PowerSchool Administrator User Guide

PowerSchool
Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

The data and names used to illustrate the reports and screen images may include names of individuals, companies, brands, and products. All of the data and names are fictitious; any similarities to actual names are entirely coincidental.

Preface

Use this guide to assist you while navigating the PowerSchool Student and Parent portal. This guide is based on the PowerSchool Student and Parent portal online help, which you can also use to learn the PowerSchool Student Information System (SIS) and to serve as a reference.

The PowerSchool Student and Parent portal online help is updated as PowerSchool is updated. Not all versions of the PowerSchool Student and Parent portal online help are available in a printable guide. For the most up-to-date information, click **Help** on any page in the PowerSchool Student and Parent portal.

Referenced Sections

This guide is based on the PowerSchool Student and Parent portal online help, and may include references to sections that are not contained within the guide. See the PowerSchool Student and Parent portal online help for the referenced section.

Security Permissions

Depending on your security permissions, only certain procedures may be available to you.

Navigation

This guide uses the > symbol to move down a menu path. If instructed to "Click **File > New > Window**," begin by clicking **File** on the menu bar. Then, click **New** and **Window**. The option noted after the > symbol will always be on the menu that results from your previous selection.

Notes

It is easy to identify notes because they are prefaced by the text "**Note:**."

Address Management User Guide

PowerSchool

Student Information System

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

The data and names used to illustrate the reports and screen images may include names of individuals, companies, brands, and products. All of the data and names are fictitious; any similarities to actual names are entirely coincidental.

Table of Contents

Introduction

With the introduction of Address Management, PowerSchool now provides a tool for address validation and boundary management. Address Management improves efficiency and accuracy in managing your address data, using cutting edge technology through visual representation of the address and boundary.

Address Validation

Address validation is the process by which an address is authenticated by an external address validation service, Google Maps. Google Maps determines if the address is valid based on whether the address can be found in its mapping database and if the address is of address level accuracy, one to which mail can be delivered, with the exception of post office boxes. If an address is valid, a geocode is associated with the address, and recorded in the student's database record. If the address is not valid, the areas of uncertainty associated with it and/or alternate addresses are identified.

Address validation can be performed for a selection of students or interactively for an individual student. Performing address validation for an individual student can be done using the student's Addresses page or the General Demographics page, as well as during the enroll a new student process.

Boundary Validation

Boundary validation is the process by which an address is identified as being inside or outside a given boundary. Boundaries are defined by the PowerSchool administrator for districts of residence and schools and stored in the PowerSchool database.

Boundary validation can be performed for a selection of students or interactively for an individual student. Performing boundary validation for an individual student can be done when performing the address validation process using the student's Addresses page or the General Demographics page, as well as during the enroll a new student process. The relationship of a student's address geocode to defined boundaries is indicated as "in" bounds or "out" of bounds on the interactive Address Validation page.

Quick Start

To get started immediately, perform the following tasks to set up and begin using Address Management:

- Enable Address Management

- Set Page-Level Permissions
- Define District Boundaries
- Define School Boundaries
- Import Records
- Perform Batch Address Validation
- Perform Interactive Address Validation
- Perform Batch Boundary Validation

Administration

Enable Address Management

By default, Address Management is disabled. PowerSchool provides the initial key and server needed to render Address Management operational. You can either use PowerSchool's free geocoding proxy server, which shares a rate limit between all customers, or you can purchase an enterprise key from Google, which processes up to 10 requests per second dedicated to your site. For more information, visit Google at http://code.google.com/apis/maps/signup.html. Once Address Management is enabled, Address Management functionality appears throughout PowerSchool.

Note: To disable Address Management, see *Disable Address Management*.

How to Enable Address Management

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Plugins, click **3rd Party Configuration**. The 3rd Party Configuration page appears.
3. Use the following table to enter information in the fields:

Field	Description
Geocoding Adapter	Choose one of the following from the pop-up menu: • **Disabled** to disable batch validation. This is the default setting. • **Google Maps - Requires ID** to enable batch validation using your Google Maps Enterprise Client ID. • **Geocoding via PowerSchool Proxy** to enable batch validation using PowerSchool's free Google Maps enterprise ID.
Google Maps Client ID	If you chose **Google Maps - Requires ID** as your **Geocoding Adapter**, enter your own Client ID. **Note:** If you chose **Geocoding via PowerSchool Proxy** as your **Geocoding Adapter**, this field is not applicable.

Google Maps Private Key	If you chose **Google Maps - Requires ID** as your **Geocoding Adapter**, enter the secret key you received from Google with your Client ID. **Note:** If you chose **Geocoding via PowerSchool Proxy** as your **Geocoding Adapter**, this field is not applicable.
PowerSchool Proxy URL	If you chose **Geocoding via PowerSchool Proxy** as your **Geocoding Adapter**, this field should be set to **https://gp.powerschool.com/powerschool-proxy-service/services/AddressValidatorProxyService?wsdl**. **Note:** If you chose **Google Maps – Requires Key** as your **Geocoding Adapter**, this field is not applicable.
Mapping Adapter	Choose one of the following from the pop-up menu: • **Disabled** to disable interactive map validation. This is the default setting. • **Google Maps** to enable interactive map validation.
Google Maps URL	If you chose **Google Maps** as your **Mapping Adapter,** this field should be set to **https://gp.powerschool.com/cgi-bin/googleMapsJSAPI_Proxy.cgi?version=3**. However, you may provide your own server by entering your server information. **Note:** If you chose **Disabled** as your **Mapping Adapter**, this field is not applicable.

4. Click **Submit**. The Districts Setup page displays.

Set Page-Level Permissions

To ensure that only the staff whose job duties include Address Management can make changes to the Address Management pages, you can define which staff members can access those pages by setting permissions as the page level. For more information about setting page-level permissions, see *Security Permissions*.

Define District Boundaries

Once Address Management is enabled, you can then define the geographical boundary for districts of residence. The geographical boundary is captured within a single encoded polyline. The encoded polyline is made up of sets of latitude/longitude pairs marking the boundary. The sets of latitude/longitude pairs are also known as points.

How to Create District Boundaries

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under District Information, click **Districts of Residence**. The Districts of Residence page appears.
3. Click **New** to create a new district of residence. The New District of Residence page appears.
4. Enter **District ID**, **District Name**, and **Sort Order** information as needed. For detailed information, see *District of Residence*.
5. Do one of the following:
    - If you have an encoded polyline from another system, you can enter it in the **Edit Boundary** text box and proceed to Step 8.
    - If you do not have an encoded polyline from another system, click **Edit Boundary**. The Boundary Definition pop-up window appears.
6. Use the following table to edit information in the fields:

Field	Description
Generate Boundary For	The name of the selected district or school.
Search	Identify the center of the boundary. Enter the address of the district or school and click **Search**. The map refreshes centered on the address.
Latitude	The latitude coordinates for each point on the map and in the Point List appear when selected.
Longitude	The longitude coordinates for each point on the map and in the Point List appear when selected.

Point List	For each point you add to the list, the latitude, longitude, and map level appears.
Add Point	Click on the map to place the point. You may drag the marker to adjust the location of the point. Once you are satisfied with the location of the marker, click to add as a point to the **Point List**. Repeat for each point of your boundary. **Note:** For basic map navigation controls, see *[Interactive Map]*.
Delete Selected Point	Select a point from the **Point List** and then click to delete the point.
Delete All Points	Click to delete all points from the **Point List**.
[Interactive Map]	Basic navigation controls include: • Click on the map to place a point on the map. • Click a point from the **Point List** to highlight it on the map. • Click and drag the map. • Click the appropriate arrow to move the view north, south, east or west. • Double-click to zoom in on the map. • Click **+** to zoom in on the center of the map. • Click **–** to zoom out. • Click **Map** to view street-level imagery. • Click **Sat** to view satellite imagery. • Click **Hyb** to view a combination of street-level and satellite imagery. **Note:** For additional information, see *Google Maps User Guide* at http://maps.google.com/support/.

7. Click **Accept** to accept the defined district boundary. The Boundary Definition pop-up window closes, and the encoded polyline appears in the **Edit Boundary** text box.

   Note: Click **Cancel** to discard any changes.

8. Click **Submit**. The Districts of Residence page displays the new or updated district of residence.

How to Edit District Boundaries

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under District Information, click **Districts of Residence**. The Districts of Residence page appears.
3. Click the district of residence you want to edit. The Edit District of Residence page appears.
4. Enter **District ID**, **District Name**, and **Sort Order** information as needed. For detailed information, see *District of Residence*.
5. Do one of the following:
    - If you have an encoded polyline from another system, you can enter it in the **Edit Boundary** text box and proceed to Step 8.
    - If you do not have an encoded polyline from another system, click **Edit Boundary**. The Boundary Definition pop-up window appears.
6. Edit the information as needed. For field descriptions, see *How to Create District Boundaries*.
7. Click **Accept** to accept the defined district boundary. The Boundary Definition pop-up window closes, and the encoded polyline appears in the **Edit Boundary** text box.

   Note: Click **Cancel** to discard any changes.

8. Click **Submit**. The Districts of Residence page displays the new or updated district of residence.

Define School Boundaries

Once you have defined the geographical boundary for your district, you can then define the geographical boundary for each of the schools within your district.

How to Define School Boundaries

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under General, click **Boundary**. The School Boundary Definition page appears.
3. Click **Edit Boundary**. The Boundary Definition pop-up window appears.
4. Use the table in *How to Define District Boundaries* to enter information in the fields.

5. Click **Accept** to accept the defined school boundary. The Boundary Definition pop-up window closes.

   Note: Click **Cancel** to discard any changes.

6. Click **Submit**. The Changes Recorded page appears.

Import and Export Records

To transfer Address Management data into and out of PowerSchool, you can use one of the many PowerSchool importing and exporting tools. For detailed information about importing and exporting records, see *Import and Export*.

How to Import Address Management Data

When importing data, you need to create an ASCII text file, preferably tab delimited. Do not use a colon or comma as the field delimiter. The import spreadsheet must include the following required fields: **Student_Number**, **First_Name**, **Last_Name**, **Geocode**, and/or **Mailing_Geocode**. The following format must be used when entering geocode information: Lat: [coordinate], Lng: [coordinate]. For example, Lat: 41.3800231, Lng: -111.0229216.

How to Export Address Management Data

When exporting data, enter the following required fields to be included on the exported spreadsheet: **Student_Number**, **First_Name**, **Last_Name**, **Geocode**, and/or **Mailing_Geocode**. Do not use a colon or comma as the **Field Delimiter**. Preferably, use a tab to separate each field in the export file.

Search for Students

To search for students based on geocode, you can use the **Search Students** function on the PowerSchool start page. Depending on the expression you enter, you can search for students with a geocode, students without a geocode, or a subset of either. The following table provides examples of search expressions using geocode. You may also use mailing_geocode. For more information, see *Student Search*.

How to Search for Students Using Geocode

1. On the start page, enter one of the following command syntaxes in the **Search Students** field:

Field	Description
geocode#“”	All students where a value appears in **Geocode** field.
grade_level=9;geocode#“”	All ninth-grade students where a value appears in **Geocode** field.
grade_level=10;geocode#“”	All tenth-grade students where a value appears in **Geocode** field.
grade_level=11;geocode#“"	All eleventh-grade students where a value appears in **Geocode** field.
grade_level=12;geocode#“”	All twelfth-grade students where a value appears in **Geocode** field.
geocode=“”	All students where a value does not appear in **Geocode** field.
grade_level=9;geocode=“”	All ninth-grade students where a value does not appear in **Geocode** field.
grade_level=10;geocode=“”	All tenth-grade students where a value does not appear in **Geocode** field.
grade_level=11;geocode=“”	All eleventh-grade students where a value does not appear in **Geocode** field.
grade_level=12;geocode=“”	All twelfth-grade students where a value does not appear in **Geocode** field.

2. Click the **Search** icon. A list of all students matching the search criteria you entered appears in the Current Student Selection section.
3. Do one of the following:
    - To work with an individual student, click the name of the student whose record you want to work with. The page displays that student's record.

- To work with the group of students, click the **[Select Function]** arrow and choose a function from the Group Functions pop-up menu. For more information about the Group Functions page, see *Work with Groups*.

Report Map Errors

Google Maps gets its map data from TeleAtlas. While TeleAtlas works with over 50,000 reliable resource world-wide to make over 10,000 map improvement updates each day, it's possible that you may find an error in the map data. To report a map error, visit Google's Fix an error on Google Maps page.

How to Report Map Errors

1. Open your Web browser.
2. Enter www.google.com and press RETURN (Mac) or ENTER (Windows). The Google home page appears.
3. Click **Maps** > **Help** > **Fix an error on Google Maps**. The Fix an error on Google Maps page appears.

   Note: To access the Fix an error on Google Maps page, you can also simply click http://maps.google.com/support/bin/answer.py?hl=en&answer=98014.

4. Click the link to the error that best describes the issue you are experiencing.
5. Follow instructions provided by Google.

Disable Address Management

Once you have enabled Address Management, later you may find it necessary to render it inoperative. If Address Management is disabled, certain Address Management functionality no longer appears throughout PowerSchool.

Note: To enable Address Management, see *Enable Address Management*.

How to Disable Address Management

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Plugins, click **3rd Party Configuration**. The 3rd Party Configuration page appears.
3. Use the following table to enter information in the fields:

Field	Description
Geocoding Adapter	To disable batch validation, choose **Disabled** from the pop-up menu.
Mapping Adapter	To disable interactive map validation, choose **Disabled** from the pop-up menu.

4. Click **Submit**. The Districts Setup page displays.

Validation

Perform Batch Address Validation

The batch address validation process provides you with the ability to validate and update address information for multiple students all at one time.

The batch address validation process may be used to validate either the primary address or the mailing address of the selected students. When validating primary addresses, a geocode is generated and associated to the student's primary address. When validating mailing addresses, a geocode is generated and associated to the student's mailing address.

When performing the batch address validation process, a street, city, state, and zip code may be automatically updated if there is only one matching address that is of address level accuracy. If there is not an address meeting these criteria, a validation exception occurs, and the address appears as an exception, providing you the opportunity to reconcile the discrepancy.

Note: This process may take several minutes to complete (or longer) depending on the selection size and your connection speed to the Internet.

How to Perform Batch Address Validation

Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Validation, choose **Batch Address Validation**. The Batch Address Validation page appears.
4. Use the following table to enter information in the fields:

Field	Description
Validate which students	Indicate which students you want to validate addresses for by choosing one of the following from the pop-up menu: • Choose **All Students** to perform the validation process for all students in the current school.

	• Choose **Current Selection** to perform the validation process for the selected set of students in the current school. **Note:** For performance reasons, it is recommended that you perform the validation process for a selected set of students rather than for all students.
Validate which addresses	Indicate which addresses you want to validate by choosing one of the following from the pop-up menu: • Choose **Addresses without geocodes** to perform the validation process for only those addresses that have not been previously validated and do not have a geocode. **Note:** For performance reasons, it is recommended that you perform the validation process for addresses that do not have geocodes rather than for all addresses.
Which address types	Indicate which address type you want to validate by choosing one of the following from the pop-up menu: • Choose **Primary** to perform the process for students' home address. • Choose **Mailing** to perform the process for students' mailing address.
Update Street, City, State, Zip	Select the checkbox to automatically update the street, city, state, and zip code of each address with the street, city, state, and zip code information provided by the validation process, if only one address is returned by the validation service and that address is of address level accuracy. Alternatively, leave the checkbox blank if you do not want to automatically update the street, city, state, and zip code of each address with the street, city, state, and zip code information provided by the validation process. **Note:** This checkbox is applicable only when one address of address level accuracy exists.

5. Click **Submit**. The Batch Address Validation Results page displays a summary of the processed records and any validation exceptions, including the student's name, address, and error message. Possible error messages include:
    - Unknown location. Cannot find address.
    - Country level accuracy. Cannot find state.
    - State/Province level accuracy. Cannot find city.
    - County level accuracy. Cannot find street.
    - City level accuracy. Cannot find street.
    - Postal code level accuracy. Cannot find street.
    - Partial street level accuracy. Cannot find street number.
    - Intersection level accuracy. Cannot find street number.
    - Premise level accuracy. Invalid address.

        Note: Premise level accuracy appears when only the name of a building or type of building, such as airport, can be found.

6. If an exception appears, click the **Name** of the student to view the student's General Demographics page where you can then reconcile the discrepancy.

Perform Interactive Address Validation

Interactive address validation allows you to view a student's home address or mailing address on a map, providing visual confirmation of the location. If more than one address is returned by the service, such as if the city or state fields were omitted, you are provided the opportunity to choose the correct one from a list of alternatives.

Note: Interactive address validation can also be performed when enrolling a new student. For detailed information, see *Enroll New Student*.

How to Perform Interactive Address Validation

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Do one of the following:
    - Under Information, choose **Addresses** from the student pages menu. The Addresses page appears.
    - Under Information, choose **Demographics** from the student pages menu. The General Demographics page appears.
3. Use the following table to enter Home Address information:

Field	Description
Street, Apt/Suite	Enter the street address in the first field, and apartment or suite number in the second field, if any.
City, State, Zip	Enter the city, state, and zip code for the street address.
Geocode	The latitude/longitude pair that represents the geographical location of the home address. This field is read-only and is automatically generated when the address is validated or imported.

4. Use the following table to enter Mailing Address information:

Field	Description
Copy From Home Address	If a student's mailing address is the same as their home address, click to duplicate the home address information in to the mailing address fields.
Street, Apt/Suite	Enter the street address in the first field, and apartment or suite number in the second field, if any.
City, State, Zip	Enter the city, state, and zip code for the street address.
Geocode	The latitude/longitude pair that represents the geographical location of the mailing address. This field is read-only and is automatically generated when the address is validated or imported.

5. Click **Validate** next to the address for which you want to perform address validation. The Address Validation pop-up window appears.
6. Use the following table to enter Address Validation information:

Field	Description

View Boundary	Indicate which boundary you want to view on the interactive map by choosing one of the following from the pop-up menu: • Choose **None Selected** if you do not want to view boundaries. By default, the pop-up menu is set this value. • Choose **Current School** to view the student's current school's boundaries. • Choose **Next School** to view the student's next school's boundaries. • Choose a district or school to view that district or school's boundaries. **Note:** This pop-up menu only appears when validating home addresses. Boundaries in the list appear prefixed by "in" bounds or "out" of bounds and may appear color-coded. Green indicates the address is inside the boundary. Red indicates the address is outside the boundary. Only districts or schools with defined boundaries appear in the pop-up menu. For more information, see *Define School Boundaries*.
Student Info	The student's **Name**, **Address Type**, **Selected Address** and **Geocode**, if any, appear. Before clicking **Accept**, you must select a valid address. This can either be the original address, if valid, or an alternative address. **Note:** Click **Cancel** to discard any changes and close the Address Validation pop-up window.
Original Address	The student's original address information appears.
Alternative Address	Determine which alternative address is the best match to the student's original address. You can use the interactive map to assist you in making that decision. Once you have determined which alternative address is the best match to the student's original address, do one of the following: • Select the **Full Update** option to update the address that appears in the Student Info section to this address, including street address, city, state, zip, and geocode.

	• Select the **Partial Update** option to only update the city, state, zip, and geocode of the address that appears in the Student Info section. **Note:** This option is useful if your school's policy includes standards for address components, such as use "Avenue" in lieu of "Ave."
[Interactive Map]	Use the interactive map to assist you determining which alternative address you want to select. The selected address appears as a marker on the map displaying address and geocode information. Basic navigation controls include: • Click the marker to view the Info window. • Click the map to close the Info window. • Click and drag the map. • Click the appropriate arrow to move the view north, south, east or west. • Click **+** to zoom in on the center of the map. • Click **–** to zoom out. • Click **Map** to view street-level imagery. • Click **Sat** to view satellite imagery. • Click **Hyb** to view a combination of street-level and satellite imagery. **Note:** For additional information, see *Google Maps User Guide* at http://maps.google.com/support/.

7. Once you have identified and selected the student address you want, click **Accept** to accept the address. Depending on which student page you were initially on, either the Addresses or General Demographics page appears.

   Note: Click **Cancel** to discard any changes.

8. Note the address information you selected now appears in the respective fields.
9. Click **Submit**. The Changes Recorded page appears.

Perform Batch Boundary Validation

The batch boundary validation process provides you with the ability to establish a set of students who fall within or outside of a given boundary. Once a set of students is identified, you can then perform a number of group functions with those students, such as setting the next school indicator or printing reports or form letters for a group of selected students..

Note: Boundary validation is based on a student's home, or primary, address.

How to Perform Batch Boundary Validation

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Validation, choose **Batch Boundary Validation**. The Batch Boundary Validation page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Use the following table to enter information in the fields:

Field	Description
Check boundary membership for which student	Indicate which students you want to validate boundaries for by choosing one of the following from the pop-up menu: • Choose **All Students** to perform the validation process for all students in the current school. • Choose **Current Selection** to perform the validation process for the selected set of students in the current school. **Note:** For performance reasons, it is recommended that you perform the validation process for a selected set of students rather than for all students.
Use which boundary	Choose the district or school from the pop-up menu for which you want to perform the boundary validation process.

	Note: Only districts or schools with defined boundaries appear in the pop-up menu.
Select students who are	Indicate which students you want the validation process to return as an updated selection by choosing one of the following from the pop-up menu: • Choose **Within the selected boundary** to return students who live within the boundary. • Choose **Outside the selected boundary** to include students who live outside of the boundary.

5. Click **Submit**. The Batch Boundary Validation Results page appears. The **View Current Selection** link appears indicating the number of students found within or outside the selected boundary.
6. To work with the group of students, click **View Current Selection**. The Student Selection page appears.

Definition of Terms

The following terms are used in reference to Address Management:

Address Level Accuracy

An address to which mail can be delivered, with the exception of post office boxes.

Boundary

A defined area on a map.

Encoded Polyline

A series of character codes identifying the sets of latitude/longitude pairs marking a boundary.

Geocode

The latitude/longitude pair that represents the geographical location of an address.

Home Address

The place where a student actually lives. Also known as primary address.

Mailing Address

The place where a student receives mail.

Marker

Object on the map that represents a point.

Point

Set of latitude/longitude pair on the map noted by marker.

Polylines

A collection of points.

Primary Address

The place where a student actually lives. Also known as home address.

Analytics User Guide

PowerSchool

Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

Table of Contents

Introduction

PowerSchool includes a close integration with Analytics. Analytics provides substantial analytic tools for evaluating test scores and other data.

Using the search power of PowerSchool, users can now select students, sections, courses, schools, teachers or the entire district, and view the Analytics District Dashboard and Student Profile views within PowerSchool.

Analytics Server Settings

There are several settings that must be in place on the Analytics server to have a successful Analytics integration with PowerSchool. The following section provides details on these settings.

Set Up District Dashboard and Student Profile Templates

On the Analytics server, make sure you have set up the District Dashboard and Student Profile templates. These templates display the Analytics data inside the PowerSchool application.

Add Vendors on the Analytics Server

You must add a vendor on the Analytics server to view Analytics data in PowerSchool. The information you enter on the Edit Vendor page is used to populate fields on the Analytics Settings page in PowerSchool.

The Vendor Name, Username, and password provided in this procedure are used as examples. You may enter a value of your choice in each of these fields.

How to Add a Vendor on the Analytics Server

1. Sign in to the Analytics Server.
2. Click **Setup & Maintenance**. The Setup & Maintenance menu appears.
3. Select **Other Maintenance**. The Other Maintenance menu appears.
4. Select **Vendor**. The Vendor List appears.
5. Click **Add Vendor**. The Edit Vendor page appears.
6. Use the following table to enter information in the fields:

Field	Description
Vendor Name	Enter **powerschool**.
Username	Enter **powerschool**.
Password	Enter a password.

7. Click **Save**.

Add Users on the Analytics Server

Create a user name on the Analytics server to allow access to Analytics data through the PowerSchool application.

How to Add a User on the Analytics Server

1. On the Analytics server, click **Setup & Maintenance**. The Setup & Maintenance menu appears.
2. Select **Other Maintenance**. The Other Maintenance menu appears.
3. Select **Users**. The User List appears.
4. Choose **District Office** from the **Choose a Building** pop-up menu.
5. Click **Add User**. The Add User page appears.
6. Use the following table to enter information in the fields:

Field	**Description**
Internal Key	Enter a value. This value will be entered in the **User Name** field on the Analytics Settings page in the PowerSchool application.
Username	Enter the same value you entered in the **Internal Key** field.
Password	Enter a password. **Note**: This field is required but is not currently used to authenticate with the PowerSchool server.
Confirm Password	Re-enter the password. **Note**: This field is required but is not currently used to authenticate with the PowerSchool server.
Email	Enter the user's email address. **Note**: This field is required but is not currently used to authenticate with the PowerSchool server.
Role	Choose the appropriate role from the pop-up menu.

User Security Group	Choose the appropriate user security group from the pop-up menu.

7. Click **Save**.

Analytics Settings in PowerSchool

Once you have completed adding a vendor and user on the Analytics server, you must add the information in PowerSchool to allow for single sign on access.

When creating user accounts, you can select from the following two types:

- Synchronized accounts allow you to ensure that the exact permissions of an administrator or teacher in PowerSchool match the exact permissions of that same user in Analytics. When the user loads Analytics, they will be restricted to exactly the permissions given their specific account. This ability allows you to give specific administrators or teachers more access to Analytics, while limiting access to other users. The Synchronized Accounts model is the preferred method as it has more fine-tuned permission roles.
- Shared generic accounts (Shared Authentication) allow you to set up one-to-three generic users in Analytics and assign permissions according to the type of user. This is an alternative to the synchronized accounts model. Normally, there will be a generic admin Analytics user, a generic teacher user, and a generic parent user. Permissions will be set in Analytics separately for each type of user.

Additionally, it is important to note:

- **Teacher Role:** When creating a new teacher in PowerSchool, even though you may not specify a security group, the security group defaults to “Unassigned Group 1”. In order for teachers to be able to access Analytics, Analytics will need to be enabled for this security group.

  Note: If you are already using “Unassigned Group 1”, it is recommended to create a new group and reassign users currently belonging to this group to the new group and reserve the “Unassigned Group 1” to assign Analytic access for teachers.

- **Teacher and Admin Role:** If a teacher also serves as an admin, typically a specific security group is assigned to accommodate this dual role. In order for teachers to be able to access Analytics, Analytics will need to be enabled for this security group.

Enable Analytics

You must enable Analytics to be able to view the Analytics Dashboard in PowerSchool and the PowerSchool Student and Parent portal. Once enabled, you can manage the data libraries in PowerSchool.

How to Enable Analytics

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Plugins, click **Pearson Applications**. The Pearson Applications page appears.
3. Choose **Analytics Settings**. The Analytics Settings page appears.
4. Use the following table to enter information in the fields:

Field	Description
Analytics Enabled	Select the checkbox to enable Analytics.
Domain or Host IP	Enter the domain or host IP of the Analytics application server, provided by Analytics, such as **https://prod1.analytics.com**. **Note:** Changing this setting does not require a restart of PowerSchool. However, you may still be required to clear your browser cookies before the update takes effect.
Dataset Name	Enter the dataset (Analytics instance name) provided by Analytics. The Dataset Name is the same value that you enter after the IP address when you sign in to your Analytics Server, such as **https://prod2.analytics.com/signin/demo-applegrove**. In this example, the Dataset Name would be "demo-applegrove."
Vendor Name	Enter the vendor name you created on the Analytics server. For more information, see *How to Add a Vendor on the Analytics Server*.
Vendor Password	Enter the vendor password you created on the Analytics server. For more information, see *How to Add a Vendor on the Analytics Server*.
Teacher/Admin Authentication Mode	Do one of the following: • Choose **Synchronized Accounts** from the pop-up menu. The **Guardians Shared Analytics User** field appears. **Note**: Synchronized account authentication requires that the same user accounts exist in both PowerSchool and Analytics. When using the Analytics data loader, teacher accounts from

	PowerSchool are automatically created and updated in Analytics for all teachers identified in the class roster data that's extracted from PowerSchool. Admin accounts can also be automatically created and updated in Analytics for each user included in a USER file that may optionally be included as part of the Analytics data load process. If a USER file is not provided, the admin accounts will need to be created manually in Analytics to enable single sign-on access from PowerSchool. For synchronized authentication to work for any PowerSchool user, the corresponding user account in Analytics must have the correct value in the **Internal Key** field. When using the data loader, this field is populated automatically for all users identified (i.e. teachers identified in class roster data and other users provided in the USER file). SIF will populate this field for all teacher accounts. **Note on the Analytics Internal Key**: The Analytics Internal key should match the system defined **Teacher ID** field in PowerSchool not the Teacher_Number, which is accessed via DDE. This is the key that allows the synchronized accounts to work successfully. If the admin accounts in Analytics do not have the **Internal Key** field, then this must be populated for this synchronized setting to work for administrators. • Choose **Shared Authentication** from the pop-up menu. The **Admin Shared Analytics User**, **Teacher Shared Analytics User**, and **Guardians Shared Analytics User** fields appear. • Enter the value from the **Internal Key** field on the Analytics server. For more information, see *How to Add a User on the Analytics Server*. **Note**: Ensure that Analytics has one-to-three generic users set up. Ideally, there is one for each Admin, Teacher, and Parent. If using the same shared account for all three types of users, parents

	will always be restricted to just the student they have access to, with no ability to navigate.
Enable Analytics in the Following Locations	Select the applicable checkbox to add Analytics in the following areas: **Note**: All check boxes are selected by default, except for Student Analysis (Parent Portal), which is deselected by default. • **Overall District Management** - Select to allow access to Analytics Management dashboard. • **District Dashboard** - Select to allow district access to the Analytics dashboard on the PowerSchool Dashboard page. For more information, see *Dashboard*. • **School Dashboard** - Select to allow school access to the Analytics dashboard on the PowerSchool Dashboard page. For more information, see *Dashboard*. • **Course Analysis** - Select to allow access to Analytics Course view on the Courses page. For more information, see *How to View the Course List*. • **Section Analysis** - Select to allow access to Analytics Section view on the Section page. For more information, see *How to View Course Sections*. • **Teacher Analysis** - Select to allow access to Analytics Teacher View on the Staff page. For more information, see *How to View Analytics Teacher Data*. • **Student Analysis (Admin Portal)** - Select to allow access to Analytics Student Sandbox on the Student Quick Lookup page. For more information, see *Student Page Layout*. • **Student/Section Analysis (Teacher Portal)** - Select to allow access to Analytics on the Start page and Student Quick Lookup page in the PowerTeacher portal. For more information, see *PowerTeacher Start Page* and *PowerTeacher Student Information* in the PowerTeacher online help. • **Student Analysis (Parent Portal)** - Select to allow access to Analytics on the Grades and Attendance page in the PowerSchool Student and Parent portal. For more information, see *Grades and Attendance* in the PowerSchool Student and Parent portal online help.

5. Click **Submit**. The Analytics Settings page appears.

Enable Analytics User Access

In order to allow access to Analytics, you must set the user group security permissions. Modify the related users group security permissions to allow access to Analytics.

Note: For more information, see *Group Security Permissions*.

How to Enable Analytics User Access

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Security, click **Groups**. The Groups page appears.
3. Click a name in the **Group Name** column. The Edit Group page appears.
4. Select the **Analytics Access** checkbox.

   Note: This field only displays if Analytics is enabled. For more information, see *Enable Analytics*.

5. Click **Submit**.

Manage Analytics Data Libraries

If Analytics is enabled, you can manage the data libraries via PowerSchool.

How to Manage Analytics Data Libraries

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Plugins, click **Pearson Applications**. The Pearson Applications page appears.
3. Click **Analytics Management**. The Analytics Management page appears.

   Note: The data that appears on the page is not served by PowerSchool. It is rendered from a separate Analytics server. For more information on the configuration of Analytics, see the Analytics documentation.

Disable Analytics

Once you have enabled Analytics, later you may find it necessary to render it inoperative.

Note: To enable Analytics, see *Enable Analytics*.

How to Disable Analytics

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Plugins, click **Pearson Applications**. The Pearson Applications page appears.
3. Click **Analytics Settings**. The Analytics Settings page appears.
4. Deselect the **Analytics Enabled** checkbox.
5. Click **Submit**. The Analytics Settings page appears.

View Analytics Data

Once enabled, Analytics data appears throughout PowerSchool, the PowerSchool Student and Parent portal, and PowerTeacher. For more information, see *Enable Analytics*.

Note: The data that appears is not served by PowerSchool. It is rendered from a separate Analytics server. For more information on the configuration of Analytics, see the Analytics documentation.

View Analytics Data via the Dashboard

Use this procedure to view Analytics data in PowerSchool via the Dashboard.

How to View Analytics Data via the Dashboard

1. Sign in to PowerSchool.
2. On the start page, choose **Dashboard** under Functions in the main menu. The Dashboard page appears.
3. Click the **Analytics** tab to view Analytics data.

   Note: For more information, see *Dashboard*.

View Analytics Course Data

Use this procedure to view Analytics course data in PowerSchool.

How to View Analytics Course Data

1. Sign in to PowerSchool.
2. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
3. Under Courses, click **Courses**. The Courses page displays.
4. Click the **Analytics** icon to view Analytics data.

   Note: For more information, see *Manage Courses*.

View Analytics Section Data

Use this procedure to view Analytics section data in PowerSchool.

How to View Analytics Section Data

1. Sign in to PowerSchool.
2. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
3. Under Scheduling, click **Sections**. The Sections page appears.
4. Choose the course name from the courses menu. The course information page lists the course sections.
5. To work with the group of students in all of the sections of the selected course, click **Make all students listed above the current selection**. The Group Functions page appears. For more information, see *Work with Groups*.
6. Click the **Analytics icon** to view Analytics data.

View Analytics Teacher Data

Use this procedure to view Analytics teacher data in PowerSchool.

How to View Analytics Teacher Data

1. Sign in to PowerSchool.
2. On the start page, search for and select a staff member. For more information, see Staff Search.
3. Click **Analytics Teacher View**. The Analytics Teacher View page appears.

   Note: You can also access the Analytics Teacher View from the Teacher Schedule page. For more information, see *Staff Current Schedule*.

   Note: For more information see *Analytics Teacher View*.

View Analytics Student Data

Use this procedure to view Analytics student data in PowerSchool.

How to View Analytics Student Data

1. Sign in to PowerSchool.
2. On the start page, click the **Analytics** icon to view Analytics student data.

   Note: For more information see *Analytics Student View*.

View Analytics Student Data via the PowerSchool Student and Parent Portal

Use this procedure to view Analytics student data in the PowerSchool Student and Parent portal.

How to View Analytics Student Data via the PowerSchool Student and Parent Portal

1. Sign in to the PowerSchool Student and Parent portal.
2. On the start page, click **Grades and Attendance** from the navigation menu. The Grades and Attendance page appears.
3. Click the **Analytics Student View** tab. The Analytics Student View page appears.

View Analytics Student Data via PowerTeacher

Use this procedure to view Analytics student data in the PowerTeacher.

How to View Analytics Student Data via PowerTeacher

1. Sign in to the PowerTeacher portal.
2. Do one of the following:
    - On the start page, click the **Analytics** icon to view Analytics student data.
    - On the Student Information page, click the **Analytics Student View** tab to view Analytics Student data.

Attendance Tracking and Notification User Guide

PowerSchool

Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

Table of Contents

Introduction

Attendance Tracking and Notification can be used in combination with the basic PowerSchool attendance setup. The additional setup elements allow for tracking of truant attendance using a combination of thresholds and triggers. Each time a student meets or exceeds a specific threshold, a notification record is created in the PowerSchool database. The notification records can be used to print attendance letters for students with truant attendance.

For example, you may set up your school to track unexcused absences. Using basic PowerSchool attendance, you can report the total number of unexcused absences for a student for particular period of time. Using attendance tracking, you can report when the student reaches a defined number of unexcused absences (thresholds) for multiple instances (triggers). In this example, you may track the first time the student reaches five unexcused absences, as well as the second time (ten absences) and third time (fifteen absences).

Remote Attendance

All calculations for Attendance Tracking and Notification will consider attendance for classes taken at a remote school. Rules regarding remote attendance:

- Both schools must record attendance in either Meeting-Period-To-Day (MPTD) or Meeting-Time-To-Day (MTTD).
- Both schools must be set up to use ATN.
- All calculations are based on the attendance settings defined at the students ‘home’ school regardless of the settings defined at the remote school.

For example, school A is the student’s ‘home’ school, and is ATN is configured to use Meeting – Period to Day (MPTD). All calculations for this student would be based on the attendance conversion set up for Period attendance at School A.

State Reporting

For state-specific information, see PowerSchool's recommended state-specific setup of Attendance Tracking and Notification settings available on PowerSource in your state reporting setup guide. If there is no state-specific setup specified in your state reporting setup guide, there is no state-specific setup considerations need to be taken into account.

Basic Attendance Setup

Attendance Tracking and Notification requires that PowerSchool attendance is set up to accurately calculate attendance and membership.

The attendance setup elements that directly affect Attendance Tracking and Notification are:

- Attendance code categories
- Attendance codes

Attendance Code Categories

Attendance code categories are used to identify types of attendance. The attendance codes associated to a particular category must either be absent codes or present codes. For example, you must set up an attendance code category to track unexcused absences, and all of the codes assigned to the category must be absent codes. The default Unexcused category set up in PowerSchool is designed to track unexcused absences and can be used for attendance tracking and notification. Alternatively, if you want to track unexcused absences separately for different reports, then you must set up two unexcused absence categories, one for attendance tracking and notification and one for other purposes.

If you want to track unexcused tardies in attendance tracking and notification, you must set up an unexcused tardy attendance code category. Note that tardies are considered present, thus all codes assigned to the Tardy attendance code category must be present codes. In order to track both unexcused tardies and unexcused absences, you must have a separate attendance code category for each.

Once attendance code categories are set up, these code categories must be associated to the appropriate attendance codes and attendance tracking category, in order to properly track attendance.

For information about associating attendance code categories with attendance tracking categories, see *Unexcused Tracking Categories* or *Illness Tracking Categories*.

For more information about attendance code categories, see *Attendance Code Categories* or the *Attendance User Guide* available on PowerSource.

Attendance Codes

Attendance codes are used to assign an attendance to a student for a particular day, section meeting, or interval. For example, you may set up attendance codes such as Unexcused Absence (UE) and Illness Absence (IL).

Once attendance codes are set up, these codes must be associated with the appropriate attendance code category. If you track both unexcused tardies and unexcused absences, you must assign one category or the other to an attendance code, but not both. If an attendance code is considered both an unexcused absence (absent) and an unexcused tardy (present), then two attendance tracking records are created from one attendance code assigned to the student.

Note: For most attendance reports, attendance status is determined by the presence status (Present or Absent) of the attendance code. For attendance tracking and notification reports, however, the presence status is ignored. Instead, the student's status is determined by the unique settings used for attendance tracking.

For more information about attendance codes, see *Attendance Codes* or the *Attendance User Guide* available on PowerSource.

Summary

- Attendance codes must be set up.
- Attendance codes must be associated with the appropriate attendance code category.
- Attendance code categories must be set up to identify types of attendance.
- Separate attendance code categories must be set up for unexcused tardies and unexcused absences.
- Attendance code categories must be associated with attendance tracking categories.

Attendance Tracking District Setup

Once you have set up basic attendance, you can then define the following attendance tracking and notification settings for your district:

- Attendance Tracking Methods
- Unexcused Tracking Levels
- Illness Tracking Levels

The Percent attendance tracking method must be set up for the district. Additional attendance tracking methods are optional. Unexcused and illness levels are also optional.

Attendance Tracking Methods

The Percent attendance tracking method must be set up with a threshold in order to properly track attendance, even if only tardies are tracked. Attendance tracking methods are used to track unexcused attendance. There are no tracking methods for illness. Illness by default uses the Year method seen in the table below.

Once the Percent tracking method is set up, additional tracking methods can be set up to be used in conjunction with Percent.

The following tracking methods are available:

Tracking Method	Description
Percent (Required)	The percentage of the day the student can miss due to unexcused absence attendance. The Percent method is calculated as ‘greater than’ the value set for the threshold. For example, if you enter 50 for the threshold, the student must be absent more than 50% of the school day in order to be reported. For example, for a four-period day, the student would need to miss more than two periods due to unexcused absence.
Tardy Day	The number of periods the student can be assigned an unexcused tardy. The Tardy Day method is calculated as greater than or equal to the threshold. For example, if you enter one for the threshold, the

	student must be counted as unexcused tardy for one or more periods in order to be reported.
Consecutive	The number of consecutive days the student can miss due to unexcused absence in a year. The Consecutive method is calculated as greater than or equal to the value entered for the threshold and is combined with the Percent method. For example, if the Percent threshold is 99 and the Consecutive threshold is three, then the student must miss more than 99% of three consecutive school days during the school year to be reported.
Semester	The number of days the student can miss due to unexcused absence per semester. The Semester method is calculated as greater than or equal to the value entered for the threshold and is combined with the Percent method. For example, if the Percent threshold is set to 50 and the Semester threshold is set to four, then the student must miss more than 50% of four school days during the semester in order to be reported.
Year	The number of days the student can miss due to unexcused absence per school year. The Year method is calculated as greater than or equal to the value entered for the threshold and is combined with the Percent method. For example, if the Percent threshold is set to 75 and the Year threshold is set to seven, then the student must miss more than 75% of seven school days during the school year in order to be reported. **Note:** The year method is not available as an option when creating levels and is used for reporting purposes only. The Percent method calculates using the year by default, so use of the Percent method alone can be used for reporting on a year basis.

Period/Intervals	The number of periods or intervals a student can miss in a day due to an unexcused attendance. In order for this method to function as expected, the Meeting attendance mode must be selected as the “Default attendance page” via **Start Page > School Setup > [Attendance] Preferences**. The Meeting attendance mode must also be selected for the student’s Full Time Equivalency (FTE) via **Start Page > School Setup > Full-Time Equivalencies**. FTEs are assigned to students via **Start Page > Student Search > Transfer Info > Edit Enrollment**. **Note:** This method cannot be configured to track attendance in a specific period or section. Once the student is identified as meeting the threshold for any period in the day, the method does not count additional periods.
Trimester	The number of days the student can miss due to unexcused absence per Trimester. The Trimester method is calculated as greater than or equal to the value entered for the threshold and is combined with the Percent method. For example, if the Percent threshold is set to 50 and the Trimester threshold is set to four, then the student must miss more than 50% of four school days during the Trimester to be reported.
Quarter	The number of days the student can miss due to unexcused absence per Quarter. The Quarter method is calculated as greater than or equal to the value entered for the threshold and is combined with the Percent method. For example, if the Percent threshold is set to 50 and the Quarter threshold is set to four, then the student must miss more than 50% of four school days during the Quarter to be reported.
Calendar Month	The number of days the student can miss due to unexcused absence per Calendar Month.

	This method is calculated as greater than or equal to the value entered for the threshold and is combined with the Percent method. For example, if the Percent threshold is set to 50 and the Calendar Month threshold is set to four, then the student must miss more than 50% of four school days during the Calendar Month in order to be reported.
Calendar Week	The number of days the student can miss due to unexcused absence per Calendar Week. This method is calculated as greater than or equal to the value entered for the threshold and is combined with the Percent method. For example, if the Percent threshold is set to 50 and the Calendar Week threshold is set to four, then the student must miss more than 50% of four school days during the Calendar Week in order to be reported.

How to Add an Attendance Tracking Method

Use this procedure to add an attendance tracking method.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Attendance, click **Attendance Tracking and Notification**. The Attendance Tracking and Notification page appears.
3. Click **Tracking Methods**. The Attendance Tracking Methods page appears.
4. Click **New.** The New Attendance Tracking Method page appears.
5. Use the following table to enter information in the fields:

Field	Description
Name	Choose one of the following attendance tracking methods from the pop-up menu: • **Percent** • **Tardy Day**

	• **Consecutive** • **Semester** • **Year** • **Period** • **Trimester** • **Quarter** • **Calendar Month** • **Calendar Week** **Note:** Each tracking method can only be set up once. If a tracking method has already been set up, it does not appear in the list. The Percent tracking method must be set up for all districts using attendance tracking.
Threshold	Enter the threshold for the attendance tracking method. **Note:** The threshold cannot be zero or blank.
Minimum Period/Interval Length (in Minutes)	Enter the minimum minutes required for a class period. The student must be marked unexcused for a period that is at least the minimum number of minutes in length to be reported for this tracking level. The length of a period is determined by the minutes in the bell schedule. **Note:** This field is only available for the Period/Interval tracking method.

6. Click **Submit**. The Attendance Tracking Methods page displays the new attendance tracking method.

How to Edit an Attendance Tracking Method

Use this procedure to edit an attendance tracking method.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Attendance, click **Attendance Tracking and Notification**. The Attendance Tracking and Notification page appears.
3. Click **Tracking Methods**. The Attendance Tracking Methods page appears.
4. Click the name of the attendance tracking method you want to edit. The Edit Attendance Tracking Method page appears.

5. Edit the information as needed. For field descriptions, see *How to Add an Attendance Tracking Method*.
6. Click **Submit**. The Attendance Tracking Methods page displays the edited attendance tracking method.

How to Delete an Attendance Tracking Method

Use this procedure to delete an attendance tracking method that may have been created in error or that is no longer in use.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Attendance, click **Attendance Tracking and Notification**. The Attendance Tracking and Notification page appears.
3. Click **Tracking Methods**. The Attendance Tracking Methods page appears.
4. Click the name of the attendance tracking method you want to delete. The Edit Attendance Tracking Method page appears.
5. Click **Delete**.
6. Click **Confirm Delete**. The Attendance Tracking Methods page displays without the deleted attendance tracking method.

Unexcused Tracking Levels

Unexcused tracking levels are used to expand on the attendance tracking methods and thresholds. Tracking levels are optional.

For example, if you set up the tracking method Percent with a threshold of 50% and Semester with a threshold of five, you can track when a student is absent more than 50% of five school days during the semester.

Using tracking levels, you can report when the student reaches a defined number of unexcused absences (thresholds) for multiple instances (triggers). For example, you may want to track the first time the student reaches five unexcused absences, as well as the second time (ten absences) and third time (fifteen absences).

Each time a student reaches a threshold, a notification record is created in the database. Multiple records may exist per day if the student reaches a threshold for more than one attendance tracking level. These records can be used to print attendance letters for students who meet or exceed attendance thresholds.

Note: If a tracking level is changed, the notification records in the database are not automatically updated. If the district must change a tier because of new requirements, it is recommended to create a new tracking level. Optionally, the District may choose to clear all records for the level. For more information, see *How To Edit an Unexcused Tracking Level*.

Example 1: Tardy Day

Based on the table below, notification records are created in the database when the student achieves four, eight, and/or twelve unexcused tardies during the school year. The Tardy Day tracking method uses the school year timeframe by default.

Tracking Method	Threshold	Trigger	Notification
Tardy Day	4 Unexcused Tardies	1	4
		2	8
		3	12

Example 2: Semester

In this example, we have set up the Percent tracking method with 99% as the threshold, so a student must miss more than 99% of the day to be considered absent.

Based on the table below, for a tracking level using the Semester tracking method, notification records are created in the database when the student misses more than 99% of three, six, and/or nine school days during the semester.

Tracking Method	Threshold	Trigger	Notification
Semester	3 Unexcused Absences	1	3
		2	6
		3	9

Example 3: Consecutive

In this example, we have set up the Percent tracking method with 50% as the threshold, so the student must miss more than 50% of the day to be considered absent. The Consecutive tracking method uses the school year timeframe by default.

Based on the table below, for a tracking level using the tracking method Consecutive, notification records are created in the database when the student misses more than 50% of four, six, eight, and/or ten consecutive school days during the school year.

Tracking Method	Threshold	Trigger	Notification
Consecutive	2 Unexcused Absences	2	4
		3	6
		4	8
		5	10

How to Add an Unexcused Tracking Level

Use this procedure to add an unexcused tracking level.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Attendance, click **Attendance Tracking and Notification**. The Attendance Tracking and Notification page appears.
3. Click **Unexcused Levels**. The Unexcused Tracking Levels page appears.
4. Click **New.** The New Unexcused Tracking Level page appears.
5. Use the following table to enter information in the fields:

Field	Description
Level Name	Enter a name for the level. **Note:** Each level name must be unique and cannot exceed 30 characters.
Tracking Method	Choose a tracking method from the pop-up menu. **Note:** The Year tracking method is not available. Tardy and Consecutive use the year time period by default.

Tracking Method	Choose a second tracking method from the pop-up menu. **Note:** You can only choose a second tracking method for Percent, Period, or Tardy Day. In other words, Percent. Period and Tardy Day are the only tracking methods that can be set up together in combination. All of the other tracking methods must be set up separately.
Tracking Method	Choose a third tracking method from the pop-up menu. **Note:** You can only choose a third tracking method for Percent, Period, or Tardy Day. In other words, Percent. Period and Tardy Day are the only tracking methods that can be set up together in combination. All of the other tracking methods must be set up separately.
Triggers	Do one of the following: • Click the **Plus (+)** button to add a new trigger. You may set up as many triggers as needed. • Click the **Minus (-)** button to remove the most recently added trigger, such as the trigger at the bottom of the list.
Trigger 1	Enter at least one trigger for this level. The trigger is a multiplier of the threshold. For example, if you have a Semester tracking method with a user-defined threshold of three and you set up a trigger of two, a notification record is created when the student reaches six unexcused absences (two multiplied by three).

6. Click **Submit**. The Unexcused Tracking Levels page displays the new tracking level.

How to Edit an Unexcused Tracking Level

Use this procedure to edit an unexcused tracking level.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.

2. Under Attendance, click **Attendance Tracking and Notification**. The Attendance Tracking and Notification page appears.
3. Click **Unexcused Levels**. The Unexcused Tracking Levels page appears.
4. Click the name of the tracking level you want to edit. The Edit Unexcused Tracking Level page appears.
5. Use the following table to enter information in the fields:

Field	Description
Level Name	Enter a name for the level. **Note:** Each level name must be unique and cannot exceed 30 characters.
Tracking Method	Choose a tracking method from the pop-up menu. **Note:** The Year tracking method is not available. Tardy and Consecutive use the year time period by default.
Tracking Method	Choose a second tracking method from the pop-up menu. **Note:** You can only choose a second tracking method for Percent, Period, or Tardy Day. In other words, Percent. Period and Tardy Day are the only tracking methods that can be set up together as an and/or combination. All of the other tracking methods must be set up separately.
Tracking Method	Choose a third tracking method from the pop-up menu. **Note:** You can only choose a third tracking method for Percent, Period, or Tardy Day. In other words, Percent. Period and Tardy Day are the only tracking methods that can be set up together as an and/or combination. All of the other tracking methods must be set up separately.
Triggers	Do one of the following: • Click the **Plus (+)** button to add a new trigger. You may set up as many triggers as needed.

	• Click the **Minus (-)** button to remove the most recently added trigger, such as the trigger at the bottom of the list.
Trigger 1	Enter at least one trigger for this level. The trigger is a multiplier of the threshold. For example, if you have a Semester tracking method with a user-defined threshold of three and you set up a trigger of two, a notification record is created when the student reaches six unexcused absences (two multiplied by three).
Clear all existing records for this level	Select the checkbox to clear all existing records for this level. A dialog box appears warning that the records will be archived and no longer reportable. Click **OK** if you are sure you want to continue. The page is available to edit after clicking **OK**. When you are finished entering values on the page and click **Submit**, all records for this level are archived and can no longer be accessed without contacting PowerSchool Technical Support or using ODBC. Only records for the appropriate timeframe are archived. For example, if records span the school year, then only records for the current school year are archived. If records span one semester, then only records for the current semester are archived. **Note:** This option is useful if the triggers for this level were set up incorrectly, causing students to receive attendance letters when they should not.
Records Cleared Status	A message appears indicating the status of records cleared for this level.

6. Click **Submit**. The Unexcused Tracking Levels page displays the edited tracking level.

How to Delete an Unexcused Tracking Level

Use this procedure to delete an unexcused tracking level that may have been created in error or that is no longer in use.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.

2. Under Attendance, click **Attendance Tracking and Notification**. The Attendance Tracking and Notification page appears.
3. Click **Unexcused Levels**. The Unexcused Tracking Levels page appears.
4. Click the name of the unexcused tracking level you want to delete. The Edit Unexcused Tracking Level page appears.
5. Click **Delete**.
6. Click **Confirm Delete**. The Unexcused Tracking Levels page displays without the deleted tracking level.

Illness Tracking Levels

Illness tracking levels can be used to report when a student reaches a defined number of illness absences (thresholds) for multiple instances (triggers). For example, you may want to track the first time a student reaches five illness absences, as well as the second time (ten absences) and third time (fifteen absences).

By default, illness levels use a Percent tracking method with a threshold of 99 and a timeframe of one full school year.

Each time a student reaches a threshold, a notification record is created in the database. Multiple records may exist per day if the student reaches a threshold for more than one attendance tracking level. These records can be used in reports to identify students who have reached illness attendance thresholds.

Note: If a tracking level is changed, the records in the database are not automatically updated. If the district must change a level because of new requirements, it is recommended to create a new tracking level.

Example: Illness Absences

By default, illness levels use a Percent tracking method with a threshold of 99 and a timeframe of one full school year.

Based on the table below, a notification record is created in the database when the student misses more than 99% of three, six, and/or nine school days during the school year. A total of four records are created, one detail record for each instance, plus a summary record.

Threshold	Trigger	Notification
3 Illness Absences	1	3
	2	6

	3	9

How to Add an Illness Tracking Level

Use this procedure to add an illness tracking level.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Attendance, click **Attendance Tracking and Notification**. The Attendance Tracking and Notification page appears.
3. Click **Illness Levels**. The Illness Tracking Levels page appears.
4. Click **New.** The New Illness Tracking Level page appears.
5. Use the following table to enter information in the fields:

Field	Description
Level Name	Enter a name for the tracking level. **Note:** Each level name must be unique and cannot exceed 30 characters.
Triggers	Do one of the following: • Click the **Plus (+)** button to add a new trigger. • Click the **Minus (-)** button to remove the most recently added trigger, such as the trigger at the bottom of the list.
Trigger 1	Enter a trigger for this level. The trigger is a multiplier of the threshold. For example, if the Year tracking method is set up with a threshold of three and you set up a trigger of two, a notification record is created when the student reaches six illness absences (two multiplied by three).

6. Click **Submit**. The Illness Tracking Levels page displays the new illness tracking level.

How to Edit an Illness Tracking Level

Use this procedure to edit an illness tracking level.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Attendance, click **Attendance Tracking and Notification**. The Attendance Tracking and Notification page appears.
3. Click **Illness Levels**. The Illness Tracking Levels page appears.
4. Click the name of the level you want to edit. The Edit Illness Tracking Level page appears.
5. Use the following table to enter information in the fields:

Field	Description
Level Name	Enter a name for the tracking level. **Note:** Each level name must be unique and cannot exceed 30 characters.
Triggers	Do one of the following: • Click the **Plus (+)** button to add a new trigger. • Click the **Minus (-)** button to remove the most recently added trigger, such as the trigger at the bottom of the list.
Trigger 1	Enter a trigger for this level. The trigger is a multiplier of the threshold. For example, if the Year tracking method is set up with a threshold of three and you set up a trigger of two, a notification record is created when the student reaches six illness absences (two multiplied by three).
Clear all existing records for this level	Select the checkbox to clear all existing records for this level. A dialog box appears warning that the records will be archived and no longer reportable. Click **OK** if you are sure you want to continue. The page is available to edit after clicking **OK**. When you are finished entering values on the page and click **Submit**, all records for this level are archived and can no longer be accessed without contacting PowerSchool Technical Support or using ODBC.

	Only records for the appropriate timeframe are archived. For example, if records span the school year, then only records for the current school year are archived. If records span one semester, then only records for the current semester are archived. **Note:** This option is useful if the triggers for this level were set up incorrectly, causing students to receive attendance letters when they should not.
Records Cleared Status	A message appears indicating the status of records cleared for this level.

6. Click **Submit**. The Illness Tracking Levels page displays the edited illness tracking level.

How to Delete an Illness Tracking Level

Use this procedure to delete an illness tracking level that may have been created in error or that is no longer in use.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Attendance, click **Attendance Tracking and Notification**. The Attendance Tracking and Notification page appears.
3. Click **Illness Levels**. The Illness Tracking Levels page appears.
4. Click the name of the illness tracking level you want to delete. The Edit Illness Tracking Level page appears.
5. Click **Delete**.
6. Click **Confirm Delete**. The Illness Tracking Levels page displays without the deleted illness tracking level.

Calculation Year

The calculation year determines the school year associated with Attendance Tracking and Notification. This setting affects reporting, since attendance reporting is year specific.

In order to change the calculation year, the appropriate term must be set up at both the district and the school via **Years & Terms**. For example, to change the calculation year to 2012-2013, the 2012-2013 school year term must be set up at the district office and at each appropriate school. For more information, see *Years and Terms*.

The Update Calculation Year utility provides the ability to change the calculation year for all schools or an individual school. In order for a school to appear in the available list of schools to update, an attendance tracking mode must be defined for the school. For more information, see *Attendance Tracking Modes*.

How to Update the Calculation Year for All Schools

Use this procedure to update the calculation year for all schools that use Attendance Tracking and Notification. The correct term must be selected at the top of the page in order to change the calculation year for all schools.

1. On the start page, choose **Term** at the top of the page. The Change Term page appears.
2. Choose the appropriate term from the **Change to** pop-up menu. The start page appears.
3. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
4. Under Attendance, click **Attendance Tracking and Notification**. The Attendance Tracking and Notification page appears.
5. Click **Update Calculation Year**. The Update Calculation Year page appears. A message at the bottom of the screen displays the value that will be set, based on the term selected at the top of the page. Verify this value before submitting the page. EX: On submit, year will be set to: 2010-2011
6. Click **Submit**. A validation message appears to verify that the Calculation Year will be updated for all schools listed on the page.

   Note: If the selected term is not set up for one or more schools in the list, a validation message appears indicating that the term does not exist for that school. If a term is missing, switch to the school, set up the term via **Years & Terms**, and then return to the district to proceed with updating the calculation year.

7. Click **OK**. The Update Calculation Year page appears with the updated year value for each school.

How to Update the Calculation Year for an Individual School

Use this procedure to update the calculation year for an individual school. An attendance tracking mode must be defined for the school in order for it to appear on the page.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.

2. Under Attendance, click **Attendance Tracking and Notification**. The Attendance Tracking and Notification page appears.
3. Click **Update Calculation Year**. The Update Calculation Year page appears.
4. Click the name of the appropriate school. The Edit Calculation Year for (school name) page appears.
5. Choose the appropriate term from the **Select Year** pop-up menu.

   Note: The terms displayed are set up for the individual school. If a term is missing, switch to the school, set up the term via **Years & Terms**, and then return to the district to proceed with updating the calculation year.

6. Click **Submit**. The Update Calculation Year page appears with the update year listed for the school.

Attendance Tracking School Setup

Once you have set up attendance tracking and notification settings for your district, you can then define the following attendance tracking and notification settings for each of your schools:

- Attendance Tracking Mode
- Unexcused Tracking Categories (Absent and Tardy)
- Illness Tracking Categories (Absent only)

One attendance tracking mode is required per school. You may set up as many attendance tracking categories as needed for the school.

Attendance Tracking Modes

Only one attendance tracking mode may be defined at a time. The same attendance tracking mode is used by both unexcused and illness attendance tracking categories.

How to Add an Attendance Tracking Mode

Use this procedure to add an attendance tracking mode.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Tracking and Notification**. The Attendance Tracking and Notification page appears.
3. Click **Attendance Mode Setup**. The Attendance Mode page appears.
4. Click **New**. The New Attendance Tracking Mode page appears.

   Note: Only one attendance tracking mode can be set up per school.

5. Choose the attendance mode value from the **Attendance Mode Value** pop-up menu:
   - **(MPTD) Meeting Period To Day**
   - **(MTTD) Meeting Time To Day**
   - **(DCTD) Daily Code To Day**
   - **(DTTD) Daily Time To Day**
   - **(ITVL) Interval**
6. Click **Submit**. The Attendance Tracking Mode page displays the new attendance tracking mode.

How to Edit an Attendance Tracking Mode

Use this procedure to edit an attendance tracking mode.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Tracking and Notification**. The Attendance Tracking and Notification page appears.
3. Click **Attendance Mode Setup**. The Attendance Mode page appears.
4. Click the attendance mode you want to edit. The Edit Attendance Tracking Mode page appears.

   Note: Only one attendance tracking mode can be set up per school.

5. Edit the information as needed. For field descriptions, see *How to Add an Attendance Tracking Mode*.

How to Delete an Attendance Tracking Mode

Use this procedure to delete an attendance tracking mode that may have been created in error or that is no longer in use.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Tracking and Notification**. The Attendance Tracking and Notification page appears.
3. Click **Attendance Mode Setup**. The Attendance Mode page appears.
4. Click the attendance tracking mode you want to delete. The Edit Attendance Tracking Mode page appears.
5. Click **Delete** to remove the attendance tracking mode. The Attendance Tracking Mode page displays without the deleted attendance tracking mode.

Unexcused Tracking Categories

Once an attendance tracking mode is defined, you may define as many attendance tracking categories as needed.

The following unexcused tracking categories can be set up for each school:

- Unexcused absence tracking category
- Unexcused tardy tracking category

Each unexcused tracking category must be associated with the appropriate attendance code category. You must set up attendance code categories before proceeding. For more information, see *Basic Attendance Setup*.

When a student is assigned unexcused attendance, a detail record is created in the database with the record type A (absent) or T (tardy), as well as a summary record with record type TA (absent) or TT (tardy). There may be multiple detail records per day if the school uses meeting attendance.

How to Add an Unexcused Tracking Category

Use this procedure to add an unexcused tracking category.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Tracking and Notification**. The Attendance Tracking and Notification page appears.
3. Click **Unexcused Tracking Setup**. The Unexcused Tracking Categories page appears.
4. Click **New.** The New Unexcused Tracking Category page appears.

   Note: If all of the attendance code categories for your school have been associated with an unexcused tracking category, the **New** button is no longer available. You must edit or delete an existing record in order to create a new record.

5. Use the following table to enter information in the fields:

Field	**Description**
Tracking Category	The tracking category displays Unexcused. **Note:** This field is read-only.
Attendance Category	Choose the attendance code category used to track unexcused absences or tardies from the pop-up menu. Attendance code categories can only be used once, so the pop-up menu displays all attendance code categories set up for your school, except for those already associated with an unexcused tracking category. Note that if you track both tardies and

	unexcused absences, you must have separate attendance code categories for each. **Note:** You must set up attendance code categories prior to configuring this parameter. For more information, see *Basic Attendance Setup*.
Status	Select one of the following options: • **Absent** – Indicates that this unexcused tracking category is used to track absences. • **Tardy** – Indicates that this unexcused tracking category is used to track tardies.

6. Click **Submit**. The Unexcused Tracking Category page displays the new unexcused tracking category. You may want to create a second attendance tracking category, either to track absences or tardies, depending on how you set up the first category.

How to Edit an Unexcused Tracking Category

Use this procedure to edit an unexcused tracking category.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Tracking and Notification**. The Attendance Tracking and Notification page appears.
3. Click **Unexcused Tracking Setup**. The Unexcused Tracking Categories page appears.
4. Click the name of the unexcused tracking category you want to edit. The Edit Unexcused Tracking Category page appears.
5. Edit the information as needed. For field descriptions, see *How to Add an Unexcused Tracking Category*.
6. Click **Submit**. The Unexcused Tracking Category page displays the edited unexcused tracking category.

How to Delete an Unexcused Tracking Category

Use this procedure to delete an unexcused tracking category that may have been created in error or that is no longer in use.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Tracking and Notification**. The Attendance Tracking and Notification page appears.
3. Click **Unexcused Tracking Setup**. The Unexcused Tracking Categories page appears.
4. Click the name of the unexcused tracking category you want to delete. The Edit Unexcused Tracking Category page appears.
5. Click **Delete**.
6. Click **Confirm Delete**. The Unexcused Tracking Categories page appears without the deleted unexcused tracking category.

Illness Tracking Categories

Multiple illness tracking categories can be set up for each school to track illness absences. Each illness tracking category must be associated with the appropriate attendance code category. You must set up attendance code categories before proceeding. For more information, see *Basic Attendance Setup*.

When a student is assigned illness attendance, a detail record is created in the database with the record type I, as well as a summary record with record type TI. There may be multiple detail records per day if the school uses meeting attendance.

How to Add an Illness Tracking Category

Use this procedure to add an illness tracking category.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Tracking and Notification**. The Attendance Tracking and Notification page appears.
3. Click **Illness Tracking Setup**. The Illness Tracking Categories page appears.
4. Click **New.** The New Illness Tracking Category page appears.

   Note: If all of the attendance code categories have been associated with an illness tracking category, the **New** button is no longer available. You must edit or delete an existing record in order to create a new record.

5. Use the following table to enter information in the fields:

Field	Description

Tracking Category	The tracking category displays Illness. **Note:** This field is read-only.
Attendance Category	Choose the attendance code category used to track illness absences from the pop-up menu. Attendance code categories can only be used once, so the pop-up menu displays all attendance code categories set up for your school, except for those already associated with an illness tracking category. **Note:** You must set up attendance code categories prior to configuring this parameter. For more information, see *Basic Attendance Setup*.

6. Click **Submit**. The Illness tracking category page displays the new illness tracking category.

How to Edit an Illness Tracking Category

Use this procedure to edit an illness tracking category.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Tracking and Notification**. The Attendance Tracking and Notification page appears.
3. Click **Illness Tracking Setup**. The Illness Tracking Categories page appears.
4. Click the name of the illness tracking category you want to edit. The Edit Illness Tracking Category page appears.
5. Edit the information as needed. For field descriptions, see *How to Add an Illness Tracking Category*.
6. Click **Submit**. The Illness Tracking Category page displays the edited illness tracking category.

How to Delete an Illness Tracking Category

Use this procedure to delete an illness tracking category that may have been created in error or that is no longer in use.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.

2. Under Attendance, click **Attendance Tracking and Notification**. The Attendance Tracking and Notification page appears.
3. Click **Illness Tracking Setup**. The Illness Tracking Category page appears.
4. Click the name of the illness tracking category you want to delete. The Edit Illness Tracking Category page appears.
5. Click **Delete**.
6. Click **Confirm Delete**. The Illness Tracking Category page appears without the deleted illness tracking category.

Attendance Tracking Reports

There are three Attendance Tracking and Notification reports, which must be run in the following order:

1. Refresh Attendance Tracking Data – used to update attendance tracking and notification records in the PowerSchool database.
2. Truancy and Attendance Letters (View Only & Extract) – used to view dates that students received truant attendance. The Extract version of this report can be used to print attendance letters for parents and/or guardians.
3. Truancy and Attendance **–** Levels Reached – used to view dates that attendance letters were sent to a student's parent, as well as dates that student truant attendance was cleared (excused).

Refresh Attendance Tracking Data Report

The Refresh Attendance Tracking Data report creates Attendance Tracking records for students with truant attendance. The purpose of the report is to identify attendance that requires administrative or parental attention, such as excessive unexcused absences, unexcused tardies, or illness absences. Once this information is calculated and stored in the PowerSchool database, it can be used when printing attendance letters.

Note: It is recommended to complete the Refresh Premier Attendance Views Data process before running this report. To access this function, navigate to **Start Page > Special Functions** under Functions in the main menu **> Attendance Functions > Refresh Premier Attendance Views Data**.

The Refresh Attendance Tracking Data report performs the following processes:

1. **Detail Record:** The report creates one detail record for each truant attendance instance. There may be multiple detail records per student per day if the school uses Meeting attendance. The detail record types are:
    - **A** (absent)
    - **T** (tardy)
    - **I** (illness)
2. **Summary Record:** The report creates one summary record for the student for the day, if the student has a detail record for that day. The summary record types are:
    - **TA** (absent)
    - **TT** (tardy)
    - **TI** (total illness)
3. **Notification Record:** The report creates a notification record for the student if he/she has enough truant attendance records to require parent notification, such as

if the student's records meet or exceed an attendance tracking threshold (set up at the District).

For example, you may track unexcused absences. At the school level, you set up an attendance code category named Unexcused Absence (UA), and you choose Meeting-Period-to-Day (MPTD) as the attendance mode used for attendance tracking and notification.

With this setup, the report creates a detail record for each attendance record associated with the UA attendance code category. Next, the report creates a summary record for each day where the student has a detail record. Finally, the report creates a notification record if the student's detail records meet or exceed an attendance tracking threshold, based on the MPTD attendance mode.

Note: This process must be completed prior to reports that require attendance tracking and notification data, including Truancy and Attendance Letters.

How to Run the Refresh Attendance Tracking Data Report

This report must be run at the district level.

1. On the start page, choose **System Reports** under Reports in the main menu. The Reports page appears.
2. On the System tab, click **Refresh Attendance Tracking Data**. The Refresh Attendance Tracking Data Report page appears.
3. Use the following table to enter information in the fields:

Field	Description
Processing Options	Choose a time to run the report from the pop-up menu: • **In Background Now** (Recommended) – Execute the report immediately in the background. • **ASAP** – Execute the report in the order it is received in the Report Queue. • **At Night** – Execute the report during the next evening. • **On Weekend** – Execute the report during the next weekend. • **On Specific Time** – Execute the report on the date and time specified.

Specific Date/Time	Enter a date using the format mm/dd/yyyy or mm-dd-yyyy in order to run the report on a specific day. The incorrect format displays an alert and the date field is submitted as a blank entry. Use the pop-up menus to schedule the report to be run at a specific hour and minute. For example, 7/29/2008 @ 10:05 AM.

4. Click **Submit**. The Report Queue page appears.
5. When the report completes, click **View**. The report results display based on the parameters you selected. Depending on your specifications, this could take several minutes.
6. Click **View** to view the report results. A dialog window appears.
7. Do one of the following:
   - Save the file to your hard drive and then open the file using a text editor application, such as TextEdit or NotePad.
   - Save the file to your hard drive and then open the file using your web browser.
   - Open the file in your web browser.

   Note: A blank result file indicates data issues in the PowerSchool database, such as duplicate attendance records or duplicate FTEs. Investigate possible data issues before proceeding with attendance tracking and notification reports.

8. Use the following table to review the report results:

Data Element	Description
WARNING: Attendance Mode not defined for the following	This warning may display if one or more schools is missing a value for the attendance tracking mode. Attendance tracking and notification data is only processed for schools with an attendance tracking mode. For more information, see *Attendance Tracking Modes*.
Schools Loaded	**Note:** A school must have an attendance tracking mode selected in order to be included in the report. For each school reported, the following data is displayed:

School	The name of the school.
Year	The Calculation Year associated with this school. For example: • Year: 19 = 2009-2010 School Year • Year: 20 = 2010-2011 School Year • Year: 21 = 2011-2012 School Year
Mode	The attendance tracking mode associated with this school. Valid values include: • (MPTD) Meeting: Period To Day • (MTTD) Meeting: Time To Day • (DCTD) Daily: Code To Day • (DTTD) Daily: Time To Day • (ITVL) Interval
Calculation Year (Year ID) for Levels	The Calculation Year that will be used. This value is based on the term selected at the top of the page when the Refresh Attendance Tracking Data report was initiated.

Truancy and Attendance Letters Report (View Only and Extract)

Use the *View Only* version of this report to review the dates that students received truant attendance that requires parental notification – the date that attendance met or exceeded the threshold of an attendance tracking level.

Use the *Extract* version of the report to record the date that the parent was notified (the date the report completes, usually the current date). This date represents the date that the attendance letter was printed and sent to the students' parents or guardians. Setting the "date extracted" cannot be reversed, so it is recommended to verify data using the *View Only* version before running the *Extract* version.

The *View Only* version of this report produces the first output below. The *Extract* version of this report produces both of the following two outputs:

- A list of students who meet or exceed a specified threshold for an attendance tracking level. This output includes the ability to immediately access a student in the list by clicking the student's name.

- An attendance letter to be printed via a ReportWorks report.

  Note: ReportWorks must be set up prior to accessing reports. For more information, see the *ReportWorks Setup and Administration Guide* on PowerSource.

The first time you run the extract for each attendance tracking level and trigger, all records are returned that meet the level and trigger. Subsequently, records are only returned if they met level and trigger since the last time the extract was run.

Note: You must run the *Refresh Attendance Tracking Data* report before the Truancy and Attendance Letters report.

How to Run the Truancy and Attendance Letters Report

Both the *View Only* and *Extract* versions of this report must be run at the school level.

1. On the start page, choose **System Reports** under Reports in the main menu. The Reports page appears.
2. On the System tab, click **Truancy and Attendance Letters (Extract/View)**. The Truancy and Attendance Letters (Extract/View) Report page appears.
3. Use the following table to enter information in the fields:

Field	**Description**
Grades (leave blank for all)	Select the checkbox for the appropriate grade levels. The page displays the grade levels associated with this school.
Data to be Filled	Select the checkbox next to the filter fields to save the settings as defaults. To select all checkboxes, choose **Set All** from the pop-up menu. To clear all checkboxes, choose **Reset All**.
Extraction Type	Choose Unexcused or Illness from the pop-up menu.
Level Name	Choose the appropriate attendance tracking level from the pop-up menu.
Trigger	Choose the trigger you would like to report from the pop-up menu.

Minimum Age to Extract	Enter the minimum age of students to include in the report.

4. Click **Submit**. The Report Queue page appears.
5. When the report completes, click **View**. The report results display based on the parameters you selected. Depending on your specifications, this could take several minutes.
6. Use the following table to review the report results:

Data Element	Description
Student	The student's full name. Click the student's name to access that student. **Note:** The report includes both active and inactive (transferred out) students in the current school.
Student Number	The student's locally assigned student number.
Qualified School	The school in which the attendance occurred. **Note:** If the line is highlighted with yellow, this indicates that the student is no longer enrolled in the school in which attendance occurred. Thus, the Current School is different than the Qualified School.
Current School	The school in which the student is currently enrolled.
Date Reached	The date the student's attendance met or exceeded an attendance tracking threshold.
Semester	If the Semester tracking method is used, then the report indicates whether the attendance occurred in the 1st or 2nd semester. **Note:** This designation is based on the ID of the term in the database. In order to have the correct ID, you must create your Years & Terms in the correct order, such as year, semester 1, semester 2.

Grade	The student's grade level.
DOB	The student's date of birth.
Phone	The student's home phone number.
Absent Dates	The date of each unexcused absence record associated with the tracking level and trigger selected at report runtime.
Tardy Dates	The date of each unexcused tardy record associated with the tracking level and trigger selected at report runtime.

7. Do one of the following:
    - **Set as current selection** (*View Only* version): Click the button to work with the selection of the students. The Group Functions page appears.
    - **ReportWorks** (*Extract* version): Click **ReportWorks** to access the list of ReportWorks reports for your school. Choose the appropriate Attendance Letters report.

      Note: The Attendance Letters template must be published in ReportWorks before it will be available as a report. The PowerSchool installation includes one Attendance Letters template for the district. If different attendance letters are required for schools on the server, it is recommended to publish the template with a different name for each school. For more information, see the *ReportWorks Setup and Administration Guide* on PowerSource.

Truancy and Attendance – Levels Reached Report

Use the Truancy and Attendance – Levels Reached report to view one or more of the following groups of students:

- Students whose parents have been notified of their truant attendance, with the date the parent were notified.
- Students whose attendance has been cleared; such as the student is no longer considered truant, with the date the attendance was cleared.
- Students whose parents haven't been notified and for whom attendance has not been cleared.

Note: You must run the *Refresh Attendance Tracking Data* and *Truancy and Attendance Letters (Extract)* reports before the Truancy and Attendance – Levels Reached report.

How to Run the Truancy and Attendance – Levels Reached Report

This report must be run at the school level.

1. On the start page, choose **System Reports** under Reports in the main menu. The Reports page appears.
2. On the System tab, click **Truancy and Attendance – Levels Reached**. The Truancy and Attendance – Levels Reached Report page appears.
3. Use the following table to enter information in the fields:

Field	Description
Data to be Filled	Select the checkbox next to the filter fields to save the settings as defaults. To select all checkboxes, choose **Set All** from the pop-up menu. To clear all checkboxes, choose **Reset All**.
Extraction Type – leave blank for all	Choose Unexcused or Illness from the pop-up menu.
Filter by Level Name – leave blank for all	Choose the appropriate attendance tracking level from the pop-up menu.
Filter by Trigger – leave blank for all	Choose the trigger you would like to report from the pop-up menu.
Students Extracted	Select the checkbox to view a list of students who were extracted in the *Truancy and Attendance Letters (Extract)* report, with the date extracted.
Students Cleared	Select the checkbox to view a list of students whose attendance records were cleared (no longer qualify for tracking or notification) in the *Refresh Attendance Tracking Data* report, with the date cleared.

Students Not Extracted (and not Cleared)	Select the checkbox to view a list of students who were not extracted and whose attendance records were not cleared.

4. Click **Submit**. The Report Queue page appears.
5. When the report completes, click **View**. The report results display based on the parameters you selected. Depending on your specifications, this could take several minutes.
6. Use the following table to review the report results:

Data Element	Description
Student	The student's full name. **Note:** The report includes both active and inactive (transferred out) students in the current school.
Student Number	The student's locally assigned student number.
Grade	The student's grade level.
Level Name	The name of the attendance tracking level.
Trigger	The trigger associated with the attendance tracking level.
Date Reached	The date the student received truant attendance.
Date Extracted	The date the student's truant attendance was extracted in the *Truancy and Attendance Letters (Extract)* report.
Date Cleared	The date the student's previous truant attendance was cleared using the *Refresh Attendance Tracking Data* report.

Attendance User Guide

PowerSchool

Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

Table of Contents

Introduction

PowerSchool's attendance function makes it possible to track students' attendance in a number of ways. Depending on your school's needs, you can track either daily attendance, section attendance, or attendance by time. You can also consolidate the multiple roll calls normally required when multiple course sections meet at the same time. For more information, see *Daily Attendance*, *Meeting Attendance*, *Interval Attendance*, *Time Attendance*, and *Concurrent Attendance*.

Given the proper permissions, administrators, teachers, and substitute teachers can take attendance using the following:

- PowerSchool: There are several ways to take and change attendance in PowerSchool for a student or group of students, either for one day or several days.
- PowerTeacher: Teachers can use PowerTeacher's attendance function to take attendance for their current classes. For more information, see the PowerTeacher online help or the *PowerTeacher User Guide*.
- PowerTeacher Substitute: Substitute teachers can use PowerTeacher Substitute to take attendance for their designated classes. For more information, see the PowerTeacher Substitute online help or the *PowerTeacher Substitute User Guide*.

A number of attendance-related reports are available. For more information, see *Attendance Count and Audit Reports* and *Attendance Reports*.

Attendance Modes

There are five modes of taking attendance; by day, by meeting, by interval, by time, or concurrently.

Note: To switch between Daily and Meeting attendance mid-year, see *Attendance Synchronization*.

Daily Attendance

In PowerSchool, you can take attendance for one or more days. The Daily Attendance function calculates attendance by the minute or by attendance code.

Meeting Attendance

In PowerSchool and PowerTeacher, you can take attendance by meeting. The meetings for a section are represented by an expression, the combination of periods and days in which this section is taught. For example, a section of Biology that meets during first and second period on "A" day has an expression of "1-2(A)." As another example, a section of Biology that meets during fifth and sixth period on "A" and "B" days has an expression of "5-6(A-B)." Each expression, such as "1-2(A)" and "5-6(A-B)," represents all the meetings for the section.

Note: PowerSchool provides fields to display in place of periods and days values, called "expressions." When an expression is displayed anywhere in the system, PowerSchool uses these fields instead of the internal values. For example, a section's expression of "1-2(A)" where "1" has an abbreviation of "P1" and "A" an abbreviation of "DA," displays as "P1(DA)."

Interval Attendance

Interval attendance is similar to Meeting attendance in that attendance is taken at least once during any meeting. The difference is that, with Interval attendance, attendance can be recorded more than once per meeting. The number of times is determined by the length of the period (or periods) in which the meeting takes place and by the specified interval duration. The length of the periods is determined by the bell schedule (see *How to Set Up Bell Schedules*) and the interval duration is specified in *School Attendance Preferences*. The system divides the length of each period by the interval duration (always rounding up) to calculate the number of times attendance can be recorded. For example, a class that takes place from 8:00 AM to 9:30 AM would be 90 minutes long. If the interval duration was 60 minutes, the class would have two opportunities to take attendance: once at the beginning of the period and once after 60 minutes has passed. Interval attendance is primarily intended for those programs in which attendance must be recorded each hour. Whether a class uses interval attendance is specified in the *Section Setup* for each class. Interval attendance can be recorded in PowerSchool and PowerTeacher.

Interval attendance makes no assumptions that a student is present or absent. As opposed to meeting or daily attendance which assume a student is present unless an attendance code indicating otherwise is found, Interval attendance requires that a code be recorded for each interval.

Note: Interval Attendance allows users to enter attendance for a class at specified clock-based intervals instead of only once per meeting. In the context of Alternative Education Programs (AEP), this saves staff the time and effort spent on manually associating attendance with specific programs. For more information about California's Alternative Education Program (CA AEP), visit PowerSource.

Time Attendance

Time attendance provides an opportunity to directly enter an attendance value for a student by entering total minutes (or hours) for a given day. The attendance is not related to a course, but it can be related to a program for which the student is enrolled. For this reason, it is very useful for work experience hours or independent study hours. Time attendance can only be entered through PowerSchool. It is not available in PowerTeacher.

Note: Time Attendance allows the administrator to enter attendance hours and minutes for programs that involve work outside of a specific course, such as independent study or work experience time. In the context of Alternative Education Programs (AEP), this allows for heightened assurance that credits are tracked toward timely graduation for students. For more information about California's Alternative Education Program (CA AEP), visit PowerSource.

Concurrent Attendance

In PowerTeacher, you can take attendance for concurrently meeting sections. Concurrently meeting sections are different sections that meet at the same time and place and have the same teacher. Teachers can choose to combine the sections' rosters and take attendance for both sections at the same time.

Taking attendance concurrently by meeting is helpful for teachers who instruct sections that share the same meeting, since all students for that meeting appear on one list, regardless of their sections.

Example 1

If a teacher teaches Spanish, SPA100, with a "1(A)" meeting, and a second section of Spanish, SPA200, also with a "1(A)" meeting, the teacher could use the concurrent attendance function to take attendance for both sections at the same time.

Example 2

If a teacher teaches English 1-3(A) (Record Once All Meetings), TA1 1(A), TA2 2(A), TA3 3(A), and Math 4(A), the teacher can take attendance for English and then click "Record MultiMeeting Attendance for Multiple Sections," which results in the combined roster of English + TA1.

Example 3

If a teacher teaches English 1-3(A) (Record Once All Meetings), TA1 2(A), and TA2 2(A), the teacher can navigate to the attendance page for TA2 1-2(A) and click "Record MultiMeeting Attendance for Multiple Sections," which results in the combined roster of English + TA1 + TA2.

Example 4

If a teacher teaches English 1-3(A) (Record Each Meeting), TA1 1(A), TA2 2(A), TA3 3(A), and Math 4(A), the teacher can take attendance for English (period 1) and then click 'Record Meeting Attendance for Multiple Sections," which results in the combined roster of English (per1) + TA1.

Example 5

If a teacher teaches English 1-3(A) (Record Each Meeting), TA1 1(A), TA2 2(A), TA3 3(A), and Math 4(A), the teacher can take attendance for English (per2) and then click "Record Meeting Attendance for Multiple Sections," which results in the combined roster of English (per2) + TA2.

Attendance Setup

All attendance setup is performed at the school level under School Setup. All attendance-related setup items are located under the Attendance category. In addition, you must set up other school-related items that work in conjunction with attendance. The following list outlines the recommended attendance setup process:

- Years and Terms
- Days
- Periods
- Attendance Preferences
- FTE Codes
- Attendance Conversions
- Bell Schedules
- Calendar
- Reporting Segments
- Attendance Code Categories
- Attendance Codes
- Schedules, including Section Attendance Settings
- Class Exclusions

Recording Attendance

There are three ways to mark or change an attendance record in PowerSchool:

- Mark or change a single attendance instance.
- Mark or change a student’s attendance records for blocks of time. This is particularly useful when the student has been or will be out for an extended period.

- Mark or change a group of student’s attendance records for blocks of time. This is particularly useful when a class goes on a field trip or for sporting events.

Use any or all of the methods either to change a record from the past where a code has already been entered or to enter new data for an unmarked date range, day, or period in the past or future.

Administration

Attendance Code Categories

Attendance code categories are used to group attendance codes by classification, beyond Present or Absent, for reporting and searching purposes. Use the Attendance Code Categories page to view, add, delete, or edit the attendance code categories used at your school.

Note that attendance code categories are the one exception to year-specific data. Attendance code categories are a constant and should not be deleted from any year that uses them.

Tardy and Excused attendance code categories are set up by default and should not be deleted. In order for an attendance code to count as tardy, the attendance code must be associated to the attendance code category of Tardy. In order for an attendance code to count as excused, the attendance code must be associated to the attendance code category of Excused. Similarly, if you create other attendance code categories, in order for an attendance code to count as the attendance code category, the attendance code must be associated to that attendance code category.

Note: Attendance code categories are not used to group attendance codes by Present or Absent. All attendance codes are categorized as Present or Absent when creating the attendance code via the Attendance Code page. For more information, see *Attendance Codes*.

After creating attendance code categories, proceed to creating attendance codes. Attendance must be set up completely before taking attendance in PowerSchool.

For more information about attendance, see *Attendance Overview*.

How to Access the Attendance Code Categories Page

You can create as many categories as needed. Tardy and Excused are available by default.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Code Categories**. The Attendance Code Categories page displays the following information:

Field	Description

Code	The code representing the attendance code category. This value is used in various data access tags, such as **^(per.att)**.
Name	The name of the attendance code category. **Note:** This field is currently not used anywhere else in PowerSchool.
Description	A description of the attendance code category.
Sort	The sort order of the attendance code category as it appears in the Code Categories list of checkboxes on the New/Edit Attendance Code pages.

How to Add an Attendance Code Category

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Code Categories**. The Attendance Code Categories page appears.
3. Click **New**. The New Attendance Code Category page appears.
4. Use the following table to enter information in the fields:

Field	Description
Code	Enter the attendance code category. This value is used in various data access tags, such as **^(per.att)**.
Name	Enter a name of the attendance code category. **Note:** This field is currently not used anywhere else in PowerSchool.
Description	Enter a description of the attendance code category.

Sort order for display	Use the pop-up menu to indicate the sort order of the attendance code category as it appears in the Code Categories list of checkboxes on the New/Edit Attendance Code pages.

5. Click **Submit**. The Attendance Code Categories page displays the new attendance code.

How to Edit an Attendance Code Category

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Code Categories**. The Attendance Code Categories page appears.
3. Click the code of the attendance code category you want to edit. The Edit Attendance Code Category page appears.
4. Edit the information as needed. For field descriptions, see *How to Add an Attendance Code Category*.
5. Click **Submit**. The Attendance Code Categories page displays the edited attendance code.

How to Delete an Attendance Code Category

When deleting an attendance code category, other users and student records may be directly impacted. Deleting an attendance code category is not recommended unless the attendance code category was created in error. If the attendance code category is already in use, it cannot be deleted.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Code Categories**. The Attendance Code Categories page appears.
3. Click the code of the attendance code category you want to delete. The Edit Attendance Code Category page appears.
4. Click **Delete**.
5. Click **Confirm Delete**. The Selection Deleted page appears.

How to Sort Attendance Code Categories

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.

2. Under Attendance, click **Attendance Code Categories**. The Attendance Code Categories page appears.
3. Choose different sort orders for the attendance code category from the **Sort** pop-up menus.
4. Click **Submit**. The page re-sorts the attendance code categories.

Attendance Codes

Attendance codes are used to define values, points, and calculations for school-specific attendance codes. Use this page to view, add, delete, or edit an attendance code used at your school. You must set up attendance codes before taking attendance in PowerSchool.

Note: Before you can set up attendance codes, you must set up attendance code categories. For more information, see *Attendance Code Categories*.

For more information about attendance, see *Attendance Overview*.

How to Access the Attendance Code Page

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Codes**. The Attendance Codes page displays the following information:

Field	Description
Code	The attendance code appears.
Description	A description of the attendance code appears.
Teachers Assign	Indicates whether teachers can assign this attendance code in PowerTeacher.
Counts ADA	Indicates whether the attendance code counts towards average daily attendance (ADA).
Presence	Indicates whether the attendance code counts towards membership totals.

Sort	The sort order of the attendance code appears as it is in the attendance codes pop-up menu on the student attendance pages.

How to Add an Attendance Code

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Codes**. The Attendance Codes page appears.
3. Click **New**. The New Attendance Code page appears.
4. Use the following table to enter information in the fields:

Field	Description
Code	Enter an attendance code. Attendance codes can use characters A-Z, 0-9 and _- (underscore and hyphen). Attendance codes are not case-sensitive. There are other restrictions, including the code must be unique for this school and year and cannot be the same name as a Code Category for this school. **Note:** By default, only single-character attendance codes are allowed. However, to create multiple-character attendance codes, select the **Enable multiple character attendance codes** checkbox on the Attendance Preferences page.
Description	Enter a description for the attendance code.
Presence Status	All attendance codes are categorized as present or absent. Indicate whether the attendance code should be categorized as present or absent by selecting the appropriate option.
Code Categories	Attendance code categories are used to group attendance codes by classification for reporting and searching purposes. In order for an attendance code to count as an attendance code category, the attendance code must be associated to that attendance code category. Indicate which attendance code category you want to associate to this attendance code by selecting the appropriate checkbox.

Points	Enter the number of attendance points a student receives for this attendance code, such as absent=1, tardy=2, and present=0.
Teacher can assign	Use the pop-up menu to choose whether teachers can assign this attendance code in PowerTeacher.
This attendance code is considered in ADA calculations	Select the checkbox if this attendance code should be considered in Average Daily Attendance (ADA) calculations.
This attendance code counts towards membership	Select the checkbox if this attendance code counts towards Average Daily Membership (ADM).
Sort order for display	Use the pop-up menu to choose a sort order of this attendance code as it appears in the attendance codes pop-up menu on the student attendance pages.

5. Click **Submit**. The Attendance Codes page displays the new attendance code.

How to Edit an Attendance Code

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Codes**. The Attendance Codes page appears.
3. Click the code or description of the attendance code you want to edit. The Edit Attendance Code page appears.
4. Edit the information as needed. For field descriptions, see *How to Add an Attendance Code*.
5. Click **Submit**. The Attendance Codes page displays the edited attendance code.

How to Delete an Attendance Code

When deleting an attendance code, other users and student records may be directly impacted. Deleting an attendance code is not recommended unless the attendance code was created in error. If the attendance code is already in use, it cannot be deleted.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Codes**. The Attendance Codes page appears.
3. Click the code or description of the attendance code you want to delete. The Edit Attendance Code page appears.
4. Click **Delete**.
5. Click **Confirm Delete**. The Selection Deleted page appears.

How to Sort Attendance Codes

Though you must choose a sort order of 1 for the "present" attendance code, you can change the sort order of the other attendance codes without using the Edit Attendance Code page.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Codes**. The Attendance Codes page appears.
3. Choose different sort orders for the attendance codes from the **Sort** pop-up menus.
4. Click **Submit**. The page re-sorts the attendance codes.

Full-Time Equivalencies

Attendance calculations support full-time equivalencies (FTEs). FTEs are a powerful tool used in schools that need to associate groups of students with different attendance values for the same day, for example, full-time and half-time students.

FTEs are also used to determine default settings for reporting on Average Daily Attendance and Average Daily Membership (ADA/ADM). These settings include the default attendance mode and their conversion types. For **Meeting**, you can choose **Percent Period to Day**, **Percent Time to Day**, **Period to Day**, or **Time to Day**. For **Daily**, you can choose **Code to Day**, **Percent Time to Day**, or **Time to Day**. And, for **Interval**, you can choose **Time to Day**. FTEs are school- and year-specific but will be duplicated when new years are created.

Using Full-Time Equivalencies (FTE) page, you can set up and use FTEs to indicate what portion of a school day students attend.

Note: If this is the first time you have accessed the Full-Time Equivalencies (FTE) page, you will notice an FTE of 1 was created. This is to maintain backwards compatibility, as previously PowerSchool assumed students were full-time.

For more information about attendance, see *Attendance Overview*.

Set Students' FTEs

Once attendance is set up, you will need to set students' FTEs for school enrollments via the student Transfer Information page.

FTE is a grouping that associates a student's school enrollment with a set of attendance conversion values. When ADA runs, for a student, it runs for each school enrollment during the report dates. When processing each school enrollment, it uses the student's FTE to locate the set of attendance conversions to use when looking up the attendance value for the day. For more information, see *Transfer Information*.

How to Access the Full-Time Equivalencies Page

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Full-Time Equivalencies (FTE)**. The Full-Time Equivalencies (FTE) page displays the following information:

Field	Description
Name	The name of the FTE as it appears in the Full-Time Equivalency pop-up menu on the Edit Current/Previous Enrollment pages. The pop-up menu is used to associate an FTE with a student's current and historical school enrollment.
Description	A description of the FTE code.
Default Attendance Mode	Attendance mode that will be used for reporting purposes if a specific mode is not provided.
Default Attendance Conversion	Attendance conversion that will be used for reporting purposes if a specific conversion is not provided.

How to Add an FTE Code

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Full-Time Equivalencies (FTE)**. The Full-Time Equivalencies (FTE) page appears.
3. Click **New**. The New FTE Code page appears.
4. Use the following table to enter information in the fields:

Field	Description
Name	Enter the name of the FTE as you want it to appear in the Full-Time Equivalency pop-up menu on the Edit Current/Previous Enrollment pages. The pop-up menu is used to associate an FTE with a student's current and historical school enrollment.
Default Attendance Mode	Choose one of the attendance mode from the pop-up menu that will be used for reporting purposes if specific mode is not provided: • **Meeting** • **Daily** • **Interval**
Default Attendance Conversion	Choose the attendance conversion from the pop-up menu that will be used for reporting purposes if a specific conversion is not provided. If you selected **Meeting** as your **Default Attendance Mode**, you can choose **Percent Period to Day**, **Percent Time to Day**, **Period to Day**, or **Time to Day**. If you selected **Daily** as your **Default Attendance Mode**, you can choose **Code to Day**, **Percent Time to Day**, or **Time to Day**. If you selected **Interval** as your **Default Attendance Mode**, you can choose **Time to Day**.
Description	Enter a description of the FTE code.
Default for These Grades	Indicate which grades you want the FTE code to be applied to by selecting the appropriate checkboxes. These checkboxes determine what FTE a student of a particular grade level will be assigned when the End of Year process moves them into their new grade for the next year. The values should be defined for the upcoming school year's FTEs before running the End of Year process for the current school year.

5. Click **Submit**. The Full-Time Equivalencies (FTE) page displays the new FTE code.

How to Edit an FTE Code

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Full-Time Equivalencies (FTE)**. The Full-Time Equivalencies (FTE) page appears.
3. Click the name or description of the FTE code you want to edit. The Edit FTE Code page appears.
4. Edit the information as needed. For field descriptions, see *How to Add an FTE Code*.
5. Click **Submit**. The Full-Time Equivalencies (FTE) page displays the edited FTE code.

How to Delete an FTE Code

When deleting an FTE code, other users and student records may be directly impacted. Deleting an FTE code is not recommended unless the FTE code was created in error. If the FTE code is already in use, it cannot be deleted.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Full-Time Equivalencies (FTE)**. The Full-Time Equivalencies (FTE) page appears.
3. Click the name or description of the FTE code you want to delete. The Edit FTE Code page appears.
4. Verify this is the FTE code category you want to delete.
5. Click **Delete**.
6. Click **Confirm Delete**. The Selection Deleted page appears.

Attendance Preferences

Use the attendance Preferences page to specify general attendance preferences. Each preference is school- and year-specific. For global preferences at the district level, see *Global Attendance Preferences*.

Use the Quick Lookup Preferences page to specify attendance preferences as they relate to the Quick Lookup page for each student.

For more information about attendance, see *Attendance Overview*.

Enable Enter Attendance Link on Student Pages Menu

To enable the Enter Attendance link to appear in the student pages menu, you must select Meeting or Interval as one of the attendance recording methods and set it as the default attendance recording page. You can use the Enter Attendance link as a shortcut to the Edit Meeting Attendance page or the Edit Interval Attendance page.

How to Specify General Attendance Preferences

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Preferences**. The Attendance Preferences page appears.
3. Use the following table to enter information in the Recording section:

Field	Description
Attendance recording methods	Select the appropriate checkboxes that apply (any combination of the four options is valid): • **Meeting** to record attendance by meeting for this year • **Daily** to record attendance by day for this year • **Time** to record attendance this year by entering a time value • **Interval** to record attendance this year according to a specified time interval **Note:** This setting affects which tabs appear on the Attendance page. For more information, see *Attendance*.
Audit attendance records	Select the checkbox to enable auditing of attendance. After an attendance record is initially created, PowerSchool keeps track of any change, its previous value, and who made the change.
Default attendance page	Use the pop-up menu to indicate the default attendance page to display when viewing student attendance. The items that appear in the pop-up menu vary based on the attendance recording methods you select. **Note:** This setting affects which tab appears as the default tab on the Attendance page. For more information, see *Attendance*.

Enable multiple character attendance codes	By default, you can only create single-character attendance codes. To create multiple-character attendance codes, select the checkbox.
Meeting and daily attendance bridge	When using both Meeting and Daily attendance modes, this setting allows you to synchronize attendance records based on a bridge period. You can define a bridge period in each bell schedule. To create and synchronize Daily attendance records based on the bridge period, select **One-Way**. To keep the corresponding meeting attendance record synchronized whenever a change is made to a daily attendance record, select **Two-Way**. **Note:** It is not necessary to bridge Meeting and Daily attendance. Daily attendance can be managed manually. However, bridging attendance does provide a convenient way of automatically creating and maintaining attendance when both attendance modes are in use. Bridging attendance only functions with sections and section enrollments, which reside in the same school.
Number of school days teachers may alter attendance prior to current date (PowerTeacher)	Use the pop-up menu to indicate how far back teachers can alter attendance in PowerTeacher. The default is set to 14 days. **Note:** This setting does not apply to PowerSchool.
Number of school days teachers may alter attendance after the current date (PowerTeacher)	Use the pop-up menu to indicate how far forward teachers can alter attendance in PowerTeacher. The default is set to 7. **Note:** This setting does not apply to PowerSchool.
Show Saturday and Sunday on attendance views	Select the checkbox to display Saturday and Sunday on attendance views. This is typically not needed unless you have in-session days on weekends where student attendance marks need to be displayed. The following pages will display Saturday and Sunday:

	• PowerSchool admin portal
	    • Student Selection > Enter Attendance
	    • Student Selection > Attendance (Meeting, Daily, Time)
	    • Student Selection > Bell Schedule View
	    • Student Selection > Quick Lookup (Meeting, Daily, Program)
	    • School > Sections > Section > Multi-day Attendance
	    • Teacher Schedules > Teacher > Multi-day Attendance
	• PowerTeacher portal
	    • Section > Multi-day Attendance
	• PowerSchool Student and Parent portal
	    • Grades and Attendance
	    • Attendance History
	    • My Schedule

Start of Week	Indicate the day of the week that you want attendance and the bell schedule to start by choosing **Sunday** or **Monday** from the pop-up menu. The following pages will start with the selected day:
	
	• PowerSchool admin portal
	    • Student Selection > Enter Attendance
	    • Student Selection > Attendance (Meeting, Daily, Time)
	    • Student Selection > Bell Schedule View
	    • Student Selection > Quick Lookup (Meeting, Daily, Program)
	    • School > Sections > Section > Multi-day Attendance
	    • Teacher Schedules > Teacher > Multi-day Attendance
	• PowerTeacher portal
	    • Section > Multi-day Attendance
	• PowerSchool Student and Parent portal
	    • Grades and Attendance
	    • Attendance History
	    • My Schedule

	Note: If the **Show Saturday and Sunday** checkbox is deselected, then the week will start on Monday regardless of the selected day.
Interval Duration (in Minutes)	Interval attendance is primarily intended for alternative education programs that require attendance to be taken every hour. When using Interval Attendance mode, the number of opportunities for which attendance can be recorded during a given class is determined by dividing the bell time for the class by the interval duration. For instance, if a class is 90 minutes long and the interval duration is 60 minutes, then there will be two opportunities provided to take attendance. The first is at the beginning of class and the second is after 60 minutes has gone by. The default for this field is 60 minutes.

4. Use the following table to enter information in the Calculating and Reporting section:

Field	Description
Calculation accuracy	Enter the number of decimal places to use when calculating attendance values.
Count Meeting attendance recorded at another school for students enrolled at this school	If a student is enrolled in a class at another school, and there is attendance associated with that class, select this option to include this attendance when calculating Average Daily Attendance (ADA).
Count these codes for period conversion	This setting determines what is counted and subsequently used as the value for looking up the day's attendance, specifically for Period conversion. Use the pop-up menu to select **Presents** if your school calculates attendance using the number of periods a student is present in a day. Select **Absences** if your school calculates attendance using the number of periods a student is absent in a day.

Round or truncate	Use the pop-up menu to indicate how you want the system to handle long decimals that exceed the maximum when calculating attendance.

5. Use the following table to enter information in the Daily Attendance Calculations section:

Field	Description
Enable ADA Periods and Passing Time Deductions	To enable, see *How to Specify Attendance Preferences* for Daily Time Exclusion. For more information, see the *Daily Time Exclusion*.
Deduct Passing Time	To enable, see *How to Specify Attendance Preferences* for Daily Time Exclusion. For more information, see the *Daily Time Exclusion*.

6. Use the following table to enter information in the Consecutive Absences Notification section:

   Note: No calculations are performed nightly for a school until these settings are submitted.

Field	Description
Enable Notification	Select the checkbox to enable the Consecutive Absences Notification. Once enabled, consecutive absences for in session calendar days are automatically calculated as part of the nightly process. A notification appears on the Attendance pages identifying students who have been absent for an extended period of consecutive day (as indicated by the Notification Threshold). For more information, see *Attendance Data Grid*.
Minimum Days Stored	Enter the minimum number of consecutive (in session calendar) days a student must be absent in order for a record to be generated in the ConsecutiveDaysAlert table. Defaults to **1**.

Maximum Days Stored	Enter the number of in session calendar days earlier than the current system date that will be searched per student for consecutive absences if the Minimum Days Stored value is met. Defaults to **20**.
Notification Threshold	Enter the minimum number of consecutive (in session calendar) days a student must be absent in order to trigger the notification. The value must be between the Minimum Days Stored and Maximum Days Stored values. Defaults to **1**.

7. Click **Submit**. The Changes Recorded page appears.

How to Specify Quick Lookup Preferences

The Quick Lookup page displays absences, tardies, final grades, and citizenship codes for each student in the following areas of PowerSchool:

- Quick Lookup page in PowerSchool and the PowerTeacher portal
- Grades and Attendance page in PowerSchool for Students and Parents
- PowerSchool Mobile

You can choose whether to count attendance for sections that meet multiple times per day as single or multiple instances. For example, if a student misses a class that meets during 2 periods per day, you can specify whether that student's Quick Lookup page displays a 1 or 2 for the number of absences for that class. This setting also affects how the number of absences appears in PowerTeacher Gradebook.

For more information about the Quick Lookup page, see *Student Page Layout*.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under General, click **Quick Lookup Preferences**. The Quick Lookup Preferences page appears.
3. Use the following table to enter information in the fields:

Field	**Description**
Store Code	Displays the store code for the final grades, citizenship codes, and any store codes used only for historical grades.

Enabled Parent/Student	Select the checkbox to enable the display of final grades and citizenship codes in PowerSchool Student and Parent portal and PowerSchool Mobile. Deselect the checkbox to disable the display of this data.
Enable Teacher	Select the checkbox to enable the display of final grades and citizenship codes in PowerSchool Teacher portal. Deselect the checkbox to disable the display of this data.
Enable Admin	Select the checkbox to enable the display of final grades and citizenship codes in PowerSchool administrator portal. Deselect the checkbox to disable the display of this data.
Source of Data	Indicate which final grade and citizenship codes you want to display by choosing one of the following from the pop-up menu: • **Gradebook (Current)**: to display the final grade and/or citizenship codes that currently exists in the teacher's PowerTeacher Gradebook. • **Historical (Stored)**: to display the final grade and/or citizenship codes from the student's historical file or after the completion of a grading term. Store Codes that only exist as historical grades will always come from the historical file.

4. Select the **Count Multi-Period Meeting Attendance Once Per Day** checkbox to count only one attendance instance for a class that meets more than once per day. Deselect the checkbox to count attendance for each period.
5. Select the **Show Citizenship Grade** checkbox to display the citizenship grade on the Quick Lookup page. Deselect the checkbox to disable the display.
6. Click **Submit**. The Changes Recorded page appears.

Attendance Indicator

On the PowerTeacher start page, a dot appears next to each class' Chair icon. The color of the dot indicates whether or not the teacher has taken attendance for that class. A clear dot indicates attendance has not been taken. A yellow dot and fraction indicates partial attendance has been taken. A green dot indicates attendance has been taken.

To provide you with flexibility, you can customize the attendance indicator images by replacing them with graphics of your own. You can switch these images as often as you like. For example, you may want to switch your images seasonally by using such images hearts, four-leaf clovers, autumn leaves, or snowmen.

How to Customize the Attendance Indicator

1. Determine the replacement images.
2. Name the replacement images accordingly:
    - For the image that indicates that attendance has not been taken (clear dot), use **attendancetaken_no.png**.
    - For the image that indicates that partial attendance has been taken (yellow dot), use **attendancetaken_some.png**.
    - For the image that indicates that attendance has been taken (green dot), use **attendancetaken_yes.png**.
3. On your PowerSchool Server, navigate to **data > custom > web_root**.
4. Create an **images** folder, if one does not already exist.
5. Open the **images** folder.
6. Copy the replacement images to this folder.

Section Attendance Settings

Use the Section Attendance Settings page to create sections where attendance will be taken every period. These sections are sections created for the sole purpose of taking attendance in a section that meets more than once per day.

For example, if a section of Biology 101 meets during Period 1 for lecture during each day of a two-day cycle and also meets during Period 3 for field study on alternating days, the expression for this section would be 1(A-B) 3(A). If you do not use this option, attendance taken during 3(A) will overwrite attendance taken during 1(A).

For more information about attendance, see *Attendance Overview*.

How to Define Section Attendance Settings

Perform the following procedure to create sections where attendance will be taken every period and either your school has committed a master schedule with sections or sections are created from the School Setup page.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Section Attendance Settings**. The Section Attendance Settings page appears.
3. Use the following table to enter information in the fields:

Field	Description
Course Name	The name of the course appears. Click the course name to display the Edit Course page.
Course Number	The number of the course appears. Click the course number to display the Edit Course page.
Section Number	The number of the section. Click the section number to display the Edit Section page.
Expression	The expression, or period and day combination, for the section appears. Click the expression to display the Edit Section page.
Teacher	The section's teacher appears. Click the teacher's name to display the teacher's current schedule.
Room	The section's room appears. Click the room to display the Edit Section page.
Term	The term abbreviation in which the section is taught appears. Click the term to display the Term page.
Mark	Select the checkbox to take attendance each period separately.

4. Click **Submit**. The Section Attendance Settings: Result page appears.

   Note: To redisplay the Section Attendance Settings: Result page from the School Setup page, click **Section Attendance Settings** and then **Section Attendance Settings: Result**.

Attendance Conversions

Set up attendance conversions to calculate attendance. You can create multiple attendance conversion methods, such as Full Day or Half Day. For example, a student receives only a half-day of attendance credit if he or she is absent for two to four periods and receives no credit if absent for five or more periods. After creating attendance conversions, set up attendance conversion items. For more information, see *Attendance Conversion Items*. For more information about attendance, see *Attendance Overview*.

How to Access the Attendance Conversions Page

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Conversions**. The Attendance Conversions page displays the following information:

Field	Description
Attendance Conversion	The name of the attendance conversion
FTE	The name of the Full Time Equivalent (FTE). Students with one FTE can have a different set of conversions than students with a different FTE.
[Attendance Conversion Item]	The types of attendance conversion items you can create, edit, or delete: • **Period** - Use to define the number of periods in which the student must be present/absent to receive the number of points ADA value you define. • **Code** - Use to define the full day ADA value you want a student to receive when a specific attendance code is given. • **Time** - Use to define the cut off points for attendance and the ADA value a student should receive at each. • **Percent Period** - Use to define the percent of periods in which the student must be present/absent to receive the number of points ADA value you define. • **Percent Time** - Use to define the percentage of time for which a student must be present/absent to receive the number of points ADA value you define. **Note:** Period and Time conversions work with daily attendance and partial attendance and can contribute to both full day and partial day ADA values. Whereas, code conversion only works with

	daily attendance and can only contribute to full day and partial day ADA values. One of the following displays for each attendance conversion item entry: • **Defined** – Indicates attendance conversion items have been defined. • **(NONE)** – Indicates no attendance conversion items have been defined. **Note:** Values may vary slightly when Day Part Attendance is not enabled.

How to Add Attendance Conversions

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Conversion**. The Attendance Conversions page appears.
3. Click **New**. The New Attendance Conversion page appears.
4. Enter the name for the attendance conversion.
5. Click **Submit**. The Attendance Conversions page displays the new attendance conversion.

How to Edit Attendance Conversions

You can edit the name of an attendance conversion. To edit conversion items, see *Attendance Conversion Items*.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Conversion**. The Attendance Conversions page appears.
3. Click the name of the attendance conversion you want to edit. The Edit Attendance Conversion page appears.
4. Edit the name of the attendance conversion.

   Note: If the attendance conversion is being used by a bell schedule, links to the bell schedule appear. Click the name of the bell schedule to access the Edit Bell Schedule page. For more information, see *How to Set Up Bell Schedules*. Click the duration of the bell schedule to access the Bell Schedule: [Name] page. For more information, see *How to Set Up Bell Schedule Items*.

5. Click **Submit**. The Attendance Conversions page displays the edited attendance conversion.

How to Delete Attendance Conversions

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Conversion**. The Attendance Conversions page appears.
3. Click the name of the attendance conversion you want to delete. The Edit Attendance Conversion page appears.
4. Click **Delete**.
5. Click **Confirm Delete**. The Selection Deleted page appears.

Attendance Conversion Items

PowerSchool uses attendance conversion items to calculate attendance for the purposes of state and provincial reports and student records. There are three types of attendance conversion items you can create for each attendance conversion method: period, code, and time.

Note: Period and Time conversions work with daily attendance and partial attendance and can contribute to both full day and partial day ADA values. Whereas, code conversion only works with daily attendance and can only contribute to full day and partial day ADA values. For more information about code conversion, see the *Attendance User Guide* available on PowerSource.

Period Items

For each period item, define the number of periods in which the student must be present/absent to receive the number of points ADA value you define.

Note: If a bridge period section is not configured within your bell schedule, period items are not counted in the period to day conversion.

How to Add Period Items

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.

2. Under Attendance, click **Attendance Conversion**. The Attendance Conversions page appears.
3. Click **(NONE)** in the Period column next to the conversion item for which you want to add period items. The Period-to-Day Attendance Conversion page appears.
4. Use the following table to enter information in the fields:

Field	Description
Periods Present / Periods Absent	Period items can be configured for periods present or absent. Present is used if your school calculates attendance using the number of periods a student is present in a day. Absent is used if your school calculates attendance using the number of periods a student is absent in a day. **Note:** To configure, see the **Count these codes for period conversion** setting in the *Attendance User Guide* available on PowerSource.
Day Attendance Value	If **Period Present**, enter the number of attendance points students receive toward full day ADA if they are present, based on the number of periods in the **Period Present** column. For example, students are counted as absent for the entire day if they are present for zero or one period, enter **0** in the fields next to 0 and 1 periods present. If **Period Absent**, enter the number of attendance points students receive if they are absent, based on the number of periods in the **Period Absent** column.
AM Attendance Value	If **Period Present**, enter the number of attendance points students receive toward partial day ADA for the AM day part if they are present, based on the number of periods in the **Period Present** field. If **Period Absent**, enter the number of attendance points students receive toward partial day ADA for the AM day part if they are absent, based on the number of periods in the **Period Absent** field. **Note:** This field only appears if Day Part Attendance is enabled.

PM Attendance Value	If **Period Present**, enter the number of attendance points students receive toward partial day ADA for the PM day part if they are present, based on the number of periods in the **Period Present** field. If **Period Absent**, enter the number of attendance points students receive toward partial day ADA for the PM day part if they are absent, based on the number of periods in the **Period Absent** field. **Note:** This field only appears if Day Part Attendance is enabled.
Comments	Enter any comments that are relevant to this attendance conversion item.

Note: Alternatively, click **Copy From Other Conversion Table** to copy period items from another conversion table. Select the attendance conversion to be copied and click **Submit**.

5. Click **Submit**. A confirmation message appears.
6. Click **Attendance Conversions** in the navigation path to return to the Attendance Conversions page.

How to Edit Period Items

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Conversion**. The Attendance Conversions page appears.
3. Click **Defined** next to the conversion item for which you want to edit period items. The Period-to-Day Attendance Conversion page appears.
4. Edit the information as needed. For field descriptions, see *How to Add Period Items*.
5. Click **Submit**.
6. Click **Attendance Conversions** in the navigation path to return to the Attendance Conversions page.

Code Items

For each code item, define the ADA value you want a student to receive when a specific attendance code is given.

Note: Code is not applicable if Day Part Attendance is enabled. For more information, see the *State and Provincial Reporting Day Part Attendance Setup Guide* available on PowerSource.

How to Add Code Items

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Conversion**. The Attendance Conversions page appears.
3. Click **(NONE)** in the Code column next to the conversion item for which you want to add code items. The Code-to-Day Attendance Conversion page appears.
4. Use the following table to enter information in the fields:

Field	Description
Attendance Value	For each attendance code, enter the number of attendance points students receive if they are marked with that attendance code.
Comments	Enter any comments that are relevant to this attendance conversion item.

Note: Alternatively, click **Copy From Other Conversion Table** to copy code items from another conversion table. Select the attendance conversion to be copied and click **Submit**.

5. Click **Submit**.
6. Click **Attendance Conversions** in the navigation path to return to the Attendance Conversions page.

How to Edit Code Items

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Conversion**. The Attendance Conversions page appears.
3. Click **Defined** next to the conversion item for which you want to edit code items. The Code-to-Day Attendance Conversion page appears.
4. Edit the information as needed. For field descriptions, see *How to Add Code Items*.
5. Click **Submit**.

6. Click **Attendance Conversions** in the navigation path to return to the Attendance Conversions page.

Time Items

For each time item, define the cut off points for attendance and the ADA value a student should receive at each.

How to Add Time Items

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Conversion**. The Attendance Conversions page appears.
3. Click **(NONE)** next to the conversion item for which you want to add time items. The Time-To-Day Attendance Conversion page appears.
4. Use the following table to enter information in the fields:

Field	Description
Minutes Present	Enter the minimum number of minutes a student must be present to earn the number of attendance points specified in the next field. Use the first row for zero minutes present. **Note:** Only numeric values containing no decimals may be entered.
Day Attendance Value	Enter the number of attendance points students receive toward the full day ADA value if they are present, based on the number of minutes you enter in the **Minutes Present** field.
AM Attendance Value	Enter the number of attendance points students receive toward the partial day ADA value for the AM day part if they are present, based on the number of minutes in the **Minutes Present** field. **Note:** This field only appears if Day Part Attendance is enabled.
PM Attendance Value	Enter the number of attendance points students receive toward the partial day ADA value for the PM day part if they are present, based on the number of minutes in the **Minutes Present** field.

	Note: This field only appears if Day Part Attendance is enabled.
Comments	Enter any comments that are relevant to this attendance conversion item.

Note: Alternatively, click **Copy From Other Conversion Table** to copy period items from another conversion table. Select the attendance conversion to be copied and click **Submit**.

5. Click **Submit**. A confirmation message appears.
6. Click **Attendance Conversions** in the navigation path to return to the Attendance Conversions page.

How to Edit Time Items

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Conversion**. The Attendance Conversions page appears.
3. Click **Defined** next to the conversion item for which you want to edit time items. The Time Attendance Conversion page appears.
4. Edit the information as needed. For field descriptions, see *How to Add Time Items*.
5. Click **Submit**.
6. Click **Attendance Conversions** in the navigation path to return to the Attendance Conversions page.

Percent Period Items

For each period item, define the percent of periods in which the student must be present/absent to receive the number of points ADA value you define.

Note: If a bridge period section is not configured within your bell schedule, period items are not counted in the period to day conversion.

How to Add Percent Period Items

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Conversion**. The Attendance Conversions page appears.

3. Click **(NONE)** in the Percent Period column next to the conversion item for which you want to add percent period items. The Percent-Period-To-Day Attendance Conversion page appears.
4. Use the following table to enter information in the fields:

Field	**Description**
Percent Present	Enter the percentage of periods in a student's schedule that they must be present to earn the number of attendance points specified in the next field. Use the first row for zero percent periods present.
Day Attendance Value	Enter the number of attendance points students receive toward the full day ADA value if they are present, based on the percentage of periods you enter in the **Percent Present** field.
Comments	Enter any comments that are relevant to this attendance conversion item.

Note: Alternatively, click **Copy From Other Conversion Table** to copy period items from another conversion table. Select the attendance conversion to be copied and click **Submit**.

5. Click **Submit**. A confirmation message appears.
6. Click **Attendance Conversions** in the navigation path to return to the Attendance Conversions page.

How to Edit Percent Period Items

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Conversion**. The Attendance Conversions page appears.
3. Click **Defined** next to the conversion item for which you want to edit percent period items. The Period-to-Day Attendance Conversion page appears.
4. Edit the information as needed. For field descriptions, see *How to Add Percent Period Items*.
5. Click **Submit**.
6. Click **Attendance Conversions** in the navigation path to return to the Attendance Conversions page.

Percent Time Items

For each time item, define the percentage of time for attendance and the ADA value a student should receive at each.

How to Add Percent Time Items

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Conversion**. The Attendance Conversions page appears.
3. Click **(NONE)** next to the conversion item for which you want to add time items. The Percent-Time-To-Day Attendance Conversion page appears.
4. Use the following table to enter information in the fields:

Field	Description
Percent Present	Enter the percentage of minutes in a student's schedule that they must be present to earn the number of attendance points specified in the next field. Use the first row for zero percent minutes present.
Day Attendance Value	Enter the number of attendance points students receive toward the full day ADA value if they are present, based on the percentage of minutes you enter in the **Percent Present** field.
Comments	Enter any comments that are relevant to this attendance conversion item.

Note: Alternatively, click **Copy From Other Conversion Table** to copy period items from another conversion table. Select the attendance conversion to be copied and click **Submit**.

5. Click **Submit**. A confirmation message appears.
6. Click **Attendance Conversions** in the navigation path to return to the Attendance Conversions page.

How to Edit Percent Time Items

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Attendance Conversion**. The Attendance Conversions page appears.
3. Click **Defined** next to the conversion item for which you want to edit percent time items. The Percent Time Attendance Conversion page appears.
4. Edit the information as needed. For field descriptions, see *How to Add Percent Time Items*.
5. Click **Submit**.
6. Click **Attendance Conversions** in the navigation path to return to the Attendance Conversions page.

Attendance Functions

Perform attendance-related functions such as recalculating daily attendance or refreshing attendance data. For more information about attendance, see *Attendance Overview*.

How to Recalculate Daily Attendance

Under certain circumstances, you may need to recalculate the daily attendance minutes. These circumstances may include updating from a previous PowerSchool release or changing the attendance preferences that affects Daily Time Exclusion (DTE). Once this special function is generated, all daily attendance record minutes for each student are updated based on DTE attendance preferences for each school's full year term. For more information, see the *Daily Time Exclusion*.

Note: This special function should be generated after regular business hours, but not during nightly processing. The duration of the special function depends on how many daily attendance and associated Attendance_Time records exist. Run this special function only under the following conditions: no attendance activity is occurring, including recording or importing of attendance records; and no attendance reports are currently running.

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Attendance Functions**. The Attendance Functions page appears.
3. Click **Recalculate Daily Attendance Minutes**. The Recalculate Daily Attendance Minutes page appears.
4. Select the checkbox next to each school name for which you want to recalculate attendance minutes.

   Note: The school context is critical in determining which schools appear on this page. When working at the district level, all schools in the district that take daily attendance appear. When working at the school level and the school takes daily attendance, the school appears. When working at the school level and the school does not take daily attendance, the school does not appear.

5. Click **Submit**. The daily attendance minutes are updated.

How to Update Attendance Views

A special function allows you to update the attendance views as needed, rather than wait for the nightly process to execute this same functionality automatically. This update process recalculates and re-populates the Membership Defaults tables based on the date ranges you specify.

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Attendance Functions**. The Attendance Functions page appears.
3. Click **Refresh Premier Attendance Views Data**. The Refresh Attendance Views Data Report page appears.
4. Use the following table to enter information in the fields:

Field	Description
Students to Include	Indicate which students you want to run the report for by selecting one of the following options: • **The selected students only** to run the report for students in the current selection enrolled in the specified date range. • **All students** to run the report for all students in the current school enrolled in the specified date range.
Begin Date and Ending Date	Specify the date range in the blank fields using the format mm/dd/yyyy or mm-dd-yyyy. If no dates or only one date is entered, the special function will run from the first day of the school's term until the current date. Since this process must recalculate attendance values, the greater the date ranges specified, the longer the processing time. **Note:** The date entered must fall within the selected school year term.

Processing Options	Select a time to run the report: • **In Background Now** to execute the report immediately in the background. • **ASAP** to execute the report in the order it is received in the Report Queue. • **At Night** to execute the report during the next evening. • **On Weekend** to execute the report during the next weekend. • **On Specific Date/Time** to execute the report on the date and time specified in the Specific Date/Time fields. After submitting this report, it will be processed in the report queue. On the navigation bar, click the **Report Queue** button. The Report Queue - My Jobs page displays all your reports.
Specific Date/Time	If you selected **On Specific Date/Time** for **Processing Output**, enter the date to execute the report using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry. Use the pop-up menus to indicate the hour and minute.

5. Click **Submit**. The refresh process begins. A job file is created showing success and failures for each student processed.

Attendance Synchronization

Districts that switch from using Daily to Meeting attendance or vice versa during the school year will have attendance records that are out of synch. For instance, during the time period that the district took Daily attendance, Meeting attendance records are missing. Use the automated attendance synchronization process to rebuild the missing attendance records.

Processing Options

The synchronization process has two processing options:

- Based on existing Daily attendance records, Meeting attendance records will be created.

- Based on existing Meeting attendance records, Daily attendance records will be created.

Setup

Prior to running the synchronization process, several setup options are required:

- Attendance recording methods – The current method used by the school for recording attendance, as this is the method that will determine the bridge direction (currently taking Daily, so need to retroactively build Meeting OR currently taking Meeting, so need to retroactively build Daily).
- Meeting and Daily Attendance Bridge – Either one-way or two-way sync must be selected:
  - One-way indicates that when a Meeting attendance record is taken during the bridge period, a Daily attendance record is automatically created.
  - Two-way is the same as one-way but also indicates that when a Daily attendance record is taken, a Meeting attendance record is automatically created for the bridge period.
- Bell Schedules – Each bell schedule used in the school's calendar must have a bridge period defined, including default time in and time out.

Other System Requirements

- System Backup – It is strongly recommended that you back up your system prior to running this process.
- School Year – The synchronization process may not be run for school years prior to 2004-2005.
- Current School Only – The synchronization process may only be run for the current school and may not be run for the district office.

For more information about attendance, see *Attendance Overview*.

How to Synchronize Attendance

Note: This procedure may only be performed at the school level.

1. On the start page, choose **System** under Setup in the main menu. The System Administration page appears.
2. Under Attendance, click **Attendance Bridge Synchronization**. The Attendance Bridge Synchronization page appears.
3. Use the following table to enter information in the fields:

<table>
<tr><th>Field</th><th>Description</th></tr>
<tr><td>Direction to re-build bridge</td><td>
Choose From Meeting, build Daily to create a daily attendance record for each meeting attendance record that exists for the calendar day's bridge period:

For each Meeting attendance record existing for the bridge period of the calendar day, a Daily attendance record will be created with the attendance code found in the Meeting record.
If a Daily record already exists for the student, either with the same attendance code or a different attendance code, a warning will be displayed. The existing record will not be modified under any circumstance.

Choose From Daily, build Meeting to create a meeting attendance record for each daily attendance record that exists for the calendar day:

For each Daily attendance record existing for the calendar day, a Meeting attendance record will be created for the bridge period with the attendance code found in the daily record.
If a Meeting record already exists for the student in the bridge period, either with the same attendance code or a different attendance code, a warning will be displayed. The existing record will not be modified under any circumstance.
If the attendance code found in the Daily attendance record counts as absent, there is a preference option to mass create a Meeting attendance for every period for the day (not just the bridge period).
When choosing the option to build meeting from daily attendance, meeting attendance records are built as follows:

If the attendance codes denote absence and the preference selected from the Other Preference pop-up menu indicates to mark

</td></tr>
</table>

	all periods, a meeting attendance record will be created for each period in the bell schedule. • If the attendance codes denote absence and the preference selected from the Other Preference pop-up menu indicates to mark only the bridge period, a meeting attendance record will be created for the bridge period identified in the bell schedule. • If the attendance codes denote present or tardy, regardless of the preference to indicate mark all periods or mark only the bridge period, a meeting attendance record will be created for the bridge period in the bell schedule.
Other Preferences	From the pop-up menu, select one of the following options: • **If daily attendance code is absent, mark all periods absent for the day** to create a meeting attendance record for each period in the bell schedule. • **If daily attendance code is absent, mark only the bridge period absent for the day** to create a meeting attendance record for the bridge period identified in the bell schedule.

4. Click **Submit**. The Attendance Bridge Synchronization Progress page appears. When the synchronization is complete, click PowerSchool in the upper-left corner to return to the start page.

   Note: If a Meeting record already exists for the student in the any of these periods, either with the same attendance code or a different attendance code, a warning will appear. The existing record will not be modified under any circumstance.

Teacher Attendance Submission Status

Finding out which teachers have taken attendance has never been easier than using the Teacher Attendance Submission Status page. With graphical green checkmark, orange exclamation mark and red exclamation mark to indicate whether a teacher has completed attendance for the entire day, part of the day, or not at all, staff can quickly determine where follow-up is needed.

Note: This procedure may only be performed at the school level.

How to View Teacher Attendance Submission Status

1. On the start page, choose **Attendance** under Functions in the main menu. The Attendance page appears.
2. Click **Teacher Attendance Submission Status**. The Teacher Attendance Submission Status page appears. By default, attendance submission status appears for today
3. Use the following table to enter information in the fields:

Field	Description
Date Displayed	By default, today's date appears. Enter the date for which you want to view attendance using the format mm/dd/yyyy or mm-dd-yyyy. Alternately, click the **Calendar** icon to select a date. If you enter an invalid date or do not use this format, an alert appears.
Show Sections Excluded From Attendance	By default, the switch is set to **No** to display only sections that are included in ADA calculations. Alternatively, click the switch to **Yes** to display both sections that are and are not included in ADA calculations.
Order By	By default, results appear in alphabetical order. Do one of the following: • Select the **Alphabetic** option to order attendance results by teacher's last names (red, orange, and green). • Select the **Att taken first** to order attendance results by teachers who have completed taking attendance (green), teachers who are in the progress of taking attendance (orange), and teachers who have not yet begun taking attendance (red). • Select **No Att taken first** to order attendance results by teachers who have not yet begun taking attendance (red), teachers who are in the progress of taking attendance

	(orange), and teachers who have completed taking attendance (green).
Show	By default, attendance for all teachers for the selected school appears. Do one of the following: • Select the **All** option to view all statuses of teacher attendance submission. • Select the **Complete Attendance** option to only view teachers who have completed taking attendance (green). • Select the **Incomplete Attendance** option to only view teachers who are in the progress of taking attendance (orange) or who have not yet begun taking attendance (red).

4. Click **Submit**. The Teacher Attendance Submission Status page refreshes and displays results based on your selections.

   Note: If you selected a date that school was not in session, an alert appears stating "No attendance data for this date."

5. To view class information, click teacher's name. The Submission Status pop-up appears displaying the teacher's name, the classes the teacher is teaching for the selected day, and whether they have taken attendance for each class.
6. When done viewing class information, click **Ok**. The Submission Status pop-up closes.

Take Attendance

Meeting/Interval Attendance

In PowerSchool, your school can track meeting attendance, interval attendance, daily attendance, and time attendance. Students' meeting and interval attendance records indicate their absences and tardies in each class period during the school day. Interval attendance allows for multiple attendance records per period. Students' daily attendance records indicate their absences, tardies, and arrival and dismissal times for an entire school day. Time attendance is a simple way of adding attendance value by entering total minutes or hours for a given day.

Use the Meeting/Interval Attendance function to view or change a student's attendance record. Each column represents one week, with the days of the week MTWTF) underlined. Attendance codes are noted in the chart under each day. In the case of meeting attendance, the days without a code indicate that the student was present. With interval attendance, all days and periods must have a code.

Meeting and interval attendance functions share the same page. The primary difference between the two is that meeting allows for only one attendance record per period while interval attendance allows for multiple attendance records per period based on the specified interval. Whether the class is meeting, or interval is determined by what is specified for the section in the *Section Setup* page. Interval attendance may not appear any different from meeting attendance if the period length is less than or equal to the specified interval duration defined in *Attendance Preferences*. For more information about attendance, see *Attendance Overview*.

Enable Enter Attendance Link on Student Pages Menu

A shortcut to the Edit Meeting/Interval Attendance page is available via the Enter Attendance link, which appears just below the Attendance link. To enable the Enter Attendance link to appear in the student pages menu, **Meeting** or **Interval** must be selected as one of the attendance recording methods and set as the default attendance recording page on the *Attendance Preferences* page.

How to Take Meeting or Interval Attendance for a Single Day/Period

Use this procedure to take Meeting or Interval attendance for the selected student. You can mark or change a single attendance instance in a selected week.

Note: Any change recorded for meeting attendance modifies daily attendance if daily attendance is enabled and the period associated with the meeting attendance being modified is the bridge period for that day. Interval attendance never modifies daily attendance.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Attendance** from the student pages menu. The default attendance page appears, based on the Default Attendance Recording Page setting on the Attendance Preferences page.

   Note: To go directly to the Edit Meeting/Interval Attendance page, click **Enter Attendance** instead of **Attendance**. The Edit Meeting/Interval Attendance page appears. To continue, skip to Step 6.

3. If the Meeting/Interval Attendance page does not display by default, click **Meeting/Interval**. The Meeting/Interval Attendance page appears.

   Note: A dash (-) indicates that school is not in session and/or the student is not enrolled on that date.

4. Click **Show dropped classes also** to view or change attendance records for dropped classes. The dropped classes appear on the page with the other classes.
5. Click the week link in a week that you want to enter or change attendance. The Edit Meeting/Interval Attendance page appears.

   Note: The Submit button is unavailable until Step 7 is performed.

6. Use the following table to enter information in the fields:

Field	Description
Current attendance code	Choose the attendance code you want to enter.
Set All	Click to enter the selected attendance code in all periods and/or intervals fields for a given day.
[Attendance]	Click to enter the selected attendance code in a specific period and/or interval field.

[Comment Icon]	When an attendance code (other than blank) is entered, a gray Comment icon appears. To enter an attendance comment: 1. Click the **Comment** icon. The Edit Comments pop-up appears. 2. Enter a comment for the student's attendance record. 3. Click **OK**. The Comment icon now appears blue to indicate a comment has been entered.

7. Click **Submit**. The Changes Recorded page appears.

How to Take Meeting Attendance for an Extended Day/Period

Note: This function does not function with interval attendance.

Use this procedure to take meeting attendance for the select student. You can mark or change a student's attendance records for blocks of time. This is particularly useful when the student has been or will be out for an extended period. To change a student's attendance record for an extended period, it is easiest to use this method.

Note: Any change recorded for meeting attendance modifies daily attendance if the following conditions are met: daily attendance is enabled, and the period associated with the meeting attendance being modified is the bridge period for that day.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Attendance** from the student pages menu. The default attendance page appears, based on the Default Attendance Recording Page setting on the Attendance Preferences page.

   Note: To go directly to the Edit Meeting Attendance page, click **Enter Attendance** instead of Attendance. The Edit Meeting Attendance page appears. To continue, skip to Step 6.

3. If the Meeting Attendance page does not display by default, click **Meeting**. The Meeting Attendance page appears.

   Note: A dash (-) indicates that school is not in session and/or the student is not enrolled on that date.

4. Click **Show dropped classes also** to view or change attendance records for dropped classes. The dropped classes appear on the page with the other classes.
5. Click **Change Meeting Attendance**. The Change Meeting Attendance page appears.
6. Use the following table to enter information in the fields:

Field	Description
Change attendance for	The selected students appear.
From this date	Enter the first day of the date range using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
To this date	Enter the last day of the date range using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
Meetings to scan	Select the checkboxes to indicate the periods to change. To mark attendance for the entire day, click **Select All**.
Codes to scan for	Either choose all by clicking **All** or select **These Codes** and then choose the attendance codes for which you want to scan
Attendance code to set	Choose the attendance code to apply to the date range from the pop-up menu.
If other than a default present	Select the option to either overwrite or not overwrite any existing attendance codes.
Comment	Enter comments that are relevant to this attendance record.

7. Click **Submit**. The Changes Recorded page appears.

Daily Attendance

In PowerSchool, your school can track both meeting and daily attendance. Students' meeting attendance records indicate their absences and tardies in each class period during the school day. Students' daily attendance records indicate their absences, tardies, and arrival and dismissal times for an entire school day.

Use the Daily Attendance function to view or change a student's attendance record. Each column represents one week, with the days of the week (MTWTF) underlined. Attendance codes are noted in the chart under each day. On the days where there is no code, the student was present.

For more information about attendance, see *Attendance Overview*.

How to Take Daily Attendance for an Individual Student

Schools use the Daily Attendance function to select a single period to denote a student's daily attendance. By denoting the period, default times for check-in, checkout, and return-in can be defined for a daily attendance total. Attendance can be entered from the classroom using PowerTeacher. Once the teacher enters the attendance, the office staff can then take control of a student's daily attendance. The office also can use a variety of options and reports when working with the Daily Attendance function.

With a period marked for daily attendance, the teacher automatically sets the daily attendance while taking attendance in the classroom using PowerTeacher. Your PowerSchool administrator sets the defaults for the time in and time out. This lets teachers not only track classroom attendance, but also set the initial code for the office.

After you add a daily attendance entry, you can modify daily attendance. Click the abbreviation for the first day above each day of the week in the current term. Click the letter to display the Daily Attendance page for the date to be modified.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Attendance** from the student pages menu. The default attendance page that appears depends on the Default Attendance Recording Page setting on the Attendance Preferences page.
3. Click **Daily**. The Daily Attendance page appears.

   Note: A dash (-) appears to indicate that school is not in session and/or the student is not enrolled on that date.

4. Click the link in a week where you want to enter attendance codes. The New Daily Attendance page appears.
5. Use the following table to enter information in the fields:

Field	Description
Date	The date for which you are taking attendance appears.
Attendance Code	Choose the attendance code from the pop-up menu.
Total Time	Based on the times entered, PowerSchool calculates the minutes the student has attended for the day. The results display after you click **Submit**.
Comment	Enter any additional text, if applicable.
Time In	Enter the time the student arrives, if applicable.
Time Out	Enter the time the student leaves, if applicable.
Exclude from Total Time Calculation	Select the checkbox to exclude this time item from the total time calculation.
Time Comment	Enter any additional text regarding the time the student arrived or left, if applicable.

6. Click **Submit**. The Changes Recorded page appears.

   Note: A clock icon, total minutes, attendance code, and time in and time out appear in the date for which you just took attendance.

How to Take Daily Attendance for Multiple Days for an Individual Student

In addition to changing a single date for an individual student, you can change multiple dates at one time.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Attendance** from the student pages menu. The default attendance page that appears depends on the Default Attendance Recording Page setting on the Attendance Preferences page.

3. Click **Daily**. The Daily Attendance page appears.

   Note: A dash (-) appears to indicate that school is not in session and/or the student is not enrolled on that date.

4. Click **Change Multiple Days** at the top of the Daily Attendance page. The Change Daily Attendance page appears.
5. Use the following table to enter information in the fields:

Field	Description
Change Daily Attendance for	The selected student appears.
From this Date	Enter the first day of the date range using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
To this Date	Enter the last day of the date range using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
Codes to scan for	Select the attendance codes for which you want to scan. To select multiple attendance codes, press and hold COMMAND (Mac) or CONTROL (Windows) as you click each of the attendance codes you want to scan.
Attendance Code to Set	Choose the attendance code to apply to the date range from the pop-up menu.
If Other Than a Default Present	Select the option to either overwrite or not overwrite any existing attendance codes.
Comment	Enter comments that are relevant to this attendance record, if applicable.

6. Click **Submit**. The Changes Recorded page appears.

   Note: A clock icon, total minutes, attendance code, and time in and time out appear in the date for which you just took attendance.

How to Edit Daily Attendance

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Attendance** from the student pages menu. The default attendance page that appears depends on the Default Attendance Recording Page setting on the Attendance Preferences page.
3. Click **Daily**. The Daily Attendance page appears.

   Note: A dash (-) appears to indicate that school is not in session and/or the student is not enrolled on that date.

4. Click the link in a week where you want to change attendance codes. The Edit Daily Attendance page appears.
5. Use the following table to enter information in the fields:

Field	Description
Date	The date for which you are taking attendance appears.
Attendance Code	Choose the attendance code from the pop-up menu.
Total Time	Based on the times entered, PowerSchool calculates the minutes the student has attended for the day. The results display after you click **Submit**.
Comment	Enter any additional text.
Time In	The time the student arrives appears.
Time Out	The time the student leaves appears.

Minutes	Based on the times entered, the minutes the student has attended for each class appears, as well as the total minutes the student has attended for the day.
Comment	Any additional text regarding the time the student arrived or left appears.
Exclude from Total Time Calculation	Indicates whether or not this time item is excluded from the total time calculation.

6. Click **Submit**. The Changes Recorded page appears.

   Note: A clock icon, total minutes, attendance code, and time in and time out appear in the date for which you just took attendance.

Record Meeting Attendance by Section

Using the Record Meeting Attendance [Section] page, you can enter or change the attendance records for students in a section.

How to Record Meeting Attendance by Section for a Date Range

Once an attendance record has been entered or modified by a PowerSchool administrator, it cannot be modified by the teacher in PowerTeacher.

1. To access the Record Meeting Attendance [Section] page, do one of the following:
   - Access the Sections page. For more information, see *Sections*.
   - Access the Teacher Schedule page. For more information, see *Staff Current Schedules*.
2. Click the **Attendance** (grid) icon next to the class for which you want to record attendance.
3. Use the following table to enter information in the fields:

Field	**Description**
Attendance Code	Select the attendance code from the pop-up menu.

	Note: To enter attendance all students using the day of the week buttons, an attendance code other than blank (Present) must be selected.
Date Range	1. Click **Edit**. The Update Date Range pop-up appears. 2. Do one of the following: • Select **Range**, enter the date range for which you want to enter attendance, or click the **Calenda**r icon to select a date. • Select **Reporting Term** to choose the term from the pop-up menu. 3. Click **Update** to change the attendance date.
Comments	Do one of the following: • Click **Display** to show teacher comments in the attendance grid. • Click **Hide** to not show teacher comments in the attendance grid.

4. To enter an attendance code for all students, click the day of the week (S, M, T, W, T, F, S) for which you want to enter the attendance code.

   Note: Attendance codes that have already been entered are not overwritten. However, if the attendance code is a blank (Present), it will be overwritten.

5. Use one of the following methods to enter the applicable attendance code:
   - Click in the field next to the student's name to enter the attendance code you selected from the **Attendance Code** pop-up menu. Use the pop-up menu to select a different attendance code, if needed.
   - Double-click in a field and select the code from the pop-up menu. Use the arrow keys on your keyboard to scroll through the list.
   - Click in a field and type the attendance code directly in the field.

   Note: Use the Tab or arrow keys to navigate to a different field.

6. When an attendance code is entered, a comment icon appears. Click the icon to enter an attendance comment on the Edit Comments pop-up. Click **OK** to enter the comment for the student's attendance record.

7. Click on an icon in the **Alert** column to view the applicable alert pop-up.
8. When finished entering attendance and comments, click **Submit**.

How to Record Meeting Attendance by Section for a Specific Date

Recording meeting attendance by section for a specific date is the same in PowerSchool as when entering single day attendance in PowerTeacher. Once an attendance record has been entered or modified by a PowerSchool administrator, it cannot be modified by the teacher in PowerTeacher.

Note: By submitting attendance on this page you are verifying that attendance has been taken for this entire class.

1. To access the Record Meeting Attendance [Section] page, do one of the following:
   - Access the Sections page. For more information, see *Sections*.
   - Access the Teacher Schedule page. For more information, see *Staff Current Schedules*.
2. Click the **Attendance** (chair) icon.
3. Use the following table to enter information in the fields:

Field	Description
Attendance Code	Select the attendance code from the pop-up menu. **Note:** Blank attendance codes count as (Present). However, if using interval attendance, an attendance value may be required to be entered for each student based on the requirements for your state/province. **Note**: If entering interval attendance, the interval for the selected period appears at the top of the **Attendance** column.
Date	Select the date or period for which you want to enter attendance from the pop-up menu. **Note**: If entering interval attendance, the interval for the selected period appears at the top of the **Attendance** column.
Classes	If there is more than one section of this class, you can click **Show Multiple Sections** to combine the students from multiple sections of this class into one attendance view. Click **Show Single Section** to return to a single section view. For more information,

	see *How to Record Meeting Attendance for Multiple Sections for a Specific Date*.

4. Use one of the following methods to enter the applicable attendance code:
    - Click in the field next to the student's name to enter the attendance code you selected from the **Attendance Code** pop-up menu. Use the pop-up menu to select a different attendance code, if needed.
    - Double-click in a field and select the code from the pop-up menu. Use the arrow keys on your keyboard to scroll through the list.
    - Click in a field and type the attendance code directly in the field.

    Note: Use the Tab or arrow keys to navigate to a different field.

5. When an attendance code is entered, a comment icon appears. Click the icon to enter an attendance comment on the Edit Comments pop-up. Click **OK** to enter the comment for the student's attendance record.
6. Click on an icon in the **Alert** column to view the applicable alert pop-up.
7. When finished entering attendance and comments, click **Submit**.

How to Record Meeting Attendance for Multiple Sections for a Specific Date

Recording meeting attendance for multiple sections for a specific date is the same in PowerSchool as when recording attendance for multiple sections in PowerTeacher. Once an attendance record has been entered or modified by a PowerSchool administrator, it cannot be modified by the teacher in PowerTeacher.

Note: By submitting attendance on this page you are verifying that attendance has been taken for this entire class.

1. To access the Record Meeting Attendance [Section] page, do one of the following:
    - Access the Sections page. For more information, see *Sections*.
    - Access the Teacher Schedule page. For more information, see *Staff Current Schedules*.
2. Click the **Attendance** (chair) icon.
3. Click **Show Multiple Sections**. In Single Day attendance mode, the names of those sections that meet concurrently appear, along with a combined class roster. In Multi-Day attendance mode, the names of those sections that meet concurrently appear, and the students display by section.

    Note: Concurrent attendance can only be taken for sections that share the same attendance mode as the originally selected section. For instance, if the selected section is designated as an interval attendance mode, only sections that are designated as using interval attendance will be combined when **Show Multiple Sections** is selected.

4. Enter the attendance code using the data entry options for the selected page.

   Note: Blank attendance codes count as (Present). However, if using interval attendance, an attendance value may be required to be entered for each student based on the requirements for your state/province.

5. Repeat for each different attendance code to assign.
6. Click **Submit**. The attendance codes are saved to the PowerSchool system.

Time Attendance

In PowerSchool, your school can track meeting attendance, interval attendance, daily attendance and time attendance. Students' meeting and interval attendance records indicate their absences and tardies in each class period during the school day. Interval attendance allows for multiple attendance records per period. Students' daily attendance records indicate their absences, tardies, and arrival and dismissal times for an entire school day.

Time attendance is a simple way of adding attendance value by entering total minutes or hours for a given day. It is often used to enter work experience hours off of a timecard from a student's vocational job or for entering independent study hours.

Use the Time Attendance function to view or change a student's time attendance record. Each column represents one week, with the days of the week (MTWTF). Attendance minutes are noted in the chart under each day.

For more information about attendance, see *Attendance Overview*.

How to Take Time Attendance

After you add a time attendance entry, you can modify the entry by clicking the minutes in the appropriate day column. Multiple time attendance entries can be made for a single day by clicking the day abbreviation. Each time the day abbreviation is clicked a new entry is displayed to be filled out. Time entries cannot be deleted but they can be given a zero-minute (or hour) amount that effectively voids them.

1. On the start page, search for and select a student. For more information, see *Student Search*.

2. Under Academics, choose **Attendance** from the student pages menu. The attendance pages appear. The default attendance page that appears depends on the Default Attendance Recording Page setting on the Attendance Preferences page.
3. Click **Time**. The Time Attendance page appears.

   Note: A dash (-) appears to indicate that school is not in session and/or the student is not enrolled on that date.

4. Click the day abbreviation in a week where you want to enter or change attendance. The New Time Attendance page appears.
5. Use the following table to enter information in the fields:

Field	Description
Date	The date for which you are taking attendance appears (read-only).
Attendance Code	Choose the attendance code from the pop-up menu.
Time	Enter the total amount of attendance time for this record. The value can either be entered in minutes or hours.
Minutes/Hours	Let the system know whether the time value entered is in minutes or hours. The default is minutes. If the time value entered is in hours then select hours from the pop-up menu. The system will convert the value to minutes when it is stored. Hours are not stored with the record.
Program	If these hours are associated to a special program that the student is enrolled in then specify that there. For example, California's Alternative Education program for Continuation Education requires that attendance is tracked for the program. The valid values are any of the special programs that the student is currently enrolled in.
Work Experience	This is primarily targeted for use for California Continuation Education, which requires that the attendance hours related to work time are tracked.

Comment	Enter any additional text regarding this record.

6. Click **Submit**. The Changes Recorded page appears.

Group Attendance

Change the attendance records either for one date range, day, or period for a selected group of students. In addition, you can change the attendance records either retroactively or in advance using either Meeting or Daily attendance. Meeting attendance is taken each time a class meets, whereas Daily attendance is taken for an entire school day. For more information about attendance, see *Attendance Overview*.

How to Change Group Attendance (Meeting)

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Attendance, choose **Attendance Change**. The Change Meeting Attendance page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Use the following table to enter information in the fields:

Field	Description
Change attendance for	The selected students appear.
From this date	Enter the first day of the date range using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.

To this date	Enter the last day of the date range using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
Meetings to scan	Select the checkboxes to indicate the periods to change. To mark attendance for the entire day, click **Select All**.
Codes to scan for	Either choose all by selecting **All** or select **These Codes** and then choose the attendance codes for which you want to scan.
Attendance code to set	Choose the attendance code to apply to the date range from the pop-up menu.
If other than a default present	Select the option to either overwrite or not overwrite any existing attendance codes.
Comment	Enter comments that are relevant to this attendance record.

5. Click **Submit**. The PowerSchool start page appears. To verify that you entered the correct codes, search for and select one of the students in the group. Then, view the student's Attendance page.

How to Change Group Attendance (Daily)

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Attendance, choose **Attendance Change**. The Change Meeting Attendance page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Click **Daily**. The Change Daily Attendance page appears.
5. Use the following table to enter information in the fields:

Field	Description
Change attendance for	The selected students appear.
From this date	Enter the first day of the date range using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
To this date	Enter the last day of the date range using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
Codes to scan for	Either choose all by selecting **All** or select **These Codes** and then choose the attendance codes for which you want to scan
Attendance code to set	Choose the attendance code to apply to the date range from the pop-up menu.
If other than a default present	Select the option to either overwrite or not overwrite any existing attendance codes.
Comment	Enter comments that are relevant to this attendance record.

6. Click **Submit**. The PowerSchool start page appears. To verify that you entered the correct codes, search for and select one of the students in the group. Then, view the student's Attendance page.

Reports

Before producing attendance reports, you are encouraged to ask your PowerSchool administrator how your school calculates attendance. For example, does your school report how many days students are present or how many days they are absent?

Access Attendance Reports

While you can run all attendance reports for individual students, you can also run many for a selected group of students. If an attendance report allows group reporting, select that group of students before running the report. If you select a group of students from the start page, the Group Functions page appears either immediately or after selecting students from the Student Selection page.

Note: For detailed information about a specific report, see the Attendance section of the *Reports User Guide* on PowerSource.

How to Access Attendance Reports

1. On the start page, choose **System Reports** under Reports in the main menu. The Reports page appears.
2. On the System tab, the following attendance reports appear:

Field	Description
Absentee	Click to view single day period-by-period attendance code report. For more information, see *Absentee Report*.
Attendance Count	Click to view multi-day period-by-period attendance code report. For more information, see *Attendance Count Report*.
Class Attendance Audit	Click to view section specific attendance roster. For more information, see *Class Attendance Audit*.
Consecutive Absences	Click to view report detailing consecutive student absences by absence code. For more information, see *Consecutive Absences Report*.

Student Attendance Audit	Click to view roster report detailing attendance codes by day. For more information, see *Student Attendance Audit*.
Monthly Student Attendance Report	Click to view twenty-day student attendance report by grade. For more information, see *Monthly Student Attendance Report*.
Attendance Summary by Grade	Click to view an aggregated attendance report for a date range and grade(s). For more information, see *Attendance Summary by Grade Report*.
Year-to-Date Attendance Summary	Click to view a year-to-date aggregated attendance report by grade. For more information, see *Year-to-Date Attendance Summary*.
PowerTeacher Attendance	Click to view report showing which teachers have not taken attendance. For more information, see *PowerTeacher Attendance Report*.
Weekly Attendance Summary (Meeting)	Click to view a weekly attendance summary by section. For more information, see *Weekly Attendance Summary (Meeting)*.
Weekly Attendance Summary (Daily)	Click to view a weekly attendance summary by Teacher. For more information, see *Weekly Attendance Summary (Daily)*.
Period Att. Verification	Click to view report showing students marked present a specified number of periods. For more information, see *Period Attendance Verification Report.*

Note: To search for students with perfect attendance, see *Advanced Search and Select*.

Attendance Data Grid

The Attendance Data Grid is the central point from which you can quickly and easily view attendance information. The Attendance Data Grid is comprised of four tabs: Reports, Daily, Meeting, and Consecutive Absences.

Note: If the Consecutive Absences Notification is enabled, a message may appear indicating there are students who have been absent for an extended period of consecutive (in session calendar) days. For detailed information, see *Consecutive Absences* in this section. For information about enabling this feature, see *Consecutive Absences* in the Attendance Preferences section.

Setup

Prior to using the Attendance Data Grid, you can configure what tabs appear on this page by using the **Attendance recording methods** setting and which tab appears as the default tab using the **Default attendance page** setting. For more information, see *Attendance Preferences*.

Note: The tabbed information is only available at the school level. If accessed at the district level, only the reports content appears.

Localization

Information on the Attendance Data Grid can be localized. To localize the Absent attendance category, use the Localize page button that appears on the navigation bar. For more information, see *Localize Individual Pages*. To localize other attendance categories and attendance codes, use the **Data** tab on the Localize PowerSchool page. For more information, see *Localize PowerSchool*.

Reports

Using the Reports tab, you can access the most commonly used attendance reports.

How to Access Attendance Reports

1. On the start page, choose **Attendance** under Functions in the main menu. The Attendance page appears.
2. Click the **Reports** tab, if needed. On the Reports tab, the following attendance reports appear:

Note: Your tab selection is retained and available each time you navigate back to the Attendance page.

Field	Description
Absentee Report	Click to view a report detailing single-day period-by-period attendance code information. For more information, see *Absentee Report*.
Attendance Count	Click to view a report detailing multi-day period-by-period attendance code information. For more information, see *Attendance Count Report*.
Consecutive Absences	Click to view a report detailing consecutive student absences by absence code. For more information, see *Consecutive Absences Report*.
PowerTeacher Attendance	Click to view a report detailing which teachers have not taken attendance. For more information, see *PowerTeacher Attendance Report*.
Search By Grades/Attendance	Click to search for a group of students based on their grades or attendance. For more information, see *Search By Grades/Attendance*.
Teacher Attendance Submission Status	Click to view a graphical report detailing which teachers have not taken attendance. For more information, see *Teacher Attendance Submission Status*.

Daily Attendance

Using the Daily tab, you can quickly and easily view daily attendance information for a selected school for the current or selected day.

How to View the Daily Attendance

1. On the start page, choose **Attendance** under Functions in the main menu. The Attendance page appears.

2. Click the **Daily** tab, if needed. By default, information appears for today's date.
3. To select a different date, click the **Calendar** icon and select a date. The page displays information for the selected date.

   Note: Your tab selection is retained and available each time you navigate back to the Attendance page.

   The following information appears in the Student Counts section:

   Note: Up to four attendance categories may appear. Attendance categories appear from highest to lowest count.

Field	Description
Absent	By default, the total number of students with absences appears on the first tile. Click the tile to remove the filter and view all attendance codes in the grid. Click again to filter by absent codes.
[Attendance Category]	Total count for the indicated attendance category. Click the tile to switch to this filter. Click again to remove this filter.
Filter	Click the arrow to expand this section. Click the arrow again to collapse this section. The first row of the filter displays information based on the selected tile. To further narrow the list of students: 1. Enter search criteria in the **Search** field. 2. Do one of the following: • Select the **Use Current Selection** checkbox to view daily attendance information for only students in the current student selection. • Leave the checkbox blank to view daily attendance information for all students in the selected school. To filter by columns: 1. Click **+**. 2. From the first pop-up menu, choose one of the following: • **Attendance Code** • **Grade Level**

	• **Home Phone** • **Name** 3. Enter search criteria in the search field. **Note:** Only one value may be entered. 4. Click **Apply**. The page refreshes and display filtered results. **Note:** The Filter (0) header refreshes and displays the number of applied filters. In addition, the header displays the fields being used to filter results. To add another filter: 1. Click **+**. 2. Repeat Step 1 through Step 5. **Note:** The + appears shaded if all filters have been added. To delete a filter: 1. Click **-** next the filter. 2. Click **Apply**. The page refreshes and display filtered results. **Note:** To remove all filter selections, click **Clear**.

4. Use the following table to view search results:

   Note: Click the name of a column to sort by that column in ascending order. Click again to sort in descending order. By default, students are sorted by Name and then Grade Level.

Field	**Description**
Name	The student's last, first name. Click to view the Daily Attendance page. For more information, see *Daily Attendance*.
Grade Level	The student's grade level.

<table>
<tr><td>Home Phone</td><td>The student's home phone number.</td></tr>
<tr><td>Attendance Code</td><td>The attendance code the student received for today.</td></tr>
<tr><td>[Pagination]</td><td>Use to navigate the search results.</td></tr>
<tr><td>Rows/Page</td><td>By default, ten records display per page. To view more records per page, enter the appropriate number in the field.</td></tr>
<tr><td>Set Current Selection</td><td>To make the filtered list of students your current student selection, do one of the following:
Select the checkbox in the header row to select all students. Alternately, if the checkbox is already selected, deselect the checkbox to remove the checkmarks from all students.
Select the checkbox for each student you want to work with.
Click Set Current Selection. A confirmation message appears.
Note: If the checkbox in the header row is selected, all records for the currently applied filters will be selected. The student selection set is retained until you set another current selection.</td></tr>
<tr><td>Download</td><td>To download the attendance information, click the arrow and select one of the following from the pop-up menu:
Comma-Separated Value (CSV)
Excel Spreadsheet (XLSX)
Portable Document Format (PDF)
Note: A checkmark appears next to your selection.
Note: The PDF format is restricted to a maximum of 1000 records.
Note: Using the CSV format to download data that contains right-to-left Unicode characters may result the incorrect ordering of data. In which case, you can reconfigure your system, use a client, such as Google Sheets, or download the data in XLSX format.</td></tr>
</table>

	Note: If you have localized your version of PowerSchool, you must have the required character set installed in order to export in your specified language.

Meeting Attendance

Using the Meeting tab, you can quickly and easily view meeting attendance information for a selected school for the current or selected day.

How to View the Meeting Attendance

1. On the start page, choose **Attendance** under Functions in the main menu. The Attendance page appears.
2. Click the **Meeting** tab, if needed. By default, information appears for today's date.
3. To select a different date, click the **Calendar** icon and select a date. The page displays information for the selected date.

   Note: Your tab selection is retained and available each time you navigate back to the Attendance page.

   The following information appears in the Student Counts section:

   Note: Up to four attendance categories may appear. Attendance categories appear from highest to lowest count.

Field	**Description**
Absent	By default, the total number of students with absences appears on the first tile. Click the tile to remove the filter and view all attendance codes in the grid. Click again to filter by absent codes.
[Attendance Category]	Total count for the indicated attendance category. Click the tile to switch to this filter. Click again to remove this filter.
Attendance Submission Status	The percentage of section meetings for which attendance has been submitted. Indicate which sections you want included in the percentage: • **ADA Sections** (default)

	• **All Sections** **Note:** ADA section are sections that count towards Average Daily Attendance (the total number of days of student attendance divided by the number of days of school taught during the same period). Click **Incomplete** to view a list of teachers and their section meetings for which attendance has not been completed. For more information, see *Teacher Attendance Submission Status*. Click **Complete** to view a list of teachers and their section meetings for which attendance has been completed. For more information, see *Teacher Attendance Submission Status*.
Filter	Click the arrow to expand this section. Click the arrow again to collapse this section. The first row of the filter displays information based on the selected tile. To further narrow the list of students: 1. Enter search criteria in the **Search** field. 2. Do one of the following: • Select the **Use Current Selection** checkbox to view daily attendance information for only students in the current student selection. • Leave the checkbox blank to view daily attendance information for all students in the selected school. To filter by columns: 1. Click **+**. 2. From the first pop-up menu, choose one of the following: • **Grade Level** • **Home Phone** • **Name** • **[Meeting]** 3. Enter search criteria in the search field. **Note:** Only one value may be entered.

	4. Click **Apply**. The page refreshes and display filtered results. **Note:** The Filter (0) header refreshes and displays the number of applied filters. In addition, the header displays the fields being used to filter results. To add another filter: 1. Click **+.** 2. Repeat Step 1 through Step 4. **Note:** The **+** appears shaded if all filters have been added. To delete a filter: 1. Click **-** next the filter. 2. Click **Apply**. The page refreshes and display filtered results. **Note:** To remove all filter selections, click **Clear**.

4. Use the following table to view search results:

   Note: Click the name of a column to sort by that column in ascending order. Click again to sort in descending order. By default, students are sorted by Name and then Grade Level.

Field	**Description**
Name	The student's last, first name. Click to view detailed information. For more information, see *Meeting/Interval Attendance*.
Grade Level	The student's grade level.
Home Phone	The student's home phone number.
[Meetings]	The attendance code the student received for the meeting. **Note:** Meetings display based on calendar setup. For more information, see *Calendar Setup*.

<table>
<tr><td>[Pagination]</td><td>Use to navigate the search results.</td></tr>
<tr><td>Rows/Page</td><td>By default, ten records display per page. To view more records per page, enter the appropriate number in the field.</td></tr>
<tr><td>Set Current Selection</td><td>To make the filtered list of students your current student selection, do one of the following:
Select the checkbox in the header row to select all students. Alternately, if the checkbox is already selected, deselect the checkbox to remove the checkmarks from all students.
Select the checkbox for each student you want to work with.
Click Set Current Selection. A confirmation message appears.
Note: If the checkbox in the header row is selected, all records for the currently applied filters will be selected. The student selection set is retained until you set another current selection.</td></tr>
<tr><td>Download</td><td>To download the attendance information, click the arrow and select one of the following from the pop-up menu:
Comma-Separated Value (CSV)
Excel Spreadsheet (XLSX)
Portable Document Format (PDF)
Note: A checkmark appears next to your selection.
Note: The PDF format is restricted to a maximum of 1000 records.
Note: Using the CSV format to download data that contains right-to-left Unicode characters may result the incorrect ordering of data. In which case, you can reconfigure your system, use a client, such as Google Sheets, or download the data in XLSX format.
Note: If you have localized your version of PowerSchool, you must have the required character set installed in order to export in your specified language.</td></tr>
</table>

Consecutive Absences

Using the Consecutive Absences tab, you can quickly and easily view a list of students who have been absent for an extended period of consecutive (in session calendar) days.

How to View the Consecutive Absences

1. On the start page, choose **Attendance** under Functions in the main menu. The Attendance page appears.
2. Click the **Consecutive Absences** tab, if needed. The Consecutive Absences tab appears.

   Note: A message appears if no students have an extended period of consecutive absences or the Consecutive Absences Notification feature has been disabled. For information about enabling this feature, see *Consecutive Absences* in the Attendance Preferences section.

   Note: Your tab selection is retained and available each time you navigate back to the Attendance page.

Field	Description
Basic Filter	To filter the information that appears on this page, enter search criteria. If needed, click the arrow to expand this section. Click the arrow again to collapse this section. To filter by columns: 1. Click **+**. 2. From the first pop-up menu, choose one of the following: • **Students** • **Consecutive Absences** 3. Enter filter criteria in the field to the right of the pop-up menu. 4. Click **Apply**. The page refreshes and display filtered results. **Note:** The Filter (0) header refreshes and displays the number of applied filters. In addition, the header displays the fields being used to filter results. To add another filter: 1. Click **+**. 2. Repeat Step 1 through Step 4.

	Note: The + appears shaded if all filters have been added. To delete a filter: 1. Click **-** next the filter. 2. Click **Apply**. The page refreshes and display filtered results. **Note:** To remove all filter selections, click **Clear**.

3. Use the following table to view search results:

   Note: Click the name of a column to sort by that column in ascending order. Click again to sort in descending order. By default, students are sorted by Name and then Grade Level.

Field	**Description**
Student	The student's last, first name. Click to access the student's Attendance page. For more information, see *Meeting/Interval Attendance*, *Daily Attendance*, or *Time Attendance*.
Consecutive Absences	The student's grade level.
[Pagination]	Use to navigate the search results.
Rows/Page	By default, ten records display per page. To view more records per page, enter the appropriate number in the field.
Set Current Selection	Click to make the filtered list of students your current student selection. A confirmation message appears.

How to Recalculate Consecutive Absences Notification

The Recalculate Consecutive Absences Notification operation automatically runs as part of the nightly process. In addition, you can run the operation manually to generate a report on consecutive absences.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Special Operations**. The Special Operations page appears.
3. Use the following table to enter information in the fields:

Field	Description
Operation	Choose **Recalculate Consecutive Absences Notification** from the pop-up menu.
Param 1	This field is optional. If no date is entered, the operation runs for today's date. If a specified date is entered, the operation runs for that date.

4. Click **Submit**. The system completes the special operation.

Backfill Management User Guide

PowerSchool

Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

Table of Contents

Introduction

Backfill is a process that specifically supports the California's Alternative Education Program for Continuation Education. For more information about California's Alternative Education Program (CA AEP), visit PowerSource.

Backfilling maximizes the number of attendance hours that can be claimed for state funding by taking excess hours from a school week and applying those hours to a prior week in which the maximum hours were not achieved. There is a set number of hours per week that can be used towards ADA funding. Once this maximum is reached the state allows any additional hours to be used in previous weeks in which a student did not attend for the maximum. Hours can only be backfilled to previous weeks. Hours cannot be used for future weeks. There are numerous rules regarding backfilling and how hours can be claimed.

Backfill can be applied when attendance is taken by enabling Realtime Backfill. Backfill can also run as a separate process using Backfill Management. For more information, see *Manage Backfill*.

Setup Backfill

Before you can begin using backfilling, you must perform the following setup items:

- Enable Backfill
- Configure Backfill Preferences

Enable Backfill Management

By default, Backfill is not enabled. Once Backfill is enabled, Backfill functionality appears throughout PowerSchool, including:

- Access to the Backfill Management page.
- Certain aggregation necessary to support backfill will occur whenever attendance is recorded in the system
- Three additional attendance categories, Unexcused Absences, Excused Absences, and Suspensions will be created, if they are not already existing, that are necessary to support backfill reports.

How to Enable Backfill Management

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Backfill Preferences**. The Attendance Backfill Preferences page appears.
3. Select the **CA Continuation School Backfill Enabled** checkbox to enable Backfill Management.
4. Specify backfill preferences. For field descriptions, see *Configure Backfill Preferences*.
5. Click **Submit**. The Changes Recorded page appears.

Configure Backfill Preferences

Once you have enabled Backfill, you can then configure backfill preferences to indicate how you want backfilling to be processed.

How to Specify Backfill Preferences

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Backfill Preferences**. The Attendance Backfill Preferences page appears.

3. Use the following table to enter information in the Reporting section:

Field	Description
Realtime Backfill Enabled	Enabling Realtime Backfill results in backfill being applied whenever attendance is recorded in the system. Each time attendance and submitted for a student the system will determine if the maximum number of course attendance hours that can be claimed for funding has been exceeded. If there are excess hours the system will determine whether any prior weeks did not reach the maximum hours and the excess hours will be applied to those prior short weeks. Realtime backfill may result in a slight degradation of performance when taking attendance. The alternative to enabling Realtime Backfill is to run a separate backfill process on a regular basis. Enabling Realtime Backfill can save time and extra steps when it comes time to report ADA. Select the checkbox to enable Realtime Backfill. Alternatively, deselect the checkbox to disable Realtime Backfill.
Program to Backfill	Continuation Education students must be enrolled into the Continuation Education program. For more information, see *Schools*. The system determines who is eligible for backfill according to those students who are enrolled in the program identified here. Additionally, the system determines which sections are eligible for backfill according to which sections are assigned to the Continuation Education program. For more information, see *Sections*. Choose the program defined for "Continuation Education" you want to backfill from the pop-up menu.
Target Hours per Day in Week	The system must know the maximum number of hours per week that can be claimed toward ADA funding. The number of hours is based on a five day in-session school week and is currently 15 hours. The maximum hours are proportional to the number of in-session school days for the week, which results in three hours per day. By default, this field is set to three hours. If you need to change this value, enter the new value in this field.

Maximum Work Experience Hours per Day in Week	California rules for eligible ADA hours state that only ten hours of work experience can be claimed toward funding in a given five-day school week. This breaks down into two hours per day thus a week with only three in-session days can only claim six work experience hours towards ADA. The system takes this into account when performing backfill as well as during the reporting of ADA for continuation education. By default, this field is set to two hours. If you need to change this value, enter the new value in this field.
Backfill Start Date	This field is used to let the system know how far back it should look when investigating for weeks that need backfill hours to achieve the maximum that can be claimed for ADA. This date should be changed whenever reports are produced, especially auditing reports or P1, P2 and P3 reports for the state, so that the backfill process does not change attendance for weeks that have already been reported. By default, this field is set to the beginning of the school year. If you need to change this value, enter the beginning date of the date range to scan using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. **Note:** It is recommended that the backfill start date be set to the beginning of each reporting period, ensuring that the backfill start date is synchronized with the actual reporting periods.
Backfill End Date	This field is used to let the system know the date on which backfill will no longer be applied. Using a date prior to the current system date effectively disables backfill for any attendance taken after the end date. Typically, this field is left blank to indicate the current date or is set to the end of the school year. Enter the ending date of the date range to scan using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. Otherwise, leave blank to indicate today's date. **Note:** If entering a backfill end date, it is recommended that the backfill end date be set to the ending of each reporting period, ensuring that the backfill end date is synchronized with the actual reporting periods.

4. Click **Submit**. The Changes Recorded page appears.

Disable Backfill Management

Once you have enabled Backfill, it may become necessary to disable it. If Backfill is disabled, Backfill functionality no longer appears throughout PowerSchool.

How to Disable Backfill Management

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Backfill Preferences**. The Attendance Backfill Preferences page appears.
3. Deselect the **CA Continuation School Backfill Enabled** checkbox to disable Backfill Management.
4. Click **Submit**. The Changes Recorded page appears.

Manage Backfill

You can run Backfill as a separate process using Backfill Management. There are certain situations that can occur during Realtime Backfill that mandate using Backfill Management. Specifically, attendance being changed for a week in which backfill was already applied or student's being withdrawn from classes in the middle of the week can result in backfill calculations being incorrect. The proper way to ensure that the calculations are correct and that all backfill has been applied for the backfill period is to run the Validate Backfill function. This function performs these three tasks:

- Corrects any miscalculations that may have occurred due to attendance changes made to weeks that already had backfill applied.
- Corrects any orphaned backfilled records caused by student's withdrawing from classes or withdrawing from the continuation education program.
- Performs the backfill process for any students who may not have had backfilled applied. This typically occurs if the option for Realtime Backfill has not been enabled in the school's attendance preferences page.

The Backfill process must be run whether or not Realtime Backfill has been enabled to ensure that calculations have been correctly applied for all students. The process performs quickly if Realtime Backfill is enabled, since only exception students are recalculated. If Realtime Backfill is not enabled or has not been used during the backfill period, the backfill process calculates backfill for each student who has enrolled in the continuation education program during the backfill period.

When running the Backfill process, you have two options. The first option is to run the Validate Backfill function, which runs all three tasks of clearing backfill, regenerating attendance aggregation, and running backfill in succession for all students in the selected school. The second option is to run the three tasks separately, which allows you to run the process for all or a selected group of students to perform corrections and problem diagnosis.

Note: Backfill should be run prior to running the California's Alternative Education reports, see the *California State Reporting Attendance and Membership Report Guide* available on PowerSource.

Option 1 – One-Step Backfill Process

- Verify Term (optional)
- Verify Backfill Preferences (optional)
- Validate Backfill
- Monitor the Backfill Process (optional)

- View Backfill Details (optional)

Option 2 – Three-Step Backfill Process

- Verify Term (optional)
- Verify Backfill Preferences (optional)
- Select Students
- Clear Backfill
- Regenerate Attendance Aggregation
- Run Backfill
- Monitor the Backfill Process (optional)
- View Backfill Details (optional)

Verify Term

Be sure you have selected the term in which you want to work.

Note: The school year of the currently selected term is used to determine which backfill start and end date to use when performing backfill functions. The actual term is not factored into this calculation.

How to Verify the Term

1. On the start page, note the term that appears in the navigation toolbar at the top of the page.
2. Verify the term is correct.
3. Select a different term, if needed:
    - Click **Term**. The Term pop-up menu appears.
    - Choose the term from the **Change To** pop-up menu. The navigation toolbar displays the name of the selected term.

Verify Backfill Preferences

Be sure backfill preferences are set accordingly.

How to Verify Backfill Preferences

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Backfill Preferences**. The Attendance Backfill Preferences page appears.
3. Verify preferences are set correctly.

4. Edit if needed. For field descriptions, see *Configure Backfill Preferences*.
5. Click **Submit**. The Changes Recorded page appears.

Select Students

When performing the three-step backfill process, either select a student or group of students you want to work with or use one of the student selection options on the Backfill Manage page.

Note: If you are performing the one-step backfill process, it is not necessary to make a student selection.

How to Select a Student of Group of Students

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Attendance, choose **Backfill Management**. The Manage Backfill page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. To continue, see Step 4 of *Clear Backfill*.

How to Use the Student Selection Options

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Attendance, choose **Backfill Management**. The Manage Backfill page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Do one of the following:

- Click **Select Backfill Students** to select all students enrolled in the backfill program during the backfill interval.
- Click **Select Backfill Exception Students** to select all students who have had attendance taken in a previously backfilled week.

5. To continue, see Step 4 of *Clear Backfill*.

Validate Backfill

Use the Validate Backfill function to ensure that backfill attendance has been correctly applied based on your attendance backfill preferences. Performing the Validate Backfill function runs all three tasks of clearing backfill, regenerating attendance aggregation, and running backfill in succession for all students in the selected school.

Note: If Realtime Backfill is enabled, only exception students are recalculated. If Realtime Backfill is not enabled or has not been used during the backfill period, Validate Backfill calculates backfill for each student who has enrolled in the continuation education program during the backfill period.

Note: it is not necessary to make a student selection when performing this procedure.

How to Validate Backfill

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Attendance, choose **Backfill Management**. The Manage Backfill page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Click **Validate Backfill**. The Validate Backfill page appears.
5. Select the checkbox to verify the command.
6. Click **Submit.** When the function is complete, the Backfill Details page appears. For more information, see *View Backfill Details*.

Clear Backfill

If you are performing the three-step backfill process, the first function to run after you have made your student selection is the Clear Backfill function to clear backfilled attendance for all selected students.

How to Clear Backfill

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Attendance, choose **Backfill Management**. The Manage Backfill page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Click **Clear Backfill**. The Clear Backfill page appears.
5. Select the **Select the checkbox to verify the command** checkbox.
6. Click **Submit**. When the function is complete, the Backfill Details page appears. For more information, see *View Backfill Details*.

Regenerate Attendance Aggregation

Once you have cleared backfilled attendance for all selected students, use the Regenerate Attendance Aggregation function to clear aggregated attendance for all selected students and regenerate that aggregation from stored Attendance records.

How to Regenerate Attendance Aggregation

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Attendance, choose **Backfill Management**. The Manage Backfill page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Click **Re-Aggregate Attendance**. The Regenerate Attendance Aggregation page appears.
5. Select the **Select the checkbox to verify the command** checkbox.
6. Click **Submit**. When the function is complete, the Backfill Details page appears. For more information, see *View Backfill Details*.

Run Backfill

Once you have cleared aggregated attendance for all selected students and regenerate that aggregation, use the Run Backfill function to backfill time attendance based on your attendance backfill preferences.

How to Run Backfill

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Attendance, choose **Backfill Management**. The Manage Backfill page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Click **Run Backfill**. The Run Backfill page appears.
5. Select the **Select the checkbox to verify the command** checkbox.
6. Click **Submit**. When the function is complete, the Backfill Details page appears. For more information, see *View Backfill Details*.

Monitor the Backfill Process

If you would like to monitor the Validate Backfill process, you can view the Process Status page.

How to Monitor the Backfill Process

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Server Statistics**. The Server Statistics page appears.

4. Scroll down to the **Handlers** section.
5. Click **Busy Handlers**. The Process Status page displays.

View Backfill Details

The View Backfill Details page provides an easy way to see the aggregated attendance minutes and how backfill has been applied for each student for each week in the current backfill date range.

How to View Backfill Details

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Attendance, choose **Backfill Management**. The Manage Backfill page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Click **View Backfill Details**. The View Backfill Details page displays the following information:

Field	Description
Backfill Week	Identifies the first day and the last day of the week for which aggregation is being shown. Aggregation occurs for every week within the backfill date range.
Days	Indicates the number of days within the week that were actual "in-session" school days. This is used to determine the maximum ADA that can be claimed and thus whether a week currently has excess hours or is short of hours.
Baseline CH	The total number of attendance minutes for the week that were entered through PowerSchool Meeting/Interval attendance or

	PowerTeacher attendance prior to any attendance minutes being used for or applied by the backfill process.
Baseline ISH	The total number of attendance minutes for the week that were entered through PowerSchool Time attendance and not marked as "Work Experience" prior to any attendance minutes being used for or applied by the backfill process.
Baseline WH	The total number of attendance minutes for the week that were entered through PowerSchool Time attendance and marked as "Work Experience" prior to any attendance minutes being used for or applied by the backfill process.
Baseline Total	The sum of the minutes reflected in Baseline CH, Baseline ISH, and Baseline WH.
Post-Backfill CH	The total number of minutes that were entered through PowerSchool Meeting/Interval attendance or PowerTeacher attendance, plus or minus any of these type of minutes that were either taken away or added by the backfill process.
Post-Backfill ISH	The total number of attendance minutes for the week that were entered through PowerSchool Time attendance and not marked as "Work Experience," plus or minus any of these type of minutes that were either taken away or added by the backfill process.
Post-Backfill WH	The total number of attendance minutes for the week that were entered through PowerSchool Time attendance and marked as "Work Experience," plus or minus any of these type of minutes that were either taken away or added by the backfill process.
Post-Backfill Total	The sum of the minutes reflected in Post-Backfill CH, Post-Backfill ISH, and Post-Backfill WH.
Categories - Ex	The total number of minutes entered using an attendance code assigned to the Excused Absences attendance code category

Categories - Ux	The total number of minutes entered using an attendance code assigned to the Unexcused Absences attendance code category.
Categories - S	The total number of minutes entered using an attendance code assigned to the Suspended Absences attendance code category.
Max Mins	The total possible apportionment for the week.
Backfill Type	identifies the type of backfill that was applied to the week by being subtracted from a subsequent week during the backfill process. The valid types are: • **CH** - Course Minutes • **ISH** - Independent Study Minutes • **WH** - Work Experience Minutes
Backfill Mins	The number of attendance minutes applied to the week by being subtracted from a subsequent week during the backfill process.
Backfill Week Date	The date of the week from which attendance minutes were subtracted and added to the current week during the backfill process.

Centris Sync Administrator Guide

PowerSchool

Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

Table of Contents

Introduction

Integration between IEP Direct with PowerSchool is available through the use of Centris Sync. By enabling Centris Sync, you can automatically feed data from PowerSchool to IEP Direct, which provides the ability to post the most current student and guardian demographic data to IEP Direct on a nightly basis.

Using AutoSend, once a day at a specified time, PowerSchool can generate a file that contains a set of objects for each student in the database. This file can be stored in a designated directory where it is retrieved and then removed by the Centris Sync Agent. For more information, see *AutoSend Setup*.

Setup

How to Enable Centris Sync

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Plugins, click **3rd Party Configuration**. The 3rd Party Configuration page appears.
3. In the Centris Group section, select the **Centris Group - IEP Viewer Enabled** checkbox.
4. Click **Submit**. The District Setup page appears.

