

## **MA103- Algebra 1 Summer Homework Assignment**

**Purpose:** The purpose of this assignment is to provide you with practice with the concepts you have learned in previous classes that you are expected to know how to do at the start of this class.

The summer assignment will be through the online site Deltamath.com which will provide feedback whether you are correct and step-by-step instructions if you need help and additional practice if needed. For each section, there is a minimum number you need to complete for full credit, but you can continue to do additional practice, if needed.

To earn full credit, you should write down the original problem, show all work, and circle your final answers. Although the assignment will be completed on Delta Math, you will upload your work to Delta Math, and it will be part of your grade for the assignment.

**We will have a quiz covering the material from the summer homework during the second week of school.**

### **Directions:**

1. Go to: <https://www.deltamath.com/students>
2. Click the orange “register” button and enter the class code: 9X27-YD4U
3. Register with Google and use your school email.

If you are a new student who does not yet have a DCDS email address, you can register with your personal email address.

4. This should bring you to the summer assignment. There are several sections to complete. It is recommended that you work on the assignment throughout the summer.
