

Future Ready, Jaguar Proud.

In the Spring of 2022, Minnesota Legislature enacted a new law requiring school districts to disclose to families the various technology software packages used for instructional and operations purposes. The legislation was passed with the intent of protecting information about our students and employees. The legislation was also designed to hold the various software companies accountable for ensuring its due diligence in taking appropriate measures to protect information about students and employees. The purpose of this message then, is to disclose to you, our families, the various software packages used in the Renville County West School District throughout the course of the school year. The software packages might be used in your classroom, by your teachers, or in the offices. We have attached a link with this message for you to view these packages. We will tell you that the list is surprisingly lengthy, and as such, is likely the reason for this legislation as I'm sure the situation is the same for every district in the state. The District would like to thank Amanda Person in IT for her efforts in collating this list and assisting the District with compliance efforts where this legislation is concerned. If you have any questions about this message, please feel free to contact Amanda or myself at the school.

DOUG FROKE
