MCS MYP Grade 6 Mathematics Subject Group Overview

Statement of Inquiry	Gathering and modeling data provides for a better understanding of a population.	Making decisions can be improved by using a model to represent relationships.	By examining relationships and patterns, we can make predictions in real world situations.	Expressions, equations and inequalities communicate real world scenarios through symbols, numbers, and algebraic thinking.	Expressions, equations and inequalities communicate real world scenarios through symbols, numbers, and algebraic thinking.	Understanding simple shapes helps us enhance our environments.	Modeling using a logical process helps us to understand the world	By examining relationships and patterns, we can make predictions in real world situations.	A logical process helps to model and generalize the natural world.
Global Context	Globalization and Sustainability	Globalization and Sustainability	Personal and Cultural Expression	Orientation in Time and Space	Globalization and Sustainability	Orientation in Time and Space	Identities and Relationships	Identities and Relationships	Identities and Relationships
	Markets, commodities, and commercialization	Population and demography	Metacognition and abstract thinking	Scale, duration, frequency, and variability	Human impact on the environment	Natural and human landscapes and resources	Competition and cooperation; teams, affiliation, and leadership	Personal efficacy and agency; attitudes, motivation, independence; happiness and the good life	Identity formation; self-esteem; status; role and role models
Key Concepts	Logic A method of reasoning and a system of principles used to build arguments and reach conclusions.	Logic A method of reasoning and a system of principles used to build arguments and reach conclusions.	Relationships The connections and associations between properties, objects, people and ideas.	Logic A method of reasoning and a system of principles used to build arguments and reach conclusions.	Logic A method of reasoning and a system of principles used to build arguments and reach conclusions.	Form The shape and underlying structure of an entity or piece of work, including its organization, essential nature and external appearance.	Relationships The connections and associations between properties, objects, people and ideas.	Relationships The connections and associations between properties, objects, people and ideas.	Logic A method of reasoning and a system of principles used to build arguments and reach conclusions.