How to Configure Centris Sync

Use the Centris Sync – SIS Data Integration page to configure PowerSchool to automatically feed data from PowerSchool to IEP Direct using Centris Sync.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page displays.
2. Under Server, click **System Settings**. The System Settings page displays.
3. Click **Centris Sync**. The Centris Sync – SIS Data Integration page displays.
4. Use the following table to enter information in the fields:

Field	**Description**
District ID	Enter the District ID provided by Centris.
District BEDS Code	Enter the District BEDS code provided by the BOCES/RIC. The BEDS Code is the district's BEDS identifier.

5. Click **Submit**.
6. Restart PowerSchool. Required the first time only; once enabled may be changed without restart.

Course Prerequisites User Guide

PowerSchool
Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

The data and names used to illustrate the reports and screen images may include names of individuals, companies, brands, and products. All of the data and names are fictitious; any similarities to actual names are entirely coincidental.

Table of Contents

Introduction

The introduction of Course Prerequisites provides the ability to define and enforce prerequisite rules that automatically limit the courses a student may request. With a multitude of options — such as percent grade, letter grade, credit hours, concurrent request, and teacher recommendation — you can build as comprehensive a rule as necessary for each course in order to help students request only those courses for which they are academically prepared to be successful.

Quick Start

To get started immediately, perform the following tasks to set up and begin using Course Prerequisites:

Course Prerequisites

- View the Course List
- Enter Prerequisites for Individual Courses
- Enter Prerequisites for All Listed Courses
- Enter Prerequisites for Entire Department
- Edit Prerequisites in Simple Rule Builder
- Edit Prerequisites in Complex Rule Builder
- Enter Rule Type Information

Prerequisites Notes

- View Prerequisites Notes
- Print Prerequisites Notes
- Add Prerequisite Notes
- Edit Prerequisite Notes
- Delete Prerequisite Notes

Course Prerequisites

Course prerequisite provides you with the ability to specify academic requirements or authorizations that must be fulfilled prior to a student's enrollment in a course and enforced at the time of student section enrollment request (during the request process). These requirements are primarily focused on the student's attainment of a sufficient grade or earned credits upon completion of one or many courses but may include additional or alternative criteria such as faculty recommendations, average percent grades, and concurrent enrollments in one or many specified sections.

Note: These procedures may also be performed when signed in to a school by choosing **School**, and then clicking **Courses**.

Enter Prerequisites for Individual Courses

Use the following procedure to add course prerequisites to an individual course, such as to add a complex rule or quickly edit a rule for a specific course.

Note: This procedure may also be performed when signed in to a school by choosing **School**, and then clicking **Courses**.

How to Enter Course Prerequisite to an Individual Course

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Courses**. The Courses page appears.
3. To narrow the list of courses, see Step 3 of *How to View the Course List*.
4. Click the Number, Name, or Department of the course for which you want to add prerequisites. The Edit Course District Information page appears.
5. Click **Prerequisites**. The Edit Course Prerequisites page appears.
6. Enter descriptive text about the prerequisite in the **Prerequisite Note** field.

   Note: A maximum of 512 characters are allowed, including carriage returns and spaces.

7. Enter prerequisites as needed. For detailed information, see *Edit Prerequisites in Complex Rule Builder*.

   Note: Click **Reset** to discard any changes you've made and start again.

8. Click **Save**. The Courses page appears.

Enter Prerequisites for Selected Courses

Use the following procedure to add prerequisites to selected courses in the course list, such as to select courses that are advanced placement in a school to easily drag and drop rules from one course to another course across multiple departments.

Note: This procedure may also be performed when signed in to a school by choosing **School**, and then clicking **Courses**.

How to Enter Prerequisites for Selected Courses

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Courses**. The Courses page appears.
3. To narrow the list of courses, see Step 3 of *How to View the Course List*.
4. Click **Edit Prerequisites**. The Edit Course List Prerequisites page appears.
5. Enter prerequisites as needed. For detailed information, see *Edit Prerequisites in Simple Rule Builder*.

   Note: Click **Reset All Courses** to discard any changes you've made and start again.

6. Click **Save All Courses**. The Courses page appears.

Enter Course Prerequisites for Entire Department

Use the following procedure to add course prerequisites for multiple courses within a selected department, such as to select all courses in one department to easily drag and drop rules from one course to another within that department.

How to Enter Course Prerequisites for an Entire Department

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Courses**. The Courses page appears.

   Note: To narrow the course list, use the Filter function. For detailed information, see *How to View the Course List.*

3. Click a course in the Number, Name, or Department column that's within the department for which you want to add prerequisites. The Edit Course District Information page appears.
4. Click **Prerequisites**. The Edit Course Prerequisites page appears.

5. Click **Edit Prerequisites for Entire [Name] Department**. The Edit Course List Prerequisites page appears.
6. Enter prerequisites as needed. For detailed information, see *Edit Prerequisites in Simple Rule Builder*.

   Note: Click **Reset All Courses** to discard any changes you've made and start again.

7. Click **Save All Courses**. The Courses page appears.

Edit Prerequisites in Simple Rule Builder

Once you have selected the course or courses that you want to work with and navigated to the Edit Course List Prerequisites page, you can then enter "simple rule" information using the following procedures.

Note: To enter "complex rules" for a course, click the **Plus (+)** button in the upper-right corner of the course enclosure.

How to View/Hide Prerequisite Notes

1. Click the **Expand All Prerequisite Notes** link to view the prerequisite note field.
2. Enter descriptive text about the prerequisite in the **Prerequisite Note** field.

   Note: A maximum of 512 characters are allowed, including carriage returns and spaces.

3. Click the **Hide All Prerequisite Notes** link to hide the prerequisite notes field.

How to Add a Letter Grade Rule

Drag the **A+** icon to the enclosure to add a Letter Grade rule for this course. The template rule appears in the enclosure.

How to Add a Percent Grade Rule

Drag the **%** icon to add a Percent Grade rule for this course. The template rule appears in the enclosure.

How to Add a Credit Hours Rule

Drag the **C** icon to add a Credit Hours rule for this course. The template rule appears in the enclosure.

How to Add a Concurrent Request Rule

Drag the **R** icon to add a Concurrent Requests rule for this course. The template rule appears in the enclosure.

How to Add an Enclosure

Choose one of the following enclosures from the **Rule Type** pop-up menu:

- **All Of** – to indicate rule passes only if all enclosed rules pass.
- **Any Of** – to indicate rule passes if any one or more of the enclosed rules passes.

How to Add a Rule

1. Click the **Plus (+)** button in the upper-right corner of the enclosure in which you want to add a rule. The Pick Rule Type to Add pop-up window appears.
2. Choose one of the following prerequisites from the **Rule Type** pop-up menu:
    - **Average Percent Grade**
    - **Concurrent Request**
    - **Credit Hours**
    - **Letter Grade**
    - **Percent Grade**
    - **Recommend**

   The Add New pop-up window appears.

3. Enter information as needed. For detailed information, see *Enter Rule Type Information*.
4. Click **Add**. The Edit Course List Prerequisites appears.

How to Edit a Rule

Do one of the following:

- Double-click the rule.
- Click the **Pencil** icon in the upper-left corner of the rule.

How to Delete a Rule

Do one of the following:

- Click the **Minus (-)** button in the upper-right corner of the rule.

- Double-click the rule and click **Remove**.

Edit Prerequisites in Complex Rule Builder

Once you have selected the course or courses that you want to work with and navigated to the Edit Course Prerequisites page, you can then enter “complex rule” information. The complex rule builder allows you to use enclosures. An enclosure is a grouping of rules and other enclosures, where to be satisfied all of, any of or none of the enclosed rules/enclosures must be satisfied.

How to Add an Enclosure

1. Do one of the following:
    - Double-click the enclosure.
    - Click the **Plus (+)** button in the upper-right corner of the enclosure.

    The Pick Rule Type to Add pop-up window appears.

2. Choose one of the following enclosures from the **Rule Type** pop-up menu:

    Note: Pop-up menu options vary depending on the enclosure to which you are adding another enclosure.

    - **All Of** – to indicate rule passes only if all enclosed rules pass.
    - **None Of** – to indicate rule passes if none of the enclosed rules passes.
    - **Any Of** – to indicate rule passes if any one or more of the enclosed rules passes.

    The Add New pop-up window appears.

3. Click **Add**. The Edit Course Prerequisites appears.

How to Move an Enclosure

Drag and drop an enclosure from one enclosure to another.

How to Delete an Enclosure

Click the **Minus (-)** button in the upper-right corner of the enclosure.

How to Add Rule

1. Do one of the following:
    - Double-click the enclosure.
    - Click the **Plus (+)** button in the upper-right corner of the enclosure.

   The Pick Rule Type to Add pop-up window appears.

2. Choose one of the following prerequisites from the **Rule Type** pop-up menu:
    - **Average Percent Grade**
    - **Concurrent Request**
    - **Credit Hours**
    - **Letter Grade**
    - **Percent Grade**
    - **Recommend**

   The Add New pop-up window appears.

3. Enter information as needed. For detailed information, see *Enter Rule Type Information*.
4. Click **Add**. The Edit Course Prerequisites appears.

How to Move a Rule

Drag and drop a rule from one enclosure to another.

How to Edit a Rule

1. Do one of the following:
    - Double-click the rule.
    - Click the **Pencil** icon in the upper-left corner of the rule.

   The Edit or Delete pop-up window appears.

2. Edit information as needed. For detailed information, see *Enter Rule Type Information*.
3. Click **Okay**.

How to Delete a Rule

Do one of the following:

- Double-click the rule and click **Remove**.
- Click the **Minus (-)** button in the upper-right corner of the rule.

Enter Rule Type Information

When entering course prerequisites, whether using the simple rule builder or the complex rule builder, you must select a rule type then enter information for the selected rule type. Rule type information is entered from the Add New [Rule Type] pop-window or the Edit or Delete [Rule Type] pop-window.

How to Enter Letter Grade Rule

Use the following information to enter parameters in the fields in order to require the student to have passed another course with one of the specified letter grades:

Field	Description
Course Number	Enter the course the student needs to have taken.
Store Codes	Indicate the store codes you want to scan by doing one of the following: • Enter a store code to scan that specific store code. • Enter a comma-separated list of store codes to scan multiple store codes. • Leave blank to scan all store codes. **Note:** Store codes are codes set up in final grades setup. They generally map to the term code abbreviations, such as Q1, Q2, Q3, Q4 or S1, S2.
List of Grades	Indicate acceptable grades by doing one of the following: • Enter an acceptable grade. • Enter a comma-separated list of acceptable grades.
If the Student Retakes	Indicate what to do if multiple grades are stored for this course and store codes for a student by choosing one of the following from the pop-up menu: • **One must pass** • **All attempts must pass**

	• **The latest attempt must pass**
Presume Completion	Select the checkbox to assume that the grade the student will get for a course the student is currently enrolled in will pass this rule. Otherwise, leave the checkbox blank. **Note:** Generally, this checkbox should be selected as it allows students to request the “next” course in a series before they have fully completed and had their grades stored for the previous course in that series.
Make Defaults	Click to make the current entries the new default settings.

How to Enter Percent Grade Rule

Use the following information to enter parameters in the fields in order to require the student to have passed another course with a percentage grade within given bounds:

Field	**Description**
Course Number	Enter the course the student needs to have taken.
Store Codes	Indicate the store codes you want to scan by doing one of the following: • Enter a store code to scan that specific store code. • Enter a comma-separated list of store codes to scan multiple store codes. • Leave blank to scan all store codes. **Note:** Store codes are codes set up in final grades setup. They generally map to the term code abbreviations, such as Q1, Q2, Q3, Q4 or S1, S2.
Minimum Percentage	Enter the minimum passing percentage. Students passing with a lower grade will not be allowed to take this course.

Maximum Percentage	Enter the maximum passing percentage (inclusive). Students passing with a higher grade will not be allowed to take this course. Leave blank if no maximum applies.
If the Student Retakes	Indicate what to do if multiple grades are stored for this course and store code for a student by choosing one of the following from the pop-up menu: • One must pass • All attempts must pass • The latest attempt must pass • The average must pass
Presume Completion	Select the checkbox to assume that the grade the student will get for a course the student is currently enrolled in will pass this rule. Otherwise, leave the checkbox blank. **Note:** Generally, this checkbox should be selected as it allows students to request the "next" course in a series before they have fully completed and had their grades stored for the previous course in that series.
Make Defaults	Click to make the current entries the new default settings.

How to Enter Average Percent Grade Rule

Use the following information to enter parameters in the fields to require the student to have passed with percentage grades within given bounds, averaged across two or more courses:

Field	Description
Course Number List	Enter two or more courses the student needs to have taken.
Store Codes	Indicate the store codes you want to scan by doing one of the following: • Enter a store code to scan that specific store code.

	• Enter a comma-separated list of store codes to scan multiple store codes. • Leave blank to scan all store codes. **Note:** Store codes are codes set up in final grades setup. They generally map to the term code abbreviations, such as Q1, Q2, Q3, Q4 or S1, S2.
Minimum Percentage	Enter the minimum passing percentage. Students passing with a lower grade will not be allowed to take this course.
Maximum Percentage	Enter the maximum passing percentage (inclusive). Students passing with a higher grade will not be allowed to take this course. Leave blank if no maximum applies.
If the Student Retakes Any Course	Indicate what to do if multiple grades are stored for any of these courses and store codes for a student by choosing one of the following from the pop-up menu: • **Include all in average** • **Use highest in average** • **Use lowest in average**
Require a Grade in Each Course	Select the checkbox to require that a grade be recorded for each course listed. Otherwise, leave the checkbox blank.
Make Defaults	Click to make the current entries the new default settings.

How to Enter Credit Hours Rule

Use the following information to enter parameters in the fields to require the student to have passed other courses with earned credit hours within given bounds:

Field	Description
Course Number	Enter the course the student needs to have taken.

Store Codes	Indicate the store codes you want to scan by doing one of the following: • Enter a store code to scan that specific store code. • Enter a comma-separated list of store codes to scan multiple store codes. • Leave blank to scan all store codes. **Note:** Store codes are codes set up in final grades setup. They generally map to the term code abbreviations, such as Q1, Q2, Q3, Q4 or S1, S2.
Minimum Credit Hours	Enter the minimum passing credit hours. Students with fewer credit hours will not be allowed to take this course.
Maximum Credit Hours	Enter the maximum passing credit hours (inclusive). Students with more credit hours will not be allowed to take this course. Leave blank if no maximum applies.
If the Student Retakes	Indicate what to do if multiple grades are stored for this course and store code for a student by choosing one of the following from the pop-up menu: • **One must pass** • **All attempts must pass** • **The latest attempt must pass** • **The average credits must pass** • **The sum of all credits must pass**
Presume Completion	Select the checkbox to assume that the grade the student will get for a course the student is currently enrolled in will pass this rule. Otherwise, leave the checkbox blank. **Note:** Generally, this checkbox should be selected as it allows students to request the “next” course in a series before they have fully completed and had their grades stored for the previous course in that series.

Make Defaults	Click to make the current entries the new default settings.

How to Enter Concurrent Request Rule

Use the following information to enter parameters in the fields to require the student to request another course at the same time:

Field	Description
Course Number	Enter the course the student must request at the same time as this course.
Make Defaults	Click to make the current entries the new default settings.

How to Enter Recommend Rule

Use the following information to enter parameters in the fields to require a teacher to recommend the student for this course:

Field	Description
Department	Enter the department to limit the ability of other teachers to satisfy recommendation rules they are not authorized to make. **Note:** For detailed information about how to associate departments to teachers, see *Staff Schedule Setup*.
Make Defaults	Click to make the current entries the new default settings.

Prerequisite Notes

When adding or editing course prerequisites, you can also enter descriptive text about the prerequisite, such as "Completion or current enrollment in Biology." A maximum of 512 characters are allowed, including carriage returns and spaces. This information appears in PowerSchool, as well as PowerSchool Parent.

Note: These procedures may also be performed when signed in to a school by choosing **School**, and then clicking **Courses**.

View Prerequisite Notes

Use the following procedure to view prerequisite notes for selected courses.

How to View Prerequisite Notes

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Courses**. The Courses page appears.

   Note: To narrow the course list, use the Filter function. For detailed information, see *How to View the Course List*.

3. Note the **Prerequisites Note** column.

Print Prerequisite Notes

Use the following procedure to print a summary of prerequisite notes for selected courses.

How to Print Prerequisite Notes

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Courses**. The Courses page appears.

   Note: To narrow the course list, use the Filter function. For detailed information, see *How to View the Course List*.

3. Click **Print**. The Course Prerequisite Rule Notes pop-up window appears.
4. Click **Print**. The Print pop-up window appears.
5. Click **Print**. The Print pop-up window closes.

6. Close the Course Prerequisite Rule Notes pop-up window.

Add Prerequisite Notes

Use the following procedure to create a prerequisite note for a selected course.

How to Add a Prerequisite Note

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Courses**. The Courses page appears.

   Note: To narrow the course list, use the Filter function. For detailed information, see *How to View the Course List*.

3. Click the course in the Number, Name, or Department column for which you want to add a prerequisite note. The Edit Course District Information page appears.
4. Click **Prerequisites**. The Edit Course Prerequisites page appears.
5. Enter descriptive text about the prerequisite in the **Prerequisite Note** field.
6. Click **Save**.

Edit Prerequisite Notes

Use the following procedure to edit a prerequisite note for a selected course.

How to Edit a Prerequisite Note

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Courses**. The Courses page appears.

   Note: To narrow the course list, use the Filter function. For detailed information, see *How to View the Course List*.

3. Click the course in the Number, Name, or Department column for which you want to edit prerequisite note. The Edit Course District Information page appears.
4. Click **Prerequisites**. The Edit Course Prerequisites page appears.
5. Edit the descriptive text about the prerequisite in the **Prerequisite Note** field.
6. Click **Save**.

Delete Prerequisite Notes

Use the following procedure to delete a prerequisite note from a selected course.

How to Delete a Prerequisite Note

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Courses**. The Courses page appears.

   Note: To narrow the course list, use the Filter function. For detailed information, see *How to View the Course List*.

3. Click the course in the Number, Name, or Department column for which you want to delete a prerequisite note. The Edit Course District Information page appears.
4. Click **Prerequisites**. The Edit Course Prerequisites page appears.
5. Remove the descriptive text about the prerequisite in the **Prerequisite Note** field.
6. Click **Save**.

Prerequisite Overrides

In instances where course prerequisites were not fulfilled prior to a student requesting a course, you can use the Manage Prerequisite Overrides page to override the prerequisite requirements and allow the student to request the course.

Note: To manage prerequisite overrides for multiple students, see *Invalid Requests*.

How to View Prerequisite Overrides

Use the following procedure to view prerequisite overrides for a selected student.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Scheduling, choose **Request Management** from the student pages menu. The Manage Requests page appears.
3. Click **Override Prerequisites**. The Manage Prerequisite Overrides page displays the following information for each existing prerequisite override:

   Note: Click column headings to sort in ascending order. Click again to sort in descending order.

Field	Description
Course Number	The number of the course for which a prerequisite is being overridden.
Course Name	The name of the course for which a prerequisite is being overridden.
Overridden By	The PowerSchool user who entered the prerequisite override. **Note:** This information does not change if edited by another PowerSchool user.
Comments	Any comments related to the override. **Note:** This information only appears within the PowerSchool Manage Prerequisite Overrides pages.

How to Override a Prerequisite

Use the following procedure to override a course prerequisite for a selected student.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Scheduling, choose **Request Management** from the student pages menu. The Manage Requests page appears.
3. Click **Override Prerequisites**. The Manage Prerequisite Overrides page appears.
4. Click **Create New Override**. The Add / Edit Prerequisite Override page appears.
5. Use the table to enter information in the following fields:

Field	Description
Course Number	Enter the number of the course for which you want to override a prerequisite. **Note:** This field is required.
Scheduling Year	Choose the school year in which the course you want to override is scheduled from the pop-up menu.
Comments	Enter any comments related to the override. **Note:** This information only appears within the PowerSchool Manage Prerequisite Overrides pages.

6. Click **Submit**. The Manage Prerequisite Overrides page appears.

How to Edit a Prerequisite Override

Use the following procedure to edit an existing prerequisite override for a selected student.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Scheduling, choose **Request Management** from the student pages menu. The Manage Requests page appears.
3. Click **Override Prerequisites**. The Manage Prerequisite Overrides page appears.
4. Click the **Pencil** icon for the override you want to edit. The Add / Edit Prerequisite Override page appears.

5. Enter information as needed. For detailed information, see *Override Prerequisites*.
6. Click **Submit**. The Manage Prerequisite Overrides page appears.

How to Delete a Prerequisite Override

Use the following procedure to delete an existing prerequisite override for a selected student.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Scheduling, choose **Request Management** from the student pages menu. The Manage Requests page appears.
3. Click **Override Prerequisites**. The Manage Prerequisite Overrides page appears.
4. Click the **Pencil** icon for the override you want to delete. The Add / Edit Prerequisite Override page appears.
5. Click **Delete**. The Manage Prerequisite Overrides page appears.

Recommendations

Using the Manage Recommendations page, you can manage student course recommendations. Course recommendations may be required as a prerequisite or they may be purely advisory, where a teacher wishes to advise a student on the path they feel best suits their talents and potential. One a recommendation is made, it appears on the student's Class Registration page in PowerSchool Parent.

How to View Recommendations

Use the following procedure to view course recommendations for a selected student.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Scheduling, choose **Request Management** from the student pages menu. The Request Management page appears.
3. Click **Manage Recommendations**. The Manage Recommendations page displays the following information for each existing recommendation:

   Note: Click column headings to sort in ascending order. Click again to sort in descending order.

Field	Description
Year	The school year in which the course being recommended is scheduled.
Course Number	The number of the course for which a recommendation is being made.
Course Name	The name of the course for which a recommendation is being made.
Recommended By	The PowerSchool user who entered the recommendation. **Note:** This information does not change if edited by another PowerSchool user.
Comments	Any comments related to the recommendation.

	Note: This information only appears within the PowerSchool Manage Recommendations pages.

How to Add a Recommendation

Use the following procedure to create new course recommendations for a selected student.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Scheduling, choose **Request Management** from the student pages menu. The Request Management page appears.
3. Click **Manage Recommendations**. The Manage Recommendations page appears.
4. Click **Create New Recommendations**. The Add/Edit Recommendations page appears.
5. Use the table to enter information in the following fields:

Field	Description
Course Number	Enter the number of the course for which you want to recommend. **Note:** This field is required.
Scheduling Year	Choose the school year in which the course you want to recommend is scheduled from the pop-up menu.
Comments	Enter any comments related to the recommendation. **Note:** This information only appears within the PowerSchool Manage Recommendations pages.

6. Click **Submit**. The Manage Recommendations page appears.

How to Edit a Recommendation

Use the following procedure to edit existing course recommendations for a selected student.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Scheduling, choose **Request Management** from the student pages menu. The Request Management page appears.
3. Click **Manage Recommendations**. The Manage Recommendations page appears.
4. Click the **Pencil** icon for the recommendation you want to edit. The Add / Edit Recommendation page appears.
5. Enter information as needed. For detailed information, see *Add Recommendations*.
6. Click **Submit**. The Manage Recommendations page appears.

How to Delete a Recommendation

Use the following procedure to delete existing course recommendations for a selected student.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Scheduling, choose **Request Management** from the student pages menu. The Request Management page appears.
3. Click **Manage Recommendations**. The Manage Recommendations page appears.
4. Click the **Pencil** icon for the recommendation you want to delete. The Add / Edit Recommendation page appears.
5. Click **Delete**. The Manage Recommendations page appears.

Invalid Requests

The Invalid Request function provides you with the ability to evaluate all course requests for a selected group of students and identify any course requests where prerequisites have not been met. Once students with invalid course requests are identified, you can then research and reconcile those course requests. For course requests that cannot be reconciled, you can perform a number of group functions with those students, such as printing reports or form letters for those students.

Note: To manage prerequisite overrides for individual students, see *Prerequisite Overrides*.

How to View Invalid Requests

Use the following procedure to view invalid course requests for a selected group of students.

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Scheduling, choose **Invalid Requests**. The Invalid Requests Parameters page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Use the following information to enter parameters in the fields:

Field	Description
Students	The number of students for which you will perform the Invalid Request function.
Re-Evaluate	Do one of the following: • If you recently performed this function and do not expect the list of results to have changed, select the **Don't re-evaluate; display last results** option. This is the quicker option.

	• If this is the first time you have performed this function, or you haven't performed it recently, select the **Re-evaluate and display new results** option. Selecting this option may take several minutes to complete as all requests for the selected students are evaluated.
School Year	Select the school year in which you want to check for invalid requests.
Courses	Do one of the following: • Select the **All courses** option to perform the function for all courses within the selected district or school. • Select the **Courses in this department** option to perform the function for all courses within a specific department. Then, enter the department name in the field provided. • Select the **Only this course** option to perform the function for a specific course. Then, enter the course number in the field provided.

5. Click **Submit**. The Invalid Requests page displays the following information for each invalid request:

   Note: Click column headings to sort in ascending order. Click again to sort in descending order.

Field	Description
Last Name	The student's last name. Click to access the student pages for this student.
First Name	The student's first name. Click to access the student pages for this student.
Course	The number and name of the course the student requested.

Prerequisite	The prerequisite note indicating the course requirement.
Research	To research invalid course request, see *Research Invalid Requests*.
Take Action	To override an invalid course requests, see *Override Invalid Requests*. To edit an invalid course requests, see *Edit Invalid Requests*. **Note:** The icons appear shaded until you perform an action.

6. Click **Re-Evaluate Requests** to apply updates.

   Note: If you navigate away from the Invalid Request page before clicking **Re-Evaluate Requests**, any updates will be discarded.

7. To work with the group of students, click **Make these students the current selection**. The Student Selection page appears.

How to Research Invalid Requests

Use the following procedure to research invalid course requests for a selected student.

1. Perform Step 1 through Step 4 of *View Invalid Requests*. The Invalid Requests page appears.
2. To view historical grades:
   a. Click the **A+** icon. The Historical Grades pop-up window appears.
   b. Click **View/edit in a new window** to update information from the Historical Grades page or click **Close**.
3. To view requests:
   a. Click the **R** icon. The Requests pop-up window appears.
   b. Click **View/edit in a new window** to update information from the Modify Schedule - Requests page or click **Close**.

How to Override an Invalid Request

Use the following procedure to override an invalid course requests for a selected student. Once an override is submitted, it will not appear as an invalid request the next time you re-evaluate requests.

1. Perform Step 1 through Step 4 of *View Invalid Requests*. The Invalid Requests page appears.
2. Click the **O** icon. The Override Prerequisite pop-up window appears.
3. Enter any comments related to the override.
4. Click **Submit**. The Override Prerequisite pop-up window closes.

How to Edit an Invalid Course Request

Use the following procedure to edit an invalid course requests for a selected student.

1. Perform Step 1 through Step 4 of *View Invalid Requests*. The Invalid Requests page appears.
2. Click the **Pencil** icon to edit course request for student. The Change Request pop-up window appears.
3. Do one of the following:
    - Enter a different course number in the **Course Number**, and then click **Submit**. The Change Request pop-up window closes.
    - Click **View/edit in a new window** to update information from the Modify Schedule - Requests page.

Teacher Recommendations

Using the Recommendations page, you can manage course recommendations for your students. Course recommendations may be required as a prerequisite or they may be purely advisory, where you wish to advise a student on the path you feel best suits their talents and potential. Once a recommendation is made, it appears on the student's Class Registration page in the PowerSchool Student and Parent portal.

Work with Students

Using the Recommendations List page, you can view, create, edit, and delete recommendations for students within a specific class. To navigate to the Recommendations List page, click the **Student Information** (backpack) icon next to the class for which you want to work with. Click the last name of the student you want to work with. And then, choose **Recommendations** from the **Select screens** pop-up menu.

How to View Recommendations for a Student

Use the following procedure to view all course recommendations you have made for a specific student.

1. On the Current Classes page, click the **Student Information** (backpack) icon next to the class for which you want to work with. The Student Information page appears with the selected class roster displayed in the navigation menu.
2. Click the last name of the student you want to work with. The student information displays the default page previously selected.
3. Choose **Recommendations** from the **Select screens** pop-up menu. The Recommendations List page displays the following information for each recommendation:

   Note: Click column headings to sort in ascending order. Click again to sort in descending order.

Field	Description
Year	The school year for which the recommendation was made.
Course Number	The number of the course for which the recommendation was made.

Course Name	The name of the course for which the recommendation was made.
Comments	Any comments related to the recommendation. **Note:** This information appears in PowerSchool and in PowerTeacher.

How to Add a Recommendation

Use the following procedure to create new course recommendations for a selected student.

1. On the Current Classes page, click the **Student Information** (backpack) icon next to the class for which you want to work with. The Student Information page appears with the selected class roster displayed in the navigation menu.
2. Click the last name of the student you want to work with. The student information displays the default page previously selected.
3. Choose **Recommendations** from the **Select screens** pop-up menu. The Recommendations List page appears.
4. Click **Create New Recommendation**. The Add/Edit Recommendation page appears.
5. Use the table to enter information in the following fields:

Field	Description
Course Number	Enter the number of the course for which you want to recommend. **Note:** This field is required.
Scheduling Year	Choose the school year in which the course you want to recommend is scheduled from the pop-up menu.
Comments	Enter any comments related to the recommendation. **Note:** This information appears in PowerSchool and in PowerTeacher.

6. Click **Submit**. The Recommendations List page appears.

How to Edit a Recommendation

Use the following procedure to edit existing course recommendations for a selected student.

Note: You may also edit a recommendation using the Recommendations page. For more information, see *How to Edit Recommendations*.

1. On the Current Classes page, click the **Student Information** (backpack) icon next to the class for which you want to work with. The Student Information page appears with the selected class roster displayed in the navigation menu.
2. Click the last name of the student you want to work with. The student information displays the default page previously selected.
3. Choose **Recommendations** from the **Select screens** pop-up menu. The Recommendations List page appears.
4. Click the **Pencil** icon for the recommendation you want to edit. The Add/Edit Recommendation page appears.
5. Enter information as needed. For detailed information, see *How to Add a Recommendation*.
6. Click **Submit**. The Recommendations List page appears.

How to Delete a Recommendation

Use the following procedure to delete existing course recommendations for a selected student.

Note: You may also delete a recommendation using the Recommendations page. For more information, see *How to Delete Recommendations*.

1. On the Current Classes page, click the **Student Information** (backpack) icon next to the class for which you want to work with. The Student Information page appears with the selected class roster displayed in the navigation menu.
2. Click the last name of the student you want to work with. The student information displays the default page previously selected.
3. Choose **Recommendations** from the **Select screens** pop-up menu. The Recommendations List page appears.
4. Click the **Pencil** icon for the recommendation you want to delete. The Add/Edit Recommendation page appears.
5. Click **Delete**. The Recommendations List page appears.

Work with Student Groups

Using the Recommendations page, you can view, create, edit, and delete recommendations for students in all your classes. To navigate to the Recommendations page, click **Recommendations** from the navigation menu.

How to View Recommendations for All Students

Use the following procedure to view all course recommendations you have made for all students.

Note: All recommendations for all schools display on this page, regardless of which school is selected on the **School** pop-up menu.

1. On the start page, click **Recommendations** from the navigation menu. The Recommendations page displays the following information for each existing recommendation:

   Note: Click column headings to sort in ascending order. Click again to sort in descending order.

Field	Description
Filter (Recommendations)	Click the arrow to expand this section. Click the arrow again to collapse this section. **How to Filter Recommendations (Simple)** To narrow the list of recommendations using simple search: 1. Verify the **Advanced** checkbox is deselected. 2. Enter search criteria in the search field. 3. Click **Apply**. The page refreshes and display filtered results. **Note:** To remove all filter selections, click **Clear**. **How to Filter Recommendations (Advanced)** To narrow the list of recommendations using advanced search: 1. Select the **Advanced** checkbox. 2. Choose the column by which you want to filter courses: • **Comment** • **Course Name** • **Course Number** • **Created**

	• **First Name** • **Last Name** • **Year** 3. Do one of the following: • Enter search criteria in the search field. • Select search criteria from the pop-up menu. 4. To add another filter, click **+** and repeat Step 1. 5. To delete a filter, click **-** next the filter. 6. Click **Apply**. The page refreshes and display filtered results. **Note:** To remove all filter selections, click **Clear**.
Year	The school year for which the recommendation was made.
Last Name	The student's last name for which the recommendation was made.
First Name	The student's first name for which the recommendation was made.
Course Number	The number of the course for which the recommendation was made.
Course Name	The name of the course for which the recommendation was made.
Created	The date and time the recommendation was made.
Comments	Any comments related to the recommendation. **Note:** This information appears in PowerSchool and in PowerTeacher.

How to Add Recommendations

1. On the start page, click **Recommendations** from the navigation menu. The Recommendations page appears.
2. Click **Create Recommendations**. The Add Recommendation drawer opens.

3. Use the following table to enter information in the Step 1: Select Students from Classes section:

<table>
<tr><th>Field</th><th>Description</th></tr>
<tr><td>Class(es)</td><td>The following information displays for each class:
Period/Day
Section Number
Course Name
Course Number
Note: Click column headings to sort in ascending order. Click again to sort in descending order.
Indicate the classes that contains the students for which you want to create recommendations by doing one of the following:
Select the checkbox in the header row to select all classes. Alternately, if the checkbox is already selected, deselect the checkbox to remove the checkmarks from all classes.
Select the checkbox for each class you want to work with.</td></tr>
<tr><td>Students</td><td>The following information displays for each student:
Last Name
First Name
Student Number
Note: Click column headings to sort in ascending order. Click again to sort in descending order.
Indicate the students for which you want to create recommendations by doing one of the following:
Select the checkbox in the header row to select all students. Alternately, if the checkbox is already selected, deselect the checkbox to remove the checkmarks from all students.</td></tr>
</table>

	• Select the checkbox for each student you want to work with. **Note:** When adding classes, selected students are retained. When removing classes, only students in the remaining selected classes are retained.

4. Click **Next**.
5. Use the following table to enter information in the Step 2: Select Courses and Enter a Comment section:

Field	**Description**
Year for Recommendation	Choose the school year in which the course you want to recommend is scheduled from the pop-up menu. **Note:** The current year displays by default. However, if next year is set up in PowerScheduler, then the next year displays as the default. This requires the active scenario to have a valid course catalog associated with it and the scheduling year for that scenario is set for the upcoming year.
Courses to Recommend Filter [Courses]	Click the arrow to expand this section. Click the arrow again to collapse this section. **How to Filter Courses (Simple)** To narrow the list of courses using simple search: 1. Verify the **Advanced** checkbox is deselected. 2. Enter search criteria in the search field. 3. Click **Apply**. The page refreshes and display filtered results. **Note:** To remove all filter selections, click **Clear**. **How to Filter Courses (Advanced)** To narrow the list of courses using advanced search: 1. Select the **Advanced** checkbox. 2. Choose the column by which you want to filter courses: • **Course Name**

	• **Course Number** • **Department** 3. Do one of the following: • Enter search criteria in the search field. • Select search criteria from the pop-up menu. 4. To add another filter, click **+** and repeat Step 1. 5. To delete a filter, click **-** next the filter. 6. Click **Apply**. The page refreshes and display filtered results. **Note:** To remove all filter selections, click **Clear**.
[Courses]	The following information displays for each class: • Course Name • Course Number • Department **Note:** Click column headings to sort in ascending order. Click again to sort in descending order. Select the checkbox for each class you want to work with. Alternately, if a checkbox is already selected, deselect the checkbox to remove the class. **Note:** If the current year is selected as the **Year of Recommendation**, active courses at the school where those sections are taught displays. If the next year is selected as the **Year of Recommendation**, courses in the course catalog in PowerScheduler related to the active scenario at the school where those sections are taught display.
Selected Courses	The course name and course number for each selected course you want to recommend appears.
Comments	Enter any comments related to the recommendation. **Note:** This information appears in PowerSchool and in PowerTeacher.

6. Click **Submit**. The Add Recommendation drawer closes. The Recommendations page displays the new recommendation(s).

How to Edit Recommendations

1. On the start page, click **Recommendations** from the navigation menu. The Recommendations page appears.
2. To narrow the list of recommendations, see *How to Filter Recommendations*.
3. Click the **Pencil** icon for the recommendation you want to edit. The Edit Recommendation drawer opens.
4. Edit the information as needed. For field descriptions, see Step 5 of *How to Add Recommendations*.
5. Click **Submit.** The Edit Recommendation drawer closes. The Recommendations page displays the updated recommendation(s).

How to Delete Recommendations

1. On the start page, click **Recommendations** from the navigation menu. The Recommendations page appears.
2. To narrow the list of recommendations, see *How to Filter Recommendations*.
3. Click the **Pencil** icon for the recommendation you want to delete. The Edit Recommendation drawer opens.
4. Click **Delete**.
5. Click **Confirm Delete**. The Recommendations page no longer displays the recommendation(s).

Student Requests

Using the Class Registration page in PowerSchool Parent, students and their parents can manage their course requests.

Register for Classes

Use the following procedure to request classes for the next year.

How to Register for Classes

Use the following procedure to request classes for the next year.

How to Register for Classes

1. On the main menu, click **Class Registration**. The Class Registration page appears.

   Note: A **Road** icon appears if a teacher has recommended the course. Click to view the recommending teacher. A **Note** icon appears if the course contains prerequisite notes. Click to view.

2. Click the **Pencil** icon to select courses from each area as instructed. The Course Request pop-up window appears.
3. Use the following table to enter information in the fields:

   Note: Click column headings to sort in ascending order. Click again to sort in descending order.

Field	Description
[Course]	Select the checkbox for each course you want to request.
Course Name	The name of the course.
Number	The number used to identify the course.
Credits	The number of credits you receive for taking the course.

Prerequisite Notes	Descriptive text about the prerequisite, if any.
Alerts	Alert to indicate prerequisites have not been met, if any.

4. Click **Okay**. The Course Request pop-up window closes. A green checkmark appears in the area for which you selected courses.

   Note: A red exclamation mark appears if courses need to be selected for an area.

5. Repeat Step 2 through Step 4 for each course request.
6. Click **Submit**. The [Scheduling Year] Course Requests page appears.

View Course Requests

Use the following procedure to view any existing course requests.

How to View Course Requests

1. On the main menu, click **Class Registration**. The Class Registration page appears.
2. Click **View future course requests**. The [Scheduling Year] Course Requests page.

Custom Fields and Screens User Guide

PowerSchool

Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

Table of Contents

Introduction

PowerSchool provides tools to create custom fields and screens to display a variety of information about courses, sections, staff, and students. First, create the custom fields. Next, create the custom screen. Finally, add the custom fields to the custom screen.

ODBC/JDBC Access to Custom Fields

Once custom fields are created, you can then easily access that information using ODBC/JDBC. For more information, see the *PS_CustomFields API Guide* available on PowerSource.

Setup

Custom Student Fields and Screens

Use custom Student Fields and Screens function to display a variety of information about students. PowerSchool supports the addition of up to 999 custom student fields. For example, create a page that includes vehicle-related information that you want to track for each student. First, create the custom fields. Next, create the custom screen. Finally, add the custom fields to the custom screen you create.

How to Add Custom Student Fields

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Custom Fields/Screens**. The Custom Fields/Screens page appears.
3. Click **Student Fields**. The Student Fields page appears.
4. Click **New**. The New Student Field page appears.
5. Use the following table to enter information in the fields:

Field	Description
Field Name	Enter the name of the field.
Description	Enter an explanation of the field and its purpose.

6. Click **Submit**. The Student Fields page displays the new field.

How to Edit Custom Student Fields

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Custom Fields/Screens**. The Custom Fields/Screens page appears.
3. Click **Student Fields**. The Student Fields page appears.
4. Click the name of the field you want to edit. The Edit Student Field page appears.
5. Edit the information as needed. For field descriptions, see *How to Add Custom Student Fields*.
6. Click **Submit**. The Student Fields page displays the edited field.

How to Delete Custom Student Fields

Deleting a custom field also deletes the field from any custom pages and the values of that field. If you manually entered the field on a PowerSchool page, you must manually remove the field from the page.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Custom Fields/Screens**. The Custom Fields/Screens page appears.
3. Click **Student Fields**. The Student Fields page appears.
4. Click the name of the field you want to delete. The Edit Student Field page appears.
5. Select the checkbox to confirm that you want to delete the field.

   Note: If you do not select the checkbox and click **Delete**, the system displays a message indicating that the field was not deleted. Click **Back** to return to the previous page. Select the checkbox, and then click **Delete**.

6. Click **Delete**.
7. Click **Confirm Delete**. Do not leave the page until a message appears indicating that the process is complete. The Custom Field Deleted page appears.

   Note: The system lists any PowerSchool pages that include the custom field. If any pages appear, you must manually remove the fields from those pages.

How to Add Custom Student Screens

Note: The Custom Student Screens page is now also accessible via **Start > System > Page and Data Management > Custom Student Screens**.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Custom Fields/Screens**. The Custom Fields/Screens page appears.
3. Under Page Management, click **Custom Student Screens**. The Student Custom Screens page appears.
4. Click **New**. The Edit Custom Student Screen page appears.
5. Enter the name of the screen in the Name field.
6. Click **Submit**. The Custom Student Screens page displays the new page.
7. Click **Edit Fields** next to the new screen. The List Custom Student Screen Fields page appears.
8. Click **New**. The Edit Field page appears.
9. Use the following table to enter information in the fields:

Field	**Description**
Label	Enter the name you want to appear for the field on the custom screen.
Field Name	Enter the name of the field. To insert a PowerSchool field into this field: 1. Click **Fields** to view a list of PowerSchool fields. The Fields pop-up appears. 2. To narrow the list of fields, enter one of more search terms in the **Filter** field. Otherwise, leave blank. 3. Click the field you want to add. The Fields pop-up closes, and the selected field appears. **Note:** Database extension fields can be selected on the **Fields** pop-up. For more information, see *Database Extensions* in the *System Administrator User Guide* available on PowerSource. **Note:** To create a custom field, see *How to Add Custom Student Fields*.

Sort Order	Enter a number to indicate the order in which you want this field to appear on the custom screen.
Input Type	Use the pop-up menu to choose one of the following to determine the type of field you are creating: • **Entry field**: A small field in which the user enters free text. • **Static field**: A field in which you cannot change the text. Use static fields to create headers above fields you want to group together, or to explain a field you place below it. • **Checkbox**: A checkbox a user clicks to select. • **Pop-up menu**: A pop-up menu from which a user selects a value. • **Radio button**: A small, round option button a user clicks to select. • **Entry box**: A large box in which users can enter multiple lines of free text.
Width	If you chose **Entry field** or **Entry box** at the Input Type field, enter the width in characters of the field or box.
Height	If you chose **Entry box** at the Input Type field, enter the height of the box in lines.
Data for Popup or Radio Buttons	If you chose **Pop-up menu** or **Radio button** at the Input Type field, enter the options the users can select at the field.

10. Click **Submit**. The List Custom Student Screen Fields page displays the field.
11. Repeat steps 8-10 for each field on the custom screen.

Note: For more information about viewing the custom screen, see *Custom Screens*.

How to Edit Custom Student Screens

Note: The Custom Student Screens page is now also accessible via **Start > System > Page and Data Management > Custom Student Screens**.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Custom Fields/Screens**. The Custom Fields/Screens page appears.
3. Under Page Management, click **Custom Student Screens**. The Student Custom Screens page appears.
4. Click the name of the custom screen in the Screen column. The Edit Custom Student Screen page appears.
5. Edit the name of the custom student screen in the Name field.
6. Click **Submit**. The Student Custom Screens page displays the edited screen.

How to Delete Custom Student Screens

Note: The Custom Student Screens page is now also accessible via **Start > System > Page and Data Management > Custom Student Screens**.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Custom Fields/Screens**. The Custom Fields/Screens page appears.
3. Under Page Management, click **Custom Student Screens**. The Student Custom Screens page appears.
4. Click the name of the custom screen in the Screen column. The Edit Custom Student Screen page appears.
5. Click **Delete**.
6. Click **Confirm Delete**. The Selection Deleted page appears.

How to Edit Custom Student Screen Fields

Note: The Custom Student Screens page is now also accessible via **Start > System > Page and Data Management > Custom Student Screens**.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Custom Fields/Screens**. The Custom Fields/Screens page appears.
3. Under Page Management, click **Custom Student Screens**. The Student Custom Screens page appears.
4. Click **Edit Fields** next to the screen you want to edit. The List Custom Student Screen Fields page appears.
5. Click the field you want to edit. The Edit Field page appears.

6. Edit the information as needed. For field descriptions, see *How to Add Custom Student Screens*.
7. Click **Submit**. The List Custom Student Screen Fields page displays the edited field.

How to Delete Custom Student Screen Fields

Note: The Custom Student Screens page is now also accessible via **Start > System > Page and Data Management > Custom Student Screens**.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Custom Fields/Screens**. The Custom Fields/Screens page appears.
3. Under Page Management, click **Custom Student Screens**. The Student Custom Screens page appears.
4. Click **Edit Fields** next to the screen you want to edit. The List Custom Student Screen Fields page appears.
5. Click the field you want to edit. The Edit Field page appears.
6. Click **Delete**.
7. Click **Confirm Delete**. The Selection Deleted page appears.

How to Export a Student Screen as a Template

Export a custom screen to share with other PowerSchool administrators or to save as a backup for the custom screen. In addition, by exporting a custom screen and then deleting it, you can remove a custom screen from the system without losing it permanently.

Note: The Custom Student Screens page is now also accessible via **Start > System > Page and Data Management > Custom Student Screens**.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Custom Fields/Screens**. The Custom Fields/Screens page appears.
3. Under Page Management, click **Custom Student Screens**. The Student Custom Screens page appears.
4. Click **Edit Fields** next to the screen to be exported as a template. The List Custom Student Screen Fields page appears.
5. Click **Export this screen as a template**. The File Download dialog appears.
6. Select **Save File As...** or **Save this file to disk**.
7. Click **OK**. The Save As dialog appears.
8. Select a file location.

9. Click **Save**. The custom screen saves as a template, and the List Custom Student Screen Fields page appears.

Custom Course Fields

Use custom Course Fields function to display a variety of information about courses. PowerSchool supports the addition of up to 999 custom course fields. For example, create a custom field called Demand to track last year's demand for a particular course. Create the custom course fields. Then, either add the custom fields to a page in PowerSchool or enter values for the fields using the Direct Database Access function, also known as Universal Search & Modify (USM).

How to Add Custom Course Fields

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Custom Fields/Screens**. The Custom Fields/Screens page appears.
3. Click **Course Fields**. The Course Fields page appears.
4. Click **New**. The New Course Field page appears.
5. Use the following table to enter information in the fields:

Field	Description
Field Name	Enter the name of the field.
Description	Enter an explanation of the field and its purpose.

6. Click **Submit**. The Course Fields page displays the new field.

How to Edit Custom Course Fields

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Custom Fields/Screens**. The Custom Fields/Screens page appears.
3. Click **Course Fields**. The Course Fields page appears.
4. Click the name of the field you want to edit. The Edit Course Field page appears.

5. Edit the information as needed. For field descriptions, see *How to Add Custom Course Fields*.
6. Click **Submit**. The Course Fields page displays the edited field.

How to Delete Custom Course Fields

Deleting a custom field deletes the field and its values. If you manually entered the field on a PowerSchool page, you must manually remove the field from the page.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Custom Fields/Screens**. The Custom Fields/Screens page appears.
3. Click **Course Fields**. The Course Fields page appears.
4. Click the name of the field you want to delete. The Edit Course Field page appears.
5. Select the checkbox to confirm that you want to delete the field.

   Note: If you do not select the checkbox and click **Delete**, the system displays a message indicating that the field was not deleted. Click **Back** to return to the previous page. Select the checkbox, and then click **Delete**.

6. Click **Delete**.
7. Click **Confirm Delete**. Do not leave the page until a message appears indicating that the process is complete. The Custom Field Deleted page appears.

   Note: The system lists any PowerSchool pages that include the custom field. If any pages appear, you must manually remove the fields from those pages.

Custom Section Fields

Use custom Section Fields function to display a variety of information about sections. PowerSchool supports the addition of up to 999 custom section fields. For example, create a custom field called Field Trip to identify the field trips taken during a particular section. Create the custom section fields. Then, either add the custom fields to a page in PowerSchool or enter values for the fields using the Direct Database Access function, also known as Universal Search & Modify (USM).

How to Add Custom Section Fields

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.

2. Under Data Management, click **Custom Fields/Screens**. The Custom Fields/Screens page appears.
3. Click **Section Fields**. The Section Fields page appears.
4. Click **New**. The New Section Field page appears.
5. Use the following table to enter information in the fields:

Field	Description
Field Name	Enter the name of the field.
Description	Enter an explanation of the field and its purpose.

6. Click **Submit**. The Section Fields page displays the new field.

How to Edit Custom Section Fields

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Custom Fields/Screens**. The Custom Fields/Screens page appears.
3. Click **Section Fields**. The Section Fields page appears.
4. Click the name of the field you want to edit. The Edit Section Field page appears.
5. Edit the information as needed. For field descriptions, see *How to Add Custom Section Fields*.
6. Click **Submit**. The Section Fields page displays the edited field.

How to Delete Custom Section Fields

Deleting a custom field deletes the field and its values. If you manually entered the field on a PowerSchool page, you must manually remove it from the page.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Custom Fields/Screens**. The Custom Fields/Screens page appears.
3. Click **Section Fields**. The Section Fields page appears.
4. Click the name of the field you want to delete. The Edit Section Field page appears.
5. Select the checkbox to confirm that you want to delete the field.

Note: If you do not select the checkbox and click **Delete**, the system displays a message indicating that the field was not deleted. Click **Back** to return to the previous page. Select the checkbox, and then click **Delete**.

6. Click **Delete**.
7. Click **Confirm Delete**. Do not leave the page until a message indicates that the process is complete. The Custom Field Deleted page appears.

   Note: The system lists any PowerSchool pages that include the custom field. If any pages appear, you must manually remove the fields from those pages.

Custom Staff Fields and Screens

Use custom Staff Fields and Screens function to display a variety of information about staff. PowerSchool supports the addition of up to 999 custom staff fields. For example, create a page that includes teacher certification fields to track this information for each teacher. First, create the custom fields. Then, create the custom screen. Finally, add the custom fields to the custom screen you created.

How to Add Custom Staff Fields

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Custom Fields/Screens**. The Custom Fields/Screens page appears.
3. Click **Staff Fields**. The Staff Fields page appears.
4. Click **New**. The New Staff Field page appears.
5. Use the following table to enter information in the fields:

Field	Description
Field Name	Enter the name of the field, such as **address**.
Description	Enter an explanation of the field and its purpose, such as **Street Address**.

6. Click **Submit**. The Staff Fields page displays the new field.

How to Edit Custom Staff Fields

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Custom Fields/Screens**. The Custom Fields/Screens page appears.
3. Click **Staff Fields**. The Staff Fields page appears.
4. Click the name of the field you want to edit. The Edit Staff Field page appears.
5. Edit the information as needed. For field descriptions, see *How to Add Custom Staff Fields*.
6. Click **Submit**. The Staff Fields page displays the edited field.

How to Delete Custom Staff Fields

Deleting a custom field also deletes that field and its values from any custom pages. If you manually entered the field on a PowerSchool page, you must manually remove the field from the page.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Custom Fields/Screens**. The Custom Fields/Screens page appears.
3. Click **Staff Fields**. The Staff Fields page appears.
4. Click the name of the field you want to delete. The Edit Staff Field page appears.
5. Select the checkbox to confirm that you want to delete the field.

   Note: If you do not select the checkbox and click **Delete**, the system displays a message indicating that the field was not deleted. Click **Back** to return to the previous page. Select the checkbox, and then click **Delete**.

6. Click **Delete**.
7. Click **Confirm Delete**. Do not leave the page until a message indicates that the process is complete. The Custom Field Deleted page appears.

   Note: The system lists any PowerSchool pages that include the custom field. If any pages appear, you must manually remove the fields from those pages.

How to Add Custom Staff Screens

Note: The Custom Staff Screens page is now also accessible via **Start > System > Page and Data Management > Custom Staff Screens**.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.

2. Under Data Management, click **Custom Fields/Screens**. The Custom Fields/Screens page appears.
3. Under Page Management, click **Custom Staff Screens**. The Custom Staff Screens page appears.
4. Click **New**. The Edit Custom Staff Screen page appears.
5. Enter the name of the screen in the Name field.
6. Click **Submit**. The Custom Staff Screens page displays the new page.
7. Click **Edit** next to the new screen. The List Custom Staff Screen Fields page appears.
8. Click **New**. The New Custom Staff Screen Fields: [Name] page appears.
9. Use the following table to edit information in the fields:

Field	**Description**
Label	Enter the name you want to appear for the field on the custom screen, such as **Address**.
Field Name	Enter the name of the field. To insert a PowerSchool field into this field: 1. Click **Fields** to view a list of PowerSchool fields. The Fields pop-up appears. 2. To narrow the list of fields, enter one of more search terms in the **Filter** field. Otherwise, leave blank. 3. Click the field you want to add. The Fields pop-up closes, and the selected field appears. **Note:** Database extension fields can be selected on the **Fields** pop-up. For more information, see *Database Extensions* in the *System Administrator User Guide* available on PowerSource. **Note:** To create a custom field, see *How to Add Custom Staff Fields*.
Sort Order	Enter a number to indicate the order in which you want this field to appear on the custom screen.
Input Type	Use the pop-up menu to choose one of the following to determine the type of field you are creating: • **Entry field**: A small field in which the user enters free text.

	• **Static field**: A field in which you cannot change the text that displays. Use static fields to create headers above fields you want to group together, or to explain a field you place below it. • **Checkbox**: A checkbox a user clicks to check. • **Pop-up menu**: A pop-up menu from which a user selects a value. • **Radio button**: Small, round option button a user clicks to select. • **Entry box**: A large box in which users can enter multiple lines of free text.
Width	If you chose **Entry field** or **Entry box** at the Input Type field, enter the width in characters of the field or box.
Height	If you chose **Entry box** at the Input Type field, enter the height of the box in lines.
Data for Popup or Radio Buttons	If you chose **Pop-up menu** or **Radio button** at the Input Type field, enter the options the users can select at the field. A pop-up menu contains values, which consists of two segments. The first segment is the value that is stored in the database. This value is not visible on the Custom Screen page. The second segment is the label, which appears within the pop-up menu. The first and second segments use a semi-colon as a delimiter. To set a default value for a pop-up menu, enter a semi-colon as the delimiter and then enter an asterisk at the end of the default entry. The following is an example of a properly formatted data for a pop-up menu where "4;Both" is the default entry: 1;Mother 2;Father 3;Guardian 4;Both;* 5;Aunt 6;Uncle 0;Unknown A radio button follows the same rules as pop-up menu. The only difference is that with a pop-up menu, you can enter numerous

	sets of values and a default may not be defined. With a radio button, you are limited to only two sets of values.

10. Click **Submit**. The Custom Staff Screen Fields: [Name] page displays the edited field.
11. Repeat steps 8-10 for each field on the custom screen.

    Note: For more information about viewing the custom screen, see *How to Edit Custom Staff Screens*.

How to Edit Custom Staff Screens

Note: The Custom Staff Screens page is now also accessible via **Start > System > Page and Data Management > Custom Staff Screens**.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Custom Fields/Screens**. The Custom Fields/Screens page appears.
3. Under Page Management, click **Custom Staff Screens**. The Custom Staff Screens page appears.
4. Click the name of the custom screen in the Screen column. The Edit Custom Staff Screen page appears.
5. Edit the name of the custom staff screen in the Name field.
6. Click **Submit**. The Custom Staff Screens page displays the edited screen.

How to Delete Custom Staff Screens

Note: The Custom Staff Screens page is now also accessible via **Start > System > Page and Data Management > Custom Staff Screens**.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Custom Fields/Screens**. The Custom Fields/Screens page appears.
3. Under Page Management, click **Custom Staff Screens**. The Custom Staff Screens page appears.
4. Click the name of the custom screen in the Screen column. The Edit Custom Staff Screen page appears.
5. Click **Delete**.
6. Click **Confirm Delete**. The Selection Deleted page appears.

How to Edit Custom Staff Screen Fields

Note: The Custom Staff Screens page is now also accessible via **Start > System > Page and Data Management > Custom Staff Screens**.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Custom Fields/Screens**. The Custom Fields/Screens page appears.
3. Under Page Management, click **Custom Staff Screens**. The Custom Staff Screens page appears.
4. Click Edit next to the screen you want to edit. The Custom Staff Screen Fields: [Name] page appears.
5. Click the Label of the field you want to edit. The Edit Custom Staff Screen Field: [Name] page appears.
6. Edit the information as needed. For field descriptions, see *How to Add Custom Staff Screens*.
7. Click **Submit**. The Custom Staff Screen Fields: [Name] page displays the edited field.

How to Delete Custom Staff Screen Fields

Note: The Custom Staff Screens page is now also accessible via **Start > System > Page and Data Management > Custom Staff Screens**.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Custom Fields/Screens**. The Custom Fields/Screens page appears.
3. Under Page Management, click **Custom Staff Screens**. The Custom Staff Screens page appears.
4. Click **Edit** next to the screen you want to edit. The Custom Staff Screen Fields: [Name] page appears.
5. Click the Label of the field you want to delete. The Edit Custom Staff Screen Field: [Name] page appears.
6. Click **Delete**.
7. Click **Confirm Delete**. The Selection Deleted page appears.

How to Export a Staff Screen as a Template

Export a custom screen to share with other PowerSchool administrators or to save as a backup. In addition, by exporting a custom screen and then deleting it, you can remove a custom screen from the system without losing it permanently.

Note: The Custom Staff Screens page is now also accessible via **Start > System > Page and Data Management > Custom Staff Screens**.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Custom Fields/Screens**. The Custom Fields/Screens page appears.
3. Under Page Management, click **Custom Staff Screens**. The Custom Staff Screens page appears.
4. Click **Edit Fields** next to the screen to be exported as a template. The Custom Staff Screen Fields: [Name] page appears.
5. Click **Export this screen as a template**. The File Download dialog appears.
6. Select **Save this file to disk**.
7. Click **OK**. The Save As dialog appears.
8. Select a file location.
9. Click **Save**. The custom screen saves as a template, and the Custom Staff Screen Fields: [Name] page appears.

Daily Time Exclusion Administrator Guide

PowerSchool

Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

The data and names used to illustrate the reports and screen images may include names of individuals, companies, brands, and products. All of the data and names are fictitious; any similarities to actual names are entirely coincidental.

Table of Contents

Introduction

Certain states require that, in specific circumstances, lunchtime and passing time between scheduled periods must be deducted from those attendance minutes that count towards the average daily attendance (ADA) to be claimed for funding from the state. PowerSchool supports the deduction of these minutes through functionality known as daily time exclusion (DTE).

Getting Started

To get started and begin taking advantage of DTE, perform the following tasks to set up and use this feature:

- *Specify Attendance Preferences*
- *Set Up Attendance Conversions*
- *Set Up Bell Schedule*
- *Define Bridge Period*
- *Define Lunch Period*
- *Set Passing Time*
- *Exclude from Attendance Calculation*
- *Schedule Students into Excluded Section*
- *Take Attendance for Excluded Section*
- *Update Attendance Views*
- *Recalculate Daily Attendance*

Note: See respective sections within PowerSchool online help for standard information and procedures.

Administration

Specify Attendance Preferences

To utilize DTE, you must use the daily method of recording attendance. Meeting attendance may also be used in conjunction with daily attendance. Using both methods is especially helpful for those schools with block schedules in which students move between classes and each teacher must record absences and tardies. Through attendance preferences, schools can define whether lunch periods and passing time are included in or excluded from the calculated ADA minutes.

The following example schedule represents an elementary, closed campus school:

Period	Time
Morning	8 to 11 a.m.
Lunch	11:10 a.m. to 12:00 p.m.
Afternoon	12:10 to 2 p.m.

In this example, lunch is scheduled as a separate period, as are the morning and afternoon periods. Courses are set up to represent morning, lunch, and afternoon classes. Sections for these courses are scheduled, and students are enrolled in these sections. When the teacher takes attendance during the morning period, PowerSchool evaluates each student’s schedule and calculates attendance as:

Time	Attendance Minutes
8 to 11 a.m.	180
12:10 to 2 p.m.	110
	Total = 290

Note that the lunch period is not included in the total attendance minutes.

Set the attendance preferences to exclude lunch periods and passing time so that PowerSchool excludes these times when attendance is recorded. The calculation determines passing time by investigating the student's schedule to find the periods in which the student is scheduled. PowerSchool then investigates the bell schedule to determine whether any passing time between the periods exists. For more information, see *Set Passing Time*.

How to Specify Attendance Preferences

Note: If your school currently uses the daily attendance method, see *Set Up Attendance Conversions* for information on updating your system to use DTE.

Note: For more information, see *Attendance Preferences*.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Attendance, click **Preferences**. The Attendance Preferences page appears.
3. Use the following table to enter DTE information:

Field	Description
Attendance recording methods	Select the **Daily** checkbox to record attendance by day for this year. **Note:** If you want to use another attendance method in conjunction with daily, select the appropriate checkboxes that apply (any combination of the four options is valid): • **Meeting** to record attendance by meeting for this year. • **Time** to record attendance this year by entering a time value. • **Interval** to record attendance this year according to a specified time interval.
Default attendance page	Choose **Daily** from the pop-up menu.

Meeting and daily attendance bridge	Select the **Two-way, keep records in sync** option. **Note:** This option ensures that when a teacher enters attendance during the period defined as the daily attendance bridge period (defined in the bell schedule set up of periods), the attendance is reflected in both the daily attendance as well as the meeting attendance. It also ensures that when the attendance administrator updates daily attendance, the change is updated to the teacher's attendance page. This synchronization only occurs for the period defined as the bridge period. If you are using both meeting and daily attendance methods, set separate meeting and daily attendance bridges. If you do not want to impact the teacher's attendance page, then set this option to **One-way, section to daily attendance**.
Enable ADA Periods and Passing Time Deductions	Select the checkbox to enable ADA Periods and Passing Time Deductions.
Deduct Passing Time	Indicate how you want passing time to be deducted by selecting one of the following options: • Select **No** to only deduct ADA excluded periods and sections. No passing time is deducted. • Select **Yes - All Passing Time** to deduct all passing time from ADA calculation. • Select **Yes - After ADA Excluded Meetings Only** to deduct ADA excluded periods and sections and any passing time that immediately follows until the next included period and section or end of day occurs (whichever comes first). **Note:** For more information on how PowerSchool calculates the passing time, see *Daily Time Exclusion Calculation Rules*.

4. Click **Submit**. The Changes Recorded page appears.

Set Up Attendance Conversions

If your school currently uses the daily attendance method, be sure to define the appropriate time items. For each time item, define the daily attendance value according to the number of minutes present, excluding lunch and passing time according to your school's needs. For detailed information, see *Attendance Conversions*.

Set Up Bell Schedule

Setting up the bell schedule to utilize DTE requires the following:

- Define the bridge period. See *Bridge Period*.
- Identify the start and end times for school when defining the bridge period.

  Note: Any attendance entered before the Default Time In or after the Default Time Out is not included in attendance minutes calculated and stored in PowerSchool.

- Be sure lunch periods are excluded from ADA calculations. See *Exclude Sections from Attendance Calculation*.
- If excluding passing time, be sure that the start and end times for all periods do not include passing time. See *Excluding Passing Time*.

Note: For more information, see *Bell Schedules*.

Define Bridge Period

The bridge period translates the attendance the teacher takes for that period into daily attendance minutes. When the teacher records attendance in the bridge period, daily attendance minutes are recorded. This figure is the maximum number of minutes the student can have for attendance for any given day.

Note: For more information, see *How to Set Up Bell Schedule Items*.

How to Define the Bridge Period

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Calendaring, click **Bell Schedules**. The Bell Schedules page appears.
3. Click **Edit Schedule** next to the bell schedule you are working with. The Bell Schedule: [bell schedule] page appears.
4. Click the period number for the bell schedule item you want to edit. The Edit Bell Schedule Item page appears.
5. Use the following table to edit information in the fields:

Field	Description

Period	Choose the bridge period from the pop-up menu.
Start Time	Enter a start time for the period. Indicate if it is AM or PM.
End Time	Enter a finish time for the period. Indicate if it is AM or PM.
Counts for ADA	Select the checkbox to count this bell schedule item in average daily attendance calculations.
Use For Daily Attendance	Select the checkbox to use daily attendance for this bell schedule item. If you select the checkbox, enter the start and end times that will be used to calculate daily attendance.

6. Click **Submit**. The Bell Schedule: [bell schedule] page displays the new bell schedule item.

Define Lunch Period

Create and schedule lunch periods so PowerSchool knows when to exclude the total lunch period time from the attendance calculation. Time for lunch can only be excluded if the period and/or section is excluded from ADA. Create one lunch course and as many sections of lunch as are necessary to fulfill your school's lunch requirements. If students go to lunch during different periods, then create a section for each of these periods. For more information, see *New Courses* and *Sections*.

Set Passing Time

If attendance preferences are set to exclude passing time between periods, the passing time between periods is deducted. If there are no time gaps between the periods, then no time is deducted between periods. The following example shows a schedule that does not include passing time:

Period	**Time**	**Attendance Calculation**
1 – Attendance	8 to 8:10 a.m.	10 minutes

2 – Math	8:15 to 9:30 a.m.	75 minutes
3 – Science	9:35 to 10:50 a.m.	75 minutes
4 – English	10:55 a.m. to 12:10 p.m.	75 minutes
Lunch	12:15 to 12:45 p.m.	0 minutes
5 – Music	12:50 to 2:05 p.m.	75 minutes
6 – PE	2:10 to 3:25 p.m.	75 minutes
		Total = 385

Note: For more information about bell schedule items, see *How to Set Up Bell Schedule Items*.

Exclude from Attendance Calculation

The ADA calculation inspects each section in which a student is enrolled to verify if it is marked as being excluded from the attendance calculation. If periods and sections are to be excluded from ADA (or count for ADA), the fields controlling inclusion/exclusion need to be set for each period and section. The intent of having both options is to provide some flexibility in accommodating the various types of schedules that are used. Whether the flag on the section or the period is used, students must be enrolled in a lunch section in order for the new ADA calculation to exclude the designated time.

Note: Either a bell schedule period or scheduled section can be marked for exclusion in order for the time to be excluded from the attendance calculation. In order for the meeting minutes to count in the attendance calculation, both the bell schedule period and the scheduled section need to be marked for inclusion.

How to Exclude a Period

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Calendaring, click **Bell Schedules**. The Bell Schedules page appears.

3. Click **Edit Schedule** next to the name of the bell schedule you want to edit. The Edit Bell Schedule page appears.
4. Click the period number for the bell schedule item you want to edit. The Bell Schedule: [name] page appears.
5. Deselect the **Counts for ADA** checkbox.
6. Click **Submit**.

How to Exclude a Section

Note: The **Exclude from Attendance** checkbox is also found on the Edit Course District Information page; however, the courses checkbox value is not considered when DTE calculations are made.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. On the School Setup page, click **Sections**.
3. Choose the course name from the courses menu. The course information page appears.
4. Click either the period or the section number in the **Per** and **Sec#** columns. The Edit Section page appears.
5. Select the **Exclude from Attendance** checkbox.
6. Click **Submit**.

Schedule Students into Excluded Section

Schedule students into the defined excluded period or section. To schedule a group of students into a specific excluded section, use the Mass Enroll feature. For more information, see *Mass Enroll in a Class*. Or, schedule students on an individual basis. For more information, see *Add Section Enrollments*.

Take Attendance for Excluded Section

Administrative staff must enter attendance for students who come to school after the attendance period, leave school early, or leave school for an appointment and return later during the same school day. If the student arrives to school after the attendance period, even though a teacher for another period marks the student as present or tardy (if meeting attendance method is used), the student’s minutes will not be calculated and stored for ADA. The attendance administrator must enter the student’s arrival through the New Daily Attendance page. Only attendance taken by the teacher during the period defined as the attendance period calculates the ADA minutes. For more information, see *Daily Attendance*.

Update Attendance Views

A special function allows you to update the attendance views as needed, rather than wait for the nightly process to execute. This same functionality automatically runs as part of the nightly process. This update process recalculates and repopulates the Membership Defaults tables based upon the date ranges you specify.

Note: If Day Part Attendance is enabled, this process recalculates and re-populates the Day Part tables based on the date ranges you specify. For more information, see the *State and Provincial Reporting Day Part Attendance Setup Guide* available on PowerSource.

How to Update Attendance Views

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Function page appears.
2. Under Function, click **Attendance Functions**. The Attendance Functions page appears.
3. Click **Refresh Premier Attendance Views Data**. The Refresh Attendance Views Data Report page appears.
4. Use the following table to enter information in the fields:

Field	**Description**
Students to Include	Indicate which students you want to run the report for by selecting one of the following options: • Select **The selected students only** to run the report for students in the current selection enrolled in the specified date range. • Select **All students** to run the report for all students in the current school enrolled in the specified date range.
Begin Date and Ending Date	Specify the date range in the blank fields using the format mm/dd/yyyy. Since this process must recalculate attendance values, the greater the date ranges specified, the longer the processing time.
Processing Options	To run this report, select a time to start it:

	• Choose **In Background Now** to execute the report immediately in the background. • Choose **ASAP** to execute the report in the order it is received in the Report Queue. • Choose **At Night** to execute the report during the next evening. • Choose **On Weekend** to execute the report during the next weekend. • Choose **On Specific Date/Time** to execute the report on the date and time specified in the Specific Date/Time fields.
Specific Date/Time	If you selected **On Specific Date/Time** for **Processing Output**, enter the date to execute the report using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field will be submitted as a blank entry. Use the pop-up menus to indicate hour and minute.

5. Click **Submit**. The refresh process begins. A job file is created showing success and failures for each student processed.

   If running the report for students in the current selection, each student appears as a separate line item in the report.

   If running the report for all students in the current school, the report displays one-line item for the school.

6. After submitting this report, it will be processed in the report queue. On the navigation bar, click the **Report Queue** button. The Report Queue - My Jobs page displays all your reports.

Recalculate Daily Attendance

Under certain circumstances, you may need to recalculate the daily attendance minutes. These circumstances may include:

- Updating from a previous PowerSchool release.
- Changing the attendance preferences that affect DTE. For more information, see *Specify Attendance Preferences*.

Once this special function is generated, all daily attendance record minutes for each student are updated based on DTE attendance preferences for each school's full year term.

How to Recalculate Daily Attendance Minutes

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Function page appears.
2. Under Function, click **Attendance Functions**. The Attendance Functions page appears.
3. Click **Recalculate Daily Attendance Minutes**. The Recalculate Daily Attendance Minutes page appears.
4. Select the checkbox next to each school name for which you want to recalculate attendance minutes. For more information, refer to the field table in *How to Update Attendance Views*.

   Note: The school context is critical in determining which schools appear on this page. When in district mode, all schools in the district that take daily attendance appear. When in school mode and the school takes daily attendance, the school appears. When in school mode and the school does not take daily attendance, the school does not appear.

5. Click **Submit**. The daily attendance minutes are updated.

Reports

All ADA and ADM reports take into account the exclusion of lunch and passing time as appropriate. These reports should be run using the daily attendance mode and the time-to-day conversion option. For more information on these reports, see *Membership Reports*.

Daily Time Exclusion Calculation Rules

The following rules apply only if a student is enrolled in at least one local class for any attendance date. If all periods are remote or unscheduled in PowerSchool, the student receives zero attendance minutes for the day, since they are not at the assigned school on that date.

Attendance calculations are dependent on the following:

<table>
<tr><th>Dependency</th><th>Description</th></tr>
<tr><td>Bell schedule (for each day based on the school calendar).</td><td>Bridge period time range (the maximum daily attendance minutes possible). Any scheduled time outside of the bridge period start and end times are ignored and do not apply to the total minutes.
Period time lengths.
Time gaps (if any) between the periods.
ADA exclusion setting.
Overlapping bell schedule periods are not supported within one bell schedule</td></tr>
<tr><td>Student schedule.</td><td>Assigned school enrollments on a given day.
Remote section enrollments.
Unscheduled periods.
Sections excluded from ADA.

Note: Double-booked and overlapping student enrollments are not supported.</td></tr>
<tr><td>Deduct Passing Time attendance preference setting.</td><td>If Deduct Passing Time preference is set to No:
The only deductions that are made are for ADA-excluded periods and sections if a student is enrolled locally in that section.
No deductions are made for passing time, which includes the time for unscheduled periods, remote sections, and time outside of student scheduled time that is within the bridge period time range.
If Deduct Passing Time preference is set to Yes - After All Meetings:</td></tr>
</table>

<table>
<tr><td></td><td>

All ADA excluded periods and sections are deducted from the attendance calculation.
All unscheduled periods are deducted (considered as passing time) from the attendance calculation.
All remote sections are deducted (considered as passing time) from the attendance calculation.
All passing time is deducted (gaps between periods) from the attendance calculation.
Time outside student-scheduled time that is within the bridge period time range is deducted from the attendance calculation.

If Deduct Passing Time attendance preference is set to Yes - After ADA Excluded Meetings Only:

Only excluded periods and sections and any immediately following passing time is deducted (time gaps, unscheduled periods, and remote sections).
All deducted time must be either an ADA excluded period or section, passing time, or unscheduled or remote periods in a contiguous unbroken manner (all follow one another in sequence in the schedule) until either an ADA included period and section, or the last period is encountered (whichever occurs first).

Note: ADA exclusion is not applicable to a remote section or unscheduled period.

</td></tr>
<tr><td>Daily attendance with and without attendance time records entered directly.</td><td>

If no Time_In/Time_Out values are entered, then the calculations are the same as those for bridged daily attendance.
If any attendance time ranges are entered, they must be within the time range set in the bridge period. PowerSchool alerts users if this is violated.
The calculated time ranges are stored in the fields:

Attendance_Time.Total_Minutes displays the total for just one-time range.
Attendance.Total_Minutes displays the sum of all the Attendance_Time time ranges that are related to

</td></tr>
</table>

	the "parent" attendance table daily attendance record.

Glossary

Term	Description
Bridge Period	A period defined in the bell schedule that, in addition to the period start/end times, contains the school day start/end times. Only one bridge period is allowed per day. Bridge period and times can change daily, dependent on the school calendar and bell schedule setups.
Daily Attendance	Student attendance marks (tardy, absent) and arrival and dismissal times for an entire school day.
Daily Time Exclusion (DTE)	Time that may be deducted from the maximum daily attendance minutes as set in the bridge period. Deductions are allowed for ADA excluded periods and sections and passing time. This only applies to schools that use the daily attendance method.
Entry Point	Where Daily Attendance minutes are calculated in PowerSchool.
Passing Time	Time between periods (if any), time before student's first period and after last period (if any - determined by the bridge period time range), as well as unscheduled and remote scheduled section time (if any - considered to be passing time).
Period	Synonymous with bell schedule time slot (a bell schedule Item record).
Remote section	Course taken outside of a student's assigned school but at the same district.
Section	The scheduled course for a student.

Data Validation Administrator Guide

PowerSchool

Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

The data and names used to illustrate the reports and screen images may include names of individuals, companies, brands, and products. All of the data and names are fictitious; any similarities to actual names are entirely coincidental.

Table of Contents

Introduction

PowerSchool now provides data validation to promote data integrity by preventing invalid data from being entered or imported into PowerSchool. Data validation is automatically enabled and appears throughout PowerSchool for certain Students and Teachers fields. For a detailed list of fields, see the *Appendix*.

Localized versions of PowerSchool support data validation. All dates, numbers, text, and messaging appear in the localized format and all data is validated against applicable rules.

Note: State-specific pages are currently not validated using this new validation capability. Validation of state-specific pages will be implemented in a future version and deployed on a state-by-state basis.

Data Types

PowerSchool supports validation for the following data types:

- Date
- Number
- Text

Rules

PowerSchool supports the following data validation rules:

Rule	Description	Data Type
Exclude Characters	• Enter any characters you want to prevent users from entering in a text field, including alphabetical characters, numbers, and special characters, such as punctuation. • The field level data validation error message remains until a valid field entry is made. • If certain characters have already been excluded in PowerSchool by a system rule, the characters entered here are added to the list of excluded characters. • If the user attempts to submit the page without correcting the error, a page level data validation error	Text

	message appears. For more information, see *Page Submission*.	
Integer	• Only numeric values may be entered as field value.	Number
Maximum Date	• The field value entered must be less than or equal to the maximum date. • If a user attempts to enter a field value greater than the maximum field value allowed, a field level data validation error message appears. • If the user attempts to submit the page without correcting the error, a page level data validation error message appears. For more information, see *Page Submission*.	Date
Maximum Length	• The length of characters entered in a field must be less than or equal to the maximum length. • If a user attempts to enter more characters than allowed, the user is prohibited from entering additional characters.	Number Text
Maximum Value	• The field value entered must be less than or equal to the maximum value. • If a user attempts to enter a field value greater than the maximum field value allowed, a field level data validation error message appears. • If the user attempts to submit the page without correcting the error, a page level data validation error message appears. For more information, see *Page Submission*.	Number
Minimum Date	• The field value entered must be greater than or equal to the minimum date. • If a user attempts to enter a field value less than the minimum field value allowed, a field level data validation error message appears.	Date

	• If the user attempts to submit the page without correcting the error, a page level data validation error message appears. For more information, see *Page Submission*.	
Minimum Length	• The length of characters entered in a field must be greater than or equal to the minimum length. • A user cannot enter a field value less than the minimum length. • If the user exits a field without entering the minimum length, a field level data validation error message appears. • The field level data validation error message remains until the minimum length is entered. • If the user attempts to submit the page without correcting the error, a page level data validation error message appears. For more information, see *Page Submission*.	Number Text
Minimum Value	• The field value entered must be greater than or equal to the minimum value. • If a user attempts to enter a field value less than the minimum field value allowed, a field level data validation error message appears. • If the user attempts to submit the page without correcting the error, a page level data validation error message appears. For more information, see *Page Submission*.	Number
Required	• A field value must be entered. The field value cannot be whitespace, such as tabs or spaces. • An asterisk appears to the right of the field. • If the user exits a required field without entering a value, a field level data validation error message appears. • The field level data validation error message remains until a valid field entry is made.	Date Number Text

	• If the user attempts to submit the page without correcting the error, a page level data validation error message appears. For more information, see *Page Submission*.	
Text Mask	• A field value must be entered in the user-defined format. • The field level data validation error message remains until a valid field entry is made. • If the user attempts to submit the page without correcting the error, a page level data validation error message appears. For more information, see *Page Submission*.	Text

Rules by Data Type

Date

The following table outlines the data validation rules and error messaging for date:

Rule	Description	Error Message
Date Type	The date value entered must be valid.	Not a valid date
Maximum Date	The date value entered must be less than or equal to the maximum value.	Date must be on or before [date]
Minimum Date	The date value entered must be greater than or equal to the minimum value.	Date must be on or after [date]
Required	A field value must be entered. The field value cannot be whitespace, such as tabs or spaces.	Missing required field

Number

The following table outlines the data validation rules and error messaging for number:

Rule	Description	Error Message
Integer	Only numeric values may be entered as field value.	Number must be an integer, containing only numeric characters
Maximum Length	The length of characters entered in a field must be less than or equal to the maximum length.	Number cannot be greater than [#] digits in length
Maximum Value	The field value entered must be less than or equal to the maximum value.	Number cannot be greater than [#]
Minimum Length	The length of characters entered in a field must be greater than or equal to the minimum length.	Number cannot be less than [#] digits in length
Minimum Value	The field value entered must be greater than or equal to the minimum value.	Number cannot be less than [#]
Number Type	The numeric value entered must be valid.	Not a valid number
Required	A field value must be entered. The field value cannot be whitespace, such as tabs or spaces.	Missing required field

Text

The following table outlines the data validation rules and error messaging for text:

Rule	Description	Error Message
Exclude Characters	Characters marked for exclusion may not be entered in a text field.	Text must not contain characters !@#$%'^&*()<>"
Maximum Length	The length of characters entered in a field must be less than or equal to the maximum length.	Text cannot be greater than [#] digits in length
Minimum Length	The length of characters entered in a field must be greater than or equal to the minimum length.	Text cannot be less than [#] digits in length
Required	A field value must be entered. The field value cannot be whitespace, such as tabs or spaces.	Missing required field
Text Mask	A field value must be entered in the user-defined format.	Entries must be unique Set Name cannot start with 'Pearson_ Set Name cannot contain the characters: < > ‘ or ”

Icon Legend

For PowerSchool pages that include the following field icons, a legend appears of the bottom of page indicating each icon used and its meanings. The legend only contains references for validation items on the page. If the page contains no validation items, the legend does not appear.

Icon	Description
*	Required Field
	Date Entry

	Time Entry
	Time Entry (5-minute interval)
	Time Entry (15-minute interval)
	Time Entry (30-minute interval)
	Time Entry (hour only interval)

Data Validation Configuration

Data Validation Rule Status

Using the Data Validation Rule Status page, you can view and edit existing rules, as well as add data validation rules for Students and Teachers standard and database extensions (legacy custom fields).

Note: Certain Students and Teachers fields are pre-configured with system rules.

How to View Data Validation Rule Status

Note: To access this page, **District Office** must be selected from the **School** pop-up menu in the navigation toolbar.

Note: The Data Validation Rule Status page is now also accessible via **Start > System > Page and Data Management > Data Validation Rule Status**.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Page and Data Management**. The Page and Data Management page appears.
3. Under Field Validation Rules, click **Data Validation Rule Status**. The Data Validation Rule Status page appears.
4. Use the following table to view information on this page:

Field	**Description**
Rule Name	The name of the data validation rule. For more information, see *Rules*.
Invalid Rule	Indicates whether rule is valid or invalid. If the caution icon appears, the rule is invalid and requires editing. **Note:** This column is only visible if there are invalid user rules that conflict with system rules. A user rule may be considered invalid if it is less restrictive than a system rule.
User Rules	Indicates if a rule is enabled/applied by the district.

System Rules	Indicates if rule is enabled/applied by the system (pre-configured by PowerSchool).

How to Add a Data Validation Rule

Note: To access this page, **District Office** must be selected from the **School** pop-up menu in the navigation toolbar.

Note: The Data Validation Rule Status page is now also accessible via **Start > System > Page and Data Management > Data Validation Rule Status**.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Page and Data Management**. The Page and Data Management page appears.
3. Under Field Validation Rules, click **Data Validation Rule Status**. The Data Validation Rule Status page appears.
4. Click **Add**. The Add Data Validation Field appears.
5. Use the following table to enter information in the fields:

Field	**Description**
Table	Choose the PowerSchool table you want to add the field to from the pop-up menu: • **Students** • **Teachers**
Field Name	Click **Choose Fieldname** to select a Students or Teachers field. **Note:** Do not select a Students or Teachers field that has already been defined with validation rules. If you do, an error message will appear upon submitting. Instead, edit the existing rule.
Type	Choose the rule data type from the pop-up menu: • **Text** • **Date**

	• **Number** The selected data type determines the rules that may be applied to the selected field.

6. Click **Submit**. The Add/Edit Data Validation Rules page appears.
7. Use the following table to enter a valid value for each **User Value** you want to edit:

   Notes:

   - Only certain rule types appear editable based on the data **Type** of the selected field/rule and whether a system rule already exists.
   - If a system value already exists, only a more restrictive user value may be defined.
   - If a system value already exists for Minimum Length, Minimum Date, or Minimum Number, the user value may not be less than the system-defined minimum.
   - If a system value already exists for Maximum Length, Maximum Date, or Maximum Number, the user value may not be greater than the system-defined maximum.

Field	**Description**
Excluded Characters	Enter any characters you want to prevent users from entering in a text field, including alphabetical characters, numbers, and special characters, such as punctuation. **Note:** If certain characters have already been excluded in PowerSchool by a system rule, the characters entered here are added to the list of excluded characters.
Integer	Select the checkbox to indicate only numeric values may be entered as field value. This will prevent entry of decimal numbers. **Note:** This checkbox may not be disabled if already set at the system level.
Maximum Date	Indicate the maximum date that may be entered in this field by doing one of the following:

	• Enter the specific date. • Choose a date from the **By Reference** pop-up menu. **Note:** The **By Reference** pop-up only appears if you are adding/editing a maximum date rule to a Students field.
Maximum Length	Enter the maximum numbers of characters that may be entered in this field.
Maximum Number	Enter the maximum numeric value that may be entered in this field.
Minimum Date	Indicate the minimum date that may be entered in this field by doing one of the following: • Enter the specific date. • Choose a date from the **By Reference** pop-up menu. **Note:** The **By Reference** pop-up only appears if you are adding/editing a minimum date rule to a Students field.
Minimum Length	Enter the minimum numbers of characters that may be entered in this field.
Minimum Number	Enter the minimum numeric value that may be entered in this field.
Required	Select the checkbox to indicate a non-blank value must be entered. **Note:** This checkbox may not be disabled if already set at the system level.
Text Mask	Choose the appropriate text mask set from the pop-up menu.

8. Click **Submit**. A confirmation message appears.

Note: If there are any data validation errors, an orange warning message appears at the top of the page indicating that the information could not be saved, each type of error encountered and the number of occurrences of each error.

How to Edit a Data Validation Rule

Note: To access this page, **District Office** must be selected from the **School** pop-up menu in the navigation toolbar.

Note: The Data Validation Rule Status page is now also accessible via **Start > System > Page and Data Management > Data Validation Rule Status**.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Page and Data Management**. The Page and Data Management page appears.
3. Under Field Validation Rules, click **Data Validation Rule Status**. The Data Validation Rule Status page appears.

   Note: A PowerSchool-defined system rule may not be editable. If a rule is not editable, the Edit (pencil) icon appears as shaded. When clicked, information is read-only.

4. Click the Rule Name you want to edit. The Add/Edit Data Validation Rules page appears.

   Note: If a PowerSchool-defined system rule is not editable, a Lock (padlock) icon appears next to the Rule Name.

5. Enter a valid value for each **User Value** you want to edit. For detailed information, see Step 7 of *How to Add a Data Validation Rule*.
6. Click **Submit**. A confirmation message appears.

   Note: If there are any data validation errors, an orange warning message appears at the top of the page indicating that the information could not be saved, each type of error encountered and the number of occurrences of each error.

How to Delete a Data Validation Rule

Note: To access this page, **District Office** must be selected from the **School** pop-up menu in the navigation toolbar.

Note: The Data Validation Rule Status page is now also accessible via **Start > System > Page and Data Management > Data Validation Rule Status**.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Page and Data Management**. The Page and Data Management page appears.
3. Under Field Validation Rules, click **Data Validation Rule Status**. The Data Validation Rule Status page appears.

   Note: A PowerSchool-defined system rule may not be editable. If a rule is not editable, the Edit (pencil) icon appears as shaded. When clicked, information is read-only.

4. Click the Rule Name you want to delete. The Add/Edit Data Validation Rules page appears.

   Note: If a PowerSchool-defined system rule is not editable, a Lock (padlock) icon appears next to the Rule Name.

5. Click **Delete**.

   Note: The **Delete** button does not display for fields associated with a system rule.

6. Click **Confirm Delete**. The Data Validation Rule Status page displays a confirmation message.

Manage Text Mask Sets

Using the Text Mask Administration page, you can define your own patterns of letters, numbers, and other characters as user-defined text masks. Fields that have text masks associated to them are validated upon submitting a page that contains those fields. If an error occurs, a field level message appears indicating the correct format to be used, such as (###) ###-####.

Text mask sets may also be used to validate field entry against a specific series of values, such M and F for validating data entry of gender.

How to Add a Text Mask Set

Note: To access this page, **District Office** must be selected from the **School** pop-up menu in the navigation toolbar.

Note: The Text Mask Administration page is now also accessible via **Start > System > Page and Data Management > Text Mask Administration**.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Page and Data Management**. The Page and Data Management page appears.
3. Under Field Validation Rules, click **Text Mask Administration**. The Text Mask Administration page appears.
4. Click **Add Set**. The Add/Edit Text Mask Set page appears.
5. Use the following table to enter information in the fields:

Field	**Description**
Set Name	Enter the name for the text mask set, such as Phone Number.
Validation Feedback Hint	Enter the allowed text mask formats, which will be used in error messaging, such as (###) ###-####.
Format / Value	Enter the text mask format, such as (###) ###-####. The text mask format can be made up of a series of character placeholders, including: • # - Number placeholder • @ - Alpha placeholder (any non-number) • * - Any number of any character • \ - Escape character (to allow for use of placeholder characters as literals) • Use any other literal character as a delimiter. To add another Format/Value, click the **Add Row** (+) icon. For example, if adding acceptable formats for Phone Number, you may want to also add ###-###-####. To delete a Format/Value, click the **Delete Row** (-) icon. You may also add specific values to a text mask set without using placeholder characters to restrict form entry or imports to a specific set of values. This can be useful to add import validation

	to certain fields normally displayed as a pop-up menu with a specific set of options.

6. Click **Submit**. The Text Mask Administration page displays a confirmation message.

   Note: If there are any data validation errors, an orange warning message appears at the top of the page indicating that the information could not be saved, each type of error encountered and the number of occurrences of each error.

How to Edit a Text Mask Set

Note: To access this page, **District Office** must be selected from the **School** pop-up menu in the navigation toolbar.

Note: The Text Mask Administration page is now also accessible via **Start > System > Page and Data Management > Text Mask Administration**.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Page and Data Management**. The Page and Data Management page appears.
3. Under Field Validation Rules, click **Text Mask Administration**. The Text Mask Administration page appears.
4. Click the name of the Text Mask Set you want to edit. The Add/Edit Text Mask Set page appears.
5. Edit information as needed. For field descriptions, see *How to Add a Text Mask Set*.
6. Click **Submit**. The Text Mask Administration page displays a confirmation message.

   Note: If there are any data validation errors, an orange warning message appears at the top of the page indicating that the information could not be saved, each type of error encountered and the number of occurrences of each error.

How to Delete a Text Mask Set

Note: To access this page, **District Office** must be selected from the **School** pop-up menu in the navigation toolbar.

Note: The Text Mask Administration page is now also accessible via **Start > System > Page and Data Management > Text Mask Administration**.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.

2. Under Data Management, click **Page and Data Management**. The Page and Data Management page appears.
3. Under Field Validation Rules, click **Text Mask Administration**. The Text Mask Administration page appears.
4. Click the **Delete** button next to the name of the Text Mask Set you want to delete. The Text Mask Administration page displays a confirmation message.

   Note: The **Delete** button does not display for text mask sets that are being referenced by existing rules.

Run the Data Validation Report

Using the Data Validation Report, you can easily identify which Students and Teachers records within a selection do not meet current data validation requirements.

How to Run the Data Validation Report for Teachers

1. On the start page, search for and select a group of staff members. For more information, see *Staff Search*.
2. Click **Functions**. The Group Staff Functions page appears.
3. Click **Data Validation Report**. The Data Validation Report Parameters page appears.
4. Use the following table to enter information in the fields:

Field	Description
Current Selection	Indicates you are running the report for Teachers.
Records in Selection	Indicates the number of teachers for which you are running the report.
Version	The version number of the report.
Description	A detailed description of the report.
Scan the following fields	Select the fields you want to scan in the **Scan the following fields** list.

	Note: Only fields with validation rules will appear in the list. Field names are not localized and displayed as they exist in the database.

5. Click **Run Report**. The Data Validation Report Results page displays the following information:

Field	Description
Name	The teacher's name. Click to open the teacher's record in another tab/window. **Note:** The page to display is the last page you viewed when you last accessed the teacher's record.
Teacher Number	The teacher's identification number.
Fields Containing Invalid Data	The fields containing invalid teacher data.

6. Click **Make Current Selection** to select all teachers in the report. The Group Staff Functions page appears.

How to Run the Data Validation Report for Students

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Scheduling, choose **Data Validation Report**. The Data Validation Report page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Use the following table to enter information in the fields:

Field	Description
Current Selection	Indicates you are running the report for Students.
Records in Selection	Indicates the number of students for which you are running the report.
Version	The version number of the report.
Description	A detailed description of the report.
Scan the following fields	Select the fields you want to scan in the **Scan the following fields** list. **Note:** Only fields with validation rules will appear in the list. Field names are not localized and displayed as they exist in the database.

5. Click **Run Report**. The Data Validation Report Results page displays the following information:

Field	Description
Name	The student's name. Click to open the student's record in another tab/window. **Note:** The page to display is the last page you viewed when you last accessed the student's record.
Student Number	The student's identification number.
Fields Containing Invalid Data	The fields containing invalid student data.

6. Click **Make Current Selection** to select all students in the report. The Group Student Functions page appears.

Working With Data Validation

Auto COMM

When data is imported into the Students or Teachers table using the AutoComm function, it is validated against applicable data validation rules. When the AutoComm function runs, the system emails the recipient the status of the AutoComm process if an email address is specified in the **E-Mail completion report to** field. Successful AutoComm runs can contain up to 100 Error messages for records that failed to import due to validation issues. Unsuccessfully imported records are not updated during the AutoComm import. If a record was not imported due to a data validation error, the message "Error on line [#]: Validation error for field: [field name]" appears along with one or more of the following explanations:

- Empty value is not allowed
- Value may not contain more than [#] character(s)
- Value must be a number
- Value must be a valid date
- Value must be an integer
- Value must be at least [#]
- Value must be less than or equal to [#]
- Value must be on or after [date]
- Value must be on or before [date]
- Value must contain at least [#] character(s)

Note: If a record was unsuccessfully imported due to a data validation, the system does not attempt routine validation until the data validation is corrected.

For the import status on unsuccessful records, see the system log. Review the details about each error, make any necessary corrections, and then run the AutoComm function again. Continue this process until all files are imported.

Page Submission

Fields that have data validation rules associated to them are validated against those rules upon submitting a page that contains those fields. Upon submitting a page, the following occurs:

- If there are any data validation errors, a warning message appears at the top of the page indicating that the information could not be saved, each type of error encountered and the number of occurrences of each error, for example:

Information was not submitted. Please see error messages on the page and correct before submitting again.
Number cannot be less than [#] - (X)
Number must be at least [#] digits in length - (Y)
Date must be on or after [date] - (Z)

Note: Where X, Y and Z are the count of the number of occurrences of that error on the page.

- A message appears next to each field where a data validation error occurred indicating a correction needs to be made. For more information, see *Rules by Data Type*.
- When updating fields that need to be corrected, the orange warning message that appears at the top of the page scrolls with the user as the user corrects each field.
- When updating fields that need to be corrected, data validation error messages remain until a valid entry is made. For more information, see *Rules by Data Type*.
- Once all data validation errors are corrected, the orange warning message then appears green indicating that the information is now valid and can be saved.

Quick Import

Data that is imported into the Students or Teachers table using the Quick Import function is validated against applicable data validation rules. The results page displays both successfully and unsuccessfully imported records. Unsuccessfully imported records are not updated during the import. If a record was not imported due to a data validation error, the message "Not imported: Validation error for field: [field name]" appears along with one or more of the following explanations:

- Empty value is not allowed
- Value may not contain more than [#] character(s)
- Value must be a number
- Value must be a valid date
- Value must be an integer
- Value must be at least [#]
- Value must be less than or equal to [#]
- Value must be on or after [date]
- Value must be on or before [date]
- Value must contain at least [#] character(s)

Note: If a record was unsuccessfully imported due to a data validation, the system does not attempt routine validation until the data validation is corrected.

Review the details about the error, make any necessary corrections, and then import again. Continue this process until all records are imported.

Troubleshooting

If it becomes necessary to disable data validation, contact PowerSchool Technical Support.

Appendix

Students Table

PowerSchool includes data validation for the following Students table fields:

Note: For more information about the Students table, see the *PowerSchool Data Dictionary Tables* available on PowerSource.

Federal Race and Ethnicity Management User Guide

PowerSchool

Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

Table of Contents

Introduction

With the introduction of Federal Ethnicity and Race Management, PowerSchool now provides a tool to assist your school district with collecting individual student and staff level ethnicity and race data, and in reporting aggregated data as required by the new Federal Ethnicity and Race Categories from the U.S. Department of Education.

Note: The legacy ethnicity fields used in scheduling and preconfigured (non state-specific) system reports have been renamed **Scheduling/Reporting Ethnicity** for students and **Reporting Ethnicity** for staff. Please continue to populate these fields for the purpose of scheduling and generating preconfigured system reports. For more information, see *Scheduling/Reporting Ethnicity Codes*.

State Reporting Setup

Refer to your state-specific Tech Notes available on PowerSource for information on state-specific federal ethnicity and race setup based upon each state's requirements. Setup templates have been provided for states that have finalized requirements for the reporting of federal ethnicity and race information. PowerSchool state-specific reports will use setup information to report federal ethnicity and race information for students and/or staff members as required by your state. If your state has not provided final requirements on the reporting of federal ethnicity and race, templates will not be provided, and it is recommended that you do not set up federal ethnicity and race at this time.

Before setting up federal ethnicity and race settings, you must read the *[Your State] District Setup of Federal Ethnicity and Race Settings* article, available on PowerSource by navigating to **Home > PowerSchool > Knowledgebase > State-Specific Reporting > [Your State] > Solutions & Resources**.

Federal Ethnicity

As the first part of a two-part question that appears on the student General Demographics page and the staff Edit Information page, students and staff members are asked to choose an ethnicity (Hispanic or Latino or not Hispanic or Latino).

Enable/Disable the Ethnicity Decline to Specify Setting

Using the Ethnicity Decline to Specify setting, you can indicate whether or not you want to permit students and staff members to be able to decline specifying their ethnicity.

Note: For state-specific information, see PowerSchool recommended state-specific setup of federal race and ethnicity settings available on PowerSource.

How to Enable/Disable the Ethnicity Decline to Specify Setting

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Identity, click **Federal Ethnicity and Race Settings**. The Federal Ethnicity and Race Settings page appears.
3. Do one of the following:
    - Select the Ethnicity Decline to Specify **Allow / Label** checkbox to include an option on permitting students and staff members to decline specifying their ethnicity and then enter the text that you want to appear next to the option. As an example, the text **Decline to Specify Ethnicity** appears the first time you navigate to this page.
    - Deselect the Ethnicity Decline to Specify **Allow / Label** checkbox to not include an option permitting students and staff members to decline specifying their ethnicity.
4. Click **Submit**. The Federal Ethnicity and Race Settings page refreshes.

Federal Race Categories

As the second part of a two-part question that appears on the student General Demographics page and the staff Edit Information page, students and staff members may be asked to choose one or more races, such as:

- (A) Asian
- (B) Black or African American
- (I) American Indian or Alaska Native
- (P) Native Hawaiian or Other Pacific Islander
- (W) White

Federal race categories must either be imported or manually entered. Once federal race categories are defined, indicate the sort order in which you want each federal race category to display relative to other federal race categories.

Note: For state-specific information, see PowerSchool recommended state-specific setup of federal race and ethnicity settings available on PowerSource.

Import Federal Race Categories

During the initial setup of federal ethnicity and race, use the Quick Import function to transfer federal race categories into the PowerSchool Federal Race Categories table. The import file must include the following columns: Name (FederalCode), Value (Description), and SortOrder. For general information, see *Quick Import*. For state-specific information, see PowerSchool recommended state-specific setup of federal race and ethnicity settings available on PowerSource.

Note: When importing federal ethnicity and race settings and data into PowerSchool, it is important to perform the imports in the following order: Federal Race Categories, Race Codes, Student Races, and then Teacher Races.

Add a Federal Race Category

Use the following procedure to create new federal race categories.

How to Add a Federal Race Category

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Identity, click **Federal Ethnicity and Race Settings**. The Federal Ethnicity and Race Settings page appears.

3. Under Federal Race Categories, click **New**. The Edit Federal Race Category page appears.
4. Use the following table to enter information in the fields:

Field	Description
Code	Enter the federal race category code, such as A.
Description	Enter a description of the federal race category code, such as (A) Asian.

5. Click **Submit**. The Federal Ethnicity and Race Settings page displays the new federal race category

Sort Federal Race Categories

Use the following procedure to indicate the order in which you want each federal race category to display relative to other federal race categories. The lower the sort order number, the higher the federal race category appears in the Race section of the student General Demographics or staff Edit Information page. Federal race categories that have only one district race code associated to them appear higher than federal race categories that have multiple district race codes.

Note: You can use 0 or negative numbers, such as -1, to precede other entries. If two items have the same sort order number, the first one created precedes the other.

How to Sort Federal Race Categories

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Identity, click **Federal Ethnicity and Race Settings**. The Federal Ethnicity and Race Settings page appears.
3. Enter a number in the respective **Sort** fields.
4. Click **Submit**. The Federal Ethnicity and Race Settings page refreshes.

Edit a Federal Race Category

Use the following procedure to edit existing federal race categories.

How to Edit a Federal Race Category

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Identity, click **Federal Ethnicity and Race Settings**. The Federal Ethnicity and Race Settings page appears.
3. Under Federal Race Categories, click the code or description of the federal race category you want to edit. The Edit Federal Race Category page appears.
4. Edit the information as needed. For field descriptions, see *How to Add a Federal Race Category*.
5. Click **Submit**. The Federal Ethnicity and Race Settings page displays the edited federal race category.

Delete a Federal Race Category

Use the following procedure to delete existing federal race categories.

How to Delete a Federal Race Category

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Identity, click **Federal Ethnicity and Race Settings**. The Federal Ethnicity and Race Settings page appears.
3. Under Federal Race Categories, click the code or description of the federal race category you want to delete. The Edit Federal Race Category page appears.
4. Click **Delete**.
5. Click **Confirm Delete**. The Selection Deleted page appears.

Enable/Disable the Race Decline to Specify Setting

Using the Race Decline to Specify setting, indicate whether or not you want to permit students and staff members to be able to decline specifying their race.

How to Enable/Disable the Race Decline to Specify Setting

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Identity, click **Federal Ethnicity and Race Settings**. The Federal Ethnicity and Race Settings page appears.
3. Do one of the following:
    - Select the Race Decline to Specify **Allow / Label** checkbox to include an option on permitting students and staff members to decline specifying their race and then enter the text that you want to appear next to the option. As

an example, the text **Decline to Specify Race** appears the first time you navigate to this page.

- Deselect the Race Decline to Specify **Allow / Label** checkbox to not include an option permitting students and staff members to decline specifying their race.

4. Click **Submit**. The Federal Ethnicity and Race Settings page refreshes.

District Race Codes

In order for a federal race category to appear on the student General Demographics page and the staff Edit Information page, at least one district race code must be defined for that federal race category. For example, if the federal race category of (A) Asian is defined, the district race code of (A) Asian must also be defined. If multiple district race codes are defined within a single federal race category, they will appear grouped together on the student General Demographics page and the staff Edit Information page. If no district race codes are defined within a particular federal race category, that category will not appear on the student General Demographics page and the staff Edit Information page.

District race codes may be imported when importing federal race categories or they can be manually entered. Once district race codes are defined, indicate the sort order in which you want each district race code to display relative to other district race codes for a given federal ethnicity category.

Note: For state-specific information, see PowerSchool recommended state-specific setup of federal race and ethnicity settings available on PowerSource.

Import District Race Codes

During the initial setup of federal ethnicity and race, use the Quick Import function to transfer district race codes into the PowerSchool Race Codes table. The import file must include the following columns: Name (RaceCode), Value (FederalCode), ValueT (Description), Value2 (AltRaceCode), and SortOrder. For general information, see *Quick Import*. For state-specific information, see PowerSchool recommended state-specific setup of federal race and ethnicity settings available on PowerSource.

Note: When importing federal ethnicity and race settings and data into PowerSchool, it is important to perform the imports in the following order: Federal Race Categories, Race Codes, Student Races, and then Teacher Races.

Add a District Race Code

Use the following procedure to create new district race codes.

How to Add a District Race Code

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Identity, click **Federal Ethnicity and Race Settings**. The Federal Ethnicity and Race Settings page appears.

3. Under District Race Codes, click **New**. The Edit District Race Code page appears.
4. Use the following table to enter information in the fields:

Field	Description
Code	Enter the district race code, such as A.
Description	Enter a description for the district race code, such as (A) Asian.
Federal Category	Choose the federal category you want to associate to the district race code, such as (A) Asian.
Alt Race Code	If you want to associate alternate district race codes with PowerSchool district race codes, you will need to map the codes appropriately. If you are using this field to associate SIF ethnicity codes with PowerSchool district race codes, you will need to obtain the SIF ethnicity codes using the *Race External Code Set* section in the *Schools Interoperability Framework™ Implementation Specification 2.0r1* document available at http://specification.sifinfo.org/Implementation/2.0r1/index.html. Once you have obtained the SIF ethnicity codes, enter the appropriate SIF ethnicity code. For more information about SIF, visit PowerSource.

5. Click **Submit**. The Federal Ethnicity and Race Settings page displays the new district race code.

Sort District Race Codes

Use the following procedure to indicate the order in which you want each district race code to display relative to other district race codes within that federal race category. The lower the sort order number, the higher the district race code appears in its respective federal category group in the Race section of the student General Demographics or staff Edit Information page.

Note: You can use 0 or negative numbers, such as -1, to precede other entries. If two items have the same sort order number, the first one created precedes the other.

How to Sort District Race Codes

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Identity, click **Federal Ethnicity and Race Settings**. The Federal Ethnicity and Race Settings page appears.
3. Enter a number in the respective **Sort** fields.
4. Click **Submit**. The Federal Ethnicity and Race Settings page refreshes.

Edit a District Race Code

Use the following procedure to edit existing district race codes.

Note: Student or staff records are not updated when editing district race codes.

How to Edit a District Race Code

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Identity, click **Federal Ethnicity and Race Settings**. The Federal Ethnicity and Race Settings page appears.
3. Under District Race Codes, click the code, description, or category of the district race code you want to edit. The Edit District Race Code page appears.
4. Edit the information as needed. For field descriptions, see *How to Add a District Race Code*.
5. Click **Submit**. The Federal Ethnicity and Race Settings page displays the edited district race code.

Delete a District Race Code

Use the following procedure to delete existing district race codes.

Note: Student or staff records are not updated when deleting district race codes.

How to Delete a District Race Code

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Identity, click **Federal Ethnicity and Race Settings**. The Federal Ethnicity and Race Settings page appears.
3. Under District Race Codes, click the code, description, or category of the district race code you want to delete. The Edit District Race Code page appears.

4. Click **Delete**.
5. Click **Confirm Delete**. The Selection Deleted page appears.

Scheduling/Reporting Ethnicity Codes

In addition to the federal ethnicity and race that appears on the student General Demographics page and the staff Edit Information page, students and staff members are also asked to choose a scheduling/reporting ethnicity. Scheduling/reporting ethnicity codes are used to collect individual student and staff level ethnicity data to be used in scheduling and preconfigured reporting.

Note: For information about setting up federal ethnicity categories and codes used in state-specific reporting, see *Federal Race Categories* and *District Race Codes*.

Add a Scheduling/Reporting Ethnicity Code

Use the following procedure to create new scheduling/reporting ethnicity codes.

How to Add a Scheduling/Reporting Ethnicity Code

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Identity, click **Scheduling/Reporting Ethnicity Codes**. The Scheduling/Reporting Ethnicity Codes page appears.
3. Click **New**. The New Scheduling/Reporting Ethnicity Codes page appears.
4. Use the following table to enter information in the fields:

Field	Description
Code	Enter the ethnicity code.
Description	Enter a description for the code.
SIF Ethnicity Code	If you want to associate SIF ethnicity codes with PowerSchool ethnicity codes, you will need to map the codes appropriately. To obtain SIF ethnicity codes, see the *Race External Code Set* section in the *Schools Interoperability Framework™ Implementation Specification 2.0r1* document available at http://specification.sifinfo.org/Implementation/2.0r1/index.html. Once you have obtained the SIF ethnicity codes, enter the appropriate SIF ethnicity code.

	For more information about SIF, visit PowerSource.

5. Click **Submit**. The Ethnicity Codes page displays the new ethnicity code.

Edit a Scheduling/Reporting Ethnicity Code

Use the following procedure to edit existing scheduling/reporting ethnicity codes.

How to Edit a Scheduling/Reporting Ethnicity Code

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Identity, click **Scheduling/Reporting Ethnicity Codes**. The Scheduling/Reporting Ethnicity Codes page appears.
3. Click the ethnicity code or description you want to edit. The Edit Scheduling/Reporting Ethnicity Codes page appears.
4. Edit the information as needed. For field descriptions, see *How to Add a Scheduling/Reporting Ethnicity Code*.
5. Click **Submit**. The Ethnicity Codes page displays the edited ethnicity code.

Delete a Scheduling/Reporting Ethnicity Code

Use the following procedure to delete existing scheduling/reporting ethnicity codes.

How to Delete a Scheduling/Reporting Ethnicity Code

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Identity, click **Scheduling/Reporting Ethnicity Codes**. The Scheduling/Reporting Ethnicity Codes page appears.
3. Click the ethnicity code or description you want to delete. The Edit Scheduling/Reporting Ethnicity Codes page appears.
4. Click **Delete**.
5. Click **Confirm Delete**. The Selection Deleted page appears.

Student Ethnicity and Race Information

Once federal ethnicity and race is setup, as well as scheduling/reporting ethnicity, you can then import or manually enter student ethnicity and race data.

Import Student Races

During the initial setup of federal race and ethnicity, use the Quick Import function to transfer student race codes into the PowerSchool Student Races table. The import file must include the following columns: RaceCd and Student_Number. For general information, see *Quick Import*. For state-specific information, see PowerSchool recommended state-specific setup of federal race and ethnicity settings available on PowerSource.

Note: When importing federal ethnicity and race settings and data into PowerSchool, it is important to perform the imports in the following order: Federal Race Categories, Race Codes, Student Races, and then Teacher Races.

Enter Ethnicity and Race Information for a Group of Students

During the initial setup of federal race and ethnicity, use the Student Field Value function to assign a scheduling/reporting ethnicity to a group of students. For general information, see *Student Field Value*. For state-specific federal ethnicity and race information, see PowerSchool recommended state-specific setup of federal race and ethnicity settings available on PowerSource.

Enter Ethnicity and Race Information for an Individual Student

Use the following procedure to enter ethnicity and race information for the selected student.

How to Enter Ethnicity and Race Information for an Individual Student

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Information, choose **Demographics** from the student pages menu. The General Demographics page appears.
3. Use the following table to edit information in the fields:

Field	Description

Ethnicity	Specify whether or not the student is Hispanic or Latino by selecting the appropriate option. **Note:** Information that appears may vary based on your configuration. For information about setting up federal ethnicity and race categories and codes used in state-specific reporting, see *Federal Race Categories* and *District Race Codes*.
Race	Specify the student's race by selecting the appropriate checkboxes. **Note:** Information that appears may vary based on your configuration. For information about setting up federal ethnicity and race categories and codes used in state-specific reporting, see *Federal Race Categories* and *District Race Codes*.
Scheduling/Reporting Ethnicity	Specify the student's ethnicity by choosing the appropriate ethnicity from the pop-up menu. **Note:** Information that appears may vary based on your configuration. For information about setting up ethnicity codes used in scheduling and preconfigured reporting, see *Scheduling/Reporting Ethnicity Codes*.

4. Click **Submit**. The Changes Recorded page appears, unless the modified information matches another student's information in one or more of the following fields:
   - Name
   - Student Number
   - School
   - Enroll Status
   - Family ID
   - Student Phone
   - Physical Address
   - Mother's Name
   - Father's Name
   - Guardian's Name
   - Any shared fields that were modified, noted with an "x." When updating linked students, you are updating the information in these fields for those students.
5. On the Students with Shared Family Information page, select the **Update** checkboxes to change the linked student's demographic information to match the

modified demographic information of the selected student. For example, if you change the selected student's street address from 12 Maple Way to 1 Apple Drive and the linked student also lives at 12 Maple Way, select the **Update** checkbox to change the linked student's address to 1 Apple Drive.

Staff Ethnicity and Race Information

Once federal ethnicity and race is setup, as well as scheduling/reporting ethnicity, you can then import or manually enter teacher ethnicity and race data.

Import Staff Races

During the initial setup of federal race and ethnicity, use the Quick Import function to transfer staff member race codes into the PowerSchool Teacher Races table. The import file must include the following columns: RaceCd and TeacherID. The TeacherID value is located in the ID field in the Teachers table. For general information, see *Quick Import*. For state-specific information, see PowerSchool recommended state-specific setup of federal race and ethnicity settings available on PowerSource.

Note: When importing federal ethnicity and race settings and data into PowerSchool, it is important to perform the imports in the following order: Federal Race Categories, Race Codes, Student Races, and then Teacher Races.

Enter Ethnicity and Race Information for a Group of Staff Members

During the initial setup of federal race and ethnicity, use the Set Staff Field Value function to assign a reporting ethnicity to a group of staff members. For general information, see *Set Staff Field Value*. For state-specific federal ethnicity and race information, see PowerSchool recommended state-specific setup of federal race and ethnicity settings available on PowerSource.

Enter Ethnicity and Race Information for an Individual Staff Member

Use the following procedure to enter ethnicity and race information for the selected staff member.

How to Enter Ethnicity and Race Information for an Individual Staff Member

1. On the start page, search for and select a staff member. For more information, see Staff Search.
2. Click **Edit Information**. The Edit Information page appears.
3. Use the following table to edit information in the fields:

Field	Description
Ethnicity	Specify whether or not the staff member is Hispanic or Latino by selecting the appropriate option. **Note:** Information that appears may vary based on your configuration. For information about setting up federal ethnicity and race categories and codes used in state-specific reporting, see *Federal Race Categories* and *District Race Codes*.
Race	Specify the staff member's race by selecting the appropriate checkboxes. **Note:** Information that appears may vary based on your configuration. For information about setting up federal ethnicity and race categories and codes used in state-specific reporting, see *Federal Race Categories* and *District Race Codes*.
Reporting Ethnicity	Specify the staff member's ethnicity by choosing the appropriate ethnicity from the pop-up menu. **Note:** Information that appears may vary based on your configuration. For information about setting up ethnicity codes used in scheduling and preconfigured reporting, see *Scheduling/Reporting Ethnicity Codes*.

4. Click **Submit**. The Edit Information page appears.

Search by Ethnicity and Race Fields

To search for students or staff based on ethnicity or race; use any of the following fields in combination with a valid operator (is (=), is not (#), in, not in). Search results will vary depending on the expression you enter.

Field	Description
Ethnicity	Use to search for students or staff based on ethnicity, using the scheduling/reporting ethnicity code.
FedEthnicity	Use to search for students or staff based on ethnicity, using the federal ethnicity code indicated by students or staff answering, “Are you Hispanic or Latino?” 1 = Yes, 0 = No, and 2 = Declined to answer.
FedRaceDecline	Use to search for students or staff based on race, using the federal race code indicated by students or staff indicating one or more races specified (0) of declining to specify race (1).
Race	Use to search for students or staff based on race, using the district race code description.
RaceCode	Use to search for students or staff based on race, using the federal race code.
Race.Fed	Use to search for students or staff based on federal race, using the federal category description.
Race.FedCode	Use to search for students or staff based on federal race, using the federal category code.

Search for Students by Ethnicity and Race Fields

Note: For more information about searching for students, see *Student Search*.

How to Search for Students by Ethnicity and Race Fields

1. On the start page, choose **Student Search** under People in the main menu. The Search Student page appears.
2. Click **View Field List**. The Field List pop-up appears.
3. To narrow the list of fields, enter one of more search terms in the **Filter** field. Otherwise, leave blank.
4. Click the ethnicity or race field you want to add. The Field List pop-up closes, and the selected field appears in the **Search Student** field.
5. Enter a field operator and value after the field in the **Search Student** field.

   Note: For more information about comparators, see *How to Use Comparators*.

6. Click the **Search** icon. The Student Selection page displays the students that meet the criteria you entered.

Search for Staff by Ethnicity and Race Fields

Note: For more information about searching for staff, see Staff Search.

How to Search for Staff by Ethnicity and Race Fields

1. On the start page, choose **Staff Search** under People in the main menu. The Search Staff page appears.
2. Click **View Field List**. The Field List pop-up appears.
3. To narrow the list of fields, enter one of more search terms in the **Filter** field. Otherwise, leave blank.
4. Click the ethnicity or race field you want to add. The Field List pop-up closes, and the selected field appears in the **Search Staff** field.
5. Enter a field operator and value after the field in the **Search Staff** field.

   Note: For more information about comparators, see *How to Use Comparators*.

6. Click the **Search** icon. The Select a Staff Member page displays the staff members that meet the criteria you entered.

Fees Management User Guide

PowerSchool

Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

Table of Contents

Introduction

Fees Management spans PowerSchool, the PowerSchool Student and Parent portal, and PowerTeacher. To get started immediately, set up fees. Once you have completed setting up fees, you can begin performing a variety of fee functions for individual students using Fee Transactions or for a group of students using Fee Functions.

Note: Fee Transactions does not apply to lunch account balances. For information about lunch transactions, see *Lunch Transactions*.

Setup

Fee Categories

Fee categories are used as an organizational tool to group fee types. The fee category indicates the manner in which fee types are assessed. PowerSchool includes two default fee categories, School and Course. Using the School fee category, you can create school enrollment fees that are automatically assessed at the school level when a student enrolls in school. Using the Course fee category, you can create course enrollment fees that are automatically assessed at the course level when a student enrolls in a course. In addition, you can create as many other fee categories as your district needs. These other fee categories are called Student fees and are assessed manually for and individual student or for a group of students. Once you have finished creating the fee categories you will need, you can then create fee types using those fee categories.

Note: A third non-editable fee category called Start of Year Balance, or SOY Balance, may appear if balances have been transferred using the End-of-Year process or if you have performed the Fee Conversion. You cannot associate fee types to this category, nor can you create fees using it. This information acts “behind the scenes” and appears on the student Fee Transactions page. For more information, see *End-of-Year Process*.

Example

Fee Category	Assessed
School	Automatically when students enroll in school.
Course	Automatically when students enroll in a course.

[Student]	Manually by district or school administrator.

How to Add a Fee Category

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Fees, click **Fee Categories**. The Fee Categories page appears.
3. Click **New**. The New Fee Category page appears.
4. Enter the name of the fee category in the **Fee Category** field, such as **Field Trip**.
5. Click **Submit**. The Fee Categories page displays the new fee category.

How to Edit a Fee Category

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Fees, click **Fee Categories**. The Fee Categories page appears.
3. Click the fee category you want to edit. The Edit Fee Category page appears.
4. Edit the name of the fee category in the **Fee Category** field.
5. Click **Submit**. The Fee Categories page displays the edited fee category.

How to Delete a Fee Category

Once you have created a fee category, later you may find it necessary to delete it. If so, you can delete it. Note, however, it is recommended that you do not delete or modify the default fee categories. If you delete a fee category, you must then update any fee record containing that category and select a new category. Transaction records already created are not affected.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Fees, click **Fee Categories**. The Fee Categories page appears.
3. Click the fee category you want to delete. The Edit Fee Category page appears.
4. Click **Delete**.
5. Click **Confirm Delete**. The Selection Deleted page appears.

Payment Methods

When setting up Fees Management, it is recommended that you review PowerSchool's payment methods to determine if they meet your district's needs. PowerSchool includes six default payment methods, cash, credit card, check, electronic fund transfer, money order, and other. In needed, you can create as many other payment methods as your district requires.

How to Add a Payment Method

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Fees, click **Payment Methods**. The Payment Methods page appears.
3. Click **New**. The New Payment Methods page appears.
4. Use the following table to enter information in the fields:

Field	Description
Code	Enter the name of the method of payment, such as **CP**.
Description	Enter a description of the method of payment, such as **Coupon**.

5. Click **Submit**. The Payment Methods page displays the new payment method.

How to Edit a Payment Method

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Fees, click **Payment Methods**. The Payment Methods page appears.
3. Click the payment method you want to edit. The Edit Payment Method page appears.
4. Edit the information as needed. For field descriptions, see *How to Add a Payment Method*.
5. Click **Submit**. The Payment Methods page displays the edited payment method.

How to Delete a Payment Method

Although payment methods can be deleted, it is recommended that you do not delete them to maintain uniformity across the states for state reporting purposes. If you delete a payment method, you must then update any fee record containing that payment method and select a new payment method. Transaction records already created are not affected.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Fees, click **Payment Methods**. The Payment Method page appears.

3. Click the payment method you want to delete. The Edit Payment Method page appears.
4. Click **Delete**.
5. Click **Confirm Delete**. The Selection Deleted page appears.

Fee Types

Fee categories are used as an organizational tool to group fee types. The fee category indicates the manner in which fee types are assessed. Once you have finished creating the fee categories you will need, you can then create fee types using those fee categories.

Example

Fee Category	Fee Type
School	Enrollment Uniform
Course	Textbook Materials
[Student], such as Field Trip	Instructional Recreational

How to Add a Fee Type

Before adding fee types, fee categories must be created. For more information, see *Fee Categories*.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under General, click **Fee Types**. The Fee Types page appears.
3. Click **New**. The New Fee Type page appears.
4. Use the following table to edit information in the fields:

Field	Description

Fee Type	Enter the name of the fee type, such as **Recreational**.
Fee Category	Choose the fee category you want to associate the fee type to from the pop-up menu, such as **Field Trip**.
Fee Type Description	Enter an explanation of the fee type, such as **Excursions for entertainment**.

5. Click **Submit**. The Fee Types page displays the new fee type.

How to Edit a Fee Type

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under General, click **Fee Types**. The Fee Types page appears.
3. Click the fee type you want to edit. The Edit Fee Type page appears.
4. Edit the information as needed. For field descriptions, see *How to Add a Fee Type*.
5. Click **Submit**. The Fee Types page displays the edited fee type.

How to Delete a Fee Type

If the fee type is not associated with a transaction, you can simply delete it. If a fee type is associated with a transaction, it is strongly recommended that you do not delete the fee type. However, if you do, you will need to manually delete or update all fee transactions that are using the fee type. Any modifications to fee transactions, including deletion, will be logged.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under General, click **Fee Types**. The Fee Types page appears.
3. Click the fee type you want to delete. The Edit Fee Type page appears.
4. Click **Delete**.
5. Click **Confirm Delete**. The Selection Deleted page appears.

How to Rank Fee Types

Once you have created fee types, you can rank them in order by which you want the fees to be paid. A lower value, such as **1**, indicates the fee type that will be paid before a fee type with a higher value, such as **3**. You can also assign a Priority value of **0** for one-off fees, such as a specific event.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under General, click **Fee Types**. The Fee Types page appears.
3. Note the **Priority** field for each fee type.
4. Enter a numeric value for each fee type indicating the order in which payments are to be distributed.
5. Click **Submit**. The Fee Types page appears.

School Enrollment Fees

School enrollment fees are used to automatically assess certain fees when a student enrolls in school, such as Enrollment, Uniform, etc. When creating school enrollment fees, you can indicate whether you want the fee to be proratable.

Note: When importing students, school enrollment fees are not automatically assessed. You must manually assess school enrollment fees using Fee Functions. For more information, see *Fee Functions*.

How to Add a School Enrollment Fee

Before adding school enrollment fees, fee types must be created using the fee category of School**.** For more information, see *Fee Categories* and *Fee Types*.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under District Information, click **Schools/School Info**. The Schools/School Info page appears.
3. Click the name of a school. The Edit School page appears.
4. In the School Enrollment Fees section, click **New**. The New School Enrollment Fee page appears.
5. Use the following table to edit information in the fields:

Field	Description
School Name	The selected school's full name appears.
Fee Type	Choose the type of fee from the pop-up menu.

	Note: Only those fee types with the fee category of School appear in the pop-up menu. For more information, see *Fee Types*.
Department	Choose the department you want to associate the fee to from the pop-up menu, if any.
Amount	Enter the amount of the fee to be assessed.
Date	Enter the date the fee becomes applicable. The default is set to today's date.
Proratable	Select the checkbox to indicate that the fee is to be assessed based on the number of school days in the year. If a student enrolls in school after the start date or withdraws from school before the end date, the student will only be charged for that portion of the school year.

6. Click **Submit**. The Fee Types page displays the new fee type.

How to Edit a School Enrollment Fee

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under District Information, click **Schools/School Info**. The Schools/School Info page appears.
3. Click the name of a school. The Edit School page appears.
4. In the School Enrollment Fees section, click the fee type you want to edit. The Edit School Enrollment Fee page appears.
5. Edit the information as needed. For field descriptions, see *How to Add a School Enrollment Fee*.
6. Click **Submit**. The Fee Types page displays the updated fee type.

How to Delete a School Enrollment Fee

Once you have created a school enrollment fee, later you may find it necessary to delete it. If so, you can delete it.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.

2. Under District Information, click **Schools/School Info**. The Schools/School Info page appears.
3. Click the name of a school. The Edit School page appears.
4. In the School Enrollment Fees section, click the fee type you want to delete. The Edit School Enrollment Fee page appears.
5. Click **Delete**.
6. Click **Confirm Delete**. The Selection Deleted page appears.

Course Enrollment Fees

Course enrollment fees are used to automatically assess certain fees when a student enrolls in a course, such as Textbook, Materials, etc. When creating course enrollment fees, you can indicate whether you want the fee to be proratable.

Note: When importing students, course enrollment fees are not automatically assessed. You must manually assess course enrollment fees using Fee Functions. For more information, see *Fee Functions*.

How to Add a Course Enrollment Fee

Before adding course enrollment fees, fee types must be created using the fee category of Course. For more information, see *Fee Categories* and *Fee Types*.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under General, click **Courses**. The Courses page appears.
3. To narrow the list of courses, see Step 3 of *How to View the Course List*.
4. Click the Number, Name, or Department of a course. The Edit Course District Information page appears.
5. Click the **Fees** tab. The Edit Course Enrollment Fees page appears.
6. Click **New**. The New Course Fee page appears.
7. Use the following table to enter information in the fields:

Field	Description
Course Name	The name of the course appears.
Course Number	The number used to identify the course appears.
Fee Type	Choose the type of fee from the pop-up menu.

	Note: Only those fee types with the fee category of Course appear in the pop-up menu. For more information, see *Fee Types*.
Department	Choose the name of the department you want to associate the fee to from the pop-up menu.
Amount	Enter the amount of the fee to be assessed.
Date	Enter the date the fee becomes applicable. The default is set to today's date.
Description	Enter a descriptive explanation of the fee.
Proratable	Select the checkbox to indicate that the fee is to be assessed based on the number of days within the term for the course section. If a student enrolls in the course after the start date or drops the course before the end date, the student will only be charged for that portion of the course.

8. Click **Submit**. The Courses page appears.

How to Edit a Course Enrollment Fee

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under General, click **Courses**. The Courses page appears.
3. To narrow the list of courses, see Step 3 of *How to View the Course List*.
4. Click **Yes** in the Fee column of the course you want to edit. The Edit Course Enrollment Fees page appears.
5. Click the course enrollment fee in the Fee Type column that you want to edit. The Edit Course Fee page appears.
6. Edit the information as needed. For field descriptions, see *How to Add a Course Enrollment Fee*.
7. Click **Submit**. The Courses page appears.

How to Delete a Course Enrollment Fee

Once you have created a course enrollment fee, later you may find it necessary to delete it. If so, you can delete it.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under General, click **Courses**. The Courses page appears.
3. To narrow the list of courses, see Step 3 of *How to View the Course List*.
4. Click **Yes** in the Fee column of the course you want to delete. The Edit Course Enrollment Fees page appears.
5. Click the course enrollment fee in the Fee Type column that you want to delete. The Edit Course Fee page appears.
6. Click **Delete**. The Courses page appears.

Work with Students

Fee Exemption Status

Using the **Fee Exemption Status** pop-up menu, you can indicate whether or not a student is subject to school or course enrollment fees. While you can indicate that school or course fees not be automatically assessed, this does not prohibit fees from being manually assessed.

Note: Field level security may be used to restrict this information (STUDENTS.FEE_EXEMPTION_STATUS). For more information, see *Field Level Security*.

How to Assign Fee Exemption Status to an Individual Student

Use this procedure to exempt an individual student from course enrollment fees, school enrollment fees, or all fees. For more information, see *Other Information*.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Information, choose **Other Information** from the student pages menu. The Other Information page appears.
3. Choose the student's exemption status from the **Fee Exemption Status** pop-up menu:
   - **Student not Exempted**
   - **Student Exempted from Course Fees**
   - **Student Exempted from School Fees**
   - **Student Exempted from All Fees**
4. Click **Submit**. The Other Information page displays the changes.

How to Assign Fee Exemption Status to a Group of Students

Use this procedure to exempt all students within a given school from course enrollment fees, school enrollment fees, or all fees. For more information, see *School Information*.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under District Information, click **Schools/School Info**. The Schools/School Info page appears.
3. Click the name of the school in the Schools column that you want to exempt from fees. The Edit School page appears.
4. Choose the fee exemption status you want to assign to the school from the **Fee Exemption Status** pop-up menu:
    - **Student not Exempted**
    - **Student Exempted from Course Fees**
    - **Student Exempted from School Fees**
    - **Student Exempted from All Fees**
5. Click **Submit**. The Schools/School Info page displays the new school.

Fee Transactions

Fee Transactions represent the exchanges of funds for a student within the PowerSchool system. You can use the Fee Transactions page to view a wide variety of transaction information, including fee record information, transactions associated with a fee, all transactions associated with a student for the current school and year, and global balances associated to a student for each school and year combination. Additionally, you can create transactions, distribute payments, and issue refunds for individual students. For information about fee functions for a group of students, see *Fee Functions*.

Note: Fee Transactions do not apply to lunch account balances. For information about lunch transactions, see *Lunch Transactions*.

How to View Fee Transaction Summary

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Administration, choose **Fee Transactions** from the student pages menu. The Fee Transactions page displays the following information:

Field	Description

Balance	The student's total debits and credits for the current year and school. **Note:** The Balance and the Totals may not be the same in cases where the student has a negative balance.
Date	The date the fee transaction occurred. Click to access the Transactions page, which displays information about the fee record. For more information, see *How to View Fee Record Information*.
Course	The number of the associated course.
Fee Type	The fee type from which the fee transaction was created. For more information, see *Fee Types*.
Priority	The priority in which this fee is to be paid in respect to the other fee types. For more information, see *How to Rank Fee Types*.
Description	An explanation of the fee.
Charged	The total amount charged to the student, considering any adjustments.
Adjust	If a prorated course fee, this is the amount of the fee adjusted for the number of days the student is enrolled within the term for the course section. If a student enrolls in the course after the start date or drops the course before the end date, the student will only be charged an adjusted, prorated fee for that portion of the course. For more information, see *School Enrollment Fees* or *Course Enrollment Fees*.
Fee	The total amount of the fee.
Paid	The amount of the fee that the student has paid. Click to access the Transactions page, which displays the transactions associated

	with the fee. For more information, see *How to View Transactions Associated with a Fee*.
Balance	The amount of the fee that the student owes.

How to Add Student Fees for an Individual Student

Using the Fee Transactions page, you can manually assess an individual student with student fees, such as Recreational Field Trip. Be sure the information you enter is accurate, as there is no edit or delete function for student fees (to preserve the history of the transaction). If you inadvertently make a mistake, you will have to create a transaction using payment, credit, or void to reverse the effect.

Note: To manually assess a group of students with student fees, see *Fee Functions*.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Administration, choose **Fee Transactions** from the student pages menu. The Fee Transactions page appears.
3. Choose a fee type from **Create New Fee** pop-up menu. The New Fee Transaction page appears.
4. Use the following table to enter information in the fields:

Field	Description
New Fee	The selected fee type appears, such as **Recreational**. **Note:** For more information, see *Fee Types*.
Category	The category associated to the fee type appears, such as **Field Trip**. **Note:** For more information, see *Fee Categories*.
Department	Choose the appropriate department from the pop-up menu.
Transaction Date	Enter the date the student fee is to be assessed. The default is set to today's date.

	Note: If you enter a different date, be sure to use the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
Description	Enter an explanation of the student fee being created, such as **Excursion to water park**.
Amount of Fee	The dollar amount to be assessed to the student's account balance, such as **75.00**.
Amount of Credit	If the student is providing full or partial payment at the time this fee is being created, enter the payment amount in this field, such as **25.00**. **Note:** If the student's payment is greater than the fee, the extra money will be applied as payment to other unpaid fees based on fee type priority.
Payment Method	If the student is providing full or partial payment at the time this fee is being created, choose the method of payment from the pop-up menu, such as **Check/Draft (Check)**.
Payment Reference Number	If the student is providing full or partial payment at the time this fee is being created, enter the payment reference number in this field, such as **Check Number 4076**.
Course Number	If this fee is related to a course, enter the number used to identify the course in this field, such as **1511 (Biology)**.

5. Click **Submit**. A confirmation message appears.

How to Delete a Fee Record

If a fee record is created in error and there are no payments recorded against the fee record, you can use this procedure to delete the fee record.

1. On the start page, search for and select a student. For more information, see *Student Search*.

2. Under Administration, choose **Fee Transactions** from the student pages menu. The Fee Transactions page appears.
3. Click the date in the Date column of the transaction line item you want to delete. The View Fee Transaction page appears.
4. Click **Delete**.

   Note: The Delete button appears shaded if there are payment recorded against the fee record.

5. Click **Confirm Delete**. The Fee Transactions page appears.

How to View Fee Record Information

Use this procedure to view fee record information for a line.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Administration, choose **Fee Transactions** from the student pages menu. The Fee Transactions page appears.
3. Click the date in the Date column of the transaction line item you want to view. The View Fee Transaction page displays the following information:

Field	**Description**
New Fee	The selected fee type. For more information, see *Fee Types*.
Category	The category associated to the fee type. For more information, see *Fee Categories*.
Transaction Date	The date the student fee was created.
Description	The explanation of the fee.
Amount of Fee	The total amount of the fee.
Amount Paid	The amount of the fee that the student has paid.
Balance	The amount of the fee that the student owes.

Department Name	The name of the department associated to this fee, if any.
Course Number	The number of the course associated to this fee, if any.
Course Name	The name of the course associated to this fee, if any.
Payment Method	The method by which the student has paid for the fee. For more information, see *Payment Methods*.
Priority	The priority in which this fee is to be paid in respect to the other fee types. For more information, see *How to Rank Fee Types*.
Pro Rated	Indicates whether or not the fee is prorated. For more information, see *School Enrollment Fees* or *Course Enrollment Fees*.
Original Fee	The amount of the original fee.
YearID	The year in which the fee was created.
Group Transaction ID	If the fee was created using Fee Functions, a system-generated group transaction identification number appears. For more information, see *Fee Functions*.

How to View Transactions Associated with a Fee

Use this procedure to view transactions associated with a fee for a line item.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Administration, choose **Fee Transactions** from the student pages menu. The Fee Transactions page appears.
3. Click the amount in the Paid column of the transaction line item you want to view. The Transactions page displays the following information:

Field	Description

Date	The date the transaction occurred. Click to view detailed information about the transaction record.
Time	The time the transaction occurred.
Type	The type of fee associated to the transaction.
Debit	The amount paid.
Credit	The amount overpaid.
Balance	The amount of the fee that the student owes.
Payment Method	The method by which the fee was paid.
Description	An explanation for creating the transaction.

How to View All Transactions

Use this procedure to view all transactions associated with a student for the current school and year.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Administration, choose **Fee Transactions** from the student pages menu. The Fee Transactions page appears.
3. Click **All Transactions**. The All Transactions page displays the following information:

Field	**Description**
Date	The date the transaction occurred. Click to view detailed information about the transaction record.
Time	The time the transaction occurred.

Type	Type of the transaction, such as **Payment** or **Refund**.
Starting Bal.	The student's balance before the transaction.
Amount	The amount of the transaction.
Net Effect	The student's balance after the transaction.
Method	The method of payment, such as **cash** or **check**.
Reference	Payment reference information entered during the transaction, if any. For example, if the student paid by check or credit card, the check number or credit card number may appear in this column.
Description	A brief explanation of the transaction.

How to View Fee Balances

Use this procedure to view global balances associated to a student for each school and year combination.

Note: Student fee balances can also be viewed in PowerTeacher as well as PowerSchool Parent if the **Do not show the lunch balance on parent/student pages** checkbox on the Miscellaneous district settings page is selected. For more information, see *Miscellaneous District Settings*.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Administration, choose **Fee Transactions** from the student pages menu. The Fee Transactions page appears.
3. Click **Fee Balances**. The Fee Balances page displays the following information:

Field	**Description**
School	The school identification number.

Year	The current year.
Debit	The total amount the student owes.
Credit	The total amount the student is owed.
Balance	The difference between what the student owes and what is owed to the student.

How to Receive a Fee Payment

When a student's payment is received, use this procedure to enter the payment and have it distributed across all outstanding fees based on fee type priority, see *How to Distribute Payments*.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Administration, choose **Fee Transactions** from the student pages menu. The Fee Transactions page appears.
3. Locate the fee for which you want to enter a payment.
4. Click **Payment** in the Transaction column. The New Transaction page appears.
5. Use the following table to enter information in the fields:

Field	Description
Transaction For	The fee type from which the fee was created appears, such as **Enrollment**. For more information about fee types, see *Fee Types*.
Course	The number used to identify the course appears. The information only displays if a course was associated to the fee.
Transaction Date	Enter the date of the transaction. The default is set to today's date. **Note:** If you enter a different date, be sure to use the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an

	alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
Transaction Type	Choose the type of transaction you want to create from the pop-up menu: • **Payment** • **Credit** • **Void**
Description	Enter an explanation for creating the transaction.
Amount	Enter the amount of the payment. If the Transaction Type selected is **Void**, there is no need to enter a value in this field. The amount will be set by the fee balance. **Note:** If the payment is higher than the balance, the payment will be rejected.
Payment Method	Choose the method by which the payment is being made from the pop-up menu. For more information, see *Payment Methods*.
Payment Reference Number	You can use this field to record additional payment information, such as a check number.

6. Click **Submit**. A confirmation message appears.

How to Distribute Payments

Use this procedure to enter a payment into the system and have it allocated across all outstanding fees based on fee type priority. For more information about fee type priority, see *How to Rank Fee Types*. To enter a payment for a selected fee, see *How to Receive a Payment*.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Administration, choose **Fee Transactions** from the student pages menu. The Fee Transactions page appears.
3. Click **Distribute** in the Transaction column. The Distribute Payment page appears.

4. Use the following table to enter information in the fields:

Field	Description
Transaction Date	Enter the date of the transaction. The default is set to today's date. **Note:** If you enter a different date, be sure to use the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
Description	Enter an explanation for creating the transaction.
Amount	Enter the amount of the payment.
Payment Method	Choose the method by which the payment is being distributed from the pop-up menu. For more information, see *Payment Methods*.
Payment Reference Number	You can use this field to record additional payment information, such as a check number.

5. Click **Submit**. A confirmation message appears.

How to Issue Refunds

Use this procedure to issue a refund. Refunds can be issued when the student's global balance is negative (the school owes money to the student). Refunds cannot be issued when the student's global balance is positive (the student owes money to the school) or null (global balance of zero).

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Administration, choose **Fee Transactions** from the student pages menu. The Fee Transactions page appears.
3. Click **Refund**. The Refund page appears.
4. Use the following table to enter information in the fields:

Field	Description
Transaction Date	Enter the date of the refund. The default is set to today's date. **Note:** If you enter a different date, be sure to use the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
Description	Enter an explanation for creating the refund.
Amount	Enter the amount of the credit.
Payment Method	Choose the method by which the credit is being made from the pop-up menu. For more information, see *Payment Methods*.
Payment Reference Number	You can use this field to record additional payment information, such as a check number.

5. Click **Submit**. A confirmation message appears.

Fee Functions

Fee Functions offers similar functionality as Fee Transactions, but these functions are used for a selected group of students. You can access Fee Functions one of two ways: click **Special Functions** on the start page or search for and select a group of students and then choose **Fee Functions** from the Group Functions pop-up menu. From the Fee Functions page, you can create transactions, assess school enrollment and course enrollment fees, and clear current balances. Each time you perform a group fee function, the system generates a group ID. The group ID can then be used to perform additional actions, such as reversing fee assessments or transactions and for generating reports.

Group Transaction IDs Warning

Each time such a group transaction is performed, a new Group Transaction ID is generated and assigned to each record created by the transaction. When running any of the group functions that require entering a Group Transaction ID, be sure to enter the correct Group Transaction ID. If you inadvertently enter the wrong Group Transaction ID, you may be affecting a large amount of date and reversing the error may take considerable time. To find the group transaction ID, check at least one fee or transaction record that has been created by the group fee functions.

How to Add Student Fees for Group of Students

Using the Fee Functions page, you can manually assess a group of students with student fees, such as Recreational Field Trip. Be sure the information you enter is accurate, as there is no edit or delete function for student fees (to preserve the history of the transaction). If you inadvertently make a mistake, you will have to create a transaction using payment, credit, or void to reverse the effect.

Note: To manually assess an individual student with student fees, see *Fee Transactions*.

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Functions, choose **Fee Functions**. The Fee Functions page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Click **New Fee**. The New Fee page appears.
5. Use the following table to enter information in the fields:

Field	**Description**
Add Fee For	The selected number of students appears.
Fee Type	Choose the fee type you want use to create the fee.
Department	Choose the department you want to associate to this fee, if any.
Transaction Date	Enter the date the student fee is to be assessed. The default is set to today's date. **Note:** If you enter a different date, be sure to use the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an

	alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
Description	Enter an explanation of the fee being created.
Amount of Fee	The dollar amount to be assessed to the students' account balance appears.
Amount of Credit	If the students are providing full or partial payment at the time this fee is being created, enter the payment amount in this field. **Note:** If the students' payment is greater than the fee, the extra money will be applied as payment to other unpaid fees based on fee type priority.
Payment Method	If the students are providing full or partial payment at the time this fee is being created, choose the method of payment from the pop-up menu.
Payment Reference Number	If the students are providing full or partial payment at the time this fee is being created, enter the payment reference number in this field.
Course Number	If this fee is related to a course, enter the number used to identify the course in this field.

6. Click **Submit**. A confirmation message appears, as the system generates a Group Transaction ID.

How to Add School Enrollment Fees

School enrollment fees are used to automatically assess certain fees when students enroll in school. For more information, see *School Enrollment Fees*. If school enrollment fees are created after students have enrolled in school, then the new school enrollment fees need to be manually assessed.

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.

2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Functions, choose **Fee Functions**. The Fee Functions page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Click **New School Enrollment Fee**. The New School Enrollment Fee page appears.
5. Use the following table to enter information in the fields:

Field	Description
Add Selected School Enrollment Fees For	The selected number of students appears.
School Enrollment Fees For	The name of the selected students' school appears.
Description (Fee Type)	Select each school enrollment fee checkbox you want to be applied to the selected students.
Amount	The dollar amount to be assessed to the selected students' account balance appears.
Transaction Date	Enter the date the fees are to be assessed. The default is set to today's date. **Note:** If you enter a different date, be sure to use the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.

6. Click **Submit**. A confirmation message appears, as the system generates a Group Transaction ID.

   Note: If a fee is marked as proratable, it will be assessed on the basis of the number of school days in the year.

How to Add Course Enrollment Fees

Course enrollment fees are used to automatically assess certain fees when students enroll in a course that has fees associated to it. For more information, see *Course Enrollment Fees*. If course enrollment fees are created after students have enrolled in a course, then the new course enrollment fees need to be manually assessed.

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Functions, choose **Fee Functions**. The Fee Functions page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Click **New Course Enrollment Fee**. The New Course Enrollment Fee page appears.
5. Use the following table to enter information in the fields:

Field	Description
Add Course Enrollment Fees For	The selected number of students appears.
Course Number	Enter the course code for which you want to assess course enrollment fees.

6. Click **Submit**. The second New Course Enrollment page appears.
7. Use the following table to enter information in the fields:

Field	Description
Add Course Enrollment Fees For	The selected number of students appears.
Course Number	The course code for which you want to assess course enrollment fees appears.

Description (Fee Type)	Select each course enrollment fee checkbox you want to be applied to the selected students.
Amount	The dollar amount to be assessed to the selected students' account balance appears.
Transaction Date	Enter the date the fees are to be assessed. The default is set to today's date. **Note:** If you enter a different date, be sure to use the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.

8. Click **Submit**. A confirmation message appears, as the system generates a Group Transaction ID.

   Note: If a fee is marked as proratable, it will be assessed on the basis of the number of days within the term for the course section.

How to Create a New Transaction

Use this procedure to create a new transaction for the selected group of students.

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Functions, choose **Fee Functions**. The Fee Functions page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Click **New Transaction**. The New Transaction page appears.
5. Use the following table to enter information in the fields:

Field	Description

Add Transaction For	The number of selected students for which their transaction is being created.
Fee Type	The fee type from which the fee was created appears, such as Enrollment. **Note:** For more information about fee types, see *Fee Types*.
Transaction Date	Enter the date of the transaction. The default is set to today's date. **Note:** If you enter a different date, be sure to use the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
Transaction Type	Choose from the pop-up menu the type of transaction you want to create: • **Payment** • **Credit** • **Void**
Description	Enter an explanation for creating the transaction.
Amount	Enter the amount of the payment. If the Transaction Type selected is **Void**, there is no need to enter a value in this field. The amount will be set by the fee balance. **Note:** If you make a mass payment and the payment is higher than the balance for a specific student, that student will receive a credit.
Payment Method	Choose the method from the pop-up menu by which the payment is being made: • **Cash** • **Credit Card/Bank Card** • **Check/Draft** • **EFT (Electronic Funds Transfer)**

	• **Money Order** • **Vouchers** For more information, see *Payment Methods*.
Payment Reference Number	You can use this field to record additional payment information, such as a check number.

6. Click **Submit**. A confirmation message appears, as the system generates a Group Transaction ID.

How to Assess School Enrollment Fees

Use this procedure to assess school enrollment for the selected group of students. Performing this procedure automatically assigns school enrollment fees to the selected group of students. Before running this function, be sure that the fees have not already been assessed to the selected students. Otherwise, the fees may be duplicated.

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Functions, choose **Fee Functions**. The Fee Functions page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Click **Assess School Enrollment Fees**. The Assess School Enrollment Fees page appears.
5. Select the appropriate option to indicate which students you want to apply the school enrollment fee to:
   - **For all currently enrolled students in [name of school]**
   - **For the selected [number] students only**
   - **For [name of student] only**
6. Click **Submit**. A confirmation message appears.

How to Assess Course Enrollment Fees

Use this procedure to assess course enrollment for the selected group of students. Performing this procedure automatically assigns course enrollment fees to the selected group of students. Before using this function, be sure that the fees have not already been assigned to the selected students. Otherwise, the fees may be duplicated.

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Functions, choose **Fee Functions**. The Fee Functions page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Click **Assess Course Enrollment Fees**. The Assess Course Enrollment Fees page appears.
5. Select the appropriate option to indicate which students you want to apply the course fee to:
   - **For all currently enrolled students in [name of school]**
   - **For the selected [number] students only**
   - **For [name of student] only:**
6. Click **Submit**. A confirmation message appears.

How to Clear Current Balance

Use this procedure to clear current balances for the selected group of students. Performing this procedure removes school or course enrollment fees that have been assigned to a selected group of students.

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Functions, choose **Fee Functions**. The Fee Functions page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Click **Clear Current Balance**. The Clear Current Balance page appears.
5. Use the following table to enter information in the fields:

Field	Description
[Student Selection]	Select the appropriate option to indicate which students you want to clear current balances for: • **For all currently enrolled students in [name of school]** • **For the selected [number] students only** • **For [name of student] only**
Transaction Date	Enter the date for which you want the clearance to occur. The default is set to today's date. **Note:** If you enter a different date, be sure to use the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
Description	Enter an explanation for clearing the balance.

6. Click **Submit**. A confirmation message appears.

How to Reverse Action Using Group Transaction ID

Use this procedure to reverse unpaid fees. This is the easiest way to correct an action that you have performed on a group of students. Performing this procedure will not reverse a transaction of type Void. Transactions that have been performed outside of the group function do not have a Group Transaction ID. In those cases, you have to reverse them manually.

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Functions, choose **Fee Functions**. The Fee Functions page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Click **Reverse Action Using Group Transaction ID**. The Reverse Action Using Group Transaction ID page appears.
5. Use the following table to enter information in the fields:

Field	Description
Group Transaction ID	Enter appropriate Group Transaction ID. **Note:** It is very important that you enter the correct Group Transaction ID.
Transaction Date	Enter the date for which you want the reversal to occur. The default is set to today's date. **Note:** If you enter a different date, be sure to use the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
Description	Enter an explanation for reversing an action.

6. Click **Submit**. A confirmation message appears, as the system generates a Group Transaction ID.

Search for Students by Fees/Transactions

To search for students based on fee or transaction information use any of the following tables and fields in combination with a valid comparator, such as *<table_name>.<field_name><comparator><value>. Search results vary depending on the expression you enter. For more information about searching, see *Student Search*.

Note: Fees search codes are designed for searches only. Although they do not work in reports or exports, there is a Fees List Object that you can use to print items such as balances and transactions on an object report. For more information, see *Fees List Objects*.

Table	Fields
[146]Fee	Fields within this table include: • Course_Name

	• Course_Number • CreationDate • Custom • Date • DateTime • Department_Name • Description • Fee_Amount • Fee_Balance • Fee_Category_Name • Fee_Paid • Fee_Type_ID • Fee_Type_Name • Group_Transaction_ID • ID • ModificationDate • OriginalFee • Priority • Pro_Rated • SchoolFee_ID • SchoolID • StudentID • System_User_ID • TeacherID • Time • YearID
[147]Transaction	Fields within this table include: • Custom • Date • DateTime • Description • FeeID • Group_Transaction_ID • ID • NetEffect • Payment_Method • Payment_Ref_Nbr • Receipt_Nbr

	• SchoolID • Starting_Balance • StudentID • System_User_ID • TeacherID • Time • Transaction_Type • YearID
[148]Fee_Balance	Fields within this table include: • Balance • Credit • Debit • ID • SchoolID • StudentID • TeacherID

Additionally, you can use the following expressions to solicit more complex results:

Expression	Results
*fee.id=noschool	The students who are not related to a school [Fee] record.
*fee.id=nocourse	The students who are not related to a course [Fee] record.
*fee.fee_balance=partial	The students who have at least one fee with a partial balance (partially paid).
*fee_balance.balance=partial	The students who have a partial global balance (partially paid).
*fee_balance.balance=0	The students who have a global balance equal to 0. **Note:** The [Fee_balance] record for a student is created when a transaction is created. Some students may not have a [Fee_balance] record because they never had a

	transaction created. This expression looks for [Fee_balance] records with a zero balance. The students who do not have a [Fee_balance] record will not appear in the results even though their balance is zero.
*fee_balance.balance=null	The students who have no [Fee_balance] record. **Note:** This expression complements ***fee_balance.balance=0** by returning the students who have no [Fee_balance] record.

End-of-Year Process: Clear or Transfer Balances

The End-of-Year Process is used to close out the current school year and transfer all students to the grade level and school that each will attend during the upcoming school year. In addition to transferring students to their next school enrollment, fee balances can be cleared or transferred from one year to the next. If fee balances are transferred, a third non-editable fee category called Start of Year Balance, or SOY Balance, is created. For information, see the *End-of-Year Process Guide* available on PowerSource.

Reports

Fees/Transactions Object Reports

Use object reports containing fee and transaction information to create a variety of reports to suit your needs. For example, using the tag ^(FEE_GetStudentBalance) provides the current balance for a selected student during the current school year. The information is formatted as a decimal ($00.00). For more information, see *Object Reports* and *Objects on an Object Report*.

Grading User Guide

PowerSchool

Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

Table of Contents

Introduction

This guide provides comprehensive information about the configuration and administration of the PowerSchool application functions and components associated with grading.

System Administration

Average Final Grades

In most cases, final grades are determined by the classroom teacher based on rules defined in PowerTeacher Gradebook. This leaves the control over students' grade reporting, and the calculation methodology of those grades, in the hands of the most authoritative source. However, there are times when schedules are set up in a way where administrators want to average grades themselves instead of the teachers or they want to average grades across sections. The final grade averaging function provides school administrators an alternative means of calculating final grades.

The Process

The final grade averaging function can be run periodically by the PowerSchool administrator after storing grades. Final grades are calculated using up to six existing stored grades from each unique course taken during the current school year. Unique courses are identified by course number, not course name or section. Consequently, only grades that have been stored via the store grades process or hand-entered with a course number may be used in the calculation.

Once the stored grades for each course have been identified, the GPA points from each grade are averaged and the resulting value is used to create a new stored grade record. The averaging method can either be a simple arithmetic average, which is used by default, or may be weighted using a user-specified method. Each store code may receive a different weight. The weighting scheme used (20/30/50, 1/1/2, 0.2/0.2/0.6) is configurable.

The GPA point value is compared against the grade scale for the course. If an exact match is found, the letter grade corresponding to that value is used. For example, if the three grades A (4.0), B (3.0), and C (2.0) are used, with each having a weight of 1, the result would be 3. This 3 is looked up in the course's grade scale. An exact match of 3.000 is found, and a new stored grade is created using the letter grade B. However, if the C had a weight of 2, the result would be 2.75. In this case, there might not be an exact match, so the result would be rounded to the nearest value. In this case, 2.75 would be closer to 2.667 for a letter grade of B-. You can change the rounding behavior to always round up, always round down, or find the nearest value.

Since multiple letter grades may have identical GPA point values (for example, F, I, NC, and WF all have zero GPA points), the user can exclude certain letter grades from being used. This prevents a zero average from matching to NC on the grade scale. This is necessary because only the GPA point values, not the letter grades themselves, are looked at. The list of excluded letter grades must be recorded for each unique grade scale used.

Once the appropriate letter grade has been identified, absences, tardies, potential credit, earned credit (if the letter grade earns graduation credit), and teacher comments are calculated based on user-defined options. The resulting new grades are stored alongside the student's existing grades and can be printed on report cards and transcripts.

How to Modify Average Final Grades Settings

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Grades, click **Average Final Grades**. The Average Final Grades page appears.
3. Use the following table to enter information in the fields:

Field	**Description**
Which Students	The students for whom you want to calculate average final grades. Do one of the following: • Select the single student option. This option is useful for testing. • Select **The selected students** option. This is useful when calculating final grades for a specific group of students, such as all current seniors. • Select the **All currently enrolled students** option. **Note:** If no students have been selected, only the **All currently enrolled students** option is available.
New store code	Indicates the new store code to use when storing the resulting final grade. Enter a valid store code (a letter followed by a single number). **Note:** The store code does not need to be defined in the Final Grade Setup section of School Setup.
Limit to this term	To filter by a term in the current school year, choose the term from the pop-up menu. To select all terms, do not select a term from the pop-up menu. If a specific term is selected, only stored grades from sections associated to the term will be averaged. This setting provides the ability to create administrative-level final grade weighting for a section that met during a specific term.

Use these final grades	Enter the store codes for up to six existing stored grades. You may optionally enter a weight value for each grade in the Weight field. This value is used in the calculation of the final letter grade but will not affect attendance or credit calculations. If no value is entered, 1 is used.
Absences and tardies are	The method by which you want absences and tardies calculated. Choose one of the following from the pop-up menu: • **Totals of values from historical grades** to record the cumulative total of absences and tardies from all final grades used. • **Averages of values from historical grades** to record the simple average of the absences and tardies from all final grades used. • **The value of the last record processed** to copy the absence and tardy numbers from the last final grade in the list. • **Do not calculate attendance** to record zeros for absences and tardies.
Potential credit is	The method by which you want potential credit hours determined. Choose one of the following from the pop-up menu: • **Total of potential credit from historical grades** to record the cumulative total of potential credit from all final grades used. • **Average of potential credit from historical grades** to record the simple average of the potential credit from all final grades used. • **The value of the last record processed** to copy the potential credit amount from the last final grade in the list. • **Potential credit from course record** to record the potential credit amount of the parent course record. • **Do not award credit** to record zero for potential credit.
Teacher comments are	The method by which you want teacher comments to be included. Choose one of the following from the pop-up menu:

	• **Taken from all historical grades** to copy the teacher comments from all final grades used. Comments are prefixed with the store code. • **Taken from the last record processed** to copy the teacher comment from the last final grade in the list. • **Do not include comments** to not include teacher comments.
For these grade scales, do not assign these grades	For each grade scale, enter a comma-separated list of letter grades that you want to exclude from the calculation, such as **WF** (withdraw fail) or **I** (incomplete). To include all grades from the grade scale in the calculation, leave the field blank.
Calculate average using	Use this pop-up menu to indicate whether or not to calculate the average using points or percentages by selecting one of the following: • **Grade Points** • **Percentages**
Store which Section ID	Use this pop-up menu to indicate whether or not to populate SectionID in the new stored grade record, thus allowing inclusion of the grade on report cards. Select one of the following: • **Do not store Section ID** • **First Enrolled Section** • **Last Enrolled Section**
Use Alternate Grade Points in Calculation	Select the checkbox to use alternate grade points in the calculation. If selected, the Alternative Grade points field that appears on the New Grade/Edit Grade pages will be used in the calculation.
Store Alternate Grade Points in	Select the checkbox to store alternate grade points in the new stored grade record. If deselected, the regular grade points for the resulting grade will be stored.

Stored Grades Record	
Overwrite Existing Stored Grades Records	Select the checkbox to allow the calculated average for a particular store code to overwrite existing data for the same store code. If deselected, the existing data will not be overwritten. In addition, extra records for the store code are not created.

4. Click **Submit**. PowerSchool calculates the average final grades for the requested group of students. Progress is indicated in the browser window.

   The system creates new historical grades for the selected students and stores them using the specified store code.

Copy Final Grade Setups

Using the Copy Final Grade Setups page, you can overwrite existing Final Grade Setup from another school.

How to Copy Final Grade Setups

1. On the start page, choose **System** under Setup in the main menu. The System Administrator Page appears.
2. Under Grades, click **Copy Final Grade Setups**. The Copy Final Grade Setups page appears.
3. Use the following table to enter information in the fields:

Type	**Description**
This School	The school in which you are currently working appears. If this is not the school into which you want to copy setup information, change the school by clicking the School link at the top of the page.
School to Copy From	Choose from the pop-up menu the school from which you want to copy setup information.

4. Click **Submit**. The system copies the information.

Export Historical Grades

Create an export file that contains the historical grades for a specific term. Use this procedure to save a backup file of each term's historical grades or to maintain a record of historical grades outside of PowerSchool, such as in a spreadsheet program.

How to Export Historical Grades

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Grades, click **Export Historical Grades**. The Export Historical Grades page appears.
3. Use the following table to enter information in the fields:

Field	Description
School	The page displays the school in which you are currently working. To change the school, click **School** in the navigation bar.
School Year	The current school year appears.
Store Code	Enter the store code of the term for which you want to export historical grades.
Field Delimiter	Use the pop-up menu to indicate how you want the system to separate fields in the export file: • **Tab** • **Comma**
Record Delimiter	Use the pop-up menu to indicate how you want the system to separate records in the export file: • **CRLF**: carriage return and line feed • **CR**: carriage return • **LF**: line feed

Fields to Export	Enter the internal PowerSchool field names of the fields you want to export. **Note:** If you include a field from another table, enter the table name in brackets first, such as **[students]student_number**. Press RETURN (Mac) or ENTER (Windows) after each field name.

4. Click **Submit**. The exported historical grades appear.

   Note: To save the file, choose **File** > **Save As** from your Web browser. Select a file location and type, such as a text file. Click **Save**.

Honor Roll Administration

The ability to calculate your honor roll based on grading, behavior, or attendance information is important to a school. Every school has its own way of calculating or determining who is on the honor roll and who is eligible for extracurricular activities.

First, define the various honor roll lists used by a school or district. Within those lists, set up the different honor levels that may be attained and the criteria for meeting each level. Once the setup is complete, the PowerSchool administrator should run the calculation function periodically throughout the school year. The results of the calculation are stored in a separate table in the database. These results can be viewed as a summary for a single student, a group report, or as individual components of a custom page, export, or custom report using report codes.

Honor Roll Methods

Honor roll methods define the various honor roll lists used by a school or district. You can create as many different honor roll methods as needed. Honor roll methods can be school-specific or shared among all schools on a server.

Honor Roll Levels

Every honor roll method will contain one or more honor roll levels. The evaluation order of honor roll levels is significant. Typically, the highest honor with the most stringent criteria is evaluated first. If a student does not meet the criteria for that level, the criteria for the next highest honor will be evaluated, and so on. If a student meets the criteria for an honor roll level, a record of that honor is created, and the remaining levels are skipped.

The evaluation of the criteria within each honor roll level is cumulative, meaning a student must meet all of the specified options to receive that honor. You can create as many different honor roll levels as needed.

Honor Roll Calculations

Once the honor roll methods and levels have been set up, you can calculate an honor roll at any time.

How to Create an Honor Roll Method

Note: Honor rolls that use a GPA Calculation Type of Current (Start Page > District Setup > GPA Calculations > Calculation Methods > New > Calculation Type = Current) must have a term set up that matches the Final Grade setup. For example, if an Honor Roll for the Q1 Final Grade is used, not only is a Q1 Final Grade needed, but a Q1 term setup in years and terms is also needed.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Grading, click **Honor Roll**. The Honor Roll Methods page appears.
3. Click **New**. The Honor Roll Method page appears.
4. Use the following table to enter information in the fields:

Type	Description
Name	Enter the name of the honor roll method. This is the name that will be referred to in honor roll report codes and on other menu pages.
Description	Enter a description of the honor roll method.
Can be used by	Specifies whether the honor roll method can be used by all schools on the server, or only the current school. Do one of the following: • Select the current school option. • Select the all schools option.

5. Click **Submit**. The Honor Roll Methods page displays the new honor roll method.
6. Click **Levels** next to the method you just created. The Honor Roll Levels page appears.
7. Click **New**. The Honor Roll Level detail page appears.
8. Use the following table to enter general information:

Type	Description
Name	Enter the name of the honor roll level. This is the level name that appears on report pages and is the default value returned by the honor roll report code. This name does not need be unique, allowing you to define multiple sets of criteria for a given level.
Description	Enter a description of the honor roll level.
Evaluation Order	Enter a value specifying the order in which the various honor roll levels will be evaluated. Lower numbers are evaluated first.
Message	Enter the text message you want to appear on report cards and transcripts. **Note:** The message should be longer than the level name.

9. Use the following table to enter GPA options:

Type	Description
GPA Calculation Method	Choose the GPA calculation method to use when evaluating this honor roll level from the pop-up menu. The GPA calculation method is used for two things: determining a GPA value that may be compared against a specified cutoff value and building a list of letter grades that will be used in the Grade Options settings described below. Every honor roll level must specify a GPA calculation method.
GPA result is	Since GPA calculation methods can return alphanumeric results, choose whether the comparison should be numeric or text from the pop-up menu.
Comparison	Choose the comparator to use when comparing the result of the GPA calculation from the pop-up menu. Enter the cutoff value in the provided field. If you do not want to compare the value of the GPA calculation, leave the cutoff value field blank.

Only include grades	If selected, the checkbox setting allows you to override the settings used in the GPA calculation method so that any grades that have been flagged to be excluded from honor roll are not used in the calculation or returned in the list of grades for the grade options. Do one of the following: • Select the checkbox to allow you to override the settings used in the GPA calculation method. • Deselect the checkbox to not allow you to override the settings used in the GPA calculation method.

10. Use the following table to enter credit options information:

Type	**Description**
Potential Credit	Use the pop-up menu to choose the comparator to use when comparing the total of the potential credit hours from the list of grades returned by the GPA calculation. Enter the cutoff value in the provided field. If you do not want to compare the value of the potential credit hours, leave the cutoff value field blank.
Earned Credit	Use the pop-up menu to choose the comparator to use when comparing the total of the earned credit hours from the list of grades returned by the GPA calculation. Enter the cutoff value in the provided field. If you do not want to compare the value of the earned credit hours, leave the cutoff value field blank.
Number of unique courses	Use the pop-up menu to choose the comparator to use when comparing the number of unique course numbers found in the list of grades returned by the GPA calculation. Enter the cutoff value in the provided field. If you do not want to compare the number of unique course numbers, leave the cutoff value field blank.

11. Use the following table to enter grade options information:

Type	Description
Student must have	These four groups of grade options allow you to do comparisons on the list of letter grades returned by the GPA calculation. Choose a comparison from the pop-up menu: • **At least**: There must be at least <the specified number> of any of the grades below in the list of grades returned by the GPA calculation • **No more than**: There cannot be any more than <the specified number> of any of the grades below in the list of grades returned by the GPA calculation • **Exactly**: There must be no more than and no less than <the specified number> of any of the grades below in the list of grades returned by the GPA calculation • **None**: There cannot be any of the grades below in the list of grades returned by the GPA calculation • **Only**: There must be only the grades below in the list of grades returned by the GPA calculation.
Of the grades	Enter a comma-separated list of letter grades to use with the "Student must have" comparison. If you do not want to compare letter grades in one or more of the grade options, leave this field blank.
And	Choose additional comparisons from the pop-up menu. For each additional comparison, enter the "Students must have" and "Of these grades" information.

12. Click **Submit**. The Honor Roll Methods page displays the new honor roll level.
13. Repeat steps 7 through 12 for each level you want to create.
14. Verify the evaluation order.
15. Click **Submit**. The Honor Roll Methods page appears.

How to Edit an Honor Roll Method

Note: Honor rolls that use a GPA Calculation Type of Current (Start Page > District Setup > GPA Calculations > Calculation Methods > New > Calculation Type = Current) must have a term set up that matches the Final Grade setup. For example, if an Honor Roll for the Q1

Final Grade is used, not only is a Q1 Final Grade needed, but a Q1 term setup in years and terms is also needed.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Grading, click **Honor Roll**. The Honor Roll Methods page appears.
3. Click the method you want to edit. The Honor Roll Method page appears.
4. Edit the information as needed. For field descriptions, see *How to Create an Honor Roll Method*.
5. Click **Submit**. The Honor Roll Methods page displays the edited honor roll method.

How to Delete an Honor Roll Method

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Grading, click **Honor Roll**. The Honor Roll Methods page appears.
3. Click the method you want to delete. The Honor Roll Method page appears.
4. Click **Delete**.
5. Click **Confirm Delete**. The Selection Deleted page appears.

How to Edit Honor Roll Levels

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Grading, click **Honor Roll**. The Honor Roll Methods page appears.
3. Click the levels of the honor roll you want to edit. The Honor Roll Level page appears.
4. Click the level you want to edit. The Honor Roll Levels detail page appears.
5. Edit the information as needed. For field descriptions, see *How to Create an Honor Roll Method*.
6. Click **Submit**. The Honor Roll Levels detail page reappears.

How to Delete Honor Roll Levels

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Grading, click **Honor Roll**. The Honor Roll Methods page appears.
3. Click the levels of the honor roll you want to edit. The Honor Roll Level page appears.
4. Click the level you want to delete. The Honor Roll Levels detail page appears.
5. Click **Delete**.
6. Click **Confirm Delete**. The Selection Deleted page appears.

How to Calculate the Honor Roll

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Grades, click **Calculate Honor Roll**. The Calculate Honor Roll page appears.
3. Use the following table to enter information in the fields:

Type	Description
Which Students	Indicate which students for whom you want to calculate honor roll by selecting one of the following options: • Select the **[Student name]** option to calculate honor roll for a single student. This option is useful for testing. • Select **The selected [x] students** option to calculate honor roll for the current selection of students. This selection is useful when calculating honor roll for a specific group of students, such as all current seniors. • Select the **All [x] currently enrolled students** option to calculate honor roll for all enrolled students in the selected school.
Store Code	Indicates the new store code to use when storing the resulting honor roll. Enter a valid store code (a letter followed by a single number). **Note:** Results of the honor roll calculation will be stored using this store code for the current school year.
Honor Roll Method	The method by which you want honor roll calculated. Use the pop-up menu to make your choice. **Note:** Only one honor roll method can be calculated at a time.

4. Click **Submit**. PowerSchool calculates the specified honor roll method for the selected students.

The results of honor roll calculations may be viewed for a single student or for a group of students.

Honor Roll Codes

The honor roll code returns data based on honor roll calculations that are periodically run by the PowerSchool administrator. The honor roll code provides an easy way to access the stored data when working with a single student, such as a custom student page, quick export, or object report.

The basic syntax of the honor roll code is illustrated by the examples below. The code always starts with ***honorroll** and is followed by several parameters (name/value pairs). These parameters are always of the form **name=value**. Certain parameters are required. All other parameters are optional and default values will be used if omitted.

~(*honorroll method=High School term=Q2)
~(*honorroll method=NHS term=S1 year=2002 result=gpa)
~(*honorroll method=Honors term=Q2 grade=11)

The following table lists the parameters, values, and examples for the honor roll code. Parameters and values can be included in the code in any sequence.

Parameter	Description	Example
method	Specifies the name of the honor roll method to return. These methods are predefined by the user in the Honor Roll section of school setup. The method parameter is required. If omitted, an error message is returned.	method=High School method=NHS
term	A single term abbreviation. Specifies the store code of the appropriate honor roll record. The term parameter is required. If omitted, an error message is returned.	term=S1 term=Q3
grade	A single grade level. For KG, PK, use the numeric code 0, -1, and so forth. Specifies the historical grade level of the appropriate honor roll record. Note that grade and year are often mutually exclusive and the use of both parameters in the code may cause no record to be found. If no grade or year	grade=12 grade=8

	parameter is specified, will find an honor roll record from the current school year.	
year	A single four-digit school year. Remember that school years in PowerSchool are specified using the start year. For example, for the 2003-2004 school year, use 2003. Specifies the school year of the appropriate honor roll record. Note that grade and year are often mutually exclusive and the use of both parameters in the code may cause no record to be found. If no grade or year parameter is specified, will find an honor roll record from the current school year.	year=2003 year=2004
result	The type of data to return as the result. Valid options are level, message, gpa, schoolname, and date. Level means return the name of the honor roll level met. Message means return the text message for the honor roll level. GPA means return the GPA used to determine the honor roll level. Schoolname means return the name of the school where the student earned the honor roll. Date means return the date the honor roll was calculated. If omitted, level is returned. Note that if no honor roll is found that matches the parameters specified, no text will be returned regardless of the result setting.	result=level result=message result=gpa result=schoolname result=date

The following are annotated examples of various honor roll codes.

High school honor roll from Q3 of the student's junior year:
~(*honorroll method=High School term=Q3 grade=11)

The GPA used to determine that honor roll level:
~(*honorroll method=High School term=Q3 grade=11 result=gpa)

The NHS honor roll message from S2 of the current school year:
~(*honorroll method=NHS term=S2 result=message)

The date the Q1 Honors honor roll was calculated for this student in the 2002-2003 school year:
~(*honorroll method=Honors term=Q1 year=2002 result=date)

Permanently Store Grades

In PowerSchool, student records include two types of grades: current and historical. Current grades are the students' grades in each of their teachers' PowerTeacher systems. Historical grades are final grades, or grades that are permanently stored in the students' records. Historical grades appear on report cards and transcripts. At the end of each grading term, use the Permanently Store Grades function to copy and store the students' current grades in PowerTeacher as historical grades.

By default, PowerSchool administrators have 30 calendar days after the term end date to store or re-store grades. The "term end date" refers to the end of the scheduling term associated to a given class. For example, when storing Q1 grades for a Quarter 1 class, administrators have until 30 days after the last day of Quarter 1 to store those grades. However, when storing Q1 grades for Year Long classes, administrators have until 30 days after the end of the year to store those grades. For more information, see *Final Grades Setup for PowerTeacher*. Changes to grades beyond the 30 days within the current school year term, can also be performed using the **Show All Terms** setting.

Note: Changes to grades beyond the 30 days, but not within the current school year term, would need to be performed either manually on the student's Historical Grades page or by importing the grades.

Before permanently storing grades, be sure that you set up grade scales, final grades, and the current grade display. For more information, see *Grade Scales*, *Final Grades Setup for PowerTeacher*, and *Current Grade Display*.

Also, you should run several reports before permanently storing grades. The Student Schedule Listing report lists the current grades and any missing grades for selected students. For more information, see *How to Run the Student Schedule Listing Report*. Print the Class Rosters report for teachers to verify that all the grades are correct. For more information, see *How to Run the Class Rosters (PDF) Report*.

Warning: Be sure the to use this feature carefully, as storing grades affects historical grades, which affect various parts of PowerSchool, including (but not limited to) GPAs, transcripts, and graduation progress.

Note: This procedure may only be performed at the school level.

How to Permanently Store Grades

The Permanently Store Grades page is comprised of the following sections:

- *Which Grades*
- *Exclude/Include Class Enrollments*
- *Additional Filter Options*
- *Classes by Term Length*
- *Options for Classes Enrolled at Other Schools*
- *Options for Withholding Credit*
- *Advanced Potential and Earned Credit Options*
- *Variable Credit Storing Preferences*
- *Repeated Course Grade Suppression*

Which Grades

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Grades, click **Permanently Store Grades**. The Permanently Store Grades page appears.
3. Use the following table to enter information in the fields:

Field	Description
Use this Final Grade/Reporting Term	Enter a two or three-digit code or use the pop-up menu to choose one to indicate the term in which the students earned the grades, such as **Q1** or **S1**. The first character must be a letter, and the second and third characters must be a number. **Note:** Do not use the same store code twice in one year. The system will overwrite the grades you stored under the store code the first time with the grades you store the second time. **Note:** This value is stored as TermBinsName in the StoredGrades table and is accessible using DDA, DDE, importing and exporting.
Save with this Historical Store Code	Enter the term code from which you want to save the grades. The term code is usually the same as the store code, such as **Q1** or **S1**. For more information about defining term codes, see *Final Grades Setup*.

4. To continue, see *Exclude/Include Class Enrollments*.

Exclude/Include Class Enrollments

Using the Exclude/Include Class Enrollments section, you can store current grades based on students' enrollment or dropped class dates.

Note: If you leave the date-related fields blank, PowerSchool stores a grade for every enrollment record, including classes that students dropped during the term. Most schools enter a two-week grace period at both the beginning and end of the term. This allows for all of the add/drop procedures at the beginning of the term to be ignored in the store grades process. Also, PowerSchool does not store grades for students who enroll in your school during the last two weeks of the term.

1. Scroll to the **Exclude/Include Class Enrollments** section.
2. Use the following table to enter information in the fields:

   Note: Select any combination of the checkboxes.

Field	Description
Exclude enrollment records where the student enrolled in the class after this date	1. Select the checkbox to exclude enrollment records where the student enrolled in the class after this date. 2. Enter the date or click the **Calendar** icon to select a date.
Exclude enrollment records where the student dropped the class before this date	1. Select the checkbox to exclude enrollment records where the student dropped the class before this date. 2. Enter the date or click the **Calendar** icon to select a date.
Include only enrollment records that are currently active and that were active on this date	1. Select the checkbox to include only enrollment records that are currently active and that were active on this date. 2. Enter the date or click the **Calendar** icon to select a date.

3. To continue, see *Additional Filter Options*.

Additional Filter Options

Using the Additional Filter Option section, you can narrow the grades to be stored based on currently selected student, track, grade level, and exit date

1. Scroll to the **Additional Filter Options** section.
2. Click the arrow to expand the section. Click again to collapse the section.
3. Use the following table to enter information in the fields:

Field	Description
Store grades for currently selected () students only	To filter by student selection, do one of the following: • Select the **Store grades for currently selected () students** checkbox to permanently store grades for only the currently selected students. • Deselect the **Store grades for currently selected () students** to permanently store grades for all students in the current school. **Note:** By default, the checkbox is disabled if there are no students in the current selection.
Request that grades be stored only for a specific section	To store grades for students in a specific course section only, enter the course and section numbers, separated by a period. For example, enter **113.04** for Course 113, Section 04. You can do this when teachers are late in entering their final grades or when testing the process of storing grades. Store grades for one course section before you store grades for all course sections. Leave this field blank to store grades for all course sections. **Note:** This setting is only applicable to this school and not remote schools. All other settings in the Additional Filter Options section are applicable to this school as well as remote schools.
Student Grade Level	To filter by grade level, select the checkboxes of the grade levels by which you want to filter the student storing selection.
Track	To filter by track, select the checkboxes of the tracks by which you want to filter the student storing selection.

School Exit Date	To filter by exit date range (first day the student's enrollment is not active or the day after the student's last day in class), enter the date range by which you want to filter the storing selection in the **From** and **to** fields, or click the **Calendar** icon to select a date. **Note:** This setting does not find students who were enrolled through the specified range but finds students whose school exit date falls within the specified range.

4. To continue, see *Classes by Term Length*.

Classes by Term Length

Using the Classes by Term Length section, you can indicate the terms for which you want to store grades.

1. Scroll to the **Classes by Term Length** section.
2. Use the following table to enter information in the fields:

Field	**Description**
[Terms]	The name of the term and date range of the term appears.
Store	For each term, choose one of the following from the pop-up menu: • **Do not store.** • **Store with credit.** • **Store with no credit.** **Note:** If the **Show All Terms** is set to **Yes** and **Store with credit** or **Store with no credit** is selected, the following message may appear "The [term name] is a [past, recently started, future] term. Are you sure you want to proceed with configuring to store grades for this term?" Click to **Yes** to confirm. Otherwise, click **Cancel**.
% of Course Credit	If **Do not store** is selected, the percent field appears shaded and no value can be entered.

	If **Store with credit** is selected, enter a percentage of the course credit to award at the time grades are permanently stored. Valid values range from **1** to **400**. If **Store with no credit** is selected, the field is automatically populated with a **0**. The value may not be changed from **0**.
Show All Terms?	By default terms that are in progress or recently passed appear. If you are storing grades for a term that is not in progress or recently passed, you may need to display all terms. If a term was already stored, you will overwrite the grades for that term and may affect graduation credit, GPAs, and transcripts. Indicate the terms for which you want to store grades: • Choose **No** to show only terms that are in progress or recently passed. This option is selected by default. • Choose **Yes** to show all terms for the current school year term. **Note:** If the **Show All Terms** is set to **Yes** and the server date does not fall within a scheduling term, the term defaults to the **Default Term When Between School Years** setting. For more information, see *Miscellaneous District Settings*. The name of the term and date range of the term appears based on your selection. Current terms appear bold, past terms appear not bold, and future terms appear not bold and italicized. **Note:** Past terms indicate the term ended beyond 30 days from today's date. Recently started terms indicate the term started within 10 days prior to today's date. Current term indicates the term has not started within 10 days prior to today's date and has not ended within the last 30 days from today's date. Future terms indicate the term has not yet started.

