C. RFI Responses

Q: On page E2.1A corridor A127 shows L13 fixtures but are scaled off at 6' fixtures. Please confirm which one is correct. On the same page, corridor A108 shows L13 fixtures but it is scaled at 2'
A: The fixture lengths are as indicated on the plan. Per the lighting schedule, these fixtures come in multiple lengths.

Q: There is a Note 5 on sheet E5.1 which represents that those items have been pre-purchased.

- Did they go Square D? Square D doesn't have any record of any orders

A: Eaton was ordered for the Gear based on voluntary alternate, Generator is Cummins, and transformer is Eaton.

- The primary switch and generator also have the same hashed border as the other Note 5 items. Are these also part of the pre-purchased items?
  A: That is correct
- If the above are indeed all pre-purchased then we are to propose to Supply and Install all of the Panel Boards, DP-1, DP-Gen, and the smaller Transformers 75KVA thru 150KVA?
  A: That is correct. Only larger equipment was included in the pre-purchased package.

Q: Glass and Glazing Summary of Work note #5, Specific Scope notes #12-m and #13-g conflict with Carpentry Specific Scope note #6-l. Please clarify. Casework Specific Scope notes #8 and #9 conflict with Carpentry Specific Scope note #6-n. Please clarify. Plumbing Specific Scope note #17-j conflicts with Carpentry Specific Scope note #6-l. Please clarify. Mechanical Specific Scope note #11-jjj conflicts with Carpentry Specific Scope note 6-l. Please clarify.
A: All blocking shown on the drawings is the responsibility of the carpenter. Any additional blocking required, but not shown is the responsibility of the contractor installing said scope of work that requires the additional blocking.

Q: There is no mention of the polished concrete in any work scopes. What Bid Division is responsible for the polished concrete?
A: We have already bid out concrete and will be handled by current contractor.

Q: On Page 7 of the Bid Category work scope for the Flooring Division, note 14 states to provide and install a moisture mitigation system at all flooring locations over concrete. Are they wanting us to include a moisture mitigation system in our base bid before we even moisture test the concrete to see if it in fact does need a moisture mitigation system? Some of these systems can run from $100,000-$300,000. Also in the Concrete Specification 033003 on page 1-2 it shows

that vapor lock will be added to the concrete. If this is the case we will not need to moisture test. See attached. Please advise as to if we should include a moisture mitigation system in to our base bid, or if we should provide a unit SF price for this work.
A: We will remove this note from the scope of work, and add a SF unit cost for moisture mitigation.

Q: On page 7 of the Bid Category work scope for the Flooring Division, note 17. H. shows floor patching up to 3/8" as required to prep concrete to receive floor finishes for the carpet and resilient flooring. See attached work scope. Typically we do an 1/8" skim coat for a smooth surface to install. I do not see on the plans where they are requiring us to provide extra heavy prep for a new build. Please advise as to what locations will require us to provide 3/8" floor prep? See attached. Please advise.
A: This note will be removed.

Q: On page 7 of the Bid Category work scope for the Flooring Division, note 17. I. states that the flooring contractor is to "Remediate and fill all cracks in the slab that exceeds 1/32" wide per requirements of the product manufacturers and specifications." See attached work scope. Are they anticipating the new concrete to crack? If so I am not sure what we should include in our base bid for this work since the concrete will be new and has not been installed yet. See attached. Please advise.
A: This note will be removed.

Q: On page 7 of the Bid Category work scope for the Flooring Division, note 17. J. states that the flooring contractor to include cost for priming, Ardex skim coating and floor leveling for all carpet areas and resilient areas. Specifications for the Carpeting and Resilient Flooring does not indicate for us to use Ardex products, but states to use what the manufacturer recommends. That being said are they requiring us to use Ardex products for the Carpeting and Resilient Flooring? Or can we use what the manufacturer recommends. See attached. Please advise.
A: Ardex or approved manufacturer is acceptable.

