***INQUIRY: establishing the purpose of the unit***

### Transfer Goals

List here one to three big, overarching, long-term goals for this unit. Transfer goals are the major goals that ask students to “transfer” or apply their knowledge, skills, and concepts at the end of the unit under new/different circumstances, and on their own without scaffolding from the teacher.

Phenomenon: Strong acids such as sulfuric acid react with bases such as hydroxides or carbonates faster than weak acids such as carbonic acid do.

Statement of Inquiry: Chemical kinetics and equilibrium allow us to answer the questions “how fast” and “how far?” in a chemical reaction.

1. **Students can** explain how the rate of a reaction can be controlled.
2. **Students can** explain how the extent of a reversible reaction can be influenced.
3. **Students can** explain what happens when protons are transferred in a chemical reaction.

### ***ACTION: teaching and learning through inquiry***

**Content / Skills / Concepts - Essential Understandings**

**Learning Process**

*Check the boxes for any pedagogical approaches used during the unit. Aim for a variety of approaches to help facilitate learning.*

<p><b>Reactivity 2.2.1</b>  <b>The rate of reaction is expressed as the change in concentration of a particular reactant/product per unit time.</b>  <i>Determine rates of reaction.</i></p> <ul style="list-style-type: none"> <li>• Calculation of reaction rates from tangents of graphs of concentration, volume or mass against time should be covered.</li> </ul> <p><b>Reactivity 2.2.2</b>  <b>Species react as a result of collisions of sufficient energy and proper orientation.</b>  <i>Explain the relationship between the kinetic energy of the particles and the temperature in kelvin, and the role of collision geometry.</i></p> <p><b>Reactivity 2.2.3</b>  <b>Factors that influence the rate of a reaction include pressure, concentration, surface area, temperature and the presence of a catalyst.</b>  <i>Predict and explain the effects of changing conditions on the rate of a reaction.</i></p> <p><b>Reactivity 2.2.4</b>  <b>Activation energy, <math>E_a</math>, is the minimum energy that colliding particles need for a successful collision leading to a reaction.</b>  <i>Construct Maxwell–Boltzmann energy distribution curves to explain the effect of temperature on the probability of successful collisions.</i></p> <p><b>Reactivity 2.2.5</b>  <b>Catalysts increase the rate of reaction by providing an alternative reaction pathway with lower <math>E_a</math>.</b>  <i>Sketch and explain energy profiles with and without catalysts for endothermic and exothermic reactions.</i>  <i>Construct Maxwell–Boltzmann energy distribution curves to explain the effect of different values for <math>E_a</math> on the probability of successful collisions.</i></p> <ul style="list-style-type: none"> <li>• Biological catalysts are called enzymes.</li> <li>• The different mechanisms of homogeneous and heterogeneous catalysts will not be assessed.</li> </ul> <p><b>Reactivity 2.3.1</b>  <b>A state of dynamic equilibrium is reached in a closed system when the rates of forward and backward reactions are equal.</b>  <i>Describe the characteristics of a physical and chemical system at equilibrium.</i></p> <p><b>Reactivity 2.3.2</b>  <b>The equilibrium law describes how the equilibrium constant, <math>K</math>, can be determined from the stoichiometry of a reaction.</b>  <i>Deduce the equilibrium constant expression from an equation for a homogeneous reaction.</i></p> <p><b>Reactivity 2.3.3</b></p>	<p>Learning experiences and strategies/planning for self-supporting learning:</p> <ul style="list-style-type: none"> <li><input checked="" type="checkbox"/> Lecture</li> <li><input type="checkbox"/> Socratic seminar</li> <li><input checked="" type="checkbox"/> Small group/pair work</li> <li><input checked="" type="checkbox"/> PowerPoint lecture/notes</li> <li><input checked="" type="checkbox"/> Individual presentations</li> <li><input checked="" type="checkbox"/> Group presentations</li> <li><input checked="" type="checkbox"/> Student lecture/leading</li> <li><input type="checkbox"/> Interdisciplinary learning</li> </ul> <p>Details:</p> <p><i>Students will learn through a combination of presentations, small group work, practice problems, and lab work.</i></p> <ul style="list-style-type: none"> <li><input checked="" type="checkbox"/> Other(s): <i>practice problems, lab work</i></li> </ul> <hr/> <p><b>Formative assessment(s):</b></p> <p><i>Short closer quizzes for each lesson</i>  <i>Practice with Tools and Inquiries</i>  <i>Daily formative checks</i></p> <hr/> <p><b>Summative assessments:</b></p> <p><i>Unit Exam - Paper 1 and 2 questions modeled after the real IB Exam Papers (2025 syllabus)</i></p> <p><i>Laboratory Assignment - assessing Tools and Inquiries practiced in</i></p>
---	---

