

SALEM SCHOOL SYSTEM
Salem, Connecticut

INSTRUCTION

USE OF TECHNOLOGY IN INSTRUCTION

The Salem Board of Education believes that the role of technology is to support the mission of Salem School by providing equitable access to a wide range of information and technological resources. These resources must be integrated into educational practices in order to realize the educational benefits of those resources. Partnerships must be developed with the corporate and private sectors to make the learning process more relevant and to coordinate and share resources.

The use of technology in instruction is to:

1. Increase student learning and achievement
2. Train staff to use technology in classrooms to enhance teaching
3. Build business/corporate, community, and school partnerships
4. Build a fully integrated network that connects all classrooms with each other, the local community, and the world
5. Provide sufficient technical support
