ACKNOWLEDGMENTS

On behalf of Cooperative Strategies, we would like to extend our appreciation to the Green Bay Area Public School District for the opportunity to assist them in developing this Enrollment Projections Report by boundary of residence. As a planning team, we hope that this document will serve the Green Bay Area Public School District for years to come.

EXECUTIVE SUMMARY

The enrollment projections by boundary of residence for the Green Bay Area Public School District included in this report were developed using the cohort survival methodology and Cooperative Strategies' custom enrollment projection software, S.T.E.P. [Student Trends & Enrollment Projections]. This custom software was developed in collaboration with The Ohio State University and is based on industry best practices as well as the national experience Cooperative Strategies has with schools, school districts, and state agencies.

The Green Bay Area Public School District serves 19,000 students in the 2022-23 school year.

The projections presented in this report were developed based on students *living within* the current school boundaries and are meant to serve as a planning tool for the future, and represent the most likely direction of the District. Enrollment projections were developed using the cohort survival methodology and by analyzing the following data outlined in this report:

- Historical enrollment by boundary, by grade, by year
- Resident live birth data
- Census data
- Building permits

Enrollment in the Green Bay Area Public School District has decreased by 1,829 students from the 2013-14 to the 2022-23 school year. Based on the cohort survival methodology, enrollment is projected to decrease over the next ten years.

HISTORICAL & PROJECTED ENROLLMENT - GREEN BAY AREA PUBLIC SCHOOL DISTRICT

As with any projection, the District should pay close attention to the variables associated with determining enrollment projections discussed in this document. Any one or more of these factors can increase or decrease enrollment within the Green Bay Area Public District. When projecting future enrollments, it is vital to track the number of live births, the amount of new housing activity, and the change in household composition. It is recommended that the data contained in this report be reviewed on an annual basis to determine how more recent trends and any new housing development will impact the enrollment. In addition, any of the following factors could cause a significant change in projected student enrollment:

- Boundary adjustments
- New school openings
- School closures
- Changes / additions in program offerings
- Preschool programs
- Changes in grade configuration
- Interest rates / unemployment shifts
- Intra- and inter-District transfers
- Magnet / charter / private school openings or closures
- Zoning changes
- Annexations
- Unplanned new housing activity
- Planned, but not built, housing
- School voucher programs
- Pandemics

Obviously, certain factors can be gauged and planned for far better than others. For instance, it may be relatively straightforward to gather housing data from local builders regarding the total number of lots in a planned subdivision and calculate the potential student yield. However, planning for changes in the unemployment rate, and how these may either boost or reduce public school enrollment, proves to be more difficult. In any case, it is essential to gather a wide variety of information in preparation for producing enrollment projections.

When looking ahead at a school district's enrollment over the next two, five, or ten years, it is helpful to approach the process from a global perspective. For example: How many new homes have been constructed each year? How many births have occurred each year in relation to the resident population? Is housing experiencing a turnover—if so, what is the composition of families moving in/out? Are more or less students attending private school or being home-schooled? What has the unemployment rate trend been over the past ten years? What new educational policies are in place that could affect student enrollment figures?

The cohort survival methodology is a standard methodology used throughout the educational planning industry to project enrollment. The enrollment projections developed for the Green Bay Area Public School District were developed using the cohort survival method.

ENROLLMENT PROJECTION METHODOLOGY

Introduction

Tracing the landscape of the country's public school enrollment back over the past fifty years reveals demographic, economic, and social changes. The United States as a whole continues to undergo major shifts in public student enrollment, due in large part to past events including the baby boom, the availability and use of birth control, and the development of suburbs. The baby boom of the late 1940s and 50s was followed by the baby bust of the 1960s and 70s. This gave rise to the echo baby boom of the 1980s.

Source: CDC, National Vital Statistics Report; **National Center for Health Statistics

Source: CDC, National Vital Statistics Report

Nationwide, districts have experienced the effects of the echo baby bust of the 1990s. From the 1950s to the 1970s, a dramatic downsizing of the family unit occurred. A direct result was the declining school enrollment of the 1970s and 1980s. As of the 2010 Census, the size of a family was at an all-time low of 3.14 persons. The live birth rate increased for the first time in several years in 1998 and increased again in 2000 and 2006. However, the birth rate resumed a descending pattern in 2008 and reached an all-time low of 11.0 (per 1,000) in 2020.

