

West Fargo Public Schools

Educating today's learners for tomorrow's world.

How to Bluetooth Pair

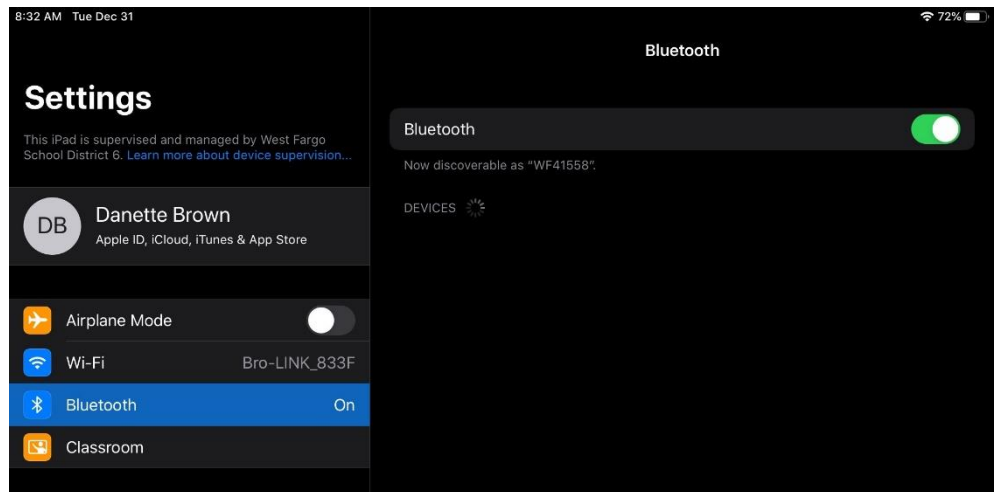

Bluetooth is defaulted to "on". This is by design to prevent users pairing devices continuously to their iPad. Students will not be able to pair anything to their device without a process that is facilitated by the teacher or teacher team and the technicians at each building. Teachers or teacher teams will support additional devices or objects being paired to the iPad that are essential to learning outcomes.

When students and teachers have the need to pair devices, the following directions will support the process:

1. Click on **Settings**.

2. On the left-hand side, select **Bluetooth**.

3. Pair the appropriate device as it populates on the screen.
