Dr. Philip Huang, MD, MPH

Director/Health Authority

A tuberculin skin test needs to be administered and the skin test results read 48-72hrs before the patient receives any live vaccine; such as MMR (measles-mumps and rubella) and Varicella vaccines.

If the patient receives any live vaccine without first having a TB Skin test then the skin test needs to be postponed at least six weeks.

La prueba de Tuberculosis necesita ser administrada y los resultados deben ser leídos en 48-72 horas, antes de que el paciente reciba cualquier vacuna viva como Sarampion, paperas y rubiola o varicella.

Si el paciente recibe cualquier vacuna viva sin antes hacerse la prueba de tuberculosis, entonces la prueba de tuberculosis se tendrá que postponer seis semanas.