Cohort Survival Method

The cohort survival methodology (sometimes referred to as the grade progression ratio method) is a widely used enrollment projection model that is used by many school districts and state and federal agencies to project K-12 enrollment.

A cohort is a group of persons [in this case, students]. The cohort survival enrollment projection methodology uses historic live birth data and historic student enrollment to “age” a known population or cohort throughout the school grades. For instance, a cohort begins when a group of kindergarteners enrolls in grade K and moves to first grade the following year, second grade the next year, and so on.

A “survival ratio” is developed to track how this group of students increased or decreased in number as they moved through the grade levels. By developing survival ratios for each grade transition [i.e. 2nd to 3rd grade] over a ten year period of time, patterns emerge. A projection ratio for each grade transition is developed based on analysis of the survival ratios. The projection ratios are used as a multiplier in determining future enrollment.

For example, if student enrollment has consistently increased from the 8th to the 9th grade over the past ten years, the survival ratio would be greater than 100% and could be multiplied by the current 8th grade enrollment to develop a projection for next year’s 9th grade. This methodology can be carried through to develop ten years of projection figures. Because there is not a grade cohort to follow for students coming into kindergarten, resident live birth counts are used to develop a birth-to-kindergarten survival ratio. Babies born five years previous to the kindergarten class are compared in number, and a ratio can be developed to project future kindergarten enrollments.

The cohort survival method is useful in areas where population is stable [relatively flat, growing steadily, or declining steadily], and where there have been no significant fluctuations in enrollment, births, and housing patterns from year to year. The cohort survival methodology inherently considers the net effects of factors such as migration, housing, dropouts, transfers to and from charter schools, open enrollment, and deaths. This methodology does not assume changes in policies, program offerings, or future changes in housing and migration patterns.

U.S. CENSUS

This section presents data from the United States Census Bureau and estimates from the American Community Survey (ACS) to demonstrate the demographic characteristics and historic trends of the population within the District boundary. While the Census is conducted every 10 years, the American Community Survey collects social, housing, educational, occupational, financial, and other demographic data from over 3.5 million households throughout the nation monthly and is compiled yearly, as mandated by the U.S. Constitution. This data helps public officials, federal/state/local agencies, school districts, etc. assess historic trends and plan for the future.

The Green Bay Area Public School District is located in Brown County, Wisconsin. It serves parts or all of the Allouez Village, Bellevue Village, Eaton Town, Green Bay City, Green Bay Town, Humboldt Town, Ledgeview Town, and Scott Town. The data on the following pages is aggregated and color-coordinated by the boundaries shown in the map on the following page.

It should be noted that the District does not necessarily serve whole municipalities but data presented by municipality is for the whole municipality.

This map shows the census boundaries used to delineate areas served by the District. It should be noted that the boundaries of cities/CDPs/towns/villages may vary across the years as population and commercial activity fluctuate.

Students by Municipality

The table and pie chart below show how many Green Bay Area Public School District students live in each municipality, by year, according to 2022-23 student data. The percentages for each municipality are based on the total students in the Green Bay Area Public School District. The total at the bottom of the table indicates the total number of students in the District, not the sum of the students living in the municipalities.

*This total reflects the amount of District students, not a total of the values in the table.

Population

According to the 2021 ACS estimates, since the 2010 Census, the total population and median age increased in the District boundary.

Based on the 2021 estimates, since the 2010 Census, the number of children under the age of 5 has decreased by 9 percent, the number of children ages 5 - 19 has increased by 3 percent, the number of adults ages 20 - 64 has increased by less than 1 percent, and the number of adults ages 65 and over has increased by 30 percent in the District boundary.

The 2000 and 2010 population counts and 2021 population estimates are shown in the table below.

Population		Under 5 years	5 to 19 years	20 to 64 years	65 years and over	Total Population	Median Age

Housing & Families

According to the 2021 ACS estimates, approximately 67% of the homes in the Green Bay Area School District boundary are single-unit structures while 31% of the homes are 2-or-more-unit structures. Nearly 29% of the District boundary's households have at least one school-aged (or younger) child in them.

