

# THINKING LAB

ESSER funds were used to purchase and equip 5 Mobile Thinkings Labs that seek to bring engaging, fun enrichment to all campuses. Each Mobile Thinking Lab is equipped with everything from maker space materials, creativity challenges, and STEM lessons.

Through collaboration with campuses, this initiative spun into providing on campus access to resources in addition to our Mobile Thinking Labs. These rooms are dedicated to bring meaningful and authentic lessons that students would not normally see in the regular classroom such as coding, robotics, engineering, creativity, and more.

For both types of Thinking Labs, a curriculum has been written rooted in Harvard's Project Zero Thinking Routines designed to promote critical thinking habits.
