§ 3.2.1 Execution of the Contract by the Contractor is a representation that the Contractor has visited the site, become generally familiar with local conditions under which the Work is to be performed, and correlated personal observations with requirements of the Contract Documents. The provisions of this Section 3.2.1 shall not be construed to limit the investigative and review responsibilities of the Contractor under any other provisions of the Contract Documents.

§ 3.2.2 Because the Contract Documents are complementary, the Contractor shall, before starting each portion of the Work, carefully study and compare the various Contract Documents relative to that portion of the Work, as well as the information furnished by the Owner pursuant to Section 2.3.4, shall take field measurements of any existing conditions related to that portion of the Work, and shall observe any conditions at the site affecting it. These obligations are for the purpose of facilitating coordination and construction by the Contractor and are not for the purpose of discovering errors, omissions, or inconsistencies in the Contract Documents; however, the Contractor shall promptly report to the Owner and the Architect any errors, inconsistencies or omissions discovered by or made known to the Contractor as a request for information in such form as the Architect may require. It is recognized that the Contractor's review is made in the Contractor's capacity as a contractor and not as a licensed design professional, unless otherwise specifically provided in the Contract Documents. The submission of its GMP proposal shall constitute a representation by the Contractor that the Contractor has carefully reviewed the Contract Documents, and visually inspected the Project Site. Construction Manager represents that the GMP includes the sufficient cost and the Project Schedule includes sufficient time for the Construction Manager to complete the Work in accordance with the Contract Documents, except for the changes to the Work as required by Change Orders issued in accordance with the Agreement. The Contractor is not required to ascertain that the Contract Documents are in accordance with all Applicable Laws, but the Contractor shall promptly report to the Owner and the Architect any nonconformity discovered by or made known to the Contractor as a request for information in such form as the Architect may require.

§ 3.2.3 Execution by the Contractor of the Guaranteed Maximum Price Amendment, shall constitute a certification by the Contractor that it has conducted general and reasonably observable inspection of the Site conditions. Failure by the Contractor to visually inspect the Project site conditions, including conditions relating to transportation, handling, storage of materials, availability of labor, water, other known projects in the region, and the character and availability of equipment and facilities needed preliminary to and during the prosecution the Work, shall not relieve the Contractor of its responsibilities under the Contract Documents and shall not constitute a basis for extension of time or any increase in the Contract Sum. Owner assumes no responsibility for any representations concerning conditions made by any of its officers, or employees or representatives, prior to the execution of the Contract, unless such representations are expressly stated in the Contract Documents. The Contractor shall not perform any construction activity it knows constitutes a recognized error, inconsistency, or omission. If the Contractor performs any construction activity knowing it involves a recognized error, inconsistency, or omission in the Contract Documents without reporting the error, inconsistency or omission to the Architect, the Contractor shall assume appropriate responsibility for such performance and shall bear an appropriate amount of the costs of correction.

§ 3.2.4 If the Contractor believes that additional cost or time is involved because of clarifications or instructions the Architect issues in response to the Contractor's notices or requests for information pursuant to this Article 3, the Contractor shall submit Claims as provided in Article 15. If the Contractor fails to perform the obligations of Sections 3.2.2 or 3.2.3, the Contractor shall pay such costs and damages to the Owner, subject to Section 15.1.7, as would have been avoided if the Contractor had performed such obligations. If the Contractor performs those obligations, the Contractor shall not be liable to the Owner or Architect for damages resulting from errors, inconsistencies or omissions in the Contract Documents, for differences between field measurements or conditions and the Contract Documents, or for nonconformities of the Contract Documents to Applicable Law.

§ 3.2.5 If the Contractor fails to fulfill its obligations to report to the Architect or Owner under this Article 3, such failure shall preclude the Contractor from any subsequent Claim arising from or relating to the factors giving rise to the Contractor's obligation to make such report.

§ 3.2.6 The Contractor shall promptly inform the Owner and the Architect if the Contractor believes that a requirement of the Contract Documents is likely to have an adverse effect on the Project.

§ 3.2.7 Contractor is responsible for the safety of the Project Site, including without limitation providing a safety plan in accordance with Applicable Law, during the performance of the Work. Except as set forth in Section 10.3, the Contractor shall be solely responsible for providing safe working conditions in accordance with its safety plan for the performance of the Work that complies with Applicable Law.

§ 3.3 Supervision and Construction Procedures

§ 3.3.1 The Contractor shall supervise and direct the Work, using the Contractor's skill and attention in accordance with the Standard of Care. The Contractor shall be solely responsible for, and have control over, construction means, methods, techniques, sequences, and procedures, and for coordinating all portions of the Work under the Contract. If the Contract Documents give specific instructions concerning construction means, methods, techniques, sequences, or procedures, the Contractor shall evaluate the jobsite safety thereof and shall be solely responsible for the jobsite safety of such means, methods, techniques, sequences, or procedures. If the Contractor determines that such means, methods, techniques, sequences or procedures may not be safe, the Contractor shall give timely notice to the Owner and Architect, and shall propose alternative means, methods, techniques, sequences, or procedures. The Architect shall evaluate the proposed alternative solely for conformance with the design intent for the completed construction. Unless the Architect objects to the Contractor's proposed alternative, the Contractor shall perform the Work using its alternative means, methods, techniques, sequences, or procedures. If the Contractor is instructed to proceed with the required means, methods, techniques, sequences or procedures without acceptance of changes proposed by the Contractor and said means and methods impact the project, the parties shall resolve any such impact in good faith.

§ 3.3.2 The Contractor shall be responsible to the Owner for acts and omissions of the Contractor's employees, Subcontractors and their agents and employees, and other persons or entities performing portions of the Work for, or on behalf of, the Contractor or any of its Subcontractors.

§ 3.3.3 The Contractor shall be responsible for inspection of portions of Work already performed to determine that such portions are in proper condition to receive subsequent Work.

§ 3.3.4 The Contractor shall schedule and perform the Work so as not to unreasonably interfere with any other known related or unrelated work being performed by the Owner in or about the Project premises nor shall the Contractor unreasonably interfere with the Owner's school activities or operations on such premises, as identified within the Contract Documents. The Contractor shall coordinate its and its subcontractors' prosecution of the Work with the Owner and Owner's Designated Representative to minimize any such interference.

§ 3.3.5 The Contractor shall protect and prevent damage to all unfinished phases of the Work.

§ 3.4 Labor and Materials

§ 3.4.1 Unless otherwise provided in the Contract Documents, the Contractor shall provide and pay for labor, materials, equipment, tools, construction equipment and machinery, water, heat, utilities, transportation, and other facilities and services necessary for proper execution and completion of the Work, whether temporary or permanent and whether or not incorporated or to be incorporated in the Work.

§ 3.4.2 Except in the case of minor changes in the Work approved by the Architect in accordance with Section 3.12.8 or ordered by the Architect in accordance with Section 7.4, the Contractor may make substitutions only with the consent of the Owner, after evaluation by the Architect and in accordance with a Change Order or Construction Change Directive.

§ 3.4.3 The Contractor shall enforce strict discipline and good order among the Contractor's employees and other persons carrying out the Work. The Contractor shall not permit employment of unfit persons or persons not properly skilled in tasks assigned to them. All labor shall be performed by workmen skilled in their respective trades, and workmanship shall be of good quality so that first class work in accordance with the standards of construction set forth in the Contract Documents and the Contractor's Standard of Care will result.

§ 3.4.4 Substitutions

§ 3.4.4.1 When two or more products are specified for an item of Work, any one thereof is acceptable and the choice is left to the Contractor, with prior written notice to the Architect and the Owner. When only one product is specified and the term "or equal" is used in connection with the product, the Contractor may, if it so desires, offer a substitute product, and by so doing, Contractor shall be deemed to represent that the substitute product will completely accomplish the purpose of the Contract Documents. Requests for substitutions of products, materials or processes other than those specified shall be accompanied by evidence showing whether or not the proposed substitution:

.1 is equal in quality and serviceability to the specified item;
.2 will not entail changes in detail and construction of related Work;
.3 will be acceptable in consideration of the required design and artistic effect; and
.4 will not provide a cost disadvantage to the Owner.

The Contractor shall furnish with its request such Drawings, Specifications, samples, performance data and other information as may be required of it to assist the Architect and the Owner in determining whether the proposed substitution is acceptable. The burden of proof of the facts above stated shall be upon the Contractor, and no substitution shall be authorized except upon the prior written approval of Owner and the Architect. Nothing in this Section 3.4.4 shall limit the provisions of Sections 3.4.4.2 or 3.4.4.3.

§ 3.4.4.2 By making requests for substitutions based on Sections 3.4.2 and 3.4.4, the Contractor:

.1 represents that the Contractor has personally investigated the proposed substitute product and determines that it is equal or superior in all respects to that specified;
.2 represents that the Contractor will provide the same warranty for the substitution that the Contractor would for that specified;
.3 certifies that the cost data presented is complete and includes all related costs under this Contract except the Architect's redesign costs, and waives all claims for additional costs related to substitution which subsequently become apparent; and
.4 shall coordinate the installation of the accepted substitution, making such changes as may be required for the Work to be complete in all respects.

§ 3.4.4.3 Approval by the Owner or Architect of any such substitution shall not relieve the Contractor of responsibility for any additional costs incurred by other trades for changes made necessary to accommodate the substituted item.

§ 3.5 WARRANTIES

§ 3.5.1 The Contractor warrants to the Owner that materials and equipment furnished under the Contract will be of good quality and new unless the Contract Documents require or permit otherwise. The Contractor further warrants that the Work will conform to the requirements of the Contract Documents and will be free from defects, except for those inherent in the quality of the Work the Contract Documents require or permit. Work, materials, or equipment not conforming to these requirements may be considered defective. The Contractor's warranty excludes remedy for damage or defect caused by abuse, alterations to the Work not executed by the Contractor, improper or insufficient maintenance, improper operation, or normal wear and tear and normal usage. If required by the Architect, the Contractor shall furnish satisfactory evidence as to the kind and quality of materials and equipment.

§ 3.5.2 All material, equipment, or other special warranties required by the Contract Documents shall be issued in the name of the Owner, or shall be transferable to the Owner, and shall commence in accordance with Section 9.8.4.

§ 3.5.3 The Contractor shall procure and assign to the Owner at the time of Substantial Completion of the Work any and all Subcontractor, manufacturer or supplier warranties relating to any materials and labor used in the Work. Such warranties shall supplement the warranties provided by the Contractor in Section 3.5.1.

§ 3.5.4 Substitutions not properly approved and authorized and work, materials or equipment which fail to perform under the proper use and normal wear for intended purposes shall be considered defective. If required by the Architect or the Owner, the Contractor shall furnish satisfactory evidence as to the kind and quality of materials and equipment to be incorporated in the Work.

§ 3.5.5 The warranties under this Section 3.5 shall be in addition to, and not a substitute for, any other rights of the Owner under the Contract Documents or existing in law or equity.

§ 3.5.6 The warranties set forth in this Section 3.5 shall survive final payment and termination of this Contract.

§ 3.6 Taxes

The Owner is a tax-exempt entity. The Contractor shall be familiar with the current regulations of the Connecticut Department of Revenue Services and the sales or use tax on materials or supplies exempted by such regulations shall not be included as part of the bid or the Contract Sum. A sales tax certificate is available upon written request.

§ 3.7 Permits, Fees, Notices and Compliance with Laws

§ 3.7.1 Unless otherwise provided in the Contract Documents, the Contractor shall secure and pay for the building permit as well as for other permits, fees, licenses, certifications and inspections by government agencies necessary for proper execution and completion of the Work that are customarily secured after execution of the Contract and required by Applicable Laws. The Contractor shall provide the Owner and Architect with reproductions of all permits, licenses, permissions, certifications and receipts for payments and, upon final completion, shall deliver all originals of such documents to the Owner with copies to the Architect.

§ 3.7.2 The Contractor shall comply with and give notices required by applicable laws, statutes, ordinances, codes, rules and regulations, and lawful orders of public authorities applicable to performance of the Work.

§ 3.7.3 If the Contractor performs Work knowing it to be contrary to Applicable Law, the Contractor shall assume appropriate responsibility for such Work and shall bear the costs attributable to correction.

§ 3.7.4 Concealed or Unknown Conditions

If the Contractor encounters conditions at the site that are (1) subsurface or otherwise concealed physical conditions that differ materially from those indicated in the Contract Documents or (2) unknown physical conditions of an unusual nature that differ materially from those ordinarily found to exist and generally recognized as inherent in construction activities of the character provided for in the Contract Documents, the Contractor shall promptly provide notice to the Owner and the Architect before conditions are disturbed and in no event later than seven (7) days after first observance of the conditions. The Architect will promptly investigate such conditions and, if the Architect

determines that they differ materially and cause an increase or decrease in the Contractor's cost of, or time required for, performance of any part of the Work, will recommend that an equitable adjustment be made in the Contract Sum or Contract Time, or both. If the Architect determines that the conditions at the site are not materially different from those indicated in the Contract Documents and that no change in the terms of the Contract is justified, the Architect shall promptly notify the Owner and Contractor, stating the reasons. If either party disputes the Architect's determination or recommendation, that party may submit a Claim as provided in Article 15.

§ 3.7.5 If, in the course of the Work, the Contractor encounters human remains or recognizes the existence of burial markers, archaeological sites or wetlands or other conditions that would warrant a suspicion that such matters are being encountered during the performance of the Work although they are not indicated in the Contract Documents, the Contractor shall immediately suspend any operations that would affect them and shall notify the Owner and Architect. Upon receipt of such notice, the Owner shall promptly take any action necessary to obtain governmental authorization required to resume the operations. The Contractor shall continue to suspend such operations until otherwise instructed by the Owner but shall continue with all other operations that do not affect those remains or features. Requests for adjustments in the Contract Sum and Contract Time arising from the existence of such remains or features may be made as provided in Article 15.

§ 3.8 Allowances

§ 3.8.1 The Contractor shall include in the Contract Sum all allowances stated in the Contract Documents. Items covered by allowances shall be supplied for such amounts and by such persons or entities as the Owner may direct, but the Contractor shall not be required to employ persons or entities to whom the Contractor has reasonable objection.

§ 3.8.2 Unless otherwise provided in the Contract Documents.

.1 allowances shall cover the cost to the Contractor of materials and equipment delivered at the site and all required taxes, less applicable trade discounts;

.2 Contractor's costs for unloading and handling at the site, labor, installation costs, overhead, profit, and other expenses contemplated for stated allowance amounts shall, unless otherwise stated in the Contract Documents, be included in the Contract Sum but not in the allowances; and

.3 whenever costs are more than or less than allowances, the Contract Sum shall be adjusted accordingly by Change Order. The amount of the Change Order shall reflect (1) the difference between actual costs and the allowances under Section 3.8.2.1 and (2) changes in Contractor's costs under Section 3.8.2.2.

§ 3.8.3 Materials and equipment under an allowance shall be selected by the Owner with reasonable promptness.

§ 3.9 Superintendent

§ 3.9.1 The Contractor shall employ a competent superintendent and necessary assistants who shall be in attendance at the Project site during performance of the Work. The superintendent shall represent the Contractor, and communications given to the superintendent shall be as binding as if given to the Contractor.

§ 3.9.2 The Contractor, as soon as practicable after award of the Contract, shall notify the Owner and Architect of the name and qualifications of a proposed superintendent. Within 14 days of receipt of the information, the Architect may notify the Contractor, stating whether the Owner or the Architect (1) has reasonable objection to the proposed superintendent or (2) requires additional time for review. Failure of the Architect to provide notice within the 14-day period shall constitute notice of no reasonable objection.

§ 3.9.3 The Contractor shall not employ a proposed superintendent to whom the Owner or Architect has made reasonable and timely objection. The Contractor shall not change the superintendent without the Owner's prior written consent, which shall not unreasonably be withheld or delayed. The list of all supervisory personnel, including the project manager and superintendent that the Contractor intends to use on the Project and an organizational chart reflecting the chain of command among such personnel, shall be submitted to the Owner for approval prior to the commencement of the Work. The Contractor shall not engage supervisory personnel other than as approved by Owner in writing and shall not change such personnel without the prior written approval of the Owner.

§ 3.10 Contractor's Construction and Submittal Schedules

§ 3.10.1 The Contractor shall, as required pursuant to the Agreement, prepare and submit for the Owner's and Architect's approval a construction schedule for the Work (as approved by the Owner and the Architect, the "Construction Schedule"). The Construction Schedule (i) shall comply with all of the applicable requirements of, the

Contract Documents: (ii) shall be revised (which revisions shall be subject to the approval of the Owner and the Architect) at appropriate intervals as determined by the Contractor and as required by the conditions of the Work and the Project; (iii) shall be related to the entire Project to the extent required by the Contract Documents, and (iv) shall provide for expeditious and practicable execution of the Work. The initial Construction Schedule is based on the scheduling requirements of the RFP.

§ 3.10.2 The Contractor, promptly after being awarded the Contract and thereafter as necessary to maintain a current submittal schedule, shall submit a submittal schedule for the Architect's approval. The Architect's approval shall not be unreasonably delayed or withheld. The submittal schedule shall (1) be coordinated with the Contractor's construction schedule, and (2) allow the Architect reasonable time to review submittals. If the Contractor fails to submit a submittal schedule or fails to provide submittals in accordance with the approved submittal schedule, the Contractor shall not be entitled to any increase in Contract Sum or extension of Contract Time based on the time required for review of submittals.

§ 3.10.3 The Contractor shall perform the Work in general accordance with the most recent schedules submitted to, and approved by, the Owner and Architect.

§ 3.10.4 The Construction Schedule shall be in such detail and include such content as required by the Owner. If the Owner requires a precedence-style critical path method (CPM), the Construction Schedule shall: (i) provide a graphic representation of all activities and events that will occur during performance of the Work; (ii) identify each phase of construction and occupancy (if applicable); and (iii) set forth dates that are critical in ensuring the timely and orderly completion of the Work (hereinafter referred to as "Milestone Dates"). Upon review and acceptance by the Owner of the Milestone Dates, the Construction Schedule shall be attached to the Agreement as Schedule 2. If not accepted, the Construction Schedule shall be promptly revised by the Contractor in accordance with the recommendations of the Owner and the Architect and resubmitted for acceptance. The Contractor shall monitor the progress of the Work for conformance with the requirements of the Construction Schedule and shall promptly advise the Owner of any delays or potential delays. The accepted Construction Schedule shall be updated to reflect actual conditions ("Progress Reports") as set forth in Section 3.10.1 above or as otherwise requested by the Owner and the final version shall be included as part of the GMP. In the event any Progress Report indicates any delays to the GMP Project Schedule, the Contractor shall propose an affirmative plan to correct the delay, including overtime and/or additional labor, if necessary. In no event shall any Progress Report constitute an adjustment in the Contract Time, any Milestone Date or the Contract Sum unless any such adjustment is agreed to by the Owner and authorized pursuant to Change Order.

