# 3-6A Lesson Master

## Questions on SPUR Objectives

See Student Edition pages 215–219 for objectives.

### VOCABULARY

In 1–3, refer to the box at the right where a recursive definition for a sequence is given in both words and algebraic notation. Identify the part of the algebraic definition that corresponds to each phrase.

The first term of a sequence is 12.  
From the second term on, each term is seven more than the previous term.

$$\begin{cases} t_1 = 12 \\ t_n = t_{n-1} + 7 \text{ for integers } n \geq 2 \end{cases}$$

1. “The first term” \_\_\_\_\_
2. “the previous term” \_\_\_\_\_
3. “From the second term on” \_\_\_\_\_

### SKILLS Objective D

In 4 and 5, write the first five terms of the sequence.

4. 
$$\begin{cases} d_1 = 36 \\ d_n = \frac{d_{n-1}}{3} \text{ for integers } n \geq 2 \end{cases}$$

5. 
$$\begin{cases} t_1 = 1 \\ t_{n+1} = (t_n)^2 + 1 \text{ for integers } n \geq 1 \end{cases}$$

6. Write a recursive formula for a sequence with first term -3 where each term is one less than the previous term. \_\_\_\_\_
7. Write a recursive formula for a sequence with first term 200 where each term is four-fifths of the previous term. \_\_\_\_\_

### USES Objective L

8. You buy eight bags of candy for a party. Each bag has 60 pieces. Unfortunately, your little sister eats eight pieces each day. Write a recursive formula for the number of pieces of candy you have left on day  $n$ . \_\_\_\_\_
9. Allison opens a bank account with \$500. Every year, she receives 2% interest on the account, then adds another \$100. A recursive formula for her account balance at the beginning of year  $n$  is given at the right. Find her balance at the beginning of year four. \_\_\_\_\_

$$\begin{cases} t_1 = 500 \\ t_n = 1.02t_{n-1} + 100 \text{ for integers } n \geq 2 \end{cases}$$
