Social Sciences

University	Major	Required Math: (Calc, Stats, Both)	Recommended Math (if only ONE can be taken)	Generic Degree Path
Angelo State University	Psychology/Business	Statistics	Statistics	Social Sciences
Baylor University	Social Work	Neither	"I recommend AP Statistics-- the things I learned in that course were super helpful in my "Data Analysis and Research for Social Workers" course. Knowing how to build a survey, understand a sample population, and identify confounding variables has been helpful in my field practicum as well!"	Social Sciences
Harding University	Social Work, Business minor	Statistics	"Take Stats!"	Social Sciences
Oklahoma State University	Psychology and Business	Statistics	"Most definitely recommend taking AP Statistics! Helps a ton in how a college class will work!"	Social Sciences
Trinity University	Psychology	Statistics. So much Statistics	"AP Statistics all the way. I referred to your YouTube channel to refresh for Psych Stats and would never have even understood what was was going on most of the time if it weren't for taking Statistics in high school."	Social Sciences
University of Alabama	Masters in Social Work	Statistics	"AP Statistics absolutely. It is required for most liberal arts degrees and is essential for any type of research class you may take. If you are interested in anything related to the social sciences or public policy, this is definitely the route and immensely helps with evaluative research."	Social Sciences
University of Texas, Austin	Psychology	For a BA, only statistics. For a BS, both.	"For people interested in psychology majors specifically I would recommend statistics, because (at least at UT, but I'm sure other places too) an intensive research design & statistics class is required and the background I had from AP Statistics was so very helpful."	Social Sciences
