<b>Total</b>
--------------

Crackfill is a temporary fix, cracks will continue to expand & migrate. Upon curing, crackfill has the potential to settle into cracks, this will make the crack visible and is a normal occurrence.

If oil spots are not remediated before seal coat placement, there is a very high chance that the seal coat will not adhere to these areas.

Terms: Net 30, unless otherwise specified above. All past due amounts are subject to a service charge at the maximum rate allowed by state law plus costs of collection, including attorney fees if incurred, at the highest rate legally available.

We recommend 24 hrs minimum cure time (closed to traffic). Opening sealed areas less than minimum specified time may cause premature wear to quality of materials & workmanship. If base is found to be unacceptable at depth, additional excavation & installation of new base may be needed, in which case additional costs will be charged at "T&M" +15% overhead & profit, upon approval of onsite superintendent. Kirk Paving, Inc. is not liable for damage or injury to pedestrians or vehicles in barricaded construction areas. When seal coating, paving & striping contractor places barricades, roped off areas, safety cones, delineators, etc. around all work areas. If animals or people walk, drive through or around our barricades & ropes, tracking materials onto sidewalks, carpets, etc., Contractor will not be responsible.
