

## Using BenQ InstaShare to Screencast (Windows)

### Introduction

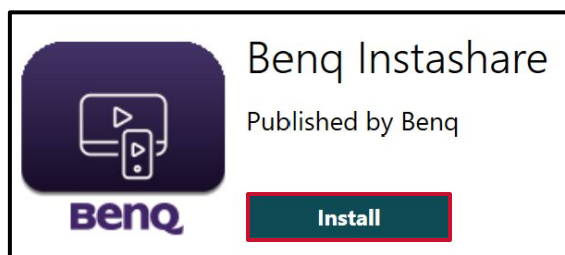

Use the BenQ InstaShare App to screencast content from a mobile device to a BenQ Panel. Follow the steps in this Quick Reference Guide to untether instruction.

### Getting Started

1. Locate the **BenQ App** in Software Center and click on the application.

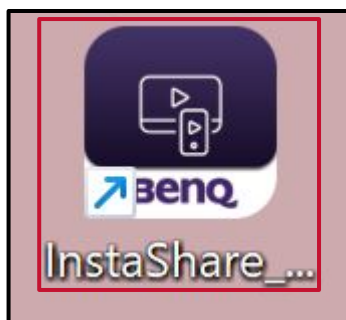

2. Select **Install** and follow device prompts.

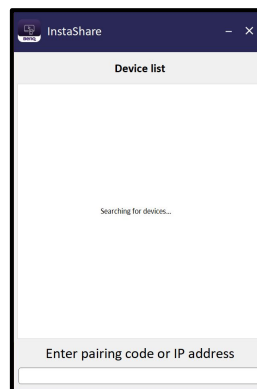

### Initiating InstaShare

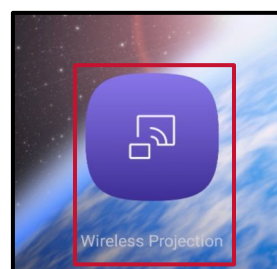

1. Open the **InstaShare** application.

2. Leave the **pairing window** open on the Windows device.

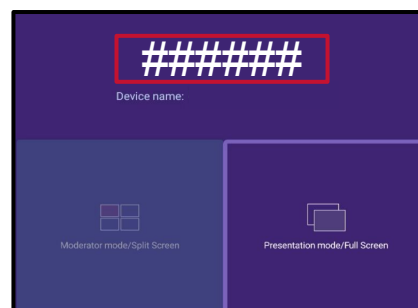

3. Open **Wireless Projection** on the BenQ Panel.

NOTE: If a user is not logged in to the BenQ Panel with an AMS account, the user will select Connection to access the InstaShare option on the BenQ Panel.

### Screencast to BenQ Panel - Presentation Mode

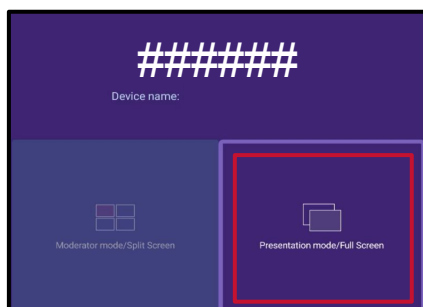

1. Locate the pairing code in InstaShare on the BenQ Panel.

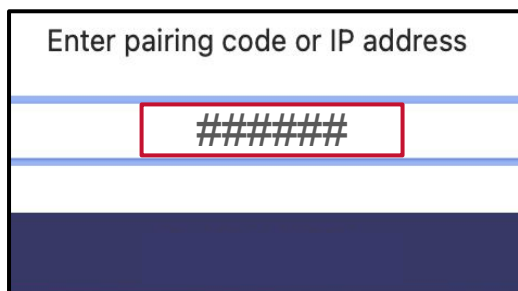

## Using BenQ InstaShare to Screencast (Windows)

### Screencast to BenQ Panel - Presentation Mode Continued

2. Select **Presentation mode/Full Screen** on the BenQ Panel.

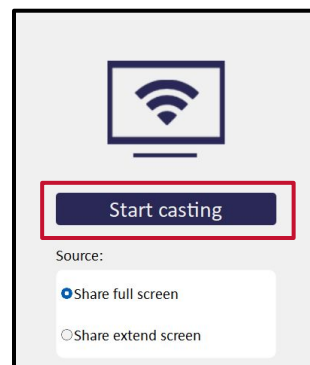

3. Type the **pairing code** into the InstaShare app on the Windows device.

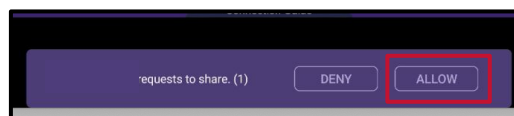

4. Select **Source**.

5. Select **Start casting**.

6. From the BenQ Panel, select **Allow**.

7. The Windows screen will now cast to the BenQ Panel.

NOTE: BenQ Panel offers a Moderator mode in InstaShare. This feature will allow multiple devices to cast to the board at one time. The InstaShare app on a Windows device allows for Screen Mirroring. This allows the board screen to be cast to the mobile device.
