Willow Ridge Update

1. Thank you B&G, Stohl Environmental, and ServPro!
2. Standing water in crawl space caused elevated humidity levels to seep through the floor.
3. Humidity led to growth of aspergillus in certain areas and on certain items in the building.
4. 24/7 operation to pump water, clean building, lower humidity levels and test air quality to ensure a safe environment for all.
5. Continual monitoring through visual inspection and humidity testing.
6. Working with our architects and engineers to determine what caused the standing water in crawl space. Working with HVAC to produce the right amount of heat and AC to keep humidity stable.
7. Opened the building on time and it remains in great condition today.
