

Marietta City Schools
2024–2025 District Unit Planner

Individuals and Societies AP Psychology

Unit title	Unit 2: Cognition	% of AP Exam	15-25% Exam	Unit duration (hours)	14 Days 21 Hours
-------------------	-------------------	---------------------	-------------	------------------------------	---------------------

Mastering Content and Skills through INQUIRY (Establishing the purpose of the Unit): *What will students learn?*

GA DoE Standards

- 2.1 Perception
 - 2.2 Thinking, Problem-Solving, Judgments, and Decision-Making
 - 2.3 Introduction to Memory
 - 2.4 Encoding Memories
 - 2.5 Storing Memories
 - 2.6 Retrieving Memories
 - 2.7 Forgetting and Other Memory Challenges
 - 2.8 Intelligence and Achievement
- SSPBF1; SSPBF2; SSPBF3; SSPBF4; SSPBF5

[Map and Globe Skills:](#)

Use a diagram of the ear and eye to explain impact of senses on behavior

8. draw conclusions and make generalizations based on information from maps

Information Processing Skills:

3. identify issues and/or problems and alternative solutions
15. determine adequacy and/or relevancy of information
16. check for consistency of information

SS Reading Skills:

L9-10RHSS6; L9-10RHSS8;

SS Writing Skills:

L11-12WHST1; L11-12WHST2

Literacy Standards:

RHSS6: Evaluate authors' differing points of view on the same historical event or issue by assessing the authors' claims, reasoning, and evidence.

L9-10RHSS8: Assess the extent to which the reasoning and evidence in a text support the author's claims.

L11-12WHST1: Write arguments focused on discipline-specific content.

L11-12WHST2: Write informative/explanatory texts, including the narration of historical events, scientific procedures/ experiments, or technical processes.

MCS Gifted Stds:

MCS.Gifted.S6A. Set appropriately high standards for work and behavior.

MCS.Gifted.S6B. Establish and work toward short and long-term goals.

MCS.Gifted.S6C. Persevere in the face of obstacles.

MCS.Gifted.S6D. Take initiative to pursue opportunities to share and use abilities.

MCS.Gifted.S6E. Seek opportunities for self-growth through risk-taking, and curiosity in various situations.

Essential Questions

How and why do we remember?
How do memory strategies differ?

Assessment Tasks

List of common formative and summative assessments.

Formative Assessment(s):

- Perception Quiz
- Memory Vocabulary Quiz
- Language Quiz
- Retrieval Quiz
- Storage Quiz
- Thinking and Language Quiz
- Thinking Quiz
- Cognition Project
- Unit 2 Common Formative
- Unit 2 Article Analysis Question
- Unit 2 Vocabulary Formative
- Unit 2 Optional Project: Documentary
- Student self-assessment
- Online discussion board entries
- Daily discussions/ oral questioning
- Classwork Checks
- Thinking Formative Check

Summative Assessment(s):

- Unit 2 Summative
- Vision Vocabulary Quiz

Learning Experiences

Add additional rows below as needed.

Objective or Content	Learning Experiences	Personalized Learning and Differentiation All information included by PLC in the differentiation box is the responsibility and ownership of the local school to
----------------------	----------------------	--

		review and approve per Board Policy IKB.
<p>2.1 Principles of Sensation</p> <p>A. Describe the general principles of organizing and integrating sensation to promote stable awareness of the external world.</p> <p style="padding-left: 40px;">Gestalt principles Depth perception Top-down processing Bottom-up processing</p> <p>B. Discuss basic principles of sensory transduction, including absolute threshold, difference threshold, signal detection, and sensory adaptation.</p> <p>C. Identify the research contributions of major historical figures in sensation and perception.</p> <p style="padding-left: 40px;">Gustav Fechner David Hubel Ernst Weber Torsten Wiesel</p>	<ul style="list-style-type: none"> ● Registration for AP exam ● Score AAQ—pass back and discuss ● Discuss Unit 1 Test- make test corrections <p>Gestalt Project with Name.</p> <p>Jigsaw on Sensation Researchers with Anchor Charts.</p>	<p>Initially, a significant portion of teaching will be direct instruction, but as the unit progresses, students will be responsible for more independent learning with emphasis on drawing conclusions utilizing their knowledge.</p>
<p>2.2 Thinking, Problem-Solving, Judgments, and Decision-Making</p>	<ul style="list-style-type: none"> ● What are sensation and perception? ● How do bottom-up processing and top-down processing differ? ● How do absolute thresholds and difference thresholds differ? ● What is the function of sensory adaptation? ● How do our expectations, contexts, motivation, and emotions influence our perceptions? 	<p>Scaffolded learning via chunking information</p> <p>Grouping for Technique presentations via random or self-selected</p> <p>Jigsaw technique</p>