Q: On page 8 of the Bid Category work scope for the Hard Tile Bid Division Note 17. F. states to provide minor repair, leveling and patching (+3/8") of substrate for walls and floors. We typically apply our standard layer of thinset for the hard tile work. Are they anticipated that the new walls and floors will not be acceptable where they will require a 3/8" pour on the floors and walls? Please advise.
A: This will be corrected in the scope. Intent is that all masonry walls will have at least 3/8" prep to ensure level surface for tile installation.

Q: Please confirm that in-wall blocking is by the Carpentry Bid Package.
A: In wall blocking shown on the drawings is the responsibility of the carpentry contractor. Any additional blocking required is the responsibility of the contractor installing the scope of work that requires said blocking.

Q: It is understood that General Trades is responsible for the 100100 Misc. Specialties items which include the metal table bases and solid surface countertops at the Dining Commons Booths and the metal stools and foot rests at the second-floor bar height counter. Does the solid surface counter at the bar height second floor counter below to the casework/millwork provider?
A: Correct, we are clarifying if the dining commons booths SS comes from the manufacturer of the base or if it is intended to be separate. If it is separate, that SS will be the casework contractors responsibility. All other bases, I.E. Art bench are to be installed by this contractor.

Q: Please verify that the plywood will be furnished and installed by the carpentry bid package and 8" plywood reveal painting will be provided by others in regards to the plastic laminate panels all as shown on Millwork Detail Plan A8.5. The only responsibility of the casework bid package is the plastic laminate panel, mounting hardware and installation.
A: This is correct. The plywood is the responsibility of the carpentry contractor, painting is the responsibility of the painter, and the laminate panels and mounting hardware is the responsibility of the Casework contractor. All contractors responsible for coordinating.

Q: Viewing Detail 15/A8.15, there are laminated panels that are installed on 6" metal stud framing at a slope, one at 8" one at 6" and the last at 2', please verify that the 6" framing is by contractors other than the casework bid package.
A: Framing is by the carpentry scope of work.

Q: The music casework spec lists grille doors to be welded steel construction. In the elevations, there are waterfall grille doors on 2/A7.4 and straight grille doors on 5/A7.5. Can straight grille doors by Case Systems (or equal) be acceptable at both locations?
A: Please submit a voluntary alternate and substitution request for all deviations from bid specifications.

Q: In Section G. Specific Scope, Item #7 Section c. notes that the FSE Contractor is responsible for all Plumbing Fixtures. This work is typically handled by the plumbing contractor. We can install the Garbage Disposal, but Plumbing to and from that unit is to be done by others. Also, the Soap and Rinse Systems are generally handled by the Owners Vendor and is not something usually handled by the FSE Contractor. Hand Sinks will be handed over to the Plumber for their install. Can you please confirm that we will not be responsible for this work?
A: All fixtures indicated as FSE are to be provided and installed by the food service contractor. All plumbing connections and final hook ups are to be the responsibility of the plumbing contractor.

Q: In Section G. Specific Scope, Item #7 Section e. notes that All Mechanical hook ups for Food Service Equipment and Mechanical are to be provided by the Food Service Contractor. We typically don't do final connections for Mechanical, Plumbing, or Electrical. Connecting of Ductwork to our Exhaust Hoods should be handled by the Mechanical Contractor and not by us. Can you please confirm that we will not be responsible for this work?
A: Mechanical contractor will be responsible for all ductwork connections and mechanical tie in.

Q: In Section G. Specific Scope, Item #7 Section g. notes that All low voltage connections are to be provided by the FSE Contractor. This work is typically handled by the Electrical Contractor. Can you please confirm that we will not be responsible for this work. If the wiring is integral to our equipment we will handle.
A: This contractor is responsible for all integral low voltage work (I.E. refrigerator thermostats) any control of mechanical equipment not installed by this contractor is the responsibility of the mechanical contractor. Fire alarm contractor is responsible for connections to hood controllers for appropriate shut down procedure.