3. To continue, see *Options for Classes Enrolled at Other Schools*.

Options for Classes Enrolled at Other Schools

Using the Options for Classes Enrolled at Other Schools section, you can indicate whether to store grades for all schools or for the selected school only. For example, if a middle school student takes a class at the high school, the middle school must select this option when permanently storing grades.

Note: When storing grades for students taking classes at other schools, the TermID fields must match between the schools for those enrollments to store correctly.

1. Scroll to the **Options for Classes Enrolled at Other Schools** section.
2. Use the following table to enter information in the fields:

Field	Description
Store grades for classes enrolled at	Select whether to store grades for all schools or for the selected school only. If storing for the selected school only, PowerSchool will not store grades for the other schools at which students may take classes.
Record the school name of	Select which school name to use when storing grades. Select either the other school or the current school.

3. To continue, see *Options for Withholding Credit.*

Options for Withholding Credit

Using the Options for Withholding Credit section, you can indicate whether or not to apply options for withholding credit during the permanently store grades process. If applied, a student may be allowed to miss a certain number of classes. However, if the student exceeds the allowable attendance points, any credit the student had earned will be cleared and a grade indicating such will be given. For example, if a student originally receives a grade of C for a course; however, due to excessive absences, the student receives an I (Incomplete) and no credit for the course.

Note: These settings are retained and available each time you navigate back to this page/section.

1. Scroll to the **Options for Withholding Credit** section.
2. Use the following table to enter information in the fields:

Field	Description
[Checkbox]	Do one of the following: • Select the checkbox to apply options for withholding credit. If selected, a student may be allowed to miss a certain number of classes. However, if the student exceeds the allowable attendance points, then the student will not receive credit for the course and any credit they had earned will be cleared. • Deselect the checkbox if you do not want to apply options for withholding credit.
If more than [ ] attendance points have been accumulated	Enter the number of times a student is allowed to miss a class, such as 5.
Between the dates of [ ] and [ ]	Enter the date range of the course, such as 09/03/2012 to 12/21/2012.
Then give the student a grade of [ ]	Enter the grade the student will receive if the attendance points are exceeded, such as I (Incomplete).
And a GPA point value of [ ]	Do one of the following: • Enter a value of zero or higher to replace any existing GPA point value for the affected grades. • Leave blank if you do not want to replace any existing GPA point value for the affected grades.
And store the real grade in the "teacher comment" field with this comment	Enter a comment if you want the original grade the student earned to appear with the comment.

3. To continue, see *Advanced Potential and Earned Credit Options.*

Advanced Potential and Earned Credit Options

Using the Advanced Potential and Earned Credit Options section, you can indicate the options you want to apply for storing potential and earned credit.

1. Scroll to the **Advanced Potential and Earned Credit Options** section.
2. Click the arrow to expand the section. Click again to collapse the section.
3. Choose one of the following from the When storing with credit pop-up menu:
    - **Store Both Potential and Earned Credit**
    - **Store Potential Credit Only**
    - **Store Earned Credit**
4. To continue, see *Variable Credit Storing Preferences.*

    Note: Advanced Potential and Earned Credit Options may or may not be used with the Variable Credit Storing Preferences. If used together, the Advanced Potential and Earned Credit Options withhold earned or potential credit even if a teacher has specified awarded (earned) or attempted (potential).

    For example, if a teacher has specified 1 for **Variable Awarded Credit** and **Variable Attempted Credit** in PowerTeacher Gradebook, then the administrator uses the Advanced Potential and Earned Credit Options to **Store Potential Credit Only**, then the result would be 1 credit for attempted (potential) and no credit for awarded (earned).

Variable Credit Storing Preferences

Using the Variable Credit Storing Preferences section, you can indicate the options you want to apply for storing variable credit.

Note: These options only apply if variable credit is enabled. Variable credit may be enabled for an individual section or for multiple sections.

1. Scroll to the **Variable Credit Storing Preferences** section.
2. Click the arrow to expand the section. Click again to collapse the section.
3. Use the following table to enter information in the fields:

Field	**Description**

Store these credit hours	Indicate which credit hours you want to store by choosing one of the following from the pop-up menu: • **Awarded and Attempted** - Earned and potential credit. • **Awarded** - Earned credit. • **Attempted** - Potential credit. • **None**
Store this when teacher has not entered variable credit hours	Indicate how to handle variable credit where no value has been entered by teachers by choosing one of the following from the pop-up menu: • **Credit hours for course/gradescale** - Store the credit hours as defined in the course and gradescale. • **0** - Store the credit hours as zero.
Round or truncate	Indicate how to handle variable credit values entered by teachers by choosing one of the following from the pop-up menu: • **Round** • **Truncate**
Number of decimal places in variable credit hours	Indicate the number of allowable decimals by choosing one of the following from the pop-up menu: • **0** • **1** • **2** • **3** • **4**

4. To continue, see *Repeated Course Grade Suppression.*

Repeated Course Grade Suppression

Using the Repeated Course Grade Suppression section, you can indicate whether to apply repeated course grade suppression policy rules. If enabled, stored grades related to grade scales that allow repeated course grade suppression will be evaluated by the repeated course grade suppression rules during the permanently store grades process.

Note: This setting is retained and available each time you navigate back to this page/section.

Note: For more information, see *Repeated Course Grade Suppression*.

1. Scroll to the **Repeated Course Grade Suppression** section.
2. Click the arrow to expand the section. Click again to collapse the section.
3. Use the following table to enter information in the fields:

Field	Description
Apply Repeated Course Grade Suppression Policy Rules	Select the checkbox to allow repeated course grade suppression. Otherwise, leave blank.

4. Click **Save**. A confirmation message appears.

District Setup

Citizenship Codes

Use this page to create, view, edit, or delete citizenship codes used when grading students. These codes are available in PowerTeacher Gradebook.

How to Add a Citizenship Code

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **Citizenship Codes**. The Citizenship Codes page appears.
3. Click **New**. The Edit Citizenship Code page appears.
4. Use the following table to enter information in the fields:

Field	Description
Code	Enter the citizenship code.
Description	Enter a description for the citizenship code.
Sort order for display	Use the pop-up menu to choose the sort order to appear on the Citizenship Codes page.

5. Click **Submit**. The Citizenship Codes page displays the new citizenship code.

How to Edit a Citizenship Code

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **Citizenship Codes**. The Citizenship Codes page appears.
3. Click either the code or the description of the citizenship code you want to edit. The Edit Citizenship Code page appears.
4. Edit the information as needed. For field descriptions, see *How to Add a Citizenship Code*.
5. Click **Submit**. The Citizenship Codes page displays the edited citizenship code.

How to Delete a Citizenship Code

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **Citizenship Codes**. The Citizenship Codes page appears.
3. Click either the code or the description of the citizenship code you want to delete. The Edit Citizenship Code page appears.
4. Click **Delete**.
5. Click **Confirm Delete**. The Selection Delete page appears.

Comment Setup

Teacher comments are an essential tool for communicating information about a student's achievements and/or behavior.

Setup

If using PowerTeacher Gradebook, you can set up a predefined comment bank and define comment lengths. For detailed information, see *Comment Bank* and *Comment Length*.

Entry

Teacher comments can be entered in PowerTeacher and PowerTeacher Gradebook. In PowerTeacher teacher comments can be entered manually and in PowerTeacher Gradebook, teacher comments can be entered manually, or you can use the district's predefined comment banks or your own personal comment bank.

View

Once entered, teacher comments can be viewed in PowerSchool, the PowerSchool Student and Parent portal, PowerTeacher, and PowerTeacher Gradebook.

Comment Bank

Use the comment bank to create and maintain a collection of ready-to-use comments that teachers can then apply in PowerTeacher Gradebook.

Note: The Comment Bank is only available in PowerTeacher Gradebook at this time. For more information about PowerTeacher Gradebook, see *PowerTeacher Gradebook User Guide* available on PowerSource.

How to Create Comments in the Comment Bank

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.

2. Under Grading, click **Comment Setup**. The Comment Bank page appears.
3. Click **New**. The New Comment page appears.
4. Use the following table to enter information in the fields:

Field	Description
Comment Code	Enter a numeric, alphabetical, or alphanumeric code.
Category	Enter a category to which you want to assign your comment (optional). The comment bank groups the comments by category. **Note:** Categories are not relevant to reports or searches. Comment categories affect only how the comments appear on the Comment Bank page.
Available to	Select an option to display this comment for all schools on this server or only the selected school.
Insert Smart Text	Use smart text to simplify comment entry and personalize standardized comments. Smart text may be inserted into a comment, which will then be auto-populated when the comment is used. For example, rather than entering "Student making steady progress academically," you can personalize the comment by entering "<first name> is making steady progress academically," which translates to "Kate is making steady progress academically." To add smart text to a comment, place the cursor in the **Comment Text** field where you want to add the smart text, and then choose one of the following smart text from the pop-up menu: Student Names • <first name> - translates to PSM_Student.Firstname • <last name, first name> - translates to PSM_Student.LastName, PSM_Student.FirstName • <first name last name> - translates to PSM_Student.Firstname PSM_Student.LastName • <preferred name> - translates to the **Preferred Name** on the Student Info window in PowerTeacher Gradebook; if

	one has not been entered, it translates to PSM_Student.FirstName. • <last name> - translates to PSM_Student.LastName Pronouns based on PSM_Student.Gender • <he/she> - translates to *he* or *she* • <his/her> - translates to *his* or *her* • <him/her> - translates to *him* or *her* • <He/She> - translates to *He* or *She* • <His/Her> - translates to *His* or *Her* • <Him/Her> - translates to *Him* or *Her* The selected smart text then appears within the comment.
Comment Text	Enter the comment text, which can include smart text, hyperlinks and some HTML.

5. Click **Submit**. The Comment Bank page displays the new comment.

How to Edit Comments in the Comment Bank

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Grading, click **Comment Setup**. The Comment Bank page appears.
3. Click the code for the comment you want to edit. The Edit Comment page appears.
4. Edit the information as needed. For field descriptions, see *How to Create Comments in the Comment Bank*.
5. Click **Submit**. The Comment Bank page displays the edited comment.

How to Delete Comments in the Comment Bank

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Grading, click **Comment Setup**. The Comment Bank page appears.
3. Click the code for the comment you want to delete. The Edit Comment page appears.
4. Click **Delete**.
5. Click **Confirm Delete**. The Selection Delete page appears.

Comment Length

In PowerTeacher Gradebook, teachers may enter final grade comments and standard final grade comments. Using the comment length setting, you can define the maximum number of characters that may not be exceeded when entering a comment in PowerTeacher Gradebook. If comment length is defined at the district level, the setting is applicable to all schools within the district. If the comment length is defined at the school level, it will override the district setting.

Note: Comment length is only available in PowerTeacher Gradebook. For more information about PowerTeacher Gradebook, see *PowerTeacher Gradebook User Guide* available on PowerSource.

How to Define Final Grade Comment Length

Use the following procedure to define the final grade comment length at the district level.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **Comment Setup**. The Maximum Comment Character Length page appears.
3. Enter the number of characters (up to 2048) allowed in the **Approximate maximum number of characters** field.
4. Click **Save**. A confirmation message appears.

How to Define Standard Grade Comment Length

Note: Standard grade comments are adjusted individually for each standard. For more information, see *Enter Standards*.

How to Define Final Grade Comment Length

Use the following procedure to define the final grade comment length at the school level.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Grading, click **Comment Setup**. The Comment Bank page appears.
3. Click the **Comment Length** tab. The Maximum Comment Character Length page appears.
4. In the Final Grade Comments section select the **School Level** option and then enter the number of characters (up to 2048) allowed.

Note: To apply the maximum length defined by the district, select the **Same as district** option. For more information, see *How to Define Maximum Length for Final Grade Comment at District Level*.

5. Click **Submit**. A confirmation message appears.

How to Define Standard Grade Comment Length

Use the following procedure to define the standard grade comment length at the school level.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Grading, click **Comment Setup**. The Comment Bank page appears.
3. Click the **Comment Length** tab. The Maximum Comment Character Length page appears.
4. In the Standards Comments section select the **School Level** option and then enter the number of characters (up to 4000) allowed.

   Note: To apply the maximum length defined by the district, select the **Same as district standards setup** option. For more information, see *Enter Standards*.

5. Click **Submit**. A confirmation message appears.

Comment Length

In PowerTeacher Gradebook, teachers may enter final grade comments and standard final grade comments. Using the comment length setting, you can define the maximum number of characters that may not be exceeded when entering a comment in PowerTeacher Gradebook. If comment length is defined at the district level, the setting is applicable to all schools within the district. If the comment length is defined at the school level, it will override the district setting.

Note: Comment length is only available in PowerTeacher Gradebook. For more information about PowerTeacher Gradebook, see *PowerTeacher Gradebook User Guide* available on PowerSource.

District Setting

How to Define Final Grade Comment Length

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **Comment Setup**. The Maximum Comment Character Length page appears.
3. Enter the number of characters (up to 2048) allowed in the **Approximate maximum number of characters** field.
4. Click **Save**. A confirmation message appears.

How to Define Standard Grade Comment Length

Note: Standard grade comments are adjusted individually for each standard. For more information, see *Enter Standards*.

School Setting

How to Define Final Grade Comment Length

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Grading, click **Comment Setup**. The Comment Bank page appears.
3. Click the **Comment Length** tab. The Maximum Comment Character Length page appears.
4. In the Final Grade Comments section select the **School Level** option and then enter the number of characters (up to 2048) allowed.

   Note: To apply the maximum length defined by the district, select the **Same as district** option. For more information, see *How to Define Maximum Length for Final Grade Comment at District Level*.

5. Click **Submit**. A confirmation message appears.

How to Define Standard Grade Comment Length

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Grading, click **Comment Setup**. The Comment Bank page appears.
3. Click the **Comment Length** tab. The Maximum Comment Character Length page appears.
4. In the Standards Comments section select the **School Level** option and then enter the number of characters (up to 4000) allowed.

Note: To apply the maximum length defined by the district, select the **Same as district standards setup** option. For more information, see *Enter Standards*.

5. Click **Submit**. A confirmation message appears.

GPA Calculations

Before running a grade-related report, such as a report card, set up the correct parameters to calculate your school's grade point average. Some schools also choose to factor into the GPA calculation the number of times a student takes a course. Since GPAs are calculated on-the-fly, any changes take effect immediately and affect all schools on the server.

For information about setting the calculation methods and attempt types, see the following sections:

- *GPA Calculation Methods*
- *GPA Attempt Types*

For information about other GPA settings, see *How to Set Other GPA Settings*.

GPA Calculation Methods

Create GPA calculation methods to define the formula and criteria for GPA calculations. PowerSchool includes four standard calculation methods: Simple, Simple Percent, Weighted, and Weighted Percent. You can modify the standard methods to meet your needs or create an unlimited number of additional calculation methods.

Any changes or additions to the list of calculation methods affect all schools on your server. To share a method with schools on other servers, export the method as a template. For more information, see *How to Export GPA Calculation Methods*. If you have the proper permissions, you can remove a calculation method using DDA/DDE. For more information, see *Direct Database Export*.

Once GPA is calculated, the GPA code is used to present GPA information on reports, exports, and student pages. This code always starts with *gpa and is followed by optional parameters that include pairs of names and values.

Examples of the GPA code include:

- **~(*gpa)** returns the cumulative weighted GPA for a student for all years at the school
- **~(*gpa method=weighted type=cumulative grade=12 credittypeCORE)** returns a weighted GPA for core classes for the student's senior year

The following table lists the parameters and values. All parameters except for "method" are overridden by any settings in the calculation method. Parameters and values can be included in the code in any sequence.

Parameter	Description	Example
method	Specifies the name of the specific calculation method that should be used when performing this calculation. If omitted, a method called "weighted" will be used.	method=weighted method=simple method=honors
type	Specifies the type of the calculation. Valid options are: • **Cumulative:** Uses values from historical grades only. • **Current:** Uses the current (not stored) grades sent by PowerTeacher. If "current" is specified, the term, grade, and year attributes, if specified, are ignored; only grades from the in-session school year using the store code specified on the Current Grade Display settings page in District Setup will be used. • **Projected:** Uses the historical grades, plus those projected grades as defined in the calculation method. If omitted, "cumulative" is used.	type=cumulative type=current type=projected
term	One or more term abbreviations. Only grades whose store codes match the specified abbreviations will be used in the calculation. Separate multiple terms with commas. If omitted, any store code	term=S1 term=Q1,Q2,Q3

	is permitted. If one or more term abbreviations are specified but no grade or year, only grades from the current school year are used.	
grade	One or more grade levels. Only grades stored at the specified grade levels will be used in the calculation. Separate multiple grade levels with commas. If omitted, the historical grade range for the school is used.	grade=12 grade=7,8,9
year	One or more four-digit school years. Only grades stored during the specified school years will be used in the calculation. Specify the start year of a school year that spans multiple calendar years. For example, use 2003 for the 2003-2004 school year. Separate multiple years with commas. If omitted, all school years are used.	year=1999 year=1998,1999,2000
credittype	One or more credit types. Only grades that match one or more of the specified credit types will be used in the calculation. Separate multiple credit types with commas. If omitted, grades with any credit type, including no credit type, are used.	credittype=English credittype=ENG,SCI,MATH credittype=Core,Electives
scale	The name of the grade scale to use for this calculation. If a particular letter grade is not present in the specified grade scale, that grade will not be included in the calculation. If the name of the grade scale specified is unrecognized, a scale called Default is used. If omitted, the GPA points from the grade itself are used.	scale=Default scale=Standard scale=Honors

How to Add GPA Calculation Methods

Note: When using projected GPA options, most schools will set the last three options as **Projected grades are stored grades from this [specified] term**, **do not add grade if a grade for this course exists in any term**, and **Stored credit hours use the course's potential credit hours**.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **GPA Calculations**. The GPA Settings page appears.
3. Click **Calculation Methods**. The GPA Calculation Methods page appears.
4. Click **New**. The GPA Calculation Method page appears.
5. Use the following table to enter information in the fields:

Field	Description
Method name	Enter the name of the calculation method. This is the name that will be referred to in GPA codes on other pages in PowerSchool. **Note:** The standard methods Weighted and Simple cannot be renamed.
Description	Enter a description of the calculation method. This description appears on the GPA Calculation Methods page.
Formula	Enter the formula for the method used to determine the result of the calculation. The formula closely resembles a formula used on a spreadsheet. Formulas can include functions, such as average, round, and sum. Use standard operators, such as **+** (addition) and ***** (multiplication) or use logical operators such as **=** (equal to) and **>** (greater than). For more information, see *Formulas for Calculation Methods*.
Calculation type	Choose an option from the pop-up menu: • **Cumulative:** Uses historical grades in the calculation that match the query options specified. • **Current:** Uses current final grades in the calculation, as determined in the School Setup area. A current calculation

	type uses the current final grades from PowerTeacher. Terms, grade levels, and school years are ignored with this calculation type. • **Projected:** Uses historical grades and additional grades as defined in the Projected GPA Options area of the GPA Calculation Method page. A projected calculation type uses historical grades that match the query options specified, plus additional grades determined by any Projected GPA Options. If the calculation type is specified, the type parameter of the GPA code is ignored.
Grade scale	To override the GPA points used in the calculation with a single grade scale, choose the grade scale from this pop-up menu. If a specific letter grade is not found in the grade scale, it is not used in the calculation. Ordinarily, the GPA points associated with the stored grade are used in the calculation. Typically, these are the weighted points. A single grade scale may be specified to override these GPA points with the values in the specified grade scale for this calculation. For example, a stored grade A may have 5 GPA points. That same A may only be worth 4 GPA points on the Standard grade scale. Use scales to calculate complex weighted GPAs for class ranking and honor roll applications, while maintaining a standard 4.0 scale to use on transcripts and college applications. If a grade scale is specified, the scale parameter of the GPA code is ignored.
Terms	Optionally, specify one or more term abbreviations, such as **Q1** or **S2**, to use in the calculation. Separate multiple values with commas. Only grades whose store code matches one of the term abbreviations will be included in the calculation. If the calculation type is Current, terms are ignored. If terms are specified, the term parameter of the GPA code is ignored.
Grade levels	Optionally, specify one or more grade levels to use in the calculation. Use the numeric grade level, such as **11** for eleventh

	grade or **0** for kindergarten. Separate multiple values with commas. Only grades recorded when a student was at the specified grade levels will be included in the calculation. Note that only grades that fall within the historical grade levels specified in the school's record in District Setup may be specified. For example, if the historical range for the school is 912, specifying **8** in the GPA code will return zero. Separate multiple grade levels with commas. If omitted, the historical grade range for the school is used. If the calculation type is Current, grade levels are ignored. If grade levels are specified, the grade parameter of the GPA code is ignored.
School years	Optionally, specify one or more four-digit school years to use in the calculation. For example, enter **2003** for the 2003-2004 school year. Separate multiple values with commas. Only grades recorded during the specified school years will be included in the calculation. School years are closely related to grade levels. As such, if the school year specified translates to a student's grade level that is outside the historical range for the school, zero will be returned. For more information, refer to the "Grade levels" field. If the calculation type is Current, school years are ignored. If school years are specified, the year parameter of the GPA code is ignored.
Credit types	Optionally, specify one or more credit types to use in the calculation. Separate multiple values with commas. Only grades whose credit type matches one of the types specified will be included in the calculation. In case of a current GPA, the course's credit type is used. In case of a cumulative GPA, the credit type specified for the stored grade is used if present; otherwise, the course's credit type is used, if found. If an historical grade does not have a credit type or if the calculation type is Current, the course's credit type is used. If

	credit types are specified, the credittype parameter of the GPA code is ignored.
Only include grades	Select all, none, or a combination of the following checkboxes to narrow the selection of grades used in the calculation: • **That count in GPA:** Includes only historical grades that are specified to be included in the GPA. If the calculation type is Current, only grades from courses and sections that have been flagged to be included in GPA will be included in the calculation. • **That count in class rank:** Includes only historical grades that are specified to be included in the class rank. If the calculation type is Current, only grades from courses and sections that have been flagged to be included in class rank will be included in the calculation. • **That count in honor roll:** Includes only historical grades that are specified to be included in the honor roll. If the calculation type is Current, only grades from courses and sections that have been flagged to be included in honor roll will be included in the calculation. • **With potential credit:** Includes only historical grades that have a potential credit that is not zero. If the calculation type is Current, the potential credit is determined by referring to the corresponding course record. If you deselect all of these checkboxes, all historical grades will be included in the calculation.
Projected grades are	If the calculation type is Projected, choose the type of grades used for projected GPA calculations from this pop-up menu. Projected grades are used to determine grades mid-term, such as when colleges want grades for a twelfth-grade student for admission purposes. • **Current final grades:** Uses current final grades from PowerTeacher, as determined in the School Setup area. • **Stored grades from this term:** Enter the term abbreviation in the blank field.

Do not add grade if	If the calculation type is Projected, choose the term for the grade to use in projected GPA calculations from this pop-up menu: • **A grade for the course exists in any term** • **A grade for the course exists in this term:** Enter the term abbreviation in the blank field. A grade will not be added to the calculation if there already exists an historical grade for the current school year with the same course number for any store code or for the specified store code.
Stored credit hours	If the calculation type is Projected, choose the credit hours option used in projected GPA calculations from this pop-up menu: • **Use actual credit hours** • **Get potential credit from course** If projected grades are historical grades, specify whether to use the actual potential and earned credit stored with the grade or to use the potential credit hours from the corresponding course.

6. Click **Submit**. The GPA Calculation Methods page displays the new method.

How to Edit GPA Calculation Methods

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **GPA Calculations**. The GPA Settings page appears.
3. Click **Calculation Methods**. The GPA Calculation Methods page appears.
4. Click the name of the calculation method you want to edit. The GPA Calculation Method page appears.
5. Edit the information as needed. For field descriptions, see *How to Add GPA Calculation Methods*.
6. Click **Submit**. The GPA Calculation Methods page displays the edited method.

How to Export GPA Calculation Methods

After you create and save a calculation method, you can export the calculation method for use on another PowerSchool server. The option to export the calculation method is available only for saved methods.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **GPA Calculations**. The GPA Settings page appears.
3. Click **Calculation Methods**. The GPA Calculation Methods page appears.
4. Click the name of the calculation method to be exported. The GPA Calculation Method page appears.
5. Click **Export as template**. Save the file as a PowerSchool Template file (*.pst). You can now share the file with other PowerSchool servers.

Formulas for Calculation Methods

Like a formula in a spreadsheet, create formulas for calculation methods in PowerSchool. Formulas consist of functions and arguments, in most cases. Functions are used to perform operations on values, such as calculating a sum or an average, including a grade point average.

There are five categories of functions:

- **Numeric:** Such as rounded, truncated by specified number of places
- **Logical:** Such as "if," "and," "or"
- **Statistical:** Such as average, max, min, median, product, sum
- **Text:** Such as ASCII characters, uppercase, repeat text by specified number of times
- **GPA functions:** Such as number of grades counted in GPA, course numbers, GPA calculation

Results of GPA functions may be arrays of values, which are in braces and separated by commas. For example, the function gpa_percent() may return the result {95.5,83.2,67.8,92} for a student. When you combine the gpa_percent() function with the statistical function average, the formula average(gpa_percent()) returns the result of 84.625 for those four grades.

Embed functions within each other to return the exact result you want. When appending the Round function to the example above to create the formula round(average(gpa_percent()),2), the result is 84.63. The value 2 in the formula indicates the number of digits to round from the decimal point.

You can also use any standard numeric or text operators in a formula, such as **+** (addition), **-** (subtraction), ***** (multiplication), **/** (division), **** (integer division), **^** (exponentiation), **%** (modulo), and **&** (concatenation). The following comparison operators may be used in logical functions: **<** (less than), **<=** (less than or equal to), **>** (greater than), **>=** (greater than or equal to), **=** (equal to), and **<>** (not equal to). For example, use the formula if((average(gpa_percent()))>90,Outstanding Academic Achievement,) to return the phrase

Outstanding Academic Achievement if a student's average percentage for the grades exceeds 90 percent. If not, the formula returns nothing.

For more information about functions, see *Functions*. For a list of functions, see the following sections:

- *Numerical Functions*
- *Logical Functions*
- *Statistical Functions*
- *Text Functions*
- *GPA Functions*

GPA Attempt Types

When calculating a student's GPA, you may want to consider the number of times he or she attempts to take a course. An attempt is a numerical expression to determine the length of the term. The name of the attempt type is the first letter of the term abbreviation, such as Y for year or S for semester. The corresponding number is the numeric expression, using decimals for fragments of the term.

Attempt types are used by the gpa_attempts() function. Attempts for a grade are determined by looking up the first character of the store code or term abbreviation, which is listed with the attempt type. If a match is found, the value specified for the attempt type is returned. If a match is not found, zero is returned as a result of that function. For more information about functions, see *Formulas for Calculation Methods*.

How to Add GPA Attempt Types

If you are using the gpa_attempts() function, set up GPA attempt types to factor the number of times a student takes a course in GPA calculations. Otherwise, it is not necessary to create attempt types.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **GPA Calculations**. The GPA Settings page appears.
3. Click **Attempt Types**. The GPA Attempt Types page appears.
4. Click **New**. The GPA Attempt Type page appears.
5. Use the following table to enter information in the fields:

Field	Description

Name	Enter the name of the attempt type, which is the first letter of the term abbreviation.
Value	Enter the value of the attempt type.
Description	Enter a description for the attempt type.

6. Click **Submit**. The GPA Attempt Types page displays the new attempt type.

How to Edit GPA Attempt Types

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **GPA Calculations**. The GPA Settings page appears.
3. Click **Attempt Types**. The GPA Attempt Types page appears.
4. Click the name of the attempt type you want to edit. The GPA Attempt Type page appears.
5. Edit the information as needed. For field descriptions, see *How to Add GPA Attempt Types*.
6. Click **Submit**. The GPA Attempt Type page displays the edited attempt type.

How to Delete GPA Attempt Types

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **GPA Calculations**. The GPA Settings page appears.
3. Click **Attempt Types**. The GPA Attempt Types page appears.
4. Click the name of the attempt type you want to delete. The GPA Attempt Type page appears.
5. Click **Delete**.
6. Click **Confirm Delete**. The Selection Deleted page appears.

How to Set Other GPA Settings

Modify other global settings related to GPA calculations, including the number of decimal places used in credit hours and the ability to prevent modifications of grade scales.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.

2. Under Grading, click **GPA Calculations**. The GPA Settings page appears.
3. Click **Miscellaneous**. The GPA Misc Settings page appears.
4. Use the following table to enter information in the fields:

Field	Description
Number of decimal places in credit hours	Enter the number of places from the decimal point to display for the credit hours.

5. Click **Submit**. The Changes Recorded page appears.

Functions

Formulas consist of functions and arguments, in most cases. Functions are used to perform operations on values, such as calculating a sum or an average, including a grade point average (GPA).

There are five categories of functions:

- Numerical functions: Such as rounded, truncated by specified number of places
- Logical functions: Such as "if," "and," "or"
- Statistical functions: Such as average, max, min, median, product, sum
- Text functions: Such as ASCII characters, uppercase, repeat text by specified number of times
- GPA functions: Such as number of grades counted in GPA, course numbers, GPA calculation

Functions must always include the parentheses, even if no arguments are specified. When specifying arguments to functions, be sure to enclose text values in quotation marks.

GPA Samples

Sample GPA formulas are listed below to illustrate the options available.

PowerSchool's traditional cumulative weighted GPA, rounded to 3 decimal places:

> round((gpa_sum(gpa_gpapoints()*gpa_potentialcredit()/sum(gpa_potentialcredit()),3)

PowerSchool's traditional cumulative simple GPA, truncated to 2 decimal places:

trunc((average(gpa_gpapoints()),2)

A value-added GPA:

average(gpa_gpapoints())+sum(gpa_addedvalue())

The number of A grades received:

countof(A,gpa_grade())+countof(A+,gpa_grade())+countof(A-,gpa_grade())

Total of all earned credit:

sum(gpa_earnedcredit())

The text "You are a star student!" if the student received more than 3 A+ grades:

if(countof(A+,gpa_grade())>=3,You are a star student!,)

The list of all letter grades, GPA points, and potential credit values used by the calculation:

gpa_grade()&&gpa_gpapoints()&&gpa_potentialcredit()

The result of one GPA calculation if the student has any grades with added value, or the result of another if not:

if(sum(gpa_addedvalue())>0,gpa_calculation(honors),gpa_calculation(standar
d))

Numerical Functions

Functions are used to perform operations on values, such as rounding numbers to a specified number of digits. The functions in this category are listed alphabetically.

Most functions have at least one required argument, though some do not accept any arguments. Optional arguments are surrounded by braces { }. A brief description and one or more examples follow each function.

Function name or alternate function	Function	Description	Examples
Abs (Absolute Value)	abs(number)	Returns the absolute value of the number. The result is either a positive number or zero.	abs(-4) returns 4 abs(78) returns 78 abs(0) returns 0

Dec (Decimal) or Frac (Fraction)	dec(number)	Returns the decimal (fractional) part of a real number. The result is always positive.	dec(22.575) returns 0.575 dec(-4.12) returns 0.12
Exp (Exponent)	exp(number)	Returns raised to the power of the number. The constant e equals 2.718281828459, the base of the natural logarithm.	exp(1) returns 2.71828... exp(0.707) returns 2.02811...
Fact (Factorial)	fact(number)	Returns the factorial of the number, equal to 1*2*3*...*number. If the number is negative, returns the #NUM! error value.	fact(5) returns 120 fact(7) returns 5040
Int (Integer)	int(number)	Rounds the number down to the nearest integer. If the number is positive, returns the integer equal to or less than the number. If the number is negative, rounds down to the next lowest whole number.	int(5.76) returns 5 int(-42.123) returns -43
Ln (Natural Log)	ln(number)	Returns the natural logarithm of the number. If the number is negative, returns the #NUM! error value.	round(ln(2.71828),3) returns 1 ln(4) returns 1.3863...
Log2 (Log to Base 2)	log2(number)	Returns the logarithm of the number to base 2. If the number is negative,	log2(43) returns 5.4263...

		returns the #NUM! error value.	
Log10 (Log to Base 10)	log10(number)	Returns the logarithm of the number to base 10. This is the inverse of the number E in scientific notation. If the number is negative, returns the #NUM! error value.	log10(100000) returns 5
Log	log(number{,base})	Returns the logarithm of the number to a base. If the base is omitted, uses 10. If the number or base is negative, returns the #NUM! error value.	log(10000) returns 4 log(10000,6) returns 5.1404...
Mod (Modulo)	mod(number,divisor)	Returns the remainder when the number is divided by the divisor. The result has the same sign as the value of the number being divided. If the number or divisor is a real number, it will be rounded before calculating the modulo.	mod(5,-2) returns 1 mod(23,7) returns 2
Pi	pi()	Returns pi, the ratio of a circle's circumference to its diameter.	pi() returns 3.141592653589793116
Power	power(number,power)	Returns the result of the number raised to a power.	power(2,8) returns 256 power(14,0.5) returns 3.7417...

Rand (Random)	rand({number})	Returns a random number between 0 and the number. If the number is omitted, the returned value is between 0 and 1.	rand() returns 0.8462... rand(50) returns 31.4896...
Round	round(number,digits)	Returns a number rounded to the specified number of digits from the decimal point. If digits is positive, it specifies the number of digits to the right of the decimal point. If negative, it specifies the number of digits to the left of the decimal point.	round(59.72893,3) returns 59.729 round(115925.45,-3) returns 116000
Sign	sign(number)	Returns 1 when the number is positive, -1 when it is negative, and 0 when it is zero.	sign(42) returns 1 sign(-827.32) returns -1 sign(0) returns 0
Sqrt (Square Root)	sqrt(number)	Returns the positive square root of the number. If the number is negative, returns the #NUM! error value.	sqrt(25) returns 5 sqrt(86) returns 9.2736...
Trunc (Truncate)	trunc(number{,digits})	Truncates the number by removing the decimal (fractional) part of the number. If digits is specified, it specifies the precision (number of decimal places) to truncate.	trunc(548.14687) returns 548 trunc(3.4583,2) returns 3.45

Logical Functions

Functions are used to perform operations on values, such as returning a specified number if certain conditions are met. The functions in this category are listed alphabetically.

Most functions have at least one required argument, though some do not accept any arguments. Optional arguments are surrounded by braces { }. A brief description and one or more examples follow each function.

Function name or alternate function	Function	Description	Examples
And	and(logical1{,logical2,...})	Returns 1 if all of the arguments are true (not zero), or 0 if any argument is false (zero).	and(1,0,1,43) returns 0 and((5=5),1) returns 1

If	if(logical,true_value,false_value)	Returns the true_value if the logical argument is true (not zero), or the false_value if the logical argument is false (zero).	if(1,100,0) returns 100
			
			if(gpa_count()>20,Lots,Few) returns Few

IsBlank	isblank(text)	Returns 1 if the text is blank or 0 if it is a number or contains text.	isblank(83.2) returns 0 isblank(test) returns 0 isblank() returns 1

IsEven	iseven(number)	Returns 1 if the number is zero or evenly divisible by 2, or 0 if it is not.	iseven(42) returns 1 iseven(-17) returns 0
IsLogical	islogical(value)	Returns 1 if the argument can be interpreted as a logical value (0 or 1), or 0 if it cannot.	islogical(0) returns 1 islogical(gpa) returns 0
IsNumber	isnumber(value)	Returns 1 if the argument is a number, or 0 if it is text.	isnumber(3.412) returns 1 isnumber(A+) returns 0
IsOdd	isodd(number)	Returns 1 if the number is not zero or evenly divisible by 2, or 0 if it is.	isodd(42) returns 0 isodd(-17) returns 1
IsText	istext(value)	Returns 1 if the argument is text, or 0 if it is a number.	istext(0) returns 0 istext(gpa) returns 1
Not	not(logical)	Reverses the logic of the logical value: Returns 1 if logical is false (zero), or 0 if	not(1) returns 0 not(5=4) returns 1

		logical is true (not zero).	
Or	or(logical1{,logical2,...})	Returns 1 if any of the arguments are true (not zero), or 0 if all are false (zero).	or(0,0,1,0) returns 1 or((5=4),0) returns 0

Statistical Functions

Functions are used to perform operations on values, such as calculating a sum or an average. The functions in this category are listed alphabetically.

Most functions have at least one required argument, though some do not accept any arguments. Optional arguments are surrounded by braces { }. A brief description and one or more examples follow each function.

Function name or alternate function	Function	Description	Examples
Average or Avg or Mean	average(number1{,number2, ...})	Returns the average (arithmetic mean) of the numeric arguments. The arguments may be individual numbers or results of functions that	average(12,18,25,15) returns 17.5 average(gpa_percent()) returns 80.5

		return arrays of numbers.	
Count	count(value1{,value2, ...})	Returns the number of arguments given. The arguments may be individual values or results of functions that return arrays of values.	count(12,18,25,15) returns 4 count(gpa_percent()) returns 5
CountOf	countof(search_value,value1 {,value2, ...})	Returns the number of occurrences of search_value in the remaining arguments. The arguments may be individual values or results of functions that return arrays of values.	countof(3.5,4,3.75,3.5,3,3, 4,3,2,3.5,2.5,3) returns 2 countof(A,gpa_grade()) returns 1
Distinct	distinct(value1{,value2, ...})	Returns an array of the unique values found in the arguments. The	distinct(4,3.75,3.5,3,3, 4,3,2,3.5,2.5,3) returns {4,3.75,3.5,3,2,2.5} distinct(gpa_grade()) returns {A,B+,B,C+,F}

		arguments may be individual values or results of functions that return arrays of values.	
Geomean (Geometric Mean)	geomean(number1 {,number2, ...})	Returns the geometric mean of the positive numeric arguments. The arguments may be individual numbers or results of functions that return arrays of numbers. If any argument is negative, returns the #NUM! error value.	geomean(12,18,25,15) returns 16.8702 ... geomean(gpa_percent()) returns 79.0972 ...
Harmean (Harmonic Mean)	harmean(number1 {,number2, ...})	Returns the harmonic mean of the positive numeric arguments, the reciprocal of the arithmetic mean of	harmean(12,18,25,15) returns 16.2896 ... harmean(gpa_percent()) returns 77.5126 ...

		reciprocals. The arguments may be individual numbers or results of functions that return arrays of numbers. If any argument is negative, returns the #NUM! error value.	
Max (Maximum)	max(number1 {,number2, ...})	Returns the largest number in the list of arguments. The arguments may be individual numbers or results of functions that return arrays of numbers.	max(12,18,25,15) returns 25 max(gpa_percent()) returns 96.2
Maxa (Maximum Alphabetic)	maxa(value1 {,value2, ...})	Sorts the arguments alphabetically, then returns the last value. The arguments may be individual	maxa(red,white,blue,green) returns white

		values or results of functions that return arrays of values.	
Median	median(number1 {,number1, ...})	Returns the median of the numeric arguments. The median is the number in the middle; half of the numbers are greater than the median, half are less. If there is an even number of arguments, returns the average of the two numbers in the middle.	median(1,2,3,4,5) returns 3 median(1,2,3,4,5,6) returns 3.5 median(gpa_gpapoints()) returns 3.333
Min (Minimum)	min(number1 {,number2, ...})	Returns the smallest number in the list of arguments. The arguments may be individual numbers or results of functions that	min(12,18,25,15) returns 12 min(gpa_percent()) returns 54.8

		return arrays of numbers.	
Min (Minimum Alphabetic)	mina(value1 {,value2, ...})	Sorts the arguments alphabetically, then returns the first value. The arguments may be individual values or results of functions that return arrays of values.	mina(red,white,blue,green) returns blue
Mode	mode(value1 {,value2, ...})	Returns the mode of the arguments. The mode is the most frequently occurring, or repetitive, value. If no value repeats, returns #N/A. In the case of a uniform distribution, or multiple modes, returns only one value. The arguments may be individual values or	mode(12,18,25,15) returns #N/A mode(12,18,25,15,19, 14,18,9,16,20) returns 18 mode(gpa_gpagrade()) returns B

		results of functions that return arrays of values.	
Product	product(number1 {,number2, ...})	Multiplies all the numeric arguments and returns the result. The arguments may be individual numbers or results of functions that return arrays of numbers.	product(12,18,25,15) returns 8100
Range	range(number1 {,number2, ...})	Returns the difference between the largest and smallest numeric arguments. The arguments may be individual numbers or results of functions that return arrays of numbers.	range(12,18,25,15) returns 13 range(gpa_gpapoints()) returns 4
Stdev (Standard Deviation)	stdev(number1,number2 {,number3, ...})	Calculates the standard deviation of a	stdev(12,18,25,15) returns 5.56778 ...

		population based on a sample given as a list of arguments using the nonbiased or n-1 method. A standard deviation is a measure of how widely values are dispersed from the average value (arithmetic mean). The arguments may be individual numbers or results of functions that return arrays of numbers. If your data represents the entire population, use Stdevp.	stdev(gpa_percent()) returns 15.6962 ...
Stdevp (Standard Deviation Population)	stdev(number1,number2 {,number3, ...})	Calculates the standard deviation of an entire population given as a list of arguments using the	stdev(12,18,25,15) returns 4.8218 ... stdev(gpa_percent()) returns 14.0391 ...

		biased or n method. A standard deviation is a measure of how widely values are dispersed from the average value (arithmetic mean). The arguments may be individual numbers or results of functions that return arrays of numbers. If your data represents a sample of the population, use Stdev.	
Sum	sum(number1 {,number2, ...})	Adds all the numeric arguments and returns the result. The arguments may be individual numbers or results of functions that return arrays of numbers.	sum(12,18,25,15) returns 70 sum(gpa_potentialcredit()) returns 4

Var (Variance)	var(number1,number2 [,number3, ...})	Returns the variance of a population based on a sample given as a list of arguments. The arguments may be individual numbers or results of functions that return arrays of numbers. If your data represents the entire population, use Varp.	var(12,18,25,15) returns 31 var(gpa_gpapoints()) returns 2.5138 ...
Varp (Variance Population)	var(number1,number2 {,number3, ...})	Returns the variance of an entire population given as a list of arguments. The arguments may be individual numbers or results of functions that return arrays of numbers. If your data represents a sample of the	varp(12,18,25,15) returns 23.25 varp(gpa_gpapoints()) returns 2.0110 ...

		population, use Var.	

Text Functions

Functions are used to perform operations on values, such as joining two strings of text together. The functions in this category are listed alphabetically.

Most functions have at least one required argument, though some do not accept any arguments. Optional arguments are surrounded by braces { }. A brief description and one or more examples follow each function.

Function name or alternate function	Function	Description	Examples
Char (Character)	char(number)	Returns the ASCII character corresponding to the number. The ASCII set used is the Macintosh extended ASCII set.	char(65) returns A char(92) returns \
Code (ASCII Code)	code(text)	Returns the numeric ASCII code of the first character in the text. The ASCII set used is the Macintosh extended ASCII set.	code(A) returns 65 code(gpa is fun) returns 103

Concatenate or Concat	concatenate(text1{,text2,...})	Joins several strings of text into one string of text.	concatenate(gpa,is,fun) returns gpaisfun concatenate(gpa_count(),,grades) returns 29 grades
Exact	exact(text1,text2)	Returns 1 if both arguments are identical in case and characters, or 0 if different.	exact(GPA,gpa) returns 0 exact(Mr. Smith,Mr. Smith) returns 1
Left	left(text{,num_characters})	Returns the first (leftmost) character or characters in the text. If num_characters is omitted, returns 1 character.	left(GPA) returns G left(Mr. Smith,3) returns Mr.
Len (Length)	len(text)	Returns the number of characters in the text, including spaces, numbers, and special characters.	len(GPA) returns 3 len(Mr. Smith) returns 8
Lower	lower(text)	Converts any uppercase characters in the text to lowercase.	lower(GPA) returns gpa lower(Mr. Smith) returns mr. smith

Mid (Middle)	mid(text,start_position, num_characters)	Returns a specific number of characters from the text starting at the position you specify.	mid(GPA,1,1) returns P mid(Mr. Smith,3,4) returns . Smi
Proper	proper(text)	Capitalizes the first letter and any letter following a non-letter in the text.	proper(GPA) returns Gpa proper(2-cent's worth) returns 2-Cent'S Worth
Replace	replace(text,start_position, num_characters,new_text)	Replaces num_characters characters of text with the new_text starting at the position you specify.	replace(gpa codes,4,5,is fun) returns gpa is fun replace(Mr. Smith,1,3,Mrs.) returns Mrs. Smith
Rept (Repeat)	rept(text,number_times)	Repeats the text the specified number of times.	rept(gpa is fun ,5) returns gpa is fun gpa is fun gpa is fun gpa is fun gpa is fun rept(-,average(gpa_gpapoints())*4) returns -----------
Right	right(text{,num_characters})	Returns the last (rightmost) characters in the text. If num_characters is omitted,	right(GPA) returns A right(Mr. Smith,4) returns mith

		returns 1 character.	
Trim	trim(text)	Removes leading, trailing, and extra spaces from the text.	trim(gpa is fun) returns gpa is fun
Upper	upper(text)	Converts any lowercase characters in the text to uppercase.	upper(gpa is fun) returns GPA IS FUN upper(Mr. Smith) returns MR. SMITH

GPA Functions

Functions are used to perform operations on values, such as returning the number of grades used to determine a student's GPA. The functions in this category are listed alphabetically. For more information about GPA functions, see PowerSource.

Most functions have at least one required argument, though some do not accept any arguments. Optional arguments are surrounded by braces { }. A brief description and one or more examples follow each function.

Function name or alternate function	Function	Description	Examples
GPA_AddedValue	gpa_addedvalue()	Returns a numeric array listing the added value for each grade used in the GPA calculation. If used within gpa_concat() or gpa_sum(), returns a single value. See the note in gpa_sum().	gpa_addedvalue() returns {0,0.02,0,0,0}

GPA_Attempts	gpa_attempts()	Returns a numeric array listing the attempts for each grade used in the GPA calculation. The attempts are determined by comparing the first character of the store code to a lookup table defined in District Setup. If the character is not found in the lookup table, a zero is used. If used within gpa_concat() or gpa_sum(), returns a single value. See the note in gpa_sum().	gpa_attempts() returns {1,1,2,2,2}
GPA_Calculation	gpa_calculation(text)	Returns the result of the GPA calculation method whose name is specified.	gpa_calculation(weighted) returns 3.254
GPA_Concat	gpa_concat(formula)	Evaluates the formula once for every grade used in the GPA calculation and returns a concatenated string of the results. When used inside gpa_concat(), the following functions return an individual	gpa_concat(if(left(gpa_grade())=B,*,)) returns **

		value instead of an array: • gpa_addedvalue() • gpa_attempts() • gpa_coursenumber() • gpa_earnedcredit() • gpa_gpapoints() • gpa_grade() • gpa_gradelevel() • gpa_percent() • gpa_potentialcredit() • gpa_storecode() • gpa_termid() **Note:** A gpa_concat() or gpa_sum() function cannot be used within the formula.	
GPA_Count	gpa_count()	Returns the number of grades used in the GPA calculation. Functionally equivalent to count(gpa_grade()), but faster.	gpa_count() returns 8
GPA_CountSchoolYears	gpa_countschoolyears()	Returns the number of unique school years (not grade	gpa_countschoolyears() returns 2

		levels) for the grades used in the GPA calculation.	
GPA_CountUniqueCourses	gpa_countuniquecourses()	Returns the number of unique courses (based on course number) for the grades used in the GPA calculation.	gpa_countuniquecourses() returns 6
GPA_CountYearTerms	gpa_countyearterms()	Counts the number of unique store codes in each school year, then returns a grand total.	gpa_countyearterms() returns 4
GPA_CourseNumber	gpa_coursenumber()	Returns a text array listing the course numbers for each grade used in the GPA calculation. If used within gpa_concat() or gpa_sum(), returns a single value. See the note in gpa_sum().	gpa_coursenumber() returns {MA1001,SC2001, FA540,LS105, PE200}
GPA_EarnedCredit	gpa_earnedcredit()	Returns a numeric array listing the earned credit hours for each grade used in the GPA calculation. If used within gpa_concat() or gpa_sum(), returns a single value. See the note in gpa_sum().	gpa_earnedcredit() returns {0,0.5,0.5,1,0}

GPA_GPAPoints	gpa_gpapoints()	Returns a numeric array listing the gpa points for each grade used in the GPA calculation. If used within gpa_concat() or gpa_sum(), returns a single value. See the note in gpa_sum().	gpa_gpapoints() returns {4,3.5,3.333,2.5,0}
GPA_Grade	gpa_grade()	Returns a text array listing the letter grade for each grade used in the GPA calculation. If used within gpa_concat() or gpa_sum(), returns a single value. See the note in gpa_sum().	gpa_grade() returns {A,B+,B,C+,F}
GPA_GradeLevel	gpa_gradelevel()	Returns a numeric array listing the grade level for each grade used in the GPA calculation. If used within gpa_concat() or gpa_sum(), returns a single value. See the note in gpa_sum().	gpa_gradelevel() returns {9,9,9,10,10}
GPA_Percent	gpa_percent()	Returns a numeric array listing the percentage for each grade used in the GPA calculation. If used within	gpa_percent() returns {96.2,88.5,84,79,54.8}

		gpa_concat() or gpa_sum(), returns a single value. See the note in gpa_sum().	
GPA_PotentialCredit	gpa_potentialcredit()	Returns a numeric array listing the potential credit hours for each grade used in the GPA calculation. If used within gpa_concat() or gpa_sum(), returns a single value. See the note in gpa_sum().	gpa_potentialcredit() returns {0,0.5,0.5,1,1}
GPA_StoreCode	gpa_storecode()	Returns a text array listing the store code for each grade used in the GPA calculation. If used within gpa_concat() or gpa_sum(), returns a single value. See the note in gpa_sum().	gpa_storecode() returns {Q1,Q2,S1,S1,S2}
GPA_Sum	gpa_sum(formula)	Evaluates the formula once for every grade used in the GPA calculation and returns the numeric total of the results. When used inside gpa_concat(), the following functions	gpa_sum(gpa_gpapoints() *gpa_potentialcredit()) returns 5.9165

		return an individual value instead of an array: - gpa_addedvalue() - gpa_attempts() - gpa_coursenumber() - gpa_earnedcredit() - gpa_gpapoints() - gpa_grade() - gpa_gradelevel() - gpa_percent() - gpa_potentialcredit() - gpa_storecode() - gpa_termid() **Note:** A gpa_concat() or gpa_sum() function cannot be used within the formula.	
GPA_TermID	gpa_termid()	Returns a numeric array listing the term ID for each grade used in the GPA calculation. If used within gpa_concat() or gpa_sum(), returns a single value. See the note in gpa_sum().	gpa_termid() returns {1004,1005,1001, 1101,1102}

Grade Scales

Create multiple grade scales and assign them to different courses or sections. For example, grades given for AP Calculus count more towards a student's GPA than grades for Basic Math. Assign the two courses to different grade scales. For more information about assigning grade scales to courses, see *Course Grade Scales*.

The grade scales you define become the set of grades that are possible to use at all schools on your PowerSchool system. The value of a grade is determined when an historical grade is given to a student taking a particular course. Even if the grade scale for that course changes, the values of that student's grade do not change.

Grade scales include color levels for each item in the scale. Grade scale color levels provide a visual indicator of student progress that can be consistent and aligned across all different types of grade scales. These color levels are used in other parts of PowerSchool, such as in the At Risk Student Dashboard in PowerSchool or on the Class Progress page in PowerTeacher Pro. When you create a new grade scale, select the number of colors associated to the grade scale. Once you generate the grade scale table, select the color level for each grade. Available colors include dark green, green, yellow, orange, and red. Depending on the number of items in the grade scale, the color levels may include different shades of these colors.

In an A, B, C, D, F grade scale:

- Dark green - Equates to a grade of A
- Green - Equates to a grade of B
- Yellow - Equates to a grade of C
- Orange - Equates to a grade of D
- Red - Equates to a grade of F

These color levels appear in PowerTeacher Pro.

Alpha Grade Scales

An alpha grade scale uses letter grades such as A, B, and C+ or E, S, and N, or descriptive grades such as Excellent, Satisfactory, and Unsatisfactory. With the exception of some new options, alpha grade scales are largely unchanged for PowerTeacher Pro.

Common Examples of Alpha Grade Scales:

- Traditional scales - A,B,C,D,F
- Elementary school - Outstanding, Satisfactory, Need Improvement (O,S,N), or alpha-based proficiency scale: Exceeds, Meets, Approaching, Basic (E,M,A,B)

Note: If you are creating grade scales using numbers, use the Numeric Grade Scales process. For more information, see Numeric Grade Scales.

- GPA and Credit - Show or hide these fields as needed.
- Term Weighting - Average final grades or term weighting points. Show or hide these fields as needed.

  Note: If your school uses average final grades, you may not need to using term weighting points in PowerTeacher Pro.

How to Create an Alpha Grade Scale

You must be signed in to the District office.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **Grade Scales**. The Grade Scales page appears.
3. Click **New**. The New Grade Scale page appears.
4. Use the following table to enter information in the fields:

Type	Description
Name	Enter a name for the grade scale.
Type	Select **Alpha** from the pop-up menu.
Use	Select an option from the pop-up menu. This determines where this grade scale will be used. • **Traditional Grade** • **Standards** • **Traditional Grade and Standards**
Description	Enter a description for the grade scale.
Use Special Codes	Create a grade scale before adding special codes. Teachers can manually assign special codes and final course grades, but they are never calculated in to the final grade. Special

	codes can also be made available to use on assignments, and act as district pre-created Gradebook Score Codes for the teacher. For example: • A teacher manually assigns Incomplete for a final grade, but the assignment scores never calculate into Incomplete. • A teacher manually enters an assignment score code of ABS to indicate that the student was absent.
Scale Used in GPA and Course Credit	Selected by default. Deselect the checkbox if your school does not use GPA and Course Credit with this scale. **Note:** This option is not available for use with standards.
Show Term Weighting and Average Final Grades (AFG)	Deselected by default. Select the checkbox to display Term Weighting Points when editing this grade scale. **Note:** If you were using average final grades, you may be able to do that in PowerTeacher Pro with term weighting points when you want to average across multiple classes. Otherwise, the new term weighting points will allow you to calculate grades based on points rather than percent.
Repeated Course Grade Suppression Policy	Choose the repeated course grade suppression policy you want to enable from the pop-up menu. If enabled, stored grades associated to this grade scale will be evaluated based on the selected repeated course grade suppression policy during the permanently store grades process. **Note:** The default is set to **None** indicating that stored grades associated to this grade scale will be included in the stored grades process but will be excluded from the repeated course grade suppression portion of the process. **Examples** For example, you may want to create separate grade scales for courses such as these:

	• The following example illustrates when you might want to allow repeated course grade suppression. The high school Algebra course is a requirement for students wanting to apply to college. Some students may need to repeat the course in order to receive a passing grade and those grades should be evaluated for repeated course grade suppression. • The following example illustrates when you might want to not allow repeated course grade suppression. The high school Band course is expected to be repeated by students each year and those grades should not be evaluated for repeated course grade suppression. **Note:** For more information, see *Repeated Course Grade Suppression*.
Enter Starting Grade Scale Items	Enter the grades you would like to populate in the Grade Scale table. Use commas to separate values, for example A+, A, A-, B+, B, B-, etc. When generated, the Grade Scale table will appear at the bottom of the page and will populate with the values you enter here.
Starting Number of Colors	Select the number of colors you want to appear associated to this grade scale. Grade scale color levels provide a visual indicator of student progress that can be consistent and aligned across all different types of grade scales.

5. Click **Generate Table**. The Grade Scale details table appears.
6. To create additional grades for this scale, click **Add Grade**. A new row in the Grade Scale details table appears.
7. Use the following table to enter information in the fields:

Field	**Description**
Grade	Required field. The information you entered in the Starting Grade Scale Items field appear.

	Enter the grade that you want to create for this grade scale, such as **A**, **B**, or **F**.
Description	Enter a description of the grade in the field, such as Superior. This description appears on grading reports.
Counts in GPA	Select the checkbox if this grade counts in the GPA. **Note:** This field displays if **Scale Used in GPA and Course Credit** is selected.
Grade Points (GPA)	Enter the number of grade points to include in the GPA. You can enter up to and including the number 200. For example, an A could be worth 4.0 grade points, a B worth 3.0 grade points, and an F worth 0 grade points. **Note:** This field displays if **Scale Used in GPA and Course Credit** is selected.
Added Value	Select the checkbox if teachers can enter a value for this grade that exceeds the normal grade points. **Note:** This field displays if **Scale Used in GPA and Course Credit** is selected.
Grad Credit	Select the checkbox to determine that this grade earns credit towards graduation requirements. **Note:** This field displays if **Scale Used in GPA and Course Credit** is selected.
Teacher Scale	Select the checkbox to indicate that teachers are allowed to use this grade scale.
Cutoff %	Required field. Enter the lowest percentage students can earn to receive this grade. For example, if you enter 93 for an A, then students must earn at least 93% of the total points to receive an A. The system uses the next highest cutoff percentage you define for a different

	grade to determine the highest percent grade students can earn to receive this grade. **Note:** This is a suggested cutoff for your teachers to use. Teachers can define their own cutoff percentages for this grade in PowerTeacher Gradebook if the selected grade scale is editable.
Grade Value	Required field. This field indicates the value of a letter grade when teachers give letter grades instead of numeric grades. Enter a number for the value of the letter grade; usually, this is in the middle of the range for the grade, such as 88 for a B+.
Color Levels / Edit	Use the pop-up menus to assign color levels to the grade. Divide the grade scale into 2-5 color groups for easy color identification for teachers. The colors appear in PowerTeacher Pro graphs and charts and display clear demarcation of proficiency.
Points	If your school will assign grades a GPA point value AND a grade averaging point value, use this field to indicate a grade averaging point value. Otherwise, leave blank. This field is used only when the **Use Alternative Grade Points in Calculation** checkbox on the Average Final Grades page is selected.
Cutoff Points	Use this field to indicate the lowest points students can earn to receive this grade. For example, if you enter 4.0 for an A, then students must earn at least 4.0 points to receive an A. The system uses the next highest cutoff points you define for a different grade to determine the highest points grade students can earn to receive this grade.
Exclude (AFG)	Select the checkbox to exclude this grade from the average final grade.
Action	Click the minus button to remove the grade from the grade scale.
Default Zero Cutoff	Select a grade from the pop-up menu to use as the default if no cutoff percentage is defined.

8. Click **Save**. The alpha grades scale is created.

Numeric Grade Scales

While numeric conversion scales already exist for standards grade calculation in PowerTeacher Gradebook, numeric grade scales are new for use in PowerTeacher Pro and can be used for both course grades and standards grades. As indicated at the beginning of this document, existing numeric conversion scales will be migrated as numeric grade scales.

Like a numeric conversion scale, a numeric grade scale is a number range (for example, 1-4). Usually, each number represents a level of proficiency. For example, 4=advances, 3=proficient, 2=approaching, 1=below. Numeric grade scales now allow calculations with just those numbers. For example, scores of 3 and 4 will average to 3.5. No percent conversion is needed.

Some districts want intermediary levels between whole numbers, for example 4, 3.5 and 3, or 4, 3+, and 3. You can do this without needing every other decimal. An example of a 1-4 scale with plus is 4, 3+, 3, 2+, 2, 1+,1. Alternately, you can include multiple decimal values. For example, a one decimal scale would have 3, 3.1, 3.2, 3.3, etc.

Special grades, like W or I, can still be used by creating a Special Codes grade scale. For more information, see Special Codes.

How to Create a Numeric Grade Scale

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **Grade Scales**. The Grade Scales page appears.
3. Click **New**. The New Grade Scale page appears.
4. Use the following table to enter information in the fields:

Type	**Description**
Name	Enter a name for the grade scale.
Type	Select **Numeric** from the pop-up menu.
Use	Select an option from the pop-up menu. This determines where this grade scale will be used. • **Traditional Grade**

	• **Standards** • **Traditional Grade and Standards**
Description	Enter a description for the grade scale.
Use Special Codes	Create a grade scale before adding special codes. Teachers can manually assign special codes and final course grades, but they are never calculated in to the final grade. Special codes can also be made available to use on assignments, and act as district pre-created Gradebook Score Codes for the teacher. For example: • A teacher manually assigns Incomplete for a final grade, but the assignment scores never calculate into Incomplete. • A teacher manually enters an assignment score code of ABS to indicate that the student was absent.
Range	Enter the minimum and maximum values of this grade scale.
Scale Used in GPA and Course Credit	Selected by default. Deselect the checkbox if your school does not use GPA and Course Credit with this scale.
Include	Select a character from the pop-up menu to include in the grade scale values. Examples for each option appear below the pop-up menu when selected. If you are using this grade scale for standards, a **Decimals** pop-up appears. Select the decimal place value you want included in the grade scale.
Show Term Weighting and Average Final Grades (AFG)	Deselected by default. Select the checkbox to display Term Weighting Points when editing this grade scale. **Note:** If you were using average final grades, you may be able to do that in PowerTeacher Pro with term weighting points when you want to average across multiple classes. Otherwise, the new term

	weighting points will allow you to calculate grades based on points rather than percent.
Repeated Course Policy	Choose the repeated course grade suppression policy you want to enable from the pop-up menu. If enabled, stored grades associated to this grade scale will be evaluated based on the selected repeated course grade suppression policy during the permanently store grades process. **Note:** The default is set to **None** indicating that stored grades associated to this grade scale will be included in the stored grades process but will be excluded from the repeated course grade suppression portion of the process. **Note:** For more information, see *Repeated Course Grade Suppression*.
When Converting Other Scales Into This Scale	By default, numeric grade scales use cutoff values. You can edit these values when you generate the grade scale table.
Starting Number of Colors	Select the number of color levels you want to start with when creating this grade scale.

5. Click **Generate Table**. The Grade Scale details table for the new grade scale appears.
6. Use the following table to enter information in the fields:

Field	Description
Grade	The Min and Max Range you entered appears in this column.
Description	Enter a description of the grade in the field, such as Superior. This description appears on grading reports.
Numeric Cutoff	Use this field to indicate the lowest points students can earn to receive this grade. For example, if you enter 4.0 for an A, then students must earn at least 4.0 points to receive an A. PowerSchool uses the next highest cutoff points you define for a

	different grade to determine the highest points grade students can earn to receive this grade.
Numeric Value	This field indicates the value of a numeric grade when teachers give letter grades instead of numeric grades. Enter a number for the value of the letter grade; usually, this is in the middle of the range for the grade, such as 88 for a B+.
Color Levels / Edit	Use the pop-up menus to assign color levels to the grade. Divide the grade scale into 2-5 color groups for easy color identification for teachers. The colors appear in PowerTeacher Pro graphs and charts and display clear demarcation of proficiency.
Cutoff % To Numeric	Enter the cutoff percent value to use between grade scales.
% Value	Enter the value to use when this grade is marked on an assignment.

7. Click **Save**. The numeric grade scale is created.

Special Codes

Special Codes are new for PowerTeacher Pro, and while similar in some respects to Score Codes in PowerTeacher Gradebook, they have extended functionality. A special code may be used in conjunction with any grade scale you create. For example, you may create a special codes scale that includes alphanumeric codes, or you may create one that includes codes such as "Inc" for incomplete, or "Abs" for absent. When you associate a regular grade scale with a special codes scale, teachers can access all of the items on both scales.

Teachers can assign special codes as final course grades. For example, a teacher can use the special code to mark a final course grade as NC (no credit). However, special codes are never the result of a final grade calculation.

Special codes can also be used for assignment scoring. For example, a teacher marks an assignment as ABS to indicate that the student was absent for the assignment or uses another code to award a pre-defined percentage of the total points possible.

How to Create a Special Codes Grade Scale

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.

2. Under Grading, click **Grade Scales**. The Grade Scales page appears.
3. Click **New**. The New Grade Scale page appears.
4. Use the following table to enter information in the fields:

Type	Description
Name	Enter a name for the grade scale.
Type	Select **Special** from the pop-up menu.
Description	Enter a description for the grade scale.
Range	Enter the minimum and maximum values of this grade scale.
Scale Used in GPA and Course Credit	Selected by default. Deselect the checkbox if your school does not use GPA and Course Credit with this scale.
Show Term Weighting and Average Final Grades (AFG)	Deselected by default. Select the checkbox to display Term Weighting Points when editing this grade scale. **Note:** If you were using average final grades, you may be able to do that in PowerTeacher Pro with term weighting points when you want to average across multiple classes. Otherwise, the new term weighting points will allow you to calculate grades based on points rather than percent.
Enter Starting Grade Scale Items	Enter the grades you would like to populate in the Grade Scale table. Use commas to separate values, for example Abs,Inc,NC. When generated, the Grade Scale table will appear at the bottom of the page and will populate with the values you enter here.
Starting Number of Colors	Select the number of color levels you want to start with when creating this grade scale.

5. Click **Generate Table**. The Grade Scale details table for the new grade scale appears.
6. Use the following table to enter information in the fields:

Field	Description
Sort	Use the arrows to move the row up or down. This determines the order in which the special codes appear in PowerTeacher Pro.
Codes	Displays the Starting Grade Scale Items you entered.
Description	Enter a description of the grade in the field, such as Superior. This description appears on grading reports.
Use As a Final Grade	Select the checkbox if this special code can be used as the final grade.
Final Grade % Value	Enter a percentage value to assign for this special code when used as a final grade.
Final Numeric Value	Enter a numeric value to assign for this special code when used as a final grade.
Counts in GPA	Select the checkbox if the final grade value counts in the student's GPA. **Note:** This field displays if Description is selected.
Grade Points (GPA)	Enter the point value for this special code for the GPA. Enter the number of grade points to include in the GPA. You can enter up to and including the number 200. **Note:** This field displays if **Scale Used in GPA and Course Credit** is selected.
Added Value	Select the checkbox if teachers can enter a value for this grade that exceeds the normal grade points. **Note:** This field displays if **Scale Used in GPA and Course Credit** is selected.
Grad Credit	Select the checkbox if this grade counts toward graduation credit.

	Note: This field displays if **Scale Used in GPA and Course Credit** is selected.
Alt. Grade Points	Enter alternate grade points to assign to this special code. If your school assigns grades a GPA point value AND a grade averaging point value, use this field to indicate a grade averaging point value. Otherwise, leave blank. This field is used only when the **Use Alternative Grade Points in Calculation** checkbox on the Average Final Grades page is selected. **Note:** This field displays if **Show Term Weighting and Average Final Grades (AFG)** is selected.
Exclude (AFG)	Select the checkbox to exclude this special code from the average final grade calculation. **Note:** This field displays if **Show Term Weighting and Average Final Grades (AFG)** is selected.
Color Levels	Use the pop-up menus to assign color levels to the grade. Divide the grade scale into 2-5 color groups for easy color identification for teachers. The colors appear in PowerTeacher Pro graphs and charts and display clear demarcation of proficiency.
Final Grade/Score is Exempt	Select the checkbox to make the assignment score exempt from calculating in to the final grade.
Final Grade/Score Incomplete	Select the checkbox to automatically assign the Incomplete attribute to the assignment score when using this special code in PowerTeacher Pro.
Use On Assignments	Select the checkbox to enable this special grade to be used to mark assignments.
Assignment % Value	Enter a percent value for this special code. This setting only applies when related to an alpha grade scale.
Assignment Numeric Value	Use the pop-up menu to select the numeric value for the assignment.

	• Select **Min** to use the minimum value of the associated numeric grade scale. • Select **Max** to use the maximum value of the associated numeric grade scale. • Select **Custom**, and then enter a custom value in the field provided. This setting only applies when related to a numeric grade scale.
Is Late	Select the checkbox to automatically assign the Late attribute to the assignment score when using this special code in PowerTeacher Pro.
Is Missing	Select the checkbox to automatically assign the Missing attribute to the assignment score when using this special code in PowerTeacher Pro.
Is Collected	Select the checkbox to automatically assign the Collected attribute to the assignment score when using this special code in PowerTeacher Pro.
Is Absent	Select the checkbox to automatically assign the Absent attribute to the assignment score when using this special code in PowerTeacher Pro.
Action	Click the minus button to remove the grade scale.

7. Click **Save**. The special codes grade scale is created.

How to Edit a Grade Scale

Edits to any grade scales affect the grade scales for all of the schools on your system.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **Grade Scales**. The Grade Scales page appears.
3. Click the **Pencil** icon for the grade scale you want to edit. The Edit Grade Scale: [grade scale] page appears.
4. Edit the information as needed. For field descriptions, see the respective *How to Create a Grade Scale* section above.
5. Click **Save**. The Grade Scales page displays the edited grade scale.

How to Delete a Grade Scale

Deleting a grade scale does not affect grades that have already been assigned. The system uses the default grade scale for any course or section that is no longer associated with a grade scale.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **Grade Scales**. The Grade Scales page appears.
3. Click the **Pencil** icon for the grade scale you want to edit. The Edit Grade Scale: [grade scale] page appears.

   Note: You cannot delete the default grade scale.

4. To remove a grade scale item:
   a. In the Grade Scale details table, click the **Minus (-)** icon for the item you want to remove.
   b. Click **Save**. A confirmation message appears.
5. To remove the grade scale:
   a. Click **Delete**.
   b. Click **Confirm Delete**. The Grade Scales page appears.

Import Grade Scales

You can also import additional grade scales into PowerSchool to make them available for teachers to use in PowerTeacher Pro.

For more information, see *Data Import Manager* in the PowerSchool online help, or the *Import/Export User Guide* for PowerSchool 10.x, available on PowerSource.
The Data Import Manager page is accessible via **Start > System > Page and Data Management > Data Import Manager**.

Grade Scales Import

To import grade scales, select **Grade Scales: District List** on the Data Import Manager page.

The following fields are required in the data import file when creating new grade scales via import:

- **ID**
- **GradescaleId**
- **Name**

- **GradescaleType**
- **Grade_Points**
- **CutoffPercentage**
- **Value**
- **NumericMin**
- **NumericMax**
- **NumericCutoff**
- **NuermicValue**
- **CutoffPoints**

The ID field is required when updating existing grade scales via import.

Working with Standards in PowerSchool

Before using standards in PowerSchool, understand what your district wants and is expected to report to a board of education, superintendent, or the state Department of Education (DOE). There is no need to define different standards or benchmarks at every grade level if you are not expected to report that information. For example, the Wyoming DOE requires schools to report student progress at the fourth-, eighth-, and eleventh-grade levels. Schools in Wyoming often select to have all teachers match their assignments to only those benchmarks unless their local DOE requires it at every grade level. Kindergarten through fourth-grade teachers can align to the fourth-grade set of benchmarks; fifth- through eighth-grade teachers can align to the eighth-grade set; and so on.

Important: If each grade level does use and report on different standards, then standards should be created by grade level.

Grading Methods

The conversion scales are applied in the grading methods listed in the following table. In specialized cases, these methods need special values in order to translate into a different scale.

Grading Method	Description
Values and Cut-offs	This is the main way that alphanumeric scales work. Every letter has a grade value. Those values are averaged together then the cut-off is used to determine the final grade. For example: A = 100, B= 80. Student has A, A, B (value = 100, 100, 80). Average =

	92.5%. The cut-off for A is 90, so the final grade is A. There are two scenarios where a numeric scale uses a value and cut-off.
Basic Numbers	This is the main way that numeric scales work. Basic numbers have no special values. For example: 4, 4, 3, 3 = 4, 4, 3, 3. Average = 3.5. There are two scenarios where a numeric scale does not use basic numbers. In order to calculate the grade correctly, you create Translation Values.

Standards Scenarios

The grade scales calculation in PowerTeacher Pro is dependent on the preferences the teacher has set on the Standards Grades Calculations page in PowerTeacher Pro.

If no calculation preferences are set:

Standards Scenario	Alphanumeric Scale	Numeric Scale
Using assignment standard scores to calculate the final standards grade.	Uses values and cut-offs to calculate the final standards grade. Every letter has a grade value. The grade values are added, then the cut-off is used to determine the final grade.	Uses basic numbers with no special values.

If preference is set to calculate the higher level standards grades from lower level standards grades:

Standards Scenario	Alphanumeric Scale	Numeric Scale
Rolling up standards final grades to the higher level standards, when all lower level standards have the same scale.	Uses values and cut-offs to calculate the final standards grade. Every letter has a grade value. The grade values are added, then the	Uses basic numbers with no special values.

	cut-off is used to determine the final grade.	
Rolling up standards final grades to the higher level standards, when some of lower level standards have different types of grade scales.	Uses values and cut-offs to calculate the final standards grade. Every letter has a grade value. The grade values are added, then the cut-off is used to determine the final grade.	Uses the grade value and cut-off to use the values and cut-offs grading method.

If preference is set to allow assignment scores to auto-calculate the assignment standards scores:

Standards Scenario	**Alphanumeric Scale**	**Numeric Scale**
Pushing scores from the assignment to the standards scores.	Uses values and cut-offs to calculate the assignment standard scores. Every letter has a grade value. The cut-off is used to determine the assignment standards score.	If the same scale is used for the section's traditional grade as well as the standards being assessed, then basic numbers with no special values are used. If however the scales differ, then the translation values and cutoffs are used.

Standards Calculation Measures

Here are five example scores, an explanation of each calculation option, and a discussion of when each option might be a good or a bad choice for your class.

Example Score	**Calculation Method**	**Calculation Score Result**
Scores on five assignments: 2, 3, 3, 3, 4	Mean (average of the scores)	3

	Weighted Mean (average of the scores, weighted by points possible)	3 (but depends on the weighted points possible for the assignments)
	Median (middle score)	3
	Mode (most frequently occurring score)	3 **Note:** When there is more than one mode, this score will be blank.
	Highest (highest score)	4
	Most Recent (average of the most recent scores)	Most Recent 1 score: 4 Most Recent 2 scores: 3.5 (average of 3 and 4) Most Recent 3 scores: 3.33 (average of 3, 3, and 4) You can also set a weight for each of the most recent scores on the Preferences dialog. For example, set the most recent calculation to use the last 3 scores. You want the most recent to be 50%, and the 2 before to each be 25% of the calculation. You can also set a weight for each of the most recent scores on the Preferences dialog. For example, set the most recent calculation to use the last 3 scores. You want the most recent to be 50%, and the 2 before to each be 25% of the calculation.

Every measure has times when it is valuable, and times where it may not be the best measure for your class.

Calculation Method Description

The following table lists the calculation methods available.

Calculation Method	When to Use It	When Not to Use It
Mean	When you have equally important scores at each period of time, and the learning is not cumulative. For example, in History, final unit test scores on unit 1, unit 2, and unit 3 may all be independent. In that case, using the mean (or average) could be a good choice.	When students are introduced to a new concept and the learning is cumulative over time. For example, students start out not understanding a concept, but over the term they get it. Averaging their initial scores (where they were unfamiliar with the work) with their final attempts (when they understood the concepts) may not be the best measure. For example, consider the following scores: 20%, 30%, 40%, 95%, 100%. In this case, the student likely did not understand the concept at the beginning, but by the end they got it. The average here is 57%, which may not be the most reflective of their proficiency at the end of the term.
Weighted Mean	The weighted mean is better than the mean when assignments with high weighted points possible	When all standards scores are valid indicators of performance, the teacher may not care about the

	should be counted more heavily.	specific points possible. This is especially true if there are high point value assignments from early in the semester, and the students have grown tremendously since that time.
Median	When you have multiple data points, and students have been given lots of chances to demonstrate mastery. It allows the student to overcome their initial attempts when they don't understand at the beginning, because only the middle score is used. Some people consider this one of the most consistent measures of performance. This measure throws out high and low outlying scores. For this reason, housing price data is usually listed in terms of the median sales price. There are extremes at either end that can skew average.	When there are only a few data points. In that case, the middle number can simply be luck. Or, when the learning is cumulative, where the students know much more at the end of the term, and their proficiency is significantly better across the board than at the start. For example, consider the following scores: 20%, 30%, 40%, 95%, 100%. In this case, the student likely did not understand the concept at the beginning, but by the end they got it. The median (or middle number) here is 40% and may not be the most reflective of their proficiency at the end of the term.
Mode	When you have a small range of possibilities. For example, when using letter grades A,B,C,D,F, or a 1-4 scale, there are only a limited range of score options. If a student's	When there are multiple possible scores, and it is unlikely for the exact score to be consistent. For example, this is not a good measure for percentage scores. Example percentage

	scores are A, D, A, B, A, the most frequently occurring value is A.	scores: 90, 91, 25, 100, 99, 81.5, 98, 97, 25, 96, 94. In this data, the mode is 25%. The average is 81.5%. The median is 94%.
Highest	When the student's highest level of demonstrated proficiency is a good indicator of what they know and can do. When assessments are in-depth and highly reliable. In these cases, many districts believe that the student's highest score is a good indicator.	When the highest score could be based on chance or lucky guessing. For example, on multiple choice tests, the student could have guessed right on several questions by chance, boosting their highest score. For example, one student's results for one standard assessed on 5 multiple choice tests were as follows: 70, 95, 70, 70, 70. Although the student did get a 95 once, this score may not be the best reflection of the student's actual level of proficiency on this standard.
Most Recent	When the learning is cumulative, and the students will demonstrate a much higher level of proficiency at the end of the term than at the beginning. In these cases, it makes sense to focus on the most recent scores as a reflection of the student's proficiency.	When some of most recent scores themselves are anomalies. For example, if a student recently was very ill, or experienced some other phenomenon, then the most recent scores may not be reflective of their actual proficiency. This is usually assessed student by student to determine if the most recent scores are accurate. It can also happen when the most recent

		assessment is not as detailed or reliable as earlier assessments, or there were other distracting factors. For example, students have lots of good quizzes and a unit test with reliable data. That was followed by in-class review worksheets. Half of the students were distracted completing them because there was construction going on outside. In this case, the most recent data may not be the most reflective.
Specific Weight	Values entered in the weight field for standards related to the course are used to determine which standards grades will be averaged to produce the course grade as well as how much each standard grade will be weighted in that calculation.	If you want to weigh all of the standards assessed by the student to determine a final grade. For calculating a final standards grade, you want all direct child standards to calculate to the parent. For calculating a final traditional grade from standards, you want all standards assessed for the student to be included in the calculation.
Specific Sum	For use with numeric grade scales. Values entered in the weight field for standards related to the course are used to determine which numeric standard grades will be summed to produce a	You do not want to have a separate scale where specific summed standards grades are evaluated against a larger maximum range.

	numeric course grade, as well as how many times they will be counted. For example: The course standard has a weight of 2, numeric value of the standard grade is 3, sum value for that standard grade is 6. Course or section grades scales will often allow higher numeric values than those assigned to the standards being summed to allow for more meaningful summed totals. For example: A standard has a numeric 1-4 grade scale. The related course where the grade is being summed might have a 1-20 numeric grade scale so that up to 5 standard grades can be summed into the course grade for a maximum course grade of 20.	

Important Usage Note: In PowerTeacher Pro, you can mark any score as Exempt. If a student was sick during the last quiz, you can exempt this score. The most recent calculation will then ignore that score, and use the previous score. In this manner, you can use the most recent scores, while still exempting any scores that are not good reflections of the student's learning.

How Do I Determine the Standards Final Grade for the Marking Period?

The default calculation method is used as a starting point. However, as described above, sometimes these measures work very well, and other times there are reasons to prefer a different calculation. The default calculation is a good starting point. However, the teacher should review the standards scores above, and review the calculations in the summary area below. Then the teacher can determine if the calculated score is correct for the report card for this student, or if they want to choose a different grade on that standard for that student.

Here are two examples, both of which start with the default calculation of the highest score for the final standards grade.

Student 1

- Scores: 3,3,3,4,4,4,4,4,4,4
- Highest = 4
- Final Grade Decision on this standard: For this student, 4 is probably a good choice for the final grade on this standard. No change or further work needed.

Student 2

- Scores: 2,2,4,2,1,2,2,2,2,2,2,2,2
- Highest = 4

Final Grade Decision on this standard: For this student, it would be good to know more about the time they got a 4. Likely, the teacher will want to change the standard final score on the report card from 4 to 2. Two is the median, mode, approximate average, and the most recent score. With this data, 2 appears to be a more accurate representation of the student's actual proficiency level on this standard than 4.

Standard Conversion Scales

Create conversion scales to be used with PowerTeacher Gradebook that can be assigned to standards to determine the standards final grades and standards assignment scores. PowerTeacher Pro does not use conversion scales. However, if a teacher is switching from PowerTeacher Gradebook to PowerTeacher Pro in the middle of the term length of a class, then it is imperative that the standards assigned to the course have a conversion scale and a grade scale that match, and that are tied directly to those standards. This will ensure that the data migration works correctly.

How to Create a Conversion Scale

Before entering standards, you must first create at least one conversion scale.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **Standards**. The Standards page appears.
3. Click **Conversion Scales**. The Standard Conversion Scales page appears with the default scale already created. However, you must define each scale and enter the cutoffs for each level and for the converted score.

Note: It is advantageous to leave a default scale in your system for importing purposes.

4. Click **New**. The New Standard Conversion Scale page appears.
5. Use the following table to select the grade scale type:

Type	Description
Name	Enter a name for the standard conversion scale.
Type	Choose a grade scale type from the pop-up menu: • **Alphanumeric:** Use for letter grades such as A, B, and C or E, S, and N, or descriptive grades such as Excellent, Satisfactory, and Unsatisfactory. • **Numeric (2 decimal places):** Use for GPA-type grades such as 4.00, 3.00, and 2.00. • **Numeric (zero decimal places):** Use for simple numerical grades such as 1, 2, 3, and 4. • **Numeric (custom)**: Use for custom numeric grades such as a 4,3,2,1 scale where teachers are allowed to enter decimal scores like 3.5.
Min	Enter the minimum numeric value allowed. Based on the Min and Max numbers you enter, PowerSchool will automatically populate the range of numeric values along with the applicable cut-off and grade values. **Note**: This field appears when **Numeric** is selected on the Type pop-up menu.
Max	Enter the maximum numeric value allowed. Based on the Min and Max numbers you enter, PowerSchool will automatically populate the range of numeric values along with the applicable cut-off and grade values. **Note**: This field appears when **Numeric** is selected on the Type pop-up menu.

Decimal Places	Enter the number of decimal places allowed. **Note**: This field is editable when **Numeric (custom)** is selected on the Type pop-up menu.
Description	Enter a description.

6. Click **Submit**. The Standard Conversion Scales page appears.

   Note: Enter as many conversion scales as needed for the district.

How to Add or Edit Conversion Scale Attributes

After defining the conversion scale, you can edit the scale attributes.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **Standards**. The Standards page appears.
3. Click **Conversion Scales**. The Standard Conversion Scales page appears.
4. Click on the Edit Scale link of the scale you want to modify. The Edit Scale page appears.
5. To add an attribute to this scale, click **New**. To edit an existing attribute, click the Number/Level or Grade/Label hyperlink.
6. Use the following table to enter information in the fields:

Type	Description
Name	The name of the conversion scale appears
Type	Displays a description of the standard conversion scale entry.
Number/Level or Grade/Label	In a numeric scale, displays the number/level as a hyperlink. In an alphanumeric scale, displays the grade/label as a hyperlink.
Description	Displays the description for the number or grade.

Cut-off	Displays the cut-off percentage. This is the minimum a student must earn on an assignment to receive this grade. In a numeric scale, this value is used as a translation value when other values are translated into this scale.
Grade Value	Enter the percentage used for calculations when this grade is entered as an assignment score. In a numeric scale, this value is used as the percentage when calculating the number/level as an assignment score.

7. Click **Submit**. The Edit Scale page appears.

   Note: Enter as many conversion scale attributes as needed for the conversion scale.

Custom List

The Custom List displays standards in a hierarchical list.

How to Set Up the Custom List

After defining the conversion scale, you can edit the scale attributes.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **Standards**. The Standards page appears.
3. Click **Custom List Settings**. The Custom Standards List Settings page appears.

   Note: Use the list settings to search for a particular standard by multiple criteria. However, after you submit the search, enter new standards using the criteria defined by your search.

4. Use the following table to select a search comparator:

Comparator	Description
(Blank)	Ignore this field.

=	Must be an exact match.
#	Must not be an exact match.
$	Contains.
!$	Does not contain.

5. Use the following table to search for a standard:

Field	**Description**
Identifier	Enter the code used by administrators for reporting and by teachers for designating to assignments. Must be unique.
Name	Enter the name of the standard.
Level	Select the level identifier from the pop-up menu.
Active Status	Select the standard's active status from the pop-up menu.
Course Numbers	Enter course numbers separated by commas.
Subject Area	Enter the global naming convention for the subject area for the standard.
Description	Enter a description of the standard.
Conversion Scale	Select a previously defined conversion scale from the pop-up menu.
Grade Scale	Select a grade scale from the pop-up menu.
Teachers Score this Assignment	Do one of the following:

	• Select **Yes** to include standards that you have marked for teachers to score. • Select **No** to exclude those standards.
Exclude From Reports	Do one of the following: • Select **Yes** to include those standards in the custom list that you have marked for exclusion from reports. • Select **No** to exclude those standards in the custom list that you have marked for exclusion from reports.
Sort Order	Select the sort order from the pop-up menus. This defines how the search results appear on the page.
Columns to Show	Select one or many check boxes to define what the search results display.

6. Click **Submit**. The Custom Standards List page appears.

   After searching for the specific criteria, the results of your search appear; however, the results can be blank.

How to View the Custom List of Standards

After you have defined your custom list settings, you can use this page to view your custom list, create new standards, and edit existing standards.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **Standards**. The Standards page appears.
3. Click **Custom List**. The Custom Standards List page appears.
4. Click **New** to create a new standard. For more information, see *How to Manually Enter Standards*.
5. To view and edit standards, click on the name of the standard. For more information, see *How to View and Edit Standards*.
6. To search for standards:

   a. In the **Search** field, enter a standard name or identifier, and then click **Apply**. Standards matching the search criteria appear on the page.
   b. Click **Clear** to remove the search entry.
   c. Click the triangle next to **Filter** to collapse the search field.
7. To filter the custom list of standards by school year, click **Term** in the navigation menu, and make a selection from the pop-up menu. The page refreshes with the standards assigned to the selected school year.

Standards Data Access Tag (DAT) Formatting

Set up the formatting for the following Standards DAT used in PowerSchool:

- std.stored.avg
- std.stored.high

For more information on standards DAT, see the *PowerSchool Data Access Tags Supplement* guide, available on PowerSource.

How to Set Up Standards DAT Format

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **Standards**. The Standards page appears.
3. Click **Standards Data Access Tag (DAT) Formatting**. The Standards Data Access Tag (DAT) Formatting page appears.
4. In the **Number of decimal places in percent scores** field, enter the number of decimal places to be used when percent scores are present (for example, 3).
5. Select the **Include "%" character in percent scores** checkbox to include the percent character when percent scores are present (for example, 89%). Otherwise, leave the checkbox blank.
6. Click **Submit**.

Manage Next Year

Use this optional feature to create the list of standards for the next school year during the current year if you have finalized the standards names and hierarchy. After completion, change the names and hierarchy of standards for the next school year as needed without affecting standards for the current school year. Note that if this process is used, subsequent changes to the current year standards will not be migrated to the next year standards list as part of the end-of-year process.

If you do not use this feature, standards will be automatically created for the next school year as part of the end-of-year process based on the names and hierarchy in place when the end-of-year process is engaged.

How to Create Next Year's List of Standards Prior to End-of-Year

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **Standards**. The Standards page appears.
3. Click **Manage Next Year**. The Manage Next Year page appears.
4. Click **Create Standards List**. A confirmation message appears at the top of the page.

   Note: The next school year must already be created at the District Office in PowerSchool in order to use this feature.

5. Navigate to the List Standards page (**Start Page > District > Standards**) and change the **Term** to next year to work with the standards you just created.

   Note: You can also create the calculation formulas for the next school year prior to the end-of-year process. For more information, see *Grade Calculations*.

Tests Setup

Before entering test scores for an individual student, create new tests that are available to all the schools on your system. If the test already exists on your system, you can edit test information, such as its description or the sort order of test scores.

How to Create a New a Test

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **Tests**. The Test page appears.
3. Click **New**. The New Test page appears.
4. Use the following table to enter information in the fields:

Field	Description
Name	Enter the name of the test.

Type	Choose the level of the test from the pop-up menu.
Description	Enter a description for the test that appears on the Test Scores and student pages menus.

5. Click **Submit**. The Test Scores page displays the new test. To add test scores, see *How to Create a Test a Score*.

How to Edit a Test

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **Tests**. The Test page appears.
3. Click the name of the test you want to edit. The Edit Test page appears.
4. Edit the information as needed. For field descriptions, see *How to Create a New a Test*.
5. Click **Submit**. The Test Scores page displays the edited test. To add test scores, see *How to Create a Test Score*.

How to Delete a Test

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **Tests**. The Test page appears.
3. Click the name of the test you want to delete. The Edit Test page appears.
4. Select the checkbox at the end of the warning note.
5. Click **Delete**.
6. Click **Confirm Delete**. The Selection Deleted page appears.

Test Scores Setup

Test scores are scores associated with a particular test. Use the test score fields when entering scores for individual students. Before creating test scores, identify or create the appropriate test. For more information, see *Tests Setup*.

How to Create a Test Score

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **Tests**. The Test page appears.

3. Click **Edit Scores** next to the test you want to edit. The Test Scores: [Test Name] page appears.
4. Click **New**. The New Test Score: [Test Name] page appears.
5. Use the following table to enter information in the fields:

Field	Description
Name	Enter the name of the test score
Sort Order	Indicate the order for the test score. **Note:** Alternatively, leave the Sort Order field blank and set the sort order from the Test Scores: [Test Name] page. For more information, see *How to Edit a Test*.
Description	Enter a description for the test to appear on the Test Scores page.

6. Click **Submit**. The Test Scores: [Test Name] page displays the new test score.

How to Edit Test Scores

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **Tests**. The Test page appears.
3. Click **Edit Scores** next to the test you want to edit. The Test Scores: [Test Name] page appears.
4. Skip to Step 6 to edit a test score. To change the sort order of the test scores, enter the order of each test scores in the Sort Order fields.
5. Click **Submit**.
6. Click the score name for the test score you want to edit. The Edit Test Score: [Test Name] page appears.
7. Edit the information as needed. For field descriptions, see *How to Create a Test Score*.
8. Click **Submit**. The Test Scores: [Test Name] page displays the edited test score.

How to Delete a Test Score

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **Tests**. The Test page appears.
3. Click **Edit Scores** next to the test. The Test Scores: [Test Name] page appears.

4. Click the score name for the test score you want to delete.
5. Select the checkbox at the end of the warning note.
6. Click **Delete**.
7. Click **Confirm Delete**. The Selection Deleted page appears.

School Setup

Class Rank

Use class rank to determine the order of students when sorted by grade point average (GPA). For example, the student with the highest GPA ranks at the top of the class. Since class rank calculates based on GPAs, the appropriate GPA calculation methods must exist before determining class rank.

Create a class rank method to set parameters for calculating the class rank. Use multiple class rank methods with varying settings to determine multiple sets of class rankings. For example, you can rank all current students using one method and then rank all current students plus students who graduated early using another method.

Class rank is calculated either manually or automatically at specified intervals, such as every week or only after grades are stored. Since calculating class rank affects all class rank methods, it is best to avoid creating more class rank methods than necessary.

Note: Though you can edit class rank methods, you cannot delete class rank methods via the Class Rank Settings page. Instead, you must use Direct Database Access to remove the class rank method. For more information, see *Direct Database Export*.

View the results of the class rank calculation using the Class Ranking Report. For more information, see *How to Run the Class Ranking Report*. You can also include class rank data access tags on custom reports and exports. For more information about data codes, see *PowerSchool Data Codes*.

How to Add a Class Rank Method

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Grading, click **Class Rank**. The Class Rank Settings page appears.
3. Click **Class Rank Methods**. The Class Rank Methods page appears.
4. Click **New**. The Class Rank Method page appears.
5. Use the following table to enter information in the fields:

Field	Description
Description	Enter a description of the class rank method, such as **Class Rank - Simple GPA**.

GPA Calculation Method	Select from the pop-up menu which GPA calculation method to use when calculating class rank. The GPA calculation method determines what is queried and how grades are calculated.
GPA result is	Select from the pop-up menu how you want to assess the class rank: • **Numeric** - Assesses rank numerically, such as giving the student with the highest GPA the rank of 1. This is the most commonly-used selection. • **Text** - Assesses rank alphabetically, such as giving the student with a GPA of A the rank of 1. Select this option when the GPA method returns a text value. For more information, see *GPA Calculation Methods*.
Only include grades	Select the checkbox to include only grades for courses or sections that count in class rank. **Note:** When selected, the class rank grade results may differ from GPA calculation results. This is the only class rank method setting that returns a result that may differ from the GPA.
Exclude students	Select the checkbox to exclude students that are set as excluded from class rank on the students' Other Information page. Some students may be excluded from class rank because they are enrolled for a short amount of time and should not be ranked amongst longer-term students. For more information about excluding a student from the class rank, see *Other Information*. Deselect the checkbox to override the student exclusion setting.
Include early graduates?	Select the checkbox to include students that graduate early. This checkbox filters students that have already exited the school using an exit code that identifies an early graduation. If selected, you must specify in the next field the early graduation exit code.
Early graduation exit code	If the checkbox in the previous field is selected, enter an exit code that specifies an early graduation.

6. Click **Submit**. The Class Rank Methods page displays the new class rank method.

How to Edit a Class Rank Method

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Grading, click **Class Rank**. The Class Rank Settings page appears.
3. Click **Class Rank Methods**. The Class Rank Methods page appears.
4. Click the name of the class rank method you want to edit. The Class Rank Method page appears.
5. Edit the information as needed. For field descriptions, see *How to Add a Class Rank Method*.
6. Click **Submit**. The Class Rank Methods page displays the edited class rank method.

How to Recalculate Class Rank

To refresh class rank data, recalculate all class rank methods either manually or at specified intervals.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Grading, click **Class Rank**. The Class Rank Settings page appears.
3. Click **Recalculation Frequency**. The Class Rank Recalculation Frequency page appears.
4. Select at which frequency the class rank should recalculate:
    - **Daily** - Recalculates automatically during the nightly process
    - **Weekly** - Recalculates automatically each weekend
    - **Monthly** - Recalculates automatically once per month
    - **After storing grades** - Recalculates automatically each time grades are stored
    - **Manually** - Never recalculates automatically

      Note: To manually recalculate the class rank, click **Recalculate now**. The class rank recalculates immediately. Once complete, the Changes Recorded page appears.

5. Click **Submit**. The GPA Options Changed page appears.

Current Grade Display

Use Current Grade Display to set how PowerSchool displays a student's grade and attendance information in the following areas of PowerSchool:

- Quick Lookup page in PowerSchool
- Grades and Attendance page in the PowerSchool Student and Parent portal
- PowerSchool Mobile

Update the settings on this page at the end of each grading term to be sure administrators, administrative staff, and parents view the most up-to-date information for students.

How to Add or Edit Current Grade Display

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Grading, click **Current Grade Display**. The Current Grade Display page appears.
3. In the **Current Grade** field, enter the store code for the current grading term. PowerSchool uses this value to determine which grade to display in all current grade fields, GPA calculations on the Quick Lookup page, and Data Access Tag (DAT) calculations.
4. Click **Submit**.

PowerTeacher Final Grade Entry

In some cases, your district may only want teachers to enter final grades and not use a gradebook. These teachers can only enter final grades in PowerTeacher. Before teachers can use PowerTeacher to enter final grades, you need to set up your PowerSchool system to do so.

Note: These setup procedures are only applicable if you are using PowerTeacher. They are **NOT** applicable if you are using PowerTeacher Gradebook. For information about setting up final grades for PowerTeacher Gradebook, see *PowerTeacher Gradebook Final Grades Setup*.

PowerTeacher Gradebook Final Grade Entry

Teachers using PowerTeacher Gradebook should **NOT** use PowerTeacher to enter final grades. For teachers who only do final standards grade entry, PowerTeacher Gradebook has been designed to be much faster and fixes all of the previous issues with PowerTeacher final grade entry. No information entered in PowerTeacher will appear in PowerTeacher Gradebook. It is advised that all teachers move to PowerTeacher Gradebook for standards grades entry. No setup in the Final Grade Entry Options within the School Setup section of PowerSchool is required for teachers using PowerTeacher Gradebook.

How to Set Up PowerTeacher for Final Grade Entry

In PowerSchool, when you enter standards to be used for final grade entry or for use with PowerTeacher Gradebook, you must remember to do the following for each standard in the district office standards setup:

- Enter a course number or course numbers. Only those standards that list a course number matching the course number of the teacher's current class appear for final grade entry.
- Select the **Allow assignments to be tied to this standard** checkbox for the appropriate standards in PowerSchool. Teachers may only record final grades for those standards that have the checkbox selected.

For detailed information, see *Enter Standards*.

How to Set Up Final Grade Entry - Global Options

Use this page to set up global final grade entry options.

Note: These settings apply to the selected school only. This feature is for PowerTeacher portal final grade entry only. Changes made in PowerTeacher portal will not be reflected in PowerTeacher Gradebook and changes made in PowerTeacher Gradebook will overwrite data entered in PowerTeacher portal.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Grading, click **Final Grade Entry Options**. The Teacher Final Grade Entry Options page appears.
3. Click **Global Settings**. The Final Grade Entry - Global Options page appears.
4. Use the following table to enter information in the fields:

Field	Description
Enable Final Grade Entry in PowerTeacher Portal	Select the checkbox to allow teachers to enter final grades in PowerTeacher.

Final Grade Columns to Display	Enter the final grade columns you want to appear in PowerTeacher.
Allow Entry for These Final Grades	Enter the grading terms for which teachers can enter final grades in PowerTeacher.
Allow Entry for	Do one of the following: • Leave both blank to indicate there is no date restriction. • Enter the number of days before the end of the term and the number of days after the end of the term that teachers can enter final grades in PowerTeacher.

5. Click **Submit**. The Teacher Final Grade Entry Options page appears.

How to Set Up Traditional Final Grade Entry Options

Use this page to set up traditional grading entry options.

Note: These settings apply to the selected school only. This feature is for PowerTeacher portal final grade entry only. Changes made in PowerTeacher portal will not be reflected in PowerTeacher Gradebook and changes made in PowerTeacher Gradebook will overwrite data entered in PowerTeacher portal.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Grading, click **Final Grade Entry Options**. The Teacher Final Grade Entry Options page appears.
3. Click **Traditional Grading**. The Final Grade Entry Options page appears.
4. Use the following table to enter information in the fields:

Field	Description
Enable Final Grade (Letter) Entry	Use the pop-up menu to indicate whether or not teachers can enter Final Grade (Letter): • Choose **Disabled** from the pop-up menu if you do not want to allow teachers to enter Final Grade (Letter).

	• Choose **Pop-up** from the pop-up menu to allow teachers to enter Final Grade (Letter) via a pop-up menu. Section's Grade Scale settings provide the pop-up menu selections. • Choose **Text Field** from the pop-up menu to allow teachers to enter Final Grade (Letter) via a text field. **Note:** To allow teachers to enter final grade comments, do not disable this field.
Enable Final Grade (Citizenship) Entry	Use the pop-up menu to indicate whether or not teachers can enter Final Grade (Citizenship): • Choose **Disabled** from the pop-up menu if you do not want to allow teachers to enter Final Grade (Citizenship). • Choose **Pop-up** from the pop-up menu to allow teachers to enter Final Grade (Citizenship) via a pop-up menu. District-level Citizenship Codes provide the pop-up menu selections. • Choose **Text Field** from the pop-up menu to allow teachers to enter Final Grade (Citizenship) via a text field.
Enable Final Grade (Percentage) Entry	Indicate whether or not teachers can enter Final Grade (Percentage): • Leave the checkbox blank if you do not want to allow teachers to enter Final Grade (Percentage). • Select the checkbox blank to allow teachers to enter Final Grade (Percentage).
Enable Final Grade (Points) Entry	Indicate whether or not teachers can enter Final Grade (Points): • Leave the checkbox blank if you do not want to allow teachers to enter Final Grade (Points). • Select the checkbox blank to allow teachers to enter Final Grade (Points).

Enable Final Grade (Total Points) Entry	Indicate whether or not teachers can enter Final Grade (Total Points): • Leave the checkbox blank if you do not want to allow teachers to enter Final Grade (Total Points). • Select the checkbox blank to allow teachers to enter Final Grade (Total Points).

5. Click **Submit**. The Teacher Final Grade Entry Options page appears.

How to Set Up Standards-based Final Grade Entry Options

Use this page to set up standards-based entry options.

Note: These settings apply to the selected school only. This feature is for PowerTeacher portal final grade entry only. Changes made in PowerTeacher portal will not be reflected in PowerTeacher Gradebook and changes made in PowerTeacher Gradebook will overwrite data entered in PowerTeacher portal.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Grading, click **Final Grade Entry Options**. The Teacher Final Grade Entry Options page appears.
3. Click **Standards-based Grading**. The Standards-based Final Grade Entry Options page appears.
4. Use the following table to enter information in the fields:

Field	Description
Enable Standards Final Grade Entry in PowerTeacher Portal	Select the checkbox to allow standards final grade entry in PowerTeacher.

5. Click **Submit**. The Teacher Final Grade Entry Options page appears.
6. Make sure that the settings you enter look correct for the teachers by signing in as a teacher.

After you define the course number and select the checkbox for each standard, and after you define final grade entry settings in PowerSchool, teachers of the indicated courses can use PowerTeacher to enter final standards grades.

How to Enter Standards Final Grades in PowerTeacher

To enable standards final grades entry, the **Enable teacher entry screens** checkbox on the Final Grade Entry - Global Options page must be selected AND the **Enable standards final grade entry in PowerTeacher Portal?** checkbox on the Standards-based Final Grade Entry Options page must be selected. Once enabled, teachers can enter standards final grades in PowerTeacher.

Note: Standards information entered in PowerTeacher do not display in the PowerSchool Student and Parent portal. Only standards information entered in PowerTeacher Gradebook appear in the PowerSchool Student and Parent portal.

1. Open your Web browser to your school's PowerTeacher URL. The Teacher Sign In page appears.
2. Use the following table to enter information in the fields:

Field	Description
Username	Enter your username.
Password	Enter your password. The characters appear as asterisks (*) to ensure greater security when you sign in.
Select Language	Choose the language in which you want to view PowerTeacher from the pop-up menu.

3. Click **Sign In**. The start page appears.
4. Click the **Backpack** icon next to the class whose standards final grades you want to view or enter. The class roster appears.
5. Click a student's name.
6. Choose **Final Grade Entry (Standards)** from the **Select screens** pop-up menu. The Final Grade Entry page for standards appears.
7. Enter the appropriate grades for each standard for the student.

Note: To view a detailed list of the standards codes and descriptions, choose Standards from the **Select screens** pop-up menu and click on the appropriate course section.

8. To enter a final grade comment regarding the student's achievement or behavior, enter text in the appropriate **Comment** field.
9. Click **Submit** to store the final grades.
10. Repeat the process for each student in the class by clicking the student's first name.

How to Enter Traditional Final Grades in PowerTeacher

To enable traditional final grades entry, the **Enable teacher entry screens** checkbox on the Final Grade Entry - Global Options page must be selected AND at least one traditional final grade setting must be enabled on the Teacher Final Grade Entry Options page. Once enabled, teachers can enter traditional final grades in PowerTeacher.

1. Open your Web browser to your school's PowerTeacher URL. The Teacher Sign In page appears.
2. Use the following table to enter information in the fields:

Field	Description
Username	Enter your username.
Password	Enter your password. The characters appear as asterisks (*) to ensure greater security when you sign in.
Select Language	Choose the language in which you want to view PowerTeacher from the pop-up menu.

3. Click **Sign In**. The start page appears.
4. Click the **Backpack** icon next to the class whose traditional final grades you want to view/enter. The class roster appears.
5. Click a student's name.
6. Choose **Final Grade Entry (Traditional)** from the **Select screens** pop-up menu. The Final Grade Entry page for traditional grading appears.
7. Enter or choose from the pop-up menus the appropriate grade, percent, or points for each final grade for the student.

8. To enter a final grade comment regarding the student's achievement or behavior, enter text in the appropriate **Comment** field.

   Note: Standards final grades entries may appear on the same page as traditional final grade entry based on the Final Grade Entry Global Options set by the system administrator. If combined, the Comment Bank does not appear.

9. Click **Submit** to store the final grades and any comments you entered.
10. Repeat the process for each student in the class by clicking the student's first name.

PowerTeacher Gradebook Final Grades Setup

Use Final Grades Setup to view and set up your school's grading terms and their parameters. Define the dates of each grading term in the school year and assignment names for which teachers enter final grades for that term.

When you store final grades at the end of each term, you store a specific final grade, such as Q1. Before you can store final grades, you must set up final grades in PowerSchool. Ensure that the following steps have been completed so that teachers can use the gradebook to report their students' grades to PowerSchool.

Note: You must set up final grades for each school that shares your PowerSchool server.

Set up final grades one term at a time. When you set up final grades for a term, you affect only the courses that belong to that term. For example, a first semester course belongs only to Semester 1; it does not belong to Quarter 1, Quarter 2, or the entire school year.

After you set up final grades in PowerSchool, the information is automatically sent to each teacher's gradebook.

Note: If you do not define the final grade setup for a grading term, teachers will not be able to enter grades in the gradebook.

For information about setting up final grades entry in PowerTeacher, see *PowerTeacher Final Grade Entry*. The page displays any grading terms already defined for the current school year.

How to Add Final Grades

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Grading, click **Final Grade/Reporting Term Setup**. The Final Grade/Reporting Term Setup page appears.
3. Click **New** under the term for which you want to set up final grades. The New Final Grade page appears.

4. Use the following table to enter information in the fields:

Field	Description
School	The selected school name appears.
Name	Enter a name for this final grade, such as **Q3**.
Staring Date	Enter the starting date to indicate the date the term begins using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
Ending Date	Enter the ending date to indicate the date the term ends using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
Suppress Letter Grade Display	Select the checkbox if you do not want to display letter grades in the system and on reports. Only percentage grades appear.
Suppress Percent Display	Select the checkbox if you do not want to display percent grades in the system on reports. Only letter grades appear.
At or Above This Level of Attendance Points	Enter a level of attendance points for the given date range to automatically affect students' grades due to attendance. Otherwise, enter **0** or leave the field blank.
Change a Student's Grade to	Enter the grade that students receive after meeting or exceeding the attendance points indicated in the previous field.
Do not apply the attendance point change to the following grades	**Note**: These fields only appear when editing an existing final grade. To make exclusions to the attendance point change: 1. Click **Add a Gradescale**. The Final Grade Exclusion page appears.

	2. Choose a grade scale from the Grade Scale pop-up menu. 3. Click **Submit**. The Edit Final Grade page appears. 4. Click **No Marks Excluded**. The Final Grade Exclusions page appears. 5. Select the **Marks to Exclude** checkboxes that apply. 6. Click **Submit** to save the changes or click **Delete** to remove.

5. Click **Submit**. The Final Grades Setups page displays the new final grade.

How to Edit Final Grades

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Grading, click **Final Grade/Reporting Term Setup**. The Final Grade/Reporting Term Setup page appears.
3. Click the term name that you want to edit. The Edit Final Grade page appears.
4. Edit the information as needed. For field descriptions, see *How to Edit Final Grades*.
5. Click **Submit**. The Final Grades Setups page displays the new final grade.

How to Set Options for Presuming Complete

The Options for Presuming Complete field applies to course prerequisite rules and graduation plan progress. Entering value indicates the number of days after the end of enrollment that you want the course prerequisite rule evaluator to presume completion and graduation plans to include the enrollment as in progress. This number allows the administrator some number of days between the end of a term and the storage of grades for that term. A negative number allows specification of the number of days before the day the enrollment ends, for instances where the school typically records grades prior to enrollments ending (rare). For more information, see *Graduation Planner* or the *Graduation Planner User Guide* available on PowerSource.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Grading, click **Final Grade/Reporting Term Setup**. The Final Grade/Reporting Term Setup page appears.
3. Enter the appropriate value in the **Days Before/After Term End** field.
4. Click **Submit**. The Final Grade/Reporting Term Setup page displays the new final grade.

How to Delete Final Grades

If you delete final grades between the process of entering final grades and storing grades, you will lose final grade information.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Grading, click **Final Grade/Reporting Term Setup**. The Final Grade/Reporting Term Setup page appears.
3. Click the term name that you want to delete. The Edit Final Grade page appears.
4. Click **Delete**.
5. Click **Confirm Delete**. A warning message appears indicating deleting the reporting term will also delete all final grades, comments, and standards grades related to this reporting term.
6. To delete these records, click **OK**. The Selection Deleted page appears.

GPA Student Screens

Use the GPA Student Screens function to determine what appears on GPA-related student pages, including the Quick Lookup page and the Cumulative Information page.

How to Define GPA Settings for Quick Lookup Page

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Grading, click **GPA Student Screens.** The GPA Options - Student Screens page appears.
3. Choose the type of current GPA to display under schedule from the pop-up menu:
    - **Weighted**: If your school calculates weighted GPAs, the system also includes the number of credit hours students earn in each course in the GPA calculation.
    - **Weighted Percent**
    - **Simple**: If your school calculates simple GPAs, only the students' grades are involved in the calculation, and the credit hours of each course are not referenced.
    - **Simple Percent**
    - **Total Earned Credit**
4. Click **Submit**. The GPA Options - Student Screens page displays the changed Quick Lookup option.

How to Define GPA Settings for Cumulative Info Page

For the Cumulative Info student page, you can define the rows of information that appear for each student.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Grading, click **GPA Student Screens**. The GPA Options - Student Screens page appears.
3. Enter in the first Row Title field the name of the first row to appear on the Cumulative Info page. The name should clearly indicate the information the user is viewing, such as Cumulative GPA (Weighted).
4. Use the following tables to determine the information you want to display in the Data column.

   For Cumulative GPAs:

Field Expression	Code	Notes
Cumulative GPA (weighted)	^(*gpa)	The cumulative GPA for the student.
Cumulative GPA (simple)	^(*gpa.simple)	Same as Cumulative GPA (weighted), except uses the simple calculation method rather than weighted.
Cumulative credit hours earned	^(*credit_hours)	Includes all courses from the Historical Grades page.
Class rank (based on cumulative weighted GPA)	^(*class_rank_out_of;gpa)	Use any valid GPA type as the GPA parameter, such as gpa.simple and gpa.percent.
Cumulative avg. % earned in all classes (weighted)	^(*gpa.percent)	See Cumulative Percentage GPA.
Cumulative avg. % earned in all classes (simple)	^(*gpa.percent.simple)	See Cumulative Simple Percentage GPA.

For GPAs for specific years and terms:

Field Expression	Code	Notes
GPA for Quarter 1 (weighted)	^(*gpa;Q1)	Calculates the GPA for Q1 of the current school year, such as the year in which the user is currently working. Q1's grades must have already been stored.
GPA for the student's entire junior year	^(*gpa;11)	Calculates the GPA for grade 11.
GPA for Q1 of the student's junior year	^(*gpa;11;Q1)	Calculates the GPA for Q1 of grade 11 for the current student. **Note:** The sequence of the parameters Q1 and 11 is not significant; ^(*gpa;Q1;11) returns the same number as ^(*gpa;11;Q1).
GPA for the year 2004	^(*gpa;2004)	Calculates the GPA for 2004 for the current student.
GPA for Quarter 3 (simple)	^(*gpa.simple;Q3)	Same as GPA for the year 2004 but using the simple calculation method. You can use percent instead of simple if you want the percent GPA.

For Current GPAs:

Field Expression	Code	Notes
The current GPA (simple)	^(*gpa.current)	From the grades on the Quick Lookup page, such as those current as of today. **Note:** Current grades are always calculated using the simple method.

The average % being earned in the current classes (simple)	^(*gpa.current.percent)	From the grades on the Quick Lookup page, such as those current as of today.

For Weighted GPAs by Credit Type:

Field Expression	**Code**	**Notes**
Weighted GPA by Credit Type	^(*gpa.credit_type.ENG)	Weighted GPA for grades for the current student in the current year that are of the credit type ENG. To calculate all historical grades, see the Weighted GPA by Credit Type by Grade field expression.
Weighted GPA by Credit Type by Grade	^(*gpa.credit_type.ENG;12)	Same as Weighted GPA by Credit Type, but also includes grade 12. For all historical grades, enter each grade and separate each grade with commas, such as ***gpa.credit_type.ENG;9,10,11,12**.

For Class Ranking by GPA:

Class ranking codes always begin with *classrank and may be followed by zero to three optional parameters:

- Parameter "method" - Specifies the name of the class rank method for which a rank should be returned. Class rank calculation methods are defined by the user in the Class Rankings section of School Setup.
- Parameter "result" - Specifies the type of data to return as the result. Possible values are "rank", "outof", "rankoutof", "percentile", "rankdate", "gpa", and "schoolname". If omitted, the default value is "rank".
- Parameter "percentiledigits" - If the parameter "result" is "percentile", this parameter specifies the number of decimal places to compute the percentage. If omitted, "2" is the default.

Field Expression	**Code**	**Notes**

Class rank, weighted (default)	^(*classrank) or ^(*classrank method="weighted")	Numerical class rank based on cumulative weighted GPA for the student's entire academic career for this school.
Class rank, user defined	^(*classrank method="UserDefined")	Class rank based on a user-defined GPA calculation method as specified in Class Rankings in School Setup.
Class rank, rank result	^(*classrank) or ^(*classrank result="rank")	Numerical class rank based on cumulative weighted GPA for the student's entire academic career for this school.
Class rank, outof result	^(*classrank result="outof")	Number of students ranked.
Class rank, rankoutof result	^(*classrank result="rankoutof")	Rank for the student, the text "out of", and the number of students ranked.
Class rank, percentile result	^(*classrank result="percentile")	Student rank percentile to the number of places specified by the percentiledigits parameter.
Class rank, rankdate result	^(*classrank result="rankdate")	Date the rank was last updated.
Class rank, gpa result	^(*classrank result="gpa")	Result of the GPA code used to determine the class rank.
Class rank, schoolname result	^(*classrank result="schoolname")	Name of the school where the student earned the rank.
Class rank, percentiledigits	^(*classrank result="percentile" percentiledigits="3")	When used with the percentile result, specifies the number of decimal places to compute the percentage.

5. Click **Submit**. The GPA Options - Student Screens page displays the new settings.

Variable Credit

To support alternative education programs, PowerSchool now offers variable credit. Using variable credit, teachers can now specify how much credit each student is attempting (potential credit) and how much credit each student is awarded (earned credit) regardless of the credit hours specified for the course or the grade the student earned for the class in a term.

To use this feature, variable credit must be enabled either for an individual section or for multiple sections. You have the option to permit teachers to enter variable awarded credit and variable attempted credit. By default, both variable awarded credit and variable attempted credit are disabled.

Note: Setting variable credit for an individual section can be done using the Edit Section page, as well as the Variable Credit Setup page. Setting variable credit for multiple sections can only be done using the Variable Credit Setup page. When setting up variable credit, you can disable both attempted and awarded credit, enabled both attempted and awarded credit, or only enable awarded credit.

Once enabled, respective column appears in PowerTeacher Gradebook on the Scoresheet in Final Grade mode. Teachers may enter any desired numerical value. For more information, see Scoresheet in the PowerTeacher Gradebook online help.

Finally, variable credit scores entered in PowerTeacher Gradebook can then be permanently stored. For more information, see *Options for Storing Variable Credit*.

Variable Credit Setup

Using variable credit setup, you can enable or disable variable credit for multiple sections. Variable credit setup also provides the option to enable and disable variable credit for an individual section.

How to Mass Update Variable Credit

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Grading, click **Variable Credit Setup**. The Variable Credit Setup page appears.
3. Use the following table to enter information in the fields:

Note: Click Section List column headings to sort in ascending order. Click again to sort in descending order. Click **<<first**, **<prev**, [number], **next>**, **last>>** to view all of the Section List search results.

Field	Description
Search Filter	By default, the Section List is empty. Click the arrow, select one or more of the following checkboxes, enter the appropriate information in each field, and then click **Search**: • **Course Name** • **Course Number** • **Section Number** • **Teacher** • **Expression** • **Year** • **Term** • **Variable Awarded Credit** • **Variable Attempted Credit** • **Selected Term Context**
Change for all listed section to	Use the pop-up menus to indicate whether or not to permit teachers to enter variable credit for all sections in the Section List: • To permit teachers to enter variable awarded credit, choose **Variable Awarded Credit** from the first pop-up menu, **Yes** from the second pop-up menu, and then click **Set**. As a result, the Variable Awarded Credit column appears in PowerTeacher Gradebook on the Scoresheet in Final Grade mode. Teachers may enter any desired numerical value. • To prevent teachers from entering variable awarded credit, choose **Variable Awarded Credit** from the first pop-up menu, **No** from the second pop-up menu, and then click **Set**. As a result, the Variable Awarded Credit column will not appear in PowerTeacher Gradebook on the Scoresheet in Final Grade mode. • To permit teachers to enter variable attempted credit, choose **Variable Attempted Credit** from the first pop-up menu, **Yes** from the second pop-up menu, and then click

	Set. As a result, the Variable Attempted Credit column appears in PowerTeacher Gradebook on the Scoresheet in Final Grade mode. Teachers may enter any desired numerical value. • To prevent teachers from entering variable attempted credit, choose **Variable Attempted Credit** from the first pop-up menu, **No** from the second pop-up menu, and then click **Set**. As a result, the Variable Attempted Credit column will not appear in PowerTeacher Gradebook on the Scoresheet in Final Grade mode.
Course Name	The name of the course.
Course Number	The number used to identify the course.
Section Number	The number used to identify the course section.
Teacher	The name of the teacher teaching the course section.
Expression	The period and day combination of the course section.
Year	The year in which the course section is being taught.
Term	The term in which the course section is being taught.
Variable Awarded Credit	Use the pop-up menu to indicate whether or not to permit teachers to enter variable awarded credit for the selected section: • To permit teachers to enter variable awarded credit, choose **Yes** from the pop-up menu. As a result, the Variable Awarded Credit column appears in PowerTeacher Gradebook on the Scoresheet in Final Grade mode. Teachers may enter any desired numerical value. • To prevent teachers from entering variable awarded credit, choose **No** from the pop-up menu. As a result, the Variable

	Awarded Credit column will not appear in PowerTeacher Gradebook on the Scoresheet in Final Grade mode.
Variable Attempted Credit	Use the pop-up menu to indicate whether or not to permit teachers to enter variable attempted credit for the selected section: • To permit teachers to enter variable attempted credit, choose **Yes** from the pop-up menu. As a result, the Variable Attempted Credit column appears in PowerTeacher Gradebook on the Scoresheet in Final Grade mode. Teachers may enter any desired numerical value. • To prevent teachers from entering variable attempted credit, choose **No** from the pop-up menu. As a result, the Variable Attempted Credit column will not appear in PowerTeacher Gradebook on the Scoresheet in Final Grade mode.

4. Click **Submit**. The Variable Credit Setup page appears and the message "Changes Saved" displays.

Repeated Course Grade Suppression

Using Repeated Course Grade Suppression students may repeat a course to improve a grade and have it applied to their graduation, GPA, class rank, and honor roll calculations. As part of the calculation, the maximum number of credits a student receives for taking the course can be set. Additionally, using Course Equivalencies, you can manage the relationship between a course and its equivalent. Once defined, course equivalencies are then used by the repeated course grade suppression process when calculating permanently store grades.

Example 1

Semester 1 a student receives a grade of F and in Semester 2 the student receives a grade of B. The F will be replaced by the B meaning the F will be excluded from graduation, class rank, honor roll, and GPA calculations. Additionally, the F will have a repeated course grade suppression value of ‘R’, indicating that it was replaced by a better grade.

Example 2

A course has a maximum credit hours setting of 1. A student takes the class three times in different semesters, each of which one credit was attempted. The student received the following grades in the following order: C, F, B. The C will replace the F and the B will be set as over maximum credit for the course. The F will be excluded from graduation, class rank, honor roll and GPA calculations. Additionally, the F will have a repeated course grade suppression value of ‘R’, indicating that it was replaced by a better grade. The B will be excluded from graduation and it will receive a repeated course grade suppression value of ‘M’, indicating it was suppressed because the student had already received the maximum number of credits allowed for that course.

Example 3

Semester 1 a student receives a grade of F for course number MATH101 and in Semester 2 the student receives a grade of B for course number MATH102. An equivalency is defined for MATH102 where it can replace MATH101. The B will replace the F where the F will be excluded from graduation, class rank, honor roll and GPA calculations. Additionally, the F will have a repeated course grade suppression value of “R”, indicating that it was replaced by a better grade. The MATH102 record will have its Replaced_Equivalent_Course field set to MATH101 to indicate that it is replacing a different “equivalent course”.

Setup

Before you can begin using repeated course grade suppression, you must perform the following setup items:

- *Set Up Repeated Course Grade Suppression Policies*
- *Set Max Credit Hours for a Course*
- *Set Repeated Course Grade Suppression for a Grade Scale*
- *Set Up Course Equivalencies*
- *Ensure Historical Grade Levels Set for School*
- *Enable Repeated Course Grade Suppression for Schools*

Set Up Repeated Course Grade Suppression Policies

Using the Repeated Course Grade Suppression Policies page, you can define more than one repeated course grade suppression policy.

How to View Repeated Course Grade Suppression Policies

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **Repeated Course Grade Suppression**. The Repeated Course Grade Suppression page appears.
3. Click the **Policies** tab. The Repeated Course Grade Suppression Policies page displays the following information:

Field	Description
Add	Click to add a new repeated course grade suppression policy.
Policy Name	The name of the policy. Click the name of the policy you want to edit or delete.
Description	A description of the policy.

How to Add a Repeated Course Grade Suppression Policy

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **Repeated Course Grade Suppression**. The Repeated Course Grade Suppression page appears.
3. Click the **Policies** tab. The Repeated Course Grade Suppression Policies page appears.
4. Click **Add**. The Add Repeated Course Grade Suppression Policy page appears.

5. Use the following table to enter information in the Details section:

Field	Description
Name	Enter the unique-name of the policy.
Description	Enter a description of the policy. **Note:** Up to 256 characters may be entered.

6. Use the following table to enter information in the Suppression Criteria section:

Field	Description
Only These Store Codes	Select the checkbox to limit which stored grades are to be evaluated by the repeated course grade suppression rules during the permanently store grades process. In the field next the checkbox, enter a comma-delimited list. Otherwise, leave the checkbox blank. **Note:** A maximum of 100 characters may be entered.
Allow Same-Term Suppression	Select the checkbox to allow stored grades with the same termID to replace each other when being evaluated by the repeated course grade suppression rules during the permanently store grades process. Otherwise, leave the checkbox blank.

7. Use the following table to enter information in the GPA Thresholds for Grade Suppression Calculations section:

   Note: Setting the **Low Threshold** or **High Threshold** value to null can provide for different types of setup configuration needs. For example, if:

   - Both thresholds populated (Low Threshold: 0, High Threshold: 1), grades can be replaced that apply to the high or low thresholds.
   - Only the high threshold is populated (Low Threshold: [null], High Threshold: 1), no grades are replaced unless that course or course equivalency is over the maximum credit.

- Only the low threshold is populated (Low Threshold: 1, High Threshold: [null]), grades are always replaceable based on the low threshold. No maximum credit is used to evaluate replacement. (Grade Suppression can still occur when the student has more than the maximum credit for that course.)
- Both thresholds are not populated (Low Threshold: [null], High Threshold: [null]), no grade replacement occurs at all. (Grade Suppression can still occur when the student has more than the maximum credit for that course.)

Field	Description
Low Threshold	Enter the lowest grade point value. If a grade has points <= to this value, the grade (typically F or lower) is deemed replaceable at any time. **Note:** Default set to **0**.
High Threshold	Enter the highest grade point value. If a grade has points above the low threshold but <= to the high threshold, then this grade is deemed replaceable only if the max credit for this course has been exceeded. For example, a D is typically not replaced unless other grades' earned credits equal the sum of the maximum credit hours setting for the course. **Note:** Default set to **1**.
Include Added Value in GPA Point Evaluation	Courses may include an added value for the grade points, such as **1** for one additional grade point. Select the checkbox to include added values in the GPA point evaluation.

8. Use the following table to enter information in the Replaced Grade Suppression Results section:

Field	Description
Exclude from Transcripts	Select the checkbox to exclude Suppression Results in transcripts. Otherwise, leave the checkbox blank.

Exclude from GPA	Select the checkbox to exclude Suppression Results in GPA calculation during the permanently store grades process. Otherwise, leave the checkbox blank.
Exclude from Class Rank	Select the checkbox to exclude Suppression Results in class rank calculation during the permanently store grades process. Otherwise, leave the checkbox blank.
Exclude from Honor Roll	Select the checkbox to exclude Suppression Results in honor roll calculation during the permanently store grades process. Otherwise, leave the checkbox blank.

9. Use the following table to enter information in the Over Maximum Credit Suppression Results section:

Field	Description
Exclude from Transcripts	Select the checkbox to exclude Maximum Credit Reached Results in transcripts. Otherwise, leave the checkbox blank.
Exclude from GPA	Select the checkbox to exclude Maximum Credit Reached Results in GPA calculation during the permanently store grades process. Otherwise, leave the checkbox blank.
Exclude from Class Rank	Select the checkbox to exclude Maximum Credit Reached Results in class rank calculation during the permanently store grades process. Otherwise, leave the checkbox blank.
Exclude from Honor Roll	Select the checkbox to exclude Maximum Credit Reached Results in honor roll calculation during the permanently store grades process. Otherwise, leave the checkbox blank.

10. Click **Submit**. The Changes Recorded page appears.

How to Edit a Repeated Course Grade Suppression Policy

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **Repeated Course Grade Suppression**. The Repeated Course Grade Suppression page appears.
3. Click the **Policies** tab. The Repeated Course Grade Suppression Policies page appears.
4. Click the name of the policy you want to edit. The Edit Repeated Course Grade Suppression Policy page appears.
5. Enter information in the fields, as needed. For field descriptions, see *How to Add a Repeated Course Grade Suppression Policy*.
6. Click **Submit**. The Changes Recorded page appears.

How to Delete a Repeated Course Grade Suppression Policy

Note: A policy may only be deleted if they are associated to a grade scale.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **Repeated Course Grade Suppression**. The Repeated Course Grade Suppression page appears.
3. Click the **Policies** tab. The Repeated Course Grade Suppression Policies page appears.
4. Click the name of the policy you want to delete. The Edit Repeated Course Grade Suppression Policy page appears.
5. Click **Delete**.
6. Click **Confirm Delete**. A confirmation message appears.

Set Max Credit Hours for a Course

Using the Edit Course District Information page, you can set the maximum number of credits a student receives for taking the course in the **Max Credit Hours** field. The value must be greater than or equal to the **Credit Hours**. Once a value is entered, the value will be evaluated against the credit earned on stored grades to determine if it should be excluded from graduation progress/graduation planner based on the association to the grade policy related to the grade scale for the course or section.

Note: For more information, see *How to Edit District Course Information*.

Set Repeated Course Grade Suppression for a Grade Scale

Using the New Grade Scale or the Edit Grade Scale page, you can enable the **Repeated Course Grade Suppression** by choosing a repeated course grade suppression policy. If enabled, stored grades associated to this grade scale will be evaluated based on the selected repeated course grade suppression policy during the permanently store grades process.

Note: For more information, see *Grade Scales*.

Set Up Course Equivalencies

Using the Course Equivalencies page, you can manage the relationship between a course and its equivalent. For example, if EHS101 (course) and EHS102 (course equivalent) are stored, then EHS102 courses can replace EHS101 grades. EHS102 is "equivalent to" EHS101. Once defined, course equivalencies are then used by the repeated course grade suppression process when calculating permanently store grades.

Note: For more information, see *Edit Course Equivalencies*.

Ensure Historical Grade Levels Set for School

The Repeated Course Grade Suppression process operates on StoredGrades Records, which have a grade level associated with them. To properly ensure that the correct group of records are being evaluated, the group is constrained by the high and low **Historical Grade Levels** settings for the school in which you are running the process. It is important to have these values set so you don't replace middle school grade records with high school grade records, for example, or count middle school credit towards max credit at the high school. This could happen if a common course number that spans these schools.

If the school has a low historical grade level set to 9, then any record considered must have grade_level set to 9 or above. If the low historical grade level is not set, then no check against low grade is performed.

If the school has a high historical grade level set to 12, then any record considered must have grade_level set to 12 or below. If the high historical grade level is not set, then no check against high grade is performed.

So, if the school has no low historical grade level, but a high historical grade level of 12, then all storedgrades records of Grade_level 12 or below will be considered in the process.

How to Ensure Historical Grade Levels Set for School

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under District Information, click **Schools/School Info**. The Schools/School Info page appears.

3. Click the name of the school in the Schools column that you want to edit. The Edit School page appears.
4. Scroll to the **Historical Grade Levels** fields.
5. Ensure the **Historical Grade Levels** settings are set.
6. Edit the information, if needed. For field descriptions, see *How to Add a School*.
7. Click **Submit**. The Schools/School Info page displays the edited school.

Enable Repeated Course Grade Suppression for Schools

Using the Repeated Course Grade Suppression School Settings page, you can "enable" Repeated Course Grade Suppression for selected school. When enabled, Repeated Course Grade Suppression fields appear on the Single Historical Grades Entry, Multiple Historical Grades Entries, Edit a Stored Grade and View Historical Grades pages.

Note: This procedure may only be performed at the district level.

How to Enable Repeated Course Grade Suppression for Schools

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Grading, click **Repeated Course Grade Suppression**. The Repeated Course Grade Suppression page appears.
3. Click the **Schools** tab. The Repeated Course Grade Suppression School Settings page appears.
4. Use the following table to enter information in the fields:

Field	Description
Exclude suppression calculations for historical grades from schools that do not use repeated course grade suppression	Select the checkbox to exclude suppression calculations for historical grades from schools that do not use repeated course grade suppression. Otherwise, leave blank. **Note:** By default, the checkbox appears selected.
Schools Not Using Grade Suppression	To add a school from the Not Using Grade Suppression list to the Using Grade Suppression list:

	1. Click the school you want to add. **Note:** To select multiple schools, press and hold COMMAND (Mac) or CONTROL (Windows) as you click each school. 2. Click the single arrow pointing right. To add all schools from the Not Using Grade Suppression list to the Using Grade Suppression list, click the double arrows pointing right.
Schools Using Grade Suppression	To remove a school from the Using Grade Suppression list to the Not Using Grade Suppression list: 1. Click the school you want to remove. **Note:** To select multiple schools, press and hold COMMAND (Mac) or CONTROL (Windows) as you click each school. 2. Click the single arrow pointing left. To remove all schools from the Using Grade Suppression list to the Not Using Grade Suppression list, click the double arrows pointing left.
Reset	Click to reset the Not Using Grade Suppression list and Using Grade Suppression list back to their original state before you began moving schools from one list to another.

5. Click **Submit**. A confirmation message appears.

Run Process

Once you have set up repeated course grade suppression, you can:

- *Run Repeated Course Grade Suppression Process Using the Permanently Store Grades Page*

- *Run Repeated Course Grade Suppression Process Using the Repeated Course Grade Suppression Page*

Run Repeated Course Grade Suppression Process Using the Permanently Store Grades Page

Using the Permanently Store Grades page, you can enable the **Apply Repeated Course Grade Suppression Policy Rules** checkbox. If enabled, stored grades related to grade scales that allow repeated course grade suppression will be evaluated by the repeated course grade suppression rules during the permanently store grades process.

Note: For more information, see *Permanently Store Grades*.

Run Repeated Course Grade Suppression Process Using the Repeated Course Grade Suppression Page

Using the Repeated Course Grade Suppression page, you can manually run the Repeated Course Grade Suppression process at the school level.

How to Run Repeated Course Grade Suppression Process

Note: This procedure may only be performed at the school level.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Grades, click **Repeated Course Grade Suppression**. The Repeated Course Grade Suppression page appears.
3. Use the following table to enter information in the fields:

Field	Description
Evaluate grades for the currently selected (0) students only.	To filter historical grade records based the current student selection, select the checkbox. Otherwise, leave the checkbox blank. To remove the filter, remove the checkbox. **Note:** If there are no students selected, the checkbox appears shaded.
Term Range	To filter historical grade records based on term range, choose a term in the **From** and/or **To** pop-up menu. Otherwise, leave the

	fields blank. To remove the filter, choose blank from the pop-up menus. **Note:** When choosing a term, the current term appears selected in the pop-up menu.
Store Codes	To filter historical grade records based on store codes, enter a comma-delimited list of store codes by which you want to filter. Otherwise, leave the field blank. To remove the filter, remove the store codes from the field.
Stored Date	To filter historical grade records based on stored date, enter a date in the **From** and/or **To** fields or click the **Calendar** icon to select dates for each field. Otherwise, leave the fields blank. To remove the filter, remove the dates from the fields.
Course Numbers	To filter historical grade records based on course numbers, enter a comma-delimited list of course numbers by which you want to filter. Otherwise, leave the field blank. To remove the filter, remove the course numbers from the field.
Credit Types	To filter historical grade records based on credit types, enter a comma-delimited list of credit types by which you want to filter. Otherwise, leave the field blank. To remove the filter, remove the credit types from the field.

4. Click **Update Selection**. The Preview Historical Grade Selection Count section displays to following information:

Field	**Description**
Historical Grade Records Selected	The number of historical grade records found based on the criteria entered.
[Messaging]	One or more of the following messages may appear: • Filter settings have changed. Click Update Selection before running the Repeated Course Grade Suppression Process.

	• Running the Repeated Course Grade Suppression Process may affect other stored grades. • The current selection may result in over 24,000 changes to historical grade records. Use the filter options to select fewer records to continue. • The student selection has changed. Click Update Selection before running the Repeated Course Grade Suppression Process.

5. Click **Run Repeated Course Grade Suppression Process**. The Process Complete section displays the number of grades affected.

   Note: The **Run Repeated Course Grade Suppression Process** button does not appear if no historical grade records are selected or if the current selection may result in over 24,000 changes to historical grade records.

Repeated Course Grade Suppression Rules

PowerSchool supports the following repeated course grade suppression rules:

- When running the repeated course grade suppression process, it looks to see if the grade is related to a grade scale that has the repeated course grade suppression policy enabled. If so, then the broader StoredGrades table is searched for grades for the same student and course or course equivalency.
- Only grades that have potential or earned credit will be evaluated.
- GPA points are used to determine which grades are better than others and can therefore replace other grades.
- As grades are evaluated, they are processed in groups based on having the same StudentID and Course_Number. They are processed in the order of oldest to newest (based on yearID and ending Term Bin date). As they are processed, earned credits are tallied to help determine if when some grades can be replaced and when the student is over the maximum credit for the course.
- If store codes are specified in the policy, then only grades with those store codes will be evaluated.
- Grades with a GPA point <= than the low threshold can always be replaced by a grade with a higher GPA point value.
- Grades with a GPA point above the low threshold and <= the high threshold are only replaced by a better grade if the grades processed so far have a sum of earned credits equal to or greater than the maximum credit for the course.

- Grades cannot replace other grades with the same TermID unless specified in the policy to ignore this restriction.
- Once the sum of the earned credits is equal to or greater than the maximum credit for the course, and if that grade cannot be replaced, then that grade will be excluded from graduation and it will set the historical grade repeated course grade suppression value to M signifying it was suppressed because the student was over the maximum credits for the course. Based on the policy, these grades may also be excluded from GPA, class rank, honor roll, or transcripts.
- When a grade replaces another grade, then the replaced grade will be excluded from graduation. Based on the policy, the replaced grade may also be excluded from GPA, class rank, honor roll, or transcripts. It will also have a repeated course grade suppression value of R indicating that it was replaced by another grade. Then a correlation is made as to which grade replaced it. This is based on the hidden DCID value of the replacing grade that gets populated in the replaced grades Replacing_DCID field.
- Older grades can replace newer grades and newer grades can replace older grades.
- If the process is run multiple times and data or settings change, grades that were previously flagged as repeated or over maximum credit will have these values removed and will no longer being excluded from graduation. Additionally, the settings to be excluded from class rank, honor roll, and GPA will revert back to how the permanently store grades process sets these values without the effects of the repeated course grade suppression rules.
- The repeated course grade suppression logic will always try to replace grades that will give the student the best GPA result. However, when grades are at maximum, the latter grades are suppressed even if they are better than previous grades that have a GPA point value too high to be replaced.
- A grade cannot replace two grades. It is always a one to one relationship. However, a grade can replace another grade that has already replaced something else.

Note: For more information on the precise calculation logic, see Knowledgebase article 70584 available on PowerSource.

Working With Grades

After running the permanently store grades process, you can:

- *View Grade Suppression Code*
- *Set Grade Suppression Code for a Stored Grade*
- *Override Grade Scale Grade Suppression Policy*
- *Add a Replaced Grade to a Transcript Object Report*

View Grade Suppression Code

Using the Complete Academic Record Detail View page, you can view the Grade Suppression Code column to verify a grade in the course is for a replaced course grade.

Note: For more information, see *Historical Grades*.

Set Grade Suppression Code for a Stored Grade

Using the Edit Stored Grades page, you can set the Grade Suppression Code for a stored grade. This value is initially set during the permanently store grades process. However, it can be entered manually or adjusted after it has been calculated. If you want to prevent any future grade calculations from changing this value, choose to exclude from grade suppression calculation. When excluded, this value will be ignored during the repeated course grade suppression processing.

When editing a stored grade, use the **Grade Suppression Code** pop-up menu to select either **Replaced Grade (R)** to indicate the stored grade is for a replaced course grade or **Over Maximum Credit (M)** to indicate maximum credit hours. Making a selection does not automatically adjust whether the stored grade is excluded from excluded from transcripts or GPA, honor roll, class rank, or graduation calculations. However, these settings can be adjusted manually.

Override Grade Scale Grade Suppression Policy

Using the New Stored Grade page, the Academic Record Entry page, or the Edit Stored Grades page, you can use the **Grade Suppression Policy Override** pop-up menu to override the section or course's grade scale grade suppression policy. Once a selection is made, stored grades associated to this grade scale will be evaluated based on the selected grade suppression policy during the permanently store grades process.

Note: For more information, see *How to Create a Single Historical Grades Entry*, *How to Create Multiple Historical Grades Entries*, or *How to Edit a Stored Grade*.

Add a Replaced Grade to a Transcript Object Report

Using the New Transcript Object or Edit Transcript Object page, you can include replaced grades in object reports. When adding or editing a transcript object, select **Replaced Grade** from the **Columns Field** pop-up menu and enter the grade indicator you want to print in the **Other Field/Text/Format** field. To display an indicator for grades that are replaced, enter **R**. To display an indicator for grades that are suppressed because they were over the maximum credit hours for the course, enter **M**.

Note: Use a comma to separate multiple grade indicators. Do not include blank spaces between the comma and the grade indicator.

Note: For more information, see *Transcript Objects*.

Work with Students

Cumulative Info

Cumulative Info is a view-only page that displays cumulative grades for the currently selected term. The information is derived from data access tags entered in the GPA Student Screens. For more information, see *GPA Student Screens*.

How to View Student Cumulative Information

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Cumulative Info** from the student pages menu. The Cumulative Information page appears.

   Note: This page is view-only for all users.

Historical Grades

Historical Grades In PowerSchool, student records include two types of grades: current and historical. Current grades are students' grades entered by each of their teachers through PowerTeacher Gradebook. Current grades change with each new assignment that teachers enter in PowerTeacher Gradebook. Teachers, administrators, and parents use current grades to track student progress throughout a grading term.

Historical grades are final grades, or grades that are permanently stored in the student's record. At the end of each grading term, your PowerSchool administrator copies and stores the students' current grades from PowerTeacher Gradebook to historical grades. Historical grades appear on report cards and transcripts.

This function displays your selected student's grades from previous terms. You have the choice of using a normal view or a detail view.

Note: The Historical Grades student page view is view-only for most users; only those with proper access, such as a school counselor, have the right to edit historical grades. Teachers who assign grades and need to change them later must contact a user with the proper access.

How to View Historical Grades

1. On the start page, search for and select a student. For more information, see *Student Search*.

2. Under Academics, choose **Historical Grades** from the student pages menu. The Historical Grades page appears. For each course in which the student earned a grade, the page displays the following:
    - Year/Term - Year and store code of the term in which the student enrolled in the course.
    - Grd Lvl - Student's grade level at the time he or she enrolled in the course.
    - Course number - The number of the course.
    - Course - The name of the course.
    - Earned credit - Number of possible credit hours the student can earn in the course.
    - **[Terms]** - Historical grade the student earned in each grading term. Click a grade to access the Edit Stored Grade page.

      Note: The Normal View page displays only the grades the student received during the grade levels of the current school.

3. Click **Detail View** to view expanded information and the grades the student received at other grade levels. The Complete Academic Record Detail View page appears.

   Note: The Complete Academic Record Detail View page displays all of the student's historical grades in PowerSchool. The Detail View page is not specific to the grade levels at this school.

4. In addition to the information on the Historical Grades page, this page displays the following detailed credit information:
    - Year/Term - Year and store code of the term in which the student enrolled in the course.
    - Grd Lvl - Student's grade level at the time he or she enrolled in the course.
    - Course # - The number of the course.
    - Course Name - The name of the course.
    - Stored Code - Each grading term the student earned a historical grade.
    - **Grade** - Historical grade the student earned in each grading term. Click a grade to access the Edit Stored Grade page.
    - Earned Credit - Number of credit hours the student earned in each course.
    - Pot. Credit - Potential credit hours the student could earn in each course.
    - Earns Grad Credit - Indicates if the course is included in a graduation requirement and the credits the student earned count towards the requirement.
    - GPA - Indicates if the grade in the course is included in the student's GPA calculation.

- Class Rank - Indicates if the grade in the course is included in the class rank calculation.
- Excluded from Honor Roll - Indicates if the grade in the course is included in the honor roll calculation.
- Transcripts - Indicates if the grade in the course is included in transcripts.
- Credit Type - Indicates if the credits in the course count towards a graduation requirement based on credit type.
- Grade Suppression Code - Indicates if the grade in the course is for a replaced course grade.

  Note: Grade Suppression Code only appears if Repeated Course Grade Suppression is enabled for the selected school. For more information, see *Repeated Course Grade Suppression*.

  Note: Your school can create credit types to group courses together to fill a graduation requirement. Assign credit types to courses or final grades and then specify that a requirement be filled by any courses or grades of that credit type. For example, you specify that any two courses with the ALGEBRA credit type fulfill a math requirement.

5. Click **Normal View** to return to the Historical Grade page. The Historical Grades page (Normal View) reappears.

How to Create a Single Historical Grades Entry

Enter a student's grades one at a time for incoming students. Alternatively, use the Multiple New Entries function on the Academic Record Entry page to enter a single grade. Most schools use the Academic Record Entry page to enter all grades.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Historical Grades** from the student pages menu. The Historical Grades page appears.
3. Click **Single New Entry**. The New Stored Grade page appears.
4. Use the following table to enter information in the fields:

Field	**Description**
School Name	Enter the name of the school where the student received the grade.

School Year	Enter the year for which you want to enter a grade.
Hist. Grade Level	Enter the grade level of the student when he or she received the grade.
Store Code	Enter the store code that your school uses for the term in which the student earned the grade. Store codes are determined in the final grade setup area on the School Setup page.
Course Number - Section Number [or] Course Name	You must provide one of the following: • The course and section number of an existing section at the currently selected school. • The course name if this is historical data for which no section record exists. If you provide a course and section, this grade will be associated with the student's enrollment in that section and will print on report cards. If you supply only the course name, the grade will print on transcripts but not on report cards since it is not associated with an actual section enrollment. In either case, the grade will be included in transcripts, the Previous Grades screen, and GPA calculations.
Teacher Name	Enter the name of the teacher that taught the class.
Grade	Enter the letter grade the student earned.
GPA Points	Enter the number of grade points the student received for this grade.
Added Value	Enter any added value for the grade points, such as **1** for one additional grade point. You can also use fractions of a point. Most schools do not enter added values.

Percent	Enter the percent grade the student earned.
Citizenship	Enter the citizenship grade for the term.
Earned Credit Hours	Enter the number of credit hours the student earned in the course. **Note:** The number of earned credit hours and potential credit hours must be the same.
Potential Credit Hours	Enter the total number of credit hours the student could have earned in the course. **Note:** The number of earned credit hours and potential credit hours must be the same.
Credit Type	If you could not match the course in which the student received this grade to a course at your school and you entered a course name, enter the credit type that counts towards the requirement if this grade fulfills a specific graduation requirement at your school. For example, if a student earned the grade in Russian, and your school does not offer Russian, enter **Russian** in the Course Name field. Then, to have the grade the student earned count towards the foreign language graduation requirement, enter **Foreign Language** or a similar credit type name in this field. Otherwise, deselect the checkbox.
Grade Suppression Policy Override	To override the section or course's grade scale grade suppression policy, choose the grade suppression policy you want to apply from the pop-up menu. Once a selection is made, stored grades associated to this grade scale will be evaluated based on the selected grade suppression policy during the permanently store grades process. **Note:** This field only appears if Repeated Course Grade Suppression is enabled for the selected school. For more information, see *Repeated Course Grade Suppression*.

Grade Suppression Calculation	Do one of the following: • Select **Include** to include the grade in the Grade Suppression calculation. • Select **Exclude** to exclude the grade from the Grade Suppression calculation. **Note:** The repeated course suppression process automatically runs after clicking **Submit**. **Note:** This field only appears if Repeated Course Grade Suppression is enabled for the selected school. For more information, see *Repeated Course Grade Suppression*.
Exclude from GPA?	Do one of the following: • Select **Include** to include the grade in the GPA calculation. • Select **Exclude** to exclude the grade from the GPA calculation.
Exclude from Class Rank?	Do one of the following: • Select **Include** to include the grade in the class rank calculation. • Select **Exclude** to exclude the grade from the class rank calculation.
Exclude from Honor Roll?	Do one of the following: • Select **Include** to include the grade in the honor roll calculation. • Select **Exclude** to exclude the grade from the honor roll calculation.
Teacher Comment	Enter any comments from the teacher.

5. Click **Submit**. The Historical Grades page displays the new grade.

How to Create Multiple Historical Grades Entries

This option for entering historical grades is helpful when a student transfers from another school and all previous grades must be entered in PowerSchool.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Historical Grades** from the student pages menu. The Historical Grades page appears.
3. Click **Multiple New Entries**. The Academic Record Entry page appears.
4. Use the following table to enter information in the fields:

Field	Description
School Name	Enter the name of the school where the student received the grade.
School Year	Enter the year for which you want to enter a grade.
Hist. Grade Level	Enter the grade level of the student when he or she received the grade.
Grade Suppression Policy Override	To override the section or course's grade scale grade suppression policy, choose the grade suppression policy you want to apply from the pop-up menu. Once a selection is made, stored grades associated to this grade scale will be evaluated based on the selected grade suppression policy during the permanently store grades process. **Note:** This field only appears if Repeated Course Grade Suppression is enabled for the selected school. For more information, see *Repeated Course Grade Suppression*.
Grade Suppression Calculation	Do one of the following: • Select **Include** to include the grade in the Grade Suppression calculation.

	• Select **Exclude** to exclude the grade from the Grade Suppression calculation. **Note:** The repeated course suppression process automatically runs after clicking **Submit**. **Note:** This field only appears if Repeated Course Grade Suppression is enabled for the selected school. For more information, see *Repeated Course Grade Suppression*.
Store Code	Enter the store code that your school uses for the term in which the student earned the grade. Store codes are determined in the final grade setup area on the School Setup page.

5. Use the following table to enter information for each course per term in the indicated school year:

Field	**Description**
Course Number - Section Number [or] Course Name	You must provide one of the following: • The course and section number of an existing section at the currently selected school. • The course name if this is historical data for which no section record exists. If you provide a course and section, this grade will be associated with the student's enrollment in that section and will print on report cards. If you supply only the course name, the grade will print on transcripts but not on report cards since it is not associated with an actual section enrollment. In either case, the grade will be included in transcripts, the Previous Grades screen, and GPA calculations.
Teacher Name	Enter the name of the teacher that taught the class.

Credit Type	If you could not match the course in which the student received this grade to a course at your school and you entered a course name, enter the credit type that counts towards the requirement if this grade fulfills a specific graduation requirement at your school. For example, if a student earned the grade in Russian, and your school does not offer Russian, enter **Russian** in the Course Name field. Then, to have the grade the student earned count towards the foreign language graduation requirement, enter **Foreign Language** or a similar credit type name in this field. Otherwise, deselect the checkbox.
Exclude from GPA?	Do one of the following: • Select **Include** to include the grade in the GPA calculation. • Select **Exclude** to exclude the grade from the GPA calculation.
Exclude from Class Rank?	Do one of the following: • Select **Include** to include the grade in the class rank calculation. • Select **Exclude** to exclude the grade from the class rank calculation.
Exclude from Honor Roll?	Do one of the following: • Select **Include** to include the grade in the honor roll calculation. • Select **Exclude** to exclude the grade from the honor roll calculation.
Grade	Enter the letter grade the student earned.
GPA Points	Enter the number of grade points the student received for this grade.

Added Value	Enter any added value for the grade points, such as **1** for one additional grade point. You can also use fractions of a point. Most schools do not enter added values.
Percent	Enter the percent grade the student earned.
Citizenship	Enter the citizenship grade for the term.
Earned Credit	Enter the number of credit hours the student earned in the course. **Note:** The number of earned credit hours and potential credit hours must be the same.
Potential Credit	Enter the total number of credit hours the student could have earned in the course. **Note:** The number of earned credit hours and potential credit hours must be the same.

6. Repeat Step 5 for additional courses.
7. Click **Submit**. The Historical Grades page displays the new grades.

How to Edit a Stored Grade

There are times when it is necessary to change a historical (stored) grade. Because such a change can have a serious impact on a student's permanent record, stored grades must be changed one by one.

Note: You can create a log entry to track each time you change a grade for a student. For more information, see *Log Entries*.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Historical Grades** from the student pages menu. The Historical Grades page appears.
3. Click the grade to be changed. The Edit Stored Grade page appears.
4. Use the following table to change a student's historical grade information on the Edit Stored Grades page:

Field	Description
School	The school name appears.
Term ID	Enter the 4-character value of the term associated to the grade. **Note:** If this grade is already associated to a Course Number - Section Number, then this field is not editable. **Note:** The grade does not automatically change with the percentage and vice versa. If you change one, you must manually change the other. **Note:** If this field is modified, the **Repeated Course Grade Suppression** checkbox is automatically selected.
School Year (Term)	The school year and term appear.
Store Code	The store code appears. **Note:** If this field is modified, the **Repeated Course Grade Suppression** checkbox is automatically selected.
Hist. Grade Level	The grade level in which the student enrolled in the course appears. You can edit the grade level. **Note:** If this field is modified, the **Repeated Course Grade Suppression** checkbox is automatically selected.
Associated Section	The section of the course in which the student was enrolled appears.
Course Number	The number of the course in which the student earned the grade appears.
Course Name	The name of the course in which the student earned the grade appears.
Teacher Name	Enter the name of the teacher of the course section.

Associated Grade Scale	The name of the associated grade scale appears.
Grade	The letter grade originally entered for the student appears. You can edit the grade.
GPA Points	Enter the point value that corresponds to the grade. For example, enter **4.0** for an A. **Note:** If this field is modified, the **Repeated Course Grade Suppression** checkbox appears selected.
Added Value	Enter any added value for the grade points, such as **1** for one additional grade point. You can also use fractions of a point. Most schools do not enter added values. **Note:** If this field is modified, the **Repeated Course Grade Suppression** checkbox appears selected.
Percent	Enter the percent grade the student earned.
Citizenship	Enter the citizenship grade for the term.
Absences	Enter the number of absences for the course in the term.
Tardies	Enter the number of tardies for the course in the term.
Earned Credit Hours	Enter the number of credit hours the student earned in the course. **Note:** The number of earned credit hours and potential credit hours must be the same. **Note:** If this field is modified, the **Repeated Course Grade Suppression** checkbox is automatically selected.
Potential Credit Hours	Enter the total number of credit hours the student could have earned in the course.

	Note: The number of earned credit hours and potential credit hours must be the same. **Note:** If this field is modified, the **Repeated Course Grade Suppression** checkbox is automatically selected.
Credit type	If you could not match the course in which the student received this grade to a course at your school and you entered a course name, enter the credit type that counts towards the requirement if this grade fulfills a specific graduation requirement at your school. For example, if a student earned the grade in Russian, and your school does not offer Russian, enter **Russian** in the Course Name field. Then, to have the grade the student earned count towards the foreign language graduation requirement, enter **Foreign Language** or a similar credit type name in this field. Otherwise, deselect the checkbox.
Grade Suppression Policy Override	To override the section or course's grade scale grade suppression policy, choose the grade suppression policy you want to apply from the pop-up menu. Once a selection is made, stored grades associated to this grade scale will be evaluated based on the selected grade suppression policy during the permanently store grades process. **Note:** This field only appears if Repeated Course Grade Suppression is enabled for the selected school. For more information, see *Repeated Course Grade Suppression*.
Grade Suppression Code	Indicate the repeated course grade suppression value of the stored grade by choosing one of the following from the pop-up menu: • **Blank** - Stored grade is not for a replaced course grade. • **Replaced Grade (R)** - Stored grade is for a replaced course grade. • **Over Maximum Credit (M)** - Maximum credit hours. **Note:** The repeated course grade suppression value is blank by default unless it has been calculated by the

	permanently store grades process. However, it can be entered manually or adjusted after it has been calculated. If you want to prevent any future grade calculations from changing this value, choose to exclude from grade suppression calculation. When excluded, this value will be ignored during the repeated course grade suppression processing. Selecting **Replaced Grade (R)** does not automatically adjust whether the grade is excluded from transcripts or GPA, honor roll, class rank, or graduation calculations. However, these settings can be adjusted manually. Selecting **Over Maximum Credit (M)** does not automatically adjust whether the grade is excluded from graduation calculation. However, these settings can be adjusted manually. **Note:** If the grade was previously replaced or was replacing another grade, adjusting the repeated course grade suppression value will remove this association. **Note:** This field is only available when editing a stored grade. **Note:** This field only appears if Repeated Course Grade Suppression is enabled for the selected school. For more information, see *Repeated Course Grade Suppression*.
Repeated Course Grade Details	Click to view the Repeated Course Grade Details pop-up, which displays the following grade replacement succession: • Grade Order • **Grade** - Click to access the Edit Stored Grade page for the repeated course grade. • Course Number • Course Name • Store Code • Term • Grade Suppression **Note:** The current repeated course grade appears highlighted. **Note:** This link only appears if there are other grades related based on the repeated course grade suppression calculation.

	Note: This field only appears if Repeated Course Grade Suppression is enabled for the selected school. For more information, see *Repeated Course Grade Suppression*.
Grade Suppression Calculation	Do one of the following: • Select **Include** to include stored grades in grade suppression calculation during the permanently store grades process. • Select **Exclude** to exclude stored grades from grade suppression calculation during the permanently store grades process. Note: If this field is modified, the **Repeated Course Grade Suppression** checkbox is automatically selected. **Note:** This field only appears if Repeated Course Grade Suppression is enabled for the selected school. For more information, see *Repeated Course Grade Suppression*. **Note:** If a grade has already been replaced by the Repeated Course Grade Suppression process and then is set to be excluded from the calculation, the Grade Suppression Code and the relationship to the replacing grade will persist and never be considered by subsequent grade suppression calculations. This could cause a grade to replace more than one other grade. To prevent this, clear the **Grade Suppression Code** prior to setting **Grade Suppression Calculation** to **Exclude**.
Display on Transcript	Do one of the following: • Select **Yes** to include stored grade in transcripts. • Select **No** to exclude stored grade from transcripts. **Note:** For more information, see *Transcript Objects*.
GPA Calculation	Do one of the following: • Select **Include** to include the grade in the GPA calculation during the permanently store grades process.

	• Select **Exclude** to exclude the grade from the GPA calculation during the permanently store grades process.
Class Rank Calculation	Do one of the following: • Select **Include** to include the grade in the class rank calculation during the permanently store grades process. • Select **Exclude** to exclude the grade from the class rank calculation during the permanently store grades process.
Honor Roll Calculation	Do one of the following: • Select **Include** to include the grade in the honor roll calculation during the permanently store grades process. • Select **Exclude** to exclude the grade from the honor roll calculation during the permanently store grades process.
Graduation Calculation	Do one of the following: • Select **Include** to include the grade in the graduation calculation during the permanently store grades process. • Select **Exclude** to exclude the grade from the graduation calculation during the permanently store grades process. **Note:** For more information, see *Repeated Course Grade Suppression*.
Teacher Comment	Enter any comments from the teacher.
Change History	A list of any changes to this grade appears.
Repeated Course Grade Suppression	Indicate whether or not to run the repeated course grade suppression process by doing one of the following: • Select the **Run** checkbox to run the repeated course grade suppression process.

	• Deselect the **Run** checkbox if you do not want to run the repeated course grade suppression process. **Note:** If the **Grade Suppression Code** is modified, the checkbox no longer appears. **Note:** By default, the checkbox is not selected. However, if **Term ID**, **Store Code**, **Hist. Grade Level**, **GPA Points**, **Added Value**, **Earned Credit Hours**, **Potential Credit Hours** or **Grade Suppression Calculation** are modified, the checkbox appears selected. **Warning**: Running the Repeated Course Grade Suppression process may affect other stored grades. **Note:** This field only appears if Repeated Course Grade Suppression is enabled for the selected school. For more information, see *Repeated Course Grade Suppression*.

5. Click **Submit**. A confirmation message appears.

How to Delete a Stored Grade

Before deleting a class from a student's historical grades, be certain this is what you want to do. You are not only deleting the grade from the historical record, you are also deleting the class from the student's permanent record. Though this function does not delete the class from the master schedule, the student's historical grades for this class cannot be retrieved once deleted.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Historical Grades** from the student pages menu. The Historical Grades page appears.
3. Click the grade you want to delete. The Edit Stored Grade page appears.
4. Click **Delete**.
5. Click **Confirm Delete**. The Selection Deleted page appears. If you delete the last grade for a class, the class no longer appears on the Historical Grades page.

How to Override Course Names

You can override a district-assigned course name if you enter a course name along with a valid course number on the Historical Grade screen. The following rules apply when overriding the course name:

- Course Number is optional. If it is not included, the Course Name is used.
- If a Section Number is entered, it must exist in the system.
- If no Course Name is entered and a valid Course Number is entered, it will default to the name in the Courses table.
- If no Course Name is entered or found, an error dialog appears, and the changes are not saved.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Historical Grades** from the student pages menu. The Historical Grades page appears.
3. Click **Single New Entry**. The New Stored Grade page appears.

   Note: To change several course names, click Multiple New Entries. The Academic Record – Entry page appears.

4. Enter the course name in the Course name field.
5. Click **Submit**.

How to Edit Previous School Names

Use this function to change or enter the name of the school where a class was taken. If you entered a school name when entering the historical grades, it appears on this page. If you did not enter a school name, do so from this page.

Note: The school names you enter appear on the student's transcript next to the school year during which he or she attended the school. If a student attended more than one school during a school year, each school and the grades the student received at that school appear in separate lists.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Historical Grades** from the student pages menu. The Historical Grades page appears.
3. Click **Previous School Names**. The Historical School Names page appears.
4. Enter or change the name of the schools where the courses were taken.
5. Click **Submit**. The Changes Recorded page appears.
6. Once you have submitted, you can:

- Click the grade to display the school name on the Edit Stored Grade page.
- Repeat this procedure by leaving the School Name field blank to reset a changed previous school name. The Edit Stored Grade page displays the current school.

Honor Roll

You can view results of honor roll calculations for a single student or a group of students. To view honor roll calculations for a single student, search for and select the student, and then choose Honor Roll from the student pages menu. The Honor Roll page displays all honor rolls the student has received, even if the honor roll was received in another school.

Note: To view honor roll calculations for a group of students, see *How to Run the Honor Roll Report*.

How to View a Student Honor Roll Information

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Honor Roll** from the student pages menu. The Honor Roll page appears.
3. Use the following table to enter information in the fields:

Type	Description
School Year	The school year when the honor roll was earned.
Grade Level	The historical grade level for this honor roll record.
School Name	The name of the school where honor roll record was issued.
Store Code	The store code for the honor roll record.
Honor Roll Method	The name of the honor roll method that was calculated.
Level Met	The name of the honor roll level earned. Click to access the Edit Honor Roll page.

4. Do one of the following when done viewing:
    - Choose another item from the student pages menu.
    - Click the **Back** button on your browser.

How to Edit Student Honor Roll Information

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Honor Roll** from the student pages menu. The Honor Roll page appears.
3. Click the level met of the honor roll you want to edit. The Edit Honor Roll page appears.
4. Use the following table to enter information in the fields:

Type	Description
School	The name of the school where the honor roll was earned. This field is read-only.
School Year	The school year when the honor roll was earned. This field is read-only.
Store Code	The store code for the honor roll record. This field is read-only.
Grade Level	The historical grade level for this honor roll record.
Method	The name of the honor roll method that was calculated.
Level	The name of the honor roll level earned.
GPA	The GPA that was used as part of the honor roll calculation.
Message	The text message associated with the honor roll level.
Change History	A text log detailing when changes were made, who made those changes, and what was changed for this record. This field is read-only.

5. Click **Submit**. The changes are reflected immediately, and an entry appears in the change history.

How to Delete Student Honor Roll Information

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Honor Roll** from the student pages menu. The Honor Roll page appears.
3. Click the level met of the honor roll you want to delete. The Edit Honor Roll page appears.
4. Click **Delete**.
5. Click **Confirm Delete**. The Selection Deleted page appears.

Teacher Comments

The Teacher Comments page displays any comment that a teacher has entered regarding a student, such as a student's achievement or behavior. Comments can be entered using PowerTeacher or PowerTeacher Gradebook.

If using PowerTeacher, comments can be entered using the Final Grade Entry pages if the Final Grade Entry function has been enabled. For more information, see *Final Grade Entry*. If using PowerTeacher Gradebook, comments can be entered using the Scoresheet Final Grades window. For more information see *Final Grades* in the *PowerTeacher Gradebook User Guide* available on PowerSource.

Note: Teachers using PowerTeacher should **NOT** use PowerTeacher Gradebook.

Note: The Comment Bank is only available in PowerTeacher Gradebook at this time. For more information about creating comments in the comment bank, see *Comment Bank*.

Once a comment is entered, it can be viewed in PowerSchool, PowerTeacher, and the PowerSchool Student and Parent portal.

How to View Teacher Comments

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Teacher Comments** from the student pages menu. The Teacher Comments page appears.
3. Use the following table to view teacher comments:

Field	Description
Reporting Term	By default, the student's schedule for the current term appears. Use the pop-up menu to select a different term.
Exp.	The expression indicates the period and day combination of the course.
Course #	The course number indicates the number used to identify the course.
Course	The name of the course.
Teacher	The name of the teacher teaching the course.
Attendance Points	The number of attendance points the student received for the course, such as absent=1, tardy=2, and present=0.
Comment	Comment entered by teacher. **Note:** If the column is blank, there are no teacher comments.
Show dropped classes	Click to view currently enrolled classes and dropped classes.
Show only current classes	Click to view only currently enrolled classes.

Term Grades

Use this page to view term grades for the selected student. The course, letter grade, percentage points, citizenship grade, and credit hours are noted for each term.

How to View Term Grades

1. On the start page, search for and select a student. For more information, see *Student Search*.

2. Under Academics, choose **Term Grades** from the student pages menu. The Term Grades page appears. By default the current year is selected.
3. Click the term tab you want to view.
4. If viewing the current year, click the percentage to view a detailed breakdown of the assignments that make up the grade. The Scores page displays the assignments and the selected student's scores for that class. For more information, see *How to View Student Assignment Scores*.

   Note: Icons indicate the status of assignments. For more information, see the icon legend at the bottom of the page.

The Test Results page displays comprehensive information about a student's test results. Additionally, if your district has set up tests, you can enter, edit, or delete test results for an individual student.

Benchmark Tests

Using the Benchmark Tests tab, you can view comprehensive information about a student's benchmark test results. Benchmark tests may be viewed by test or by standard.

Note: The Benchmark Tests tab only appears if Schoolnet is enabled at the system level and at least one role has been assigned to you. The content that appears is not served by PowerSchool. It is rendered from a separate Schoolnet server. If content does not appear, contact your school's PowerSchool administrator.

Note: When accessing the Benchmark Tests tab, you may encounter one or more of the following error messages:

Error	Description
Test results are currently unavailable. Please try again later.	Indicates that the system is down and cannot make network contact.
Test data is not available for this student.	Indicates there is currently no test data available for the student.
Record could not be found. Check with your system	Indicates one of the following:

administrator for assistance.	• Student is not enrolled at a school that is integrated with Schoolnet. • Student's account has not yet been set up in Schoolnet. • Student's account has been set up in Schoolnet, but credentials are still being set up.

How to View Benchmark Test Results by Test

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Test Results** from the student pages menu. The Test Results page appears for that student.
3. Click the **Benchmark Tests** tab. Benchmark tests for the selected student appear.
4. Use the following table to enter information in the Filters fields:

Field	Description
School Year	Choose the school year from the pop-up menu.
Test Category	Choose one of the following test categories from the pop-up menu: • **All Test Categories** (default) • **State Benchmark** • **District Benchmark** • **School Benchmark**
View By	Choose the **Test** option.

The following information appears for each test the student has taken:

- Test Name and Description
- Test Date
- Test Score
- Score Group

5. Click the name of the test to view further details.

6. Click the **Benchmark Tests** tab to return to list of benchmark tests.

   Note: For more information, see the *Schoolnet online help*.

How to View Benchmark Test Results by Standard

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Test Results** from the student pages menu. The Test Results page appears for that student.
3. Click the **Benchmark Tests** tab. Benchmark tests for the selected student appear.
4. Use the following table to enter information in the Filters fields:

Field	Description
School Year	Choose the school year from the pop-up menu.
Test Category	Choose one of the following test categories from the pop-up menu: • **All Test Categories** (default) • **State Benchmark** • **District Benchmark** • **School Benchmark**
View By	Choose the **Standard** option.

The following standards information appears for each test the student has taken:

- Standard
- Last Assessed
- Score
- Score Group

5. Click the name of the standard to view further details.
6. Click the **Benchmark Tests** tab to return to list of benchmark tests.

Note: For more information, see the *Schoolnet online help*.

Classroom Tests

Using the Classroom Tests tab, you can view comprehensive information about a student's classroom test results. Classroom tests may be viewed by test or by standard.

Note: The Classroom Tests tab only appears if Schoolnet is enabled at the system level and at least one role has been assigned to you. The content that appears is not served by PowerSchool. It is rendered from a separate Schoolnet server. If content does not appear, contact your school's PowerSchool administrator.

Note: When accessing the Classroom Tests tab, you may encounter one or more of the following error messages:

Error	Description
Test results are currently unavailable. Please try again later.	Indicates that the system is down and cannot make network contact.
Test data is not available for this student.	Indicates there is currently no test data available for the student.
Record could not be found. Check with your system administrator for assistance.	Indicates one of the following: • Student is not enrolled at a school that is integrated with Schoolnet. • Student's account has not yet been set up in Schoolnet. • Student's account has been set up in Schoolnet, but credentials are still being set up.

How to View Classroom Test Results by Test

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Test Results** from the student pages menu. The Test Results page appears for that student.
3. Click the **Classroom Tests** tab. Classroom tests for the selected student appear.
4. Use the following table to enter information in the Filters fields:

Field	Description
School Year	Choose the school year from the pop-up menu.
Test Category	Choose one of the following test categories from the pop-up menu: • **All Test Categories** • **Common Classroom** • **My Classroom**
View By	Choose the **Test** option.

The following information appears for each test the student has taken:

- Test Name and Description
- Test Date
- Test Score
- Score Group

5. Click the name of the test to view further details.
6. Click the **Classroom Tests** tab to return to list of classroom tests.

   Note: For more information, see the *Schoolnet online help*.

How to View Classroom Test Results by Standard

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Test Results** from the student pages menu. The Test Results page appears for that student.
3. Click the **Classroom Tests** tab. Classroom tests for the selected student appear.
4. Use the following table to enter information in the Filters fields:

Field	Description
School Year	Choose the school year from the pop-up menu.

Test Category	Choose one of the following test categories from the pop-up menu: • **All Test Categories** • **Common Classroom** • **My Classroom**
View By	Choose the **Standard** option.

The following standards information appears for each test the student has taken:

- Standard
- Last Assessed
- Score
- Score Group

5. Click the name of the standard to view further details.
6. Click the **Classroom Tests** tab to return to list of classroom tests.

   Note: For more information, see the *Schoolnet online help*.

Standardized Tests

Using the Standardized Tests tab, you can view comprehensive information about a student's classroom test results.

Note: The Standardized Tests tab only appears if Schoolnet is enabled at the system level and at least one role has been assigned to you. The content that appears is not served by PowerSchool. It is rendered from a separate Schoolnet server. If content does not appear, contact your school's PowerSchool administrator.

Note: When accessing the Standardized Tests tab, you may encounter one or more of the following error messages:

Error	Description
Test results are currently unavailable. Please try again later.	Indicates that the system is down and cannot make network contact.

Test data is not available for this student.	Indicates there is currently no test data available for the student.
Record could not be found. Check with your system administrator for assistance.	Indicates one of the following: • Student is not enrolled at a school that is integrated with Schoolnet. • Student's account has not yet been set up in Schoolnet. • Student's account has been set up in Schoolnet, but credentials are still being set up.

How to View Standardized Test Results

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Test Results** from the student pages menu. The Test Results page appears for that student.
3. Click the **Standardized Tests** tab. Standardized tests for the selected student appear.
4. Choose the **School Year** from the pop-up menu. The following information appears for each standardized test the student has taken:
    - Section
    - Score Group
    - Raw Score
    - Scaled Score
5. Click the name of a standardized test to view test details.
6. Click the **Standardized Tests** tab to return to list of standardized tests.

    Note: For more information, see the *Schoolnet online help*.

PowerSchool Test Scores

Using the PowerSchool Test Scores tab, you can easily manage test results for an individual student.

Note: In order for tests to appear in the **Enter New Test** pop-up menu, they must first be created using *Tests Setup*.

Note: If Analytics is enabled, click **Analytics Student View** to view the Analytics Student View page. For more information, see *Enable Analytics*.

How to Enter Student PowerSchool Test Scores

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Test Results** from the student pages menu. The Test Results page appears for that student.
3. Click the **PowerSchool Test Scores** tab.
4. Choose a test from the **Enter New Test** pop-up menu. If selecting the test that currently appears, click **Submit**. The New Student Test: [Test Name] page appears.

   Note: is not necessary to have all three score types (number, percent, or alpha) when importing a score. Import one, two, or all three score .

5. Use the following table to enter information in the fields:

Field	Description
Test	The selected test appears.
Date	Enter the date of the test using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
Term	Choose the term from the pop-up menu.
Grade Level	Enter the grade level for the test.
Score	For each of the test results, enter the number score, the percent score, and the alpha letter grade.

6. Click **Submit**. The Test Results page displays the new test score for that student.

How to Import PowerSchool Test Scores

Use the Import Test Results function when setting up your initial PowerSchool data, enrolling a large number of new or transferring students, or entering test results for students after receiving the test results. Before importing test results, you must have an ASCII text file containing the test score data being imported, preferably delimited by tabs.

The following table displays a sample import file for eleventh graders who recently took the ACT. This example shows an import file reporting the numeric scores, test date, and students' grade level at the time the test was given. The test results are named Composite, English, Math, Reading, and Science.

student_number	Date	grade_level	composite	english	math	reading	science
645236653	8/7/03	11	18	18	17	16	21
645236741	8/7/03	11	28	29	27	29	25
645236654	8/7/03	11	18	14	22	19	18

To record the numeric, percentage, and alphanumeric scores for test results, use the following numeric suffixes after the column headings and one space:

- [Column name] 1: Displays the numeric score. For example, include in the Math 1 column the scores 17, 27, and 22.
- [Column name] 2: Displays the percentage score. For example, include in the Math 2 column the scores 57%, 90%, and 73%.
- [Column name] 3: Displays that alphanumeric score. For example, include in the Math 3 column the scores F, A-, and C.

Note: It is not necessary to have all three score types (number, percent, or alpha) when importing a score. Import one, two, or all three score types.

The following table displays a sample import file for eleventh graders who recently took a district-level math test. This example shows an import file reporting the numeric, percentage, and alphanumeric scores, test date, and students' grade level at the time the test was given.

student_number	Date	grade_level	Math 1	Math 2	Math 3
645236653	8/7/03	11	17	57	F

645236741	8/7/03	11	27	90	A-
645236654	8/7/03	11	22	73	C

Before importing test results, you must first create a test and its scores. For more information, see *How to Create New Tests* and *How to Create Test Scores*.

Note: The Quick Import page is now also accessible via **Start > System > Page and Data Management > Quick Import**.

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Importing & Exporting**. The Importing & Exporting page appears.
3. Click **Quick Import**. The Quick Import page appears.
4. Use the following table to enter information in the fields:

Field	Description
Table	Choose the **Test Results** table from the pop-up menu.
Field delimiter	Choose the field delimiter from the pop-up menu. This refers to the item that will separate the fields in the exported data. If you choose **Other**, enter the delimiter in the field.
End-of-line marker	Choose the end-of-line marker from the pop-up menu. This refers to the item that will separate the records in the exported data. If you choose Other, enter the delimiter in the field. • **CR:** Carriage return • **CRLF:** Carriage return line feed • **LF:** Line feed
File to import	Click **Browse...** next to the File to import field. Navigate to the data file and click b.

Suggest field map	Select the checkbox to have the system suggest PowerSchool field names for the information in the data file. These are just suggestions and can be changed.
School	The selected school appears.

5. Click **Import**. The Select Test page appears.
6. Choose a test from the **Test** pop-up menu. If the test you want does not appear, create it. For more information, see *How to Create New Tests*.
7. Click **Submit**. The Import Records from an ASCII Text File page appears.
8. Choose the PowerSchool field into which you want to enter each value from the To PowerSchool pop-up menu.
9. Select the checkbox to exclude the first row. Depending on the text file, the first row may include information about the file and not about the student test results.
10. Enter the imported value you want to use in the unmapped field and choose the PowerSchool field from the pop-up menu.
11. Click **Submit**. The Import Progress page displays the records that were successfully imported and those that the system could not import because of your specifications. The system imports the data into the Test Scores table. Depending on the type of data, you can view, edit, and report on it.

How to Edit Student PowerSchool Test Results

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Test Results** from the student pages menu. The Test Results page appears for that student.
3. Click the **PowerSchool Test Scores** tab.
4. Click the name of the test you want to edit. The Edit Student Test: [test name] page appears.
5. Edit the information as needed. For field descriptions, see *How to Enter Student Test Results*.
6. Click **Submit**. The Test Results page displays the edited test score for that student.

How to Delete Student PowerSchool Test Results

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Test Results** from the student pages menu. The Test Results page appears for that student.

3. Click the **PowerSchool Test Scores** tab.
4. Click the name of the test you want to delete. The Edit Student Test: [test name] page appears.
5. Click **Delete**.
6. Click **Confirm Delete**. The Selection Delete page appears.

Graduation Planner User Guide

PowerSchool

Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

Table of Contents

Introduction

With the introduction of Graduation Planner, PowerSchool now provides a more robust tool for planning a student's academic career, tracking and reporting on their progress, and evaluating graduation readiness.

Note: Graduation Planner may be used as an alternative to or in conjunction with Graduation Requirements and Graduation Sets.

State Reporting

Graduation Planner is available for all states. However, at this time certain states will need to continue to use Graduation Requirements and Graduation Sets to ensure correct information is reported on their state-required reports. Refer to state-specific Tech Notes available on PowerSource for more information on whether or not your state requires the continued use of Graduation Requirements and Graduation Sets. For those states identified, Graduation Planner may be used, but required state reporting information will be reported out of Graduation Requirements and Graduation Sets.

District Setup

To get started, the following setup must be performed:

- Create a graduation plan.
- Edit all/individual version(s) of a graduation plan.
- Create a subject group.
- Create a credit assignment strategy.

Graduation Plans

Graduation plans provide the mechanism for schools to determine graduation requirements based on credit hours. There are two types of graduation plans you can create: graduation contracts and post-secondary preparation plans. Graduation contracts define the requirements a student must fulfill in order to graduate high school. Post-secondary preparation plans define the requirements a student must fulfill in order to attend a post-secondary institution, such as a state college or university.

How to View Graduation Plans

Use this procedure to view a list of all existing graduation plans.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Graduation Planner Setup**. The Graduation Planner Setup page appears. By default, the **Contracts** tab is selected.
3. Note the following information appears for each graduation plan:

Field	Description
Graduation Plan	The name of the graduation plan. Click to edit a graduation plan. For more information, see *How to Edit a Graduation Plan*.
Version	The versions of the graduation plan. Click the version of the graduation plan you want to edit. For more information, see *How to Edit a Graduation Plan Version*. Click the **Plus (+)** button to create a new graduation plan version. For more information, see *How to Create a Graduation Plan Version*.

Summary	The subject group(s) and requirements for each graduation plan.
Select Students	Click to make students associated to the graduation plan the current student selection and to display the student pages.
New Graduation Plan	Click to create a new graduation plan.

