

Teacher Modeling within Canvas

Does the Canvas Teacher App have markup capabilities like the Canvas Student App?

- A teacher will need to access the **Canvas Student App** to use the markup features on a PDF within Canvas. This would be helpful if you wanted to demonstrate or model how to perform a specific skill for your students on an assignment or classwork (Example: Show how to do a math problem on a student assignment).
- Access the Canvas Student App, click *Find My School*. Type *Elizabeth Forward School District*.
- Click **Sign in as a Teacher** & enter your Power School username & password.
- When you access the assignment/file on Canvas, the teacher will now have access to use the markup features.