§ 3.10.5 In the event the Owner determines that the performance of the Work as of a Milestone Date has not progressed or reached the level of completion required by the GMP Project Schedule because of delays caused by the Contractor, its Subcontractors or those for whom they are responsible, the Owner shall have the right, but not the obligation, to order the Contractor to take corrective measures necessary to expedite the progress of construction, including, without limitation, (1) working additional shifts or overtime, (2) supplying additional manpower, equipment, and facilities, and (3) other similar measures (hereinafter referred to collectively as "Extraordinary Measures"). Such Extraordinary Measures shall continue until the progress of the Work complies with the stage of completion required by the Contract Documents. The Owner's right to require Extraordinary Measures is solely for the purposes of ensuring the Contractor's compliance with the GMP Project Schedule as adjusted for time extensions granted pursuant to Section 8.3. Except as provided in Section 8.3, the Contractor shall not be entitled to an adjustment in the Contract Sum in connection with Extraordinary Measures required by the Owner pursuant to this Section 3.10.5. The Owner may exercise the rights furnished the Owner under or pursuant to this Section 3.10.5 as frequently as the Owner deems necessary to ensure that that Contractor's performance of the Work will comply with any Milestone Date or the Substantial Completion Date, as the same may be extended by Change Order.

§ 3.10.6 The Owner shall have the right to direct a postponement or rescheduling of any date or time for the performance of any part of the Work that may interfere with the Owner's operations. Any postponement, rescheduling or performance of the Work under this Section 3.10.6 may be grounds for an extension of the Contract Time, if permitted under Section 8.3 and an equitable adjustment in the Contract Sum if: (1) the performance of the Work was properly scheduled by the Contractor in compliance with the requirements of the Contract Documents and (2) such rescheduling or postponement is requested by or required for the convenience of the Owner. Without limiting the foregoing, the Contractor will not be entitled to an extension of the Contract Time or an adjustment of the Contract Sum to the extent the interfering Work so interferes as a result of the negligent act or omission of the Contractor or its subcontractors of any tier or the failure of any of the same to perform the Work in a manner consistent with the

Contract Documents, including Section 3.10.3 hereof, except for Concurrent Delays, for which the Construction Manager's sole remedy shall be a non-compensable extension of time. The term "Concurrent Delays" refers to delays set forth in Section 8.3 that are concurrent with delays caused by Contractor, its subcontractors or those for whom it is responsible.

§ 3.11 Documents and Samples at the Site

The Contractor shall make available, at the Project site, the Contract Documents, including Change Orders, Construction Change Directives, and other Modifications, in good order and marked currently to indicate field changes and selections made during construction, and the approved Shop Drawings, Product Data, Samples, and similar required submittals. These shall be in electronic form or paper copy, available to the Architect and Owner, and delivered to the Architect for submittal to the Owner upon completion of the Work as a record of the Work as constructed. The Contractor shall coordinate and cooperate with the Architect in the Architect's preparation of the "as constructed" electronics file for the Project.

§ 3.12 Shop Drawings, Product Data and Samples

§ 3.12.1 Shop Drawings are drawings, diagrams, schedules, and other data specially prepared for the Work by the Contractor or a Subcontractor, Sub-subcontractor, manufacturer, supplier, or distributor to illustrate some portion of the Work.

§ 3.12.2 Product Data are illustrations, standard schedules, performance charts, instructions, brochures, diagrams, and other information furnished by the Contractor to illustrate materials or equipment for some portion of the Work.

§ 3.12.3 Samples are physical examples that illustrate materials, equipment, or workmanship, and establish standards by which the Work will be judged.

§ 3.12.4 Shop Drawings, Product Data, Samples, and similar submittals are not Contract Documents. Their purpose is to demonstrate how the Contractor proposes to conform to the information given and the design concept expressed in the Contract Documents for those portions of the Work for which the Contract Documents require submittals. Review by the Architect is subject to the limitations of Section 4.2.7. Informational submittals upon which the Architect is not expected to take responsive action may be so identified in the Contract Documents. Submittals that are not required by the Contract Documents may be returned by the Architect without action.

§ 3.12.5 The Contractor shall review for compliance with the Contract Documents and submit to the Architect, Shop Drawings, Product Data, Samples, and similar submittals required by the Contract Documents, in accordance with the submittal schedule approved by the Architect or, in the absence of an approved submittal schedule, with reasonable promptness and in such sequence as to cause no delay in the Work or in the activities of the Owner or of Separate Contractors. The Contractor shall be responsible for the Owner's costs associated with the Architect's time for submittal review if any submittal must be reviewed by the Architect more than two (2) times due to the fault of the Contractor, or as otherwise approved by the Owner.

§ 3.12.6 By submitting Shop Drawings, Product Data, Samples, and similar submittals, the Contractor represents to the Owner and Architect that the Contractor has (1) reviewed them, (2) determined and verified materials, field measurements and field construction criteria related thereto, or will do so, and (3) checked and coordinated the information contained within such submittals with the requirements of the Work and of the Contract Documents. The Contractor shall indicate its review of the submittals as evidence of such review and coordination. Submittals made to the Architect without such indication of review may be returned to the Contractor for resubmission.

§ 3.12.7 The Contractor shall perform no portion of the Work for which the Contract Documents require submittal and review of Shop Drawings, Product Data, Samples, or similar submittals, until the respective submittal has been approved by the Architect.

§ 3.12.8 The Work shall be in accordance with approved submittals except that the Contractor shall not be relieved of responsibility for deviations from the requirements of the Contract Documents by the Architect's approval of Shop Drawings, Product Data, Samples, or similar submittals, unless the Contractor has specifically notified the Architect of such deviation at the time of submittal and (1) the Architect has given written approval to the specific deviation as a minor change in the Work, or (2) a Change Order or Construction Change Directive has been issued authorizing the

deviation. The Contractor shall not be relieved of responsibility for errors or omissions in Shop Drawings, Product Data, Samples, or similar submittals, by the Architect's approval thereof.

§ 3.12.9 The Contractor shall direct specific attention, in writing or on resubmitted Shop Drawings, Product Data, Samples, or similar submittals, to revisions other than those requested by the Architect on previous submittals. In the absence of such notice, the Architect's approval of a resubmission shall not apply to such revisions.

§ 3.12.10 The Contractor shall not be required to provide professional services that constitute the practice of architecture or engineering unless such services are specifically agreed by the parties as part of the GMP or unless the Contractor needs to provide such services in order to carry out the Contractor's responsibilities for construction means and methods. The Contractor shall not be required to provide professional services in violation of applicable law.

§ 3.12.10.1 If professional design services or certifications by a design professional related to systems, materials, or equipment are specifically required of the Contractor by the Contract Documents, the Owner and the Architect will specify all performance and design criteria that such services must satisfy. The Contractor shall be entitled to rely upon the adequacy and accuracy of the performance and design criteria provided in the Contract Documents. The Contractor shall cause such services or certifications to be provided by an appropriately licensed design professional that has been approved by the Owner and that carries such professional liability insurance as required by the Owner, whose signature and seal shall appear on all drawings, calculations, specifications, certifications, Shop Drawings, and other submittals prepared by such professional. Shop Drawings, and other submittals related to the Work, designed or certified by such professional, if prepared by others, shall bear such professional's written approval when submitted to the Architect. The Owner and the Architect shall be entitled to rely upon the adequacy and accuracy of the services, certifications, and approvals performed or provided by such design professionals, provided the Owner and Architect have specified to the Contractor the performance and design criteria that such services must satisfy. Pursuant to this Section 3.12.10, the Architect will review and approve or take other appropriate action on submittals only for the limited purpose of checking for conformance with information given and the design concept expressed in the Contract Documents.

§ 3.12.10.2 If the Contract Documents require the Contractor's design professional to certify that the Work has been performed in accordance with the design criteria, the Contractor shall furnish such certifications to the Architect at the time and in the form specified by the Architect.

§ 3.13 Use of Site

§ 3.13.1 The Contractor shall confine operations at the site to areas permitted by Applicable Laws and the Contract Documents and shall not unreasonably encumber the site with materials or equipment.

§ 3.13.2 The Contract Documents shall provide current location of utilities and utility lines. Contractor shall protect and save from damage or disruption those known utilities and utility services lines of all kinds, either above or below grade found in the areas affected by the Work. The Contractor shall be responsible for all damage caused to such known utilities by the operation of equipment or delivery of materials or as the direct or indirect result of any of the Work and shall repair all such damage at its expense and as part of the Work included in the Contract Documents.

§ 3.14 Cutting and Patching

§ 3.14.1 The Contractor shall be responsible for cutting, fitting, or patching required to complete the Work or to make its parts fit together properly. All areas requiring cutting, fitting, or patching shall be restored to the condition existing prior to the cutting, fitting, or patching, unless otherwise required by the Contract Documents.

§ 3.14.2 The Contractor shall not damage or endanger a portion of the Work or fully or partially completed construction of the Owner or Separate Contractors by cutting, patching, or otherwise altering such construction, or by excavation. The Contractor shall not cut or otherwise alter construction by the Owner or a Separate Contractor except with written consent of the Owner and of the Separate Contractor. Consent shall not be unreasonably withheld. The Contractor shall not unreasonably withhold from the Owner or a Separate Contractor, its consent to cutting or otherwise altering the Work.

§ 3.15 Cleaning Up

§ 3.15.1 The Contractor shall keep the premises and surrounding area free from accumulation of waste materials and rubbish caused by operations under the Contract. At completion of the Work, the Contractor shall remove waste

materials, rubbish, the Contractor's tools, construction equipment, machinery, and surplus materials from and about the Project and shall clean and/or remove all stains, spots, marks, blemishes, foreign matter and dirt from surfaces of the Work and from other surfaces not a part of the Work but where such condition resulted from the Contractor's operations.

§ 3.15.2 If the Contractor fails to clean up as provided in the Contract Documents, the Owner may do so and the Owner shall be entitled to reimbursement from the Contractor for the full cost of such clean up.

§ 3.16 Access to Work

The Contractor shall provide the Owner and Architect with access to the Work in preparation and progress wherever located.

§ 3.17 Royalties, Patents and Copyrights

The Contractor shall pay all royalties and license fees. The Contractor shall defend suits or claims for infringement of copyrights and patent rights, or failure to pay such royalty and license fees, and shall hold the Owner and Architect harmless from loss on account thereof, but shall not be responsible for defense or loss when a particular design, process, or product of a particular manufacturer or manufacturers is required by the Contract Documents, or where the copyright violations are contained in Drawings, Specifications, or other documents prepared by the Owner or Architect. However, if an infringement of a copyright or patent is discovered by, or made known to, the Contractor, the Contractor shall be responsible for such losses to the Owner unless the Contractor had furnished such information to the Owner and the Architect promptly upon obtaining such knowledge.

§ 3.18 Indemnification

§ 3.18.1 To the fullest extent permitted by law, the Contractor shall indemnify, defend and hold harmless the Owner, the Owner's Designated Representative, and the directors, officers, owners, agents and employees of any of them as well as the Building Committee appointed by the Owner for the Project, from and against any and all claims, liens, judgments, damages, losses, and expenses, including but not limited to attorneys' fees, arising out of or resulting from performance of the Work, provided that such claim, damage, loss, or expense is attributable to bodily injury, sickness, disease or death, or to injury to or destruction of tangible property (other than the Work itself) except to the extent such injury to or destruction of the Work itself is covered by builder's risk insurance, but only to the extent caused by the negligent acts or omissions of the Contractor, a Subcontractor, anyone directly or indirectly employed by them, or anyone for whose acts they may be liable; provided however that such indemnity obligations shall not include liability for damage arising out of bodily injury to person or damage to property caused by or resulting from the negligence of the indemnitee, such indemnitee's agents or employees. Such obligation shall not be construed to negate, abridge, or reduce other rights or obligations of indemnity that would otherwise exist as to a party or person described in this Section 3.18.

§ 3.18.2 In claims against any person or entity indemnified under this Section 3.18 by an employee of the Contractor, a Subcontractor, anyone directly or indirectly employed by them, or anyone for whose acts they may be damages, compensation, or benefits payable by or for the Contractor or a Subcontractor under workers' liable, the indemnification obligation under Section 3.18.1 shall not be limited by a limitation on amount or type of compensation acts, disability benefit acts, or other employee benefit acts.

§ 3.19 MEETINGS

§ 3.19.1 A qualified representative of the Contractor shall attend periodic progress meetings held at such time and as such place as the Architect or the Owner shall designate.

§ 3.19.2 The Contractor shall schedule and conduct progress meetings at the site on a bi-weekly basis (or interval appropriate for the level of jobsite activity). Attendance is required of each Subcontractor, supplier or other entity whose portion of the Work is currently the subject of concern or discussion or planning of future construction activities. Owner and Architect shall be provided with forty-eight (48) hour prior notice of each such progress meetings and be permitted to attend and participate in the meetings.

ARTICLE 4 ARCHITECT

§ 4.1 General

§ 4.1.1 The Architect is the person or entity retained by the Owner pursuant to Section 2.3.2 and identified as such in the Agreement.

§ 4.1.2 Duties, responsibilities, and limitations of authority of the Architect as set forth in the Contract Documents shall not be restricted, modified, or extended without written consent of the Owner, Contractor, and Architect. Consent shall not be unreasonably withheld.

§ 4.2 Administration of the Contract

§ 4.2.1 The Architect will provide administration of the Contract as described in the Contract Documents and will be an Owner's representative (i) during construction; (ii) until the date that final payment under the Contract is due and payable; and (iii) with the concurrence of the Owner, during the one-year period described in Section 12.2. The Architect issues the final Certificate for Payment. The Architect will have authority to act on behalf of the Owner only to the extent provided in the Contract Documents.

§ 4.2.2 The Architect will visit the site at intervals appropriate to the stage of construction, or as otherwise agreed with the Owner, to become familiar with the progress and quality of the portion of the Work completed, and to determine in general if the Work observed is being performed in a manner indicating that such portion of the Work is, and when the Work is fully completed the entirety of the Work, will be in accordance with the Contract Documents. However, the Architect will not be required to make exhaustive or continuous on-site inspections to check the quality or quantity of the Work. The Architect will not have control over, charge of, or responsibility for the construction means, methods, techniques, sequences or procedures, or for the safety precautions and programs in connection with the Work, since these are solely the Contractor's rights and responsibilities under the Contract Documents.

§ 4.2.3 On the basis of the site visits, the Architect will keep the Owner reasonably informed about the progress and quality of the portion of the Work completed, and promptly report to the Owner (1) known deviations from the Contract Documents, (2) known deviations from the most recent construction schedule submitted by the Contractor, and (3) defects and deficiencies observed in the Work. The Architect will not be responsible for the Contractor's failure to perform the Work in accordance with the requirements of the Contract Documents. The Architect will not have control over or charge of, and will not be responsible for, acts or omissions of, the Contractor, Subcontractors, or their agents or employees, or any other persons or entities performing portions of the Work.

§ 4.2.4 Communications

The Owner and Contractor shall include the Architect in all communications that relate to or affect the Architect's services or professional responsibilities. The Owner shall promptly notify the Architect of the substance of any direct communications between the Owner and the Contractor otherwise relating to the Project. Communications by the Contractor with the Architect's consultants shall be through the Architect. Communications by the Architect with Subcontractors and suppliers shall be through the Contractor. Communications by the Contractor with Separate Contractors shall be through the Owner. The Contract Documents may specify other communication protocols.

§ 4.2.5 Based on the Architect's evaluations of the Contractor's Applications for Payment, the Architect will review and certify the amounts due the Contractor and will issue Certificates for Payment in such amounts.

§ 4.2.6 The Architect has authority to reject Work that does not conform to the Contract Documents. Whenever the Architect considers it necessary or advisable, the Architect will have authority to require inspection or testing of the Work in accordance with Sections 13.4.1, 13.4.2 and 13.4.3, whether or not the Work is fabricated, installed or completed. However, neither this authority of the Architect nor a decision made in good faith either to exercise or not to exercise such authority shall give rise to a duty or responsibility of the Architect to the Contractor, Subcontractors, suppliers, their agents or employees, or other persons or entities performing portions of the Work.

§ 4.2.7 The Architect will review and approve, or take other appropriate action upon, the Contractor's submittals such as Shop Drawings, Product Data, and Samples, but only for the limited purpose of checking for conformance with information given and the design concept expressed in the Contract Documents. The Architect's action will be taken in accordance with the submittal schedule approved by the Architect or, in the absence of an approved submittal schedule, with reasonable promptness while allowing sufficient time in the Architect's professional judgment to permit adequate review. Review of such submittals is not conducted for the purpose of determining the accuracy and completeness of other details such as dimensions and quantities, or for substantiating instructions for installation or performance of equipment or systems, all of which remain the responsibility of the Contractor as required by the Contract Documents. The Architect's review of the Contractor's submittals shall not relieve the Contractor of the obligations under Sections 3.3, 3.5, and 3.12. The Architect's review shall not constitute approval of safety

precautions or of any construction means, methods, techniques, sequences, or procedures that are not specified by the Architect or in the Contract Documents. The Architect's approval of a specific item shall not indicate approval of an assembly of which the item is a component.

§ 4.2.8 The Architect will prepare Change Orders and Construction Change Directives and may order minor changes in the Work as provided in Section 7.4. The Architect will investigate and make determinations and recommendations regarding concealed and unknown conditions as provided in Section 3.7.4.

§ 4.2.9 The Architect will conduct inspections to determine the date or dates of Substantial Completion and the date of final completion; issue Certificates of Substantial Completion pursuant to Section 9.8; receive and forward to the Owner, for the Owner's review and records, written warranties and related documents required by the Contract Documents and assembled by the Contractor pursuant to Section 9.10; and issue a final Certificate for Payment pursuant to Section 9.10.

§ 4.2.10 If the Owner and Architect agree, the Architect will provide one or more Project representatives to assist in carrying out the Architect's responsibilities at the site. The Owner shall notify the Contractor of any change in the duties, responsibilities and limitations of authority of the Project representatives.

§ 4.2.11 The Architect will interpret and decide matters concerning performance under, and requirements of, the Contract Documents on written request of either the Owner or Contractor. The Architect's response to such requests will be made in writing within any time limits agreed upon or otherwise with reasonable promptness.

§ 4.2.12 Interpretations and decisions of the Architect will be consistent with the intent of, and reasonably inferable from, the Contract Documents and will be in writing or in the form of drawings. When making such interpretations and decisions, the Architect will endeavor to secure faithful performance by both Owner and Contractor, will not show partiality to either, and will not be liable for results of interpretations or decisions rendered in good faith.

§ 4.2.13 The Architect's decisions on matters relating to aesthetic effect will be final if consistent with the intent expressed in the Contract Documents.

§ 4.2.14 The Architect will review and respond to requests for information about the Contract Documents. The Architect's response to such requests will be made in writing within any time limits agreed upon or otherwise with reasonable promptness. If appropriate, the Architect will prepare and issue supplemental Drawings and Specifications in response to the requests for information.