How to Create a Graduation Plan

Use this procedure to add as many graduation plans as needed.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Graduation Planner Setup**. The Graduation Planner Setup page appears. By default, the **Contracts** tab is selected.
3. Click **New Graduation Plan**. The Edit Graduation Plan appears.
4. Use the following table to enter information in the fields:

Field	Description
Graduation Plan Name	Enter the name of the graduation plan. The name must be unique for the district.
Is Post-Secondary	Do one of the following: • Leave this checkbox blank to create a graduation contract. • Select the checkbox to create a post-secondary graduation plan.

5. Click **Submit**. The Graduation Planner Setup page displays the new graduation plan.

How to Edit a Graduation Plan

Use this procedure to edit graduation plan details.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Graduation Planner Setup**. The Graduation Planner Setup page appears. By default, the **Contracts** tab is selected.
3. Click the name of the graduation plan you want to edit. The Edit Graduation Plan appears.
4. Use the following table to edit information in the fields:

Field	**Description**
Graduation Plan Name	Enter the name of the graduation plan. The name must be unique for the district.
Is Post-Secondary	Do one of the following: • To create a graduation contract, leave this checkbox blank. • To create a post-secondary graduation plan, select the checkbox.
Plan Versions	The versions of the graduation plan. Click the version of the graduation plan you want to edit. For more information, see *How to Edit a Graduation Plan Version*. Click the **Plus (+)** button to create a new graduation plan version. For more information, see *How to Create a Graduation Plan Version*.
Select Students in Plan	Click to make students associated to the graduation plan the current student selection and to display the student pages.

5. Click **Submit**. The Graduation Planner Setup page appears.

How to Delete a Graduation Plan

Use this procedure to delete a graduation plan that may have been created in error or that is no longer in use.

Note: If a graduation plan is associated to a student, it cannot be deleted. First remove all students and then the graduation plan may be deleted.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Graduation Planner Setup**. The Graduation Planner Setup page appears. By default, the **Contracts** tab is selected.
3. Click the name of the graduation plan you want to delete. The Edit Graduation Plan appears.
4. Click **Delete**. The Graduation Planner Setup page appears.

How to Convert a Graduation Set into Graduation Plan

Use this procedure to convert an existing graduation set into a graduation plan. For more information, see Graduation Sets.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Scheduling, click **Graduation Sets**. The Graduation Sets page appears.
3. Click the name of the graduation set you want to edit. The Graduation Requirement Set page appears.
4. Click **Convert to Graduation Plan**. The Edit Graduation Plan page appears.
5. View the created graduation plan to confirm it is correct. For more information, see *How to View a Graduation Plan*.

Graduation Plan Versions

Initially, each graduation plan is created as a single version, which is defined as valid for students entering the plan from the start of time ("0") through the end of time ("9999"). If the requirements for a particular plan change in any year, you can modify the existing plan so that it ends the previous year, and create a new version, which starts the year of the change (and remains in effect forever).

How to Create a Graduation Plan Version

Use this procedure to add as many versions needed for this graduation plan.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Graduation Planner Setup**. The Graduation Planner Setup page appears. By default, the **Contracts** tab is selected.
3. Click the **Plus (+)** button next to the graduation plan for which you want to create a new version. The Edit Graduation Plan Version page appears.
4. Use the following table to enter information in the fields:

Field	Description
Graduation Plan Name	The name of the graduation plan.
Version Applies to Years	Enter the start time and end time of the gradation plan. **Note:** Multiple versions in a plan may not overlap years.

5. Click **Submit**. The Graduation Planner Setup page appears.

How to Copy a Graduation Plan Version

Use this procedure to create a new copy of the given version, starting in a specified year. The system automatically adjusts other versions so that any version, which includes the new version's starting year, will end the year before, and the new version will continue as long as that old version did. This allows you to quickly "split" versions for a given year of entry.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Graduation Planner Setup**. The Graduation Planner Setup page appears. By default, the **Contracts** tab is selected.
3. Click the version of the graduation plan you want to edit. The Edit Graduation Plan Version appears.
4. Click **Copy Version** to create a copy of this graduation plan. The Copy Version pop-up appears.
5. Enter the appropriate year in the **Create copy starting in year** field.
6. Click **Submit**. The Copy Version pop-up closes, and the Graduation Planner Setup page appears.
7. Click **Submit**. The Graduation Planner Setup page appears.

How to Edit a Graduation Plan Version

Use this procedure to edit graduation plan version details.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Graduation Planner Setup**. The Graduation Planner Setup page appears. By default, the **Contracts** tab is selected.

3. Click the version of the graduation plan you want to edit. The Edit Graduation Plan Version appears.
4. Use the following table to edit information in the fields:

Field	Description
Graduation Plan Name	The name of the graduation plan. Click to edit the graduation plan. For more information, see *How to Edit a Graduation Plan*.
Version Applies to Years	The start year and end year of the gradation plan. **Note:** Multiple versions in a plan may not overlap years.
Copy Version	Click to create a copy of this graduation plan. For detailed information, see *How to Copy a Graduation Plan Version*.
Order Selectors	Click to indicate the order by which credit type is applied to requirements. For detailed information, see *How to Use Order Selectors*.
Required Tests	
Name	The name of a required test.
Number Score	The numerical score value required in order to meet the requirement.
Percentage Score	The percentage score value required in order to meet the requirement.
Alpha Score	The alpha score value required in order to meet the requirement.
Action	Waiver Allowed, indicating waiving the required test is permitted, appears if the **Allow Waiver** checkbox is selected on the Edit Graduation Plan Test Requirements page.
Configure	Click to access the Edit Graduation Plan Test Requirements page where you can add, edit, and delete required tests. For more information, see *Required Tests*.

Subject Groups	
Subject Group	The name of the subject group or child subject group within this version of the graduation plan. Click the name of a subject group or child subject group to edit the graduation plan requirement. For detailed information, see *Graduation Plan Subject Groups.* Click the **Plus (+)** button (on the left) next to the graduation plan for which you want to create a subject group. For detailed information, see *Graduation Plan Subject Groups.* **Note:** If the **Plus (+)** button does not appear, hover over the subject group for which you want to create a subject group.
Credit Required	At the top level, the total credits required to complete this version of the graduation plan. At the subject group and child subject group level, the total credits required within the subject group or child subject group to complete this version of the graduation plan. Click to edit the graduation plan requirement. For detailed information, see *Graduation Plan Subject Groups*.
Course Numbers	The courses assigned to the credit assignment strategy. Click to edit graduation plan requirement. For detailed information, see *Credit Assignment Strategies*.
Credit Assignment Strategy	The name of the credit assignment strategy. **Note: No Targets Defined** indicates there are orphaned records. To resolve, click the course number(s) or No Courses Selected to access the Edit Graduation Plan Selector page where you can assign one or more subject groups or delete the assignment strategy altogether. Click to edit graduation plan requirement. For detailed information, see *Credit Assignment Strategies*. Click the **Plus (+)** button (on the right) next to the graduation plan for which you want to create a credit assignment strategy. For detailed information, see *Credit Assignment Strategies.*

	Note: If the **Plus (+)** button does not appear, hover over the subject group for which you want to create a credit assignment strategy.
Select Students in Version	Click to make students associated to the graduation plan version the current student selection and to display the student pages.

5. To work with subject groups, see *Graduation Plan Subject Groups*.
6. To work with requirements, see *Credit Assignment Strategies*.
7. Click **Submit**. The Graduation Planner Setup page appears.

How to Use Order Selectors

Use this procedure to indicate the order by which credits are applied to selectors (subject groups). Selector order is only important when multiple selectors (subject groups) might all select a given credit type. This may happen when a single course appears in multiple selectors (subject groups), or when selectors (subject groups) include credit types. The "top" selector (subject group) will have the first opportunity to match any credit the student earns.

Note: If you have a mix of more-specific and less-specific selectors (subject groups), be sure the more-specific selectors are higher up in the list, as credit is applied to the first matching selector (subject group) in the list regardless of specificity.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Graduation Planner Setup**. The Graduation Planner Setup page appears. By default, the **Contracts** tab is selected.
3. Click the version of the graduation plan you want to edit. The Edit Graduation Plan Version appears.
4. Click **Order Selectors** to indicate the order by which credit type is applied to requirements. The Order Selectors pop-up displays a list of selectors.
5. Use the up and down arrows to sort the requirements.
6. Click **Submit**. The Order Selectors pop-up closes, and the Graduation Planner Setup page appears.

How to Delete a Graduation Plan Version

Use this procedure to delete a graduation plan version that may have been created in error or that is no longer in use.

Note: If a graduation plan version is associated to a student, it cannot be deleted. First remove all students and then the graduation plan version may be deleted.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Graduation Planner Setup**. The Graduation Planner Setup page appears. By default, the **Contracts** tab is selected.
3. Click the version of the graduation plan you want to delete. The Edit Graduation Plan Version appears.
4. Click **Delete**. The Graduation Planner Setup page appears.

Required Tests

Once you have created a graduation plan, you can then add required tests to that graduation plan to track test scores, such as ACT, STAR, etc. If required tests are added, they will appear on the Graduation Plan Progress page, the Graduation Progress Report, the Graduation Plan Progress page in PowerScheduler, on the Graduation Progress page in PowerTeacher, and on the Graduation Progress page in the PowerSchool Student and Parent portal.

How to Add a Required Test

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Graduation Planner Setup**. The Graduation Planner Setup page appears. By default, the **Contracts** tab is selected.
3. Click the version of the graduation plan for which you want to add a required test. The Edit Graduation Plan Version appears.
4. Click **Configure**. The Edit Graduation Plan Test Requirements page appears.
5. Click **Add**. The Add Required Test pop-up appears.
6. In the Step1: Choose Test section, select the option of the test you want to require.
7. Click **Next**.
8. In the Step 2: Choose Test Scores section, select the type of test scores you want to require.
9. Click **OK**. The Add Required Test pop-up closes. The Edit Graduation Plan Test Requirements page displays the test and test scores you selected.
10. Use the following table to enter information in the fields:

    Note: Once a score is entered, all other score types appear shaded.

Field	**Description**

Name	The name of the test score.
Number Score	Choose the comparator from the pop-up menu and then enter a numeric score.
Percent Score	Choose the comparator from the pop-up menu and then enter a percentage score.
Alpha Score	Enter an alpha score.
Action	Select the **Allow Waiver** checkbox to allow this required test to be waived. Click **Delete** next to the test score you want to delete.

11. Click **Submit**. The Edit Graduation Plan Version page appears.

How to Edit a Required Test

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Graduation Planner Setup**. The Graduation Planner Setup page appears. By default, the **Contracts** tab is selected.
3. Click the version of the graduation plan for which you want to edit a required test. The Edit Graduation Plan Version appears.
4. In the Required Tests section, click **Configure**. The Edit Graduation Plan Test Requirements page appears.
5. Edit as needed. For field descriptions, see *How to Add a Required Test*.
6. Click **Submit**. The Edit Required Test drawer closes, and a confirmation message appears.

How to Delete a Required Test

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Graduation Planner Setup**. The Graduation Planner Setup page appears. By default, the **Contracts** tab is selected.
3. Click the version of the graduation plan for which you want to edit a required test. The Edit Graduation Plan Version appears.

4. In the Required Tests section, click **Configure**. The Edit Graduation Plan Test Requirements page appears.
5. Click the **Delete** icon next to the test score you to delete.
6. **Note:** Deleting the last test score associated to a required test, deletes the required test altogether.
7. Click **Submit**. The Edit Required Test drawer closes, and a confirmation message appears.

Subject Groups

Once you have created a graduation plan, you then create subject groups within that graduation plan to track credit hours for specific subject areas, such as Arts, Electives, English, Foreign Language, Health, Math, Science, Social Studies, etc.

How to Create a Subject Group

Use this procedure to add as many subject groups needed for this graduation plan.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Graduation Planner Setup**. The Graduation Planner Setup page appears. By default, the **Contracts** tab is selected.
3. Click the version of the graduation plan for which you want to create a subject group. The Edit Graduation Plan Version appears.
4. Hover over the subject group for which you want to create a subject group. The subject group appears highlighted and two Plus (+) buttons become visible.
5. Click the **Plus (+)** button (on the left) next to the graduation plan for which you want to create a subject group. The Edit Graduation Plan Requirement page appears.
6. Use the following table to enter information in the fields:

Field	Description
Path to Node	By default, the newly created subject group will appear at the bottom of the subject group list. To move the subject group: 1. Click the **Pencil** icon to change the placement of the subject group within the list. The Placement of Requirement pop-up appears. 2. Do one of the following:

	• Select the **As First Child Of** option to make the subject group a subset of the selected subject group. • Select the **After Siblings** to make the subject group appear after the selected subject group. 3. Click **Enter**. The Placement of Requirement pop-up closes.
Name	Enter the name of the subject group within the graduation plan used to track credit hours for a specific subject area.
Credit Required	Enter the number of the required credits.
Allow Waiver	Select the checkbox to enable the ability to waive graduation requirements for students within this subject group. Otherwise, leave blank.
Allow Any of the Child Subject Groups	Select the checkbox to enable the ability to create multiple paths within a subject group for a graduation plan. Otherwise, leave blank.

7. Click **Submit**. The Edit Graduation Plan Version page appears.

How to Create a Child Subject Group

Use this procedure to add as many child subject group as needed for this graduation plan.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Graduation Planner Setup**. The Graduation Planner Setup page appears. By default, the **Contracts** tab is selected.
3. Click the version of the graduation plan for which you want to create a child subject group. The Edit Graduation Plan Version appears.
4. Hover over the subject group for which you want to create a child subject group. The subject group appears highlighted and two Plus (+) buttons become visible.
5. Click the **Plus (+)** button (on the left) next to the graduation plan for which you want to create a child subject group. The Edit Graduation Plan Requirement page appears.

6. Enter the information as needed. For field description, see *How to Create a Subject Group*.
7. Click **Submit**. The Edit Graduation Plan Version page appears.

How to Edit a Subject Group

Use this procedure to edit a subject group or child subject group details.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Graduation Planner Setup**. The Graduation Planner Setup page appears. By default, the **Contracts** tab is selected.
3. Click the version of the graduation plan for which you want to edit a subject group or child subject group. The Edit Graduation Plan Version appears.
4. Click the name of the subject group of child subject group you want to edit. The Edit Graduation Plan Requirement page appears.
5. Edit the information as needed. For field description, see *How to Create a Subject Group*.
6. Click **Submit**. The Graduation Planner Setup page appears.

How to Delete a Subject Group

Use this procedure to delete a subject group or child subject group that may have been created in error or that is no longer in use.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Graduation Planner Setup**. The Graduation Planner Setup page appears. By default, the **Contracts** tab is selected.
3. Click the version of the graduation plan for which you want to delete a subject group or a child subject group. The Edit Graduation Plan Version appears.
4. Click the name of the subject group or child subject group you want to delete. The Edit Graduation Plan Requirement page appears.
5. Click **Delete**. The Graduation Planner Setup page appears.

Credit Assignment Strategies

Once you have created a subject group, the subject group can then be associated to courses and/or credit types, which determines how credit is tracked. Additionally, you may set the assignment strategy for a subject group, which allows overflow credit, any credit that is above and beyond the subject group's credit hour requirements, to be assigned to another subject group.

How to Create a Credit Assignment Strategy

Use this procedure to create a credit assignment strategy by associating courses and/or credit types to a selected subject group.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Graduation Planner Setup**. The Graduation Planner Setup page appears. By default, the **Contracts** tab is selected.
3. Click the version of the graduation plan for which you want to create a credit assignment strategy. The Edit Graduation Plan Version appears.
4. Hover over the subject group for which you want to create a credit assignment strategy. The subject group appears highlighted and two Plus (+) buttons become visible.
5. Click the **Plus (+)** button (on the right) next to the graduation plan for which you want to create a credit assignment strategy. The Edit Graduation Plan Selector page appears.
6. Use the following table to enter information in the fields:

<table>
<tr><th>Field</th><th>Description</th></tr>
<tr><td>Description</td><td>The name of the subject group or child subject group appears. Edit if needed.</td></tr>
<tr><td>Credits from Courses</td><td>1. Click Query to Select.
2. Enter your search criteria:
a. To search for by course name, select the Course Name checkbox and enter the name of the course you want to search for.
b. To search for by course number, select the Course Number checkbox and enter the number of the course you want to search for.
c. To search by other criteria:
1. Click Add Query Criterion and choose another search criteria from the pop-up menu. A secondary pop-up menu appears based on your selection.</td></tr>
</table>

	2. Choose the appropriate value from the pop-up menu. 3. Enter the appropriate value in the field (if applicable). 4. Repeat Step 1 through Step 3 for each additional criterion. 3. Click **Query**. Results appear in the Found Course list box. 4. In the Found Courses list box, click the course(s) that you want to associate to the graduation plan selector. The course(s) appear in the Selected list box. **Note:** Use the **Minus (-)** button next to an item to remove the item or the **Unpick All** button to remove all items from the list box.
Or with Credit Types	Enter the appropriate credit types. Separate multiple credit types with commas **Note:** If a credit type is entered, the stored grades which match this selector include not only those from any selected courses, but also those with the given credit type. This allows a district to bring in out-of-district transcripts without giving a student course-specific credit.
Assign Into	In the list box on the left, click the name of the graduation requirements you want to assign the selected course(s) to. The selected graduation requirements appear in the list box on the right. Credits for the selected courses or credit types will be allocated to the first requirement in the list until it is full, then to the next requirement. **Note:** Use the **Minus (-)** button next to an item to remove the item or the **Unpick All** button to remove all items from the list box.

7. Click **Submit**. The Graduation Planner Setup page appears.

How to Edit a Credit Assignment Strategy

Use this procedure to edit a credit assignment strategy.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Graduation Planner Setup**. The Graduation Planner Setup page appears. By default, the **Contracts** tab is selected.
3. Click the version of the graduation plan for which you want to edit a credit assignment strategy. The Edit Graduation Plan Version appears.
4. Click the course numbers of the subject group for which you want to edit a credit assignment strategy. The Edit Graduation Plan Selector page appears.
5. Edit the information as needed. For field descriptions, see *How to Create a Credit Assignment Strategy*.
6. Click **Submit**. The Graduation Planner Setup page appears.

How to Delete a Credit Assignment Strategy

Use this procedure to delete a credit assignment strategy that may have been created in error or that is no longer in use.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Graduation Planner Setup**. The Graduation Planner Setup page appears. By default, the **Contracts** tab is selected.
3. Click the version of the graduation plan for which you want to delete a credit assignment strategy. The Edit Graduation Plan Version appears.
4. Click the course numbers of the subject group for which you want to delete a credit assignment strategy. The Edit Graduation Plan Selector page appears.
5. Click **Delete**. The Graduation Planner Setup page appears.

Graduation Waivers

If the **Allow Waiver** checkbox on the Edit Graduation Plan Requirement page has been enabled for a subject group, you can waive graduation requirements for students within the subject group.

How to Add a Waiver Type

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Graduation Planner Setup**. The Graduation Planner Setup page appears. By default, the **Contracts** tab is selected.
3. Click the **Waivers** tab.
4. Click **Add** in the Waiver Type section. The Add Type drawer appears.

5. Use the following table to enter information in the fields:

Field	Description
Name	Enter the name of the waiver type.
Code	Enter the code of the waiver type.
Description	Enter a description of the waiver type.

6. Click **Submit**. The Graduation Planner Setup page appears.

How to Edit a Waiver Type

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Graduation Planner Setup**. The Graduation Planner Setup page appears. By default, the **Contracts** tab is selected.
3. Click the **Waivers** tab.
4. Click the **Pencil** icon next to the waiver type you want to edit. The Edit Type drawer appears.
5. Edit as needed. For detailed field descriptions, see *How to Add a Waiver Type*.
6. Click **Submit**. The Graduation Planner Setup page appears.

How to Delete a Waiver Type

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Graduation Planner Setup**. The Graduation Planner Setup page appears. By default, the **Contracts** tab is selected.
3. Click the **Waivers** tab.
4. Click the **Delete** icon next to the waiver type you want to delete. The Delete Type drawer appears.
5. Click **Submit**. The Graduation Planner Setup page appears.

How to Add a Waiver Source

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.

2. Under Courses, click **Graduation Planner Setup**. The Graduation Planner Setup page appears. By default, the **Contracts** tab is selected.
3. Click the **Waivers** tab.
4. Click **Add** in the Waiver Source section. The Add Source drawer appears.
5. Use the following table to enter information in the fields:

Field	Description
Name	Enter the name of the waiver source.
Code	Enter the code of the waiver source.
Description	Enter a description of the waiver source.

6. Click **Submit**. The Graduation Planner Setup page appears.

How to Edit a Waiver Source

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Graduation Planner Setup**. The Graduation Planner Setup page appears. By default, the **Contracts** tab is selected.
3. Click the **Waivers** tab.
4. Click the **Pencil** icon next to the waiver source you want to edit. The Edit Source drawer appears.
5. Edit as needed. For detailed field descriptions, see *How to Add a Waiver Source*.
6. Click **Submit**. The Graduation Planner Setup page appears.

How to Delete a Waiver Source

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Graduation Planner Setup**. The Graduation Planner Setup page appears. By default, the **Contracts** tab is selected.
3. Click the **Waivers** tab.
4. Click the **Delete** icon next to the waiver source you want to delete. The Delete Source drawer appears.
5. Click **Submit**. The Graduation Planner Setup page appears.

How to Add a Waiver Reason

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Graduation Planner Setup**. The Graduation Planner Setup page appears. By default, the **Contracts** tab is selected.
3. Click the **Waivers** tab.
4. Click **Add** in the Waiver Reason section. The Add Reason drawer appears.
5. Use the following table to enter information in the fields:

Field	Description
Name	Enter the name of the waiver reason.
Code	Enter the code of the waiver reason.
Description	Enter a description of the waiver reason.

6. Click **Submit**. The Graduation Planner Setup page appears.

How to Edit a Waiver Reason

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Graduation Planner Setup**. The Graduation Planner Setup page appears. By default, the **Contracts** tab is selected.
3. Click the **Waivers** tab.
4. Click the **Pencil** icon next to the waiver reason you want to edit. The Edit Reason drawer appears.
5. Edit as needed. For detailed field descriptions, see *How to Add a Waiver Reason*.
6. Click **Submit**. The Graduation Planner Setup page appears.

How to Delete a Waiver Reason

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Graduation Planner Setup**. The Graduation Planner Setup page appears. By default, the **Contracts** tab is selected.
3. Click the **Waivers** tab.

4. Click the **Delete** icon next to the waiver reason you want to delete. The Delete Reason drawer appears.
5. Click **Submit**. The Graduation Planner Setup page appears.

School Setup

Once you are finished setting up graduation planner at the district level, the following setup must be performed at the school level:

- Set the Options for Presuming Complete setting.
- Set the Allow Students/Parents to See Graduation Plan Progress setting.
- Set the Allow Students/Parents to Select Post-Secondary Plans setting.

Options for Presuming Complete

Entering value indicates the number of days after the end of enrollment that you want graduation plans to include the enrollment as in progress. This number allows the administrator some number of days between the end of a term and the storage of grades for that term. A negative number allows specification of the number of days before the day the enrollment ends, for instances where the school typically records grades prior to enrollments ending (rare).

How to Set Options for Presuming Complete

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Grading, click **Final Grade Setup**. The Final Grade Setups page appears.
3. Enter the appropriate value in the **Options for presuming complete** field.
4. Click **Submit**. The Final Grades Setups page displays the new final grade.

Allow Students/Parents to See Graduation Plan Progress

Using the **Allow students/parents to see Graduation Plan Progress** setting, indicate whether or not you want parents and students to be able to access the Graduation Plan Progress page in the PowerSchool Student and Parent portal. For more information, see *Graduation Plan Progress*.

How to Enable/Disable the Graduation Plan Progress Page

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under General, click **Graduation Planner Setup**. The Graduation Planner Setup page appears.
3. Do one of the following:

- Select the **Allow students/parents to see Graduation Plan Progress** option to permit students/parents to access the Graduation Plan Progress page in the PowerSchool Student and Parent portal.
- Deselect the **Allow students/parents to see Graduation Plan Progress** option to not permit students/parents to access the Graduation Plan Progress page in the PowerSchool Student and Parent portal.

4. Click **Submit**. The Graduation Planner Setup page refreshes.

Allow Students/Parents to Select Post-Secondary Plans

Using the **Allow students/parents to select Post-Secondary Plans** setting, indicate whether or not you want the **Select Post-Secondary Plans** link to appear on the Graduation Plan Progress page in the PowerSchool Student and Parent portal. For more information, see *Post-Secondary Graduation Plans*.

How to Enable/Disable the Post-Secondary Plans Selection

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under General, click **Graduation Planner Setup**. The Graduation Planner Setup page appears.
3. Do one of the following:
    - Select the **Allow students/parents to select Post-Secondary Plans** option to permit students/parents to access the post-secondary plans selector on the Graduation Plan Progress page in the PowerSchool Student and Parent portal.
    - Deselect the **Allow students/parents to select Post-Secondary Plans** option to not permit students/parents to access the post-secondary plans selector on Graduation Plan Progress page in the PowerSchool Student and Parent portal.
4. Click **Submit**. The Graduation Planner Setup page refreshes.

Students

Once graduation planner is set up, you can then conduct student searches based on graduation planner information.

Search by Graduation Plan

To search for students based on graduation plan, you can use the **Search Students** function on the PowerSchool Start Page using the alias **GradPlan**. As with all searches, GradPlan searches may be chained. Using any of the following comparators, you can find students with grad plans where the name matches the given criteria:

Comparator	Meaning
=	Equals
#	Does not equal
in	Is [field] present in the search argument?
contains	Is the search argument contained in the [field]?

For more information about searching, see *Student Search*.

How to Search for Students By Graduation Plan

For example, to select all of your 12th graders in the "MIT" plan:

1. On the start page, enter **GradPlan contains MIT** in the **Search Students** field.
2. Click the **Search** icon. The page displays a list of all students with graduation plans that contain “MIT” in the name.
3. Enter **&Grade_Level is 12** in the **Search Students** field. The page narrows the list of students to only those students with graduation plans that contain “MIT” in the name and who are in the twelfth grade.
4. Do one of the following:
    - Click the name of the student whose record you want to work with.
    - To work with the entire group of students, choose a function from the group functions pop-up menu at the bottom of the list.

Once graduation planner is set up, you can then begin working with students managing graduation plans and generating graduation progress summaries.

Graduation Plans

Using the Graduation Plan Selection page, you can manage graduation plans for individual students.

How to Select a Graduation Plan

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Graduation Plan Selection** from the student pages menu. The Graduation Plan Selection page appears.
3. Use the following table to enter information in the fields:

Field	Description
Year Entering Graduation Plan	Enter the year the student will begin the graduation plan. **Note:** This setting affects the default version the student will be assigned if the name is selected instead of a specific version.
Graduation Contracts	In the list box on the left, click the name or the specific version of the graduation contract you want to select. The selected graduation contract appears in the list box on the right. To remove a graduation contract from the list box on the right, click the **Minus (-)** button next to the graduation contract you want to remove. To remove all graduation contracts from the list box on the right, click the **Unpick All** button. If selecting multiple graduation contracts, use the up and down arrows to indicate the order in which you want the items to appear in the Graduation Plan Progress page. **Note:** If the name is selected instead of a specific version, the student will be assigned the version of the plan, which matches their **Year Entering Graduation Plan** setting.

Year Entering Post-Secondary School	Enter the year the student will go to the post-secondary school. **Note:** This setting affects the default version the student will be assigned if the name is selected instead of a specific version.
Post-Secondary Preparation Plans	In the list box on the left, click the name or the specific version of the post-secondary preparation plan you want to select. The selected post-secondary preparation plan appears in the list box on the right. To remove a post-secondary preparation plan from the list box on the right, click the **Minus (-)** button next to the post-secondary preparation plan you want to remove. To remove all post-secondary preparation plans from the list box on the right, click the **Unpick All** button. If selecting multiple post-secondary preparation plans, use the up and down arrows to indicate the order in which you want the items to appear in the Graduation Plan Progress page. **Note:** If the name is selected instead of a specific version, the student will be assigned the version of the plan, which matches their **Year Entering Post-Secondary Preparation Plans** setting.

4. Click **Submit**. The Graduation Plan Progress page appears.

How to Edit a Graduation Plan Selection

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Graduation Plan Selection** from the student pages menu. The Graduation Plan Selection page appears.
3. Edit the information as needed. For field descriptions, see *How to Select a Graduation Plan*.
4. Click **Submit**. The Graduation Plan Progress page appears.

How to Remove a Graduation Plan

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Graduation Plan Selection** from the student pages menu. The Graduation Plan Selection page appears.

3. Use the following table to enter information in the fields:

Field	Description
Graduation Contracts	To remove a graduation contract from the list box on the right, click the **Minus (-)** button next to the graduation contract you want to remove. To remove all graduation contracts from the list box on the right, click the **Unpick All** button.
Post-Secondary Preparation Plans	To remove a post-secondary preparation plan from the list box on the right, click the **Minus (-)** button next to the post-secondary preparation plan you want to remove. To remove all post-secondary preparation plans from the list box on the right, click the **Unpick All** button.

4. Click **Submit**. The Graduation Plan Progress page appears.

Graduation Plan Progress

Note: This procedure may also be performed via **Start Page > PowerScheduler > Selected Students > Graduation Plan Progress**.

How to View a Student's Graduation Plan Progress

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Graduation Plan Progress** from the student pages menu. The Graduation Plan Progress page displays the following information for each plan:

Field	Description
Graduation Plan	The name of the graduation plan. To view additional information: 1. Click the name of the graduation plan. The [Graduation Plan] drawer opens.

	2. Review information. 3. Click **Close**.
Required Tests	
Test Name	The name of a required test for this graduation plan to track test scores, such as ACT, STAR, etc. Click to view detailed information.
Action	If the **Allow Waiver** checkbox on the Edit Graduation Plan Test Requirements page has been enabled, you can waive the required test. To add a waiver to a required test, see *How to Add a Required Test Waiver*. To edit a waiver for a required test, see *How to Edit a Required Test Waiver*. To delete a waiver from a required test, see *How to Delete a Required Test Waiver*.
Attempts	The number of times the student has taken the required test.
Completed	Indicates whether the student has passed, failed, waived, or has not taken the required test.
Subjects Groups	
Subject Group	The name of the subject group within the graduation plan used to track credit hours for a specific subject area. To view additional information: 1. Click the name of a subject group. The [Subject Group] drawer opens. 2. Review information. 3. Click **Close**.
[Waiver]	If the **Allow Waiver** checkbox on the Edit Graduation Plan Requirement page has been enabled for a subject group, you can waive graduation requirements for students within the subject group.

	To add a waiver to a subject group, see *How to Add a Subject Group Waiver*. To edit a waiver for a subject group, see *How to Edit a Subject Group Waiver*. To delete a waiver from a subject group, see *How to Delete a Subject Group Waiver*.
Earned	The total number (and individual number) of credits for courses within the subject group that the student has earned.
Enrolled	The total number of courses within the subject group that the student is currently enrolled in.
Requested	The total number (and individual number) of credits for courses within the subject group that the student has requested.
Waived Credits	The total number of credits within the subject group that can be waived.
Applied Waiver Credits	The total number of credits within the subject group that have be waived.
Required	The total number of credits within the subject group that are required.
Progress	The total number of credits within the subject group that are in progress. Progress is indicated by the use of a color-coded bar: • Dark green indicates completed credits. • Green indicates current enrollments. • Blue indicates waived credits. • Yellow indicates requested credits.
[Checkmark]	A green checkmark indicates that a requirement has been completely satisfied with earned credits.

How to Add a Required Test Waiver

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Graduation Plan Progress** from the student pages menu. The Graduation Plan Progress page appears.
3. In the Required Tests section, click the **Plus (+)** button next to the required test for which you want to add a waiver. The Add Waiver drawer opens.
4. Use the following table to enter information in the fields:

Field	Description
Test Name	The name of a required test.
Waiver Type	Choose a waiver type from the pop-up menu.
Waiver Reason	Choose a waiver reason from the pop-up menu.
Waiver Source	Choose a waiver source from the pop-up menu.
Waiver Date	Indicate the date the waiver is effective.
Authorized By	Choose the name of the person authorizing the waiver from the pop-up menu.

5. Click **Submit**. The Add Waiver drawer closes.

How to Edit a Required Test Waiver

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Graduation Plan Progress** from the student pages menu. The Graduation Plan Progress page appears.
3. In the Required Tests section, click the **Pencil** icon next to the required test for which you want to edit a waiver. The Edit Waiver drawer opens.
4. Edit as needed. For detailed field descriptions, see *How to Add a Required Test Waiver*.
5. Click **Submit**. The Edit Waiver drawer closes.

How to Delete a Required Test Waiver

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Graduation Plan Progress** from the student pages menu. The Graduation Plan Progress page appears.
3. In the Required Tests section, click the **Pencil** icon next to the required test for which you want to delete a waiver. The Edit Waiver drawer opens.
4. Click **Delete**.
5. Click **Confirm Delete**. The Edit Waiver drawer closes.

How to Add a Subject Group Waiver

The Graduation Progress page displays the student's four-year graduation plan, any post-secondary plans, and the progress of each of those plans.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Graduation Plan Progress** from the student pages menu. The Graduation Plan Progress page appears.
3. In the Subject Groups section, click the **Plus (+)** button next to the subject group for which you want to add a waiver. The Add Waiver drawer opens.
4. Use the following table to enter information in the fields:

Field	**Description**
Graduation Plan	The name of the graduation plan.
Subject Group	The name of the subject group.
Path to Node	The location of the subject group within the subject group list.
Waiver Type	Choose a waiver type from the pop-up menu.
Waiver Reason	Choose a waiver reason from the pop-up menu.
Waiver Source	Choose a waiver source from the pop-up menu.
Elective Subject Group	Choose an elective subject group from the pop-up menu.

Waiver Date	Indicate the date the waiver is effective.
Credit Waived	Indicate the number of credits to waive.
Authorized By	Choose the name of the person authorizing the waiver from the pop-up menu.

5. Click **Submit**. The Add Waiver drawer closes.

How to Edit a Subject Group Waiver

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Graduation Plan Progress** from the student pages menu. The Graduation Plan Progress page appears.
3. In the Subject Groups section, click the **Pencil** icon next to the subject group for which you want to edit a waiver. The Edit Waiver drawer opens.
4. Edit as needed. For detailed field descriptions, see *How to Add a Waiver*.
5. Click **Submit**. The Edit Waiver drawer closes.

How to Delete a Subject Group Waiver

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Academics, choose **Graduation Plan Progress** from the student pages menu. The Graduation Plan Progress page appears.
3. In the Subject Groups section, click the **Pencil** icon next to the subject group for which you want to delete a waiver. The Edit Waiver drawer opens.
4. Click **Delete**.
5. Click **Confirm Delete**. The Edit Waiver drawer closes.

Once graduation planner is set up, you can then begin working with groups of students managing graduation plans and generating graduation progress reports and summaries.

Graduation Plans

Using the group Graduation Plan Selection page, you can manage graduation plans for a selection of students.

How to Select a Graduation Plan

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Graduation, choose **Graduation Plan Selection**. The Graduation Plan Selection page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Use the following table to enter information in the fields:

Field	Description
Action to Take	Select the **Add the selected plans** option.
Graduation Contracts	In the list box on the left, click the name or the specific version of the graduation contract you want to select. The selected graduation contract appears in the list box on the right. To remove a graduation contract from the list box on the right, click the **Minus (-)** button next to the graduation contract you want to remove. To remove all graduation contracts from the list box on the right, click the **Unpick All** button. If selecting multiple graduation contracts, use the up and down arrows to indicate the order in which you want the items to appear in the Graduation Plan Progress page. **Note:** If the name is selected instead of a specific version, the student will be assigned the version of the plan that matches their **Year Entering Graduation Plan** setting on the Graduation Plan Selection student page.
Post-Secondary Preparation Plans	In the list box on the left, click the name or the specific version of the post-secondary preparation plan you want to select. The

	selected post-secondary preparation plan appears in the list box on the right. To remove a post-secondary preparation plan from the list box on the right, click the **Minus (-)** button next to the post-secondary preparation plan you want to remove. To remove all post-secondary preparation plans from the list box on the right, click the **Unpick All** button. If selecting multiple post-secondary preparation plans, use the up and down arrows to indicate the order in which you want the items to appear in the Graduation Plan Progress page. **Note:** If the name is selected instead of a specific version, the student will be assigned the version of the plan that matches their **Year Entering Post-Secondary Preparation Plans** setting on the Graduation Plan Selection student page.

5. Click **Submit**. The Changes Recorded page appears.

How to Replace a Graduation Plan

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Graduation, choose **Graduation Plan Selection**. The Graduation Plan Selection page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Use the following table to enter information in the fields:

Field	Description
Action to Take	Select the **Replace all student selections with the versions below** option.

Graduation Contracts	In the list box on the left, click the name of the graduation contract you want to select. The selected graduation contract appears in the list box on the right. **Note:** Use the **Minus (-)** button next to an item to remove the item or the **Unpick All** button to remove all items from the list box.
Post-Secondary Preparation Plans	In the list box on the left, click the name of the post-secondary preparation plan you want to assign to the student. The selected post-secondary preparation plan appears in the list box on the right. **Note:** Use the **Minus (-)** button next to an item to remove the item or the **Unpick All** button to remove all items from the list box.

5. Click **Submit**. The Changes Recorded page appears.

How to Remove a Graduation Plan

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Graduation, choose **Graduation Plan Selection**. The Graduation Plan Selection page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Use the following table to enter information in the fields:

Field	Description
Action to Take	Select the **Remove the selected plans** option.

Graduation Contracts	To remove a graduation contract from the list box on the right, click the **Minus (-)** button next to the graduation contract you want to remove. To remove all graduation contracts from the list box on the right, click the **Unpick All** button. **Note:** If the name is selected instead of a specific version, the student will be removed from all versions of the plan.
Post-Secondary Preparation Plans	To remove a post-secondary preparation plan from the list box on the right, click the **Minus (-)** button next to the post-secondary preparation plan you want to remove. To remove all post-secondary preparation plans from the list box on the right, click the **Unpick All** button. **Note:** If the name is selected instead of a specific version, the student will be removed from all versions of the plan.

5. Click **Submit**. The Changes Recorded page appears.

Graduation Progress Reports

Use the Graduation Progress Report to creates a printable graduation progress report for the selected students in their selected plans.

Warning: This report may adversely impact the performance of the system if run for too large a selection of students. Plan to run this report at off-peak times, or check with your system administrator prior to running.

Note: Due to browser differences, some browsers may fail to properly print this report. The fully supported browsers for this report are Internet Explorer 6.0+ on Windows, Safari 2.0+ on OS X, and Firefox 3.0+ on all platforms.

How to View the Graduation Progress Report

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Graduation, choose **Graduation Progress Report**. The Graduation Progress Report Parameters page appears.

Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Use the following table to enter information in the fields:

Field	Description
Students	The current selection of students.
Include page for students with no plan	Select the appropriate option: • **Skip students with no plan** • **Include all students**

5. Click **Submit**. The Graduation Progress Report page displays the following information for each student:

Field	Description
[Student Name]	The student's name.
[Student Number]	The student's number.
Graduation Plan	The name of the graduation plan. To view additional information: 1. Click the name of the graduation plan. The [Graduation Plan] drawer opens. 2. Review information. 3. Click **Close**.
Required Tests	
Test Name	The name of a required test for this graduation plan to track test scores, such as ACT, STAR, etc. Click to view detailed information.

Action	To view a waiver for a required test: 1. Click the **Notebook** icon. The View Waiver drawer opens and displays the following information: • **Test Name** • **Waiver Type** • **Waiver Reason** • **Waiver Source** • **Waiver Date** • **Authorized By** 2. Click **Close**. The View Waiver drawer closes. **Note:** The **Notebook** icon only appears if the **Allow Waiver** checkbox on the Edit Graduation Plan Test Requirements page has been enabled and a waiver has been added for the subject group.
Attempts	The number of times the student has taken the required test.
Completed	Indicates whether the student has passed, failed, waived, or has not taken the required test.
Subject Groups	
Subject Group	The name of the subject group within the graduation plan used to track credit hours for a specific subject area. To view additional information: 1. Click the name of a subject group. The [Subject Group] drawer opens. 2. Review information. 3. Click **Close**.
[Waiver]	To view a waiver for a subject group: 1. Click the **Notebook** icon. The View Waiver drawer opens and displays the following information: • **Graduation Plan** • **Subject Group** • **Path to Node**

	• **Waiver Type** • **Waiver Reason** • **Waiver Source** • **Elective Subject Group** • **Waiver Date** • **Credit Waived** • **Authorized By** 2. Click **Close**. The View Waiver drawer closes. **Note:** The **Notebook** icon only appears if the **Allow Waiver** checkbox on the Edit Graduation Plan Requirement page has been enabled and a waiver has been added for the subject group.
Earned	The total number (and individual number) of credits for courses within the subject group that the student has earned.
Enrolled	The total number of courses within the subject group that the student is currently enrolled in.
Requested	The total number (and individual number) of credits for courses within the subject group that the student has requested.
Waived Credits	The total number of credits within the subject group that can be waived.
Applied Waiver Credits	The total number of credits within the subject group that have be waived.
Required	The total number of credits within the subject group that are required.
Progress	The total number of credits within the subject group that are in progress. Progress is indicated by the use of a color-coded bar: • Dark green indicates completed credits. • Green indicates current enrollments. • Blue indicates waived credits.

	• Yellow indicates requested credits.
[Checkmark]	A green checkmark indicates that a requirement has been completely satisfied with earned credits.

6. To print the report:

   Note: Instructional text that appears on the page will not be sent to the printer. When printing, each student's Graduation Progress Report will be printed on a separate page.

   - Turn on printing of "backgrounds" in your printer settings. Shading and colorations in this report are all "backgrounds" and not printing backgrounds will generally lead to illegible printouts.
   - Turn off printing of "header" information in your browser settings. If this is not off, each page printed will include (depending on browser) the URL of this page, a page number, and a time stamp. These are generally not desired for this report.
   - Use your browser's "Print Preview" feature to confirm that the output is correct prior to sending to the printer. You may adjust text size using the text font size controls of your browser. You may also control landscape/portrait printing via your browser settings. Doing so may prevent table cells from spanning page breaks and instances where the report appears too small in the final output.
   - Use your browser's "Print" feature to print the report.

Graduation Progress Report Data Capture

Use the Graduation Progress Report Data Capture function to store graduation plan progress data for future reporting.

Warning: This report may adversely impact the performance of the system if run for a large selection of students. To offset the impact on performance, check with your system administrator prior to running the report or run the report at an off-peak time.

How to Run the Graduation Progress Report Data Capture Function

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.

2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Graduation, choose **Graduation Progress Report Data Capture**. The Graduation Progress Report Data Capture Parameters page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Click **Submit**. A confirmation message appears.

Graduation Progress Summary

Use Graduation Progress Summary to view a summary of graduation plan progress against specified requirements of a user-selected plan.

How to View the Graduation Progress Summary

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Graduation, choose **Graduation Progress Summary**. The Graduation Progress Summary Parameters page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Use the following table to enter information in the fields:

Field	Description
Students	The current selection of students.
Plan Version to Display	Click the name of the graduation plan for which you want to view a summary. The selected graduation plan appears in the Columns to Display the list box on the left.

Columns to Display	Click the graduation plan, subject groups, and/or child subject groups you want to appear in the summary. The selected items appear in the list box on the right. Use the up and down arrows to indicate the order in which you want the items to appear in the summary. **Note:** Use the **Minus (-)** button next to an item to remove the item or the **Unpick All** button to remove all items from the list box.

5. Click **Submit**. The Graduation Progress Summary page displays graduation plan information for student.

PowerTeacher

Once graduation planner is set up, teachers can then begin working with students generating graduation progress summaries.

Graduation Plan Progress

The Graduation Progress page displays the student's four-year graduation plan, any post-secondary plans, and the progress of each of those plans. Progress is indicated by the use of a color-coded bar. Dark green indicates earned credits; light green indicates currently enrolled credits; and yellow indicates requested/planned credits. A green checkmark indicates that a requirement has been completely satisfied.

How to View Graduation Plan Progress

Use this procedure to view course requirements and completion status.

1. On the Student Information page, choose **Graduation Plan Progress** from the **Select screens** pop-up menu. The Graduation Progress page displays the following information for each plan:

Field	Description
[Student Name]	The student's name.
[Student Number]	The student's number.
Graduation Plan	The name of the graduation plan. To view additional information: 1. Click the name of the graduation plan. The [Graduation Plan] drawer opens. 2. Review information. 3. Click **Close**.
Required Tests	
Test Name	The name of a required test for this graduation plan to track test scores, such as ACT, STAR, etc. Click to view detailed information.

Action	To view a waiver for a required test: 1. Click the **Notebook** icon. The View Waiver drawer opens and displays the following information: • **Test Name** • **Waiver Type** • **Waiver Reason** • **Waiver Source** • **Waiver Date** • **Authorized By** 2. Click **Close**. The View Waiver drawer closes. **Note:** The **Notebook** icon only appears if the **Allow Waiver** checkbox on the Edit Graduation Plan Test Requirements page has been enabled and a waiver has been added for the subject group.
Attempts	The number of times the student has taken the required test.
Completed	Indicates whether the student has passed, failed, waived, or has not taken the required test.
Subject Groups	
Subject Group	The name of the subject group within the graduation plan used to track credit hours for a specific subject area. To view additional information: 1. Click the name of a subject group. The [Subject Group] drawer opens. 2. Review information. 3. Click **Close**.
[Waiver]	To view a waiver for a subject group: 1. Click the **Notebook** icon. The View Waiver drawer opens and displays the following information: • **Graduation Plan** • **Subject Group** • **Path to Node**

	Waiver Type **Waiver Reason** **Waiver Source** **Elective Subject Group** **Waiver Date** **Credit Waived** **Authorized By** 2. Click **Close**. The View Waiver drawer closes. **Note:** The **Notebook** icon only appears if the **Allow Waiver** checkbox on the Edit Graduation Plan Requirement page has been enabled and a waiver has been added for the subject group.
Earned	The total number (and individual number) of credits for courses within the subject group that the student has earned.
Enrolled	The total number of courses within the subject group that the student is currently enrolled in.
Requested	The total number (and individual number) of credits for courses within the subject group that the student has requested.
Waived Credits	The total number of credits within the subject group that can be waived.
Applied Waiver Credits	The total number of credits within the subject group that have be waived.
Required	The total number of credits within the subject group that are required.
Progress	The total number of credits within the subject group that are in progress. Progress is indicated by the use of a color-coded bar: - Dark green indicates completed credits. - Green indicates current enrollments. - Blue indicates waived credits.

	• Yellow indicates requested credits.
[Checkmark]	A green checkmark indicates that a requirement has been completely satisfied with earned credits.

PowerSchool Parent Portal

Once graduation planner is set up, parents can then begin monitoring their student's graduation plan progress and managing any post-secondary plans.

Graduation Plan Progress

The Graduation Progress page displays the student's four-year graduation plan, any post-secondary plans, and the progress of each of those plans. Progress is indicated by the use of a color-coded bar. Dark green indicates earned credits; light green indicates currently enrolled credits; and yellow indicates requested/planned credits. A green checkmark indicates that a requirement has been completely satisfied.

Note: This procedure is only available if enabled by your school.

How to View Graduation Plan Progress

Use this procedure to view course requirements and completion status.

1. On the main menu, do one of the following:
    - Click **Grades History**. The Grade History page appears.
    - Click **Class Registration** and then **View future course requests**. The [Scheduling Year] Course Requests page.
2. Click **View Graduation Progress**. The Graduation Progress page displays the following information for each plan:

Field	Description
Select Post Secondary Plans	To select a post-secondary plan: 1. Click **Select Post-Secondary Plans**. The Post-Secondary Plans Selection page appears. 2. In the first box, click the name of the post-secondary plan you want to select. The name appears in the second box. 3. Repeat Step 2 for each post-secondary plan you want to select. 4. Click **Submit**. The Graduation Progress page appears. To remove a post-secondary plan:

<table>
<tr><td></td><td>Click Select Post-Secondary Plans. The Post-Secondary Plans Selection page appears.
In the box on the right, click the Minus (-) button next to the name of the post-secondary plan you want to delete. The post-secondary plan no longer appears.
Repeat Step 2 for each post-secondary plan you want to delete.
Click Submit. The Graduation Progress page appears.</td></tr>
<tr><td>Graduation Plan</td><td>The name of the graduation plan. To view additional information:
Click the name of the graduation plan. The [Graduation Plan] drawer opens.
Review information.
Click Close.</td></tr>
<tr><td colspan="2">Required Tests</td></tr>
<tr><td>Test Name</td><td>The name of a required test for this graduation plan to track test scores, such as ACT, STAR, etc. Click to view detailed information.</td></tr>
<tr><td>Action</td><td>To view a waiver for a required test:
Click the Notebook icon. The View Waiver drawer opens and displays the following information:
Test Name
Waiver Type
Waiver Reason
Waiver Source
Waiver Date
Authorized By
Click Close. The View Waiver drawer closes.
Note: The Notebook icon only appears if the Allow Waiver checkbox on the Edit Graduation Plan Test Requirements page has been enabled and a waiver has been added for the subject group.</td></tr>
<tr><td>Attempts</td><td>The number of times the student has taken the required test.</td></tr>

</table>

Requested	The total number (and individual number) of credits for courses within the subject group that the student has requested.
Waived Credits	The total number of credits within the subject group that can be waived.
Applied Waiver Credits	The total number of credits within the subject group that have be waived.
Required	The total number of credits within the subject group that are required.
Progress	The total number of credits within the subject group that are in progress. Progress is indicated by the use of a color-coded bar: • Dark green indicates completed credits. • Green indicates current enrollments. • Blue indicates waived credits. • Yellow indicates requested credits.
[Checkmark]	A green checkmark indicates that a requirement has been completely satisfied with earned credits.

Post-Secondary Graduation Plans

Post-secondary preparation plans define requirements that must be fulfilled in order to attend a post-secondary institution, such as a state college or university. Using the post-secondary plans selector, you can select the applicable post-secondary plans in order to monitor your student's progress and ensure that they achieve their goals.

Note: This procedure is only available if enabled by your school.

How to Select a Post-Secondary Plan

Use this procedure to select a post-secondary plan.

1. On the main menu, do one of the following:
    - Click **Grades History**. The Grade History page appears.

- Click **Class Registration** and then **View future course requests**. The [Scheduling Year] Course Requests page.

2. Click **View Graduation Progress**. The Graduation Progress appears.
3. Click **Select Post-Secondary Plans**. The Post-Secondary Plans Selection page appears.
4. In the first box, click the name of the post-secondary plan you want to select. The name appears in the second box.
5. Repeat Step 4 for each post-secondary plan you want to select.
6. Click **Submit**. The Graduation Progress page appears.

How to Remove a Post-Secondary Plan

Use this procedure to remove a post-secondary plan.

1. On the main menu, do one of the following:
   - Click **Grades History**. The Grade History page appears.
   - Click **Class Registration** and then **View future course requests**. The [Scheduling Year] Course Requests page.
2. Click **View Graduation Progress**. The Graduation Progress appears.
3. Click **Select Post-Secondary Plans**. The Post-Secondary Plans Selection page appears.
4. In the box on the right, click the **Minus (-)** button next to the name of the post-secondary plan you want to delete. The post-secondary plan no longer appears.
5. Repeat Step 4 for each post-secondary plan you want to delete.
6. Click **Submit**. The Graduation Progress page appears.

Health Management User Guide

PowerSchool

Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

The data and names used to illustrate the reports and screen images may include names of individuals, companies, brands, and products. All of the data and names are fictitious; any similarities to actual names are entirely coincidental.

Table of Contents

Introduction

With the introduction of Health Management, PowerSchool now provides a tool to assist your school district with capturing, managing, and reporting student health-related information. Using Heath Management, you can set up immunizations, screenings, and grade level entry certifications based on your district's needs. Once set up, you can then record student immunization information, screening information, and grade level entry certifications.

State Reporting

For state-specific information, see PowerSchool's recommended state-specific setup of Health Management settings available on PowerSource in your state reporting setup guide. If there is no state-specific setup specified in your state reporting setup guide, you do not have PowerSchool state-required Immunization reports that are supported at this time. Therefore, no state-specific setup considerations need to be taken into account. You may set up Health Management as needed by your district.

Note: Topics are ordered by how they appear in the *Health Management User Guide*.

- *Set Page-Level Permissions*
- *Import Immunization Data*
- *Set Up Immunizations*
- *Set Up Vaccines*
- *Set Up Exemption Types*
- *Set Up Certificate Types*
- *Set Up Screenings*
- *Set Up Office Visits*
- *Set Up Grade Level Entry Certifications*
- *Set Up Certification Status Values*
- *Set Up Miscellaneous*
- *Enter Immunizations*
- *Enter Screenings*
- *Enter Waivers*
- *Enter Office Visits*
- *Enter Certifications*
- *Search for Students by Immunization Compliance*
- *Work with Student Groups*
- *Health Data Grid*

Setup

Set Page-Level Permissions

Security for the Health Management setup pages is controlled through page-level permissions. Permissions for the Certifications, Immunizations, Office Visits, and Screenings tabs are controlled independently of one another. For each page, enable page permissions access, set page-level permissions, and then disable page permissions access:

- Start Page > Special Functions under Functions in the main menu > Importing & Exporting > Quick Import
- Start Page > Special Functions under Functions in the main menu > Importing & Exporting > Quick Import > Submit
- Start Page > District under Setup in the main menu > Health > Immunizations
- Start Page > District under Setup in the main menu > Health > Office Visits
- Start Page > District under Setup in the main menu > Health > Screenings
- Start Page > District under Setup in the main menu > Health > Grade Level Entry Certifications

Note: Page-level permissions should not be used to control access for the student Health Management pages. Security for the student Health Management pages is controlled through group security permissions. For more information, see *Set Group Security Permissions*.

Note: For detailed information, see *Page-Level Permissions* in the *Security Permissions* section.

Set Group Security Permissions

Security for the Health Management student pages is controlled through group security permissions. Permissions for the Certifications, Immunizations, Office Visits, and Screenings tabs are controlled independently of one another. When setting up group security permissions using the Edit Group page, at a minimum, you need to define the following for users in a selected group:

- Use the **Default Access** pop-up menu to indicate the level of permission used as the default permissions.
- Use the **Health Certification** pop-up menu to indicate the level of permission for the Grade Level Entry Certifications tab.
- Use the **Health Immunization** pop-up menu to indicate the level of permission for the Immunizations tab.

- Use the **Health Office Visits** pop-up menu to indicate the level of permission for the Office Visits tab.
- Use the **Health Screening** pop-up menu to indicate the level of permission for the Certifications tab.
- Select the **Accessible Student Screens Health** checkbox to provide access to the student Health Management pages.

Note: For detailed information, see *How to Edit Security Groups* in the *Group Security Permissions* section.

Import Immunization Data

During the initial setup of Health Management, use the Quick Import function to transfer immunization data into PowerSchool. When importing immunization data, you need to create an ASCII text file. The field delimiter must be tab and the row delimiter must be carriage return. Other delimiters are not supported. The import file must include the following required fields:

Student_Number
WhenInput
WhoInput
(VaccineCode)_(DoseNumber)_Date
(VaccineCode)_(DoseNumber)_CertificateType

The import spreadsheet may also include the following optional fields:

(VaccineCode)_ExemptionType
(VaccineCode)_CompliancyStatus

The (DoseNumber) must start at 1. If there is more than one dose, the (DoseNumber) that follows must be sequential. For example:

Student_Number
WhenInput
WhoInput
Polio_ExemptionType
Polio_CompliancyStatus
Polio_1_Date
Polio_2_Date
Polio_3_Date
Polio_4_Date
Polio_1_CertificateType
Polio_2_CertificateType

Polio_3_CertificateType
Polio_4_CertificateType

When using the Quick Import function, you must choose **Immunization** from the **Table** pop-up menu. For detailed information about using the Quick Import function, see *Quick Import*. For state-specific information, see PowerSchool's recommended state-specific setup of Health Management settings available on PowerSource in your state reporting setup guide.

Set Up Immunizations

Using the Health Immunization tab, you can set up vaccines, exemption types, and certificate types for Health Management.

Set Up Vaccines

Use the following procedures to define vaccines for which you want to record immunization information. For state-specific information, see PowerSchool's recommended state-specific setup of Health Management settings available on PowerSource in your state reporting setup guide. Defined values appear on the student Health page's Immunization tab. For more information, see *Enter Student Immunization Information*.

How to Add a Vaccine

Use this procedure to add as many vaccines as needed.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Health, click **Health**. The Health page appears.
3. Click the **Immunizations** tab, if needed.
4. On the Immunizations tab, click **Vaccines**. The Vaccines page appears.
5. Click **+ Add**. The Add New Vaccine dialog appears.
6. Use the following table to enter information in the fields:

Field	Description
Vaccine Name	Enter the vaccine name.
Vaccine Code	Enter the vaccine code.

State Report Name	Do one of the following: • Enter the name specified by your state; see your PowerSchool state reporting setup guide. • Enter a district-defined name. • Leave this field blank.
State Report Code	Do one of the following: • Enter the code specified by your state; see your PowerSchool state reporting setup guide. • Enter a district-defined code. • Leave this field blank.
Number of Doses	Enter the number of required doses.
Description	Enter any additional comments pertaining to the vaccine.
This vaccine is optional	By default the checkbox is not selected indicating the vaccine is mandatory. Select the checkbox to indicate the vaccine is optional.
Rules Engine	The option to use the Rules Engine varies by state. If your state guidelines indicate that a visual notification of compliance and status is required, then this section is visible. By binding a vaccine to a rule, the Rules Engine can compare student immunization data against state-specific guidelines in order to identify students' vaccine and/or dose compliancy. 1. To bind a vaccine, choose a rule from the **Bind vaccine to a rule** pop-up menu. A vaccine may be bound to only one rule. Once the rule is bound to a vaccine, it no longer appears in the **Bind vaccine to a rule** pop-up menu. **Note:** To unbind a vaccine, select the **Unbind rule** checkbox. By selecting this option, all existing compliancy values for the vaccine are reset to the default value of compliant and rules assessment is reset to manually assess compliance at vaccine level.

	2. If you bind a vaccine to a rule, indicate the method by which you want the vaccine assessed by selecting one of the following: • To automatically assess the vaccine, select the **Use Rules Engine to assess compliance** option. By selecting this option, vaccine compliance is automatically assessed at the dose level. • To manually assess the vaccine, select the **Manually assess compliance at vaccine level** option. By selecting this option, vaccine compliance can be manually assessed at the vaccine level. **Note:** If a vaccine that is set to use Rules Engine to assess compliance is then set to manually assess compliance, all existing compliancy values for the vaccine are reset to the default value of compliant. **Note:** For state-specific information, see PowerSchool's recommended state-specific setup of Health Management settings available on PowerSource in your state reporting setup guide.

7. Click **Update**.
8. Repeat Step 5 through Step 7 for each vaccine you want to add.
9. To require users to certify that the immunization data entered is accurate, select the **Require users to certify transcription accuracy** checkbox. Otherwise, leave it blank.
10. Click **Submit**.

How to Edit a Vaccine

Use this procedure to edit vaccine details.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Health, click **Health**. The Health page appears.
3. Click the **Immunizations** tab, if needed.
4. On the Immunizations tab, click **Vaccines**. The Vaccines page appears.
5. Click the vaccine you want to edit. The Edit Vaccine dialog appears.
6. Edit the information as needed. For field descriptions, see *How to Add a Vaccine*.
7. Click **Update**.

8. Repeat Step 5 through Step 7 for each vaccine you want to edit.
9. To require users to certify that the immunization data entered is accurate, select the **Require users to certify transcription accuracy** checkbox. Otherwise, leave it blank.
10. Click **Submit**.

How to Delete a Vaccine

Use this procedure to delete a vaccine that may have been created in error or that is no longer in use.

Note: If a vaccine is associated to a student, it cannot be deleted. First remove the dose dates for the vaccine from all students and then the vaccine may be deleted.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Health, click **Health**. The Health page appears.
3. Click the **Immunizations** tab, if needed.
4. On the Immunizations tab, click **Vaccines**. The Vaccines page appears.
5. Click the **Minus (-)** button next to the vaccine you want to remove. The vaccine appears shaded.

   Note: Click the **Revert** icon (counterclockwise arrow) to undo the deletion.

6. Repeat Step 5 for each vaccine you want to delete.
7. Click **Submit**.

How to Change the Display Order of Vaccines

Use this procedure to change the order in which the vaccines you created appear on the Immunizations tab of the student Health page.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Health, click **Health**. The Health page appears.
3. Click the **Immunizations** tab, if needed.
4. On the Immunizations tab, click **Vaccines**. The Vaccines page appears.
5. Click and hold the **Horizontal Three-Line** icon and drag up or down to change the display order of the vaccines.
6. Click **Submit**. The new display order is saved, and the updated order appears on the student Health page's Immunizations tab.

Set Up Exemption Types

Use the following procedures to define exemption types, which may be used to indicate the reason an individual is exempt from vaccination. For state-specific information, see PowerSchool's recommended state-specific setup of health and immunizations settings available on PowerSource in your state reporting setup guide. Defined values appear in the **Exemption Type** pop-up menu on the student Health page's Immunization tab. For more information, see *Enter Student Immunization Information*.

How to Add an Exemption Type

Use this procedure to add as many exemption types as needed.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Health, click **Health**. The Health page appears.
3. Click the **Immunizations** tab, if needed.
4. On the Immunizations tab, click **Exemption Types**. The Exemption Types page appears.

   Note: Click the **Name** or **Code** column to sort by that column.

5. Click **+ Add**. The Add New Exemption Type dialog appears.
6. Use the following table to enter information in the fields:

Field	Description
Exemption Name	Enter the exemption type name.
Exemption Code	Enter the exemption type code.
State Report Name	Do one of the following: • Enter the name specified by your state; see your PowerSchool state reporting setup guide. • Enter a district-defined name. • Leave this field blank.

State Report Code	Do one of the following: • Enter the code specified by your state; see your PowerSchool state reporting setup guide. • Enter a district-defined code. • Leave this field blank.

7. Click **Update**.
8. Repeat Step 5 through Step 7 for each exemption type you want to add.
9. Click **Submit**.

How to Edit an Exemption Type

Use this procedure to edit an exemption type.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Health, click **Health**. The Health page appears.
3. Click the **Immunizations** tab, if needed.
4. On the Immunizations tab, click **Exemption Types**. The Exemption Types page appears.

   Note: Click the **Name** or **Code** column to sort by that column.

5. Click the **Pencil** icon next to the exemption type you want to edit. The Edit Exemption Type dialog appears.

   Note: If an Eye icon appears instead of the Pencil icon, you have view only access to this page.

6. Edit the information as needed. For field descriptions, see *How to Add an Exemption Type*.
7. Click **Update**.
8. Repeat Step 5 through Step 7 for each exemption type you want to edit.
9. Click **Submit**.

How to Delete an Exemption Type

Use this procedure to delete an exemption type that may have been created in error or that is no longer in use.

Note: If an exemption type is associated to a student, it cannot be deleted. First remove the exemption type from all students and then it may be deleted.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Health, click **Health**. The Health page appears.
3. Click the **Immunizations** tab, if needed.
4. On the Immunizations tab, click **Exemption Types**. The Exemption Types page appears.
5. Click the **Minus (-)** button next to the exemption type you want to remove. The exemption type appears shaded.

   Note: Click the **Revert** icon (counterclockwise arrow) to undo the deletion.

6. Repeat Step 5 for each exemption type you want to delete.
7. Click **Submit**.

Set Up Certificate Types

Use the following procedures to define certificates types, which may be used to indicate the source of information from which immunization information was obtained. For state-specific information, see PowerSchool's recommended state-specific setup of Health Management settings available on PowerSource in your state reporting setup guide. Defined values appear in the **Certificate Type** pop-up menu on the student Health page's Immunization tab. For more information, see *Enter Student Immunization Information*.

How to Add a Certificate Type

Use this procedure to add as many immunization certificate types as needed.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Health, click **Health**. The Health page appears.
3. Click the **Immunizations** tab, if needed.
4. On the Immunizations tab, click **Certificate Types**. The Certificate Types page appears.

   Note: Click the **Name**, **Code**, or **Default** column to sort by that column.

5. Click **+ Add**. The Add New Certificate Type dialog appears.
6. Use the following table to enter information in the fields:

Field	Description
Certificate Name	Enter the certificate type name.
Certificate Code	Enter the certificate type code.
State Report Name	Do one of the following: • Enter the name specified by your state; see your PowerSchool state reporting setup guide. • Enter a district-defined name. • Leave this field blank.
State Report Code	Do one of the following: • Enter the code specified by your state; see your PowerSchool state reporting setup guide. • Enter a district-defined code. • Leave this field blank.
Default Certificate	Select the checkbox to specify this certificate type as the default certificate type.

7. Click **Update**.
8. Repeat Step 5 through Step 7 for each certificate type you want to add.
9. Click **Submit**.

How to Edit a Certificate Type

Use this procedure to edit a certificate type.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Health, click **Health**. The Health page appears.
3. Click the **Immunizations** tab, if needed.
4. On the Immunizations tab, click **Certificate Types**. The Certificate Types page appears.

Note: Click the **Name**, **Code**, or **Default** column to sort by that column.

5. Click the **Pencil** icon next to the certificate type you want to edit. The Edit Certificate Type dialog appears.

   Note: If an Eye icon appears instead of the Pencil icon, you have view only access to this page.

6. Edit the information as needed. For field descriptions, see *How to Add a Certificate Type*.
7. Click **Update**.
8. Repeat Step 5 through Step 7 for each certificate type you want to edit.
9. Click **Submit**.

How to Delete a Certificate Type

Use this procedure to delete a certificate type that may have been created in error or that is no longer in use.

Note: If a certificate type is associated to a student, it cannot be deleted. First remove the certificate type from all students and then it may be deleted.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Health, click **Health**. The Health page appears.
3. Click the **Immunizations** tab, if needed.
4. On the Immunizations tab, click **Certificate Types**. The Certificate Types page appears.
5. Click the **Minus (-)** button next to the certificate type you want to remove. The certificate type appears shaded.

   Note: Click the **Revert** icon (counterclockwise arrow) to undo the deletion.

6. Repeat Step 5 for each certificate type you want to delete.
7. Click **Submit**.

Set Up Screenings

There are six screenings for which you can set up student entry field display values: Hearing, Oral Health, Scoliosis, Tuberculosis, Vision and Color, and Vital Signs/Biometrics. Each screening includes a number of student entry fields for which the following display values may be defined: Display Value, State Report Name, and State Report Code. For state-specific information, see PowerSchool's recommended state-specific setup of Health Management settings available on PowerSource in your state reporting setup guide. Defined values appear on the Add Screening and Edit Screening dialogs on the student Health page's Screenings tab. For more information, see *Enter Student Screening Records*.

How to Add a Screening Student Entry Field Display Value

Use this procedure to add as many display values to each screening student entry field as needed.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Health, click **Health**. The Health page appears.
3. Click the **Screenings** tab.
4. On the Screenings tab, click the screening type for which you want to add a display value. Student entry fields for the selected screening appear.

   Note: Click the **Display Value**, **State Code**, or **State Name** column to sort by that column.

5. Click **+ Add** next to the student entry field for which you want to add a display value:

Field	Description
Hearing	• Screening Provider Type • Left Ear Test Result • Right Ear Test Result • Test Type • Screening Outcome • Hearing Waiver Reason
Oral Health	• Screening Provider Type • Treatment Urgency • Screening Outcome • Oral Health Waiver Reason
Scoliosis	• Screening Provider Type • X-Ray Film Impression • Screening Outcome

	• Scoliosis Waiver Reason
Tuberculosis	• Screening Provider Type • Chest X-Ray Impression • Skin Test Result • Skin Test Type • Screening Outcome • Tuberculosis Waiver Reason
Vision and Color	• Screening Provider Type • Color Blind Test Result • Left Eye Test Result • Right Eye Test Result • Screening Outcome • Vision Waiver Reason
Vital Signs/Biometrics	• Screening Provider Type • Weight Status • Screening Outcome • Vital Signs/Biometrics Waiver Reason

6. On the Add dialog for the selected student entry field, enter information in the fields:

Field	**Description**
Display Value	Enter the name of the display value.
State Report Name	Do one of the following: • Enter the name specified by your state; see your PowerSchool state reporting setup guide. • Enter a district-defined name. • Leave this field blank.

State Report Code	Do one of the following: • Enter the code specified by your state; see your PowerSchool state reporting setup guide. • Enter a district-defined code. • Leave this field blank.

7. Click **Add**.
8. Repeat Step 5 through Step 7 for each student entry field display value you want to add.
9. Click **Submit**.

How to Edit a Screening Student Entry Field Display Value

Use this procedure to edit a screening student entry field display value.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Health, click **Health**. The Health page appears.
3. Click the **Screenings** tab.
4. On the Screenings tab, click the screening type for which you want to edit a display value. Student entry fields for the selected screening appear.

   Note: Click the **Display Value**, **State Code**, or **State Name** column to sort by that column.

5. Use the following table to enter information in the fields:

Field	**Description**
Active	Do one of the following: • Leave the checkbox selected to indicate the student entry field display value is active. When selected, the student entry field display value will appear on the Student Health pages. • Deselect the checkbox to indicate the student entry field display value is not active. When deselected, the student

	entry field display value will no longer appear on the Student Health pages. **Note:** By default, when a student entry field display value is added it is active.
Default	Do one of the following: • Select the checkbox of the student entry field display value you want to display as the default value on the Student Health pages. • Deselect the checkboxes of the student entry field display value you do not want to display as the default value on the Student Health pages. **Note:** Only one active student entry field display value may be selected as the default value. If the default value is made inactive, it no longer appears as the default.
Order	Use the up and down arrows to modify the order of the student entry field display values as they appear on the Student Health pages.

6. Click the **Pencil** icon next to the student entry field display value you want to edit. The Edit dialog for the selected student entry field appears.

   Note: If an Eye icon appears instead of the Pencil icon, you have view only access to this page.

7. Edit the information as needed. For field descriptions, see *How to Add a Screening Student Entry Field Display Value*.
8. Click **Update**.
9. Repeat Step 5 through Step 7 for each student entry field display value you want to edit.
10. Click **Submit**.

How to Delete a Screening Student Entry Field Display Value

Use this procedure to delete a display value for a screening student entry field that may have been created in error or that is no longer in use.

Note: If a screening display value is associated to a student, it cannot be deleted. First remove the screening display value from all students and then it may be deleted.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Health, click **Health**. The Health page appears.
3. Click the **Screenings** tab.
4. On the Screenings tab, click the screening type for which you want to delete a display value. Student entry fields for the selected screening appear.

   Note: Click the **Display Value**, **State Code**, or **State Name** column to sort by that column.

5. Click the **Minus (-)** button next to the student entry field display you want to remove. The student entry field display appears shaded.

   Note: Click the **Revert** icon (counterclockwise arrow) to undo the deletion.

6. Repeat Step 5 for each student entry field display value you want to delete.
7. Click **Submit**.

Set Up Office Visits

When setting up offices visits, you can define display values for the following three student entry fields: Office Visit Type, Office Visit Provider Type, and Office Visit Outcome. For each student entry field, the following values may be defined: Display Value, State Report Name, and State Report Code. For state-specific information, see PowerSchool's recommended state-specific setup of Health Management settings available on PowerSource in your state reporting setup guide. Defined values appear on the Add Office Visit and Edit Office Visit dialogs on the student Health page's Office Visits tab. For more information, see *Enter Student Office Visits*.

How to Add an Office Visit Student Entry Field Display Value

Use this procedure to add as many display values to each office visit student entry field as needed.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Health, click **Health**. The Health page appears.
3. Click the **Office Visits** tab.

Note: Click the **Display Value**, **State Code**, or **State Name** column to sort by that column.

4. On the Office Visits tab, click **+ Add** next to the student entry field for which you want to add a display value**:**
    - **Office Visit Type**
    - **Office Visit Type Provider**
    - **Office Visit Outcome**
5. On the Add dialog for the selected student entry field, enter information in the fields:

Field	Description
Display Value	Enter the name of the office visit type, office visit provider type, or office visit outcome.
State Report Name	Do one of the following: • Enter the name specified by your state; see your PowerSchool state reporting setup guide. • Enter a district-defined name. • Leave this field blank.
State Report Code	Do one of the following: • Enter the code specified by your state; see your PowerSchool state reporting setup guide. • Enter a district-defined code. • Leave this field blank.

6. Click **Add**.
7. Repeat Step 4 through Step 6 for each student entry field display value you want to add.
8. Click **Submit**.

How to Edit an Office Visit Student Entry Field Display Value

Use this procedure to edit an office visit student entry field display value.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Health, click **Health**. The Health page appears.
3. Click the **Office Visits** tab.

   Note: Click the **Display Value**, **State Code**, or **State Name** column to sort by that column.

4. Use the following table to enter information in the fields:

Field	Description
Active	Do one of the following: • Leave the checkbox selected to indicate the student entry field display value is active. When selected, the student entry field display value will appear on the Student Health pages. • Deselect the checkbox to indicate the student entry field display value is not active. When deselected, the student entry field display value will no longer appear on the Student Health pages. **Note:** By default, when a student entry field display value is added it is active.
Default	Do one of the following: • Select the checkbox of the student entry field display value you want to display as the default value on the Student Health pages. • Deselect the checkboxes of the student entry field display value you do not want to display as the default value on the Student Health pages. **Note:** Only one active student entry field display value may be selected as the default value. If the default value is made inactive, it no longer appears as the default.

Order	Use the up and down arrows to modify the order of the student entry field display values as they appear on the Student Health pages.

5. Click the **Pencil** icon next to the student entry field display value you want to edit. The Edit dialog for the selected student entry field appears.

   Note: If an Eye icon appears instead of the Pencil icon, you have view only access to this page.

6. Edit the information as needed. For field descriptions, see *How to Add an Office Visit Student Entry Field Display Value*.
7. Click **Update**.
8. Repeat Step 4 through Step 6 for each student entry field display value you want to edit.
9. Click **Submit**.

How to Delete an Office Visit Student Entry Field Display Value

Use this procedure to delete a display value for an office visit student entry field that may have been created in error or that is no longer in use.

Note: If an office visit display value is associated to a student, it cannot be deleted. First remove the office visit display value from all students and then it may be deleted.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Health, click **Health**. The Health page appears.
3. Click the **Office Visits** tab.

   Note: Click the **Display Value**, **State Code**, or **State Name** column to sort by that column.

4. On the Office Visits tab, click the **Minus (-)** button next to the student entry field display value you want to remove. The student entry field display value appears shaded.

   Note: Click the **Revert** icon (counterclockwise arrow) to undo the deletion.

5. Repeat Step 4 for each student entry field display value you want to delete.
6. Click **Submit**.

Set Up Grade Level Entry Certifications

Depending on the state, one or many grade level entry certifications must occur for students in a district to ensure that health-related requirements have been met prior to entry into a given grade level. Use the following procedures to define grade levels that require entry certification. For state-specific information, see PowerSchool's recommended state-specific setup of Health Management settings available on PowerSource in your state reporting setup guide. Defined values appear in the **+ Add Grade Level** pop-up menu on the student Health page's Grade Level Entry Certifications tab. For more information, see *Enter Student Grade Level Entry Certification Records*.

Note: This topic covers how to add, edit, and delete grade level entry certifications. To add, edit, and delete certification status values, see *Set Up Certification Status Values*.

How to Add a Grade Level Entry Certification

Use this procedure to add as many grade level entry certifications as needed.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Health, click **Health**. The Health page appears.
3. Click the **Grade Level Entry Certifications** tab.

   Note: Click the **Grade Level** or **Description** column to sort by that column.

4. On the Grade Level Entry Certifications tab under Grade Level Entry Certifications, click **+ Add**. The Add Grade Level Entry Certification dialog appears.
5. Use the following table to enter information in the fields:

Field	Description
Grade Level	Choose a grade level from the pop-up menu.
Description	Enter any additional comments pertaining to the grade level entry certification.

6. Click **Add**.
7. Repeat Step 4 through Step 6 for each grade level entry certification you want to add.
8. Click **Submit**.

How to Edit a Grade Level Entry Certification

Use this procedure to edit a grade level entry certification.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Health, click **Health**. The Health page appears.
3. Click the **Grade Level Entry Certifications** tab.

   Note: Click the **Grade Level** or **Description** column to sort by that column.

4. Use the following table to enter information in the fields:

Field	Description
Active	Do one of the following: • Leave the checkbox selected to indicate the student entry field display value is active. When selected, the student entry field display value will appear on the Student Health pages. • Deselect the checkbox to indicate the student entry field display value is not active. When deselected, the student entry field display value will no longer appear on the Student Health pages. **Note:** By default, when a student entry field display value is added it is active.
Order	Use the up and down arrows to modify the order of the student entry field display values as they appear on the Student Health pages.

5. Click the **Pencil** icon next to the grade level entry certification you want to edit. The Edit Grade Level Entry Certification dialog appears.

   Note: If an Eye icon appears instead of the Pencil icon, you have view only access to this page.

6. Edit the information as needed. For field descriptions, see *How to Add a Grade Level Entry Certification*.
7. Click **Update**.
8. Repeat Step 4 through Step 6 for each grade level entry certification you want to edit.
9. Click **Submit**.

How to Delete a Grade Level Entry Certification

Use this procedure to delete a grade level entry certification that may have been created in error or that is no longer in use.

Note: If a grade level entry certification is associated to a student, it cannot be deleted. First remove the grade level entry certification from all students and then it may be deleted.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Health, click **Health**. The Health page appears.
3. Click the **Grade Level Entry Certifications** tab.

   Note: Click the **Grade Level** or **Description** column to sort by that column.

4. On the Grade Level Entry Certifications tab under Grade Level Entry Certifications, click the **Minus (-)** button next to the grade level entry certification you want to remove. The grade level entry certification appears shaded.

   Note: Click the **Revert** icon (counterclockwise arrow) to undo the deletion.

5. Repeat Step 4 for each grade level entry certification you want to delete.
6. Click **Submit**.

Set Up Certification Status Values

If one or many grade level entry certifications have been defined, use the following procedures to define status values that may be used to indicate the progress of a grade level entry certification. For state-specific information, see PowerSchool's recommended state-specific setup of Health Management settings available on PowerSource in your state reporting setup guide. Defined values appear in the **Certification Status** pop-up menu. For more information, see *Enter Student Grade Level Entry Certification Records*.

Note: This topic covers how to add, edit, and delete certification status values. To add, edit, and delete grade level entry certifications, see *Set Up Grade Level Entry Certifications*.

How to Add a Certification Status Value

Use this procedure to add as many certification status values as needed.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Health, click **Health**. The Health page appears.
3. Click the **Grade Level Entry Certification** tab.

   Note: Click the **Display Value**, **State Code**, or **State Name** column to sort by that column.

4. On the Grade Level Entry Certifications tab under Certification Status Values, click **+ Add**. The Add Certification Status Value dialog appears.
5. Use the following table to enter information in the fields:

Field	**Description**
Display Value	Enter the name of the certification status value.
State Report Name	Do one of the following: • Enter the name specified by your state; see your PowerSchool state reporting setup guide. • Enter a district-defined name. • Leave this field blank.
State Report Code	Do one of the following: • Enter the code specified by your state; see your PowerSchool state reporting setup guide. • Enter a district-defined code. • Leave this field blank.

6. Click **Add**.
7. Repeat Step 4 through Step 6 for each certification status value you want to add.
8. Click **Submit**.

How to Edit a Certification Status Value

Use this procedure to edit a certification status value.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Health, click **Health**. The Health page appears.
3. Click the **Grade Level Entry Certification** tab.

   Note: Click the **Display Value**, **State Code**, or **State Name** column to sort by that column.

4. On the Grade Level Entry Certifications tab under Certification Status Values, click the **Pencil** icon next to the certification status value you want to edit. The Edit Certification Status Value dialog appears.

   Note: If an Eye icon appears instead of the Pencil icon, you have view only access to this page.

5. Edit the information as needed. For field descriptions, see *How to Add a Certification Status Value*.
6. Click **Update**.
7. Repeat Step 4 through Step 6 for each certification status value you want to edit.
8. Click **Submit**.

How to Delete a Certification Status Value

Use this procedure to delete a certification status value that may have been created in error or that is no longer in use.

Note: If a certification status value is associated to a student, it cannot be deleted. First remove the certification status value from all students and then it may be deleted.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Health, click **Health**. The Health page appears.
3. Click the **Grade Level Entry Certification** tab.

   Note: Click the **Display Value**, **State Code**, or **State Name** column to sort by that column.

4. On the Grade Level Entry Certifications tab under Certification Status Values, click the **Minus (-)** button next to the certification status value you want to remove. The certification status value appears shaded.

   Note: Click the **Revert** icon (counterclockwise arrow) to undo the deletion.

5. Repeat Step 4 for each certification status value you want to delete.
6. Click **Submit**.

Set Up Miscellaneous Health Settings

Using the Setup tab, you can set up miscellaneous settings for Health Management.

How to Set Up Miscellaneous Health Settings

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Health, click **Health**. The Health page appears.
3. Click the **Setup** tab.
4. Use the following table to enter information in the fields:

Field	Description
Display Office Visits and Screenings entered at other schools	Select the checkbox to display a student's screenings and office visits entered at a previous school when viewing the student's health records. Otherwise, leave the checkbox blank. By default, this setting is disabled.

5. Click **Submit**.

Student Entry

Enter Student Immunization Information

Using the Immunizations tab on the student Health page, you can enter immunization data for a student. The Immunizations tab accommodates an unlimited number of vaccines, quick data entry, and provides real-time dose date validation.

Note: Based on your group security permissions, you may be able to view only, or you may be able to view/modify. For more information, see *Set Group Security Permissions*.

How to View a Student's Vaccine Summary

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Information, choose **Health** from the student pages menu. The Health page appears for that student.
3. Click the **Immunizations** tab, if needed.
4. On the Immunizations tab, hover over the vaccine name you want to view. The following information appears for the selected vaccine:
    - Vaccine Description
    - Vaccine Code
    - Number of Doses
    - Is Mandatory
    - Exemption Type
    - Out of Compliance
    - Comments

How to Enter a Student's Immunization Information

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Information, choose **Health** from the student pages menu. The Health page appears for that student.
3. Click the **Immunizations** tab, if needed.
4. On the Immunizations tab, use the following table to enter information in the fields:

    Note: When entering information in a pop-up, you can press **Tab** to scroll through pop-up fields; tabbing from the last field saves and closes the pop-up; press **Esc** to cancel and close the pop-up and press **Return** (Mac) or **Enter** (Windows) to save and close the pop-up.

<table>
<tr><th>Field</th><th>Description</th></tr>
<tr><td>[Compliance Message]</td><td>A message appears indicating the number of immunizations that are out of compliance, if any.</td></tr>
<tr><td>Vaccine</td><td>Click the name of the vaccine. The [Vaccine Name] pop-up appears.
Do one or more of the following:
If the vaccine is optional or if vaccine compliance is manually assessed at the vaccine level, select the Out of compliance checkbox to indicate the immunization is out of compliance. Alternatively, deselect the Out of compliance checkbox to indicate the immunization is in compliance.

Note: This checkbox does not appear if vaccine compliance is automatically assessed at the dose level. For more information, see Rules Engine.
Indicate the student is exempt from the immunization by choosing the appropriate Exemption Type from pop-up menu.
Enter additional information regarding the immunization in the Comment field.
Press Tab to save and close the pop-up.</td></tr>
<tr><td>Date each dose was given</td><td>Click the appropriate dose cell of the vaccine for which you want to enter information. A pop-up appears.
Enter the date the dose was administered or click the Calendar icon to select a date. Use the Arrow icons to select a different month.
Choose the appropriate Certificate Type from the pop-up menu.
Press Tab to save and close the pop-up and open the next does pop-up.</td></tr>
<tr><td>[Legend]</td><td>The following icons are used to provide visual indicators about information pertaining to a vaccine:</td></tr>
</table>

	• The **Stop Sign Exclamation Mark** icon indicates the student has not received the vaccination and therefore is out of compliance. • The **Triangle Exclamation Mark** icon indicates the student has not yet received the latest dose of a vaccination and therefore is out of compliance. **Note:** This icon may only appear if vaccine compliance is automatically assessed at the dose level. This icon does not appear if vaccine compliance is manually assessed at the vaccine level. For more information, see *Rules Engine*. • The **Square EX** icon indicates the student is exempt from being administered the vaccination. • The **Square OP** icon indicates the vaccination is optional.
Description of Change	Enter the reason for updating the student's immunization information.
View Change History	1. Click to view the student's immunization change history. The Change History dialog appears. 2. Do one or more of the following: • Click the arrow next to **the date** to expand the list. • Click the arrow again to condense the list. • Click **Expand All Items** to view all entries. • Click **Collapse All Items** to minimize all entries. 3. Click **X** to close the dialog.
[Confirmation]	Once you have completed entering a student's immunization information, you must select the checkbox attesting that all values you entered are accurate and reflective of the certificate data presented to you before you can submit the information. **Note:** If this checkbox does not appear, your district does not require it.

5. Click **Submit**.

How to Edit a Student's Immunization Information

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Information, choose **Health** from the student pages menu. The Health page appears for that student.
3. Click the **Immunizations** tab, if needed.
4. On the Immunizations tab, edit the information as needed. For field descriptions, see *How to Enter a Student's Immunization Information*.
5. Click **Submit**.

How to View a Student's Immunization Information Change History

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Information, choose **Health** from the student pages menu. The Health page appears for that student.
3. Click the **Immunizations** tab, if needed.
4. On the Immunizations tab, click **View Change History**. The Change History dialog appears.
5. Do one of the following:
    - Click the arrow next to **the date** to expand the list.
    - Click the arrow again to condense the list.
    - Click **Expand All Items** to view all entries.
    - Click **Collapse All Items** to minimize all entries.
6. Click **X** to close the dialog.

Enter Student Screening Records

Using the Screenings tab on the student Health page, you can enter screening information for a student. The Screenings tab provides you with the ability to record an unlimited number of hearing, oral health, Scoliosis, Tuberculosis, vision and color, and vital signs/biometrics examinations. Additionally, a screening summary page provides quick access to historical screening information. This topic covers how to add, edit, and delete student screening records. To add, edit, and delete student screening waivers, see *Enter Student Screening Waivers*.

Note: Based on your group security permissions, you may be able to view only, view/modify, or view/modify/delete. For more information, see *Set Group Security Permissions*.

How to View a Student's Screening Summary

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Information, choose **Health** from the student pages menu. The Health page appears for that student.
3. Click the **Screenings** tab. The Screenings tab displays the following information:

   Note: Click the **Type**, **Date**, **Outcome** or **Comment** column to sort by that column.

Field	Description
Type	The type of screening that was administered: • Hearing Screening • Oral Health Screening • Scoliosis Screening • Tuberculosis Screening • Vision Screening • Vital Signs/Biometrics Screening Hover over the screening name to view the following information: • Screening Provider Name • Screening Provider Type • Grade Level • [Screening information]
Date	The date the screening was performed.
Outcome	The decision or action taken as a result of the screening.
Comment	Additional information regarding the screening.

How to Add a Hearing Screening Record

Use this procedure to enter hearing screening information for a student.

1. On the start page, search for and select a student. For more information, see *Student Search*.

2. Under Information, choose **Health** from the student pages menu. The Health page appears for that student.
3. Click the **Screenings** tab.

   Note: Click the **Type**, **Date**, **Outcome** or **Comment** column to sort by that column.

4. On the Screenings tab, click **+ Add Screening** and choose **Hearing Screening**. The Add Hearing Screening dialog appears.
5. Use the following table to enter information in the Screening Details fields:

Field	Description
Screening Provider Name	Enter the name of the person or facility that performed the screening. **Note:** This setting is retained as you move through PowerSchool.
Screening Date	Enter the date the screening was performed or click the **Calendar** icon to select a date. Use the **Arrow** icons to select a different month.
Screening Provider Type	Use the pop-up menu to further indicate who performed the screening, such Internal or External. **Note:** This setting is retained as you move through PowerSchool.
Grade Level	Use the pop-up menu to indicate the grade level the student was in when the screening was administered. **Note:** By default, the student's current grade level appears.

6. Use the following table to enter information in the Hearing Test fields:

Field	Description
Right Ear Test Result	Use the pop-up menu to indicate right ear hearing test results, such as Normal, Discharge, Foreign Objects, Cerement, Failure @ 500/25 db, Failure @ 1000/25 db, Failure @ 2000/25 db, Failure @

	4000/25 db, Failure @ 2 or more frequencies, Permanent Disability, or Unable to Test.
Left Ear Test Result	Use the pop-up menu to indicate left ear hearing test results, such as Normal, Discharge, Foreign Objects, Cerement, Failure @ 500/25 db, Failure @ 1000/25 db, Failure @ 2000/25 db, Failure @ 4000/25 db, Failure @ 2 or more frequencies, Permanent Disability, or Unable to Test.
Test Type	Use the pop-up menu to indicate the type of hearing test that was administered.
Hearing Referral Date	Enter the date the student was recommended a hearing aid or click the **Calendar** icon to select a date. Use the **Arrow** icons to select a different month.
Hearing Aid	Enter the type of hearing aid that has been recommended to the student.
Test Conducted Late	Use the checkbox to indicate whether or not the hearing screening was administered on time.

7. Use the following table to enter information in the Outcome & Comment fields:

Field	Description
Screening Outcome	Use the pop-up menu to indicate the decision or action taken as a result of the screening. **Note:** Display values vary based on selected screening: • Hearing and Vision and Color screenings values may include Referred to Doctor/New Case, Referred to Doctor, Failed/Not Referred, No Change, Improved by Prescription, Screening Inconclusive, Permanent Disability, Passed, or Referred Non-Acuity Pr ob. • Oral Health screenings values may include No Visible Decay, Visible Decay, or Visible Decay and Fillings Present.

	• Scoliosis, Tuberculosis, and Vital Signs/Biometrics screenings values may include Pass or Fail.
Comment	Enter additional information regarding the screening, as needed.

8. Click **Add**. The Add Hearing dialog closes.
9. Click **Submit**.

How to Add an Oral Health Screening Record

Use this procedure to enter oral health screening information for a student.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Information, choose **Health** from the student pages menu. The Health page appears for that student.
3. Click the **Screenings** tab.

   Note: Click the **Type**, **Date**, **Outcome** or **Comment** column to sort by that column.

4. On the Screenings tab, click **+ Add Screening** and choose **Oral Health Screening**. The Add Oral Health Screening dialog appears.
5. Enter information in the Screening Details fields, as needed. For Screening Details field descriptions, see *How to Enter a Hearing Screening Record*.
6. Use the following table to enter information in the Assessment fields:

Field	Description
Dental Sealants Present	Use the pop-up menu to indicate whether or not the student has received dental sealants, such as Yes or No.
Malocclusion	Use the pop-up menu to indicate whether or not the student has been diagnosed with Malocclusion, such as Yes or No.
History of Caries Present	Use the pop-up menu to indicate whether or not the student has a history of Caries, such as Yes or No.

Untreated Caries Present	If a student has been diagnosed with Caries, use the pop-up menu to indicate whether or not the student has received treatment, such as Yes or No.
Treatment Urgency	Use the pop-up menu to indicate the need for treatment, such as, No obvious problem found, Early dental care is recommended, or Urgent care is needed.

7. Enter information in the Outcome & Comment fields, as needed. For Outcome & Comment field descriptions, see *How to Enter a Hearing Screening Record*.
8. Click **Add**. The Add Oral Health Screening dialog closes.
9. Click **Submit**.

How to Add a Scoliosis Screening Record

Use this procedure to enter Scoliosis screening information for a student.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Information, choose **Health** from the student pages menu. The Health page appears for that student.
3. Click the **Screenings** tab.

   Note: Click the **Type**, **Date**, **Outcome** or **Comment** column to sort by that column.

4. On the Screenings tab, click **+ Add Screening** and choose **Scoliosis Screening**. The Add Scoliosis Screening dialog appears.
5. Enter information in the Screening Details fields, as needed. For Screening Details field descriptions, see *How to Enter a Hearing Screening Record*.
6. Use the following table to enter information in the X-Ray fields:

Field	Description
X-Ray Film Date	Enter the date timestamp of the X-Ray film or click the **Calendar** icon to select a date. Use the **Arrow** icons to select a different month.

X-Ray Film Impression	Use the pop-up menu to indicate the severity of the Scoliosis, such as Abnormal, Normal, or No X-Ray.

7. Enter information in the Outcome & Comment fields, as needed. For Outcome & Comment field descriptions, see *How to Enter a Hearing Screening Record*.
8. Click **Add**. The Add Scoliosis Screening dialog closes.
9. Click **Submit**.

How to Add a Tuberculosis Screening Record

Use this procedure to enter Tuberculosis screening information for a student.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Information, choose **Health** from the student pages menu. The Health page appears for that student.
3. Click the **Screenings** tab.

   Note: Click the **Type**, **Date**, **Outcome** or **Comment** column to sort by that column.

4. On the Screenings tab, click **+ Add Screening** and choose **Tuberculosis Screening**. The Add Tuberculosis Screening dialog appears.
5. Enter information in the Screening Details fields, as needed. For Screening Details field descriptions, see *How to Enter a Hearing Screening Record*.
6. Use the following table to enter information in the Test and X-Ray fields:

Field	Description
Skin Test Given Date	Enter the date timestamp the skin test was performed or click the **Calendar** icon to select a date. Use the **Arrow** icons to select a different month.
Skin Test Read Date	Enter the date timestamp the skin test was read or click the **Calendar** icon to select a date. Use the **Arrow** icons to select a different month.
Skin Test Type	Use the pop-up menu to indicate the type of skin test that was administered.

In duration Size	Enter the size of the in duration in millimeters (mm).
Skin Test Result	Use the pop-up menu to indicate the results of the impression, such as Positive or Negative.
Chest X-Ray Film Date	Enter the date timestamp of the chest X-Ray film or click the **Calendar** icon to select a date. Use the **Arrow** icons to select a different month.
Chest X-Ray Impression	Use the pop-up menu to indicate the results of the chest X-Ray impression, such as Normal or Abnormal.

7. Enter information in the Outcome & Comment fields, as needed. For Outcome & Comment field descriptions, see *How to Enter a Hearing Screening Record*.
8. Click **Add**. The Add Tuberculosis Screening dialog closes.
9. Click **Submit**.

How to Add a Vision and Color Screening Record

Use this procedure to enter vision and color screening information for a student.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Information, choose **Health** from the student pages menu. The Health page appears for that student.
3. Click the **Screenings** tab.

   Note: Click the **Type**, **Date**, **Outcome** or **Comment** column to sort by that column.

4. On the Screenings tab, click **+ Add Screening** and choose **Vision and Color Screening**. The Add Vision and Color Screening dialog appears.
5. Enter information in the Screening Details fields, as needed. For Screening Details field descriptions, see *How to Enter a Hearing Screening Record*.
6. Use the following table to enter information in the Vision and Color fields:

Field	**Description**

Vision Referral Date	Enter the date the student was recommended a vision aid or click the **Calendar** icon to select a date. Use the **Arrow** icons to select a different month.
Test Conducted Late	Use the checkbox to indicate whether or not the vision screening was administered on time.
Right Eye Vision Test Result	Use the pop-up menu to indicate the results of the right eye test, such as 20/20, 20/30, 20/40, 20/50, 20/70, 20/100, 20/200, 20/20 Corrected, 20/30 Corrected, 20/40 Corrected, 20/50 Corrected, 20/70 Corrected, 20/100 Corrected, 20/200 Corrected, Signs, Permanent Disability, and Unable to Test.
Left Eye Vision Test Result	Use the pop-up menu to indicate the results of the left eye test, such as 20/20, 20/30, 20/40, 20/50, 20/70, 20/100, 20/200, 20/20 Corrected, 20/30 Corrected, 20/40 Corrected, 20/50 Corrected, 20/70 Corrected, 20/100 Corrected, 20/200 Corrected, Signs, Permanent Disability, and Unable to Test.
Color Blind Test Result	Use the pop-up menu to indicate the results of the color blind test, such as Pass, Fail Blue/Yellow, or Fail Red/Green.
Vision Aid	Enter the type of vision aid that has been recommended to the student.

7. Enter information in the Outcome & Comment fields, as needed. For Outcome & Comment field descriptions, see *How to Enter a Hearing Screening Record*.
8. Click **Add**. The Add Vision and Color Screening dialog closes.
9. Click **Submit**.

How to Add a Vital Signs/Biometrics Screening Record

Use this procedure to enter vital signs and biometrics screening information for a student.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Information, choose **Health** from the student pages menu. The Health page appears for that student.

3. Click the **Screenings** tab.

   Note: Click the **Type**, **Date**, **Outcome** or **Comment** column to sort by that column.

4. On the Screenings tab, click **+ Add Screening** and choose **Vital Signs/Biometrics Screening**. The Add Vital Signs/Biometrics Screening dialog appears.
5. Enter information in the Screening Details fields, as needed. For Screening Details field descriptions, see *How to Enter a Hearing Screening Record*.
6. Use the following table to enter information in the Biometrics fields:

Field	**Description**
Height	Enter the student's height in inches, if your district is using US units of measure, or meters, if your district is using international units of measure. **Note:** Two decimal places allowed.
Height Percentile	Enter the student's height percentile.
Weight	Enter the student's weight in pounds, if your district is using US units of measure, or kilograms, if your district is using international units of measure. **Note:** Two decimal places allowed.
Weight Percentile	Enter the student's weight percentile.
Weight Status	Use the pop-up menu to indicate the student's weight status, such as Normal, Obese, Overweight, or Underweight.
BMI	The student's Body Mass Index is calculated automatically once a height and weight is entered.

7. Use the following table to enter information in the Vital Signs fields:

Field	**Description**

Systolic Blood Pressure	Enter the student's Systolic Blood Pressure.
Diastolic Blood Pressure	Enter the student's Diastolic Blood Pressure.
Resting Heart Rate	Enter the student's resting heart rate.
Temperature	Enter the student's body temperature.

8. Enter information in the Outcome & Comment fields, as needed. For Outcome & Comment field descriptions, see *How to Enter a Hearing Screening Record*.
9. Click **Add**. The Add Vital Signs/Biometrics Screening dialog closes.
10. Click **Submit**.

How to Edit a Screening Record

Use this procedure to edit screening information for a student.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Information, choose **Health** from the student pages menu. The Health page appears for that student.
3. Click the **Screenings** tab.

   Note: Click the **Type**, **Date**, **Outcome** or **Comment** column to sort by that column.

4. On the Screenings tab, click the **Pencil** icon next to the screening record you want to edit. The Edit Screening dialog for the selected screening record appears.

   Note: If an Eye icon appears instead of the Pencil icon, you have view only access to this information. Click the **Eye** icon next to the screening record you want to view. The Screening dialog appears. When you are done viewing, close the dialog.

5. Edit information as needed. For field descriptions, see the appropriate *How to Add a Screening Record* procedure.
6. Enter the reason for updating the screening record in the **Change Reason** text box.
7. Click **Update**. The Edit Screening dialog closes.
8. Click **Submit**.

How to Delete a Screening Record

Use this procedure to delete a student's screening record that may have been created in error.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Information, choose **Health** from the student pages menu. The Health page appears for that student.
3. Click the **Screenings** tab.

   Note: Click the **Type**, **Date**, **Outcome** or **Comment** column to sort by that column.

4. On the Screenings tab, click the **Minus (-)** button next to the screening record you want to delete. The screening record appears shaded.

   Note: Click the **Revert** icon (counterclockwise arrow) to undo the deletion.

5. Repeat Step 4 for each screening record you want to delete.
6. Click **Submit**.

Enter Student Screening Waivers

In addition to entering screening information for a student using the Screenings tab on the student Health page, you can also create waivers specific to each screening type. This topic covers how to add, edit, and delete student screening waivers. To add, edit, and delete student screening records, see *Enter Student Screening Records*.

Note: Based on your group security permissions, you may be able to view only, view/modify, or view/modify/delete. For more information, see *Set Group Security Permissions*.

How to View a Student's Screening Waiver Summary

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Information, choose **Health** from the student pages menu. The Health page appears for that student.
3. Click the **Screenings** tab. The Screenings tab displays the following information:

   Note: Click the **Type**, **Date**, **Outcome** or **Comment** column to sort by that column.

<table>
<tr><th>Field</th><th>Description</th></tr>
<tr><td>Type</td><td>The type of screening waiver:
Hearing Waiver
Oral Health Waiver
Scoliosis Waiver
Tuberculosis Waiver
Vision Waiver
Vital Signs/Biometrics Waiver
Hover over the screening waiver name to view the following information:
Parent Requesting Waiver
Grade Level
Waiver Reason</td></tr>
<tr><td>Date</td><td>The date the screening was waived.</td></tr>
<tr><td>Outcome</td><td>Not applicable to waivers.
Note: Only applicable to screenings.</td></tr>
<tr><td>Comment</td><td>Additional information regarding the screening waiver.</td></tr>
</table>

How to Add a Screening Waiver

Use this procedure to enter screening waiver information for a student.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Information, choose **Health** from the student pages menu. The Health page appears for that student.
3. Click the **Screenings** tab.

   Note: Click the **Type**, **Date**, **Outcome** or **Comment** column to sort by that column.

4. On the Screenings tab, click **+ Add Waiver** and choose one of the following:

- **Hearing Waiver**
- **Oral Health Waiver**
- **Scoliosis Waiver**
- **Tuberculosis Waiver**
- **Vision Waiver**
- **Vital Signs/Biometrics Waiver**

The Add Waiver dialog for the selected screening appears.

5. Use the following table to enter information in the Screening Waiver Details fields:

Field	Description
Parent Requesting Waiver	Enter the name of the parent or guardian who requested the screening waiver.
Waiver Date	Enter the date the screening was waived or click the **Calendar** icon to select a date. Use the **Arrow** icons to select a different month. **Note:** By default, today's date appears.
Grade Level	Use the pop-up menu to indicate the grade level the student was in when the screening waiver was requested. **Note:** By default, the student's current grade level appears.

6. Use the following table to enter information in the Reason & Comment fields:

Field	Description
Waiver Reason	Use the pop-up menu to indicate the reason the screening waiver was requested.
Comment	Enter additional information regarding the screening waiver, as needed.

7. Click **Add**. The Add Screening Waiver dialog closes.

8. Click **Submit**.

How to Edit a Screening Waiver

Use this procedure to edit screening waiver information for a student.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Information, choose **Health** from the student pages menu. The Health page appears for that student.
3. Click the **Screenings** tab.

   Note: Click the **Type**, **Date**, **Outcome** or **Comment** column to sort by that column.

4. On the Screenings tab, click the **Pencil** icon next to the screening waiver you want to edit. The Edit Screening Waiver dialog appears.

   Note: If an Eye icon appears instead of the Pencil icon, you have view only access to this page.

5. Edit information as needed. For field descriptions, see *How to Add a Screening Waiver*.
6. Click **Update**. The Edit Screening Waiver dialog closes.
7. Click **Submit**.

How to Delete a Screening Waiver

Use this procedure to delete a student's screening waiver that may have been created in error.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Information, choose **Health** from the student pages menu. The Health page appears for that student.
3. Click the **Screenings** tab.

   Note: Click the **Type**, **Date**, **Outcome** or **Comment** column to sort by that column.

4. On the Screenings tab, click the **Minus (-)** button next to the screening waiver you want to delete. The screening waiver appears shaded.

   Note: Click the **Revert** icon (counterclockwise arrow) to undo the deletion.

5. Repeat Step 4 for each screening waiver you want to delete.
6. Click **Submit**.

Enter Student Office Visits

Students are seen in the school nurse's office for a variety of reasons. Using the Office Visits tab on the student Health page, you can enter office visit information for a student.

Note: Based on your group security permissions, you may be able to view only, view/modify, or view/modify/delete. For more information, see *Set Group Security Permissions*.

How to Add an Office Visit Record

1. Use this procedure to enter office visit information for a student.
2. On the start page, search for and select a student. For more information, see *Student Search*.
3. Under Information, choose **Health** from the student pages menu. The Health page appears for that student.
4. Click the **Office Visits** tab.

   Note: Click the **Visit Type**, **Date**, or **Reason** column to sort by that column.

5. On the Office Visits tab, click **+ Add**. The Add Office Visit dialog appears.
6. Use the following table to enter information in the Visit Details fields:

Field	Description
Visit Type	Use the pop-up menu to indicate the purpose of the office visit.
Contact with Parent	Select the checkbox to indicate that a parent of the student has been contacted as a result of the office visit. Otherwise, leave blank.
Provider Name	Enter the name of the person conducting the office visit. **Note:** By default, the name of the user signed in appears.
Provider Type	Use the pop-up menu to indicate the type of office visit.

	Note: This setting is retained as you move through PowerSchool.
Visit Date	Enter the date the student visited the office or click the **Calendar** icon to select a date. Use the **Arrow** icons to select a different month. **Note:** By default, today's date appears.
Visit Time In	Enter the time the student's office visit began. **Note:** By default, the current time appears.
Visit Time Out	Enter the time the student's office visit ended. **Note:** The first time you click the field, the field automatically populates with the current time.

7. Use the following table to enter information in the Visit Reasons fields:

Field	Description
Issue/Visit Reason	Enter a description of the issue or reason for the office visit, if needed.
Assessment	Enter a description of the assessment of the issue or reason for the office visit, if needed.

8. Use the following table to enter information in the Outcome & Actions fields:

Field	Description
Visit Outcome	Use the pop-up menu to indicate the decision or action taken as a result of the office visit.
Actions	Enter additional information regarding the decision or action taken as a result of the office visit, as needed.

9. Click **Add**. The Add Office Visit dialog closes.
10. Click **Submit**.

How to Edit an Office Visit Record

Use this procedure to edit office visit information for a student.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Information, choose **Health** from the student pages menu. The Health page appears for that student.
3. Click the **Office Visits** tab.

   Note: By default, office visits are sorted by date with the most recent office visit appearing first. Click the **Visit Type**, **Date**, or **Reason** column to sort by that column.

4. On the Office Visits tab, click the **Pencil** icon next to the office visit record you want to edit. The Edit Office Visit dialog appears.

   Note: If an Eye icon appears instead of the Pencil icon, you have view only access to this information. Click the **Eye** icon next to the office visit record you want to view. The Office Visit dialog appears. When you are done viewing, close the dialog.

5. Edit information as needed. For field descriptions, see *How to Add an Office Visit Record*.
6. Enter the reason for updating the screening record in the **Change Reason** text box.
7. Click **Update**. The Edit Office Visit dialog closes.
8. Click **Submit**.

How to Delete an Office Visit Record

Use this procedure to delete a student's office visit record that may have been created in error.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Information, choose **Health** from the student pages menu. The Health page appears for that student.
3. Click the **Office Visits** tab.

   Note: Click the **Visit Type**, **Date**, or **Reason** column to sort by that column.

4. On the Office Visits tab, click the **Minus (-)** button next to the office visit record you want to delete. The office visit record appears shaded.

   Note: Click the **Revert** icon (counterclockwise arrow) to undo the deletion.

5. Repeat Step 4 for each office visit record you want to delete.
6. Click **Submit**.

How to View a Student's Office Visit Record Change History

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Information, choose **Health** from the student pages menu. The Health page appears for that student.
3. Click the **Office Visit** tab.
4. On the Office Visit tab, click **View Change History**. The Change History dialog appears.
5. Do one of the following:
   - Click the arrow next to **the date** to expand the list.
   - Click the arrow again to condense the list.
   - Click **Expand All Items** to view all entries.
   - Click **Collapse All Items** to minimize all entries.
6. Click **X** to close the dialog.

Enter Student Grade Level Entry Certification Records

Your state may require grade level entry certifications to be recorded to ensure that health-related requirements have been met prior to a student's entry into a grade level. Using the Grade Level Entry Certifications tab on the student Health page, you can enter health-related grade entry requirements for a student.

Note: Based on your group security permissions, you may be able to view only, view/modify, or view/modify/delete. For more information, see *Set Group Security Permissions*.

How to Add a Grade Level Entry Certification Record

Use this procedure to enter grade level entry certification information for a student.

1. On the start page, search for and select a student. For more information, see *Student Search*.

2. Under Information, choose **Health** from the student pages menu. The Health page appears for that student.
3. Click the **Grade Level Entry Certifications** tab.

   Note: Click the **Grade Level**, **Date**, **Comment**, or **Certification Status** column to sort by that column.

4. On the Grade Level Entry Certifications tab, click **+ Add Grade Level** and choose the grade level for which you want to add the certification. The Add Grade Level Entry Certification dialog appears.
5. Use the following table to enter information in the fields:

Field	Description
Certifier	Enter the first and last name of the individual certifying the grade level entry.
Certification Date	Enter the certification date or click the **Calendar** icon to select a date. Use the **Arrow** icons to select a different month.
Certification Status	Use the pop-up menu to choose the appropriate certification status.
Comment	Enter additional information regarding the certification, as needed.

6. Click **Add**. The Add Grade Level Entry Certification dialog closes.
7. Click **Submit**.

How to Edit a Grade Level Entry Certification Record

Use this procedure to edit grade level entry certification information for a student.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Information, choose **Health** from the student pages menu. The Health page appears for that student.
3. Click the **Grade Level Entry Certifications** tab.

Note: Click the **Grade Level**, **Date**, **Comment**, or **Certification Status** column to sort by that column.

4. On the Grade Level Entry Certifications tab, click the **Pencil** icon next to the grade level entry certification record you want to edit. The Edit Grade Level Entry Certification dialog appears.

   Note: If an Eye icon appears instead of the Pencil icon, you have view only access to this page.

5. Edit information as needed. For field descriptions, see *How to Add a Grade Level Entry Certification Record*.
6. Click **Update**. The Edit Grade Level Entry Certification dialog closes.
7. Click **Submit**.

How to Delete a Grade Level Entry Certification Record

Use this procedure to delete a student's grade level entry certification record that may have been created in error.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Information, choose **Health** from the student pages menu. The Health page appears for that student.
3. Click the **Grade Level Entry Certifications** tab.

   Note: Click the **Grade Level**, **Date**, **Comment**, or **Certification Status** column to sort by that column.

4. On the Grade Level Entry Certifications tab, click the **Minus (-) button** next to the grade level entry certification record you want to delete. The grade level entry certification record appears shaded.
5. Repeat Step 4 for each grade level entry certification record you want to delete.
6. Click **Submit**.

Student Search

Search for Students by Immunization Compliance

The immunization compliance function provides you with the ability to search for students based on their compliancy status and/or exemption status for one or more vaccines.

How to Search for Students by Immunization Compliance

Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Validation, choose **Immunization Compliance**. The Immunization Compliance page appears.
4. Use the following table to enter information in the fields:

Field	Description
Students	Indicate which students you want to search for by selecting one of the following options: • Select **All active students** to search all students currently enrolled in the selected school. • Select **The selected students** to search only students within the current selection.
Vaccine	Indicate which vaccine(s) you want to evaluate by selecting one of the following options: • Select **Any mandatory vaccines** to evaluate any vaccines. Selecting this option returns students who meet the compliance, exemption, and dose (if specified) parameters for any immunization record. • Select **Only this vaccine** and then choose the vaccine you want to evaluate from the pop-up menu. Selecting this

	option returns students who meet the compliance, exemption, and dose (if specified) parameters for the immunization record associated with the specified vaccine.
Compliance	Indicate which vaccine compliancy status you want to search for by selecting one of the following options: • Select **Not Compliant** to search for students who are not current for the selected vaccine(s). • Select **Compliant** to search for students who are current for the selected vaccine(s). • Select **Any** to search for students regardless of their vaccine compliancy status.
Exemption	Indicate which vaccine exemption status you want to search for by selecting one of the following options: • Select **Not Exempt** to search for students who are not exempt from the selected vaccine(s). • Select **Exempt** to search for students who are exempt from the selected vaccine(s). • Select **Any** to search for students regardless of their vaccine exemption status.
Doses	To narrow your search by the number of doses of a vaccine that have been received, enter the appropriate number in the **Fewer than** field.

5. Click **Submit**. The Immunization Compliance Results page displays a summary of student immunization compliancy information based on the parameters you selected. The students who appear in this summary have at least one immunization record that meets the specified compliance value and the specified exemption value and contains less than the specified number of doses (if a dose value is entered).
6. Do one of the following:
    - Click **View Current Selection**. The Student Selection page displays the current selection of students.
    - Click **Print Reports for the Current Selection**. The Reports page appears.

- Click **Go to the student Health screen for the first student in the Current Selection**. The Health page for the selected student appears.

  Note: This option is only available when the Current Selection contains at least one student.

Work with Student Groups

Health Screenings

Using the Health Screenings group function, you can view health screening information for a selected group of students for a selected date and screening type. Additionally, you can set default screening values for particular screening types and apply them to the selected group of students, as needed.

Note: The Health Screenings group function is only available if you have unrestricted field level access to the student grade level field (or Students.Grade_Level in the database). For more information, see *Field Level Security*.

Note: Default screening values that are created using the Health Screenings group function are user-specific and only available to the user who created them. Default screening values that are created at the district level (**Start Page > District > Health > Screenings**) are available to all schools within the district.

View Health Screenings

Use this procedure to view health screening information for a selected group of students for a selected date and screening type.

How to View Health Screenings

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Search, choose **Health Screenings**. The Health Screenings page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Use the following table to enter information in the Select Student and Screening Types fields:

Field	Description

<table>
<tr><td>Student Selection</td><td>Indicate the students you would like to work with by selecting one of the following options:
Current Selection (#)
By Class (#)
By default, the Current Selection option is selected.

Note: The number of students appears in parenthesis next to the Current Selection option. Click the number to view the current student selection on the Search Students page.

If you select the By Class option:
Choose which teacher from the Teacher pop-up menu.
Choose which course from the Course pop-up menu.
Choose which section from the Section pop-up menu.

Note: Section information includes the course expression, term, and section. Sections are sorted by term, then expression.
Note: To make the By Class option the current selection, click Make Current Selection. The class size appears in parenthesis next to the By Class option. Click the number to view the current student selection on the Search Students page.</td></tr>
<tr><td>Screening Date</td><td>Enter the screening date or click the Calendar icon to select a date.</td></tr>
<tr><td>Screening Type</td><td>Choose which screening type you want to work with from the pop-up menu:
Hearing
Oral Health
Scoliosis
Tuberculosis
Vision and Color
Vital Signs/Biometrics</td></tr>
</table>

Select Default Screening Values	For detailed information, see *Set Default Screening Values*.
Columns to Display	Select the checkbox for each column of data you want to display. **Note:** Checkboxes appear based on the **Screening Type** selected. **Note:** Your checkbox selection is retained and available each time you navigate back to this screening type.

5. Click **Next**. The following information displays in the Create Screenings section:

   Note: Once information displays, the button appears as **Refresh Table**.

Field	Description
Entered	If a record already exists for the student for the selected date and screening type, a checkmark appears. Alternately, if a record does not exist for the student for the selected date and screening type, a checkmark does not appear.
Name	The student's name appears. You can click to set screening values for the individual student.
[Columns]	Columns display in the summary table based on the Columns to Display selection.

Set Default Screening Values

Using the Default Values function, you can set default values for each of the following screenings:

- Hearing
- Oral Health
- Scoliosis
- Tuberculosis
- Vision and Color
- Vital Signs/Biometrics

Note: Default values set using the Default Values function override the defaults set by the district.

Note: Once you have entered default screening values for a screening, those default values are retained for future use.

Note: Default screening values are not automatically applied to every student within the selected group. To apply the default screening values and any additional entries or edits you have, you must set the screening values for each student within the selected group. For more information, see *Set Screening Values*.

How to Set Default Screening Values for Hearing

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Search, choose **Health Screenings**. The Health Screenings page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Enter information in the Select Student and Screening Types fields, as needed, and choose **Hearing** from the **Screening Type** pop-up menu. For field description table, see *How to View Health Screenings*.
5. Click **Default Values**. The Set Default Screening Values - Hearing drawer appears.

   Note: The **Default Values** button does not appear if you have read-only access.

6. Use the following table to enter information in the fields:

   Note: Only enter information in the fields you want to set as default values.

Field	Description
Screening Provider Name	Enter the name of the person or facility that performed the screening.
Screening Date	Enter the screening date or click the **Calendar** icon to select a date.

Screening Provider Type	Use the pop-up menu to further indicate who performed the screening, such Internal or External.
Right Ear Test Result	Use the pop-up menu to indicate right ear hearing test results, such as Normal, Discharge, Foreign Objects, Cerement, Failure @ 500/25 db, Failure @ 1000/25 db, Failure @ 2000/25 db, Failure @ 4000/25 db, Failure @ 2 or more frequencies, Permanent Disability, or Unable to Test.
Left Ear Test Result	Use the pop-up menu to indicate left ear hearing test results, such as Normal, Discharge, Foreign Objects, Cerement, Failure @ 500/25 db, Failure @ 1000/25 db, Failure @ 2000/25 db, Failure @ 4000/25 db, Failure @ 2 or more frequencies, Permanent Disability, or Unable to Test.
Test Type	Use the pop-up menu to indicate the type of hearing test that was administered.
Hearing Referral Date	Enter the date the student was recommended a hearing aid or click the **Calendar** icon to select a date. Use the **Arrow** icons to select a different month.
Hearing Aid	Enter the type of hearing aid that has been recommended to the student.
Test Conducted Late	Use the checkbox to indicate whether or not the hearing screening was administered on time.
Screening Outcome	Use the pop-up menu to indicate the decision or action taken as a result of the screening.
Comment	Enter additional information regarding the screening, as needed.

7. Click **Save and Close**. The drawer closes.

How to Set Default Screening Values for Oral Health

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Search, choose **Health Screenings**. The Health Screenings page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Enter information in the Select Student and Screening Types fields, as needed, and choose **Oral Health** from the **Screening Type** pop-up menu. For field description table, see *How to View Health Screenings*.
5. Click **Default Values**. The Set Default Screening Values - Oral Health drawer appears.

   Note: The **Default Values** button does not appear if you have read-only access.

6. Use the following table to enter information in the fields:

   Note: Only enter information in the fields you want to set as default values.

Field	Description
Screening Provider Name	Enter the name of the person or facility that performed the screening.
Screening Date	Enter the screening date or click the **Calendar** icon to select a date.
Screening Provider Type	Use the pop-up menu to further indicate who performed the screening, such Internal or External.
Dental Sealants Present	Use the pop-up menu to indicate whether or not the student has received dental sealants, such as Yes or No.
Malocclusion	Use the pop-up menu to indicate whether or not the student has been diagnosed with Malocclusion, such as Yes or No.

History of Caries Present	Use the pop-up menu to indicate whether or not the student has a history of Caries, such as Yes or No.
Untreated Caries Present	If a student has been diagnosed with Caries, use the pop-up menu to indicate whether or not the student has received treatment, such as Yes or No.
Treatment Urgency	Use the pop-up menu to indicate the need for treatment, such as, No obvious problem found, Early dental care is recommended, or Urgent care is needed.
Screening Outcome	Use the pop-up menu to indicate the decision or action taken as a result of the screening.
Comment	Enter additional information regarding the screening, as needed.

7. Click **Save and Close**. The drawer closes.

How to Set Default Screening Values for Scoliosis

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Search, choose **Health Screenings**. The Health Screenings page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Enter information in the Select Student and Screening Types fields, as needed, and choose **Scoliosis** from the **Screening Type** pop-up menu. For field description table, see *How to View Health Screenings*.
5. Click **Default Values**. The Set Default Screening Values - Scoliosis drawer appears.

   Note: The **Default Values** button does not appear if you have read-only access.

6. Use the following table to enter information in the fields:

Note: Only enter information in the fields you want to set as default values.

Field	Description
Screening Provider Name	Enter the name of the person or facility that performed the screening.
Screening Date	Enter the screening date or click the **Calendar** icon to select a date.
Screening Provider Type	Use the pop-up menu to further indicate who performed the screening, such Internal or External.
X-Ray Film Date	Enter the date timestamp of the X-Ray film or click the **Calendar** icon to select a date. Use the **Arrow** icons to select a different month.
X-Ray Film Impression	Use the pop-up menu to indicate the severity of the Scoliosis, such as Abnormal, Normal, or No X-Ray.
Screening Outcome	Use the pop-up menu to indicate the decision or action taken as a result of the screening.
Comment	Enter additional information regarding the screening, as needed.

7. Click **Save and Close**. The drawer closes.

How to Set Default Screening Values for Tuberculosis

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Search, choose **Health Screenings**. The Health Screenings page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Enter information in the Select Student and Screening Types fields, as needed, and choose **Tuberculosis** from the **Screening Type** pop-up menu. For field description table, see *How to View Health Screenings*.
5. Click **Default Values**. The Set Default Screening Values - Tuberculosis drawer appears.

   Note: The **Default Values** button does not appear if you have read-only access.

6. Use the following table to enter information in the fields:

   Note: Only enter information in the fields you want to set as default values.

Field	**Description**
Screening Provider Name	Enter the name of the person or facility that performed the screening.
Screening Date	Enter the screening date or click the **Calendar** icon to select a date.
Screening Provider Type	Use the pop-up menu to further indicate who performed the screening, such Internal or External.
Skin Test Given Date	Enter the date timestamp the skin test was performed or click the **Calendar** icon to select a date. Use the **Arrow** icons to select a different month.
Skin Test Read Date	Enter the date timestamp the skin test was read or click the **Calendar** icon to select a date. Use the **Arrow** icons to select a different month.
Skin Test Type	Use the pop-up menu to indicate the type of skin test that was administered.
In duration Size	Enter the size of the in duration in millimeters (mm).
Skin Test Result	Use the pop-up menu to indicate the results of the impression, such as Positive or Negative.

Chest X-Ray Film Date	Enter the date timestamp of the chest X-Ray film or click the **Calendar** icon to select a date. Use the **Arrow** icons to select a different month.
Chest X-Ray Impression	Use the pop-up menu to indicate the results of the chest X-Ray impression, such as Normal or Abnormal.
Screening Outcome	Use the pop-up menu to indicate the decision or action taken as a result of the screening.
Comment	Enter additional information regarding the screening, as needed.

7. Click **Save and Close**. The drawer closes.

How to Set Default Screening Values for Vision and Color

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Search, choose **Health Screenings**. The Health Screenings page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Enter information in the Select Student and Screening Types fields, as needed, and choose **Vision and Color** from the **Screening Type** pop-up menu. For field description table, see *How to View Health Screenings*.
5. Click **Default Values**. The Set Default Screening Values - Vision and Color drawer appears.

   Note: The **Default Values** button does not appear if you have read-only access.

6. Use the following table to enter information in the fields:

   Note: Only enter information in the fields you want to set as default values.

Field	Description

Screening Provider Name	Enter the name of the person or facility that performed the screening.
Screening Date	Enter the screening date or click the **Calendar** icon to select a date.
Screening Provider Type	Use the pop-up menu to further indicate who performed the screening, such Internal or External.
Vision Referral Date	Enter the date the student was recommended a vision aid or click the **Calendar** icon to select a date. Use the **Arrow** icons to select a different month.
Test Conducted Late	Use the checkbox to indicate whether or not the vision screening was administered on time.
Right Eye Vision Test Result	Use the pop-up menu to indicate the results of the right eye test, such as 20/20, 20/30, 20/40, 20/50, 20/70, 20/100, 20/200, 20/20 Corrected, 20/30 Corrected, 20/40 Corrected, 20/50 Corrected, 20/70 Corrected, 20/100 Corrected, 20/200 Corrected, Signs, Permanent Disability, and Unable to Test.
Left Eye Vision Test Result	Use the pop-up menu to indicate the results of the left eye test, such as 20/20, 20/30, 20/40, 20/50, 20/70, 20/100, 20/200, 20/20 Corrected, 20/30 Corrected, 20/40 Corrected, 20/50 Corrected, 20/70 Corrected, 20/100 Corrected, 20/200 Corrected, Signs, Permanent Disability, and Unable to Test.
Color Blind Test Result	Use the pop-up menu to indicate the results of the color blind test, such as Pass, Fail Blue/Yellow, or Fail Red/Green.
Vision Aid	Enter the type of vision aid that has been recommended to the student.
Screening Outcome	Use the pop-up menu to indicate the decision or action taken as a result of the screening.

Comment	Enter additional information regarding the screening, as needed.

7. Click **Save and Close**. The drawer closes.

How to Set Default Screening Values for Vital Signs/Biometrics

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Search, choose **Health Screenings**. The Health Screenings page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Enter information in the Select Student and Screening Types fields, as needed, and choose **Vital Signs/Biometrics** from the **Screening Type** pop-up menu. For field description table, see *How to View Health Screenings*.
5. Click **Default Values**. The Set Default Screening Values - Vital Signs/Biometrics drawer appears.

   Note: The **Default Values** button does not appear if you have read-only access.

6. Use the following table to enter information in the fields:

   Note: Only enter information in the fields you want to set as default values.

Field	Description
Screening Provider Name	Enter the name of the person or facility that performed the screening.
Screening Date	Enter the screening date or click the **Calendar** icon to select a date.
Screening Provider Type	Use the pop-up menu to further indicate who performed the screening, such Internal or External.

Height	Enter the student's height in inches, if your district is using US units of measure, or meters, if your district is using international units of measure. **Note:** Two decimal places allowed.
Height Percentile	Enter the student's height percentile.
Weight	Enter the student's weight in pounds, if your district is using US units of measure, or kilograms, if your district is using international units of measure. **Note:** Two decimal places allowed.
Weight Percentile	Enter the student's weight percentile.
Weight Status	Use the pop-up menu to indicate the student's weight status, such as Normal, Obese, Overweight, or Underweight.
BMI	The student's Body Mass Index is calculated automatically once a height and weight is entered.
Systolic Blood Pressure	Enter the student's Systolic Blood Pressure.
Diastolic Blood Pressure	Enter the student's Diastolic Blood Pressure.
Resting Heart Rate	Enter the student's resting heart rate.
Temperature	Enter the student's body temperature.
Screening Outcome	Use the pop-up menu to indicate the decision or action taken as a result of the screening.
Comment	Enter additional information regarding the screening, as needed.

7. Click **Save and Close**. The drawer closes.

How to Edit Default Screening Values

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Search, choose **Health Screenings**. The Health Screenings page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Enter information in the Select Student and Screening Types fields, as needed, and choose the screening you want to work with from the **Screening Type** pop-up menu. For field description table, see *How to View Health Screenings*.
5. Click **Default Values**. The Set Default Screening Values drawer appears for the selected screening.

   Note: The **Default Values** button does not appear if you have read-only access.

6. Edit information as needed. For field descriptions, see respective *How to Set Default Screening Values for* procedure.
7. Click **Save and Close**. The drawer closes.

How to Revert Default Screening Values to District Defaults

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Search, choose **Health Screenings**. The Health Screenings page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Enter information in the Select Student and Screening Types fields, as needed, and choose the screening you want to work with from the **Screening Type** pop-up menu. For field description table, see *How to View Health Screenings*.

5. Click **Default Values**. The Set Default Screening Values drawer appears for the selected screening.

   Note: The **Default Values** button does not appear if you have read-only access.

6. Click **Clear User Defaults**.
7. Click **Confirm Clear User Defaults**. The drawer closes.

Set Screening Values

Default screening values are not automatically applied to every student within the selected group. To apply the default screening values and any additional entries or edits you have, you must set the screening values for each student within the selected group. Using the **Save and Next** button, you can set screening values for each student in rapid succession.

Note: Default screening values will not overwrite any existing screening values that have already been entered for a student.

How to Set Screening Values

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Search, choose **Health Screenings**. The Health Screenings page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Enter information in the Select Student and Screening Types fields, as needed. For field description table, see *How to View Health Screenings*.
5. Click **Next**. Information displays in the Create Screenings section.

   Note: Once information displays, the button appears as **Refresh Table**. If you make changes to the Select Student and Screening Types fields, click **Refresh Table** to update the information that appears in the Create Screenings section.

6. Click the name of the student you want to work with. The Set Screening Values - [Screening Type] drawer appears.
7. Use the following table to edit information in the fields:

Field	Description
[Student]	The student's name.
[Student ID]	The student's student identification number.
[Date of Birth]	The student's date of birth.
View All Screenings	Click to view all screenings for the student. The Screenings tab on the student Health page displays.
Screening Provider Name	Enter the name of the person or facility that performed the screening. **Note:** This setting is retained as you move through PowerSchool.
Screening Date	Enter the screening date or click the **Calendar** icon to select a date.
Grade Level	Use the pop-up menu to indicate the student's grade level when the screening waiver was performed. **Note:** All grade levels for the district appear. By default, the student's current grade level is selected.
Screening Provider Type	Use the pop-up menu to further indicate who performed the screening, such Internal or External. **Note:** This setting is retained as you move through PowerSchool.
[Fields]	For field descriptions, see respective *How to Set Default Screening Values for* procedure.
Screening Outcome	Use the pop-up menu to indicate the decision or action taken as a result of the screening.
Comment	Enter additional information regarding the screening, as needed.

Change Reason	Enter the reason for updating the screening record.

8. Do one of the following:
   - Click **Save and Close**. The drawer closes, and screening values are applied to the selected student.
   - Click **Save and Next**. The Set Screening Values - [Screening Type] drawer displays information for the next student in the Create Screenings section.

Delete Screening Records

If a student's screening record was created in error, you can use the Delete function to remove the record. The Delete function is only available if a record already exists for a student indicated by a checkmark in the **Entered** column.

How to Delete a Screening Record

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Search, choose **Health Screenings**. The Health Screenings page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Enter information in the Select Student and Screening Types fields, as needed. For field description table, see *How to View Health Screenings*.
5. Click **Next**. Information displays in the Create Screenings section.

   Note: Once information displays, the button appears as **Refresh Table**. If you make changes to the Select Student and Screening Types fields, click **Refresh Table** to update the information that appears in the Create Screenings section.

6. Click the name of the student you want to work with. The Set Screening Values - [Screening Type] drawer appears.
7. Click **Delete**.
8. Click **Confirm Delete**. The drawer closes. The checkmark no longer appears next to the student's name in the Create Screenings section.

Health Data Grid

The Health Data Grid is the central point from which you can quickly and easily view immunization and screenings information for your school or district, as well as create a customized search filter to locate specific immunization and screenings information. When signed in to at the school level, you can view immunization and screenings information from the selected school. When signed in to at the district level, you can view immunization and screenings information for all schools within the district.

Page-Level Permission

To ensure that only staff members whose job duties include health management can access the Health Data Grid, you can define which staff members can access the page by setting permissions at the page level. For detailed information, see *Page-Level Permissions*.

Search for Immunization Records

Use the following procedure to search for immunization records.

Note: Information on this page displays based on your security settings.

How to Search for Immunization Records

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Health Management**. The Health Management page appears.
3. Click the **Immunization** tab, if needed.
4. Use the following table to enter information in the Student Immunization Counts section:

Field	Description
Immunization Mode	Use the pop-up menu to select the type of immunization information you want to view: • **Not Compliant** to view students who are not current with their immunizations. • **Compliant** to view students who are current with their immunizations.

	• **Exempt** to view students who are exempt from immunizations. • **Not Recorded** to view students who are missing one or more immunization records. **Note:** By default, **Not Compliant** is selected.
[Student Immunization Counts]	The first tile to display depends on the selected **Immunization Mode**: • If **Not Compliant** is selected, the **Any** tile displays the total count of students who are not current with their immunizations. • If **Compliant** is selected, the **All** tile displays the total count of students who are current with their immunizations. • If **Exempt** is selected, the **Any** tile displays the total count of students who are exempt from any immunizations. • If **Not Recorded** is selected, the **Any** tile displays the total count of students who are missing immunization records. Each subsequent tile is representative of a student immunization count. Tiles appear in alphabetical order. Click a tile to switch to a filter. **Note:** Carousel navigation may appear based on the size of your screen. You can use to navigate the tiles.

5. Use the following table to enter information in the Filter section:

   Note: Click the **Filter** arrow to collapse this section. Click the **Filter** arrow again to expand this section.

Field	**Description**
Immunization	Filter information for the selected tile appears.
Use Current Selection	Select the checkbox to view immunization information for only students in the current student selection.

<table>
<tr><td>Student</td><td>To further narrow the list students:

1. Click the Add (+) button.
2. Choose Student from the first pop-up menu.
3. Enter the student's name or a portion of the student's name.
4. Click Apply.

Note: Format must be last, first.</td></tr>
<tr><td>Grade Level</td><td>To further narrow the list of students by the grade level:

1. Click the Add (+) button.
2. Choose Grade Level from the first pop-up menu.
3. Choose a grade level from the second pop-up menu.
4. Click Apply.</td></tr>
<tr><td>Home Phone</td><td>To further narrow the list of students by home phone:

1. Click the Add (+) button.
2. Choose Home Phone from the first pop-up menu.
3. Enter the student's home phone number or a portion of the home phone number.
4. Click Apply.</td></tr>
<tr><td>School</td><td>To further narrow the list of students by the school:

1. Click the Add (+) button.
2. Choose School from the first pop-up menu.
3. Choose a school name from the second pop-up menu.
4. Click Apply.

Note: This only appears if at the district level.</td></tr>
<tr><td>Comment</td><td>To further narrow the list of students by the comment:

1. Click the Add (+) button.
2. Choose Comment from the first pop-up menu.</td></tr>
</table>

	3. Enter a comment or a portion of the comment. 4. Click **Apply**. **Note:** This only appears if **Exempt** and an **[Immunization]** tile are selected.
Count	To further narrow the list of students by count: 1. Click the **Add (+)** button. 2. Choose **Count** from the first pop-up menu. 3. Choose a comparator from the second pop-up. 4. Enter the count in the search field. 5. Click **Apply**. **Note:** This only appears if **Not Recorded** and the **Any** tile are selected.
Exemption Type	To further narrow the list of students by the exemption type: 1. Click the **Add (+)** button. 2. Choose **Exemption Type** from the first pop-up menu. 3. Enter an exemption type. 4. Click **Apply**. **Note:** This only appears if **Exempt** and an **[Immunization]** tile are selected.

Note: To delete the filter, click the **Minus (-)** button next to the filter. To remove all filter selections, click **Clear**.

6. Use the following table to view search results:

   Note: Click the name of a column to sort by that column in ascending order. Click again to sort in descending order.

Field	**Description**
Student	The student's last, first name. Click to view detailed information. For more information, see *Enter Student Immunization Information*.

Grade Level	The student's grade level.
Home Phone	The student's home phone number.
School	The student's school. **Note:** This only appears if at the district level.
Comment	Comments regarding the exemption. **Note:** This only appears if **Exempt** and an **[Immunization]** tile are selected.
Count	The total count of immunizations missing for the student. **Note:** This only appears if **Not Recorded** and the **Any** tile are selected.
Exemption Type	The type of exemption. **Note:** This only appears if **Exempt** and an **[Immunization]** tile are selected.
Immunization	Do one of the following: • Click **Show** to view immunization information. • Click **Hide** to hide immunization information. By default, **Hide** is selected. **Note:** This only appears if either **Not Compliant** or **Exempt** and the **Any** tile are selected.
[Pagination]	Use to navigate the search results.
Rows/Page	By default, ten records display per page. To view more records per page, enter the appropriate number in the field.

Set Current Selection	Select the checkbox for each student you want to work with and then click **Set Current Selection** to make the selected students your current student selection. A confirmation message appears. **Note:** If the checkbox in the header row is selected, all records for the currently applied filters will be selected. The student selection set is retained until you set another current selection.
Download	To download the attendance information, click the arrow and select one of the following from the pop-up menu: • **Comma-Separated Value (CSV)** • **Excel Spreadsheet (XLSX)** • **Portable Document Format (PDF)** **Note:** A checkmark appears next to your selection. **Note:** The PDF format is restricted to a maximum of 1000 records. **Note:** Using the CSV format to download data that contains right-to-left Unicode characters may result the incorrect ordering of data. In which case, you can reconfigure your system, use a client, such as Google Sheets, or download the data in XLSX format. **Note:** If you have localized your version of PowerSchool, you must have the required character set installed in order to export in your specified language.

Search for Screening Records

Use the following procedure to search for screening records.

Note: Information on this page displays based on your security settings.

How to Display Office Visits and Screenings Entered at Other Schools

Use this procedure to display a student's screenings and office visits entered at a previous school when viewing the student's health records.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Health, click **Health Setup**. The Health page appears.
3. Click the **Setup** tab.

4. Select the **Display Office Visits and Screenings entered at other schools** checkbox.

   Note: Deselect the checkbox to hide a student's screenings and office visits entered at a previous school when viewing the student's health records.

5. Click **Submit**.

How to Search for Screening Records

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Health Management**. The Health Management page appears.
3. Click the **Screenings** tab, if needed.
4. Use the following table to enter information in the Student Screening Counts section:

Field	Description
Screening Mode	Use the pop-up menu to select the type of screening information you want to view: • **Not Completed** to view students who are not current with their screening. • **Completed** to view students who are current with their screening. **Note:** By default, **Not Completed** is selected.
Date Range	Use the pop-up menu to indicate the time frame for which you want to view screening: • **Current Calendar Year** (appears if at district level) • **Current School Year** (appears if at school level) • **Prior Calendar Year** (appears if at district level) • **Prior School Year** (appears if at school level) • **Current Month** • **Prior Month** • **Current Week** • **Prior Week**

	• **Date Range** • **Specific Date** **Note:** At the school level, the default is set to **Current School Year**. At the district level, the default is set to **Current Calendar Year**. If **Date Range** is selected, enter or select a **Start Date** and **End Date** and then click **Apply**. If **Specific Date** is selected, enter or select a date and then click **Apply**.
[Student Screenings Counts]	Each tile is representative of a student screening count. Tiles appear in alphabetical order: • Hearing • Oral Health • Scoliosis • Tuberculosis • Vision and Color • Vital Signs/Biometrics If the **Screening Mode** of **Not Completed** is selected, the tiles display the count of students who are not current with their screening. If the **Screening Mode** of **Completed** is selected, the tiles display the count of students who are current with their screening. Click a tile to switch to a filter.

5. Use the following table to enter information in the Filter section:

   Note: Click the **Filter** arrow to collapse this section. Click the **Filter** arrow again to expand this section.

Field	**Description**
Screening	Filter information for the selected tile appears.

Use Current Selection	Select the checkbox to view screening information for only students in the current student selection.
Student	To further narrow the list of students: 1. Click the **Add (+)** button. 2. Choose **Student** from the first pop-up menu. 3. Enter the student's name or a portion of the student's name. 4. Click **Apply**. **Note:** Format must be last, first.
Grade Level	To further narrow the list of students by the grade level: 1. Click the **Add (+)** button. 2. Choose **Grade Level** from the first pop-up menu. 3. Choose a grade level from the second pop-up menu. 4. Click **Apply**.
Home Phone	To further narrow the list of students by home phone: 1. Click the **Add (+)** button. 2. Choose **Home Phone** from the first pop-up menu. 3. Enter the student's home phone number or a portion of the home phone number. 4. Click **Apply**.
School	To further narrow the list of students by the school: 1. Click the **Add (+)** button. 2. Choose **School** from the first pop-up menu. 3. Choose a school name from the second pop-up menu. 4. Click **Apply**. **Note:** This only appears if at the district level.
Waiver	To further narrow the list of students by waiver:

	1. Click the **Add (+)** button. 2. Choose **Waiver** from the first pop-up menu. 3. Choose **Yes** or **No** from the second pop-up menu. 4. Click **Apply**. **Note:** This only appears if the **Screening Mode** of **Not Completed** is selected.
Screening Count	To further narrow the list of students by screening count: 1. Click the **Add (+)** button. 2. Choose **Screening Count** from the first pop-up menu. 3. Choose a comparator from the second pop-up menu. 4. Enter a valid number. 5. Click **Apply**. **Note:** This only appears if the **Screening Mode** of **Completed** is selected.
Screening Outcome	To further narrow the list of students by screening outcome: 1. Click the **Add (+)** button. 2. Choose **Screening Outcome** from the first pop-up menu. 3. Enter the screening outcome or a portion of the screening outcome. 4. Click **Apply**. **Note:** This only appears if the **Screening Mode** of **Completed** is selected and **Show** for **Screening Outcome** has been clicked.

Note: To delete the filter, click the **Minus (-)** button next to the filter. To remove all filter selections, click **Clear**.

6. Use the following table to view search results:

   Note: Click the name of a column to sort by that column in ascending order. Click again to sort in descending order.

Field	Description

Student	The student's last, first name. Click to view detailed information. For more information, see *Enter Student Screening Information*.
Grade Level	The student's grade level.
Home Phone	The student's home phone number.
School	The student's school. **Note:** This column only appears if at the district level.
Waiver	Indicates whether or not the student has a waiver. **Note:** This column only appears if the **Screening Mode** of **Not Completed** is selected.
Screening Count	The total number of screenings for this student. **Note:** This column only appears if the **Screening Mode** of **Completed** is selected.
Screening Outcome	The decision or action taken as a result of the screening. Do one of the following: • Click **Show** to view screening outcome. • Click **Hide** to hide screening outcome. By default, **Hide** is selected. **Note:** This column only appears if the **Screening Mode** of **Completed** is selected.
[Pagination]	Use to navigate the search results.
Rows/Page	By default, ten records display per page. To view more records per page, enter the appropriate number in the field.

Set Current Selection	Select the checkbox for each student you want to work with and then click **Set Current Selection** to make the selected students your current student selection. A confirmation message appears. **Note:** If the checkbox in the header row is selected, all records for the currently applied filters will be selected. The student selection set is retained until you set another current selection.
Download	To download the attendance information, click the arrow and select one of the following from the pop-up menu: • **Comma-Separated Value (CSV)** • **Excel Spreadsheet (XLSX)** • **Portable Document Format (PDF)** **Note:** A checkmark appears next to your selection. **Note:** The PDF format is restricted to a maximum of 1000 records. **Note:** Using the CSV format to download data that contains right-to-left Unicode characters may result the incorrect ordering of data. In which case, you can reconfigure your system, use a client, such as Google Sheets, or download the data in XLSX format. **Note:** If you have localized your version of PowerSchool, you must have the required character set installed in order to export in your specified language.

Import and Export User Guide

PowerSchool

Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

Table of Contents

Introduction

Use PowerSchool's import functions to submit large amounts of information into the system. Use the export functions to retrieve large amounts of information from the system. Before importing or exporting, keep the following concepts in mind.

Importing Menu

The Importing Menu includes the following information:

Field	Description
Quick Import	Click to import records from an ASCII text file. For more information, see *Quick Import*. **Note:** The Quick Import page is now also accessible via **Start > System > Page and Data Management > Quick Import**.
Quick Import for State-Specific Extended Tables	Click to import records from an ASCII text file. For more information, see *Quick Import for State-Specific Extended Tables*. **Note:** The Quick Import for State-Specific Extended Tables page is now also accessible via **Start > System > Page and Data Management > Quick Import for State-Specific Extended Tables**.
Import Using Template	Click to import records from an ASCII text file using an import template for Student, Staff, and Course records. For more information, see *Import Using Template*. **Note:** The Import Using Template page is now also accessible via **Start > System > Page and Data Management > Import Using Template**.
Templates for Importing	Click to configure import mapping templates for common imports into Student, Staff, and Course records. For more information, see *Templates for Importing*.

	Note: The Templates for Importing page is now also accessible via **Start > System > Page and Data Management > Templates for Importing**.
Data Import Manager	Click to access the import manager. For more information, see *Data Import Manager*. **Note:** The Data Import Manager page is now also accessible via **Start > System > Page and Data Management > Data Import Manager**.
Data Import Queue	Click to view in progress and completed imports. For more information, see *Data Import Queue*. **Note:** The Data Import Queue page is now also accessible via **Start > System > Page and Data Management > Data Import Queue**.

Exporting Menu

The Exporting Menu includes the following information:

Field	Description
Quick Export	Click to export student data. For more information, see *Quick Export*. **Note:** The Quick Export page is now also accessible via **Start > System > Page and Data Management > Quick Export**.
Export Using Template	Click to export using an existing template. For more information, see *Export Using Template*. **Note:** The Export Using Template page is now also accessible via **Start > System > Page and Data Management > Export Using Template**.
Templates for Exporting	Click to set up export templates. For more information, see *Templates for Exporting*.

	Note: The Templates for Exporting page is now also accessible via **Start > System > Page and Data Management > Templates for Exporting**.
Data Export Manager	Click to access the export manager. For more information, see *Data Export Manager*. **Note:** The Data Export Manager page is now also accessible via **Start > System > Page and Data Management > Data Export Manager**.

Select a Group

Before you can import or export, you must select a group of students whose records you want to review. For more information, see *Student Search*.

Importing Enrollment Dates

You can import student information into PowerSchool using *Quick Import* or *AutoComm*. When you import a student record that has an enrollment date prior to or "less than" the current date, the student record is considered "historical." Historical student records are considered inactive students. Therefore, when searching for such students, your search criteria must start with a slash ("/") to search all student records.

Importing Enrollment IDs

Basics

- If the EnrollmentID column (Students table) or ID column (ReEnrollments table) is not included in the import, PowerSchool retains the existing value (on an update to a Students table record) or generates a new unique value.
- If the EnrollmentID column (Students table) or ID column (ReEnrollments table) is included in the import with data (values), PowerSchool uses the imported value, assuming it is not already in use by another enrollment. If it is in use, an error message indicating such displays.
- If the EnrollmentID column (Students table) or ID column (ReEnrollments table) is included in the import without data (values), PowerSchool generates a new value, even if one already exists. In general, this is not recommended, as existing information may be used for state reporting.
- The Students table allows for updating of records, whereas the ReEnrollments table does not.

Students Table

- In general, it is recommended to not include the EnrollmentID column when importing into the Students table. When the EnrollmentID column is not included, PowerSchool automatically determines if an EnrollmentID value already exists. If one exists, the value is retained. If one does not exist, a value is generated.
- Only under certain circumstances it is recommended to include the EnrollmentID column when importing into the Students table. For example, if a Student record has been deleted and needs to be restored from a test or backup server, including the EnrollmentID column would restore the EnrollmentID value back to what it was prior to the deletion of the record (unless the EnrollmentID was different on the test or backup server, in which case it is recommended to not include the EnrollmentID and let PowerSchool generate one). Note that this is just one example where it is recommended to include the EnrollmentID column when importing into the Students table.
- Importing an EnrollmentID column that does not contain data (or contains values of zero) causes EnrollmentIDs to be regenerated for all the imported records, regardless of whether or not an Enrollment ID exists for the record. In general, including the EnrollmentID column without values (or with values of zero) is not recommended.
- If importing new students, you do not need to include the EnrollmentID column. PowerSchool generates a value during the import.

ReEnrollments Table

- The ReEnrollments table does not allow for updating of records. Therefore, to “update” a record, first export the existing data (including the ID field), delete the existing record and then re-import the record with the updated data. When re-importing, include the ID column with the exported values so that the ID will not be regenerated.
- If the ID is left blank or if the ID column is not included, a new ID is generated. In general, this is not recommended as existing information may be used for state reporting.
- “Updating” should be done with caution. It is recommended you perform the update on a test or backup server first prior to performing on a production server.
- If importing new reenrollments, you do not need to include the ID column. PowerSchool generates a value during the import.

Student Number Field

The student number field is essential to moving all of the data in PowerSchool. This field matches student data to the correct student with absolute certainty. Each student has only one number, and everything in PowerSchool is linked to this number. Thus, you should include the student_number field in all documents that you export. You must include the student number in any document that includes data you want to import into PowerSchool. Keep this in mind when exporting, especially if you want to import the data back into PowerSchool after you have worked with it in your spreadsheet application.

Enroll Status Field

The enroll status field indicates a student's current enrollment status, which defines the student's entire basis in school. Enroll status codes include:

- -2 or less = Inactive (Must be set manually by an administrator)
- -1 = Pre-registered
- 0 = Active
- 1 = Inactive (Must be set manually by an administrator)
- 2 = Transferred-Out
- 3 = Graduated Students (Students moved to the "Graduated Students" school.)
- 4 = Imported as Historical
- 5 or higher = Inactive (Must be set manually by an administrator)

More often than not, the only time you will see this code is if you are working within the database. However, you may encounter the code within the student pages of the application for students with an enroll status other than Active, such as Inactive, Graduated Students, or Imported as Historical. In this case, the code appears at the top of the page. This field is used throughout the application and is a key element in searching or querying students.

Field Names

It is important to spell field names correctly. Case sensitivity is unimportant in field names, but spelling must be exactly as noted on the field list. If you omit the underscore, misspell words, or enter a field name that is different from what exists in the field list, PowerSchool cannot find the field and it will not be imported into or exported from the PowerSchool database. If you do not know how a specific field name is written, click **View Field List** on the PowerSchool start page.

Special Export Codes

Use special export codes to include a student's GPA or other calculated value in your import or export. For more information about data codes, see *PowerSchool Data Codes*. You will need your username and password to sign in. If you do not have this information, contact your System Administrator.

Data Versus Reports

Importing or exporting data is different than importing or exporting report templates. When you import or export data, you move information between a spreadsheet application and your PowerSchool database. When importing or exporting a report template, you are copying report parameters from one PowerSchool system to another PowerSchool system. For more information about importing and exporting report templates, see *Alternate Ways to Create Reports* and *Report Templates*.

SIS Views

SIS Views provide quick access to key metrics and not just raw data. These pre-defined SQL queries extract data that can be joined together and filtered to provide customized results. For detailed information, see the *Data Dictionary SIS Views* available on PowerSource.

Import

Quick Import

Use the Quick Import function to bring a large amount of data into PowerSchool. Before completing this procedure, you must have an ASCII text file that contains the data to import and is preferably delimited by tabs.

For information about importing test results, see *How to Import PowerSchool Test Scores*.

Database Extensions and Quick Import

Database extension fields appear while mapping fields from an import file to PowerSchool. When importing and mapping these fields, keep the following in mind:

- As import/export reads from and writes to a text file, binary data is not supported.
- PowerSchool assumes a user only imports data that was exported, therefore it is also assumed that date formats and any other formats do not need to be error-checked on import. The date format used is mm/dd/yyyy.
- Delimiters occurring in the data are not escaped (for example, fields are delimited by tabs, but one field contains tabs) and can cause problems when importing. Data can be wrapped with double quotes to lessen the issue, but there is still data (ex. double quote + tab + double quote) that can cause the same problems.
- Boolean values will be case insensitive, "true/false" or "t/f" or 1/0.

How to Import Data Using Quick Import

Note: Verify that you are signed in to the appropriate school. If the school is incorrect, click **School** at the top of the page to choose a new school before starting this procedure.

Note: The Quick Import page is now also accessible via **Start > System > Page and Data Management > Quick Import**.

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Importing & Exporting**. The Importing & Exporting page appears.
3. Click **Quick Import**. The Quick Import page appears.
4. Use the following table to enter information in the fields:

Field	Description

<table>
<tr>
<td>Table</td>
<td>
Choose the table to which the data will be imported from the pop-up menu:

If you choose the Students table, be sure to import at least 20 student records.
If you choose the Sections table, be sure the target term is selected. For more information, see How to Change Terms.

Note: When importing multiple section records, the expressions of the sections defined by your school are required. An expression is the combination of the periods and days in which the section meets. Though PowerSchool creates internal values for periods and days, you should import the actual values that you want to appear when the system displays expressions. An invalid expression causes an error for that record, which results in the record not being imported.
If you choose the Student Schedules (CC table), be sure to include data in the import file for the following required fields:

Student_Number
Course Number
Section Number
DateEnrolled
Dateleft
TermID
SchoolID

Note: TermID is the Import Term File # value provided on the School > Years & Terms > Edit Terms > Select Term > Edit Term page.

Note: If you include the Dropped column in your import file, any record with a value of True will be imported as a dropped enrollment.
If you attempt to choose the Courses table, but it does not appear in the pop-up menu, then the district may only

</td>
</tr>
</table>

	allow new courses to be created at the district office. For more information, see *How to Edit Course Settings*.
Field Delimiter	Choose the field delimiter from the pop-up menu. This refers to the item that will separate the fields in the exported data. • **Tab**: Separates fields with a tab • **Other**: Enter a field delimiter in the blank field, such as a comma
End-of-Line Marker	Choose the end-of-line marker from the pop-up menu. This refers to the item that will separate the records in the exported data. • **CR**: Carriage return • **CRLF**: Carriage return line feed • **LF**: Line feed • **Other**: Enter a delimiter in the blank field
Character Set	Use the pop-up menu to choose the character set for the import file. This selection is specific to the operating system where the import file was created: • **Windows ANSI** (Windows) • **Mac Roman** (Mac) • **ISO 8859-1** (Unix) • **UTF-8**
File to Import	Enter the file path and name of the file to import or click **Choose File** (or **Browse**), navigate to the data file, and click **Open**.
Suggest Field Map	Select the checkbox to have the system suggest into which PowerSchool field each piece of data in the data file is saved. These are just suggestions and can be changed before saving.
School	The name of the school for which you are importing data.

5. Click **Import**. The Import Records from an ASCII Text File page appears.

   Note: When importing test results, the Select Test page appears instead. For more information, see *How to Import PowerSchool Test Scores*.

6. Use the following table to enter information in the fields:

Field	Description
From Your File	The fields of the first record from the import file appear.
To PowerSchool	If you select the **Suggest field map** checkbox on the Quick Import page, the PowerSchool fields suggested for each piece of data imported appear. If you do not select the **Suggest field map** checkbox or you need to change the fields, use the pop-up menu to choose the PowerSchool field into which the system imports the data from the import file.
Check to exclude first row	Do one of the following: • Select the checkbox to prevent importing the header row. • Deselect the checkbox to import the first row. This should be used if your import file does not contain a header row.
The lines below can be used to assign a constant value to field(s) in all of the imported records.	To enter a new value in a PowerSchool field for all records from the import file, such as entering the same city for all student records in an import file: 1. Enter the value you want to import for all records. 2. Use the pop-up menu to choose the PowerSchool field into which the system imports the value.

7. Use the following table to enter information in the Advanced Import Options fields:

   Note: Advanced Import Options appear based on the table that was selected from the **Table** pop-up menu.

<table>
<tr><th>Table</th><th>Description</th></tr>
<tr><td>Attendance</td><td>Select the Overwrite existing attendance with the imported attendance checkbox if you want the system to use the imported attendance data in cases where attendance codes already exist for that day or class.</td></tr>
<tr><td>Comment Bank</td><td>Select the Update comment bank records checkbox if you want the system to use the imported comment bank comments in cases where there are already comment bank comments with the same code.</td></tr>
<tr><td>Courses</td><td>Select the Update course records checkbox if you want the system to add course-related information to existing course records in cases where the course numbers are the same.</td></tr>
<tr><td>Historical Grades</td><td>Do the following:
If you want the system to include more than one score for a student only when the term and storecode are the same, select the Allow multiple grades for a student to be stored checkbox.
If the courses in the import file have unrecognized names and you want to specify the course number range for the imported courses, select the If a course name is imported that is not recognized checkbox and enter the range for the new course numbers in the range fields. If you do not select the checkbox, the system will assign a random course number in the 9000 range.
To store grades that include neither a letter grade nor any earned credit, select the Allow grades to be stored which contain both checkbox.</td></tr>
<tr><td>Immunizations</td><td>Do the following:
If you do not want the system to import immunization data that already exists for a student, select the Where values</td></tr>
</table>

	exist in the import file and in PowerSchool, DO NOT IMPORT the values option. • If you do want the system to import immunization data that already exists for a student, select the **Where values exist in the import file and in PowerSchool, OVERWRITE the values in PowerSchool with the values in the import file** option.
Meal Transactions	Select the **Use PowerSchool's internal student id numbers** checkbox if you want the system to reference the ID field versus the student_number field.
Sections	Do the following: • Select the **Update section records** checkbox if you want the system to add section-related information to existing section records in cases where the course and section numbers are the same. • If your school uses AutoComm to synchronize your data in PowerSchool with data in another system, select the **Synchronize Mode** checkbox to perform an AutoComm import. Check with your PowerSchool administrator before using this option.
Students	Select one of the following options to determine what you want the system to do when a student record in the import file contains a student ID number that already exists in PowerSchool: • If you do not want the system to import any record with a student number that already exists, select **Do not process that line from the file being imported**. • If you want the system to update the matching student's record with the data in the import file, select **Update the student's record with the information from the file being imported**. • If you want the system to create a new record if a student ID number is in the import file, select **Generate a new, unique student number for the student (from the range specified below)**. Then, select the checkbox below

	this option and enter the number range within which you want the system to generate and assign the new student ID numbers. • If your school uses AutoComm to synchronize your data in PowerSchool with data in another system, select the **Synchronize Mode** checkbox to perform an AutoComm import. Check with your PowerSchool administrator before using this option. It is a system requirement that you must import at least 20 student records.
Student Schedules	Do the following: • Select **Normal Mode** to import records for the active terms of the current school. **Note**: If no SchoolID is included in the import file, the system defaults to this mode. • Select **Synchronize Mode** if your school uses AutoComm to synchronize your data in PowerSchool with data in another system. When selected, all other Advanced Import Options are unavailable and the system defaults to Normal Mode. Synchronize Mode drops existing section enrollments and imports new enrollments from your import file. For example, if a student is currently enrolled in English during second period and the import file contains a record for that student for Science second period, the system will drop the student's section enrollment for English and import the Science section enrollment. **Note**: This change cannot be undone. If course and section numbers are shared across multiple schools, it is recommended that you include the SchoolID in the import file. If course and section numbers are shared across multiple schools and the SchoolID is not included in the import file, the system will not import the records, and the

	following alert appears, "Not Imported: The import school: ( ) does not match the current school. Skipping Record." **Warning:** Check with your PowerSchool administrator before using this option. • Select **Historical Mode** to import records for any term for the current school. **Note:** This option is not available unless the import files include SchoolID data. • Select **District Mode** to import records for active terms at any school. **Note:** This option is only available when signed in to the district office. • Select **Historical and District Modes** to import records for any terms at any school. **Note:** This option is only available when signed in to the district office.
Teachers	Select the **Update teacher records** checkbox if you want the system to add teacher-related information to existing teacher records in cases where the teacher numbers are the same.
Test Scores	For information about importing test results, see *How to Import PowerSchool Test Scores*.

8. Click **Import**. The Importing [File to Import] page displays the processed records. If a record could not be imported due to an error, the row number of the record along with the reason it could not be imported appears. If a record was successfully imported, the row number of the record along with the action taken appears.

Quick Import for State-Specific Extended Tables

Use the Quick Import for State-Specific Extended Tables function to bring a large amount of data into PowerSchool state-specific extended tables. Before completing this procedure, you must have an ASCII text file that contains the data to import and is preferably delimited by tabs.

How to Import Data Using Quick Import for State-Specific Extended Tables

Note: Verify that you are signed in to the appropriate school. If the school is incorrect, click **School** at the top of the page to choose a new school before starting this procedure.

Note: The Quick Import for State-Specific Extended Tables page is now also accessible via **Start > System > Page and Data Management > Quick Import for State-Specific Extended Tables**.

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Importing & Exporting**. The Importing & Exporting page appears.
3. Click **Quick Import for State-Specific Extended Tables**. The Quick Import for State-Specific Extended Tables page appears.
4. Use the following table to enter information in the fields:

Field	Description
Table	Choose the extended table to which the data will be imported from the pop-up menu.
Field Delimiter	Choose the field delimiter from the pop-up menu. This refers to the item that will separate the fields in the exported data. • **Tab**: Separates fields with a tab • **Other**: Enter a field delimiter in the blank field, such as a comma
End-of-Line Marker	Choose the end-of-line marker from the pop-up menu. This refers to the item that will separate the records in the exported data. • **CR**: Carriage return • **CRLF**: Carriage return line feed • **LF**: Line feed • **Other**: Enter a delimiter in the blank field

Character Set	Use the pop-up menu to choose the character set for the import file. This selection is specific to the operating system where the import file was created: • **Windows ANSI** (Windows) • **Mac Roman** (Mac) • **ISO 8859-1** (Unix)
File to Import	Enter the file path and name of the file to import or click **Choose File** (or **Browse**), navigate to the data file, and click **Open**.
Suggest Field Map	Select the checkbox to have the system suggest into which PowerSchool field each piece of data in the data file is saved. These are just suggestions and can be changed before saving.
School	The name of the school for which you are importing data.

5. Click **Import**. The Import Records into an Extended Table from an ASCII Text File page appears.
6. Use the following table to enter information in the fields:

Field	**Description**
From Your File	The fields of the first record from the import file appear.
To	If you select the **Suggest field map** checkbox on the Quick Import page, the PowerSchool fields suggested for each piece of data imported appear. If you do not select the **Suggest field map** checkbox or you need to change the fields, use the pop-up menu to choose the PowerSchool field into which the system imports the data from the import file.
Check to exclude first row	Do one of the following: • Select the checkbox to prevent importing the header row.

	• Deselect the checkbox to import the first row. This should be used if your import file does not contain a header row.
Update Existing Rows	Do one of the following: • Select the checkbox if you want the system to update existing rows with data from each import. • Deselect the checkbox if you do not want the system to update any row that contains data.
The lines below can be used to assign a constant value to field(s) in all of the imported records.	To enter a new value in a PowerSchool field for all records from the import file, such as entering the same city for all student records in an import file: 1. Enter the value you want to import for all records. 2. Use the pop-up menu to choose the PowerSchool field into which the system imports the value.

7. Enter information in the Advanced Import Options fields.

   Note: Advanced Import Options appear based on the table that was selected from the **Table** pop-up menu.

8. Click **Submit**. The Importing [File to Import] page displays the processed records. If a record could not be imported due to an error, the row number of the record along with the reason it could not be imported appears. If a record was successfully imported, the row number of the record along with the action taken appears.

Templates for Importing

If you often import the same fields of data, you can create a template so that you don't have to define the import parameters and field import map every time you perform an import.

For example, if you often import an update from the school nurse with immunization information, create a template that includes the fields and format for immunization-related fields.

Database Extensions and Import Templates

You can specify any database extension fields on the template.

- Delimiters occurring in the data are not escaped (for example, fields are delimited by tabs, but one field contains tabs) and can cause problems when importing. Data can be wrapped with double quotes to lessen the issue, but there is still data (ex. double quote + tab + double quote) that can cause the same problems.
- Boolean values will be case insensitive, "true/false" or "t/f" or 1/0.

How to Add an Import Template

Create an import template to use each time you import the same data into your PowerSchool system.

Note: The Templates for Importing page is now also accessible via **Start > System > Page and Data Management > Templates for Importing**.

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Importing & Exporting**. The Importing & Exporting page appears.
3. Click **Templates for Importing**. The Templates for Importing page appears.
4. Click **New**. The New Import Template page appears.
5. Use the following table to enter information in the fields:

Field	Description
Name of this template	Enter a name for the template.
Import into this table	Choose the **Students**, **Courses**, or **Teachers** table from the pop-up menu. **Note:** If **Courses** does not appear in the pop-up menu, then the district may only allow new courses to be created at the district office. For more information, see *How to Edit Course Settings*.
Delimited or fixed-length?	Choose **Delimited** or **Fixed-field length** for the data format from the pop-up menu.
Field delimiter	If you chose **Delimited**, choose which delimiter to use to separate the fields in the exported data from the pop-up menu:

<table>
<tr><td></td><td>Tab
Comma
Other: Enter the type of field delimiter in the adjacent field.</td></tr>
<tr><td>End-of-line (record) delimiter</td><td>Choose one of the following to determine how the records are separated in the files you import using this template from the pop-up menu:
CR: Carriage return
CRLF: Carriage return/line feed
LF: Line feed
Other: Enter the type of end-of-line delimiter in the adjacent field, such as a semicolon.</td></tr>
<tr><td>Update Mode</td><td>Select the checkbox if you want the data in the file you import to update any fields with existing data. Otherwise, deselect the checkbox.</td></tr>
<tr><td>Columns</td><td> Create a map to determine into which PowerSchool fields each field of information in the import file is saved. Enter the fields in the order they appear in the import file. If you chose Fixed-field length, indicate the width of each column (in characters) and the field name. To separate the number and field name, enter <tab>. For example, if the first column in your fixed width file contains the student's phone number, enter 12<tab>home_phone. If you chose Delimited, enter each field name and press RETURN (Mac) or ENTER (Windows). If you are adding columns for database extensions, enter the extension field name using the format [extension name].[fieldname]. </td></tr>
</table>

6. Click **Submit**. The Templates for Importing page displays the new template.

How to Edit an Import Template

Edit an import template to use each time you import the same data into your PowerSchool system.

Note: The Templates for Importing page is now also accessible via **Start > System > Page and Data Management > Templates for Importing**.

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Importing & Exporting**. The Importing & Exporting page appears.
3. Click **Templates for Importing**. The Templates for Importing page appears.
4. Click the name of the template you want to edit. The Edit Import Template page appears.
5. Edit the information as needed. For field descriptions, see *How to Add an Import Template*.
6. Click **Submit**. The Templates for Importing page displays the edited template.

How to Delete an Import Template

Delete import templates when they are no longer needed to conserve space on your system and minimize the possibility of confusion with the templates that are still used.

Note: The Templates for Importing page is now also accessible via **Start > System > Page and Data Management > Templates for Importing**.

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Importing & Exporting**. The Importing & Exporting page appears.
3. Click **Templates for Importing**. The Templates for Importing page appears.
4. Click the name of the template you want to delete. The Edit Import Template page appears.
5. Click **Delete**.
6. Click **Confirm Delete**. The Selection Deleted page appears.

How to Import Using a Template

When importing data using a template, you match the data with the fields defined in the template. To complete this procedure, you need a data file saved to a local or network location and an import template. For more information about creating an import template, see *How to Add an Import Template*.

Note: The Import Using Template page is now also accessible via **Start > System > Page and Data Management > Import Using Template**.

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Importing & Exporting**. The Importing & Exporting page appears.
3. Click **Import Using Template**. The Import Using Template page appears.
4. Use the following table to enter information in the fields:

Field	**Description**
Import template	Choose the template to use from the pop-up menu. **Note:** Click template to link to the Templates for Importing page, where you can view, create, edit, and remove templates used for importing.
File to import	Either enter the data file path and name in the field or click **Browse...** to select the data file.

5. Click **Submit**. The Import Check: [data file name] page appears.
6. Verify that the data correlates to the fields from the template. If it doesn't, click the link to modify the template. For more information, see *How to Edit an Import Template*. Otherwise, click **Import**. The Importing: [data file name] page appears, and the data is imported.

How to Export a Template

Export a template used for importing data to save a backup copy of the template. Though you can view and modify the exported template using an application such as a Web browser, the exported template can also be sent to a system outside of your PowerSchool system.

Note: The Templates for Importing page is now also accessible via **Start > System > Page and Data Management > Templates for Importing**.

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Importing & Exporting**. The Importing & Exporting page appears.
3. Click **Templates for Importing**. The Templates for Importing page appears.
4. Click the name of the template to be exported in the Template Name column. The Edit Import Template page appears.
5. Click **Export this template**. The File Download dialog appears.
6. Select **Save File As...** or **Save this file to disk**. The Save or Save As dialog appears.

7. Select a file location.
8. Click **Save**. The template saves to the selected location.

AutoComm Setup

Use AutoComm to synchronize the data in PowerSchool with that in another system, such as a mainframe system. To synchronize your data, set up intervals at which PowerSchool automatically imports files of data from the other system.

To use AutoComm, create an AutoComm record where you determine the synchronization parameters for each of the following files:

- Courses
- Teachers
- Sections
- Students
- Student schedules

Note: When importing multiple section records, the sections' expressions as defined by your school are required. An expression is the combination of the periods and days in which the section meets. Though PowerSchool creates internal values for periods and days, you should import the actual values that you want to appear when the system displays expressions. An invalid expression causes an error for that record, which results in the record not being imported.

How to Add an AutoComm Record

PowerSchool uses the parameters that you define for the record on this page to import the appropriate data at the dates and times you specify.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **AutoComm Setup**. The AutoComm Setup page appears.
3. Click **New**. The AutoComm Record page appears.
4. Use the following table to enter information in the fields:

Field	Description
Name	Enter the name of this record.

Table to Import	Use the pop-up menu to choose the table into which you are importing data with this record: • **Attendance** • **Students** • **Courses** • **Sections** • **Student schedules** • **Teachers** **Note:** The Attendance Recording Methods choices made on the Attendance Preferences page affect the Attendance table options.
When to Execute	Use the pop-up menus to determine the hour and minutes at which you want PowerSchool to automatically import data. **Note:** If the minutes are 00, AutoComm will run after the Hourly Process has completed—not specifically on the hour stated, but within that hour.
Days to Execute	Enter the days of the week you want the system to import records. Starting with Monday, use the following abbreviations for the days of the week: **MTWHFSU**.
Turn Execution Off	Do one of the following: • Select the checkbox to stop the system from automatically importing data. • Deselect the checkbox to turn AutoComm on.
Get Input From	Indicate the method by which you want to import the records from the other system from the pop-up menu. To use a local (or network shared file system) to import the records from the other system: 1. Choose **Local (or network shared) File System**. To use the file transfer protocol (FTP) to import the records from the other system:

	1. Choose **Ad Hoc FTP Server**. 2. Enter information in the following fields: • **Use Passive Mode** - If your FTP has difficulty transferring, select the checkbox. • **FTP host name** • **FTP account name** • **FTP password** • **Timeout in seconds** - Indicates the number of second that PowerSchool will try to make the initial FTP connection with the remote system. To use a managed connection, such as SFTP, to import the records from the other system: 1. Choose **Managed Connection.** A second pop-up menu appears. 2. Choose a managed connection from the pop-up menu. **Note:** Managed Connections only appears in the pop-up if configured and download capability is enabled. See **System > System Settings > Plugin Management > Remote Connection Manager**.
Path	Enter the path to the folder of the file on your computer or network. If using PowerSchool on a single node, the path needs to be defined as being from the root; if using a server array, only the file name should be used and never the path, since there is only one location for AutoComm files to be located on a server array.
Field Delimiter	Use the pop-up menu to choose one of the following to determine how values are separated in the import file: • **Tab** • **Comma**

<table>
<tr><td>Record Delimiter</td><td>Use the pop-up menu to choose how records are separated in the import file. This selection is specific to the operating system where the import file was created:
CRLF: Carriage return, line feed (Windows)
CR: Carriage return (Mac)
LF: Line feed (Unix)</td></tr>
<tr><td>Character Set</td><td>Use the pop-up menu to choose the character set for the import file. This selection is specific to the operating system where the import file was created:
Windows ANSI (Windows)
Mac Roman (Mac)
ISO 8859-1 (Unix)
UTF-8</td></tr>
<tr><td>Sort Order</td><td>Enter the order that this record appears on the AutoComm Setup page.

If you do not make a selection, the order will be alphabetical by the name of the AutoComm record.</td></tr>
<tr><td>Update existing records with imported data (when applicable)</td><td>Do one of the following:
Select the checkbox if you want the system to update existing student records with data from each import. The system updates blank fields within records and creates new records for those that do not exist.
Deselect the checkbox if you do not want the system to update any record that contains data.</td></tr>
<tr><td>Mark students and their schedules inactive when their exit date is <= today.</td><td>If you want the system to automatically import a student record as inactive if the student's exit date is earlier than today, select the checkbox. Otherwise, deselect the checkbox.</td></tr>
</table>

<table>
<tr><td>First record of file is number_of_records=</td><td>The system does not import the file if the number of records in it does not match the number given in the first record of the file. It is recommended that you select the checkbox.</td></tr>
<tr><td>E-Mail completion report to</td><td>Enter the email addresses of the people you want the system to send a completion report to each time it imports this file. Separate multiple addresses with commas.</td></tr>
<tr><td>PowerSchool fields to import into</td><td>Enter the PowerSchool fields in which the system saves each value in the import file. After you enter each field code, press RETURN (Mac) or ENTER (Windows).

To insert a PowerSchool field into this field:

1. Click Student Field List to view a list of PowerSchool student fields. The Student Field List pop-up appears.
2. To narrow the list of fields, enter one of more search terms in the Filter field. Otherwise, leave blank.
3. Click the field you want to add. The Student Field List pop-up closes, and the selected field appears.

Importing to the Attendance table requires some specific field names: Daily Attendance

• Student_Number
• Att_Date
• Schoolid
• Attendance_CodeID

Meeting Attendance

• Student_Number
• Att_Date
• Course_Number
• Section_Number
• Schoolid
• Attendance_CodeID

Note: When creating the import file, remove the column headings; only record data should be in the file. Create the file in Excel and save it as a tab- delimited file. The data in the file should</td></tr>
</table>

	be in the same order as the field names listed in the AutoComm Record. **Note:** If you are adding database extension fields, enter the extension field name using the format [extension name].[fieldname].
Duplicate this AutoComm record to all schools on this server	If you are creating this record for the first time, select the checkbox to make the record available to all schools that use your PowerSchool system. Otherwise, deselect the checkbox. **Note:** If working in the District mode, you can modify only the Students and Teachers tables.

5. Click **Submit**. The AutoComm Setup page displays the new record.

How to Edit an AutoComm Record

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **AutoComm Setup**. The AutoComm Setup page appears.
3. Click the name of the AutoComm record you want to edit. The AutoComm Record page appears.
4. Edit this information as needed. For field descriptions, see *How to Add an AutoComm Record*.
5. Click **Submit**. The AutoComm Setup page displays the edited record.

How to Delete an AutoComm Record

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **AutoComm Setup**. The AutoComm Setup page appears.
3. Click the name of the AutoComm record you want to delete. The AutoComm Record page appears.
4. Click **Delete**.
5. Click **Confirm Delete**. The Selection Deleted page appears.

How to Manually Run an AutoComm Record

Manually run an AutoComm record to avoid waiting for the process to automatically run on the specified day and time.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **AutoComm Setup**. The AutoComm Setup page appears.
3. Click **Run Now**. The AutoComm record runs, and the AutoComm Setup page appears. If an email address is specified in the "E-Mail completion report to" field, the system emails the recipient the status of the AutoComm process.

Data Import Manager

Using the Data Import Manager, you can quickly and easily import data from a text file into PowerSchool.

Note: Currently data may only be imported into a limited number of pre-defined and Custom Table data sets. Additional data sets will be made available in future releases.

Set Page-Level Permissions

To ensure that only authorized staff members access the data import pages, set page-level permissions for **Start Page > Special Functions** under Functions in the main menu **> Importing & Exporting > Data Import Manager** under Importing. For more information about setting page-level permissions, see *Security Permissions*.

Preparing Your Import File

General Information

Before importing data, you will need to create an import file. When creating your import file, it is important to note the following:

- Do not use a double quote (") as the field delimiter.
- The double quote is a reserved character and may only be used to ignore other delimiters.
- Field delimiters are regarded as literals if the field value is surrounded by double quotes.
- Strings are regarded as literals if surrounded by double quotes.
- Double quotes that are surrounded by double quotes are regarded as part of the value.

Example 1

Field delimiter as a literal in the field value:

First Name, Last Name, Address
John, Smith, "123 Anyplace Dr, Ste 100"

Results:

FirstName	LastName	Address
John	Smith	123 Anyplace Dr, Ste 100

Example 2

Field delimiter as a literal in the field value surrounded by double quotes:

First Name, Last Name, Address
John, Smith, """123 Anyplace Dr, Ste 100"""

Results:

FirstName	LastName	Address
John	Smith	"123 Anyplace Dr, Ste 100"

Example 3

Double quotes used to escape a field delimiter:

First Name, Last Name, Address
John, Smith, 123 Anyplace Dr"," Ste 100

Produces the following results:

FirstName	LastName	Address
John	Smith	123 Anyplace Dr, Ste 100

Example 4

Quote within a field value:

First Name, Last Name, Address
John, Smith, 123 Anyplace """Dr,""" Ste 100

Produces the following results:

FirstName	LastName	Address
John	Smith	123 Anyplace "Dr," Ste 100

Example 5

Without the double quotes, the field delimiter is not escaped:

First Name, Last Name, Address
John, Smith, 123 Anyplace Dr, Ste 100

Produces the following results:

FirstName	LastName	Address	
John	Smith	123 Anyplace Dr	Ste 100

Importing Contacts

The Contacts module provides the ability to import a contact along with associated addresses, phone numbers, email addresses, and students. In order to associate more than one of any child record, multiple related rows are included in the import file. An identifier value is required for each row. Specifying the same identifier value on multiple rows indicates that the rows are related. Some fields have rules regarding what is a valid value (dates, booleans, code sets). An invalid value may cause a single row or multi-row import to fail. Multi-row imports have additional checks for duplicates and conflicting values. Below are rules for duplicates and conflicts for each entity. Duplicates are ignored during the import, while conflicts are rejected with appropriate error messages. When processing multiple related rows, the import process rejects all related rows if any of the rows have an error. The Import Results page displays applicable error messages for each failed row.

General

Entity	Rule
Boolean Flags	When specified, the values of 0, false, f, no, and n indicate false. 1, true, t, yes and y indicate true. Anything else is an error. Not case sensitive.
Code Set Values	When a code set value is specified, it must be a case-insensitive match to an actual code in the database for the applicable code type.
Dates	When specified, the date must be in either mm/dd/yyyy or mm/dd/yy format. Any date values not in that format result in an error.
Blanks	All Boolean flags and code set values have default values that are applied if no value is specified. In the case of Boolean flags, this can lead to conflicts if one related row specifies a non-default value and the other related row does not specify the corresponding column.

Contact (Person Table)

Entity	Rule
Last Name	Required on at least one related row. An error occurs if multiple rows have values that conflict with each other.

Prefix Suffix Gender	Code set values. Defaults to not set, if not specified. If the value is set to a specific value, it can be included on any related row. Specifying on multiple related rows is okay, as they are a case-insensitive match.
IsActive	Boolean flag. Defaults “true” if not specified. Conflict will arise if “false” is specified on one row and either, “true” or blank is specified on another related row.
First Name Middle Name Employer State Contact Number	Same rules as Last Name, except they are not required.

Email Address (EmailAddress and PersonEmailAddressAssoc Tables)

Entity	Rule
Email Address	Required if an email address is to be imported. Must be a valid email address format (somebody@example.com). Same email address (case-insensitive) cannot be included on two related rows unless the type and IsPrimary values are also specified with the same value which indicates a duplicate.
Email Type	Code set value. Defaults to not set, if not specified.
IsPrimary	Boolean flag. Defaults to false, if not specified. A contact can only have one primary email address so related rows with more than one true IsPrimary value will be rejected except in the case of a duplicate.

