

Lincoln Academy ~ MAP Scores Fall/Spring Comparison

M=Mathematics

R=Reading

L=Language Usage

S=Science

Blue Highlight = highest growth from Fall (F) to Spring (S)

Talking Points:

- Both MAP and CMAS are based on new benchmarks connecting to new standards in Colorado.
- What we see in these scores reflects adjustment to new standards as well as a new testing system.
- This data shows that students are growing significantly and similarly to their district peers with a few exceptions.
- 6th grade stands out as a particular area of growth. In spite of our mid-year efforts, we could not resolve testing concerns. For example, students appear to go backward from the beginning of the year in a couple of areas. Since this is not actually possible, we believe this is foremost a

problem with testing. We need to further investigate the cause of this. Clearly back-to-back testing was not the only factor influencing testing. This certainly does not look good, but without a better understanding of why this happened, it may be best not to draw significant conclusions from this data.

- Both 5th and 8th grade stand out as areas where not only was testing accurate, but also showed amazing growth (and high achievement as a result).
- All but one grade made their projected growth in mathematics, which in the fall was an area of concern for us as a school. 7th and 8th grade made significant strides in this area doubling the projected growth score!
- Other subject areas show areas of promise and areas of needed growth.
- The parts of the data that are similar to the district show us that we must adjust to the new standards to show how strong our students really are. We do not believe that they actually are similar in skill or growth. Part of our work will be aligning our classes more closely with standards so our strengths show more clearly.

Nevertheless, we will continue to focus our energies on a high quality education rather than merely tests.
