

Educational Specifications

Long-Range Facilities Plan guidelines shall be used to ensure all new and remodeled facilities in the Bismarck School District are designed to best implement the educational program.

Educational specifications are detailed descriptions of:

1. The activities that will take place in the building;
2. The curriculum to be housed in the building;
3. Specific architectural characteristics desired;
4. The facilities needed, their equipment requirements and their space relationship to other facility elements; and
5. Pertinent budget and other governing factors.

The architects and building administrator of the project should involve appropriate staff for each project.

State and local officials such as the ADA coordinator, fire officials, and other public and private individuals may be used in the development of projects when deemed necessary by the Superintendent and the School Board.