ARTICLE 5 SUBCONTRACTORS

§ 5.1 Definitions

§ 5.1.1 A Subcontractor is a person or entity who has a direct contract with the Contractor to perform a portion of the Work at the site. The term "Subcontractor" is referred to throughout the Contract Documents as if singular in number and means a Subcontractor or an authorized representative of the Subcontractor. The term "Subcontractor" does not include a Separate Contractor or the subcontractors of a Separate Contractor.

§ 5.1.2 A Sub-subcontractor is a person or entity who has a direct or indirect contract with a Subcontractor to perform a portion of the Work at the site. The term "Sub-subcontractor" is referred to throughout the Contract Documents as if singular in number and means a Sub-subcontractor or an authorized representative of the Sub-subcontractor.

§ 5.2 Award of Subcontracts and Other Contracts for Portions of the Work

§ 5.2.1 Unless otherwise stated in the Contract Documents, the Contractor, as soon as practicable after award of the Contract, shall notify the Owner and Architect of the persons or entities proposed for each principal portion of the Work, including those who are to furnish materials or equipment fabricated to a special design. Within 14 days of receipt of the information, the Architect may notify the Contractor whether the Owner or the Architect (1) has reasonable objection to the identity or fee proposal of any such proposed person or entity or (2) requires additional time for review. Failure of the Architect to provide notice within the 14-day period shall constitute notice of no reasonable objection.

§ 5.2.1.1 To facilitate and expedite the investigations of such proposed persons or entities, the Contractor shall, upon the Owner's request, provide to the Owner and Architect a list of the names and addresses of all prospective subcontractors and such other information as may be reasonably requested by the Owner.

§ 5.2.2 The Contractor shall not contract with a proposed person or entity to whom the Owner or Architect has made reasonable and timely objection. The Contractor shall not be required to contract with anyone to whom the Contractor has made reasonable objection.

§ 5.2.3 If the Owner or Architect has reasonable objection to a person or entity proposed by the Contractor, the Contractor shall propose another to whom the Owner or Architect has no reasonable objection. If the proposed but rejected Subcontractor was reasonably capable of performing the Work, the Contract Sum and Contract Time shall be increased or decreased by the difference, if any, occasioned by such change, and an appropriate Change Order shall be issued before commencement of the substitute Subcontractor's Work. However, no increase in the Contract Sum or Contract Time shall be allowed for such change unless the Contractor has acted promptly and responsively in submitting names as required.

§ 5.2.4 The Contractor shall not substitute a Subcontractor, person, or entity for one previously selected if the Owner or Architect makes reasonable objection to such substitution. If the Contractor wishes to substitute a different person or entity for a person or entity previously selected and approved as a Subcontractor pursuant to this Section 5.2, the procedure set forth in Section 5.2.1 shall be followed.

§ 5.3 Subcontractual Relations

§ 5.3.1 Any part of the Work performed by a Subcontractor shall be pursuant to a written Subcontract between the Contractor and Subcontractor, which form of Subcontract shall be reasonably satisfactory to the Owner in all respects. Copies of all Subcontractor bids or proposals shall, upon request of Owner, be submitted to the Owner and Architect.

§ 5.3.2 By appropriate agreement, written where legally required for validity, the Contractor shall require each Subcontractor, to the extent of the Work to be performed by the Subcontractor, to be bound to the Contractor by terms of the Contract Documents, and to assume toward the Contractor all the obligations and responsibilities, including the responsibility for safety of the Subcontractor's Work, which the Contractor, by these Documents, assumes toward the Owner. Each subcontract agreement shall preserve and protect the rights of the Owner under the Contract Documents with respect to the Work to be performed by the Subcontractor so that the subcontracting thereof will not prejudice such rights. Where appropriate, the Contractor shall require each Subcontractor to enter into similar agreements with Sub-subcontractors. The Contractor shall make available to each proposed Subcontractor, prior to the execution of the subcontract agreement, redacted copies of the Contract Documents to which the Subcontractor will be bound. Subcontractors will similarly make copies of applicable portions of such documents available to their respective proposed Sub-subcontractors.

§ 5.3.3 The Contractor shall be fully responsible for coordinating and expediting the work of all Subcontractors and shall employ the necessary and qualified personnel to produce the required quality of labor and materials and to prevent delays in the progress of the Project. The Contractor shall afford each trade with all reasonable opportunities for the installation of its work and for the storage and handling of its materials

§ 5.4 Contingent Assignment of Subcontracts

§ 5.4.1 Each subcontract agreement for a portion of the Work is assigned by the Contractor to the Owner, provided that

.1 assignment is effective only after termination of the Contract by the Owner for cause pursuant to, and in accordance with, Section 14.2 and only for those subcontract agreements that the Owner accepts by notifying the Subcontractor and Contractor; and

.2 assignment is subject to the prior rights of the surety, if any, obligated under bond relating to the Contract.

When the Owner accepts the assignment of a subcontract agreement, the Owner assumes the Contractor's rights and obligations under the subcontract. The Contractor agrees to execute any and all other documents required to effect this assignment, which form of assignment shall include the indemnity of the Contractor against all claims of Subcontractors that arose prior to the date of assignment, regardless of whether such claims are regarding matters that arose prior to the date of assignment.

User Notes: (1363232823)

§ 5.4.2 Upon such assignment, if the Work has been suspended for more than 30 days, the Subcontractor's compensation shall be equitably adjusted for increases in cost resulting from the suspension.

§ 5.4.3 Upon assignment to the Owner under this Section 5.4, the Owner may further assign the subcontract to a successor contractor or other entity

§ 5.5 Payment of Subcontractors

§ 5.5.1 After payment to Contractor by the Owner, the Contractor shall pay any amounts due any Subcontractor, whether for labor performed or materials furnished, when such labor or material has been included in a requisition submitted by such Contractor and paid by Owner. Such payments shall be made within thirty (30) days after the Contractor receives payment from the Owner. The Contractor shall promptly give notice to the Owner of any claim or demand by a Subcontractor claiming that any amount is due to such Subcontractor or claiming any default by the Contractor in any of the Contractor's obligations to such Subcontractor.

§ 5.5.2 The Contractor shall include in each of the subcontracts a provision requiring each Subcontractor to pay any amounts due to any Sub-Subcontractors, whether for labor performed or materials furnished, within thirty (30) days after such Subcontractor receives a payment from the Contractor which encompasses labor or materials furnished by such Sub-subcontractor and a provision requiring each Subcontractor to promptly give notice to the Contractor of any claim or demand by a Sub-subcontractor claiming that any amount is due to such Sub-Subcontractor or claiming any default by such Subcontractor in any of its obligations to such Sub-subcontractor which notice the Contractor shall promptly relay to the Owner.

ARTICLE 6 CONSTRUCTION BY OWNER OR BY SEPARATE CONTRACTORS

§ 6.1 Owner's Right to Perform Construction and to Award Separate Contracts

§ 6.1.1 The term "Separate Contractor(s)" shall mean other contractors retained by the Owner under separate agreements. The Owner reserves the right to perform construction or operations related to the Project with the Owner's own forces, and with Separate Contractors retained under Conditions of the Contract substantially similar to those of this Contract, including those provisions of the Conditions of the Contract related to insurance and waiver of subrogation.

§ 6.1.2 When separate contracts are awarded for different portions of the Project or other construction or operations on the site, the term "Contractor" in the Contract Documents in each case shall mean the Contractor who executes each separate Owner-Contractor Agreement.

§ 6.1.3 The Owner shall provide for coordination of the activities of the Owner's own forces and of each Separate Contractor with the Work of the Contractor, who shall cooperate with them. The Contractor shall participate with any Separate Contractors and the Owner in reviewing their construction schedules. The Contractor shall make any revisions to its construction schedule deemed necessary after a joint review and mutual agreement. The construction schedules shall then constitute the schedules to be used by the Contractor, Separate Contractors, and the Owner until subsequently revised.

§ 6.1.4 Intentionally Omitted.

§ 6.2 Mutual Responsibility

§ 6.2.1 The Contractor shall afford the Owner and Separate Contractors reasonable opportunity for introduction and storage of their materials and equipment and performance of their activities and shall connect and coordinate the Contractor's construction and operations with theirs as required by the Contract Documents.

§ 6.2.2 If part of the Contractor's Work depends for proper execution or results upon construction or operations by the Owner or a Separate Contractor, the Contractor shall, prior to proceeding with that portion of the Work, promptly notify the Architect of apparent discrepancies or defects in the construction or operations by the Owner or Separate Contractor that would render it unsuitable for proper execution and results of the Contractor's Work. Failure of the Contractor to notify the Architect of apparent discrepancies or defects prior to proceeding with the Work shall constitute an acknowledgment that the Owner's or Separate Contractor's completed or partially completed construction is fit and proper to receive the Contractor's Work. The Contractor shall not be responsible for discrepancies or defects in the construction or operations by the Owner or Separate Contractor that are not apparent.

§ 6.2.3 The Contractor shall reimburse the Owner for costs the Owner incurs that are payable to a Separate Contractor because of the Contractor's delays, disruptions to the work of such separate contractor, improperly timed activities or defective construction. The Owner shall be responsible to the Contractor for costs the Contractor incurs because of a Separate Contractor's delays, disruptions to the Work, improperly timed activities, damage to the Work or defective construction.

§ 6.2.4 The Contractor shall promptly remedy damage that the Contractor wrongfully causes to completed or partially completed construction or to property of the Owner or Separate Contractor as provided in Section 10.2.5.

§ 6.2.5 The Owner and each Separate Contractor shall have the same responsibilities for cutting and patching as are described for the Contractor in Section 3.14.

§ 6.2.6 Upon the Owner's request, the Contractor shall defend any proceedings brought against the Owner by any separate contractor on account of any damage alleged to have been caused by the Contractor which arises from the Contractor's failure to comply with the terms and conditions of this Section 6.2.

§ 6.3 Owner's Right to Clean Up

If a dispute arises among the Contractor, Separate Contractors, and the Owner as to the responsibility under their respective contracts for maintaining the premises and surrounding area free from waste materials and rubbish, the Owner may clean up and the Architect will allocate the cost among those responsible.

ARTICLE 7 CHANGES IN THE WORK

§ 7.1 General

§ 7.1.1 Changes in the Work may be accomplished after execution of the Contract, and without invalidating the Contract, by Change Order, Construction Change Directive or order for a minor change in the Work, subject to the limitations stated in this Article 7 and elsewhere in the Contract Documents.

§ 7.1.2 A Change Order shall be based upon agreement among the Owner, Contractor, and Architect. A Construction Change Directive requires agreement by the Owner and Architect and may or may not be agreed to by the Contractor. An order for a minor change in the Work may be issued by the Architect alone.

§ 7.1.3 Changes in the Work shall be performed under applicable provisions of the Contract Documents. The Contractor shall proceed promptly with changes in the Work, unless otherwise provided in the Change Order, Construction Change Directive, or order for a minor change in the Work.

§ 7.2 Change Orders

§ 7.2.1 A Change Order is a written instrument prepared by the Architect and signed by the Owner, Contractor, and Architect stating their agreement upon all of the following:

.1 The change in the Work;
.2 The amount of the adjustment, if any, in the Contract Sum; and
.3 The extent of the adjustment, if any, in the Contract Time.

§ 7.2.2 A Change Order executed by the Owner and the Contractor shall constitute a final settlement of all matters relating to the subject matter of the Change Order including, without limitation, compensation to be paid in connection with any change in the Work required by the Change Order (provided that the Work that is the subject of such change is performed in a manner consistent with the provisions of the Contract Documents and the applicable Change Order), including but not limited to all direct and indirect costs, profit, overhead, extended overhead, loss of productivity and general conditions associated with such change, and any and all adjustments to the Contract Sum and to the Contract Time. In the event a Change Order affects an increase in the Contract Sum, Contractor shall include the work covered by such Change Order in Applications for Payment for such work as if the work were originally part of the Work as set forth in the Contract Documents.

§ 7.2.3 Notwithstanding anything to the contrary set forth in these General Conditions, if the Agreement sets forth the methodology for calculating adjustments in the Contract Sum associated with a change in the Work, and if, under the terms of the Contract Documents, an adjustment in the Contract Sum would be required, then the adjustment will be based on such methodology unless otherwise mutually agreed by the parties. This paragraph shall be applicable in the case of a change in the Work effected by a Change Order as well as a Construction Change Directive.

§ 7.2.4 Unless otherwise instructed by the Owner, Change Orders shall be prepared on the form AIA G-701.

§ 7.3 Construction Change Directives

§ 7.3.1 A Construction Change Directive is a written order prepared by the Architect and signed by the Owner and Architect, directing a change in the Work prior to agreement on adjustment, if any, in the Contract Sum or Contract Time, or both. The Owner may by Construction Change Directive, without invalidating the Contract, order changes in the Work within the general scope of the Contract consisting of additions, deletions, or other revisions, the Contract Sum and Contract Time being adjusted accordingly.

§ 7.3.2 A Construction Change Directive shall be used in the absence of total agreement on the terms of a Change Order.

§ 7.3.3 If the Construction Change Directive provides for an adjustment to the Contract Sum, the adjustment shall be based on one of the following methods as selected by the Architect and approved by the Owner:

.1 Mutual acceptance of a lump sum properly itemized and supported by sufficient substantiating data to permit evaluation;
.2 Unit prices stated in the Contract Documents or subsequently agreed upon;
.3 Cost to be determined in a manner agreed upon by the parties and a mutually acceptable fixed or percentage fee; or
.4 As provided in Section 7.3.4.

§ 7.3.4 If the Contractor does not respond promptly or disagrees with the method for adjustment in the Contract Sum, the Architect shall determine the adjustment on the basis of reasonable expenditures and savings of those performing the Work attributable to the change, including, in case of an increase in the Contract Sum, an amount for General Conditions Costs as provided by the A133, overhead and profit as set forth in the Agreement, or if no such amount is set forth in the Agreement, a reasonable amount. In such case, and also under Section 7.3.3.3, the Contractor shall keep and present, in such form as the Architect may prescribe, an itemized accounting together with appropriate supporting data. Unless otherwise provided in the Contract Documents, costs for the purposes of this Section 7.3.4 shall be limited to the Cost of the Work as defined by the Agreement, including without limitation the following:

.1 Costs of labor, including applicable payroll taxes, fringe benefits required by agreement or custom, workers' compensation insurance, and other employee costs approved by the Architect;
.2 Costs of materials, supplies, and equipment, including cost of transportation, whether incorporated or consumed;
.3 Rental costs of machinery and equipment, exclusive of hand tools, whether rented from the Contractor or others, provided, if rented from the Contractor, such rental and the rental rates have been approved by the Owner;
.4 Costs of premiums for all bonds and insurance, permit fees, and sales, use, or similar taxes, directly related to the change; and
.5 Costs of supervision and field office personnel directly attributable to the change.

The costs described in Section 7.3.4.1 through and including 7.3.4.5 shall not include any of the following:

.1 Salaries and other compensation of the Contractor's personnel stationed at the Contractor's principal office or offices other than the site office, except as otherwise allowed by the A133;
.2 Expenses of the Contractor's principal office and offices other than the site office;
.3 Overhead and general expenses, except as may be expressly included in this Section or the A133;
.4 The Contractor's capital expenses, including interest on the Contractor's capital employed for the Work;
.5 Costs due to the negligence or failure of the Contractor, Subcontractors, material or equipment suppliers or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable to fulfill a specific responsibility of the Contract Documents; or
.6 Any cost not described in this Section or the A133.

§ 7.3.5 If the Contractor disagrees with the adjustment in the Contract Time, the Contractor may make a Claim in accordance with applicable provisions of Article 15.

§ 7.3.6 Upon receipt of a Construction Change Directive, the Contractor shall promptly proceed with the change in the Work involved and advise the Architect of the Contractor's agreement or disagreement with the method, if any, provided in the Construction Change Directive for determining the proposed adjustment in the Contract Sum or Contract Time.

§ 7.3.7 A Construction Change Directive signed by the Contractor indicates the Contractor's agreement therewith, including adjustment in Contract Sum and Contract Time or the method for determining them. Such agreement shall be effective immediately and shall be recorded as a Change Order.

§ 7.3.8 The amount of credit to be allowed by the Contractor to the Owner for a deletion or change that results in a net decrease in the Contract Sum shall be actual net cost as confirmed by the Architect. When both additions and credits covering related Work or substitutions are involved in a change, the allowance for overhead and profit shall be figured on the basis of net increase, if any, with respect to that change.

§ 7.3.9 Pending final determination of the total cost of a Construction Change Directive to the Owner, the Contractor may request payment for Work completed under the Construction Change Directive in Applications for Payment. The Architect will make an interim determination for purposes of monthly certification for payment for those costs and certify for payment the actual costs incurred by the Contractor as a result of such Construction Change Directive: provided, however, to the extent such Construction Change Directive is made necessary by the act or omission of the Contractor or of anyone for whom the Contractor is responsible, the Architect shall certify for payment the amount, if any, that the Architect determines, in the Architect's professional judgment, to be necessary for the Contractor to continue the Work. The Architect's interim determination of cost shall adjust the Contract Sum on the same basis as a Change Order, subject to the right of either party to disagree and assert a Claim in accordance with Article 15.

§ 7.3.10 When the Owner and Contractor agree with a determination made by the Architect concerning the adjustments in the Contract Sum and Contract Time, or otherwise reach agreement upon the adjustments, such agreement shall be effective immediately and the Architect will prepare a Change Order. Change Orders may be issued for all or any part of a Construction Change Directive.

§ 7.4 Minor Changes in the Work

The Architect may order minor changes in the Work that are consistent with the intent of the Contract Documents and do not involve an adjustment in the Contract Sum or an extension of the Contract Time. The Architect's order for minor changes shall be in writing. If the Contractor believes that the proposed minor change in the Work will affect the Contract Sum or Contract Time, the Contractor shall notify the Architect and shall not proceed to implement the change in the Work. If the Contractor performs the Work set forth in the Architect's order for a minor change without prior notice to the Architect that such change will affect the Contract Sum or Contract Time, the Contractor waives any adjustment to the Contract Sum or extension of the Contract Time.

ARTICLE 8 TIME

§ 8.1 Definitions

§ 8.1.1 Unless otherwise provided, Contract Time is the period of time, including authorized adjustments, allotted in the Contract Documents for Substantial Completion of the Work.

§ 8.1.2 The date of commencement of the Work is the date established in the Agreement.

§ 8.1.3 The date of Substantial Completion is the date Substantial Completion is achieved in accordance with Section 9.8.

§ 8.1.4 The term "day" as used in the Contract Documents shall mean calendar day unless otherwise specifically defined.

§ 8.2 Progress and Completion

§ 8.2.1 Time limits stated in the Contract Documents applicable to the Substantial Completion of the new building and the Milestone dates are of the essence of the Contract. By executing the GMP Amendment, the Contractor confirms that the GMP Project Schedule is a reasonable period for performing the Work.