<p>Discuss how experience and culture can influence perceptual processes.</p> <p style="text-align: center;">Perceptual set Context effects Schema</p> <p>Discuss the role of attention in behavior.</p>	<p>Identify problem-solving strategies as well as factors that influence their effectiveness.</p> <p>List the characteristics of creative thought and creative thinkers.</p> <p>Thinking powerpoint</p> <p>Ted Talk: How schools kill creativity</p> <p>Sensation Powerpoint for Demonstrations:</p> <ul style="list-style-type: none"> ● Top-down processing vs. bottom-up processing ● Bottom-Up processing: we process this way when we have no prior knowledge. We start at the bottom and work our way up. <p>Display Top Picture of Handout 4-2: At first it appears to have no meaning or organization. Clearly, one is receiving stimulation, but it is a meaningless array of black, white and gray. Perception is an active process. We struggle to impose some organization upon the meaningless array we are sensing. Use to illustrate the complex nature of perception as opposed to sensation.</p> <ul style="list-style-type: none"> ● Top-Down processing- We process this way when we have prior knowledge. We start at the top and have to work to process details. <p>Example: With stereotyping we use previous expectations to make judgments about the world around us. While stereotypes can be negative, it can also be very efficient with certain stimuli. Without top-down processing we would have to interpret the world as if it were constantly new.</p> <p>Example: Have a student read the following to show how we use our own experience and expectations in top-down processing</p> <p style="text-align: center;">According to research at Cambridge University, it doesn't matter in what order the letters in a word are, the only important thing is that the first and last letter be at the right place. The rest can be a total mess and you can still read it without a problem. This is because the human mind does not read every letter by itself, but the word as a whole.</p> <ul style="list-style-type: none"> ● Absolute vs. Difference thresholds (JND) ● Absolute Threshold- the minimum stimulation needed to detect a particular stimulus 	
--	---	--

50% of the time

Mosquito noise website: <http://www.youtube.com/watch?v=LNjPmhbPc9I>

- Signal Detection Theory-says there is no single absolute threshold. Detection depends partly on a person's experience, expectations, motivation, and alertness

- Subliminal- below one's absolute threshold for conscious awareness- CAN WE SENSE STIMULI BELOW OUR ABSOLUTE THRESHOLDS?

- Priming- the activation, often unconsciously, of certain associations, thus predisposing one's perception, memory, or response- CAN WE BE AFFECTED BY STIMULI SO WEAK AS TO BE UNNOTICED?

- Difference Threshold (Just Noticeable Difference)- the minimum difference between two stimuli required for detection 50% of the time.

- Twenty-third Psalm is a popular example. Each line of the typeface changes imperceptibly. How many lines are required for you to experience a just noticeable difference?

- Weber's Law- the principle that, to be perceived as different, two stimuli must differ by a constant percentage (rather than a constant amount)

Example: If you were a sales person and you were working with a man who wanted to buy a three-piece suit and a sweater, which should you sell him first?

Weber's law: Difference thresholds grow with the magnitude of the stimulus. For the difference to be perceived, two stimuli must differ by a constant proportion, not a constant amount

- Sensory Adaptation- diminished sensitivity as a consequence of a constant stimulation

Examples: your watch, socks, the smell of your friend's house, train in my backyard etc.

Our eyes are always moving, quivering just enough to guarantee that the retinal image continually changes. If our eyes were to stop moving, sense receptors would be fatigued and images would vanish.

