

To the Families of Multnomah Education Service District students:

This letter is to inform you of the Integrated Pest Management (IPM) law enacted on July 1, 2012 that Oregon Schools must abide by (ORS 634.700-634.750). We are required to notify staff, students, and parents anytime there is a scheduled application of a pesticide at any of our school campuses. In that notification you will find expected application date, name of the pesticide being applied, the EPA registration number of the pesticide, and other information.

For each application of a pesticide – inside or outside – we are also required to post in the vicinity of the application on that school campus. So on occasion you may see signs posted informing you of a pesticide application at a school, but please be assured that we are doing everything we can to keep these applications to a minimum and only using the safest of products to achieve the expected results. There will be contact information on the application posting signs of who you can call if you ever have questions about what is going on or what products are being used.

An OSU faculty member with expertise in pesticide toxicology has reviewed all of the pesticides that we use, and they meet the requirements of a “low-impact pesticide” as defined by ORS 634.705 (5). They never have a label category that is higher than Caution, and contain no known carcinogens. You can find a copy of the approved list of pesticides at the following web page:  
<https://blogs.oregonstate.edu/schoolipm/pesticides/>.

I would also encourage you to review the entire OSU School IPM program at <https://blogs.oregonstate.edu/schoolipm/> to see what we are doing and how we go about improving the condition of our schools to create a healthier environment for your children. It is all about educating, communicating, and eliminating pests through cleaning and organizing our environment. We are sealing up our buildings, eliminating clutter, keeping food in plastic storage containers, eliminating leaks and drips in our plumbing, properly pruning our landscaping, and being more thorough in our cleaning efforts. Through these efforts, we are eliminating the three things that pests need to survive: Food, Water, and Shelter.

I am happy to answer any questions you may have.

Thank you,

Anna Dinwiddie