<p><b>The magnitude of the equilibrium constant indicates the extent of a reaction at equilibrium and is temperature dependent.</b>  <i>Determine the relationships between K values for reactions that are the reverse of each other at the same temperature.</i></p> <ul style="list-style-type: none"> <li>● Include the extent of reaction for: <math>K \ll 1</math>, <math>K &lt; 1</math>, <math>K = 1</math>, <math>K &gt; 1</math>, <math>K \gg 1</math>.</li> </ul> <p><b>Reactivity 2.3.4</b>  <b>Le Châtelier’s principle enables the prediction of the qualitative effects of changes in concentration, temperature and pressure to a system at equilibrium.</b>  <i>Apply Le Châtelier’s principle to predict and explain responses to changes of systems at equilibrium.</i></p> <ul style="list-style-type: none"> <li>● Include the effects on the value of K and on the equilibrium composition.</li> <li>● Le Châtelier’s principle can be applied to heterogeneous equilibria such as: <math>X(g) \rightleftharpoons X(aq)</math></li> </ul> <p><b>Reactivity 3.1.1</b>  <b>Brønsted–Lowry acid is a proton donor and a Brønsted–Lowry base is a proton acceptor.</b>  <i>Deduce the Brønsted–Lowry acid and base in a reaction.</i></p> <ul style="list-style-type: none"> <li>● A proton in aqueous solution can be represented as both <math>H^+(aq)</math> and <math>H_3O^+(aq)</math>.</li> <li>● The distinction between the terms “base” and “alkali” should be understood.</li> </ul> <p><b>Reactivity 3.1.2</b>  <b>A pair of species differing by a single proton is called a conjugate acid–base pair.</b>  <i>Deduce the formula of the conjugate acid or base of any Brønsted–Lowry base or acid.</i></p> <p><b>Reactivity 3.1.3</b>  <b>Some species can act as both Brønsted–Lowry acids and bases</b>  <i>Interpret and formulate equations to show acid–base reactions of these species.</i></p> <p><b>Reactivity 3.1.4</b>  <b>The pH scale can be used to describe the <math>[H^+]</math> of a solution: <math>pH = -\log_{10}[H^+]</math>; <math>[H^+] = 10^{-pH}</math>.</b>  <i>Perform calculations involving the logarithmic relationship between pH and <math>[H^+]</math></i></p> <ul style="list-style-type: none"> <li>● Include the estimation of pH using universal indicator, and the precise measurement of pH using a pH meter/probe.</li> <li>● The equations for pH are given in the data booklet.</li> </ul> <p><b>Reactivity 3.1.5</b>  <b>The ion product constant of water, <math>K_w</math>, shows an inverse relationship between <math>[H^+]</math> and <math>[OH^-]</math>. <math>K_w = [H^+][OH^-]</math></b>  <i>Recognize solutions as acidic, neutral and basic from the relative values of <math>[H^+]</math> and <math>[OH^-]</math></i></p> <ul style="list-style-type: none"> <li>● The equation for <math>K_w</math> and its value at 298 K are given in the data booklet.</li> </ul> <p><b>Reactivity 3.1.6</b>  <b>Strong and weak acids and bases differ in the extent of ionization.</b>  <i>Recognize that acid–base equilibria lie in the direction of the weaker conjugate.</i></p>	<p><i>the Unit</i></p> <p><b>Differentiation:</b></p> <ul style="list-style-type: none"> <li><input checked="" type="checkbox"/> Affirm identity - build self-esteem</li> <li><input checked="" type="checkbox"/> Value prior knowledge</li> <li><input checked="" type="checkbox"/> Scaffold learning</li> <li><input checked="" type="checkbox"/> Extend learning</li> </ul> <p>Details:</p> <ul style="list-style-type: none"> <li>● <i>SWD/504 – Accommodations Provided</i></li> <li>● <i>ELL – Reading &amp; Vocabulary Support</i></li> <li>● <i>Intervention Support</i></li> <li>● <i>Extensions – Enrichment Tasks and Project</i></li> </ul> <p><b>Tools and Inquiries:</b></p> <p><b>Reactivity 2.2.1</b></p> <ul style="list-style-type: none"> <li>● Tool 1, 3, Inquiry 2—Concentration changes in reactions are not usually measured directly. ---	--

