Policy No. 6810
Management Support

ENERGY MANAGEMENT AND CONSERVATION

It is the policy of the Sumner-Bonney Lake School District that the District wisely manages the use of natural resources and maintains programs that support the conservation of energy and other natural resources. The goal of this policy is to create and maintain sustainable, healthy school environments through a long-term resource management plan.

Sumner-Bonney Lake School District will model environmental stewardship by instituting a resource conservation management plan, to:

- Reduce the use of energy, water, and other natural resources, and encourage recycling
- Educate students, teachers and staff about the importance of conserving natural resources
- Lessen environmental damage attributable to natural resources consumption.

It shall be the joint responsibility of the superintendent, administrators, teachers, students, and support personnel to ensure the achievement of energy and resource savings throughout the district. The superintendent, or designee, is authorized to establish sustainability program guidelines and will provide periodic reports to the Board on this topic as requested.