Phone Number (PhoneNumber and PersonPhoneNumberAssoc Tables)

Entity	Rule
Phone Number (as entered)	Required if a phone number is to be imported. Format is open, but it should not include extension mark up, such as 212-555-1234 x123. Extensions should be entered into the “Extension”

	field. They will be dropped if included in the Phone Number (as entered) field. The same phone number can be entered multiple times with differing types and priority order values. Note that while the format is open, it will still honor any defined Limited Data Validation (LDV) rules.
Extension	Optional extension value. Same phone number with different extension makes it unique.
Phone Type Code	Code set value. Defaults to not set, if not specified.
Phone Number Priority Order	Must be a positive integer if specified. Cannot use the same value more than once for related rows unless it is a duplicate. If not specified, a default value will be set. The default value is based on the order of appearance in the file and any phone number priority order values specified on related rows. For example, if four related rows include distinct phone numbers and two of them specify priority orders of 1 and 3, the first one that didn't specify would be assigned two and the other would be assigned 4.
IsSMS	Boolean flag. Defaults to false, if not specified. If it is specified and the phone number already exists (on another contact), the existing phone number’s IsSMS flag will be updated to the specified value.
IsPreferred	Boolean flag. Defaults to false, if not specified. Conflict will arise if true is specified on one row and either false or blank is specified on another related row.

Address (Address and PersonAddressAssoc Tables)

Entity	**Rule**
Street	Required if an address is to be imported. Every field except for address type must match in order to be considered a duplicate. Any other deviation of values on related rows is considered a new address. If it is a duplicate and priority order does not match, the row is rejected.

Line Two Unit City Postal Code	Optional text values.
Geocode Latitude Geocode Longitude	Optional decimal values. Must be greater than zero if specified. No validation against physical address is performed.
State	Code set value. Defaults to not set, if not specified,
Address Type	Code set value. Defaults to not set, if not specified.
Address Start Date Address End Date	Optional date values. Must be in valid date format if specified. Start date cannot be after end date if both are specified.

Contact Student (StudentContactAssoc and StudentContactDetail Tables)

Entity	Rule
Student Number	Must be specified if a contact student relationship is to be imported. If same student number appears on multiple lines, non-overlapping start and end dates must be specified. Student number must match an existing Students record in the database and student must be at current school unless the import is being performed at the district office. It is considered a duplicate if all other values are the same.
Original Contact Type	Indicates that the contact is one of the six legacy contact types. Valid values are mother, father, guardian, emergency1, emergency2 and emergency3. Note that a student may only have one contact of each original contact type. Therefore, an imported row will fail if a student already has a contact of the specified original contact type or if the same original contact type is assigned to a student for multiple contacts that are being imported.
Relationship Type	Code set value. Defaults to not set, if not specified.
Relationship Note	Optional text value.

Relationship Start Date Relationship End Date	Optional date values. Must be in valid date format if specified. Start date cannot be after end date if both are specified. If multiple related rows contain the same student number, none of the related date ranges can have any overlapping dates. Null start date means beginning of time and null end date means the end of time for the purposes of comparing date ranges.
Contact Has Custody Contact Lives With Contact Allow School Pickup Is Emergency Contact Contact Receives Mailings	Boolean flags. All default to false, if not specified. A conflict will arise if a related row specifies true and another specifies false or is blank.

Importing Incidents

PowerSchool's Incident Management schema spans several complex tables that would otherwise require multiple separate imports to create a single incident. The incident data set in the Data Import Manager allows administrators to import incident records using a flat file import. The flat-file information is translated behind the scenes to fit the actual tables used for incident records.

A single incident can include multiple attributes, participants, actions, objects, or behaviors. As such, the incident import data set allows these column groups to be repeated in your import file to represent multiple groupings of the above items.

Incident Element Hierarchy

Within the incident element hierarchy, elements are categorized as a parent, sibling, or child element. Parent and sibling elements can be listed in any order. Child elements must be listed after a parent element in order for the fields to be valid.

- Incident
    - Incident_Attribute
    - Action
        - Action_Attribute
    - Object
    - Behavior
    - Participant

- Participant_Attribute
- Participant_Role
    - Participant_Object
    - Participant_Action
        - Participant_Action_Attribute
    - Participant_Behavior
        - Participant_Behavior_Action
            - Participant_Behavior_Action_Attribute

Data Element	Description
Incident	When creating your incident import file, you may include the following data (based on your PowerSchool incident management setup) for each incident you are importing: • Incident_ID • Incident_School_Number • Incident_Title • Incident_Description • Incident_Prepared_By • Incident_Incident_Type • Incident_Incident_Date • Incident_Incident_Time • Incident_Time_Frame_Code • Incident_Time_Frame_Subcode • Incident_Time_Frame_Comment • Incident_Financial_Impact • Incident_Location_Code • Incident_Location_Subcode • Incident_Location_Description **Note:** If Incident_School_Number is mapped, then the incident is associated with the mapped school or district office. If Incident_School_Number is not mapped, then the incident is associated with the current school. **Note:** For field descriptions, see *Incident Management*. When importing, these fields may only

	be mapped once. For more information, see Step 6 of *How to Import Data Using the Data Import Manager*.
Incident_Attribute	Within the incident import file, these fields must be listed after an Incident in order for the fields to be valid. For each incident attribute in the incident data set, you may include the following data (based on your PowerSchool incident management setup): • Incident_Attribute_Code • Incident_Attribute_Subcode (required if code is divided into sub codes) • Incident_Attribute_Comment (may be forbidden, allowed or required based on configuration) **Note:** For field descriptions, see *Incident Management*. When importing, these fields may be mapped one or more times. For more information, see Step 6 of *How to Import Data Using the Data Import Manager*.
Action	Within the incident import file, these fields must be listed after an Incident in order for the fields to be valid. For each action in the incident data set, you may include the following data (based on your PowerSchool incident management setup): • Action_Code • Action_Subcode (required if code is divided into sub codes) • Action_Comment (may be forbidden, allowed or required based on configuration) • Action_Begin_Date • Action_End_Date • Action Taken Detail • Actual_Resolution_Date • Action_Duration_Code • Action_Duration_Subcode (required if code is divided into sub codes)

	• Action_Duration_Comment (may be forbidden, allowed or required based on configuration) • Action_Assigned_Duration • Action_Actual_Duration • Action_Duration_Notes • Action_Change_Reason • Action_Change_Code • Action_Change_Subcode (required if Action Change Code is broken into sub codes) • Action_Change_Comment (may be forbidden, allowed or required based on action change code configuration) **Note:** For field descriptions, see *Incident Management*. When importing, these fields may be mapped one or more times. For more information, see Step 6 of *How to Import Data Using the Data Import Manager*.
Action_Attribute	Within the incident import file, these fields must be listed after an Action in order for the fields to be valid. For each action attribute in the incident data set, you may include the following data (based on your PowerSchool incident management setup): • Action_Attribute_Code • Action_Attribute_Subcode (required if code is divided into sub codes) • Action_Attribute_Comment (may be forbidden, allowed or required based on configuration) • Action_Attribute_Value (content of value field depends on configuration) **Note:** For field descriptions, see *Incident Management*. When importing, these fields may be mapped one or more times. For more information, see Step 6 of *How to Import Data Using the Data Import Manager*.

Object	Within the incident import file, these fields must be listed after an Incident in order for the fields to be valid. For each object in the incident data set, you may include the following data (based on your PowerSchool incident management setup): • Object_Code • Object_Subcode (required if code is divided into sub codes) • Object_Comment (may be forbidden, allowed or required based on configuration) • Object_Description • Object_Quantity **Note:** For field descriptions, see *Incident Management*. When importing, these fields may be mapped one or more times. For more information, see Step 6 of *How to Import Data Using the Data Import Manager*.
Behavior	Within the incident import file, these fields must be listed after an Incident in order for the fields to be valid. For each behavior in the incident data set, you may include the following data (based on your PowerSchool incident management setup): • Behavior_Code • Behavior_Subcode (required if code is divided into sub codes) • Behavior_Subcode_2 (required if sub codes is divided into sub codes) • Behavior_Subcode_3 (required if sub codes is divided into sub codes) • Behavior_Subcode_4 (required if sub codes is divided into sub codes) • Behavior_Comment (may be forbidden, allowed or required based on configuration) • Behavior_Primary (use value Primary or leave blank)

	Note: For field descriptions, see *Incident Management*. When importing, these fields may be mapped one or more times. For more information, see Step 6 of *How to Import Data Using the Data Import Manager*.
Participant	Within the incident import file, these fields must be listed after an Incident in order for the fields to be valid. For each participant in the incident data set, you may include the following data (based on your PowerSchool incident management setup): • Participant_Student_Number (cannot be populated if Teacher_Number is also populated) • Participant_Teacher_Number (cannot be populated if Student_Number is also populated) • Participant_Unknown (cannot be populated if Student_Number or Teacher_Number is also populated) • Participant_First (cannot be populated if Student_Number or Teacher_Number is also populated) • Participant_Middle (cannot be populated if Student_Number or Teacher_Number is also populated) • Participant_Last (cannot be populated if Student_Number or Teacher_Number is also populated) • Participant_Position (cannot be populated if Student_Number or Teacher_Number is also populated) • Participant_Age (cannot be populated if Student_Number or Teacher_Number is also populated) • Participant_Gender (cannot be populated if Student_Number or Teacher_Number is also populated)

	Note: For field descriptions, see *Incident Management*. When importing, these fields may be mapped one or more times. For more information, see Step 6 of *How to Import Data Using the Data Import Manager*.
Participant_Attribute	Within the incident import file, these fields must be listed after a Participant in order for the fields to be valid. For each participant attribute in the incident data set, you may include the following data (based on your PowerSchool incident management setup): • Participant_Attribute_Code • Participant_Attribute_Subcode (required if code is divided into sub codes) • Participant_Attribute_Comment (may be forbidden, allowed or required based on configuration) **Note:** For field descriptions, see *Incident Management*. When importing, these fields may be mapped one or more times. For more information, see Step 6 of *How to Import Data Using the Data Import Manager*.
Participant_Role	Within the incident import file, these fields must be listed after a Participant in order for the fields to be valid. For each participant role in the incident data set, you may include the following data (based on your PowerSchool incident management setup): • Participant_Role_Code (required if preceded by Participant) • Participant_Role_Subcode (required if code is divided into sub codes) • Participant_Role_Comment (may be forbidden, allowed or required based on configuration)

	Note: For field descriptions, see *Incident Management*. When importing, these fields may be mapped one or more times. For more information, see Step 6 of *How to Import Data Using the Data Import Manager*.
Particpant_Object	Within the incident import file, these fields must be listed after a Participant_Role in order for the fields to be valid. For each participant object in the incident data set, you may include the following data (based on your PowerSchool incident management setup): • Participant_Object_Code • Participant_Object_Subcode (required if code is divided into sub codes) • Participant_Object_Comment (may be forbidden, allowed or required based on configuration) • Participant_Object_Description • Participant_Object_Quantity **Note:** For field descriptions, see *Incident Management*. When importing, these fields may be mapped one or more times. For more information, see Step 6 of *How to Import Data Using the Data Import Manager*.
Participant_Action	Within the incident import file, these fields must be listed after a Participant_Role in order for the fields to be valid. For each participant action in the incident data set, you may include the following data (based on your PowerSchool incident management setup): • Participant_Action_Code • Participant_Action_Subcode (required if code is divided into sub codes) • Participant_Action_Comment (may be forbidden, allowed or required based on configuration) • Participant_Action_Begin_Date

	• Participant_Action_End_Date • Participant_Action_Taken_Detail • Participant_Actual_Resolution_Date • Participant_Action_Duration_Code • Participant_Action_Duration_Subcode (required if code is divided into sub codes) • Participant_Action_Duration_Comment (may be forbidden, allowed or required based on configuration) • Participant_Assigned_Duration • Participant_Actual_Duration • Participant_Duration_Notes • Participant_Action_Change_Reason • Participant_Action_Change_Code • Participant_Action_Change_Subcode (required if code is divided into sub codes) • Participant_Action_Change_Comment (may be forbidden, allowed or required based on configuration) **Note:** For field descriptions, see *Incident Management*. When importing, these fields may be mapped one or more times. For more information, see Step 6 of *How to Import Data Using the Data Import Manager*.
Participant_Action_Attribute	Within the incident import file, these fields must be listed after a Participant_Action in order for the fields to be valid. For each participant action attribute in the incident data set, you may include the following data (based on your PowerSchool incident management setup): • Participant_Action_Attribute_Code • Participant_Action_Attribute_Subcode (required if code is divided into sub codes) • Participant_Action_Attribute_Comment (may be forbidden, allowed or required based on configuration)

	• Participant_Action_Attribute_Value (content of value field depends on configuration) **Note:** For field descriptions, see *Incident Management*. When importing, these fields may be mapped one or more times. For more information, see Step 6 of *How to Import Data Using the Data Import Manager*.
Participant_Behavior	Within the incident import file, these fields must be listed after a Participant_Role in order for the fields to be valid. For each participant behavior in the incident data set, you may include the following data (based on your PowerSchool incident management setup): • Participant_Behavior_Code • Participant_Behavior_Subcode (required if code is divided into sub codes) • Participant_Behavior_Subcode_2 (required if sub codes is divided into sub codes) • Participant_Behavior_Subcode_3 (required if sub codes is divided into sub codes) • Participant_Behavior_Subcode_4 (required if sub codes is divided into sub codes) • Participant_Behavior_Comment (may be forbidden, allowed or required based on configuration) • Participant_Behavior_Primary (use value Primary or leave blank) **Note:** For field descriptions, see *Incident Management*. When importing, these fields may be mapped one or more times. For more information, see Step 6 of *How to Import Data Using the Data Import Manager*.
Participant_Behavior_Action	Within the incident import file, these fields must be listed after a Participant_Behavior in order for the fields to be valid. For each participant behavior

	action in the incident data set, you may include the following data (based on your PowerSchool incident management setup): • Participant_Behavior_Action_Code • Participant_Behavior_Action_Subcode (required if code is divided into sub codes) • Participant_Behavior_Action_Comment (may be forbidden, allowed or required based on configuration) • Participant_Behavior_Action_Begin_Date • Participant_Behavior_Action_End_Date • Participant_Behavior_Action_Taken_Detail • Participant_Behavior_Action_Actual_Resolution_Date • Participant_Behavior_Action_Duration_Code • Participant_Behavior_Action_Duration_Subcode (required if code is divided into sub codes) • Participant_Behavior_Action_Duration_Comment (may be forbidden, allowed or required based on configuration) • Participant_Behavior_Action_Assigned_Duration • Participant_Behavior_Action_Actual_Duration • Participant_Behavior_Action_Duration_Notes • Participant_Behavior_Action_Change_Reason • Participant_Behavior_Action_Change_Code • Participant_Behavior_Action_Change_Subcode (required if code is divided into sub codes) • Participant_Behavior_Action_Change_Comment (may be forbidden, allowed or required based on configuration) **Note:** For field descriptions, see *Incident Management*. When importing, these fields may be mapped one or more times. For more information, see Step 6 of *How to Import Data Using the Data Import Manager*.

Participant_Behavior_Action_Attribute	Within the incident import file, these fields must be listed after a Participant_Behavior_Action in order for the fields to be valid. For each participant behavior action attribute in the incident data set, you may include the following data (based on your PowerSchool incident management setup): • Participant_Behavior_Action_Attribute_Code • Participant_Behavior_Action_Attribute_Subcode (required if code is divided into sub codes) • Participant_Behavior_Action_Attribute_Comment (may be forbidden, allowed or required based on configuration) • Participant_Behavior_Action_Attribute_Value (content of value field depends on configuration) **Note:** For field descriptions, see *Incident Management*. When importing, these fields may be mapped one or more times. For more information, see Step 6 of *How to Import Data Using the Data Import Manager*.

Importing Custom Tables

The Data Import Manager allows administrators to import data into custom tables. These tables are not part of the core PowerSchool schema, but are created by PowerSchool custom development groups.

- Custom Tables are listed in the Import Into pop-up menu on the Data Import Manager page using the name of the custom table.
- Custom table fields are available for select data sets in the Data Import Manager when mapping fields from the import file to PowerSchool.
    - If the custom table is a 1-to-1 child table, administrators must map one of the fields in the import file to the foreign key field in the custom table.
    - If the custom table is a 1-to-many child table, administrators must map one of the fields in the import file to the foreign key field in the custom table when adding child records.
    - When updating existing records in the custom table, administrators must map one of the fields in the import file to the primary key field. The foreign

key field is ignored if the primary key field is mapped and present for the record. This means that it is not possible to update a foreign key value.
    - If the custom table is a stand-alone table that does not have a parent table, administrators must map one of the fields in the import file to the primary key field only when attempting to update an existing record.
- When mapping custom table fields, the fields appear in the following order:
    - If the custom table is a 1-to-1 extension of a core table, after the last core field within the import module, the foreign key to the parent table appears first and then all the other custom table fields appear in alphabetical order.
    - If the custom table is a 1-to-many child extension of a core table, after the core table, the custom child table fields are grouped and appear in alphabetical order. The foreign key to the parent table appears first, the primary key appears second, and then all the other custom table fields appear in alphabetical order.
    - If the custom table is a stand-alone table that does not have a parent table, the primary key appears first and then all the other custom table fields appear in alphabetical order.
- Standard import options are available when importing into a custom table.
    - Administrators can choose whether or not to exclude the first row if it contains headers.
    - Administrators can choose whether or not to update existing records if a match is found.
- Data being imported into a custom table will be validated based on the data type and other field attributes. Data types include:
    - Text must be a text value less than or equal to the database field's length property.
    - Integer must be a whole number less than or equal to 19 digits long.
    - Double must be a numeric value with up to one decimal point and be less than or equal 19 digits long.
    - Boolean must be a numeric value of 0 or 1.
    - Date must be a valid m/d/y format where m can be 1-12, d can be 1-31 and y can be two digits (05) or four digits (2005).
- Import results for an import into a custom table are displayed in the Import Results page.

Import Data Using the Data Import Manager

Once you have prepared your import file, you can import the data using the Data Import Manager.

How to Import Data Using the Data Import Manager

Note: Verify that you are signed in to the appropriate school. If the school is incorrect, click **School** at the top of the page to choose a new school before starting this procedure.

Note: The Data Import Manager page is now also accessible via **Start > System > Page and Data Management > Data Import Manager**.

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Importing & Exporting**. The Importing & Exporting page appears.
3. Click **Data Import Manager**. The Data Import Manager page appears.
4. Use the following table to enter information in the Select Source and Target fields:

Field	Description
Source	Enter the file path and name of the file to import or click **Choose File** (or **Browse**), navigate to the data file, and click **Open**.
Import Into	Indicate which data set you want to import the data into by choosing one of the following from the pop-up menu: • **Contacts** • **Course Archive** • **Course Equivalency** • **Incident** • **[Custom Table]** • **Student Email** • **Transportation** **Note:** Custom tables only appear if your district allows importing into custom tables at the school level.
Field Delimiter	Use the pop-up menu to choose which delimiter to use to separate the fields in the exported data from the pop-up menu: • **Tab** • **Comma** • **Other**: Enter the field delimiter in the adjacent field. **Note**: Adjacent field only appears editable if **Other** is selected.

	Note: Only one character may be entered. A double quote character is not allowed. **Note:** This field only appears if applicable to the **Import Into** selection.
Character Set	Use the pop-up menu to choose the character set for the import file. This selection is specific to the operating system where the import file was created: • **Unicode** • **Windows ANSI** (Windows) • **Mac Roman** (Mac) • **ISO 8859-1** (Unix) **Note:** This field only appears if applicable to the **Import Into** selection.

5. Click **Next** or the **Map Columns** header.

   Note: The **Next** button and the **Map Columns** header appear shaded until the **Source** and **Import Into** are populated.

6. Use the following table to enter information in the Map Columns fields:

Field	**Description**
Select Template	To apply a template: 1. Click **Select Template**. The Select Import Template pop-up appears. 2. Select the template you want to apply. 3. Note the mapped fields that are included in the template appear in the lower portion of the pop-up. 4. Click **Apply**. The Select Import Template pop-up closes. To delete a template: 1. Click **Select Template**. The Select Import Template pop-up appears.

	2. Select the template you want to delete. 3. Click **Delete**. 4. Click **Confirm Delete**. A confirmation message appears. 5. Click **Close**. The Select Import Template pop-up closes. **Note:** If no templates have been saved, this button appears disabled. **Note:** Click column headings to sort templates in ascending order. Click again to sort in descending order.
Import File Column	This section displays the fields from the import file.
PowerSchool Field	This section displays the suggested PowerSchool field for each field from the import file. To map a field from the import file, choose a PowerSchool field from the pop-up menu. **Student Email** For Student Email, only Student Number and Email appear mapped. Student Number is required for importing Student Emails. All other imported fields appear blank. **Incident** Primary fields in the Incident data set may only be mapped once. Secondary fields may be mapped one or more times. For more information, see the *Incident Import File* section under *Preparing Your Import File*.
Save Template	If you import the same fields of data frequently, you can create a template so that you don't have to define the field import map every time you perform an import. To create a new template: 1. Click **Save Template**. The Save Template pop-up appears. 2. Enter the name of the template. 3. Enter a description of the template. 4. Note the mapped fields that are included in the template. 5. Click **Save as New**. The Save Template pop-up closes, and a confirmation message appears.

	To edit a template: 1. Click **Save Template**. The Save Template pop-up appears. 2. Edit the description of the template. 3. Note the mapped fields that are included in the template. 4. Click **Save**. The Save Template pop-up closes, and a confirmation message appears.

7. Click **Next** or the **Select Options** header.

   Note: The **Next** button and the Select Options header appear shaded until at least one column is mapped, an identifier (required field) is mapped, and the same primary column is not mapped more than once.

8. Use the following table to enter information in the Select Options fields:

Field	Description
Check to exclude the first row.	Do one of the following: • Select the checkbox to prevent importing the header row. • Deselect the checkbox to import the first row. This should be used if your import file does not contain a header row. **Note:** If one or more columns are auto-mapped, the checkbox is automatically selected. If no columns are auto-mapped, the checkbox is not automatically selected.
If a record in the import file matches an existing record in the database, how would you like that record processed?	If you are importing to the Student Email table, select one of the following options to determine what you want the system to do when a student record in the import file contains a student ID number that already exists in PowerSchool: • If you do not want the system to import any record with a student number that already exists, select **Do not process that record from the import file**. • If you want the system to update the matching student's record with the data in the import file, select **Update the**

	existing record with information from the file being imported. **Note:** This field does not appear if you are importing to the Incident table.
Check to confirm that records should be deleted if blank rows exist in the import file. All columns in a table must be present in the import file.	Check to confirm that all data in a given column should be deleted if blank records exist for all rows in the import file for that column. All columns in a table must be present in the import file. Do one of the following: • Select the checkbox to confirm the deletion of all data in the specified column. • Deselect the checkbox to retain all data in the specified column.

9. Click **Import**. The Import Results page displays a summary of the processed records:

Field	**Description**
Refresh	Click to update the status of the report. To set the automatic page refresh: 1. On the **Refresh** button, click the arrow. A pop-up menu displays the units of time you can set for the automatic page updates; 30 seconds, one minute, five minutes, or 10 minutes. 2. Select a value from the pop-up menu. A countdown clock appears on the Refresh button and displays the time until the page updates, based on your selection. 3. To cancel the automatic page refresh, click the arrow and select the **Cancel** button.

<table>
<tr><td>Processed # out of # records</td><td>The first number represents the number of records processed. The second number represents the total number of records in the import file including the header row.</td></tr>
<tr><td>Failed</td><td>Incident

If a record could not be imported due to an error, the row number of the record along with one of the following reasons appear:
<code type> sub_code specified without code
Returned if a sub_code was specified without a parent code.
<code type> comment specified without code
Returned if a comment was specified without a parent code.
Invalid <code type> code
Returned if the specified code is not valid.
Specified <code type> code does not allow sub_codes
Returned if a sub_code is specified for a parent code that is not split into sub_codes.
Specified <code type> sub_code1 does not allow sub_codes
Returned if a sub_code is specified for a parent sub_code that is not split into sub_codes.
Specified <code type> sub_code2 does not allow sub_codes
Returned if a sub_code is specified for a parent sub_code that is not split into sub_codes.
Specified <code type> sub_code3 does not allow sub_codes
Returned if a sub_code is specified for a parent sub_code that is not split into sub_codes.
Invalid <code type> sub_code
Returned if the specified sub_code is not defined for the parent code.
Invalid <code type> sub_code1
Returned if the specified sub_code is not defined for the parent sub_code.
Invalid <code type> sub_code2
Returned if the specified sub_code is not defined for the parent sub_code.</td></tr>
</table>

	• **Invalid <code type> sub_code3** Returned if the specified sub_code is not defined for the parent sub_code. • **Invalid <code type> sub_code4** Returned if the specified sub_code is not defined for the parent sub_code. • **<code type> comment is not allowed** Returned if a comment was specified but is not allowed for the specified code or sub_code. • **<code type> comment is required** Returned if a comment was not specified but is required for the specified code or sub_code. • **<code type> primary must be primary must be True, False, 1, 0 or Primary** Returned if the specified primary attribute is not valid. • **Multiple <code type> were specified as primary** Returned if the more than one code was specified as primary. • **<code type> code requires sub_code** Returned if the specified code is split into sub_codes and no sub_code was specified. • **<code type> sub_code1 requires sub_code** Returned if the specified sub_code is split into sub_codes and no sub_code was specified. • **<code type> sub_code2 requires sub_code** Returned if the specified sub_code is split into sub_codes and no sub_code was specified. • **<code type> sub_code3 requires sub_code** Returned if the specified sub_code is split into sub_codes and no sub_code was specified. **Note:** The <code type> portion of the message will be replaced by the applicable code type that had the error. In addition to the above errors, a record may not be imported due to a data validation error. If a data validation error occurs, "[field name]: " appears along with one or more of the following explanations: • **Empty value is not allowed** • **Value may not contain more than [#] character(s)**

	• **Value must be a number** • **Value must be a valid date** • **Value must be an integer** • **Value must be at least [#]** • **Value must be less than or equal to [#]** • **Value must be on or after [date]** • **Value must be on or before [date]** • **Value must contain at least [#] character(s)** **Student Email** If a record could not be imported due to an error, the row number of the record along with one of the following reasons appear: • **Email already exists** • **Student not found** • **Student number not found** **Note:** Click column heading to sort in ascending order. Click again to sort in descending order.
Imported	If a record was successfully imported, the row number of the record along with one of the following results appears indicating whether an imported record was cleared, added, ignored, or updated during the import: • Deleted • Inserted • Skipped • Updated **Note:** Click column heading to sort in ascending order. Click again to sort in descending order.
Download Failed Records	Click to download the failed records. Downloaded file appears in the format of the original import file. This can be used to easily identify which records had problems during import so that corrections can be made, and the import can be reattempted. **Note:** This button is only available once the import process has completed.

Data Import Queue

Use the Data Import Queue to view the results of import jobs that you have submitted using the Data Import Manager. When you submit an import request to the system, the system captures the import request and transmits the job to the Data Import Queue. The Data Import Queue page displays the status of the import job as it is processed by the system.

How to Use the Data Import Queue

Note: The Data Import Queue page is now also accessible via **Start > System > Page and Data Management > Data Import Queue**.

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Importing & Exporting**. The Importing & Exporting page appears.
3. Click **Data Import Queue**. The Data Import Queue page appears.
4. Use the following table to enter information in the fields:

Field	Description
Refresh	Click to update the status of the queue. To set the automatic page refresh: 1. On the **Refresh** button, click the arrow. A pop-up menu displays the units of time you can set for the automatic page updates; 30 seconds, one minute, five minutes, or 10 minutes. 2. Select a value from the pop-up menu. A countdown clock appears on the Refresh button and displays the time until the page updates, based on your selection. 3. To cancel the automatic page refresh, click the arrow and select the **Cancel** button.
Import File	The name of the imported file.
Import Into	The data set being imported into.

School	The name of the school for which the file was imported.
Start Date/Time	The date and time the import started appears.
End Date/Time	The date and time the import ended appears. **Note:** This field only displays when the import has completed.
Status	The status of the import appears: • In progress • Complete • Complete with some failures Click to view the Import Results page.
Delete	Click to delete the import.

View Imported Data

Once you imported data, you can then view the imported the data using the appropriate PowerSchool page.

How to View Imported Course By Year Data

Navigate to the View Course Information By Year page for a selected course. For more information, see *How to Edit Course Information*.

How to View Imported Incident Data

Navigate to the Incident Detail page for a selected student. For more information, see *How to Edit a Discipline Incident*.

How to View Imported Student Email Data

Navigate to the Student Email / Email Configuration page for a selected student. For more information, see *How to Configure Student Email*.

How to View Imported Transportation Data

Navigate to the Transportation Entry page for a selected student. For more information, see *How to Edit Transportation Information*.

Export

Quick Export

This method quickly produces a simple list of students and information from the Student table. Change the parameters to produce a more detailed list. For more information about exporting, see *How to Export Using a Template*.

In addition to exporting data, SIS Views provide quick access to key metrics and not just raw data. For detailed information, see the *Data Dictionary SIS Views* available on PowerSource.

How to Use Quick Export

Note: The Quick Export page is now also accessible via **Start > System > Page and Data Management > Quick Export**.

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Export, choose **Quick Export**. In most cases, you will not need to change the default options on the Export Students page, in which case you can skip the next step. To change the selections, proceed to the next step.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Use the following table to enter information in the fields:

Field	Description
[Fields to be Exported]	Enter the fields to be included on the exported spreadsheet. Enter as many fields as needed. Enter only one field per line. Separate multiple fields with a hard return. To insert a PowerSchool field into this field: 1. Click **Fields** at the bottom of the page to view a list of PowerSchool fields. The Fields pop-up appears.

	2. To narrow the list of fields, enter one of more search terms in the **Filter** field. Otherwise, leave blank. 3. Click the field you want to add. The Fields pop-up closes, and the selected field appears. **Note:** Database extension fields can be selected on the **Fields** pop-up. For more information, see *Database Extensions* in the *System Administrator User Guide* available on PowerSource.
Field Delimiter	A field delimiter separates fields (or "columns") in the exported data. Use the pop-up menu to choose how you want the system to separate each field in the export file: • **Tab** • **Comma** • **None** • **Other**: Enter the delimiter in the blank field.
Record Delimiter	A record delimiter separates records (or "rows") in the exported data. Use the pop-up menu to choose how you want the system to separate each record in the export file: • **CR**: Carriage return • **CRLF**: Carriage return and line feed • **LF**: Line feed • **Other**: Enter the delimiter in the blank field.
Surround Fields	Select the checkbox to surround the fields in the exported data with quotation marks.
Column titles on 1st row	Select the checkbox to include column titles on the first row of the exported data.
Export DCID	Select the checkbox to export the Student table's unique identifier.

5. Click **Submit**. The exported data appears.

6. Choose **File > Save As...** to save the file. Open the saved file using a spreadsheet application, such as Excel or Lotus 1-2-3. Format, print, and save it as any other spreadsheet document.

Templates for Exporting

Export information by using a template. Select the template from a list or create a new one. For more information about exporting, see *Quick Export*.

Database Extensions and Export Templates

Users can add table extension fields to export templates created for the selected table using the following methods for the Data to Export field:

- For Student and Users tables, click **Fields** and select from the pop-up.
- For Courses, Historical Grades, and Student Schedules tables, enter the database extension field name manually.

How to Create an Export Template

If there is no template that you can use to perform the export or no template you can edit to meet your needs, you must create a new one.

Note: The Export Using Template page is now also accessible via **Start > System > Page and Data Management > Export Using Template**. Additionally, the Templates for Exporting page is now also accessible via **Start > System > Page and Data Management > Templates for Exporting**.

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Export, choose **Export Using Template**. The Export Using Template page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Choose the type of export from the **Type of Export** pop-up menu. The Export Using Template page appears.
5. Click **Template**. The Templates for Exporting page appears.

6. Click **New**. The New Export Template page appears.
7. Use the following table to enter information in the fields:

Field	Description
Name of this template	Enter a name for the template.
Export from this table	Choose the table that will be used in the export from the pop-up menu.
Delimited or fixed-field length?	Choose either **Delimited** or **Fixed** from the pop-up menu to determine the length of each field.
Field delimiter	If you chose **Delimited** in the previous field, use the pop-up menu to choose the field delimiter. This refers to the item that will separate the fields in the exported data. If you choose **Other**, enter the delimiter in the blank field. Select the checkbox to surround field values with quotation marks.
End-of-line (record) delimiter	Choose the delimiter for the end of each record from the pop-up menu. For **Other:**, enter the delimiter in the blank field.
Column Titles	Select the checkbox to put column titles on the first row.
Mime Type	Enter a MIME type. To use the default MIME type, leave the field blank. For more information, see *MIME Types*.

8. Click **Submit**. The Templates for Exporting page displays the new template. Add columns to the template using the procedure *How to Add Template Columns*.

How to Add Template Columns

Note: The Export Using Template page is now also accessible via **Start > System > Page and Data Management > Export Using Template**. Additionally, the Templates for

Exporting page is now also accessible via **Start > System > Page and Data Management > Templates for Exporting**.

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Export, choose **Export Using Template**. The Export Using Template page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Choose the type of export from the **Type of Export** pop-up menu. The Export Using Template page appears.
5. Click **Template**. The Templates for Exporting page appears.
6. Click the # Columns link of the template to be changed. The Edit Columns page appears.
7. Click **New** to add a column to the template. The New Column page appears.
8. Use the following table to enter information in the fields:

Field	**Description**
Title/Heading	Enter a title for the column.
Data to Export	Enter the fields to be included in the export. To insert a PowerSchool field into this field: 1. Click **Fields** to view a list of PowerSchool fields. The Fields pop-up appears. 2. To narrow the list of fields, enter one of more search terms in the **Filter** field. Otherwise, leave blank. 3. Click the field you want to add. The Fields pop-up closes, and the selected field appears. **Note:** If you are adding database extension fields for Courses, Historical Grades, and Student Schedules tables, enter the

	extension field name using the format [extension name].[fieldname].
If Blank, Export This	If a record has no data for a particular field, indicate a value to replace the blank field (optional). For example, enter **No Data**.
Column Number	Enter a column number for this column on the template. All column numbers will have a zero added as a suffix to the column number.
Width in Characters	Enter the width of the column in characters if using fixed-field lengths instead of field delimiters.
Alignment	Use the pop-up menu to choose the alignment of the column if using fixed-field lengths instead of field delimiters.

9. Click **Submit**. The Edit Columns page appears.
10. Repeat the previous three steps to add additional columns to the template.
11. Click **Back to Templates for Exporting**. The Templates for Exporting page appears.

The template has been changed. Perform the export by following the instructions in the section *Export Using a Template*.

How to Edit a Template

When you need a list that differs slightly from the list that a template produces, you can easily modify the template to meet your needs.

Note: Everyone who uses the template will view the changes you enter. Contact other users before changing a template that many people use.

Note: The Export Using Template page is now also accessible via **Start > System > Page and Data Management > Export Using Template**. Additionally, the Templates for Exporting page is now also accessible via **Start > System > Page and Data Management > Templates for Exporting**.

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.

3. Under Export, choose **Export Using Template**. The Export Using Template page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Choose the type of export from the **Type of Export** pop-up menu. The Export Using Template page appears.
5. Click **Template**. The Templates for Exporting page appears.
6. Click the name of the template you want to edit. The Edit Export Template page appears.
7. Edit the information as needed. For field descriptions, see *How to Create an Export Template*.
8. Click **Submit**. The Templates for Exporting page appears. To continue modifying the template, see *How to Edit Template Columns*.

How to Edit Template Columns

Note: The Export Using Template page is now also accessible via **Start > System > Page and Data Management > Export Using Template**. Additionally, the Templates for Exporting page is now also accessible via **Start > System > Page and Data Management > Templates for Exporting**.

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Export, choose **Export Using Template**. The Export Using Template page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Choose the type of export from the **Type of Export** pop-up menu. The Export Using Template page appears.
5. Click **Template**. The Templates for Exporting page appears.
6. Click the # Columns link of the template to be changed. The Edit Columns page appears.
7. Click the Title of the column you want to edit. The Edit Column page appears.

8. Edit the information as needed. For field descriptions, see *How to Add Template Columns*.
9. Click **Submit**. The Edit Columns page appears.

How to Delete a Template

Note: The Export Using Template page is now also accessible via **Start > System > Page and Data Management > Export Using Template**. Additionally, the Templates for Exporting page is now also accessible via **Start > System > Page and Data Management > Templates for Exporting**.

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Export, choose **Export Using Template**. The Export Using Template page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Choose the type of export from the **Type of Export** pop-up menu. The Export Using Template page appears.
5. Click **Template**. The Templates for Exporting page appears.
6. Click the name of the template you want to delete. The Edit Export Template page appears.
7. Click **Delete**.
8. Click **Confirm Delete**. The Selection Deleted page appears.

How to Delete Template Columns

Note: The Export Using Template page is now also accessible via **Start > System > Page and Data Management > Export Using Template**. Additionally, the Templates for Exporting page is now also accessible via **Start > System > Page and Data Management > Templates for Exporting**.

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.

3. Under Export, choose **Export Using Template**. The Export Using Template page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Choose the type of export from the **Type of Export** pop-up menu. The Export Using Template page appears.
5. Click **Template**. The Templates for Exporting page appears.
6. Click the # Columns link of the template to be changed. The Edit Columns page appears.
7. Click the Title of the column you want to delete. The Edit Column page appears.
8. Click **Delete**.
9. Click **Confirm Delete**. The Selection Deleted page appears.

How to Export Using a Template

Note: The Export Using Template page is now also accessible via **Start > System > Page and Data Management > Export Using Template**.

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Export, choose **Export Using Template**. The Export Using Template page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Choose the type of export from the **Type of Export** pop-up menu. The Export Using Template page appears.
5. Use the following table to enter information in the fields:

Field	Description
Type of Export	The type of data to export appears.

Export template?	Choose the template to export from the pop-up menu.
For Which Records?	The number of selected records appears.

6. Click **Submit**. The results of the export appear.
7. Choose **File** > **Save As...**.
8. In the Save dialog, specify a name, location, and file type.
9. Click **Save**. Open the file using a spreadsheet or other application.

AutoSend Setup

Create AutoSend records to determine whether your PowerSchool system can automatically create a copy of the information you specify at the selected date and time intervals and export the file to another system.

When creating an AutoSend record, you can determine the export parameters for each of the following types of data:

- Attendance
- Course
- Section
- Student schedule
- Student demographic
- Teacher

How to Add an AutoSend Record

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **AutoSend Setup**. The AutoSend Setup page appears.
3. Click **New**. The AutoSend Record page appears.
4. Use the following table to enter information in the fields:

Field	**Description**
Name	Enter the name of this record.

<table>
<tr><td>Data to Send</td><td>Use the pop-up menu to choose the data you want to send with this record:
Attendance
Courses
Sections
Student Schedules
Students
Teachers
Note: Attendance table options are affected by the choice of attendance recording methods. For more information, see Attendance Preferences.</td></tr>
<tr><td>When to Execute</td><td>Use the pop-up menus to determine the hour and minutes at which you want PowerSchool to automatically export a copy of the data.

Note: If the minutes are 00, Autosend runs after the Hourly Process has completed (not specifically on the hour stated but within that hour).</td></tr>
<tr><td>Days to Execute</td><td>Enter the days of the week you want the system to export the data. Starting with Monday, use the following abbreviations: MTWHFSU.</td></tr>
<tr><td>Turn Execution Off</td><td>Select the checkbox to stop the system from automatically exporting data. To turn AutoSend on, deselect the checkbox.</td></tr>
<tr><td>Send Output to</td><td>Indicate the method by which you want to export the records to the other system from the pop-up menu.

To use a local (or network shared file system to export the records to the other system:
Choose Local (or network shared) File System.
To use the file transfer protocol (FTP) to export the records to the other system:</td></tr>
</table>

	1. Choose **Ad Hoc FTP Server**. 2. Enter information in the following fields: • **Use Passive Mode** - If your FTP has difficulty transferring, select the checkbox. • **FTP host name** • **FTP account name** • **FTP password** • **Timeout in seconds** - Indicates the number of second that PowerSchool will try to make the initial FTP connection with the remote system. To use a managed connection, such as SFTP, to export the records to the other system: 1. Choose **Managed Connection.** A second pop-up menu appears. 2. Choose a managed connection from the pop-up menu. **Note:** Managed Connections only appears in the pop-up if configured and download capability is enabled. See **System > System Settings > Plugin Management > Remote Connection Manager**.
Path	If you do not use FTP to send the export file to another system, enter the path and name of the file destination on your PowerSchool server. If you use FTP to send the export file to another system, enter the path and file name of the file destination on the FTP server. If this is on a single node, the path must be defined as being from the root. If this is a server array, use only the file name and never the path, since there is only one location for Autosend files to be imported from on a server array. The file will be exported in text format (.txt). Dynamic file naming options: • %d = Date in YYYY-MM-DD format. 2016-11-14 • %t = Time in HR24MI format. 1312 • %s = CurSchoolID. 100

	For example, c:\data\myfile-%d-%t-%s.txt would produce a file called c:\data\myfile-2016-11-14-1312-100.txt when executed.
Field Delimiter	Use the pop-up menu to choose one of the following to determine how values are separated in the export file: • **Tab** • **Comma**
Record Delimiter	Use the pop-up menu to choose how records are separated in the export file: • **CRLF**: carriage return, line feed • **CR**: carriage return • **LF**: line feed
Sort Order	Enter the order that this record appears on the AutoSend Setup page. If you do not make a choice, the order is alphabetical by the name of the AutoSend record.
First record of file is "number_of_records="	The system does not export the file if the number of records in it does not match the number given in the first record of the file. It is recommended that you select the checkbox.
Include "upload_type"	If you select the checkbox, the first or second record of the export includes the text upload_type=, followed by the upload type.
Attendance-Specific Settings	If you chose Attendance from the Data to Send pop-up menu, select an option to indicate which attendance data you want the system to include in the export file: • **Send any attendance modified in the last 24 hours** • **Send attendance modified since last upload** • **Send attendance data modified between these dates**: Enter the date range using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert

	appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry. • **Send all attendance to date** Otherwise, leave this field blank.
Student-Specific Settings	If you chose Students from the Data to Send pop-up menu, the system includes all students currently enrolled at your school in the export file.
E-Mail completion report to	Enter the email addresses of the people you want the system to send a completion report to each time it exports this file. Separate multiple addresses with commas.
Fields to export	Choose the PowerSchool fields to include in this export file from the pop-up menu. **Note:** If you are adding database extension fields, enter the extension field name using the format [extension name].[fieldname].
Duplicate this AutoSend record to all schools on this server	If you are creating this record for the first time, you may want to select the checkbox to make the record available to all schools that use your PowerSchool system. Otherwise, deselect the checkbox.
Duplicate this AutoSend record to district office	If you are creating this record for the first time, you may want to select the checkbox to make the record available to the district office. Otherwise, deselect the checkbox. **Note:** This option is only for the Students or Teacher tables.

5. Click **Submit**. The AutoSend Setup page displays the new AutoSend record.

How to Edit an AutoSend Record

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **AutoSend Setup**. The AutoSend Setup page appears.

3. Click in the Name column the AutoSend record you want to edit. The AutoSend Record page appears.
4. Edit the information as needed. For field descriptions, see *How to Add an AutoSend Record*.
5. Click **Submit**. The AutoSend Setup page displays the edited AutoSend record.

How to Delete an AutoSend Record

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **AutoSend Setup**. The AutoSend Setup page appears.
3. Click in the Name column the AutoSend record you want to delete. The AutoSend Record page appears.
4. Click **Delete**.
5. Click **Confirm Delete**. The Selection Deleted page appears.

How to Manually Run an AutoSend Record

Manually run an AutoSend record to avoid waiting for the process to automatically run on the specified day and time.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **AutoSend Setup**. The AutoSend Setup page appears.
3. Click **Run Now**. The AutoSend record runs and displays the results.

Direct Database Export

Direct Database Access (DDA), also called Universal Search & Modify (USM), is one of the most versatile functions of your PowerSchool system. Use DDA to search and match data in all of the internal tables on your PowerSchool server.

Note: Depending on your security settings, you may not be able to perform all functions.

PowerSchool data is stored in a relational database of tables. Each table contains an unlimited number of fields. When you use DDA, you directly access a table in the relational database.

Use PowerSchool's Direct Database Export (DDE) page when you need to create an export file or report that contains records from the tables. Use another application, such as a spreadsheet application, to view or organize the records. Unlike using the Export Using Template page, you can match and export data from two related tables.

You do not have to access DDA to export data from it. You can export DDA data while you are signed in to PowerSchool. When you export data from DDA, the system creates an independent export file that you can open or update using any application you want.

For example, assume you want to export all ninth graders and their current grades to a software application in which you can create a pie graph. Use the DDE function to match the records in the student table to the current grades table; then, export both tables of data, open the export file in a spreadsheet application, and create the graph.

Note: For detailed information about PowerTeacher Gradebook administration and setup, see the *Enable PowerTeacher for a Selection of Teachers* section in the *PowerTeacher Gradebook Administrator Installation and Setup Guide* available on PowerSource.

How to Select Records for Export-List View

View a list of all records in a selected table or search for specific records in a table. You can also limit the export to records for all schools on your system or for just one school. For example, export student data about California residents in fourth grade or above who attend all schools on the system.

Note: The Direct Database Export (DDE) page is now also accessible via **Start > System > Page and Data Management > DDE**.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Direct Database Export**. The Direct Database Export (DDE) page appears.
3. Use the following table to enter information in the fields:

Field	Description
Current Table	Choose the table from which you want to export records from the pop-up menu. **Note:** Database extension tables can be selected on the **Current Table** pop-up. For more information, see *Database Extensions* in the *System Administrator User Guide* available on PowerSource. **Note:** See http://[your.school.address]/admin/home?ac=structure for a complete list of PowerSchool tables and fields.

Select all [x] records in this table	To indicate the records to use in the export, do one of the following: • Click **Select all [number of] records in this table** to select all records and skip to Step 10. • Identify search criteria in the Search Students fields by continuing to the next step. **Note:** Search for students either on the Search Students page before beginning this procedure or on the Direct Database Export page. Repeat steps 5-7 to use the second search field on the Direct Database Export page, or repeat steps 5-9 to narrow the search results even further.
Search [Table Name]	Choose a field from the first pop-up menu. Choose an operator from the second pop-up menu: • Equals (**=**) • Less than (**<**) • Greater than (**>**) • Less than or equal to (**<=**) • Greater than or equal to (**>=**) • Does not equal (**#**) • Contains (**contains**) • Does not contain (**!Contain**) Enter the value for the field in the last field.
Search only in records belonging to [school name]	Select the checkbox to filter your school's records in the search.

4. Click **Search within the current [number of selected] records only**. The Direct Database Export (DDE) page displays the new number of current records in selection.
5. Click **List View** to make sure you selected the records you want to export. The List Records: [Table name] page appears with the fields separated by five periods.

Note: Click the field value to link to the Display Record page, which displays all fields and their values for the selected record.

How to Select Records for Export-Table View

View a report in a table format of all records in a selected table, or search for specific records in a table. You can also limit the export to records for all schools on your system or just one school. For example, export student data about California residents in fourth grade or above who attend all schools on the system.

To modify the format of the table view, see *How to Format the DDE Table View*.

Note: The Direct Database Export (DDE) page is now also accessible via **Start > System > Page and Data Management > DDE**.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Click **Direct Database Export**. The Direct Database Export (DDE) page appears.
3. Use the following table to enter information in the fields:

Field	Description
Current Table	Choose the table from which you want to export records from the pop-up menu. **Note:** Database extension tables can be selected on the **Current Table** pop-up. For more information, see *Database Extensions* in the *System Administrator User Guide* available on PowerSource. **Note:** See http://[your.school.address]/admin/home?ac=structure for a complete list of PowerSchool tables and fields.
Select all [x] records in this table	To indicate the records to use in the export, do one of the following: • Click **Select all [number of] records in this table** to select all records and skip to Step 10. • Identify search criteria in the Search Students fields by continuing to the next step. **Note:** Search for students either on the Search Students page before beginning this procedure or

	on the Direct Database Export page. Repeat steps 5-7 to use the second search field on the Direct Database Export page, or repeat steps 5-9 to narrow the search results even further.
Search [Table Name]	Choose a field from the first pop-up menu. Choose an operator from the second pop-up menu: • Equals (**=**) • Less than (**<**) • Greater than (**>**) • Less than or equal to (**<=**) • Greater than or equal to (**>=**) • Does not equal (**#**) • Contains (**contains**) • Does not contain (**!Contain**) Enter the value for the field in the last field.
Search only in records belonging to [school name]	Select the checkbox to filter your school's records in the search.

4. Click **Search within the current [# of selected] records only**. The Direct Database Export (DDE) page displays the new number of current records in selection.
5. Click **Table View** to make sure you selected the records you want to export. The List Records: [Table name] page appears with the records in a table format.

   Note: Click the field value to link to the Modify Record page.

How to Format the DDE Table View

Note: The Direct Database Export (DDE) page is now also accessible via **Start > System > Page and Data Management > DDE**.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Direct Database Export**. The Direct Database Export (DDE) page appears.

3. Click **Table View Setup**. The DDA/DDE Table View Setup page appears.
4. Use the following table to enter information in the fields:

Field	Description
Maximum Number of Records Per Page	Enter the maximum number of records you want to appear on each page of the table.
Maximum Number of Fields Per Table	Enter the maximum number of fields you want the table to display.
Maximum Number of Character Per Field	Enter the maximum number of characters each field in the table can display.
Use Font Tag	Select the checkbox to apply font formats. Otherwise, deselect the checkbox.
Format Data	Select the checkbox if you want the system to format the data within the table. Otherwise, deselect the checkbox.
Use Gridlines	Select the checkbox if you want the table to separate each field of data with gridlines. Otherwise, deselect the checkbox.
Alternate Colors	Select the checkbox if you want the table to display each row of data in a different color. Otherwise, deselect the checkbox.
Use Cell Padding	Enter a number to indicate how much padding you want each cell of the table to contain around the text. Most users enter a number between **1** and **3**.

5. Click **Submit**. The Direct Database Export (DDE) page appears.

How to Match Selections for Export

Match the records you searched for and selected in one table to records in another table to gather and select information, so you can view what you need. For example, match records in the Students table to records in the CC (current grades) table.

Note: You cannot match tables that do not have a relationship or shared field. For example, you cannot match the Students table to the Teachers table.

Note: The Direct Database Export (DDE) page is now also accessible via **Start > System > Page and Data Management > DDE**.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Direct Database Export**. The Direct Database Export (DDE) page appears.
3. Choose one of the tables to match from the Current Table pop-up menu.
4. Click **Select all [#] records in this table**. The Direct Database Export (DDE) page displays the new number of current records in selection.
5. Click **Match Selection**. The Match USM Selection page appears.
6. Choose the second table to match from the pop-up menu.
7. Click **Proceed to match selection**. The Direct Database Export page displays the total number of records between the two matched tables that you can export. To export the selected records, see *How to Export Records*.

How to Export Records

Before exporting records, you must first select the records using the Direct Database Export function.

Note: The Direct Database Export (DDE) page is now also accessible via **Start > System > Page and Data Management > DDE**.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Direct Database Export**. The Direct Database Export (DDE) page appears.
3. Select records for exporting. For more information, see *How to Select Records for Export-List View*, *How to Select Records for Export-Table View*, or *How to Match Selections for Export*.
4. Click **Export Records**. The Export Records page appears.
5. Use the following table to enter information in the fields:

Field	Description

Fields	Use the pop-up menu to choose the fields from which you want to export a copy of the data. After you choose each field, the system inserts the field name in the text box. Enter as many fields as needed. Only one field appears per line. Separate multiple fields with a hard return. To include fields from another table, manually enter the name of the table in brackets, then the field name in the field box. For example, to export fields from the Sections table and include teachers' names, enter **[teachers]lastfirst**. To include database extension fields from another table, manually enter [Table.ExtensionName] in brackets, followed by the field name. For example, to export fields from the Sections table and include alternate course number, enter **[Courses.CoursesCoreFields]Alt_Course_Number**.
Field Delimiter	A field delimiter separates fields (or "columns") in the exported data. Use the pop-up menu to choose how you want the system to separate each field in the export file: • **Tab** • **Comma** • **None** • **Other**: Enter the delimiter in the blank field.
Record Delimiter	A record delimiter separates records (or "rows") in the exported data. Use the pop-up menu to choose how you want the system to separate each record in the export file: • **CR**: Carriage return • **CRLF**: Carriage return and line feed • **LF**: Line feed • **Other**: Enter the delimiter in the blank field.
Surround Fields	Select the checkbox if you want the system to surround each field with quotation marks in the export file. Otherwise, deselect the checkbox.

Column titles on 1st row	Select the checkbox if you want the first row of the export file to have column titles indicating the fields included in each column. Otherwise, deselect the checkbox.
Sorting Records	Determine the order of the records in the export file. Define a primary, secondary, and tertiary sort. In the first field in the Sort Field Name column, enter the field name by which you want to primarily sort the records in the file. Then, select one of the following to determine to sort records by this field in ascending or descending order: • **<** (descending) • **>** (ascending)

6. Click **Submit**. For Mac users, the results of the export appear. For Windows users, continue to the next step.
7. Choose **File > Save As....**
8. In the **Save** dialog, specify a name, location, and file type.
9. Click **Save**. Open the file using a spreadsheet or other application.

Data Export Manager

Using the Data Export Manager, you can quickly and easily export data from PowerSchool tables, database extensions, and PowerSchool data sets into a text file.

PowerSchool Tables

Individual access to most PowerSchool tables is provided through Data Export Manager. Some tables have been removed for security reasons or because they are part of system processes.

Database Extensions

Database extensions allow you to display customized information in PowerSchool. Access to one-to-one, one-to-many, and independent database extensions is provided through Data Export Manager. Database extensions may be created through the PowerSchool user interface and define the table structure and related fields.

- Database extension tables are listed in the Export From pop-up menu on the Data Export Manager page using the name of the table.
- Database extension table fields are available in the Data Export Manager when selecting fields to export.
- After choosing a database extension table, the database extension table fields appear in a field list on the left side of the Data Export Manager page. The fields appear in the following order:
  - Each table lists its fields alphabetically after any primary and foreign keys.
  - If the selected database extension table is a 1-to-1 or a 1-to-many extension of a core table, the extension fields appear first, followed by the associated parent table and any of its extensions.
  - If the database extension table is an independent table that does not have a parent table, its fields appear first, followed by any of its extension fields.
  - A child table extension will list its fields and extensions first, followed by its parent table fields and extensions.
- Standard export options are available when exporting from a database extension table.
- Export results for an export from a database extension table are displayed in the downloaded export file.

For more information, see *Database Extensions*.

PowerSchool Data Sets

A PowerSchool data set is a data source that can be accessed via Data Export Manager, as well as the API. A typical PowerSchool data set declares a set of arguments, a set of columns, and a select statement. The arguments are optional, but the columns and select statement are required. A PowerSchool data set is pre-defined by PowerSchool and includes export modules for Course Archive, Incident, Student Email, Transportation, as well as data sets for Students + Courses and others.

Additional Data Sets

Additional data sets, also available through Data Export Manager, provide more specific access to data within PowerSchool. Additional data sets may be defined by PowerSchool or by a third-party as a PowerQuery and installed in PowerSchool via the Plugin Package. Once the plugin is installed and enabled, the third-party data set becomes accessible as another resource in PowerSchool.

Note: PowerQueries may be created for a specific function within PowerSchool and may not necessarily be designed for use with the Data Export Manager. Consequently, unexpected behaviors may occur when used outside of their primary context.

Set Page-Level Permissions

To ensure that only authorized staff members access the mass data export pages, set page-level permissions for **Start Page > Special Functions** under **Functions** in the main menu **> Importing & Exporting > Data Export Manager** under Exporting. For more information about setting page-level permissions, see *Security Permissions*.

Export/Edit Settings

Using the Export/Edit tab on the Edit User Access Roles page, you can define which data sources a user can export and/or edit. These access levels only apply to exporting, previewing and editing via the Data Export Manager.

Note: For more information, see *User Access Roles*.

How to Define Export/Edit Settings

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Security, click **Roles Administration**. The Roles Administration page appears.
3. Click **User Access**. The User Access Roles page appears.
4. Click the name of the role you want to edit. The Edit User Access Role page appears.
5. Click the **Export/Edit** tab.

6. Use the following table to enter information in the Settings section:

Field	Description
Default Access Level	Select the **Export** checkbox to permit users assigned to this role to export content from any data source set to use the default settings. Select the **Edit** checkbox to permit users assigned to this role to edit content from any extensions set to use the default settings. **Note:** The **Edit** checkbox only displays for database extensions since the Data Export Manager only allows for editing of those fields.
User can set up and run scheduled system templates	Select the checkbox to permit users assigned to this role to set up and run scheduled templates.

7. Use the following table to enter information in the Filter section:

   Note: Click the **Filter** arrow to collapse this section. Click the **Filter** arrow again to expand this section.

Field	Description
Data Source Name	The data source from which data is derived. To narrow the list of data sources by data source name: 1. Click the **Add (+)** button. 2. Choose **Data Source Name** from the first pop-up menu. 3. Enter the data source name or a portion of the name. 4. Click **Apply**.
Parent Name	To narrow the list of data sources by parent name: 1. Click the **Add (+)** button. 2. Choose **Parent Name** from the first pop-up menu. 3. Enter the parent name or a portion of the name.

	4. Click **Apply**. **Note:** Parent column contents vary by data source type. For extensions, it displays the name of the table that is extended. For tables, it displays its own name. For data sets, it appears blank.
Type	To narrow the list of data sources by data set type: 1. Click the **Add (+)** button. 2. Choose **Type** from the first pop-up menu. 3. Choose one of the following from the second pop-up menu: • **Table** • **Data Set** • **Extension** 4. Click **Apply**.
Category	To narrow the list of data sources by category: 1. Click the **Add (+)** button. 2. Choose **Category** from the first pop-up menu. 3. Choose one of the following from the second pop-up menu: • [No Category] • [Any of the functional-based categories] 4. Click **Apply**.
Use Defaults	To modify this filter: 1. Click the **Add (+)** button. 2. Choose **Use Defaults** from the first pop-up menu. 3. Choose one of the following from the second pop-up menu: • Choose **Data Sources using the default setting**. • Choose **Data Sources *not* using the default setting**. 4. Click **Apply**.

	Note: By default, this filter is set to **Data Sources *not* using the default setting**.
Export	To narrow the list of data sources by whether or not the **Export** checkbox is selected: 1. Click the **Add (+)** button. 2. Choose **Export** from the first pop-up menu. 3. Choose one of the following from the second pop-up menu: • **True** • **False** 4. Click **Apply**.
Edit	To narrow the list of data sources by whether or not the **Edit** checkbox is selected: 1. Click the **Add (+)** button. 2. Choose **Edit** from the first pop-up menu. 3. Choose one of the following from the second pop-up menu: • **True** • **False** 4. Click **Apply**.

Note: To delete the filter, click the **Minus (-)** button next to the filter. To remove all filter selections, click **Clear**.

8. Use the following table to view search results:

   Note: Click the name of a column to sort by that column in ascending order. Click again to sort in descending order.

Field	Description
Data Source Name	The data source name appears.

	If the data source is a PowerQuery, it appears as a link. Users must have access to all required tables within the data set in order for the data set to be available in the Data Export Manager. 1. Click the data set name to see its table dependency information. The [Data Set] drawer opens. 2. Click **Apply** to grant this role access to the data set and all tables listed. The [Data Set] drawer closes.
Parent Name	The parent name appears.
Type	The type appears.
Category	The category appears.
Use Defaults	Do one of the following: • Select the checkbox in the header row to select the **Use Defaults** checkbox for all filtered data sources. • Deselect the checkbox in the header row to deselect the **Use Defaults** checkbox for all filtered data sources. • Select the checkbox to use the role's default export and edit settings for a data source. • Deselect the checkbox to use the data source specific export and edit settings.
Export	Do one of the following: • Select the checkbox in the header row to permit exporting of all filtered data sources. • Deselect the checkbox in the header row to prohibit exporting of all filtered data sources. • Select the checkbox next to a specific data source to explicitly permit exporting of the specific data source. • Deselect the checkbox next to a specific data source to explicitly prohibit exporting of the specific data source.

Edit	Do one of the following: • Select the checkbox in the header row to permit editing of all filtered data sources. • Deselect the checkbox in the header row to prohibit editing of all filtered data sources. • Select the checkbox next to a specific data source to explicitly permit editing of the specific data source. • Deselect the checkbox next to a specific data source to explicitly prohibit editing of the specific data source. **Note:** If this checkbox next to a specific data source is selected/deselect, the **Export** checkbox is automatically selected/deselected as well. **Note:** This checkbox only applies to editing extensions.
[Pagination]	Use to navigate the search results.
Rows/Page	By default, ten records display per page. To view more records per page, enter the appropriate number in the field.

9. Click **Save**. A confirmation message appears.

   Note: Changes are also saved for fields that may no longer be visible with the current filter.

How to View Data Export Manager Information for Assigned Roles

1. On the start page, search for and select a staff member. For more information, see *Staff Search*.
2. On the Staff page, click **Security Settings** from the staff pages menu. The Security Settings page appears.
3. Click the **Admin Access and Roles** tab.
4. Click the [Information Icon] next to the role for which you want to view Data Export Manager information. Data Export Manager information appears, including the default level followed by the data sources users assigned to this role can edit and/or export.
5. When done viewing, click **OK** to close the pop-up.

Export Data Using the Data Export Manager

This procedure may be performed for a selected school or at the district level. This procedure may be performed for a student selection or teacher selection depending on your **Export From** selection. For more information about selecting students, see *Student Search*. For more information about selecting staff, see *Staff Search*.

Note: The Data Export Manager page is also accessible via **Start > System > Page and Data Management > Data Export Manager**.

How to Export Data Using the Data Export Manager

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Importing & Exporting**. The Importing & Exporting page appears.
3. Under Data Export, click **Data Export Manager**. The Data Export Manager page appears.

   Note: The Export tab appears selected by default.

4. Use the following table to enter information in the Select Columns to Export section:

   Note: Information display based on your security permissions.

Field	Description
Category	Choose the category that contains the data you want to export from the pop-up menu: • **Tables** displays top 20 PowerSchool tables followed by most other PowerSchool tables. • **Database Extensions** displays database extensions. • **PowerSchool Data Sets** displays approved data sets and any preexisting or new export modules. • **Additional Data Sets** displays all other data sets and third-party PowerQueries. • **Show All** displays all of the above. • **[Functional Categories]**, displays any functional categories within PowerSchool that have display names, such as Attendance, Grading, or Scheduling.

<table>
<tr><td></td><td>[Uncategorized] displays any functional categories within PowerSchool that do not have display names.</td></tr>
<tr><td>Export From</td><td>Choose the data source that contains the data you want to export from the pop-up menu.

Note: Only data sources for which you have export access to all required tables and fields will be available for selection. If a data set appears shaded and cannot be selected, you do not have field level access to one or more fields used in that data set.

Note: Descriptions have been defined for many of the mass data modules and can be further customized to provide more detailed instructions. To view a list of descriptions:
On the start page, choose System under Setup in the main menu. The System Administrator page appears.
Under Data Management, click Page and Data Management. The Page and Data Management page appears.
Under Localization, click Localize PowerSchool. The Localize PowerSchool page appears.
Click the Data tab.
Choose PowerSchool Customer Defined Data from the Choose the functional area or item you want to translate pop-up menu.
Choose Mass Data Module from the Category pop-up.
Click Retrieve Text. Descriptions for the mass data module appear in the Text for translation section.
For more information, see Localize Using Batch Mode.</td></tr>
<tr><td>Select All</td><td>If the data set contains more than one table or other entity, this checkbox appears. Do one of the following:
To export all fields from all tables or entities within the data set, select the checkbox. Note all the checkboxes appear selected.</td></tr>
</table>

	• To remove all fields from all tables or entities within the data set, deselect the checkbox. Note all the checkboxes appear deselected.
[Data Source]	After choosing the data source, the available fields appear in a field list on the left side of the page. **Note:** Click the arrow to collapse a section. Click the arrow again to expand a section. Do one of the following: • To export all fields within a section, select the checkbox by the table or section name. Note all the checkboxes appear selected. • To remove all fields within a section, deselect checkbox by the table or section name. Note all the checkboxes appear deselected. • To export only certain fields within the data set, select the field checkboxes. • To remove a field, deselect the checkbox next to the appropriate field. **Note:** You can also remove a field by clicking the minus (-) button that appears on the right side of the page next to the field.
Sort	If the data set contains only one table or entity, the selected fields are sorted based on the order that the fields were selected. To modify the order of fields, use the up and down arrows to move fields. If the data set contains more than one table or entity, the selected fields are sorted based on the hierarchy of the parent, child, and sibling fields that were selected. Note the title above entity groupings. To modify the order of fields, use the up and down arrows to move fields. Fields within an entity can only be sorted within that entity. As such, some up and down arrows may be disabled to prevent invalid sorting.
Field	The internal PowerSchool field name as it appears in the data set.

Label Used on Export	Enter the name you want to appear for the field in the export file. **Note:** This field is populated with the field name from the data set. This field cannot be left blank.
Remove	Click to remove a field.

5. Click **Next**.
6. Use the following tables to review information in the Select/Edit Records to Export from [Data Source] section:

   Note: Information displays based on your security permissions.

Field	Description
Built In Filters	Click the arrow to expand this section. Click the arrow again to collapse this section. To narrow the list: 1. Enter information as needed. 2. Click **Apply**. The page refreshes and display filtered results. **Note:** To remove all filter selections, click **Clear**. **Note:** This section displays based on your **Export From** selection. If this section does not appear, there are no built in filters for your selection.
Column Filters	Click the arrow to expand this section. Click the arrow again to collapse this section. To narrow the list: 1. Choose the column by which you want to filter records from the **Filter by** pop-up menu. 2. Select a comparator from the **Value** pop-up menu. 3. Enter search criteria in the **Value** field. 4. To add another filter, click **+** and repeat Step 1. 5. To delete a filter, click **-** next the filter.

<table>
<tr><td></td><td>
6. Optionally, click Show Records. The page refreshes and display filtered results.

Note: To remove all filter selections, click Clear.

Note: This section displays based on your selected data set. If this section does not appear, there are no column filters for the data set.

Note: Some fields in your selected data set may not be available for filtering.
</td></tr>
<tr><td>[Export Rows]</td><td>
Select one of the following options:

Export All Rows to apply any Built In Filters.
Export Filtered Rows to apply Built In Filters and Column Filters.

</td></tr>
<tr><td>Edit All Filtered Records</td><td>
It is extremely important to note that you are making a permanent mass-change to data in the database when you use this feature.

Click Show Records in order for this button to appear.
Click to edit field data for multiple records. The Edit drawer appears.
To narrow the list, enter search criteria in the Filter field.
Select the field option and then enter data.
Click Submit. The Edit closes.

Note: Only extensions from the originally selected database extension are editable.

Note: This button does not appear if you have read-only access to the page.
</td></tr>
<tr><td>Actions</td><td>

Click the Edit icon to update field data. The Edit drawer appears.
Edit information at needed.
Click Submit. The Edit closes.

</td></tr>
</table>

	Note: Only extensions from the originally selected database extension are editable. **Note:** This column does not appear if you have read-only access to the page.
[Data Source]	Fields to be exported. **Note:** Click column headings to sort in ascending order. Click again to sort in descending order.
Field Definitions	To get field definitions for the selected records: 1. Click **Get Data Dictionary Field Definitions**. A confirmation message appears. 2. Click **Download Field Definitions File**. The CSV file is downloaded and appears in separate tab.

7. Click **Next**.
8. Use the following table to enter information in the Export Summary and Output Options fields:

   Note: Information display based on your security permissions.

Field	Description
Export Summary | Records to Export	The number of records to be exported appears. **Note:** This number may differ from the record selection when the selected data set is from extended tables. If exporting from a standalone extended table, the total number of records displays regardless of students/teachers selection. If exporting from a 1-to-1 or 1-to-many extended table, the number of records that display depends on whether current student/teacher selection or all active students/teachers were selected.
Export Format | Export File Name	Enter the name of the export file. When export is scheduled dynamic file naming:

	%d = Date in YYYY-MM-DD format. 2016-11-14 %t = Time in HR24MI format. 1312 %s = CurSchoolID. 100 For example, c:\data\myfile-%d-%t-%s.txt would produce a file called c:\data\myfile-2016-11-14-1312-100.txt when executed. **Note:** Default is set to **[selected data source]_export.txt**. **Note:** Special characters in file names may not display properly depending on your operating system. For example, characters considered reserved by your operating system or file names with leading or trailing periods.
Export Format | Line Delimiter	Use the pop-up menu to choose which delimiter to use to separate the lines of data in the export file: **CR**: Carriage return (default) **CRLF**: Carriage return/line feed **LF**: Line feed **Other**: If selected, enter the type of end-of-line delimiter in the adjacent field, such as a semicolon. **Note:** Only one character may be entered. A double quote character is not allowed.
Export Format | Field Delimiter	Use the pop-up menu to choose which delimiter to use to separate the fields in the export file: **Tab** (default) **Comma** **Other**: If selected, enter the field delimiter in the adjacent field. **Note:** Only one character may be entered. A double quote character is not allowed.
Export Format | Character Set	Use the pop-up menu to choose the character set for the export file. This selection is specific to the operating system where the import file was created:

	• **Windows ANSI** (Windows) • **Mac Roman** (Mac) • **ISO 8859-1** • **UTF-8** **Note:** Defaults to the appropriate character set based on the client operating system.
Export Options | Include Column Header	Do one of the following: • Select the checkbox if you want a header row to appear in the export file. • Deselect the checkbox if you do not want a header row to appear in the export file. **Note:** By default, the checkbox is selected. **Note:** Column headers are defined using the **Label** field in the Select Columns to Export section.
Export Options | Surround "Field Values" in Quotes	Do one of the following: • Select the checkbox if you want the exported field values to appear with quotes around them in the export file. • Deselect the checkbox if you do not want the exported field values to appear with quotes around them in the export file. **Note:** By default, the checkbox is not selected.

9. Use the following table to do one of the following:

Field	**Description**
Export	Click **Export**. Save and/or download the export file to your desktop (varies depending on your browser). **Note:** If using Excel to view an export file that includes fields containing characters that are being used as a record delimiter,

	content may not be parsed correctly. It is recommended that you use a text editor to view the export file.
Save Template	For detailed information, see Step 5 of *How to Create a Template*.

Managing My Templates

If you export the same data frequently, you can create a template so that you don't have to define the fields, filters and Export Options used every time you perform an export. Once you create a template, the template appears on the My Templates tab. From the My Templates tab, you can easily manage your templates.

Note: Your templates are unique to your account and can be used at any school that you can switch to.

Note: Exports are always run within your current school context. Be careful when saving School ID filters as part of a template as this will prevent the export from exporting data at other schools.

How to Create a Template

Note: Student and staff selections are not saved with a template. If a specific set of student or staff is required for an export, use the column filters.

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Importing & Exporting**. The Importing & Exporting page appears.
3. Under Data Export, click **Data Export Manager**. The Data Export Manager page appears.
4. Prepare the export as needed. All selected Fields, Filters, and Export Options will be saved with the template. For detailed information, see *How to Export Data Using the Data Export Manager*.
5. Click **Save Template**. The Save Export Template pop-up appears.
6. Enter the template name in the **Name** field.
7. Enter a description in the **Description** field.
8. Note the mapped fields that are included in the template.
9. Click **Save as New**. A confirmation message appears.

How to View Templates

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Importing & Exporting**. The Importing & Exporting page appears.
3. Under Data Export, click **Data Export Manager**. The Data Export Manager page appears.
4. Click the **My Templates** tab. The My Templates tab displays the following information for each template:

   Note: Click column headings to sort templates in ascending order. Click again to sort in descending order.

5. Use the following table to do one of the following:

Field	Description
Template	The name of the template. Click to load for export or editing.
Description	The description for the template.
Data Source	The data source from which the template is derived.
Actions	The actions that may be taken with the template. Use the **Schedule** icon to schedule the template for export. For more information, see *How to Schedule an Export*. Use the **Delete** icon to delete the template. For more information, see *How to Delete a Template*.

How to Apply a Template

Note: Current student and staff selections are not saved with a template. If a specific set of student or staff is required for an export, use the column filters.

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Importing & Exporting**. The Importing & Exporting page appears.
3. Under Data Export, click **Data Export Manager**. The Data Export Manager page appears.
4. Click the **My Templates** tab. The My Templates tab appears.

Note: Click column headings to sort templates in ascending order. Click again to sort in descending order.

5. Click the name of the template you want to apply. The Export tab appears.
6. To continue, see Step 4 of *How to Export Data Using the Data Export Manager*.

How to Create a Template from an Existing Template

Note: Student and staff selections are not saved with a template. If a specific set of student or staff is required for an export, use the column filters.

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Importing & Exporting**. The Importing & Exporting page appears.
3. Under Data Export, click **Data Export Manager**. The Data Export Manager page appears.
4. Click the **My Templates** tab. The My Templates tab appears.

   Note: Click column headings to sort templates in ascending order. Click again to sort in descending order.

5. Click the name of the template you want to use to create a new template. The Export tab appears.
6. Prepare the export as needed. For detailed information, see *How to Export Data Using the Data Export Manager*.
7. Click **Save Template**. The Save Export Template pop-up appears.
8. Enter the template name in the **Name** field.
9. Enter a description in the **Description** field.
10. Click **Save as New**. A confirmation message appears.

How to Edit a Template

Note: Student and staff selections are not saved with a template. If a specific set of student or staff is required for an export, use the column filters.

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Importing & Exporting**. The Importing & Exporting page appears.
3. Under Data Export, click **Data Export Manager**. The Data Export Manager page appears.
4. Click the **My Templates** tab. The My Templates tab appears.

Note: Click column headings to sort templates in ascending order. Click again to sort in descending order.

5. Click the name of the template you want to edit. The Export tab appears.
6. Prepare the export as needed. For detailed information, see *How to Export Data Using the Data Export Manager*.
7. Click **Save Template**. The Save Export Template pop-up appears.
8. Click **Save**. A confirmation message appears.

How to Delete a Template

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Importing & Exporting**. The Importing & Exporting page appears.
3. Under Data Export, click **Data Export Manager**. The Data Export Manager page appears.
4. Click the **My Templates** tab. The My Templates tab appears.

   Note: Click column headings to sort templates in ascending order. Click again to sort in descending order.

5. Click the **Delete** icon next to the template you want to delete.
6. Click the **Confirm Delete** icon. A confirmation message appears.

Managing Scheduled System Templates

Once a template is scheduled for export, it becomes a system template and is available for exporting data associated only within the school context it is created. System templates created at the district office will export data from all schools.

Data exported from System Templates do not have field level security restrictions. However, users who are permitted to set up and run scheduled system templates do not necessarily have access to the export destination. Security of the export destination is managed by its own security mechanisms, outside of PowerSchool.

How to Schedule a Template for Export

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Importing & Exporting**. The Importing & Exporting page appears.
3. Under Data Export, click **Data Export Manager**. The Data Export Manager page appears.

4. Click the **My Templates** tab. The My Templates tab appears.

   Note: Click column headings to sort templates in ascending order. Click again to sort in descending order.

5. Click the **Schedule Template** icon next to the template you want to schedule for export. The Set Schedule drawer appears.

   Note: This button only appears for users with a role permitted to edit scheduled system templates.

6. Use the following tables to enter information in the fields:

Field	Description
Schedule Active	By default, this checkbox is selected indicating PowerSchool is scheduled to automatically export a copy of the data. If you do not want PowerSchool to automatically export a copy of the data, deselect the checkbox.
Days to Execute	Select the checkbox next to each day of the week you want PowerSchool to automatically export a copy of the data: • **Mon** • **Tues** • **Wed** • **Thu** • **Fri** • **Sat** • **Sun**
When to Execute	Enter the hour and minutes you want PowerSchool to automatically export a copy of the data.
Send Output To	Choose the method by which you want to export a copy of the data from the pop-up menu: • **PowerSchool Folder**

	• **SFTP** **Note:** For more information about SFTP, see *Remote Connection Management*.
Path	Enter the path where you want the exported file saved. A relative path may be entered, such as /folder/subfolder. In which case, the file will be written to the given path relative to the PowerSchool data folder as defined by the PowerSchool Installer. An absolute path preceded by drive letter may also be entered, such as F:\exportdirectory\. Absolute paths may only refer to local drives in a single node environment or to network drives as defined by the PowerSchool Installer for multi-node environments.
Email Completion Report To	Enter the email addresses of the people you want to send a completion report to each time it exports this file. Separate multiple addresses with commas.

7. Click **Save**. A confirmation message appears. The scheduled template now appears on the Scheduled System Templates tab.

How to View Scheduled System Templates

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Importing & Exporting**. The Importing & Exporting page appears.
3. Under Data Export, click **Data Export Manager**. The Data Export Manager page appears.
4. Click the **Scheduled System Templates** tab. The Scheduled System Templates tab appears.
5. Use the following tables to view information in the fields:

Field	Description
Template	The name of the template scheduled for export. Click to load for export or editing.

	Note: When template is scheduled, the name of the template is appended with (copy).
Data Source	The data source from which the template is derived.
Status	Indicates whether or not the scheduled export is set active. For more information, see *Schedule Active*.
Last Run	Indicates one of the following: • The date and time the scheduled export completed. • The date and time the scheduled export failed. • The date and time the scheduled export began running.
Actions	The actions that may be taken with the scheduled export. Use the **Edit** icon to edit scheduled export options. For more information, see *How to Edit System Template Schedule Options*. Use the **Run Now** icon to run the scheduled export immediately. For more information, see *How to Run a Scheduled System Template*. Use the **Delete** icon to delete a scheduled export. For more information, see *How to Delete a Scheduled System Template*.

How to View Scheduled System Template Results

Once a scheduled export runs, navigate to where the exported file was saved (designated path) to view scheduled export results.

How to Edit System Template Schedule Options

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Importing & Exporting**. The Importing & Exporting page appears.
3. Under Data Export, click **Data Export Manager**. The Data Export Manager page appears.
4. Click the **Scheduled System Templates** tab. The Scheduled System Templates tab appears.

Note: Click column headings to sort templates in ascending order. Click again to sort in descending order.

5. Click the **Edit** icon next to the template you want to edit. The Set Schedule drawer appears.
6. Edit as needed. For field descriptions, see *How to Schedule an Export*.
7. Click **Save**. A confirmation message appears.

How to Run a Scheduled System Template Immediately

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Importing & Exporting**. The Importing & Exporting page appears.
3. Under Data Export, click **Data Export Manager**. The Data Export Manager page appears.
4. Click the **Scheduled System Templates** tab. The Scheduled System Templates tab appears.

   Note: Click column headings to sort templates in ascending order. Click again to sort in descending order.

5. Click the **Run Now** icon next to the template you want to run. A confirmation message appears.
6. Navigate to where the exported file was saved (designated path) to view scheduled export results.

How to Delete a Scheduled System Template

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Importing & Exporting**. The Importing & Exporting page appears.
3. Under Data Export, click **Data Export Manager**. The Data Export Manager page appears.
4. Click the **Scheduled System Templates** tab. The Scheduled System Templates tab appears.

   Note: Click column headings to sort templates in ascending order. Click again to sort in descending order.

5. Click the **Delete** icon next to the template you want to delete.
6. Click the **Confirm Delete** icon. A confirmation message appears.

Import and Export Standards

Using the PowerSchool import and export feature, you can manage standards more efficiently for your district.

There are three areas in which you can import and export standards into or out of PowerSchool. Each area provides specific information for managing standards.

- Standards: District List for importing and exporting general information and associations for standards.
- Standards: Course Weight for importing and exporting course weights for a parent standard or lower level standard.
- Standards: Final Grade By Class for importing and exporting standards final grades.

You can import your standards into PowerSchool and make them available for teachers to use in PowerTeacher Pro.

The Data Import Manager page is accessible via **Start > System > Page and Data Management > Data Import Manager**. You must have the correct security permissions and user roles in order to use this feature.

Standards: District List

Use the Standards: District List to mass update general standards information, such as the identifier, conversion scale, grade scale, or parent identifier.

How to Export Standards: District List

When updating standards, you can either use the Standards ID or the identifier and year. You can obtain the ID for each standard by exporting the Standards: District List first. You can use the export to add or change data and import it back in to PowerSchool.

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Importing & Exporting**. The Importing & Exporting page appears.
3. Under Data Export, click **Data Export Manager**. The Data Export Manager page appears.
4. Select P**owerSchool Data Sets** from the Category pop-up menu.
5. Select **Standards: District List** from the **Export From** pop-up menu. The Standards: District List available fields appear in a field list on the left side of the page.
6. Select the fields you want to export.

- If you want to export the data to make changes and then import it back in to PowerSchool, select the **ID** field, as this may make the import a bit faster than using the identifier and year. If the ID, Identifier and Year are all in the import file, the import process will key off of the ID.
- If you want to use this export to create new grade scales and import them into PowerSchool to be used by PowerTeacher Pro, the following fields are required in the file:
    - **ID**
    - **Name**
    - **GradescaleItemDCID**
    - **ConversionScaleID**
    - **YearID**

7. Change the sort order and labels for the export as needed.
8. Click **Next**. The Select Columns to Export page appears.
9. Set the filter criteria, and then click **Show Records**. The data appears on the page.
10. Click the **Pencil** icon next to the record you want to edit. The Edit drawer appears.
11. Enter the changes for the record and click **Submit** to close the Edit drawer.
12. Click **Next** on the Data Export Manager page.
13. Select the export output options, and then click **Export**.

How to Import Standards: District List

You can make additional changes as needed to the file prior to importing back in to PowerSchool.

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Importing & Exporting**. The Importing & Exporting page appears.
3. Click **Data Import Manager**. The Data Import Manager page appears.
4. Select the source file for the import.
5. Select **Standards: District List** from the **Import Into** pop-up menu, and then select the **Field Delimiter** for the file.
6. Click **Next**.
7. Select the **PowerSchool Field** to map the information from the import file from the pop-up menu.
8. Click **Next**.
9. Select the import options for the file.

   Note: The Longitudinal ID is a number used to link a standard from year to year. If you do not specify the Longitudinal ID in the import file, you have the option of retrieving the ID of the matching identifier from a previous year or creating a new value.

10. Click **Import**.

Standards: Course Weights

To import course weights, you must have standards already created and associated to courses in PowerSchool.

In the Standards: Course Weights dataset, the Parent Weight is used when calculating a final traditional grade. Modifying this weight will impact final traditional grades.

Child Weight is rolled up to the Parent Weight in final standards grades.

How to Export Standards: Course Weights

You can export the Standards: Course Weights data set, make any necessary changes, and import the updated dataset back in to PowerSchool.

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Importing & Exporting**. The Importing & Exporting page appears.
3. Under Data Export, click **Data Export Manager**. The Data Export Manager page appears.
4. Select **PowerSchool Data Sets** from the **Category** pop-up menu.
5. Select **Standards: Course Weights** from the **Export From** pop-up menu. The Standards: Course Weights available fields appear in a field list on the left side of the page.
6. Select the fields you want to export.
    - If you want to make changes to this dataset and import it back in to PowerSchool, the **YearID** field is required in the data import file when creating new course weights via import. Additionally, you can include a combination of the following fields in the import file:
        - **ParentCourse**
        - **ParentStandardID**
        - **StandardCourceAssocID**
7. Change the sort order and labels for the export as needed. You can only filter on certain Parent record fields.
8. Click **Next**. The Select Columns to Export page appears.
9. Set the filter criteria, and then click **Show Records**. The data appears on the page.
10. Click the **Pencil** icon next to the record you want to edit. The Edit drawer appears. You can only edit Parent weights using this feature.
11. Enter the changes for the record, and then click **Submit** to close the Edit drawer.
12. Click **Next** on the Data Export Manager page.

13. Select the export output options, and then click **Export**.

How to Import Standards: Course Weights

You can make additional changes as needed to the file prior to importing back in to PowerSchool.

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Importing & Exporting**. The Importing & Exporting page appears.
3. Click **Data Import Manager**. The Data Import Manager page appears.
4. Select the source file for the import.
5. Select **Standards: Course Weights** from the **Import Into** pop-up menu and select the **Field Delimiter** for the file.
6. Click **Next**.
7. Select the **PowerSchool Field** to map the information from the import file from the pop-up menu.
8. Click **Next**.
9. Select the import options for the file.
10. Click **Import**.

Standards: Final Grades By Class

Export a list of all standards final grades. This export allows you to choose if you want to use the current student selection to export final grades for a selection of students.

How to Export Standards: Final Grades By Class

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Importing & Exporting**. The Importing & Exporting page appears.
3. Under Data Export, click **Data Export Manager**. The Data Export Manager page appears.
4. Select **PowerSchool Data Sets** from the **Category** pop-up menu.
5. Select **Standards: Final Grades By Class** from the **Export From** pop-up menu. The Standards: Final Grades By Class available fields appear in a field list on the left side of the page.
6. Select the fields you want to export.
7. Change the sort order and labels for the export as needed.
8. Click **Next**. The Select Columns to Export page appears.

9. Select the **Use current student selection** checkbox to use your current student selection for the export. Select the **Year to include** from the pop-up menu. Additionally, you can filter on Standard Identifiers, Course Numbers, and StoreCodes. The export will only export standards grades for the schools for which you have security permissions enabled.
10. Click **Next.**
11. Select the export output options and click **Export**.

How to Import Standards: Final Grades By Class

You can make changes as needed to the file prior to importing back in to PowerSchool.

1. O the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Importing & Exporting**. The Importing & Exporting page appears.
3. Click **Data Import Manage**r. The Data Import Manager page appears.
4. Select the source file for the import.
5. Select **Standards: Final Grades By Class** from the **Import Into** pop-up menu and select the **Field Delimiter** for the file.
6. Click **Next**.
7. Select the **PowerSchool Field** to map the information from the import file from the pop-up menu.
8. Click **Next**.
9. Select the import options for the file.
10. Click **Import**.

Incident Management User Guide

PowerSchool

Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

Table of Contents

Introduction

Use Incident Management to specify and record an entry for school or district-related discipline incidents. These incidents may include from zero to many participants and may include students, teachers, and persons known or unknown, not enrolled or employed by the school district. Incidents may also include from zero to many objects, such as weapons, drugs, vehicles, and any other item that is part of the incident. Actions may also be attached to incidents in a zero to many relationship and describe actions taken as a result of the incident. Objects and actions may be linked to participants as well as the incident itself. For example, a weapon may be linked directly to a person or simply found at the scene. The action of "increased security" may be related to an incident of vandalism with no participants or linked directly to a participant as in suspension for a student who committed an offense.

Creating discipline incidents involves selecting the incident types, codes, and subcodes which are created at the district level. This ensures that all schools are using the same data to enter discipline incidents. For more information, see *Incident Types*, *Incident Codes*, *Incident Subcodes*, and *Secondary Incident Subcodes*. Search for existing incidents on the Incident List page or create a new incident on the Incident Detail page. For more information, see *Incident Search and List* and *Discipline Incidents*.

Incident codes allow you to manage specific information by category, subcategory, and incident type. These codes and subcodes appear on the Incident Detail page for those users with assigned page-level security. Security settings determine who can view, create, and edit incidents. For more information, see *How to Edit Security Groups*.

Access incident information either by viewing incidents within PowerSchool by performing an ODBC/JDBC query using a third-party application such as Microsoft Excel. Future access through reports is planned and state reporting extracts will use this incident data.

Setup

Incident Code Types

Code types are used as an organizational tool to categorize incidents. PowerSchool includes the following 11 system-defined, non-editable code types that provide the basis from which all user-defined incident codes, subcodes, and secondary subcodes are created:

Category	Description
Action Attributes	Use to describe further details about an action taken in response to an incident. Defined codes and subcodes display on the Add/Update Action dialog accessed in the Incident Element section of the Incident Detail page. Information appears based on the data type selected for each action attribute, text, number, or date fields or as a yes/no or subcode selection pop-up menus. For more information, see *How to Add an Action*.
Action Change Codes	Use to describe reasons an action was changed. Defined codes display as a pop-up menu on the Add/Update Action dialog accessed in the Incident Builder section of the Incident Detail page. For more information, see *How to Add an Action*.
Action Codes	Use to describe actions taken in response to an incident. Defined codes and subcodes display as pop-up menus on the Add/Update Action dialog accessed in the Incident Elements section of the Incident Detail page. A comment field for the selected code may also appear providing the ability to enter additional information about the code. For more information, see *How to Add an Action*.
Attribute Codes	Use to describe further details about of an incident. Defined codes display as headings and subcodes display as checkboxes on the Add/Update Attribute dialog accessed in the Incident Element section of the Incident Detail page. For more information, see *How to Add an Attribute*.

Behavior Codes	Use to describe the type of behavior for which the discipline incident was created. Defined codes and subcodes display as pop-up menus on the Add/Update Behavior dialog accessed in the Incident Elements section of the Incident Detail page. A comment field for the selected code may also appear providing the ability to enter additional information about the code. For more information, see *How to Add a Behavior*.
Duration Codes	Use to describe the period of time the incident lasted. Defined codes and subcodes display as pop-up menus on the Add/Update Action dialog in the Incident Element section of the Incident Detail page. A comment field for the selected code may also appear providing the ability to enter additional information about the code. For more information, see *How to Add an Action*.
Location Codes	Use to describe the place where the incident occurred. Up to 50 characters may be entered when creating codes and subcodes. Defined codes and subcodes display as pop-up menus in the Incident Description section of the Incident Detail page. A comment field for the selected code may also appear providing the ability to enter additional information about the code. For more information, see *How to Create a Discipline Incident*.
Object Codes	Use to describe an item used in the incident. Defined codes and subcodes display as pop-up menus on the Add/Update Object dialog in the Incident Element section of the Incident Detail page. A comment field for the selected code may also appear providing the ability to enter additional information about the code. For more information, see *How to Add an Object*.
Participant Attribute Codes	Use to describe further detail about a participant. Defined codes and subcodes display as pop-up menus on the Add/Update Participant Attributes dialog in the Incident Builder section of the Incident Detail page. A comment field for the selected code may also appear providing the ability to enter additional information about the code. For more information, see *How to Create a Discipline Incident*.

Participant Roles Codes	Use to describe a participant's role in the incident. There are four system-defined codes: Reporter, Victim, Witness and Offender. While the codes are non-editable, you can define subcodes to provide more detail about a participant's role. Defined codes and subcodes display as pop-up menus on the Add/Update Participant Attributes dialog in the Incident Builder section of the Incident Detail page. A comment field for the selected code may also appear providing the ability to enter additional information about the code. For more information, see *How to Create a Discipline Incident*.
Time Codes	Use to describe the period of time that the incident took place. Defined codes and subcodes display as pop-up menus in the Incident Description section of the Incident Detail page. A comment field for the selected code may also appear providing the ability to enter additional information about the code. For more information, see *How to Create a Discipline Incident*.

Incident Codes

There is no limit to the number of incident codes you can create for each code type, with the exception of Participant Roles Codes, which is limited to four system-defined, non-editable incident codes. For example, using the code type of Action, you can create a School Action incident code. Then, create subcodes such as Community Service, Counseling, and In-School Suspension to further define the School Action code. For more information about incident subcodes, see *Incident Subcodes*.

Code Type	Code	Subcode
Action	School Action	Community Service Counseling In-School Suspension

How to Add an Incident Code

Use this procedure to add an incident code. Add as many incident codes as needed per code type, with the exception of Participant Roles Codes, which is limited to four system-defined, non-editable incident codes.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Discipline and Log Entries, click **Incident Management**. The Incident Management Setup page appears.
3. Click **Code & Subcode Setup**. The Incident Management Code & Subcode Configuration page displays the Code Types list.

   Note: Click the arrow next to **Code Types** to expand the list. Click the arrow again to condense the list.

4. From the Code Types list, select the code type for which you want to create a code. The Incident Management Code & Subcode Configuration page displays the [Code Type] Codes list.

   Note: Click the arrow next to [Code Type] Codes to expand the list. Click the arrow again to condense the list.

5. Click the **Plus (+)** button in the upper-right corner. The Add New Code dialog appears.
6. Use the following table to enter information in the applicable fields:

Field	Description
Code Type	By default, the code type selected on the Incident Management Setup page appears. If needed, choose another code type from the pop-up menu. **Note**: This pop-up menu does not appear if adding an incident code using Action Attributes.
Data Type	Choose the graphical user interface that you want the action attribute to appear as on the Add Action dialog from the pop-up menu: • **Text** field • **Number** field • **Date** field • **Yes/No** pop-up menu • **Select** pop-up menu (subcodes permitted)

	Note: This pop-up menu only appears if adding an incident code using Action Attributes.
Category	Enter the name of the code category. **Note**: This is a required field.
This Action Affects Attendance	Do one of the following: • Select the checkbox to indicate this action affects attendance. • Leave the checkbox blank to indicate this action does not affect attendance. **Note:** This field only appears for Action Codes.
State Aggregate Report Code	Enter the state reporting code for this category. This code can be specified by the state department of education, or it can be a district-defined code (for example, dress code violations with several subcodes defined for the type of violation). For state-defined codes, see your PowerSchool state reporting setup guide. You can define subcodes for each aggregate report code. The subcodes roll up to the aggregate report code.
Display Order	Enter the order in which you want the code displayed on the pop-up menu or Incident Detail page, depending on the parent code type.
Severity	Enter the severity of the behavior. For state-defined severity codes, see your PowerSchool state reporting setup guide. **Note:** This field only appears if adding an incident code using Behavior Codes.
This code is not divided into subcodes	Select this option if there are no subcodes to associate to this code type. **Note:** This option does not appear if adding an incident code using Action Attributes where **Text**, **Number**, **Date**, or **Yes/No** is selected from the **Data Type** pop-up menu.

This code has at least one subcode	Select this option if there is a subcode to associate to this code type. The following fields appear: • **Subcode**: Enter the name of the subcode. • **Short Description**: Enter a short description for this subcode. • **Full Description**: Enter a full description for this subcode. To enter multiple subcodes for this code type, see *Incident Subcodes*. **Note:** This option does not appear if adding an incident code using Action Attributes where **Text**, **Number**, **Date**, or **Yes/No** is selected from the **Data Type** pop-up menu.
State Detail Report Code	Enter the state detail report code. This code can be specified by the state department of education, or it can be a district-defined code (for example, dress code violations with several subcodes defined for the type of violation). For state-defined codes, see your PowerSchool state reporting setup guide. You can define subcodes for each aggregate report code. The subcodes roll up to the aggregate report code. Multiple subcodes can be assigned to one aggregate report code. To assign additional subcodes, see *Incident Subcodes*.
State Reportable	Select the checkbox to mark this code type reportable to the state department of education. This value is used by state reports to identify incidents that have state-reportable codes and subcodes assigned.
Police Reportable	Select the checkbox to mark this code type reportable to the local police for all cases.
Allow Comment	Select the checkbox to include a comment field for the selected code providing the ability to enter additional information about the code. If the **Allow Comment** checkbox is selected, do one of the following:

	• Select the **Make this Comment Mandatory** checkbox to make entering a comment required. • Deselect the **Make this Comment Mandatory** checkbox to make entering a comment optional.
Policy Description	Enter any policy-related information that you want to communicate to users who will be working with this code.

7. Click **Submit**. The new code appears in the [Code Type] Codes list.
8. Repeat Step 5 through Step 7 for each additional code you want to create using the selected code type.

How to Edit an Incident Code

Use this procedure to edit an incident code, with the exception of the system-defined Participant Roles Codes, which are non-editable.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Discipline and Log Entries, click **Incident Management**. The Incident Management Setup page appears.
3. Click **Code & Subcode Setup**. The Incident Management Code & Subcode Configuration page displays the Code Types list.

   Note: Click the arrow next to **Code Types** to expand the list. Click the arrow again to condense the list.

4. From the Code Types list, select the code type that contains the code you want to edit. The Incident Management Code & Subcode Configuration page displays the [Code Type] Codes list.

   Note: Click the arrow next to [Code Type] Codes to expand the list. Click the arrow again to condense the list.

5. From the [Code Type] Codes list, select the code you want to edit. The selected code appears highlighted.
6. Click the **Pencil** icon next to the code. The Edit Code dialog appears.

If you selected the **This code is not divided into subcodes** option when the code was created, the following fields display as editable:

- **Category**
- **State Aggregate Report Code**
- **Display Order**

If you selected the **This code has at least one subcode** option when the code was created, the following fields display as editable:

- **Category**
- **State Aggregate Report Code**
- **Display Order**
- **This code is not divided into subcodes**
- **This code has at least one subcode**
- **State Detail Report Code**
- **State Reportable**
- **Police Reportable**
- **Allow Comment**
- **Make this Comment Mandatory**

7. Edit the information as needed. For field descriptions, see *How to Add an Incident Code*.
8. Click **Submit**. The code without the Pencil icon appears in the [Code Type] Codes list.

How to Delete an Incident Code

Use this procedure to delete an incident code that may have been created in error or that is no longer in use, with the exception of the system-defined Participant Roles Codes, which are non-editable.

Note: If an incident code is associated to an incident, it cannot be deleted. First remove the incident code from all incidents using the code and then it may be deleted. For more information, see *How to Create a Discipline Incident*.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Discipline and Log Entries, click **Incident Management**. The Incident Management Setup page appears.
3. Click **Code & Subcode Setup**. The Incident Management Code & Subcode Configuration page displays the Code Types list.

Note: Click the arrow next to **Code Types** to expand the list. Click the arrow again to condense the list.

4. From the Code Types list, select the code type that contains the code you want to delete. The Incident Management Code & Subcode Configuration page displays the [Code Type] Codes list.

   Note: Click the arrow next to [Code Type] Codes to expand the list. Click the arrow again to condense the list.

5. From the [Code Type] Codes list, select the code you want to delete. The selected code appears highlighted.
6. Click the **Pencil** icon next to the code. The Edit Code dialog appears.
7. Click **Delete**. The code no longer appears in the [Code Type] Codes list.

Incident Subcodes

Once you have created an incident code, you can then create incident subcodes to further define the incident code. There is no limit to the number of subcodes you can create for each incident code. For example, using the code type of Location, you can create an On School Property incident code. Then, create subcodes such as Athletic Field, Cafeteria, and Playground to further define the On School Property code. For more information about incident codes, see *Incident Codes*.

Code Type	Code	Subcode
Location	On School Property	Athletic Field Cafeteria Playground

How to Add an Incident Subcode

Use this procedure to add an incident subcode. Add as many incident subcodes as needed per incident code.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Discipline and Log Entries, click **Incident Management**. The Incident Management Setup page appears.

3. Click **Code & Subcode Setup**. The Incident Management Code & Subcode Configuration page displays the Code Types list.

   Note: Click the arrow to expand the list. Click the arrow again to condense the list.

4. From the Code Types list, select the appropriate code type. The Incident Management Code & Subcode Configuration page displays a list of [Code Type] Codes.

   Note: Click the arrow to expand the list. Click the arrow again to condense the list.

5. From the [Code Type] Codes list, select the code for which you want to create a subcode. The selected code appears highlighted. If any subcodes have already been created for the code, the code expands to display the list of subcodes.

   Note: Click the arrow to expand the list. Click the arrow again to condense the list.

6. Click the **Plus (+)** button for the selected code. The Add New Subcode dialog appears.
7. Use the following table to enter information in the applicable fields:

Field	Description
Subcode	Enter the name of the subcode. **Note**: This is a required field.
This Action Affects Attendance	Do one of the following: • Select the checkbox to indicate this action affects attendance. • Leave the checkbox blank to indicate this action does not affect attendance. **Note:** This field only appears for Action Subcodes.
Short Description	Enter a short description for this subcode.
Full Description	Enter a full description for this subcode.

State Detail Report Code	Enter the state detail report code. This code can be specified by the state department of education, or it can be a district-defined code (for example, dress code violations with several subcodes defined for the type of violation). For state-defined codes, see your PowerSchool state reporting setup guide.
Display Order	Enter the order in which you want the code displayed on the pop-up menu or Incident Detail page (depending on the parent code type).
State Reportable	Select to mark this code type reportable to the state department of education.
Police Reportable	Select to mark this code type reportable to the local police.
Allow Comment	Select the checkbox to include a comment field for the selected subcode providing the ability to enter additional information about the subcode. If the **Allow Comment** checkbox is selected, do one of the following: • Select the **Make this Comment Mandatory** checkbox to make entering a comment required. • Deselect the **Make this Comment Mandatory** checkbox to make entering a comment optional.
Policy Description	Enter any policy-related information that you want to communicate to users who will be working with this subcode.

8. Click **Submit**. The new subcode appears under the selected code.
9. Repeat Step 5 through Step 8 for each additional subcode.

How to Edit an Incident Subcode

Use this procedure to edit an incident subcode.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Discipline and Log Entries, click **Incident Management**. The Incident Management Setup page appears.
3. Click **Code & Subcode Setup**. The Incident Management Code & Subcode Configuration page displays the Code Types list.

   Note: Click the arrow to expand the list. Click the arrow again to condense the list.

4. From the Code Types list, select the appropriate code type. The Incident Management Code & Subcode Configuration page displays a list of [Code Type] Codes.

   Note: Click the arrow to expand the list. Click the arrow again to condense the list.

5. From the [Code Type] Codes list, select the code that contains the subcode you want to edit. The selected code appears highlighted and expands to display the list of subcodes.

   Note: Click the arrow to expand the list. Click the arrow again to condense the list.

6. Select the subcode you want to edit. The selected code appears highlighted.
7. Click the **Pencil** icon next to the subcode. The Edit Subcode dialog appears.
8. The following fields display as editable:
   - **Subcode**
   - **Short Description**
   - **Full Description**
   - **State Detail Report Code**
   - **Display Order**
   - **State Reportable**
   - **Police Reportable**
9. Edit the information as needed. For field descriptions, see *How to Add an Incident Subcode*.
10. Click **Submit**. The subcode without the Pencil icon appears under the selected code.

How to Delete an Incident Subcode

Use this procedure to delete an incident subcode that may have been created in error or that is no longer in use.

Note: If an incident subcode is associated to an incident, it cannot be deleted. First remove the incident subcode from all incidents using the subcode and then it may be deleted. For more information, see *How to Create a Discipline Incident*.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Discipline and Log Entries, click **Incident Management**. The Incident Management Setup page appears.
3. Click **Code & Subcode Setup**. The Incident Management Code & Subcode Configuration page displays the Code Types list.

   Note: Click the arrow to expand the list. Click the arrow again to condense the list.

4. From the Code Types list, select the appropriate code type. The Incident Management Code & Subcode Configuration page displays a list of [Code Type] Codes.

   Note: Click the arrow to expand the list. Click the arrow again to condense the list.

5. From the [Code Type] Codes list, select the code that contains the subcode you want to delete. The selected code appears highlighted and expands to display the list of subcodes.

   Note: Click the arrow to expand the list. Click the arrow again to condense the list.

6. Select the subcode you want to delete. The selected code appears highlighted.
7. Click the **Pencil** icon next to the subcode. The Edit Subcode dialog appears.
8. Click **Delete**. The subcode no longer appears under the selected code.

Secondary Incident Subcodes

When working with Behavior Codes, you can create up to four levels of subcodes for each Behavior Code created.

How to Add a Secondary Incident Subcode

Use this procedure to add a secondary incident subcode to a Behavior Code subcode.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Discipline and Log Entries, click **Incident Management**. The Incident Management Setup page appears.

3. Click **Code & Subcode Setup**. The Incident Management Code & Subcode Configuration page displays the Code Types list.

   Note: Click the arrow to expand the list. Click the arrow again to condense the list.

4. From the Code Types list, select **Behavior Codes**. The Incident Management Code & Subcode Configuration page displays a list of Behavior Codes.

   Note: Click the arrow to expand the list. Click the arrow again to condense the list.

5. From the Behavior Codes list, select the code you want to add a secondary subcode to. The selected code appears highlighted. If any subcodes have already been created for the code, the code expands to display the list of subcodes.

   Note: Click the arrow to expand the list. Click the arrow again to condense the list.

6. Select the subcode you want to add a secondary subcode to. The selected subcode appears highlighted. If any secondary subcodes have already been created for the subcode, the subcode expands to display the list of secondary subcodes.
7. Click the **Plus (+)** button for the selected subcode. The Add New Subcode dialog appears.
8. Use the following table to enter information in the applicable fields:

Field	**Description**
Subcode	Enter the name of the subcode. **Note**: This is a required field.
Short Description	Enter a short description for this subcode.
Full Description	Enter a full description for this subcode.
State Detail Report Code	Enter the state detail report code. This code can be specified by the state department of education, or it can be a district-defined code (for example, dress code violations with several subcodes defined for the type of violation). For state-defined codes, see your PowerSchool state reporting setup guide.

Display Order	Enter the order in which you want the code displayed on the pop-up menu or Incident Detail page (depending on the parent code type).
Severity	Enter the severity of the behavior. For state-defined severity codes, see your PowerSchool state reporting setup guide.
State Reportable	Select to mark this code type reportable to the state department of education.
Police Reportable	Select to mark this code type reportable to the local police.
Allow Comment	Select the checkbox to include a comment field for the selected subcode providing the ability to enter additional information about the subcode. If the **Allow Comment** checkbox is selected, do one of the following: • Select the **Make this Comment Mandatory** checkbox to make entering a comment required. • Deselect the **Make this Comment Mandatory** checkbox to make entering a comment optional.
Policy Description	Enter any policy-related information that you want to communicate to users who will be working with this subcode.

9. Click **Submit**. The new secondary subcode appears under the selected subcode.
10. Repeat Step 6 through Step 9 for each additional secondary subcode.

How to Edit a Secondary Incident Subcode

Use this procedure to edit a secondary incident subcode of a Behavior Code subcode.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Discipline and Log Entries, click **Incident Management**. The Incident Management Setup page appears.

3. Click **Code & Subcode Setup**. The Incident Management Code & Subcode Configuration page displays the Code Types list.

   Note: Click the arrow to expand the list. Click the arrow again to condense the list.

4. From the Code Types list, select **Behavior Codes**. The Incident Management Code & Subcode Configuration page displays a list of Behavior Codes.

   Note: Click the arrow to expand the list. Click the arrow again to condense the list.

5. From the Behavior Codes list, select the code you want to add a secondary subcode to. The selected code appears highlighted. If any subcodes have already been created for the code, the code expands to display the list of subcodes.

   Note: Click the arrow next to code to expand the list. Click the arrow again to condense the list.

6. Select the subcode that contains the secondary subcode you want to edit. The selected subcode appears highlighted. If any secondary subcodes have already been created for the subcode, the subcode expands to display the list of secondary subcodes.
7. Select the secondary subcode you want to edit. The selected secondary subcode appears highlighted.
8. Click the **Pencil** icon next to the secondary subcode. The Edit Subcode dialog appears.
9. Edit the information as needed. For field descriptions, see *How to Add a Secondary Incident Subcode*.
10. Click **Submit**. The subcode without the Pencil icon appears under the selected code.

How to Delete a Secondary Incident Subcode

Use this procedure to delete a secondary incident subcode that may have been created in error or that is no longer in use.

Note: If a secondary incident subcode is associated to an incident, it cannot be deleted. First remove the secondary incident subcode from all incidents using the subcode and then it may be deleted. For more information, see *How to Create a Discipline Incident*.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Discipline and Log Entries, click **Incident Management**. The Incident Management Setup page appears.

3. Click **Code & Subcode Setup**. The Incident Management Code & Subcode Configuration page displays the Code Types list.

   Note: Click the arrow to expand the list. Click the arrow again to condense the list.

4. From the Code Types list, select **Behavior Codes**. The Incident Management Code & Subcode Configuration page displays a list of Behavior Codes.

   Note: Click the arrow to expand the list. Click the arrow again to condense the list.

5. From the Behavior Codes list, select the code you want to add a secondary subcode to. The selected code appears highlighted. If any subcodes have already been created for the code, the code expands to display the list of subcodes.

   Note: Click the arrow to expand the list. Click the arrow again to condense the list.

6. Select the subcode that contains the secondary subcode you want to delete. The selected subcode appears highlighted. If any secondary subcodes have already been created for the subcode, the subcode expands to display the list of secondary subcodes.
7. Select the secondary subcode you want to delete. The selected secondary subcode appears highlighted.
8. Click the **Pencil** icon next to the secondary subcode. The Edit Subcode dialog appears.
9. Click **Delete**. The secondary subcode no longer appears under the selected subcode.

Incident Types

Once you have created incident codes and subcodes, you then must create incident types. Using incident types, you can control which users can view and enter specific types of incidents. There is no limit to the number of incident types you can create. For example, create a **Counselors** incident type. Then, use the security settings to allow a specific group to view and create the Counselors incident type. The incident types you define appear on the **Incident Type** pop-up menu on the Incident Detail page.

How to Add an Incident Type

Use this procedure to add an incident type. Add as many incident types as needed.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.

2. Under Discipline and Log Entries, click **Incident Management**. The Incident Management Setup page appears.
3. Click **Incident Types**. The Incident Types page appears.
4. Click **Add New Incident Type**. A blank **Name** field appears on the page.
5. Enter the new incident type in the **Name** field.
6. Click **Submit**. The Incident Management Setup page appears.

How to Edit an Incident Type

Use this procedure to edit an incident type.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Discipline and Log Entries, click **Incident Management**. The Incident Management Setup page appears.
3. Click **Incident Types**. The Incident Types page appears.
4. Edit the information as needed.
5. Click **Submit**. The Incident Management Setup page appears.

How to Delete an Incident Type

Use this procedure to delete an incident type that may have been created in error or that is no longer in use.

Note: If an incident type is associated to an incident, it cannot be deleted. First remove the incident type from all incidents using the type and then it may be deleted. For more information, see *How to Create a Discipline Incident*.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Discipline and Log Entries, click **Incident Management**. The Incident Management Setup page appears.
3. Click **Incident Types**. The Incident Types page appears.
4. Click the **Red X** icon next to the **Name** field you want to delete. The field appears dimmed on the page.
5. Click **Submit**. The Incident Management Setup page appears.

How to Change the Display Order of Incident Types

Use this procedure to change the order in which the incident types you created on the **Incident Type** pop-up menu on the Incident Detail page display.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Discipline and Log Entries, click **Incident Management**. The Incident Management Setup page appears.
3. Click **Incident Types**. The Incident Types page appears.
4. Click and hold the **Horizontal Three-Line** icon and drag up or down to change the display order of the incident type fields.
5. Click **Submit**. The new display order is saved, and the updated order appears on the Incident Detail page and the Edit Group page.

Search and Entry

Incident Data Grid

The Incident Data Grid is the central point from which you can quickly and easily view incidents for your school or district, as well as create a customized search filter to locate specific existing incidents. When signed in to at the school level, you can view incidents that include a participant from that school or incidents that originated at that school for the assigned incident code types. When signed in to at the district level, you can view incidents at all schools for the assigned incident code types.

Note: Information on this page displays based on your security settings.

How to Search for a Student's Existing Discipline Incidents

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Administration, choose **Incidents** from the student pages menu. The Incident List page appears for that student.
3. To continue, see Step 3 of *How to Search for Existing Discipline Incidents*.

How to Search for Existing Discipline Incidents

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Incident Management**. The Incident List page appears.
3. Use the following table to enter information in the Incident Information section:

Field	Description
Time Frame	Use the pop-up menu to indicate the time frame for which you want to view incidents: • **Current Calendar Year** (appears if at district level) • **Current School Year** (appears if at school level) • **Prior Calendar Year** (appears if at district level) • **Prior School Year** (appears if at school level) • **Current Month** • **Prior Month** • **Current Week**

	• **Prior Week** • **Date Range** • **Specific Date** **Note:** At the school level, the default is set to **Current School Year**. At the district level, the default is set to **Current Calendar Year**. If **Date Range** is selected, enter or select a **Start Date** and **End Date** and then click **Apply**. If **Specific Date** is selected, enter or select a date and then click **Apply**.

Incident Element	Use the pop-up menu to indicate the way in which you want to view incident counts:
	
	• **Action**
	• **Behavior**
	• **Custom**
	
	To customize your Incidents Counts by Action view:
	
	1. Choose **Action** from the pop-up menu.
	2. Click the button next to the pop-up menu. The Edit Tile Configuration section appears.
	3. For each tile you want to customize, choose one of the following:
	    • **Hide** - Removes the tile from the view. The next time the view is accessed, the tile will not appear.
	    • **Any** to filter by a code and its subcodes
	    • A single subcode
	4. Click **Save**.
	
	Note: Click **Cancel** to cancel customizations. Click **Reset Defaults** to delete customizations.
	
	To customize your Incidents Counts by Behavior view:
	
	1. Choose **Behavior** from the pop-up menu.
	2. Click the button next to the pop-up menu. The Edit Tile Configuration section appears.

	3. For each tile you want to customize, choose one of the following: • **Hide** - Removes the tile from the view. The next time the view is accessed, the tile will not appear. • **Any** to filter by a code and its subcodes • A single subcode 4. Click **Save**. **Note:** Click **Cancel** to cancel customizations. Click **Reset Defaults** to delete customizations. To customize your Incidents Counts view: 1. Choose **Custom** from the pop-up menu. 2. Click the button next to the pop-up menu. The Edit Tile Configuration section appears. 3. For each tile you want to customize, choose one of the following: • **Hide** - Removes the tile from the view. The next time the view is accessed, the tile will not appear. • **Action** • **Behavior** 4. If **Action** or **Behavior** is selected, choose one of the following from the second pop-up menu: • **Hide** - Removes the tile from the view. The next time the view is accessed, the tile will not appear. • **Any** to filter by a code and its subcodes • A single subcode 5. Click **Save**. **Note:** Click **Cancel** to cancel customizations. Click **Reset Defaults** to delete customizations.
[Incident Category]	The tiles display the top ten counts for each incident category. Click a tile to switch to that filter. Click again to remove that filter. **Note:** Incident category tiles appear in alphabetical order.
Create New Incident	Click to create a new incident. For more information, see *How to Create a Discipline Incident*.

4. Use the following table to enter information in the Filter section:

   Note: Click the **Filter** arrow to collapse this section. Click the **Filter** arrow again to expand this section.

Field	Description
[Incident Element]	The first row of the filter displays the action or behavior based on the selected tile. This indicates that the incidents currently on display in the grid have at least one related matching action or behavior.
ID	To further narrow the list of incidents by the ID: 1. Click the **Add (+)** button. 2. Choose **ID** from the first pop-up menu. 3. Choose a comparator from the second pop-up. 4. Enter the entire ID number of the incident in the search field. Partial IDs cannot be entered. 5. Click **Apply**.
Title	To further narrow the list of incidents by the title: 1. Click the **Add (+)** button. 2. Choose **Incident Title** from the first pop-up menu. 3. Enter the title of the incident or incidents in the search field. Partial titles can be entered, which do not require a wild character. 4. Click **Apply**.
Incident Type	To further narrow the list of incidents by the incident type: 1. Click the **Add (+)** button. 2. Choose **Incident Type** from the first pop-up menu. 3. Choose a comparator from the second pop-up. 4. Choose an incident type from the third pop-up menu. 5. Click **Apply**.

Incident Location	To further narrow the list of incidents by the incident location: 1. Click the **Add (+)** button. 2. Choose **Incident Location** from the first pop-up menu. 3. Choose a comparator from the second pop-up. 4. Choose an incident location from the third pop-up menu. 5. Click **Apply**.
School	To further narrow the list of incidents by the school: 1. Click the **Add (+)** button. 2. Choose **School** from the first pop-up menu. 3. Choose a school from the second pop-up menu. 4. Click **Apply**. **Note:** This filter only appears at the district level. **Note:** If field level security has been applied to School, this filter option is not available.
Action	To further narrow the list of incidents by the action: 1. Click the **Add (+)** button. 2. Choose **Action** from the first pop-up menu. 3. Choose one of the following from the second pop-up menu: • **Any** to filter by a code and its subcodes • A single subcode 4. Click **Apply**.
Attribute	To further narrow the list of incidents by the attribute: 1. Click the **Add (+)** button. 2. Choose **Attribute** from the first pop-up menu. 3. Choose one of the following from the second pop-up menu: • **Any** to filter by a code and its subcodes • A single subcode

	4. Click **Apply**.
Behavior	To further narrow the list of incidents by the behavior: 1. Click the **Add (+)** button. 2. Choose **Behavior** from the first pop-up menu. 3. Choose one of the following from the second pop-up menu: • **Any** to filter by a code and its subcodes • A single subcode 4. Click **Apply**.
Current Grade Level	To further narrow the list of incidents by the current grade level: 1. Click the **Add (+)** button. 2. Choose **Current Grade Level** from the first pop-up menu. 3. Choose a grade level from the second pop-up menu. 4. Click **Apply**.
Object	To further narrow the list of incidents by the object: 1. Click the **Add (+)** button. 2. Choose **Object** from the first pop-up menu. 3. Choose one of the following from the second pop-up menu: • **Any** to filter by a code and its subcodes • A single subcode 4. Click **Apply**.
Participant: Any	To further narrow the list of incidents by the any participant of the incident: **Note:** If the **Current Grade Level** filter has been applied, participants are limited to only students. 1. Click the **Add (+)** button. 2. Choose **Participant: Any** from the first pop-up menu. 3. Enter the name or a portion of the participant's name.

	4. Click **Apply**. **Note:** Format must be Last, First.
Participant: Offender	To further narrow the list of incidents by the incident offender: **Note:** If the **Current Grade Level** filter has been applied, participants are limited to only students. 1. Click the **Add (+)** button. 2. Choose **Participant: Offender** from the first pop-up menu. 3. Enter the name or a portion of the participant's name. 4. Click **Apply**. **Note:** Format must be Last, First.
Participant: Reporter	To further narrow the list of incidents by the incident reporter: **Note:** If the **Current Grade Level** filter has been applied, participants are limited to only students. 1. Click the **Add (+)** button. 2. Choose **Participant: Reporter** from the first pop-up menu. 3. Enter the name or a portion of the participant's name. 4. Click **Apply**. **Note:** Format must be Last, First.
Participant: Victim	To further narrow the list of incidents by the incident victim: **Note:** If the **Current Grade Level** filter has been applied, participants are limited to only students. 1. Click the **Add (+)** button. 2. Choose **Participant: Victim** from the first pop-up menu. 3. Enter the name or a portion of the participant's name. 4. Click **Apply**. **Note:** Format must be Last, First.

Participant: Witness	To further narrow the list of incidents by the incident witness: **Note:** If the **Current Grade Level** filter has been applied, participants are limited to only students. 1. Click the **Add (+)** button. 2. Choose **Participant: Witness** from the first pop-up menu. 3. Enter the name or a portion of the participant's name. 4. Click **Apply**. **Note:** Format must be Last, First.

Note: To delete the filter, click the **Minus (-)** button next to the filter. To remove all filter selections, click **Clear**.

5. Use the following table to view search results:

   Note: Click the name of a column to sort by that column in ascending order. Click again to sort in descending order.

Field	Description
[Checkboxes]	Do one of the following: • Select the checkbox in the header row to select all incidents. Alternately, if the checkbox is already selected, deselect the checkbox to remove the checkmarks from all incidents. • Select the checkbox for each incident you want to work with.
ID	Unique sequential number generated by PowerSchool when the incident is created. Click to view the Incident Detail page.
Title	A short description of the incident. Click to view the Incident Detail page.
Incident Type	The type of incident that occurred.

Incident Date	The date and time the incident occurred.
Incident Location	The location where the incident occurred.
School	The school at which the incident occurred. **Note:** This column only appears at the district level. **Note:** If field level security has been applied to School, this column appears masked.
[Pagination]	Use to navigate the search results.
Rows/Page	By default, ten records display per page. To view more records per page, enter the appropriate number in the field.
Download	To download the incident information, click the arrow and select one of the following from the pop-up menu: • **Comma-Separated Value (CSV)** • **Excel Spreadsheet (XLSX)** • **Print Document Format (PDF)** **Note:** A checkmark appears next to your selection. **Note:** The PDF format is restricted to a maximum of 1000 records. **Note:** Using the CSV format to download data that contains right-to-left Unicode characters may result the incorrect ordering of data. In which case, you can reconfigure your system, use a client, such as Google Sheets, or download the data in XLSX format. **Note:** If you have localized your version of PowerSchool, you must have the required character set installed in order to export in your specified language.

6. Use the following table to update the current student selection:

Field	**Description**

Select Participants with These Roles	1. Select one of the following checkboxes: • **Any Role** • **Offender** • **Reporter** • **Victim** • **Witness** 2. Do one of the following: • Click **Add to Current Selection** to add the filtered list of students to your current student selection. • Click **Set Current Selection** to make the filtered list of students your current student selection.

Discipline Incidents

Using the Incident Detail page, you can create discipline incidents. The Incident Detail page consists of the following two sections, which are used to enter specific information regarding the discipline incident: Incident Description and Incident Builder. These sections can be expanded and collapsed to help make entering and reviewing information on the page more manageable. Click the section title to expand or collapse the section on the page.

How to Create a Discipline Incident

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Incident Management**. The Incident List page appears.
3. Click **Create New Incident**. The Incident Detail page appears.

   Note: If the **Create New Incident** button does not appear, either the incident types have not yet been defined or you do not have the appropriate security permissions. For more information, see *Incident Types* and *How to Edit Security Groups*.

4. Scroll to the **Incident Description** section. If needed, click the section title to expand the section.
5. Use the following table to enter field information in the Incident Description section:

Field	Description

School	Use the pop-up menu to select the school or district office where the incident occurred. **Note:** This pop-up menu appears only when entering a new incident at the district level.
Incident Type	Use the pop-up menu to select the type of incident. This is a required field.
Incident Date	Click the **Calendar** icon to open the calendar menu. Click the date the incident occurred. Use the **Arrow** icons to select a different month. Use the **Time** pop-up menus to enter the time the incident occurred.
Time Frame [Code]	Use the pop-up menu to select the time code which best describes the period of time that the incident took place.
Time Frame [Subcode]	If the time code you selected has one or more subcodes associated to it, the subcode pop-up menu appears. Choose a subcode to provide further detail about the period of time that the incident took place.
Time Frame Comment	If the time frame code or subcode you selected allows for comments to be entered, enter additional information. This field may be required.
Title	Enter a title for the incident. This title appears in the search Results section on the Incident List page when searching for an incident.
Description	Enter a brief description of the incident.
Location [Code]	Use the pop-up menu to select the location code which best describes the site or setting where the incident took place.
Location [Subcode]	If the location code you selected has one or more subcodes associated to it, the subcode pop-up menu appears. Choose a

	subcode to provide further detail about the site or setting where the incident took place.
Location Comment	If the location code or subcode you selected allows for comments to be entered, enter additional information. This field may be required.
Location Description	Enter additional details about the site or setting where the incident took place.
Prepared By	Enter your name.
Financial Impact	Enter a dollar figure for the financial impact to the school of the incident.

6. Scroll to the **Incident Builder** section. If needed, click the section title to expand the section.
7. Click the **Plus (+)** button next to Participants. The Search for Student, Staff, or Other Participants dialog appears.
8. Use the following table to enter information in the applicable fields:

Field	**Description**
Last Name	Enter the last name of the student, staff, or other participant. Partial names can be entered.
Type	Use the pop-up menu to indicate which group you want to search by choosing **Students**, **Staff**, or **Others**.
Grade Level	If you selected **Students**, use the pop-up menu to limit the student results by grade level, or select **All** to search all grade levels.
Only Active	If you selected **Students** or **Staff**, select the checkbox to limit the search to students currently enrolled and staff members with a status of active.

Context	Use the pop-up menu to indicate the school or district office you want to search.

9. Click **Search** to generate the search results based on the input criteria.

   Note: Use the pop-up menu below to limit the size of the search results to **5**, **10**, **15**, or **20** results per page. Click **<<first**, **<prev**, **next>**, **last>>** to view all of the search results.

10. Click the name of the person in the Results section that you want to add as the participant.

    Note: If the name of the person you want to add as a participant does not appear in the Results section because the participant has yet to be added to PowerSchool or does not belong to the school or district office, click **Create Other**. The Add Other Participant dialog appears. Use the following table to enter information in the applicable field:

Field	**Description**
Mark Person as Unknown	Select the checkbox to mark the participant as unknown. This special attribute assists with tracking individuals where identifying details (such as name) are not known.
First, Middle, Last	Enter the first, middle and last name of the participant.
Position	Enter the staff position or title, if applicable.
Age	Enter the age of the participant.
Gender	Use the pop-up menu to select the gender of the participant.

11. Click **Add**. The Add Participant Attributes dialog appears.
12. Use the following table to enter field information in the Attributes section:

Field	**Description**

[Attribute Code]	Click the **Plus (+)** button next to Attributes to display the attribute pop-up menu. Choose the attribute which best applies to the participant.
[Attribute Subcode]	If the attribute you selected has one or more subcodes associated to it, the attribute subcode pop-up menu appears. Choose the attribute subcode which best applies to the participant.
Attribute Code Comment	If the code or subcode you selected allows for comments to be entered, enter additional information. This field may be required.

Note: To remove an attribute, click the **Minus (-)** button next to the attribute pop-up menu you want to remove.

13. Repeat Step 12 for each attribute you want to add.
14. Use the following table to enter field information in the Select Role(s) section:

Field	Description
[Role Code]	Choose the role from the pop-up menu which best describes the participant's involvement in the incident: • **Reporter** • **Victim** • **Offender** • **Witness** By default **Reporter** appears.
[Role Subcode]	If the role code you selected has one or more subcodes associated to it, the subcode pop-up menu appears. Choose the subcode to provide further detail about the participant's involvement in the incident.
Role Code Comment	If the code or subcode you selected allows for comments to be entered, enter additional information. This field may be required.

Note: To remove a role, click the **Minus (-)** button next to role pop-up menu you want to remove.

15. Repeat Step 14 for each role you want to add to the selected participant. Up to four roles may be added per participant.
16. Click **Add Participant Attributes**. The Add Participant Attributes dialog closes. Participant information appears in the respective roles.
17. Repeat Step 7 through Step 16 for each participant you want to add to the incident.
18. Add the following incident elements as needed: Action, Object, Behavior, and Attribute. For detailed information, see *How to Add an Incident Elements*.
19. Assign incident elements as needed. For detailed information, see *How to Assign an Incident Elements*.
20. Click **Submit Incident** when all sections on the Incident Details page are completed. The Incident List page appears.

How to Edit a Discipline Incident

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Incident Management**. The Incident List page appears.
3. Search for and click the incident you want to edit. For more information, see *How to Search for Existing Discipline Incidents*.
4. On the Incident Detail page, edit the applicable fields. For field descriptions, see *How to Create a Discipline Incident*.
5. Edit incident elements as needed. For detailed information, see *Incident Elements*.
6. Scroll to the **Change Reason** section. If needed, click the section title to expand the section.
7. Enter a brief description of the edits made to the incident.
8. Scroll to the **Attendance Related Actions** section. If needed, click the section title to expand the section.

   Note: This section only appears if any incident with an action code/subcode that affects attendance has been previously submitted.

   The following information appears:

   - Name
   - Action
   - Begin Date
   - End Date
   - Duration Code
   - Assigned Duration
   - Actual Duration
   - Attendance - Click to edit attendance information. For more information, see *Attendance*.

9. Click **Submit Incident**. The Incident List page appears.

How to Delete a Discipline Incident

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Incident Management**. The Incident List page appears.
3. Search for the incident you want to edit. For more information, see *How to Search for Existing Discipline Incidents*.
4. On the Incident Detail page, click **Delete**. The Delete Incident dialog appears.
5. Click **Delete** to remove the incident.

How to View a Discipline Incident Change History

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Incident Management**. The Incident List page appears.
3. Search for and click the incident you want to edit.
4. On the Incident Detail page, click **View Change History**. The Change History dialog appears.
5. Do one of the following:
    - Click a date to view the details of the change to a specific entry.
    - Click **Expand All Items** to view all entries.
6. Click **X** to close the dialog.

Incidents Elements

Incident elements consist of Actions, Behaviors, Objects and incident Attributes. They represent additional reportable detail about an incident and can be related to participants or the incident itself. Examples of an action would be a suspension or expulsion. Behaviors are typically the offenses that occurred such as an assault. Objects are the items that would have been used during the incident such as a weapon. Attributes are details about the incident itself and are not directly related to any participant. All of these elements are defined at the district level.

How to Add an Incident Elements

Note: Certain codes/subcodes may have a Policy associated with them indicating instructions for working with the codes/subcodes.

Add an Action

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Incident Management**. The Incident List page appears.
3. Search for the incident you want to edit. For more information, see *How to Search for Existing Discipline Incidents*.
4. On the Incident Detail page, click the **Plus (+)** button next to Incident Elements and select **Add Action**. The Add Action dialog appears.
5. Use the following table to enter field information in the applicable fields:

Field	Description
Action Code	Use the pop-up menu to select the applicable action code. **Note:** A warning message may appear if the selected code affects attendance.
Action Date Range	Enter a date range in which the action occurs: • **Begin Date** - Click the Calendar icon to open the calendar menu. Click the begin date for the action. Use the Arrow icons to select a different month. • **End Date** - Click the Calendar icon to open the calendar menu. Click the end date for the action. Use the Arrow icons to select a different month.
Action Taken Detail	Enter detailed information regarding the action taken.
Actual Resolution Date	Click the **Calendar** icon to open the calendar menu. Click the resolution date for the action. Use the **Arrow** icons to select a different month.
Duration Code	Use the pop-up menu to select the duration code of the action, such as hours, calendar days, or school days. This value is applied to all duration fields.
Assigned Duration	Enter the assigned duration of the action as it applies to the selected Duration Unit. For example, if the action is a three-day suspension from school, enter **3**.

Actual Duration	Enter the actual duration of the action as it applies to the selected Duration Unit.
Duration Notes	Enter any additional information regarding the duration of the action.
Action Change Reason	Enter the reason why the duration of the action changed, if applicable.
Action Change Code	Use the pop-up menu to choose the action change code which best describes the reason the change was made.
Action Attributes	Enter action attribute information as needed. **Note:** The information that appears in this section is based on the number of action attributes created during setup and the data type selected for each action attribute. Action attributes may appear as a text, number, or date field or as a yes/no or subcode selection pop-up menu. For more information, see *Code Types* and *How to Add an Incident Code*. **Note:** A policy description may appear indicating instructions for working with the codes/subcodes.

6. Click **Add Action**. The Add Action dialog closes. The entered information appears in the Incident Element section of the Incident Detail page.
7. Repeat previous steps for each action you want to add.

Add an Object

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Incident Management**. The Incident List page appears.
3. Search for the incident you want to edit. For more information, see *How to Search for Existing Discipline Incidents*.
4. On the Incident Detail page, click the **Plus (+)** button next to Incident Elements and select **Add Object**. The Add Object dialog appears.
5. Use the following table to enter field information in the applicable fields:

Field	Description
Object Code	Use the pop-up menu to select the applicable object code. Upon selecting a code, a subcode pop-up menu appears. Use the pop-up menu to select the applicable subcode.
Description	Enter a brief description of the object.
Quantity	Enter the number of objects associated with this incident.

6. Click **Add Object**. The Add Object dialog closes. The entered information appears in the Incident Element section of the Incident Detail page.
7. Repeat previous steps for each object you want to add.

Add a Behavior

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Incident Management**. The Incident List page appears.
3. Search for the incident you want to edit. For more information, see *How to Search for Existing Discipline Incidents*.
4. On the Incident Detail page, click the **Plus (+)** button next to Incident Elements and select **Add Behavior**. The Add Behavior dialog appears.
5. Use the following table to enter field information in the applicable fields:

Field	Description
Behavior Code	Use the pop-up menu to select the appropriate behavior code.
[Behavior Subcode]	If the behavior you selected has one or more subcodes associated to it, the subcode pop-up menu appears. Choose a subcode from the pop-up menu to provide further detail about the behavior.
[Behavior Subcode 2]	If the behavior you selected has one or more subcodes associated to it, the subcode pop-up menu appears. Choose a subcode from the pop-up menu to provide further detail about the behavior.

[Behavior Subcode 3]	If the behavior you selected has one or more subcodes associated to it, the subcode pop-up menu appears. Choose a subcode from the pop-up menu to provide further detail about the behavior.
[Behavior Subcode 4]	If the behavior you selected has one or more subcodes associated to it, the subcode pop-up menu appears. Choose a subcode from the pop-up menu to provide further detail about the behavior.
Behavior Code Comment	If the code or subcode you selected allows for comments to be entered, enter additional information. This field may be required.
Primary Behavior	Select the checkbox to indicate principal behavior associated to the incident. Certain states require that the most important behavior be identified. Refer to your state requirements to determine how to decide which behavior is the primary one.

6. Click **Add Behavior**. The Add Behavior dialog closes. The entered information appears in the Incident Element section of the Incident Detail page.
7. Repeat previous steps for each behavior you want to add.

Add an Attribute

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Incident Management**. The Incident List page appears.
3. Search for the incident you want to edit. For more information, see *How to Search for Existing Discipline Incidents*.
4. On the Incident Detail page, click the **Plus (+)** button next to Incident Elements and select **Add Attribute**. The Add Attribute dialog appears.
5. Select all the applicable attributes for this incident.

   Note: A policy description may appear indicating instructions for working with the codes/subcodes.

6. Click **Add Attributes**. The Add Attribute dialog closes. The entered information appears in the Incident Element section of the Incident Detail page.

How to Assign an Incident Element

Attributes are assigned at the incident level and therefore cannot be assigned to a participant.

Assign an Action

Actions can only be assigned to one participant or behavior, but you can assign multiple actions if needed.

- Drag and drop an action to the appropriate participant name. The action appears below the participant's name.
- Drag and drop an action to the appropriate behavior. The action appears below the behavior.

Note: If you inadvertently submit an incident with an action that is associated to the incorrect behavior, reopen the incident and then drag and drop the action to the correct participant or behavior and resubmit.

Assign an Object

Objects can be assigned to multiple participants.

- Drag and drop an object to the appropriate participant name. The object appears below the participant's name.

Assign a Behavior

Behaviors can only be assigned to one participant, but you can assign multiple behaviors if needed.

- Drag and drop a behavior to the appropriate participant name. The behavior appears below the participant's name.

How to Edit an Incident Element

Note: Certain codes/subcodes may have a Policy associated with them indicating instructions for working with the codes/subcodes.

Edit an Action

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Incident Management**. The Incident List page appears.

3. Search for the incident you want to edit. For more information, see *How to Search for Existing Discipline Incidents*.
4. On the Incident Detail page, click the **Pencil** icon next to the action you want to edit. The Update Actions dialog appears.
5. Edit the applicable fields. For field descriptions, see *How to Create a Discipline Incident: Add an Action*.
6. Click **Update Action**.
7. On the Incident Detail page, click **Change Reason** to expand the change reason section of the page if needed.
8. Enter a brief description of the edits made to the incident.
9. Click **Submit Incident**. The Incident List page appears.

Edit an Object

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Incident Management**. The Incident List page appears.
3. Search for the incident you want to edit. For more information, see *How to Search for Existing Discipline Incidents*.
4. On the Incident Detail page, click the **Pencil** icon next to the object you want to edit. The Update Actions dialog appears.
5. Edit the applicable fields. For field descriptions, see *How to Create a Discipline Incident: Add an Object*.
6. Click **Update Action**.
7. On the Incident Detail page, click **Change Reason** to expand the change reason section of the page if needed.
8. Enter a brief description of the edits made to the incident.
9. Click **Submit Incident**. The Incident List page appears.

Edit a Behavior

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Incident Management**. The Incident List page appears.
3. Search for the incident you want to edit. For more information, see *How to Search for Existing Discipline Incidents*.
4. On the Incident Detail page, click the **Pencil** icon next to the behavior you want to edit. The Update Actions dialog appears.
5. Edit the applicable fields. For field descriptions, see *How to Create a Discipline Incident: Add a Behavior*.
6. Click **Update Action**.

7. On the Incident Detail page, click **Change Reason** to expand the change reason section of the page if needed.
8. Enter a brief description of the edits made to the incident.
9. Click **Submit Incident**. The Incident List page appears.

Edit an Attribute

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Incident Management**. The Incident List page appears.
3. Search for the incident you want to edit. For more information, see *How to Search for Existing Discipline Incidents*.
4. On the Incident Detail page, click the **Pencil** icon next to the attribute you want to edit. The Update Actions dialog appears.
5. Edit the applicable fields. For field descriptions, see *How to Create a Discipline Incident: Add an Attribute*.
6. Click **Update Action**.
7. On the Incident Detail page, click **Change Reason** to expand the change reason section of the page if needed.
8. Enter a brief description of the edits made to the incident.
9. Click **Submit Incident**. The Incident List page appears.

How to Delete Elements

Note: Certain codes/subcodes may have a Policy associated with them indicating instructions for working with the codes/subcodes.

Delete an Action

Note: If the action you are deleting is associated with a participant, the action will be retained for future use. If the action you are deleting is not associated with a participant, the action will be permanently removed.

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Incident Management**. The Incident List page appears.
3. Search for the incident you want to edit. For more information, see *How to Search for Existing Discipline Incidents*.
4. On the Incident Detail page, click the **Minus (-)** icon next to the action you want to delete. A confirmation dialog appears.
5. Click **OK**.

6. On the Incident Detail page, click **Change Reason** to expand the change reason section of the page if needed.
7. Enter a brief description of the edits made to the incident.
8. Click **Submit Incident**. The Incident List page appears.

Delete an Object

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Incident Management**. The Incident List page appears.
3. Search for the incident you want to edit. For more information, see *How to Search for Existing Discipline Incidents*.
4. On the Incident Detail page, click the **Minus (-)** icon next to the object you want to delete. A confirmation dialog appears.
5. Click **OK**.
6. On the Incident Detail page, click **Change Reason** to expand the change reason section of the page if needed.
7. Enter a brief description of the edits made to the incident.
8. Click **Submit Incident**. The Incident List page appears.

Delete a Behavior

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Incident Management**. The Incident List page appears.
3. Search for the incident you want to edit. For more information, see *How to Search for Existing Discipline Incidents*.
4. On the Incident Detail page, click the **Minus (-)** icon next to the behavior you want to delete. A confirmation dialog appears.
5. Click **OK**.
6. On the Incident Detail page, click **Change Reason** to expand the change reason section of the page if needed.
7. Enter a brief description of the edits made to the incident.
8. Click **Submit Incident**. The Incident List page appears.

Delete an Attribute

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Incident Management**. The Incident List page appears.
3. Search for the incident you want to edit. For more information, see *How to Search for Existing Discipline Incidents*.

4. On the Incident Detail page, click the **Minus (-)** icon next to the attribute you want to delete. A confirmation dialog appears.
5. Click **OK**.
6. On the Incident Detail page, click **Change Reason** to expand the change reason section of the page if needed.
7. Enter a brief description of the edits made to the incident.
8. Click **Submit Incident**. The Incident List page appears.

InfoSnap User Guide

PowerSchool
Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

The data and names used to illustrate the reports and screen images may include names of individuals, companies, brands, and products. All of the data and names are fictitious; any similarities to actual names are entirely coincidental.

Table of Contents

Introduction

PowerSchool has a close integration with InfoSnap, which allows authorized PowerSchool users to seamlessly transition from PowerSchool into InfoSnap. InfoSnap provides custom online admissions and registration solutions. For details on enabling the InfoSnap integration, go to www.InfoSnap.com/About/PowerSchool.

Get Information About InfoSnap

Using the InfoSnap link in PowerSchool, you can access the InfoSnap web site to learn more about InfoSnap.

How to Get Information About InfoSnap

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Click **InfoSnap**. The InfoSnap web site launches in a separate window (or tab depending on your browser setting).
5. When you are finished viewing the InfoSnap web site, close the window (or tab depending on your browser setting).

Setup

Before you can begin using InfoSnap, perform the following setup items:

- Install Plugin
- View General Plugin Information (optional)
- View SSO (optional)
- Manage Link Details (optional)
- Configure School Access (optional)
- View OAuth Client Credentials (optional)
- Enable Plugin
- Enable Customizations

Note: See the *Plugin Management User Guide* for procedures that do not appear in this guide.

Enable Customizations

Once you have performed the above setup items, you will then need to enable customizations if the plugin files includes custom pages. For more information, see *System Settings*.

Note: When customizations is disabled, the **Information** icon (circle with lowercase "i") does not appear next to the **InfoSnap** link in the PowerSchool Student and Parent portal.

How to Enable Customization

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Customization**. The Customization page appears.
4. Select the **Customization Enabled** checkbox to prevent overwriting custom pages on your server when updating PowerSchool.
5. Click **Synchronize Custom web_root** to manually synchronize the custom pages with the Web root folder on your server. The page refreshes.
6. Click **Submit**. The System Settings page appears.

Working With InfoSnap

Once InfoSnap is configured, the InfoSnap link appears in PowerSchool or the PowerSchool Student and Parent portal based on the navigation links defined in the InfoSnap configuration file. The navigation links may appear as "InfoSnap" or some other name as defined in the InfoSnap configuration file. Using the InfoSnap link, users can launch InfoSnap from within PowerSchool while keeping their PowerSchool session active allowing them to work in both applications simultaneously.

Launch InfoSnap

Use this procedure to launch InfoSnap in PowerSchool or the PowerSchool Student and Parent portal.

Note: The InfoSnap link only appears if enabled, if navigation links for PowerSchool or the PowerSchool Student and Parent portal are defined in the InfoSnap configuration file, and if the selected school has been granted access to the InfoSnap link.

How to Launch InfoSnap from the Navigation Bar

1. Do one of the following:
    - Sign in to PowerSchool.
    - Sign in to the PowerSchool Student and Parent portal.

    Note: For more information about signing in to PowerSchool, see *The Basics User Guide* available on PowerSource. For more information about signing in to the PowerSchool Student and Parent portal, see the *PowerSchool Student and Parent Portal User Guide* available on PowerSource.

2. Click the **Applications** button (an upward-right arrow) in the navigation toolbar. The Applications drawer slides into view.
3. Click the **[InfoSnap]** link. InfoSnap launches in a separate window (or tab depending on your browser settings).

    Note: The window that appears is not served by PowerSchool. It is rendered from a separate server. If the window does not launch, contact your school's PowerSchool administrator.

    Note: If you are not actively working in PowerSchool, your session may time out. If so, you need to sign in again.

4. When you are finished working in InfoSnap, be sure to sign out of InfoSnap.

5. When you are finished working in PowerSchool, be sure to sign out of PowerSchool.

How to Launch InfoSnap from the Main Menu

1. Do one of the following:
   - Sign in to PowerSchool.
   - Sign in to the PowerSchool Student and Parent portal.

   Note: For more information about signing in to PowerSchool, see *The Basics User Guide* available on PowerSource. For more information about signing in to the PowerSchool Student and Parent portal, see the *PowerSchool Student and Parent Portal User Guide* available on PowerSource.

2. If the **Information** icon (circle with lowercase "i") appears next to the **[InfoSnap]** link, you can click it to view information about InfoSnap. A pop-up displays InfoSnap information as defined in the InfoSnap plugin. When done viewing, click the x in the upper-right corner.
3. In the main menu on the left side of the page, choose **[InfoSnap]**. InfoSnap launches in a separate window (or tab depending on your browser settings).

   Note: The window that appears is not served by PowerSchool. It is rendered from a separate server. If the window does not launch, contact your school's PowerSchool administrator.

   Note: If you are not actively working in PowerSchool, your session may time out. If so, you need to sign in again.

4. When you are finished working in InfoSnap, be sure to sign out of InfoSnap.
5. When you are finished working in PowerSchool, be sure to sign out of PowerSchool.

LDAP User Guide

PowerSchool

Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

Table of Contents

Introduction

LDAP (Lightweight Directory Access Protocol) enables administrators to establish a single source for securely managing authentication for all users on the district network, including those using PowerSchool, PowerSchool Teacher, and the PowerSchool Student and Parent portal.

Setup

Configuration

In order for PowerSchool to authenticate users using an LDAP directory server, the LDAP directory server must be configured within PowerSchool.

Configuring the LDAP directory server consists of providing the server's address, port, SSL setting, and LDAP directory administrator credentials. It is possible to selectively enable or disable the use of LDAP for three groups of users: staff, teachers, and students. Each group of users enabled for LDAP must also have a domain context configured that identifies the root of the tree where each group of user accounts is located along with the name of the user ID attribute from the directory schema.

Once configured, the LDAP directory server synchronizes the usernames stored in PowerSchool's database with the sign in (user) IDs stored in your LDAP directory server.

Synchronization and Authentication

Directory synchronization is the process of synchronizing the usernames stored in PowerSchool's database with the sign in (user) IDs stored in your LDAP directory. For a user to successfully authenticate in PowerSchool via LDAP, the usernames must match in both PowerSchool and the LDAP Directory.

When LDAP is enabled, usernames are no longer directly editable through the PowerSchool user interface on either the Modify Info for Students or Security Settings for Teachers and Staff pages. Instead, you must use one of the Synchronization processes.

Synchronization can either be performed as a mass operation, using a selection of students or teachers and staff, or one at a time using the LDAP Lookup button on either the Modify Information or Security Settings pages. See *How to Synchronize Using LDAP Directory Synchronization*.

Set Up the LDAP Directory

Use the LDAP Directory Setup page to configure PowerSchool to authenticate by either Active Directory LDAP or Open Directory LDAP.

How to Set Up the LDAP Directory

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.

2. Under Security, click **LDAP Directory Setup**. The LDAP Directory Setup page appears.
3. Use the following table to enter information in the Server Configuration fields:

Field	Description
LDAP Server Hostname or IP Address	Enter the hostname or IP address of the LDAP directory server, such as **192.168.1.12**.
LDAP Port	Enter the TCP port to use, such as **636**.
Enable SSL (Recommended prior to enabling LDAP)	To enable SSL between PowerSchool and the LDAP Directory, do one of the following: • Select the **SSL Enabled (File System Keystore)** option if the LDAP server certificate has been added to either the cacerts or jssecerts files on the server. **Note:** This option is available for backwards compatibility. • Select the **SSL Enabled (PowerSchool Keystore)** option if the LDAP server certificate has been added via the Certificate Management Console. **Note:** It is strongly recommended that prior to enabling LDAP, SSL also be enabled.
Active Directory FQDN	If using Active Directory, enter the fully qualified domain name of the Active Directory Server, such as **ad.powerschool.com**. Typically this will be the same as the LDAP Server Hostname, but does not have to be. When authenticating against Active Directory, the Security Principal is of the form userID@fqdn. **Note:** When configuring LDAP for Open Directory, this field may be left blank.

LDAP Admin DN	Enter the distinguished name (DN) of an account in the LDAP Directory with read privileges within the directory, such as **cn=Administrator,cn=users,dc=ad,dc=powerschool,dc=com** The distinguished name can be the directory administrator account, but an account with read-only access is sufficient. This account is used for directory searches when attempting to synchronize usernames between PowerSchool and the Directory.
LDAP Admin Password	Enter the password for the Admin DN.
Maximum Active LDAP Connections (per node)	Enter the number of active simultaneous LDAP connections per node. **Note:** This number represents the maximum number of users that can simultaneously sign into PowerSchool using LDAP authentication per PowerSchool node. This does not represent the maximum number of users that can be logged into PowerSchool at any given time.

5. Click **Validate Server Connection** to establish an anonymous connection to the directory using the values entered on this page and to authenticate the connection using the Admin DN and Password credentials, if provided. A window displays indicating the success or failure of these operations.
6. If using Active Directory, click **Active Directory Defaults** to populate all schema configuration items with reasonable defaults based on the Server Configuration. If using Open Directory, click **Open Directory Defaults** to populate all schema configuration items with reasonable defaults based on the Server Configuration. If any of the Server Configuration information is missing or ambiguous, you will be prompted for clarification.
7. Use the following table to enter information in the Schema Configuration fields:

Field	**Description**
Enable LDAP	Select the Staff, Teachers, and Students checkboxes to enable LDAP Authentication. LDAP Authentication may be selectively enabled for three distinct groups of users: Staff, Teachers and Students. The remaining

	attributes, Domain Context and User ID Attribute, can be set for each user type. **Note:** It is strongly recommended that prior to enabling LDAP, SSL be enabled.
Domain Context	The Domain Context to which the user will bind when trying to authenticate, such as **cn=users,dc=ad,dc=powerschool,dc=com** for Staff, Teachers, and Students. This domain context is also used when performing LDAP Directory Synchronization activities. For example, if you are trying to synchronize the username for a student, the student domain context will be used as the base when searching the directory.
User ID Attribute	Specify which schema attribute to use when forming the distinguished name (DN) when the user attempts to sign in, such as **uid** for Staff, Teachers, and Students. For example, if the User ID Attribute is uid and the domain context is cn=users,dc=ldap,dc=powerschool,dc=com, then the DN for user jsmith becomes uid=jsmith,cn=users,dc=ldap,dc=powerschool,dc=com.

8. Click **Submit**. The Security page appears.

Synchronize Using LDAP Directory Synchronization

Use the LDAP Directory Synchronization page to synchronize PowerSchool Usernames with an LDAP directory server.

How to Synchronize Using LDAP Directory Synchronization

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Security, click **LDAP Directory Synchronization**. The LDAP Directory Synchronization page displays.

   The LDAP Directory Synchronization page acts as a hub for all of the synchronization processes. From this page, you can choose to synchronize the current selection of students or teachers and staff, all students (district wide), all students with blank usernames (district wide), all teachers (district wide), all staff (district wide), all teachers with blank usernames (district wide), or all staff with blank usernames (district wide).

Note: You can also invoke mass student synchronization from the Functions menu after establishing a selection of students. For more information, see *How to Perform Student LDAP Directory Synchronization*. Similarly, you can invoke mass teacher/staff synchronization from the Functions menu after establishing a selection of teachers and/or staff. For more information, see *How to Perform Staff LDAP Directory Synchronization*.

Once a selection is established and the LDAP Directory Synchronization process is selected, one of two pages appears, depending on whether you are working with students or teachers and staff. In either case, before the synchronization process begins, the expected user ID attribute displays, and you have the opportunity to change it before proceeding. The User ID attribute is the name of the schema element in the LDAP directory that holds the username. This is the value that is brought back into PowerSchool and stored in the appropriate username field in PowerSchool's database.

3. Click **Submit**. When you click submit, the synchronization process begins and each record in the selection is processed. The first and last name in each record is used to find an exact match in the directory. If no exact match is found, a second search is done using only the last name in an effort to find partial matches.

   If an exact match is found, the username in PowerSchool's database is compared to the username reported by the directory. If they are the same, no action is taken. If they differ, the value from the directory is stored in PowerSchool. All matching records are reported in the first section of the Synchronization Results.

   When processing an exact match for a teacher/staff record, the following logic applies. If the record represents a teacher, the Teacher Username will be checked and updated if necessary. And, if the teacher has access to the admin portion of PowerSchool, the Admin Username is also checked. If the record represents a staff member, the Admin Username is checked and updated if necessary.

   If partial matches are found, a list of the partial matches will be displayed in the exception portion of the Synchronization Results. A link will also be provided next to the record, which opens in a new browser window to allow manual lookup and synchronization.

   Records with no matches (either exact or partial) are reported in the exception portion of the Synchronization Results. For records with no matches, the appropriate users should be added to the LDAP directory or the first and last names should be checked to ensure that they match in PowerSchool and the Directory. Once the issue is corrected, the synchronization process can run again.

Perform Student LDAP Directory Synchronization

Use the LDAP Directory Synchronization page to synchronize PowerSchool Usernames with an LDAP directory server.

How to Perform Student LDAP Directory Synchronization

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Functions, choose **LDAP Directory Synchronization**. The LDAP Directory Synchronization page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Edit the **User ID Attribute**, as needed. For detailed information, see *Setup the LDAP Directory*.
5. Click **Submit**.

Work with LDAP

Staff

Note: Information in this section appears in the *Staff User Guide*.

How to Perform Staff LDAP Directory Synchronization

1. On the start page, search for and select a group of staff members. For more information, see *Staff Search*.
2. Click **Functions**. The Group Staff Functions page appears.
3. Click **LDAP Directory Synchronization**. The LDAP Directory Synchronization page appears.
4. Edit the User ID Attribute as needed.
5. Click **Submit**.

How to Edit a Staff Member Security Settings

1. On the start page, search for and select a staff member. For more information, see *Staff Search*.
2. Click **Security Settings**. The Security Settings page appears.
3. Click the **Teachers and Affiliations** tab.
4. Use the following table to enter information in the fields:

Field	Description
Sign in to PowerTeacher	Select the checkbox if you want this staff member to be able to sign in to PowerTeacher Portal and PowerTeacher Gradebook.
Teacher Username	If you want this staff member to be able to access PowerTeacher, enter a username. If you do not, leave this field blank. **Note:** Use the **LDAP Enabled** checkbox next to the **Teacher Username** field to enable or disable LDAP Authentication for an individual staff member. For more information, see *LDAP*. **Note:** The **LDAP Lookup** and **Clear** buttons only appear if you have unrestricted Full Access to **Teacher Username** (USERS.TEACHERLOGINID) and **LDAP Enabled**

	(USERS.TEACHERLDAPENABLED). For more information, see *Field Level Security*.
Teacher Password	If you entered a username in the **Teacher Username** field, enter the staff member's PowerTeacher password.
School Affiliations	Manage the schools you want this user to be affiliated with as a teacher/staff member. Selecting more than one school activates the **School** link on the navigation toolbar in the PowerTeacher Portal, and in PowerTeacher Gradebook (if applicable). For more information, see *How to Add School Affiliations*.

5. Click **Submit**. The Changes Recorded page appears.

How to Add School Affiliations

1. On the start page, search for and select a staff member. For more information, see *Staff Search*.
2. On the Staff page, click **Security Settings** from the staff pages menu. The Security Settings page appears.
3. Click the **Teachers and Affiliations** tab.
4. On the Teachers and School Staff section, click **Add** on the School Affiliations row. The Add Schools pop-up appears.
5. Select the checkbox next to each school you want to add.

   Note: You can also press SHIFT while selecting multiple schools, which automatically selects all schools between your first and last selection.

6. Select the **Staff Type** from the pop-up menu.
7. It is recommended that you assign a status to each staff member. This makes searching for and selecting staff members more efficient and can affect what directory the user is in for LDAP systems. To specify the staff member's status, choose one of the following from the pop-up menu:
   - **Not Assigned**
   - **Teacher**
   - **Staff**
   - **Lunch Staff**
   - **Substitute**
8. Click **OK**. The selected School and Staff Type appear on the Security Settings page. The Active checkbox is automatically selected.

9. Click **Submit**. The school associations appear on the Security Settings page.

How to Modify School Affiliations

1. On the start page, search for and select a staff member. For more information, see *Staff Search*.
2. On the Staff page, click **Security Settings** from the staff pages menu. The Security Settings page appears.
3. Click the **Teachers and Affiliations** tab.
4. On the School Affiliations section, deselect the **Active** checkbox next to the school for which you want to remove access.

   Note: Once you click **Submit**, the school still appears on the Security Settings page, but the access is no longer active.

5. Click on the **Staff Status** field for a specific school to change the status, if needed. Select the status from the pop-up menu.

   Note: The user's **Staff Status** at their home school is reported to LDAP servers regardless of their status at other schools.

6. Click the **Notes** icon in the Action column. The Notes pop-up appears. Enter any pertinent information about this school association for this staff account.
7. Click **Submit** to save changes.

How to Assign Admin Access

Use this procedure to assign access the administrative portion of PowerSchool.

1. On the start page, search for and select a staff member. For more information, see *Staff Search*.
2. Click **Security Settings**. The Security Settings page appears.
3. Click the **Admin Access and Roles** tab.
4. Use the following table to enter information in the fields:

Field	Description
Sign in to Administrative	If you want this staff member to be able to sign in to PowerSchool, select the checkbox. Otherwise, leave the checkbox deselected.

Portion of PowerSchool	
Admin Username	If you want this staff member to be able to access the entire PowerSchool system, enter a username. If you do not, leave this field blank. **Note:** Usually, only school administrators, PowerSchool administrators, cafeteria personnel, guidance staff, and administrative staff members have access to PowerSchool. Teachers generally only have access to PowerTeacher Portal. **Note:** If LDAP is configured on your server, select the **LDAP Enabled** checkbox to enable or disable LDAP Authentication for an individual staff member. For more information, see *LDAP*. **Note:** Field level security may be used to restrict this information. The **LDAP Lookup** and **Clear** buttons only appear if you have unrestricted Full Access to **Admin Username** (USERS.LOGINID) and **LDAP Enabled** (USERS.ADMINLDAPENABLED). For more information, see *Field Level Security*.
Admin Password	If you entered a username in the **Admin Username** field, enter the staff member's PowerSchool password.
Default Group	To assign the staff member to a security group, choose the appropriate group from the pop-up menu. This security group will be used throughout the administrative portion of PowerSchool unless overridden for a specific school by assigning a specific role. For more information, see *Role Assignments*. **Note:** Click the field name to view each group and its permissions in PowerSchool. For more information, see *How to Edit Security Groups*.
Allow Admin Sign in During These Times	Do one of the following: • Select **Any time** for no restrictions on when the staff member can sign in to PowerSchool.

	• Select **Allow this user's access from** and use the pop-up menus to choose the time range that the user is allowed to sign in to PowerSchool.
Allowed IPs	If you want this staff member to be able to use PowerSchool from certain computers only, enter the IP addresses of those computers in this field. This setting only affects the administrative portion of PowerSchool. **Note:** If you define more than one IP address, separate each address with a comma. If you want this staff member to be able to access PowerSchool from any computer, leave this field blank.
Roles and Schools	Manage role assignments for the user. For more information, see *Role Assignments*.

PowerSchool Student and Parent Portal Administration

PowerSchool Student and Parent portal Access IDs and passwords can be manually or automatically assigned individually or by group. It is important to note that in addition to a Student Username and Password, each student is assigned an Access ID and an Access Password. Unlike usernames and passwords, Access ID and Access Password are not accounts themselves, but are used to link a student to a parent account. Anyone with the Student's Access ID and Password can add that student to their account. Parent can use each student's Access ID and Access Password to link to their existing parent account, or when they first create their parent account.

Note: If LDAP is configured on your server, select the **Student LDAP Enabled** checkbox to enable or disable LDAP Authentication for an individual student. For more information, see *LDAP*.

Note: Field level security may be used to restrict this information. The **LDAP Lookup** and **Clear** buttons only appear if you have unrestricted Full Access to **Student Username** (STUDENTS.STUDENT_WEB_ID) and **LDAP Enabled** (STUDENTS.LDAPENABLED). For more information, see *Field Level Security*.

How to Manually Assign an Access ID and Password for Linking to a Student Account

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Information, choose **Access Accounts** from the student pages menu. The Access Accounts page appears.
3. Use the following table to enter information in the Access Keys fields:

Field	Description
Access ID	Enter the Access ID that parent/guardians will use to link this student to their account.
Access Password	Enter the Access Password that parent/guardians will use to link this student to their account.

4. Click **Submit**. A confirmation message appears indicating the account is updated.

How to Manually Assign a Student's Username and Password

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Information, choose **Access Accounts** from the student pages menu. The Access Accounts page appears.
3. Use the following table to enter information in the Student Access Account fields:

Field	Description
Student Username	Enter the student’s user name. **Note:** This field appears as read-only if Unified Classroom is enabled. For more information, see *Unified Classroom Setup*.
Student Password	Enter the student’s password.

4. Click **Submit**. A confirmation message appears indicating the account is updated.

Localization Administration User Guide

PowerSchool

Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

Table of Contents

Introduction

PowerSchool provides a toolkit that makes it easy to translate the system into any language. This includes PowerTeacher, ReportWorks, labels on various pages, fields used for Student/Teacher/Staff searches, and configuration items like Attendance codes, course names and grade scale items. Online help for the Administrator/Student/Parent/Substitute/Teacher web pages can also be translated using the toolkit.

To support this, PowerSchool now uses Unicode, allowing you to enter student names with “ñ” or other non-English characters. The translation toolkit also makes it possible to repurpose existing fields in PowerSchool by renaming the labels to suit your school or district’s unique needs.

Access to localization tools is based on group security permissions and can be accomplished in a batch process or on a page-by-page basis, allowing you flexibility for your localization workflow. You can localize PowerSchool into different permutations based on the system locales you configure. Custom pages can also be localized, using the PowerSchool Administrator web application in conjunction with the localization batch process in PowerSchool.

Student and Parent Access Translations

PowerSchool includes translation of student and parent web access into 18 different languages. This does not translate data coming from PowerSchool, but it does translate all static labels that exist within the PowerSchool Student and Parent portal. The 18 languages (in addition to English) include:

- Arabic
- Chinese (Simplified)
- Chinese (Traditional)
- French
- German
- Greek
- Haitian Creole
- Hindi
- Italian
- Japanese
- Korean
- Persian
- Polish
- Portuguese

- Russian
- Spanish
- Tagalog
- Vietnamese

If you create a locale in PowerSchool using one of the languages listed, students and parents can select that language from a pop-up menu on the PowerSchool sign in page. The pages display in the selected language. For more information, see *How to Add a Locale*.

Localization Administration

Set up locales, numeric and currency formats, and units of measure from the Localization Administration page accessed via District Office page permissions. Once the system locales are configured, you can set group permissions to allow individual users to localize PowerSchool.

Manage System Locales

A locale is a combination of a language plus geographic information that allows you to identify specific variations on a language. In PowerSchool, the locale is defined by the selected language and country code. When locales are created, they appear on the Manage System Locales page and are available on the user sign in pages of PowerSchool, PowerTeacher Portal, and the Parent and Student Portal (depending on security settings). Selecting a locale displays all translated items in PowerSchool in the specified language for that locale.

Parent and Student portal pages that are already translated into one of the 18 languages provided by PowerSchool display on the Parent and Student portal sign in page on the Select Language pop-up menu.

Note: The language selected on the PowerSchool Student and Parent portal Account Preferences page determines the language in which alerts and emails will be received. If the language is not selected then emails shall be sent in default language selected by the district.

How to Add a Locale

Note: Although the English locale is the initial default for PowerSchool, once a new locale is created, it overwrites the English locale. Therefore, if you require an English locale in addition to any other locales you create, you must add an English locale. You must be signed in at the District level to add or edit a locale.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Page and Data Management**. The Page and Data Management page appears.
3. Under Localization, click **Manage System Locales**. The Manage System Locales page appears.
4. Click **Add Locale**. The New Locale page appears.
5. Use the following table to enter or select information in the fields:

Field	Description
Locale Display Name	Enter a description for the locale. This is the description that displays in the list of locales on the PowerSchool Sign In page. **Note**: Enter the locale name in the language that pertains to the locale. For example, for a French locale, enter Français, for Spanish enter Español.
Language	Select a supported language from the pop-up menu.
Country	Select a supported country from the pop-up menu. **Note**: The combination of language and country must be unique. Although you may have multiple versions of the same language, you cannot add two of the same language/country combination. For example, you may select English/US and also add English/Canada, but you could not have two versions of English/US in the system.
Date Format	Select a supported date format from the pop-up menu.
Time Format	Select a supported time format from the pop-up menu.
Numeric Format	Select a numeric format from the pop-up menu. To create or modify the available formats, see *Set Numeric/Currency Format*.
Currency Format	Select a currency format from the pop-up menu. To create or modify the available formats, see *Set Numeric/Currency Format*.
System Default Locale	Select the checkbox to identify this locale as the system default. Processes that are not associated with a user logon use the locale marked as the System Default Locale. All nightly jobs also use the System Default Locale. Only one locale can be designated as the System Default Locale.

6. Click **Submit**. The new locale is saved and appears on the Manage System Locales page.

7. To switch to the locale you added, sign out of PowerSchool and then select the locale from the **Select Language** pop-up menu on the sign in page and click **Sign In**.

How to Edit a Locale

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Page and Data Management**. The Page and Data Management page appears.
3. Under Localization, click **Manage System Locales**. The Manage System Locales page appears.
4. Select a locale. The Edit Locale page appears. Edit the information as needed. For field descriptions, see *How to Add a Locale*.
5. Click **Submit**. A confirmation message appears on the Manage System Locales page.

How to Delete a Locale

If you delete a locale, the associated translations will no longer display in PowerSchool. However, the translations still exist in the PowerSchool database and can be retrieved if the locale is re-created.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Page and Data Management**. The Page and Data Management page appears.
3. Under Localization, click **Manage System Locales**. The Manage System Locales page appears.
4. Click the **minus (-)** icon next the locale you want to delete. The Cancel and Delete buttons appear.
5. Click **Delete**. A message appears at the top of the page confirming the deletion of the locale.

Configure Locale Independent Settings

Localization settings that are global (not tied to a locale) are set on this page. This includes setting units of measure to be used for health screenings and assigning the alphabetic characters to be used on the Browse Students/Browse Staff search pages.

On the Locale Independent Settings page, you also create and modify numeric and currency format settings that can be selected on the Manage System Locales page. You must be signed in at the District level to set numeric/currency format.

How to Add a Numeric/Currency Format

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Page and Data Management**. The Page and Data Management page appears.
3. Under Localization, click **Locale Independent Settings**.
4. Click the **Numeric Format** tab, if needed. The Numeric Format page appears.
5. Click **Add Format**. The New Numeric/Currency Format page appears.
6. Use the following table to enter information in the fields:

Field	Description
Display Label	Enter a label or example for this numeric/currency format.
Group Separator	Select the group separator from the pop-up menu.
Decimal Separator	Select the decimal separator from the pop-up menu.

7. Click **Submit**. The format is now available for selection on the Manage System Locales page.

How to Edit a Numeric/Currency Format

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Page and Data Management**. The Page and Data Management page appears.
3. Under Localization, click **Locale Independent Settings**.
4. Click the **Numeric Format** tab, if needed. The Numeric Format page appears.
5. Select a numeric/currency format. The Edit Numeric/Currency page appears.
6. Edit the information as needed. For field descriptions, see *Set Numeric/Currency Format*.
7. Click **Submit**. A confirmation message appears.

How to Delete a Numeric/Currency Format

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.

2. Under Data Management, click **Page and Data Management**. The Page and Data Management page appears.
3. Under Localization, click **Locale Independent Settings**.
4. Click the **Numeric Format** tab, if needed. The Numeric Format page appears.
5. Click the **minus (-)** icon next the format you want to delete. The Cancel and Delete buttons appear.
6. Click **Delete**. A message appears at the top of the page confirming the deletion of the format.

How to Set Units of Measure

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Page and Data Management**. The Page and Data Management page appears.
3. Under Localization, click **Locale Independent Settings**.
4. Click the **Miscellaneous** tab. The **Miscellaneous** page appears.
5. Choose the applicable units of measure from the pop-up menu.
6. Click **Submit**.

How to Localize Alphabetic Characters for Browse Students/Browse Staff Search

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Page and Data Management**. The Page and Data Management page appears.
3. Under Localization, click **Locale Independent Settings**.
4. Click the **Miscellaneous** tab. The **Miscellaneous** page appears.
5. Enter the applicable alphabetic characters in the **Front Page Name Letters** field.
6. Click **Submit**. The alphabetic characters you entered appear on the Search Students and Search Staff pages, in the Browse Students and Browse Staff section.

Enable Language Translator Security Permissions

Enable the Language Translator security setting to allow the users assigned to that group access to the Localize PowerSchool page and individual page localization. For more information, see *Group Security Permissions*. To enable individual page localization, see *Localize Individual Pages*.

How to Enable Language Translator Security Permissions

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Security, click **Groups**. The Groups page appears.
3. Click a name in the Group Name column. The Edit Group page appears.
4. Select the **Language Translator** checkbox.
5. Click **Submit**. The Groups page appears.

Import and Export Custom Pages

Custom Pages are files created in PowerSchool Administrator that have message keys extracted for translation. These files include custom pages as well as any localized custom page messages. Imported and exported as a .zip file format, these files should not be edited, modified, or unzipped. For more information about translating custom pages, see the PowerSchool Administrator online help or the *Custom Web Page Management User Guide* available on PowerSource.

How to Export Custom Pages

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Page and Data Management**. The Page and Data Management page appears.
3. Under Page Management, click **Custom Pages Import/Export**. The Custom Pages Import Export page appears.
4. Enter the export file name in the **File Name to Export** field. PS_CustomPagesExport appears by default.
5. Click **Export**. A zip file with all of the custom pages is downloaded.

How to Import Custom Pages

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Page and Data Management**. The Page and Data Management page appears.
3. Under Page Management, click **Custom Pages Import/Export**. The Custom Pages Import Export page appears.
4. Click **Choose File** (or **Browse**) to select the import file.
5. Click **Import**. The Custom Pages Imported alert appears.

Import Localization Content

Import your translated, localized content into PowerSchool using the Import Localization page.

You can import locale translations (message keys), translation packages, and online help from the Import Localization page, then monitor the import files from the Import Localization Status page.

Translation packages are properties files that the system uses to determine localizations and translations that have been created in PowerSchool. These files include plain text and online help localizations, and in export mode there is an option to include localized customer-defined data. This mode is used to transport files from one PowerSchool installation to another. These files should not be edited, modified, or unzipped.

The import process uploads a zipped file onto a specified server. The uploaded file is installed on the server and made available in PowerSchool. If the server the language pack is uploaded to is part of a server array, the file is distributed to all servers in the array.

How to Import Localization Content

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Page and Data Management**. The Page and Data Management page appears.
3. Under Localization, click **Import Localization**. The Import Localization page appears.
4. Use the following table to enter information in the fields:

Field	**Description**
Source	Click Browse to locate the import file on your computer.
Locale	Select the locale of the translation being imported from the pop-up menu.
Type	Select the file type from the pop-up menu. **Note:** If **Message Key File** is selected, two additional fields appear.
Character Set	Use the pop-up menu to choose the character set for the import file: • **UTF-8 (Unicode)**

	• **Windows ANSI (Windows)** • **Mac Roman (Mac)** • **ISO 8859-1 (Unix)**
Field Delimiter	Choose the field delimiter from the pop-up menu. This refers to the item that will separate the fields in the exported data. • **Tab**: Separates fields with a tab • **Comma**: Separated fields with a comma • **Other**: Enter a field delimiter in the blank field, such as a comma **Note:** This field appears if you select **Message Key File** as the **Type** to be imported.
Include column headers:	Deselect the checkbox to exclude the header row from the import. **Note:** This field appears if you select **Message Key File** as the **Type** to be imported.

5. Click **Import**. The Import Localization Results page displays the number of imported records. If a record was not imported, the item, translated text and reason display.

Import Localization Status

When you import localization content, you can check the status of the import on the Import Localization Status page.

How to Monitor Import Localization Status

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Page and Data Management**. The Page and Data Management page appears.
3. Under Localization, click **Import Localization Status**. The Import Localization Status page appears.
4. Do one of the following:
    - Click **Refresh** to update the page.
    - Click the link in the Status column to view the import results. The Import Localization Results page appears.

- Click the minus icon to delete the completed import.

Note: If the Status column displays **Completed with some failures**, click the link and review the results on the Import Localization Results page. Edit the import file, and then re-import the data.

Export Localization Content

Export your translated, localized content into PowerSchool using the Export Localization page.

How to Export Localization Content

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Page and Data Management**. The Page and Data Management page appears.
3. Under Localization, click **Export Localization**. The Export Localization page appears.
4. In the Select Export Type section, use the following table to enter or select information in the fields:

Field	**Description**
Type	Select the file type from the pop-up menu.
Locale	Select the locale of the translation being exported from the pop-up menu.
Filename	Enter the desired name for the export file.

5. Click **Next**. The Select Records section appears.
6. In the Select Records section, use the following table to select information:

Field	**Description**
Application and Area	Click an application to view the areas that you can export for that application.

	Select the checkbox next to the area you want to export. Select the **All** checkbox to export all areas for the selected application.
Include	Select the option you want to include in the export from the pop-up menu: • **Translated** • **Not Translated** • **Both**

7. Click **Next**. The Select Options section appears. The total number of records to be exported displays in the Count of Matching Records field.
8. Use the following table to select information:

Field	Description
Character Set	Use the pop-up menu to choose the character set for the import file: • **UTF-8 (Unicode)** • **Windows ANSI (Windows)** • **Mac Roman (Mac)** • **ISO 8859-1 (Unix)**
Field Delimiter	Choose the field delimiter from the pop-up menu. This refers to the item that will separate the fields in the exported data. • **Tab**: Separates fields with a tab • **Comma**: Separated fields with a comma • **Other**: Enter a field delimiter in the blank field, such as a comma **Note:** This field appears if you select **Message Key File** as the **Type** to be imported.

First row contains headers:	Select the checkbox to exclude the header row from the import. **Note:** This field appears if you select **Message Key File** as the **Type** to be imported.

9. Click **Export**. The file is exported and downloaded to the specified folder on your computer.

PowerSchool Localization

PowerSchool supports localization of text that appears on the application pages, and information that displays from the database.

On the Localize PowerSchool page, the Text for Translation area displays the default text to be translated, based on the filtering selected. The translation is entered in the Translated Text field.

The functional areas available for translation are based on the District or School sign in. Attendance codes and other specific user defined data are available for translation at the School level. Field names and other text translations are available at the District level.

The Localize PowerSchool page contains three tabs which allows for translation in the following areas of the application:

- Text – Translation of all static text messages and field names.
- Data – Translation of all specific data such as Attendance codes, grade scales, and search expressions.
- Help Text – Translation of online help text for PowerSchool, PowerTeacher Portal, PowerTeacher Substitute Portal, and the PowerSchool Parent and Student Portals.

Individual page translation, which displays the localize page icon on the navigation bar, is enabled on the *Locale Independent Settings* page. Access to the Localize PowerSchool page and individual page translation is controlled by security group permissions.

Localization Rules

When entering translated text, there are certain rules to follow to ensure a more fluent-sounding translation. Review the following rules before you begin the translation process.

HTML

If there are HTML snippets, entities, etc., in the default translation, those must be maintained in the translated text.

For example:
> Change Daily Attendance
would be translated into pig Latin as:
> Angechay Ailyday Attendanceway

Parameter Substitutions

If the default text has constructions of the form {xxx}, you must exactly reproduce them in your translated text. The majority of the time, these will take the form where 'xxx' is a small number (0 or 1).

For example, if you are translating a text like this: *Report {0} of {1} reports(s)* and you are translating to French, the translation should be: *Rapporte {0} de {1} rapporte(s)*

If you omit the {xxx} constructions, the page may not display correctly.

Another example: *{0}Family* would be translated to: *{0}Famille*

The purpose of these constructions is to instruct the software where to substitute information into the middle of a message; each {xxx} represents where one variable or database field is inserted. The software specifies where the substituted data comes from; the message text specifies where the data is substituted in the message body.

Parentheses

Whenever parentheses are used, there must be an open and close set in order to translate correctly.

Space and Empty String Handling

If the translated text string is empty, the translation user interface deletes the translated record from the database. This allows the string to revert to its default value in the user interface. There may be some cases where an actual blank string should be stored, but the system does not currently allow this.

The translation user interface saves translated text with the same beginning/end spacing as the original (default) text.

For example, if the default text is: *key2 = \ records* should be translated to Spanish as: *key2 = \ registros*

Localize Using Batch Mode

Localize static text and messages on the Text tabbed page view on the Localize PowerSchool page. Using the Chose functional area pop-up menu, you can localize text for custom pages, PowerTeacher web access, PowerSchool Parent and Student web access, PowerTeacher Gradebook, and ReportWorks. Localize customer-specific data, such as codes and expressions, on the Data tab.

How to Localize Text or Data in Batch Mode

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Page and Data Management**. The Page and Data Management page appears.
3. Under Localization, click **Localize PowerSchool**. The Localize PowerSchool page appears.

   Note: This link does not appear if the Language Translator group security permission is not enabled for the user.

4. Depending on the type of batch translation you want to perform, select the **Text** or **Data** tab.
5. Use the following table to enter information in the fields:

Field	**Description**
Choose locale	Choose a locale on which to perform the language translation from the pop-up menu. By default, the current system locale appears.
Choose the functional area, or item you want to translate	Choose the area of the application to translate from the pop-up menu. This filters the selection of information that you can translate in the Text for Translation area. Depending on the tab selected, the pop-up menu displays a list of various types of messages or data grouped by the following areas or applications: • PowerSchool lists all static text or data from the PowerSchool web application. • PowerSchool Customer Defined Data lists all static text that appears on the Data Export Manager page. • PowerTeacher Gradebook lists all static text that appears in the PowerTeacher Gradebook application.

	• ReportWorks lists all static text that appears in the ReportWorks application. The numbers to the right of each section signify how many messages have been translated for the selected locale out of the total number of messages.
Category	Choose the PowerSchool customer defined data category to translate from the pop-up menu. **Note:** This field only appears if **PowerSchool Customer Defined Data** is selected from the **Choose the functional area, or item you want to translate** pop-up menu.
Search for specific text	Enter text in the field. Use the pop-up menu to select a search modifier.
Filtered Retrieved Messages	Choose a filter option from the pop-up menu: • Choose **Display all matching messages** to filter by the information entered in Search for specific text field. • Choose **Display only translated messages** to display only data that has been previously translated. • Choose **Display only non-translated messages** to filter by those messages that have not yet been translated. • Choose **Display only messages needing merge** to filter by only those messages that require a merge between the new and existing text. • Choose **Display only new messages** to filter by new messages only. • Choose **Display only new messages with related localizations** to filter by new messages that have a message key prefix that matches existing localizations.
Retrieve Text	Click to display text for translation based on the selections provided.
Text Key	Displays the internal system identifier, such as the system web page name.

