

## MCS IB Chemistry HL Year 1 Subject Group Overview

Unit Name	Atoms and Periodicity	From Models to Materials	Reaction Stoichiometry	Energetics and Kinetics
Time Frame	6 weeks	12 weeks	8 weeks	10 weeks
Standards/ IB Topics	S1.2, S1.3, S3.1	S2.1, S2.2, S2.3, S2.4, S3.2	S1.1, S1.4, S1.5, R2.1	R1.1, R1.2, R1.3, R2.2, R2.3
Content Specific Information (texts, documents, methods)	<p><b>Statement of Inquiry:</b> The fundamental principles that shape the behavior and properties of elements enable scientists to develop and use predictive models across scientific disciplines.</p> <p><b>Phenomenon:</b> Isotopes are used in medical imaging to diagnose and monitor a wide variety of conditions through the interactions that they have with electrons in the human body.</p> <p><b>Crosscutting Concepts</b></p> <ul style="list-style-type: none"> <li>• Systems and System Models</li> <li>• Patterns</li> <li>• Cause and Effect</li> </ul> <p><b>CORE IDEAS</b></p> <ul style="list-style-type: none"> <li>• Parts of the atom and counting subatomic particles</li> <li>• Isotopes, abundance of isotopes, and relative atomic mass</li> <li>• Mass spectra</li> <li>• Properties of light</li> <li>• Continuous and line spectra</li> <li>• Line emission spectrum of hydrogen</li> <li>• Energy levels and sublevels</li> <li>• Electron configuration</li> <li>• Ionization and limit of convergence in emission spectra</li> <li>• Successive ionization energies</li> <li>• Organization of the periodic table</li> <li>• Periodicity (atomic radius, ionic radius, ionization energy, electron affinity, electronegativity, metallic character, oxidation state)</li> <li>• Discontinuities in first ionization energy</li> <li>• Trends in transition elements</li> </ul>	<p><b>Statement of Inquiry:</b> The underlying principles governing the structure, behavior, and applications of diverse substances foster innovations in material science and engineering.</p> <p><b>Phenomenon:</b> Shape memory polymers and alloys can “remember” and return to their original shape after being deformed through the use of external stimuli such as heat and pressure.</p> <p><b>Crosscutting Concepts</b></p> <ul style="list-style-type: none"> <li>• Systems and System Models</li> <li>• Structure and Function</li> </ul> <p><b>CORE IDEAS</b></p> <ul style="list-style-type: none"> <li>• Bonding triangles</li> <li>• Metallic bonding and properties</li> <li>• Transition elements and delocalized d-electrons</li> <li>• Alloys</li> <li>• Ionic bonding, nomenclature, and polyatomic ions</li> <li>• Three-dimensional lattice structures and lattice enthalpy</li> <li>• Covalent bonding and nomenclature</li> <li>• Nature, length and strength of single, double, and triple bonds</li> <li>• Coordination bonds</li> <li>• VSEPR theory</li> <li>• Bond polarity</li> <li>• Molecular polarity</li> <li>• Covalent network structures</li> <li>• Intermolecular forces</li> <li>• Chromatography</li> <li>• Resonance structures and benzene</li> <li>• Structures with expanded octets</li> </ul>	<p><b>Statement of Inquiry:</b> The quantitative aspects of chemical transformations enable scientists to design and optimize chemical processes across a multitude of applications.</p> <p><b>Phenomenon:</b> Precise control over reactant quantities dictates the size, shape, and properties of nanoparticles, contributing to advancements for applications ranging from drug delivery to catalysis.</p> <p><b>Crosscutting Concepts</b></p> <ul style="list-style-type: none"> <li>• Scale, Proportion, and Quantity</li> </ul> <p><b>CORE IDEAS</b></p> <ul style="list-style-type: none"> <li>• Classification of matter</li> <li>• Separation techniques</li> <li>• Kinetic molecular theory, states of matter, and changes of state</li> <li>• Temperature</li> <li>• Ideal and real gases</li> <li>• Moles and Avogadro’s number</li> <li>• Relative formula mass and relative atomic mass</li> <li>• Molar mass</li> <li>• Empirical/molecular formulas</li> <li>• Molar concentration and dilution</li> <li>• Molar volume, Avogadro’s Law, ideal gas equation, combined gas law</li> <li>• Writing and balancing chemical equations</li> <li>• Mole ratios</li> <li>• Stoichiometric calculations</li> <li>• Limiting and excess reactants</li> <li>• Percentage yield and atom economy</li> </ul>	<p><b>Statement of Inquiry</b> The underlying factors influencing reaction pathways allow for the development of novel strategies for energy conversion and chemical synthesis across scientific disciplines and technological applications.</p> <p><b>Phenomenon:</b> Utilizing bioethanol in internal combustion engines showcases the renewable and carbon-neutral nature of biofuels, providing a cleaner and more sustainable alternative to fossil fuels.</p> <p><b>Crosscutting Concepts</b></p> <ul style="list-style-type: none"> <li>• Systems and System Models</li> <li>• Energy and Matter</li> <li>• Stability and Change</li> <li>• Cause and Effect</li> </ul> <p><b>CORE IDEAS</b></p> <ul style="list-style-type: none"> <li>• System and surroundings</li> <li>• Energy transfer, endothermic, exothermic</li> <li>• Relative stability</li> <li>• Standard enthalpy change, heat, and temperature</li> <li>• Average bond enthalpy</li> <li>• Hess’s law</li> <li>• Standard enthalpy changes of combustion and formation</li> <li>• Born-Haber cycle</li> <li>• Standard entropy change</li> <li>• Gibbs energy and spontaneity</li> <li>• Gibbs energy and equilibrium</li> <li>• Combustion and incomplete combustion</li> <li>• Fossil fuels, biofuels, and fuel cells</li> <li>• Rate of reaction and collision</li> </ul>

