

Pascack Valley Regional High School District

**Pascack Hills High School, Montvale, New Jersey
Pascack Valley High School, Hillsdale, New Jersey**

Course Name: Advanced Topics in Computer Science

Born On: September, 2018
Previous Revision: August, 2022
Current Revision: August, 2023
Board Approval: 8/28/23

COURSE DESCRIPTION: Advanced Topics in Computer Science

Advanced Topics in Computer Science involves specialized study of theoretical and applied aspects of Computer Science. Topics will include the following:

SOFTWARE: A variety of computer programming languages will be studied, including mobile and web applications.

HARDWARE: Hardware topics will include programming of the Arduino microcontroller as well as a drone.

THEORY: Additional topics may include an analysis of the essential properties of data structures and algorithms.

CYBERSECURITY: introduce high school students to basic cybersecurity concepts and inspire interest in cybersecurity careers.

PROJECTS: A significant component of this course is student driven exploration of relevant Computer Science concepts and/or applications.

Guided readings and research will support larger individual and group projects.

All computer science courses in the Pascack Valley Regional High School District are designed to address multiple learning styles and needs, and accommodations and modifications are made for students with disabilities, multilingual students, students at risk of failure, gifted and talented students, and students with 504 plans. *Advanced Topics in Computer Science* builds on concepts learned and skills developed in *AP Computer Science A*, while also spiraling in those concepts and skills to reinforce and strengthen students' knowledge of computer science. Additionally, *Advanced Topics in Computer Science* anticipates higher-level computer science concepts and skills that will be learned in college-level computer science courses, and enrichment opportunities are provided to challenge students and engage them in rich, interesting tasks. Students are encouraged to analyze data using tools and models to make valid and reliable claims (9.4.12.IML.3), and various technologies and applications are technology are integrated throughout the curriculum.

The Pascack Valley Regional High School Computer Science Department integrates 21st century life and career skills across its courses, with the dual goal of informing students about careers and fields of study that use computer science (9.3.ST.5, 9.3.ST-ET.5 and 9.3.ST-SM.2), and helping students improve the computational thinking skills they will need to in those careers and fields of study (9.2.12.CAP.2). Computer Science courses address the *New Jersey Student Learning Standards for Career Readiness, Life Literacies and Key Skills*, with a particular emphasis on demonstrating the ability to reflect, analyze and use creative skills and ideas (9.4.12.CI.1), investigating new challenges and opportunities for personal growth, advancement and transition (9.4.12.CI.3), identifying problem-solving strategies used in the development of an innovative product or practice (9.4.12.CT.1), and explaining the potential benefits of collaborating to enhance critical thinking and problem solving (9.4.12.CT.2). Computer Science courses also address the *New Jersey Student Learning Standards for English Language Arts Companion Standards*, with a particular focus on following complex multistep procedures (RST.9-10.3/RST.11-12.3), determining the meaning of symbols, key terms, and other domain-specific words and phrases (RST.9-10.4/RST.11-12.3), and translating quantitative or technical information expressed in words into visual forms and translating information expressed visually or mathematically into words (RST.9-10.7). Similarly, the Computer Science Department seeks to support students by providing them with opportunities to use computational thinking skills in interdisciplinary contexts, in contexts that are meaningful to students, and in contexts that attend to the contributions and perspectives of historically marginalized groups. Specifically, computer science courses will look to incorporate, when appropriate, contributions and experiences of people from the LGBTQ+ community and individuals with disabilities, and references to issues of social and cultural relevance, including climate change.

Advanced Topics in Computer Science – This full-year course involves specialized study of theoretical and applied aspects of Computer Science. Topics will include the following: SOFTWARE – A variety of computer programming languages will be studied, including mobile and web applications; HARDWARE – Hardware topics will include programming of the Arduino microcontroller as well as a drone; THEORY – Additional topics may include an analysis of the essential properties of data structures and algorithms; CYBERSECURITY- basic cybersecurity concepts will be studied and PROJECTS – A significant component of this course is student driven exploration of relevant Computer Science concepts and/or applications. Guided readings and research will support larger individual and group projects.