	Note: Custom page text keys are created in PowerSchool Administrator and are identified with the type .htmlc. For more information, see the PowerSchool Administrator online help or the *Custom Web Page Management User Guide* available on PowerSource.
Default Text	Displays the system-defined text. This text displays either in English or the language entered in the default database tables.
Translated Text	Displays the translated text. Click in the field to edit or enter information. **Note**: To copy and add translated text to matching rows, see *Copy and Add Translated Text*.
Translation Hints	Google Translation API is no longer available for translation hints, so clicking on the magnifying glass icon will only return suggestions based on translations already done for the selected language within PowerSchool. Nothing will be displayed if there are no translations currently available.
Copy and Add Translated Text	When localized text or data is added to the Translated Text column, a Copy/Add icon appears to the right of the column. Click on this icon to copy the translated text of that row to the Translated Text field of all the rows in the grid that match that Default Text.
Navigation links	Click the arrows to scroll through the list of text to translate or enter a page number in the field provided to navigate to a specific page of the list. Use the pop-up menu to change the number of lines that display in the list.

6. Click **Submit** to save the Translated Text field entries. A verification message appears.

Localize PowerSchool Online Help

Localize the PowerSchool online help content on the Help Text tabbed page view.

There are several files that contain the text used on the tabs and buttons on the online help pages. You can translate the text on each of these files and it will be reflected on the applicable page in the online help.

Note: If you have customized PowerSchool online help pages, see the PowerSchool Administrator online help or the *Custom Web Page Management User Guide* available on PowerSource for details on extracting text keys for localization.

How to Localize PowerSchool Online Help

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Page and Data Management**. The Page and Data Management page appears.
3. Under Localization, click **Localize PowerSchool**. The Localize PowerSchool page appears.
4. Select the **Help Text** tab.
5. Use the following table to enter information in the fields:

Field	Description
Choose locale	Choose a locale on which to perform the language translation from the pop-up menu. By default, the current system locale appears.
Choose the functional area, or item you want to translate	Choose the area of the online help to translate from the pop-up menu. This filters the selection of information that you can translate in the Default translation area. Only online help topics, tables of content and indices for the PowerSchool application and portals that display in this list can be translated. The numbers to the right of each section signify how many messages have been translated for the selected locale out of the total number of messages.
File	When an online help category is selected, the associated help files appear in a pop-up menu. Select a file to translate.
Retrieve Text	Click to display the selected content for translation on the Default tab.

Default Tab	Displays the HTML content for the selected help file.
Translated Tab	Displays the translated HTML content.
HTML Editing Toolbar	Displays basic HTML editing functions.

6. Highlight the text you want to convert for translation and click the **Translation Hints** button on the HTML editing toolbar. The Translation Hints dialog appears.
7. Select the applicable text on the Translation Hints. The information appears in place of the text you highlighted. You can also enter the localization text directly in the file.
8. Select the applicable text on the Translation Hints. The information appears in place of the text you highlighted. You can also enter the localization text directly in the file.
9. Use the HTML editing toolbar to make any formatting changes to the help file.
10. Click **Submit** to save. A verification message appears.
11. Click **Help** to view and verify the translation.

How to Localize Help Tabs and Button Text

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Page and Data Management**. The Page and Data Management page appears.
3. Under Localization, click **Localize PowerSchool**. The Localize PowerSchool page appears.
4. Select the **Help Text** tab.
5. On **the Choose the functional area, or item you want to translate** pop-up menu, choose the following files to edit tab text and/or buttons for the applicable online help page:
    - Contents > toc_header.html: Topic Index, A-Z Index, and Search tabs, and Back button text for the Topic Index page.
    - Contents > toc_search.html: Topic Index, A-Z Index, and Search tabs, and Back button and Search button text for the Search page. Also contains text found on the Search submission and results pages.
    - Index > index_header.html: Topic Index, A-Z Index, and Search tabs, and Back button text for the A-Z Index page.
    - Miscellaneous > header.html: Topic Index, A-Z Index, and Search tabs, and Back button text for the A-Z Index page.

  - Miscellaneous > how_to/pso_how_to_header.html: Topic Index, A-Z Index, and Search tabs, and Back button text for contextual help pages.
6. Click **Submit** to save. A verification message appears.
7. Click **Help** to view and verify the translation.

Enable Individual Page Localization

Set the individual page localization to enable translation of a page in PowerSchool.

How to Enable Individual Page Localization

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Page and Data Management**. The Page and Data Management page appears.
3. Under Localization, click **Localize PowerSchool**. The Localize PowerSchool page appears.
4. Select the **Settings** tab.
5. Select the **Enable individual page translation in PowerSchool** checkbox.
6. Click **Submit**. Depending on the group security permissions, the localize page icon will appear on the navigation bar in PowerSchool, PowerTeacher portal, and the PowerSchool Student and Parent portal.

Localize Individual Pages

Depending on the assigned user role and page permissions, a localize page button appears in the navigation bar of PowerSchool, PowerTeacher web access, and PowerSchool Parent and Student web access. This button allows you to localize field names and text that appears on that page.

In order to localize individual pages on PowerTeacher and Parent and Student web access, the following settings must be in place:

- Individual page translation must be enabled.
- You must have group security permissions with language translator setting enabled.
- You must have security permissions to access PowerTeacher web access, and/or PowerSchool Parent and Student web access.

How to Localize an Individual Page in PowerSchool

1. Sign in to PowerSchool. The localize page button appears on the navigation bar of each page the user has access to.

2. In the navigation toolbar, click the [Localize Page] icon. The Localize Page pop-up appears.
3. Use the following table to enter information in the fields:

Field	Description
Choose the language to translate or modify	Choose a locale on which to perform the language translation from the pop-up menu. By default, the current system locale appears.
Retrieve Text	Click to display the text for the current page.
Search	Text for translation can be filtered by Text Key, Default Text and Translated Text. Enter the text or a portion of text you want to find.
Text Key	Displays the internal system identifier, such as the system web page name. **Note**: Custom page text keys are created in PowerSchool Administrator and are identified with the type .htmlc. For more information, see the PowerSchool Administrator online help or the *Custom Web Page Management User Guide* available on PowerSource.
Default Text	Displays the system-defined text. This text displays either in English or the language entered in the default database tables.
Translated Text	Displays the translated text. Click in the field to edit or enter information. **Note**: To copy and add translated text to matching rows, see *Copy and Add Translated Text*.
Translation Hints	1. Click the magnifying glass icon to view the Translation Hints dialog. Translated text suggestions appear if an exact match is found between the default text of the current row and the default text of one or more previously translated messages is found.

	2. Select the word and it is automatically placed in the Translated Text column for the selected row. 3. Click the **X** to close the dialog.
Copy and Add Translated Text	When localized text or data is added to the Translated Text column, a Copy/Add icon appears to the right of the column. Click on this icon to copy the translated text of that row to the Translated Text field of all the rows in the grid that match that Default Text.
Navigation links	Click the arrows to scroll through the list of text to translate or enter a page number in the field provided to navigate to a specific page of the list. Use the pop-up menu to change the number of lines that display in the list.

4. Click **Submit** to save the Translated Text field entries. A verification message appears.

How to Localize an Individual Page in the PowerTeacher Portal

In order to translate individual pages in PowerTeacher portal, you must have group security permissions set, and individual page translation must be enabled for the locale.

For more information, see *How to Enable Language Translator Security Permissions* and *How to Enable Individual Page Localization*.

1. On the Address bar, enter the URL for PowerTeacher portal
2. On the sign in page, enter a valid Username and Password.
3. Click **Sign In**. The applicable web access page displays, with the translate page icon available on each page.
4. Follow steps 3 and 4 in *How to Localize an Individual Page in PowerSchool*.

How to Localize an Individual Page in the PowerSchool Student and Parent Portal

In order to translate individual pages in the PowerSchool Student and Parent portal, you must have group security permissions set, and individual page translation must be enabled for the locale.

For more information, see *How to Enable Language Translator Security Permissions* and *How to Enable Individual Page Localization*.

1. On the Address bar, enter the URL for the PowerSchool Student and Parent portal, followed by /?translator=true. For example: **http://[server ID].powerschool.com/public/home.html?translator=true**
2. On the sign in page, enter a valid Username and Password.
3. Click **Sign In**. The applicable web access page displays, with the translate page icon available on each page.
4. Follow steps 3 and 4 in *How to Localize an Individual Page in PowerSchool*.

Localize Custom Pages

Customized PowerSchool pages can be converted to display on the Localize PowerSchool page for batch translation. Use the PowerSchool Administration application to covert the data for translation. For more information on custom pages, the PowerSchool Administrator online help or the *Custom Web Page Management User Guide* available on PowerSource.

Localize Daily Bulletin

You can create different language versions of the bulletin for each locale you have configured in PowerSchool. For more information, see *How to Add a Locale*.

How to Localize a Daily Bulletin Item

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Daily Bulletin Setup**. The Daily Bulletin Setup page appears.
3. Do one of the following:
    - Click the date of the existing bulletin item you want to edit. The Edit Daily Bulletin Item page appears.
    - Click **New** to create a new bulletin. The New Daily Bulleting Item page appears. Enter information in the default local fields
4. To copy the original bulletin content and automatically translate it, click the translate icon for the applicable locale.
5. To copy the original bulletin content without translating, click **Copy [default locale]** for the applicable locale. The original bulletin content is copied into the Item Body and the text can be translated manually.
6. Click **Submit**. The Daily Bulletin Setup page displays the translated bulletin item.

How to Verify Localized Daily Bulletin

Note: For more information about daily bulletins, see *Daily Bulletin*.

1. On the start page, choose **Daily Bulletin** under Functions in the main menu. The View Daily Bulletin pop-up window appears.

   Note: If the Default Sign In Page is set to Daily Bulletin, the daily bulletin appears as a page. For more information, see *How to Set the Default Sign In Page*.

2. Do one of the following:
   - Click the **Calendar** icon to select a date to view the bulletin for that day. On the calendar, dates that are shaded blue have a daily bulletin associated to them, the current date displays a black border, and the selected date has no shading. Use the arrow buttons to navigate to a different month.
   - Click the email address to send a message to the person who creates items for the daily bulletin. Send either an announcement to contribute to the bulletin or a message to the bulletin administrator. For more information, contact your PowerSchool administrator.
3. When done viewing, close the View Daily Bulletin pop-up window.

Updates to Localization

When new versions of PowerSchool are released, they may contain changes or updates to messages, field names, and static text within the application. You can view these changes on the Localize PowerSchool page and change the translation if necessary.

How to View and Edit Message Updates

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Page and Data Management**. The Page and Data Management page appears.
3. Under Localization, click **Localize PowerSchool**. The Localize PowerSchool page appears.
4. Select the **Text** tab.
5. Use the following table to enter information in the fields:

Field	Description
Choose the language to translate or modify	Choose a locale from the pop-up menu. By default, the current system locale appears.

Choose the functional area, or item you want to translate	Choose the functional area of the application to view the updated messages for that area.
Search for specific text	Leave blank.
Filtered Retrieved Messages	Chose a filter option from the pop-up menu: • Choose **Display only messages needing merge** to filter by only those messages that require a merge between the new and existing text. For more information, see *How to Merge Localized Text*. • Choose **Display only new messages** to filter by new messages only. • Choose **Display only new messages with related localizations** to filter by new messages that have a message key prefix that matches existing localizations.

6. Use the tabbed page view to translate the new messages. For more information, see *How to Localize Text or Data in Batch Mode*.

How to Merge Localized Text

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Data Management, click **Page and Data Management**. The Page and Data Management page appears.
3. Under Localization, click **Localize PowerSchool**. The Localize PowerSchool page appears.
4. Select the **Text** tab.
5. On the Filter Retrieved Messages pop-up menu, choose **Display only messages needing merge**. The applicable messages appear in the tabbed view. A merge icon appears in the far right column.
6. Click the merge icon next to the message you want to edit. The **Merge translated text dialog** appears.
7. Use the following table to enter information in the fields:

Field	Description
Text Key	The system-generated message key assigned to the text.
Original Default	The previous version default text before localization.
Current Default	The current version default text.
Update Current Text	Enter the new localization for the current message text.
Default Differences	Displays the changes for the selected message key.

8. Click Use next to the text you want to use for the selected message key. The Merge translated text dialog closes, and the text you selected appears on the Translated Text column of the Localize PowerSchool page.
9. Repeat these steps for each merge.
10. Click **Submit** to save the changes.

Localize PowerTeacher Administrator

PowerTeacher Administrator is a web-based application that allows system administrators to complete and distribute PowerTeacher Gradebook information to a number of teachers, thereby maintaining organization and minimizing teachers' workloads. PowerTeacher Administrator does not currently have batch and page-level localization enabled. Therefore, translations must be handled outside of PowerSchool. However, it is necessary to update a specific file on the PowerSchool server in order for customized translations to appear correctly in PowerTeacher Administrator.

Once the customized translation of the PowerTeacher Administrator content is complete, you will edit a properties file available on the PowerSchool server, change the name as specified in the following procedure, and place it in the specified folder.

How to Update the PowerTeacher Administrator Properties File

1. On the PowerSchool server, navigate to: [drive]:\Program Files\PowerSchool\application\components\powerschool-psweb-[build number]\WEB-INF\classes\com
2. Locate the file **package.properties** within the folder.
3. Copy the file and rename it to the following:

package.[language code].[COUNTRY CODE].properties

Note: Language and country codes are listed in the LOCALE table in the PowerSchool database. The codes are case-sensitive and must be entered in the file name as they appear in the LOCALE table. Be sure the renamed file resides in the correct folder: [drive]:\Program Files\PowerSchool\application\components\powerschool-psweb-[build number]\WEB-INF\classes\com

4. Edit the renamed file using a text-editing tool as needed and translate only the values associated to the message keys (the text to the right of “=”).

Log Entries User Guide

PowerSchool
Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

The data and names used to illustrate the reports and screen images may include names of individuals, companies, brands, and products. All of the data and names are fictitious; any similarities to actual names are entirely coincidental.

Table of Contents

Introduction

Log entries are used to create a record regarding a student's behavior, performance, or activity. Many schools use log entries to chronicle disciplinary actions. Log entries can also be used to record students' positive achievements.

Setup

Log Types

Log types are used to group log entries by classification indicating the nature of a log entry. Additionally, subtypes can be created within each log type to further characterize the log entry. For example, a log entry related to cheating on a test is discipline-related. Discipline is the log type, and cheating is the subtype. For more information about log entries and the use of log types, see *Log Entry Fields* and *Log Entries*.

How to Add a Log Type

1. On the start page, choose **District** under Setup in the main menu. The District Setup Page appears.
2. Under Discipline and Log Entries, click **Log Types**. The Log Types page appears.
3. Click **New**. The Edit Log Types page appears.
4. Enter a log type in the **Log Type** field.
5. Click **Submit**. The Log Types page displays the new log type. To add subtypes, see *How to Add a Log Subtype*.

How to Edit a Log Type

1. On the start page, choose **District** under Setup in the main menu. The District Setup Page appears.
2. Under Discipline and Log Entries, click **Log Types**. The Log Types page appears.
3. Click the log type you want to edit. The Edit Log Type page appears.
4. Edit the log type.
5. Click **Submit**. The Log Types page displays the edited log type. To edit subtypes, see *How to Edit a Log Subtype*.

How to Delete a Log Type

1. On the start page, choose **District** under Setup in the main menu. The District Setup Page appears.
2. Under Discipline and Log Entries, click **Log Types**. The Log Types page appears.
3. Click the log type you want to delete. The Edit Log Type page appears.
4. Click **Delete**.
5. Click **Confirm Delete**. The Selection Deleted page appears.

How to Add a Log Subtype

1. On the start page, choose **District** under Setup in the main menu. The District Setup Page appears.
2. Under Discipline and Log Entries, click **Log Types**. The Log Types page appears.
3. Click **Edit Subtypes** next to the log type you want to edit. The Edit Subtypes page appears.
4. Click **New**. The Edit Subtype page appears.
5. Use the following table to enter information in the fields:

Field	**Description**
Log Code	Enter the code for the log subtype.
Description	Enter a description of the log subtype. This appears in the Subtype pop-up menu when using log entries.

6. Click **Submit**. The Edit Subtypes page appears.

How to Edit a Log Subtype

1. On the start page, choose **District** under Setup in the main menu. The District Setup Page appears.
2. Under Discipline and Log Entries, click **Log Types**. The Log Types page appears.
3. Click **Edit Subtypes** next to the log type you want to edit. The Edit Subtypes page appears.
4. Click either the code or description of the subtype want to edit. The Edit Subtype page appears.
5. Edit the information as needed. For field descriptions, *How to Add a Log Subtype*.
6. Click **Submit**. The Edit Subtypes page displays the edited log subtype.

How to Delete a Log Subtype

1. On the start page, choose **District** under Setup in the main menu. The District Setup Page appears.
2. Under Discipline and Log Entries, click **Log Types**. The Log Types page appears.
3. Click **Edit Subtypes** next to the log type you want to edit. The Edit Subtypes page appears.
4. Click either the code or description of the subtype you want to delete. The Edit Subtype page appears.
5. Click **Delete**.

6. Click **Confirm Delete**. The Selection Deleted page appears.

Log Entry Fields

Log entries are used to create a record regarding a student's behavior, performance, or activity. Many schools use log entries to chronicle disciplinary actions. Log entries can also be used to record students' positive achievements.

The default Log Entries page contains over forty fields, which may or may not be applicable to your district. Based on your needs, you can customize the page to eliminate unneeded fields. Log Entries page customizations are reflected on PowerSchool's Log Entries page.

Using the Log Entry Setup page, you can determine which fields appear and the selections for each field, the format in which the field appears, and the order in which the field appears on the page.

How to Customize the Log Entries Page

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Discipline and Log Entries, click **Log Entry Fields**. The Log Entry Setup page appears.

   The following information displays for each of the 44 configurable log entry fields:

Field	Description
Field Name	Name of all the log entry field as it appears in the database. To edit this information, click the corresponding **Field Name** link.
Field Label	Title of field name, which appears on the Log Entries page.
Description	Description of the field name. This information is for reference only and does not appear on the Log Entries page.
Sort Order	Order in which the field appears on the Log Entries page. You can assign a value of 1 to 44. If you give two or more fields the same value, the fields appear in ascending alphabetical order within the selected sort order. Fields that are not assigned a value appear in ascending alphabetical order at the bottom of this page.

	If you do not want a field to appear on the Log Entries page, choose **Hide**. **Note:** You cannot hide the following fields: Entry_Date, Entry_Time, Entry_Author, LogType, Subtype, Consequence, Subject, and Entry.

3. Click the **Field Name** link of the field you want to customize. The Edit Log Entry Field page appears. The page varies based on the field you selected.
4. Use the following table to edit information in the fields:

Field	**Description**
Field Name	The name of the log entry field appears as it is in the database.
Field Label	Enter the title of the field name, which you want to appear on the Log Entries page. Some HTML formatting is supported. **Note:** You cannot modify the Field Label for the following fields: Entry_Date, Entry_Time, Entry_Author, LogType, Subtype, Consequence, Subject, and Entry.
Input Type	Use the pop-up menu to select the form in which you want the field to appear: • **Entry field** • **Static field** • **checkbox** • **Popup menu** • **Radio buttons** • **Entry box** Not all menu items are available for each Field Name. Only those menu items that are applicable Input Types appear. **Note:** You cannot modify the Input Type for the following fields: Entry_Date, Entry_Time, Entry_Author, LogType, Subtype, Consequence, Subject, and Entry.

Width	If you select the Field Type of "entry field" or "entry box," enter a value to indicate the width of the field/box.
Height	If you select the Field Type of "entry field" or "entry box," enter a value to indicate the height of the field/box.
Data for Popup or Radio buttons	If you select the Input Type of "Popup menu" or "Radio buttons," enter the information you want to appear. A pop-up menu contains values, which consists of two segments. The first segment is the value that is stored in the database. This value is not visible on the Log Entries page. The second segment is the label, which appears within the pop-up menu. The first and second segments use a semi-colon as a delimiter. To set a default value for a pop-up menu, enter a semi-colon as the delimiter and then enter an asterisk at the end of the default entry. The following is an example of a properly formatted data for a pop-up menu where "P;Police" is the default entry: S;Student T;Teacher A;Administrator O;Other School Staff P;Police;* N;Non-School Individual U;Unknown Some fields in the Log table are called "flag fields" because they end with "Flag," such as "Discipline_FelonyFlag" and "Discipline_LikelyInjuryFlag." Flag fields are stored as numeric values. No is stored as a 0 while Yes is stored as 1. The following is an example of properly formatted flag fields: 0;No 1;Yes A radio button follows the same rules as pop-up menu. The only difference is that with a pop-up menu, you can enter numerous sets of values. With a radio button, you are limited to only two sets of values.

5. Once you have entered the appropriate data on the Edit Log Entry Field page, click **Submit**. Upon submitting your customizations, data validation is performed. An error page appears if one or more invalid entries are found due to the following:
    - An empty entry.
    - More than one default value.
    - An entry that has only one segment.
    - An entry that has only one segment where that entry is marked as the default entry.

    The error page lists the line numbers where the error occurred and instructs you to return to the Edit Log Entry Field page to make corrections. The following are example of error messages you may encounter:

    - The entry in line 2 of the popup values is invalid.
    - The entries in these lines of the popup values are invalid: 2 and 4.
    - The entries in these lines of the popup values are invalid: 2, 3, and 4.

    Note: Additionally, the system removes nulls (Char(0)) though no alert page is returned.

6. Once you have made all of your Log Entry Field customizations, click **Submit**.

Log Entry Fields

Field	Description
Entry_Date	The date the log entry is entered, such as 5/17/2009. By default, this field appears as an entry field on the Log Entries student page and is auto-populated with today's date.
Entry_Time	The time the log entry is entered, such as 3:41 PM. By default, this field appears as an entry field on the Log Entries page as is auto-populated with the current time.
Entry_Author	The name of the staff member making the log entry. By default, this field appears as an entry field on the Log Entries page and is auto-populated with the author's username.

LogType	Classification indicating the nature of a log entry. By default, this field appears as a pop-up menu on the Log Entries page. To modify the field selections, see *Log Types*.
Subtype	Further characterization of a log entry associated to a specific LogType. By default, this field appears as a pop-up menu on the Log Entries page. To modify the field selections, see *Log Types*.
Consequence	Action resulting from the log entry. By default, this field appears as a pop-up menu on the Log Entries page.
Subject	The title for the log entry. By default, this field appears as an entry field on the Log Entries page.
Entry	Description for making the log entry. By default, this field appears as an Entry box on the Log Entries page. There is no limit to the length of the entry.
Database Extension (Legacy Custom Field)	Database extension (legacy custom field) created by your district to display a variety of information about students, staff, courses, and sections.

The following fields were incorporated into PowerSchool to address the Federal Gun-Free Schools Act:

Field	**Description**
Discipline_IncidentType	The type of incident. Discipline incident types indicate the nature of an incident. By default, this field appears as a pop-up menu on the Log Entries page.
Discipline_IncidentTypeCategory	The category of incident. Discipline incident categories are the general groups of incidents. Add a discipline incident category to further classify group incidents. By default, this field appears as a pop-up menu and an entry field on the Log Entries page.

Discipline_IncidentTypeDetail	The details of the incident. Discipline incident details include specific information about incidents. Use discipline incident details to record additional information about an incident. By default, this field appears as a pop-up menu and an entry field on the Log Entries page.
Discipline_IncidentDate	The date the incident occurred, such as 5/17/2009. By default, this field appears as an entry field on the Log Entries page and is automatically populated with today's date.
Discipline_IncidentContext	Indicates if the incident occurred during or outside school hours and if it occurred at a school-sponsored activity. By default, this field appears as a pop-up menu on the Log Entries page.
Discipline_IncidentLocation	Indicates if the incident occurred on campus, during an off-campus school activity, or while using school-sponsored transportation. By default, this field appears as a pop-up menu on the Log Entries page.
Discipline_IncidentLocDetail	Discipline location details include specific information about incident locations. By default, this field appears as an entry field on the Log Entries page.
Discipline_Offender	Category of the person committing the incident. By default, this field appears as a pop-up menu on the Log Entries page.
Discipline_Reporter	Category of the person reporting the incident. By default, this field appears as a pop-up menu on the Log Entries page.

Discipline_ReporterID	Identification number of the person reporting the incident. By default, this field appears as an entry field on the Log Entries page.
Discipline_VictimType	Category of the person victimized by the incident. By default, this field appears as a pop-up menu on the Log Entries page.
Discipline_FelonyFlag	Indicates if the incident was a felony. By default, this field appears as a Yes or No pop-up menu on the Log Entries page.
Discipline_LikelyInjuryFlag	Indicates if the incident likely resulted in an injury. By default, this field appears as a Yes or No pop-up menu on the Log Entries page.
Discipline_SchoolRulesVioFlag	Indicates if the incident was a violation of school rules. By default, this field appears as a Yes or No pop-up menu on the Log Entries page.
Discipline_PoliceInvolvedFlag	Indicates if there were police involved in the incident. By default, this field appears as a Yes or No pop-up menu on the Log Entries page.
Discipline_HearingOfficerFlag	Indicates if there was a hearing officer involved in the incident. By default, this field appears as a Yes or No pop-up menu on the Log Entries page.
Discipline_GangRelatedFlag	Indicates if the incident was gang-related. By default, this field appears as a Yes or No pop-up menu on the Log Entries page.
Discipline_HateCrimeRelatedFlag	Indicates if the incident was a hate crime. By default, this field appears as a Yes or No pop-up menu on the Log Entries page.

Discipline_AlcoholRelatedFlag	Indicates if the incident was alcohol-related. By default, this field appears as a Yes or No pop-up menu on the Log Entries page.
Discipline_DrugRelatedFlag	Indicates if the incident was drug-related. By default, this field appears as a Yes or No pop-up menu on the Log Entries page.
Discipline_DrugTypeDetail	Discipline drug details include specific information about drug-related incidents. By default, this field appears as a pop-up menu on the Log Entries page.
Discipline_WeaponRelatedFlag	Indicates if a weapon was used during the incident. By default, this field appears as a Yes or No pop-up menu on the Log Entries page.
Discipline_WeaponType	Indicates the type of weapon. By default, this field appears as a pop-up menu on the Log Entries page.
Discipline_WeaponTypeNotes	Notes relating to the weapon type. By default, this field appears as an entry field on the Log Entries page. A maximum of 79 characters can be entered.
Discipline_MoneyLossValue	The amount of money lost in the incident, if the incident results in a dollar loss amount for any party. By default, this field appears as an entry field on the Log Entries page.
Discipline_ActionDate	The date the discipline action was taken, such as 5/17/2009. By default, this field appears as an entry field on the Log Entries page and is auto-populated with today's date.
Discipline_ActionTaken	The disciplinary action taken against a student. By default, this field appears as a pop-up menu on the Log Entries page.

Discipline_ActionTakenDetail	Specific information about disciplinary action taken against a student. By default, this field appears as a pop-up menu on the Log Entries page.
Discipline_ActionTakenEndDate	The date the discipline action ends. By default, this field appears as an entry field on the Log Entries page.
Discipline_DurationAssigned	The assigned duration of the discipline action. By default, this field appears as an entry field on the Log Entries page.
Discipline_DurationActual	The actual duration of the discipline action. By default this field appears as an entry field on the Log Entries page.
Discipline_DurationChangeSource	Reasons for any difference in the values of the Discipline_DurationActual from the Discipline_DurationAssigned fields. By default, this field appears as a pop-up menu on the Log Entries page.
Discipline_DurationNotes	Notes relating to the duration of the discipline action. By default, this field appears as an entry field on the Log Entries page. You can enter a maximum of 79 characters.
Discipline_Sequence	The numerical sequence of this log entry if entering more than one log entry for the incident. By default, this field appears as an entry field on the Log Entries page.

Work with Log Entries

Log Entries

Use log entries to create a record regarding a student's behavior, performance, or activity. Many schools use log entries to chronicle disciplinary actions. Log entries can also be used to record students' positive achievements. Regardless of your reason for creating the log entry, the system immediately sends the log entry to the PowerSchool server, where it is stored in the student's permanent record. Only authorized staff members can view, add, edit, and delete log entries and discipline alerts.

Note: The Log Entries student page is customizable. The information presented in this section is based on the default setup and may differ from your PowerSchool Log Entries student page. For information about configuring this page, see *Log Types* and *Log Entry Fields*.

How to View Log Entries

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Administration, choose **Log Entries** from the student pages menu. If nothing appears, no teachers or other administrators have created log entries for the selected student.

How to Create a Log Entry

Though teachers can create log entries in PowerTeacher Gradebook, administrators create log entries in PowerSchool.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Administration, choose **Log Entries** from the student pages menu. The Log Entries page appears.
3. Click **New**. The New Log Entry page appears.

   Note: The Date, Time, and Author fields are automatically entered when the page appears. There is no need to change or add anything to those fields unless they are incorrect.

4. Use the following table to enter information in the fields:

Field	Description
Date & Time	Enter the current date and time using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
Author	Enter the name of the log entry author.
Log Type	Choose the log type from the pop-up menu.
Subtype	Choose the log subtype from the pop-up menu.
Consequence	Choose the log consequence from the pop-up menu.
Title	Enter a title for the log entry.
Log Entry Text	Enter the log entry text. **Note:** This information goes in the student's permanent record. There is no limit to the length of the entry.

5. Because the Log Entries student page can be customized, the fields that appear on the second half of the page (after the Log Entry Text box) may differ from your PowerSchool Log Entries student page. Use the following table to enter information in the fields:

Field	Description
Incident Type	Choose the type of incident from the pop-up menu.
Incident Type Category	Choose the category of the incident from the pop-up menu.
Incident Type Detail	Choose the details of the incident type from the pop-up menu.

Incident Date	Enter the date of the incident.
Incident Context	Choose the context of the incident from the pop-up menu. Indicate if the incident occurred during or outside school hours and if it occurred at a school-sponsored activity.
Incident Location	Choose the location of the incident from the pop-up menu. Indicate if the incident occurred on campus, during an off-campus school activity, or while using school-sponsored transportation.
Incident Location Detail	Choose the details of the incident location from the pop-up menu.
Offender	Choose the category of the person committing the incident, such as a **student** or **teacher**, from the pop-up menu.
Reporter	Choose the category of the person reporting the incident, such as a **student** or **teacher**, from the pop-up menu.
Reporter ID	Enter the identification number of the person reporting the incident.
Victim Type	Choose the category of the person victimized by the incident, such as a student or teacher, from the pop-up menu.
Felony Flag	Select **Yes** or **No** to indicate if the incident was a felony.
Likely Injury	**Select Yes or No** to indicate if the incident likely resulted in an injury.
School Rules Violation	Select **Yes** or **No** to indicate if the incident was a violation of school rules.
Police Involved	Select **Yes** or **No** to indicate if there were police involved in the incident.

Hearing Officer	Select **Yes** or **No** to indicate if there was a hearing officer involved in the incident.
Gang Related	Select **Yes** or **No** to indicate if the incident was gang-related.
Hate Crime	Select **Yes** or **No** to indicate if the incident was a hate crime.
Alcohol Related	Select **Yes** or **No** to indicate if the incident was alcohol-related.
Drug Related	Select **Yes** or **No** to indicate if the incident was drug-related.
Drug Type	Choose the drug type from the pop-up menu.
Weapon Related	Select **Yes** or **No** to indicate if a weapon was used during the incident.
Weapon Type	Choose the type of weapon, such as a **knife** or a **handgun**, from the pop-up menu.
Weapon Type Notes	Enter any notes related to the weapon type. **Note:** You can enter a maximum of 79 characters.
Money Loss Value	Enter any amount of money lost in the incident.
Action Date	Enter the date the discipline action was taken.
Action Taken	Choose from the pop-up menu the discipline action taken, such as **detention** or **suspension**.
Action Taken Detail	Choose the details of the discipline action taken from the pop-up menu.
Action Taken End Date	Enter the date the discipline action ended.

Duration (Assigned)	Enter the assigned duration of the discipline action, such as **2** for two hours of detention.
Duration (Actual)	Enter the actual duration of the discipline action.
Duration Change Source	Use the pop-up menu to choose the reason for any difference in the values of the Duration (Actual) from the Duration (Assigned) fields.
Duration Notes	Enter any notes related to the duration of the discipline action. **Note:** You can enter a maximum of 79 characters.
Sequence	Enter the numerical sequence of this log entry if entering more than one log entry for the incident.
Administrator ID	Enter the identification number of the person administering the discipline action.

6. Click **Submit**. The Changes Recorded page appears.

How to Edit a Log Entry

There are times when you must change an entry because it contains too much or not enough information. Only those school administrators with the proper permissions can edit a log entry.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Administration, choose **Log Entries** from the student pages menu. The Log Entries page appears.
3. Click the date of the entry you want to edit. The Edit Log Entry page appears.
4. Use the following table to edit information in the fields:

Field	**Description**
Date & Time	Enter the current date and time using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you

	submit the date with an incorrect format, the date field is submitted as a blank entry.
Author	The name of the log entry author appears.
Log Type	Choose the log type from the pop-up menu.
Subtype	Choose the log subtype from the pop-up menu.
Consequence	Choose the log consequence from the pop-up menu.
Title	Enter a title for the log entry.
Log Entry Text	Enter the log entry text. **Note:** This information goes in the student's permanent record. There is no limit to the length of the entry.

See *How to Create a Log Entry* for details of the Federal Gun Safe Schools Act Information fields.

Note: Depending on your state, additional state-specific fields may appear. Modify the fields as necessary.

5. Click **Submit**. The Changes Recorded page appears.

How to Delete a Log Entry

Occasionally a log entry must be deleted from the student's permanent record. Only those school administrators with the proper permissions can delete a log entry.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Administration, choose **Log Entries** from the student pages menu. The Log Entries page appears.
3. Click the date of the entry you want to delete. The Edit Log Entry page appears.
4. Click **Delete**.
5. Click **Confirm Delete**. The Selection Deleted page appears.

How to Add a Discipline Alert

Use a Discipline alert to indicate and make staff members aware of a student's discipline information.

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Administration, choose **Log Entries** from the student pages menu. The Log Entries page appears.
3. Click **Edit Discipline Alert**. The Discipline Alert page appears.
4. Use the following table to enter information in the fields:

Field	Description
Discipline Alert Text	Enter the discipline-related information.
Alert Expires	Enter the alert expiration date, if any, using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry. If there is no expiration date, use the default entry 0/0/0.

5. Click **Submit**. The Discipline Alert icon appears at the top of each page for the selected student. If the student does not have a Discipline alert, the icon does not appear.
6. Click the Discipline Alert icon to read the alert from any page. The Discipline alert for the selected student appears.
7. Click **Close** to close the Discipline Alert window.

Search Log Entries

Log entries are used to create a record regarding a student's behavior, performance, or activity. Many schools use log entries to chronicle disciplinary actions. Log entries can also be used to record students' positive achievements.

Using the Search Log Entries page, you can search for log entries based on selected parameters. Upon submitting the search, the Log Entry Functions page appears displaying three output options. You can view a list of the log entries, print a log entries report, or export the log entries.

How to Search for a Log Entry

Use PowerSchool to search for log entries containing selected words or those created during a specific period. Your security access will dictate how detailed of a search you can perform. For more information, see *Security*.

1. On the start page, choose **Special Functions** under Functions in the main menu. The Special Functions page appears.
2. Click **Search Log Entries**. The Log Entries Search page appears.
3. Complete any combination of the following fields. Use the following table to enter information in the fields:

Field	**Description**
Log Type	Choose the log type from the pop-up menu.
Log Subtype	Choose the log subtype from the pop-up menu.
Log Consequence	Choose the log consequence from the pop-up menu.
Contain this text	Enter the log entry text to search for.
And contain this text	Enter additional log entry text to search for.
Does not contain this text	Enter log entry text to be ignored during the search.
Title contains this text	Enter all or part of the title of the log entry.
Entered on or after this date	Enter a date either before or on the date the log entry was created using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
Entered on or before this date	Enter a date either after or on the date the log entry was created using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.

Student Grade Level	Enter the grade level of the student.
Author	Enter the name of the log entry author.
Sort by	Choose the sort order criteria from the pop-up menu.

4. Click **Submit**. The Log Entry Functions page appears.
5. Depending on what you want to do with the Log records you have selected, select one of the following:
    - *List Log Entries*
    - *Report on Log Entries*
    - *Quick Export*
6. Based on your selection, see the appropriate section below.

List Log Entries

Use this option to create a line listing of the log entries in the current selection of log entries.

How to List Log Entries

1. Search for log entries. For more information, see *How to Search for a Log Entry*.
2. On the Log Entry Functions page, click **List Log Entries**. The List Log Entries page appears. The system tells you how many log entries were found and lists each entry.
3. Do one of the following:
    - Click **Make this the current selection of students** to work with the entire group.
    - Click a student name to view all log entries for that student.

Report on Log Entries

Use this option to print log object reports that you have created using the Objects reporting tool. For more information, see *Objects Reports*.

Note: Only one log record can be printed per page.

How to Report on Log Entries

1. Search for log entries. For more information, see *How to Search for a Log Entry*.

2. On the Log Entry Functions page, click **Print a Report**. The Print a Report. page appears.
3. Use the following table to enter information in the fields:

Field	Description
Which report would you like to print?	Choose the report you want to print from the pop-up menu.
Which Log Entries?	Indicate the number of report pages you want to print by selecting one of the following: • Leave the **Only the first** option blank to print all of the report pages. • Select the **Only the first** option to limit the number of report pages you want to print. Enter the number of pages in the pages field.
Watermark Text	To print text as a watermark on each page of the report, use the pop-up menu to either choose one of the standard phrases or choose **Custom** and enter the text you want to print as a watermark in the field.
Watermark Mode	Use the pop-up menu to determine how you want the text to print. **Watermark** prints the text behind objects on the report, while **Overlay** prints the text over objects on the report.
When to print	Select a time to run the report: • **ASAP**: Execute immediately. • **At Night**: Execute during the next evening. • **On Weekend**: Execute during the next weekend. • **On Specific Date/Time**: Execute on the date and time specified in the following fields using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.

Report Output Locale	Select the locale from the pop-up menu. The report output will be in the language associated with the locale. **Note:** When generating object reports, certain report text may appear in the default English language. For more information, see *Object Reports*.

4. Click **Submit** to generate the report. The Report Queue page appears. For more information, see *Report Queue*.

Export Log Entries

Use this option to quickly produce a list of information from the Log table.

How to Export Log Entries

1. Search for log entries. For more information, see *How to Search for a Log Entry*.
2. On the Log Entry Functions page, click **Quick Export**. In most cases, you will not need to change the default options on the Export Students page. Skip to Step 4. To change the selections, proceed to the next step.
3. Use the following table to enter information in the fields:

Field	Description
[Fields to be Exported]	Enter the fields to be included on the exported spreadsheet. Enter as many fields as you want. Separate multiple fields with spaces. To insert a PowerSchool field into this field: 1. Click **Fields** at the bottom of the page to view a list of PowerSchool fields. The Fields pop-up appears. 2. To narrow the list of fields, enter one of more search terms in the **Filter** field. Otherwise, leave blank. 3. Click the field you want to add. The Fields pop-up closes, and the selected field appears. The following are Log table student fields you can export: • [01]LastFirst • [01]Grade_Level

	• [01]Student_Number • [01]DOB • [01]SSN • [01]Ethnicity • [01]Mailing_City • [01]Mailing_Street • [01]Mailing_State • [01]Mailing_Zip • [01]Alert_Discipline • [01]State_StudentNumber The following are Log table discipline fields you can export: • Entry_Author • Entry_Date • Entry_Time • Student_Number • Subject • Entry • Consequence • Subtype • Category • Logtypeid • Discipline_IncidentType • Discipline_IncidentTypeDetail • Discipline_IncidentTypeCategory • Discipline_IncidentContext • Discipline_IncidentDate • Discipline_IncidentLocation • Discipline_ActionDate • Discipline_IncidentLocDetail • Discipline_ActionTaken • Discipline_ActionTakenDetail • Discipline_AdministratorID • Discipline_LikelyInjuryFlag • Discipline_AlcoholRelatedFlag • Discipline_MoneyLossValue • Discipline_DrugRelatedFlag • Discipline_Offender • Discipline_DrugTypeDetail • Discipline_PoliceInvolvedFlag

	• Discipline_DurationActual • Discipline_Reporter • Discipline_DurationAssigned • Discipline_ReporterID • Discipline_DurationChangeSource • Discipline_SchoolRulesVioFlag • Discipline_DurationNotes • Discipline_Sequence • Discipline_FelonyFlag • Discipline_VictimType • Discipline_GangRelatedFlag • Discipline_WeaponRelatedFlag • Discipline_HateCrimeFlag • Discipline_WeaponType • Discipline_HearingOfficerFlag • Discipline_WeaponTypeNotes • Discipline_ActionTakenEndDate • Custom
Field Delimiter	Choose a field delimiter from the pop-up menu. The field delimiter is the item that separates fields in the exported data. If you choose **Other**, enter the delimiter in the blank field.
Record Delimiter	Choose the record delimiter from the pop-up menu. This refers to the item that will separate the records in the exported data. If you choose Other, enter the delimiter in the field. • **CR**: Carriage return • **CRLF**: Carriage return line feed • **LF**: Line feed
Surround Fields	Select the checkbox to surround the fields in the exported data with quotation marks.
Column titles on 1st row	Select the checkbox to include column titles on the first row of the exported data.

4. Click **Submit**. The exported data appears.

5. Choose **File** > **Save As...** to save the file. Open the saved file using a spreadsheet application, such as Excel or Lotus 1-2-3. Format, print, and save it as any other spreadsheet document.

Mobile Web Pages User Guide

PowerSchool

Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

The data and names used to illustrate the reports and screen images may include names of individuals, companies, brands, and products. All of the data and names are fictitious; any similarities to actual names are entirely coincidental.

Table of Contents

Introduction

PowerSchool offers two different types of mobile access: Mobile web pages, and mobile apps. Each requires separate configuration settings within PowerSchool.

Mobile Apps

Mobile apps include:

- PowerTeacher Mobile (iPad)
- PowerSchool for Parents (iPod Touch, iPhone, iPad, and Android)
- PowerSchool for Students (iPod Touch, iPhone, iPad, and Android)

PowerSchool for Parents and PowerSchool for Students mobile apps are available for download from the iTunes App Store and Google Play.

PowerTeacher Mobile is available for download from the iTunes App Store.

Mobile Web Pages

Mobile web pages are a way for teachers and administrators to access the mobile pages of PowerSchool using the iPhone® or Android operating system mobile devices. Since these are web pages, it is not necessary to install any application on your mobile device. Simply navigating to the normal PowerSchool sign in through the device's browser will allow PowerSchool to detect that a mobile device is being used and present pages that are tailored to the smaller screens. Mobile web pages include rich functionality such as the ability to view comprehensive student information including grades and schedules, as well as viewing and recording attendance.

Mobile Apps Setup

Before your district begins using mobile apps, it is recommended that you set up the following:

- Register your PowerSchool server with PowerSource.
- Upload a School Map (optional).

How to Register Your PowerSchool Server with PowerSource

Registering your PowerSchool server with PowerSource enables end-users to easily configure the mobile app to work with your PowerSchool server.

Enter the information needed for registering your PowerSchool server with PowerSource.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Plugins, click **Mobile Registration**. The Mobile Registration page appears.
3. Use the following table to enter information in the PowerSource Registration of District's Mobile App Services fields:

Field	Description
Mobile District Code	Displays a four-digit code if the PowerSchool server is registered with the PowerSource mobile registration server. If the PowerSchool server has not been registered, dashes appear.
Mobile App Server Address	Enter the server or IP address remote web traffic will use for the mobile web services. This can be an individual IP, domain, or a load-balancer address. **Note:** Typically this is the same as your Tomcat server.
Mobile App Port Number	Enter the port number remote web traffic will use for the mobile web services. **Note:** Typically this is the same as your Tomcat server.

Mobile App SSL Enabled	If your Tomcat server or Load Balancer is using SSL, select the checkbox. Otherwise leave the checkbox blank. **Note:** This option does not enable or disable SSL, it only informs the PowerSource Registration that your servers are using SSL.
District Postal Code	Enter the district's postal code. This is used when teachers search for your district via zip or geo-location.

4. Click **Submit**. The Changes Recorded page appears.

School Map

You can upload a map of your campus that is visible to students using the PowerSchool Mobile. For best results, use a PDF with text for room numbers and names. This allows students and parents to search for a room number.

Note: Maximum file size for uploaded map image is 1 MB.

How to Upload a School Map

Upload a school map in PDF, JPEG, GIF or PNG format. See the upload page for detailed information on recommended specifications.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under General, click **School Map**. The School Map page appears.
3. Click **Choose File** (or **Browse**) to select the school map file.
4. Click **Submit**. The School Map page appears. The uploaded map file appears as a download link.

How to Delete a School Map

Once the school map has been uploaded, you may need to remove it in the future.

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under General, click **School Map**. The School Map page appears.
3. Click **Delete School Map**. The School Map page appears, and the school map link is removed.

Mobile Web Pages Setup

Before your district can begin using mobile web pages, you must set up the following items:

- Enable mobile web pages at the district level.
- Set mobile web page settings at the school level.

Once mobile web pages is enabled at the district level and mobile web pages settings are set at the school level, all staff members will have access to the mobile pages of PowerSchool using a mobile device.

Enable Mobile Web Pages at the District Level

To get started, you must enable mobile web pages at the district level.

How to Enable Mobile Web Pages

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Plugins, click **Miscellaneous**. The Miscellaneous page appears.
3. Select the **Enable Mobile Web Pages** checkbox to enable access to the mobile version of PowerSchool. For field descriptions, see *Miscellaneous District Settings*.

   Note: Alternatively, deselect the checkbox to disable access to the mobile version of PowerSchool.

4. Click **Submit**. The Changes Recorded page appears.

Set Mobile Browser Settings

Once mobile web pages are enabled at the district level, you can then set mobile browser settings at the school level.

How to Set Mobile Browser Settings

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under General, click **Mobile Browser Settings**. The Mobile Browser Settings page appears.
3. Use the following table to enter information in the fields:

Field	Description
Disable Mobile PS (Admin)	If you want administrators in this school to be able to access the mobile pages of PowerSchool in mobile browsers, leave the **Optimized Pages** checkbox blank. Alternatively, if you do not want Administrators in this school to be able to access the mobile version of PowerSchool pages, select the **Optimized Pages** checkbox. By default, this feature is enabled.
Disable Mobile PS (Teachers)	If you want teachers in this school to be able to access the mobile pages of PowerTeacher in mobile browsers, leave the **Optimized Pages** checkbox blank. Alternatively, if you do not want teachers in this school to be able to access the mobile version of PowerTeacher pages, select the **Optimized Pages** checkbox.
Disable Mobile PS (Subs)	If you want subs in this school to be able to access the mobile pages of PowerTeacher Substitute in mobile browsers, leave the **Optimized Pages** checkbox blank. Alternatively, if you do not want subs in this school to be able to access the mobile version of PowerTeacher Substitute pages, select the **Optimized Pages** checkbox. By default, this feature is enabled.
Default Class Sort	Indicate the order by which you want classes to appear when accessing PowerSchool, PowerTeacher, and PowerTeacher Substitute using a mobile browser by choosing one of the following from the pop-up menu: • **Course/Expression** to sort by course name and then schedule expression. • **Expression/Course** to sort by schedule expression and then course name.
Hide Bus Route	If you do not want bus routes to appear when accessing PowerSchool, PowerTeacher, or PowerTeacher Substitute using a mobile browser, select the checkbox. Otherwise, leave the checkbox blank.

Show Bus Info From Transportation or Student Fields	If you have opted not to hide bus route information, indicate which bus route information you would like to appear by choosing **Transportation** or **Student Fields** from the pop-up menu. If you chose **Transportation**, bus route information is pulled from the Transportation table. If you chose, **Student Fields**, bus route information is pulled from the Students table. For more information, see the *PowerSchool Data Dictionary Tables* available on PowerSource. Otherwise, select the checkbox.
Hide Student Photos	If you have opted not to hide bus route information, indicate which bus route information you would like to appear by choosing Transportation or Student Fields from the pop-up menu. If you chose Transportation, bus route information is pulled from the Transportation table. If you chose, Student Fields, bus route information is pulled from the Students table. For more information, see the PowerSchool Data Dictionary Tables available on PowerSource. Otherwise, select the checkbox.
Hide Lunch Count (Subs)	If you do not want student photos to appear when accessing PowerSchool, PowerTeacher, or PowerTeacher Substitute using a mobile browser, select the checkbox. Otherwise, leave the checkbox blank. If you do not want lunch counts to appear when accessing PowerTeacher Substitute using a mobile browser, select the checkbox. Otherwise, leave the checkbox blank.
Hide Lunch Count (Teachers)	If you do not want lunch counts to appear when accessing PowerTeacher using a mobile browser, select the checkbox. Otherwise, leave the checkbox blank.

4. Click **Submit** to save the preferences.

PowerSchool Mobile Web Pages

PowerSchool mobile web pages are designed for administrators to quickly and easily access the mobile pages of PowerSchool using a mobile device.

Note: All pages are formatted to fix a 320-pixel width, the standard size for mobile devices.

Get Started with PowerSchool Mobile Web Pages

Sign In to PowerSchool Mobile Web Pages

Because PowerSchool is a secure system, you need a secure connection to use it. To access PowerSchool, you must first sign in to the system.

Note: Do not use someone else's password or give your password to anyone else.

How to Sign In to PowerSchool Mobile Web Pages

1. On you mobile device, open your Web browser to your school's PowerSchool URL. The Administrator Sign In page appears.
2. Enter your username in the first field.
3. Enter your password in the second field.

   Note: The characters appear as asterisks (*) to ensure greater security when you sign in.

4. Click **Enter**. The start page appears, and you are signed in to PowerSchool. For more information, see *PowerSchool Mobile Web Pages Home Page*.

   Note: Alternately, you can press **ENTER** or **RETURN** on your keyboard.

PowerSchool Mobile Web Pages Home Page

When you sign in to PowerSchool mobile web pages, the Home page appears. This page serves as the central point from which you begin your PowerSchool mobile web pages session. The PowerSchool mobile web pages Home page consists of the following main areas:

- Navigation bar
- ID bar
- Schedule
- Menu

Navigation Bar

The navigation bar appears at the top of the PowerSchool mobile web pages Home page and is common to every page in the application. The navigation bar includes the following information:

Field	Description
Home	Click to return to the Home page.
[Page]	The page name you are currently viewing appears.
Sign Out	Click to sign out of PowerSchool mobile web pages. For more information, see *Sign Out of PowerSchool Mobile Web Pages*.

ID Bar

The ID bar appears just below the navigation bar and displays your name. In an effort to ensure that your account is secure, and your information protected, the date of the last time you signed in to appears next to your name. This information can be used to alert you to any unusual account activity. If you experience any unusual account activity, report it to your school.

School

The name of your default school (or district) appears. If you have access to more than one school, you can click the link to access the Change Schools page where you can select another school. Not everyone has permission to switch schools. Switching schools cancels any selection of students made in the previous school. Before beginning any PowerSchool procedure, be sure the school (or district) in which you want to work appears.

How to Change Schools

1. Click **School**. The Change Schools page appears
2. Choose the appropriate school name or choose **District Office** from the **School** pop-up menu. The navigation bar displays the name of the school you just selected.

   Note: If the page does not refresh automatically, click **Submit**.

Schedule

The name of the current day's schedule appears. Click to view the Bell Schedule page, which provides detailed information, including the periods, start times, stop times and duration of each period.

Menu

The main menu includes links to the following functions:

Field	**Description**
Students	Click to browse for students. For more information, see *Students*.
Teachers	Click to search for teachers. For more information, see *Teachers*.
Attendance	Click to view attendance. For more information, see *Attendance*.
Activities	Click to search for students by activity. For more information, see *Activities*.
Birthdays	Click to view students' birthdays. For more information, see *Birthdays*.
Daily Bulletin	Click to read your school's daily bulletin. For more information, see *Daily Bulletin*.
Exit to Main PS	Click to return to PowerSchool in "normal" mode.

Work with the PowerSchool Mobile Web Pages Menu

Note: Access to information is based on your page-level permissions. For more information, see *Security Permissions*. Additionally, if certain information does not appear, that information may be set to "hidden" by your school's PowerSchool administrator.

Students

How to Search for a Student By Last Name

1. On the Home page, click **Students**. The Students page appears.

2. Click a letter of the alphabet to display a list of students whose last names begin with the selected letter. The Last: [Letter] page appears.
3. Click the name of the individual whose record you want to work with. The student page appears. For more information, see *How to Work with Student Information*.

How to Search for a Student By Grade Level

1. On the Home page, click **Students**. The Students page appears.
2. Click the grade level for which you want to view students. The Grade: [Number] page appears.
3. Click the name of the individual whose record you want to work with. The student page appears. For more information, see *How to Work with Student Information*.

How to Search for an All Students

1. On the Home page, click **Students**. The Students page appears.
2. Click **All**. The All Students page appears.
3. Click the name of the individual whose record you want to work with. The student page appears. For more information, see *How to Work with Student Information*.

How to Work with Student Information

1. To work with student information, search for a student by activity, birthday, grade level, last name, or teacher. For more information, see respective *How To*.
2. Click the name of the individual whose record you want to work with. The student page appears. The following student information displays:

Field	Description
Prev	Click to view the previous student in the current student selection.
Next	Click to view the next student in the current student selection.
[Student Information]	Displays the student's photo, name, student number, grade level, date of birth, and age.
Find Me	Click to find the student based on the current time, the current day's bell schedule, and the student's schedule. The Find Me page displays the following information:

	• Period • Rotation • Current Time • First Class Begins At • Last Class End At
Schedule	Click to view the student's current schedule. The Schedule page displays the following information for each of the student's classes: • Period • Course • Term Course Grade/Percent • Absences • Tardies • Teacher • Room
Bus	If information is being pulled from the Transportation table, the student's bus number(s) displays. Click to view additional details, including Route, Description, Dates, and Departure. If information is being pulled from the Student Fields table, the student's bus route(s) displays. Click to view additional details, including bus stop(s).
Locker	Displays the student's locker number. Click to view the student's locker number and locker combination.
Activities	Displays the number of activities the student is involved in. Click to view a list of the activities.
Demographics	Displays student's guardian, home phone number, and address. Click the home phone number of a guardian to call that guardian. Click the address to view a map of the address location.
Family	Displays the names and grades of students who are related to this student. Click to view a related student's student record. Click

	Select Entire Family to view a list of the related students, which will make them the current selection. The Family page appears.
Parents	Displays the email address, name, phone numbers, and employer of parents or guardian associated to the student. Click the email address of a parent or guardian to email that parent or guardian. Click the phone number of a parent or guardian to call that parent or guardian.
Emergency Contacts	Displays the relationship, name, and phone numbers of emergency contacts associated to the student. Click the phone number of an emergency contact to call that emergency contact.

Teachers

How to View a Teacher's Current Schedule

1. On the Home page, click **Teachers**. The Teachers page appears.
2. Click the name of the teacher whose schedule you want to view. The Schedule page appears displaying the selected teacher's schedule.

How to View a Teacher's Class Roster

1. On the Home page, click **Teachers**. The Teachers page appears.
2. Click the name of the teacher whose roster you want to view. The Schedule page appears displaying the selected teacher's schedule.
3. Click the class for which you want to view the roster. The Roster page appears.

How to Search for Students by Teacher

1. On the Home page, click **Teachers**. The Teachers page appears.
2. Click the name of the teacher whose schedule you want to view. The Schedule page appears.
3. Click the class for which you want to view the roster. The Roster page appears. A photo roster of all students in the class display.
4. Click the name of a student to view the student's record. The student page appears. For more information, see *How to Work with Student Information*.

Attendance

How to View the Current Day's Attendance

1. On the Home page, click **Attendance**. The Attendance page appears.
2. Do one of the following:
   - Click **Daily**. The Daily Attendance page appears.
   - Click **Meeting**. The Meeting Attendance page appears.
3. Click the period for which you want to view attendance. The Attendance page appears.

Activities

How to Search for Students by Activity

1. On the Home page, click **Activities**. The Activities page appears. A list of all activities with membership totals display.
2. Click the name of the activity you want to search by. The [Activity Name] page appears. A photo roster of all students involved in the selected activity display.
3. Click the name of a student to view the student's record. The student page appears. For more information, see *How to Work with Student Information*.

Birthdays

How to View Birthdays

1. On the Home page, click **Birthdays**. The Birthdays page appears. A photo roster of all students with birthdays yesterday, today, or tomorrow display.
2. Click the name of student to view the student's record. For more information, *How to Work with Student Information*.

Daily Bulletin

How to View the Daily Bulletin

1. On the Home page, click **Daily Bulletin**. The Daily Bulletin page displays today's announcements and links to previous or future bulletins.
2. Click the zoom icons increase or decrease the font size for better readability.
3. Click the date links at the top or bottom of the page to view that day's bulletin.
4. Click the e-mail address at the bottom of the page to send a message to the person who issues the announcements. Depending on your default e-mail application, an e-mail form appears.
5. Complete the e-mail message.

6. Click **Send**.

Quit PowerSchool Mobile Web Pages

Sign Out of PowerSchool Mobile Web Pages

When finished working in PowerSchool mobile web pages, it is important to sign out of the application.

How to Sign Out of PowerSchool Mobile Web Pages

1. Return to the Home page.
2. Click **Sign Out** in the navigation bar. The Administrator Sign In page appears. You must enter your username and password again to redisplay the PowerSchool mobile web pages Home page.

PowerTeacher Mobile Web Pages

PowerTeacher mobile web pages are designed for teachers to quickly and easily access the mobile pages of PowerTeacher using a mobile device.

Note: All pages are formatted to fix a 320-pixel width, the standard size for mobile devices.

Get Started with PowerTeacher Mobile Web Pages

Sign In to PowerTeacher Mobile Web Pages

Before you can sign in to PowerTeacher mobile web pages, you will need your school's PowerTeacher URL, your username, and your password. If you do not have this information or have questions, contact your school's PowerSchool administrator.

Note: Do not use someone else's password or give your password to anyone else.

How to Sign In to PowerTeacher Mobile Web Pages

1. On you mobile device, open your Web browser to your school's PowerTeacher URL. The Teacher Sign In page appears.
2. Enter your username in the first field.
3. Enter your password in the second field.

   Note: The characters appear as asterisks (*) to ensure greater security when you sign in.

4. Click **Enter**. The PowerTeacher mobile web pages Home page appears. For more information, see *PowerTeacher Mobile Web Pages Home Page*.

   Note: Alternately, you can press **ENTER** or **RETURN** on your keyboard.

PowerTeacher Mobile Web Pages Home Page

When you sign in to PowerTeacher mobile web pages, the Home page appears. This page serves as the central point from which you begin your PowerTeacher mobile web pages session. The PowerTeacher mobile web pages Home page consists of the following main areas:

- Navigation bar
- ID bar
- Schedule

- Menu

Navigation Bar

The navigation bar appears at the top of the PowerTeacher mobile web pages Home page and is common to every page in the application. The navigation bar includes the following information:

Field	Description
Home	Click to return to the Home page.
[Page]	The page name you are currently viewing appears.
Sign Out	Click to sign out of PowerTeacher mobile web pages . For more information, see *Sign Out of PowerTeacher Mobile Web Pages*.

ID Bar

The ID bar appears just below the navigation bar and displays your name. In an effort to ensure that your account is secure, and your information protected, the date of the last time you signed in to appears next to your name. This information can be used to alert you to any unusual account activity. If you experience any unusual account activity, report it to your school.

Schedule

The name of the current day's schedule appears. Click to view the Bell Schedule page, which provides detailed information, including the periods, start times, stop times and duration of each period.

Menu

The main menu includes links to the following functions:

Field	Description

Attendance	Click to record meeting attendance. For more information, see *Attendance*.
Rosters	Click to view or work with classes. For more information, see *Rosters*.
Birthdays	Click to view students' birthdays. For more information, see *Birthdays*.
Daily Bulletin	Click to read your school's daily bulletin. For more information, see *Daily Bulletin*.
Lunch Counts	Click to submit lunch counts. For more information, see *Lunch Counts*.
Exit to Main PS	Click to return to PowerTeacher in "normal" mode.

Work with the PowerTeacher Mobile Web Pages Menu

Note: Access to information is based on your page-level permissions. For more information, see *Security Permissions*. Additionally, if certain information does not appear, that information may be set to "hidden" by your school's PowerSchool administrator.

Attendance

How to Record Meeting Attendance

1. On the Home page, click **Attendance**. The Attendance page appears.

   Note: A dot appears next to each class' **Chair** icon. The color of the dot indicates whether or not you've taken attendance for that class. A clear dot indicates attendance has not been taken. A yellow dot and fraction indicates partial attendance has been taken. A green dot indicates attendance has been taken.

2. Click the period for which you want to record attendance. The Record Meeting Attendance page appears.
3. Click **Att Code**. The Att Code page appears.

4. Select the attendance code you want to assign. The Record Meeting Attendance page appears.
5. Click **Submit**. The Home page appears.

Rosters

How to View Student Information

1. On the Home page, click **Rosters**. The Schedule page appears.
2. Click the class for which you want to work. The Roster page appears displaying a list of students for the selected class.
3. Click the name of the student whose record you want to view. The following student information displays:

Field	**Description**
[Student Information]	Displays the student's photo, name, student number, grade level, date of birth, and age.
Find Me	Click to find the student based on the current time, the current day's bell schedule, and the student's schedule. The Find Me page displays the following information: • Period • Rotation • Current Time • First Class Begins At • Last Class End At
Schedule	Click to view the student's current schedule. The Schedule page displays the following information for each of the student's classes: • Period • Course • Term Course Grade/Percent • Absences • Tardies • Teacher

	• Room
Demographics	Displays student's guardian, home phone number, and address. Click the home phone number of a guardian to call that guardian. Click the address to view a map of the address location.
Family	Displays the names and grades of students who are related to this student. Click to view a related student's student record. Click **Select Entire Family** to view a list of the related students, which will make them the current selection. The Family page appears.
Parents	Displays the email address, name, phone numbers, and employer of parents or guardian associated to the student. Click the email address of a parent or guardian to email that parent or guardian. Click the phone number of a parent or guardian to call that parent or guardian.
Emergency Contacts	Displays the relationship, name, and phone numbers of emergency contacts associated to the student. Click the phone number of an emergency contact to call that emergency contact.

Birthdays

How to View Birthdays

1. On the Home page, click **Birthdays**. The Birthdays page appears. A photo roster of all students with birthdays yesterday, today, or tomorrow display.
2. Click the name of student to view the student's record. For more information, see the field description table in the *Rosters* section.

Daily Bulletin

How to View the Daily Bulletin

1. On the Home page, click **Daily Bulletin**. The Daily Bulletin page displays today's announcements and links to previous or future bulletins.
2. Click the zoom icons increase or decrease the font size for better readability.
3. Click the date links at the top or bottom of the page to view that day's bulletin.

4. Click the e-mail address at the bottom of the page to send a message to the person who issues the announcements. Depending on your default e-mail application, an e-mail form appears.
5. Complete the e-mail message.
6. Click **Send**.

Lunch Counts

How to Submit Lunch Counts

1. On the Home page, click **Lunch Counts**. The Lunch Counts page appears.
2. Click the class for which you want to submit lunch counts. The Submit Lunch Counts page appears.
3. Use the following table to enter information in the fields:

Field	**Description**
Student Breakfast	Enter the number of student breakfasts.
Adult Breakfast	Enter the number of adult breakfasts.
Adult Lunch	Enter the number of adult lunches.
Student Lunch	Enter the number of student lunches.
Student A La Carte	Enter the number of student à la carte meals.
Adults A La Carte	Enter the number of adult à la carte meals.
Milk	Enter the total number of students and adults buying milk.
Other 1	Enter the number of Other 1 meals (optional). **Note:** The field represents an additional meal type that may be used for special request meals, such as a vegetarian dish or a kosher dish.

Other 2	Enter the number of Other 2 meals (optional). **Note:** See *Other 1*.

4. Click **Submit** to enter the counts. The Home page appears.

Password Rules Management User Guide

PowerSchool

Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

Table of Contents

Introduction

With the introduction of Password Rules Management, PowerSchool now provides PowerSchool administrators the ability to configure various rules that are applicable when Students, Admins and Teachers, and Parents establish and maintain their passwords, including:

- Password Reset Rule
- Password Complexity Rules
- Password Expiration Rule
- Password Reuse Rule
- Account Lockout Rule

Once Password Rules Management is configured, Password Rules Management functionality appears throughout PowerSchool, the PowerSchool Student and Parent portal, PowerTeacher, PowerTeacher Administrator and PowerTeacher Gradebook.

Quick Start

To get started immediately, perform the following tasks to set up and begin using Password Rules Management:

- Password Rules Management Configuration
- Configure Password Rules
- Configure Student Password Rules (optional)
- Work with Password Rules

Setup

Password Rules Management provides PowerSchool administrators the ability to configure various rules that are applicable when Students, Parents, Admins, and Teachers establish and maintain their passwords. The rules can be configured separately for each group of user types, as follows:

- Students
- Admins and Teachers
- Parents

Upgrading PowerSchool

When upgrading, Password Rules Management is automatically set to the following default values for students, admins and teachers, and parents:

- Password Reset Rule – Disabled.
- Password Complexity Rules (Minimum characters) – Set to **1** for students, admins, and teachers. Set to **6** for parents.
- Password Complexity Rules (Password contains) – Disabled.
- Password Expiration Rule – Disabled.
- Password Reuse Rule – Disabled.
- Account Lockout Rule – Disabled.

Once you have configured Password Rules Management, subsequent upgrades will preserve your configurations.

During the upgrade, user account data is migrated into the new Password Rules Management PCAS tables. Once the upgrade is completed, a comma-delimited file is created in the PowerSchool logs folder (the same folder containing pslog.txt and dalx.log) called PCAS_Migrate.csv. The file only contains errors and modified usernames. If the file appears empty, all accounts migrated successfully and without change. To open the file, use a spreadsheet application, such as Excel. The file displays original usernames, new usernames where the original usernames had to be modified, and any errors that were encountered during the migration. Possible errors include:

- Failed to migrate: Indicates that the account could not be migrated for unexpected reasons.
- Truncated password to 40 characters: Indicates that the user's password was too long for an admin-entered password and has been truncated to the first 40 characters of the password.

- Failed Rename in Legacy Table (PCAS and Legacy out of sync!): Indicates that the new username was created in PCAS but was not copied back over to the legacy table overwriting the original username; as a result, the user will not be able to sign in; therefore, manually change the user's username via the appropriate PowerSchool page.

Note: If you are unable to identify a user by their username, the DCID value for that particular row in the appropriate table is given; you can use the DCID value to bring up the matching record in USM.

Using the information provided, you can notify users who usernames had to be modified (user names are modified to prevent duplicate user names from migrating to the new Password Rules Management PCAS tables, as well as to troubleshoot any data migration issues.

Installing PowerSchool

When installing, Password Rules Management is automatically set to the following default values for students, admins and teachers, and parents:

- Password Reset Rule – Enabled.
- Password Complexity Rules (Minimum characters) – Set to **7**.
- Password Complexity Rules (Password contains) – Enabled.
- Password Expiration Rule – Set to **60** days.
- Password Reuse Rule – Set to **5**.
- Account Lockout Rule – Set to **5**.

Configure Password Rules

Using Password Rules Management, you define password reset, complexity, expiration, reuse, and lockout rules based on your district's needs. Once configured, user may encounter the following messages:

Occurs	Message	Action
Sign In	Your password was set by the system administrator. Please change your password.	User to reset their password. Refer them to appropriate *How to Reset Your Password* procedure.

Sign In	Your password has expired. Please create a new password.	User to reset their password. Refer them to appropriate *How to Reset Your Password* procedure.
Sign In	The number of sign in attempts for this account has been exceeded. Contact your school directly for assistance.	User to contact you to unlock their account. See *How to Unlock an Account*.
Reset Password Change Password	Current password is not correct.	User to re-enter password accordingly.
Reset Password Change Password	New password must be at least [number] characters long.	User to re-enter password accordingly.
Reset Password Change Password	New password must contain at least one uppercase and one lowercase letter.	User to re-enter password accordingly.
Reset Password Change Password	New password must contain at least one letter and one number.	User to re-enter password accordingly.
Reset Password Change Password	New password must contain at least one special character.	User to re-enter password accordingly.
Reset Password Change Password	The verification password you enter must match the new password.	User to re-enter password accordingly.
Reset Password Change Password	The password entered was previously used. Please enter a new password.	User to re-enter password accordingly.

How to Configure Password Rules

1. On the start page, choose **System** under Setup in the main menu. The System Administrator Page appears.
2. Under Security, click **Password Rules Management**. The Password Rules Management page appears. By default, the Password Rules tab is selected.
3. Use the following table to enter information in the fields:

Field	Description
Password Reset Rule	To require a user to reset their password upon first signing in, select the applicable checkboxes: **Note:** If you do not want to apply this rule, leave the checkbox blank. • Select the **Students** checkbox to apply this rule to students' passwords. • Select the **Admins and Teachers** checkbox to apply this rule to administrators' and teachers' passwords. • Select the **Parents** checkbox to apply this rule to parents' passwords.
Password Complexity Rules	Indicate the minimum number of characters a password must contain (value between 1 and 24): • Enter the desired number in the **Students** field to apply this rule to students' passwords. • Enter the desired number in the **Admins and Teachers** field to apply this rule to administrators' and teachers' passwords. • Enter the desired number in the **Parents** field to apply this rule to parents' passwords. To require a user's password contain at least 1 uppercase letter, 1 lowercase letter, 1 special character, and 1 numeric character, select the applicable checkboxes: **Note:** If you do not want to apply this rule, leave the checkbox blank.

	• Select the **Students** checkbox to apply this rule to students' passwords. • Select the **Admins and Teachers** checkbox to apply this rule to administrators' and teachers' passwords. • Select the **Parents** checkbox to apply this rule to parents' passwords.
Password Expiration Rule	Indicate the number of days a user may use a password before being required to enter a new password: **Note:** If you do not want to apply this rule, enter **0**. • Enter the desired number in the **Students** field to apply this rule to students' passwords. • Enter the desired number in the **Admins and Teachers** field to apply this rule to administrators' and teachers' passwords. • Enter the desired number in the **Parents** field to apply this rule to parents' passwords.
Password Reuse Rule	Indicate the number of different passwords a user must use before a password may be reused after resetting the password: **Note:** If you do not want to apply this rule, enter **0**. • Enter the desired number in the **Students** field to apply this rule to students' passwords. • Enter the desired number in the **Admins and Teachers** field to apply this rule to administrators' and teachers' passwords. • Enter the desired number in the **Parents** field to apply this rule to parents' passwords.
Account Lockout Rule	Indicate the number of times users may enter an incorrect password before being locked out: **Note:** If you do not want to apply this rule, enter **0**.

	• Enter the desired number in the **Students** field to apply this rule to students' passwords. • Enter the desired number in the **Admins and Teachers** field to apply this rule to administrators' and teachers' passwords. • Enter the desired number in the **Parents** field to apply this rule to parents' passwords. **Note:** To unlock an account, see *Locked Accounts*.

5. Click **Submit**. A confirmation message appears.

How to Reset Password Rules Default Settings

1. On the start page, choose **System** under Setup in the main menu. The System Administrator Page appears.
2. Under Security, click **Password Rules Management**. The Password Rules Management page appears. By default, the Password Rules tab is selected.
3. Click **Load Default Settings**. A confirmation message appears indicating the default settings have been loaded.

   Note: For details about default values, see *Installing PowerSchool*.

4. Click **Submit**. A confirmation message appears indicating your changes have been saved.

Configure Student Password Rules

Once password rules are established, you have the option to provide students with the ability to change their own passwords when using the PowerSchool Student and Parent portal. Settings on this page affect the ability of students to change their own passwords based on their school and grade level. If a student is able to change their password, any password rules settings enabled for students will be enforced for the password they choose.

Note: By default, students may not change their passwords, This feature must be enabled.

How to Configure Student Password Rules

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.

2. Under Security, click **Password Rules Management**. The Password Rules Management page appears. By default, the Password Rules Management tab is selected.
3. Click the **Student Password Management** tab. The Student Password Management tab appears selected.
4. Locate the name of the school for which you want students to be able to change their own passwords.
5. For the selected school, choose the grade level for which you want students to be able to change their own passwords from the **Enable At and Above Grade** pop-up menu.
6. Repeat Step 5 through Step 6 for each school for which you want students to be able to change their own passwords
7. Click **Submit**. A confirmation message appears.

Invalid Sign In Attempts

Using the Invalid Sign In Attempts Report, you can monitor sign in attempts to ensure system security.

How to View Invalid Sign In Attempts

1. On the start page, choose **System** under Setup in the main menu. The System Administrator Page appears.
2. Under Security, click **Report of Invalid Sign In Attempts**. The Report of Invalid Sign In Attempts page appears.
3. Use the following table to enter information in the fields:

Field	Description
Start Date	To search for invalid sign in attempts for a specified date range, enter the start date using the format mm/dd/yyyy. Otherwise, leave the field blank. **Note:** If you only enter a start date, the system searches from that date to today's date.
End Date	To search for invalid sign in attempts for a specified date range, enter the end date using the format mm/dd/yyyy. Otherwise, leave the field blank.

Source IP Address	To search for invalid sign in attempts using a specific IP address, enter the IP address in the field. Otherwise, leave the field blank.
Minimum Invalid Attempts	To search for invalid sign in attempts based on a minimum number of sequential attempts, enter a number in the field. Otherwise, leave the field blank.
User Type	To search for invalid sign in attempts by a specific portal, choose the appropriate portal from the pop-up menu: • **Parent** • **PowerSchool Administrator** • **PowerTeacher Administrator** • **Student** • **System Management Console Administrator** • **Teacher** Otherwise, leave the default setting of **All Users** selected.
Attempted User Name	To search for invalid sign in attempts based on specific user, enter the user's username in the field. Otherwise, leave the field blank.
Attempt Type	To search for sign in attempts based on validity, select the appropriate option: • Select **Valid Users** to search for invalid sign in attempts where the user name entered matches a user name in the system. • Select **Invalid Users** to search for invalid sign in attempts where the user name entered does not match a user name in the system. Otherwise, leave the default setting of **All Users** selected.

5. Click the **Search** icon. The following search results display based on the criteria you entered:
    - User Name – Click to view user account details. If the account is locked, you can unlock the account by clicking the **Unlock** button.
    - Valid User

- User Type
- Source IP Address
- Attempt Date
- Attempt Time

Note: Click the name of a column to sort by that column in ascending order. Click again to sort in descending order. If many results appear, use the quick navigation links such as **<< first** and **next >** to navigate between the different pages of results.

Locked Accounts

Using the Locked Accounts Report, you can monitor locked accounts to ensure system security. A user account may be locked automatically if **Account Lockout Rules** is enabled and the user has exceeded the number of sign in attempts allowed. For more information, see *Password Rules Configuration*. Accounts only appear on this page if they have been automatically locked.

How to View Locked Accounts

1. On the start page, choose **System** under Setup in the main menu. The System Administrator Page appears.
2. Under Security, click **Locked Accounts**. The Manage Locked Accounts page appears.
3. Click the appropriate portal from the pop-up menu:
    - **All**
    - **Admins**
    - **Teachers**
    - **Parents**
    - **Students**
4. The following information appears for each locked account:

Field	Description
Username	The last name, first name, and username of the user that is locked out. Click to access the Security Settings page.
Account Type	Indicates the portal for which the user has an account.
Lock Details	The date, time, and reason the user is locked out of account.

How to Unlock an Account

Use this procedure to unlock a user's account whereby allowing them access to PowerSchool, PowerTeacher, or the PowerSchool Student and Parent portal.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Security, click **Locked Accounts**. The Manage Locked Accounts page appears.
3. Click the appropriate portal from the pop-up menu:
    - **All**
    - **Admins**
    - **Teachers**
    - **Parents**
    - **Students**
4. Do one of the following:
    - Click **Unlock** next to each account you want to unlock.
    - Click **Unlock All [Name of Selected Portal] Accounts** to unlock all locked accounts for the selected portal.
5. Click **Submit**.

Work with Password Rules

Once Password Rules Management is configured, Password Rules Management functionality appears throughout PowerSchool, the PowerSchool Student and Parent Portal, PowerTeacher, PowerTeacher Administrator and PowerTeacher Gradebook.

Pearson Digital Learning Platforms User Guide

PowerSchool

Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

Table of Contents

Introduction

PowerSchool includes a close integration with Pearson Digital Learning Platforms, which allows authorized PowerSchool users to seamlessly transition from PowerSchool into Pearson Digital Learning Platforms.

Note: PowerSchool comes pre-configured with these settings. No changes are typically required in this section.

Setup

Before you can begin using Pearson Digital Learning Platforms, you must perform the following setup items:

- View General Information (optional)
- Configure Single Sign-On Settings
- View Identity Attributes (optional)
- Configure SAML Inline Authentication
- Manage Link Details (optional)
- Configure School Access (optional)
- Enable Sign-On

View General Information

Once the Pearson Digital Learning Platforms plugin is installed, it appears in the Installed Plugins section on the Plugin Management Dashboard page.

How to View General Information

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Click **Pearson Digital Learning Platforms**. The Pearson Digital Learning Platforms Setup page displays the following information in the General Information section:

Field	Description
Plugin Name	The name of the plugin, such as Pearson Digital Learning Platforms.
Plugin Description	A description of the plugin, such as Integration with Pearson LMS products.
Plugin Version	The version number of the plugin, such as 1.0.

Publisher	The name of the publisher, such as PowerSchool.
Publisher Email	The email of the publisher, such as powerschoolsupport@pearson.com.

Configure Single Sign-On Settings

Using the Single Sign-On Setup for Pearson Digital Learning Platforms page, you can configure the settings needed for establishing a successful SSO connection between PowerSchool and Pearson Digital Learning Platforms making the transition between PowerSchool and Pearson Digital Learning Platforms seamless.

Note: In addition to configuring single-sign on settings for PowerSchool, verify that your Pearson Digital Learning Platforms server is also configured for SSO. If it is not, a successful SSO connection between PowerSchool and Pearson Digital Learning Platforms cannot be established. For assistance, contact Pearson Digital Learning Platforms Client Solutions Center.

How to Configure Identity Provider Settings

Use this section to set up the SSO connection from PowerSchool to Pearson Digital Learning Platforms.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Click **Pearson Digital Learning Platforms**. The Pearson Digital Learning Platforms Setup page appears.
5. Click **Single Sign-On Service**. The Single Sign-On Setup for Pearson Digital Learning Platforms page appears.
6. Use the following table to enter information in the PowerSchool Identity Provider Settings fields:

   Note: All fields are required.

Field	**Description**

Name	The PowerSchool identity provider's name. The default is set to **PowerSchool IDP**.
Entity ID	The PowerSchool server's public URL. The value is automatically populated using the values entered on the Global Server Settings page (**System > System Settings > Global Server Settings > PowerSchool Configuration - External Access** fields). Verify this is the correct value and update if necessary.
Single Sign-On Certificate	Choose the certificate the PowerSchool IDP will use for single sign-on authentications.

7. Do one of the following:
    - To continue, see Step 6 of *How to Configure Service Provider Settings*.
    - Click **Save**. A confirmation message appears.

How to Configure Service Provider Settings

Use this section to configure PowerSchool to accept SSO requests from Pearson Digital Learning Platforms.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Click **Pearson Digital Learning Platforms**. The Pearson Digital Learning Platforms Setup page appears.
5. Click **Single Sign-On Service**. The Single Sign-On Setup for Pearson Digital Learning Platforms page appears.
6. Use the following table to enter information in the Pearson Digital Learning Platforms Service Provider Settings fields:

    Note: All fields are required.

Field	Description

Name	The Pearson Digital Learning Platforms service provider's name. **Note:** Do not change this value.
Base URL	Enter the Pearson Digital Learning Platforms service provider's base URL.
Metadata URL	Enter the Pearson Digital Learning Platforms service provider's metadata URL.
Pearson Digital Learning Platforms Host Server and Port	Enter the Pearson Digital Learning Platforms service provider's host server and port.

7. Click **Save**. A confirmation message appears.
8. To continue, see *How to Configure School Access Settings*.

How to View PowerSchool User Identifying Elements for Single Sign-On

Use this section to view the SAML SSO Attributes used for establishing successful SSO connection between PowerSchool and Pearson Digital Learning Platforms.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Click **Pearson Digital Learning Platforms**. The Pearson Digital Learning Platforms Setup page appears.
5. Click **Single Sign-On Service**. The Single Sign-On Setup for Pearson Digital Learning Platforms page appears.
6. Use the following table to view information in the PowerSchool User Identifying Elements for Single Sign-On section:

Field	**Description**

Number	The sequential number of the PowerSchool user-identifying element.
Name	The name of the PowerSchool user-identifying element, such as authenticationId.

View Identity Attributes

Using the Identity Attribute Configuration page, you can view the unique identifier for an object.

Note: PowerSchool comes pre-configured with these settings. These settings may only be modified by PowerSchool Technical Support either by accessing the Identity Attribute Configuration page as a Maintenance User or by adding **plugin.console.is_identity_attr_config_enabled** with a value of **1** to the Prefs table (once modifications have been made, the pref then needs to be removed from the Prefs table). For assistance, contact PowerSchool Technical Support.

Note: Suggested default settings are for single-tenant environments. However, identity attributes may also be configured for multi-tenant environments. When configuring identity attributes, it is recommended that you either configure for a single-tenant environment or a multi-tenant environment, not both. "Single-tenant" refers to a single, district-wide instance of PowerSchool integrated with a single, district-wide version of Pearson Digital Learning Platforms. "Multi-tenant" refers to a district-wide PowerSchool integrated with a statewide or multi-district-wide version of Pearson Digital Learning Platforms.

How to View Identity Attributes

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Click **Pearson Digital Learning Platforms**. The Pearson Digital Learning Platforms Setup page appears.
5. Click **Identity Attribute Configuration**. The Identity Attribute Configuration page for Pearson Digital Learning Platforms appears.
6. Use the following table to view information on this page:

Field	Description
Students	The unique identifier of this object. By default, this is set to **PSGUID**.
Users	The unique identifier of this object. By default, this is set to **PSGUID**.
Guardian	The unique identifier of this object. By default, this is set to **PSGUID**.
Schools	The unique identifier of this object. By default, this is set to **SCHOOL_NUMBER**.
District	The unique identifier of this object. By default, this is set to **DISTRICT 0**.
Sections	The unique identifier of this object. By default, this is set to **DCID**.
Assignments	The unique identifier of this object. By default, this is set to **DCID**.

Configure SAML Inline Authentication

Once you have configured the Event API, you can then configure SAML inline authentication allowing users to sign directly in to Pearson Digital Learning Platforms without using the SSO link within PowerSchool. For example, if an administrator bookmarks their My Pearson Digital Learning Platforms page and SAML Inline Authentication is configured, when the administrator clicks their bookmark, they will be able to sign directly in to Pearson Digital Learning Platforms.

How to Configure SAML Inline Authentication

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.

4. Click **Pearson Digital Learning Platforms**. The Pearson Digital Learning Platforms Setup page appears.
5. Click **SAML Inline Authentication**. The SAML Inline Authentication page for Pearson Digital Learning Platforms appears.
6. Use the following table to enter information:

Field	Description
User Types	PowerSchool user types for which SAML inline authentication may be configured: • Admin • Guardian • Student • Teacher
Allow SSO Authentication	Select the checkbox for each user type that you want to allow SSO authentication. Otherwise, leave blank.
Application Launch	For each user type that you have allowed SSO authentication, do one of the following: • Select the checkbox to indicate you want a new browser window to open when signing directly in to Pearson Digital Learning Platforms. • Deselect the checkbox to indicate you want Pearson Digital Learning Platforms to appear in the same browser window as PowerSchool when signing directly in to Pearson Digital Learning Platforms.

7. Click **Save**. The Pearson Digital Learning Platforms Setup page appears.

Manage Link Details

Using the Link Details page, you can quickly and easily view detailed information about Pearson Digital Learning Platforms links that have been added to PowerSchool as part of the Pearson Digital Learning Platforms installation. Additionally, you can control which schools can view the Pearson Digital Learning Platforms links.

Note: This procedure is only applicable if the plugin configuration file you installed declares navigation links.

How to Manage Link Details

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Click **Pearson Digital Learning Platforms**. The Pearson Digital Learning Platforms Setup page appears.
5. Click **Link Details**. The Link Details page for the selected plugin displays the following information for each portal:

Field	Description
[Portal]	The name of the portal: • Administrator Portal • Teacher Portal • Guardian Portal • Student Portal
Schools	For detailed information, see *Configure School Access*. **Note:** This setting controls only the display of links associated to a plugin. This does not restrict users from accessing content referred to by these links. Only the display of links based on the user's school context is affected.
Displayed in # / # Schools	Indicates the number of school the link displays in. **Note:** Only displays for Teacher Portal.
URL	The URL of the link, including <HostName>:<Port><Path>.
Display Text	The link title text appears.

UI Location	The location(s) where the link appears in the PowerSchool user interface.
SSO	Indicates whether or not the link is used for SSO.

Configure School Access

Using the Link Display by School drawer, you can control which schools can view Pearson Digital Learning Platforms links.

Note: Third party links appear in PowerSchool based on the navigation links defined in the plugin configuration file.

Note: This procedure is not applicable to plugins that handle their own school level access.

Note: School-level permissions within PowerTeacher Pro 1.0 will use the permissions of the school from which PTP was launched.

How to Configure School Access

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Click **Pearson Digital Learning Platforms**. The Pearson Digital Learning Platforms Setup page appears.
5. Click **Link Details**. The Link Details page for the selected plugin appears.
6. Click **Schools** next to the portal for which you want to configure school access. The Link Display by School drawer opens.
7. Use the following table to enter information:

Field	Description
Schools Where Links Not Displayed	Schools that have not been granted access to the plugin appear. To grant access to a plugin, highlight one or more schools in the list and click the arrow (>). The selected school appears in the Schools with access to plugin column.

	Note: To select multiple schools, press and hold COMMAND (Mac) or CONTROL (Windows) as you click each school. To grant access to a plugin for all schools, click the double arrow (>>). All schools appear in the Schools with access to plugin column.
Schools Where Links Displayed	Schools that have been granted access to the plugin appear. To revoke access to a plugin, highlight one or more schools in the list and click the arrow (<). The selected school appears in the Schools without access to plugin column. **Note:** To select multiple schools, press and hold COMMAND (Mac) or CONTROL (Windows) as you click each school. To revoke access to a plugin for all schools, click the double arrow (<<). All schools appear in the Schools without access to plugin column.

8. Click **Submit**. The Link Display by School drawer closes, and a confirmation message appears.
9. To continue, see Step 4 of *How to Enable Single Sign-On*.

Enable Single Sign-On

Once Pearson Digital Learning Platforms has been configured, you can use the Plugin Management Dashboard page to enable Pearson Digital Learning Platforms single sign-on.

Note: By default, Pearson Digital Learning Platforms is not enabled.

How to Enable Single Sign-On

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Select the **Enable/Disable** checkbox for the Pearson Digital Learning Platforms plugin. The Enable Plugin drawer appears.
5. Review the content.

Note: If you have installed a plugin that is dependent on page customizations, you must enable page customizations on the Customizations page. For more information, see *Customizations*.

Note: If PowerSchool encounters errors with the plugin, detailed information about the errors appears and you may not proceed with enabling the plugin.

6. Click **Enable** to proceed. A confirmation message appears.

How to Disable How to Enable Single Sign-On

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Deselect the **Enable/Disable** checkbox for the Pearson Digital Learning Platforms plugin. The Disable Plugin pop-up appears.
5. Click **Yes**. A confirmation message appears.

Launch Pearson Digital Learning Platforms

Once Pearson Digital Learning Platforms is set up, users can launch Pearson Digital Learning Platforms from within PowerSchool while keeping their PowerSchool session active allowing them to work in both applications simultaneously. Additionally, if SAML inline authentication settings have been configured, users may sign directly in to Schoolnet without using the SSO link within PowerSchool.

Note: The link only appears if the plugin is enabled, the link is set to display for the selected school, and if you belong to a user access role that has the capability associated to the link.

Note: When a new student or teacher user is added to PowerSchool, it may take up to 24 hours for their user profile has been established. During that time, Pearson Digital Learning Platforms may be launched; however, content will not yet be available.

Launch in the PowerSchool Student and Parent Portal

Use this procedure to launch Pearson Digital Learning Platforms in the PowerSchool Student and Parent portal.

How to Launch in the PowerSchool Student and Parent Portal

1. Sign in to the PowerSchool Student and Parent portal.

   Note: For more information about signing in to the PowerSchool Student and Parent portal, see the *PowerSchool Student and Parent Portal User Guide* available on PowerSource.

2. On the start page, click **Pearson Courses** in the navigation menu. Pearson Digital Learning Platforms launches in a separate window (or tab depending on your browser setting).

   Note: The window that appears is not served by PowerSchool. It is rendered from a separate server. If the window does not launch, contact your school's PowerSchool administrator.

   Note: If you are not actively working in the PowerSchool Student and Parent portal, your session may time out. If so, you need to sign in again.

3. When you are finished working in Pearson Digital Learning Platforms, be sure to sign out of the application.

4. When you are finished working in the PowerSchool Student and Parent portal, be sure to sign out of the PowerSchool Student and Parent portal.

Launch in PowerTeacher

Use this procedure to launch Pearson Digital Learning Platforms in PowerTeacher.

How to Launch in PowerTeacher

1. Sign in to PowerTeacher.

   Note: For more information about signing in to PowerTeacher, see the *PowerTeacher User Guide* available on PowerSource.

2. Click the **Applications** button (an upward-right arrow) in the navigation toolbar. The Applications drawer slides into view.
3. Click **Pearson Courses**. Pearson Digital Learning Platforms launches in a separate window (or tab depending on your browser settings).

   Note: The window that appears is not served by PowerSchool. It is rendered from a separate server. If the window does not launch, contact your school's PowerSchool administrator.

   Note: If you are not actively working in PowerTeacher, your session may time out. If so, you need to sign in again.

4. When you are finished working in Pearson Digital Learning Platforms, be sure to sign out of the application.
5. When you are finished working in PowerTeacher, be sure to sign out of PowerTeacher.

Sign In as an Administrator

Use this procedure to sign directly in to Pearson Digital Learning Platforms as an Administrator without using the SSO link within PowerSchool.

Note: SAML inline authentication settings must be configured.

How to Sign In as an Administrator

1. Open your Web browser to your school's Pearson Digital Learning Platforms URL. The Single Sign-On page appears.
2. Select your district from the pop-up menu.

3. Click **Continue**. The Single Sign-On page refreshes.
4. Click **Sign in as an Administrator**. The Administrator Sign In page appears.
5. Use the following table to enter information in the fields:

Field	Description
Select Language	Choose the language in which you want to view PowerSchool from the pop-up menu. **Note:** If no more than one locale is configured, the pop-up menu does not appear.
Username	Enter your username.
Password	Enter your password. The characters display as asterisks (*****) to ensure greater security when you sign in.

6. Click **Sign In**. Pearson Digital Learning Platforms launches.

   Note: Depending on SAML Inline Authentication settings, Pearson Digital Learning Platforms either replace your existing browser window or opens in a new browser window.

Sign In as a Student

Use this procedure to sign directly in to Pearson Digital Learning Platforms as a Student without using the SSO link within PowerSchool.

Note: SAML inline authentication settings must be configured.

How to Sign In as a Student

1. Open your Web browser to your school's Pearson Digital Learning Platforms URL. The Single Sign-On page appears.
2. Select your district from the pop-up menu.
3. Click **Continue**. The Single Sign-On page refreshes.
4. Click **Sign in as a Student**. The Student and Parent Sign In page appears.
5. Use the following table to enter information in the fields:

Field	Description
Select Language	Choose the language in which you want to view the PowerSchool Student and Parent portal from the pop-up menu. **Note:** If no more than one locale is configured, the pop-up menu does not appear.
Username	Enter your username.
Password	Enter your password. The characters appear as asterisks (*) to ensure greater security when you sign in.

6. Click **Sign In**. Pearson Digital Learning Platforms launches.

   Note: Depending on SAML Inline Authentication settings, Pearson Digital Learning Platforms either replaces your existing browser window or opens in a new browser window.

Sign In as a Teacher

Use this procedure to sign directly in to Pearson Digital Learning Platforms as a Teacher without using the SSO link within PowerSchool.

Note: SAML inline authentication settings must be configured.

How to Sign In as a Teacher

1. Open your Web browser to your school's Pearson Digital Learning Platforms URL. The Single Sign-On page appears.
2. Select your district from the pop-up menu.
3. Click **Continue**. The Single Sign-On page refreshes.
4. Click **Sign in as a Teacher**. The Teacher Sign In page appears.
5. Use the following table to enter information in the fields:

Field	Description

Select Language	Choose the language in which you want to view PowerTeacher from the pop-up menu. **Note:** If no more than one locale is configured, the pop-up menu does not appear.
Username	Enter your username.
Password	Enter your password. The characters appear as asterisks (*) to ensure greater security when you sign in.

6. Click **Sign In**. Pearson Digital Learning Platforms launches.

   Note: Depending on SAML Inline Authentication settings, Pearson Digital Learning Platforms either replaces your existing browser window or opens in a new browser window.

Plugin Management User Guide

PowerSchool

Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

The data and names used to illustrate the reports and screen images may include names of individuals, companies, brands, and products. All of the data and names are fictitious; any similarities to actual names are entirely coincidental.

Table of Contents

Introduction

The Plugin Management Dashboard provides you with a central location from which to manage plugins. Plugins are components that "plug in" to PowerSchool and add a specific feature or service to PowerSchool. PowerSchool provides a number of plugins that are available by default in the application, as well as the ability to quickly and easily install new plugins.

Setup

Before you can begin using a new plugin, perform the following setup items:

- Install Plugin
- View Plugin Information (optional)
- View SSO (optional)
- Manage Link Details (optional)
- Configure School Access (optional)
- View OAuth Client Credentials (optional)
- Configure Page Size (optional)
- Enable Plugin
- Update Plugin Version
- Configure User Access Roles (optional)
- Assign User Access Roles (optional)

Configuration

Install Plugins

In order to successfully install a new plugin, the plugin installation file must have an .xml or .zip extension.

Note: If the plugin installation file includes a PowerQuery, the PowerQuery name may not exceed 200 characters.

How to Install a Plugin

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Click **Install**. The Plugin Install page appears.
5. Do one of the following:
    - Click **Choose File** to select a plugin installation file to install.
    - Click **Browse...** to browse for a plugin.
6. Click **Install**. A confirmation message appears.

How to Install a Plugin That Requests/Requires Registration

Use this procedure if the plugin you are installing requests/requires registration. PowerSchool will send data to the registration server based on the plugin configuration.

Note: This information is contained within the plugin .xml file.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Click **Install**. The Plugin Install page appears.
5. Do one of the following:
    - Click **Choose File** to select a plugin installation file to install.
    - Click **Browse...** to browse for a plugin.

    If the plugin installation is successful, the Plugin Registration pop-up appears and displays the information that will be sent to the registration server.

6. Click **Register** to send the registration information automatically. The Registration Results pop-up appears. If the registration was successful, a confirmation message appears. If the registration was unsuccessful, an error message appears.

    Note: Click **Cancel** to send the registration information manually. The Plugin Registration pop-up closes.

View Installed Plugins

Once a plugin is installed, it appears in the Installed Plugins section on the Plugin Management Dashboard page.

How to View Installed Plugins

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Use the following table to view information in the Installed Plugins section:

Field	Description

Name	The name of the plugin.
Version	The version number of the plugin.
Enable/Disable	Indicates whether or not the plugin is enabled.

How to View Plugin Information

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Click the name of the plugin you want to configure. The Setup page for the selected plugin appears.
5. Use the following table to view information in the General Information section:

Field	Description
Plugin Name	The name of the plugin.
Plugin Description	A description of the plugin.
Plugin Version	The version number of the plugin.
Publisher	The name of the publisher.
Publisher Email	The email of the publisher.
Enabled	Indicates whether or not the plugin is enabled.
Event Subscription URL	The URL provided by the plugin used by PowerSchool to send events for that plugin.

6. Use the following table to view information in the Installed Resources section:

Note: Information appears if plugin contains the specific resource.

Field	Description
Schema Extensions	Click the arrow to expand the section to view the following Schema Extensions information: • Extensions • Tables • Fields **Note:** If a plugin is enabled, schema extensions are formatted into tables. If a plugin is not enabled, schema extensions are presented in XML format.
Data Access Requests	Click the arrow to expand the section to view the following Data Access Requests information: • Table Name • Field Name • FLS Controlled • Blacklisted • Status
Named Queries	Click the arrow to expand the section to view the following Named Queries information: • Query • Query Arguments • Returned Columns • Query SQL **Note:** If a plugin is enabled, named queries are formatted into tables. If a plugin is not enabled, named queries are presented in XML format.
Web Resources	Click the arrow to expand the section to view the following Web Resources information:

	• Resource • Mime Type
Permission Resources	Click the arrow to expand the section to view the following Permission Resources information: • Name • Content
Message Resources	Click the arrow to expand the section to view the following Message Resources information: • Resource • Mime Type • Content

7. To print resource details, click **Print Resource Details**. The Print Preview for your browser appears.
8. Click **Print**. A report detailing the following information is generated:
    - Plugin Name
    - Plugin Description
    - Plugin Version
    - Publisher
    - Publisher Email
    - Enabled
    - Event Subscription URL
    - Installed Resources

How to View Information for All Plugins

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Click **Resource Report**. The Plugins Resource Details page appears.
5. View information in the General Information section. For field descriptions, see *How to View General Plugin Information for a Plugin*.

6. View information in the Installed Resources section. For field descriptions, see *How to View General Plugin Information for a Plugin*.
7. Do one of the following:

Field	Description
Expand All	Click to expand all the sections.
Collapse All	Click to collapse all the sections.
Print All	1. Click to generate a report detailing information for all plugins. The Print Preview for your browser appears. 2. Click **Print**. A report detailing the following information is generated: • Plugin Name • Plugin Description • Plugin Version • Publisher • Publisher Email • Enabled • Event Subscription URL • Installed Resource

How to Run the Plugins Resource Report

1. On the start page, choose **System Reports** under Reports in the main menu. The Reports page appears.
2. On the System tab, click **Plugins Resource Report** under Plugins. The Plugins Resource Report page appears.
3. Select the **Report Output Locale** from the pop-up menu. The report output will be in the language associated with the locale. For more information, see *Report Output Locale*.
4. Click **Submit**. The Plugins Resource Details page appears.
5. To continue, see Step 7 of *How to View Information for All Plugins*.

View Single Sign-On Settings

Using the Single Sign-On Settings page, you can quickly and easily view detailed information about single sign-on settings that have been added to PowerSchool as part of the plugin installation. Additionally, you can use this page to correct or update single sign-on settings as needed.

Note: This procedure is only applicable if the plugin configuration file you installed declares single sign-on links.

How to View Single Sign-On Settings (OpenID)

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Click the name of the plugin you want to configure. The Setup page for the selected plugin appears.
5. Click **Single Sign-On Settings**. The Single Sign-On Settings page for the selected plugin displays the following information:

   Note: Update information if needed.

Field	Description
Name	The name of the plugin, such as Plugin. **Note:** This field is read-only.
Host Name or IP Address	The relying party's host name, such as plugin.com. **Note:** This is a required field.
Port	The relying party's port number. The default value is **443**. **Note:** This is a required field.

6. Click **Save**. A confirmation message appears.

How to View Single Sign-On Settings (SAML)

Note: This procedure is for a plugin that defines PowerSchool as a SAML Identity Provider. For a plugin that defines PowerSchool as a Service Provider, see *SAML Single Sign-On*.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.

2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Click the name of the plugin you want to configure. The Setup page for the selected plugin appears.
5. Click **Single Sign-On Settings**. The Single Sign-On Settings page for the selected plugin appears.
6. Use the following table to enter information in the PowerSchool Identity Provider Settings fields:

   Note: Update information if needed.

Field	Description
Name	The PowerSchool identity provider's name. The default is set to **PowerSchool IDP**.
Entity ID	The PowerSchool identity provider's entity ID. The default value is a unique 36 character alphanumeric string prefaced with **https://**.
Single Sign-on Certificate	Choose the appropriate PowerSchool identity provider's single sign-on certificate from the pop-up menu. This is the certificate that contains the PowerSchool X.509 client certificate.
View PowerSchool IDP Metadata	The PowerSchool IDP Metadata describes the services offered by the PowerSchool identity provider along with the names and formats of data items passed to the service provider when a user is authenticated. 1. Click to view the PowerSchool identity provider's metadata. A separate window appears. 2. When done viewing, close the window.

7. Use the following table to enter information in the Service Provider Settings fields:

   Note: Update information if needed.

Field	Description

Name	The service provider’s name. The value is part of the data imported during plugin install.
Base URL	The service provider’s base URL. This is the root of all URLs for the service provider application.
Metadata URL	The service provider’s metadata URL. The value is supplied by the service provider, which allows the IDP to communicate with the service provider application.
Host Server and Port	The service provider's entity-ID, which is used to identify the service provider when the service provider initiates single sign-on.

8. Click **Save**. A confirmation message appears.

Manage Link Details

Using the Link Details page, you can quickly and easily view detailed information about links that have been added to PowerSchool as part of the plugin installation. Additionally, you can control which schools can view installed plugin links.

Note: This procedure is only applicable if the plugin configuration file you installed declares navigation links.

How to Manage Link Details

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Click the name of the plugin you want to configure. The Setup page for the selected plugin appears.
5. Click **Link Details**. The Link Details page for the selected plugin displays the following information for each portal:

Field	Description

[Portal]	The name of the portal: • Administrator Portal • Teacher Portal • Guardian Portal • Student Portal
Schools	For detailed information, see *Configure School Access*. **Note:** This setting controls only the display of links associated to a plugin. This does not restrict users from accessing content referred to by these links. Only the display of links based on the user's school context is affected.
Displayed in # / # Schools	Indicates the number of school the link displays in. **Note:** Only displays for Teacher Portal.
URL	The URL of the link, including <HostName>:<Port><Path>.
Display Text	The link title text appears.
UI Location	The location(s) where the link appears in the PowerSchool user interface.
SSO	Indicates whether or not the link is used for SSO.

Configure School Access

When a plugin is installed, by default all schools are granted access to the plugin links. Using the Link Display by School drawer, you can control which schools can view installed plugin links.

Note: Third party links appear in PowerSchool based on the navigation links defined in the plugin configuration file.

Note: This procedure is not applicable to plugins that handle their own school level access.

Note: School-level permissions within PowerTeacher Pro 1.0 will use the permissions of the school from which PTP was launched.

How to Configure School Access

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Click the name of the plugin you want to configure. The Setup page for the selected plugin appears.
5. Click **Link Details**. The Link Details page for the selected plugin appears.
6. Click **Schools** next to the portal for which you want to configure school access. The Link Display by School drawer opens.
7. Use the following table to enter information:

Field	Description
Schools Where Links Not Displayed	Schools that have not been granted access to the plugin appear. To grant access to a plugin, highlight one or more schools in the list and click the arrow (>). The selected school appears in the Schools with access to plugin column. **Note:** To select multiple schools, press and hold COMMAND (Mac) or CONTROL (Windows) as you click each school. To grant access to a plugin for all schools, click the double arrow (>>). All schools appear in the Schools with access to plugin column.
Schools Where Links Displayed	Schools that have been granted access to the plugin appear. To revoke access to a plugin, highlight one or more schools in the list and click the arrow (<). The selected school appears in the Schools without access to plugin column. **Note:** To select multiple schools, press and hold COMMAND (Mac) or CONTROL (Windows) as you click each school. To revoke access to a plugin for all schools, click the double arrow (<<). All schools appear in the Schools without access to plugin column.

8. Click **Submit**. The Link Display by School drawer closes, and a confirmation message appears.

View OAuth Client Credentials

PowerSchool uses OAuth 2.0 to secure the data exchange features of a plugin. If you have installed a plugin that uses data exchange, PowerSchool auto-generates the plugin's client credentials. The client credentials are required for the external system to retrieve an access token for data exchange. This is sensitive data and should be kept secure to prevent unauthorized access to PowerSchool data.

PowerSchool is capable of sending the client credentials to the external system automatically if the publisher of the plugin has set up the system to handle automatic registration. If a plugin does not support automatic registration, then it will be necessary for you to manually send the client credentials to the publisher before the external system will be able to use the data exchange features.

Note: This procedure is only applicable if the plugin configuration file you installed includes OAuth configuration information.

How to View OAuth Client Credentials

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Click the name of the plugin you want to configure. The Setup page for the selected plugin appears.
5. Click **Data Configuration**. The Data Configuration page for the selected plugin appears.
6. Use the following table to view information on the OAuth Credentials section:

Field	Description
Client ID	A value that uniquely identifies the plugin.
Client Secret	The account identifier associating the API client record to the client credentials.

7. Click **OK**. The Setup page for the selected plugin appears.

Configure Page Size

Using the Page Size Configuration settings, you can decrease or increase the number of records that can be requested per page.

Note: For more information, see the *PowerSchool Developer Site* available on PowerSource.

How to Configure Page Size

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Click the name of the plugin you want to configure. The Setup page for the selected plugin appears.
5. Click **Data Configuration**. The Data Configuration page for the selected plugin appears.
6. Use the following table to enter information on the Page Size Configuration section:

Field	Description
Maximum Page Size	Enter the maximum number of records that can display on a page. **Note:** A value of 1 to 1000 may be entered. Increasing the maximum number of records that can display on a page could negatively impact system performance.

7. Click **Submit**. A confirmation message appears.

Enable Plugins

By default, the newly installed plugin is not enabled. Once the plugin is enabled, plugin functionality appears throughout PowerSchool.

How to Enable a Plugin

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Select the **Enable/Disable** checkbox of the plugin you want to enable. The Enable Plugin drawer appears.
5. Review the content.

   Note: If PowerSchool encounters errors with the plugin, detailed information about the errors appears and you may not proceed with enabling the plugin.

6. Click **Enable** to proceed. A confirmation message appears.

   Note: Once a plugin is enabled, third party links appear in PowerSchool based on the navigation links defined in the plugin configuration file.

   Note: If you have installed a plugin that is dependent on page customizations, you must enable page customizations on the Customizations page. For more information, see *Customizations*.

Update Plugin Version

Once you have installed and configured a plugin, you can later update it with a newer version. Updating may be done without having to delete and reinstall the existing plugin.

How to Update a Plugin Version

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Click the name of the plugin you want to update. The Setup page for the selected plugin appears.
5. Click **Update**. The Plugin Update page appears.
6. Do one of the following:
   - Click **Choose File** to select a new plugin version to install.
   - Click **Browse...** to browse for a new plugin version.
7. Click **Submit**. Depending on the file you selected, a message may display.
8. Use the following table to proceed:

Message	Action
The version number of this plugin is a less-recent version than the currently installed plugin. Are you sure you want to update the existing plugin with this version?	1. Select the new plugin version to install. 2. Click **Submit**.
The identifier for this plugin does not match the identifier of the currently installed plugin. In order to successfully update the currently installed plugin, the new plugin must have a matching plugin identifier.	1. Select the new plugin version to install that has a matching plugin identifier. 2. Click **Submit**.
The plugin name or publisher of this plugin does not match the plugin name or publisher of the currently installed plugin. In order to successfully update the currently installed plugin, the new plugin must have a matching plugin name and publisher.	1. Select the new plugin version to install that has the same plugin name or publisher. 2. Click **Submit**.

After clicking **Submi**t, the Enable Plugin drawer may appear (for some plugins).

9. Review the content.
10. Click **Enable** to proceed. A confirmation message appears.

    Note: If the newer version of your plugin includes page customizations, you must enable page customizations on the Customizations page. For more information, see *Customizations*.

Disable Plugins

Once you have enabled a plugin, it may become necessary to disable it. If a plugin is disabled, plugin functionality no longer appears throughout PowerSchool.

How to Disable a Plugin

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.

2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Deselect the **Enable/Disable** checkbox of the plugin you want to disable. The Disable Plugin pop-up appears.
5. Click **Yes**. A confirmation message appears.

Delete Plugins

Once you have installed and configured a plugin, you may find it necessary to remove it. If a plugin is deleted, the plugin is removed from the PowerSchool database altogether.

Note: Deleting a plugin will allow you to re-install it. You may delete and reinstall a plugin if you ever need to revert to the original settings.

How to Delete a Plugin

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Click **Delete** next to the plugin you want to delete. The Delete Plugin pop-up appears.
5. Click **Yes**. The plugin no longer appears.

User Access

Configure User Access Roles

If an installed plugin includes teacher and admin SAML authorization, you can use the Roles Administration pages to control the level of access given to PowerSchool users who access plugin links from within PowerSchool and PowerTeacher. For more information, see *Roles Administration*.

Note: This procedure is only applicable if the plugin you installed includes SAML authorization and declares permissions.

Assign User Access Roles

Once you have configured user access roles for a plugin that includes teacher and admin SAML authorization, staff members must then be assigned the appropriate role(s) in order to access plugins from within PowerSchool and PowerTeacher. For more information on assigning a role to a staff member, see *Role Assignments*.

Note: When assigning user access roles to individual staff members, user access roles may be assigned to schools within PowerSchool, as well as to "external systems school" that represents external systems within PowerSchool. User access roles assigned to the external systems school do not grant access to any PowerSchool school or district regardless of the PowerSchool security group.

Mass Assign User Access Roles

The Mass Assign Use Access Roles function is also available when there is a SAML plugin that declares permissions. For more information on assigning roles to multiple staff members, see *Mass Assign User Access Roles to Selected Group of Users*.

Note: When mass assigning user access roles to selected staff members, user access roles may only be assigned to the "external systems school" that represents external systems within PowerSchool. User access roles assigned to the external systems school do not grant access to any PowerSchool school or district regardless of the PowerSchool security group.

Security

Monitor Activity

To ensure system security, you can monitor invalid access attempts to your API services. If a client attempts to obtain an API access token using invalid (expired or non-existent) client credentials or access token, a message is logged in the PSJ runtime log.

How to Monitor Activity

Use the PowerSchool Monitor to monitor the PSJ runtime log. For more information, see *How to View PSJ Runtime Log*.

Reset Client Credentials

If API services credentials have been compromised or you suspect they have been compromised, you can use this procedure to reset the API services credentials.

How to Delete a Plugin

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Click **Delete** next to the plugin for which you want to reset the OAuth credentials. The Delete Plugin pop-up appears.
5. Click **Yes**. The plugin no longer appears.

How to Reinstall a Plugin

1. On the Plugin Management Dashboard page, click **Install**. The Plugin Install page appears.
2. For the **Plugin Installation File**, enter or select the plugin installation file.
3. Click **Install**. A confirmation message appears.

How to Reenable a Plugin

1. On the Plugin Management Dashboard page, select the **Enable/Disable** checkbox of the plugin you want to enable. A confirmation message appears.
2. Click **Yes**.

Working With Plugin Links

Once a plugin is set up, users can launch the plugin from within PowerSchool while keeping their PowerSchool session active allowing them to work in both applications simultaneously.

Note: The link only appears if the link is defined in the plugin configuration file, the plugin is enabled, the link is set to display for the selected school, and if you belong to a user access role that has the capability associated to the link.

Note: If SAML single sign-on settings have been added to PowerSchool as part of the plugin installation, SAML single sign-on links will only appear in PowerSchool and PowerTeacher if: A user is of the user type the link is specified for, and there are no permissions declared in that plugin; There are permissions declared in that plugin, and one or more of the permissions declared in that plugin is turned on for one or more of the user access roles that are assigned to that user.

Launch a Plugin Application

Use this procedure to launch a plugin application in PowerSchool, the PowerSchool Student and Parent portal, or PowerTeacher.

How to Launch a Plugin Application from the Navigation Bar

1. Do one of the following:
    - Sign in to PowerSchool.
    - Sign in to the PowerSchool Student and Parent portal.
    - Sign in to PowerTeacher.

    Note: For more information about signing in to PowerSchool, see *The Basics User Guide* available on PowerSource. For more information about signing in to the PowerSchool Student and Parent portal, see the *PowerSchool Student and Portal User Guide* available on PowerSource. For more information about signing in to PowerTeacher, see the *PowerTeacher User Guide* available on PowerSource.

2. Click the **Applications** button (an upward-right arrow) in the navigation toolbar. The Applications drawer slides into view.
3. Click the **Application** link you want to launch. The application launches in a separate window (or tab depending on your browser settings).

Note: The window that appears is not served by PowerSchool. It is rendered from a separate server. If the window does not launch, contact your school's PowerSchool administrator.

Note: If you are not actively working in PowerSchool, your session may time out. If so, you need to sign in again.

4. When you are finished working in the application, be sure to sign out of the application.
5. When you are finished working in PowerSchool, be sure to sign out of PowerSchool.

How to Launch a Plugin Application from the Main Menu

1. Do one of the following:
   - Sign in to PowerSchool.
   - Sign in to the PowerSchool Student and Parent portal.
   - Sign in to PowerTeacher.

   Note: For more information about signing in to PowerSchool, see *The Basics User Guide* available on PowerSource. For more information about signing in to the PowerSchool Student and Parent portal, see the *PowerSchool Student and Parent Portal User Guide* available on PowerSource. For more information about signing in to PowerTeacher, see the *PowerTeacher User Guide* available on PowerSource.

2. In the main menu on the left side of the page, choose the plugin you want to launch. The application launches in a separate window (or tab depending on your browser settings).

   Note: The window that appears is not served by PowerSchool. It is rendered from a separate server. If the window does not launch, contact your school's PowerSchool administrator.

   Note: If you are not actively working in PowerSchool, your session may time out. If so, you need to sign in again.

3. When you are finished working in the application, be sure to sign out of the application.
4. When you are finished working in PowerSchool, be sure to sign out of PowerSchool.

PowerLunch User Guide

PowerSchool

Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

Table of Contents

Introduction

PowerLunch is the lunch management portion of PowerSchool. The system helps you monitor meals sold, including free and reduced lunches, as well as student account balances and transactions.

PowerLunch is compatible with a wide selection of bar code and magnetic-strip readers. If your school is properly equipped, students can use their lunch IDs to have their accounts automatically debited as they pass through the lunch line. A full array of reports is available, including meal count reports and transaction reports.

Note: You are encouraged to read the section *Introduction to PowerSchool* if you have not already done so. In addition, the section *Custom Reports* will be helpful for creating and running reports in PowerLunch.

Meal Classifications

PowerLunch classifies cafeteria patrons into several categories. This helps schools maintain records on how many meals are sold. PowerLunch meal classifications include two main groups of patrons: students and adults.

Additionally, use the classifications to prepare reports for government funding. It is important to understand each category before you can set up PowerLunch for your school.

Students

Most people that eat lunch at school are students. They are divided into six groups based on the amount each pays for meals:

- **Free**: These students have qualified for the free lunch program and are not charged for meals. This is based on the financial situation of the students' families.
- **Reduced**: These students have qualified for a reduced price for meals. This is based on the financial situation of the students' families.
- **Full Pay**: These students pay the full, standard price for meals.
- **Exempt**: These students do not pay for their lunch because of special programs set up by the school. Some schools exempt students because they periodically work in the cafeteria in exchange for lunch. Others allow it because the student has participated in another program that benefits the school in some way. If a school does have such a program, students are usually exempt for specific days only. Generally, students are not exempt from paying for lunch every day. If a student is exempt, the government does not subsidize that lunch. It is important to understand that exempt students are not the same as those who receive free lunches. Whether a student receives free lunches or not depends on the family's financial situation. Students who are exempt from paying for lunch are designated as such because they participate in a school program that allows for it. If a student is exempt, the government does not subsidize that lunch, whereas a free lunch is subsidized.
- **Free-Direct Certification**: These students do not each lunch and are not counted in the eligibility counts for PowerLunch reports.
- **Temporary**: These students visit the school and receive lunch there.

Adults

While most meals are served to students, some are served to adults. There are three classifications for adult patrons:

- **Staff**: Staff work at the school or in the school district. Staff members include teachers, administrators, counselors, custodial staff, and maintenance workers.
- **Guest**: These adult patrons do not work at the school. Visitors such as parents and on-site PowerSchool trainers are guests.
- **Earned**: These adults have earned a free meal by working at the school. Some schools offer this type of program to those who work in the cafeteria or other part of the school. This classification is the equivalent of the exempt status for students.

Get Started

To get started with PowerLunch, you must first sign in to PowerSchool.

Sign In to PowerSchool

Because PowerSchool is a secure system, you need a secure connection to use it. To access PowerSchool, you must first sign in to the system. For more information, see *Sign In to PowerSchool*.

Note: Do not use your colleague's password or give your password to a colleague. Security is very important in PowerSchool. For more information, see *Security*.

How to Sign In to PowerSchool

1. Open your Web browser to your school's PowerSchool URL. The Administrator Sign In page appears.
2. Use the following table to enter information in the fields:

Field	Description
Select Language	Choose the language in which you want to view PowerSchool from the pop-up menu. **Note:** If no more than one locale is configured, the pop-up menu does not appear.
Username	Enter your username.
Password	Enter your password. The characters display as asterisks (*****) to ensure greater security when you sign in.
[Server Information]	The date, time, and version number appear. Click the version number to view the Server Details pop-up. When you are done viewing, click the **x** in the upper-right-hand corner to close.

3. Click **Sign In**. The start page appears. For more information, see *PowerSchool Start Page*.

Notes:

- If your PowerSchool administrator has issued you a temporary password, you may be asked to reset your password upon first signing in. For more information, see *How to Reset Your Password*.
- If your password has expired, you may be asked to reset your password. For more information, see *How to Reset Your Password*.
- If you have exceeded the number of sign in attempts allowed, you may become locked out of PowerSchool. If so, contact your PowerSchool administrator.

Access PowerLunch

On the start page, choose **PowerLunch** under Applications in the main menu. The PowerLunch page appears.

Sign Out of PowerSchool

When you finish your work in PowerLunch, it is important to sign out. Sign out of PowerSchool from any page in the system. Click **Sign Out** in the header. The Administrator Sign In page appears. You must enter your username and password again to redisplay the start page.

Setup

At most schools, the PowerSchool administrator sets up PowerLunch with the input of cafeteria staff. If you are responsible for setting up PowerLunch, follow the instructions in the sections *PowerLunch Initialization* and *Free and Reduced Lunches*. When the setup is complete, proceed to the section *Lunch ID Numbers*.

You are encouraged to set a bookmark for the PowerLunch page on your computer's Web browser. This will save time when you want to sign in to PowerLunch.

PowerLunch Initialization

To initialize PowerLunch, begin by setting up the following items:

- *Set Prices*
- *Set Messages*
- *Create Student Lunch ID Numbers*
- *Create Lunch ID Numbers for Staff*
- *Publish Lunch ID Numbers*
- *Set Up Beginning Student Balances*
- *Set Up Beginning Staff Balances*

Set Prices

Set up a price list for the different categories of patrons at your school. Each category pays a different price for meals depending on their role at your school and their financial situation.

How to Set Prices

1. On the start page, choose **PowerLunch** under Applications in the main menu. The PowerLunch page appears.
2. Click **Set Prices and Options** under Management. The Set Prices and Options page appears.
3. Use the following table to enter information in the fields:

Field	Description
Patron Type	The categories of patrons.

Breakfast Prices	Enter the price of breakfast for all categories of patrons. It is not necessary to enter a dollar sign, but you must use a decimal point. You cannot edit the Student Free Price field because students with a Free status do not have to pay for their first meal.
Second Breakfast Prices	Enter the price of breakfast for all categories of patrons. You can charge patrons receiving free or reduced meals the full meal price in Quicksale mode when they purchase a second meal. Additionally, this will put these second meals under the paid heading on the Meal Count Listing report. It is not necessary to enter a dollar sign when entering the price.
Lunch Prices	Enter the price of lunch for all categories of patrons. It is not necessary to enter a dollar sign when entering the price. You cannot edit the Student Free Price field because students with a Free status do not have to pay for their first meal.
Second Lunch Prices	Enter the price of lunch for all categories of patrons. You can charge patrons receiving free or reduced meals the full meal price in Quicksale mode when they purchase a second meal. Additionally, this will put these second meals under the paid heading on the Meal Count Listing report. It is not necessary to enter a dollar sign when entering the price.
Auto-calculate cash if the account is deficit	Select the checkbox to automatically calculate cash if the patron's account does not have enough of a balance to cover the meal (optional).
Use single-screen lunch process (Quicksale)	Select the checkbox to have the lunch process (Quicksale) display and to set a full-priced meal as the default. This step is optional, but you are encouraged to use it. For more information about Quicksale, see *Daily Activities*.
Show student photo on screen	Select the checkbox to display the patron's photo on the page (optional). This option is only available if student photos have been imported into PowerSchool.

Don't use false balance for free lunch students	Select the checkbox if you do not use false balances for free lunch students. This allows the student's free or reduced lunch price to appear on the page. This also allows low-balance messages to appear. Selecting the checkbox can create confidentiality issues if others view the page.
Allow students from any school through the lunch line	Select the checkbox to allow students from any school through the lunch line (optional). Often, this refers to other students in your school district. This affects all schools on your PowerSchool system.
Disable student allergy alert	By default, the student allergy alert is enabled. If a student has an allergy, an alert appears on the Record Lunch Sale page. Select the checkbox to disable of the student allergy alert. Alternatively, deselect the checkbox to re-enable the student allergy alert.

4. Click **Submit**. The Changes Recorded page appears.

Set Messages

Set up warning messages that appear when a student's account balance gets low or becomes deficit. Also, set up a message to tell the cashier if a student is eating a second meal for the day. If you do not want a message for a specific event, leave that field blank when setting up messages.

How to Set Messages

1. On the start page, choose **PowerLunch** under Applications in the main menu. The PowerLunch page appears.
2. Click **Set Messages** under Management. The Set Messages page appears.
3. Use the following table to enter information in the fields:

Field	Description

When account balance drops below this level…	Enter the dollar amount of the cut-off to display a message when the patron's account balance drops below this level. This selection applies to your school only.
…display this message	If you entered a dollar amount in the previous field, enter the message to appear on the page when the student's balance is low.
When there is not enough money in the account, display this message…	To be warned when there is not enough money in the patron's account to pay for the meal, enter the message to appear on the page. This selection applies to all schools on your PowerSchool system.
When patron is purchasing a 2nd meal, display this message…	To be warned when a patron is purchasing a second meal for the day, enter the message to appear on the page. This is especially important when the student purchasing the extra meal receives free or reduced lunches. This selection applies to all schools on your PowerSchool system.

4. Click **Submit**. The Changes Recorded page appears.

Create Student Lunch ID Numbers

Assign numbers to a group of students or to an individual student. Lunch ID numbers may or may not be the same numbers as the student ID numbers. They are linked to the price that students pay for their meals and are used to keep track of students' meal account balances. PowerSchool administrators can assign lunch IDs at some schools.

How to Create Student Lunch ID Numbers

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Functions, choose **ID/Password Assignments**. The Assign IDs & Passwords page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Use the following table to enter information in the fields:

Field	Description
For	Select the option to indicate for whom you want to assign ID numbers. Do one of the following: • Select all of the enrolled students in the current school • Select the current selection of students • Select a single student
Don't overwrite any existing IDs or passwords	Select the checkbox if you do not want to overwrite any IDs or passwords already assigned in PowerSchool.
In case of conflicts append	If there is a conflict with an existing ID, choose a suffix from the pop-up menu.
Assign Lunch IDs	Select the checkbox to create only lunch IDs. Though options to create other IDs/Passwords appear on this page, ensure that no other checkbox is selected unintentionally, such as the Assign Web IDs and passwords checkbox.
Each Lunch ID is	Choose the number of digits in the lunch IDs from the pop-up menu. Choose how the number will be generated from the pop-up menu.

5. Click **Submit**. A notice appears, indicating that the students are being processed.

Create Lunch ID Numbers for Staff

To assign lunch IDs to staff, you must assign them one at a time by going through the Staff page: select the teacher, click **Edit Information**, enter the lunch ID, and click **Submit**. This works well for an individual teacher, but sometimes you want to export a list of several teachers, such as during the PowerSchool setup. When you export the staff list to your spreadsheet application, it will be easier to assign lunch ID numbers to each teacher and import that list back into PowerSchool.

Set Up Beginning Student Balances

Once everything else is set up and everyone has a lunch ID, you can start collecting lunch money. Most schools that use PowerSchool allow students to deposit money into their accounts so that they do not have to pay cash every day. This is advantageous for the schools because there are minimal cash transactions. The following instructions explain how to enter the first deposit into an individual student's account and subsequent deposits outside of those occurring as students pass through the lunch line. For instructions on how to handle deposits at the lunch line, see *Daily Activities* and *Maintenance Activities*.

Note: If you are setting up PowerLunch or if you are entering the beginning balance for several students, you can enter the data in a spreadsheet application and import it to PowerSchool. Contact your PowerSchool administrator for more information.

Repeat this procedure for all students when they make their initial deposit into their meal accounts and subsequent deposits that do not occur while passing through the lunch line.

How to Set Up Beginning Student Balances

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Choose **Lunch Transactions** under Administration in the student pages menu. The Lunch Transactions page appears.
3. Click **New**. The Transaction Record page appears.
4. Use the following table to enter information in the fields:

Field	Description
Transaction Date	Enter the date of the transaction.
Description	Enter a description for the transaction, such as **Beginning Balance** or **Initial Deposit**.
Amount of Fee	It is not necessary to enter an amount in this field since a deposit is being made.
Amount of Credit	Enter the amount of the deposit.

Cash Transaction	Select the checkbox if the transaction is a cash transaction.

5. Click **Submit**. The Changes Recorded page appears.

   Note: Click **Lunch Transactions** to display the transaction. The balance updates to reflect the deposit.

Set Up Beginning Staff Balances

Enter the first deposit into an individual staff member's account and subsequent deposits outside of those occurring as they pass through the lunch line.

Note: If you are setting up PowerLunch or if you are entering the beginning balance for several staff members, you can enter the data in a spreadsheet application and import it to PowerSchool. Contact your PowerSchool administrator for more information.

How to Set Up Beginning Staff Balances

1. On the start page, search for and select a staff member. For more information, see *Staff Search*.
2. Click **Transactions** under Function in the staff pages menu. The Transactions page appears.
3. Click **New**. The Transaction Record page appears.
4. Use the following table to enter information in the fields:

Field	**Description**
Date of Transaction	Enter the date of the transaction.
Description	Enter a description for the transaction, such as **Beginning Balance** or **Initial Deposit**.
Debit	It is not necessary to enter an amount in this field since a deposit is being made.
Credit	Enter the amount of the deposit.

5. Click **Submit**. The Transactions page appears.

Free and Reduced Lunches

Once PowerLunch Initialization setup is complete, you can then begin set up PowerLunch to serve free and reduced lunches. The first two procedures, *How to Set Eligibility Levels* and *How to Create Eligibility Letter Templates*, must be done before you can start using PowerLunch. This may or may not be the responsibility of your PowerSchool administrator. School administrators should see *How to Evaluate an Application* for information about evaluating applications every time they receive an application for free or reduced lunches.

Set Eligibility Levels

For students to receive free or reduced-price lunches, you must set the cut-off amounts for each type of lunch. Additionally, you must set how much money a family can earn to be eligible for each type of lunch. The number of people in a household is also a part of the calculation. The state issues the values for these cut-offs that you enter into PowerLunch.

Repeat this procedure for each household size indicated by your state's directives.

How to Set Eligibility Levels

1. On the start page, choose **PowerLunch** under Applications in the main menu. The PowerLunch page appears.
2. Click **Meal Program Eligibility** under Management. The Meal Program Eligibility page appears.
3. Click **Set Eligibility Levels**. The Eligibility Levels page appears.
4. Click **New**. The Edit Eligibility Level page appears.
5. Use the following table to enter information in the fields:

Field	Description
Household Size	Enter the number of household members identified for this meal program.
Max monthly income that qualifies for Free meals for this household size	Enter the maximum monthly income that qualifies a student for free meals for the specified household size.

Max monthly income that qualifies for Reduced meals for this household size	Enter the maximum monthly income that qualifies a student for reduced meals for the specified household size.

6. Click **Submit**. The Eligibility Levels page appears.

Create Eligibility Letter Templates

When a student applies for a free or reduced lunch, you must inform the parents or guardians of the results of the evaluation. To do this, PowerLunch generates letters. Generating such a letter is discussed in the section *How to Evaluate an Application*, but the following instructions explain how to set up the template for the letter.

To evaluate an application for free or reduced lunches, see *How to Evaluate an Application*. For more information about serving meals, see *Daily Activities*.

How to Create Eligibility Letter Templates

1. On the start page, choose **PowerLunch** under Applications in the main menu. The PowerLunch page appears.
2. Click **Meal Program Eligibility** under Management. The Meal Program Eligibility page appears.
3. Click **Free**. The Free Letter page appears.
4. Enter text for the letter to appear when a student is approved as free. In addition to standard text, you can include HTML tags and PowerSchool data codes.
5. Click **Submit**. The Changes Recorded page appears.
6. Repeat these steps for the other two types of letters: Reduced Lunches and Not Eligible.

   Note: To make your work quicker, copy the text and codes from the Free Lunch letter, and paste them into body of the remaining letters. Then simply edit the text or codes to make them fit in the new letters.

Evaluate an Application

Evaluate a student's application for free or reduced lunches.

The default status for all students is Full Pay. An evaluation resulting in free or reduced lunches changes the status accordingly, and PowerLunch records the free or reduced lunch price in the appropriate student record. When the student passes through the lunch line, either the amount for a reduced lunch is charged to the student's account or there is no charge if the student receives free lunches. All lunches (full pay, reduced, free, and earned) are recorded for reporting purposes.

How to Evaluate an Application

1. On the start page, choose **PowerLunch** under Applications in the main menu. The PowerLunch page appears.
2. Click **Meal Program Eligibility** under Management. The Meal Program Eligibility page appears.
3. Enter the last names of the students to be evaluated. Separate multiple names with semicolons.
4. Enter the application number, if applicable.
5. Click **Submit**. The Evaluate a Student page appears.
6. Use the following table to enter information in the fields:

Field	Description
Select each student to whom this evaluation will apply	Select the checkboxes to choose each student to whom this evaluation will apply, even if only one student is listed.
Household size	Enter the size of the student's or students' household.
Monthly income	Enter the monthly income of the student's or students' household.
Guardian name and address	Enter the name and address of the student's or students' guardian, as displayed on the eligibility letter.
Options	Select the standard evaluation option if you just want to verify a student's eligibility. Select the direct certification option to qualify the student by overriding the minimum monthly income requirements.

7. Click **Submit**. The results of the evaluation appear using the appropriate eligibility letter template. For more information, see *How to Create Eligibility Letter Templates*.

Lunch ID Numbers

Once *PowerLunch Initialization* and *Free and Reduced Lunches* setup is complete, you can then publish lunch ID numbers.

Publish Lunch ID Numbers

Once you assign lunch ID numbers, you must tell each person what their number is. A popular method of doing this is to create mailing labels with the lunch ID and barcode printed on them. Some schools put the label on a card and laminate it. For more information about creating mailing labels, see *Mailing Labels*.

Work with PowerLunch

Daily Activities

Serving breakfast and lunch are usually the most frequently used functions in PowerLunch. They help you to serve meals and track how much each patron spends. The instructions for serving breakfast and lunch are identical. Use the Record Sale page to enter deposits toward lunch balances. For more information, see *How to Take Deposits*.

Perform a Quicksale

A Quicksale is the fastest way to record the sale of a meal because it uses minimal keystrokes. Quicksale automatically records the proper amount to be charged to the patron's account, based on the meal prices assigned to their lunch ID numbers. The following instructions assume that you selected the Quicksale option when you set up prices. For more information, see *How to Set Prices*. These instructions apply to both students and staff.

How to Perform a Quicksale

1. On the start page, choose **PowerLunch** under Applications in the main menu. The PowerLunch page appears.
2. Click either **Serve Breakfast** or **Serve Lunch** under Transactions, depending on which meal is being served. The Record Sale page appears.
3. Use the following table to enter information in the fields:

Field	Description
Lunch ID	Enter the patron's lunch ID number. This can be a student or a staff member.
Quicksale	Select the checkbox.

4. Click **Submit** to enter the sale. The transaction is recorded. The amount of the sale is automatically deducted from the patron's account.

   Note: If enabled, an allergy alert appears if the student has an allergy. For more information, see *How to Set Prices and Options*.

Note: If set up, a warning message appears when a student's account balance gets low or becomes deficit. For more information, see *How to Set Messages*.

PowerLunch is ready for the next patron's ID number.

Perform a Non-Quicksale

The Quicksale option is very handy when a student purchases a standard meal, but what if someone buys an item à la carte? These instructions apply to both students and staff.

How to Perform a Non-Quicksale

1. On the start page, choose **PowerLunch** under Applications in the main menu. The PowerLunch page appears.
2. Click either **Serve Breakfast** or **Serve Lunch** under Transactions, depending on which meal is being served. The Record Sale page appears.
3. Use the following table to enter information in the fields:

Field	**Description**
Lunch ID	Enter the patron's lunch ID number. This can be a student or a staff member.
Quicksale	Deselect the checkbox.

4. Click **Submit**. The Record Sale page appears.

   Note: When navigating to this page, the cursor first appears in the **Cash Received** field.

5. Use the following table to enter information in the fields:

Field	**Description**
Lunch ID	The lunch ID for the selected patron appears.
Current Account Balance	The patron's current balance appears.

Charge One Meal	If you want to charge one meal, select the checkbox and enter the dollar amount charged, if different than the default amount. **Note:** If the default meal price does not appear in the Charge One Meal field, your system is configured to suppress the price of the meal on this page.
A La Carte Items	Enter the dollar amount of any à la carte items purchased.
Cash Received	Enter the dollar amount of any cash received.

Note: Click **Don't Record Sale** if you make an error in your entries. You return to the previous page.

6. Click **Record Sale**. The Record Sale page appears. The sale is recorded, and the amount of the purchase is subtracted from the patron's account.

   Note: If enabled, an allergy alert appears if the student has an allergy. For more information, see *How to Set Prices and Options*.

   Note: If set up, a warning message appears when a student's account balance gets low or becomes deficit. For more information, see *How to Set Messages*.

   PowerLunch is ready for the next patron’s ID number.

Perform a Student Guest Sale

Students from other schools can visit your school and have lunch during the day. In that case, you must record the sale, but it must appear as a different type in the records.

How to Perform a Student Guest Sale

1. On the start page, choose **PowerLunch** under Applications in the main menu. The PowerLunch page appears.
2. Click either **Serve Breakfast** or **Serve Lunch** under Transactions, depending on which meal is being served. The Record Sale page appears.
3. Click **Student Guest**. The Record Sale: Student Guest page appears.

   Note: When navigating to this page, the cursor first appears in the **Cash Received** field.

4. Use the following table to enter information in the fields:

Field	Description
Lunch ID	The lunch ID for the selected patron appears.
Current Account Balance	The patron's current balance appears.
Charge One Meal	If you want to charge one meal, select the checkbox and enter the dollar amount charged, if different than the default amount. **Note:** If the default meal price does not appear in the Charge One Meal field, your system is configured to suppress the price of the meal on this page.
A La Carte Items	Enter the dollar amount of any à la carte items purchased.
Cash Received	Enter the dollar amount of any cash received.

Note: Click **Don't Record Sale** if you make an error in your entries. You return to the previous page.

5. Click **Record Sale**. The Record Sale page appears. The sale is recorded, and the amount of the purchase is subtracted from the patron's account.

   Note: If enabled, an allergy alert appears if the student has an allergy. For more information, see *How to Set Prices and Options*.

   Note: If set up, a warning message appears when a student's account balance gets low or becomes deficit. For more information, see *How to Set Messages*.

   PowerLunch is ready for the next patron's ID number.

Perform an Adult Guest Sale

There are times when adults visit your school and want to eat lunch there. You must record these sales as well.

How to Perform an Adult Guest Sale

1. On the start page, choose **PowerLunch** under Applications in the main menu. The PowerLunch page appears.

2. Click either **Serve Breakfast** or **Serve Lunch** under Transactions, depending on which meal is being served. The Record Sale page appears.
3. Click **Adult Guest**. The Record Sale: Student Guest page appears.

   Note: When navigating to this page, the cursor first appears in the **Cash Received** field.

4. Use the following table to enter information in the fields:

Field	**Description**
Lunch ID	The lunch ID for the selected patron appears.
Current Account Balance	The patron's current balance appears.
Charge One Meal	If you want to charge one meal, select the checkbox and enter the dollar amount charged, if different than the default amount. **Note:** If the default meal price does not appear in the Charge One Meal field, your system is configured to suppress the price of the meal on this page.
A La Carte Items	Enter the dollar amount of any à la carte items purchased.
Cash Received	Enter the dollar amount of any cash received.

Note: Click **Don’t Record Sale** if you make an error in your entries. You return to the previous page.

5. Click **Record Sale**. The Record Sale page appears. The sale is recorded, and the amount of the purchase is subtracted from the patron’s account.

   Note: If set up, a warning message appears when a student's account balance gets low or becomes deficit. For more information, see *How to Set Messages*.

   PowerLunch is ready for the next patron’s ID number.

Look Up a Teacher ID

Sometimes a staff member forgets his or her assigned lunch ID number. In this case, you must look it up because you cannot perform a transaction for a teacher without the number.

How to Look Up a Teacher ID

1. On the start page, choose **PowerLunch** under Applications in the main menu. The PowerLunch page appears.
2. Click either **Serve Breakfast** or **Serve Lunch** under Transactions, depending on which meal is being served. The Record Sale page appears.
3. Click **Look up teacher ID**. The Search Staff page appears.
4. Search for and select the teacher. For more information, see *Staff Search*.
5. Click **Edit Information**. The Edit Information page appears.
6. Note the teacher's Lunch ID.

Review Recent Sales

If a patron approaches you saying that he or she was not given the correct change or that there was another problem concerning the sale, you can review the ten immediate previous sales.

How to Review Recent Sales

1. On the start page, choose **PowerLunch** under Applications in the main menu. The PowerLunch page appears.
2. Click either **Serve Breakfast** or **Serve Lunch** under Transactions, depending on which meal is being served. The Record Sale page appears.
3. Click **Review Recent Sales (up to 10)**. The Review Sales page displays the names of the patrons, time of the sales, and amount of each sale.
4. Click the amount of the sale to view more details about it. The View Transaction page appears.
5. Do one of the following:
    - Click **Delete** to delete the transaction, if necessary. The Selection Deleted page appears.
    - Click **Back** to return to the Record Sale page.

      Note: If a "Warning Page Expired" message appears, click the **PowerSchool** logo to return to the start page.

Enter Earned Meals

Some schools offer meals in exchange for work performed at school. Either students or adults can earn meals, but they must be recorded as such for reporting purposes. This should be done each day that someone earns a meal.

How to Enter Earned Meals

1. On the start page, choose **PowerLunch** under Applications in the main menu. The PowerLunch page appears.
2. Click **Enter Earned Meals** under Management. The Enter Earned Meals page appears.
3. Use the following table to enter information in the fields:

Field	Description
School	The selected school appears.
Which meal?	Choose the meal earned from the pop-up menu.
# of student earned meals	Enter the number of meals that students earned.
# of adult earned meals	Enter the number of meals that adults earned.
Date	Enter the date indicating when the meals were earned using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.

4. Click **Submit**. The meals are recorded, and you return to the PowerLunch start page.

Maintenance Activities

The activities described in this section are those that you may perform on a regular basis but perhaps not every day.

Take Deposits

Take deposits of money to be credited to an account after the initial deposit has been made. For more information about how credit the initial deposit, see *How to Set Up Beginning Student Balances* and *How to Set Up Beginning Staff Balances*.

When a patron pays for a single meal with cash, use the non-Quicksale transaction. For more information about this type of transaction, see *How to Perform a Non-Quicksale*.

How to Take Deposits

1. On the start page, choose **PowerLunch** under Applications in the main menu. The PowerLunch page appears.
2. Click **Take Deposits**. The Record Sale page appears.
3. Use the following table to enter information in the fields:

Field	Description
Lunch ID	Enter the patron's lunch ID number. This can be a student or a staff member.
Quicksale	Deselect the checkbox.

4. Click **Submit**. The PowerLunch Deposit page appears.
5. Use the following table to enter information in the fields:

Field	Description
Lunch ID	The patron's lunch ID appears.
Current Acct Balance	The patron's account balance appears.
Amount Received	Enter the amount of the deposit.
Tender Type	Choose whether the patron paid by cash or check.
Status	The patron's lunch status:

	• **F**=Free • **R**=Reduced • **P**=Full Pay • **E**=Exempt • **FDC**=Free Direct Certification

6. Click **Submit**. The deposit is recorded.

   PowerLunch is ready for the next patron's ID number.

Issue Student Refunds

There are times when you have to issue a refund; maybe a student is leaving school with a meal account credit, or perhaps someone made an error on the student's account. Whatever the reason, record the transaction when you determine that a refund should be issued.

Note: Be sure to use the Lunch Transactions page and not the Fee Transactions page.

How to Issue Student Refunds

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Choose **Lunch Transactions** under Administration in the student pages menu. The Lunch Transactions page appears.
3. Click **New**. The Transaction Record page appears.
4. Use the following table to enter information in the fields:

Field	Description
Transaction Date	Enter the date of the transaction.
Description	Enter a description for the transaction, such as **Refund for overcharge**.
Amount of Fee	It is not necessary to enter an amount in this field, since a refund is being made.

Amount of Credit	Enter the amount of the refund.
Tender Type	If appropriate, choose whether the refund was paid by cash or check.

5. Click **Submit**. The Changes Recorded page appears.

Issue Staff Refunds

There are times when you have to issue a refund, such as when an error is made on the staff member's account. Whatever the reason, record the transaction when you determine that a refund should be issued.

How to Issue Staff Refunds

1. On the start page, search for and select a staff member. For more information, see *Staff Search*.
2. Click **Transactions** under Functions in the staff pages menu. The Transactions page appears.
3. Click **New**. The Transaction Record page appears.
4. Use the following table to enter information in the fields:

Field	Description
Date of Transaction	Enter the date of the transaction.
Description	Enter a description for the transaction, such as **Refund for overcharge**.
Debit	It is not necessary to enter an amount in this field, since a refund is being made.
Credit	Enter the amount of the refund.

5. Click **Submit**. The Changes Recorded page appears.

Create a Deficit Account Letter

When a student's account balance is negative, you must notify the parents or guardians. This project involves several tasks. You must first create a form letter template, select the students whose accounts are deficit, and then run the report to generate the letters.

For instructions on exporting the template and importing it to your PowerSchool system, see *Report Templates*. In addition, the search string for selecting students with a deficit balance is **balance1<0**.

Manager Screen

Use the PowerLunch Manager Screen to perform PowerLunch activities that are outside of or more complex than the daily activities. All options on the Manager Screen concern changing data entered on days in the past.

Change Previous Meals

Change a patron's meal classification and edit previous transactions that might be affected by a change in classification. This is useful when a student is retroactively approved for free or reduced lunches.

How to Change Previous Meals

1. On the start page, choose **PowerLunch** under Applications in the main menu. The PowerLunch page appears.
2. Click **Manager Screen** under Management. The Manager Screen appears.
3. Click **Change Previous Meals**. The Change Previous Meals page appears.
4. Use the following table to enter information in the fields:

Field	Description
Which students?	Select the option to indicate which students' classifications will change. For information about searching for and selecting students, see *Student Search*.
On/between these dates	Enter the first and last days of the date range to be changed using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.

Change meals to this type	Choose the meal charge category from the pop-up menu: • **Free** • **Reduced** • **Full pay**

Note: The change you are about to make affects all meal transactions for the student, the account balance, and meal counts. Be sure you want to change the classification.

5. Click **Submit** if you are sure you want to change the classification. The Changes Recorded page appears.

Edit Transactions

Change individual transactions for a specific day.

How to Edit Transactions

1. On the start page, choose **PowerLunch** under Applications in the main menu. The PowerLunch page appears.
2. Click **Manager Screen** under Management. The Manager Screen appears.
3. Click **Edit Transactions**. The Edit Transactions page appears.
4. Use the following table to enter information in the fields:

Field	Description
Date Range	Enter the first and last days to be scanned using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
At this school	Choose the school from the pop-up menu.

5. Click **Submit**. The Select a Transaction to Edit page appears.
6. Click the transaction you want to edit. The Edit Transaction page appears.
7. Make any necessary changes to the transaction.
8. Click **Submit**. The Changes Recorded page appears.

How to Enter Meal Transactions for a Different Date

Use this option if you must manually record the day's sales.

1. On the start page, choose **PowerLunch** under Applications in the main menu. The PowerLunch page appears.
2. Click **Manager Screen** under Management. The Manager Screen appears.
3. Click **Transaction for a Different Date**. The Transaction for a Different Date page appears.
4. Use the following table to enter information in the fields:

Field	Description
Date on which to enter transactions	Enter the date that will be used to record the transactions using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
Which meal	Choose the meal from the pop-up menu.
School	The selected school appears.

5. Click **Proceed to Serving Screen**. The Record Sale page appears, and you can now enter the transactions as if they were occurring live.

   Note: When you finish entering the transactions for the different date, sign out of PowerLunch to reset the date.

Reports

PowerLunch's reporting functions are varied and useful. Run the reports regularly to manage your own records and to provide statistics to the state, if necessary. For the most part, they are simple to produce and user-friendly. However, you are encouraged to see the sections *Custom Reports* and *Preconfigured Reports* before trying to create reports.

Note: Click your Web browser's Back button anytime you get a report that does not provide you with the proper information. Whether you need another column or just selected the wrong reporting date, simply go back and reset your specifications.

Run the Cash Report

This report tells you how much cash each cashier accepted on a selected day.

How to Run the Cash Report

1. On the start page, choose **PowerLunch** under Applications in the main menu. The PowerLunch page appears.
2. Click **Cash Report** under Reports. The Cash Report page appears.
3. Enter the date for which you want to produce the report using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
4. Click **Submit**. The resulting report displays which cashiers received deposits in cash and checks on the date you specified.

Run the Meal Count Listing Report

This report is similar to the Meal Count report but includes more details. You have the option of clicking links in the reported statistics to learn more about them.

How to Run the Meal Count Listing Report

1. On the start page, choose **PowerLunch** under Applications in the main menu. The PowerLunch page appears.
2. Click **Meal Count Listing** under Reports. The Meal Count Listing page appears.
3. Use the following table to enter information in the fields:

Field	Description

Date Range	Enter the date range to be scanned using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
Meal	Choose the meal from the pop-up menu.
Use school calendar	Select the checkbox to use the school calendar when scanning. This function excludes any school holidays from the count.

4. Click **Submit**. The resulting report displays the number of eligible patrons in each category (the number in brackets) and how many meals were purchased by each category (the number to the left of the number in brackets).

   Click any of the linked numbers to view the details of the transactions that make up that number. For students, there are seven categories: free, reduced, paid, guest, exempt, earned, and additional. The seven categories are added in the total column. For adults, there are four categories: faculty, guest, earned, and additional. The four categories are added in the total column. Both totals are added in the last total column on the right. Totals for multiple days appear at the bottom of each column.

Run the Meal Count Report

This report provides a quick list of total meals served on the selected days. It displays the breakdown by meal and lunch status. The following rules apply to students on this report:

- The guest or earned meal must have been served at the current school in order to be included in the guest or earned meal count for the current school.
- A meal served at the current school for a student enrolled in another school in the district is included in the Meal counts for the current school but excluded from the Eligibility counts.
- The student must be enrolled at the current school (or within the district if running at the district level) on the eligibility count date. The eligibility section of the report only applies to the end date of the date range; students need to be enrolled on that date to be counted correctly on the report.

Note: Once the PowerSchool end-of-year process is complete, no historical meal counts, or eligibility counts can be reported for the preceding year.

You can run this report at the district level. If doing so, you must first switch schools to the district office. See *How to Change Schools*. Also, the students must be enrolled somewhere within the district during the specified date range.

If you run this report at the school level, the report scans pasts and present student enrollments in the current school for the date range entered.

How to Run the Meal Count Report

1. On the start page, choose **PowerLunch** under Applications in the main menu. The PowerLunch page appears.
2. Click **Meal Count Report** under Reports. The Meal Count Report page appears.
3. Use the following table to enter information in the fields:

Field	Description
Date Range	Enter the date range to be scanned using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry. If you do not enter a date, the current date is used as the date range. You can enter the same date in both fields to report on a single day.
Restrict report to these grade levels	Enter the lowest and highest in the range of grade levels to be scanned. If you want a report on one grade only, enter the same grade number in both fields. To scan all grades, leave both fields blank.

4. Click **Submit**. The report displays the number of meals served on the specified days.

Take PowerLunch Class Counts

This report helps you plan how many meals to prepare by importing counts from PowerTeacher.

Note: The count will only display meals for those teachers who submitted their lunch counts through PowerTeacher.

How to Take PowerLunch Class Counts

1. On the start page, choose **PowerLunch** under Applications in the main menu. The PowerLunch page appears.
2. Click **PowerLunch Class Counts** under Reports. The PowerLunch Class Counts page appears. The report displays today's date at the top of the page, as well as the number of hot meals and milk units students intend to purchase.

Run the Transaction Detail Report

This report provides detailed information about transactions in a selected date range. After you select the information to be scanned, PowerLunch produces a report in your spreadsheet application. You can select to retrieve almost any information from PowerLunch on any day.

How to Run the Transaction Detail Report

1. On the start page, choose **PowerLunch** under Applications in the main menu. The PowerLunch page appears.
2. Click **Transaction Detail Report** under Reports. The Transaction Detail Report page appears.
3. Use the following table to enter information in the fields:

Field	Description
Columns to show	Select any combination of the checkboxes to indicate what to display.
Start Date	Enter the start date of the report using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
End Date	Enter the end date of the report using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
Transaction Types	Select the checkbox next to the transaction type to display: • **All** (both staff and student lunches)

	• **Student Lunch** • **Staff Lunch**
Batch number	Enter a batch number to scan a specific batch. Separate multiple batches with commas. A batch refers to a cashier's session for the day. For example, if you have two cashiers for breakfast, the sessions are batch numbers 1 and 2. Perhaps you have four cashiers for lunch on the same day. They would be batch numbers 3-6. You can prepare a report on the activities of certain staff members.
Order	Choose from the pop-up menu the sort order of the listings on the report.
Export	Select the checkbox to export the report to a file that you can open with your spreadsheet application. If you do not select the checkbox, the report appears in your Web browser and you will not be able to format it.

4. Click **Submit**. If you did not select the Export option, the report appears, including the columns you selected and cash totals. Print or save the report. If you save the report without exporting it, you could lose some of the report's format. For more information, see *Run, Print, and Save Reports*.

   If you chose the Export option, continue to the next step to save the file.

5. Choose **File** > **Save As...**.
6. In the Save dialog, specify a name, location, and file type.
7. Click **Save**. Open the file using a spreadsheet or other application.

PowerScheduler Load Process User Guide

PowerSchool

Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

The data and names used to illustrate the reports and screen images may include names of individuals, companies, brands, and products. All of the data and names are fictitious; any similarities to actual names are entirely coincidental.

Table of Contents

When to Load Only Student Schedules

Complete the PowerScheduler Load Process if you already have a master schedule and only need to load student schedules. It is relevant for schools that meet any of the following criteria:

- Built a master schedule manually
- Copied a previous year's master schedule
- Plan to copy a previous year's master schedule

The process of loading only student schedules includes preparing to load, loading, and committing schedules. This process assumes that you have entered student course requests but not done any other preparation for preparing to build a master schedule.

Because every situation is different, there is some flexibility as to which steps an individual school will need to perform. It is important to understand each step and know how to make adjustments when necessary. Do not perform a step if you are not sure that you should.

The load process includes the following steps:

Auto Scheduler Setup: Must be performed as the first step in the process. Use the Auto Scheduler Setup function to create a scheduling scenario. The scheduling scenario is the basic framework for your schedule before sections and students are added. The scenario includes the terms, periods, days, and courses for the schedule. It is strongly recommended to run the function at every school in the District, regardless of whether each school uses PowerScheduler.

Set Schedule Year: Must be performed as the second step in the process. Use the Set Schedule Year function to associate your scenario with the Years & Terms created using the Auto Scheduler Setup.

Copy Master Schedule: Must be performed as the third step in the process. Use the Copy Master Schedule function to copy the schedule from a previous school year. This function copies sections into the schedule, including all associated settings, such as expression, room, teacher, and term.

Parameters: The following required parameters are set up when using Auto Scheduler Setup: Catalogs, Days, Periods, and Years & Terms.

Load Constraints: Define load constraints, if appropriate.

New Courses: After creating courses, associate them to the course catalog on the live-side, then associate the courses to catalog in PowerScheduler.

Rooms: Create the appropriate rooms for the schedule. Rooms are associated with sections when copying the master schedule. However, you may still need to create them for the current scenario. The master schedule and rooms are directly related; if rooms are not valid, sections will not display in the master schedule.

Teacher Scheduling Preferences: Populate the required teacher scheduling fields, which are Schedule This Teacher and Maximum Consecutive Periods.

Student Scheduling Preferences: Populate the required student scheduling fields, which are Next School, Next Year Grade, and Schedule This Student.

Course Requests: It is necessary to setup new courses and student scheduling preferences before entering student course requests. Student course requests must be entered before loading.

Review Master Schedule: Review the Master Schedule and make any final manual modifications.

Load Validation: Once the schedule is complete and students have entered requests, validate the load. When validating, the PowerScheduler engine performs the load function without actually creating any student schedules. Review any errors or warnings in the Load Results Log.

Load: When a load validation does not return any errors, run a load.

Import Results: To view student schedules in PowerScheduler, it is necessary to import the results. If you are satisfied with the details in the Load Results Log, then import the results to transfer the data into PowerScheduler.

Reports: PowerScheduler includes a group of reports designed for analyzing data after loading.

Re-Load: If you need to make changes that affect student schedules, such as courses, sections, or load constraints, it is possible to run the load again. Re-loading changes all student schedules that were previously imported. To preserve changes, perform the reschedule process.

Manually Schedule: Though PowerScheduler strives to create ideal schedules, it may be necessary to make manual modifications. Re-loading after making manual modifications changes all student schedules. To preserve changes, perform the reschedule process.

Reschedule: To load schedules for a specific group of students, select the group of students and choose the **Reschedule the selected [x] students** option.

Commit the Schedule: Before committing the schedule, verify that there is a current backup of your PowerSchool data. Also, verify that the End-of-Year (EOY) process has not been performed. Then, commit the schedule for the next school year. It is possible to replace student schedules, sections, or both.

Load Process: Schedule Setup

When loading student schedules, you must first define the school year, terms, and days that school is in session. Then, create a build scenario into which you can copy an existing master schedule. Finally, verify that these setup procedures are performed correctly.

Note: It is strongly recommended that you use the Automatic Scheduler Setup function to create the scenario instead of manually defining years and terms.

If you did not build your own master schedule, you can copy an existing master schedule to use as the foundation for your new master schedule. For more information, see *Copy the Master Schedule*. To delete a master schedule, see *How to Delete the Master Schedule*.

How to Define a Schedule Year and Terms

For scheduling purposes, you need to define the upcoming school year and its associated terms. If you are working with a copy of a previous year's master schedule, the terms will remain the same as they were in that schedule.

Note: It is strongly recommended that you use the Automatic Scheduler Setup function to create the scenario instead of manually defining years and terms.

It is important to enter the terms sequentially. For example, first create the school year, then semesters, and finally quarters.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Years & Terms** from the PowerScheduler menu. The Schedule Years & Terms page appears.
3. Click **New**. The Create New Schedule School Year page appears.
4. Use the following table to enter information in the fields:

Field	Description
Name of School Year	Enter the name of the school year, such as 2008-2009.
Abbreviation	Enter an abbreviation for the school year, such as 08-09.
First Day of School	Enter the first day of school for this academic year in MM/DD/YYYY format, such as 09/02/2009.

Last Day of School	Enter the last day of school for this academic year in MM/DD/YYYY format, such as 6/5/2010.

5. Click **Submit**. The Schedule Years & Terms page displays the schedule year.
6. Click **Edit Terms** in the row of the appropriate schedule year.
7. On the Term Setup page, click **New**. The Edit Schedule Term page appears.

   Note: Enter the terms sequentially. That is, if your school has terms of two semesters and four quarters, enter them in this order: Year, Semester 1, Semester 2, and then Quarter 1, Quarter 2, Quarter 3, and Quarter 4.

8. Use the following table to enter information in the fields:

Field	**Description**
Name of Term	Enter the name of this term, such as Semester 1.
Abbreviation	Enter an abbreviation for this term, starting with a letter, such as S1.
First Day of Term	Enter the first day of this term in MM/DD/YYYY format.
Last Day of Term	Enter the last day of this term in MM/DD/YYYY format.
What portion of the school year does this term represent?	Use the pop-up menu to choose the fraction that this term represents within the school year. If your school year consists of four terms, choose **1/2**. If this term represents the whole school year, choose **Full year**.
Import File Term #	Enter an import file term number so that the system can align terms when it imports the master schedule. For example, if your school uses semester and quarter classes, you might state in the import file that all sections of S1 are identified by the number S10203. Enter the same number in this field to map the date.

9. Click **Submit**. The Term Setup page appears.

How to Define Days

Define the number of days in the schedule. A day (or "cycle") is the number of repeating days that make up a schedule.

Note: A schedule day or cycle is NOT the same as a calendar day.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Days** from the PowerScheduler menu. The Edit Days page appears.
3. Use the following table to enter information in the fields:

Field	Description
Name	Enter the name of the day.
Abbreviation	Enter an abbreviation for the day name.

4. Click **Submit**. The Changes Recorded page appears.

How to Create a Build Scenario

You need to create a build scenario. First, define the basic build information, such as the number of terms, days, and periods in your master schedule. Then, define load optimization parameters to determine the minimum and maximum number of possibilities the system evaluates while loading student schedules with courses.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Scenarios** from the PowerScheduler menu. The Scenarios page appears.
3. Click **New**. The Edit Build Scenario page appears.
4. Use the following table to enter information in the Build Information fields:

Field	Description

[Scenario type]	Select the **Load Only** option if you already have a schedule, such as through the process of either importing or copying, and only want to load students. **Note:** If creating a **Build and Load** scenario, see *Build Scenarios*.
Build Name	Enter a name for this build scenario. If you are creating several scenarios, use descriptive names so that you can easily distinguish among them.
Active Build	If you are creating only one build scenario, select the checkbox. If you are creating more than one build scenario, select the checkbox for the one you want the system to use to build your master schedule. **Note:** You will only be able to edit the course catalog that is associated with the build marked as active.
Build Description	Enter a description of this scenario.
Terms	1. Click **Associate** to select the number of schedule terms you want this scenario to include. The Schedule Term Setup page appears. 2. Select the checkboxes in the rows that represent the number of schedule terms you want this scenario to include. For example, if you plan to build a two-semester master schedule, select the checkbox next to the row that includes Semester 1 and Semester 2. 3. Click **Submit**.
Periods	From the pop-up menu, choose the number of periods per day for this build scenario. For example, if you are building a block schedule, you might choose 4. If you are building a regular schedule, you might choose 7.
Days	Choose from the pop-up menu the number of days for this build scenario.

Course Catalog	Use the pop-up menu to choose the course catalog you want the system to use to build this schedule. If this is your first time creating a master schedule, do not select a catalog. The system will automatically generate a course catalog, which you can modify. For more information, see *Course Catalogs*.

5. Use the following table to enter information in the Build Optimizations and Load Optimizations fields:

Field	**Description**
Percent of schedule combinations to evaluate for each course	Change this value only if you encounter problems with the amount of time the system is using to build the master schedule. The default value of this field is 10. For example, if you enter **25**, the system evaluates one-quarter of the possible schedule combinations for each course. If you enter **75**, the system evaluates three-quarters of the possible schedule combinations for each course.
Minimum number of schedule combinations to evaluate for each course	Change this value only if you encounter problems with the amount of time the system is using to build the master schedule. The default value of this field is 10,000. For courses with few possible combinations to begin with, use a higher number to prevent the system from attempting too few schedule combinations and not being able to fit the course into the schedule.
Percent of schedule combinations to evaluate for each student	Change this value only if you encounter problems with the amount of time the system is using to load the master schedule. The default value of this field is 10. For example, if you enter **25**, the system evaluates one-quarter of the possible schedule combinations for each student. If you enter **75**, the system evaluates three-quarters of the possible schedule combinations for each student.

Minimum number of schedule combinations to evaluate before skipping	Change this value only if you encounter problems with the amount of time the system is using to load the master schedule. The default value of this field is 10,000. Enter a high number to force the system to sample a minimum number of student schedule course possibilities.

Note: You can also set build optimizations for a particular course by adding a Course Optimize constraint. This type of constraint takes precedence over the build optimizations you set here. For more information, see *Build Constraints*.

6. Use the following table to enter information in the Best Schedule Weights fields:

Field	Description
Student conflicts	To have the system give more weight to student conflicts than section balance when confronted with a conflict while building the master schedule, enter a larger number in this field than in the Section balance field. The default value of this field is 50. **Note:** The numbers in both of these fields must add up to 100.
Section balance	To have the system give more weight to section balance than student conflicts when confronted with a conflict while building the master schedule, enter a larger number in this field than in the Student conflicts field. The default value of this field is 50. **Note:** The numbers in both of these fields must add up to 100.
Total	The total of the weighting values appears. This number must be 100.

7. Click **Submit**. The Scenarios page appears.

How to Verify Periods

After copying the master schedule, verify the periods for your schedule and verify the scenario.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Periods** from the PowerScheduler menu. The Periods page appears.
3. Verify that the period information is correct.

   Note: If you edit the information, click **Submit**.

How to Verify the Scenario

After you verify the accuracy of your master schedule, make sure that the details of the scenario you created are accurate.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Scenarios** from the PowerScheduler menu. The Scenarios page appears.
3. Click the name of the build scenario you want to use to build your master schedule. The Edit Build Scenario page appears.
4. Verify that the data in the following fields are correct: Build Name, Terms, Periods, Days, and Course Catalog. Make modifications, if necessary.
5. Click **Associate** next to the Terms field. The Schedule Term Setup page appears.
6. Select the checkboxes in the rows that represent the number of schedule terms you want this scenario to include. For example, if you plan to build a two-semester master schedule, select the checkbox in the row of Semester 1 and Semester 2.
7. Click **Submit**.
8. On the Edit Build Scenario page, enter comments in the Build Description field to describe this scenario.
9. Click **Submit** to save any changes. The Scenarios page appears.

How to Move a Course Section

You probably need to make minor changes to the master schedule you built or copied. For example, you might know from past experience that a particular course section should convene during a different period, or maybe a new teacher will replace one who is retiring.

Delete any courses that are not part of next year's master schedule or that you schedule manually, such as before- or after-school sections. Also, keep in mind that the loading process often runs smoother if you do not include teacher aid, work release, study hall, independent study, or preparation courses in your master schedule.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Schedule, choose **Sections** from the PowerScheduler menu. The sections menu appears.
3. Click the course for the section you want to move. The course information page appears.
4. Click the section number. The Edit Section page appears.
5. Use the following table to enter information in the specified fields:

Field	Description
Term	Choose from the pop-up menu the term in which this section meets.
Schedule	Select the checkboxes for the periods for the appropriate days on which this section is taught. This creates the schedule expression that appears next to the section on several pages. The expression must tell the scheduling engine exactly how to schedule the section. For example, your school has a two-day schedule that includes periods 1, 1A, and 1B. A course held during Period 1 meets both A day and B day. A course held during Period 1A meets first period on A day, and a course held during Period 1B meets first period on B day. In this scenario, you would select the A and B checkboxes in the Period 1 row.
Teacher	Choose a teacher from the pop-up menu.
Room	Enter the room name or number in which this section is taught.

6. Click **Submit**. The course information page appears.

Load Process: Course Information

Automatically generate information into fields on the Course Information page based on the current master schedule. Then, verify the information and set scheduling preferences for each course.

How to Auto Generate Course Information

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Functions** from the PowerScheduler menu. The Scheduling Functions page appears.
3. Click **Auto Generate Course Information**. The Auto Generate Course Info page appears.
4. Select the checkbox to verify that you want to generate course information for the fields.
5. Click **Submit**. The Changes Recorded page appears.

How to Verify and Complete Course Information

If you use the auto-generate course information function, the system enters the following information for each course:

- Number of sections offered
- Valid terms
- Terms per year
- Periods per meeting
- Periods per cycle
- Frequency
- Is This Course a Lab
- Lab Periods per meeting
- Lab Frequency
- Maximum enrollment
- Schedule this course
- Build type
- Load priority
- Load type
- Balance priority

Verify and adjust these values. Then, enter course scheduling preferences for each course on the Course Information page.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Courses** from the PowerScheduler menu. The Courses page appears.
3. Click the name of the course you want to work with from the courses menu.
4. Do one of the following:
    - Choose **Preferences** from the pop-up menu.
    - Click the **Preferences** tab.

The Course Information page appears.

5. Select either the **Allow Student Repeats in the Same Term** or **Allow Student Repeats in Different Terms** checkbox.
6. Use the following table to adjust any values in the Load Options section of the page:

Field	Description
Load Priority	Enter a numerical value of 1 to 99 (1 being the highest priority) to prioritize in which course the system should schedule a student when a conflict between two of the student's requests arises. You can enter the same load priority number for several courses. For example, enter a load priority of **10** for all academic courses to ensure that students are loaded into these courses first, **20** for academic electives, and **30** for non-academic electives. **Note:** If this course has a Section Link constraint associated with it, you may want to give it the highest load priority to prevent the section link from being broken.
Load Type	Choose from the pop-up menu whether this is an academic, elective, or alternate course. The system uses this classification to balance the types of courses in which the student is scheduled during a schedule term. For example, if your school's scheduling terms are semesters, the system does not schedule the student in all elective courses the first semester and all academic courses the second semester.
Balance Priority	Use this pop-up menu to set a secondary priority for the course when loading student schedules. The primary priority is determined by the Load Priority field. The following settings create an additional priority. For example, if you choose Grade from the pop-up menu, the system not only attempts to keep an equal number of students in each section, but also an equal number from all grade levels. The default setting for loading students into the master schedule is Section. Use the pop-up menu to choose one of the following options to ensure a balance of students in each section (optional):

	• **Section:** When loading students into sections, the system always attempts to keep an even number of students among sections. • **Gender:** Balanced number of students by gender within each section. • **Grade:** Balanced number of students from each grade level within each section. • **EthnicCode:** Balanced number of students with different ethnic codes within each section. • **House:** Balanced number of members from each house within each section. **Note:** In order to balance by genders other than male and female, you will need to use the server-side engine loader (rather than the client-side scheduling engine), which optimizes processing for faster and better results.
Use Pre-Established Teams	Select the checkbox if you want the system to reference teams when scheduling students into this course.
Close Section After Max	Select the checkbox if you want the system to stop scheduling students in a section of this course after the enrollment reaches the number you defined in the Maximum Enrollment field.
Use Section Types	Select the checkbox if you want the system to schedule the course according to section types.

7. Click **Submit**. The Changes Recorded page appears.

Load Process: Prepare Staff and Students

Prepare staff and student records before loading the master schedule.

How to Prepare Staff

You must verify that you selected the Use for Scheduling checkbox for each teacher on the Staff Scheduling Preferences page in the active or "live" side of PowerSchool. You can use the Set Staff Field Value function to select the checkbox for all teachers at the same time.

1. On the start page, choose **Staff** under People in the main menu. The Search Staff page appears.
2. Select the group of staff members.
3. Click **Functions**. The Group Staff Functions page appears.
4. Click **Set Staff Field Value**. The Teacher Field Value page appears.
5. Use the following table to enter information in the fields:

Field	**Description**
Field to Change	Enter the name of the field to be changed. Enter **Sched_Scheduled** to prepare teachers for scheduling. **Note:** To view a list of field codes, click **Fields**.
New Field Value	Enter the new value of the field. Enter **true** to prepare teachers for scheduling. Put quotation marks around any values that do not perform calculations, such as constant characters or a string of characters.
Clear Field Value	Select the checkbox to remove existing values for that field.
Do not overwrite existing data	Select the checkbox if you do not want the system to overwrite any existing field values.

6. Click **Submit**. The Field Value page appears.
7. Click **Submit** to confirm. Now you can perform a search to find the group with the changed value.

How to Prepare Students

Confirm that the appropriate students are available in your database for scheduling. Before the system can load students into the master schedule, you must enter detailed scheduling information for each student.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.

3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. Click the name of the student you want to work with from the students menu.
5. Do one of the following:
   - Choose **Preferences** from the pop-up menu.
   - Click the **Preferences** tab.

   The Edit Scheduling Preferences page appears.

6. Use the following table to enter information below the Required Settings header:

Field	**Description**
Next Year Grade	Enter the student's next year grade level.
Priority	Enter a number to indicate the order in which the system should schedule this student during the load process. You can assign scheduling priorities to students for the system to follow when loading student schedules. Students can share the same priority. For example, if there are more requests than available spots, you might want the system to schedule graduating seniors first because it is their last chance to take the courses they request. If this is the case, assign all twelfth graders a priority of **10**, all eleventh graders a priority of **20**, all tenth graders a priority of **30**, and all ninth graders a priority of **40**. **Note:** The lower the number, the higher the priority.
Schedule This Student	Select the checkbox to include the student in the scheduling process. If you forget to select the checkbox for a student who has made course requests, the system will be unable to schedule that student. Not only do you have to select to include the appropriate students, but also you must exclude graduating students by deselecting the checkbox.

Year of Graduation	Enter the student's year of graduation. **Note:** You do not have to enter a year of graduation for students who are graduating this year.
Next School Indicator	Choose the school the student will attend next year from the pop-up menu. Choose **Graduated School** for students who are graduating this year.

7. Click **Submit**.

Other Scheduling Functions

Use the links on the Scheduling Functions page to run processes related to the master schedule. For scheduling functions not listed in this section, see the following sections:

- *Calculate Target Number of Sections to Offer*
- *Duplicate Scenarios*
- Expression Mapping, used when *Importing the Master Schedule*
- *Update Selections*, including the processes *Unlock Previously Scheduled Courses*, *How to Set the Next Year Grade Field for an Entire Grade Level*, *How to Schedule All of Next Year's Students*, and *How to Assign a Group of Students to a Building, House, or Team*.

How to Auto Generate Course Information

Automatically generate information into the fields on the Course Information page based on the current master schedule.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Functions** from the PowerScheduler menu. The Scheduling Functions page appears.
3. Click **Auto Generate Course Information**. The Auto Generate Course Info page appears.
4. Select the checkbox to set the following fields to their default values:
    - Load Priority: 10
    - Load Type: Academic
    - Balance Priority: Section
    - Schedule this Course: True

5. Click **Submit**. The Changes Recorded page appears.

How to Auto Generate Rooms

Automatically generate rooms from the existing master schedule to use in the new build.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Functions** from the PowerScheduler menu. The Scheduling Functions page appears.
3. Click **Auto Generate Rooms**. The Generate Rooms page appears.
4. Select the checkbox to verify that you want to copy the existing rooms into the current build.
5. Click **Submit**. The Changes Recorded page appears.

How to Auto Generate Teacher Assignments

Automatically generate teacher assignments from the existing master schedule. To verify that these assignments display the correct terms, number of assignments, and other information, run the *Teacher Assignments by Teacher Report*.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Functions** from the PowerScheduler menu. The Scheduling Functions page appears.
3. Click **Auto Generate Teacher Assignments**. The Generate Teacher Assignments page appears.
4. Select the checkbox to generate teacher assignments using the existing master schedule.
5. Click **Submit**. The Changes Recorded page appears.

How to Calculate Percent Schedules

Percentage calculations are triggered whenever a student’s schedule changes through the scheduling engine or PowerScheduler functionality, such as manually changing a student’s schedule. There are situations in which a student’s schedule can be created without using these processes, such as by importing a schedule. You can use the Calculate Percent Schedules function to recalculate all students' percent scheduled numbers, including those students' schedules that were not created through other functions.

Note: This function always recalculates the entire set of students identified for scheduling.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Functions** from the PowerScheduler menu. The Scheduling Functions page appears.
3. Click **Calculate Percent Schedules**. The Alert page appears, indicating that the percent schedules calculation completed.

How to Copy the Master Schedule

Copy the current year's master schedule to another year. After copying the master schedule, do the following:

- *Regenerate bitmaps* from the Functions menu.
- Align the active scenario to the imported master schedule in terms of years and terms, periods, and days. For more information, see *Build Scenarios*.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Functions** from the PowerScheduler menu. The Scheduling Functions page appears.
3. Click **Copy Master Schedule**. The Copy Master Schedule page appears.
4. Choose the year from which you want to copy the master schedule from the School pop-up menu.
5. Select the checkbox to proceed.
6. Click **Submit**. The Changes Recorded page appears.

How to Delete the Master Schedule

Delete the current year's master schedule.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Functions** from the PowerScheduler menu. The Scheduling Functions page appears.
3. Click **Delete Master Schedule**. The Delete Master Schedule page appears.
4. Select the checkbox to proceed.
5. Click **Submit**. The Changes Recorded page appears.

How to Move Previous Year Data

Use this function to delete all constraints, relationships, and teacher/course assignments for the current build and replace them with constraints, relationships, and teacher/course assignments from the selected build.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Functions** from the PowerScheduler menu. The Scheduling Functions page appears.
3. Click **Move Previous Year Data**. The Move Previous Year Data page appears.
4. Choose the build that you want to use to overwrite the current build from the pop-up menus.
5. Select the confirmation checkbox to proceed.
6. Click **Submit**. The Changes Recorded page appears.

How to Regenerate Bitmaps

Reset the bitmap from the expression for all sections and constraints in the current build. Regenerate bitmaps after importing any constraints that use an expression, such as preschedule, room free, teacher free, or course restrict constraints.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Functions** from the PowerScheduler menu. The Scheduling Functions page appears.
3. Click **Regenerate Bitmaps**. The Expression to Bitmap page appears.
4. Select the checkbox to proceed.
5. Click **Submit**. The Scheduling Functions page appears.

How to Reset Section Meetings

When section data has been imported or modified and the section meetings table does not refresh, the courses will not appear in matrix views or on manual enrollment pages. Force a refresh of the section meetings table.

The currently-selected school determines which school is affected. If you perform this function at the District level, all schools' Section_Meeting records will be reset.

Note: For better performance, run this function outside of school hours.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Functions** from the PowerScheduler menu. The Scheduling Functions page appears.

3. Click **Reset Section Meetings**.
4. Select the checkbox to reset all PowerScheduler section meetings values based on the current schedule expressions for the selected school.
5. Click **Submit**. The Scheduling Functions page appears.

How to Reset Class Counts

Use this function to reset the number of students in each section for all courses in the current build.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Functions** from the PowerScheduler menu. The Scheduling Functions page appears.
3. Click **Reset Class Counts**. The system resets the number of students in each section in the current build. The Scheduling Functions page appears.

How to Reset Teacher Assignments

Use this function to reset the number of teacher assignments for all courses in the current course catalog.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Functions** from the PowerScheduler menu. The Scheduling Functions page appears.
3. Click **Reset Teacher Assignments**. The Scheduling Functions page appears.

How to Resolve Invalid Requests

Every year there may be students with invalid requests. Using this function, you can resolve the following types of invalid requests:

- Invalid School - The school ID in the request is different than the school the student is being scheduled for.
- Invalid Course - The course in the request is not a valid future year course requests due to one of the following reasons:
    - The course is not in the active course catalog in PowerScheduler.
    - The **Schedule This Course** checkbox is not selected. For more information, see *How to Define Scheduling Preferences*.
    - The course is not set as **Available** for the year to be scheduled. For more information, see *Edit Course Status* or *Edit Availability for Schools and Year*.

Note: This function does not check for the following types of invalid requests:

- Requests related to students who are not set to be scheduled.
- Students set to be scheduled at another school that have a course request for the school you are running the function from.
- Invalid requests based on unfulfilled prerequisites. For more information, see *Course Requests: Invalid Requests*.
- Support identifying current year invalid requests.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Functions** from the PowerScheduler menu. The Scheduling Functions page appears.
3. Click **Resolve Invalid Requests**. The Resolve Invalid Requests page appears.
4. If needed, click the **Filter** arrow to expand this section.

   Note: Click the **Filter** arrow again to collapse this section.

5. Use the following table refine your search:

Field	Description
Search	Enter search criteria in the **Search** field.
Filter	1. To filter by columns: a. Click **+**. b. From the first pop-up menu, choose one of the following: • **Course Name** • **Course Number** • **Status** • **School** • **Student Name** c. Enter search criteria in the search field. **Note:** Use a comma-separated list for multiple values. d. Click **Apply**. The page refreshes and display filtered results.

	2. To add another filter, click **+** and repeat Step 1. **Note:** The **+** appears shaded if all filters have been added. 3. To delete a filter, click **-** next the filter. 4. Click **Apply**. The page refreshes and display filtered results. **Note:** To remove all filter selections, click **Clear**.

The following information appears:

Note: This function displays the first 1000 invalid requests. If there are more than 1000 invalid requests, resolve the initial list and run the function again.

Note: Click the name of a column to sort by that column in ascending order. Click again to sort in descending order. By default, students are sorted by Name and then Grade Level.

Field	Description
[Checkboxes]	Do one of the following • Select the checkbox in the header row to select all invalid requests. Alternately, if the checkbox is already selected, deselect the checkbox to remove the checkmarks from all invalid requests. • Select the checkbox for each invalid request you want to work with.
Student Name	The last, first name of the student with the invalid request.
Course Name	The course name of the invalid request.
Course Number	The course number of the invalid request.
School	The school where the invalid request has been made.
Status	The status of the invalid request.