§ 8.2.2 The Contractor shall not knowingly, except by agreement or instruction of the Owner in writing, commence the Work prior to the effective date of insurance required to be furnished by the Contractor and Owner.

§ 8.2.3 The Contractor shall proceed expeditiously with adequate forces and shall achieve Substantial Completion within the GMP Project Schedule, as that may be amended in accordance with the Agreement.

§ 8.2.4 Accelerated GMP Project Schedule

§ 8.2.4.1 Although the RFP Construction Schedule is based on a twenty-seven month duration based on following overlapping phases: (a) Construction, 21 months; (b) Owner move-in and fixtures, furniture and equipment, 5 months; and Demolition and Site Work, 2 months, the Contractor acknowledges and agrees that it may be able to the reduce the duration of the Work: (i) by sequencing the demolition, sitework and closeout phase of the Work immediately after the completion of the Building Construction phase of the Work; and (ii) based on certain assumptions and clarifications set forth in **Attachment 2 to the Agreement** ("Accelerated Schedule").

§ 8.2.4.2 The Contractor further acknowledges and agrees that the Accelerated Schedule, which would result in a reduction of its General Conditions Cost, was a material inducement to the Owner's award of the Agreement.

§ 8.2.4.3 In accordance with said inducement, Contractor agrees that its GMP proposal shall, in addition to a GMP Project Schedule based on RFP Construction Schedule, include an Accelerated GMP Project Schedule proposal which shall be prepared in accordance with **Attachment 2** and designed to achieve the same magnitude of General Conditions Cost savings in its original Accelerated Schedule proposal.

§ 8.2.4.4 The Owner acknowledges and agrees that the Accelerated Schedule will require the Owner to comply with the noted assumptions set forth in **Attachment 2**, including without limitation the delivery date of the issued-for-construction documents. To the extent the assumptions or durations noted in **Attachment 2** require revision at time of the GMP proposal, the parties shall negotiate an alternative accelerated schedule proposal accordingly.

§ 8.3 Delays and Extensions of Time

§ 8.3.1 If the Contractor is delayed at any time in the commencement or progress of the Work by (1) an act or neglect of the Owner or Architect, of an employee of either, or of a Separate Contractor; (2) by changes ordered in the Work; (3) by labor disputes, fire, war, terrorism, incidence of disease or other illness that reaches outbreak, epidemic, endemic and/or pandemic proportions or other causes affecting the area in which the Project is located and/or the Contractor's labor and/or supply chain, unusual delay in deliveries, unavoidable casualties, adverse weather conditions documented in accordance with Section 15.1.6.2, or other causes beyond the Contractor's reasonable control; (4) by delay authorized by the Owner pending mediation and binding dispute resolution; or (5) by other causes that the Contractor asserts, and the Architect determines, justify delay, then the Contract Time shall be extended for such reasonable time, and the GMP may be adjusted for the additional Cost of Work caused by any such delay, as the Architect may determine, provided that (i) the Contractor notifies the Owner and Architect in writing of the alleged cause of such delay within ten (10) days after the Contractor became aware of the delay-precipitating event, and (ii) the Contractor demonstrates by a detailed and substantiated analysis the effects of the delay, if any, upon the construction schedule and Contract Time and GMP.

§ 8.3.2 Claims relating to time shall be made in accordance with applicable provisions of Article 15.

§ 8.3.3 This Section 8.3 does not preclude recovery of damages for delay by either party under other provisions of the Contract Documents.

ARTICLE 9 PAYMENTS AND COMPLETION

§ 9.1 Contract Sum

§ 9.1.1 The Contract Sum is stated in the Agreement and, including authorized adjustments, is the total amount payable by the Owner to the Contractor for performance of the Work under the Contract Documents.

§ 9.1.2 If unit prices are stated in the Contract Documents or subsequently agreed upon, and if quantities originally contemplated are materially changed so that application of such unit prices to the actual quantities causes substantial inequity to the Owner or Contractor, the applicable unit prices shall be equitably adjusted.

§ 9.2 Schedule of Values

Where the Contract is based on a stipulated sum or Guaranteed Maximum Price, the Contractor shall submit a schedule of values to the Architect before the first Application for Payment, allocating the entire Contract Sum to the various portions of the Work. The schedule of values shall be prepared in the form, and supported by the data to substantiate its accuracy, required by the Architect. This schedule, upon the approval of the Owner and the Architect, shall be used as a basis for reviewing the Contractor's Applications for Payment. Any changes to the schedule of values shall be submitted to the Architect and supported by such data to substantiate its accuracy as the Architect may require, and unless objected to by the Architect, shall be used as a basis for reviewing the Contractor's subsequent Applications for Payment.

§ 9.3 Applications for Payment

§ 9.3.1 At least ten days before the date established for each progress payment, the Contractor shall submit to the Architect an itemized Application for Payment prepared in accordance with Contract Documents and the schedule of values, if required under Section 9.2, for completed portions of the Work. The application shall be notarized, if required, and supported by all data substantiating the Contractor's right to payment that the Owner, the Architect, or any person or entity providing funding for the Project, may require, such as copies of requisitions, and releases and waivers of liens from Subcontractors and suppliers, and shall reflect retainage if provided for in the Contract Documents. All Applications for Payment shall be in the form and contain the information and supporting documentation as required in this Section 9.3 and such additional information and documentation and as may be reasonably requested by the Owner.

§ 9.3.1.1 As provided in Section 7.3.9, such applications may include requests for payment on account of changes in the Work that have been properly authorized by Construction Change Directives, or by interim determinations of the Architect, but not yet included in Change Orders.

§ 9.3.1.2 Applications for Payment shall not include requests for payment for portions of the Work for which the Contractor does not intend to pay a Subcontractor or supplier unless such Work has been performed by others whom the Contractor intends to pay.

§ 9.3.2 Unless otherwise provided in the Contract Documents or prohibited by any person or entity providing funding for the Project, payments shall be made on account of materials and equipment delivered and suitably stored at the site for subsequent incorporation in the Work. If approved in advance by the Owner and not prohibited by any person or entity providing funding for the Project, payment may similarly be made for materials and equipment suitably stored off the site at a location agreed upon in writing. Payment for materials and equipment stored on or off the site shall be conditioned upon compliance by the Contractor with procedures satisfactory to the Owner to establish the Owner's title to such materials and equipment or otherwise protect the Owner's interest, and shall include the costs of applicable insurance, storage, and transportation to the site, for such materials and equipment stored off the site.

§ 9.3.3 The Contractor warrants that title to all Work covered by an Application for Payment will pass to the Owner no later than the time of payment. The Contractor further warrants that upon submittal of an Application for Payment all Work for which Certificates for Payment have been previously issued and payments received from the Owner shall, to the best of the Contractor's knowledge, information, and belief, be free and clear of liens, claims, security interests, or encumbrances, in favor of the Contractor, Subcontractors, suppliers, or other persons or entities that provided labor, materials, and equipment relating to the Work.

§ 9.3.3.1 The Contractor further expressly undertakes to defend the Owner, at the Contractor's sole cost and expense, against any actions, lawsuits, or proceedings brought against Owner as a result of liens filed against the Work, the Project site and any improvements thereon (referred to collectively as "Liens" in this Section 9.3.3), by the Contractor, any Subcontractor, Sub-subcontractor or anyone claiming by, through or under them. The Contractor hereby agrees to indemnify and hold Owner harmless against any such Liens or claims of Liens and agrees to pay any judgment or Lien resulting from any such actions, lawsuits or proceedings. The Contractor's obligations under this Section 9.3.3 are conditioned upon Owner having fulfilled its payment obligations to the Contractor with respect to the Work that is the subject of the Lien or claim and for which indemnification is sought.

§ 9.3.3.2 Commencing with the second Application for Payment, and continuing with each Application for Payment submitted thereafter, the Contractor shall furnish to the Owner a properly executed release and waiver of mechanics

liens from the Contractor and each Subcontractor and material supplier whose Work was included on the previous Application for Payment for which payment by Owner was made to the Contractor.

§ 9.3.3 Applications for Payment, and invoices in support of the same, shall clearly distinguish between amounts charged for labor and amounts charged for materials.

§ 9.3.4 Unless otherwise required by the Owner, Applications for Payment shall be on AIA documents G702 and G703.

§ 9.4 Certificates for Payment

§ 9.4.1 The Architect will, within seven days after receipt of the Contractor's Application for Payment, either (1) issue to the Owner a Certificate for Payment in the full amount of the Application for Payment, with a copy to the Contractor; or (2) issue to the Owner a Certificate for Payment for such amount as the Architect determines is properly due, and notify the Contractor and Owner of the Architect's reasons for withholding certification in part as provided in Section 9.5.1; or (3) withhold certification of the entire Application for Payment, and notify the Contractor and Owner of the Architect's reason for withholding certification in whole as provided in Section 9.5.1.

§ 9.4.2 The issuance of a Certificate for Payment will constitute a representation by the Architect to the Owner, based on the Architect's evaluation of the Work and the data in the Application for Payment, that, to the best of the Architect's knowledge, information, and belief, the Work has progressed to the point indicated, the quality of the Work is in accordance with the Contract Documents, and, as a representation made by the Architect solely to the Owner, that the Contractor is entitled to payment in the amount certified. The foregoing representations are subject to an evaluation of the Work for conformance with the Contract Documents upon Substantial Completion, to results of subsequent tests and inspections, to correction of minor deviations from the Contract Documents prior to completion, and to specific qualifications expressed by the Architect. However, the issuance of a Certificate for Payment will not be a representation that the Architect has (1) made exhaustive or continuous on-site inspections to check the quality or quantity of the Work; (2) reviewed construction means, methods, techniques, sequences, or procedures; (3) reviewed copies of requisitions received from Subcontractors and suppliers and other data requested by the Owner to substantiate the Contractor's right to payment; or (4) made examination to ascertain how or for what purpose the Contractor has used money previously paid on account of the Contract Sum.

§ 9.4.3 Notwithstanding anything to the contrary, issuance of a Certificate for Payment by the Architect is a recommendation only and payment to the Contractor of amounts certified in a Certificate for Payment is subject to the Owner's approval.

§ 9.4.4 Certificates for Payment shall be on AIA documents G702 and G703.

§ 9.5 Decisions to Withhold Certification

§ 9.5.1 The Architect may withhold a Certificate for Payment in whole or in part, to the extent reasonably necessary to protect the Owner, if in the Architect's opinion the representations to the Owner required by Section 9.4.2 cannot be made. If the Architect is unable to certify payment in the amount of the Application, the Architect will notify the Contractor and Owner as provided in Section 9.4.1. If the Contractor and Architect cannot agree on a revised amount, the Architect will promptly issue a Certificate for Payment for the amount for which the Architect is able to make such representations to the Owner. The Architect may also withhold a Certificate for Payment or, because of subsequently discovered evidence, may nullify the whole or a part of a Certificate for Payment previously issued, to such extent as may be necessary in the Architect's opinion to protect the Owner from loss for which the Contractor is responsible, including loss resulting from acts and omissions described in Section 3.3.2, because of

.1 defective Work not remedied;
.2 uninsured third-party claims filed or reasonable evidence indicating probable filing of such claims, unless security acceptable to the Owner is provided by the Contractor;
.3 failure of the Contractor to make payments properly to Subcontractors or suppliers for labor, materials or equipment;
.4 reasonable evidence that the Work cannot be completed for the unpaid balance of the Contract Sum;
.5 uninsured property damage to the Owner or a Separate Contractor (excluding the Work);
.6 reasonable evidence that the Work will not be completed within the Contract Time, and that the unpaid balance would not be adequate to cover actual or liquidated damages for the anticipated delay; or
.7 repeated failure to carry out the Work in accordance with the Contract Documents.

§ 9.5.2 When either party disputes the Architect's decision regarding a Certificate for Payment under Section 9.5.1, in whole or in part, that party may submit a Claim in accordance with Article 15.

§ 9.5.3 When the reasons for withholding a Certificate for Payment are removed, the Certificate for Payment will be issued as regards amounts previously withheld. The Owner shall not be deemed to be in default by reason of withholding payment while any of the above grounds remained uncured, nor shall any interest accrue or be payable with respect to any payments so withheld.

§ 9.5.4 If the Architect withholds certification for payment under Section 9.5.1.3, the Owner may, at its sole option, issue joint checks to the Contractor and to any Subcontractor or supplier to whom the Contractor failed to make payment for Work properly performed or material or equipment suitably delivered. If the Owner makes payments by joint check, the Owner shall notify the Architect and the Contractor shall reflect such payment on its next Application for Payment.

§ 9.6 Progress Payments

§ 9.6.1 After the Architect has issued a Certificate for Payment, the Owner shall make payment in the manner and within the time provided in the Contract Documents and shall so notify the Architect.

§ 9.6.2 The Contractor shall pay each Subcontractor, no later than seven days after receipt of payment from the Owner, the amount to which the Subcontractor is entitled, reflecting percentages actually retained from payments to the Contractor on account of the Subcontractor's portion of the Work. The Contractor shall, by appropriate agreement with each Subcontractor, require each Subcontractor to make payments to Sub-subcontractors in a similar manner.

§ 9.6.3 The Architect will, on request, furnish to a Subcontractor, if practicable, information regarding percentages of completion or amounts applied for by the Contractor and action taken thereon by the Architect and Owner on account of portions of the Work done by such Subcontractor.

§ 9.6.4 The Owner has the right to request written evidence from the Contractor that the Contractor has properly paid Subcontractors and suppliers amounts paid by the Owner to the Contractor for subcontracted Work. If the Contractor fails to furnish such evidence within seven days, the Owner shall have the right to contact Subcontractors and suppliers to ascertain whether they have been properly paid. Neither the Owner nor Architect shall have an obligation to pay, or to see to the payment of money to, a Subcontractor or supplier, except as may otherwise be required by law.

§ 9.6.5 The Contractor's payments to suppliers shall be treated in a manner similar to that provided in Sections 9.6.2, 9.6.3 and 9.6.4.

§ 9.6.6 A Certificate for Payment, a progress payment, or partial or entire use or occupancy of the Project by the Owner shall not constitute acceptance of Work not in accordance with the Contract Documents.

§ 9.6.7 Unless the Contractor provides the Owner with a payment bond in the full penal sum of the Contract Sum, payments received by the Contractor for Work properly performed by Subcontractors or provided by suppliers shall be held by the Contractor for those Subcontractors or suppliers who performed Work or furnished materials, or both, under contract with the Contractor for which payment was made by the Owner. Nothing contained herein shall require money to be placed in a separate account and not commingled with money of the Contractor, create any fiduciary liability or tort liability on the part of the Contractor for breach of trust, or entitle any person or entity to an award of punitive damages against the Contractor for breach of the requirements of this provision.

§ 9.6.8 Provided the Owner has fulfilled its payment obligations under the Contract Documents, the Contractor shall defend and indemnify the Owner from all loss, liability, damage or expense, including reasonable attorney's fees and litigation expenses, arising out of any lien claim or other claim for payment by any Subcontractor or supplier of any tier. Upon receipt of notice of a lien claim or other claim for payment, the Owner shall notify the Contractor. If approved by the applicable court, when required, the Contractor may substitute a surety bond for the property against which the lien or other claim for payment has been asserted.

§ 9.6.9 Any provision in the Contract Documents to the contrary notwithstanding, the Owner shall not be obligated to make payment to the Contractor hereunder to the extent that the Contractor has not performed the Work or supplied the materials, for which payment is requested, in accordance with the Contract Documents.

§ 9.7 Failure of Payment

If the Architect does not issue a Certificate for Payment as required by the Contract Documents, through no fault of the Contractor, within ten (10) days after receipt of the Contractor's Application for Payment, or if the Owner does not pay the Contractor within seven days after the date established in the Contract Documents, the amount certified by the Architect or awarded by binding dispute resolution, then the Contractor may, upon ten (10) additional days' notice to the Owner and Architect, stop the Work until payment of the amount owing has been received. The Contract Time shall be extended appropriately, and the Contract Sum shall be increased by the amount of the Contractor's reasonable costs of shutdown, delay and start-up, plus interest as provided for in the Contract Documents.

§ 9.8 Substantial Completion

§ 9.8.1 Substantial Completion is the stage in the progress of the Work when the Work or designated portion thereof is sufficiently complete in accordance with the Contract Documents so that the Owner can occupy or utilize the Work for its intended use. Substantial Completion shall not occur until: (i) the Owner's receipt of certification by the Architect that the Work is Substantially Complete in the form of a Certificate of Substantial Completion; and (ii) the Owner's receipt of a final and unconditional or a Temporary Certificate of Occupancy from the governmental authorities having jurisdiction that the Work has been completed in accordance with Applicable Laws. Notwithstanding the foregoing, if, but for the failure of the building department or governmental authorities having jurisdiction to timely issue the temporary certificate of occupancy for the Project ("Administrative Delay"), the Contractor would have been deemed to have achieved Substantial Completion of the Work within the Contract Time under the terms and conditions of the Contract Documents, the Contractor shall be entitled to an extension of the Contract Time equal to the duration of such Administrative Delay.

§ 9.8.2 When the Contractor considers that the Work, or a portion thereof which the Owner agrees to accept separately, is substantially complete, the Contractor shall prepare and submit to the Architect a comprehensive list of items to be completed or corrected prior to final payment. Failure to include an item on such list does not alter the responsibility of the Contractor to complete all Work in accordance with the Contract Documents.

§ 9.8.3 Upon receipt of the Contractor's list, the Architect will make an inspection to determine whether the Work or designated portion thereof is substantially complete. If the Architect's inspection discloses any item, whether or not included on the Contractor's list, which is not sufficiently complete in accordance with the Contract Documents so that the Owner can occupy or utilize the Work or designated portion thereof for its intended use, the Contractor shall, before issuance of the Certificate of Substantial Completion, complete or correct such item upon notification by the Architect. In such case, the Contractor shall then submit a request for another inspection by the Architect to determine Substantial Completion.

§ 9.8.4 When the Work or designated portion thereof is substantially complete, the Architect will prepare a Certificate of Substantial Completion that shall establish the date of Substantial Completion; establish responsibilities of the Owner and Contractor for security, maintenance, heat, utilities, damage to the Work and insurance; and fix the time within which the Contractor shall finish all items on the list accompanying the Certificate. Warranties required by the Contract Documents shall commence on the date of Substantial Completion of the Work or designated portion thereof unless otherwise provided in the Certificate of Substantial Completion.

§ 9.8.5 The Certificate of Substantial Completion shall be submitted to the Owner and Contractor for their written acceptance of responsibilities assigned to them in the Certificate. Upon such acceptance, and consent of surety if any, the Owner shall make payment of retainage applying to the Work or designated portion thereof. Such payment shall be adjusted for Work that is incomplete or not in accordance with the requirements of the Contract Documents.