Content/Topic:	Key Learning Items/Concepts and Pacing Guide	Observable Proficiencies and Skills:	NJSLS CS & Design Thinking Standards	Formative, Summative, Benchmark, and Alternative Assessments	Core Instructional and Supplemental Materials/ Modifications and Accommodations
<p>Unit 1 – Python Programming</p> <p>Time: 6-8 weeks</p> <p>Content Statement: Students will be able to utilize the techniques and structures of the Python programming language to create projects that implement those concepts.</p>	<p>Key learning items/concepts:</p> <ul style="list-style-type: none"> - Functions allow you to write code once that you can execute repeatedly with different inputs. (2 weeks) - Python modules allow code to be divided up into different files and reused in different programs. (2 weeks) - Topics will include the following: basic strategies for problem solving, conditional, repetition, function and other constructs that control the flow of execution of a program, and the use of high-level data types such as lists, strings and dictionaries in problem representation (2 weeks) - analyze large sets of data (2 weeks) <p>Content-specific modifications and accommodations</p> <ul style="list-style-type: none"> - use multiple representations and technology to support conceptual understanding - provide students with skeletons of code and/or utilize flexible grouping <p>Interdisciplinary/additional connections</p> <ul style="list-style-type: none"> - Engage in programming assignments that have applications in science, mathematics, or business - Consider potential programming applications for climate change - Draw on contexts from diverse groups for programming exercises 	<p>Students will be able to:</p> <ul style="list-style-type: none"> - Use Python to compute the results of arithmetic expressions - Use Python to define and call functions - Use Python to use logic and conditionals to change the behavior of the program based upon values within the program. 	<p>8.1.12.DA.1 8.1.12.DA.2 8.1.12.DA.5 8.1.12.AP.1 8.1.12.AP.2 8.1.12.AP.3 8.1.12.AP.4 8.1.12.AP.5 8.1.12.AP.6 8.1.12.AP.8 8.1.12.AP.9</p> <p>NJSLS SMP</p> <p>MP1. Make sense of problems and persevere in solving them MP2. Construct viable arguments and critique the reasoning of others MP3. Reason abstractly and quantitatively MP4. Model with mathematics MP5. Attend to precision MP6. Use appropriate tools strategically MP7. Look for and make use of structure MP8. Look for and express regularity in repeated reasoning</p> <p>P1 – Analyzing the effects of computation</p>	<p>Suggestion(s): Students will be assessed regularly throughout this course, with a focus on both conceptual understanding and procedural fluency. Assessment tools may include the following:</p> <ul style="list-style-type: none"> - quizzes (F) - tests (S) - performance tasks (F/S) - projects (S) - homework (F) - discussions (F) - journals (F) - Form A, B, or C benchmark (B) - alternative assessments (A) - portfolio (F, S) - online learning courses (F) - Group Learning Projects (F) - Individual Projects (S) - Oral Presentations (S) 	<p>Suggestion(s): Cay Horstmann. <i>Java Concepts</i>. John Wiley & Sons, Inc, 2005. (grade level); soloLearn (remediation; on grade level; advanced); PyCharm (remediation; on grade level; advanced)</p> <p>Modifications and Accommodations: Students with special needs: Teachers and support staff will attend to all modifications and accommodations listed in students’ IEPs and 504s. Teachers will incorporate manipulatives, extra time, alternative assessments, scaffolding, spiraling, technology, and flexible grouping to support student learning.</p> <p>Multilingual students: Teachers and support staff will work to support multilingual students in their first language and in English, providing materials and/or resources</p>

		<p>P2 – Creating computational artifacts P3 – Using abstractions and models P4 – Analyzing problems and artifacts P5 – Communicating processes and results P6 – Working effectively in teams</p> <p>NJSLS for ELA Companion Standards</p> <p>RST.9-10.3 RST.9-10.4 RST.9-10.7 RST.11-12.3 RST.11-12.4</p> <p>NJSLS-CLKS - 21st Century Life and Careers</p> <p>9.4.12.CI.1 9.4.12.CI.3 9.4.12.CT.1 9.4.12.CT.2</p> <p>- Technology</p> <p>9.4.12.IML.3 <i>9.4.12.DC.3</i> <i>9.4.12.DC.4</i> <i>9.4.12.DC.7</i> <i>9.4.12.TL.1</i></p> <p>- Career Education</p> <p>9.2.12.CAP.2 9.3.ST.5 9.3.ST-ET.5 9.3.ST-SM.2</p>	<p>to support students’ understanding. Students will be given additional time, as appropriate, and translation tools will be utilized as needed.</p> <p><u>Students at risk of school failure:</u> Formative and summative data will be used to monitor student success, and students at risk of failure will receive additional supports and services, which may include parent consultation, extra help, and differentiation strategies, including small group instruction, group work, scaffolding, and spiraling.</p> <p><u>Gifted and Talented Students:</u> Students who excel in their mastery of course standards will be further challenged with more complex tasks, extensions of concepts and skills, and extended problem solving and critical thinking opportunities.</p>

Advanced Topics in Computer Science – This full-year course involves specialized study of theoretical and applied aspects of Computer Science. Topics will include the following: SOFTWARE – A variety of computer programming languages will be studied, including mobile and web applications; HARDWARE – Hardware topics will include programming of the Arduino microcontroller as well as a drone; THEORY – Additional topics may include an analysis of the essential properties of data structures and algorithms; CYBERSECURITY- basic cybersecurity concepts will be studied and PROJECTS – A significant component of this course is student driven exploration of relevant Computer Science concepts and/or applications. Guided readings and research will support larger individual and group projects.
