Activity Descriptions

Quest Camp

Season 1: Collapse is set in a post-apocalyptic world where all adults have suddenly vanished. Students must work together to rebuild society and survive the myriad of challenges that lie ahead in their new world.

Teachers role-play as an all-knowing Artificial Intelligence robot to assist their students as they embark on each month's QUEST.

Mindset Challenge

Mindsets provides opportunities for students to interact with real-world situations using math strategies to problem solve. Students develop transferable skills in a highly engaging, collaborative experience. The research shows that real-world problem solving and projects improve students' attitudes toward learning and make school more engaging

Math Acceleration

The summer math acceleration program is designed to equip students with essential skills that will prepare them for their upcoming year of math instruction. Through focused activities, students engage in a review of fundamental concepts, allowing them to strengthen problem-solving abilities, and develop mathematical fluency. This program aims to provide a solid foundation, ensuring students are well-prepared and confident as they advance to the next level of math education.

Literacy Hour

The summer literacy program is a targeted intervention that supports students in developing their reading comprehension and critical thinking skills. Through a combination of engaging activities, guided reading exercises, and interactive discussions, students enhance their ability to understand and critically analyze various texts. This program fosters a deeper appreciation for literature, equipping students with the essential tools to effectively comprehend, interpret, and evaluate written works, ultimately strengthening their overall literacy skills.
