

Taking the SAT soon? We've got your back. 🤝

Join a **FREE**, 4-week online bootcamp in Math and/or Reading & Writing to:

- ✔ Learn from a certified peer tutor who's been in your shoes, along with a small group of other students from across the country
- ✔ Practice real, full-length tests with personalized support for challenging concepts
- ✔ Pick up test-taking strategies and build confidence for your big day

The screenshot shows a math problem: "If $\sqrt{8x - 16} = x$, what is the value of x ?" with multiple choice options (A) 0, (B) 2, (C) 4, and (D) 16. The solution steps are shown: $(\sqrt{8x-16})^2 = x^2$, $8x-16 = x^2$, $0 = x^2 - 8x + 16$, and $0 = (x-4)(x-4) \rightarrow x=4$. The option (C) 4 is circled in red. The interface also shows four video thumbnails of participants.
