

IPM PLAN EVALUATION

At least annually, the School IPM Plan and School IPM Program of the Mountain Lakes School District will be evaluated. This necessarily includes review of all records in the IPM log binder. Program evaluation involves reviewing monitoring data, actions taken, treatment impacts and effectiveness, and any other relevant observations. These records will provide information on previous and current pest populations and which strategies were applied. Comparing data will clearly indicate which pest management strategies were most effective for the amount of time and money spent. IPM practices and procedures will be modified, if necessary, based on past experience, results, and gained knowledge.

This evaluation will be coordinated by the **IPM Coordinator**. The participants in the evaluation will be:

- **Educational Facilities Manager**
- **IPM Coordinator**
- **School Principal**
- **Pest Control Contractor**

A written evaluation is to be completed by August 1st of the upcoming school year. If the school is using a contractor, the Educational Facilities Manager will meet with the pest control contractor to evaluate the success or failure of this IPM Plan.

The following issues will be addressed during the evaluation of the School IPM Plan and Program (*check all that apply*):

- adequacy of pest control indoor and outdoor
- areas of concern
- sanitation issues
- building maintenance issues
- new less toxic pest control tactics
- adequate support by all members of the community
- adequacy of thresholds
- revise integrated pest management priorities
- Other: _____

Following evaluation, the School IPM Plan will be revised by the IPM Coordinator accordingly.