Q: The scope of work mentions "temp roofing"; is this project being installed in (2) phases: Phase 1 being substrate and vapor barrier and Phase 2 being the permanent roof over top; or are we to install the entirety of the roof right away and not figuring this as a phased project?
A: This is not intended to be done in two phases.

Q: The scope of work mentioned flood testing; the specifications don't mention this, is flood testing of the entire roof surface required?
A: Yes.

Q: The scope of work mentions installing pavers; there is no specification or area I noted on the drawings that show pavers; please clarify whether pavers are being installed on this project?
A: Removed from scope.

Q: The scope of work mentions installing snow guards, please clarify where snow guards are located.
A: Removed from scope.

Q: Is there any work on the existing building or does this contract only pertain to this "NEW" construction middle school?
A: Only work is on New construction.

Q: Looking over the plans it appears that the whole masonry wall legend is missing. The masonry walls appear to start in the “4”s and the legend ends in the “3”s. Do we know what the different wall types indicate? Is it safe to assume that all walls go to deck?
A: To be updated in Addendum #3.

Q: On page A 7.6 - interior elevation 1 shows suspended wood grill. What specification is this under?
A: See Spec Section 09 5426.

Q: Spec 05-7000 Decorative metal - specific note 10 mentions Beam and Column Covers. Can you please clarify where these occur?
A: Sheet A1.1D will add column covers in Addendum #3.

Q: Page A1.1B in room B104. Wall type 1A is called out which is 7/8 furring. The detail called out is 12 on A5.1, this calls out 2 1/2 “ track. Which is the correct wall type?
A: Type 1A is correct.

Q: I see different wall types called out on the floor plan that aren’t listed on the partition legend. I cannot find them, could you please point me in the right direction.
A: To be updated in Addendum #3.

Q: If insulation isn’t noted in the partition legend, I’m assuming the plan is to leave it out. Correct?
A: To be updated in Addendum #3.

Q: Drawing A 3.7 is missing.
A: There is no sheet A3.7.

Q: There are no corner guards indicated on A9.1A and A9.1C. Please confirm.
A: All walls in these areas are masonry, no corner guards needed.

Q: Where wall protection (WP) is listed on the room tags on the Floor Finish Plans, but not indicated on the drawings. Are we to assume this is for all walls? Example: Passage E101 has WP1A listed on the room tag but is not given a location, where AWP1D is also listed and marked at certain locations.
A: Refer to pattern details on finish plans, dash line indicates WP locations.

Q: The spec lists 120" extra drop at the top of the motorized projection screens. The max drip that Draper can do is 72". Please clarify what is correct.
A: Provide 72” drop and increase screen height by 48”

Q: The power plans and the specs call for a BDA/Area of Refuge System but does not indicate on the plans where the devices are to be installed. Please advise.
A: Area of refuge system in not required, provide 2 ways communication at elevator.

Q: Please verify that there is no wood science casework on this project as Casework Notes 17 & 20 on the Casework & Equipment Plans suggests.
A: No, all casework is P-Lam.

Q: Plan A9.2D, the custom countertop at Level 2 Bar-height Counter in Commons D201 is said to be quartz. Millwork details on Plan A8.3 indicates that top as being SS1 and SS3 solid surface. Please confirm the material type.
A: Refer to A8.3 for solid surface call-out, A9.2D to be revised in Addendum #3.

Q: Casework Plan A9.1B indicates SS2. There is no listing for SS2 in either the 064023 or 123600 specifications. If SS2 is required, please provide color for SS2.
A: SS2 will change to QT21 in Addendum #3.

Q: What specification are the metal pipe supports under for the casework contractor?

A: Means and Method.

Q: Are the countertops in Rooms B135 and B144 where the L-bracket shelving systems occur to be quartz (QTZ1) or solid surface. Both QTZ1 and SS1 surfaces occur at countertops in Room B135.
A: Neither, the L-Bracket shelving system is pre-fab – see spec 06 4023/2.11/C.