6. Do one of the following:

<table>
<tr><th>Action</th><th>Description</th></tr>
<tr><td>To remove invalid requests</td><td>1. Click Delete Requests.
2. Click Confirm Delete Requests. A confirmation message appears.</td></tr>
<tr><td>To resolve invalid requests due to an invalid school</td><td>Click Change School to resolve an invalid request due to the school ID in the request being different than the school the student is being scheduled for. A confirmation message appears indicating the school ID in the request has been changed to the school you are running the function from.</td></tr>
<tr><td>To resolve invalid requests due to an invalid course</td><td>1. Click Change Course. The Select Course drawer appears.
2. Enter search criteria in the Search field.
3. To filter by columns:
a. Click +.
b. From the first pop-up menu, choose one of the following:
• Course Name
• Course Number
• Department
c. Enter search criteria in the search field.

Note: Use a comma-separated list for multiple values.

d. Click Apply. The page refreshes and display filtered results.
4. To add another filter, click + and repeat Step 1.

Note: The + appears shaded if all filters have been added.

5. To delete a filter, click - next the filter.
6. Click Apply. The page refreshes and display filtered results.

Note: To remove all filter selections, click Clear.</td></tr>
</table>

	7. Click **Submit**. The Select Courses drawer closes, and a confirmation message appears.

How to Set the Schedule Year

Because course requests can be made for the current year or for other scheduling years, you must set the schedule year for student requests made in PowerScheduler, in the PowerSchool Student and Parent portal, or on the Requests Modify Future page in PowerSchool.

For example, set the scheduling year to **2015-2016** if you want students to enter course requests for the 2015-2016 year. In this case, the request Screen Setup function in PowerScheduler will apply to the 2015-2016 school year. The student's requests made through the Requests Modify Current page in PowerSchool will apply to the 2014-2015 school year. For more information about student course requests, see *Student Course Requests*.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Functions** from the PowerScheduler menu. The Scheduling Functions page appears.
3. Click **Set Schedule Year**. The Set Schedule Year page appears.
4. Choose the schedule year from the pop-up menu.

   Note: Only the years established on the Years & Terms page appear in the pop-up menu. To select a year that is not listed, you must first set up that scheduling year. For more information, see *Auto Scheduler Setup*.

5. Click **Submit**. The Scheduling page appears.

How to Split Year-Long Classes

Use this function to split year-long classes into smaller terms. By creating year-long classes and then using this function to divide the class into smaller terms, you reduce the number of classes you need to set up.

Note: Perform this function only when you are ready to commit your master schedule.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.

2. Under Tools, choose **Functions** from the PowerScheduler menu. The Scheduling Functions page appears.
3. Click **Split Year-Long Classes**. The Split Year-Long Classes page appears.
4. Select the term segment into which you want to split year-long classes.
5. Select the checkbox to proceed.
6. Click **Submit**. The Changes Recorded page appears.

Load Process: Load Constraints

Load constraints restrict the way the system loads students into courses. Define load constraints before performing a load. To compare results of a load with and without load constraints, first perform a load and then define load constraints.

PowerSchool contains six types of load constraints you can define. Use each one to constrain student schedules in a specific way. For example, use a Student Preference constraint to force a student to be scheduled in a particular teacher's section.

Note: Since constraints restrict student schedules, the more constraints you define, the less flexibility the system has to load students into courses and the less optimal the resulting schedule will be. It is always best to use the fewest number of constraints required to accomplish your scheduling goals.

To view a list of load constraints and the number of each that have been defined for your schedule, choose Load Constraints from the constraints menu.

For more information about load constraints, see *Define Load Constraints*.

Define Load Constraints

Set up constraints to force PowerScheduler to load student schedules in a particular way. You must build your master schedule before you can define load constraints.

Note: To view a list of load constraints and the number of each that have been defined for your schedule, choose Load Constraints from the constraints menu.

To edit or delete constraints, see *Work with Load Constraints*.

How to Add a Balance Adjustment Constraint

Use a Balance Adjustment constraint to pre-load a course section with a certain number of reserved seats before adding the rest of the students. For example, use this constraint if you have a math class that needs five seats open for SPED students.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.

2. Under Scheduling Setup, choose **Constraints** from the PowerScheduler menu. The Constraints menu appears.
3. Under Load Constraints, choose **Balance Adjustment**. The Balance Adjustment Constraints page appears.
4. Click **New**. The Edit Balance Adjustment Constraint page appears.
5. Use the following table to enter information in the fields:

Field	**Description**
Course Number	Click **Associate** to select the name of the course you want to balance.
Section Number	Enter the section number of the selected course that you want to balance.
Teacher	Click **Associate** to select the name of the teacher who instructs this course section.
Number of Reserved Seats	Enter the number of seats to be held.

Note: You must either enter a section number or select a teacher.

6. Click **Submit**. The Balance Adjustment Constraints page appears.

How to Add a Student/Student Avoid Constraint

Use a Student/Student Avoid constraint to specify that two selected students cannot be scheduled into any of the same course sections.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Constraints** from the PowerScheduler menu. The Constraints menu appears.
3. Under Load Constraints, choose **Student Avoid**. The Student/Student Avoid Constraints page appears.
4. Click **New**. The Edit Student/Student Avoid Constraint page appears.
5. Use the following table to enter information in the fields:

Field	Description
Student 1	Click **Associate** to select the name of one of the students you want to separate from one another.
Student 2	Click **Associate** to select the name of the other student.

6. Click **Submit**. The Student/Student Avoid Constraints page appears.

How to Add a Student/Teacher Avoid Constraint

Use a Student/Teacher Avoid constraint to specify that this student and this teacher cannot be scheduled into any of the same course sections.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Constraints** from the PowerScheduler menu. The Constraints menu appears.
3. Under Load Constraints, choose **Teacher Avoid**. The Student/Teacher Avoid Constraints page appears.
4. Click **New**. The Edit Student/Teacher Avoid Constraint page appears.
5. Use the following table to enter information in the fields:

Field	Description
Student	Click **Associate** to select the name of the student you want to avoid scheduling with a selected teacher.
Teacher	Click **Associate** to select the name of the teacher you want to avoid scheduling with the selected student.

6. Click **Submit**. The Student/Teacher Avoid Constraints page appears.

How to Add a Student Free Constraint

Use a Student Free constraint to specify those periods when a student must be free, such as when taking a course at another school.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Constraints** from the PowerScheduler menu. The Constraints menu appears.
3. Under Load Constraints, choose **Student Free**. The Student Free Constraints page appears.
4. Click **New**. The Edit Student Free Constraint page appears.
5. Use the following table to enter information in the fields:

Field	**Description**
Student	Click **Associate** to select the name of the student who needs to have a free periods.
Term	Choose from the pop-up menu the term in which this student needs free periods.
Schedule	Select the checkbox next to each period in each day that you want to schedule this student to have a free periods.

6. Click **Submit**. The Student Free Constraints page appears.

How to Add a Section Link Constraint

Use a Section Link constraint to specify that if students are enrolled in one course section, they must also be enrolled in another, specific course section.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Constraints** from the PowerScheduler menu. The Constraints menu appears.
3. Under Load Constraints, choose **Section Link**. The Section Link Constraints page appears.
4. Click **New**. The Edit Section Link Constraint page appears.
5. Use the following table to enter information in the fields:

Field	**Description**

Course Number 1	Click **Associate** to select the name of one of the courses for which you want to link a section.
Section Number 1	Enter the section number of the course in the Course Number 1 field that you want to link to another course section.
Course Number 2	Click **Associate** to select the name of the other course for which you want to link a section.
Section Number 2	Enter the section number of the course in the Course Number 2 field that you want to link to the section in the Section Number 1 field.

6. Click **Submit**. The Section Link Constraints page appears.

How to Add a Student Preference Constraint

Use a Student Preference constraint to schedule a student into a particular course section, term, or teacher.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Constraints** from the PowerScheduler menu. The Constraints menu appears.
3. Under Load Constraints, choose **Student Preference**. The Student Preference Constraints page appears.
4. Click **New**. The Edit Student Preference Constraint page appears.
5. Use the following table to enter information in the fields:

Field	Description
Student	Click **Associate** to select the name of the student you want to force to schedule in a specific course section.
Course Number	Click **Associate** to select the name of the course.

Term	Choose the term to which you want this constraint to apply from the pop-up menu (optional).
Section Number	Enter the section number of the course into which you want the student to be scheduled (optional).
Teacher	Click **Associate** to select the name of the teacher who instructs this course section (optional).

Note: Though the last three fields are optional, you must make a selection for at least one of the fields.

6. Click **Submit**. The Student Preference Constraints page appears.

Load Process: Load Students

Once you have a satisfactory master schedule, you can begin fine-tuning student schedules by running a load.

Do not load students into your master schedule until you are satisfied with it. Loading will not have any impact on the structure of the schedule, just on the placement of students within it. Also, do not make manual adjustments to student schedules and then reload students; the system will overwrite all of the changes you made.

Note: It is recommended that you run the first load before you define any load constraints.

How to Run a Load

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Processing, choose **Load** from the PowerScheduler menu. The Load Student Schedules Queue page appears.
3. Use the following table to enter information in the fields:

Field	**Description**
Load type	Select a type of load:

	• **Load all students**: The system reschedules all students. Previously created student schedules or manually adjusted student schedules are deleted. • **Balance**: The system adjusts student schedules to help improve the balance of students among sections. There is no guarantee that students' schedules will not change. • **Reschedule the selected [x] students**: The system reschedules only students whose schedules have not been locked. You can select this option multiple times.
Close sections at maximum	Select the checkbox to ensure that courses close at their maximum enrollment numbers. **Note:** Do not select the checkbox the first time you do a load. The build itself runs without considering section maximums, so this will let you determine if you can get a little better load percentage. Also, not closing sections at their maximums will help you focus on students with conflicts.
Use global course substitutes	Select the checkbox to ensure that the system automatically inserts any global course substitutes after student course substitutes have been tried and rejected.
Use student course substitutes	Select the checkbox to ensure that the system automatically inserts student course substitutes in the order chosen, if needed.

4. Click **Execute**. The engine starts to run. For more information, see *Understand the PowerSchool Scheduler Page*.

   To view details about the load, click **(Q)** next to Load in the PowerScheduler menu, then click **View** in the Load Log column on the Load Student Schedules Queue page. To view errors and messages produced by the load, click **View** in the Results Log column. For more information about the Results Log, see *Load Results Log*. After successfully loading schedules, import the results of the load. For more information about importing, see *Import Student Schedules*.

Import Student Schedules

After you load students into schedules, you must import the results to display student schedules in PowerSchool.

If you import schedules that have changed for a student or a group of students after the first import, only the schedules of the selected students will be overwritten. Students schedules that did not change since the last import are not affected.

How to Import Student Schedules

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Processing, choose **(Q)** next to Load from the PowerScheduler menu. The Load Student Schedules Queue page appears.
3. Click **Import** in the appropriate row in the Results column. The Load Student Schedules Queue page appears.

Analyze the Results

When the load finishes, percentages for students with requests, students without conflicts, and total requests satisfied appear on the main Scheduling page.

To display the Scheduling page, choose **PowerScheduler** under Applications in the main menu on the PowerSchool start page. The page displays the following information:

Field	Description
Build Scenario	The name of the build scenario. **Note:** Click the name of the scenario to view or edit its information.
Last Build	The most recent date you built the master schedule for a build scenario.
Last Load	The most recent date you loaded student schedules for a build scenario.
Students With Requests	The number of students for whom course requests were entered.

Requests Satisfied	The number of all primary student course requests satisfied.
Students Without Conflicts	The percentage of students without any conflicts in their schedules.
Status	Indicates if the build scenario is active or inactive.
%Scheduled	The percentage of requests successfully filled.
%Core Scheduled	The percentage of requests for core classes successfully filled.
%Requests Satisfied	The percentage of total requests including alternate requests that were filled.

Load Results Log

Similar to the build results log, the load results log displays the names of students it cannot schedule. It also provides possible reasons the engine did not run properly and alerts you to any potential issues the engine finds.

How to View the Load Results Log

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Processing, choose **(Q)** next to Load from the PowerScheduler menu. The Load Student Schedules Queue page appears.

   Note: Use this page to import the student schedules after being loaded. For more information, see *Import Student Schedules*.

3. Click **View** in the Results Log column of the appropriate row. The "Results Log for [school name]" page appears.

   If the build stops because of validation errors, the results log displays details about these errors. There are three types of errors:

- Info: These messages are informational, such as "Course [x]: Rescheduled [x] students out of [x] (leaving [x] unscheduled)." These do not prevent a successful load.
- Warning: These are "red flag" messages, such as "The teacher's preferred room is not suitable for the course the teacher is teaching." These do not prevent a successful load.
- Error: These messages are validation errors that must be corrected in order for the engine to run, such as "Invalid valid term found in the Course file (does not match the term length)." These do prevent a successful load.

For more information about validation messages, see *Build Validation*.

Load Process: Post-Load Options

After completing a load, you can do one or more of the following:

1. Accept the results of the load and begin manually adjusting student schedules. Select this option only if you are positive that the master schedule will not change and that student schedules are correct. Verify student schedules to make sure the master schedule is correct.
2. Resolve student conflicts by using or adding alternate course requests if you did not use them in the first load. If your schedule contains alternate student course requests but you did not allow the system to use them, rerun the load and select the substitutes options.
3. Manually adjust student course requests to allow better scheduling. For example, if a student has a course request that is impossible to meet, change it. Repeat this process until you are satisfied with the results.
4. Select the students you want to reschedule. Then, reload student schedules.

If you select option 2, 3, or 4 above, you may need to reload student schedules. For more information, see *Load Process: Load Students*.

Reload Students

After you make changes to student course requests, you may want to reload the affected students into the master schedule. For more information about rescheduling students, see *Run a Load*.

How to Reload Students into the Master Schedule

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Search for and select the group of students you would like to reschedule.

   Note: You must select the students before you reschedule.

3. Under Processing in the PowerScheduler menu, choose **Load** from the PowerScheduler menu. The Load Schedules page appears.

   Note: By default, all student schedules are unlocked. Only the Reschedule option adjusts unlocked student schedules.

4. Select the **Reschedule the selected [x] students** option.
5. Click **Execute**. The Load Student Schedules (Step 2) page appears.
6. Use the following table to enter information in the fields:

Field	**Description**
Load type	Select the **Reschedule the selected [x] students** option.
Close sections at maximum	Select the checkbox to ensure that courses close at their maximum enrollment numbers.
Use global course substitutes	Select the checkbox to ensure that the system automatically inserts any global course substitutes after student course substitutes have been tried and rejected.
Use student course substitutes	Select the checkbox to ensure that the system automatically inserts student course substitutes in the order chosen, if needed.

7. Click **Execute**. The engine starts to run. For more information, see *Understand the PowerSchool Scheduler Page*.

Manually Adjust Student Schedules

Manually adjust and fine-tune student schedules only if you are certain that the master schedule will not change and that student schedules are correct.

Note: Running a load will cause manual modifications to be lost. Instead, choose the Reschedule the selected [x] students option when loading. For more information, see *Run a Load*.

You can also manually enroll students in courses based on their course requests. For more information, see *How to Manually Schedule Students*.

Note: If you use the Balance Adjustment constraint to pre-load a section with a certain number of "placeholder students," you need to manually schedule students into those seats after loading the rest of the student schedules. For example, if you use this constraint in a section of a math course to hold five seats for Special Education students, you need to schedule those Special Education students into the math section after loading the other students' schedules.

How to Enroll a Student in a Course

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.
3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. Click the name of the student you want to work with from the students menu.
5. Do one of the following:
    - Choose **Schedule** from the pop-up menu.
    - Click the **Schedule** tab.

    The Schedule page displays the percentage scheduled calculations for the student:

    - % Scheduled - Percentage of requests successfully filled
      Calculated by rounding ((enrolledSlots * 100) / timeSlots)
    - % Core Scheduled - Percentage of requests for core classes successfully filled
      Calculated by rounding ((coreSlots * 100) / coreTimeSlots)
    - % Primary Requests Satisfied - Percentage of primary requests (non-alternate requests) that were successfully filled
      Calculated by rounding ((primeReqSatisfied * 100) / totalRequests)
    - % Total Requests Satisfied - Percentage of total requests including alternate requests that were filled
      Calculated by rounding ((totalReqSatisfied * 100) / totalRequests)

    Note:

TimeSlots calculated by
number_of_terms * number_of_days * number_of_periods
-- find timeSlots by buildId
select sterms * dpcycle * ppday as timeSlots
from scheduleBuilds
where buildId = <scheduleBuilds.buildId>;

CoreTimeSlots calculated by
number_of_terms * number_of_days * number_of_core_periods
-- find coreTimeslots by buildId
select sterms * dpcycle * (select count(*) from schedulePeriods where buildId = <scheduleBuilds.buildId> and corePeriod = 1) as coreTimeSlots
from scheduleBuilds
where buildId = <scheduleBuilds.buildId>;

TotalRequests calculated by
-- find totalRequests by studentId and yearId, excluding any global alternate course
select count(*) totalRequests
from scheduleRequests
where studentId = <students.id>
and yearid = <4-digit-yearid>
and globalAlternateCourse = 0;

Percentage calculated by
-- get student requests statistics by studentId and buildId
select totalRequests, enrolledSlots, coreSlots, primeReqSatisfied, totalReqSatisfied
from studentSchedulingResults
where buildId = <scheduleBuilds.buildId>
and studentId = <students.id>;

Note: To determine which student course requests have yet to be filled, see the "Unfilled Requests" section of the page.

6. Choose from the **Enroll** pop-up menu the period in which you want to enroll this student in a course. The Available Courses page appears.

   Note: For information about the filter options, see *How to Filter Manual Schedule Options*.

   The page displays the following information:

Field	Description

Crs.Sec	The course and section number.
Course Name	The course name. Click a course name to automatically add it to the student's schedule.
Expression	The period and day combination.
Term	The selected term.
Teacher	The teacher's name.
Grade	The grade level.
Credit Type	The credit type, such as Math.
Cr Hrs	The number of credit hours earned by taking this course.
Enrollment	The number of students currently enrolled in this course during the selected period.

How to Drop a Student From a Course

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.
3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. Click the name of the student you want to work with from the students menu.
5. Do one of the following:
    - Choose **Schedule** from the pop-up menu.
    - Click the **Schedule** tab.

    The Schedule page appears.

6. Click the **Drop** pop-up menu.

7. Choose the period in which you want to drop this student from a course. Period names in the menu match the periods on the page. For example, to drop a course that convenes during Period A2 in Semester 2, choose the second occurrence of A2. The Student's Schedule page appears.

   Note: To simultaneously drop more than one course, select the checkboxes in the appropriate rows, and then click **Drop Classes**.

How to Filter Manual Schedule Options

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.
3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. Click the name of the student you want to work with from the students menu.
5. Do one of the following:
   - Choose **Schedule** from the pop-up menu.
   - Click the **Schedule** tab.

   The Schedule page appears.

6. Choose from the **Enroll** pop-up menu the period in which you want to enroll this student in a course. The Available Period Courses page appears.
7. Select one or more of the following filters on the Available Period Courses page:

Field	Description
Period	Choose the period from the pop-up menu.
Term	Choose the term from the pop-up menu.
Teacher	Choose the teacher from the pop-up menu.
Day	Choose the day from the pop-up menu.
Grade	Choose the grade level from the pop-up menu.

Credit Type	Choose the credit type, such as MATH, from the pop-up menu.
Course	To jump to a particular course, enter the course number and press RETURN (Mac) or ENTER (Windows).
Show only classes with available seats	Select the checkbox to display only classes that have not reached the maximum enrollment.

Note: To enroll the student in a course, see *How to Enroll a Student in a Course*.

How to Mass Enroll a Group of Students in a Course

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.
3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. On the Selected Students page, click **Functions**. The Scheduling Functions page appears.
5. Click **Schedule Mass Enroll**. The Mass Enroll page appears.
6. Use the following table to enter information in the fields:

Field	Description
Teacher	Choose the teacher from the pop-up menu. If you select the course by teacher, you must also indicate the appropriate period and day of the course section.
Period	Choose the period from the pop-up menu.
Day	Choose the day from the pop-up menu.
Term	Choose the term from the pop-up menu.
course.section	Alternatively, enter the course and section number. Separate the course and section numbers with a period and no spaces.

7. Click **Submit**. If the Mass Enroll - Dependent Sections page appears, the course has dependent sections.
8. Select one of the following option for the selected students:
   - **Enroll in [course name] and its dependent sections**
   - **Enroll in [course name] only**
9. Click **Submit**. The Changes Recorded page appears.

Update Selections

Use the Update Selections function to update a group of selected records at one time. Update selections for procedures such as *Unlock Previously Scheduled Courses*, *How to Set the Next Year Grade Field for an Entire Grade Level*, *How to Schedule All of Next Year's Students*, and *How to Assign a Group of Students to a Building, House, or Team*. For general instructions, see *How to Update Selections*.

How to Update Selections

To change the records for a group of students, first select the student group. For examples of how to search for a group of students, see *How to Set the Next Year Grade Field for an Entire Grade Level*.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Functions** from the PowerScheduler menu. The Scheduling Functions page appears.
3. Click **Update Selections**. The Update Selections page appears.
4. Use the following table to enter information in the fields:

Field	Description
Current Table	Choose the table from which you want to export records from the pop-up menu. **Note:** See http://your.school.address/admin/home?ac=structure for a complete list of PowerSchool tables and fields.
Select all [x] records in this table	To indicate the records to use in the export, either: • Click **Select all [X] records in this table** to select all records. Skip to Step 6.

	• Identify search criteria in the Search fields by continuing to the next step.
Search Students	Choose a field from the first pop-up menu. Choose an operator from the second pop-up menu: • Equals (=) • Less than (<) • Greater than (>) • Less than or equal to (<=) • Greater than or equal to (>=) • Does not equal (#) • Contains (contains) • Does not contain (!Contain) In the last field, enter the value for the field.

5. Click **Search within the current [# of selected] records only**. The Update Selections page displays the new number of current records in selection.
6. Do one of the following:
   - Click **List View** to view the selections.
   - Click **Select Records by Hand** to narrow the selection. Press and hold COMMAND (Mac) or CONTROL (Windows) and click the selections you want to keep. Click **Submit**.
   - Click **Modify Records** and continue to the next step. The Modify Records page appears.
7. Choose from the pop-up menu the field to modify in the selected records.
8. Enter the value for the field to modify in the selected records.
9. Click **Modify Selected Records**. The system updates the records, and the Update Selections page appears.

Commit the Master Schedule

When you have a satisfactory schedule and want to make it your master schedule for the next school year, you must commit it. Once a schedule is committed, it replaces any existing master schedule and becomes your current schedule.

You can commit the schedule as soon as the current academic year has ended, or you can wait until just before the next academic year begins. If your periods for the next academic year are set up exactly as they are for the current year, you can commit the schedule as soon as you are confident that you no longer need to build or load.

Note: If you use PowerScheduler to create a master schedule, you should commit your master schedule before running the End-of-Year Process. The End-of-Year process modifies each student's Next School Indicator and Next Year Grade. If PowerScheduler is used after running the End-of-Year process, it is likely that students will be scheduled for the wrong school or grade level.

For information about committing the master schedule, see *When to Commit the Master Schedule*.

When to Commit the Master Schedule

When your schedule is as good as it can possibly be, and school is no longer in session, commit the master schedule. When you commit a master schedule, it replaces any existing master schedule for that school year.

To ensure that attendance is set up properly, your "live side" school year should be created before committing your schedule in PowerScheduler. Also, when committing a master schedule, course information, including credit hours, is retrieved from the district level in PowerSchool.

How to Commit the Master Schedule

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Processing, choose **Commit**. The Commit Master Schedule page appears.
3. Select which schedules to copy:
    - **Sections Only**: Select this option to commit only sections.
    - **Student Schedules Only**: Select this option to commit only student schedules.
    - **Sections & Student Schedules**: Select this option to commit both sections and student schedules.
4. Click **Submit**. The Verify Commit Master Schedule page appears.

5. Click **Submit**. The Commit Master Schedule Warnings page displays if there are any conflicts or unavailable courses. If there are no conflicts or unavailable courses, skip to Step 6.

   Note: Only school calendar conflicts are committed as part of the master schedule; unavailable courses are not.

6. If you are certain you want to commit, click **Submit** to proceed. The Changes Recorded page appears.

Load Process: Print Schedules and Rosters

Print schedules and rosters either before or after you commit the master schedule.

How to Print Student Schedules

Use the Student Schedule List report to view the number of courses scheduled by each student. You can also use this report to view each student's schedule. Print student and teacher schedules either before or after you commit your master schedule.

Note: You can also print student schedules using a report card template.

To run this report for a specific group of students, first select those students. Then, select the Use Selected Students checkbox on the Scheduling Reports page before clicking **Student Schedule List**.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Student Schedule List**. The Student Classes Scheduled page displays the following information:

Field	Description
#	The numbered list of students.
Student	The student's name. Click the heading to sort the list by student name.

% Scheduled	The percentage of the student's course requests that were fulfilled. Click the heading to sort the list by percentage scheduled.
Classes Scheduled	The number of courses that have been scheduled for this student. Click the heading to sort the list by the number of classes scheduled. Click the number per student to view the student's Schedule page.

How to Print Class Rosters (PDF)

Generate a class roster as a PDF file for the current or previous terms. Print class rosters either before or after you commit your master schedule.

1. On the start page, choose **System Reports** under Reports in the main menu. The Reports page appears.
2. On the System tab, click **Class Rosters (PDF)**. The Class Rosters (PDF) page appears.
3. Use the following table to enter information in the fields:

Field	Description
Print rosters for	Select the teachers for which you want to generate a class roster. To select multiple teachers, press and hold COMMAND (Mac) or CONTROL (Windows) as you click each teacher's name.
Meetings	Indicate the meetings to be audited by selecting the appropriate checkboxes. To audit all meetings, deselect all of the checkboxes.
Include students who	Select an enrollment period option. Some options require you to enter a date or date range using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
Heading font	Choose the heading font from the pop-up menu.
Size, line height, style	Enter the heading font size and line height in points. One point equals 1/72 of an inch.

	Select the **Bold** checkbox to bold the heading. Select the **Italic** checkbox to italicize the heading. Select the **Underline** checkbox to underline the heading.
Print heading on	Choose an option from the pop-up menu to determine how you want the heading to print: • **First page of each class** • **All pages** • **Do not print heading**
Heading text	Enter the content you want to appear in the heading. In addition to standard text, you can include HTML tags, PowerSchool fields and PowerSchool data codes. To insert a PowerSchool field into this field: 1. Click **Fields** to view a list of PowerSchool fields. The Fields pop-up appears. 2. To narrow the list of fields, enter one of more search terms in the **Filter** field. Otherwise, leave blank. 3. Click the field you want to add. The Fields pop-up closes, and the selected field appears.
Column title font	Choose the column title font from the pop-up menu.
Size, line height, style	Enter the column title font size and line height in points. One point equals 1/72 of an inch. Select the **Bold** checkbox to bold the column title. Select the **Italic** checkbox to italicize the column title. Select the **Underline** checkbox to underline the column title.
Print column titles on	Choose an option from the pop-up menu to determine how you want the column title to print: • **All pages** • **First page of each class**

	• **Do not print column titles**
Roster Font	Choose the roster listing font from the pop-up menu.
Size, line height, style	Enter the roster listing font size and line height in points. One point equals 1/72 of an inch. Select the **Bold** checkbox to bold the roster listing. Select the **Italic** checkbox to italicize the roster listing. Select the **Underline** checkbox to underline the roster listing.
Roster columns	Enter the content to include in the student listings columns using the format field name \ column title \ column width \ alignment. To insert a PowerSchool field into this field: 1. Click **Fields** to view a list of PowerSchool fields. The Fields pop-up appears. 2. To narrow the list of fields, enter one of more search terms in the **Filter** field. Otherwise, leave blank. 3. Click the field you want to add. The Fields pop-up closes, and the selected field appears.
Rule width	Enter the thickness in points of the vertical and horizontal lines on the report, as well as the outline of the entire report. One point equals 1/72 of an inch.
Cell padding	Enter the width of each cell and the amount of space from all sides of the cells to the text in points. One point equals 1/72 of an inch.
Page size	Choose from the pop-up menu the size of the paper on which you want to print this report. To enter a custom size, enter the horizontal and vertical page measurements in the Custom Size fields.
Margins	Enter the size of the margins in inches.

Orientation, Scale	Use the pop-up menu to choose the page layout. **Portrait** is a vertical page; **landscape** is a horizontal page. Scale is the finished size of the report. Fit more on a page by reducing it by a percentage but remember to leave it as large as possible for easier viewing.
Watermark Text	To print text as a watermark on each page of the report, use the pop-up menu to either choose one of the standard phrases or choose **Custom** and enter the text you want to print as a watermark in the field.
Watermark mode	Use the pop-up menu to determine how you want the text to print. **Watermark** prints the text behind objects on the report, while **Overlay** prints the text over objects on the report.
When to print	Select a time to run the report: • **ASAP**: Execute immediately. • **At Night**: Execute during the next evening. • **On Weekend**: Execute during the next weekend. • **On Specific Date/Time**: Execute on the date and time specified in the following fields using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.

4. Click **Submit**. The report queue appears.
5. Click **View** once the report is completed.

   Note: Click **Refresh** to update the status of the report.

   The page displays a PDF file of the report. Thoroughly review it to verify that the formatting and content are correct. If the report provides the data you need and is formatted properly, print it from this page or save it to another application. For more information, see *Run, Print, and Save Reports*.

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

Table of Contents

Master Schedule Overview

Without the proper tools, building a school's master schedule can be a difficult and time-consuming process. When you build a schedule, you must not only consider periods and classes, but also student course requests, teacher schedules, teacher course requests, and dozens of other factors that make it a difficult process.

PowerSchool considers all schedule factors and determines the best possible schedule from hundreds of thousands of possibilities. The resulting master schedule satisfies the most requirements and minimizes the most conflicts.

Building a school's master schedule is done in four phases:

- *Prepare to Build the Master Schedule*
- *Build Master Schedule Introduction*
- *Load Students*
- *Commit the Master Schedule*

Much of the work necessary to create a master schedule must be completed before building the schedule. To prepare to build a master schedule, you must define scheduling parameters, such as courses and classrooms, and enter student course requests, teacher assignments, course information, and schedule constraints. The system weighs all of the parameters that you define and generates the best possible master schedule.

Because there are many ways to arrange a master schedule, you can create test scenarios using your data and different variables to determine the best possible results for your school. For example, you might create several different scenarios containing more or fewer constraints to determine how the system arranges your courses. You can save and modify these scenarios as you work toward the best possible master schedule.

Complete all of the steps in the section *Prepare to Build the Master Schedule* before you can proceed to the section *Build Master Schedule Introduction*. After building, load student requests into the master schedule and commit the master schedule to PowerSchool.

Generally, schools follow the build, load, then commit process when creating their master schedules. Though this suggested series of steps applies to most situations, there are exceptions. For example, you can build a master schedule without loading student schedules; instead, you could import student schedules. However, doing so will not take into consideration section size maximums or load constraints. You can also load schedules without first building a master schedule if you copy or import schedules or if you manually built a master schedule.

During both the preparing and building phases of this process, you will likely want to run certain reports. See *Master Schedule Reports* for descriptions of scheduling reports that you may use. There are several checklists to help you throughout the process. For more information, see *Checklists*.

When you click **PowerScheduler** on the start page, the Scheduling page displays for each scenario the name, date of the last master schedule build, last load of the student schedules into the master schedule, number of students with requests and satisfied requests after the last load, and percentage of students without scheduling conflicts.

Note: The Students With Requests and Students Without Conflicts statistics only update after the build or the load finish completely.

The status of each scenario appears. Only one scenario can be active at any given time; the others are considered inactive. Also, the Scheduling page displays for each scenario the percent of students scheduled, the percent of core requests scheduled, and the percent of satisfied student course requests.

The PowerScheduler menu displays the main scheduling functions, which are designed and sequenced to help you build your master schedule. The main scheduling functions list is divided into the following functional areas:

Requesting

- **Course Groups:** Create course groups in preparation for creating request forms.
- **Screen Setup:** Create the request forms that will be used for entering student course requests.

Scheduling Setup

- **Scenarios:** Maintain your schedule scenarios. You can select a scenario or create a new one.
- **Auto. Scheduler Setup:** Set up certain defaults for build scenarios. This is the starting point when building a master schedule, since you must begin by setting up the Scheduling Years and Terms, Days, and Periods before you can proceed with building your master schedule.
- **Course Catalogs:** Create or edit a course catalog.
- **Years & Terms:** Define the schedule years and terms.
- **Periods:** Define the schedule layout for periods.
- **Days:** Define the schedule layout for days.
- **Buildings:** Define the names of buildings.
- **Constraints:** Define constraints for the schedule, such as days that teachers are free, prescheduled courses, and breaks.
- **Departments:** Define the names of departments.
- **Facilities:** Define the names of facilities.
- **Houses:** Define the names of houses.

- **Section Types:** Define the section types of courses, such as special education.
- **Teams:** Define teams.

Resources

- **Courses:** Define schedule information for each course in your course catalog, such as assignments, constraints, and relationships.
- **Rooms:** Define classroom information, such as physical size and location.
- **Students:** Define student information, such as constraints, requests, and preferences.
- **Teachers:** Define teacher information, such as assignments, teams, and homerooms.

Processing

- **Course Rank:** View the system-generated course rank or change the order of the course rank.
- **Build (Q):** Build the master schedule.
- **Load (Q):** Load student information, such as requests, into the master schedule.
- **Automated Study Hall:** For students that have gaps in their schedules, enroll those students into study hall periods.
- **Commit:** Commit the built master schedule to PowerSchool.

Schedule

- **Master Schedule:** Make changes to your master schedule once it is built but before it is committed. Change sections, teachers, student course requests, and schedules.
- **Visual Scheduler:** Use to create your master schedule using drag-and-drop capabilities.
- **Sections:** Create a new course section or edit information about an existing one.

Tools

- **Checklist:** Use this checklist to keep track of all the tasks needed to prepare to build a master schedule.
- **Engine Download:** Download a current version of the scheduling engine. This link will be updated as the engine is updated.
- **Functions:** Perform functions such as calculate sections and update selections.
- **Reports:** Run all schedule-related reports.

To return to the PowerScheduler menu when the main menu changes, click **PowerScheduler** in the navigation path.

Checklists

Refer to several checklists to help you as you prepare to build and load the master schedule. Access the checklists from either PowerSchool or PowerSchool Help:

- Scheduling Checklist: This checklist guides you through each process when building a master schedule. It is especially helpful when multiple people are building the master schedule, since you can set the status of each step from "No Status" to "In Progress" to "Complete." Enter comments for each step or for the overall process to share information. This checklist displays items for both building a master schedule and loading students' schedules, or just for loading students' schedules. The appropriate checklist appears depending on whether the current scenario is "build and load" or "load only." To access this checklist, choose **Checklist** under the Tools heading from the PowerScheduler main menu.
- Master Schedule Checklist: Use this checklist to ensure that the master schedule is ready to optimize, load, or print. See *Master Schedule Checklist*.
- Checklist to Know Your Student Schedules are Complete: Use this checklist to determine that the entire process of building the master schedule is complete. See *Checklist to Know Your Student Schedules are Complete*.

Schedule Search and Select

Before you can do any type of schedule-related work on a student's record or on a group's records, select the individual or group. By performing a search, you make such a selection.

When you select a student, his or her name appears in the main menu. Either click the student's name to work with that student or go to the PowerScheduler menu to perform functions for that student.

If you select a group of students, the selected students' names appear in the students menu. Then, go to the PowerScheduler menu to perform functions for the group of students.

How to Select Students for Scheduling

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students**. The Scheduling page appears.
3. Note the following information in the left navigation menu:

Field	Description

Search Students	Using the pop-up menu, you can choose the student page you want to work with: • **Constraints** • **Demographics** • **Grad Planner** • **Grad Progress** • **Matrix** • **Preference** • **Requests** • **Schedule** **Note:** These options also appear as tabs on the student pages.
Functions	Click **Functions**. The *Student Scheduling Functions* page appears for the selected students.

4. Select the student you want to work with using any of the following methods:

Field	**Description**
[Search Students]	Enter search criteria in the search field. If Smart Search is enabled, as you begin entering your search criteria, PowerSchool automatically provides a drop-down list of suggestions that you may choose from.
[Search Icon]	Click to initiate the search.
View Field List	Click to view the PowerSchool Field List pop-up, which displays a list of all fields that can be used to perform a student search. **Note:** Database extension fields can be selected from the pop-up, but any associated one-to-many tables are not searchable at this time. For more information, see *Database Extensions* in the *System Administrator User Guide* available on PowerSource.
[Alphabet]	Click a letter of the alphabet to display a list of students whose last names begin with the selected letter. For example, if you click

	B, the system displays the students at your school whose last names begin with a "B".
Next Year Grade Level	Click a number to display a list of students in the next year grade level. If you click **9**, the system displays a list of ninth graders at your school for next year.
Current Year Grade Level	Click a number to display a list of students in the current year grade level. If you click **9**, the system displays a list of ninth graders at your school for this year.
[Gender]	Click **M** to display a list of all the male students at your school. Click **F** to display a list of all the female students at your school.
All	Click to display a list of all active students at your school.
Current Selection	Click to quickly return to the last group of selected students without repeating a search function.

Note: For more information, see *Student Search*.

5. If only one student's name appears or if you want to select all of the students, continue to Step 5. If you want to select one or more but not all of the students, click **Select Students By Hand**. Press and hold COMMAND (Mac) or CONTROL (Windows) as you click each of the students' names.

   Note: If the students are listed consecutively, click the first name on the list. Press SHIFT as you click the last name on the list. This selects the first and last names you click and every name in between.

6. Do one of the following:
   - Click **Functions**. The *Student Scheduling Functions* page appears for the selected students.
   - Click **Select these students**. The students' names appear in the students menu.

Student Scheduling Functions Page

Use the Student Scheduling Functions page to execute processes for the selected group of students. To select a group of students, see *Schedule Search and Select*.

The student Scheduling Functions page includes the following functions:

- *Export Using Template*
- *List Students*
- *Mass Add Requests*
- *Mass Delete Requests*
- *Next School Indicator*
- *Print Reports*
- *Print Mailing Labels*
- *Quick Export*
- *Reports Menu*
- *Schedule Mass Enroll*
- *Schedule Reports Menu*
- *Work with these students*

Scheduling Functions Page

Use the Scheduling Functions page to run processes related to the master schedule.

The Scheduling Functions page includes the following functions:

- *Auto Create Rooms*
- *Auto Fill Student Information*
- *Auto Fill Course Information*
- *Auto Fill Teacher Information*
- *Auto Generate Course Information*
- *Auto Generate Rooms*
- *Auto Generate Teacher Assignments*
- *Calculate Percent Schedules*
- *Calculate Target Number of Sections to Offer*
- *Copy Master Schedule*
- *Delete Master Schedule*
- *Duplicate Scenarios*
- *Move Previous Year Data*
- *Regenerate Bitmaps*
- *Reset Section Meetings*
- *Reset Class Counts*
- *Reset Teacher Assignments*
- *Resolve Invalid Requests*
- *Set Schedule Year*

- *Split Year-Long Classes*
- Update Selections, including the processes *Unlock Previously Scheduled Courses*, *How to Set the Next Year Grade Field for an Entire Grade Level*, *How to Schedule All of Next Year's Students*, and *How to Assign a Group of Students to a Building*.

Prepare to Build the Master Schedule

Preparing to build the master schedule is the first of several phases in creating a master schedule. The process of preparing to build the master schedule consists of the following 11 steps:

- *Schedule Security*
- *Scheduling Setup*
- *Build Scenarios Overview*
- *Courses*
- *Rooms Overview*
- *Student Information*
- *Student Course Requests*
- *Course Information*
- *Teacher Scheduling Information*
- *Build Constraints Overview*
- *Course Rank*

Most steps can be performed in any order, within reason. For example, you cannot enter teacher assignments if you have not entered all of your teachers on the teacher list. You also must define your schedule constraints before you calculate course rank.

To assign specific sections to several individuals, each person can perform a step at the same or different times. If you are the only person preparing to build your school's schedule, you should follow the steps in the above sequence.

Schedule Security

Once you know which groups at your school will be in charge of scheduling, you need to give members access to the Scheduling area. See *Schedule Security Setup*. For more information about general system security, see *Security*.

Schedule Security Setup

Give groups of users access to the scheduling functions in PowerSchool.

How to Give Groups Access to the Schedule Area

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Security, click **Groups**. The Groups page appears.

3. Click the name of the group that contains your staff members, such as **Counselors**. The Edit Group page appears.
4. Select the **PowerScheduler Access** checkbox.
5. Click **Submit**. The Groups page appears.

Scheduling Setup

To build the master schedule to your school's specifications, you need to define pieces of information for the system to use to schedule courses at your school. These are called scheduling setup. Depending on your school's setup, not all scheduling setup need to be defined.

Define the following scheduling setup before building a master schedule:

- *Scenarios*
- *Auto. Scheduler Setup*
- *Course Catalogs*
- *Years and Terms*
- *Periods*
- *Days*
- *Buildings*
- *Departments*
- *Facilities*
- *Houses*
- *Section Types*
- *Teams*
- *Program Balancing*

Buildings

If your school campus contains several buildings, you can define each of them. Then, you can associate these buildings with students, teachers, and rooms. This way, the system knows to schedule courses in the appropriate building, taught by the appropriate teacher, and taken by the appropriate students.

How to Define a Building

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Buildings** from the PowerScheduler menu. The Buildings page appears.
3. Click **New**. The Add/Edit Building page appears.

4. Enter a name for the building in the Building field.
5. Click **Submit**. The Buildings page appears.

How to Edit a Building

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Buildings** from the PowerScheduler menu. The Buildings page appears.
3. Click the name of the building you want to edit. The Add/Edit Building page appears.
4. Edit the name of the building in the Building field.
5. Click **Submit**. The Buildings page appears.

How to Delete a Building

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Buildings** from the PowerScheduler menu. The Buildings page appears.
3. Click the name of the building you want to delete. The Add/Edit Building page appears.
4. Click **Delete**. The Buildings page appears.

Days

A day (or "cycle") is the number of repeating days that make up a schedule. The days are originally set up when you enter the number of days while creating the scenario or performing the Auto Scheduler Setup function.

To build a master schedule, PowerScheduler requires that days are defined. Prior to the start of the scheduling process, determine the numbers of days you will need in your schedule.

Note: A schedule day or cycle is NOT the same as a calendar day.

How to Define Days

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Days** from the PowerScheduler menu. The Edit Days page appears.
3. Use the following table to enter information in the fields:

Field	Description
Name	Enter the name of the day.
Abbreviation	Enter an abbreviation for the day name.

4. Click **Submit**. The Changes Recorded page appears.

Departments

Courses, rooms, and teachers belong to departments. When building the master schedule, the system attempts to schedule courses in one of the rooms belonging to the appropriate department.

Use this function to set up departments. If you previously used PowerScheduler with departments, the departments also appear for this year.

Note: Be very careful to avoid typographical errors when defining departments. For example, if there is an existing SCIENCE department and you define a misspelled "SCEIENCE" department in PowerScheduler, the erroneously-named department will also exist when the schedule is committed since its name did not match the name of any existing department. It is a cumbersome task to clean up the data, as departments are associated to a number of tables, such as Teacher, Room, and Course.

How to Define a Department

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Departments** from the PowerScheduler menu. The Departments page displays the list of departments.
3. Click **New**. The Add/Edit Department page appears.
4. Enter a name for the department in the Department field.
5. Click **Submit**. The Departments page appears.

How to Edit a Department

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Departments** from the PowerScheduler menu. The Departments page appears.

3. Click the name of the department you want to edit. The Add/Edit Department page appears.
4. Edit the name of the department in the Department field.
5. Click **Submit**. The Departments page appears.

How to Delete a Department

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Departments** from the PowerScheduler menu. The Departments page appears.
3. Click the name of the department you want to delete. The Add/Edit Department page appears.
4. Click **Delete**. The Departments page appears.

Facilities

Some courses require special equipment or facilities. For example, a chemistry course requires special laboratory equipment, and a film course requires audio and video equipment. Also, a chemistry course is taught in a laboratory and a physical education class is taught in a gymnasium. To associate courses that need special equipment or types of rooms, the system uses facilities.

Note: You can assign multiple facilities to courses and rooms.

How to Define a Facility

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Facilities** from the PowerScheduler menu. The Facilities page appears.
3. Click **New**. The Add/Edit Facility page appears.
4. Enter a name for the facility in the Facility field.
5. Click **Submit**. The Facilities page appears.

How to Edit a Facility

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Facilities** from the PowerScheduler menu. The Facilities page appears.
3. Click the name of the facility you want to edit. The Add/Edit Facility page appears.

4. Edit the name of the facility in the Facility field.
5. Click **Submit**. The Facilities page appears.

How to Delete a Facility

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Facilities** from the PowerScheduler menu. The Facilities page appears.
3. Click the name of the facility you want to delete. The Add/Edit Facility page appears.
4. Click **Delete**. The Facilities page appears.

Houses

Some schools separate students into houses. For example, a school can have a House A (Grades 9 and 10) and a House B (Grades 11 and 12). Determine which rooms, teachers, and students belong to each house. If the "Use houses" checkbox is selected on the Edit Advanced Build Scenario page (see *How to Edit Advanced Optimizations*), the system references which house a room is assigned to before scheduling courses in that room and gives scheduling priority to the appropriate house.

Also, sections will be scheduled for houses based on the house assignment of the teachers scheduled for those sections. Students assigned to a house will be assigned to a section either without a house or with the same house, whereas students not assigned a house can be assigned to any section.

How to Define a House

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Houses** from the PowerScheduler menu. The Houses page appears.
3. Click **New**. The Add/Edit House page appears.
4. Enter a name for the house in the House field.
5. Click **Submit**. The Houses page appears.

How to Edit a House

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Houses** from the PowerScheduler menu. The Houses page appears.

3. Click the name of the house you want to edit. The Add/Edit House page appears.
4. Edit the name of the house in the House field.
5. Click **Submit**. The Houses page appears.

How to Delete a House

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Houses** from the PowerScheduler menu. The Houses page appears.
3. Click the name of the house you want to delete. The Add/Edit House page appears.
4. Click **Delete**. The Houses page appears.

Scheduling Periods

To build a master schedule, the system requires periods, which are generated when you create a scenario using the Auto Scheduler Setup process. Use this page to name and abbreviate those periods.

If you are working with a copy of a previous year's master schedule, the periods will be the same as they were in that schedule.

How to Define Periods

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Periods** from the PowerScheduler menu. The Edit Periods page appears.
3. Use the following table to enter information in the fields:

Field	Description
Name	Enter a name for this period.
Abbreviation	Enter an abbreviation for this period name.
Core	Select the checkboxes to specify the periods that are “core” periods in which you expect students to be scheduled. When PowerScheduler calculates the core percent scheduled figure, a

	calculation of successfully scheduled should consider core periods. By default, the checkbox is selected. Many schools define certain periods that are for other purposes than scheduling, such as a 0 period that may be used for daily attendance or night school periods. By identifying which periods are core periods, the system can base its decision of how successful a student's schedule is according to how many of the core periods have been scheduled.
Sort	Select a sort order for displaying this period.

4. Click **Submit**. The Changes Recorded page appears.

Section Types

Section types are special sections of a course. For example, your school might offer separate sections of courses for bilingual students. In this case, one section of the course will be identified as bilingual. The teacher who instructs this section will have a bilingual section type assignment. The students' requests will also reflect the bilingual section type.

How to Define a Section Type

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Section Types** from the PowerScheduler menu. The Section Types page appears.
3. Click **New**. The Add/Edit Section Types page appears.
4. Use the following table to enter information in the fields:

Field	Description
Section Type	Enter a name for the section type. Enter a maximum of 20 characters.
Section Type Code	Enter a section type code. Enter a maximum of 2 characters.

5. Click **Submit**. The Section Types page appears.

How to Edit a Section Type

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Section Types** from the PowerScheduler menu. The Section Types page appears.
3. Click the name of the section type you want to edit. The Add/Edit Section Types page appears.
4. Use the following table to edit information in the fields:

Field	Description
Section Type	Enter a name for the section type.
Section Type Code	Enter a section type code.

5. Click **Submit**. The Section Types page appears.

How to Delete a Section Type

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Section Types** from the PowerScheduler menu. The Section Types page appears.
3. Click the name of the section type you want to delete. The Add/Edit Section Types page appears.
4. Click **Delete**. The Section Types page appears.

Teams

Some schools, most often middle or junior high schools, assign students and teachers to teams to provide the best support and monitoring system.

Teams are either static or dynamic. If you define static teams, you manually assign each student to a particular team. For more information, see *Student Information*. If you create dynamic teams, you define the team names and assign teachers to the teams but allow the system to decide which students to assign to which teams for the best possible balance.

Note: For information about how to assign teachers to teams, see *Teacher Scheduling Information*.

The Teams page displays the team name and number. Use the team number to change the team for a group of students. For more information about updating a selection of students, see *Update Selections*.

How to Define a Team

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Teams** from the PowerScheduler menu. The Teams page appears.
3. Click **New**. The Edit Team page appears.
4. Enter a name for the team.
5. Click **Submit**. The Teams page appears.

How to Edit a Team

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Teams** from the PowerScheduler menu. The Teams page appears.
3. Click the name of the team you want to edit. The Edit Team page appears.
4. Edit the name of the team.
5. Click **Submit**. The Teams page appears.

How to Delete a Team

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Teams** from the PowerScheduler menu. The Teams page appears.
3. Click the name of the team you want to delete. The Edit Team page appears.
4. Click **Delete**. The Teams page appears.

Schedule Years and Terms

For scheduling purposes, you need to define the upcoming school year and its associated term, which are generated when you create a scenario using the Auto Scheduler Setup process.

Note: If you are working with a copy of a previous year's master schedule, the terms will remain the same as they are in that schedule.

It is important to enter the terms from largest to smallest. For example, create the school year first and then semesters 1 and 2, any trimesters, and any quarters.

How to Define a Schedule Year and Terms

Note: When creating a year, the corresponding registration records from the previous year are copied to the new year. If registration records already exist for the school and year, then the registration records are not copied. For more information about registration records, see *Student Course Request Pages*.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Years & Terms** from the PowerScheduler menu. The Schedule Years & Terms page appears.
3. Click **New**. The Create New Schedule School Year page appears.
4. Use the following table to enter information in the fields:

Field	Description
Name of School Year	Enter the name of the school year, such as 2008-2009.
Abbreviation	Enter an abbreviation for the school year, such as 08-09.
First Day of School	Enter the first day of school for this academic year in MM/DD/YYYY format, such as 09/02/2009.
Last Day of School	Enter the last day of school for this academic year in MM/DD/YYYY format, such as 6/5/2010.

5. Click **Submit**. The Schedule Years & Terms page displays the schedule year.
6. Click **Edit Terms** in the row of the appropriate schedule year.
7. On the Term Setup page, click **New**. The Edit Schedule Term page appears.

   Note: Enter the terms sequentially. That is, if your school has terms of two semesters and four quarters, enter them in this order: Year, Semester 1, Semester 2, and then Quarter 1, Quarter 2, Quarter 3, and Quarter 4.

8. Use the following table to enter information in the fields:

Field	Description
Name of Term	Enter the name of this term, such as Semester 1.
Abbreviation	Enter an abbreviation for this term, starting with a letter, such as S1.
First Day of Term	Enter the first day of this term in MM/DD/YYYY format.
Last Day of Term	Enter the last day of this term in MM/DD/YYYY format.
What portion of the school year does this term represent?	Use the pop-up menu to choose the fraction that this term represents within the school year. If your school year consists of four terms, choose **1/2**. If this term represents the whole school year, choose **Full year**.
Import File Term #	Enter an import file term number so that the system can align terms when it imports the master schedule. For example, if your school uses semester and quarter classes, you might state in the import file that all sections of S1 are identified by the number S10203. Enter the same number in this field to map the date.

9. Click **Submit**. The Term Setup page appears.

How to Edit a Schedule Year

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Years & Terms** from the PowerScheduler menu. The Schedule Years & Terms page appears.
3. Click the name of the schedule year you want to edit, such as **Full Year** or **2008-2009 School Year**. The Edit Schedule School Year page appears.
4. Use the following table to edit information in the fields:

Field	Description

Name of School Year	Enter the name of the school year, such as 2008-2009.
Abbreviation	Enter an abbreviation for the school year, such as 08-09.
First Day of School	Enter the first day of school for this academic year in MM/DD/YYYY format, such as 09/02/2008.
Last Day of School	Enter the last day of school for this academic year in MM/DD/YYYY format, such as 6/5/2009.

5. Click **Submit**. The Schedule Years & Terms page appears.

How to Edit a Schedule Term

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Years & Terms** from the PowerScheduler menu. The Schedule Years & Terms page appears.
3. Click **Edit Terms** in the row of the appropriate schedule year. The Term Setup page appears.
4. Click the name of the term you want to edit. The Edit Schedule Term page appears.
5. Use the following table to edit information in the fields:

Field	Description
Name of Term	Enter the name of this term.
Abbreviation	Enter an abbreviation for this term, starting with a letter, such as S1. Enter no more than six characters.
First Day of Term	Enter the first day of this term.
Last Day of Term	Enter the last day of this term.

What portion of the school year does this term represent?	Use the pop-up menu to choose the fraction that this term represents within the school year. If this term represents the whole school year, choose **Full year**.
Import File Term #	Enter an import file term number so that the system can align terms when it imports the master schedule. For example, if your school uses semester and quarter classes, you might state in the import file that all sections of S1 are identified by the number S10203. Enter the same number in this field to map the date.

6. Click **Submit**. The Term Setup page appears.

How to Delete a Schedule Term

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Years & Terms** from the PowerScheduler menu. The Schedule Years & Terms page appears.
3. Click **Edit Terms** in the row of the appropriate schedule year. The Term Setup page appears.
4. Click the name of the schedule term you want to delete. The Edit Schedule Term page appears.
5. Click **Delete**. The Term Setup page appears.

How to Delete a Schedule Year

Note: When deleting a year, the corresponding registration records are also deleted. For more information about registration records, see *Student Course Request Pages*.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Years & Terms** from the PowerScheduler menu. The Schedule Years & Terms page appears.
3. Click **Edit Terms** in the row of the appropriate schedule year. The Term Setup page appears.
4. Click the name of the schedule year you want to delete. The Edit Schedule Term page appears.
5. Click **Delete**. The Schedule Years & Terms page appears.

Program Balancing

If enabled, Program Balancing allows PowerScheduler to evenly balance students in programs across sections during PowerScheduler loads and Automated Walk-In Scheduling. Program Balancing uses the new server-side engine loader, which removes the need to run the client scheduling engine on client machines, provides program balancing, and optimizes processing for faster and better results. To enable, see *How to Define Scheduling Preferences*. Once enabled, you will need to define which programs you want to include in balancing.

How to Define Program Balancing

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Program Balancing** from the PowerScheduler menu. The Program Balancing page appears.
3. Use the following table to enter information in the fields:

Field	Description
Balance These Programs	Select the checkbox next to each program you want included in balancing.
Evaluate Programs as of This Date	Enter the date from which you want the Scheduling Engine to evaluate special programs or click the **Calendar** icon to select a date.

4. Click **Submit**. A confirmation message appears.

Build Scenarios Overview

A build scenario includes the parameters that PowerScheduler references to create a master schedule for the upcoming school year. Use scenarios to work with different combinations of criteria before committing a master schedule. After completing a successful build for a scenario, you can duplicate it and try various modifications to the original scenario.

Though you can create multiple build scenarios, it is suggested that you start with just one. Multiple scenarios may be useful when, for example, your school wants to hire an additional computer science teacher to meet student course request demands. In this case, create two build scenarios: one that includes the additional computer science teacher and one that does not. Present both scenarios to the school committee to make a final decision on which situation would work best.

Some information used to create a master schedule is shared amongst all scenarios, whereas other information is defined per scenario. The following data is exclusive to a particular build scenario:

- Master schedule
- Student schedules
- Constraints
- Course rank
- Teacher assignments
- Course relationships

For example, if you define the constraint that Mrs. Smith must be free first period for the Schedule 1 scenario, the Schedule 2 scenario does not adhere to that constraint.

The following information is shared by all build scenarios that you create for a given build year:

- Students
- Student course requests
- Student course request pages
- Teachers
- Rooms
- All parameters (such as terms)
- Course groups

For example, if you enter a student course request, the system tries to schedule that request in all scenarios.

For more information about build scenarios, including how to create a build scenario, see *Build Scenarios*.

Build Scenarios

Before creating build scenarios, define the basic build information, such as the number of terms, days, and periods in your master schedule. Then, define optimization parameters, which determine how long the system spends scheduling each course, section, and student.

When building the master schedule, PowerSchool evaluates every possible schedule combination before it adds a course to that schedule. Depending on your school's courses, constraints, and other schedule parameters, there could be millions of ways to schedule one multi-section course. Evaluating all of these schedule combinations would take many hours. You might not want to wait for such a thorough evaluation. If this is the case, define build and load optimizations to determine how many combinations the system should review when building your schedule.

When you enter optimization parameters, you define the minimum and maximum number of possibilities the system should evaluate while doing the following:

- Building the master schedule
- Loading student schedules with courses

You can also define best schedule weights to determine how the system handles conflicts when building your master schedule. For example, if you give more weight to section balance than to student conflicts, the system tries to create similar-size course sections before it tries to accommodate student course requests. Based on the last load for each scenario, the percent of students scheduled, core courses scheduled, and satisfied student requests appear on the Scenarios page.

How to Create a Build Scenario

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Scenarios** from the PowerScheduler menu. The Scenarios page appears.
3. Click **New**. The Edit Build Scenario page appears.
4. Use the following table to enter information in the Build Information fields:

Field	Description
[Scenario type]	Select the **Build and Load** option to build a schedule and then load students into that schedule. **Note:** If creating a **Load Only** scenario, see *Load Process: Schedule Setup*.
Build Name	Enter a name for this build scenario. If you are creating several scenarios, use descriptive names so that you can easily distinguish among them.
Active Build	If you are creating only one build scenario, select the checkbox. If you are creating more than one build scenario, select the

	checkbox for the one you want the system to use to build your master schedule. **Note:** You will only be able to edit the course catalog that is associated with the build marked as active.
Build Description	Enter a description of this scenario.
Terms	Click **Associate** to select the number of schedule terms you want this scenario to include. The Schedule Term Setup page appears. 1. Select the checkboxes in the rows that represent the number of schedule terms you want this scenario to include. For example, if you plan to build a two-semester master schedule, select the checkbox next to the row that includes Semester 1 and Semester 2. 2. Click **Submit**.
Periods	From the pop-up menu, choose the number of periods per day for this build scenario. For example, if you are building a block schedule, you might choose 4. If you are building a regular schedule, you might choose 7.
Days	Choose from the pop-up menu the number of days for this build scenario.
Course Catalog	Use the pop-up menu to choose the course catalog you want the system to use to build this schedule. If this is your first time creating a master schedule, do not select a catalog. The system will automatically generate a course catalog, which you can modify. For more information, see *Course Catalogs*.

5. Use the following table to enter information in the Build Optimizations and Load Optimizations fields:

Field	**Description**

Percent of schedule combinations to evaluate for each course	Change this value only if you encounter problems with the amount of time the system is using to build the master schedule. The default value of this field is 10. For example, if you enter **25**, the system evaluates one-quarter of the possible schedule combinations for each course. If you enter **75**, the system evaluates three-quarters of the possible schedule combinations for each course.
Minimum number of schedule combinations to evaluate for each course	Change this value only if you encounter problems with the amount of time the system is using to build the master schedule. The default value of this field is 10,000. For courses with few possible combinations to begin with, use a higher number to prevent the system from attempting too few schedule combinations and not being able to fit the course into the schedule.
Percent of schedule combinations to evaluate for each student	Change this value only if you encounter problems with the amount of time the system is using to load the master schedule. The default value of this field is 10. For example, if you enter **25**, the system evaluates one-quarter of the possible schedule combinations for each student. If you enter **75**, the system evaluates three-quarters of the possible schedule combinations for each student.
Minimum number of schedule combinations to evaluate before skipping	Change this value only if you encounter problems with the amount of time the system is using to load the master schedule. The default value of this field is 10,000. Enter a high number to force the system to sample a minimum number of student schedule course possibilities.

Note: You can also set build optimizations for a particular course by adding a Course Optimize constraint. This type of constraint takes precedence over the build optimizations you set here. For more information, see *Build Constraints*.

6. Use the following table to enter information in the Best Schedule Weights fields:

Field	**Description**

Student conflicts	To have the system give more weight to student conflicts than section balance when confronted with a conflict while building the master schedule, enter a larger number in this field than in the Section balance field. The default value of this field is 50. **Note:** The numbers in both of these fields must add up to 100.
Section balance	To have the system give more weight to section balance than student conflicts when confronted with a conflict while building the master schedule, enter a larger number in this field than in the Student conflicts field. The default value of this field is 50. **Note:** The numbers in both of these fields must add up to 100.
Total	The total of the weighting values appears. This number must be 100.

7. Click **Submit**. The Scenarios page appears.

How to Edit Advanced Optimizations

In addition to the build and load optimization fields on the Edit Build Scenario page, there are a number of more advanced optimizations. Edit these fields only if you encounter problems while building your master schedule or loading student schedules.

Note: If you are able to run a successful build and load students into schedules satisfactorily, do not edit the Advanced Optimization fields.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Scenarios** from the PowerScheduler menu. The Scenarios page appears.
3. Click **Edit** in the Advanced column of the appropriate build scenario. The Edit Advanced Build Scenario page appears.
4. Use the following table to enter information in the fields:

Field	Description

Use dynamic student load on all combinations until (n) sections	The default value of this field is 4, meaning that if a course has up to four sections, the system will score those sections precisely when loading students. If you enter a **5** or greater in this field, the system will score courses with five or more sections less precisely but faster.
Random number seed value	Change this value only to make sure the randomization function is working. The default value of this field is 123.
Use buildings	Select the checkbox if this scenario uses buildings.
Use houses	Select the checkbox if this scenario uses houses.
Swap rooms after building each course	Sometimes it is not possible to schedule a teacher in his or her preferred room. Select the checkbox so that the system will try to swap rooms as soon as a conflict arises. The checkbox is selected by default. If you deselect the checkbox, the system will not try to swap rooms during the scheduling process. After the schedule has been built, you can manually make adjustments.
Use swap rooms on prebuilt sections and preschedule constraints	Select the checkbox to allow room exchanges. For example, assume you reviewed the master schedule that is being built and made some room changes. Then, if you restarted the build, you would not want to allow the system to swap rooms, possibly eliminating these changes. In this case, do not select the checkbox. The checkbox is deselected by default.
Calculate future assignments for better combinations	Select the checkbox to ensure that the system will take the time to make sure course assignment decisions made now are smart ones. The checkbox is selected by default. **Note:** Because this process can be extremely time-consuming, you have the option of adjusting the amount of time the system spends on future assignments.

Percent of future assignments to calculate after teacher is scheduled	Use this field to fine-tune the amount of time the system spends scheduling each teacher. Enter a number that represents what percent of time a teacher will already be scheduled before the system starts calculating future assignments for him or her. **Note:** The higher the number you enter, the faster the system will calculate and the greater the chance that this teacher will encounter scheduling difficulties.
Maximum time to spend on future assignments	If you find in the log that the computer runs out of time when calculating future assignments, you may need to increase this value. The default value of this field is .1 second.
Maximum memory allowed for teacher assignment optimization	If your computer has a great deal of memory, you could increase this value, which might make the system run faster. The default value of this field is 2 MB.
Maximum time to spend on teacher assignments sort optimization	The order in which the system selects teachers to schedule is very useful; however, leaving the default value ensures that the system is never going to spend an excessive amount of time determining this order. The default value of this field is .25 seconds.
Maximum repeat count for validation error messages	This setting minimizes the number of repeated error messages from the system. For example, if you forget to enable an entire grade of students for scheduling, this setting limits the number of invalid request messages that are returned. The default value of this field is 25.
Section type handling	Choose **Strict** from the pop-up menu to not allow the system to schedule a student into a section of a course if he or she had not requested that section type.

5. Click **Submit**. The Changes Recorded page appears.

How to Delete a Build Scenario

Deleting a build scenario also deletes the following items associated with this build: master schedule, student schedules, teacher assignments, constraints, and course relationships.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Scenarios** from the PowerScheduler menu. The Scenarios page appears.
3. Click the name of the build scenario you want to delete. The Edit Build Scenario page appears.
4. Click **Delete**. The Delete Scenario page appears.
5. Select the checkbox if you are sure you want to delete this build scenario.
6. Click **Submit**. The Scenarios page appears.

Auto Scheduler Setup

The Auto Scheduler Setup function is intended to give you a head-start when creating scenarios. After you enter basic information related to days, periods, and terms on the Auto Scheduler Setup page, PowerScheduler populates those fields for a scenario. That way, you do not need to set up days, periods, and terms on their respective setup pages; instead, those field defaults can be set using Auto Scheduler Setup.

You will be guided through several pages when using the Auto Scheduler Setup function. As you navigate through the setup screens, it is important to note that no information is saved to PowerScheduler until you submit the Build Scenario.

How to Run the Auto Scheduler Setup Function

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Auto Scheduler Setup** from the PowerScheduler menu. The Auto Scheduler Setup page appears.
3. Use the following table to enter information in the fields:

Field	Description
Lowest term level division	Use the pop-up menu to choose the smallest fraction of terms that the school uses. For example, if the school uses quarters and semesters, select **Quarters** from the pop-up menu.

Number of periods	Use the pop-up menu to choose the number of periods that the school uses. For example, if the school currently uses or would like to create a seven period schedule, select **7**.
Number of days	Use the pop-up menu to choose the number of days that the school uses. For example, if the school currently uses or would like to create a schedule using A and B days, select **2**.

4. Click **Continue**. The Automatic Schedule Setup - Schedule Term Selection page appears.
5. Select the checkbox next to the full year term and the term levels that will be used for scheduling. For example, if you offer semester courses, select the checkboxes next to **Full Year** and **Semester - Semester**.

   Note: You must select the **Full Year** checkbox.

6. Click **Continue**. The Automatic Schedule Setup - Define Term Dates page appears.
7. Enter the first and last days of each term, using the format mm/dd/yyyy or mm-dd-yyyy.
8. Click **Continue**. The Edit Build Scenario page appears.
9. Click **Submit**. The Scenarios page appears.

   Note: For more information about creating or editing a build scenario, see *Build Scenarios*.

Auto Create and Fill Scheduling Information

When preparing to build a master schedule, you need to enter information related to rooms, students, courses, and teachers. Though each of these records can be created individually, PowerScheduler can automatically create this information to improve efficiency.

How to Auto Create Rooms

Though you can still build rooms individually, you may also create them all at once. For example, enter for each department the room start number, increment number, number of rooms, department, facilities, and room maximum. The system generates the list of rooms.

Note: The Auto Generate Rooms function creates rooms from an existing master schedule.

Once the list is created, you can go back to each room and modify names and other information.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Functions**. The Scheduling Functions page appears.
3. Click **Auto Create Rooms**. The Auto-Create Rooms page appears.
4. Use the following table to enter information in the fields:

Field	Description
Start Number	Enter the starting number for the room numbers.
Increment Number	Enter the value by which the room numbers increase from the starting number.
Number of Rooms	Enter the number of rooms that should be created.
Room Prefix	Enter a prefix for the room numbers (optional). This value can be alpha or numeric and will concatenate with room start number. For example, entering the prefix MA creates the room number MA23 for the math room 23.
Department	Click **Associate** to select the department for these rooms. Associating a room to a department does not limit the room to that department. To do this, see the field Department Use Only.
Building	Click **Associate** to select the building for these rooms (optional).
House	Click **Associate** to select the house for these rooms (optional).
Use for Scheduling	Select either **Yes** or **No** from the pop-up menu to indicate if these rooms should be used for scheduling purposes.
Room is Always Free	Select either **Yes** or **No** from the pop-up menu to indicate if these rooms are always free.

Department Use Only	Select either **Yes** or **No** from the pop-up menu to indicate if these rooms are to be used only by the associated department.
Facility Use Only	Select either **Yes** or **No** from the pop-up menu to indicate if these rooms are used for certain facilities, such as lab rooms.
Room Facilities	If you selected **Yes** for the Facility Use Only field, click **Associate** to select the facility or facilities for this room.
Room Maximum	Enter the maximum number of seats for this room.

5. Click **Submit**. The Rooms page appears. For more information about modifying room information, see *How to Edit a Room*.

How to Auto Fill Student Information

Use this function to fill in student information simultaneously for selected students. Student information that can be automatically filled includes next year grade, priority, and year of graduation.

You can set the next school indicator for all students before using this function, and you must set the next year grade indicator for returning twelfth graders before using this function. For more information, see *Next School Indicator*.

Note: The grade level entered affects all students for the grade level column selected whose next school indicator is set for the school submitting the information.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Functions**. The Scheduling Functions page appears.
3. Click **Auto Fill Student Information**. The Auto-Fill Student Info page appears.
4. Use the following table to enter information in the fields:

Field	**Description**
Next Year Grade	For each column, enter the next year grade to indicate which students' information to change. For example, enter 12 for eleventh graders who will be in the twelfth grade next year, and enter 12 in the next column for any returning twelfth graders.

Priority	Enter the scheduling priority for the students. For example, enter 1 for returning twelfth graders who need to be scheduled first, and enter a higher number for incoming ninth graders.
Schedule This Student	Select either **Yes** or **No** to indicate if the students in each column should be scheduled or not.
Year of Graduation	Enter the year of graduation to indicate in which school year the student will graduate. For example, enter **2009** for twelfth graders graduating at the end of the 2008-2009 school year.

5. Click **Submit**. The Auto-Fill Student Info page appears.

How to Auto Fill Course Information

Use this function to fill in course information simultaneously for selected courses. To automatically update course information, select courses (for example, by department) using the Update Selections function. For more information, see *Update Selections*.

When entering course information, use the pop-up menus to select No Change, Yes, or No for certain fields. All pop-up menus will have No Change as the default option. For entry fields, leave a field blank to not update existing course information. To clear any values in field, either enter 0 or select the Clear Value checkbox.

You can edit each course to enter individual information, such as facilities. When you edit a course, you cannot edit the Terms Per Year field unless you change the valid terms on the course page. If you use the Update Selections function to change the terms, this recalculation does not automatically occur; in that case, you must also use the Update Selections function to change the terms per year.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Functions**. The Scheduling Functions page appears.
3. Click **Auto Fill Course Information**. The Auto-Fill Course Info page appears.
4. Use the following table to enter information in the fields:

Field	**Description**

Apply To	Choose whether you want to apply the changes to all courses in the active catalog or only to the selected courses. By default, changes are only applied to the selected courses.
Schedule This Course	Choose **Yes** from the pop-up menu to indicate that these courses should be scheduled. Choose **No** to indicate that these courses should not be scheduled. Choose **No Change** to not affect the scheduling statuses of these courses.
Department	Click **Associate** to select the department for these courses. Select the **Clear Value** checkbox to remove department information for the selected courses.
Build Type	Build types define the shape of a course. Use the pop-up menu to select either **No Change** or one of the following options: • **Standard**: This course meets for the same number of periods every time it meets. For example, a course that meets every day for one period is standard, and a course that meets for one period every other day is also standard. • **Lab**: This is a standard course that meets for the same number of consecutive extra periods on certain days in the cycle. For example, a standard Chemistry course meets every day in a six-day cycle (Days A-F). Two days in the cycle, the class meets for two consecutive periods to complete an involved laboratory assignment. • **LabFloat**: This is a standard course that meets extra periods some days in the cycle, but the extra period is not consecutive to the course. For example, a Humanities course meets every day in a six-day cycle. One day during the cycle, the students attend a two-period lab in which they complete a community service assignment. The community service assignment does not have to occur directly before or after the Humanities course.
Maximum Enrollment	Enter the maximum number of students you want to schedule in sections of each course.

Target Number of Sections to Offer	Enter the number of sections to offer for each course. **Note:** To calculate this number manually, see *How to Define Scheduling Preferences*.
Number of Teacher Assignments	Enter the number of teacher assignments for each course. For example, if the school decides to offer four sections of Algebra, the engine requires that four teacher assignments are defined. As a result, Teacher A will have an assignment for one section, Teacher B will have an assignment for two sections, and Teacher C will have an assignment for one sections, totaling four teacher assignments. This tells the Scheduling Engine that four sections of Algebra must be built, and also tells the Engine who must teach those sections. **Note:** Only Build and Load scenarios allow for teacher assignments. Teacher assignments are not used by Load Only scenarios.
Frequency	Enter the number of times each course will meet per cycle.
Periods Per Meeting	Enter the number of periods each course will meet per day.
Lab Frequency	Enter the number of times each lab will meet per cycle.
Lab Periods Per Meeting	Enter the number of periods each lab will meet per day.
Repeats in Same Term	Choose **Yes** from the pop-up menu to indicate that these courses are offered more than once in the same term. Choose **No** to indicate that these courses should not be offered more than once in the same term. Choose **No Change** to not affect the scheduling statuses of these courses. **Note:** This setting does not affect the Repeats in Different Terms setting.
Repeats in Different Terms	Choose **Yes** from the pop-up menu to indicate that these courses can be offered more than once in different terms. Choose **No** to

	indicate that these courses cannot be offered more than once in different terms. Choose **No Change** to not affect the scheduling statuses of these courses. **Note:** This setting does not affect the Repeats in Same Terms setting.
Balance Terms	If the Repeats in Different Terms option is selected, use this pop-up menu to indicate if these courses should be offered evenly across all terms. For example, if a course is offered for three trimesters and you do not indicate that the terms should be balanced, the course could be offered twice in the first trimester, once in the second trimester, and not at all in the third.
Valid Start Periods	Select the checkboxes for the periods in which these courses can be offered. For example, a marching band course may always meet during the last period of the day. Select the **Clear Value** checkbox to remove valid start period information for the selected courses.
Valid Terms	Click **Associate** to select in which terms these courses are offered. Select the **Clear Value** checkbox to remove valid term information for the selected courses.
Facilities	Click **Associate** to select which facilities these courses use. Select the **Clear Value** checkbox to remove facility information for the selected courses.
Load Priority	Enter a load priority for these courses. The lower the number, the higher the priority during the load process.
Load Type	Use the pop-up menu to select the type of course for these courses: • **Academic** • **Elective**

Balance Priority	Use the pop-up menu to select the type of priority that should be used when loading these courses. • Section • Gender • Grade • Ethnic Code • House
Use Teams	Use the pop-up menu to indicate if these courses should be scheduled by associated teams.
Close at Max	Use the pop-up menu to indicate if these courses should close when enrollment reaches the maximum number of students specified in the Maximum Enrollment field.
Use Section Types	Use the pop-up menu to indicate if these courses should be scheduled by associated section types.
Don't Allow Substitutions	Use the pop-up menu to indicate if students should be scheduled in alternate courses.

5. Click **Submit**. The Changes Recorded page appears.

How to Auto Fill Teacher Information

Use this function to fill in teacher information simultaneously for selected teachers. To automatically update teacher information, select teachers using the Update Selections function. For more information about this function, see *Update Selections*.

When entering teacher information, use the pop-up menus to select No Change, Yes, or No for certain fields. All pop-up menus will have No Change as the default option. For entry fields, leave a field blank to not update existing teacher information. To clear any values in field, either enter 0 or select the Clear Value or Clear Room checkbox.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Functions**. The Scheduling Functions page appears.
3. Click **Auto Fill Teacher Information**. The Auto-Fill Teacher Info page displays.

4. Use the following table to enter information in the fields:

Field	Description
Apply To	Choose whether you want to apply the changes to all teachers who are ready to schedule or to the selected teachers only.
Department	Click **Associate** to select the department for these teachers. Select the **Clear Value** checkbox to remove any existing values in this field.
Preferred Room	Click **Associate** to select the room these teachers prefer. Select the **Clear Room** checkbox to remove any existing values in this field.
Maximum Consecutive Periods	Enter the maximum number of periods these teachers can teach in a row.
Schedule for Lunch	Select the checkbox if you want these teachers to be scheduled for a lunch period. For more information, see *Scheduled Lunch*.
Schedule This Teacher	Select either **Yes** or **No** to indicate if these teachers should be scheduled or not.
Is Always Free?	Select either **Yes** or **No** to indicate if these teachers are always free.

5. Click **Submit**. The Changes Recorded page appears.

Courses

To work with the courses that will be part of next year's schedule, you must first add any new courses you plan to offer and associate them with your school. See *New Courses*. Then, create a course catalog to make course selections available for student course requests. After creating a course catalog, you can edit or delete that catalog, depending on your needs. See *Course Catalogs*.

Note: It is possible for students to request a course that is not part of your course catalog if that course has been associated with your school.

Course relationships have consequences for how you manage new and modified courses. First, it is important to understand the ways to view courses and how those views are connected:

1. Course List (Start Page > District or School > Courses). This page lists all courses on the server and is the central point from which you can manage courses and course-related information at both the district and school level.
2. Available Courses for [Year] List (Start Page > School > Courses > Manage courses for this school). This page lists all courses on the server and is used to create new courses, as well as to make them active or inactive for the current school.
3. PowerScheduler Course Catalog (Start Page > PowerScheduler > Catalogs > Edit). This list matches what is listed on the PowerSchool School Course List. Indicate for each course if it is active for scheduling. When you submit this information, a new record is created for the course in a different table in PowerSchool's database. At that point, changes to courses listed in PowerSchool do not affect courses listed in PowerScheduler.
4. PowerScheduler School Course List (Start Page > PowerScheduler > Courses). This list includes the selected courses from the Scheduling Course Catalog. Selecting courses to be scheduled does not affect this list of courses.

In summary, view 4 is based on the selected courses of view 3, which, like view 2, is based on the selected courses of view 1. This means that to add a course to PowerScheduler, you must first add a course to the Available Courses for [Year] List (view 1). Then, in the Scheduling Course Catalog, select the checkbox next to the course and submit.

To change a course name but use same course number, there are two options. The first takes more thought but is easiest, whereas the second requires someone with the highest level of access to the database to make changes for you. Regardless of the option you choose, the current courses should not be modified at all if any of them are in use this school year by any school on the server. It is necessary to store grades using the courses' current names. Do not modify course names until you complete all necessary processes at the end of the school year. Also, changes made in PowerScheduler are void when you complete your master schedule and are ready to commit student schedules because the master schedule references courses in PowerSchool.

To change a course name but use same course number:

- Option 1: Leave everything as is and schedule using the old course name. After the end of the school year, change the course's name. This takes more thought because you must remember that you need to change the name at the end of the school year. Since you must change the course name regardless of which option you choose, no extra work is required.

- Option 2: Use DDA to search the SchedCourseCatalogs table for the course number. Be sure to search only within records belonging to your school and make a backup of your data file before proceeding. Then, change the course name. This affects the course name in PowerScheduler.

New Courses

Add any new courses before building or loading a master schedule.

Note: You cannot add a new course to your course list in PowerSchool's Scheduling area.

How to Add a New Course to the Course List (District)

Use the following procedure to create a new course. Once a course is created, it is available and active for both student course requests and inclusion in your course catalog for the selected schools and years.

Note: This procedure may also be performed when signed in to a school by choosing **School**, and then clicking **Courses**. If the **New Courses** button does not appear on the page, then the district may only allow new courses to be created at the district office. For more information, see *How to Edit Course Settings*.

1. On the start page, choose **District** under Setup in the main menu. The District Setup page appears.
2. Under Courses, click **Courses**. The Courses page appears.
3. Click **New Course**. The Create New Course page appears.
4. Use the following table to enter information in the fields:

Field	Description
Course Name	Enter the name of the course.
Course Number	Enter the number that will be used to identify this course.
Alternate Course Number	Enter an alternate course number if your school uses this field for state reporting or district purposes.

Associate Course with Schools	Indicate which schools you want this course to be made available to by doing one of the following: • To select a single school, click each school you want to associate. • To select multiple schools, press and hold COMMAND (Mac) or CONTROL (Windows) as you click each school. **Note:** By default all schools are selected. **Note:** This field only appears at the district level. If creating a new course at the school level, the new course is automatically associated only to the selected school.
Available School Years	Indicate which school years you want this course to be made available by doing one of the following: • To select a single year, click each year you want to associate. • To select multiple years, press and hold COMMAND (Mac) or CONTROL (Windows) as you click each year. **Note:** By default all current and future years are selected.
Credit Hours	Enter the number of credits a student receives for taking this course.
CIP Code	In some states, schools use CIP codes to identify courses as part of a state-managed vocational program. Enter this code, if applicable.
Vocational Class	Select the checkbox if this is a vocational course.
Credit Type	Enter the type of credit a student receives for passing this course, such as **MATH**, **ENG**, or **FINE**. You can then apply this credit to a graduation type.
Default Maximum Enrollment	Enter the maximum number of students that can be enrolled in this course.

Courses Notes	Enter descriptive text regarding the course or course enrollment, if any.
Grade Scale	Choose the grade scale from the pop-up menu. For more information, see *How to Assign Grade Scales to Courses*.
GPA Added Value Points	Enter any added value for the grade points, such as **1** for one additional grade point. You can also use fractions of a point. Most schools do not enter added values.
Exclude from GPA?	Select the option to either include or exclude the grade from the GPA calculation.
Exclude from Class Rank?	Select the option to either include or exclude the grade from the class rank calculation.
Exclude from Honor Roll?	Select the option to either include or exclude the grade from the honor roll calculation.
Use the Course for Lunch	Select the checkbox to indicate that this course will be used exclusively for scheduled lunches. Otherwise, deselect the checkbox. **Note:** For more information, see *Scheduled Lunch*.
Exclude on Report Cards/Transcripts	Select the checkbox to exclude all sections of this course from appearing on the schedule listing of Report Cards or the Transcript Object of Object reports. Otherwise, leave blank.

5. Click **Submit**. The new course appears on the Courses page.

How to Add a New Course to the Course List

1. On the start page, choose **School** under Setup in the main menu. The School Setup page appears.
2. Under Scheduling, click **Courses**. The Courses page appears.
3. Choose **Manage courses for this school**. The Available Courses for [Year] page appears.

4. Click **New**. The Create New Course page appears.
5. Enter information as needed. For detailed information, see *How to Add a New Course to the Course List*.
6. Click **Submit**. The new course appears on the Courses page.

Course Catalogs

Create the list of courses that your school will offer during the next school year. This list is referred to as the course catalog.

Courses in the course catalog are copied from the district level. Not all courses on the district course list are available for the catalog; only courses that appear on the school's Available Courses for [Year] page can be included. For more information, see *How to Edit Course Status*.

You can edit information in the course catalog without affecting the courses on the school's Available Courses for [Year] page. For example, you may want to change the credit hours for a course for scheduling purposes but revert to the course's real credit hours when committing schedules for the next school year. Once a master schedule is committed, the course information, including credit hours, is retrieved from the district level.

Note: You can have more than one course catalog, and it is not necessary to create a new catalog for each scheduling year. Course catalogs are associated with builds, and a catalog is only active when it is associated with the active build scenario. This also means that you can only edit courses in the catalog that is active. For more information, see *Build Scenarios*.

Note: When navigating through the course catalog pages, you may see a warning icon next to the **Courses Catalog** and the **Edit Course Catalog** links. The warning icon indicates there are unavailable courses related to the course catalog of the active build scenario.

How to Create a Course Catalog

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Course Catalogs** from the PowerScheduler menu. The Catalogs page appears.
3. Click **New**. The New Course Catalog page appears.
4. Use the following table to enter information in the fields:

Field	Description

Name	Enter a name for this catalog. For example, if you are creating the course catalog for a specific school year, you might call it **2008-2009**.
Description	Enter a description of the catalog. Enter no more than 80 characters in this field.

5. Click **Submit**. The new catalog appears on the Catalogs page.
6. Click **Edit Course Catalog** in the row of the catalog you created. The Course Catalog page appears.

   Note: If "Not active catalog" appears in the Edit Catalog column instead of "Edit Course Catalog," you must first make the new catalog the active catalog. Edit the current build scenario so that the new catalog is the active catalog. For more information, see *Build Scenarios*.

7. Deselect the checkbox next to each course you want to remove from this course catalog. By default, the checkboxes next to all of the courses available for scheduling at your school are selected. To sort the list, click **Course Name**, **Course Number**, or **Active Status**, which sorts the active (selected) courses first and the inactive (deselected) courses last.

   Note: Deselecting a course means that you will not be able to schedule that course for the upcoming schedule year, even if you have student course requests associated with it. Any student course requests will be automatically dropped from the scheduling process.

8. Click **Submit**. The Catalogs page appears.

   Note: You can edit the scheduling information for any of the courses within your active course catalog by clicking **Edit** in the Courses row. For more information, see *Build Scenarios*.

How to Edit a Course Catalog

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Course Catalogs** from the PowerScheduler menu. The Catalogs page appears.

3. Click the name of the catalog you want to edit. The Edit Course Catalog page appears.
4. Use the following table to enter information in the fields:

Field	Description
Name	Enter a name for this catalog. For example, if you are creating the course catalog for a specific school year, you might call it **2008-2009**.
Description	Enter a description of the catalog. Enter no more than 80 characters in this field.

5. Click **Submit**. The Catalogs page appears.

How to Edit Available Courses in the Course Catalog

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Course Catalogs** from the PowerScheduler menu. The Catalogs page appears.
3. Click **Edit Course Catalog**. The Course Catalog page appears.
4. Use the following table to enter information in the fields:

Field	Description
[Text]	The following informational text appears on the page: • This page lists courses in the course catalog (selected), as well as all available courses for this school and scheduling year not in the catalog (deselected). • To add or remove a course from the catalog, select or deselect the checkbox and click Submit. • Courses listed in black bold are available and active for live scheduling at this school for the designated scheduling year. • Warning icons indicate courses that are in the catalog, but not available for live scheduling at this school for the

	designated scheduling year. These courses must be made available in order to commit them in live schedules, and if not, should be removed from the course catalog after removing any related data in PowerScheduler. Examples of related data includes sections, class enrollments, teacher assignments, teacher recommendations, course requests, constraints, and course relationships. • If the district allows schools to change course availability, to edit availability for courses, use the Edit Availability for Schools and Years district level function, the Availability tab on the Course Edit page, or the Unavailable tab on the Courses for [year-year] page. • If the district does not allow schools to change course availability, to edit availability for courses, use the Edit Availability for Schools and Years district level function or the Availability tab on the Course Edit page at the district level. • To view all unavailable courses, go to the **Unavailable Courses** page.
Sort List By	Sort courses in the course catalog by clicking **Course Name**, **Course Number**, or **Active Status**.
[Course]	Do one of the following: • Select the checkbox next to each course you want to include in the course catalog. • Deselect the checkbox next to each course you want to remove from the course catalog.

5. Click **Submit**. The Catalogs page appears.

How to Edit Unavailable Courses in the Course Catalog

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Course Catalogs** from the PowerScheduler menu. The Catalogs page appears.
3. Click **Edit Course Catalog**. The Course Catalog page appears.

4. Click **Unavailable Courses.** The Unavailable Courses page displays all courses that are unavailable for the selected school and scheduling year.
5. Use the following table to enter information in the fields:

Field	Description
[Text]	The following informational text appears on the page: • This page lists all courses that are unavailable for the selected school and scheduling year. • Only available courses can be committed to the live side schedule. • Unavailable courses should only be included in the catalog if they will be made available prior to committing the schedule, or for the purpose of temporarily accessing them within PowerScheduler to remove related data. Examples of related data includes sections, class enrollments, teacher assignments, teacher recommendations, course requests, constraints, and course relationships. • To add or remove a course from the catalog, select or deselect the checkbox and click Submit. • If the district allows schools to change course availability, to edit availability for courses, use the Edit Availability for Schools and Years district level function, the Availability tab on the Course Edit page, or the Unavailable tab on the Courses for [year-year] page. • If the district does not allow schools to change course availability, to edit availability for courses, use the Edit Availability for Schools and Years district level function or the Availability tab on the Course Edit page at the district level. • To view all courses included in the course catalog, along with additional courses available for this school and scheduling year, select **View School Courses**.
Sort List By	Sort courses in the course catalog by clicking **Course Name** or **Course Number**.

[Course]	Select the checkbox next to each course you want to include in the course catalog.

6. Click **Submit**. The Course Catalog page appears.

How to Delete a Course Catalog

Deleting a course catalog deletes the following items related to that catalog: courses, teacher assignments, constraints, and course relationships. You cannot delete the active catalog. To inactivate a catalog so that it can be deleted, see *Build Scenarios*.

Note: This function does not delete courses from the school's Available Courses for [Year] page.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Course Catalogs** from the PowerScheduler menu. The Catalogs page appears.
3. Click the name of the catalog you want to delete. The Edit Course Catalog page appears.
4. Click **Delete**. The Delete Catalog page appears.
5. Select the checkbox if you are sure you want to delete this course catalog.
6. Click **Submit**. The Changes Recorded page appears.

Rooms Overview

Your school's layout and classrooms are essential parts of the scheduling process. Entering all of the necessary room information allows the system to consider the most efficient use of available space when building the master schedule.

When performing the *Schedule Parameters* function, you defined the departments and facilities within your school. Now it is time to enter the rooms. To each room, you can associate specific departments and facilities so that the system schedules courses in the appropriate locations.

Note: Only enter classrooms needed for next year's schedule. For example, if you know you are not going to hold classes in a particular room, do not enter its information in the system. If a room that you will not use next year is in the system, you can leave it there as long as you make it unavailable for scheduling. For more information, see *How to Edit a Room*.

To ensure that there is a place for each section of a course to meet, you must schedule them into classrooms. The system assigns courses to rooms based on the following priorities (listed from highest to lowest priority):

- The assigned teacher's preferred classroom
- Any classroom associated with the same department as the course being scheduled
- Any classroom associated with the same department as the assigned teacher
- Any classroom with an adequate number of seats

Note: If the course requires a special facility, the system considers rooms that provide the necessary facility only. If no facility is available, then the system cannot schedule the course.

Rooms

Define locations for courses so that the system best utilizes available space when building a master schedule. To create several rooms simultaneously, see *How to Auto Create Rooms*.

How to Filter the Rooms Page

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Rooms** from the PowerScheduler menu. The Rooms page appears.
3. If needed, click the **Filter** arrow to expand this section.

   Note: Click the **Filter** arrow again to collapse this section.

4. Use the following table refine your search:

Field	Description
Search	1. Enter search criteria in the field. 2. Click **Apply**. The page refreshes and display filtered results. **Note:** To remove all filter selections, click **Clear**.
[Column]	In addition to filtering by the Search field, you can filter by column headings. To filter by column headings:

	1. Click **+**. **Note:** The **+** appears shaded if all filters have been added. To delete a filter, click **-** next the filter. 2. From the first pop-up menu, choose one of the following: • **Department** • **Dept. Use Only** • **Description** • **Facilities** • **Fac. Use Only** • **Always Free** • **Max** • **Number** • **Scheduled** 3. Enter search criteria in the search field. **Note:** Use a comma-separated list for multiple values. 4. To add another filter, repeat Step 1 through Step 3. 5. Click **Apply**. The page refreshes and display filtered results. **Note:** To remove all filter selections, click **Clear**.

The following information appears:

Note: Click the name of a column to sort by that column in ascending order. Click again to sort in descending order. By default, rooms are sorted by Room Number, Department, and then Facility.

- **Number**
- **Description**
- **Department**
- **Matrix**
- **Facilities**
- **Max**
- **Scheduled**
- **Dept. Use Only**
- **Fac. Use Only**
- **Always Free**

How to Add a Room

Create a room for each space within your school that will be used for scheduling. This could include offices and libraries.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Rooms** from the PowerScheduler menu. The Rooms page appears.
3. Click **New**. The Add/Edit Room page appears.
4. Use the following table to enter information in the fields:

Field	Description
Room Number	Enter the room number.
Room Description	Enter a description of this room.
Department	Click **Associate** to select the department for this room. If you associate this room with a specific department, such as **Math**, the system will do its best to schedule math courses in this room. To ensure that this room will only hold Math courses, you must also select the **Department Use Only** checkbox. **Note:** Click Department to create or edit departments at your school.
Building	Click **Associate** to select this room's building. **Note:** Click Building to create or edit buildings at your school.
House	Click **Associate** to select this room's house. **Note:** Click House to create or edit houses at your school.
Use for Scheduling	Select the checkbox if you want the system to consider this classroom when it assigns courses to rooms. Otherwise, deselect the checkbox.

	For example, some rooms (such as the cafeteria) are not used for scheduling. Deselect the checkbox to indicate if the room is not to be scheduled. If this is a room that you want to leave in the system but will not be using for scheduling next year, deselect the checkbox.
Room is Always Free	If you select the checkbox, the system can schedule multiple courses in this room at the same time. This function is often used with gymnasiums. However, sometimes the Room Maximum field can cause problems, and it would make more sense to break the class into Gym 1 and Gym 2 if you know that the maximum number of courses taught in the gym is two. If you deselect the checkbox, only one course can be scheduled in this room per period.
Department Use Only	Select the checkbox if you want the system to schedule in this room only courses that belong to this room's department. If you deselect the checkbox, the system schedules mostly courses with the same department as the room. But it is possible for the system to schedule a course that belongs to another department into this room. This would happen if some departments need more space than others. **Note:** If you select the checkbox, do not select the Facility Use Only checkbox.
Facility Use Only	Select the checkbox to specify that the system can schedule only courses requiring the facilities you enter in the Room Facilities field in this room. **Note:** If not many courses require the facilities in this room and you select the checkbox, the system does not fully schedule the room; the room remains free rather than accommodating another course. If you deselect the checkbox, the system considers the facilities you enter in the Room Facilities field as suggestions. For example, assume the system needs to schedule the computer course Algorithms and Data Structure. Though the course does not

	require a computer lab facility, the system can schedule the course in the room with the computer lab if it is free. **Note:** If you select the checkbox, do not select the Department Use Only checkbox.
Room Facilities	Click **Associate** to select the facilities of this room, if any. Facilities are any special characteristics of a room that courses may require. For example, a room might have a kitchen, computer lab, stage, or wood shop. Most classrooms do not have room facilities. There is a limit of 50 characters that can be entered in this field. **Note:** Click **Facilities** to create or edit facilities at your school.
Room Maximum	Enter a number to determine the maximum number of students that this room can accommodate. The capacity of the room limits the courses that the system can schedule there. For example, if you enter **25**, the system cannot schedule a course section with a maximum of 35 students into this room.

5. Click **Submit**. The Rooms page appears.

   Next, you might want to assign a course to a particular room. For example, maybe your school has several biology labs, and Biology 1 needs to be held in the classroom closest to the teacher's preferred room. To force a course to schedule in a particular room, define a Course Room constraint. For more information, see *Build Constraints*.

How to Edit a Room

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Rooms** from the PowerScheduler menu. The Rooms page appears.
3. To filter the page, see *How to Filter the Rooms Page*.
4. Click the number of the room you want to modify. The Add/Edit Room page appears.
5. Use the following table to edit information in the fields:

Field	Description
Room Number	Enter the room number.
Room Description	Enter a description of this room.
Department	Click **Associate** to select the department for this room. If you associate this room with a specific department, such as **Math**, the system will do its best to schedule math courses in this room. To ensure that this room will only hold Math courses, you must also select the **Department Use Only** checkbox. **Note:** Click Department to create or edit departments at your school.
Building	Click **Associate** to select this room's building. **Note:** Click Building to create or edit buildings at your school.
House	Click **Associate** to select this room's house. **Note:** Click House to create or edit houses at your school.
Use for Scheduling	Select the checkbox if you want the system to consider this classroom when it assigns courses to rooms. Otherwise, deselect the checkbox. For example, some rooms (such as the cafeteria) are not used for scheduling. Deselect the checkbox to indicate if the room is not to be scheduled. If this is a room that you want to leave in the system but will not be using for scheduling next year, deselect the checkbox.
Room is Always Free	If you select the checkbox, the system can schedule multiple courses in this room at the same time. This function is often used with gymnasiums. However, sometimes the Room Maximum field can cause problems, and it would make more sense to break the class into Gym 1 and Gym 2

	if you know that the maximum number of courses taught in the gym is two. If you deselect the checkbox, only one course can be scheduled in this room per period.
Department Use Only	Select the checkbox if you want the system to schedule in this room only courses that belong to this room's department. If you deselect the checkbox, the system schedules mostly courses with the same department as the room. But it is possible for the system to schedule a course that belongs to another department into this room. This would happen if some departments need more space than others. **Note:** If you select the checkbox, do not select the Facility Use Only checkbox.
Facility Use Only	Select the checkbox to specify that the system can schedule only courses requiring the facilities you enter in the Room Facilities field in this room. **Note:** If not many courses require the facilities in this room and you select the checkbox, the system does not fully schedule the room; the room remains free rather than accommodating another course. If you deselect the checkbox, the system considers the facilities you enter in the Room Facilities field as suggestions. For example, assume the system needs to schedule the computer course Algorithms and Data Structure. Though the course does not require a computer lab facility, the system can schedule the course in the room with the computer lab if it is free. **Note:** If you select the checkbox, do not select the Department Use Only checkbox.
Room Facilities	Click **Associate** to select the facilities of this room, if any. Facilities are any special characteristics of a room that courses may require. For example, a room might have a kitchen, computer lab, stage, or wood shop. Most classrooms do not have room facilities.

	There is a limit of 50 characters that can be entered in this field. **Note:** Click **Facilities** to create or edit facilities at your school.
Room Maximum	Enter a number to determine the maximum number of students that this room can accommodate. The capacity of the room limits the courses that the system can schedule there. For example, if you enter **25**, the system cannot schedule a course section with a maximum of 35 students into this room.

6. Click **Submit**. The Rooms page appears.

How to Delete a Room

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Rooms** from the PowerScheduler menu. The Rooms page appears.
3. To filter the page, see *How to Filter the Rooms Page*.
4. Click the number of the room you want to delete. The Add/Edit Room page appears.
5. Click **Delete**. The Rooms page appears.

How to View the Room Matrix

The room matrix function creates a visual, graphical representation of a room's schedule. This schedule can be printed, though not for more than one room at a time.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Rooms** from the PowerScheduler menu. The Rooms page appears.
3. To filter the page, see *How to Filter the Rooms Page*.
4. Click **View** next to the room for which you want to view the room matrix. The room matrix displays a room's schedule for each period and day in each term. Identical colors on the schedule indicate the same section. A blank block means that nothing is scheduled for that block in that term. If all matrix preferences are selected, each block includes the following information:
    - **Name of the course**
    - **Course number**

- **Section number**
- **Name of the teacher for this section**
- **Expression, which is the combination of periods and days**
- **Term**
- **Number of students scheduled for this section**
- **Maximum enrollment for this section**

Student Information

As part of the process of preparing to build your master schedule, you need to confirm that the appropriate students are available in your database for scheduling. Before the system can build the schedule, you must enter detailed scheduling information for each student.

Update the following fields for all students who will attend your school next year:

- *Next School Indicator*
- *Next Year Grade*
- *Priority*
- *Year of Graduation*
- *Schedule This Student*

Update the following fields for students who will not attend your school next year:

- Schedule This Student
- Next School Indicator

In addition to the required settings, there are a number of optional settings you can use to assign students to houses, buildings, and teams.

It is easy to update for a group of students many of the required scheduling preferences fields, such as Next Year Grade and Schedule This Student. In certain circumstances, you may need to change or update a field for an individual student.

Warning: If you use the Update Selections tool to mass update a field value, that change cannot be undone; the new value appears in the field for all of the selected students. To remove the new value, you need to either manually change the value for each student's record or perform another Update Selections function to reverse your change.

Next Year Grade

Set the Next Year Grade field for all of the students who will attend your school next year. You do not need to set this field for students who are graduating from your school.

How to Set the Next Year Grade Field for a Student

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.
3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. Click the name of the student you want to work with from the students menu.
5. Do one of the following:
    - Choose **Preferences** from the pop-up menu.
    - Click the **Preferences** tab.

    The Edit Scheduling Preferences page appears.

6. Enter a grade level number in the **Next Year Grade** field.
7. Click **Submit**. The Changes Recorded page appears.

How to Set the Next Year Grade Field for an Entire Grade Level

Repeat this procedure for each appropriate grade level. Also, while you are working with a particular grade level, you may want to update the scheduling priority (Sched_Priority) and year of graduation (Sched_YearOfGraduation) fields in addition to the next year grade field (Sched_NextYearGrade).

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Functions** from the PowerScheduler menu. The Scheduling Functions page appears.
3. Click **Update Selections**. The Update Selections page appears.
4. Choose **Grade_Level** from the pop-up menu below Search Students.
5. Choose **=** from the pop-up menu in the second field.
6. Enter in the next field the number that represents the appropriate grade level, such as **9**.
7. Click **Search all records in this school**. The Update Selections page displays the new number of records.
8. Click **Modify Records**. The Modify Records page appears.
9. Choose **Sched_NextYearGrade** from the pop-up menu.
10. Enter in the next field the grade level number you want to assign to these students, such as **10**.
11. Click **Modify Selected Records**. The Update Selections page appears.

Priority

You can assign scheduling priorities to students for the system to follow when loading student schedules. Students can share the same priority.

For example, if there are more requests than available spots, you might want the system to schedule graduating students first because it is their last chance to take the courses they request. If this is the case, assign all twelfth graders a priority of 10, all eleventh graders a priority of 20, all tenth graders a priority of 30, and all ninth graders a priority of 40.

Note: Priority numbers can range from 1 to 999. The lower the number, the higher the priority. Some schools set priorities in increments of 10 to accommodate future modifications. Also, starting with 10 as the default priority number allows for special cases that need the highest priority to be given a number lower than 10.

To assign a priority to an entire grade level, see *How to Set the Next Year Grade Field for an Entire Grade Level*.

How to Assign Priority to a Student

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.
3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. Click the name of the student you want to work with from the students menu.
5. Do one of the following:
    - Choose **Preferences** from the pop-up menu.
    - Click the **Preferences** tab.

   The Edit Scheduling Preferences page appears.

6. Enter a number in the **Priority** field.
7. Click **Submit**. The Changes Recorded page appears.

Year of Graduation

Set the Year of Graduation field for all of the students who will attend your school next year. Setting the year of graduation for any new registers and incoming students from previous grades reduces future scheduling work and provides another way to perform advanced student searches. You do not need to set this field for graduating students.

To set the year of graduation for an entire grade level, see *How to Set the Next Year Grade Field for an Entire Grade Level*.

How to Set the Year of Graduation for a Student

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.
3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. Click the name of the student you want to work with from the students menu.
5. Do one of the following:
    - Choose **Preferences** from the pop-up menu.
    - Click the **Preferences** tab.

    The Edit Scheduling Preferences page appears.

6. Enter a number in the **Year of Graduation** field, such as **2012**.
7. Click **Submit**. The Changes Recorded page appears.

Schedule This Student

Let the system know which of your students you want to include in the scheduling process. If you do not indicate that you want to schedule a student who has made course requests, the system will be unable to schedule that student.

Not only do you have to select the Schedule This Student checkbox to include the appropriate students, but also you must exclude graduating students by deselecting the Schedule This Student checkbox.

Though you can indicate that you want to schedule an individual student, you may prefer to modify this setting for a group of students.

How to Schedule an Individual Student

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.
3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. Click the name of the student you want to work with from the students menu.

5. Do one of the following:
    - Choose **Preferences** from the pop-up menu.
    - Click the **Preferences** tab.

    The Edit Scheduling Preferences page appears.

6. Select the **Schedule This Student** checkbox.
7. Click **Submit**. The Changes Recorded page appears.

How to Schedule All of Next Year's Students

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Functions** from the PowerScheduler menu. The Scheduling Functions page appears.
3. Click **Update Selections**. The Update Selections page appears.
4. Choose **Grade_Level** from the pop-up menu in the first field under the Search Students heading.

    Note: if the Search Students heading does not appear, choose **Students** from the Current Table pop-up menu.

5. Choose **<** from the pop-up menu in the second field.
6. Enter in the last field the number that represents the highest grade level at your school, such as **12**.
7. Click **Search all records in this school**. The Update Selections page displays the new number of records.
8. Click **Modify Records**. The Modify Records page appears.
9. Choose **Sched_Scheduled** from the pop-up menu.
10. Enter **True** in the next field to indicate that you want these students to be included in the scheduling process.
11. Click **Modify Selected Records**. The Update Selections page appears.

How to Exclude Graduating Students from Scheduling

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Functions** from the PowerScheduler menu. The Scheduling Functions page appears.
3. Click **Update Selections**. The Update Selections page appears.
4. Choose **Grade_Level** from the pop-up menu in the first field under the Search Students heading.

Note: if the Search Students heading does not appear, choose **Students** from the Current Table pop-up menu.

5. Choose **=** from the pop-up menu in the second field.
6. Enter in the last field the number that represents the highest grade level at your school, such as **12**.
7. Click **Search all records in this school**. The Update Selections page displays the new number of records.
8. Click **Modify Records**. The Modify Records page appears.
9. Choose **Sched_Scheduled** from the pop-up menu.
10. Enter **False** in the next field to indicate that you do not want these students to be included in the scheduling process.
11. Click **Modify Selected Records**. The Update Selections page appears.

Optional Scheduling Preferences

The following fields on the Edit Scheduling Preferences page are optional: Buildings, Houses, and Teams. It is possible that your school uses none, some, or all of these fields.

How to Assign a Student to a Building

If your school uses buildings, you should have created them using the section *Schedule Parameters*. Now you can assign students to those buildings.

To complete this task, you must know exactly what these buildings are named in the system. Find this information by choosing Buildings under the Parameters heading from the PowerScheduler menu.

To assign a group of students to a building, see *How to Assign a Group of Students to a Building, House, or Team*.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.
3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. Click the name of the student you want to work with from the students menu.
5. Do one of the following:
    - Choose **Preferences** from the pop-up menu.
    - Click the **Preferences** tab.

   The Edit Scheduling Preferences page appears.

6. Click **Associate** to select the name of the appropriate building in the Next Year Campus/Building field.
7. Click **Submit**. The Changes Recorded page appears.

How to Assign a Student to a House

If your school uses houses, you should have created them using the section *Schedule Parameters*. Now you can assign students to those houses.

To complete this task, you must know exactly what these houses are named in the system. Find this information by choosing Houses under the Parameters heading from the PowerScheduler menu.

To assign a group of students to a house, see *How to Assign a Group of Students to a Building, House, or Team*.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.
3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. Click the name of the student you want to work with from the students menu.
5. Do one of the following:
    - Choose **Preferences** from the pop-up menu.
    - Click the **Preferences** tab.

    The Edit Scheduling Preferences page appears.

6. Click **Associate** to select the name of the appropriate house in the Next Year House field.
7. Click **Submit**. The Changes Recorded page appears.

How to Assign a Student to a Team

If your school uses teams, you should have created them using the section *Schedule Parameters*. Teams are either static or dynamic. If you are using static teams, you must assign each student to a particular team, either individually or in groups.

To complete this task, you must know exactly what these teams are named in the system, but you do not need to know the number of the team. The team number appears next to the Next Year Team field after you complete the following procedure. Find the name of the team by choosing Team under the Parameters heading from the PowerScheduler menu. For more information, see *Teams*.

To assign a group of students to a team, see *How to Assign a Group of Students to a Building, House, or Team*.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.
3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. Click the name of the student you want to work with from the students menu.
5. Do one of the following:
    - Choose **Preferences** from the pop-up menu.
    - Click the **Preferences** tab.

   The Edit Scheduling Preferences page appears.

6. Choose the appropriate team in the **Next Year Team** field from the pop-up menu.

   Note: If there is a number to the right of the blank **Next Year Team** pop-up menu, the student was previously associated with a team at a different school. You must clear the **Next Year Team** field using the *Update Selection* function.

7. Click **Submit**. The Changes Recorded page appears.

How to Assign a Group of Students to a Building, House, or Team

Use this procedure to assign a group of students to a building, house, or team.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Functions** from the PowerScheduler menu. The Scheduling Functions page appears.
3. Click **Update Selections**. The Update Selections page appears.
4. Click **Select Records by Hand**. The Select Records By Hand: Students page appears.
5. Press and hold COMMAND (Mac) or CONTROL (Windows) and click the names of the students you want to assign to a particular building.
6. Click **Submit**. The Update Selections page appears.
7. Click **Modify Records**. The Modify Records page appears.

8. Choose **Sched_NextYearBuilding** from the pop-up menu. If assigning students to a house, choose **Sched_NextYearHouse**. If assigning students to a team, choose **Sched_NextYearTeam**.
9. Enter the name of the building, house, or team into which you want to assign these students in the next field. Enter the name exactly as it appears in the system.
10. Click **Modify Selected Records**. The Update Selections page appears.

Student Schedule Demographics

Use the Demographics page to view student information in the scheduling area. To edit the student's demographic information, see *Demographics*.

How to View Student Schedule Demographics

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.
3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. Click the name of the student you want to work with from the students menu.
5. Do one of the following:
    - Choose **Demographics** from the pop-up menu.
    - Click the **Demographics** tab.

   The Demographics page appears.

Graduation Plan Progress

Use the Graduation Plan Progress page in the schedule area to view information about a student's four-year graduation plan, any post-secondary plans, and the progress of each of those plans.

Note: This procedure may also be performed via **Start Page > Student Selection > Graduation Plan Progress**.

How to View a Student's Graduation Plan Progress

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.

3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. Click the name of the student you want to work with from the students menu.
5. Do one of the following:
    - Choose **Grad Planner** from pop-up menu.
    - Click the **Grad Planner** tab.

The Graduation Plan Progress page displays the following information for each plan:

Field	Description
Graduation Plan	The name of the graduation plan. To view additional information: 1. Click the name of the graduation plan. The [Graduation Plan] drawer opens. 2. Review information. 3. Click **Close**.
Graduation Plan	The name of the graduation plan. To view additional information: 1. Click the name of the graduation plan. The [Graduation Plan] drawer opens. 2. Review information. 3. Click **Close**.
Required Tests	
Test Name	The name of a required test for this graduation plan to track test scores, such as ACT, STAR, etc.
Action	If the **Allow Waiver** checkbox on the Edit Graduation Plan Test Requirements page has been enabled, you can waive the required test. To add a waiver to a required test, see *How to Add a Required Test Waiver*. To edit a waiver for a required test, see *How to Edit a Required Test Waiver*.

	To delete a waiver from a required test, see *How to Delete a Required Test Waiver*.
Attempts	The number of times the student has taken the required test.
Completed	Indicates whether the student has passed, failed, waived, or has not taken the required test.
Subjects Groups	
Subject Group	The name of the subject group within the graduation plan used to track credit hours for a specific subject area. To view additional information: 1. Click the name of a subject group. The [Subject Group] drawer opens. 2. Review information. 3. Click **Close**.
[Waiver]	If the **Allow Waiver** checkbox on the Edit Graduation Plan Requirement page has been enabled for a subject group, you can waive graduation requirements for students within the subject group. To add a waiver to a subject group, see *How to Add a Subject Group Waiver*. To edit a waiver for a subject group, see *How to Edit a Subject Group Waiver*. To delete a waiver from a subject group, see *How to Delete a Subject Group Waiver*.
Earned	The total number (and individual number) of credits for courses within the subject group that the student has earned.
Enrolled	The total number of courses within the subject group that the student is currently enrolled in.

Requested	The total number (and individual number) of credits for courses within the subject group that the student has requested.
Waived Credits	The total number of credits within the subject group that can be waived.
Applied Waiver Credits	The total number of credits within the subject group that have be waived.
Required	The total number of credits within the subject group that are required.
Progress	The total number of credits within the subject group that are in progress. Progress is indicated by the use of a color-coded bar: • Dark green indicates completed credits. • Green indicates current enrollments. • Blue indicates waived credits. • Yellow indicates requested credits.
[Checkmark]	A green checkmark indicates that a requirement has been completely satisfied with earned credits.

How to Add a Required Test Waiver

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.
3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. Click the name of the student you want to work with from the students menu.
5. Do one of the following:
   - Choose **Grad Planner** from pop-up menu.
   - Click the **Grad Planner** tab.

   The Graduation Plan Progress page appears.

6. In the Required Tests section, click the **Plus (+)** button next to the required test for which you want to add a waiver. The Add Waiver drawer opens.
7. Use the following table to enter information in the fields:

Field	Description
Test Name	The name of a required test.
Waiver Type	Choose a waiver type from the pop-up menu.
Waiver Reason	Choose a waiver reason from the pop-up menu.
Waiver Source	Choose a waiver source from the pop-up menu.
Waiver Date	Indicate the date the waiver is effective.
Authorized By	Choose the name of the person authorizing the waiver from the pop-up menu.

8. Click **Submit**. The Add Waiver drawer closes.

How to Edit a Required Test Waiver

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.
3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. Click the name of the student you want to work with from the students menu.
5. Do one of the following:
    - Choose **Grad Planner** from pop-up menu.
    - Click the **Grad Planner** tab.

   The Graduation Plan Progress page appears.

6. In the Required Tests section, click the **Pencil** icon next to the required test for which you want to edit a waiver. The Edit Waiver drawer opens.
7. Edit as needed. For detailed field descriptions, see *How to Add a Required Test Waiver*.

8. Click **Submit**. The Edit Waiver drawer closes.

How to Delete a Required Test Waiver

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.
3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. Click the name of the student you want to work with from the students menu.
5. Do one of the following:
    - Choose **Grad Planner** from pop-up menu.
    - Click the **Grad Planner** tab.

    The Graduation Plan Progress page appears.

6. In the Required Tests section, click the **Pencil** icon next to the required test for which you want to delete a waiver. The Edit Waiver drawer opens.
7. Click **Delete**.
8. Click **Confirm Delete**. The Edit Waiver drawer closes.

How to Add a Subject Group Waiver

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.
3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. Click the name of the student you want to work with from the students menu.
5. Do one of the following:
    - Choose **Grad Planner** from pop-up menu.
    - Click the **Grad Planner** tab.

    The Graduation Plan Progress page appears.

6. In the Subject Groups section, click the **Plus (+)** button next to the subject group for which you want to add a waiver. The Add Waiver drawer opens.
7. Use the following table to enter information in the fields:

Field	Description
Graduation Plan	The name of the graduation plan.
Subject Group	The name of the subject group.
Path to Node	The location of the subject group within the subject group list.
Waiver Type	Choose a waiver type from the pop-up menu.
Waiver Reason	Choose a waiver reason from the pop-up menu.
Waiver Source	Choose a waiver source from the pop-up menu.
Elective Subject Group	Choose an elective subject group from the pop-up menu.
Waiver Date	Indicate the date the waiver is effective.
Credit Waived	Indicate the number of credits to waive.
Authorized By	Choose the name of the person authorizing the waiver from the pop-up menu.

8. Click **Submit**. The Add Waiver drawer closes.

How to Edit a Subject Group Waiver

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.
3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. Click the name of the student you want to work with from the students menu.
5. Do one of the following:
    - Choose **Grad Planner** from pop-up menu.

- Click the **Grad Planner** tab.

The Graduation Plan Progress page appears.

6. In the Subject Groups section, click the **Pencil** icon next to the subject group for which you want to edit a waiver. The Edit Waiver drawer opens.
7. Edit as needed. For detailed field descriptions, see *How to Add a Waiver*.
8. Click **Submit**. The Edit Waiver drawer closes.

How to Delete a Subject Group Waiver

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.
3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. Click the name of the student you want to work with from the students menu.
5. Do one of the following:
    - Choose **Grad Planner** from pop-up menu.
    - Click the **Grad Planner** tab.

The Graduation Plan Progress page appears.

6. In the Subject Groups section, click the **Pencil** icon next to the subject group for which you want to delete a waiver. The Edit Waiver drawer opens.
7. Click **Delete**.
8. Click **Confirm Delete**. The Edit Waiver drawer closes.

- *Graduation Planner*

Schedule Graduation Check

Use the Graduation Progress page in the schedule area to view information about a student's progress toward graduation. View the required classes and class categories, required credit hours, number of credit hours completed and currently in progress, and number of credit hours needed to meet graduation requirements.

How to View Schedule Graduation Check

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.
3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. Click the name of the student you want to work with from the students menu.
5. Do one of the following:
    - Choose **Grad Progress** from the pop-up menu.
    - Click the **Grad Progress** tab.

   The Graduation Progress page appears.

6. Select the appropriate graduation requirement set from the pop-up menu. The Graduation Progress page displays the student's progress towards the requirements for that graduation requirement set.

Student Schedule Matrix

The student matrix function creates a visual, graphical representation of a student's schedule. The matrix displays "100% Scheduled" when the schedule is complete. This schedule can be printed, though not for more than one student at a time.

You can also use the matrix to manually enroll students in courses based on their course requests. For more information, see *How to Manually Schedule Students*.

How to View the Student Schedule Matrix

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.
3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. Click the name of the student you want to work with from the students menu.
5. Do one of the following:
    - Choose **Matrix** from the pop-up menu.
    - Click the **Matrix** tab.

   The Schedule Matrix page displays the percentage scheduled calculations for the student:

- % Scheduled - Percentage of requests successfully filled
- % Core Scheduled - Percentage of requests for core classes successfully filled
- % Primary Requests Satisfied - Percentage of primary requests (non-alternate requests) that were successfully filled
- % Total Requests Satisfied - Percentage of total requests including alternate requests that were filled

The schedule matrix displays the student's schedule for each period and day in each term. Identical colors on the schedule indicate the same section. A blank block means that nothing is scheduled for that block in that term. If all matrix preferences are selected, each block includes the following information:

- Course name
- Course number
- Section number
- Teacher name
- Room number
- Expression, which is the combination of periods and days
- Year term

How to Set Student Schedule Matrix Preferences

Indicate what type of information you want to display on the student schedule matrix. Though you can navigate to the Student Schedule Matrix Preferences page from an individual student's schedule matrix, the settings you select apply to all student schedule matrices.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.
3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. Click the name of the student you want to work with from the students menu.
5. Do one of the following:
    - Choose **Matrix** from the pop-up menu.
    - Click the **Matrix** tab.

    The Schedule Matrix page appears.

6. Click **Matrix Preferences**. The Student Schedule Matrix Preferences page appears.
7. Use the following table to enter information in the fields:

Field	Description
Course Name	Select the checkbox to display the course name.
Course Number.Section Number	Select the checkbox to display the course and section numbers.
Teacher Name	Select the checkbox to display the teacher name.
Room	Select the checkbox to display the room number.
Expression Term	Select the checkbox to display the expression, which is the period and day combination.

8. Click **Submit**. The Schedule Matrix page displays the items selected on the Student Schedule Matrix Preferences page.

Student Course Requests

Student course requests are critical to scheduling, whether you use PowerScheduler or Automated Walk-In (AWI) scheduling. During the PowerScheduler Build process, for example, Student Course Requests are utilized to determine how many sections of a course are required. During the Scheduler Load process or when using AWI scheduling, the Requests are used to place the students into their desired or required courses. Requests can also be used to make PowerScheduler and AWI scheduling load students into selected sections of a course.

When using PowerScheduler to build a master schedule or load students into courses, the goal is to satisfy as many student course requests and to have the most balanced schedule possible. Both PowerScheduler and AWI scheduling utilize student course requests when creating Master Schedules or Student Schedules.

Before creating student course request pages, some preparation is required. This involves setting up the schools on the PowerSchool server for the upcoming scheduling year, setting student scheduling preferences, adding any new courses, collecting the appropriate grade-level requirement information, and creating course groups and student request screens. Once complete, you can then begin building or loading schedules for the next school year.

The student course request process involves several steps. Complete these steps in the following order:

1. Create a scenario for each school before using PowerScheduler to build master schedules or load student schedules for each new scheduling year. It is recommended that you use Auto Schedule Setup to create a scenario for all schools in your district, whether or not the school will use PowerScheduler for scheduling purposes. That way, the appropriate students and their course requests will appear in the correct schools during the scheduling process. For more information, see *Auto Scheduler Setup*.
2. Set the schedule year for the upcoming year at all schools on the PowerSchool server. Approximate start and end dates for the new scheduling year will be required; these can be modified later, if necessary. For more information, see *How to Set the Schedule Year*.
3. Set the Next School, Next Year Grade, and Schedule This Student indicators for all active students using the Student Field Value and Next School group functions or by setting each student individually from the student's Schedule Setup page. These fields, with the exception of Next School, may also be mass-filled for each school using the Auto Fill Student Information function in PowerScheduler. Note that the Next School indicator must be set before using this function for those students who will be scheduled. For more information, see *How to Auto Fill Student Information*.
4. Add new courses to the Available Courses for [Year] page at any schools that will be using them for scheduling, then activate the courses in the course catalogs. For more information, see *Course Catalogs*.
5. Collect appropriate grade-level information. For more information about what information to gather, see *Grade-Level Requirements*.
6. Create course groups. For more information, see *Course Groups*.
7. Create student course request pages. For more information, see *Student Course Request Pages*.
8. Enter student course requests. For more information, see *Student Course Request Entry*.

Grade-Level Requirements

Determine the individual course requirements at your school, such as the names of required courses and number of credits students must take in each grade level. Having all of this information readily available for reference will make it much easier to create the student course request pages.

Collect the following information for each grade level:

- Required courses

- Number of credits that must be taken
- Possible semester elective courses
- Possible year-long elective courses
- Possible no-credit courses
- Number of terms for each request
- Before- or after-school courses
- Possible lunch periods

The following is an example of what you might collect for a ninth-grade request page:

Information to Collect	**Example**
Required courses	• One semester of each of the following: Software Applications 1, Software Applications 2, General Science 1, General Science 2, Health, Word Processing • Two semesters of English: English 9, English 9 Honors, or English 9 Basic Skills • Two semesters of math: Consumer Math, Pre-Algebra, Algebra I, Algebra II, or Geometry
Number of credits that must be taken	Ninth graders must take 7 full credits (14 semester classes)
Possible semester electives	Woods I, Woods II, Beginning Pottery, Art I, Art II, Beginning Foods, Fitness for Life (PE), any other Physical Education class, any computer class
Possible year-long electives	Band, Chorus, Audition Choir, any first-year Foreign Language, Agriculture I, Horticulture I
Possible no-credit courses	Only students with special permission can take no-credit periods: Study Hall, Work Experience, released time for religious or other academic classes, Independent Study
Number of terms for each request	Each request will represent one semester of course material

Before- or after-school courses	No class will be offered to ninth graders before or after school
Possible lunch periods	Lunch is not part of the ninth grade student schedule

Course Groups

To make it easier for students, parents, or staff members to enter requests, you have the option of creating course groups. Course groups represent the courses that are available to a student for a specific request.

For example, when eighth-grade students select a ninth-grade elective course for the next school year, they are presented with a list of valid ninth-grade elective course options. Students must make their selection from the list of courses that you determine are valid for a particular selection.

Note: It is recommended that course groups for scheduling use should only contain courses that require the same number of student course requests. For example, you should not combine single semester courses with year-long courses, as this could lead to an inaccurate count of requests and credit hours.

Create the lists by making a course group for all predetermined requirements. For example, in the case that you need to create six course groups for a particular grade level, you might create three groups for core courses, one for semester electives, one for year-long electives, and one for no credit electives.

Course group	Example
Core courses	Software Application I and II, General Science 1 and 2, Health, Word Processing English 9: English 9, Honors, Basic Skills Mathematics 9: Consumer Math, Pre-Algebra, Algebra I, Algebra II, Geometry
Semester electives	Woods I, Woods II, Beginning Pottery, Art I, Art II, Beginning Foods, Fitness for Life (PE), any other Physical Education class, any computer class

Yearlong electives	Band, Chorus, Audition Choir, any first-year Foreign Language, Agriculture I, Horticulture I
No credit electives	Study Hall, Work Experience, Released Time, Independent Study

How to Create a Course Group

Repeat this process for all course groups required for each grade level or request type at your school.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Requesting, choose **Course Groups** from the PowerScheduler menu. The Course Groups page appears.
3. Choose in which order you want courses to be listed on student course request pages, either by course name or course number, from the pop-up menu.
4. Click **New** in the courses menu. The Edit Course Group page appears.
5. Use the following table to enter information in the fields:

Field	Description
Name	Enter a name for the course group. All course groups and graduation requirement sets must have unique names in all schools. **Note:** If there are multiple schools on your server, you may want to create a system for naming your course groups so that they sort in a certain way. For example, you might call the course group containing Apple Grove High School's ninth-grade core courses **AGHS-9-Core Courses**. If you followed this system, all of your schools would sort together, as would the grade levels within them.
Type	Choose the type of course group from the pop-up menu: • **Both**: Course group is for both scheduling and graduation requirement purposes. Existing groups are set to Both by default.

	• **Scheduling Only**: Course group is used for scheduling purposes only. • **Graduation Set Only**: Course group is used for graduation requirement purposes only.
Applies to	Choose whether you want to apply the course group to all schools or only to the current school. By default, course groups are only applied to the current school.

6. Select the checkbox next to the name of each course that should belong to this group.
7. Click **Submit**. The Course Groups page appears.

How to Delete a Course Group

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Requesting, choose **Course Groups** from the PowerScheduler menu. The Course Groups page appears.
3. Choose the course group you want to edit from the courses menu. The Edit Course Group page appears.
4. Click **Delete**.
5. Click **Confirm Delete**. The Course Groups page appears.

Student Course Request Pages

Create course requirements and student course request pages for each grade level in the school. The course request pages contain courses you select for the various course groups from which students can make their selections. The request pages require students to select only courses and electives that have been approved for their grade level. If you need to make an exception, you can do so manually. For more information about grade-specific requirements, see *Requirements*.

Course Request Screens are relevant to whatever is selected as the scheduling year. The scheduling year also determines which Request Screen appears to parents and students. For example, if the current school year is 2011-2012 and the schedule year is set to 2012-2013, students who are in tenth grade during 2011-2012 will use the Grade 11 request screen. For more information, see *How to Set the Schedule Year*.

When creating a year, the corresponding registration records from the previous year are copied to the new year. If registration records already exist for the school and year, then the registration records are not copied.

How to Create a Request Screen in PowerScheduler

Because course requirements vary for each grade level, you can create new or edit existing course request pages for each grade level in your school. The Next School Indicator field points to the school students will attend next year. For example, a school district consists of two high schools and three junior high schools. An eighth grader entering student course requests will view the request page for the high school set as his or her next school. Other eighth graders, whose next school is set to the other high school, would view a different request page.

Note: It is important to set all students' next school indicator, even if they stay at the same school next year. For more information, see *Student Information*.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Requesting, choose **Screen Setup** from the PowerScheduler menu. The Requesting Setup Future page appears.
3. Note the Future Requests menu displays all of the grade levels at your school.
4. Click the appropriate grade level. The [grade level] Request Screen Setup for [school year] appears.

   Note: The grade level selected refers to the students' next year grade level.

5. Use the following table to enter information in the fields:

Field	Description
Enable student registration screen for this grade in	Indicate which portals you want the student registration screen for this grade to appear by choosing the appropriate checkboxes: • **PowerSchool Admin Portal** • **PowerSchool Student and Parent Portal** Click **Preview Student Registration Screen** to preview the registration screen.

Message to display on registration screens for students in this grade:	Enter any text you want to display on registration screens for students in this grade.
Number of credit hours each student must submit (excluding alternate requests)	Enter a minimum and maximum number of credits needed to complete the registration process. For example, you could enter **5** for Minimum and **7** for Maximum, thus ensuring that no student takes courses whose total credit hours are less than five or more than seven. **Note:** Leaving the Minimum and Maximum fields blank makes it possible for students to request too many or too few credit hours.
New Single Course Requirement	To enter a single class requirement, click to access the Grade-Specific Requirement For Course Requests page. For more information, see *Requirements*.
New Multi-Course Requirement	To enter a multi-class requirement, click to access the Grade-Specific Requirement For Course Requests page. For more information, see *Requirements*.
New Core Requirement	To enter a core requirement, click to access the Grade-Specific Requirement For Course Requests page. For more information, see *Requirements*.
Sort Order	Indicate the order in which you want requirements to display on the registration screens.
Requirement Name	The name of the requirement. Click to access the requirements page. For more information, see *Requirements*.
Type	Indicates the type of requirement: Core Required, Multi-Course, or Single Course. For more information, see *Requirements*.
Course Group	Indicates the course group. For more information, see *Requirements*.

6. Click **Submit**. The [grade level] Request Screen Setup Future page appears.

Requirements

You must create requirement entries for each student course request. Requirement entries make up the body of the request page, informing students which courses they must take and giving them selections from valid course groups. For more information about student course request pages, see *Student Course Request Pages*.

There are three types of requirement entries:

- Single Course Requirement: Students make single selections from a course group. For example, if all eleventh graders need to take one computer course next year, create a Computer course group that includes all of the computer courses. Students select one of the courses from the list to fulfill their Computer requirement.
- Multi-Course Requirement: Students make multiple selections from a course group. For example, if all eleventh graders need to take two business courses next year, create a Business course group that includes all business courses. Students select two or more of the courses from the list to fulfill their Business requirement.
- Core Requirement: Students view a set of requests that are predefined, such as a core set of courses for all ninth graders. There are no options from which students can make selections.

How to Enter a Single Course Requirement in PowerScheduler

A single course requirement appears on the request page as a pop-up menu. Students choose a single course from the list (course group) you create.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Requesting, choose **Screen Setup** from the PowerScheduler menu. The Future Requests menu displays the available grade levels.
3. Click the grade level for which you want to enter a single course requirement.
4. On the [grade level] Request Screen Setup Future page, click **New Single Course Requirement**. The Grade-Specific Requirement for Course Requests: [grade level] (Future) page appears.
5. Use the following table to enter information in the fields:

Field	Description

Name of this requirement	Enter a name for the requirement, such as **Ninth Grade Math**.
Description/Instructions	Enter a description or instructions for students to read on the screen so they understand exactly what they need to do to meet this requirement. For example: **You are required to enroll in one Math course. Use the pop-up menu to make your selection from the list of available courses.**
List of courses to present to the student in the pop-up menu	Use the pop-up menu to choose the course group you want students to make their selection from, such as **Math 9**.
Must students select a course from the pop-up, or may they leave it blank?	Choose either **Must select one** or **Can leave blank** from the pop-up menu.
Message to display if students are required to select a course, but they leave it blank instead	If you chose **Must select one** in the previous field, you can enter an alert message students will receive if they do not select one of the courses in the group. For example, enter: **You forgot to select one Math course**. If you do not enter a specific message for this requirement, the system displays a generic message: **You did not select a course for this requirement: [requirement name]**.
Request type	Use the pop-up menu to choose the type of request: • **Elective**: Not a requirement • **Alternate**: Used if an elective request is not met. If you select **Alternate**, the system uses this request if it cannot schedule the student in a requested elective. • **Required**: Required course for this grade level **Note:** An alternate request will never replace a required request.

Number of requests to generate	Use the pop-up menu to choose the number of requests that should be generated when this requirement is selected. For example, if Math is a year-long course but sections operate on semesters, choose **2** for two requests. Semester electives may only need one request.
Item sort order	Enter a number between **0** and **100** that indicates the order in which you want this requirement to appear on the request page you are creating.

6. Click **Submit**. The [grade level] Request Screen Setup Future page appears.

How to Enter a Multi-Course Requirement

A Multi-Course requirement appears on the request page as a pop-up menu. Students choose multiple courses from the list (course group) you create.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Requesting, choose **Screen Setup** from the PowerScheduler menu. The Future Requests menu displays the available grade levels.
3. Click the grade level for which you want to enter a single course requirement.
4. On the [grade level] Request Screen Setup Future page, click **New Multi-Course Requirement**. The Grade-Specific Requirement for Course Requests: [grade level] (Future) page appears.
5. Use the following table to enter information in the fields:

Field	Description
Name of this requirement	Enter a name for the requirement, such as **Ninth Grade Math**.
Description/Instructions	Enter a description or instructions for students to read on the screen so they understand exactly what they need to do to meet this requirement. For example: **You are required to enroll in two Math courses. Use the pop-up menu to make your selection from the list of available courses.**

List of valid courses for this item	Use the pop-up menu to choose the course group you want students to make their selection from, such as **Math 9**.
Number of courses student must select to meet this requirement	Enter the minimum and maximum number of courses students must select for this requirement. For example, enter **2** and **2** to require that no more and no less than two courses from the list are selected.
Message to display if the number of courses selected is not correct	Enter the message you want to appear to students if they do not select the correct number of requirements. If this field is left blank, a generic message will display.
Request type	Use the pop-up menu to choose the type of request: • **Elective**: Not a requirement • **Alternate**: Used if an elective request is not met. If you select Alternate, the system uses this request if it cannot schedule the student in a requested elective. • **Required**: Required course for this grade level. **Note:** An **Alternate** request will never replace a required request
Number of requests to generate	Use the pop-up menu to choose the number of requests that should be generated when this requirement is selected. For example, if Math is a year-long course but sections operate on semesters, choose **2** for requests. Semester electives may only need one request.
Item sort order	Enter a number between **0** and **100** that indicates the order in which you want this requirement to appear on the request page you are creating.

6. Click **Submit**. The [grade level] Request Screen Setup Future page appears.

How to Enter a Core Requirement

A core requirement is a set of courses that members of an entire grade level must request. There is no selection for students to make; you make the selection now so that students view an unalterable list of these required courses on their request pages.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Requesting, choose **Screen Setup** from the PowerScheduler menu. The grades menu displays the available grade levels.
3. Click the grade level for which you want to enter a single course requirement.
4. On the [grade level] Request Screen Setup Future page, click **New Core Requirement**. The Grade-Specific Requirement for Course Requests: [grade level] Future page appears.
5. Use the following table to enter information in the fields:

Field	Description
Requirement Name	Enter a name for the requirement. For example, assume you are creating a requirement for ninth graders that consists of the core courses in which they must enroll. You could name the requirement **Ninth Grade Core Required Courses**.
Description/Instructions	Enter a description or instructions. Since students will automatically receive the course requests you specify on this page, you could enter **All freshmen must take the following courses:**.
List of valid courses for this item	Use the pop-up menu to choose a course group, such as **Ninth Core Courses**.
Number of requests to generate per course	Use the pop-up menu to choose the number of requests that need to be generated for this requirement. For example, if these are semester-long courses, you would need to generate one request per course. In that case, choose **1** from the pop-up menu.

Item sort order	Enter a number between **0** and **100** that indicates the order in which you want this requirement to appear on the request page you are creating.

6. Click **Submit**. The [grade level] Request Screen Setup Future page appears.

How to Preview the Registration Request Page

After you enter all of the requirements you want to include on the request page, you have an opportunity to review how it looks and verify its accuracy.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Requesting, choose **Screen Setup** from the PowerScheduler menu. The grades menu displays the available grade levels.
3. Click the grade level for which you created a request page. The [grade level] Request Screen Setup Future page appears.
4. Enter any message you want to appear on the request page in the "Message to display on registration screens for students in this grade" field.

   Note: The checkbox "This grade may register for courses" should not be selected until the request pages are completely set up and you are ready for PowerScheduler to accept course requests.

5. Click **Submit**.
6. At the top of the [grade level] Request Screen Setup page, click **Preview Student Registration Screen** to review the actual output of the page. The Request Form Future page appears.
7. Click **Close** to return to the [grade level] Request Screen Setup Future page if you need to make corrections to any of the individual requirements.
8. Click **Submit**. The [grade level] Request Screen Setup page appears.

Student Course Request Entry

Once you complete and activate student course request pages for each grade level in your school, students and parents or guardians can use the PowerSchool Student and Parent portal to enter requests. You can also enter students' course requests in PowerScheduler.

To enter student course requests one at a time, see either *How to Enter Requests in the Scheduling Area* or *How to Enter Student Requests by Course*, depending on whether you are working with a student or a course. To enter requests for more than one student at a time, see *How to Mass Assign Student Course Requests*.

Course requests entered in PowerScheduler appear on the requesting student's Requests Modify Future and Requests View Future pages in PowerSchool. In addition, administrative staff members can use PowerSchool to enter or delete requests for one or more students. To edit requests, see *How to Edit Student Course Requests*.

After the initial requests are made in PowerSchool or in PowerScheduler, future course requests can be modified or deleted in PowerScheduler.

You may also want to manually schedule a student once his or her course requests are made. For more information, see *How to Manually Schedule Students*.

For alternate course requests, PowerScheduler prioritizes scheduling alternates in the following order: associated Alternate course for a request, individual course requests with the Alternate checkbox selected, and global course substitutions made on the Course Information page. Any request with an Alternate Group Code of "E" (the only acceptable group code) can be replaced with any requests selected as "Alternate" according to PowerScheduler's priority for scheduling alternates.

How to Activate the Student Request Forms

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Requesting, choose **Screen Setup** from the PowerScheduler menu. The grades menu displays the available grade levels.
3. Click the name of a grade level at your school. The [grade level] Request Screen Setup page appears.

   Note: The selected grade level is the grade level for the future year. For example, to activate the course request page for students who will be in 10th grade next year, select **Grade 10**.

4. Select the **This grade may register for classes** checkbox.
5. Click **Submit**. The [grade level] Request Screen Setup page appears.

How to Enter Requests in the Scheduling Area

In addition to the Requests Modify Future page in PowerSchool, you can use PowerScheduler to enter student course requests for a future school year. That school year is determined by the setting on the Set Schedule Year page. For more information about setting the schedule year, see *How to Set the Schedule Year*.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.
3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. Click the name of the student you want to work with from the students menu.
5. Do one of the following:
    - Choose **Requests** from the pop-up menu.
    - Click the **Requests** tab.

    The Requests page displays the percentage scheduled calculations for the student:

    - % Scheduled - Percentage of requests successfully filled
      Calculated by rounding ((enrolledSlots * 100) / timeSlots)
    - % Core Scheduled - Percentage of requests for core classes successfully filled
      Calculated by rounding ((coreSlots * 100) / coreTimeSlots)
    - % Primary Requests Satisfied - Percentage of primary requests (non-alternate requests) that were successfully filled
      Calculated by rounding ((primeReqSatisfied * 100) / totalRequests)
    - % Total Requests Satisfied - Percentage of total requests including alternate requests that were filled
      Calculated by rounding ((totalReqSatisfied * 100) / totalRequests)

    Note:

    TimeSlots calculated by
    number_of_terms * number_of_days * number_of_periods
    -- find timeSlots by buildId
    select sterms * dpcycle * ppday as timeSlots
    from scheduleBuilds
    where buildId = <scheduleBuilds.buildId>;

    CoreTimeSlots calculated by
    number_of_terms * number_of_days * number_of_core_periods
    -- find coreTimeslots by buildId
    select sterms * dpcycle * (select count(*) from schedulePeriods where buildId = <scheduleBuilds.buildId> and corePeriod = 1) as coreTimeSlots
    from scheduleBuilds
    where buildId = <scheduleBuilds.buildId>;

    TotalRequests calculated by
    -- find totalRequests by studentId and yearId, excluding any global alternate course

```
select count(*) totalRequests
from scheduleRequests
where studentId = <students.id>
and yearid = <4-digit-yearid>
and globalAlternateCourse = 0;
```

Percentage calculated by

```
-- get student requests statistics by studentId and buildId
select totalRequests, enrolledSlots, coreSlots, primeReqSatisfied, totalReqSatisfied
from studentSchedulingResults
where buildId = <scheduleBuilds.buildId>
and studentId = <students.id>;
```

Note: To reference the course catalog for the selected scheduling year, click **Course Catalog**. For more information, see *How to Reference the Course Catalog*.

6. Click **New Request**. The Edit Course Request [student name] page appears.
7. Click **Associate**. The Courses pop-up appears.
8. Select the name of the course. Press and hold COMMAND (Mac) or CONTROL (Windows) to make multiple selections.
9. Click **Submit**. The Courses pop-up closes.
10. Click **Submit**. The Requests page appears.
11. Use the following table to enter information in the fields:

Field	Description
Number	The number of the requested course appears.
Course Name	The name of the requested course appears.
Note	Additional information about the request.
Alt	Select the checkbox to indicate whether this is an alternate course request.
Code	If this course request cannot be met but can be replaced with any course request selected as "Alternate," enter **E** in this field.

Priority	If you selected the **Alt** checkbox, enter a priority number so the system will know which alternate to load first when a student does not receive the elective he or she wants.
Section Type	Choose the course's section type, if applicable, from the pop-up menu. For example, a student may request a bilingual section of a course.
Alternate 1	Click **Associate** to select the name of the first alternate for this course.

12. Click **Submit**. The Requests page appears.

How to Enter Student Requests by Course

If you are working with a course and want to enter student requests for that course, use the Requests function for the course.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Courses** from the PowerScheduler menu. The Courses page appears.
3. Click the name of the course you want to work with from the courses menu.
4. Do one of the following:
    - Choose **Requests** from the pop-up menu.
    - Click the **Requests** tab.

    The [Course Name] Requests page appears.

    Note: To reference the course catalog for the selected scheduling year, click **Course Catalog**. For more information, see *How to Reference the Course Catalog*.

5. Click **New**. The Edit Course Request: [Course Name] page appears.
6. Use the following table to enter information in the fields:

Field	Description

Student	Click **Associate** to select the student for which you are making this request.
Section Type	Choose the course's section type, if applicable, from the pop-up menu. For example, a student may request a bilingual section of a course.
Alternate	Select the checkbox to indicate whether this is an alternate course request.
Alternate Group Code	If this course request cannot be met but can be replaced with any course request selected as "Alternate," enter **E** in this field.
Alternate Priority	This field is reserved for future functionality.
Alternate Course 1	Click **Associate** to select the name of an alternate course for this request.
Alternate Course 2	Click **Associate** to select the name of an alternate course for this request.

7. Click **Submit**. The [Course Name] Requests page appears.

How to Manually Schedule Students

Use the student's Request page to quickly and efficiently schedule a student.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.
3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. Click the name of the student you want to work with from the students menu.
5. Do one of the following:
    - Choose **Requests** from the pop-up menu.
    - Click the **Requests** tab.

The Requests page appears.

Note: To reference the course catalog for the selected scheduling year, click **Course Catalog**. For more information, see *How to Reference the Course Catalog*.

6. Click **Manually Schedule Student**. The Manually Schedule Student page appears.
7. Select the checkbox next to the course, term, and expression in which you want to enroll the student. Deselect the checkbox next to the course, term, and expression from which you want to drop the student.

   Note: The student's currently scheduled classes appear in gray, available classes appear in green, and full classes appear in red. If an expression is gray and has a selected checkbox, the student is in the class. An asterisk (*) notation means that the class is full, regardless of color. If enrolling the student in a full class, enter the password to override the maximum enrollment in the field at the bottom of the page.

8. Click **Submit**. The Manually Schedule Student page appears.

   Note: To refresh the page to display the last saved selections, click **Reset**.

9. Click **Continue**. The student's Schedule page appears.

How to Edit Student Course Requests

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.
3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. Click the name of the student you want to work with from the students menu.
5. Do one of the following:
   - Choose **Requests** from the pop-up menu.
   - Click the **Requests** tab.

   The Requests page appears.

   Note: To reference the course catalog for the selected scheduling year, click **Course Catalog**. For more information, see *How to Reference the Course Catalog*.

6. Use the following table to edit information in the fields:

Field	Description
Number	The number of the requested course appears.
Course Name	The name of the requested course appears.
Note	Additional information about the request.
Alt	Select the checkbox to indicate whether this is an alternate course request.
Code	If this course request cannot be met but can be replaced with any course request selected as "Alternate," enter **E** in this field.
Priority	If you selected the **Alt** checkbox, enter a priority number so the system will know which alternate to load first when a student does not receive the elective he or she wants.
Section Type	Choose the course's section type, if applicable, from the pop-up menu. For example, a student may request a bilingual section of a course.
Alternate 1	Click **Associate** to select the name of the first alternate for this course.

7. Click **Submit**. The Requests page appears.

How to Delete Student Course Requests

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.
3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. Click the name of the student you want to work with from the students menu.
5. Do one of the following:

- Choose **Requests** from the pop-up menu.
- Click the **Requests** tab.

The Requests page appears.

Note: To reference the course catalog for the selected scheduling year, click **Course Catalog**. For more information, see *How to Reference the Course Catalog*.

6. Use the following table to edit information in the fields:

Field	Description
[Delete All]	Select the checkbox in the header row to delete all course requests.
[Delete]	Select the checkbox in the row of each course request you want to delete.

7. Click **Delete Selected**. The Requests page appears.

How to Reference the Course Catalog

Using the Course Catalog pop-up, you can reference the course catalog for the selected scheduling year.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.
3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. Click the name of the student you want to work with from the students menu.
5. Do one of the following:
    - Choose **Requests** from the pop-up menu.
    - Click the **Requests** tab.

    The Requests page appears.

6. Click **Course Catalog**. The Course Catalog pop-up appears.
7. Enter search criteria in the **Search** field.

8. To filter by columns:

7.
   a. Click **+**.
   b. From the first pop-up menu, choose one of the following:
      - **Course Name**
      - **Course Number**
      - **Description**
   c. Enter search criteria in the search field.

      Note: Use a comma-separated list for multiple values.

   d. Click **Apply**. The page refreshes and display filtered results.
8. To add another filter, click **+** and repeat steps a through d.

   Note: The **+** appears shaded if all filters have been added.

9. To delete a filter, click **-** next the filter.
10. Click **Apply**. The page refreshes and display filtered results.

    Note: To remove all filter selections, click **Clear**.

11. Use the following table to view search results:

Note: Click the name of a column to sort by that column in ascending order. Click again to sort in descending order. By default, students are sorted by Name and then Grade Level.

Field	Description
Course Name	The course name appears.
Course Number	The course number appears.
Description	The course description appears.
[Pagination]	Use to navigate the search results.

Rows/Page	By default, ten records display per page. To view more records per page, enter the appropriate number in the field.

13. Click **Close** when done.

How to Mass Assign Student Course Requests

It is possible that an entire grade level or group of students will need to request the same course or courses. If this is the case, you have the option of mass assigning course requests to these students.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.
3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. On the Selected Students page, click **Functions**. The Scheduling Functions page appears.
5. Click **Mass Add Requests**. The Mass Add Requests page appears.
6. Use the following table to enter information in the fields:

Field	Description
Course Number	Click **Associate** to select the number of the course you want to assign to the group of students you selected.
Section Type	If applicable, choose the course's section type from the pop-up menu. For example, these students may request a bilingual section of a course.
Request Type	Choose the type of request from the pop-up menu: • **Required** • **Elective** • **Alternate**

Priority	If you selected Alternate in the Request Type field, enter a priority for the request. The lower the number, the higher the priority and the more likely these students will be scheduled into this alternate class.

7. Click **Submit**. The Changes Recorded page appears.

How to Mass Delete Student Course Requests

After student course requests have been entered, you may find that due to a data entry error, an entire group of students was assigned to the wrong course. Alternatively, perhaps there is not enough money in the budget to hold a particular course next year. In these and other similar situations, you have the option of mass deleting student course requests.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Students** from the PowerScheduler menu. The Scheduling page appears.
3. Select students for scheduling. For detailed information, see *Schedule Search and Select*.
4. On the Selected Students page, click **Functions**. The Scheduling Functions page appears.
5. Click **Mass Delete Requests**. The Mass Delete Requests page appears.
6. Use the following table to enter information in the fields:

Field	Description
Course Number	Click **Associate** to select the number of the course you want to delete from the group of students you selected.
Section Type	If appropriate, choose the Section Type from the pop-up menu. This ensures that only requests of the selected course that have this section type will be deleted.
Alternate	Select the checkbox to delete only requests for this course that are selected as Alternate.

What to Delete	Choose whether you want to apply the changes to the first occurrence or all occurrences of students' course requests. Deleting only the first occurrence of a request is useful for removing duplicate student course requests.

7. Click **Submit**. The Changes Recorded page appears.

Course Information

Define scheduling preferences for each course in your course catalog. These preferences control how PowerSchool builds your master schedule. See *Course Scheduling Setup*.

The process the system uses to schedule students in courses is similar to the process of constructing a wall of bricks. The master schedule is the wheelbarrow of available bricks. Each brick used to build the walls are the course sections in your course catalog. A good master schedule will have enough bricks with appropriate shapes and sizes to build solid walls for every student.

Building walls without gaps requires that the bricks all fit together. If your bricks come in different shapes, this can be a challenge. For example, a course that meets every day and all year long will have a very different shape from another course that meets every other day for one semester. Building a wall with all types of bricks requires that the wheelbarrow (master schedule) contain the right variety of bricks (course sections) from which to choose.

Course Scheduling Setup

For each course, define its shape or build type. You must also define sections, room requirements, load options, and substitute information. For information about relating courses, see *How to Define Related Courses*.

How to Define Scheduling Preferences

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Courses** from the PowerScheduler menu. The Courses page appears.
3. Click the name of the course you want to work with from the courses menu.
4. Do one of the following:
    - Choose **Preferences** from the pop-up menu.
    - Click the **Preferences** tab.

The Course Information page appears.

5. Use the following table to enter information in the fields:

Field	**Description**
Course Number	The number that will be used to identify this course appears.
Course Name	The name of the course appears.
Course Description	Enter a detailed course description that will appear on the student course request pages and in the printed version of the course catalog.
Course Credit Hours	Displays the number of credits a that is set in the district course record. This is the value that is used in the live side of PowerSchool to determine what students receive for taking this course.
Request Screen Credits Hours	Enter the number of credits to be displayed on the course requests screens in PowerScheduler. For more information about course requests screens, see *Student Course Request Pages*. **Note:** This value does not copy to the district course record on the live side of PowerSchool. This is meant primarily to accommodate scheduling processes that use adjusted values. For example, if .5 is entered as the credit class value, 1 is used as the credit on the request screens because the schedule is being built as a yearlong class, but before the commit process the split year-long classes function will be used.
Credit Type	The type of credit a student receives for passing this course appears, such as **MATH**, **ENG**, or **FINE**.
Alternate Course Number	The alternate course number appears, if your school uses this field for state reporting or district purposes.
Grade Scale	The grade scale associated with this course appears.

CIP Code	In some states, schools use CIP codes to identify courses as part of a state-managed vocational program.
Vocational Class	Indicates if this is a vocational course.
Schedule This Course	Select the checkbox to schedule this course in the master schedule. If you deselect the checkbox, the system does not include the course in the master schedule.
Use The Course For Lunch	Select the checkbox to indicate that this course will be used exclusively for scheduled lunches. Otherwise, deselect the checkbox. **Note:** For more information, see *Scheduled Lunch*.
Exclude on Report Cards/Transcripts	Select the checkbox if you do not want this course to appear on report cards and transcripts. For example, you may not want courses designated for lunch to appear on students' reports.
Department	Click **Associate** to select the department to which this course belongs. Click **Department** to create a new department or edit an existing one.
Build Type	Build types define the shape of a course. Choose one of the following options from the pop-up menu: • **Standard**: This course meets for the same number of periods every time it meets. For example, a course that meets every day for one period is standard. A course that meets for one period every other day is also standard. • **Lab**: This is a standard course that meets for the same number of consecutive extra periods on certain days in the cycle. For example, a standard Chemistry course meets every day in a six-day cycle (Days A-F). Two days in the cycle, the class meets for two consecutive periods to complete an involved laboratory assignment. • **LabFloat**: This is a standard course that meets extra periods some days in the cycle, but the extra period is not consecutive to the course. For example, a Humanities

	course meets every day in a six-day cycle. One day during the cycle, the students attend a two-period lab in which they complete a community service assignment. The community service assignment does not have to occur directly before or after the Humanities course.
Maximum Enrollment	Enter the maximum number of students you want to schedule in sections of this course.
Target Number of Sections to Offer	Enter the number of sections to offer for this course. **Note:** To calculate this number automatically, you can use one of the following functions: the Calculate Target Number of Sections to Offer function, the Auto Fill Course Information function or the Auto Generate Course Information function.
Number of Teacher Assignments	Enter the number of teacher assignments for this course. For example, if the school decides to offer four sections of Algebra, the engine requires that four teacher assignments are defined. As a result, Teacher A will have an assignment for one section, Teacher B will have an assignment for two sections, and Teacher C will have an assignment for one sections, totaling four teacher assignments. This tells the Scheduling Engine that four sections of Algebra must be built, and also tells the Engine who must teach those sections. **Note:** Only Build and Load scenarios allow for teacher assignments. Teacher assignments are not used by Load Only scenarios.
Periods Per Cycle	The number of periods this course meets in the cycle appears. This number could be greater than or less than the number of days in the cycle. For example, a course could have a value of 4 in the Periods Per Cycle field for a school with a two-days-per-cycle schedule. This course meets for two periods during each day in the cycle. Another way to express periods per cycle is: Periods per meeting * Frequency + Lab Periods per meeting * Lab frequency = Periods per cycle.

Periods Per Meeting	Enter the number of periods this course section meets each time it convenes. Most courses meet for a single period. Some courses have an intensive curriculum and may convene for two or more periods per meeting.
Frequency	The number of days this course meets during a cycle appears. For example, Senior Gym is held A day and B day. Therefore, the frequency is 2. It is important to understand that the frequency of a course is not related to the number of periods it meets within a given cycle.
Terms per Year	The number of terms per year this course meets appears. This value is automatically calculated. For example, Introduction to Art has a Terms Per Year value of 1. This means that a section of this course only meets for a single term. However, Freshman English has a Terms Per Year value of 4, which means this course meets all four terms in the year. Terms Per Year is related to the number of terms you set in the build scenario. Remember that the Terms Per Year value equals the lowest common denominator (LCD) of all scheduling terms. For example, if a school has trimesters, semesters and quarters, the LCD is 12. For a semester course, the Terms Per Year value would be 6, or half of the schedule terms; a trimester course would have a Terms Per Year value of 4, and a quarterly course would have a Terms Per Year value of 3.
Allow Student Repeats in the Same Term	Select the checkbox to allow the system to schedule a student in more than one section of this course in the same term. For example, occasionally students need to double-up on a course within the same term. This is usually done for elective courses, such as Work Release.
Allow Student Repeats in Different Terms	Select the checkbox to allow the system to schedule a student in more than one section of this course in different terms. Use this option for either academic or elective courses.
Balance Terms	For courses with more than one section, select the checkbox if you want the system to attempt to place an equal number of

	sections in each valid term. For example, a course consisting of 13 sections is only offered during Term 1 and Term 3 in a four-term year. Therefore, the system schedules seven sections in one term and six sections in the other.
Valid Start Periods	Select the checkbox next to the appropriate periods to determine in which periods the course is valid to start. For example, if you want a course that has two periods per meeting to start any period except 6 or 7 in a seven-period day, select the checkboxes next to Period 1, Period 2, Period 3, Period 4, and Period 5.
Valid Terms	Click **Associate** to select the terms this course can meet. For example, assume you want the system to schedule a half-year course in the fall of a four-term school year. Select **S1** (first semester) as the only valid term for this course.
Valid Day Combinations	Enter the valid days that this course can meet. For example, if a teacher is available to teach a course only on the B day of an AB schedule, enter **B**. Click **Day** to add or edit a day. Enclose multiple entries in parentheses and separate multiple entries with commas, such as (A,B). Use dashes to indicate day combinations, such as (A-C).
Is This Course A Lab	Select the checkbox if this course is a lab.
Lab Frequency	Enter the number of days this lab meets during a cycle.
Lab Periods Per Meeting	Enter the number of periods this lab meets each time it meets.
Valid Lab Day Combinations	Click **Associate** to select the valid days that this lab can meet. Click **Day** to add or edit a day. Enclose multiple entries in parentheses and separate multiple entries with commas, such as **(A,B)**.
Facilities	Click **Associate** to select the special facilities this course requires, if any. For example, a facility could be a piano, biology lab, or wood shop. If you define a facility here, the system schedules this

	course in a room that contains that facility. Click **Facilities** to add or edit a facility.
Load Priority	Enter a numerical value of **1** to **99** (1 being the highest priority) to prioritize in which course the system should schedule a student when a conflict between two of the student's requests arises. You can enter the same load priority number for several courses. For example, enter a load priority of **10** for all academic courses to ensure that students are loaded into these courses first, **20** for academic electives, and **30** for non-academic electives. **Note:** If this course has a Section Link constraint associated with it, you may want to give it the highest load priority to prevent the section link from being broken.
Load Type	Use the pop-up menu to choose whether this is an **Academic**, **Elective**, or **Alternate** course. The system uses this classification to balance the types of courses in which the student is scheduled during a schedule term. For example, if your school's scheduling terms are semesters, the system does not schedule the student in all elective courses the first semester and all academic courses the second semester.
Balance Priority	Use this pop-up menu to set a secondary priority for the course when loading student schedules. The primary priority is determined by the load priority field. The following settings create an additional priority. For example, if you choose **Grade** from the pop-up menu, the system not only attempts to keep an equal number of students in each section, but also an equal number from all grade levels. The default setting for loading students into the master schedule is Section. Use the pop-up menu to choose one of the following options to ensure a balance of students in each section (optional): • **Section**: When loading students into sections, the system always attempts to keep an even number of students among sections. • **Gender**: Balanced number of males and females in each section.

	• **Grade**: Balanced number of students from each grade level within each section. • **EthnicCode**: Balanced number of students with different ethnic codes within each section. • **House**: Balanced number of members from each house within each section.
Use Pre-Established Teams	Select the checkbox if you want the system to reference teams when scheduling students into this course.
Close Section After Max	Select the checkbox if you want the system to stop scheduling students in a section of this course after the enrollment reaches the number you defined in the Maximum Enrollment field.
Use Section Types	Select the checkbox if you want the system to schedule courses according to section types. For more information about section types, see *Section Types*.
Don't Allow Student Substitutions	Select the checkbox if you do not want the system to attempt to schedule a student in alternate courses if this course is full.
Global Substitution 1	Click **Associate** to select the first course substitution you want the system to schedule for every student who cannot be scheduled in this course.
Global Substitution 2	Click **Associate** to select the second course substitution you want the system to schedule for every student who cannot be scheduled in this course. The system will use this substitution if Global Substitution 1 is no longer available.
Global Substitution 3	Click **Associate** to select the third course substitution you want the system to schedule for every student who cannot be scheduled in this course. The system will use this substitution if Global Substitution 2 is no longer available.

6. Click **Submit**. The Changes Recorded page appears.

How to Define Related Courses

For each course, you can define related courses. The system uses these course relationships when building the schedule. Relate courses to alert the system that it must consider other courses when determining the best place for a course in the master schedule.

For example, if a teacher can instruct multiple special education courses at one time in the same room, you can relate the courses so that the system knows it is possible to do so.

If you define a relationship for a course with another course, you do not have to define the relationship for both courses. But, you can define the relationship for both courses so that it is easy to identify this relationship regardless of which course you are viewing.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Courses** from the PowerScheduler menu. The Courses page appears.
3. Click the name of the course you want to work with from the courses menu.
4. Do one of the following:
    - Choose **Relationships** from the pop-up menu.
    - Click the **Relationships** tab.

    The Course Relationships page appears.

5. Click **New**. The Edit Course Relationship page appears.
6. Use the following table to enter information in the fields:

Field	Description
Course Number	Click **Associate** to select the number of the course for which you want to define a relationship.
Relationship Type	Use the pop-up menu to choose one of the following options: • **Is Blocked for Building With**: This relationship type is used for building a master schedule. Courses that must be related to one another in the schedule. For example, you may want pottery to be scheduled before or after ceramics so that they can share a hot kiln. Alternatively, a medieval literature class may follow a medieval history class.

	• **May Be Built Concurrent With**: This relationship type is used for building a master schedule. Courses that can meet at the same time, in the same place, and be taught by the same teacher. For example, a special education teacher might have a class of ten students, three of whom are taking remedial reading and the remainder of whom study remedial vocabulary and spelling. **Note:** When two courses are blocked simultaneously and share the same teachers, there is no need to add a concurrent relationship between the two courses. Also, the PowerScheduler engine propagates concurrent relationships amongst courses that share a concurrent relationship. For example, if Course A has a concurrent relationship with Course B and Course B has a concurrent relationship with Course C, there is no need to add a concurrent relationship between Course A and Course C. • **Has a Load Coreq of**: Two courses that are scheduled during the same term of a student's schedule. The term of one section must be the same as or a subsection of the term of the other section. For example, if one of the courses is scheduled in Semester 1, then the other may be Semester 1, Trimester 1, or Quarter 1 or Quarter 2. Though a Trimester 2 course overlaps a Semester 1 course, the courses cannot have a "coreq" relationship type. • **Has a Load Postreq of**: A course that must be in a student's schedule in a term after the related course. The course you associate using the Course Number field will be scheduled after the currently selected course. The term of the first section must end before the term of the second section begins. For example, Course B is a post-requisite of Course A. When the system schedules a student for these courses, it ensures that Course B is scheduled into a term after the student is scheduled for Course A. • **Has a Load Prereq of**: A course that must be in a student's schedule in a term before the related course. The course you associate using the Course Number field must be scheduled before the currently selected course. The term of the first section must start after the term of the second section ends. For example, Course A is a prerequisite of

	Course B. When the system schedules a student for these courses, it ensures that Course A is scheduled into a term before the student is scheduled for Course B. • **Must Not Load Coreq With**: The courses cannot be scheduled in the same term or sub-term. For example, if Course A is scheduled for Semester 1, then Course B may be scheduled for Trimester 2 or Trimester 3 but not Trimester 1. This relationship is bi-directional; that is, if you indicate that Course A "Must Not Load Coreq With" Course B, then Course B is automatically set to "Not Load Coreq With" Course A. • **Must Load Distinct (no term overlap) With**: The courses cannot load into overlapping terms. For example, if Course A is scheduled for Semester 1, then Course B may be scheduled for Trimester 3 but not Trimester 1 or Trimester 2. This is also a bi-directional relationship type. • **Must Load the Term After**: The course must load in the next term. For example, if Course A is scheduled for Quarter 1, then Course B may be scheduled in Quarter 2 but not Quarters 1, 3, or 4. Likewise, if Course A is scheduled for Semester 1, then Course B may be scheduled in Quarter 3 or Semester 2. To indicate the reverse of this relationship type, see the "Must Load the Term Before" option. • **Must Load the Term Before**: The course must load in the previous term. For example, if Course A is scheduled for Quarter 3, then Course B may be scheduled in Quarter 2 but not Quarters 1, 3, or 4. To indicate the reverse of this relationship type, see the "Must Load the Term After" option. **Note:** Coreq, Postreq, and Prereq only relate to the current scheduling year. The system does not check historical data for previous courses.
Relationship Code	If you selected a relationship type of **Block**, you must define a relationship code. Use the pop-up menu to choose one of the following options: • **Simultaneous**: The blocked course must be scheduled at the same time as the current course. If the same teacher

	instructs both courses, they must also be concurrent. Simultaneously blocked courses can have different attributes, such as numbers of sections, different frequencies, and different teachers. The courses can be scheduled at the same time with different teachers in different rooms. **Note:** The PowerScheduler engine propagates simultaneous relationships amongst courses that share a simultaneous relationship and have the same number of sections. For example, if Course A is blocked simultaneously with Course B, Course B is blocked simultaneously with Course C, and courses A, B, and C have the same number of sections, there is no need to add a simultaneous block relationship between Course A and Course C. • **Before or After**: The blocked course must be scheduled either before or after the current course. • **Before**: The selected course must be scheduled before the course you associate using the Course Number field. The blocked course selected in the Course Number field must be scheduled after the current course. • **After**: The selected course must be scheduled after the course you associate using the Course Number field. The blocked course selected in the Course Number field must be scheduled before the current course. • **Different Terms**: Two courses occur on the same days and periods, but in different terms. • **Combine Into**: Combine courses that have different student requests but have the same teacher and the same attributes, such as frequency, periods per meeting, valid start periods, and number of sections. Since the PowerScheduler engine processes combined courses as a single course, select an "anchor" course in the Course Number field from which you can combine additional courses. For example, a combined block relationship is applied to English I, English II, English III, which are all are taught by the same teacher but were requested by different students. Those three courses will be scheduled at the same time with the same teacher in the same room.

	When editing course relationships for English II and English III, associated English I as the anchor course for each combined relationship. • **Opposite Days**: Two courses occur during the same period and term, but on alternate days. • **Section**: The blocked course must have the same students in each section as the current course. For example, all students in section 1 of the blocked course must be in section 1 of the current course.

7. Click **Submit**. The Course Relationships page appears.

Calculate Target Number of Sections to Offer

Use the Calculate Target Number of Sections to Offer page if you want the system to calculate the recommended number of sections to offer for each course in the current catalog. When calculating the number of sections to offer for each course, PowerScheduler divides the total number of primary requests for that course by the maximum enrollment per section. Any remainders in this calculation are rounded up to provide the necessary number of sections for the number of requests. For example, if 215 students request a Biology course and the maximum number of students in each section is 25, the system calculates a need for 9 sections of Biology.

Before you continue, you must enter a value in the **Maximum Enrollment** field on the Course Information page. For more information, see *How to Define Scheduling Preferences*.

How to Calculate Target Number of Sections to Offer

The Calculate Target Number of Sections to Offer function calculates the recommended number of sections to offer for each course in the current catalog, based upon the number of course requests, the course maximum enrollment, and whether students may repeat the class in a given school year. Be sure to enter scheduling preferences for all of your courses before using this function. For more information, see *How to Define Scheduling Preferences*.

Note: To select a group of course see **PowerScheduler** > **Functions** > **Update Selections** > Choose **ScheduleCourseCatalog** from the **Current Table** pop-up menu > **Select Records by Hand** > Hold down the COMMAND key to make multiple selections > **Submit**.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.

2. Under Tools, choose **Functions** from the PowerScheduler menu. The Scheduling Functions page appears.
3. Click **Calculate Target Number of Sections to Offer**. The Calculate Target Number of Sections to Offer page appears.
4. Do one of the following:
    - Select the **All courses** option to perform the function for all courses.
    - Select the **Selected courses** option to perform the function for a selected group of courses.
5. Click **Submit**. The Changes Recorded page appears.

Teacher Scheduling Information

You must enter and define scheduling setup information for every teacher who instructs at least one course at your school. In addition, you can assign teachers to the courses they will be teaching. For more information, see *Teacher Scheduling Setup* and *Teacher Assignments*.

Teacher Scheduling Setup

To set up teachers for scheduling, set teacher scheduling preferences and view teacher constraints to determine if the constraints need to be modified.

How to Set Teacher Scheduling Preferences

When you set teacher scheduling preferences, there are a few fields that lend themselves to mass updating, such as Use for Scheduling. However, because the majority of the information needs to be set individually, it does not make sense to use the Update Selections tool in this area in most cases.

Repeat this procedure for every teacher at your school who will be instructing at least one course next schedule year.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Teachers** from the PowerScheduler menu. The Teachers page appears.
3. Click the name of the teacher you want to work with from the teachers menu.
4. Do one of the following:
    - Choose **Preferences** from the pop-up menu.
    - Click the **Preferences** tab.

    The Teacher Scheduling Preferences page appears.

5. Use the following table to enter information in the fields:

Field	Description
Department	Click **Associate** to select this teacher's department.
Preferred Room	Click **Associate** to select this teacher's classroom. The system always attempts to schedule courses assigned to this teacher in his or her preferred classroom first.
Maximum Consecutive Periods	Use the pop-up menu to choose the maximum number of periods this teacher can teach in a row (according to his or her contract).
Schedule This Teacher	Select the checkbox if you want the system to include this teacher when scheduling. **Note:** If you deselect the checkbox, the system will not include this teacher in the schedule build process.
Is Always Free?	Select the checkbox to allow this teacher to be scheduled for an unlimited number of courses during the same period. For example, some special education teachers teach different subjects to different students in the same room during the same period.
Schedule For Lunch	Select the checkbox if you want this teacher to be scheduled for a lunch period. For more information, see *Scheduled Lunch*.
Building Code (optional)	Click **Associate** to select this teacher's building.
House Code (optional)	Click **Associate** to select this teacher's house.
Team Code (optional)	Use the pop-up menu to choose the team to which you want this teacher to belong. **Note:** If there is a number to the right of the blank Team Code pop-up menu, the teacher was previously associated with a team

	at a different school. You must clear the Team Code field using the *Update Selections* function.
Maximum Student Load	Enter the maximum number of students that a teacher can have per day. This overrides the value of the Teacher's Maximum Daily Student Load, which is set at the district level. For more information, see *Miscellaneous District Settings*. Entering a value in this field does not prevent the teacher from being over-scheduled but only allows for reporting on the teachers whose schedules exceed the specified maximum student loads.

6. Click **Submit**. The Changes Recorded page appears.

How to View Teacher Constraints

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Teachers** from the PowerScheduler menu. The Teachers page appears.
3. Click the name of the teacher you want to work with from the teachers menu.
4. Do one of the following:
    - Choose **Constraints** from the pop-up menu.
    - Click the **Constraints** tab.

    The Teachers Constraints page appears.

    Note: For information about how to add, modify, or delete a teacher's constraints, see *Build Constraints*.

Teacher Assignments

Creating teacher assignments is a very important part of the scheduling process. Teacher assignments define which courses and how many sections of each course a teacher will instruct.

To enter teacher assignments, use one of the following methods:

- Select a teacher, enter all of his or her assignments, and go to the next teacher.
- Select a course, enter the teachers who will be teaching it, and go to the next course.

If you enter or edit an assignment for a teacher or course, the system automatically updates the information in both places.

How to Assign Teachers to Courses

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Teachers** from the PowerScheduler menu. The Teachers page appears.
3. Click the name of the teacher you want to work with from the teachers menu.
4. Do one of the following:
    - Choose **Assignments** from the pop-up menu.
    - Click the **Assignments** tab.

    The Teachers Assignments page appears.

5. Click **New**. The Edit Teacher Assignment page appears.
6. Use the following table to enter information in the fields:

Field	Description
Course Number	Click **Associate** to select a course from the active course catalog.
Section Type	If appropriate for the course you selected, use the pop-up menu to choose the section type you want to assign to this teacher, such as **Spanish** or **SPED**. If you use section types, you must indicate which teachers teach what section types. For example, if Teacher A teaches the Spanish section (section type) of course 100, choose Spanish and enter **1** in the Number of Sections field. If Teacher B teaches two sections of course 100 with only one of the two being a Spanish section type, you need to create two teacher assignments. For one, choose **Spanish** for the section type and enter **1** in the Number of Sections field; for the other, leave the Section Type field blank and enter **1** in the Number of Sections field.
Number of Sections	Enter the number of sections of the course this teacher will instruct.

Schedule Term Code	Use the pop-up menu to choose the schedule term in which this course is taught. **Note:** This field only applies to courses that are not full-year courses. For example, assume one teacher is instructing three sections of a single semester course. If you want two sections to meet Semester 1 and one section to meet Semester 2, enter two teacher assignments for the course. For one assignment, choose **S1** in this field and enter **2** in the Number of Sections field. For the other, choose **S2** in this field and enter **1** in the Number of Sections field. If you do not choose a term, the system decides in which term to schedule the course.

7. Click **Submit**. The teacher's Teacher Assignments page appears.

How to Assign Courses to Teachers

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Courses** from the PowerScheduler menu. The Courses page appears.
3. Click the name of the course you want to work with from the courses menu.
4. Do one of the following:
    - Choose **Assignments** from the pop-up menu.
    - Click the **Assignments** tab.

    Any teacher assignments previously entered for this course appears.

5. Click **New**. The Edit Course Assignment [course name] page appears.
6. Use the following table to enter information in the fields:

Field	Description
Teacher	Click **Associate** to select the name of the teacher to whom you want to assign this course.

Section Type	If appropriate for the course you selected, use the pop-up menu to choose the section type you want to assign to this teacher, such as **Spanish** or **SPED**. If you use section types, you must indicate which teachers teach what section types. For example, if Teacher A teaches the Spanish section (section type) of course 100, choose Spanish and enter **1** in the Number of Sections field. If Teacher B teaches two sections of course 100 with only one of the two being a Spanish section type, you need to create two teacher assignments. For one, choose **Spanish** for the section type and enter **1** in the Number of Sections field; for the other, leave the Section Type field blank and enter **1** in the Number of Sections field.
Number of Sections	Enter the number of sections of the course this teacher will instruct.
Schedule Term Code	Use the pop-up menu to choose the schedule term in which this course is taught. **Note:** This field only applies to courses that are not full-year courses. For example, assume one teacher is instructing three sections of a single semester course. If you want two sections to meet Semester 1 and one section to meet Semester 2, enter two teacher assignments for the course. For one assignment, choose **S1** in this field and enter **2** in the Number of Sections field. For the other, choose **S2** in this field and enter **1** in the Number of Sections field. If you do not choose a term, the system decides in which term to schedule the course.

7. Click **Submit**. The [course name] page appears.

How to View Teacher Assignments

Use this procedure to view teacher assignments for a specific teacher.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.

2. Under Resources, choose **Teachers** from the PowerScheduler menu. The Teachers page appears.
3. Click the name of the teacher you want to work with from the teachers menu.
4. Do one of the following:
   - Choose **Assignments** from the pop-up menu.
   - Click the **Assignments** tab.

   The Teachers Assignments page appears.

   Note: To edit or delete a teacher assignment, click the course number on the Teacher Assignments page or the teacher name on the [course name] page. Edit the assignment and click **Submit** or click **Delete** to remove the assignment.

How to View Teacher Assignments by Course

Use this procedure to view all teacher assignments for a specific course.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Courses** from the PowerScheduler menu. The Courses page appears.
3. Click the name of the course you want to work with from the courses menu.
4. Do one of the following:
   - Choose **Assignments** from the pop-up menu.
   - Click the **Assignments** tab.

   Any teacher assignments previously entered for this course appears. The following information displays for each assignment:

   - Target Number of Sections to Offer
   - Teacher Name
   - Count
   - Section Type
   - Terms
   - Department
   - Room

Teacher Schedule

View a teacher's schedule, including courses, sections, and enrollment per section. You can add or delete sections from a teacher's schedule. In addition, you can modify a section, such as locking it to prevent the section from being changed when the system rebuilds the master schedule.

How to Add a Section to a Teacher Schedule

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Teachers** from the PowerScheduler menu. The Teachers page appears.
3. Click the name of the teacher you want to work with from the teachers menu.
4. Do one of the following:
    - Choose **Schedule** from the pop-up menu.
    - Click the **Schedule** tab.

    The Teacher Schedule page appears.

5. Click **New**. That teacher's Edit Section page appears.
6. Use the following table to enter information in the fields:

Field	Description
Teacher name	The name of the selected teacher appears.
Course Number	Click **Associate** to select a course from the active course catalog.
Term	Choose the term for the course from the pop-up menu.
Schedule	Select the checkboxes for the expressions for the appropriate days on which the staff member teaches this section. **Note:** The schedule expression is the combination of periods and days.
Room	Click **Associate** to select a room in which the staff member teaches this section.
Section number	Enter a unique section number for this section. Select the **Locked Section** checkbox if the section should not be rescheduled during the next build.

Close section at max	Identifies whether to enroll students into the section even if the maximum enrollment has been reached. If this is selected, no students will be enrolled if the current enrollment is equal to or greater than the maximum enrollment. Select the checkbox to not accept more enrollments than the maximum number of enrolled students.
Section type	Identifies the section as open only to be filled by students whose course requests are designated as the same section type. Choose the type of section, such as Bilingual, from the pop-up menu (optional). **Note:** For more information, see *How to Add a Section Type*.
Grade Level	Enter the grade level of this section.
Current enrollment	The current enrollment of students in this section appears.
Maximum enrollment	Enter the maximum number of students that can enroll in this section.
Team	Choose the team associated with this section from the pop-up menu.
House	Click **Associate** to select a team to which this section belongs.
Where Taught	Enter the school ID if the section is taught at a different school.
Dependent sections	Enter any dependent sections for this section. Separate multiple sections with commas.
Exclude From Attendance	Select the checkbox if you do not want to include this section in the student ADM/ADA counts.
Grade Scale	Choose the grade scale from the pop-up menu.

Maximum Load Status	Use the pop-up menu to indicate whether the section should be exempt from counting towards a teacher's maximum student load: • **Exempt**: Students enrolled in this section do not count towards a teacher's maximum student load. • **Lab**: Same as non-exempt. • **Non-Exempt:** Students enrolled in this section count towards a teacher's maximum student load. **Note:** At this time, the Non-Exempt selection is not saved on this page. Use Direct Database Export to set sections as non-exempt. In the Sections table, set the Max_Load_Status field to **Non-Exempt**. For more information, see *Teacher Maximum Load*. **Note:** For existing non-exempt sections and for all new sections, no values are stored for this field unless they are set to **Lab** or **Exempt** on this page, or they set to any of the three status types using Direct Database Export. Sections with no values are ignored when calculating the teacher maximum load.
Exclude from GPA?	Select the option to either include or exclude the grade from the GPA calculation.
Exclude from class rank?	Select the option to either include or exclude the grade from the class rank calculation.
Exclude from honor roll?	Select the option to either include or exclude the grade from the honor roll calculation.

7. Click **Submit**. The teacher's Schedule page displays the new section.

How to Edit a Section on a Teacher Schedule

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Teachers** from the PowerScheduler menu. The Teachers page appears.
3. Click the name of the teacher you want to work with from the teachers menu.
4. Do one of the following:

- Choose **Schedule** from the pop-up menu.
- Click the **Schedule** tab.

The Teacher Schedule page appears.

5. Use the following table to filter information:

Note: Click the arrow to expand this section. Click the arrow again to collapse this section.

<table>
<tr><th>Field</th><th>Description</th></tr>
<tr><td>Filter</td><td>1. Enter search criteria in the Search field.
2. To filter by columns:
a. Click +.
b. From the first pop-up menu, choose one of the following:
• Course
• Expression
• Max
• Students
• Room
• Section #
• Section Type
• Team
• Term
c. From the second pop-up menu, choose the appropriate comparator:
• contains
• contains all
• contains any
• does not contain
• is empty
• starts with
• starts with any
d. Enter search criteria in the search field.

Note: Use a comma-separated list for multiple values. If contains is selected, only one value may be entered. If is empty is selected, no value may be entered.</td></tr>
</table>

	e. Click **Apply**. The page refreshes and display filtered results. **Note:** The Filter (0) header refreshes and displays the number of applied filters. In addition, the header displays the fields being used to filter results. 3. Click the name of a column to sort by that column in ascending order. Click again to sort in descending order. 4. To add another filter, click **+** and repeat Step 1. **Note:** The **+** appears shaded if all filters have been added. 5. To delete a filter, click **-** next the filter. 6. Click **Apply**. The page refreshes and display filtered results. **Note:** To remove all filter selections, click **Clear**.

