

Physics

- Physics is an Algebra-based science course intended for college-bound 11th and 12th grade students.
- It prepares students for college coursework in all types of engineering, robotics, pre-medical, pre-dental, pre-veterinary, nursing (radiology), nuclear medicine, physical therapy, forensic science, pharmacy, environmental science, geology, chemistry, physics, astronomy, remote sensing, meteorology, and climate-related careers.
- You must have a “B-” or better in both Algebra 1 and Honors Chemistry to take the course. Prior or concurrent enrollment in Algebra 2 is also required.
- The course includes information about velocity, acceleration, projectile motion, forces, friction, work, energy, momentum, collisions, rotational motion, heat, simple harmonic motion, waves, sound, light, optics, electricity, and magnetism.
- We will perform approximately 18 lab activities throughout the school year.
- More information is available at www.saultschools.org/Page/6220