§ 9.9 Partial Occupancy or Use

§ 9.9.1 The Owner may occupy or use any completed or partially completed portion of the Work at any stage when such portion is designated by separate agreement with the Contractor, provided such occupancy or use is consented to by the insurer and authorized by public authorities having jurisdiction over the Project. Such partial occupancy or use may commence whether or not the portion is substantially complete, provided the Owner and Contractor have accepted in writing the responsibilities assigned to each of them for payments, retainage, if any, security, maintenance,

(1363232823)

heat, utilities, damage to the Work and insurance, and have agreed in writing concerning the period for correction of the Work and commencement of warranties required by the Contract Documents. When the Contractor considers a portion substantially complete, the Contractor shall prepare and submit a list to the Architect as provided under Section 9.8.2. Consent of the Contractor to partial occupancy or use shall not be unreasonably withheld. The stage of the progress of the Work shall be determined by written agreement between the Owner and Contractor or, if no agreement is reached, by decision of the Architect.

§ 9.9.2 Immediately prior to such partial occupancy or use, the Owner, Contractor, and Architect shall jointly inspect the area to be occupied or portion of the Work to be used in order to determine and record the condition of the Work.

§ 9.9.3 Unless otherwise agreed upon, partial occupancy or use of a portion or portions of the Work shall not constitute acceptance of Work not complying with the requirements of the Contract Documents.

§ 9.10 Final Completion and Final Payment

§ 9.10.1 Upon receipt of the Contractor's notice that the Work is ready for final inspection and acceptance and upon receipt of a final Application for Payment, the Architect will promptly make such inspection. When the Architect finds the Work acceptable under the Contract Documents and the Contract fully performed, the Architect will promptly issue a final Certificate for Payment stating that to the best of the Architect's knowledge, information and belief, and on the basis of the Architect's on-site visits and inspections, the Work has been completed in accordance with the Contract Documents and that the entire balance found to be due the Contractor and noted in the final Certificate is due and payable. The Architect's final Certificate for Payment will constitute a further representation that conditions listed in Section 9.10.2 as precedent to the Contractor's being entitled to final payment have been fulfilled. All warranties and guarantees required under or pursuant to the Contract Documents not previously delivered shall be assembled and delivered by the Contractor to the Owner and Architect as part of the final Application for Payment. The final Certificate for Payment will not be issued by the Architect until all warranties and guarantees and all other close-out deliverables (including those set forth in Section 9.10.2 below) have been received and accepted by the Owner.

§ 9.10.2 Neither final payment nor any remaining retained percentage shall become due until the Contractor submits to the Architect (1) an affidavit that payrolls, bills for materials and equipment, and other indebtedness connected with the Work for which the Owner or the Owner's property might be responsible or encumbered (less amounts withheld by Owner) have been paid or otherwise satisfied, (2) a certificate evidencing that insurance required by the Contract Documents to remain in force after final payment is currently in effect, (3) a written statement that the Contractor knows of no reason that the insurance will not be renewable to cover the period required by the Contract Documents, (4) consent of surety, if any, to final payment, (5) documentation of any special warranties, such as manufacturers' warranties or specific Subcontractor warranties, and (6) if required by the Owner, other data establishing payment or satisfaction of obligations, such as receipts and releases and waivers of mechanic's liens, claims, security interests, or other encumbrances arising out of the Contract, to the extent and in such form as may be designated by the Owner. If a Subcontractor refuses to furnish a release or waiver required by the Owner, the Contractor shall furnish a bond satisfactory to the Owner to indemnify the Owner against such lien, claim, security interest, or encumbrance. If no such bond is provided, the Owner may, without limiting its remedies under law, in equity, or under the Contract Documents, withhold the portion of final payment claimed to be due by the relevant Subcontractor or supplier until such lien is no longer a viable encumbrance. The Contractor shall refund to the Owner all money that the Owner may be compelled to pay in discharging the lien, claim, security interest, or encumbrance, including all costs and reasonable attorneys' fees.

§ 9.10.3 If, after Substantial Completion of the Work, final completion thereof is materially delayed through no fault of the Contractor or by issuance of Change Orders affecting final completion, and the Architect so confirms, the Owner shall, upon application by the Contractor and certification by the Architect, and without terminating the Contract, make payment of the balance due for that portion of the Work fully completed, corrected, and accepted. If the remaining balance for Work not fully completed or corrected is less than retainage stipulated in the Contract Documents, and if bonds have been furnished, the written consent of the surety to payment of the balance due for that portion of the Work fully completed and accepted shall be submitted by the Contractor to the Architect prior to certification of such payment. Such payment shall be made under terms and conditions governing final payment, except that it shall not constitute a waiver of Claims.

§ 9.10.4

Intentionally Omitted.

§ 9.10.5 Acceptance of final payment by the Contractor, a Subcontractor, or a supplier, shall constitute a waiver of claims by that payee except those previously made in writing and identified by that payee as unsettled at the time of final Application for Payment.

ARTICLE 10 PROTECTION OF PERSONS AND PROPERTY

§ 10.1 Safety Precautions and Programs

The Contractor shall be responsible for initiating, maintaining, and supervising all safety precautions and programs in connection with the performance of the Contract.

§ 10.2 Safety of Persons and Property

§ 10.2.1 The Contractor shall take reasonable precautions for safety of, and shall provide reasonable protection to prevent damage, injury, or loss to

.1 employees on the Work and other persons who may be affected thereby;

.2 the Work and materials and equipment to be incorporated therein, whether in storage on or off the site, under care, custody, or control of the Contractor, a Subcontractor, or a Sub-subcontractor; and

.3 other property at the site or adjacent thereto, such as trees, shrubs, lawns, walks, pavements, roadways, structures, and utilities not designated for removal, relocation, or replacement in the course of construction.

§ 10.2.2 The Contractor shall comply with, and give notices required by, Applicable Law bearing on safety of persons or property or their protection from damage, injury, or loss.

§ 10.2.3 The Contractor shall implement, erect, and maintain, as required by existing conditions and performance of the Contract, reasonable safeguards for safety and protection, including posting danger signs and other warnings against hazards; promulgating safety regulations; and notifying the owners and users of adjacent sites and utilities of the safeguards. The Contractor shall also be responsible for all measures necessary to protect any property adjacent to the Project and improvements thereon. Any damage to such property or improvements shall be promptly repaired by the Contractor at its cost and expense.

§ 10.2.4 When use or storage of explosives or other hazardous materials or equipment, or unusual methods are necessary for execution of the Work, the Contractor shall exercise utmost care and carry on such activities under supervision of properly qualified personnel.

§ 10.2.4.1 When there are indications that the use of explosives or other hazardous materials, equipment or unusual methods is necessary for execution of the Work, the Contractor shall give the Owner and Architect reasonable advance notice of the conditions.

§ 10.2.4.2 The Contractor shall be solely responsible for the handling, storage and use of explosive or other hazardous materials when their use is permitted.

§ 10.2.4.3 The Contractor shall not bring explosives onto the Project site or use such in the Work without the prior written permission of the Architect and the Owner. For such use, the Contractor shall obtain necessary permits with copies to the Architect and the Owner. The Contractor shall furnish the Owner and Architect with certificates indicating proper and adequate insurance.

§ 10.2.5 The Contractor shall promptly remedy damage and loss (other than damage or loss insured under property insurance required by the Contract Documents) to property referred to in Sections 10.2.1.2 and 10.2.1.3 caused in whole or in part by the Contractor, a Subcontractor, a Sub-subcontractor, or anyone directly or indirectly employed by any of them, or by anyone for whose acts they may be liable and for which the Contractor is responsible under Sections 10.2.1.2 and 10.2.1.3. The Contractor may make a Claim for the cost to remedy the damage or loss to the extent such damage or loss is attributable to acts or omissions of the Owner or Architect or anyone directly or indirectly employed by either of them, or by anyone for whose acts either of them may be liable, and not attributable to the fault or negligence of the Contractor. The foregoing obligations of the Contractor are separate from, in addition to, and are not to be construed as included as a part of the Contractor's obligations under Section 3.18.

§ 10.2.6 The Contractor shall designate a responsible member of the Contractor's organization at the site whose duty shall be the prevention of accidents. This person shall be the Contractor's superintendent unless otherwise designated by the Contractor in writing to the Owner and Architect.

§ 10.2.7 The Contractor shall not permit any part of the construction or site to be loaded so as to cause damage or create an unsafe condition.

§ 10.2.8 Injury or Damage to Person or Property
If either party suffers injury or damage to person or property because of an act or omission of the other party, or of others for whose acts such party is legally responsible, notice of the injury or damage, whether or not insured, shall be given to the other party within a reasonable time not exceeding 21 days after discovery. The notice shall provide sufficient detail to enable the other party to investigate the matter.

§ 10.2.9 In the event the Contractor identifies activities or conditions during performance of the Work or at the Project, which, in the Contractor's good faith opinion, pose an unreasonable risk of bodily injury or property damage, whether immediate or in the future, the Contractor shall have the right to immediately take steps to protect its personnel and Subcontractors and stop Work and remove its personnel from the affected area.

§ 10.2.10 The Contractor shall at all times provide protection against weather (rain, wind, storms or heat) so as to maintain all Work, materials, apparatus and fixtures free from damage. At the end of the day's work, all new Work likely to be damaged shall be reasonably protected against such weather.

§ 10.2.11 The Contractor shall provide adequate fire protection for all operations associated with the Work, and such protection must meet all applicable federal (including OSHA), State and municipal regulations.

§ 10.2.12 The Contractor shall remove and replace with new work, at the Contractor's own expense, any Work damaged by failure to provide protection pursuant to Sections 10.2.10 and 10.2.11, provided that this obligation shall not prohibit the Contractor's right to submit a claim with the Project's Builder's Risk or property insurance.

§ 10.2.13 The Contractor shall be responsible, to the extent not covered by insurance, for damage, loss or liability due to theft or vandalism to the Work and stored materials when work is not in progress at night, on weekends or holidays.

§ 10.2.14 The Contractor shall protect and prevent damage to all unfinished phases of the Work.

§ 10.2.15 SECURING THE SITE
The Contractor is responsible for securing, and preventing access by unauthorized individuals to, the Project site from such date as the Contractor, it subcontractors, consultants, or agents commence the Work until the date of Final Completion, unless the Owner and Contractor agree in writing to an earlier date.

§ 10.3 Hazardous Materials and Substances
§ 10.3.1 The Contractor is responsible for compliance with any requirements included in the Contract Documents regarding any material, substance, chemical, waste, product, derivative, compound, mixture, solid, liquid, mineral or gas, whether naturally occurring or manmade, that is hazardous, toxic, or words of similar import or regulatory effect, and any petroleum or petroleum-derived products, radon, radioactive materials or wastes, asbestos in any form, lead or lead-containing materials, urea formaldehyde foam insulation, and polychlorinated biphenyls (collectively, "Hazardous Materials"). If the Contractor believes its Work will disturb or otherwise implicate any actual or suspected Hazardous Material or encounters a Hazardous Material not addressed in the Contract Documents, the Contractor shall not disturb any such Hazardous Material, immediately report the condition to the Owner and the Architect in writing and take all necessary precautions to prevent release of and exposure to the Hazardous Materials and the Contractor shall immediately report the condition to the Owner and the Architect in writing and take all necessary precautions to prevent release of and exposure to the Hazardous Materials and foreseeable bodily injury or death to persons resulting from such Hazardous Material. If such reasonable precautions will be inadequate to prevent release of and exposure to Hazardous Materials, or foreseeable bodily injury and death, the Contractor shall, upon recognizing the condition, immediately stop Work in the affected area.

§ 10.3.2 Upon receipt of the Contractor's notice pursuant to Section 10.3.1, of the existence of actual or suspect Hazardous Materials not addressed in the Contract Documents, the Owner shall obtain the services of a licensed

(1363232823)

laboratory to verify the presence or absence of the Hazardous Material reported by the Contractor and, in the event such Hazardous Material is found to be present, to cause it to be rendered harmless or otherwise abated. Unless otherwise required by the Contract Documents, the Owner shall furnish in writing to the Contractor and Architect the names and qualifications of persons or entities who are to perform tests verifying the presence or absence of the material or substance or who are to perform the task of removal or safe containment of the material or substance. The Contractor and the Architect will promptly reply to the Owner in writing stating whether or not either has reasonable objection to the persons or entities proposed by the Owner. If either the Contractor or Architect has an objection to a person or entity proposed by the Owner, the Owner shall propose another to whom the Contractor and the Architect have no reasonable objection. When the Hazardous Material has been rendered harmless and/or otherwise abated in accordance with all Applicable Laws, Work in the affected area shall resume upon written agreement of the Owner and Contractor. By Change Order, the Contract Time shall be extended appropriately and the Contract Sum shall be increased by the amount of the Contractor's reasonable additional costs of shutdown, delay, and start-up, except to the extent that the Hazardous Material was exacerbated due to the negligence, willful or intentional misconduct, or breach of contract of the Contractor.

§ 10.3.3 To the fullest extent permitted by law, the Owner shall indemnify and hold harmless the Contractor, Subcontractors, Architect, Architect's consultants, and agents and employees of any of them from and against claims, damages, losses, and expenses, including but not limited to attorneys' fees, arising out of or resulting from performance of the Work in the affected area related to the presence of any actual or suspected Hazardous Materials if in fact such Hazardous Material presents the risk of bodily injury or death as described in Section 10.3.1 and has not been rendered harmless or otherwise abated, provided that such claim, damage, loss, or expense is attributable to bodily injury, sickness, disease or death, or to injury to or destruction of tangible property (other than the Work itself), except to the extent that such damage, loss, or expense was caused by, or resulted from the negligence of, or the intentional or willful misconduct or breach of contract by the party seeking indemnity, or the negligence of, or intentional or willful misconduct or breach of contract by such party's agents (including Subcontractors) or employees.

§ 10.3.4 The Owner shall not be responsible under this Section 10.3 for hazardous materials or substances the Contractor, any Subcontractor or any materialman or supplier, or any entity for whom any of them is responsible, brings to the site unless such materials or substances are required by the Contract Documents. The Owner shall be responsible for hazardous materials or substances required by the Contract Documents, except to the extent of the Contractor's fault or negligence in the use and handling of such materials or substances or its failure to comply with the Contract Documents. The Contractor agrees not to use any fill or other materials to be incorporated into the Work which are hazardous, toxic or comprised of any items that are hazardous or toxic except to the extent required by the Contract Documents.

§ 10.3.5 To the fullest extent permitted by law, the Contractor shall indemnify, defend and hold harmless the Owner, the Owner's Designated Representative, and the directors, officers, owners, agents and employees of any of them, as well as the Building Committee appointed by the Owner for the Project, and the fee owner of the Project site (if other than the Owner) against claims, damages, losses and expenses, including but not limited to reasonable attorney's fees, resulting from an actual or suspect Hazardous Material or which the Contractor or its agents (including Subcontractors) or employees brings to the site and improperly handles, or from the Contractor's failure to perform its obligations under Section 10.3.1, except to the extent that such damage, loss or expense was caused by, or resulting from the negligence of the indemnitee.

§ 10.3.6 If, without negligence or fault on the part of the Contractor or any party for whose acts the Contractor is responsible, the Contractor is held liable by a government agency for the cost of remediation of a hazardous material or substance solely by reason of properly performing Work as required by the Contract Documents, the Owner shall reimburse the Contractor for all cost and expense thereby incurred.

§ 10.3.7 The Contractor shall perform all required procedures necessary to ensure that there will be no actual or threatened release, discharge, spillage, uncontrolled loss, seepage or filtration (each a "Release") of any Hazardous Material on the site caused by its operations. The Contractor is responsible for any and all costs and liabilities associated with the investigation and remediation of any such Release, or as required by regulating authorities having jurisdiction under any of the Applicable Laws, and holds the Owner, its employees and agents, and the fee owner of the Project site (if other than the Owner), harmless against any current or future liabilities resulting from such incidents.

§ 10.3.8 All material and equipment furnished under the Contract Documents shall be free of asbestos, lead based paint, and PCBs. Unless otherwise specified in the Contract Documents, any material or equipment containing these, and any other Hazardous Materials shall be considered defective and shall be removed by the Contractor at the Contractor's sole expense.

§ 10.3.9 The Contractor, when it will be providing, using, storing, delivering or disposing of any toxic, hazardous or potentially dangerous materials, shall advise in writing, and receive the written approval of, the Owner of the use of such hazardous materials in advance of conducting any such Work and the Contractor is responsible for protecting its own employees, those of the Owner, and all of its employees and agents from the hazards associated with such materials. The Contractor shall furnish written directions, precautions or training, provided or made available from the supplier of the materials, or other acceptable source, for use by all persons who may be subjected to the hazard. The Contractor shall comply with all Applicable Laws. The Contractor shall dispose of any hazardous or toxic substances in accordance with all Applicable Laws, including E.P.A. and D.O.T. regulations and requirements. The Contractor shall perform all required procedures necessary to ensure that there will be no discharge, spillage, uncontrolled loss, seepage or filtration of any hazardous or toxic waste on the site caused by its operations. The Contractor is responsible for any and all costs and liabilities associated with the clean-up of any such spillage, etc., or as required by regulating authorities having jurisdiction, and holds the Owner and its employees and agents harmless against any current or future liabilities resulting from such incidents.

§ 10.4 Emergencies

In an emergency affecting safety of persons or property, during which it is infeasible for the Contractor to consult with the Owner and/or Architect, the Contractor shall act, at the Contractor's discretion, to prevent threatened damage, injury, or loss. Additional compensation or extension of time claimed by the Contractor on account of an emergency shall be determined as provided in Article 15 and Article 7. The Contractor shall promptly notify insurers as applicable, and the Architect and the Owner of the nature of the emergency. Immediately thereafter, the Contractor shall submit to the Architect and the Owner a written report including description of circumstances of the emergency and details of actions taken.

ARTICLE 11 INSURANCE AND BONDS

§ 11.1 Contractor's Insurance and Bonds

§ 11.1.1 The Contractor shall purchase and maintain insurance of the types and limits of liability, containing the endorsements, and subject to the terms and conditions, as described in the Agreement, Exhibit B (Insurance and Bonds) or elsewhere in the Contract Documents. The Contractor shall purchase and maintain the required insurance from an insurance company or insurance companies lawfully authorized to issue insurance in the jurisdiction where the Project is located. The Owner shall be named as additional insureds under the Contractor's commercial general liability policy or as otherwise described in the Contract Documents.

§ 11.1.2 The Contractor shall provide surety bonds of the types, for such penal sums, and subject to such terms and conditions as required by the Contract Documents. The Contractor shall purchase and maintain the required bonds from a company or companies lawfully authorized to issue surety bonds in the jurisdiction where the Project is located.

§ 11.1.3 Upon the request of any person or entity appearing to be a potential beneficiary of bonds covering payment of obligations arising under the Contract, the Contractor shall promptly furnish a copy of the bonds or shall authorize a copy to be furnished.