School Enrollment

The tables below summarize the percentage of the population living within the Green Bay Area Public School District boundary, by age group, enrolled in school; enrolled in school and attending public school; and enrolled in school and attending private school, based on U.S. Census American Community Survey (ACS) 5-Year Estimates. Home-schooled children are counted in the private school data. If anyone in these age groups had not attended any school in the 3 months before the survey was conducted, they were considered to not be enrolled in any school.

It should be noted that this data is not a survey of the students attending schools in the District; rather, it is based on monthly surveys sent out by the ACS to households in the District boundary. This survey data is then used to create the estimates shown in the tables below.

GENERAL DEMOGRAPHICS

The following information represents block group estimates created from market research and U.S. Census data obtained from the Environmental Systems Research Institute [ESRI]. ESRI provides a yearly update to their demographic data in increments of five years. To make updates to their demographic data set, they use American Community Survey [ACS] data that takes a series of monthly sample surveys but only from areas with populations of 65,000 or more. One year of ACS data is a period estimate as a twelve-month average, rather than a single point in time.

According to the ESRI estimates, the total population of Brown County is estimated to increase over the next five years. As illustrated in the table below, the number of children, ages 5-18, is estimated to decrease by 88 children, or approximately less than 1 percent.

BROWN COUNTY POPULATION ESTIMATES

Age Group	2022	2027	Change	% Change
Ages 0-2	9,977	10,200	223	2%
Ages 3-4	6,687	6,835	148	2%
Ages 5-10	20,516	20,587	71	0%
Ages 11-13	10,440	10,465	25	0%
Ages 14-18	17,273	17,089	-184	-1%
Ages 5-18	48,229	48,141	-88	0%
Total Population	272,927	277,663	4,736	2%

BROWN COUNTY POPULATION ESTIMATES

GREEN BAY AREA PUBLIC SCHOOL DISTRICT BOUNDARY ESTIMATED SCHOOL-AGED POPULATION CHANGE 2022-2027

The map on the following page shows school-aged population change in the U.S. Census block groups within / around the Green Bay Area Public School District boundary. Population changes are based on 2022 and 2027 estimates.

A block group is defined by the U.S. Census Bureau as, "a statistical district of a census tract, generally defined to contain between 600 and 3,000 people and 240 and 1,200 housing units, and the smallest geographic unit for which the Census Bureau tabulates sample data."

HOUSING DATA

Housing development and building permits are tracked to determine their effect on student enrollment. The table and graphs below illustrate the number of single- and multi-family building permits issued since 2000.

More detailed housing data can be found in the Student Potential Analysis report.

BROWN COUNTY BUILDING PERMITS

GREEN BAY CITY BUILDING PERMITS

RESIDENT LIVE BIRTH DATA

Utilization of resident live birth data is recommended when projecting future kindergarten enrollments. This data provides a helpful overall trend. Large bubbles in birth counts, either up or down, can also be planned for or anticipated by the District.

In addition, the live birth counts are used in determining a birth-to-kindergarten and birth-to-first grade survival ratio. This ratio identifies the percentage of children born in a representative area who attend kindergarten and first grade in the District five and six years later. The survival ratios for birth-to-kindergarten, birth-to-first grade, as well as grades 1-12 can be found on Page 24 of this report.

Data is arranged by the residence of the mother. For example, if a mother lives in Green Bay city but delivers her baby in Appleton city, the birth is counted in Green Bay city. Live birth counts are different from live birth rates. The live birth count is simply the actual number of live births. A birth rate is the number of births per 1,000 women in a specified population group.

The table and graph include the resident live birth counts by Elementary School Boundary.

* Jefferson became Head Start starting in the 2020-21 school year. Jefferson births from 9/2013-8/2014 on, were combined into Ft. Howard's to roll into projections for future Kdg students.

SURVIVAL RATIOS

The chart below demonstrates the ten-year changes in enrollment as students move through the system. Percentages greater than 100 indicate that there are more students than there were in the previous grade the previous year. In other words, there was an increase in student population where new students were added to the system. Percentages less than 100 indicate that there was decline or students left the system. If the exact number of students in 1st grade during the 2015-16 school year were present in 2nd grade for the 2016-17 school year, the survival ratio would be 100 percent.

Birth-to-Kindergarten and Birth-to-First Grade: This ratio indicates the number of children born in the area who attend kindergarten and first grade in the district five and six years later. What is important to note is the trend in survival ratios, not necessarily the actual number.