Note: Click the number in the **Students** column to view the class roster for the section.

6. Click the number in the **Section #** column for the section you want to edit. That teacher's Edit Section page appears.
7. Edit information as needed. For field descriptions, see *How to Add a Section to a Teacher Schedule*.
8. Click **Submit**. The teacher's Schedule page displays the edited section.

How to Delete a Section From a Teacher Schedule

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Teachers** from the PowerScheduler menu. The Teachers page appears.
3. Click the name of the teacher you want to work with from the teachers menu.
4. Do one of the following:
    - Choose **Schedule** from the pop-up menu.
    - Click the **Schedule** tab.

   The Teacher Schedule page appears.

Note: Click the number in the Size column to view the class roster for the section.

5. Click the number in the Section # column for the section you want to delete. That teacher's Edit Section page appears.
6. Click **Delete**. The teacher’s Schedule page appears.

Teacher Schedule Matrix

The teacher matrix function creates a visual, graphical representation of a teacher's schedule. This schedule can be printed, though not for more than one teacher at a time.

How to View the Teacher Schedule Matrix

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Teachers** from the PowerScheduler menu. The Teachers page appears.
3. Click the name of the teacher you want to work with from the teachers menu.
4. Do one of the following:
    - Choose **Matrix** from the pop-up menu.
    - Click the **Matrix** tab.

    The Teacher Schedule Matrix page displays the teacher's schedule for each period and day in each term. Identical colors on the schedule indicate the same section. A blank block means that nothing is scheduled for that block in that term. If all matrix preferences are selected, each block includes the following information:

    - Name of the course
    - Course number
    - Section number
    - Room number
    - Expression, which is the combination of periods and days
    - Year term
    - Number of students scheduled for this section
    - Maximum enrollment of this section

    To change the matrix preferences, see *How to Set Teacher Schedule Matrix Preferences*.

How to Set Teacher Schedule Matrix Preferences

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Teachers** from the PowerScheduler menu. The Teachers page appears.
3. Click the name of the teacher you want to work with from the teachers menu.
4. Do one of the following:
    - Choose **Matrix** from the pop-up menu.
    - Click the **Matrix** tab.

    The Teacher Schedule Matrix page

5. Click **Matrix Preferences**. The Teacher Schedule Matrix Preferences page appears.
6. Use the following table to enter information in the fields:

Field	**Description**
Course Name	Select the checkbox to display the course name.
Course Number.Section Number	Select the checkbox to display the course and section numbers.
Room	Select the checkbox to display the room number.
Expression Term	Select the checkbox to display the expression, which is the period and day combination.
Enrollment	Select the checkbox to display enrollment information, which is the number of students enrolled and the maximum enrollment.

7. Click **Submit**. The Teacher Schedule Matrix page displays the items selected on the Teacher Schedule Matrix Preferences page.

Scheduled Lunch

To schedule time for lunch or teacher-supervised breaks in your school's master schedule, create lunch sections. Lunch sections are sections of a course that have been designated for lunch periods. To schedule students for lunch, a lunch course request must exist for each student before loading student schedules.

Start by creating a lunch course in PowerScheduler, indicating that it will be used exclusively for scheduled lunches. Then, create sections for that course. Select the periods that each section of the lunch course will span and the days on which it occurs. For more information about specifying that a course is used for scheduling lunch, see *Course Scheduling Setup*.

For each section of a lunch course, PowerScheduler can assign a teacher to supervise during lunchtime. If supervision is not necessary, scheduling teachers for lunch ensures that the teachers will have time set aside for their own lunch break. Teachers can be assigned to only one lunch section per day, though that section can span several periods. Teachers are scheduled for one section of the lunch course for each day combination and term specified by the lunch course.

For example, a five-day, quarterly schedule where lunch can be periods 3, 5, or 7, set up the lunch course with a frequency of five, valid terms for each quarter, and valid start periods selected for 3, 5 and 7. Each teacher can be scheduled for one of 20 lunch sections (one for each day and term) that will start in either period 3, 5, or 7 in the respective day and term combination. For more information about scheduling a teacher for lunch, see *Teacher Scheduling Setup*.

Students can also request lunch courses. Each student must request the lunch course for each day combination and term. Students will be loaded into lunch sections that have no assigned teacher. Using the earlier example, students also have 60 sections in which they can be scheduled (three per day per term).

Though PowerScheduler schedules lunch courses in the same manner as other courses, you can filter lunch courses for certain reports and functions. When defining course scheduling preferences, specify that the course is excluded from report cards and transcripts. The course will not appear on those object reports. Also, lunch courses are not included in functions such as splitting year-long courses.

If you use the lunch functionality for any other teacher scheduling purpose, remember that you can only have one lunch course and that it must follow the same rules as scheduled lunch. That is, there should be only one period of time each day of the year in which teachers are assigned to this activity.

Automated Study Hall

The Automated Study Hall function provides study hall periods to students with incomplete schedules. Automated Study Hall creates a study hall course and sections into which students, teachers, and rooms are scheduled.

How to Run the Automated Study Hall Function

Perform this function only after you build and load a master schedule. Also, set up a Study Hall course before creating study hall sections. For more information, see *New Courses*.

To set up study hall for a selected group of students, first select the group of students. For more information, see *Schedule Search and Select*.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Processing, choose **Automated Study Hall** from the PowerScheduler menu. The Automated Study Hall Parameters page appears.
3. Use the following table to enter information in the fields:

Field	Description
Run For	Choose whether you want to set up study hall sections for all students or only for the selected students.
Terms	Click **Associate** to select the terms in which you want to set up study hall sections. The terms available include only those terms in the active scenario.
Course	Click **Associate** to select a course from which you will create study hall sections. The courses available include only those courses in the active catalog.
Rooms Allowed	Click **Associate** to select the rooms that can be used for study hall sections. The rooms available include only those that are selected to be scheduled and are associated with the selected school. Select the **Allow Multiple Sections Per Room** checkbox if there can be more than one section in a particular room at the same time.
Teachers Allowed	Click **Associate** to select the teachers that can be scheduled for study hall sections. The teachers available include only those that are selected to be scheduled and are associated with the selected school.

	Select the **Allow Exceed Max-in-a-Row for Teachers** checkbox to override the maximum number of periods in a row on a teacher's schedule.
Max Number of Students per Section	Enter the maximum number of students that can be scheduled into a study hall section.
Periods Allowed	Click **Associate** to select the periods in which study hall sections can be scheduled. The periods available include only those in the active scenario.
Day Pattern List	Click **Add** and select a day pattern on which study hall sections can be scheduled. That way, PowerScheduler can be more efficient by setting up study hall sections that span multiple days, if possible. For example, a five-day schedule could include the day patterns MWF, TR, and MTF. PowerScheduler would first find the students that have free periods that fit a given day pattern. Then, for each period in the master schedule, it creates the appropriate number of study hall sections that occur on each day in the day pattern. Assuming the maximum number of students per section is 25, the day pattern MWF would produce study hall sections as follows: • Period 1: Two sections each on Monday, Wednesday, and Friday • Period 2: Zero sections • Period 3: One section each on Monday, Wednesday, and Friday Click **Add** for each day pattern you want to identify. Click **Modify** or **Delete** to edit or remove a day pattern. **Note:** The default day pattern, if none is entered, is one that reflects all the days in the schedule. In this case only those students who have an unscheduled meeting period that occurs on all days in the schedule will be enrolled in a study hall. For example; if a student is unscheduled during period 3 on both days of an A/B schedule, then the student will be enrolled. If a student

	is unscheduled during period 3 on only Day A, then the student will not be enrolled in a study hall.

4. Click **Create**. The Automated Study Hall Parameters page appears.

How to View the Automated Study Hall Results Log

After setting up study hall parameters, you can view the results of the study hall setup.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Processing, choose **Automated Study Hall** from the PowerScheduler menu. The Automated Study Hall Parameters page appears.
3. Click **View last results log**. The Automated Study Hall - Results Log page displays the date and time the of the last study hall run and the parameters and values set for that run.

   Note: For descriptions of these parameters, see *How to Run the Automated Study Hall Function*.

   The following information appears in the Results section of the Automated Study Hall - Results Log page:

Field	Description
Students found with schedule holes	The number of students whose requests were fulfilled but whose schedules have open periods.
Total students fully scheduled	The number of students who had all unscheduled time filled with study hall sections as a result of the last Automated Study Hall run.
Total students not fully scheduled	The number of students who did not have all unscheduled time filled with study hall sections as a result of the last Automated Study Hall run.
[Study Hall Sections]	For each study hall section created, the following information appears:

	• Section # • Expression • Term • Teacher • Room • Size

4. Click **Back** to return to the Automated Study Hall Parameters page.

   Note: If a "Warning Page Expired" message appears, click the **PowerSchool** logo to return to the start page.

Build Constraints Overview

Build constraints restrict the way the system schedules a course in the master schedule. Use constraints to tell the system exactly how you want to build your schedule.

PowerSchool includes many types of build constraints you can define. Use each constraint to constrain the schedule in a specific way. For example, use a Teacher Free constraint if you want the football coach to have a free period at the end of the day during the fall semester. Alternatively, to preschedule the Wind Ensemble course at a particular time and place, use a Pre-Schedule constraint.

Note: Since constraints restrict the schedule, the more constraints you define, the less flexibility the system has to build your schedule and the less optimal the resulting schedule will be. It is always best to use the fewest number of constraints required to accomplish your scheduling goals.

The most common constraints are Pre-Schedule and Teacher Free. There are also constraints to manage course and teacher teams and to restrict the meeting times of courses.

You do not have to define any constraints if you can build a satisfactory master schedule without them. Schools often start building schedules with only a few constraints, then gradually add new ones to refine the schedule and achieve particular results.

After creating constraints, you can edit and delete them as necessary. For more information, see *Work with Build Constraints*. In addition to build constraints, you can set constraints during the load process. For information about load constraints, see *Load Constraints*.

Build Constraints

Build constraints restrict the actual building of the master schedule. To view a list of build constraints and the number of each that have been defined for your schedule, choose **Build Constraints** from the constraints menu. For teacher-related build constraints, see *Teacher Build Constraints*.

How to Add a Course Optimize Constraint

Use a Course Optimize constraint to override the global sampling parameters when scheduling a specific course. For example, if you have a course that you know will be very difficult to schedule, increase both the minimum number of combinations to sample and sampling percentage using this constraint.

Note: You can only define one Course Optimize constraint per course.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Constraints** from the PowerScheduler menu. The Constraints menu appears.
3. Under Build Constraints, choose **Course Optimize**. The Course Optimize Constraints page appears.
4. Click **New**. The Edit Course Optimization page appears.
5. Use the following table to enter information in the fields:

Field	Description
Course Number	Click **Associate** to select the course you want to optimize.
Minimum number of combinations to sample	Enter the minimum number of combinations you want the system to sample when scheduling this course into the master schedule. For example, if this field on the Edit Build Scenario page is set for 10,000 and you have a course you know will be difficult to schedule, enter **50,000** so that the system will evaluate five times as many combinations as it does for your other courses.
Sampling Percentage	Enter the percentage of combinations you want the system to sample when scheduling this course into the master schedule. For example, if this field on the Edit Build Scenario page is set for 75% and you have a course you know will be difficult to schedule, enter **100** to have the system evaluate all possible combinations.

6. Click **Submit**. The Course Optimize Constraints page appears.

How to Add a Course Restriction Constraint

Use a Course Restriction constraint to restrict sections of a course to particular periods and days or to meet any time except the specified periods and days.

For example, use this constraint to force three sections of a five-section course to schedule at the same time. The system normally spreads the sections out over different periods. With this constraint, you can force them to be scheduled where you want.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Constraints** from the PowerScheduler menu. The Constraints menu appears.
3. Under Build Constraints, choose **Course Restrict**. The Course Restrictions Constraints page appears.
4. Click **New**. The Edit Course Restriction page appears.
5. Use the following table to enter information in the fields:

Field	**Description**
Course Number	Click **Associate** to select the number of the course you want to restrict.
Term	Use the pop-up menu to choose to which term you want this constraint to apply.
Schedule	Select the checkbox next to each period in each day that you want this course to be taught.
Applies to days only	Select the checkbox to apply this constraint to only the days specified in the Schedule checkboxes. The system does not consider periods and terms for this constraint.
Applies to periods only	Select the checkbox to apply this constraint to only the periods specified in the Schedule checkboxes. The system does not consider days and terms for this constraint.

Minimum Number of Sections	Enter the minimum number of sections you want to restrict. **Note:** If the Minimum Number of Sections and Maximum Number of Sections fields are both 0, then this course can be taught in any period or day except the ones indicated.
Maximum Number of Sections	Enter the maximum number of sections you want to restrict. **Note:** If the Minimum Number of Sections and Maximum Number of Sections fields are both 0, then this course can be taught in any period or day except the ones indicated.
Section Type	If the course section you want to restrict has a section type, use the pop-up menu to choose it. If a course has five sections and the two sections you want to restrict contain section types, you must create two constraints.

6. Click **Submit**. The Course Restrictions Constraints page appears.

How to Add a Course Room Constraint

Use a Course Room constraint to assign a course to a particular room. For example, you could force the Computer-Aided Drafting class to be taught in the Computer Lab rather than the Shop.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Constraints** from the PowerScheduler menu. The Constraints menu appears.
3. Under Build Constraints, choose **Course Room**. The Course Room Constraints page appears.
4. Click **New**. The Edit Course Room Constraint page appears.
5. Use the following table to enter information in the fields:

Field	Description
Course Number	Click **Associate** to select the number of the course you want to assign to a particular room.

Room	Click **Associate** to select the room in which you want this course to be scheduled.
Teacher	Click **Associate** to select the teacher who will be instructing this course. **Note:** This constraint only applies to the sections of this course taught by the teacher you select. If you do not select a teacher, this constraint applies to all sections of the selected course.

6. Click **Submit**. The Course Room Constraints page appears.

How to Add a Course Team Constraint

Use a Course Team constraint to block teachers and courses together so that certain courses can only be taught at the same time as certain other courses. For example, a jazz band instructor can only teach a jazz band course when a jazz choir instructor leads a jazz choir class (or vice versa).

A blocking course relationship requires Course 1 and Course 2 to have the exact same number of sections. A Course Team constraint allows Course 1 and Course 2 to offer different numbers of sections, as long as there is at least one section of each using the blocking specified. For more information, see *Course Information*.

Note: The order of the courses is irrelevant when creating this constraint.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Constraints** from the PowerScheduler menu. The Constraints menu appears.
3. Under Build Constraints, choose **Course Team**. The Course Team Constraints page appears.
4. Click **New**. The Edit Course Team Constraint page appears.
5. Use the following table to enter information in the fields:

Field	Description
Course Number 1	Click **Associate** next to the Course Number field to select the name of the first course you want to team together.

Teacher	Click **Associate** next to the Teacher field to select the name of the teacher instructing this course.
Course Number 2	Click **Associate** next to the Course Number field to select the name of the course you want to team with Course Number 1.
Teacher	Click **Associate** next to the Teacher field to select the name of the teacher instructing Course Number 2.
Simultaneous Blocking?	Select the checkbox if you need these two courses to be scheduled at the same time. Otherwise, any other blocking course relationship (such as Before or After) prevails. **Note:** For more information, see *Course Information*.
Same Room?	Select the checkbox to force both courses to be scheduled in the same room.
Minimum Number of Teaming Sections	Enter the minimum number of sections of these courses that will be teamed together. For example, if each course has four sections but you enter **2** in this field, then only two of the four sections will be teamed.

6. Click **Submit**. The Course Team Constraints page appears.

How to Add a Pre-Schedule Constraint

Use a Pre-Schedule constraint to schedule sections of a course ahead of time when you already know exactly when and where they must meet in the master schedule. For example, use this constraint to schedule sections of Band in sixth and seventh periods, which is the only time the band teacher is available.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Constraints** from the PowerScheduler menu. The Constraints menu appears.
3. Under Build Constraints, choose **Pre-Schedule**. The Pre-Schedule Constraints page appears.
4. Click **New**. The Edit Pre-Schedule Constraint page appears.

5. Use the following table to enter information in the fields:

Field	Description
Course Number	Click **Associate** to select the number of the course you want to preschedule.
Schedule	Use the pop-up menu to select the term in which this constraint applies. Select the checkbox next to each period in each day that you want to schedule this course. For example, if you have a one-day schedule and select Period 1 and Period 2, a section of this course will span periods 1 and 2 every day. Alternatively, if you have a two-day schedule and select Period 1 for both days, the section will meet every day during first period.
Room	Click **Associate** to select the number of the room in which you want to preschedule this course.
Teacher	Click **Associate** to select the name of the teacher who instructs the course you want to preschedule.
Section Type	If the section of the course you want to preschedule has a section type, use the pop-up menu to choose it. **Note:** To preschedule two sections of the same course, one of which has a section type, you must create two constraints.
Team Code	If the section of the course you want to pre-schedule is associated with a teacher team, use the pop-up menu to choose it.

6. Click **Submit**. The Pre-Schedule Constraints page appears.

How to Add a Room Free Constraint

Use a Room Free constraint to block a room from being scheduled for a particular term, day, and period. For example, use this constraint to keep a classroom free during the last period of the day for after-school detention.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Constraints** from the PowerScheduler menu. The Constraints menu appears.
3. Under Build Constraints, choose **Room Free**. The Room Free Constraints page appears.
4. Click **New**. The Edit Room Free Constraint page appears.
5. Use the following table to enter information in the fields:

Field	Description
Room	Click **Associate** to select room you want to keep free when scheduling.
Schedule	Use the pop-up menu to select the term in which this constraint applies. Select the checkbox next to each period in each day that you want to keep this room free. For example, select the checkboxes across the first row if you want to keep the room free during the first period of each day.

6. Click **Submit**. The Changes Recorded page appears.

How to Add a Schedule Break Constraint

Use a Schedule Break constraint to add flexibility to teachers' max-in-a-row count. For example, if your teachers can instruct a maximum of three periods in a row, work around this by putting a 10-minute homeroom period after Period 2. This would make it possible to schedule teachers for Periods 1 through 5.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Constraints** from the PowerScheduler menu. The Constraints menu appears.

3. Under Build Constraints, choose **Schedule Break**. The Schedule Break Constraints page appears.
4. Click **New**. The Edit Schedule Break Constraint page appears.
5. Choose the period after which you want to insert a break in the schedule from the pop-up menu.
6. Click **Submit**. The Schedule Break Constraints page appears.

Teacher Build Constraints

Teacher-related build constraints consider teachers' restrictions when building a master schedule. To view a list of build constraints and the number of each that have been defined for your schedule, choose **Build Constraints** from the constraints menu. For other build constraints, see *Build Constraints*.

How to Add a Teacher Dovetail Constraint

Use a Teacher Dovetail constraint to fit partial courses together during the same period so that they take up less room.

For example, Course 1 is a partial course that meets three times during a six-day schedule cycle. Course 2 is a partial course taught by the same teacher and also meets three days in the cycle. Use this constraint to force both courses to meet during the same period, but on alternate days. Together the partial courses act as a full course, allowing greater flexibility in that teacher's schedule.

Note: You only have to define this constraint for one of the courses you want to fit together with another course.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Constraints** from the PowerScheduler menu. The Constraints menu appears.
3. Under Build Constraints, choose **Teacher Dovetail**. The Teacher Dovetail Constraints page appears.
4. Click **New**. The Edit Teacher Dovetail Constraint page appears.
5. Use the following table to enter information in the fields:

Field	Description
Course Number	Click **Associate** to select the name of one of the courses you want to dovetail with another.

Teacher	Click **Associate** to select the name of the teacher who instructs this course. Only the sections of the course taught by this teacher will be constrained. **Note:** If you do not select a teacher, all sections of the course you selected will be constrained.

6. Click **Submit**. The Teacher Dovetail Constraints page appears.

How to Add a Teacher Free Constraint

Use a Teacher Free constraint to specify those periods when a teacher must be free, such as when teaching at another school. This is the opposite of the Teacher Part-Time constraint.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Constraints** from the PowerScheduler menu. The Constraints menu appears.
3. Under Build Constraints, choose **Teacher Free**. The Teacher Free Constraints page appears.
4. Click **New**. The Edit Teacher Free Constraint page appears.
5. Use the following table to enter information in the fields:

Field	Description
Teacher	Click **Associate** to select the name of the teacher who you want to be free during certain periods of the day.
Schedule	Use the pop-up menu to choose the term to which you want to apply this constraint. Select the checkbox next to each period in each day that you want this teacher to be free.

6. Click **Submit**. The Teacher Free Constraints page appears.

How to Add a Teacher Part-Time Constraint

Use a Teacher Part-Time Constraint to define which periods a part-time teacher is available to be scheduled. This is the opposite of the Teacher Free constraint.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Constraints** from the PowerScheduler menu. The Constraints menu appears.
3. Under Build Constraints, choose **Teacher Part-Time**. The Teacher Part-Time Constraints page appears.
4. Click **New**. The Edit Teacher Part-Time Constraint page appears.
5. Use the following table to enter information in the fields:

Field	Description
Teacher	Click **Associate** to select the name of the teacher who is on a part-time schedule.
Beginning Period	Choose the period that this teacher is available from the pop-up menu.
Ending Period	Choose the last period that this teacher is available from the pop-up menu.
Maximum Consecutive Periods	Enter the maximum number of consecutive periods this teacher is available. This setting works in conjunction with the **Beginning Period** and **Ending Period** fields. For example, assume you have selected 1 for the Beginning Period and 7 for the Ending Period and 4 for the Maximum Periods field. This teacher would be available for periods 1-4, 2-5, 3-6, or 4-7.

6. Click **Submit**. The Teacher Part-Time Constraints page appears.

How to Add a Teacher Team Constraint

Use a Teacher Team constraint to allow teachers to teach course sections outside of their own team. For example, if a teacher belongs to the Team 1but also must teach a section for the Team 2, define this constraint to allow Team 2 students to be scheduled with this teacher for a particular course.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Constraints** from the PowerScheduler menu. The Constraints menu appears.
3. Under Build Constraints, choose **Teacher Team**. The Teacher Team Constraints page appears.
4. Click **New**. The Edit Teacher Team Constraint page appears.
5. Use the following table to enter information in the fields:

Field	Description
Course Number	Click **Associate** to select the number of the course you want to link to a teacher.
Team Code	Choose the appropriate teacher team code from the pop-up menu.
Teacher	Click **Associate** to select the name of the teacher who will be teaching outside of his or her assigned team.
Number of Sections	Enter the number of course sections you want this teacher to teach outside of his or her assigned team.

6. Click **Submit**. The Teacher Team Constraints page appears.

Work with Build Constraints

Use the PowerScheduler menu to view build constraints by type or to modify or delete build constraints.

To view constraints that affect courses, sections, students, or teachers, choose the appropriate resource from the PowerScheduler menu. Then, view the constraints either by choosing **Constraints** from the pop-up menu or by clicking **Constraints** on the page. The Constraints page displays all constraints that affect that resource, regardless of type.

How to Modify Build Constraints

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Constraints** from the PowerScheduler menu. The Constraints menu appears.
3. Click the name of the type of constraint you want to modify, such as **Course Optimize**.
4. Click the course name, student name, teacher name, or period number in the row of the constraint you want to modify. The Edit page for that particular constraint appears.
5. Edit the information as needed.
6. Click **Submit**. The appropriate constraints page appears.

How to Delete Build Constraints

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Constraints** from the PowerScheduler menu. The Constraints menu appears.
3. Click the name of the type of constraint you want to delete, such as **Course Team**.
4. Click the course name, student name, teacher name, or period number in the row of the constraint you want to delete. The Edit page for that particular constraint appears.
5. Click **Delete**. The appropriate constraints page appears.

Course Rank

Building a course rank is the last step before building the master schedule.

The course rank file defines the order in which the system schedules courses into the master schedule. The rank is a value that a course is given according to how difficult it is to schedule. As the system fills the master schedule with courses during the build, it becomes more and more difficult to schedule each successive course. Therefore, the order in which the system schedules courses is important. The best course rank places the courses that are the most difficult to schedule at the beginning of the build process and saves the courses that are easiest to schedule for the end.

For example, singletons (courses that are offered only once per term) are scheduled before regular courses because they are more difficult to fit in a schedule. The system schedules prescheduled courses first, and then schedules singletons, doubletons, core sections, and electives.

Demand for a course (the number of student course requests) and constraints on a course affect course rank. The system initially builds the course rank based on constraints and other parameters that you defined.

It is important to keep the course rank file up-to-date as you build your schedule and adjust your courses, teachers, constraints, and other parameters.

The first time you build the course rank, the system creates a rank file. As you build your schedule and adjust parameters, such as courses, teachers, and constraints, the rank file needs to be updated. For more information, see *Build Course Rank*.

Build Course Rank

When you initially build the course rank, the system displays the courses in the order the system has determined, based on the course definitions and constraints.

The system assigns a sequential number to each course to indicate its place in rank using numbers in increments of ten, such as 10, 20, 30. The smaller the number, the higher the course rank.

Use this numbering system to edit the ranks of courses and put courses between system-defined ranks. For example, you can re-rank a course to 11, 12, or 13 without affecting the ranks of the system-defined courses ranked at 10 and 20.

After building the course rank and making modifications, you may need to rebuild the course rank. Rebuilding the course rank overwrites any changes you have made to the rank file. Rebuild the course rank after you add or delete a course. If you rebuild the rank, you will lose any edits you made. Be sure to make note of those changes so that you can re-create them in the rebuilt course rank. To rebuild the course rank, see *How to Build Initial Course Rank*. To rebuild the rank without updating your manual changes, use the Update Rank function. For more information, see *Update Rank*.

How to Build Initial Course Rank

Use this function to set up an initial course rank or rebuild a course rank. This will overwrite any manual changes to the course rank.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Processing, choose **Course Rank** from the PowerScheduler menu. The Course Rank page appears.
3. Click **Build Rank**. The Confirm Build Course Rank page appears.
4. Click **Submit**. The Course Rank page appears.

How to Edit a Course Rank

After creating an initial rank file, you can modify, update, and rebuild it. These are the final steps before building the master schedule.

The system evaluates all factors that affect courses to determine the best course rank. After the system builds the course rank, you can make manual adjustments based on your own experience or special circumstances not reflected in the parameters and constraints you defined. The rank you manually give a course overrides the rank assigned by the system.

For example, the system calculates a course rank of 90 for Concert Band based on the constraints you entered for this course compared to the constraints you entered for other courses. Due to experience in dealing with the conflicts band members face when trying to schedule Concert Band, you decide to change the rank of this class. By changing the rank from 90 to 5, you force other courses to schedule around Concert Band, reducing the chance of conflicts.

Note: You cannot change the rank of a course to be higher than a prescheduled course. Prescheduled courses are always the first courses scheduled.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Processing, choose **Course Rank** from the PowerScheduler menu. The Course Rank page appears.
3. Use the following table to edit information in the fields:

Field	Description
Delete	Select the checkbox to delete this course from the course rank. **Note:** Only delete a course from the course rank if it is not going to be scheduled.
Sys Rank	The rank that the system determined for the course appears.
Rank	The rank that the system determined for the course appears. The Sys Rank value is the same as the Rank value if the course rank has not been manually changed.
Crs Num	The number of the course appears.

Crs Name	The name of the course appears.
Sections	The number of sections offered for the course appears.
PPC	The number of periods per cycle for the course appears.
Demand	The number of requests for the course appears.
Crs Conflicts	The number of unique courses among students who are requesting a particular course appears. The course in that row is not included in the calculation.
Stu Conflicts	The sum of all requests made by students who have requested the course appears.
Constraints	This field contains a dot if any constraints have been associated with the course. It is blank if the course has no constraints.
Comments	Enter any comments about why you are editing a particular course rank number.

4. Click **Submit**. The system displays the changes on the Course Rank page.

How to Update Rank

Update the course rank after you do any of the following:

- Edit the number of sections of a course.
- Significantly change the number of student course requests.
- Add or delete constraints.

Updating the course rank recalculates the system rank and updates the course rank for courses that you have not adjusted.

Note: To overwrite any manual changes and rebuild your entire course rank, rebuild the course rank. For more information, see *How to Build Initial Course Rank*.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Processing, choose **Course Rank** from the PowerScheduler menu. The Course Rank page appears.
3. Click **Update Rank**. The Confirm Update Course Rank page appears.
4. Click **Submit**. The Course Rank page appears.

Build Master Schedule Introduction

After you define all of the parameters and constraints outlined in the section *Prepare to Build the Master Schedule*, proceed by building the master schedule. When you build the master schedule, do the following:

- Validate the data you entered. For more information, see *Validate Build Scenarios*.
- Begin the build. For more information, see *Build the Master Schedule Overview*.
- Fix any issues the system finds when building the schedule. If the system stops the build, see *When the System Stops the Build*.
- Optimize the built schedule.
- Load students into the master schedule.
- Commit the master schedule for the next school year.

You can follow these steps several times to create the best possible master schedule. For example, you might build the schedule and realize you need to add some course sections. After adding the sections, rebuild the schedule. Then, you may find that you need to define a Teacher Part-time constraint, which restricts when the system can schedule a course to which a particular teacher is assigned. Add the constraint and build the schedule again.

You will most likely build the master schedule several times before committing it for the next school year. To ensure that your student schedules are complete, see *Checklist to Know Your Student Schedules are Complete*.

Complete the appropriate steps in *Prepare to Build the Master Schedule* before proceeding. There are five main steps you must complete in the following order when building the master schedule:

- Validate Build Scenarios
- Build the Master Schedule
- Load Constraints
- Load Students
- Commit the Master Schedule

Validate Build Scenarios

Before PowerScheduler builds your master schedule, you must validate the information that was entered. The validation process finds any errors in your data, such as too many sections assigned to a teacher.

The system checks the following:

- All courses selected as scheduled must be in the rank.

- All courses assigned to teachers must be in the rank.
- Each course has a room that will handle its capacity.
- Student course requests have been dropped if a course is not scheduled.

The validation process also alerts you to potential problems, such as students with no scheduled course requests or a teacher who has more periods assigned than periods available.

Before validating your build scenario, confirm that the build parameters are correct. For more information, see *Build Scenario Parameters*.

How to Validate a Scenario

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Processing, choose **Build** from the PowerScheduler menu. The Build Schedule page appears.
3. Select the **Validate only** checkbox.
4. Click **Submit**. The engine starts to run. For more information, see *Understand the PowerSchool Scheduler Page*.
5. Make the necessary corrections using the steps described in the section *Build Validation*. Continue to validate your data until it is error-free.

Build Scenario Parameters

Before you validate your data, verify that the details of the build scenario are correct.

How to Confirm Build Scenario Parameters

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Scenarios** from the PowerScheduler menu. The Scenarios page appears.
3. Click the name of the build scenario you will use to build your master schedule. The Edit Build Scenario page appears.
4. Verify that the data in the following fields are correct: Build Name, Terms, Periods, Days, and Course Catalog. Make modifications, if necessary.
5. Make sure that the **Active Build** checkbox is selected.
6. Enter comments in the Build Description field to describe this scenario. If you build a master schedule using another scenario, comments make it easy to differentiate between the two.

Note: You can also use this field to denote changes as the build process progresses.

7. Click **Submit** to save any changes. The Scenarios page appears.

Load Validation

Validate the data in your schedule before loading. This process finds any errors that would prevent the system from loading a master schedule.

Note: The Import link does not appear on the Load Student Schedules Queue page if only validation was performed.

How to Validate Load Data

Before running a load, you should validate the data. The validation process finds any errors in your data and alerts you to potential problems.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Processing, choose **Load** from the PowerScheduler menu. The Load Student Schedules Queue page appears.
3. Select the **Validate only** checkbox.
4. Click **Submit**. The engine starts to run. For more information, see *Understand the PowerSchool Scheduler Page*.
5. Under Processing, choose **(Q)** next to Load from the PowerScheduler menu. The Load Student Schedules Queue page appears.
6. Click **View** in the Results Log column of the appropriate load. The "Results Log for [school name]" page appears.
7. Make the necessary corrections and continue to validate your data until it is error-free.

Build Validation

Use the results log to identify any errors in your data. Items in the log can be of three types: information, warnings, and errors. All errors must be corrected before you begin building the master schedule. Though warnings do not need to be corrected, you may want to review them before building the master schedule.

When you start the validate process, the system checks the following types of data:

- Courses
- Students

- Blocks
- Constraints
- Parameters
- Teachers

The following table displays examples of error messages contained in the validation log:

Validation type	Error messages
Course	• Course has been dropped. Missing from course rank. Sections offered is zero. • Invalid minimum periods-per-day. • Invalid frequency. • Invalid maximum days-per-cycle. • Invalid term length. • Invalid schedule type. • Dropped course still listed in course rank. • Course is not flagged to be scheduled. • The assigned course number is not valid. • Requested course number is not a valid course flagged for scheduling.
Blocks	• Invalid block -courses can only be blocked in pairs (no chaining). • Invalid block - a course cannot have multiple blocking relationships.
Teachers	• Teacher is flagged for scheduling but has no teacher assignments. • Teacher has more periods assigned than periods available. • Teacher's max-in-a-row is zero. • Scheduled teacher has no scheduled assignments. • Invalid teacher. • Too many sections assigned to teachers. • Not enough sections assigned to teachers.
Students	• Scheduled student has no scheduled requests. • Student with requests is not flagged for scheduling.

	• Student is not flagged for scheduling but has requests.

Once you know where the errors in your data are, go back and correct them. For example, if the sign indicates that too many sections are assigned to a teacher, find the related course number and make the necessary changes. Then, validate your scenario until it is error-free.

Build the Master Schedule Overview

When building a master schedule, the goal is to satisfy the most student course requests possible while maintaining a good balance of students in course sections. PowerScheduler assigns each section to a period and schedules the sections into classrooms based on the teacher assignments. The system attempts to satisfy as many student course requests as possible, while respecting constraints and the course rank. Before you can build the master schedule, you must download and install the scheduling engine.

Plan to build the master schedule several times. After you build the schedule for the first time, you may find that you forgot to define a constraint or that you need to add sections to a course. Make those changes and build the schedule again. It is likely that you will make changes and rebuild several times before you have a satisfactory schedule.

After you decide on a master schedule, you have the option of allowing the system to optimize it. Then, finalize the master schedule before loading student schedules.

Download and Install the Scheduling Engine

When you install the scheduling engine, all of the necessary files download to your local computer. Complete the instructions for your specific type of computer.

Note: Occasionally, there are enhancements made to the scheduling engine. If you navigate to a PowerScheduler page and see a message about updating your engine, you must download the most recent engine.

Important Note: If you have previously installed the scheduling engine, uninstall it before re-installing an updated version.

How to Download the Scheduling Engine for Macintosh

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Engine Download** from the PowerScheduler page. The Engine Download page appears.
3. Click **PSSchedEngineInstall.dmg**. The scheduling engine disk image downloads.
4. Double-click the downloaded file, if necessary. The Install PowerSchool Scheduling Engine page appears.
5. Click **Continue**. The Choose Destination Location page appears.
6. Click the disk onto which you want to install the engine. Click **Choose Folder** to navigate to your preferred location.
7. Click **Continue**.
8. Click **Install**.

9. Click **Close** when the successful installation message appears.

   Note: If you are using Mac OS X 10.2.2 without the Security Update 2002-11-21 installed, the engine will not run properly. To install the security update, select Software Update in the Mac OS X System Preferences dialog, which is available from the Apple menu.

To continue the process of building a master schedule, see *Build the Master Schedule*.

How to Download the Scheduling Engine for Windows

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Engine Download** from the PowerScheduler menu. The Engine Download page appears.
3. Click **PSSchedEngineInstall.ZIP**. Depending on the type of computer you are using, different pages may appear. However, everyone must save the scheduling engine software.
4. When asked where to store the software, select a folder or directory.
5. Double-click **PSSchedEngineInstall.exe** to extract the file. The InstallShield Wizard page appears.
6. Click **Next**. The Choose Destination Location page appears.
7. Click **Browse** in the Destination Folder field to navigate your preferred location.
8. Click **Next**. The InstallShield Wizard Complete page appears.
9. Click **Finish**. The InstallShield Wizard page closes.

To continue the process of building a master schedule, see *Build the Master Schedule*.

Build the Master Schedule

After you prepare the master schedule, validate the build scenario you want to use, build the master schedule, and then optimize the master schedule. For information about data validation, see *Validate Build Scenarios*. For information about optimization, see *Optimize the Master Schedule*.

Note: It is recommended that you do not use Safari when building your master schedule.

How to Build the Master Schedule

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Processing, choose **Build** from the PowerScheduler menu. The Build Schedule page appears.

3. Select the **Build master schedule** option.
4. Select the **Use locked master records** checkbox if you are rebuilding the schedule after fixing an issue with a particular item, such as a course, room, or teacher, or if you manually entered any sections using the Sections link on the PowerScheduler menu. The system restarts the build at the course it was scheduling when the build stopped, leaving where they were originally scheduled all of the courses it had scheduled before the build stopped. For more information about locked course sections, see *Unlock Previously Scheduled Courses*.

   Note: Do not select the checkbox if you are building the master schedule for the first time or optimizing a completed master schedule.

5. Click **Execute**. The engine starts to run, and the PowerSchool Scheduler page appears. See *Understand the PowerSchool Scheduler Page*.
6. Click **(Q)** next to Build on the PowerScheduler menu to view the results of the build. The Build Master Schedule Queue page appears.

   Note: Each time you run a build, a new result appears on the Build Master Schedule Queue page.

7. Use the following table to enter information in the fields:

Field	Description
Build Type	The function performed (either Build or Optimize) appears.
Started	An indication of whether the function started (either True or False) appears.
Success	An indication of whether the function was successful (either True or False) appears.
Completed	For events where the Success is "True," the date and time at which the function completed appears. The date and time is according to the server's settings.
Results Log	Click **View** to see the results of the build. For more information, see *Build Results Log*.

Results	Click **Import** to import the results of the build from PowerScheduler Engine into PowerSchool. For more information, see *Import the Master Schedule*. **Note:** The Import link does not appear if only validation was performed.
Build Log	Click **View** to see the build log. For more information, see *Build Log*.
Comment	Enter a comment for the build, such as **First Attempt**.
Delete	Select the **Delete** checkbox to clear the build information from the queue.

8. Click **Submit** to save your changes if you entered a comment or selected the **Delete** checkbox. The Build Master Schedule Queue page refreshes.

Understand the PowerSchool Scheduler Page

After you click **Execute** on the Build Schedule page, PowerSchool prepares the information and notifies the scheduling engine on your computer that it is ready to begin the build process. The engine downloads the files necessary for the build and begins to build the schedule.

Note: With Internet Explorer, you can add a File Helper for the PowerScheduler engine application so that you're not prompted to save the engine each time you build. However, if you then work outside the network on which your PowerSchool server resides, you must change the IP address for the engine by modifying the Preferences in the engine application.

It is normal for the engine to immediately quit. The first build attempts cause the engine to do more validation. To proceed, you must eliminate all validation errors. For more information, see *Build Results Log*.

Once all of the engine validations are eliminated, the engine begins scheduling each course in the course catalog in the order defined in the course rank. The build process can take a long time. You may want to monitor the system's progress to troubleshoot if the build stops.

For each course, the system displays the following:

- Course number
- Course name
- Number of sections
- Number of courses that have been successfully scheduled
- Percentage of courses that have been successfully scheduled

The PowerSchool Scheduler page contains the following buttons:

- **More Information:** Select this option to view additional information about the course the engine is scheduling. Click **Faster Scheduling** to viewing less information so that the engine runs faster.
- **Stop:** Click this button to stop the build. Then, click **Yes** when asked if you are sure you want to stop scheduling. The system saves the schedule it created before you click **Stop** but does not schedule the course it is currently reviewing. For example, you start the build process on Friday afternoon but want to stop the build before you leave for the weekend. On Monday, restart the build where the system left off on Friday afternoon. For more information, see *Restart the Build*.
- **Skip:** Click this button to force the system to move on to schedule the next course. You should wait until at least 10% of the combinations are tried before skipping the course. Then, click **Yes** when asked if you are sure you want to skip this course. You may want to click **Skip** if the system has tested one million of more than two million combinations for a course and is beginning to slow while attempting the final million combinations. The system then schedules the course in the best combination it has already attempted.

While the engine runs, you may notice that it sometimes slows down. This is because with thousands of scheduling possibilities, the engine must cycle through them to produce the most optimal schedule possible while taking into account student requests, courses, and the constraints upon them. The engine must sort through more and more information as it proceeds with the building or loading process. For example, when the process first begins, it is easy to find a section for a student's request; however, as more sections fill up and fewer sections are available, the engine must work through a student's schedule to attempt to fulfill all course requests. Thus, you may notice periodic slow points as the engine proceeds.

When the System Stops the Build

PowerScheduler may stop the build process for one of several reasons, including the following:

- The engine has encountered validation errors. View the build results log.

- The system has encountered a course for which it cannot schedule all of its sections due to constraints that cannot be respected, data entry mistakes, or some other problem. View the build log.
- The build process is complete.

If the system stops immediately, the PowerSchool Scheduler page displays the following message: "No longer listening for incoming connections." This means that your data has uncorrected validation errors. Use the build log to correct these errors. For more information, see *Build Log*.

Build Results Log

To see the results of the build or if the engine stops immediately after starting, check the build results log. This log displays any new validation errors the engine discovered.

How to View the Build Results Log

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Processing, choose **(Q)** next to Build from the PowerScheduler menu. The Build Master Schedule Queue page appears.
3. Click **View** in the Results Log column of the appropriate build. The "Results Log for [school name]" page appears.

If the build stops because of validation errors, the results log displays details about these errors. There are three types of errors:

- Info: These messages are informational, such as "Course [x]: Rescheduled [x] students out of [x] (leaving [x] unscheduled)." These do not prevent a successful build.
- Warning: These are "red flag" messages, such as "The teacher's preferred room is not suitable for the course the teacher is teaching." These do not prevent a successful build.
- Error: These messages are validation errors that must be corrected in order for the engine to run, such as "Invalid valid term found in the Course file (does not match the term length)." These do prevent a successful build.

For more information about validation messages, see *Build Validation*.

Build Log

The build log displays the possible reasons the engine stopped the build while scheduling a particular course. It also displays information about course attributes, teachers, and rooms.

How to View the Build Log

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Processing, choose **(Q)** next to Build from the PowerScheduler menu. The Build Master Schedule Queue page appears.
3. Click **View** in the Build Log column of the appropriate build. The Build Log page appears.

How to Interpret the Build Log

If PowerScheduler completes the build, the build log displays a quick summary of the build. If the build stops because of a problem scheduling a course, the build log displays details about the course for which it stopped the build. Determine how to resolve the issue based on the following information the system lists for the course:

- Summary of the course parameters, such as whether facilities are needed
- Rooms in which the system already scheduled the course
- Names of teachers assigned to teach the course and their parameters, such as max-in-a-row
- Availability of the required facilities and rooms
- List of possible reasons for stopping

Once you have this information, make adjustments to eliminate or work around the problem. The system will not schedule any additional courses until you correct the issues.

Import the Master Schedule

Each time you build a schedule, you must import the results of that build unless you want to rebuild from scratch. Importing the master schedule flags the sections as locked. If you rebuild from this point forward, you must select the "Use locked master records?" option when building. For more information about locked course sections, see *Unlock Previously Scheduled Courses*.

If the engine stops the build before all courses have been scheduled, you can import the master schedule to view the schedule information in PowerSchool.

How to Import the Master Schedule

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Processing, choose **(Q)** next to Build from the PowerScheduler menu. The Build Master Schedule Queue page appears.

   Note: Each time you run a build, a new result appears on the Build Master Schedule Queue page.

3. Click **Import**. The Import Schedule page appears.
4. Use the following table to enter information in the fields:

Field	Description
Master Schedule?	Select this option to import the master schedule without student schedules.
Master Schedule with Student Schedules?	Select this option to import the master schedule with student schedules.

5. Click **Submit**. The Import Schedule page appears.

Review Course Rank

Before you restart the build, you may need to rebuild or update your course rank if you made significant changes to a course or to student course requests.

PowerScheduler uses the course rank to determine the order in which it schedules each course. If you make changes to a course or student course requests, those changes may affect when the system should schedule the course during the build process.

Update the course rank if you add a new course to the course catalog. When you update the rank, the system fits the new course into the rank without moving or recalculating the rank of all the other courses. Rebuild the course rank for all courses if you add or drop sections from a course. The system deletes the previous course rank file and recalculates the rank for every course. For more information, see *Build Course Rank*.

If you rebuild the rank, do not lock previously scheduled courses when you build the schedule again. Rebuilding the rank places all courses, including those that were scheduled during the last build, in a new scheduling order. To allow the system to create the most successful schedule with the new rank order, build the schedule again by deselecting the "Use locked master records?" checkbox on the Build Master Schedule (Step 2) page.

Restart the Build

If you made significant changes to a course or student course requests, review your course rank before restarting the build. For more information, see *Review Course Rank*. After you solve all issues with the course, click **Build** on the Scheduling page to build the schedule again.

When you restart the build, you can do one of the following:

- Build the schedule again from scratch, which overwrites any courses that the system scheduled before the last build stopped. For more information, see *Restart the Build from Scratch*.
- Restart the build and lock all or specific courses the system successfully scheduled during the previous build. The system reschedules only courses you do not lock. To unlock sections of courses, see *Unlock Previously Scheduled Courses*.

After completing one of the above steps, analyze the build to determine if you need to adjust it. For more information, see *Analyze the Built Master Schedule*.

Restart the Build From Scratch

You may want to rebuild the schedule from scratch if either of the following are true:

- Adjustments you made to the course impact courses that were successfully scheduled during the previous build before it stopped.
- You rebuilt the entire course rank file.

For example, if you corrected a teacher conflict by defining a Teacher Part-Time constraint, the correction is likely to affect any other courses that the teacher was previously scheduled to instruct. Therefore, PowerScheduler must reschedule those courses, too.

Unlock Previously Scheduled Courses

When you rebuild the schedule, PowerScheduler automatically selects the Locked Section checkbox on the Edit Section page to lock sections that were successfully scheduled in the previous build. The purpose of locking sections is to save time when rebuilding the master schedule.

Unlock all sections for a course when you want to rebuild that course in the master schedule. The sections are locked as the build runs successfully. If the build partially finishes and then you later rebuild, the system starts where it left off. To have the system rebuild sections of a certain course and then jump to where it left off, you must unlock the sections of the course and select the Use Locked Master Records checkbox when rebuilding. For example, unlock sections of a Biology course. When rebuilding, select the Use Locked Master Records checkbox. The system starts rebuilding with Biology and then skips to where it left off in the previous build.

If you do not select the Use Locked Master Records checkbox when rebuilding the master schedule, the system rebuilds all sections, locked or not. For more information, see *Build the Master Schedule*.

How to Unlock an Individual Section

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Schedule, choose **Sections** from the PowerScheduler menu. The Sections page appears.
3. Choose the course from the courses menu for the section you want to unlock. The course information page appears.
4. Click the number of the section you want to unlock in the Section # column. The Edit Section page appears.
5. Deselect the **Locked Section** checkbox.
6. Click **Submit**. The course information page appears.

How to Unlock More Than One Section

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Functions** from the PowerScheduler menu. The Scheduling Functions page appears.
3. Click **Update Selections**. The Update Selections page appears.
4. Choose **ScheduleSections** from the Current Table pop-up menu.
5. Choose **Course_Number** from the pop-up menu under Search ScheduleSections.
6. Enter the numbers of the courses you want to select, separated by commas, in the blank field in that row.
7. Click **Search all [number] records in this school**. The Update Selections page displays the new number of records.
8. Click **Modify Records**. The Modify Records page appears.
9. Choose **LockedSection** from the pop-up menu.
10. Ensure that the next pop-up menu displays **=** and that the following field is blank.

11. Click **Modify Selected Records**. The Update Selections page appears.

Schedule Sections

A section is an occurrence of a course. Each course can have several sections that meet in different rooms at different times and are taught by different teachers. Using the Sections page, you can view, add, edit, and delete sections for a selected course.

Note: The Sections page can be accessed using the **Sections** link under Schedule or the **Courses** link under Resources.

How to Add a Section on the Master Schedule

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Schedule, choose **Sections** from the PowerScheduler menu. The Sections page appears.
3. Choose the course for the section you want to edit from the courses menu.
4. Click the **Sections** tab. The Sections page for the selected course appears.

   Note: Click the number in the Size column to view the class roster for the section.

5. Click **New**. The Edit Section page appears.
6. Use the following table to enter information in the fields:

Field	Description
Course Name	The name of the selected course appears.
Course Number	The number of the selected course appears.
Term	Choose the term in which the section is offered from the pop-up menu.
Schedule	Select the checkboxes for the periods for the appropriate days on which this section is taught. **Note:** This creates the schedule expression that appears next to the section on several pages.

Teacher	Choose a teacher from the pop-up menu.
Room	Enter the room name or number in which this section is taught.
Section Number	Enter a unique section number for this section. Select the **Locked Section** checkbox if the section should not be rescheduled during the next build.
Close Section at Max	Select the checkbox to not accept more enrollments than the maximum number of enrolled students.
Section Type	Choose the type of section, such as Bilingual, from the pop-up menu (optional).
Grade Level	Enter the grade level of this section.
Current Enrollment	The current enrollment of students in this section appears.
Maximum Enrollment	Enter the maximum number of students that can enroll in this section.
Team	Choose the team associated with this section from the pop-up menu.
House	Click **Associate** to select a team to which this section belongs.
Where Taught	Enter the school ID if the section is taught at a different school.
Dependent Sections	Enter any dependent sections for this section. Separate multiple sections with commas.
Scheduling Program Restrictions	Choose one of the following options: • **Include** to only include students of specified special programs in being scheduled into specified sections.

	• **Exclude** to exclude students of specified special programs from being scheduled into specified sections. If the **Include** option was selected, specify which special programs to include by doing one of the following: • Select the **Select All Programs** checkbox to select all programs. • Select the individual checkbox of each program. The **Evaluated as of [Date]** defaults to date entered in **Evaluate Programs as of this date** field. See *How to Define Program Balancing*.
Exclude From Attendance	Select the checkbox if you do not want to include this section in the student ADM/ADA counts.
Grade Scale	Choose the grade scale from the pop-up menu.
Maximum Load Status	Use the pop-up menu to indicate whether the section should be exempt from counting towards a teacher's maximum student load: • **Exempt**: Students enrolled in this section do not count towards a teacher's maximum student load. • **Lab**: Includes the students enrolled in this section in the calculated average of the number of students scheduled into all lab sections assigned to a teacher. This average is then applied to the teacher's maximum student load. • **Non-Exempt:** Students enrolled in this section count towards a teacher's maximum student load.
Exclude from GPA?	Select the option to either include or exclude the grade from the GPA calculation.
Exclude from Class Rank?	Select the option to either include or exclude the grade from the class rank calculation.

Exclude from Honor Roll?	Select the option to either include or exclude the grade from the honor roll calculation.

7. Click **Submit**. The Sections page for the selected course appears.

How to Edit a Section on the Master Schedule

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Schedule, choose **Sections** from the PowerScheduler menu. The Sections page appears.
3. Choose the course for the section you want to edit from the courses menu.
4. Click **Sections**. The Sections page for the selected course appears.
5. Use the following table to filter information:

   Note: Click the arrow to expand this section. Click the arrow again to collapse this section.

Field	**Description**
Filter	To narrow the list: 1. Enter search criteria in the **Search** field. To filter by columns: 1. Click **+**. 2. From the first pop-up menu, choose one of the following: • **Expression** • **Max** • **Students** • **Room** • **Section #** • **Section Type** • **Teacher** • **Term** 3. From the second pop-up menu, choose the appropriate comparator: • c**ontains** • **contains all**

<table>
<tr><td></td><td>

contains any
does not contain
is empty
starts with
starts with any

4. Enter search criteria in the search field.

Note: Use a comma-separated list for multiple values. If contains is selected, only one value may be entered. If is empty is selected, no value may be entered.

5. Click Apply. The page refreshes and display filtered results.

Note: The Filter (0) header refreshes and displays the number of applied filters. In addition, the header displays the fields being used to filter results.

Note: Click the name of a column to sort by that column in ascending order. Click again to sort in descending order.

To add another filter:

1. Click +.
2. Repeat Step 1 through Step 5.

Note: The + appears shaded if all filters have been added.

To delete a filter:

1. Click - next to the filter.
</td></tr>
</table>

Note: Click the number in the **Students** column to view the class roster for the section.

6. Click the number in the **Section #** column for the section you want to edit. The Edit Section page appears.
7. Enter information as needed. For field descriptions, see *How to Add a Section*.
8. Click **Submit**. The Sections page for the selected course appears.

How to Delete a Section From the Master Schedule

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.

2. Under Schedule, choose **Sections** from the PowerScheduler menu. The Sections page appears.
3. Choose the course for the section you want to edit from the courses menu.
4. Click **Sections**. The Sections page for the selected course appears.

   Note: Click the number in the Size column to view the class roster for the section.

5. Click the number in the Section # column for the section you want to edit. The Edit Section page appears.
6. Click **Delete**. The Delete Section page appears.
7. Click **Delete**.
8. Click **Confirm Delete**. The Sections page for the selected course appears.

How to Add a Section from the Courses Page

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Courses** from the PowerScheduler menu. The Courses page appears.
3. Click the name of the course you want to work with from the courses menu.
4. Do one of the following:
   - Choose **Sections** from the pop-up menu.
   - Click the **Sections** tab.

   The Sections page for the selected course appears.

5. Click **New**. The Edit Teacher Assignment page appears.
6. Enter information as needed. For field descriptions, see *How to Add a Section*.
7. Click **Submit**. The Sections page for the selected course appears.

How to Edit a Section from the Courses Page

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Courses** from the PowerScheduler menu. The Courses page appears.
3. Click the name of the course you want to work with from the courses menu.
4. Do one of the following:
   - Choose **Sections** from the pop-up menu.
   - Click the **Sections** tab.

   The Sections page for the selected course appears.

5. Click the number in the Section # column for the section you want to edit. The Edit Section page appears.
6. Edit information as needed. For field descriptions, see *How to Add a Section*.
7. Click **Submit**. The Sections page for the selected course appears.

How to Delete a Section from the Courses Page

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Resources, choose **Courses** from the PowerScheduler menu. The Courses page appears.
3. Click the name of the course you want to work with from the courses menu.
4. Do one of the following:
   - Choose **Sections** from the pop-up menu.
   - Click the **Sections** tab.

   The Sections page for the selected course appears.

5. Click the number in the Section # column for the section you want to edit. The Edit Section page appears.
6. Click **Delete**. The Delete Section page appears.
7. Click **Delete**.
8. Click **Confirm Delete**. The Sections page for the selected course appears.

Master Schedule

The master schedule displays the schedule for all teachers in your school.

How to View the Master Schedule

View the master schedule for all teachers for all periods. The first time you display the master schedule after creating or modifying it, the Master Schedule Preferences page appears. For more information, see *How to Modify Master Schedule Preferences*.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Schedule, choose **Master Schedule** from the PowerScheduler menu. Depending on your preferences, classes for each teacher and the number of students in each class appear on the Master Schedule page.
3. Do one of the following (optional):

- Click a course number to edit the information for that section of the selected course. The Edit Section page appears.

  Note: For more information about editing the section, see *Schedule Sections*. If you do not want to edit the section, click your Web browser's **Back** button to display the Master Schedule page.

- Click a number for one of the classes to view a list of students in that class. The Class Roster page displays the students for the class.
- Do one of the following (optional):
  - Click **Make this the current selection of students** to select the students in the class as the only group you want to work with. The Student Scheduling Functions page appears, including the number of selected students.
  - Click **Add these students to the current selection of students** to add this group to a previously selected group. The Student Scheduling Functions page appears, including the number of selected students.

How to Modify Master Schedule Preferences

The first time you display the master schedule after creating or modifying it, the Master Schedule Preferences page appears. Use this page to filter information that appears on the master schedule page.

The master schedule preferences are associated with each user account. Therefore, your preferences will appear when you sign in to any computer with your username and password.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Schedule, choose **Master Schedule** from the PowerScheduler menu. The Master Schedule Preferences page appears.
3. Use the following table to enter information in the fields:

Field	Description
Periods	Select the checkboxes to indicate which periods to display on the master schedule. To display all periods, select the **All Periods** checkbox.

Days	Select the checkboxes to indicate which days to display on the master schedule. To display all days, select the **All Days** checkbox.
Credit Type	Enter the credit type to indicate which credit type to display on the master schedule, such as **MATH**. To display all credit types, do not enter anything in the field.
Report Output Locale	Select the locale from the pop-up menu. The report output will be in the language associated with the locale.

4. Click **Submit**. The master schedule appears.

   Unless any changes are made to your master schedule, the Master Schedule page appears according to your set preferences. To change your preferences, click **Show Preferences** at the bottom of the Master Schedule page.

Analyze the Built Master Schedule

After the system completes the build, evaluate the master schedule to see if you need to either make changes and rebuild the schedule or manually adjust it.

To analyze the completed master schedule:

- Print the master schedule.
- Print post-scheduling reports. For more information, see *Build the Master Schedule Reports*.

To evaluate the master schedule:

- Use the student numbers to evaluate how the system balanced students among sections.
- Evaluate how and when a room is used.
- Be sure teachers are not over- or under-scheduled. Teachers should not be over-scheduled unless you entered an excess number of teacher assignments.

Master Schedule Checklist

Use the following checklist to help you determine that the master schedule is complete and ready to optimize, load, or print. For more information, see *Optimize the Completed Master Schedule*, *Load Students*, and *Print Schedules and Rosters*.

- Are all of the courses in the course catalog defined to be included in the master schedule?
- Do all of the courses in the master schedule contain the correct number of sections?
- Did the system respect all of the constraints you defined?
- Did the system schedule all of the courses in rooms with any required facilities?

Optimize the Completed Master Schedule

When you determine that your master schedule is complete, PowerScheduler can perform a final optimization. Although it is not required, you should optimize the master schedule. For more information, see *Optimize the Master Schedule*.

Optimize your schedule before or after you make any manual adjustments. If you want to optimize your master schedule after you make manual adjustments and you want to keep these courses where you manually scheduled them, enter very high rank numbers for the adjusted courses in the course rank. You can then define that the system only optimizes courses with a lower rank number. If you did not keep track of the courses you adjusted, do not optimize.

Optimizing your schedule can only make it better. To safeguard the original completed master schedule before you optimize, duplicate the scenario. For more information, see *Duplicate the Scenario*.

After optimizing the master schedule, you can finalize it. For more information, see *Finalize the Master Schedule*.

Duplicate the Scenario

Make a copy of the original completed master schedule before you optimize it.

How to Duplicate the Scenario

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Functions** from the PowerScheduler menu. The Scheduling Functions page appears.
3. Click **Duplicate Scenarios**. The Duplicate Scenarios page appears.
4. Use the following table to enter information in the fields:

Field	Description

Source Scenario	Choose the name of the scenario you want to duplicate from the pop-up menu.
New Scenario Name	Enter a name for the new scenario.
New Scenario Description	Enter a description of the new scenario.
Master Schedule	Select the checkbox to copy the master schedule into the new scenario.
Student Schedules	Select the checkbox to copy the student schedules into the new scenario.
Teacher Assignments	Select the checkbox to copy the teacher assignments into the new scenario.
Constraints	Select the checkbox to copy the constraints into the new scenario.
Course Relationships	Select the checkbox to copy the course relationships into the new scenario.

Note: Be sure to select all of the checkboxes in the "Select items to copy" section to duplicate your current scenario in its entirety.

5. Click **Submit**. The Changes Recorded page appears.

Optimize the Master Schedule

Optimize your master schedule to meet as many student course requests as possible within the given parameters.

How to Optimize the Master Schedule

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Processing, choose **Build** from the PowerScheduler menu. The Build Schedule page appears.

3. Select the **Optimize master schedule** option.
4. Use the following table to enter information in the fields:

Field	Description
Time Allowed for Optimizations	Enter the number of hours in the first field and the number of minutes in the next field that you want the system to spend optimizing your master schedule. **Note:** Because PowerSchool restarts nightly, do not enter a number higher than 12 in the Hours field.
Skip courses with rank above	Enter the course rank number of the course at which you want the system to stop optimizing. For example, you do not need to optimize course rank numbers 800-910 if these courses are ranked as such because they are already successfully scheduled. Enter 800 in the Max Rank field to have the system optimize the courses with a course rank of 1-799.

5. Click **Execute**. The engine starts to run. For more information, see *Understand the PowerSchool Scheduler Page*.

Finalize the Master Schedule

Once you built and possibly optimized the master schedule, you need to import the information from the scheduling engine back to PowerSchool. For more information, see *Import the Master Schedule*.

Note: For more information about this page, see *Understand the PowerSchool Scheduler Page*.

Load Constraints

Load constraints restrict the way PowerScheduler loads students into courses in the master schedule.

PowerSchool includes six types of definable load constraints. Each constrain student schedules in a specific way. For example, use a Student Preference constraint to force a student to be scheduled in a particular teacher's section.

Note: Since constraints restrict student schedules, the more constraints you define, the less flexibility the system has to load students into courses and the less optimal the resulting schedule will be. It is always best to use the fewest number of constraints required to accomplish your scheduling goals.

Load constraints differ from build constraints, which are defined before building a master schedule. For information about build constraints, see *Build Constraints*.

Work with Load Constraints

After creating load constraints, you can view them by choosing **Constraints** under the Resources heading from the PowerScheduler menu. Select the constraint you created to view the constraints by type.

To view constraints that affect courses, sections, students, or teachers, choose the appropriate resource from the PowerScheduler menu. Then, view the constraints by choosing Constraints from the pop-up menu. The Constraints page displays all constraints that affect that resource, regardless of type.

Use the PowerScheduler menu to view the constraints by type or to modify or delete constraints.

How to Modify Load Constraints

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Constraints** from the PowerScheduler menu. The Constraints menu appears.
3. Click the name of the type of constraint you want to modify, such as **Balance Adjustment**.
4. Click the course name, student name, or teacher name in the row of the constraint you want to modify. The Edit page for that particular constraint appears.
5. Make your changes to the fields, as necessary.
6. Click **Submit**. The appropriate constraints page appears.

How to Delete Load Constraints

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Scheduling Setup, choose **Constraints** from the PowerScheduler menu. The Constraints menu appears.
3. Click the name of the type of constraint you want to delete, such as **Student Preference**.
4. Click the course name, student name, or teacher name in the row of the constraint you want to delete. The Edit page for that particular constraint appears.
5. Click **Delete**. The appropriate constraints page appears.

Load Students

When using PowerSchool to create a complete master schedule, you need to be familiar with both building and loading a master schedule.

The build process creates the master schedule by placing courses in specific rooms during certain periods and scheduling teachers to instruct those courses. The load process places students in a schedule that has been or is being created, based on their course requests. Effectively, the build creates the master schedule and the load creates the student schedules.

Although students are loaded into the schedule as it is building, this is not necessarily an optimal load. Students who are loaded into the schedule earlier have an advantage over those loaded later. Their course requests are more likely to be met. Also, while these students may be fully or close to fully scheduled, theirs may not be the best possible schedule that the system can create based on the completed master schedule.

When the students' schedules were created during the build process, the best possible schedules were chosen for them at that time; however, the build was not complete and optimized, and the system could not take into account any changes made to the schedule after they were loaded.

Note: The build function only does one pass; it does not go back to review better alternatives for courses already scheduled.

Once you have built a satisfactory master schedule, you can begin fine-tuning student schedules by running a load. While this function has no impact on the number of students enrolled in courses, it could have a positive effect on section balances. For example, it is possible that during your first load, you gain eight students in one course, five students in another, and ten in a third. Then, you can try again to help individual students get all of their course requests.

Do not load students into your master schedule until you are satisfied with it. Loading will not have any impact on the structure of the schedule, just on the placement of students within it. Also, do not make manual adjustments to student schedules and then reload students because the system will overwrite all of the changes you made.

Loading is required in most cases. You need to load if you entered alternate course requests or global substitutions, or if you chose to close course sections at a maximum number. The build process does not handle these factors, which are not considered unless you load. Also, if you are making manual adjustments to your master schedule, you need to do a load under most circumstances.

After running a load, analyze the results. For more information, see *Analyze the Results*. After analysis, proceed with one of the steps outlined in the section *Post-Load Options*.

Run a Load

Adjusting the master schedule potentially affects and causes conflicts for many students' schedules. For example, moving a course section to a different period may satisfy a number of unmet course requests, but this action can cause problems with others course requests.

As a result, whenever you change the master schedule, you need to reload students. You can also load students to see if the system can create better schedules for all students. Do this after you finish building a master schedule or if you made a number of changes to the schedule.

After running a load, import student schedules and then analyze the results. For more information, see *Analyze the Results*. After analysis, proceed with one of the steps outlined in the section *Post-Load Options*.

When performing a load, consider the following:

- Load priority is used to determine which substitutions should be made as well as which requests should go unfilled, if that is necessary. The engine always prefers to use substitutions instead of leaving a request unfilled, even if that means using a substitution on an important course instead of leaving an elective course unfilled.
- Load priorities are not a rank ordering. They are an importance rating. One request for a course with a load priority of 5 is equivalent to two requests with a 10 priority, three with a 15 priority, or four with a 20 priority. That means that, while these courses may have a priority of 5 and other courses have a priority of 10, it is just as good for the engine to leave the priority 5 unfilled as it is to leave two priority 10 courses unfilled; it is actually better for the engine to leave one priority 5 unfilled than to leave two courses with priority 9 or lower unfilled.

  For example, if a student has two 7 requests and one 5 request; while neither of the 7 requests can be filled outright, they both have substitutions; the substitutions, however, conflict with the 5 course, so the student can't get both. Therefore, it is better for the engine to miss the 5 and fill the two 7 requests with substitutions than it would be to leave the 7s unfilled and get the 5.
- To rate a course as really important, assign it a load priority of 1 or 10. For all other courses, rank according to how important they are relative to that 1 (or 10) course (even if that means using numbers like 1000). Then, as a second pass, double or quadruple their load priorities if any of those are semester or quarter courses.

How to Run a Load

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Processing, choose **Load** from the PowerScheduler menu. The Load Student Schedules Queue page appears.
3. Use the following table to enter information in the fields:

Field	Description
Load type	Select a type of load: • **Load all students**: The system reschedules all students. Previously created student schedules or manually adjusted student schedules are deleted. • **Balance**: The system adjusts student schedules to help improve the balance of students among sections. There is no guarantee that students' schedules will not change. • **Reschedule the selected [x] students**: The system reschedules only students whose schedules have not been locked. You can select this option multiple times.
Close sections at maximum	Select the checkbox to ensure that courses close at their maximum enrollment numbers. **Note:** Do not select the checkbox the first time you do a load. The build itself runs without considering section maximums, so this will let you determine if you can get a little better load percentage. Also, not closing sections at their maximums will help you focus on students with conflicts.
Use global course substitutes	Select the checkbox to ensure that the system automatically inserts any global course substitutes after student course substitutes have been tried and rejected.
Use student course substitutes	Select the checkbox to ensure that the system automatically inserts student course substitutes in the order chosen, if needed.

4. Click **Execute**. The engine starts to run. For more information, see *Understand the PowerSchool Scheduler Page*.

To view details about the load, click **(Q)** next to Load in the PowerScheduler menu, then click **View** in the Load Log column on the Load Student Schedules Queue page. To view errors and messages produced by the load, click **View** in the Results Log column. For more information about the Results Log, see *Load Results Log*. After successfully loading schedules, import the results of the load. For more information about importing, see *Import Student Schedules*.

Note: The Import link does not appear on the Load Student Schedules Queue page if only validation was performed. For more information about load validation, see *Load Validation*.

Post-Load Options

After completing your first load, you can do one or more of the following procedures:

1. Accept the results of the load and begin manually adjusting student schedules. Select this option only if you are certain that the master schedule will not change and that student schedules are correct. Verify student schedules to make sure the master schedule is correct. For more information about adjusting student schedules, see *Manually Adjust Student Schedules*.
2. Resolve student conflicts by using or adding alternate course requests if you did not use them in the first load. If your schedule contains alternate student course requests but you did not allow the system to use them, rerun the load and select the substitutes options. For more information about creating alternate course requests, see *How to Enter Requests in the Scheduling Area*.
3. Manually adjust student course requests to allow better scheduling. For example, if a student has a course request that is impossible to meet, change it. Repeat this process until you are satisfied with the results. For more information about adjusting alternate course requests, see *How to Enter Requests in the Scheduling Area*.
4. Select the students you want to reschedule. Then, reload student schedules.

If you select option 2, 3, or 4 above, you probably need to reload student schedules. For more information, see *Reload Students*.

In the event that the unsatisfactory load results are due to discrepancies in the master schedule, you need to rebuild or manually adjust the master schedule. For more information, see *Restart the Build*.

Lock Student Schedules

If you manually adjusted students' course requests and are satisfied with the resulting schedules, you can effectively lock those students' schedules before reloading by excluding them from the student selection before reloading. That way, only the selected students are included in the load.

Note: If one of the students in the selection has an association with another student, such as a Student Avoid constraint, the schedule of the "other" student not included in the selection may be affected by the load process.

For more information about selecting students, see *Schedule Search and Select*.

Checklist to Know Your Student Schedules are Complete

The following is a checklist you can use to be sure that your student schedules are complete:

- You built a master schedule.
- You worked on conflicts, identified patterns, and corrected problems.
- You updated your master schedule.
- You optimized your master schedule. (optional)
- You ran a load.
- You checked your balances.
- You accommodated all student course requests. (optional)
- You reloaded and made any manual adjustments.
- Your balances are satisfactory.
- Your teacher schedules are satisfactory.

Print Schedules and Rosters

Print Student Schedules

If you would like to print student and teacher schedules, you can do so either before or after you commit your master schedule. For more information, see *How to Run the Student Schedule Listing Report*.

You can also print student schedules using a report card template. For more information, see *Report Cards*.

Print Class Rosters

You can print class lists either before or after you commit your master schedule. For more information, see *How to Run the Class Roster (PDF) Report*.

Master Schedule Reports

Before building your master schedule, use the pre-build reports to determine that the scenario information is correct and view how student course requests will affect your schedule for the next school year. For example, run the Course Request Tally report if there are more requests than you originally planned for a particular course. You can then adjust the section count before building. For pre-build reports, see *Prepare to Build the Master Schedule Reports*.

You can also view reports to display which teachers are assigned to which courses and print a teacher assignments list. The teacher reports only display the names of teachers who are already assigned to courses.

After you build a master schedule, use the post-build reports to help you correct any errors in your data, such as non-scheduled course requests, non-scheduled student requests, and under-scheduled students. You can also use these reports to view your room utilization, a list of student schedules, and your new master schedule. For post-build reports, see *Build the Master Schedule Reports*.

Report Output Locale

Using the **Report Output Locale** pop-up menu, you can select a locale. The report output will then appear in the language associated with the selected locale.

Prepare to Build the Master Schedule Reports

PowerSchool includes many reports pertaining to the master schedule. The following reports are specific to the first part of the master schedule process, prepare to build the master schedule, and relate to courses, student course requests, rooms, students, and teachers. For request-related reports, see *Prepare to Build the Master Schedule Request Reports*. For teacher-related reports, see *Prepare to Build the Master Schedule Teacher Reports*. Use the Scheduling Reports page to navigate to each report.

How to Run the Conflict Matrix Export Report

The Conflict Matrix Export report displays student course request conflicts between courses. For example, you might find that 16 students have requested both AP Calculus and Anatomy/Physiology. Therefore, you would try not to schedule these two classes during the same period.

Note: This report is used primarily by schools and districts that are not building their master schedule in PowerSchool.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Conflict Matrix Export**. The Export Conflict Matrix page appears.
4. Use the following table to enter information in the fields:

Field	Description
Students to Include	Number of students included in scheduling for next year. If a student or group of students have been selected, choose to run the report for only that student selection or for all students. In the Include Only In Grades field, enter the numbers of the grade levels you want to include in this report (optional).
Output Form	Select **Tab-Delimited** to open the report in a program such as Excel or **Simple HTML** to open in a Web browser. **Note**: If SSL is enabled, you must manually assign a port to view the HTML output. For more information, see the *Load Balancer Requirements and Configuration Guide* available on PowerSource. Select the **Link each count to the conflicting students list** checkbox to display a link to the list of students who have scheduling conflicts.
Conflict Definition	Select **Count students with multiple requests for a course as a single conflict** to identify multiple requests of the same course as one conflict. With the checkbox selected, the number of student requests matches the number of conflicts. For example, if a student creates two requests for History and one for Math, the report displays this as one History-Math conflict instead of two. Deselect the checkbox to display multiple requests as multiple conflicts. Select **Count every request as a conflict with itself** to count multiple requests for a course plus the individual requests that create the conflict. This may be useful to show conflicts where a student requests a course twice. Deselect the checkbox to only

	count multiple requests and not the individual requests that create the conflict.
Identify Course By	Select the **Course numbers** option to include course numbers, the **Course names** option to include course names, or **Course numbers + names** to include both.
Report Output Locale	Select the locale from the pop-up menu. The report output will be in the language associated with the locale. **Note:** Clicking on hyperlinks within the report may display a different page in PowerSchool, which will appear in your preferred language and not in the locale you selected for the report output.

5. In the Courses Across Top section, use the following table to enter information in the fields to display information on the X axis of the report:

Field	Description
Include Courses	Select one of the following options: • **All Courses** to include all courses in your active course catalog in this report. **Note:** If you select **All Courses**, you do not have to select the checkboxes next to each course name at the bottom of the page. • **In Department** to include all courses in a specific department. Either enter the name of the department or click **Associate** to select the department. • **With Number of Sections between** to include courses with a specified number of sections. Enter the range of section numbers in the fields. • **Selected courses (below)** to include just the courses you select at the bottom of the page. Select the **Include courses with No Requests from selected students** checkbox to include courses that do not have any

	student requests. This may be useful when comparing multiple exports, as the reports will align if the checkbox is selected for both. Deselect the checkbox to include only courses with student requests.
Sort by	Select one of the following options to sort the report columns (all ascending except Number of Conflicts): • **Course Number** • **Course Name** • **Number of Sections** • **Number of Requests** • **Number of Conflicts (with the courses along the other axis)**
Include Rows for	Select any or all of the following checkboxes to add rows to the report for each: • Number of Sections • Number of Requests • Terms Offered • Total Conflicts

6. In the Courses Along Side section, use the following table to enter information in the fields to display information on the Y axis of the report:

Field	**Description**
Include Courses	Select one of the following options: • **All Courses** to include all courses in your active course catalog in this report. **Note:** If you select **All Courses**, you do not have to select the checkboxes next to each course name at the bottom of the page.

	• **In Department** to include all courses in a specific department. Either enter the name of the department or click **Associate** to select the department. • **With Number of Sections** between to include courses with a specified number of sections. Enter the range of section numbers in the fields. • **Selected courses (below)** to include just the courses you select at the bottom of the page. Select the **Include courses with No Requests from selected students** checkbox to include courses that do not have any student requests. This may be useful when comparing multiple exports, as the reports will align if the checkbox is selected for both. Deselect the checkbox to include only courses with student requests.
Sort by	Select one of the following options to sort the report columns (all ascending except Number of Conflicts): • **Course Number** • **Course Name** • **Number of Sections** • **Number of Requests** • **Number of Conflicts (with the courses along the other axis)**
Include Columns for	Select any or all of the following checkboxes to add rows to the report for each: • **Number of Sections** • **Number of Requests** • **Terms Offered** • **Total Conflicts**

7. If you chose **Selected Courses (below)** for either axis, select the checkbox next to the name of each course you want to include in this report.
8. Click **Submit**. The report runs.

How to Run the Conflicting Students List Report

The Conflicting Students List Report displays the students with primary requests for two specific courses. For example, run this report to determine if any students requested both Pre-Algebra and Algebra courses that should not be taken simultaneously, or if any students requested two courses that take place only on the same day and period. If you identify conflicts, you could move the assignments, sections, or requests before loading student schedules.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Conflicting Students List**. The Students With Request Conflict page appears.
4. Use the following table to enter information in the fields:

Field	Description
Course Number 1	Click **Associate** to select one of the courses.
Course Number 2	Click **Associate** to select the other course.
Report Output Locale	Select the locale from the pop-up menu. The report output will be in the language associated with the locale.

5. Click **Submit**. The Students with Conflict page displays all students who requested both courses.

How to Run the Course List Report

The Course List report displays scheduling information for each course in your active course catalog.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Course List**. The Course List page appears.

4. Select the **Report Output Locale** from the pop-up menu. The report output will be in the language associated with the locale. For more information, see *Report Output Locale*.
5. Click **Submit**. The Courses page displays the following information:

Field	Description
Number	The course number.
Name	The course name.
Scheduled	Indicates whether or not the course is scheduled.
Department	The course's department.
Max	The maximum enrollment of the course.
Sections	The number of sections of the course.
PP Meeting	The number of periods per meeting.
Frequency	The number of days the course meets per cycle.
PP Cycle	The number of days per cycle.
Valid Start Periods	The periods in which periods the course is valid to start.
Sched Terms	The number of schedule terms in which the course is offered.
Terms Offered	The terms in which the course if offered.
Facilities	Any facilities associated with this course.
LP	The order in which students are scheduled in this course during the load process.

Team	Indicates if this course is scheduled by team.
Section Type	Indicates if this course is scheduled by section type.
Section to Offer	The number of sections to offer for the course.
Rank	The rank of the course that determines the order in which PowerSchool schedules courses into the master schedule.

6. To narrow the list of courses, see *How to Filter (Simple) the Course List Report* or *How to Filter (Advanced) the Course List Report*.

How to Filter (Simple) the Course List Report

1. To narrow the list of courses using simple search, use the following table to enter information in the Filter section:

   Note: If you apply a filter, those settings are retained and available each time you navigate back to this page.

   Note: Click the arrow to expand this section. Click the arrow again to collapse this section

Field	Description
Advanced	Verify this checkbox is deselected.
Search	Enter search criteria in the search field.

2. Click **Apply**. The page refreshes and display filtered results.

   Note: To remove all filter selections, click **Clear**.

How to Filter (Advanced) the Course List Report

1. To narrow the list of courses using advanced search, use the following table to enter information in the Filter section:

Note: If you apply a filter, those settings are retained and available each time you navigate back to this page.

Note: Click the arrow to expand this section. Click the arrow again to collapse this section.

Field	Description
Advanced	Select the checkbox.
[Column]	Choose the column by which you want to filter courses: • Number • Name • Scheduled • Department • Max • Sections • PP Meeting • Frequency • PP Cycle • Valid Start Periods • Sched Terms • Terms Offered • Facilities • LP • Team • Section Type • Section to Offer • Rank
[Comparator]	If you selected a column where a comparator is applicable, choose the appropriate comparator: • = equals • < is less than • > is greater than
[Field]	Enter search criteria in the search field.

2. To add another filter, click **+** and repeat Step 1.
3. To delete a filter, click **-** next the filter.
4. Click **Apply**. The page refreshes and display filtered results.

   Note: To remove all filter selections, click **Clear**.

How to Run the Course Relationships Report

The Course Relationships report displays any course relationships defined for courses in your course catalog.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Course Relationships**. The Course Relationships page appears.
4. Select the **Report Output Locale** from the pop-up menu. The report output will be in the language associated with the locale. For more information, see *Report Output Locale*.
5. Click **Submit**. The Course Relationships page displays the following information:

Field	**Description**
Course Number 1	The number of the first course.
Course Name 1	The name of the first course.
Course Number 2	The number of the second course.
Course Name 2	The name of the second course.
Type	The type of relationship that has been defined for these two courses: • Block: Courses that must be related to one another in the schedule. For example, you may want Pottery to be scheduled before or after Ceramics so that they can share a hot kiln. Alternatively, a medieval literature class may follow a medieval history class.

	• Concurrent: Courses that can meet at the same time, in the same place, and be taught by the same teacher. For example, a special education teacher might have a class of ten students, three of whom are taking remedial reading and the remainder of whom study remedial vocabulary and spelling. • Coreq: Two courses that are scheduled during the same term of a student's schedule. • Postreq: A course that must be in a student's schedule in a term after the related course. • Prereq: A course that must be in a student's schedule in a term before the related course. For example, Course A is a prerequisite of Course B. When the system schedules a student for these courses, it ensures that Course A is scheduled into a term before when Course B is in the student's schedule.
Code	If the two courses share a block relationship type, this field describes the type of block relationship, such as Term or Simultaneous.

How to Run the Room List Report

The Room List report provides scheduling information for all of the rooms available in the school.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Room List**.
4. Select the **Report Output Locale** from the pop-up menu. The report output will be in the language associated with the locale. For more information, see *Report Output Locale*.
5. Click **Submit**. The Rooms page displays the following information:

Field	**Description**

Number	The room number.
Description	A description of the room.
Max	The maximum enrollment of the room.
Sched	Displays the word True if the room is included in the scheduling process or False if it is not.
Department	The department to which the room belongs.
Dept. Use Only	Displays the word True if the room can only hold courses from its own department or False if it can hold courses from any department.
Facilities	The facilities associated with the room.
Fac. Use Only	Displays the word True if the room can only hold courses requiring a facility or False if it can hold courses that do not require a facility.
Always Free	Displays the word True if the room has no limit to the number of courses it can hold or False if it can only hold one course per period.
Building	The building associated with the room.
House	The house associated with the room.

How to Run the Student List Report

The Student List report provides scheduling preference information for all of the students who will attend your school next year.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.

2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Student List**.
4. Use the following table to enter information in the fields:

Field	Description
Students to Include	Number of students included in scheduling for next year. If a student or group of students have been selected, choose to run the report for only that student selection or for all students. In the **Include Only In Grades** field, enter the numbers of the grade levels you want to include in this report (optional).
Report Output Locale	Select the locale from the pop-up menu. The report output will be in the language associated with the locale. For more information, see *Report Output Locale*.

5. Click **Submit**. The report displays the following information:

Field	Description
Number	The student's number.
Name	The student's name.
Grade	The student's grade level.
Gender	The student's gender.
Next Grade	The grade level the student will be in next year.
Priority	The student's scheduling priority.
YOG	The student's year of graduation.

Locked	Displays the word True if the student's schedule has been locked or False if it has not been locked.
Building	The student's building.
House	The student's house.
Team	The student's team.

Prepare to Build the Master Schedule Teacher Reports

PowerSchool includes many reports pertaining to the master schedule. The following reports are specific to the first part of the master schedule process, prepare to build the master schedule, and relate to teachers. For other reports, see *Prepare to Build the Master Schedule Reports*. Use the Scheduling Reports page to navigate to each report.

How to Run the Teacher Assignments by Course Report

The Teacher Assignments by Course report lists the courses assigned to each teacher in your school.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Teacher Assignments By Course**.
4. Select the **Report Output Locale** from the pop-up menu. The report output will be in the language associated with the locale. For more information, see *Report Output Locale*.
5. Click **Submit**. The Teacher Assignments By Course page displays the following information:

Field	Description
Course #	The course number.

Course Name	The course name.
#	The numbered list of teachers.
Teacher Name	The teacher's name.
# Sections	The number of sections assigned to the teacher.
Term	The terms for which an assignment has been made. If this field is blank, the system will determine the term based on course preference information.

How to Run the Teacher Assignments by Teacher Report

The Teacher Assignments by Teacher report lists the courses assigned to each teacher in your school.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Teacher Assignments By Teacher**.
4. Select the **Report Output Locale** from the pop-up menu. The report output will be in the language associated with the locale. For more information, see *Report Output Locale*.
5. Click **Submit**. The Teacher Assignments By Teacher page displays the following information:

Field	**Description**
Teacher Name	The teacher's name.
#	The numbered list of courses for each teacher.
Course Name	The course name.

Course #	The course number.
# Sections	The number of sections assigned to the teacher.
Term	The terms for which an assignment has been made. If this field is blank, the system determines the term based on course preference information.

How to Run the Teacher List Report

The Teacher List report lists the scheduling preferences for all of the teachers in your school.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Teacher List**.
4. Select the **Report Output Locale** from the pop-up menu. The report output will be in the language associated with the locale. For more information, see *Report Output Locale*.
5. Click **Submit**. The Teachers page displays the following information:

Field	Description
Teacher	The teacher's name.
Department	The teacher's department.
Room	The teacher's preferred room number.
Consecutive	The maximum number of consecutive periods the teacher can instruct.

Always Free	Displays the word True if the teacher can be scheduled to teach more than one course during the same period or False if the teacher can teach only one course per period.
Building	The teacher's building.
House	The teacher's house.
Team	The teacher's team.

Prepare to Build the Master Schedule Request Reports

The following reports relate to student course requests. For other reports that are useful before building a master schedule, see *Prepare to Build the Master Schedule Reports*.

How to Run the Course Request Tally Report

The Course Request Tally report lists the number of primary and alternate student course requests by course. Use this report to determine how many sections of a course you need.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Course Request Tally**. The Course Request Tally page appears.
4. Use the following table to enter information in the fields:

Field	Description
Students to Include	Number of students included in scheduling for next year. If a student or group of students have been selected, choose to run the report for only that student selection or for all students. In the **Include Only In Grades** field, enter the numbers of the grade levels you want to include in this report (optional).

Exclude Alternates	Select **Yes** from the pop-up menu to exclude alternate requests.
Report Output Locale	Select the locale from the pop-up menu. The report output will be in the language associated with the locale. For more information, see *Report Output Locale*.

5. Click **Submit**. The Course Request Tally page displays the following information:

Field	**Description**
Course	The course number.
Course Name	The course name.
Primary	The number of primary student course requests for the course. Click a number to view the list of students who requested a particular course.
Alternate	The number of alternate student course requests for the course. Click a number to view the list of students who requested a particular course.
Elective Alt	The number of elective alternate student course requests for the course. Click a number to view the list of students who requested a particular course.
Total	The total number of requests for the course. Click a number to view the list of students who requested a particular course.

Note: Click any column heading to sort the list.

How to Run the Requests by Course Report

The Requests by Course report lists the names of the students who requested each of the courses in your course catalog.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Requests by Course**. The Requests By Course page appears.
4. Use the following table to enter information in the fields:

Field	Description
Students to Include	Number of students included in scheduling for next year. If a student or group of students have been selected, choose to run the report for only that student selection or for all students. In the **Include Only In Grades** field, enter the numbers of the grade levels you want to include in this report (optional).
Report Output Locale	Select the locale from the pop-up menu. The report output will be in the language associated with the locale. For more information, see *Report Output Locale*.

5. Click **Submit**. The Requests By Course page displays the following information:

Field	Description
Course #	The course number.
Course Name	The course name.
#	The numbered list of students for each course.
Student Name	The names of the students who requested each course.

How to Run the Requests by Student Report

The Requests by Student report lists the names of the courses each student requested.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Requests by Student**. The Requests By Student page appears.
4. Use the following table to enter information in the fields:

Field	Description
Students to Include	Number of students included in scheduling for next year. If a student or group of students have been selected, choose to run the report for only that student selection or for all students. In the **Include Only In Grades** field, enter the numbers of the grade levels you want to include in this report (optional).
Report Output Locale	Select the locale from the pop-up menu. The report output will be in the language associated with the locale. For more information, see *Report Output Locale*.

5. Click **Submit**. The Requests By Student page displays the following information:

Field	Description
Student #	The student number.
Student Name	The student's name.
#	The numbered list of courses requested by each student.
Course #	The course number for the course requested by each student.
Course Name	The name of the course requested by each student.

How to Run the Student Request Tally Report

The Student Request Tally report displays the number of primary and alternate student course requests made by each student.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Student Request Tally**. The Student Request Tally page appears.
4. Use the following table to enter information in the fields:

Field	Description
Students to Include	Number of students included in scheduling for next year. If a student or group of students have been selected, choose to run the report for only that student selection or for all students. In the **Include Only In Grades** field, enter the numbers of the grade levels you want to include in this report (optional).
Report Output Locale	Select the locale from the pop-up menu. The report output will be in the language associated with the locale. For more information, see *Report Output Locale*.

5. Click **Submit**. The Student Request Tally page displays the following information:

Field	Description
#	The numbered list of students.
Student	The student's name.
% Scheduled	The percentage of the student's course requests that were fulfilled.
Primary	The number of primary course requests made by the student.
Credits	The number of credit hours for primary course requests.

Alternate	The number of alternate course requests made by the student.
Credits	The number of credit hours for alternate course requests.
Total	The total number of course requests made by the student.
Credits	The number of credit hours for all course requests.

Build the Master Schedule Reports

PowerSchool includes a number of reports that help you evaluate a completed master schedule. Use these reports to determine whether maximum enrollment parameters need to be increased, the teachers are correctly scheduled, and the system scheduled courses in rooms and their facilities at the correct times.

The following reports are specific to the second part of the master schedule process, build the master schedule, and relate to the master schedule, student course requests, rooms, schedules, and students.

Reports

- *Alternate Request Report*
- *Individual Student Conflict Matrix Report*
- *Master Schedule Report*
- *Master Schedule (PDF) Report*
- *Master Schedule List Report*
- *Non-Scheduled Course Requests Report*
- *Non-Scheduled Student Requests Report*
- *Non-scheduled Student Requests for Scheduled Courses Report*
- *Percent Schedule By Students Report*
- *Room Schedule Report*
- *Room Utilization Report*
- *Schedule Periods by Grade Report*
- *Schedule Course Enrollment Report*
- *Schedule Results by Grade Report*
- *Student Program Balancing*
- *Student Schedule List Report*
- *Student Schedule Report*
- *Teacher Maximum Load Report*

- *Under-Scheduled Students Report*
- *Unscheduled Rooms Report*
- *Unscheduled Students Report*
- *Unscheduled Teachers Report*

How to Run the Alternate Request Report

Use the Alternate Request report to list the number of course requests made by a student and whether or not the student was scheduled in his or her requested course. The report separates the requests by course and alternate course.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Alternate Request Report**.
4. Use the following table to enter information in the fields:

Field	Description
Students to Include	Number of students included in scheduling for next year. If a student or group of students have been selected, choose to run the report for only that student selection or for all students. In the **Include Only In Grades** field, enter the numbers of the grade levels you want to include in this report (optional).
Report Output Locale	Select the locale from the pop-up menu. The report output will be in the language associated with the locale. For more information, see *Report Output Locale*.

5. Click **Submit**. The Requests By Student page displays the following information:

Field	Description
Student Name	The name of the student.
Requests	The names and numbers of the requested courses.

Scheduled Alternates	The names and numbers of the scheduled alternate courses.
Scheduled	An X next to a course indicates that the student was scheduled in that course.

How to Run the Master Schedule Report

Use the Master Schedule report to evaluate the schedule the system built. View the master schedule for all teachers for all periods. The first time you display the master schedule after creating or modifying it, the Master Schedule Preferences page appears. For more information, see *How to Modify Master Schedule Preferences*.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Master Schedule**. The Master Schedule page appears.

   Depending on your preferences, the report may display the teacher's name, the selected day, and the following information for each period:

   - Name of the course assigned to a teacher
   - Course number.Section number (click to view that section's Edit Section page)
   - Number of students scheduled for this section (click to view the class roster)
   - Maximum enrollment of this section
   - Room number
   - Expression, which is the combination of periods and days
   - Term

How to Run the Master Schedule (PDF) Report

Use the Master Schedule PDF report to generate a PDF of the master schedule. View the master schedule for all teachers for all periods. The first time you display the master schedule after creating or modifying it, the Master Schedule Preferences page appears. For more information, see *How to Modify Master Schedule Preferences*.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.

2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Master Schedule (PDF)**. The Master Schedule PDF page appears.
4. Use the following table to enter information in the Master Schedule Options fields:

Field	Description
Periods	Select the checkboxes to indicate which periods to display on the master schedule. To display all periods, select the **All Periods** checkbox.
Days	Select the checkboxes to indicate which days to display on the master schedule. To display all days, select the **All Days** checkbox.
Credit Type	Enter the credit type to indicate which credit type to display on the master schedule, such as **MATH**. To display all credit types, do not enter anything in the field.
Rooms	Select the rooms to display on the master schedule. Press and hold COMMAND (Mac) or CONTROL (Windows) to make multiple selections. Select **All Rooms** to display all rooms.
Teachers	Select the teachers to display on the master schedule. Press and hold COMMAND (Mac) or CONTROL (Windows) to make multiple selections. Select **All Teachers** to display all teachers.
Sort By	Select a sort order option for the master schedule: • **Teacher** • **Credit Type** • **Department** • **Room**
Report Output Locale	Select the locale from the pop-up menu. The report output will be in the language associated with the locale.

5. Use the following table to enter information in the Printing Options fields:

Field	Description
Period/Day orientation	Select an option to determine which axis should display periods and which axis should display days: • **Periods across the top** • **Days across the top**
Heading Font	Choose the heading font from the pop-up menu.
Size, line height, style	Enter the heading font size and line height in points. One point equals 1/72 of an inch. Select the formatting checkboxes you want to use. For example, select the **Bold** checkbox to bold the heading.
Print Heading On	Choose the page on which to print the heading from the pop-up menu.
Column Title Font	Choose the column title font from the pop-up menu.
Size, line height, style	Enter the column title font size and line height in points. One point equals 1/72 of an inch. Select the formatting checkboxes you want to use. For example, select the **Bold** checkbox to bold the column title.
Print Column Titles On	Choose from the pop-up menu the page on which to print the column titles: • **All pages** • **First page** • **Do not print column titles**
Body Font	Choose from the pop-up menu the font for the body of the report.

Size, line height, style	Enter the body font size and line height in points. One point equals 1/72 of an inch. Select the formatting checkboxes you want to use. For example, select the **Bold** checkbox to bold the body.
Cell padding (points)	Enter the width of each cell and the amount of space from all sides of the cells to the text in points. One point equals 1/72 of an inch.
Page size	Choose from the pop-up menu the size of the paper on which you want to print this report. To enter a custom size, enter the horizontal and vertical page measurements in the Custom Size fields.
Margins (inches)	Enter the size of the margins in inches.
Orientation, Scale	Choose the page layout from the pop-up menu. **Portrait** is a vertical page; **Landscape** is a horizontal page. Scale is the finished size of the report. Fit more on a page by reducing it by a percentage but remember to leave it as large as possible for easier viewing.
Watermark Text	To print text as a watermark on each page of the report, use the pop-up menu to either choose one of the standard phrases or choose **Custom** and enter the text you want to print as a watermark in the field.
Watermark Mode	Use the pop-up menu to determine how you want the text to print. **Watermark** prints the text behind objects on the report, while **Overlay** prints the text over objects on the report.
When to print	Select a time to run the report: • **ASAP:** Execute immediately. • **At Night:** Execute during the next evening. • **On Weekend:** Execute during the next weekend.

	• **On Specific Date/Time:** Execute on the date and time specified in the following fields.

6. Click **Submit**. The report queue appears.
7. Click **View** once the report is completed.

   Note: Click **Refresh** to update the status of the report.

   The page displays a PDF file of the report. Thoroughly review it to verify that the formatting and content are correct. If the report provides the data you need and is formatted properly, print it from this page or save it to another application.

How to Run the Master Schedule List Report

Use this report to display the master schedule with filters. For example, filter the report to show the master schedule for a certain credit type, room, and teacher.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Master Schedule List**. The Master Schedule List page appears.

   Note: The first time you display the master schedule after creating or modifying it, the Master Schedule Preferences page appears. Use this page to filter information that appears on the master schedule page. To change your preferences after running the report, click **Show Preferences** at the bottom of the master Schedule List page. For more information, see *How to Modify Master Schedule Preferences*.

4. Use the following table to filter information:

   Note: Click the arrow to expand this section. Click the arrow again to collapse this section.

Field	Description
Filter	1. Enter search criteria in the **Search** field. 2. To filter by columns: a. Click **+**.

	b. From the first pop-up menu, choose one of the following: • **Course Name** • **Expression** • **Max** • **Number.Section** • **Section #** • **Room** • **Section Type** • **Students** • **Teacher Department** • **Teacher Name** • **Team** • **Term** c. From the second pop-up menu, choose the appropriate comparator: • **contains** • **contains all** • **contains any** • **does not contain** • **is empty** • **starts with** • **starts with any** d. Enter search criteria in the search field. **Note:** Use a comma-separated list for multiple values. If **contains** is selected, only one value may be entered. If **is empty** is selected, no value may be entered. e. Click **Apply**. The page refreshes and display filtered results. **Note:** The Filter (0) header refreshes and displays the number of applied filters. In addition, the header displays the fields being used to filter results. **Note:** Click the name of a column to sort by that column in ascending order. Click again to sort in descending order.

	3. To add another filter, click **+** and repeat Step 1. **Note:** The **+** appears shaded if all filters have been added. 4. To delete a filter, click **-** next the filter. 5. Click **Apply**. The page refreshes and display filtered results. **Note:** To remove all filter selections, click **Clear**.

Note: Click the number in the **Students** column to view the class roster for the section.

5. Click the number in the **Section #** column for the section you want to edit. The Edit Section page appears.
6. Enter information as needed. For field descriptions, see *How to Add a Section*.
7. Click **Submit**. The Sections page for the selected course appears.

   The master schedule list displays the course and section numbers, course name, schedule expression, term, teacher name, teacher department, room number, number of students enrolled, and maximum enrollment for each course section.

How to Run the Non-Scheduled Course Requests Report

Use the Non-Scheduled Course Requests report to view for each course the students whose course requests could not be honored during the scheduling process. This information can help you determine if you need to ease course maximum restrictions, add more course sections, or update a student's course requests.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.

   Note: To exclude alternate requests, click **Exclude Alternates** below the report name.

3. Click **Non-scheduled Course Requests**. The Non-Scheduled Course Requests page appears.
4. Use the following table to enter information in the fields:

Field	Description
Students to Include	Number of students included in scheduling for next year. If a student or group of students have been selected, choose to run the report for only that student selection or for all students. In the **Include Only In Grades** field, enter the numbers of the grade levels you want to include in this report (optional).
Exclude Alternates	Select **Yes** from the pop-up menu to exclude alternate requests.
Report Output Locale	Select the locale from the pop-up menu. The report output will be in the language associated with the locale. For more information, see *Report Output Locale*.

5. Click **Submit**. The report displays the following information:

Field	Description
Course Number	The course number. **Note:** Alternate course requests are noted with (Alt).
Course Name	The course name. **Note:** Alternate course requests are noted with (Alt).
Student Number	The number of the requesting student that was not scheduled in this course.
Student Name	The name of the requesting student that was not scheduled in this course.

How to Run the Non-Scheduled Student Requests Report

Use the Non-Scheduled Student Requests report to determine which course requests have not been satisfied on a student-by-student basis. The information can help you decide if you need to ease course maximum restrictions or update a student's course requests.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.

   Note: To exclude alternate requests, click **Exclude Alternates** below the report name.

3. Click **Non-scheduled Student Requests**. The Non-Scheduled Student Requests page appears.
4. Use the following table to enter information in the fields:

Field	Description
Students to Include	Number of students included in scheduling for next year. If a student or group of students have been selected, choose to run the report for only that student selection or for all students. In the **Include Only In Grades** field, enter the numbers of the grade levels you want to include in this report (optional).
Exclude Alternates	Select **Yes** from the pop-up menu to exclude alternate requests.
Report Output Locale	Select the locale from the pop-up menu. The report output will be in the language associated with the locale. For more information, see *Report Output Locale*.

5. Click **Submit**. The report displays the following information:

Field	Description
Student Number	The number of the requesting student that was not scheduled in this course.

Student Name	The name of the requesting student that was not scheduled in this course.
Course Number	The course number. **Note:** Alternate course requests are noted with (Alt)
Course Name	The course name. **Note:** Alternate course requests are noted with (Alt).

How to Run the Non-Scheduled Student Requests for Scheduled Courses Report

Use the Non-Scheduled Student Requests for Scheduled Courses report to determine which requests for scheduled courses have not been satisfied on a student-by-student basis.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.

   Note: To exclude alternate requests, click **Exclude Alternates** below the report name.

3. Click **Non-scheduled Student Requests for Scheduled Courses**. The Non-Scheduled Student Requests for Scheduled Courses page appears.
4. Use the following table to enter information in the fields:

Field	**Description**
Students to Include	Number of students included in scheduling for next year. If a student or group of students have been selected, choose to run the report for only that student selection or for all students .In the **Include Only In Grades** field, enter the numbers of the grade levels you want to include in this report (optional).

Exclude Alternates	Select **Yes** from the pop-up menu to exclude alternate requests.
Report Output Locale	Select the locale from the pop-up menu. The report output will be in the language associated with the locale. For more information, see *Report Output Locale*.

5. Click **Submit**. The report displays the following information:

Field	**Description**
Student Number	The number of the requesting student that was not scheduled in this course.
Student Name	The name of the requesting student that was not scheduled in this course.
Course Number	The course number. **Note:** Alternate course requests are noted with (Alt).
Course Name	The course name. **Note:** Alternate course requests are noted with (Alt).

How to Run the Room Schedule Report

Use the Room Schedule report to determine which courses are being taught in a particular room.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Room Schedule**. The Room Schedule page appears.
4. Click **Associate** to select the number of the room you want.
5. Select the **Report Output Locale** from the pop-up menu. The report output will be in the language associated with the locale. For more information, see *Report Output Locale*.

6. Click **Submit**. The report displays the following information:

Field	Description
Sec#	The section number of the course.
Expression	The period and days in which the course is taught.
Term	The term in which the course is taught.
Teacher	The name of the teacher instructing the course.
Course#	The course number.
Course	The course name.
Size	The number of students enrolled in the course. Click the number to display the class roster.

How to Run the Room Utilization Report

Use the Room Utilization report to verify that the system scheduled courses in the correct rooms, with the appropriate facilities, and at the correct times. You can also use this report to make sure that you correctly defined room capacities.

For each room, the system displays the courses that take place in the room by period. For each period, the system displays the number of available seats, scheduled students, and maximum seats.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Room Utilization**. The Room Utilization page appears.
4. Click **Associate** to select the rooms that you want to display on the report.
5. Select the **Report Output Locale** from the pop-up menu. The report output will be in the language associated with the locale. For more information, see *Report Output Locale*.

6. Click **Submit**. The report displays the following information:

Field	**Description**
Room	The room number and maximum seats for each room.
Day	The day the room is scheduled.
Terms	The terms that the room is scheduled.
Period	The course name, course and section number, teacher name, expression (period and day), term, number of taken seats, and number of seats available.

How to Run the Schedule Periods by Grade Report

Use the Schedule Periods by Grade report to view the number of students scheduled into courses by period, grade, and term.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Schedule Periods By Grade**. The Schedule Periods By Grade page appears.
4. Select the **Report Output Locale** from the pop-up menu. The report output will be in the language associated with the locale. For more information, see *Report Output Locale*.
5. Click **Submit**. The report displays the following information:

Field	**Description**
Term	The term number.
Expressions	The period and day combination.

Grade [number]	The number of unscheduled students, scheduled students, and total number of students for this grade level.

How to Run the Schedule Course Enrollment Report

Use the Scheduled Course Enrollment report to view the number of seats available, requested, occupied, and vacant per course. The report also displays the number of unfilled student requests for each course.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Schedule Course Enrollment**. The Schedule Course Enrollment page appears.
4. Select the **Report Output Locale** from the pop-up menu. The report output will be in the language associated with the locale. For more information, see *Report Output Locale*.
5. Click **Submit**. The report displays the following information:

Field	Description
Number	The course number.
Course Name	The course name.
Seats Available	The maximum enrollment for the course.
Primary Requests	The number of primary requests made for the course. Click the number to display the names of the students that requested the course. The Course detail page appears with the Primary Requests tab selected. To view other Course detail information, click a different tab.
Alternate Requests	The number of alternate requests made for the course. Click the number to display the names of the students that requested the course. The Course detail page appears with the Alternate

	Requests tab selected. To view other Course detail information, click a different tab. **Note:** The **Alt** checkbox on the Requests page must be selected to indicate that the request is an alternate course request.
Seats Filled	The number of fulfilled requests for the course. Click the number to display the names of the students enrolled in the course. The Course detail page appears with the Seats Filled tab selected. To view other Course detail information, click a different tab.
Seats Vacant	The number of empty seats in the course.
Unfilled Primary Requests	The number of unfulfilled primary requests for the course. Click the number to display the names of the students that requested the course but are not enrolled in it. The Course detail page appears with the Unfilled Primary Requests tab selected. To view other Course detail information, click a different tab.

How to Run the Schedule Results by Grade Report

Use the Schedule Results by Grade report to view a summary of how many students in each grade were fully scheduled and not scheduled. To give you a better indication of the success of your schedule, run this report after loading student schedules but before working with individual students' scheduled.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Schedule Results by Grade**. The Scheduling Results By Grade page appears.
4. Select the **Report Output Locale** from the pop-up menu. The report output will be in the language associated with the locale. For more information, see *Report Output Locale*.
5. Click **Submit**. The report displays the following information:

Field	Description

Students Scheduled	Next year's student grade level and the total number of students that submitted course requests for each grade level.
All Periods	When all periods are considered, the number and percentage of students in each grade that have a complete schedule and the number and percentage of students in each grade that do not have a complete schedule.
Core Periods	When only core periods are considered, the number and percentage of students in each grade that have a complete schedule and the number and percentage of students in each grade that do not have a complete schedule. Core periods are those that are flagged as such and are those in which the school expects students to be scheduled.
Requests Scheduled	Next year's student grade level and the total number of requests submitted by students for each grade level.
Including Alternates	When alternate course requests are considered, the number and percentage of students in each grade that have a complete schedule and the number and percentage of students in each grade that do not have a complete schedule.
Primary Requests Only	When only primary course requests are considered, the number and percentage of students in each grade that have a complete schedule and the number and percentage of students in each grade that do not have a complete schedule.

Student Schedule Reports

How to Run the Student Schedule List Report

Use the Student Schedule List report to view the number of courses scheduled by each student. You can also use this report to view each student's schedule.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.

2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Student Schedule List**. The Student Classes Scheduled page appears.
4. Use the following table to enter information in the fields:

Field	Description
Students to Include	Number of students included in scheduling for next year. If a student or group of students have been selected, choose to run the report for only that student selection or for all students. In the **Include Only In Grades** field, enter the numbers of the grade levels you want to include in this report (optional).
Report Output Locale	Select the locale from the pop-up menu. The report output will be in the language associated with the locale. For more information, see *Report Output Locale*. **Note:** Clicking on hyperlinks within the report may display a different page in PowerSchool, which will appear in your preferred language and not in the locale you selected for the report output.

5. Click **Submit**. The report displays the following information:

Field	Description
#	The numbered list of students.
Student	The student's name. Click the heading to sort the list by student name.
% Scheduled	The percent of the period/term combinations that were fulfilled. Click the heading to sort the list by percentage scheduled.
Classes Scheduled	The number of courses that have been scheduled for this student. Click the heading to sort the list by the number of classes scheduled. Click the number per student to view the student's Schedule page.

How to Run the Student Schedule Report

The Student Schedule Matrix allows you to produce and print student schedule reports with page breaks between students. Though this report can be viewed with Safari for Mac OS X and Microsoft Internet Explorer for Windows, other browsers may not display the report formatting appropriately.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Student Schedule Report**. The Student Schedule Matrix Report page appears.
4. Use the following table to enter information in the fields:

Field	Description
Report Title	Enter a title for the report.
Term to Display	Select from the pop-up menu which term to use for the report.
Students to scan	Select an option to indicate the students to include, if applicable.
Max Students per Page	Enter the maximum number of student reports to display per page.
Sort Order	Select an option to indicate the sort order: • **Last Name** • **(Next Year) Grade Level** • **Homeroom**
Show Other-School Enrollments	Select the checkbox to display any enrollments at other schools. The enrollments are based on the selected scenarios.
Color Sections By:	Select an option for the report colors: • **No Coloring**: Report displays no coloration. • **Section**: Report displays sections in the same color.

	• **Course**: Report displays courses in the same color.
Report Output Locale	Select the locale from the pop-up menu. The report output will be in the language associated with the locale.

5. Click **Submit**. The Student Schedule Matrix appears.

How to Run the Student Schedule Matrix Report

The Student Schedule Matrix allows you to produce and print student schedules for the current year with page breaks between students. Though this report can be viewed with Safari for Mac OS X and Microsoft Internet Explorer for Windows, other browsers may not appropriately display the report formatting.

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Scheduling, choose **Student Schedule Report**. The Student Schedule Matrix Report page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Use the following table to enter information in the fields:

Field	Description
Report Title	Enter a title for the report.
Students to scan	Select an option to indicate the students to include, if applicable.
Max Students per Page	Enter the maximum number of students to display per page.
Sort Order	Select an option to indicate the sort order.

Include Active Enrollments As Of	Enter a date to filter report results by the specified date of active enrollments. Use the format mm/dd/yyyy or mm-dd-yyyy.
Show Dropped Enrollments in Separate List	Select the checkbox to display a student's dropped enrollments below the student's matrix. A Withdrawn Classes table displays the enrollment information for each dropped course, including the date of withdrawal.
Bell Schedule for Period Start/End Times	Select from the pop-up menu which bell schedule to use to display the start and end times for each period.
Color Sections By:	Select an option for the report colors: • **No Coloring**: Report displays no coloration. • **Section**: Report displays sections in the same color. • **Course**: Report displays courses in the same color.

5. Click **Submit**. The Student Schedule Matrix appears.

Tips for Printing the Student Schedule Matrix Report

- Enable the printing of backgrounds. Shading and colorations in reports are all considered backgrounds. Not printing backgrounds may lead to illegible printouts.
- Turn off the printing of header information in your browser settings. If this is not off, each page printed may include the URL of this page, a page number, and a time stamp. These are generally not desired for this report.
- Use your browser's Print Preview function to confirm that the output is correct prior to sending to the printer. You may adjust text size using the text font size controls of your browser. You may also control the page orientation using your browser settings to fix table cells that span page breaks or reports that print too small.

How to Run the Under-Scheduled Students Report

Use the Under-Scheduled Students report to determine the number of students who have been under-scheduled for each period.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.

2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Under-scheduled Students**. The Under-Scheduled Students page appears.
4. Use the following table to enter information in the fields:

Field	Description
Students to Include	Number of students included in scheduling for next year. If a student or group of students have been selected, choose to run the report for only that student selection or for all students. In the **Include Only In Grades** field, enter the numbers of the grade levels you want to include in this report (optional).
Report Output Locale	Select the locale from the pop-up menu. The report output will be in the language associated with the locale. For more information, see *Report Output Locale*.

5. Click **Submit**. The report displays the following information:

Field	Description
# of Blocks	The number of blocks, or units, available in the schedule. Units are periods multiplied by the number of days multiplied by the number of schedule terms. For example, a scenario with 2 days, 8 periods, and 4 terms would have 64 blocks.
Percent	The number of blocks divided by the total number of blocks possible.
# of Students	The number of students who have the corresponding number of blocks scheduled.
Percent	The percentage of the total number of students that have the corresponding number of blocks scheduled.

How to Run the Unscheduled Rooms Report

Use the Unscheduled Rooms report to determine the number of rooms that have not been scheduled for classes per term, period, and day.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Unscheduled Rooms**. The Unscheduled Rooms page appears.
4. Select the **Report Output Locale** from the pop-up menu. The report output will be in the language associated with the locale. For more information, see *Report Output Locale*.
5. Click **Submit**. The report displays the following information:

   Note: If each room is scheduled, the message "All rooms are fully scheduled" appears.

Field	Description
Term Period Day Description	The term, period, and schedule day in which there are unscheduled rooms.
# of Rooms	The number of unscheduled rooms for each term, period, and day. Click the number of rooms to display the list of rooms.

How to Run the Unscheduled Students Report

Use the Unscheduled Students report to determine the number of students who have not been scheduled into classes per term, period, and day. When making adjustments after loading student schedules, school counselors can use this report to find "holes" in student schedules.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Unscheduled Students**. The UnScheduled Students page appears.
4. Use the following table to enter information in the fields:

Field	Description

Students to Include	Number of students included in scheduling for next year. If a student or group of students have been selected, choose to run the report for only that student selection or for all students. In the **Include Only In Grades** field, enter the numbers of the grade levels you want to include in this report (optional).
Report Output Locale	Select the locale from the pop-up menu. The report output will be in the language associated with the locale. For more information, see *Report Output Locale*.

5. Click **Submit**. The report displays the following information:

Field	Description
Term Period Day Description	The term, period, and schedule day in which there are unscheduled students.
# of Students	The number of unscheduled students for each term, period, and day. Click the number of students to display the list of students, from which you can select students and perform functions for the group of students.

How to Run the Unscheduled Teachers Report

Use the Unscheduled Teachers report to determine the number of teachers who have not been scheduled into classes per term, period, and day.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Unscheduled Teachers**. The UnScheduled Teachers page appears.
4. Select the **Report Output Locale** from the pop-up menu. The report output will be in the language associated with the locale. For more information, see *Report Output Locale*.
5. Click **Submit**. The report displays the following information:

Field	Description
Term Period Day Description	The term, period, and schedule day in which there are unscheduled teachers.
# of Teachers	The number of unscheduled teachers for each term, period, and day. Click the number of teachers to display the list of teachers.

How to Run the Percent Schedule By Students Report

Use the Percent Schedule By Students report to determine how successful your current schedule is based on percentage scheduled calculations for a given student for the active PowerScheduler scenario.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Percent Schedule By Students**. The Percent Scheduled By Students page appears.
4. Use the following table to enter information in the fields:

Field	Description
Students to Include	Number of students included in scheduling for next year. If a student or group of students have been selected, choose to run the report for only that student selection or for all students. In the **Include Only In Grades** field, enter the numbers of the grade levels you want to include in this report (optional).
Report Output Locale	Select the locale from the pop-up menu. The report output will be in the language associated with the locale. For more information, see *Report Output Locale*.

5. Click **Submit**. The report displays the following information:

Field	Description
Student Name	Name of the student.
Next Year Grade	Students' grade levels for next year. This report sorts by next year grade level followed by student name.
# Requests	Number of course requests made by the student.
# Classes Scheduled	Number of classes scheduled for the student.
% Scheduled	Percent scheduled based on all possible time slots that can be scheduled according to periods, days, and terms.
% Core Periods	Percent of core periods scheduled based on all possible time slots that can be scheduled according to periods, days, and terms. Core periods are flagged as such and are the periods in which the school expects students to be scheduled.
% Primary Requests	Percent of primary requests (non-alternate requests) that were successfully filled.
% All Requests	Percent of total requests including alternate requests that were filled.

How to Run the Individual Student Conflict Matrix Report

Use the Individual Student Conflict Matrix report to identify whether it is possible to rearrange a student’s schedule so that more or all of their course requests can be fulfilled.

In the process of scheduling, it is inevitable that some students will not have all their requests fulfilled. This is often due to limited resource availability, but it can also be due to inherent limitations of using a scheduling engine. At some point, the effort that the engine expends investigating the different possibilities of a schedule runs into diminishing returns. While PowerSchool’s scheduling engine often reaches into the 90 percent fulfillment of requests range, manual intervention is necessary at some point to achieve an even higher percentage. Often it requires investigating students to identify why all of their requests were not scheduled.

While PowerSchool provides reports that identify unfilled requests, you must investigate various other reports to determine how, or even if, a particular request can be filled. Questions that a scheduling administrator might ask include: “Are any of the sections of the requested class available during an unscheduled period for the student?”, “If not, can I reschedule a filled class so that the student can be scheduled into the missed one?”, “Is there enough room in another class so that I can squeeze the student in?”. This report provides sufficient information for an administrator to begin answering these questions.

Note: As an example, consider four sections: Course A1 with no section type, Course A2 with a section type of Bilingual, Course B1 with no section type, and Course B2 with a section type of Bilingual. If a student requests Course A1 with an alternate of Course B and gets enrolled in B so that it appears as an alternate on the report, the report displays both sections of Course B but only one section of Course A. The same result appears if the student does not request Course B as a primary or alternate request but is enrolled in the course, anyway; all sections appear on the report regardless of section type.

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Individual Student Conflict Matrix**. The Individual Student Conflict Matrix page appears.
4. Use the following table to enter information in the fields:

Field	Description
Students to Include	Select the students you want to run the report for: • Select **The selected students only** to run the report students in the current selection enrolled in the date range specified. • Select **All students** to run the report for all students in the current school enrolled in the date range specified.
Filter Students By	Select how you want students to be filtered: • Select **Students with requests** to view only students who have requests in the course request file.

	• Select **Include students with no requests** to view students with requests as well as those without any requests. • Select **Only students with unfilled requests** to view only students who have requests existing in the course request file with no corresponding scheduled course.
Sort Order	Select the sort order: • **Student Name** • **Grade Level** Many times scheduling administrators work with students on a grade-by-grade basis and it is useful to see all those students in the lowest grade first, then the next, and so on.
Enforce Teams	Select the checkbox so that only sections that belong to the student's team appear in the report. In case of an unassigned team, the section is listed.
Enforce Houses	Select the checkbox so that only sections that belong to the student's house appear in the report. In case of an unassigned house, the section is listed.
Enforces Buildings	Select the checkbox so that only sections occurring in a room belonging to the student's assigned building appear in the report. In case of an unassigned room, the section is listed.
Enforce Student Avoid	Select the checkbox so that only sections that do not violate an existing student-student avoid constraint for the students appearing in the report. In case the student is already enrolled in a section that violates this constraint, the section is listed.
Enforce Teacher Avoid	Select the checkbox so that only sections that do not violate an existing student-teacher avoid constraint for the student appear in the report.

	In case the student is already enrolled in a section that violates this constraint, the section is listed.
Enforce Free Time	Select the checkbox so that only sections that do not violate an existing student free time constraint appears in the report. In case the student is already enrolled in a section that violates this constraint, the section is listed.
Report Output Locale	Select the locale from the pop-up menu. The report output will be in the language associated with the locale.

5. Click **Submit**. The report displays the following information:

Field	**Description**
Student Number	The student’s number.
Student Name	The student’s last name, first name, and middle initial.
Next Year Grade	The next year grade level of the student.
Requested	The classes for which a primary request exists for the student.
Alt	Identifies whether the request is an alternate request as opposed to a primary request.
Section Type	Identifies any section type that was part of the request.
Crs-ID	The course number of the requested (or alternate) course.
Course Name	The course name of the requested (or alternate) course.
Term	The term for which sections of the requested course has been scheduled.

[Period]	The period for which sections of the requested course have been scheduled.
Section Number	The identification number of the section (course number plus section) in which the student is enrolled. In the case of requests that were not scheduled, "Unscheduled" displays.
Expression	The period/day combination.
# Sec	The total number of sections that are available for the requested course.

How to Run the Teacher Maximum Load Report

Use the Teacher Maximum Load Report to identify teachers who are scheduled to teach more students in a day than is allowed by their contracts. This report displays expected loads based on the schedule in PowerScheduler. For more information about setting the value of a teacher's maximum load, see *Teacher Scheduling Setup*.

Sections can be exempted from counting towards a teacher's maximum load. For more information, see *Teacher Schedule*.

Note: A similar report is available for the current year, which is especially helpful when performing walk-in scheduling. For more information, see *How to Run the Teacher Maximum Load Report.*

1. On the start page, choose **PowerScheduler** under Applications in the main menu. The Scheduling page appears.
2. Under Tools, choose **Reports** from the PowerScheduler menu. The Scheduling Reports page appears.
3. Click **Teacher Maximum Load Report**. The Teacher Maximum Load page appears.
4. Use the following table to enter information in the fields:

Field	Description
Select a Teacher	Use the pop-up menu to select the teacher for whom you want to run this report. To select all teachers at the selected school, choose **All Teachers**.

Limit report to	Select an option to limit the results of the report: • **All Selected Teacher(s)**: Displays results for all teachers selected in the Select a Teacher field, even those whose schedules do not exceed their maximum loads. • **Only those over the limit**: Displays only the teachers selected in the Select a Teacher field that exceed the specified student load.
For this date	Enter a date to display report results as of the specified date. Use the format mm/dd/yyyy or mm-dd-yyyy.
Report Output Locale	Select the locale from the pop-up menu. The report output will be in the language associated with the locale.

5. Click **Submit**. The report displays the following information:

Field	Description
No.	The teacher's number.
Teacher Name	The teacher’s last name, first name, middle initial.
Course	The name of the course that has a section contributing to the teacher's student load.
Section	The identification number of the section contributing to the teacher's student load. **Note:** To exempt a section from being included, see *Schedule Sections*.
Max	Maximum number of students allowed in the section.
Room	Room number of the section.

[Day]	Cycle day of the school's schedule, such as A or B.
Flag	Indicates whether a maximum load or section maximum has been exceeded.

PowerSchool Assessment User Guide

PowerSchool

Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

Table of Contents

Introduction

PowerSchool Assessment provides standards-based instructional assessment and analytical solutions that allow administrators and teachers to deliver measurable improvements in student performance. If your district or school has purchased PowerSchool Assessment along with PowerSchool's student information system, you can enable the pre-installed PowerSchool Assessment plugin so that administrators and teachers can access PowerAssessment functions via single sign-on links within PowerSchool.

Setup

Before you can access PowerSchool Assessment from within PowerSchool, perform the following setup items:

- View General Plugin Information (optional)
- View SSO (optional)
- Manage Link Details (optional)
- Configure School Access (optional)

  Note: PowerSchool Assessment is a multi-tenant, web-based application and has some special access considerations for administrators and teachers with PowerSchool SIS access to multiple schools. For more information, see the *Configure School Access* section of the *Plugin Management User Guide*.

- Enable Plugin
- Enable Customizations

Working with PowerSchool Assessment

Once PowerSchool Assessment is set up, users can launch PowerSchool Assessment from within PowerSchool while keeping their PowerSchool session active. This allows users to work in both applications simultaneously.

Note: The link only appears if the plugin is enabled, the link is set to display for the selected school, and if you belong to a user access role that has the capability associated to the link.

Launch PowerSchool Assessment in the PowerSchool Admin Portal

Use this procedure to launch PowerSchool Assessment in the PowerSchool admin portal.

How to Launch PowerSchool Assessment in the PowerSchool Admin Portal

1. Sign in to PowerSchool.

   Note: For more information about signing in to PowerSchool, see *The Basics User Guide* available on PowerSource.

2. Click the **Applications** button (an upward-right arrow) in the navigation toolbar. The Applications drawer slides into view.
3. Click the **[PowerSchool Assessment]** link. PowerSchool Assessment launches in a separate window (or tab depending on your browser settings).

   Note: The window that appears is not served by PowerSchool. It is rendered from a separate server. If the window does not launch, contact your school's PowerSchool administrator.

   Note: If you are not actively working in PowerSchool, your session may time out. If so, you need to sign in again.

4. When you are finished working in PowerSchool Assessment, be sure to sign out of PowerSchool Assessment.
5. When you are finished working in PowerSchool, be sure to sign out of PowerSchool.

Launch PowerSchool Assessment in PowerTeacher Pro Read Only Mode

Use this procedure to launch PowerSchool Assessment in PowerTeacher Pro in read only mode.

How to Launch PowerSchool Assessment in PowerTeacher Pro Read Only Mode (Teacher Schedules)

1. On the start page, choose **Teacher Schedules** under Functions in the main menu. The Teacher Schedules page appears.
2. Click the name of the staff member. The selected teacher's schedule appears.
3. Click the **PowerTeacher Pro** button to launch a read-only version of the application.

How to Launch PowerSchool Assessment in PowerTeacher Pro Read Only Mode (Search Staff)

1. On the start page, search for and select a staff member. For more information, see *Staff Search*.
2. On the Staff page, select **PowerTeacher Pro** from the staff pages menu to launch a read-only version of the application.

Launch PowerSchool Assessment in PowerTeacher Pro

Use this procedure to launch PowerSchool Assessment in PowerTeacher Pro.

How to Launch PowerSchool Assessment in PowerTeacher Pro

1. Sign in to PowerTeacher.

   Note: For more information about signing in to PowerTeacher, see the *PowerTeacher User Guide* available on PowerSource.

2. Select the **PowerTeacher Pro** link on the main menu. PowerTeacher Pro launches.
3. On the charms bar, select **Assessment**. The Assessment sub-menu appears.
4. Use the links to navigate the functions:
   - Under Assessments, click **Manage Tests** to access the Assessment Library.
   - Under Assessments, click **Administer Test** to access the Testing Center.
   - Under Assessments, click **View Results** to access Assessment Reporting.
   - Under Interventions, click **Manage** to access Interventions.

   PowerSchool Assessment launches in a separate window (or tab depending on your browser settings).

   Note: The window that appears is not served by PowerSchool. It is rendered from a separate server. If the window does not launch, contact your school's PowerSchool administrator.

Note: If you are not actively working in PowerSchool, your session may time out. If so, you need to sign in again.

5. When you are finished working in PowerSchool Assessment, be sure to sign out of PowerSchool Assessment.
6. When you are finished working in PowerSchool Assessment, be sure to sign out of PowerTeacher Pro.
7. When you are finished working in PowerSchool, be sure to sign out of PowerSchool.

How to Launch PowerSchool Assessment Reports in PowerTeacher Pro

1. Sign in to PowerTeacher.

   Note: For more information about signing in to PowerTeacher, see the *PowerTeacher User Guide* available on PowerSource.

2. Select the **PowerTeacher Pro** link on the main menu. PowerTeacher Pro launches.
3. On the charms bar, select **Reports**. The Reports sub-menu appears.
4. Use the links to navigate the functions:
   - Under Assessments, click **View Results** to access Assessment Reporting.
   - Under Assessments, click **Achievement Records** to access Student Achievement Records.
   - Under Assessments, click **LDS Reporting** to access Longitudinal Data System Reporting (appears if PowerSchool Analytics is enabled).

   PowerSchool Assessment launches in a separate window (or tab depending on your browser settings).

   Note: The window that appears is not served by PowerSchool. It is rendered from a separate server. If the window does not launch, contact your school's PowerSchool administrator.

   Note: If you are not actively working in PowerSchool, your session may time out. If so, you need to sign in again.

5. When you are finished working in PowerSchool Assessment, be sure to sign out of PowerSchool Assessment.
6. When you are finished working in PowerSchool Assessment, be sure to sign out of PowerTeacher Pro.
7. When you are finished working in PowerSchool, be sure to sign out of PowerSchool.

PowerSchool Learning User Guide

PowerSchool

Student Information System

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

Table of Contents

Introduction

PowerSchool Learning is PowerSchool’s learning management and classroom collaboration solution. Educators can quickly create and deliver rich engaging lessons that facilitate 21st century learning, electronically provide feedback and grades, and collaborate and share best practices. PowerSchool learning streamlines teacher workflows and communication and seamlessly integrates third-party tools into one portal, so educators can spend more time teaching and less time managing, tracking, and grading assignments. If you use PowerSchool’s student information system, classes are automatically created, populated, and updated regularly in PowerSchool Learning and grades can be pushed automatically into the PowerTeacher Pro.

Setup

Before you can enable access to PowerSchool Learning from within PowerSchool, perform the following setup items:

- View General Plugin Information (optional)
- View SSO (optional)
- Manage Link Details (optional)
- Configure School Access (optional)
- Enable Plugin
- Enable Customizations
- Enable User Access Role

Working with PowerSchool Learning

Once PowerSchool Learning is set up, teachers can launch PowerSchool Learning from PowerTeacher portal, and students can launch the application from the PowerSchool Student and Parent portal. For more information, see the PowerTeacher Portal online help, or the PowerSchool Student and Parent Portal online help.

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

The data and names used to illustrate the reports and screen images may include names of individuals, companies, brands, and products. All of the data and names are fictitious; any similarities to actual names are entirely coincidental.

Table of Contents

Introduction

PowerSchool Registration is PowerSchool's add-on student enrollment and school choice system. PowerSchool Registration seamlessly facilitates new student enrollment, annual student registration, and year-round updates. PowerSchool registration provides the ability to register your students in PowerSchool and eliminates the need to print paper enrollment packets every year. If your district or school has purchased PowerSchool Registration along with PowerSchool's student information system, you can enable the PowerSchool Registration plugin so that administrators and teachers can access PowerRegistration functions via single sign-on links within PowerSchool.

Note: Each PowerSchool client using PowerSchool Registration will have one or multiple uniquely configured PowerSchool Registration plugins, which are provided by your PowerSchool Registration solutions support staff. If you are already a PowerSchool Registration customer, please have your organization’s technical contact email your PowerSchool Registration specialist to request your site's upgrade to the new PowerSchool Registration plugin.

Setup

Before you can access PowerSchool Registration from within PowerSchool, perform the following setup items:

- View General Plugin Information (optional)
- View SSO (optional)
- Manage Link Details (optional)
- Configure School Access (optional)
- Enable Plugin
- Enable Customizations

Working with PowerSchool Registration

Once PowerSchool Registration is set up, users can launch PowerSchool Registration from within PowerSchool while keeping their PowerSchool session active. This allows users to work in both applications simultaneously.

Note: The link only appears if the plugin is enabled, the link is set to display for the selected school, and if you belong to a user access role that has the capability associated to the link.

Launch PowerSchool Registration in the PowerSchool Admin Portal

Use this procedure to launch PowerSchool Registration in the PowerSchool admin portal.

How to Launch PowerSchool Registration in the PowerSchool Admin Portal

1. Sign in to the PowerSchool.

   Note: For more information about signing in to PowerSchool, see *The Basics User Guide* available on PowerSource.

2. Click the **Applications** button (an upward-right arrow) in the navigation toolbar. The Applications drawer slides into view.
3. Click the **[PowerSchool Registration]** link. PowerSchool Registration launches in a separate window (or tab depending on your browser settings).

   Note: The window that appears is not served by PowerSchool. It is rendered from a separate server. If the window does not launch, contact your school's PowerSchool administrator.

   Note: If you are not actively working in PowerSchool, your session may time out. If so, you need to sign in again.

4. When you are finished working in PowerSchool Registration, be sure to sign out of PowerSchool Registration.
5. When you are finished working in PowerSchool, be sure to sign out of PowerSchool.

Launch PowerSchool Registration in the PowerSchool Student and Parent Portal

Use this procedure to launch PowerSchool Registration in the PowerSchool Student and Parent portal.

How to Launch PowerSchool Registration in the PowerSchool Student and Parent Portal

1. Sign in to the PowerSchool Student and Parent portal.

   Note: For more information about signing in to the PowerSchool Student and Parent portal, see the *PowerSchool Student and Parent Portal User Guide* available on PowerSource.

2. Click the **Applications** button (an upward-right arrow) in the navigation toolbar. The Applications drawer slides into view.
3. Click the **[PowerSchool Registration]** link. PowerSchool Registration launches in a separate window (or tab depending on your browser settings).

   Note: The window that appears is not served by PowerSchool. It is rendered from a separate server. If the window does not launch, contact your school's PowerSchool administrator.

   Note: If you are not actively working in PowerSchool, your session may time out. If so, you need to sign in again.

4. When you are finished working in PowerSchool Registration, be sure to sign out of PowerSchool Registration.
5. When you are finished working in PowerSchool, be sure to sign out of PowerSchool.

PowerSchool WS-Trust Bridge Administrator User Guide

PowerSchool

Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

The data and names used to illustrate the reports and screen images may include names of individuals, companies, brands, and products. All of the data and names are fictitious; any similarities to actual names are entirely coincidental.

Table of Contents

PowerSchool WS-Trust Bridge

Using the WS-Trust protocol, your SAML Service Provider can now communicate with an Active Directory Federation Service (ADFS).

Notes:

- The PowerSchool WS-Trust Bridge plugin requires PowerSchool 9.0 or greater to be installed.
- For more information about the PowerSchool WS-Trust Bridge plugin, see the *PowerSchool WS-Trust Bridge* section of the *PowerSchool Developer Site* available on PowerSource.
- For information about SAML Service Provider, see the *PowerSchool as a SAML Service Provider* section of the *PowerSchool Developer Site* available on PowerSource.
- For PowerSchool issues, contact PowerSchool Technical Support.
- For ADFS issues, contact your ADFS service provider.

Setup

Before you can begin using the PowerSchool WS-Trust Bridge plugin, you will need to perform the setup items in this section.

Configure PowerSchool Installation Settings

In order for the PowerSchool WS-Trust Bridge plugin to function, the **PowerSchool WS-Trust Bridge** checkbox on the Deploy and Configuration Application page must be selected for all nodes during the PowerSchool installation process. For more information, see the *Installation Guide for PowerSchool 9.x* available on PowerSource.

Install PowerSchool WS-Trust Bridge

Once you have installed PowerSchool with the correct settings, you can then install the PowerSchool WS-Trust Bridge plugin.

How to Install PowerSchool WS-Trust Bridge

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Click **Install**. The Plugin Install page appears.
5. Click **Browse…**. The Browse Plugins pop-up appears.
6. Click **Install** for **PowerSchool WS-Trust Bridge**. The pop-up closes, and a confirmation message appears.

View PowerSchool WS-Trust Bridge Plugin Information (Optional)

Once the PowerSchool WS-Trust Bridge plugin is installed, it appears in the Installed Plugins section on the Plugin Management Dashboard page.

How to View PowerSchool WS-Trust Bridge Plugin Information

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.

3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Click **PowerSchool WS-Trust Bridge**. The PowerSchool WS-Trust Bridge Setup page appears.
5. Use the following table to view information on this page:

Field	Description
Plugin Name	The name of the plugin.
Plugin Description	A description of the plugin.
Plugin Version	The version number of the plugin.
Publisher	The name of the publisher.
Publisher Email	The email of the publisher.
Enabled	Indicates whether or not the plugin is enabled.

Configure PowerSchool WS-Trust Bridge

Using the WS-Trust Bridge Setup for PowerSchool WS-Trust Bridge page, you can configure the bridge settings needed to establish a successful connection between your SAML Service Provider and your ADFS.

How to Configure PowerSchool WS-Trust Bridge

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Click **PowerSchool WS-Trust Bridge**. The PowerSchool WS-Trust Bridge Setup page appears.
5. Click **WS-Trust Bridge**. The WS-Trust Bridge Setup for PowerSchool WS-Trust Bridge page appears.
6. Use the following table to enter information in the fields:

Field	Description
Security Attribute Name	The name of the ADFS claim. Claims are used for authorization purposes.
Realm	The URL used by PowerSchool to communicate with ADFS. PowerSchool WS-Trust Bridge plugin installation defaults the value to the External Access on the Global Server Settings page.
Passive Address	The URL of the ADFS.
IDP Signing Cert	The name of the certificate used to sign the SAML response. The certificate must be the same as the certificate used by ADFS.
Encryption Cert	The name of the certificate used to encrypt the security token. The certificate must be the same as the certificate used by ADFS. **Note:** This field is optional.

7. Click **Save**. A confirmation message appears.

View SAML Service Provider Settings (Optional)

Using the SAML Service Provider Setup page, you can quickly and easily view detailed information about SAML Service Provider settings that have been added to PowerSchool as part of the PowerSchool WS-Trust Bridge plugin installation. Additionally, you can use this page to correct or update information as needed.

Note: This procedure is for a plugin that defines PowerSchool as a Service Provider. For a plugin that defines PowerSchool as a SAML Identity Provider, see *SAML Single Sign-On*.

How to View External Identity Provider Settings

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.

4. Click **PowerSchool WS-Trust Bridge**. The PowerSchool WS-Trust Bridge Setup page appears.
5. Click **SAML Service Provider**. The SAML Service Provider Setup for PowerSchool WS-Trust Bridge page appears.
6. Use the following table to edit information in the External Identity Provider Settings fields:

Field	Description
Name	The external identity provider's name. **Note:** This field is read-only.
Entity ID	The external identity provider's public URL.
Metadata URL	The service provider's metadata URL. The value is supplied by the service provider, which allows the IDP to communicate with the service provider application.
View IDP Metadata	The external identity provider's IDP Metadata must match what is stored in PowerSchool. This information can be used to diagnose communication issues. 1. Click to view. A separate window appears. 2. When done viewing, close the window.

7. Click **Save**. A confirmation message appears.

How to View Local Service Provider Settings

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Click **PowerSchool WS-Trust Bridge**. The PowerSchool WS-Trust Bridge Setup page appears.
5. Click **SAML Service Provider**. The SAML Service Provider Setup for PowerSchool WS-Trust Bridge page appears.

6. Use the following table to edit information in the Local Service Provider Settings fields:

Field	Description
Name	The local service provider's name.
Base URL	The local service provider's base URL. **Note:** This field is read-only.
Metadata URL	The local service provider's metadata URL. **Note:** This field is read-only.
Entity-ID	The local service provider's public URL. **Note:** This field is read-only.

7. Click **Save**. A confirmation message appears.

How to View PowerSchool User Identifying Elements for SSO

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Click **PowerSchool WS-Trust Bridge**. The PowerSchool WS-Trust Bridge Setup page appears.
5. Click **SAML Service Provider**. The SAML Service Provider Setup for PowerSchool WS-Trust Bridge page appears.
6. Scroll to the PowerSchool User Identifying Elements for Single Sign-On section.
7. Click **Cancel** when done viewing.

Manage Link Details (Optional)

Using the Link Details page, you can quickly and easily view detailed information about PowerSchool WS-Trust Bridge links that have been added to PowerSchool as part of the

PowerSchool WS-Trust Bridge installation. Additionally, you can control which schools can view the PowerSchool WS-Trust Bridge links.

Note: This procedure is only applicable if the plugin configuration file you installed declares navigation links.

How to Manage Link Details

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Click **PowerSchool WS-Trust Bridge**. The PowerSchool WS-Trust Bridge Setup page appears.
5. Click **Link Details**. The Link Details page for the selected plugin displays the following information for each portal:

Field	Description
[Portal]	The name of the portal: • Administrator Portal • Teacher Portal • Guardian Portal • Student Portal
Schools	For detailed information, see *Configure School Access*. **Note:** This setting controls only the display of links associated to a plugin. This does not restrict users from accessing content referred to by these links. Only the display of links based on the user's school context is affected.
Displayed in # / # Schools	Indicates the number of school the link displays in. **Note:** Only displays for Teacher Portal.
URL	The URL of the link, including <HostName>:<Port><Path>.

Display Text	The link title text appears.
UI Location	The location(s) where the link appears in the PowerSchool user interface.
SSO	Indicates whether or not the link is used for SSO.

Configure School Access (Optional)

Using the Link Display by School drawer, you can control which schools can view PowerSchool WS-Trust Bridge links.

Note: Third party links appear in PowerSchool based on the navigation links defined in the plugin configuration file.

Note: This procedure is not applicable to plugins that handle their own school level access.

Note: School-level permissions within PowerTeacher Pro 1.0 will use the permissions of the school from which PTP was launched.

How to Configure School Access

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Click **PowerSchool WS-Trust Bridge**. The PowerSchool WS-Trust Bridge Setup page appears.
5. Click **Link Details**. The Link Details page for the selected plugin appears.
6. Click **Schools** next to the portal for which you want to configure school access. The Link Display by School drawer opens.
7. Use the following table to enter information:

Field	Description
Schools Where Links Not Displayed	Schools that have not been granted access to the plugin appear.

	To grant access to a plugin, highlight one or more schools in the list and click the arrow (>). The selected school appears in the Schools with access to plugin column. **Note:** To select multiple schools, press and hold COMMAND (Mac) or CONTROL (Windows) as you click each school. To grant access to a plugin for all schools, click the double arrow (>>). All schools appear in the Schools with access to plugin column.
Schools Where Links Displayed	Schools that have been granted access to the plugin appear. To revoke access to a plugin, highlight one or more schools in the list and click the arrow (<). The selected school appears in the Schools without access to plugin column. **Note:** To select multiple schools, press and hold COMMAND (Mac) or CONTROL (Windows) as you click each school. To revoke access to a plugin for all schools, click the double arrow (<<). All schools appear in the Schools without access to plugin column.

8. Click **Submit**. The Link Display by School drawer closes, and a confirmation message appears.

Enable PowerSchool WS-Trust Bridge

By default, the PowerSchool WS-Trust Bridge plugin is not enabled. Once enabled, your SAML Service Provider can now communicate with an Active Directory Federation Service (ADFS).

How to Enable PowerSchool WS-Trust Bridge

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Select the **Enable/Disable** checkbox for the PowerSchool WS-Trust Bridge plugin. The Enable Plugin drawer appears.
5. Review the content.

Note: If you have installed a plugin that is dependent on page customizations, you must enable page customizations on the Customizations page. For more information, see *Customizations*.

Note: If PowerSchool encounters errors with the plugin, detailed information about the errors appears and you may not proceed with enabling the plugin.

6. Click **Enable** to proceed. A confirmation message appears.

How to Disable PowerSchool WS-Trust Bridge

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Server, click **System Settings**. The System Settings page appears.
3. Click **Plugin Management Configuration**. The Plugin Management Dashboard page appears.
4. Deselect the **Enable/Disable** checkbox for the PowerSchool WS-Trust Bridge plugin. The Disable Plugin pop-up appears.
5. Click **Yes**. A confirmation message appears.

Restart PowerSchool

Restart all nodes of PowerSchool for the changes to take effect.

Reports User Guide

PowerSchool

Student Information System

PowerSchool

Released April 2018

Document Owner: Documentation Services

This edition applies to Release 12.x of the PowerSchool software and to all subsequent releases and modifications until otherwise indicated in new editions or updates.

The data and names used to illustrate the reports and screen images may include names of individuals, companies, brands, and products. All of the data and names are fictitious; any similarities to actual names are entirely coincidental.

Table of Contents

Introduction

PowerSchool includes two types of reports: custom and preconfigured. Custom reports include form letters, mailing labels, report cards, and object reports. Preconfigured reports include reports related to attendance, grades, membership and enrollment, statistics, and student listings. Use the reports menu to run any custom or traditional report. Limit the group of students to report on by selecting a group of students before accessing the reports menu.

Group Reports

Select a group of students before running either preconfigured or custom reports.

How to Display the Reports Page

Display the reports page by selecting a group of students for whom you want to run a report. Alternately, you can choose **System Reports** under Reports in the main menu.

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Printing, choose **Reports Menu**. The Reports page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Do one of the following:
   - Click the **System** tab to view *Preconfigured Reports.*
   - Click the **ReportWorks** tab to view *ReportWorks Reports.*
   - Click the **State** tab to view *State Reports*.
   - Click the **Engine** tab to work with the reporting engine.
   - Click the **Setup** tab to view *Custom Reports*.

System Report Queue

Use the System Report Queue to view, delete, cancel, and re-execute preconfigured reports that you submit to the queue. When you submit a report request to the system, the system captures the report request and transmits the job to the Report Queue. The Report Queue page displays the status of the report as it is processed by the system. The Report Queue also includes debugging tools and logs to troubleshoot problems with reports.

Reports are organized by tabs. The System tab displays all preconfigured reports, while the ReportWorks tab displays all submitted reports that were created in ReportWorks. For more information about viewing ReportWorks, see *ReportWorks Report Queue*.

To view all jobs in the report queue regardless of the user, view the report queue from the System Administrator menu. Administrators can also set preferences for the Report Queue. For more information, see *Report Queue Preferences*.

How to Set Automatic Page Refresh on the Report Queue

You can choose how often the ReportWorks report queue automatically refreshes. This feature is available on the System Reports Report Queue and the ReportWorks Report Queue.

1. On the start page, click the **Report Queue** button in the navigation bar.
2. Click the **System** tab. The Report Queue (System) - My Jobs page displays all your reports.
3. On the **Refresh** button, click the arrow. A pop-up menu displays the units of time you can set for the automatic page updates; 30 seconds, one minute, five minutes, or 10 minutes.
4. Select a value from the pop-up menu. A countdown clock appears on the Refresh button and displays the time until the page updates, based on your selection.
5. To cancel the automatic page refresh, click the arrow and select the **Cancel** button.

How to View System Reports in the Report Queue

You must run a report before performing this procedure. For more information, see *Custom Reports* or *Preconfigured Reports*.

1. On the start page, click the **Report Queue** button in the navigation bar.
2. Click the **System** tab. The Report Queue (System) - My Jobs page displays all your reports.
3. Do one of the following:
    - Click **Refresh** to update the page.
    - Click the cancel icon to stop running the report.
    - Click **View** to view the report once the Status column displays the status "Completed."
    - Click the Job Name of the report. The Report Queue Job Detail page displays details of the report job, and you can select either the **Cancel Job** or **Run job**

again checkbox, depending on whether the job has completed or not. For more information, see *How to View System Completed Report Details*.

- Click the trash icon to delete the completed report.

How to View Completed System Report Details

When a report runs completely, view the job details. For details on reports that are running or pending, see *How to View System Reports in the Report Queue*.

1. On the start page, click the **Report Queue** button in the navigation bar.
2. Click the **System** tab. The Report Queue (System) - My Jobs page displays all your reports.
3. Click the job name of the report. The Report Queue Job Detail page appears.
4. Use the following table to enter information in the fields:

Field	Description
User	The username of the person who ran the report appears.
School	The school name and number for the report appears.
Created	The date and time the report job started appears.
Job Name	The name of the report appears.
Type	The way in which the report is generated appears.
Reports	The name of the table that includes the data used for the report appears.
Status	The status of the report job appears: • **Completed**: Job is finished. • **Running**: Job is processing. • **Pending**: Job has not started. • **Canceled**: Job has been canceled.

Use the following table to enter information in the fields if the report has not completed:

Field	Description
Started	The date and time the report started running appears.
Ended	The date and time the report finished running will appear once completed.
Merger Action	If the report is a merger of multiple report definition (RPT) files, this field displays the text **MERGE**. If the report was not a merger report, nothing appears in this field.
Destination	The destination of the report appears, such as Browser.
When to Execute	The status of when the report will run appears.
Cancel Job?	Select the checkbox to cancel the execution of the report.

Use the following table to enter information in the fields if the report has completed:

Field	Description
Started	The date and time the report started running appears.
Ended	The date and time the report finished running appears.
Destination	The destination of the report appears, such as Browser.
When to Execute	Select a time to run the report: • **ASAP**: Execute immediately. • **At Night**: Execute during the next evening. • **On Weekend**: Execute during the next weekend. • **On Specific Date/Time**: Execute on the date and time specified in the following fields.

Run Job Again?	Select the checkbox to execute the report again.
Result File	Select the Result File to display the report.
File Size	The size of the file appears.

Use the following table to enter information in the fields if the report is pending completion:

Field	**Description**
Started	The date and time the report started running will appear once it executes.
Ended	The date and time the report finished running will appear once completed.
Merger Action	If the report is a merger of multiple report definition (RPT) files, this field displays the text **MERGE**. If the report was not a merger report, nothing appears in this field.
Destination	The destination of the report appears, such as Browser.
When to Execute	Select a different time to rerun the report: • **ASAP**: Execute immediately. • **At Night**: Execute during the next evening. • **On Weekend**: Execute during the next weekend. • **On Specific Date/Time**: Execute on the date and time specified in the following fields.
Cancel Job?	Select the checkbox to cancel the execution of the report.

Use the following table to enter information in the fields if the report was canceled:

Field	**Description**

Started	The date and time the report started running appears.
Ended	The date and time the report stopped running appears.
Merger Action	If the report is a merger of multiple report definition (RPT) files, this field displays the text **MERGE**. If the report was not a merger report, nothing appears in this field.
Destination	The destination of the report appears, such as Browser.
When to Execute	Select a time to rerun the report: • **ASAP**: Execute immediately. • **At Night**: Execute during the next evening. • **On Weekend**: Execute during the next weekend. • **On Specific Date/Time**: Execute on the date and time specified in the following fields.
Run Job Again?	Select the checkbox to execute the report again.
Error Message	Details regarding the cancellation of the report appear.
Error Code	The code used to cancel the report appears.

5. Click **Submit** to save your changes. PowerSchool runs the report, and the report queue appears. Depending on your specifications, this could take several minutes.
6. Click **View** to display the report.

How to View Report Queue Jobs

You must run a report before performing this procedure. For more information, see *Custom Reports* or *Preconfigured Reports*.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Reports, click **Report Queue Settings**. The Report Queue Settings page appears.

3. Click **Current Jobs**. The Report Queue - Current Jobs page displays the reports in the queue.
4. Do one of the following:
    - Click **Refresh** to update the page.
    - Click the job name of the report. The Report Queue Job Detail page displays details of the report job.
    - Select the **Cancel** checkboxes for the reports you want to cancel. Click **Cancel Selected Jobs**.

How to View Completed Report Queue Jobs

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Reports, click **Report Queue Settings**. The Report Queue Settings page appears.
3. Click **Completed Jobs**. The Report Queue - Completed Jobs page displays the reports.
4. Do one of the following:
    - Click **Refresh** to update the page.
    - Click the job name of the report. The Report Queue Job Detail page displays details of the report job.
    - Select the name of the result file to display the report.

How to Understand Report Queue Job Details

View report job details.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Reports, click **Report Queue Settings**. The Report Queue Settings page appears.
3. Click **Completed Jobs**. The Report Queue - Completed Jobs page displays the reports.
4. Click the job name of the report. The Report Queue Job Detail page appears.
5. Use the following table to enter information in the fields:

Field	Description
User	The username of the person who ran the report appears.

School	The school name and number for the report appear.
Created	The date and time the report job started appear.
Job Name	The name of the report appears.
Type	The way in which the report is generated appears.
Reports	The name of the table that includes the data used for the report appears.
Status	The status of the report job appears: • **Completed:** Job is finished. • **Running:** Job is processing. • **Pending:** Job has not started. • **Canceled:** Job has been canceled.
Started	The date and time the report started running appears.
Ended	The date and time the report finished running appears.
When to Execute	Select a time to run this report: • **ASAP:** Execute immediately. • **At Night:** Execute during the next evening. • **On Weekend:** Execute during the next weekend. • **On Specific Date/Time:** Execute on the date and time specified in the following fields.
Run Job Again?	Select the checkbox to run the report again.
Result File	Select the result file to display the report.
File Size	The size of the file appears.

Location on Server	The file location on the PowerSchool server appears. This information is available for completed jobs only.
Priority	Enter a priority for the report. Lower numbers give the report higher priority. This information is available for pending jobs only. You can further modify priorities on the user group security pages. For more information, see *How to Edit Security Groups*.

6. Click **Submit** to save your changes.

How to View the Report Queue Status

The Report Queue Status page displays information about past and current jobs in the report queue. The content of this page varies depending on the status of the report jobs. For example, you can cancel any jobs with the status Pending or Running, whereas you cannot modify Canceled or Completed jobs.

1. On the start page, choose **System** under Setup in the main menu. The System Administrator page appears.
2. Under Reports, click **Report Queue Settings**. The Report Queue Settings page appears.
3. Click **Status**. The Report Queue Status page appears.
4. Use the following table to understand the fields in the Report Queue section:

Field	Description
Current status	Status of the entire report queue. The report queue can be running or not running. Other error or status messages pertaining to the entire report queue may appear.
Last restarted	Date and time of the last time the job was restarted.
Number of report processes	Number of report processes currently running in PowerSchool.

Automatically delete completed jobs after	Number of days that a job remains in the report queue. To modify this number, see *How to Set Report Queue Preferences*.
Maximum pending jobs per user	Maximum number of jobs any one user can have pending in the report queue. To modify this number, see *How to Set Report Queue Preferences*.
Result file location	Location of the report results on the PowerSchool server.

Use the following table to understand the fields in the Job Statistics section:

Field	**Description**
Currently running jobs	Number of jobs currently running.
Last job run	Date and time of the last job to run.
Jobs run today	Number of jobs run so far today.
Total jobs ever run	Number of jobs ever run in PowerSchool on this server.
Pending jobs on server	Number of jobs currently with the Pending status. Click the number to display the jobs.
Completed jobs on server	Number of jobs currently with the Completed status. Click the number to display the jobs.
Canceled jobs on server	Number of jobs currently with the Canceled status.
Total jobs on server	Number of jobs currently on the server with any status.

Use the following table to enter information in the Report Processes section:

Field	**Description**

Process Name	Names of the currently running report processes.
Jobs Run	Number of jobs run for each process.
Total Time	Total time each process took.
Status	The status of each process appears. If the job is running, the name of the report appears. Click the report name to display the job details. To cancel the report, select the checkbox and click **Cancel Selected Jobs**. When a job completes, the report name no longer appears in the Status column.

5. Click **Refresh** to update the page (optional).

ReportWorks Queue

Use the ReportWorks Queue to view, delete, cancel, and re-execute submitted reports.

Reports are organized by tabs. The System tab displays all pre configured reports, while the ReportWorks tab displays all submitted reports that were created in ReportWorks. For more information about viewing pre configured reports in the queue, see *System Report Queue*.

To view all jobs in the report queue regardless of the user, view the ReportWorks queue from the System Administrator menu. For more information, see *ReportWorks Administrator Report Queue*.

Administrators can also set preferences for the Report Queue. For more information, see *Report Queue Preferences*.

Note: When you submit a ReportWorks report, if heap memory exceeds 75 percent on the server, the report will automatically cancel, and a message appears on the Report Details dialog. When the report is submitted, the system will check the memory allocation at different intervals to assure memory usage does not exceed 95 percent while the report is being generated.

State Reporting Platform Reports

You can schedule when you want specific State Reporting Platform (SRP) reports to run using the Scheduling options, available on the report detail page of all SRP reports. Once submitted, the report displays on the Scheduled Reports section of the ReportWorks Report Queue in PowerSchool.

How to Set Automatic Page Refresh on the ReportWorks Report Queue

You can choose how often the Report Queue page refreshes. This feature is available on the System Reports Report Queue and the ReportWorks Report Queue.

1. On the start page, click the **Report Queue** button in the navigation bar.
2. Click the **ReportWorks** tab. The Report Queue (ReportWorks) - My Jobs page displays all of your reports.
3. On the **Refresh** button, click the arrow. A pop-up menu displays the units of time you can set for the automatic page updates; 30 seconds, one minute, five minutes, or 10 minutes.
4. Select a value from the pop-up menu. A countdown clock appears on the Refresh button and displays the time until the page updates, based on your selection.
5. To cancel the automatic page refresh, click the arrow and select the **Cancel** button.

How to View Reports in the Report Queue

1. On the start page, click the **Report Queue** button in the navigation bar.
2. Click the **ReportWorks** tab. The Report Queue (ReportWorks) - My Jobs page displays all of your reports. Pending or running reports appear in the Queued Reports section. All other reports appear in the Completed Reports section.
3. Click **Refresh** to update the page.
4. Use the following table to view information in the fields:

Field	Description
Created On	The date the report was generated appears.
Report Name	Click the name to open the Report Details dialog. For more information, see *How to View Completed Report Details*.
Started	The date and time the report job started appears.
Ended	The date and time the report job ended appears.

	Note: This field only displays in the Completed Reports section.
Created By	The username of the person who ran the report appears.
Output Type Icon	The output type of the associated report appears. Click the icon to view the report.
Status	The status of the report job appears: • Completed: Job is finished. Click the hyperlink to view the report. • Running: Job is processing. • Pending: Job has not started. • Canceled: Job has been canceled.
Options	Icons appear depending on the status of the report. • Click the trash can icon to delete a report. • Click the cancel icon to cancel a running report. • Click the regenerate icon to re-run the report.
Delete All	Click to delete all completed reports listed. **Note:** This field only displays in the Completed Reports section.

How to View Completed Report Details

When a report runs completely, view the job details.

1. On the start page, click the **Report Queue** button in the navigation bar.
2. Click the **ReportWorks** tab. The Report Queue (ReportWorks) - My Jobs page displays all of your reports.
3. Click the **Report Name**. The Report Details dialog appears.
4. Use the following table to view information in the fields:

Field	Description

Report Name	The name of the report appears.
Description	The report description appears.
Status	The status of the report job appears: - Completed: Job is finished. Click the hyperlink to view the report. - Running: Job is processing. - Pending: Job has not started. - Canceled: Job has been canceled.
Created On	The date the report was generated appears.
Create By	The username of the person who ran the report appears.
Started	The date and time the report job started appears.
Ended	The date and time the report job ended appears.
Error Code	The code used to cancel the report appears.
Error Message	Details regarding the cancellation of the report appear.
Parameter Name	Lists the runtime option name(s) selected when running the report.
Parameter Value	List the runtime option value(s) selected when running the report.

5. Click **Close Details** to close the dialog.

Report Structure

Knowing how a report is structured will help you understand how to set up a report. All parts of a report are not used in every report, but you should know what each part does. In most cases, you decide which parts to include on the final report.

Report Listings

PowerSchool pulls this report data according to your specifications. Report listings are also known as schedule listings.

Title

This title appears at the top of the final report. It should be descriptive but brief.

Header

This information appears above the report listings. It can be an opening to a letter or a description of the data to follow.

Footer

This information appears below the report listings. It can be a closure to the report or instructions on how to proceed.

Body/Statement

This text appears on the report. It can be placed above or below the report listings.

Database Extensions

Any database extensions created in PowerSchool are available to use on reports. For more information, see *Database Extensions* in the *System Administrator User Guide* available on PowerSource.

HTML Tags

HTML stands for hypertext mark-up language, which is most often used to create Web pages. Because PowerSchool is a Web-based system, some HTML is also used to format PowerSchool reports. HTML tags give special characteristics to text in your reports. You can employ HTML tags in a PowerSchool report to center, bold, or italicize text. The following are a few examples of commonly used HTML tags:

- <b> = bold text
-
 = inserts a line break
- <p> = paragraph break; inserts a space between reports

PowerSchool Data Codes

PowerSchool data codes insert data into reports through a merge process similar to that used in word processing applications. You use the data codes to tell PowerSchool what fields you want in the report. PowerSchool pulls the data from those fields for the selected student or group and inserts that data into the report. While HTML tags are programming codes, PowerSchool data codes are specific to PowerSchool and are used to merge data from the PowerSchool database. The following are some common PowerSchool data codes:

- ^(*credit_hours) = number of cumulative credit hours the student has earned
- ^(*gpa;Q3) = student's GPA for third quarter
- ^(grade_level) = student's grade level
- ^(He/She) = correct pronoun for each student based on the Gender field
- ^(he/she) = correct pronoun for each student based on the Gender field
- ^(him/her) = correct pronoun for each student based on the Gender field
- ^(His/Her) = correct pronoun for each student based on the Gender field
- ^(his/her) = correct pronoun for each student based on the Gender field
- ^(lastfirst) = student's last name, first name
- ^(schoolname) = name of the school
- ^(son/daughter) = correct pronoun for each student based on the Gender field
- ^(yearname) = school year
- ^[time] = prints the current time

Note: The asterisk (*) is used to indicate that data must be calculated.

For more information about data codes, see PowerSource.

Report Formatting

Many PowerSchool reports are generated in your Web browser application and are formatted for you. However, some reports require formatting before PowerSchool can generate them. Modifiable parameters include header and footer text, margin size, font, line height, and grid lines. In many cases, you do not have to make any changes to the default values that appear when you open a new template. However, you have the option of changing the format of certain reports.

When report formats can be altered, you have the option of changing some or all of the settings. When you change a setting, it becomes the default for anyone who uses the report unless you change it back. Note that not all of the settings appear on every report, and that the following list is not all-inclusive.

The following table describes each function:

Item	**Description**
Margins	This is the space at the top, bottom, and sides of the report. Margins are set in inches.
Font	This is the text style. Choose the font from the pop-up menu.
Font Size	This is the size of the letters. It is set in points (72 points = 1 inch).
Frame	This is the border of a report.
Justification/Alignment	This refers to how the text or listings are lined up horizontally on the page: • Left justification means that all lines start from the specified point on the left side of the page with each line ending at a different point on the right (depending on the number of characters in each line). • Right justification means that all lines start from the specified point on the right side of the page with each line ending at a different point on the left (depending on the number of characters in each line).

	• Centered justification means that each line is centered on the page, making the left (beginning) and right (ending) points different for each line. • Full justification means that all lines begin at a specified point on the left side of the page and end at a specified point on the right side of the page; spacing is adjusted between words and letters of words to accommodate this setting.
Line/Text Height	This is the height of a line of data. It is set in points (72 points = 1 inch).
Line/Frame Width	This is the thickness of a line or the lines making up the frame. It is set in points (72 points = 1 inch).
Rule Thickness	This is the thickness of the grid lines on a roster. It is set in inches.
Gutter Width	This is the distance between reports when more than one is printed on a page. It is set in columns and rows.
Padding	This is the amount of space around the text. It is set in inches and can be horizontal or vertical spacing.
Rounding	This refers to how square or rounded the corners of the frame are. The higher the number, the rounder the corner.
Where to Start Listing (X,Y)	This indicates the place on the page where the report is located. X is the distance from the left side of the page; Y is the distance from the top of the page. It is set in inches.
Horizontal Offset	This refers to the amount of space between X,Y points (see above) and the start of the listings. It is set in inches.
Horizontal/Vertical Change	This is the amount of horizontal or vertical space between line objects in an object report. It is set in inches.

Schedule Listings	These are the columns of data to be included on the report. Usually one column represents one PowerSchool data field.
Orientation	This is the page layout. Portrait is a vertical page; landscape is a horizontal page.
Reduction	This refers to the finished size of the report. Fit more on a page by reducing it by a percentage but remember to leave it as large as possible for easier viewing. Reduction is also known as scale.

Report Styles

An important part of how your custom reports look is the fonts that are used. Perhaps you like report titles to be in large, bold, capital letters. Perhaps you prefer that footer text be small and italicized. So that you don't have to set these preferences each time, PowerSchool provides several styles you can use. Create new styles according to your own preferences and needs.

How to Add a Report Style

1. On the start page, choose **System Reports** under Reports in the main menu. The Reports page appears.
2. Click the **Setup** tab. The Report Setup page appears.
3. Click **Styles**. The Styles page appears.
4. Click **New**. The Edit a Style Definition page appears.
5. Use the following table to enter information in the fields:

Field	**Description**
Style Name	Enter the name of the style.
Font	Choose the font from the pop-up menu.
Font Style	Select the checkboxes to make the font style bold, italic, or underlined. Select any combination of the checkboxes.

Font Size	Enter the font size in points. **Note:** One point is 1/72 of an inch.
Line Height	Enter the height for the space between lines on the report in points. **Note:** One point is 1/72 of an inch.
Alignment	Choose the alignment from the pop-up menu.
Use This as the Default System Style	Use the pop-up menu to indicate to want this style to be the default system style by selecting **Yes** or **No**. If you select Yes, the style will be used as the default font for all reports unless you specify otherwise.

6. Click **Submit**. The Styles page shows that the new style has been added to the list. You can create several styles or edit an existing one by clicking the name of the style. All PowerSchool users have access to all styles on the list. Contact other users before changing the default style.

Run, Print, and Save Reports

Use a template to pull data from the PowerSchool system and print a hard copy. To create and import report templates, see *Custom Reports* and *Report Templates*.

How to Run a Report for a Single Student

1. On the start page, search for and select a student. For more information, see *Student Search*.
2. Under Enrollment, choose **Functions** from the student pages menu. The Functions page appears.
3. Click **Print Reports For This Student**. The Print a Report page appears.
4. Use the following table to enter information in the fields:

Field	Description
Print the report for	The selected student appears.

Which report to print	Choose the report from the pop-up menu. Types of reports are separated in the pop-up menu by dashes. The first group of reports are Form Letters. The second group of reports are Report Cards. The last group of reports are Object Reports.
If printing student schedule, use...	If you selected a Report Card in the "Which report to print" field, select an option to indicate enrollment specifications. If you select the "enrollment as of" option, enter the enrollment date in the field using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
If printing fee list, only include transactions conducted during... (may be overridden in report setup)	If you selected an Object Report in the "Which report to print" field and that Object Report includes a fee list object, choose the date range from the pop-up menu. If you select the "Date Range," enter the beginning and ending dates in the fields using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
Watermark Text	To print text as a watermark on each page of the report, use the pop-up menu to either choose one of the standard phrases or choose **Custom** and enter the text you want to print as a watermark in the field.
Watermark Mode	Use the pop-up menu to determine how you want the text to print. **Watermark** prints the text behind objects on the report, while **Overlay** prints the text over objects on the report.
When to print	Select a time to run the report: • **ASAP**: Execute immediately. • **At Night**: Execute during the next evening. • **On Weekend**: Execute during the next weekend. • **On Specific Date/Time**: Execute on the date and time specified in the following fields using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format,

	an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
Report Output Locale	Select the locale from the pop-up menu. The report output will be in the language associated with the locale. **Note:** When generating object reports, certain report text may appear in the default English language. For more information, see *Object Reports*.

5. Click **Submit**. The report queue appears.
6. Click **View** once the report is completed.

   Note: Click **Refresh** to update the status of the report.

   The page displays a PDF file of the report. Thoroughly review it to verify that the formatting and content are correct. If the report provides the data you need and is formatted properly, print it from this page or save it to another application.

How to Run a Report for a Group of Students

Run this report card-based report for a group of students to display the schedule listing for the current school year.

1. On the start page, search for and select a group of students. A list of students appears in the Current Student Selection section. For more information, see *Select a Group of Students*.
2. Click the **[Select Function]** arrow. The Group Functions pop-up menu appears.
3. Under Printing, choose **Print Reports**. The Print Reports page appears.

   Note: Alternatively, if you have a current selection of students, you can choose **Special Functions** under Functions in the main menu and then click **Groups Functions**.

4. Use the following table to enter information in the fields:

Field	Description

Which report would you like to print?	Choose the report from the pop-up menu. Types of reports are separated in the pop-up menu by dashes. The first group of reports are Form Letters. The second group of reports are Report Cards. The last group of reports are Object Reports.
For which students?	Select one of the following options to indicate the students for whom the report will be run: • **All records in a single batch**: Prints the report as a single job • **Print only the first [X] records**: Prints the report for only the first specified number of records. • **All records in batches of [X] records**: Prints the report in the specified number of batches. **Note:** The report jobs are automatically named with the text “Batch X of Y” followed by the report name, where X is the batch number and Y is the total number of batches. The total number of batches is determined by the size of the original selection and the size of a batch. For example, if there are 1,012 records in the selection, and the batch size is set to 50, there will be 21 total batches: 20 batches of 50 records and a 21st batch containing the final 12 records.
In what order?	Select the sort order.
If printing student schedules, use...	If you selected a Report Card in the "For which students?" field, select an option to indicate enrollment specifications. If you select the "enrollment as of" option, enter the enrollment date in the field using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
If printing fee list, only include transactions conducted during...	If you selected an Object Report in the "For which students?" field and that Object Report includes a fee list object, choose the date range from the pop-up menu. If you select the "Date Range," enter the beginning and ending dates in the fields using the

(may be overridden in report setup)	format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
Watermark Text	To print text as a watermark on each page of the report, use the pop-up menu to either choose one of the standard phrases or choose **Custom** and enter the text you want to print as a watermark in the field.
Watermark Mode	Use the pop-up menu to determine how you want the text to print. **Watermark** prints the text behind objects on the report, while **Overlay** prints the text over objects on the report.
When to print	Select a time to run the report: • **ASAP**: Execute immediately. • **At Night**: Execute during the next evening. • **On Weekend**: Execute during the next weekend. • **On Specific Date/Time**: Execute on the date and time specified in the following fields using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry.
Report Output Locale	Select the locale from the pop-up menu. The report output will be in the language associated with the locale. **Note:** When generating object reports, certain report text may appear in the default English language. For more information, see *Object Reports*.

5. Click **Submit**. The report queue appears.
6. Click **View** once the report is completed.

   Note: Click **Refresh** to update the status of the report.

   The page displays a PDF file of the report. Thoroughly review it to verify that the formatting and content are correct. If the report provides the data you need and is formatted properly, print it from this page or save it to another application.

How to Print a Report

1. Run a report that creates a PDF.
2. View the report in your Web browser or in Adobe Acrobat Reader.
3. Choose **File** > **Print** from the menu bar.
4. Make the necessary selections in the Print dialog.
5. Click **OK**. The report prints as you view it on the page.

How to Save a Report

Save the data from a particular report. Saving a report creates a snapshot of the data. The saved report will not continue to display current information as the PowerSchool system is continuously updated.

Note: Not all reports can be saved.

1. Run a report that creates a PDF.
2. View the report in your Web browser or in Adobe Acrobat Reader.
3. Choose **File** > **Save As** from the menu.
4. Enter a file name for the report. If you think you will forget it, write it down.
5. Click **Save**. The report is saved. Open it using a procedure similar to opening a document in a word processing or spreadsheet application.

Alternate Ways to Create Reports

There are some shortcuts to creating a report from scratch. One way is to use a report template that someone else has already created. The second way is to copy a template that is already on your PowerSchool system. The third way is to create a template in a word processing application and paste it into a PowerSchool template.

How to Use a Template From Another PowerSchool System

There are two parts to using an existing template. First, download (or export) it from a PowerSchool system. Then, import it to a second PowerSchool system for the person who wants to use it. This process is just like copying a document from one hard drive to your own. The only difference is that you are copying a report template from one PowerSchool system to another. For more information, see *Report Templates*.

How to Copy a Template From Your PowerSchool System

Use the procedures discussed in the section *Report Templates* to copy a template on your own PowerSchool system and import it back to the same PowerSchool system. This is helpful when you need a report similar to an existing one with only minor changes. Be sure to give the template a different name so that you do not end up with two templates of the same name. Once the template is in PowerSchool, edit the parameters to create a new one. This is similar to using the Save As option in many applications. Open an existing document and save it under a different name to save it as two documents. Keep the one in its original format and edit the other.

How to Create a Template in Another Application

This method can be helpful if you do not feel comfortable working outside of a word processing application. You can create the template in an application you know with minimal time spent entering HTML tags and PowerSchool data codes. The idea is to create the template using a word processing application and then paste it into a PowerSchool template, while replacing the appropriate sections with some HTML tags and PowerSchool data codes. To create PowerSchool templates, create and save *Report Cards*, *Mailing Labels*, *Form Letters*, and *Object Reports* to reuse as templates.

System Reports

PowerSchool includes a number of preconfigured system reports that allow you to start analyzing data right away. System reports contain information that PowerSchool administrators need most often and include parameters, which you can use to filter and sort the data displayed on these reports.

For details on all system reports, see *Attendance Reports*, *Attendance Count and Audit Reports*, *Discipline Reports*, *Grade and Gradebook Reports*, *Membership Reports*, *Enrollment Reports*, *Scheduling*, *Parent/Student Access Statistics*, and *Student Listings*. You are also encouraged to see the section *Custom Reports* before creating a report to give you an understanding of the process of creating reports, which will make running reports much easier.

While you can run all reports on individual students, you can also run many for a selected group of students. If a report allows group reporting, first select the group of students. For more information, see *Select a Group of Students*. Click the PowerSchool logo to return to the start page and begin work on a report. PowerSchool remembers the group and prompts you to select it when you enter the report parameters.

Shared Section Reports

If a section is shared between multiple teachers, some reports will display all sections associated with a teacher, and all teachers associated with a section, as long as the teacher roles are active and assigned to that section during the selected term or date specifications.

Attendance Reports

Before producing attendance reports, you are encouraged to ask your PowerSchool administrator how your school calculates attendance. For example, does your school report how many days students are present or how many days they are absent?

Access Attendance Reports

While you can run all attendance reports for individual students, you can also run many for a selected group of students. If an attendance report allows group reporting, select that group of students before running the report. If you select a group of students from the start page, the Group Functions page appears either immediately or after selecting students from the Student Selection page.

Note: For detailed information about a specific report, see the Attendance section of the *Reports User Guide* on PowerSource.

How to Access Attendance Reports

1. On the start page, choose **System Reports** under Reports in the main menu. The Reports page appears.
2. On the System tab, the following attendance reports appear:

Field	Description
Absentee	Click to view single day period-by-period attendance code report. For more information, see *Absentee Report*.

Attendance Count	Click to view multi-day period-by-period attendance code report. For more information, see *Attendance Count Report*.
Class Attendance Audit	Click to view section specific attendance roster. For more information, see *Class Attendance Audit*.
Consecutive Absences	Click to view report detailing consecutive student absences by absence code. For more information, see *Consecutive Absences Report*.
Student Attendance Audit	Click to view roster report detailing attendance codes by day. For more information, see *Student Attendance Audit*.
Monthly Student Attendance Report	Click to view twenty-day student attendance report by grade. For more information, see *Monthly Student Attendance Report*.
Attendance Summary by Grade	Click to view an aggregated attendance report for a date range and grade(s). For more information, see *Attendance Summary by Grade Report*.
Year-to-Date Attendance Summary	Click to view a year-to-date aggregated attendance report by grade. For more information, see *Year-to-Date Attendance Summary*.
PowerTeacher Attendance	Click to view report showing which teachers have not taken attendance. For more information, see *PowerTeacher Attendance Report*.
Weekly Attendance Summary (Meeting)	Click to view a weekly attendance summary by section. For more information, see *Weekly Attendance Summary (Meeting)*.
Weekly Attendance Summary (Daily)	Click to view a weekly attendance summary by Teacher. For more information, see *Weekly Attendance Summary (Daily)*.

Period Att. Verification	Click to view report showing students marked present a specified number of periods. For more information, see *Period Attendance Verification Report.*

Note: To search for students with perfect attendance, see *Advanced Search and Select*.

Absentee Report

Use the Absentee report to generate single-day period-by-period attendance code information. For example, you can use this report to search for students who received an unexcused absence code for the previous day. You can then contact the students' guardian to verify whether or not the student actually has an excused absence.

Note: You can search on any absent or present attendance code that is stored in the database. However, instances where the absence of an attendance code indicates a presence is not searchable as an attendance code value is not stored in the database.

Note: You can also access this report by clicking **Attendance > Absentee Report**.

How to Run the Absentee Report

1. On the start page, choose **System Reports** under Reports in the main menu. The Reports page appears.
2. On the System tab, click **Absentee**. The Absentee Report page appears. The upper portion of the page displays the report's name, version number, description, and comments.
3. Use the following table to enter information in the fields:

Field	Description
Attendance Mode	Use the pop-up menu to select one the attendance recording methods for which you want to run this report: • **Use Default**: searches for and displays report output based on FTE. By default, this menu option is selected. If your school uses more than one FTE to differentiate students, such as full time and part time, and you want to run the report for those sets of students, the only way to

	effectively run these groupings with different modes and conversion items is to use the default. • **Daily**: searches for and displays report output by day. • **Meeting**: searches for and displays report output by period. For more information about attendance modes, see *Attendance Overview*. **Note:** Menu options appear based on your attendance setup configuration. For the Use Default menu option to appear, FTEs must be set up and the "Use default settings" checkbox on the Attendance Preferences page must be selected. For the Daily or Meeting menu options to appear, the Daily or Meeting checkboxes on the Attendance Preferences page must be selected.
Students to Include	Indicate which students you want to run the report for by selecting one of the following options: • **The selected students only** to run the report for students in the current selection enrolled in the specified date range. • **All students** to run the report for all students in the current school enrolled in the specified date range.
Grades	Select the checkboxes of the grade levels you want to scan. Doing so takes the selection of students selected in the "Students to Include" section and narrows the selection to include only those students having the same grade level as those selected. Alternatively, leave all the checkboxes blank to scan all grade levels. Doing so includes all of the students selected in the "Students to Include" selection.
Attendance Codes	Select the attendance codes for which you want to scan. To select multiple attendance codes, press and hold COMMAND (Mac) or CONTROL (Windows) as you click each of the attendance codes you want to scan.

Date to Scan	Enter the date to scan using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry. **Note:** The date entered must fall within the selected school year term.
Periods	If **Meeting** has been chosen from the Attendance Mode pop-up menu, select the checkboxes of the periods you want to scan or leave all the checkboxes blank to scan all periods. **Note:** If **Daily** has been chosen from the Attendance Mode pop-up menu, periods do not apply.
Processing Options	Select a time to run the report: • **In Background Now** to execute the report immediately in the background. • **ASAP** to execute the report in the order it is received in the Report Queue. • **At Night** to execute the report during the next evening. • **On Weekend** to execute the report during the next weekend. • **On Specific Date/Time** to execute the report on the date and time specified in the Specific Date/Time fields. After submitting this report, it will be processed in the report queue. On the navigation bar, click the **Report Queue** button. The Report Queue - My Jobs page displays all your reports.
Specific Date/Time	If you selected the **On Specific Date/Time** processing option, enter the date to scan using the format mm/dd/yyyy or mm-dd-yyyy. If you do not use this format, an alert appears. If you submit the date with an incorrect format, the date field is submitted as a blank entry. Use the pop-up menus to indicate the hour and minute.

Data to be filled	In this section, select the checkbox next to the following filter fields to save the settings as defaults. From the pop-up menu, choose **Set All** to select all checkboxes and **Reset All** to remove all checkboxes next to the following fields.
Include Student Number	Select the checkbox to include the student numbers on the report.
Number of Blank Lines Below Student Names	Enter the number of blank lines to include as separators after each student name.
Include Verification Line	Select the checkbox to include one line for each student where the following can be recorded on the report: talked to, relationships, reason, verify date, and employee.

4. Click **Submit**. The report results display based on the parameters you selected. Depending on your specifications, this could take several minutes.
5. Do one of the following:
   - Click a name to open the student pages menu and work with that student.
   - Click **Functions** at the bottom of the report to open the Group Functions page. For more information about what you can do from that menu, see *Work with Groups*.
   - Click **Find teachers who have not taken attendance** to identify teachers who have not yet taken attendance. For more information about this function, see *How to Run the PowerTeacher Attendance Report*.
   - Print the report from your Web browser or save it to another application. For more information, see *Run, Print, and Save Reports*.

Consecutive Absences Report

Use the Consecutive Absences report to generate a report detailing consecutive student absences by absence code. The report can be run in either daily or meeting mode. In daily mode, the report searches for students with consecutive absences codes in their daily attendance record. In meeting mode, the report searches each student's attendance records period by period for consecutive absence codes.

Note: You can also access this report by clicking **Attendance > Consecutive Absences**.

How to Run the Consecutive Absences Report

1. On the start page, choose **System Reports** under Reports in the main menu. The Reports page appears.
2. On the System tab, click **Consecutive Absences**. The Consecutive Absences Report page appears. The upper portion of the page displays the report's name, version number, description, and comments.
3. Use the following table to enter information in the fields:

Field	Description