- HCl, HBr, HI, HNO<sub>3</sub>, and H<sub>2</sub>SO<sub>4</sub> are strong acids, and group 1 hydroxides are strong bases.
- The distinction between strong and weak acids or bases and concentrated and dilute reagents should be covered.

### **Reactivity 3.1.7**

#### **Acids react with bases in neutralization reactions.**

*Formulate equations for the reactions between acids and metal oxides, metal hydroxides, hydrogencarbonates and carbonates.*

- Identify the parent acid and base of different salts.
- Bases should include ammonia, amines, soluble carbonates and hydrogencarbonates; acids should include organic acids.

### **Reactivity 3.1.8**

#### **pH curves for neutralization reactions involving strong acids and bases have characteristic shapes and features.**

*Sketch and interpret the general shape of the pH curve.*

- Interpretation should include the intercept with the pH axis and equivalence point.
- Only monoprotic neutralization reactions will be assessed.

pH probes) more suitable than analogue methods (e.g. pH paper/solution)?

### **Reactivity 3.1.6**

- Tool 1, Inquiry 2—What physical and chemical properties can be observed to distinguish between weak and strong acids or bases of the same concentration?

### **Reactivity 3.1.7**

- Tool 1, Structure 1.1—How can the salts formed in neutralization reactions be separated?

### **Reactivity 3.1.8**

- Tool 1, Structure 1.1—How can the salts formed in neutralization reactions be separated?

## **Approaches to Learning (ATL)**

*Check the boxes for any explicit approaches to learning connections made during the unit. For more information on ATL, please see [the guide](#).*

- Thinking
- Social
- Communication
- Self-management
- Research

Details:

*Students will be continuously challenged to develop higher-order thinking skills as they take prior knowledge, combine it with new content, and synthesize new understandings and connections.*

*Students will build social groups through group work and intentional reflection activities.*

<b>Language and Learning</b> <i>Check the boxes for any explicit language and learning connections made during the unit. For more information on the IB's approach to language and learning, please see <a href="#">the guide</a>.</i>	<b>TOK Connections</b> <i>Check the boxes for any explicit TOK connections made during the unit</i>	<b>CAS Connections</b> <i>Check the boxes for any explicit CAS connections. If you check any of the boxes, provide a brief note in the "details" section explaining how students engaged in CAS for this unit.</i>
<input checked="" type="checkbox"/> Activating background knowledge <input checked="" type="checkbox"/> Scaffolding for new learning <input checked="" type="checkbox"/> Acquisition of new learning through practice <input checked="" type="checkbox"/> Demonstrating proficiency Details: <i>Content and vocabulary introduced in previous science courses will be used in this unit.</i>  <i>Students will use many of the concepts from this unit in future units throughout the two-year course.</i>  <i>Students will acquire new vocabulary.</i>  <i>Students will continually demonstrate proficiency with chemistry vocabulary in class discussions and group work.</i>	<input type="checkbox"/> Personal and shared knowledge <input checked="" type="checkbox"/> Ways of knowing <input type="checkbox"/> Areas of knowledge <input type="checkbox"/> The knowledge framework Details: <i>TOK knowledge questions will be included as discussion options for each lesson.</i>	<input checked="" type="checkbox"/> Creativity <input type="checkbox"/> Activity <input type="checkbox"/> Service Details: <i>Students will be encouraged to consider the creativity involved in scientific experimentation. Students can explore alternative ways (visual, for example) to express and explain this creativity to others.</i>
