<b>Statement of Inquiry</b>	Data collection and analysis leads to understanding of systems and can result in change..	Development of a place is influenced by the diverse characteristics of its inhabitants.	Characteristics of individuals and groups may lead to conflict and impact the landscape of a place.	Centralization of power impacts the development and relationships within and outside of a place.	Knowledge and understanding of resource use and development trends provides insight to the characteristics of a place.	Development of a place has intended and unintended consequences.	Globalization and interaction among groups leads to changing perspectives and the need to address inequities.	
<b>Global Context</b>	<b>Scientific and Technological Innovation</b> Students will explore the natural world; the interaction between people and the natural world; how humans	<b>Identities and Relationships</b> Who am I? Who are we? Students will explore identity; beliefs and values; personal, physical, mental, social and	<b>Personal and Cultural Expression</b> What is the nature and purpose of creative expression? 	<p>use their understanding of scientific principles; the impact of scientific and technological advances on communities and environments; the impact of environments on human activity; how humans adapt environments to their needs.</p>	<p>spiritual health; human relationships including families, friends, communities and cultures; what it means to be human.</p>	<p>ideas, feelings, nature, culture, beliefs and values; the ways in which we reflect on, extend and enjoy our creativity; our appreciation of the aesthetic.</p>	<p>relationship between communities; sharing finite resources with other people and with other living things; access to equal opportunities; peace and conflict resolution.</p>	<p>and communities; the relationship between local and global processes; how local experiences mediate the global; the opportunities and tensions provided by world interconnectedness; the impact of decision-making on humankind and the environment</p>	<p>humankind; discoveries; explorations and migrations of humankind; the relationships between, and the interconnectedness of, individuals and civilizations, from personal, local and global perspective</p>	<p>relationship between communities; sharing finite resources with other people and with other living things; access to equal opportunities; peace and conflict resolution.</p>	
<b>Key Concepts</b>	<p><b>Systems</b> are sets of interacting or interdependent components. Systems thinking provides a powerful tool for understanding both natural and human environments, and the role of individuals within them. Social and natural systems rely on a state of equilibrium and are vulnerable to change from internal and external forces.</p>	<p><b>Time, place and space</b> refers to the absolute or relative position of people, objects and ideas. Time is not simply the measurement of years or time periods but is a continuum of significant events of the past, present and future. Place and space are complex concepts, the definitions of which are fluid. Place is socially constructed and can be explored in terms of constraints and opportunities afforded by location. Places have value and meaning defined by humans. Space relates to where and why places and landscapes are located. This</p>	<p><b>Change</b> is a conversion, transformation, or movement from one form, state or value to another. Inquiry into change involves understanding and evaluating causes, processes and consequences. The concept of change allows examination of the forces that shape the world: past, present and future. The causes and effects of change can be natural and artificial; intentional and unintentional; positive, negative or neutral. The subject group explores the role of individuals and societies in shaping change</p>	<p><b>Systems</b> are sets of interacting or interdependent components. Systems thinking provides a powerful tool for understanding both natural and human environments, and the role of individuals within them. Social and natural systems rely on a state of equilibrium and are vulnerable to change from internal and external forces.</p>	<p><b>Global interactions</b> focuses on the dependence of the larger human community, including the many ways that people come into conflict with and cooperate with each other, and live together in a highly interconnected world to share finite resources.</p>	<p><b>Change</b> is a conversion, transformation, or movement from one form, state or value to another.
