

Personalized Learning

Powered by 

The **VISION** for personalized learning at Gwinnett Online Campus is to empower students to exceed their potential through individualized learning paths designed to support and enrich every learning outcome.

Personalized Learning Overview

Gwinnett Online Campus has developed a Personalized Learning Framework focused on purposeful targeted instruction, learner focused flexibility, and quality digital content. With the teacher as the analytical engine, all students receive purposeful and targeted instruction based upon their individual strengths and areas for growth. Advanced content or review material is released to students based upon formative assessments and student interaction with the digital content; real-time feedback and intervention is provided to increase retention and engagement while pinpointing precise learning standards and targets. Students who demonstrate content mastery are provided meaningful enrichment while students in need of additional support receive individualized scaffolding opportunities.

Students learn how to use the Clear Touch interactive table in the Personalized Learning Lab.

“

**7TH GRADE
SCIENCE STUDENT**

I would love for everything to be structured this way! It keeps me occupied and on task for much longer than normal lessons!

**HIGH SCHOOL
GEOMETRY STUDENT**

I do think it is nice that there are lessons to help each student rather than just one format that all students have to do.

”

In addition to the unique online course design, students engage in technology-rich station learning when their courses are brought to life in the innovative new personalized learning lab. While in the lab, students move through multiple stations, depending on their instructional needs and learning styles. This powerful instructional design maximizes learner-focused flexibility and positively contributes to the graduation rate of Gwinnett Online Campus.
