

# Brainstormer

---

Brainstorming is used in creative thinking and planning. It allows students to generate and organize their ideas in a non-linear way. To use the Brainstormer write the central concept in the middle of the page and write related concepts on lines or bubbles anywhere around the central concept. Multiple ideas may branch off any concept. Brainstorming may be done individually or as a group. It is best not to critique or eliminate ideas while brainstorming. Just go for quantity of ideas and encourage creativity.