	<p>Ask students to count the points in each line. They will find it nearly impossible to do because of lack of precision in guiding the movement of the eyes.</p> <ul style="list-style-type: none"> • Perceptual Set <p>Perceptual Set: childhood game- What do these letters spell? FOLK How about these? CROAK What do these letters spell? SOAK. What do we call the white of an egg????</p> <p>Perceptual Set: Write the following on the chalkboard and ask students to provide punctuation that will make the words meaningful: TIME FLIES ICAN'T THEY'RE TOO FAST. The apostrophes come easily, but the rest is difficult. TIME FLIES. I CAN'T. THEY'RE TOO FAST. It still does not make sense because we're too familiar with the slogan< "Time flies" in which "time" is a noun and "flies" is a verb. Tell students to read "time" as the verb and "flies" as the noun. It now makes perfect sense.</p> <p>Perceptual Set (what we expect effects what we sense): Britain's Got Talent http://www.youtube.com/watch?v=P-ZjOEK4-dl Context Effects</p>	
<p>2.3 Introduction to Memory</p>	<p>Open with Discussion on life with no Memory Video on Clive Wearing. PPT on Studying and Encoding Memory Compare and contrast various cognitive processes Describe and differentiate psychological and physiological systems of memory Identify the contributions of key researchers in cognitive psychology (Chomsky, Ebbinghaus, Kohler, Loftus, Miller)</p> <p>Simulation similar to Sperling Study.</p>	<p>Read Storing and Retrieving Memories</p> <p>Teacher centered notes with guided notes and class discussion built in.</p>
<p>2.4 Encoding Memories</p> <p>2.5 Storing Memories</p> <p>2.6 Retrieving Memories</p>	<p>Outline the principles that underlie construction and encoding of memories.</p> <p>Outline the principles that underlie effective storage of memories.</p> <p>Describe strategies for retrieving memories</p> <p>Activity- Making Material Meaningful.</p>	<p>Grouping for Technique presentations via random or self-selected</p> <p>Jigsaw technique</p> <p>Pre-teach academic vocabulary through flipped learning homework</p>

	<p>Activity- Pegword- Grocery List.</p> <p>Activity- Method of Loci.</p>	<p>Grouping for Technique presentations via random or self-selected</p> <p>Jigsaw technique</p>
2.7 Forgetting and Other Memory Challenges	<p>Open with Long Term Potentiation (LTP)</p> <p>https://www.khanacademy.org/test-prep/mcat/behavior/learning-slug/v/long-term-potential-on-and-synaptic-plasticity</p> <p>Activity- Rumor Chain Memory Construction.</p> <p>Describe strategies for memory improvement and typical memory errors.</p> <p>Ted Talk- Elizabeth Loftus with Guided Notes- How REliable is your Memory https://www.ted.com/talks/elizabeth_loftus_how_reliable_is_your_memory?language=en</p> <p>Notes- PPT Storing and Retrieving Memories.</p>	<p>Read Forgetting, Memory, Construction, and Impairing Memory</p> <p>Self-directed learning by way of problem-based learning</p>
2.8 Intelligence and Achievement	<p>Identify problem-solving strategies as well as factors that create bias and errors in thinking.</p> <p>Intelligence PPT</p> <p>Define intelligence and list characteristics of how psychologists measure intelligence.</p> <ol style="list-style-type: none"> 1. Abstract versus verbal measures 2. Speed of processing 3. Fluid intelligence 4. Crystalized intelligence 5. Flynn effect 6. Stereotype threat 7. Savant syndrome <p>Discuss how culture influences the definition of intelligence</p> <p>Compare and contrast historic contemporary theories of intelligence.</p> <ol style="list-style-type: none"> 1. Charles Spearman 2. Howard Gardner 3. Robert Sternberg 	<p>Scaffolded learning via chunking information</p> <p>read What is Intelligence</p> <p>read Assessing Intelligence</p> <p>Pre-teach academic vocabulary through flipped learning homework</p>

Identify the contributions of key researchers in intelligence research and testing.

1. Alfred Binet
2. Francis Galton
3. Howard Gardner

Content Resources

AP Classroom, Barron’s AP Psychology, Myers Understanding Psychology Updated AP 3rd Edition. Ppt and Prezi Notes, Quizlet, Kahoot, Quizziz and Blookets review for all units.