§ 11.1.4 Notice of Cancellation or Expiration of Contractor's Required Insurance. Within three (3) business days of the date the Contractor becomes aware of an impending or actual cancellation or expiration of any insurance required by the Contract Documents, the Contractor shall provide notice to the Owner of such impending or actual cancellation or expiration. Upon receipt of notice from the Contractor, the Owner shall, unless the lapse in coverage arises from an act or omission of the Owner, have the right to stop the Work until the lapse in coverage has been cured by the procurement of replacement coverage by the Contractor. The furnishing of notice by the Contractor shall not relieve the Contractor of any contractual obligation to provide any required coverage.

§ 11.2 Owner's Insurance

§ 11.2.1 The Owner shall purchase and maintain insurance of the types and limits of liability, containing the endorsements, and subject to the terms and conditions, as described in the Agreement or elsewhere in the Contract

Documents. The Owner shall purchase and maintain the required insurance from an insurance company or insurance companies lawfully authorized to issue insurance in the jurisdiction where the Project is located.

§ 11.2.2 Failure to Purchase Required Property Insurance. If the Owner fails to purchase and maintain the required property insurance, with all of the coverages and in the amounts described in the Agreement or elsewhere in the Contract Documents, the Owner shall inform the Contractor in writing prior to commencement of the Work. Upon receipt of notice from the Owner, the Contractor may delay commencement of the Work and may obtain insurance that will protect the interests of the Contractor, Subcontractors, and Sub-Subcontractors in the Work. When the failure to provide coverage has been cured or resolved, the Contract Sum and Contract Time shall be equitably adjusted. In the event the Owner fails to procure coverage, the Owner waives all rights against the Contractor, Subcontractors, and Sub-subcontractors to the extent the loss to the Owner would have been covered by the insurance to have been procured by the Owner. The cost of the insurance shall be charged to the Owner by a Change Order. If the Owner does not provide written notice, and the Contractor is damaged by the failure or neglect of the Owner to purchase or maintain the required insurance, the Owner shall reimburse the Contractor for all reasonable costs and damages attributable thereto.

§ 11.2.3 Notice of Cancellation or Expiration of Owner's Required Property Insurance. Within three (3) business days of the date the Owner becomes aware of an impending or actual cancellation or expiration of any property insurance required by the Contract Documents, the Owner shall provide notice to the Contractor of such impending or actual cancellation or expiration. Unless the lapse in coverage arises from an act or omission of the Contractor: (1) the Contractor, upon receipt of notice from the Owner, shall have the right to stop the Work until the lapse in coverage has been cured by the procurement of replacement coverage by either the Owner or the Contractor; (2) the Contract Time and Contract Sum shall be equitably adjusted; and (3) the Owner waives all rights against the Contractor, Subcontractors, and Sub-subcontractors to the extent any loss to the Owner would have been covered by the insurance had it not expired or been cancelled. If the Contractor purchases replacement coverage, the cost of the insurance shall be charged to the Owner by an appropriate Change Order. The furnishing of notice by the Owner shall not relieve the Owner of any contractual obligation to provide required insurance.

§ 11.3 Waivers of Subrogation

§ 11.3.1 The Owner and Contractor waive all rights against (1) each other and any of their subcontractors, sub-subcontractors, agents, and employees, each of the other; (2) the Architect and Architect's consultants; and (3) Separate Contractors, if any, and any of their subcontractors, sub-subcontractors, agents, and employees, for damages caused by fire, or other causes of loss, to the extent those losses are covered by property insurance required by the Agreement or other property insurance applicable to the Project, except such rights as they have to proceeds of such insurance. The Owner or Contractor, as appropriate, shall require similar written waivers in favor of the individuals and entities identified above from the Architect, Architect's consultants, Separate Contractors, subcontractors, and sub-subcontractors. The policies of insurance purchased and maintained by each person or entity agreeing to waive claims pursuant to this section 11.3.1 shall not prohibit this waiver of subrogation. This waiver of subrogation shall be effective as to a person or entity (1) even though that person or entity would otherwise have a duty of indemnification, contractual or otherwise, (2) even though that person or entity did not pay the insurance premium directly or indirectly, or (3) whether or not the person or entity had an insurable interest in the damaged property.

§ 11.3.2 If during the Project construction period the Owner insures properties, real or personal or both, at or adjacent to the site by property insurance under policies separate from those insuring the Project, or if after final payment property insurance is to be provided on the completed Project through a policy or policies other than those insuring the Project during the construction period, to the extent permissible by such policies, the Owner waives all rights in accordance with the terms of Section 11.3.1 for damages caused by fire or other causes of loss covered by this separate property insurance.

§ 11.4 Loss of Use, Business Interruption, and Delay in Completion Insurance

The Owner, at the Owner's option, may purchase and maintain insurance that will protect the Owner against loss of use of the Owner's property, or the inability to conduct normal operations, due to fire or other causes of loss.

§11.5 Adjustment and Settlement of Insured Loss

§ 11.5.1 A loss insured under the property insurance required by the Agreement may be adjusted by the Owner as fiduciary and made payable to the Owner as fiduciary for the insureds, as their interests may appear, subject to requirements of any applicable mortgagee clause and of Section 11.5.2. The Owner shall pay the Architect and

Contractor their just shares of insurance proceeds received by the Owner, and by appropriate agreements the Architect and Contractor shall make payments to their consultants and Subcontractors in similar manner.

§ 11.5.2 Prior to settlement of an insured loss, the Owner shall notify the Contractor of the terms of the proposed settlement as well as the proposed allocation of the insurance proceeds. The Contractor shall have 14 days from receipt of notice to object to the proposed settlement or allocation of the proceeds. If the Contractor does not object, the Owner shall settle the loss and the Contractor shall be bound by the settlement and allocation. Upon receipt, the Owner shall deposit the insurance proceeds in a separate account and make the appropriate distributions. Thereafter, if no other agreement is made or the Owner does not terminate the Contract for convenience, the Owner and Contractor shall execute a Change Order for reconstruction of the damaged or destroyed Work in the amount allocated for that purpose. If the Contractor timely objects to either the terms of the proposed settlement or the allocation of the proceeds, the Owner may proceed to settle the insured loss, and any dispute between the Owner and Contractor arising out of the settlement or allocation of the proceeds shall be resolved pursuant to Article 15. Pending resolution of any dispute, the Owner may issue a Construction Change Directive for the reconstruction of the damaged or destroyed Work.

ARTICLE 12 UNCOVERING AND CORRECTION OF WORK

§ 12.1 Uncovering of Work

§ 12.1.1 If a portion of the Work is covered contrary to the Architect's request or to requirements specifically expressed in the Contract Documents, it must, if requested in writing by the Architect, be uncovered for the Architect's examination and be replaced at the Contractor's expense without change in the Contract Time.

§ 12.1.2 If a portion of the Work has been covered that the Architect has not specifically requested to examine prior to its being covered, the Architect may request to see such Work and it shall be uncovered by the Contractor. If such Work is in accordance with the Contract Documents, the Contractor shall be entitled to an equitable adjustment to the Contract Sum and Contract Time as may be appropriate. If such Work is not in accordance with the Contract Documents, the costs of uncovering the Work, and the cost of correction, shall be at the Contractor's expense.

§ 12.2 Correction of Work

§ 12.2.1 Before Substantial Completion

The Contractor shall promptly correct Work rejected by the Architect or failing to conform to the requirements of the Contract Documents, discovered before Substantial Completion and whether or not fabricated, installed or completed. Costs of correcting such rejected Work, including additional testing and inspections, the cost of uncovering and replacement, and compensation for the Architect's services and expenses made necessary thereby, shall be at the Contractor's expense.

§ 12.2.2 After Substantial Completion

§ 12.2.2.1 In addition to the Contractor's obligations under Section 3.5, if, within one year after the date of Substantial Completion of the Work or designated portion thereof or after the date for commencement of warranties established under Section 9.9.1, or by terms of any applicable special warranty required by the Contract Documents, any of the Work is found to be not in accordance with the requirements of the Contract Documents, the Contractor shall correct it promptly after receipt of notice from the Owner to do so, unless the Owner has previously given the Contractor a written acceptance of such condition. The Owner shall give such notice promptly after discovery of the condition. During the one-year period for correction of Work, if the Owner fails to notify the Contractor and give the Contractor an opportunity to make the correction, the Owner waives the rights to require correction by the Contractor and to make a claim for breach of warranty. If the Contractor fails to correct nonconforming Work within a reasonable time during that period after receipt of notice from the Owner or Architect, the Owner may correct it in accordance with Section 2.5. All warranties in excess of the one year noted above ("Extended Warranties") shall be assigned to the Owner, after which said assignment the Contractor's liability shall be limited to assisting the Owner with the enforcement of the Extended Warranties.

§ 12.2.2.2 The one-year period for correction of Work shall be extended with respect to portions of Work first performed after Substantial Completion by the period of time between Substantial Completion and the actual completion of that portion of the Work.

§ 12.2.2.3 The one-year period for correction of Work shall not be extended by corrective Work performed by the Contractor pursuant to this Section 12.2.

§ 12.2.3 The Contractor shall remove from the site portions of the Work that are not in accordance with the requirements of the Contract Documents and are neither corrected by the Contractor nor accepted by the Owner.

§ 12.2.4 The Contractor shall bear the cost of correcting destroyed or damaged construction of the Owner or Separate Contractors, whether completed or partially completed, caused by the Contractor's correction or removal of Work that is not in accordance with the requirements of the Contract Documents.

§ 12.2.5 Nothing contained in this Section 12.2 shall be construed to establish a period of limitation with respect to other obligations the Contractor has under the Contract Documents. Establishment of the one-year period for correction of Work as described in Section 12.2.2 relates only to the specific obligation of the Contractor to correct the Work, and has no relationship to the time within which the obligation to comply with the Contract Documents may be sought to be enforced, nor to the time within which proceedings may be commenced to establish the Contractor's liability with respect to the Contractor's obligations other than specifically to correct the Work.

§ 12.2.6 AUDITS
Upon request of the Owner, the Contractor will cooperate, secure the cooperation of all Subcontractors and Sub-subcontractors and assist the Owner during any audit of the Project conducted by the Owner or one or more Agencies (as defined in Section 2.2.1.2 of the Agreement) at any time after Substantial Completion. Such cooperation shall include providing the Owner with access to all records related to the Project.

§ 12.3 Acceptance of Nonconforming Work
If the Owner prefers to accept Work that is not in accordance with the requirements of the Contract Documents, the Owner may do so instead of requiring its removal and correction, in which case the Contract Sum will be reduced as appropriate and equitable. Such adjustment shall be effected whether or not final payment has been made.

ARTICLE 13 MISCELLANEOUS PROVISIONS
§ 13.1 Governing Law
The Contract shall be governed by the law of the State of Connecticut.

§ 13.2 Successors and Assigns
§ 13.2.1 The Owner and Contractor respectively bind themselves, their partners, successors, assigns, and legal representatives to covenants, agreements, and obligations contained in the Contract Documents. Except as provided in Section 13.2.2, neither party to the Contract shall assign the Contract as a whole without written consent of the other. If either party attempts to make an assignment without such consent, that party shall nevertheless remain legally responsible for all obligations under the Contract.

§ 13.2.2 The Owner may, without consent of the Contractor, assign the Contract to a lender providing construction financing for the Project, if the lender assumes the Owner's rights and obligations under the Contract Documents. The Contractor shall execute all consents reasonably required to facilitate the assignment.

§ 13.3 Rights and Remedies
§ 13.3.1 Duties and obligations imposed by the Contract Documents and rights and remedies available thereunder shall be in addition to and not a limitation of duties, obligations, rights, and remedies otherwise imposed or available by law or in equity.

§ 13.3.2 No action or failure to act by the Owner, Architect, or Contractor shall constitute a waiver of a right or duty afforded them under the Contract, nor shall such action or failure to act constitute approval of or acquiescence in a breach thereunder, except as may be specifically agreed upon in writing.

§ 13.4.3 The invalidity of any part or provision of the Contract Documents shall not impair or affect in any manner the validity, enforceability or effect of the remaining parts and provisions of the Contract Documents and the parties agree to substitute for the invalid provision the provision within the bounds of the law which most clearly effectuates the legal and economic intent of the invalid provision.

§ 13.4.4 No provision contained in the Contract Documents shall create or give to third parties any claim or right against the Owner.

§ 13.4 Tests and Inspections

§ 13.4.1 Tests, inspections, and approvals of portions of the Work shall be made as required by the Contract Documents and by Applicable Law. Unless otherwise provided, the Contractor shall make arrangements for such tests, inspections, and approvals with an independent testing laboratory or entity acceptable to the Owner, or with the appropriate public authority, and shall bear all related costs of tests, inspections, and approvals. The Contractor shall give the Architect timely notice of when and where tests and inspections are to be made so that the Architect may be present for such procedures. The Owner shall bear costs of tests, inspections, or approvals that do not become requirements until after bids are received or negotiations concluded. The Owner shall directly arrange and pay for tests, inspections, or approvals where building codes or applicable laws or regulations so require.

§ 13.4.2 If the Architect, Owner, or public authorities having jurisdiction determine that portions of the Work require additional testing, inspection, or approval not included under Section 13.4.1, the Architect will, upon written authorization from the Owner, instruct the Contractor to make arrangements for such additional testing, inspection, or approval, by an entity acceptable to the Owner, and the Contractor shall give timely notice to the Architect of when and where tests and inspections are to be made so that the Architect may be present for such procedures. Such costs, except as provided in Section 13.4.3, shall be at the Owner's expense. If the inspections and tests conducted under Section 13.4.1 or this Section 13.4.2 reveal failure in a portion of the Work, the Owner may order the inspection and testing at the Contractor's expense of any and all portions of the Work that are identical or similar to the failing portion.

§ 13.4.3 If procedures for testing, inspection, or approval under Sections 13.4.1 and 13.4.2 reveal failure of the portions of the Work to comply with requirements established by the Contract Documents, all costs made necessary by such failure, including those of repeated procedures and compensation for the Architect's services and expenses, shall be at the Contractor's expense.

§ 13.4.4 Required certificates of testing, inspection, or approval shall, unless otherwise required by the Contract Documents, be secured by the Contractor and promptly delivered to the Architect.

§ 13.4.5 If the Architect is to observe tests, inspections, or approvals required by the Contract Documents, the Architect will do so promptly and, where practicable, at the normal place of testing.

§ 13.4.6 Tests or inspections conducted pursuant to the Contract Documents shall be made promptly to avoid unreasonable delay in the Work.

§ 13.5 Interest

Payments due and unpaid under the Contract Documents shall bear interest as provided in the Agreement.

ARTICLE 14 TERMINATION OR SUSPENSION OF THE CONTRACT

§ 14.1 Termination by the Contractor

§ 14.1.1 The Contractor may terminate the Contract if the Work is stopped for a period of sixty (60) consecutive days through no act or fault of the Contractor, a Subcontractor, a Sub-subcontractor, or any of their respective agents or employees, or any other persons or entities performing portions of the Work, for any of the following reasons:

.1 Issuance of an order of a court or other public authority having jurisdiction that requires all Work to be stopped;

.2 An act of government, such as a declaration of national emergency, that requires all Work to be stopped; or

.3 Because the Architect has not issued a Certificate for Payment and has not notified the Contractor of the reason for withholding certification as provided in Section 9.4.1, or because the Owner has not made payment on a Certificate for Payment within the time stated in the Contract Documents and has not notified the Contractor of the reason for withholding payment.

§ 14.1.2 The Contractor may terminate the Contract if, through no act or fault of the Contractor, a Subcontractor, a Sub-subcontractor, or any of their respective agents or employees, or any other persons or entities performing portions of the Work, repeated suspensions, delays, or interruptions of the entire Work by the Owner as described in

Section 14.3, constitute in the aggregate more than 100 percent of the total number of days scheduled for completion, or 120 days in any 365-day period, whichever is less.

§ 14.1.3 If one of the reasons described in Section 14.1.1 or 14.1.2 exists, the Contractor may, upon fourteen (14) days' notice to the Owner and Architect, terminate the Contract and recover from the Owner payment in accordance with the Contract Documents for Work executed in accordance with the Contract Documents and direct costs incurred by reason of such termination.

§ 14.1.4 If the Work is stopped for a period of ninety (90) consecutive days through no act or fault of the Contractor, a Subcontractor, a Sub-subcontractor, or any of their respective agents or employees or any other persons or entities performing portions of the Work because the Owner has repeatedly failed to fulfill the Owner's obligations under the Contract Documents with respect to matters material to the progress of the Work, the Contractor may, upon fourteen (14) additional days' notice to the Owner and the Architect, terminate the Contract and recover from the Owner as provided in Section 14.1.3.

§ 14.1.5 The notice of termination delivered pursuant to Section 14.1.3 or 14.1.4 must state with specificity the means by which the Owner may cure its nonperformance, and the Contractor shall not terminate this Contract if, within the applicable fourteen (14) day period, the Owner substantially takes such curative measures.

§ 14.2 Termination by the Owner for Cause

§ 14.2.1 The Owner may, without prejudice to any other rights or remedies available to the Owner under the Contract Documents or at law or in equity, terminate the Contract if the Contractor

.1 repeatedly refuses or fails to supply enough properly skilled workers or proper materials;

.2 fails to make payment to Subcontractors or suppliers in accordance with the respective agreements between the Contractor and the Subcontractors or suppliers;

.3 repeatedly disregards Applicable Law;

.4 otherwise is guilty of substantial breach of a provision of the Contract Documents;

.5 institutes proceedings or consent to proceedings requesting relief or arrangement under the Federal Bankruptcy Act or similar or applicable federal or state law, or a petition under any federal or state bankruptcy or insolvency law is filed against the Contractor and such petition is not dismissed within sixty (60) days from the date of said filing, or the Contractor admits in writing its inability to pay its debts as they become due, or it makes a general assignment for the benefit of its creditors, or a receiver, liquidator, trustee, or assignee is appointed, or a receiver of all or any substantial portion of the Contractor's properties is appointed;

.6 abandons the Work;

.7 submits an Application for Payment, sworn statement, waiver of lien, affidavit or document of any nature whatsoever which is intentionally falsified;

.8 fails to make prompt payment to Subcontractors or for materials or labor in accordance with the respective subcontracts or otherwise breaches its obligations under any subcontract with a Subcontractor; or

.9 if a mechanics or materialman's lien or notice of lien is filed against any part of the Work or the Project site and not promptly bonded or insured over by the Contractor, provided the Owner has paid the Contractor for the Work which is the subject of the lien.

§ 14.2.2 When any of the reasons described in Section 14.2.1 exist, and upon certification by the Architect that sufficient cause exists to justify such action, the Owner may, if the Contractor fails to commence and diligently pursue a cure during such seven (7) day period, without prejudice to any other rights or remedies of the Owner and after giving the Contractor and the Contractor's surety, if any, seven days' notice, terminate employment of the Contractor and may, subject to any prior rights of the surety:

.1 Exclude the Contractor from the site and take possession of all materials, equipment, tools, and construction equipment and machinery thereon owned by the Contractor;

.2 Accept assignment of subcontracts pursuant to Section 5.4; and

.3 Finish the Work by whatever reasonable method the Owner may deem expedient. Upon written request of the Contractor, the Owner shall furnish to the Contractor a detailed accounting of the costs incurred by the Owner in finishing the Work.

