Introduction

LEW Environmental Services, LLC. was contracted by Sayreville Public Schools to test for the presence of lead in drinking water in nine schools in the district.

Sampling Methodology

LEW Environmental Services, LLC. followed NJAC 6A:26. Full details on sampling practices can be found in Districts Sampling Plan.

All samples were collected in 250mL wide mouth plastic containers that was prepackaged by the analytical laboratory. The sample containers may contain nitric acid, if expedited analysis is required. If not, nitric acid will be added to each sample upon arrival at the laboratory. At each sample location, the first draw sample was taken after it was determined that the water had been standing in the plumbing system for greater than eight hours but less than forty-eight hours. If second draw samples were collected, they were collecting following a flushing protocol outlined in the District's Sampling Plan.

Drinking Water Results

On September 16&17th 2023, LEW Environmental Services, LLC. collected the following number of water samples:

Cheesequake Elementary

- 11 first draw samples collected plus 1 QA/QC sample
- 0 samples above the 15ppb action level

Dwight D Eisenhower Elementary

- 8 first draw samples collected plus 1 QA/QC sample
- 0 samples above the 15ppb action level

Emma L Arleth Elementary

- 12 first draw samples collected plus 1 QA/QC sample
- 0 samples above the 15ppb action level

Harry S Truman Elementary

- 16 first draw samples collected plus 1 QA/QC sample
- 0 samples above the 15ppb action level

Selover Elementary

- 7 first draw samples collected plus 1 QA/QC sample
- 0 samples above the 15ppb action level

Samsel Upper Elementary

- 41 first draw samples collected plus 1 QA/QC sample
- 1 sample above the 15ppb action level

Woodrow Wilson Elementary

- 13 first draw samples collected plus 1 QA/QC sample
- 0 samples above the 15ppb action level

Sayreville Middle School

- 25 first draw samples collected plus 1 QA/QC sample
- 1 sample above the 15ppb action level

Sayreville High School

- 59 first draw samples collected plus 1 QA/QC sample
- 0 samples above the 15ppb action level

The complete list of samples that exceeded the 15ppb limit can be found in Appendix A. The complete list of all sample results can be found in Appendix C. The laboratory results can be found in Appendix E.

Certain outlets could not or were not tested due to various reasons. The following table lists those locations and the reason why samples were not collected.

Recommendations

Those outlets where the first draw sample tested below 15ppb are not considered to be elevated and no mitigation is necessary.

For those outlets where the first draw sample exceeds 15ppb the following steps are recommended:

- 1) Immediately discontinue use of the outlets.
- 2) Conduct second draw (flush) samples on these outlets to further delineate source of contamination.

A complete list of recommendations per outlet can be found in Appendix B.

Additional Recommendations

- 1) Follow-up samples should be collected after any remediation efforts in order to determine the efficacy of the work.
- 2) Any of the inoperable/non-functioning outlets listed above that are brought back into service should be sample.
- 3) Comply with all requirements set forth in NJAC 6A:26.
