

Now Enrolling Students ...

Why A School-Based Health Center?

Instead of taking time off of work and your child missing pivotal class time, enroll them in our SBHC. A school-based health center is a safe, easily-accessible medical office on a school campus where students can go for comprehensive, preventative, and primary health and dental care services. Children cannot reach full education potential unless they are physically and mentally healthy.

How Does The School-Based Health Center Work?

Our SBHC doesn't take the place of your family's physician or dentist, but instead works as an additional service to enhance the care of the student in a convenient location. Your physician will always be informed of any treatment or problems. If you don't have a physician or insurance, we will work with you to determine what options are available. *Nobody will be turned away because of an inability to pay and parents will always be contacted prior to most treatments.*