§ 14.2.3 When the Owner terminates the Contract for one of the reasons stated in Section 14.2.1, the Contractor shall not be entitled to receive further payment until the Work is finished.

§ 14.2.4 If the unpaid balance of the Contract Sum exceeds costs of finishing the Work, including compensation for the Architect's services and expenses made necessary thereby, and other damages incurred by the Owner and not expressly waived, such excess shall be paid to the Contractor. If such costs and damages exceed the unpaid balance of the Guaranteed Maximum Price, the Contractor shall pay the difference to the Owner. The amount to be paid to the Contractor or Owner, as the case may be, shall be certified by the Initial Decision Maker, upon application, and this obligation for payment shall survive termination of the Contract.

§ 14.3 Suspension by the Owner for Convenience

§ 14.3.1 The Owner may, without cause, order the Contractor in writing to suspend, delay or interrupt the Work, in whole or in part for such period of time as the Owner may determine.

§ 14.3.2 The Contract Sum and Contract Time shall be adjusted for increases in the cost and time caused by suspension, delay, or interruption under Section 14.3.1. Adjustment of the Contract Sum shall include profit (or, as applicable, the Contractor's Fee). No adjustment shall be made to the extent

.1 that performance is, was, or would have been, so suspended, delayed, or interrupted, by another cause for which the Contractor is responsible; or

.2 that an equitable adjustment is made or denied under another provision of the Contract.

§ 14.4 Termination by the Owner for Convenience

§ 14.4.1 The Owner may, upon ten (10) days prior written notice, without prejudice and without waiving any other unknown right or remedy available to the Owner and Construction Manager under the Contract Documents or at law or in equity, terminate the Contract for the Owner's convenience and without cause.

§ 14.4.2 Upon receipt of notice from the Owner of such termination for the Owner's convenience, the Contractor shall

.1 cease operations as directed by the Owner in the notice;

.2 take actions necessary, or that the Owner may direct, for the protection and preservation of the Work; and

.3 except for Work directed to be performed prior to the effective date of termination stated in the notice, terminate all existing subcontracts and purchase orders and enter into no further subcontracts and purchase orders.

§ 14.4.3 In case of such termination for the Owner's convenience, the Owner shall pay the Contractor for Work properly executed in accordance with the Contract Documents, and reasonably and satisfactorily documented direct and demobilization costs and earned Fee as of effective date of termination incurred by reason of the termination, including costs attributable to termination of Subcontracts.

§ 14.5 Payment upon Termination

§ 14.5.1 Except for claims for such payments as the Owner is explicitly required to make upon termination pursuant to this Article 14, the Contractor hereby waives and forfeits all claims for payment and damages, including without limitation, anticipated profits.

§ 14.5.2 When making any payment upon termination required under this Article 14, the Owner shall be credited for (1) payment previously made to the Contractor for the terminated portion of the Work, (2) valid claims which the Owner has against the Contractor under the Contract Documents, and (3) the value of the materials, supplies, equipment or other items that are to be disposed of by the Contractor that are included in the Contract Sum.

ARTICLE 15 CLAIMS AND DISPUTES

§ 15.1 Claims

§ 15.1.1 Definition

A Claim is a demand or assertion by one of the parties seeking, as a matter of right, payment of money, a change in the Contract Time, or other relief with respect to the terms of the Contract. The term "Claim" also includes other disputes and matters in question between the Owner and Contractor arising out of or relating to the Contract. The responsibility to substantiate Claims shall rest with the party making the Claim. This Section 15.1.1 does not require the Owner to file a Claim in order to impose liquidated damages in accordance with the Contract Documents.

§ 15.1.2 Time Limits on Claims

The Owner and Contractor shall commence all Claims and causes of action against the other and arising out of or related to the Contract, whether in contract, tort, breach of warranty or otherwise, in accordance with the requirements of the binding dispute resolution method selected in the Agreement and within the period specified by Applicable Law.

§ 15.1.3 Notice of Claims

§ 15.1.3.1 Claims by either the Owner or Contractor, where the condition giving rise to the Claim is first discovered prior to expiration of the period for correction of the Work set forth in Section 12.2.2, shall be initiated by notice to the other party and to the Initial Decision Maker with a copy sent to the Architect, if the Architect is not serving as the Initial Decision Maker. Claims by either party under this Section 15.1.3.1 shall be initiated within 21 days after occurrence of the event giving rise to such Claim or within 21 days after the claimant first recognizes the condition giving rise to the Claim, whichever is later.

§ 15.1.3.2 Claims by either the Owner or Contractor, where the condition giving rise to the Claim is first discovered after expiration of the period for correction of the Work set forth in Section 12.2.2, shall be initiated by notice to the other party. In such event, no decision by the Initial Decision Maker is required.

§ 15.1.4 Continuing Contract Performance

§ 15.1.4.1 Pending final resolution of a Claim, except as otherwise agreed in writing or as provided in Section 9.7 and Article 14, the Contractor shall proceed diligently with the performance of its obligations under the Contract Documents and the Owner shall continue to make payments in accordance with the Contract Documents.

§ 15.1.4.2 The Contract Sum and Contract Time shall be adjusted in accordance with the Initial Decision Maker's decision, subject to the right of either party to proceed in accordance with this Article 15. The Architect will issue Certificates for Payment in accordance with the decision of the Initial Decision Maker.

§ 15.1.5 Claims for Additional Cost

If the Contractor wishes to make a Claim for an increase in the Contract Sum, notice as provided in Section 15.1.3 shall be given before proceeding to execute the portion of the Work that is the subject of the Claim. Prior notice is not required for Claims relating to an emergency endangering life or property arising under Section 10.4.

§ 15.1.6 Claims for Additional Time

§ 15.1.6.1 If the Contractor wishes to make a Claim for an increase in the Contract Time, notice as provided in Section 15.1.3 shall be given. The Contractor's Claim shall include an estimate of cost and of probable effect of delay on progress of the Work. In the case of a continuing delay, only one Claim is necessary.

§ 15.1.6.2 If adverse weather conditions are the basis for a Claim for additional time, such Claim shall be documented by data substantiating that weather conditions were abnormal for the period of time, could not have been reasonably anticipated, and had an adverse effect on the scheduled construction.

§ 15.1.6.3 Notwithstanding anything to the contrary herein or in the Contract Documents, but subject to the Contractor's remedy for Concurrent Delays, neither the Contract Sum nor the Contract Time shall be adjusted if the increased costs or delay underlying the Contractor's claim for adjustment stems from the negligent act or omission of the Contractor, its subcontractors of any tier, or of anyone for whose performance the Contractor is responsible to the Owner, or as a result of the error of any of the same or of the failure of any of the same to comply with, and fulfill their responsibilities under, the Contract Documents.

§ 15.1.7 Waiver of Claims for Consequential Damages

The Contractor and Owner waive Claims against each other for consequential damages arising out of or relating to this Contract. This mutual waiver includes

.1 damages incurred by the Owner for rental expenses, for losses of use, income, profit, financing, business and reputation, and for loss of management or employee productivity or of the services of such persons; and

AIA Document A201 – 2017 Copyright © 1911, 1915, 1918, 1925, 1937, 1951, 1958, 1961, 1963, 1966, 1970, 1976, 1987, 1997, 2007 and 2017. All rights reserved. .2 damages incurred by the Contractor for principal office expenses including the compensation of personnel stationed there, for losses of financing, business and reputation, and for loss of profit, except anticipated profit arising directly from the Work.

This mutual waiver is applicable, without limitation, to all consequential damages due to either party's termination in accordance with Article 14. Nothing contained in this Section 15.1.7 shall be deemed to preclude assessment of liquidated damages, when applicable, in accordance with the requirements of the Contract Documents.

§ 15.2 Initial Decision

§ 15.2.1 Claims, excluding those where the condition giving rise to the Claim is first discovered after expiration of the period for correction of the Work set forth in Section 12.2.2 or arising under Sections 10.3, 10.4, and 11.5, shall be referred to the Initial Decision Maker for initial decision. The Architect will serve as the Initial Decision Maker, unless otherwise indicated in the Agreement. Except for those Claims excluded by this Section 15.2.1, an initial decision shall be required as a condition precedent to mediation of any Claim. If an initial decision has not been rendered within 30 days after the Claim has been referred to the Initial Decision Maker, the party asserting the Claim may demand mediation and binding dispute resolution without a decision having been rendered. Unless the Initial Decision Maker and all affected parties agree, the Initial Decision Maker will not decide disputes between the Contractor and persons or entities other than the Owner.

§ 15.2.2 The Initial Decision Maker will review Claims and within ten days of the receipt of a Claim take one or more of the following actions: (1) request additional supporting data from the claimant or a response with supporting data from the other party, (2) reject the Claim in whole or in part, (3) approve the Claim, (4) suggest a compromise, or (5) advise the parties that the Initial Decision Maker is unable to resolve the Claim if the Initial Decision Maker lacks sufficient information to evaluate the merits of the Claim or if the Initial Decision Maker concludes that, in the Initial Decision Maker's sole discretion, it would be inappropriate for the Initial Decision Maker to resolve the Claim.

§ 15.2.3 In evaluating Claims, the Initial Decision Maker may, but shall not be obligated to, consult with or seek information from either party or from persons with special knowledge or expertise who may assist the Initial Decision Maker in rendering a decision. The Initial Decision Maker may request the Owner to authorize retention of such persons at the Owner's expense.

§ 15.2.4 If the Initial Decision Maker requests a party to provide a response to a Claim or to furnish additional supporting data, such party shall respond, within ten days after receipt of the request, and shall either (1) provide a response on the requested supporting data, (2) advise the Initial Decision Maker when the response or supporting data will be furnished, or (3) advise the Initial Decision Maker that no supporting data will be furnished. Upon receipt of the response or supporting data, if any, the Initial Decision Maker will either reject or approve the Claim in whole or in part.

§ 15.2.5 The Initial Decision Maker will render an initial decision approving or rejecting the Claim or indicating that the Initial Decision Maker is unable to resolve the Claim. This initial decision shall (1) be in writing; (2) state the reasons therefor; and (3) notify the parties and the Architect, if the Architect is not serving as the Initial Decision Maker, of any change in the Contract Sum or Contract Time or both. The initial decision shall be final and binding on the parties but subject to mediation and, if the parties fail to resolve their dispute through mediation, to binding dispute resolution.

§ 15.2.6 Either party may file for mediation of an initial decision at any time, subject to the terms of Section 15.2.6.1.

§ 15.2.6.1 Either party may, within 30 days from the date of receipt of an initial decision, demand in writing that the other party file for mediation. If such a demand is made and the party receiving the demand fails to file for mediation within 30 days after receipt thereof, then both parties waive their rights to mediate or pursue binding dispute resolution proceedings with respect to the initial decision.

§ 15.2.7 In the event of a Claim against the Contractor, the Owner may, but is not obligated to, notify the surety, if any, of the nature and amount of the Claim. If the Claim relates to a possibility of a Contractor's default, the Owner may, but is not obligated to, notify the surety and request the surety's assistance in resolving the controversy.

§ 15.2.8 If a Claim relates to or is the subject of a mechanic's lien, the party asserting such Claim may proceed in accordance with Applicable Law to comply with the lien notice or filing deadlines.

§ 15.3 Mediation

§ 15.3.1 Claims, disputes, or other matters in controversy arising out of or related to the Contract, except those waived as provided for in the Contract Documents, shall be subject to mediation as a condition precedent to binding dispute resolution.

§ 15.3.2 The parties shall endeavor to resolve their Claims by mediation which, unless the parties mutually agree otherwise, shall be administered by the American Arbitration Association in accordance with its Construction Industry Mediation Procedures in effect on the date of the Agreement. A request for mediation shall be made in writing, delivered to the other party to the Contract, and filed with the person or entity administering the mediation. The request may be made concurrently with the filing of binding dispute resolution proceedings but, in such event, mediation shall proceed in advance of binding dispute resolution proceedings, which shall be stayed pending mediation for a period of 60 days from the date of filing, unless stayed for a longer period by agreement of the parties or court order.

§ 15.3.3 Either party may, within 30 days from the date that mediation has been concluded without resolution of the dispute or 60 days after mediation has been demanded without resolution of the dispute, demand in writing that the other party file for binding dispute resolution. If such a demand is made and the party receiving the demand fails to file for binding dispute resolution within 60 days after receipt thereof, then both parties waive their rights to binding dispute resolution proceedings with respect to the initial decision.

§ 15.3.4 The parties shall share the mediator's fee and any filing fees equally. The mediation shall be held in the place where the Project is located, unless another location is mutually agreed upon. Agreements reached in mediation shall be enforceable as settlement agreements in any court having jurisdiction thereof.

§ 15.4 Arbitration

§ 15.4.1 If the parties have selected arbitration as the method for binding dispute resolution in the Agreement, any Claim subject to, but not resolved by, mediation shall be subject to arbitration which, unless the parties mutually agree otherwise, shall be administered by the American Arbitration Association in accordance with its Construction Industry Arbitration Rules in effect on the date of the Agreement. The Arbitration shall be conducted in the place where the Project is located, unless another location is mutually agreed upon. A demand for arbitration shall be made in writing, delivered to the other party to the Contract, and filed with the person or entity administering the arbitration. The party filing a notice of demand for arbitration must assert in the demand all Claims then known to that party on which arbitration is permitted to be demanded.

§ 15.4.1.1 A demand for arbitration shall be made no earlier than concurrently with the filing of a request for mediation, but in no event shall it be made after the date when the institution of legal or equitable proceedings based on the Claim would be barred by the applicable statute of limitations. For statute of limitations purposes, receipt of a written demand for arbitration by the person or entity administering the arbitration shall constitute the institution of legal or equitable proceedings based on the Claim.

§ 15.4.2 The award rendered by the arbitrator or arbitrators shall be final, and judgment may be entered upon it in accordance with Applicable Law in any court having jurisdiction thereof.

§ 15.4.3 The foregoing agreement to arbitrate and other agreements to arbitrate with an additional person or entity duly consented to by parties to the Agreement, shall be specifically enforceable under applicable law in any court having jurisdiction thereof.

§ 15.4.4 Consolidation or Joinder

§ 15.4.4.1 Subject to the rules of the American Arbitration Association or other applicable arbitration rules, either party may consolidate an arbitration conducted under this Contract with any other arbitration to which it is a party provided that (1) the arbitration agreement governing the other arbitration permits consolidation, (2) the arbitrations to be consolidated substantially involve common questions of law or fact, and (3) the arbitrations employ materially similar procedural rules and methods for selecting arbitrator(s).

§ 15.4.4.2 Subject to the rules of the American Arbitration Association or other applicable arbitration rules, either party may include by joinder persons or entities substantially involved in a common question of law or fact whose presence is required if complete relief is to be accorded in arbitration, provided that the party sought to be joined consents in writing to such joinder. Consent to arbitration involving an additional person or entity shall not constitute consent to arbitration of any claim, dispute or other matter in question not described in the written consent.

§ 15.4.4.3 The Owner and Contractor grant to any person or entity made a party to an arbitration conducted under this Section 15.4, whether by joinder or consolidation, the same rights of joinder and consolidation as those of the Owner and Contractor under the Contract.

The Contract Documents form the Contract for Construction. The Contract represents the entire and integrated agreement between the parties hereto and supersedes prior negotiations, representations, or agreements, either written or oral. The Contract may be amended or modified only by a Modification. The Contract Documents shall not be construed to create a contractual relationship of any kind (1) between the Contractor and the Architect or the Architect's consultants, (2) between the Owner and a Subcontractor or a Sub-subcontractor, (3) between the Owner and the Architect or the Architect's consultants, or (4) between any persons or entities other than the Owner and the Contractor. ~~The Architect shall, however, be entitled to performance and enforcement of obligations under the Contract intended to facilitate performance of the Architect's duties.~~

...

The term "Work" means the construction and services required ~~by the Contract Documents, whether~~ by, or reasonably inferable from, , the Contract Documents, whether performed on or off the site of the Project and whether completed or partially completed, and includes all other labor, materials, equipment, and services provided or to be provided by ~~the Contractor to fulfill the Contractor's obligations.~~ the Contractor, its Subcontractors, Sub-Subcontractors, material suppliers or any other entity for whom the Contractor is responsible, to fulfill the Contractor's obligations under or pursuant to the Contract Documents. The Work may constitute the whole or a part of the Project.

...

§1.1.9 CONTRACTOR

The term "Contractor" as used in these General Conditions shall mean the "Construction Manager" as defined in the Agreement.

User Notes: (1363232823)

§ 1.2.1 The intent of the Contract Documents is to include all items necessary for the proper execution and completion of the Work by the Contractor. The Contract Documents are complementary, and what is required by one shall be as binding as if required by all; performance by the Contractor shall be required only to the extent consistent with the Contract Documents and reasonably inferable from ~~them as being necessary to produce the indicated results.~~them. If the Contractor discovers any inconsistency within or between parts of the Contract Documents or between the Contract Documents and any of the Applicable Laws (as defined in Section 2.2.1.1 of the Agreement), the Contractor shall give notice to the Owner and the Architect of such inconsistency and shall, unless otherwise ordered in writing by the Architect or the Owner, provide work or materials of the better quality, greater quantity, or that otherwise complies with applicable standards, codes or ordinances, except as otherwise provided by the GMP Clarifications and Assumptions.

§ 1.2.1.1 The invalidity of any provision of the Contract Documents shall not invalidate the Contract or its remaining provisions. If it is determined that any provision of the Contract Documents violates any law, or is otherwise invalid or unenforceable, then that provision shall be revised to the extent necessary to make that provision legal and enforceable. In such ~~case~~case, the Contract Documents shall be construed, to the fullest extent permitted by law, to give effect to the parties' intentions and purposes in executing the Contract.
PAGE 11

§ 1.2.4 Where no explicit quality or standards for materials or workmanship are established for any portion of the Work, the Contractor shall perform such Work in a good and workman like manner and in a manner of good quality for the intended use and consistent with the quality of the surrounding Work and of the construction of the Project generally.

§ 1.2.5 All manufactured articles, materials and equipment shall be applied, installed, connected, erected, used, cleaned and conditioned in accordance with the manufacturer's written or printed directions and instructions unless otherwise indicated in the Contract Documents. Directions, specifications and recommendations by manufacturers for installation, handling, storing, adjustment, and operation of their materials or equipment shall be complied with, but the Contractor shall nonetheless have the responsibility for determining whether such directions, specifications, and recommendations may safely and suitably be employed in the Work, and for notifying the Architect in advance in writing of any deviation or modification necessary for installation safety or proper operation of the item.

§ 1.2.6 In the event of any conflict, inconsistency or ambiguity among the Contract Documents, such Documents shall have the following priority: (1) Construction Manager's Assumptions and Clarifications; (2) Modifications as defined by Section 1.1.1 of AIA Document A201-2017, as modified herein; (3) this Agreement; (4) modified AIA Document A201-2017, as modified herein; (5) Drawings and (6) Specifications.