## MCS IB Chemistry HL Year 1 Subject Group Overview

Unit Name	Atoms and Periodicity	From Models to Materials	Reaction Stoichiometry	Energetics and Kinetics
	<ul style="list-style-type: none"> <li>● Variable oxidation states in transition elements</li> <li>● Transition element complexes</li> </ul>	<ul style="list-style-type: none"> <li>● Formal charge</li> <li>● Sigma bonds and pi bonds</li> <li>● Hybridization</li> <li>● Formulas of organic compounds</li> <li>● Functional groups, homologous series, and nomenclature</li> <li>● Structural isomerism</li> <li>● Addition polymers, condensation polymers, and properties of polymers</li> </ul>		<p>theory</p> <ul style="list-style-type: none"> <li>● Factors influencing rate of reaction and catalysts</li> <li>● Activation energy</li> <li>● Reaction mechanisms</li> <li>● Energy profiles</li> <li>● Molecularity</li> <li>● Rate equations and rate order</li> <li>● Rate constant</li> <li>● Arrhenius equation and Arrhenius factor</li> <li>● Dynamic equilibrium</li> <li>● Equilibrium constant</li> <li>● Le Chatelier's principle</li> <li>● Reaction quotient</li> <li>● Equilibrium law</li> <li>● Determining equilibrium position from the equilibrium constant and Gibbs energy change</li> </ul>
SEPs	<p><b>SEP</b></p> <ul style="list-style-type: none"> <li>● Asking Questions and Defining Problems</li> <li>● Developing &amp; Using Models</li> <li>● Carry out Investigations</li> <li>● Constructing Explanations</li> <li>● Planning and Carrying out investigations</li> <li>● Analyzing &amp; interpreting data</li> <li>● Use mathematics and computational thinking</li> <li>● Engage in Argument from Evidence</li> <li>● Obtaining, evaluating and communicating information</li> </ul>	<p><b>SEP</b></p> <ul style="list-style-type: none"> <li>● Asking Questions and Defining Problems</li> <li>● Developing &amp; Using Models</li> <li>● Carry out Investigations</li> <li>● Constructing Explanations</li> <li>● Planning and Carrying out investigations</li> <li>● Analyzing &amp; interpreting data</li> <li>● Use mathematics and computational thinking</li> <li>● Engage in Argument from Evidence</li> <li>● Obtaining, evaluating and communicating information</li> </ul>	<p><b>SEP</b></p> <ul style="list-style-type: none"> <li>● Asking Questions and Defining Problems</li> <li>● Developing &amp; Using Models</li> <li>● Carry out Investigations</li> <li>● Constructing Explanations</li> <li>● Planning and Carrying out investigations</li> <li>● Analyzing &amp; interpreting data</li> <li>● Use mathematics and computational thinking</li> <li>● Engage in Argument from Evidence</li> <li>● Obtaining, evaluating and communicating information</li> </ul>	<p><b>SEP</b></p> <ul style="list-style-type: none"> <li>● Asking Questions and Defining Problems</li> <li>● Developing &amp; Using Models</li> <li>● Carry out Investigations</li> <li>● Constructing Explanations</li> <li>● Planning and Carrying out investigations</li> <li>● Analyzing &amp; interpreting data</li> <li>● Use mathematics and computational thinking</li> <li>● Engage in Argument from Evidence</li> <li>● Obtaining, evaluating and communicating information</li> </ul>
