

Marietta City Schools
District Unit Planner

Fourth Grade

Unit Name *Unit 4: Investigating Fractions and Decimals*

Unit duration (Days)

7-8 weeks

[GA K-12 Standards](#)

Previously students have partitioned shapes into halves, thirds, quarters (fourths), determined equivalences for simple fractions, and identifying and comparing fractional parts. In this unit, students will be building on this understanding to compare fractions less than 1, add and subtract fractions with like denominators, and measure to the nearest $\frac{1}{8}$ of an inch.

4.NR.4: Solve real-life problems involving addition, subtraction, equivalence, and comparison of fractions with denominators of 2, 3, 4, 5, 6, 8, 10, 12, and 100 using part-whole strategies and visual models.

- **4.NR.4.1** Using concrete materials, drawings, and number lines, demonstrate and explain the relationship between equivalent fractions, including fractions greater than one, and explain the identity property of multiplication as it relates to equivalent fractions. Generate equivalent fractions using these relationships.
- **4.NR.4.2** Compare two fractions with the same numerator or the same denominator by reasoning about their size and recognize that comparisons are valid only when the two fractions refer to the same whole.
- **4.NR.4.3** Compare two fractions with different numerators and/or different denominators by flexibly using a variety of tools and strategies and recognize that comparisons are valid only when the two fractions refer to the same whole.
- **4.NR.4.4** Represent whole numbers and fractions as the sum of unit fractions.
- **4.NR.4.5** Represent a fraction as a sum of fractions with the same denominator in more than one way, recording with an equation.
- **4.NR.4.6** Add and subtract fractions and mixed numbers with like denominators using a variety of tools.

4.NR.5 Solve real-life problems involving addition, equivalence, comparison of fractions with denominators of 10 and 100, and comparison of decimal numbers as tenths and hundredths using part-whole strategies and visual models.

- **4.NR.5.1** Demonstrate and explain the concept of equivalent fractions with denominators of 10 and 100, using concrete materials and visual models. Add two fractions with denominators of 10 and 100.
- **4.NR.5.2** Represent, read, and write fractions with denominators of 10 or 100 using decimal notation, and decimal numbers to the hundredths place as fractions, using concrete materials and drawings.
- **4.NR.5.3** Compare two decimal numbers to the hundredths place by reasoning about their size. Record the results of comparisons with the symbols $>$, $=$, or $<$, and justify the conclusions.

4.MDR.6 Measure time and objects that exist in the world to solve real-life, mathematical problems.

- **4.MDR.6.1** Use the four operations to solve problems involving elapsed time to the nearest minute, intervals of time, metric measurements of liquid volumes, lengths, distances, and masses of objects, including problems involving fractions with like denominators, and also problems that require expressing measurements given in a larger unit in terms of a smaller unit, and expressing a smaller unit in terms of a larger unit.
- **4.MDR.6.2** Ask questions and answer them based on gathered information, observations, and appropriate graphical displays to solve problems relevant to everyday life.
- **4.MDR.6.3** Create dot plots to display a distribution of numerical (quantitative) measurement data.

4.MP.1-8 Display perseverance and patience in problem-solving. Demonstrate skills and strategies needed to succeed in mathematics, including critical thinking, reasoning, and effective collaboration and expression. Seek help and apply feedback. Set and monitor goals. *(It is important to note that MPs 1, 3 and 6 should support the learning in every lesson.)*

- **MP.1** Make sense of problems and persevere in solving them.
- **MP.2** Reason abstractly and quantitatively.
- **MP.3** Construct viable arguments and critique the reasoning of others.
- **MP.4** Model with mathematics.
- **MP.5** Use appropriate tools strategically.
- **MP.6** Attend to precision.
- **MP.7** Look for and make use of structure.
- **MP.8** Look for and express regularity in repeated reasoning.

The [Framework for Statistical Reasoning](#) and the [Mathematical Modeling Framework](#) should be taught throughout the units. The [K-12 Mathematical Practices](#) should be evidenced at some point throughout each unit depending on the tasks that are explored. It is important to note that MPs 1, 3 and 6 should support the learning in every lesson.

I Can Statements

- I can describe how the number and size of the parts differ even though the fractions are equivalent.
- I can generate equivalent fractions.
- I can explain fractional equivalence as multiplicative and why they are not additive.
- I can describe how the number and size of the parts differ even though the fractions are equivalent.
- I can use fraction diagrams to compare fractions.
- I can recognize that comparisons are valid only when the two fractions refer to the same whole.
- I can record the results of comparisons with symbols $>$, $=$, or $<$, and justify the conclusions.
- I can join (compose) and break apart (decompose) whole numbers and fractions as the sum of unit fractions.
- I can decompose a fraction into a sum of fractions with the same denominator using visual representations and write an equation to justify my work.
- I can justify my reasoning using visual fraction representations.
- I can compose and decompose mixed numbers in more than one way using visual representations.
- I can flexibly add and subtract fractions and mixed numbers with the same denominator in word problems using different strategies as they relate to everyday life.
- I can represent fractions with denominators of 10 or 100 using decimal notation, and decimal numbers to the hundredths place as fractions, using concrete materials and drawings.
- I can read fractions with denominators of 10 or 100 using decimal notation, and decimal numbers to the hundredths place as fractions.
- I can write fractions with denominators of 10 or 100 using decimal notation, and decimal numbers to the hundredths place as fractions.
- I can reason about the size of decimals when comparing decimals.
- I can order and compare decimal fractions to the hundredths using $<$, $>$, and $=$.
- I can measure lengths of objects using appropriate tools strategically.
- I can represent, read, and write fractions with denominators of 10 or 100 using decimal notation and decimal numbers to the hundredths place as fractions.
- I can compare two decimal numbers using various strategies.

Tier II Vocabulary Words- High Frequency Multiple Meaning	Tier III Vocabulary Words- Subject/ Content Related Words
<i>Compare, Justify, Part-whole, Greater than $>$, Less than $<$, Equal to $=$, Sum, Difference</i>	<i>Fraction, Equivalent fraction, Mixed number, Numerator, Denominator, Mixed number, Improper fraction, Decimal, Tenths, Hundredths</i>

It is the responsibility of each schools' grade level PLC to identify appropriate instructional lessons and resources, based on data and student needs, using the suggested pacing duration. The following learning tasks have been vetted to align to the standards included in this unit. The GA Dept. of Education strongly recommends that any additional tasks, resources, and/or assessments used for instruction should be vetted using the [Quality Assurance Rubric](#), to ensure alignment to the state standards.

Objective or Content	Learning Experiences		Differentiation Considerations
<p>4.NR.4: Solve real-life problems involving addition, subtraction, equivalence, and comparison of fractions with denominators of 2, 3, 4, 5, 6, 8, 10, 12, and 100 using part-whole strategies and visual models.</p>	<p style="text-align: center;"><u>GA DOE Learning Plans</u></p> <p><u>Equivalent Fractions: Fractions of a Whole</u> 4.NR.4.1 <i>In this learning plan, students will be exploring equivalent fractions, including those that are greater than one using concrete materials and drawings.
