

February 9, 2024

Dear families and staff of Parkway School:

We would like to provide you all an update on the great progress of our water filtration system and all the intensive work that comes along with that. We are still hopeful to be on target for a springtime completion.

The new building that will house the water filtration system now has completed concrete floors, walls, and a roof. The contractor is finishing the exterior waterproofing details and roofing system. Electrical service for the filtration system has been started and should be completed within days. The new filtration system is scheduled to arrive later this month and will be installed soon after.

We are thankful for the dedication of GPS' Facilities Department and the building and construction managers, Wernert, on this project. Attached are a few photos of the progress.

We will continue our regular updates. Thank you for your continued cooperation and support.

Dr. Toni Jones  
Superintendent of Schools
