

## Managing your iPad Storage

To make more storage available, your device can remove some of your items, like streamed music and videos, and apps that aren't needed. Only remove items that can be downloaded again or that aren't needed anymore.

### To Check your iPad Storage

1. Go to Settings > General > Storage.
2. In the detailed view you can:
  - Offload the app, which frees up storage used by the app, but keeps its documents and data.
  - Delete the app, which removes the app and its related data.

If your device is almost full and can't free up space, you might get a Storage Almost Full alert, you need to offload some less-used content like videos and unused apps.
