

Tic-Tac-Toe Products

Object: Be the first team to get (4) four products in a row (horizontally, vertically or diagonally).

Divide into 2 teams (A and B)

1. Team A selects two factors by placing a marker on the two numbers (1-9) to multiply. The product is circled on the grid.
2. Team B may move 1 marker to a new factor for a new product, and place an 'X' on the grid.
3. Teams alternate moving one marker at a time and continue placing 'X's and O's' until a team has marked four products in a row.
4. After several games students discuss strategies.