Q: In the specifications for roofing it mentions the roofing insulation to be a Minimum of R-30; but then it also mentions that insulation thickness to be 2”. Please clarify whether we can figure the roofing as (2) layers of 2.6” ISO or if we need to figure (3) layers of 2” ISO?
A: Provide 2 layers of 2.6”

Q: A1.1- Corridor 127 has a callout for "Solid Surface seating bench on CMU knee wall"- no detail is available for wall height- assumed height to be 2'? Please advise
A: 1’-4” CMU with 2 layers ¾” F.R.T. plywood and solid surface 1’-6” final height.

Q: A1.1a - A1.1f , A1.2C-1.2F floor plans do not show any wall/partition legend descriptions for wall types 4,5,6 CMU walls. Will this be provided in an addendum?
A: To be updated in Addendum #3.

HOT WATER TEMPERATURE SET-UP

1. CREATE DEMAND GREATER THAN MIXING VALVE'S MINIMUM FLOW RATING USING HOSE CONNECTION ON HW LINE WITHIN ASSEMBLY. IF FLOW CAN NOT BE ACHIEVED THIS WAY, TURN ON FIXTURES WITHIN THE BUILDING.
2. ADJUST TEMPERATURE TO 130°F AND LET STABILIZE. RE-ADJUST AS NECESSARY.
3. SET HIGH LIMIT ON AQUASTAT TO 132°F.

HOT WATER RETURN SET-UP (TO BE DONE AFTER HOT WATER TEMPERATURE SET-UP)

1. ENSURE THERE IS NO FLOW IN THE SYSTEM.
2. SET LOW LIMIT ON AQUASTAT TO 127°F.
3. START RETURN PUMP.
4. OPEN BALANCE VALVE ON RETURN LINE GOING BACK TO WATER HEATER TO 10% OF RETURN FLOW.
5. LET PUMP RUN FOR MINIMUM 30 MINUTES. IF TEMPERATURE INCREASES ON OUTLET OF MIXING VALVE CLOSE THE BALANCE VALVE UNTIL TEMPERATURE IS MAINTAINED. IF TEMPERATURE DECREASES, OPEN THE BALANCE VALVE UNTIL TEMPERATURE IS MAINTAINED.
6. ALLOW PUMP TO CYCLE TO ENSURE IT STARTS AND STOPS AT AQUASTAT SETTINGS.

140° HOT WATER RETURN SET-UP (TO BE DONE AFTER HOT WATER TEMPERATURE SET-UP)

1. ENSURE THERE IS NO FLOW IN THE SYSTEM
2. SET HIGH LIMIT ON AQUASTAT TO 142°F
3. SET LOW LIMIT ON AQUASTAT TO 137°F.
4. START RETURN PUMP.
5. ALLOW PUMP TO CYCLE TO ENSURE IT STARTS AND STOPS AT AQUASTAT SETTINGS.

2. CONTRACTOR MAY COMBINE 20A CIRCUITS AS NOTED IN SPECIFICATION.
3. CONDUCTORS ARE BASED ON THHN/THWN UP TO AND INCLUDING #4/0. LARGER THAN #4/0 ARE BASED ON TYPE XHHW.
4. CONDUIT SIZES ARE VALID FOR EMT OR RGS. CONDUIT SIZES SHALL BE ADJUSTED AS REQUIRED FOR OTHER TYPES OF CONDUIT.
5. ELECTRICAL CONTRACTOR TO COORDINATE WITH MECHANICAL CONTRACTOR AND PROVIDE REQUIRED WIRE SIZES TO ACCOMMODATE MECHANICAL EQUIPMENT LUG SIZES.
6. SIZE OF DISCONNECT SWITCH LOCATED AT EQUIPMENT SHALL BE SIZED BASED UPON OVERCURRENT PROTECTION OF THAT DEVICE.
7. OBTAIN APPROVAL FROM ENGINEER PRIOR TO INSTALLING DIFFERENT SIZE/QUANTITY OF CONDUCTORS TO OBTAIN AN EQUIVALENT AMPACITY.
8. SPLICE FROM ALUMINUM TO COPPER PRIOR TO ENTERING EQUIPMENT LISTED FOR USE WITH COPPER CONDUCTORS ONLY OR USE COPPER CONDUCTORS FOR THE ENTIRE LENGTH OF FEEDER.
9. N/A = NOT ACCEPTABLE