The COVID-19 pandemic introduced an unforeseen level of volatility, nationwide, as seen in the survival ratios for the 2019-20 to 2020-21 and 2020-21 to 2021-22 school years. These ratios will need to be monitored closely over the next few years as new trends are established.

The following table illustrates the historical survival ratios in the Green Bay Area Public School District over the past ten years by grade level.

Survival Ratios - District-wide

from	to	Birth to K	K to 1	Birth to 1	1 to 2	2 to 3	3 to 4	4 to 5	5 to 6	6 to 7	7 to 8	8 to 9	9 to 10	10 to 11	11 to 12

GREEN BAY AREA PUBLIC SCHOOL DISTRICT HISTORICAL ENROLLMENT

Enrollment in the Green Bay Area Public School District has decreased by 1,829 students from the 2013-14 to the 2022-23 school year. Based on the cohort survival methodology, enrollment is projected to decrease over the next ten years.

Historical Enrollment - District-wide

The varying shades of color in the table represent statistically significant cohort sizes. The darker blue represents smaller cohorts, while the darker red represents larger cohorts, comparatively.

PAROCHIAL SCHOOL ENROLLMENT (BY SCHOOL BOUNDARY)

PROJECTED ENROLLMENT

Cooperative Strategies developed low, moderate, high, and recommended enrollment projections for the Green Bay Area Public School District based on students **living within** the 2022-23 elementary school boundaries. The moderate enrollment projections are based on a selected average or weighted average of survival ratios (in this case, a 5-year simple average.). The low and high enrollment projections are developed using statistical distributional theory, providing the District with a more conservative (low) and more liberal (high) enrollment projection. The recommended enrollment projection is based on a detailed analysis of historical enrollment and resulting survival ratios over the past 10 years, by elementary school boundary. Significant shifts in survival ratio patterns are realized and accounted for in determining projection ratios independently for each grade level. The recommended illustrates the most likely direction of the District based on more recent trends.

The range of enrollment projections from low (conservative) to high (liberal) are offered due to the limitations of the cohort survival method in factoring changes to policies, program offerings, and future changes in housing and migration patterns. For example, the low enrollment projection might be used if housing declines significantly more than anticipated; the high enrollment projection might be used if housing growth increases at a more rapid rate than seen in recent years.

It should be noted that the actual live birth counts are available through 9/2021 - 8/2022 and project kindergarten enrollment through 2027-28. To project kindergarten through 2032-33, a simple average of the last 3 years of live birth counts was used.

Projected PK and K4 enrollment does not follow the cohort survival method but is based on the current 2022-23 enrollment of 239 PK students and 1,072 K4 students.

HISTORICAL & PROJECTED ENROLLMENT - GREEN BAY AREA PUBLIC SCHOOL DISTRICT

GREEN BAY AREA PUBLIC SCHOOL DISTRICT PROJECTED ENROLLMENT—RECOMMENDED

Based on the Recommended projected enrollment, K-12 student enrollment in the Green Bay Area Public School District is projected to decrease from 19,010 in the 2022-23 school year to 16,987 students in the 2032-33 school year.

Projected Enrollment - Recommended - District-wide

CONCLUSION

As with any projection, the District should pay close attention to live birth counts, enrollment in elementary schools, open enrollment, non-public enrollment, in / out migration patterns, and any housing growth. It is recommended that this document be reviewed on an annual basis to determine how more recent growth and enrollment trends will impact the enrollment projections.

Cooperative Strategies is pleased to have had the opportunity to provide the District with this demographic study. We hope this document will provide the necessary information to make informed decisions about the future of the Green Bay Area Public School District.

APPENDIX SCHOOL BOUNDARY MAPS

The maps on the following pages illustrate the school boundaries in the Green Bay Area Public School District.

APPENDIX

LIVE/ATTEND ANALYSIS

he tables on the following pages illustrate a live/attend analysis for the K-12 and PK/K4 students of Green Bay Area Public School District. This table cross-references 2022-23 student enrollment and the attendance zone in which students reside. The numbers in bold denote students who live in the boundary of and attend their zoned school. Transfer-in denotes the number of students who transfer into a school from outside of the attendance zone. Transfer-out denotes the number of students that leave their zoned school to attend another school. Out of District indicates students who reside outside of the District and Unmatched indicates students who were unable to be geocoded (matched to a point on a map).
