## Measles Information & Tips

### WHAT IS MEASLES?

Measles is a serious virus and one of the most **highly contagious and deadly** infectious diseases in human history.

#### SYMPTOMS AND TIMELINE:

COUGH

RUNNY NOSE

FEVER

WATERY, RED EYES

RASH ➡

USUALLY STARTS 3 TO 5 DAYS AFTER THE OTHER SYMPTOMS.

Measles may appear differently on darker skin tones.

Measles can spread 4 days before the rash starts through 4 days after.

### HOW IT SPREADS:

You can get sick by breathing air with the measles virus in it.

Measles can stay in the air and infect others for **up to 2 hours** after a contagious person has left a room.

COUGHING, SNEEZING, OR TALKING

SHARING ITEMS THAT HAVE SALIVA ON THEM, LIKE CUPS

SOCIAL ACTIVITIES

TOUCHING A SURFACE THAT HAS A VIRUS ON IT

### WHAT ELSE SHOULD I KNOW?

The measles, mumps, and rubella (MMR) vaccine is safe and effective at protecting against these viruses.

If you believe you are ill with measles, and need to seek care, **CALL** the medical facility **BEFORE** arriving.

Contact your health care provider to check

### IF UNVACCINATED:

- The MMR vaccine may help prevent sickness if given within three days from when you were exposed.
- If exposed, you may need to quarantine for 21 days.

Talk to your health care provider to see what options are available for you.