KEYED NOTES:
1. CONDUCTORS ARE BASED ON 90°C, 600V. INSULATED WIRE APPLIED AT 75°C FOR TERMINATION RATED 60/75°C OR 75°C. FOR TERMINATION RATED AT 60°C, USE CONDUCTORS AND CONDUIT SIZES INDICATED IN PARENTHESES.

2. PROVIDE BRANCH CIRCUIT CONDUCTORS AS INDICATED IN THE TABLE ABOVE FOR ALL LIGHTING AND RECEPTACLE BRANCH CIRCUITS. WHERE BRANCH CIRCUITS SERVE DEDICATED EQUIPMENT, THE CONTRACTOR MAY PERFORM VOLTAGE DROP CALCULATIONS BASED ON ACTUAL EQUIPMENT CONNECTED LOAD AND PROVIDE CONDUCTORS APPROPRIATELY SIZED TO LIMIT VOLTAGE DROP TO A MAXIMUM OF 3%.
3. CONDUCTOR SIZES ARE BASED ON MAXIMUM OF 3 CURRENT CARRYING CONDUCTORS IN A SINGLE CONDUIT.
4. LIMITS FOR CONDUCTOR LENGTHS SHOWN ARE BASED ON A MAXIMUM BRANCH CIRCUIT LOADING OF 64% OF THE BRANCH BREAKER RATING AND A MAXIMUM OF 3 PERCENT VOLTAGE DROP TO COMPLY WITH ASHRAE 90.1 AND THE NEC. FOR CIRCUITS LOADED GREATER THAN 64% OF BRANCH BREAKER RATING, THE CONTRACTOR SHALL PROVIDE CONDUCTORS APPROPRIATELY SIZED TO LIMIT VOLTAGE DROP TO 3%.

THE FOLLOWING THREE PHASE CALCULATIONS ARE BASED ON THE "POINT-BY POINT" METHOD WHERE:

$Isc = Isc \times M$, $M = 1/(1+f)$

CONDUCTOR OR BUS: $f = \frac{1.732 \times L \times Isc}{C \times n \times E}$

UTILITY XFMR: $Isc = \frac{kVA \times 100{,}000}{E \times 1.732 \times \%Z}$

XFMR: $f = \frac{Ip(sc) \times Ep \times 1.73 \times \%Z}{100{,}000 \times KVA}$ $Is(sc) = \frac{Ep \times M \times Ip(sc)}{Es}$

L = LENGTH (ft) OF CONDUCTOR, C = CONSTANT FROM TABLE, n = NUMBER OF CONDUCTORS PER PHASE
Isc = AVAILABLE SHORT CIRCUIT (A), E = VOLTAGE OF CIRCUIT

The 6-foot fall rule states: all contractors working at or above 6 feet must provide and use a fall arrest system with tie off points. However, using a guard rail system with complete top, mid, and toe rails/boards is acceptable in compliance with the MIOSHA standards.
- All contractors shall include all costs to install all new work within occupied spaces during non-instructional times related to the work occurring during the school year.
- The end of the day for all contractors shall be 11:00 pm Mon-Fri.
- Submit RFIs to Barton Malow Builders through BuildingConnected for a response.
- Pay close attention to plans and specifications.
- It is encouraged for all contractors to qualify their bid if there are any items that are unclear.
- This project does not fall under the Davis Bacon Prevailing Wage Law or Michigan prevailing wage.
- The bidder's list is available upon request to any subcontractors. Please contact Barton Malow for details.
- Please note: MIOSHA inspections have recently been full complete 3-to-4-day inspections. All contractors are to always follow all MIOSHA and BMC standards. Failure to abide by the standards will not be tolerated.