...

In the interest of ~~brevity~~brevity, the Contract Documents frequently omit modifying words such as "all" and "any" and articles such as "the" and "an," but the fact that a modifier or an article is absent from one statement and appears in another is not intended to affect the interpretation of either statement.

...

§ 1.5.1 The Architect and the Architect's consultants ~~shall~~shall, except to the extent otherwise provided in the agreement between the Owner and the Architect, be deemed the authors and owners of their respective Instruments of Service, including the Drawings and Specifications, and retain all common law, statutory, and other reserved rights in their Instruments of Service, including copyrights. The Contractor, Subcontractors, Sub-subcontractors, and suppliers shall not own or claim a copyright in the Instruments of Service. Submittal or distribution to meet official regulatory requirements or for other purposes in connection with the Project is not to be construed as publication in derogation of the ~~Architect's or Architect's consultants' reserved rights.~~reserved rights of the owner(s) of such Instruments of Service.

The parties shall agree upon protocols governing the transmission and use of Instruments of Service or any other information or documentation in digital form. The parties ~~will~~ may use AIA Document E203™–2013, Building Information Modeling and Digital Data Exhibit, to establish the protocols for the development, use, transmission, and exchange of digital data.

...

§1.8.1 The Owner will direct the Architect to promptly deliver to the Contractor a full operable copy of the Architect's building and building system model(s) in order to facilitate the placement of the features, systems and components that will be supplied by the Contractor's personnel, suppliers and subcontractors.

§ 1.9 CONTRACTOR'S STANDARD OF CARE

The Contractor shall exercise the Contractor's Standard of Care in performing all aspects of the Work and its obligations under the Contract Documents. All references in the Contract Documents to the knowledge, inference, reliance, awareness, determination, belief, observation, recognition or discovery of the Contractor or reference to any similar term shall include the knowledge, inference, reliance, awareness, determination, belief, observation, recognition the Contractor would have obtained or achieved upon the exercise of the Contractor's Standard of Care.

...

§ 2.1.1 The Owner is the person or entity identified as such in the Agreement and is referred to throughout the Contract Documents as if singular in number. The Owner shall designate in writing a representative who shall have express authority to bind the Owner with respect to all matters requiring the Owner's approval or authorization. Except as otherwise provided in Section 4.2.1, the Architect does not have such authority. ~~The term "Owner" means the Owner or the Owner's authorized representative.~~

PAGE 13

§ 2.2.1 ~~Prior to commencement of the Work and upon written request by the Contractor, the Owner shall furnish to the Contractor reasonable evidence that the Owner has made financial arrangements to fulfill the Owner's obligations under the Contract. The Contractor shall have no obligation to commence the Work until the Owner provides such evidence. If commencement of the Work is delayed under this Section 2.2.1, the Contract Time shall be extended appropriately.~~ Intentionally Omitted.

§ 2.2.2 ~~Following commencement of the Work and upon written request by the Contractor, the Owner shall furnish to the Contractor reasonable evidence that the Owner has made financial arrangements to fulfill the Owner's obligations under the Contract only if (1) the Owner fails to make payments to the Contractor as the Contract Documents require; (2) the Contractor identifies in writing a reasonable concern regarding the Owner's ability to make payment when due; or (3) a change in the Work materially changes the Contract Sum. If the Owner fails to provide such evidence, as required, within fourteen days of the Contractor's request, the Contractor may immediately stop the Work and, in that event, shall notify the Owner that the Work has stopped. However, if the request is made because a change in the Work materially changes the Contract Sum under (3) above, the Contractor may immediately stop only that portion of the Work affected by the change until reasonable evidence is provided. If the Work is stopped under this Section 2.2.2, the Contract Time shall be extended appropriately and the Contract Sum shall be increased by the amount of the Contractor's reasonable costs of shutdown, delay and start-up, plus interest as provided in the Contract Documents.~~ Intentionally Omitted.

§ 2.2.3 ~~After the Owner furnishes evidence of financial arrangements under this Section 2.2, the Owner shall not materially vary such financial arrangements without prior notice to the Contractor.~~ Intentionally Omitted.

§ 2.2.4 ~~Where the Owner has designated information furnished under this Section 2.2 as "confidential," the Contractor shall keep the information confidential and shall not disclose it to any other person. However, the Contractor may disclose "confidential" information, after seven (7) days' notice to the Owner, where disclosure is required by law, including a subpoena or other form of compulsory legal process issued by a court or governmental entity, or by court or arbitrator(s) order. The Contractor may also disclose "confidential" information to its employees, consultants, sureties, Subcontractors and their employees, Sub-subcontractors, and others who need to know the content of such~~

§ 2.3.1 Except for permits and related fees and filings that are the responsibility of the Contractor under the Contract Documents, including those required under Section 3.7.1, the Owner shall ~~secure~~ secure, file and pay for necessary approvals, easements, assessments and charges required for construction, use or occupancy of permanent structures or for permanent changes in existing facilities.

...

§ 2.3.3 If the employment of the Architect terminates, the Owner ~~shall employ a successor to whom the Contractor has no reasonable objection~~ may employ a successor and whose status under the Contract Documents shall be that of the Architect.

§ 2.3.4 The Owner shall furnish surveys describing physical characteristics, legal limitations and utility locations for the site of the Project, and a legal description of the ~~site. The~~ site to the extent required by the Contract Documents. Unless otherwise instructed by the Owner, the Contractor shall be entitled to rely on the accuracy of information furnished by the Owner but shall exercise proper precautions relating to the safe performance of the Work.

§ 2.3.5 ~~The Owner shall furnish information or services required of the Owner by the Contract Documents with reasonable promptness. The Owner shall also furnish any other information or services under the Owner's control and relevant to the Contractor's performance of the Work, with reasonable promptness after receiving the Contractor's written request for such information or services.~~Intentionally Omitted.

...

If the Contractor fails to correct Work that is not in accordance with the requirements of the Contract Documents as required by Section 12.2 or repeatedly fails to carry out Work in accordance with the Contract Documents, the Owner may issue a written order to the Contractor to stop the Work, or any portion thereof, until the cause for such order has been eliminated; however, the right of the Owner to stop the Work shall not give rise to a duty on the part of the Owner to exercise this right for the benefit of the ~~Contractor~~ Contractor, the Architect, or any other person or entity, except to the extent required by Section 6.1.3.

...

If the Contractor defaults or neglects to carry out the Work in accordance with the Contract Documents and fails within a ten-day period after receipt of notice from the Owner to commence and continue correction of such default or neglect with diligence and promptness, the Owner may, without prejudice to other remedies the Owner may have, correct such default or neglect. ~~Such action by the Owner and amounts charged to the Contractor are both subject to prior approval of the Architect and the Architect~~ The Architect may, pursuant to Section 9.5.1, withhold or nullify a Certificate for Payment in whole or in part, to the extent reasonably necessary to reimburse the Owner for the reasonable cost of correcting such deficiencies, including Owner's expenses and compensation for the Architect's additional services made necessary by such default, neglect, or failure. If current and future payments are not sufficient to cover such amounts, the Contractor shall pay the difference ~~to the Owner.~~ to the Owner at or prior to the date of Final Completion of the Work. The right of the Owner to so carry out such Work pursuant to this Section 2.5 shall not give rise to any duties on the part of the Owner to exercise this right for the benefit of the Contractor or any other person or entity. If the Contractor disagrees with the actions of the Owner or the Architect, or the amounts claimed as costs to the Owner, the Contractor may file a Claim pursuant to Article 15.

~~ARTICLE 3 CONTRACTOR~~

§ 2.6 ADDITIONAL RIGHTS

§ 2.6.1 The rights stated in this Article 2 shall be in addition to and not in limitation of any other rights of the Owner provided in the Contract Documents, or as may be available to the Owner at law or in equity.

§ 2.6.2 Any data provided by the Owner to the Contractor concerning the physical characteristics or measurements of the components that comprise the Project site; access to the Project site or staging and storing at the Project site; present obstructions and conditions of structures on or near the Project site; locations and depths of sewers, conduits, pipes, and gas lines on or near the Project site; positions of sidewalks, curbs and pavements on or near the Project site and other data concerning the conditions of the Project site and its surroundings, have been obtained from sources the Owner believes to be reliable. .

ARTICLE 3 CONTRACTOR

§ 3.1.1 The Contractor is the person or entity identified as such in the Agreement and is referred to throughout the Contract Documents as if singular in number. The Contractor and Subcontractors of every tier shall be lawfully licensed, if required in the jurisdiction where the Project is located. The Contractor shall designate in writing a representative who shall have express authority to bind the Contractor with respect to all matters under this Contract. The term "Contractor" means the Contractor or the Contractor's authorized representative.

§ 3.1.2 The Contractor shall ~~perform~~ be responsible for performance of the Work in accordance with the Contract Documents. The Contractor shall be responsible to the Owner for the performance, and the acts or omissions, of the Subcontractors, Sub-subcontractors and material or equipment suppliers. Any reference in the Contract Documents to the Contractor's performance, act, or omission, or reference to a similar term, shall include the performance, act, or omission of the Subcontractors, Sub-subcontractors and material or equipment suppliers.

§ 3.1.4 The Contractor shall comply with all Applicable Laws regarding its performance of the Work including, without limitation, those relating to equal opportunity, labor, wages and employment.

§ 3.1.5 The Contractor shall comply, and shall cause Subcontractors of every tier to comply, with all accounting procedures and record retention policies reasonably requested by the Owner.

§ 3.2.1 Execution of the Contract by the Contractor is a representation that the Contractor has visited the site, become generally familiar with local conditions under which the Work is to be performed, and correlated personal observations with requirements of the Contract Documents. The provisions of this Section 3.2.1 shall not be construed to limit the investigative and review responsibilities of the Contractor under any other provisions of the Contract Documents.

§ 3.2.2 Because the Contract Documents are complementary, the Contractor shall, before starting each portion of the Work, carefully study and compare the various Contract Documents relative to that portion of the Work, as well as the information furnished by the Owner pursuant to Section 2.3.4, shall take field measurements of any existing conditions related to that portion of the Work, and shall observe any conditions at the site affecting it. These obligations are for the purpose of facilitating coordination and construction by the Contractor and are not for the purpose of discovering errors, omissions, or inconsistencies in the Contract Documents; however, the Contractor shall promptly report to the Owner and the Architect any errors, inconsistencies or omissions discovered by or made known to the Contractor as a request for information in such form as the Architect may require. It is recognized that the Contractor's review is made in the Contractor's capacity as a contractor and not as a licensed design professional, unless otherwise specifically provided in the Contract Documents. The submission of its GMP proposal shall constitute a representation by the Contractor that the Contractor has carefully reviewed the Contract Documents, and visually inspected the Project Site. Construction Manager represents that the GMP includes the sufficient cost and the Project Schedule includes sufficient time for the Construction Manager to complete the Work in accordance with the Contract Documents, except for the changes to the Work as required by Change Orders issued in accordance with the Agreement. The Contractor is not required to ascertain that the Contract Documents are in accordance with all Applicable Laws, but the Contractor shall promptly report to the Owner and the Architect any nonconformity discovered by or made known to the Contractor as a request for information in such form as the Architect may require.

§ 3.2.3 ~~The Contractor is not required to ascertain that the Contract Documents are in accordance with applicable laws, statutes, ordinances, codes, rules and regulations, or lawful orders of public authorities, but the Contractor shall promptly report to the Architect any nonconformity discovered by or made known to the Contractor as a request for information in such form as the Architect may require.~~ Execution by the Contractor of the Guaranteed Maximum Price Amendment, shall constitute a certification by the Contractor that it has conducted general and reasonably observable inspection of the Site conditions. Failure by the Contractor to visually inspect the Project site conditions, including

conditions relating to transportation, handling, storage of materials, availability of labor, water, other known projects in the region, and the character and availability of equipment and facilities needed preliminary to and during the prosecution the Work, shall not relieve the Contractor of its responsibilities under the Contract Documents and shall not constitute a basis for extension of time or any increase in the Contract Sum. Owner assumes no responsibility for any representations concerning conditions made by any of its officers, or employees or representatives, prior to the execution of the Contract, unless such representations are expressly stated in the Contract Documents. The Contractor shall not perform any construction activity it knows constitutes a recognized error, inconsistency, or omission. If the Contractor performs any construction activity knowing it involves a recognized error, inconsistency, or omission in the Contract Documents without reporting the error, inconsistency or omission to the Architect, the Contractor shall assume appropriate responsibility for such performance and shall bear an appropriate amount of the costs of correction.

§ 3.2.4 If the Contractor believes that additional cost or time is involved because of clarifications or instructions the Architect issues in response to the Contractor's notices or requests for information pursuant to ~~Sections 3.2.2 or 3.2.3~~ this Article 3, the Contractor shall submit Claims as provided in Article 15. If the Contractor fails to perform the obligations of Sections 3.2.2 or 3.2.3, the Contractor shall pay such costs and damages to the Owner, subject to Section 15.1.7, as would have been avoided if the Contractor had performed such obligations. If the Contractor performs those obligations, the Contractor shall not be liable to the Owner or Architect for damages resulting from errors, inconsistencies or omissions in the Contract Documents, for differences between field measurements or conditions and the Contract Documents, or for nonconformities of the Contract Documents to ~~applicable laws, statutes, ordinances, codes, rules and regulations, and lawful orders of public authorities.~~Applicable Law.

§ 3.2.5 If the Contractor fails to fulfill its obligations to report to the Architect or Owner under this Article 3, such failure shall preclude the Contractor from any subsequent Claim arising from or relating to the factors giving rise to the Contractor's obligation to make such report.

§ 3.2.6 The Contractor shall promptly inform the Owner and the Architect if the Contractor believes that a requirement of the Contract Documents is likely to have an adverse effect on the Project.

§ 3.2.7 Contractor is responsible for the safety of the Project Site, including without limitation providing a safety plan in accordance with Applicable Law, during the performance of the Work. Except as set forth in Section 10.3, the Contractor shall be solely responsible for providing safe working conditions in accordance with its safety plan for the performance of the Work that complies with Applicable Law.
PAGE 15

§ 3.3.1 The Contractor shall supervise and direct the Work, using the Contractor's ~~best skill and attention.~~ skill and attention in accordance with the Standard of Care. The Contractor shall be solely responsible for, and have control over, construction means, methods, techniques, sequences, and procedures, and for coordinating all portions of the Work under the Contract. If the Contract Documents give specific instructions concerning construction means, methods, techniques, sequences, or procedures, the Contractor shall evaluate the jobsite safety thereof and shall be solely responsible for the jobsite safety of such means, methods, techniques, sequences, or procedures. If the Contractor determines that such means, methods, techniques, sequences or procedures may not be safe, the Contractor shall give timely notice to the Owner and Architect, and shall propose alternative means, methods, techniques, sequences, or procedures. The Architect shall evaluate the proposed alternative solely for conformance with the design intent for the completed construction. Unless the Architect objects to the Contractor's proposed alternative, the Contractor shall perform the Work using its alternative means, methods, techniques, sequences, or procedures. If the Contractor is instructed to proceed with the required means, methods, techniques, sequences or procedures without acceptance of changes proposed by the Contractor and said means and methods impact the project, the parties shall resolve any such impact in good faith.
PAGE 16

§ 3.3.4 The Contractor shall schedule and perform the Work so as not to unreasonably interfere with any other known related or unrelated work being performed by the Owner in or about the Project premises nor shall the Contractor unreasonably interfere with the Owner's school activities or operations on such premises, as identified within the Contract Documents. The Contractor shall coordinate its and its subcontractors' prosecution of the Work with the Owner and Owner's Designated Representative to minimize any such interference.

§ 3.3.5 The Contractor shall protect and prevent damage to all unfinished phases of the Work.

...

§ 3.4.3 The Contractor shall enforce strict discipline and good order among the Contractor's employees and other persons carrying out the Work. The Contractor shall not permit employment of unfit persons or persons not properly skilled in tasks assigned to them. All labor shall be performed by workmen skilled in their respective trades, and workmanship shall be of good quality so that first class work in accordance with the standards of construction set forth in the Contract Documents and the Contractor's Standard of Care will result.

§ 3.4.4 Substitutions

§ 3.4.4.1 When two or more products are specified for an item of Work, any one thereof is acceptable and the choice is left to the Contractor, with prior written notice to the Architect and the Owner. When only one product is specified and the term "or equal" is used in connection with the product, the Contractor may, if it so desires, offer a substitute product, and by so doing, Contractor shall be deemed to represent that the substitute product will completely accomplish the purpose of the Contract Documents. Requests for substitutions of products, materials or processes other than those specified shall be accompanied by evidence showing whether or not the proposed substitution:

.1 is equal in quality and serviceability to the specified item;
.2 will not entail changes in detail and construction of related Work;
.3 will be acceptable in consideration of the required design and artistic effect; and
.4 will not provide a cost disadvantage to the Owner.

The Contractor shall furnish with its request such Drawings, Specifications, samples, performance data and other information as may be required of it to assist the Architect and the Owner in determining whether the proposed substitution is acceptable. The burden of proof of the facts above stated shall be upon the Contractor, and no substitution shall be authorized except upon the prior written approval of Owner and the Architect. Nothing in this Section 3.4.4 shall limit the provisions of Sections 3.4.4.2 or 3.4.4.3.

§ 3.4.4.2 By making requests for substitutions based on Sections 3.4.2 and 3.4.4, the Contractor:

.1 represents that the Contractor has personally investigated the proposed substitute product and determines that it is equal or superior in all respects to that specified;
.2 represents that the Contractor will provide the same warranty for the substitution that the Contractor would for that specified;
.3 certifies that the cost data presented is complete and includes all related costs under this Contract except the Architect's redesign costs, and waives all claims for additional costs related to substitution which subsequently become apparent; and
.4 shall coordinate the installation of the accepted substitution, making such changes as may be required for the Work to be complete in all respects.

§ 3.4.4.3 Approval by the Owner or Architect of any such substitution shall not relieve the Contractor of responsibility for any additional costs incurred by other trades for changes made necessary to accommodate the substituted item.

§ 3.5 ~~Warranty~~WARRANTIES

§ 3.5.1 The Contractor warrants to the Owner ~~and Architect~~ that materials and equipment furnished under the Contract will be of good quality and new unless the Contract Documents require or permit otherwise. The Contractor further warrants that the Work will conform to the requirements of the Contract Documents and will be free from defects, except for those inherent in the quality of the Work the Contract Documents require or permit. Work, materials, or equipment not conforming to these requirements may be considered defective. The Contractor's warranty excludes remedy for damage or defect caused by abuse, alterations to the Work not executed by the Contractor, improper or insufficient maintenance, improper operation, or normal wear and tear and normal usage. If required by the Architect, the Contractor shall furnish satisfactory evidence as to the kind and quality of materials and equipment.

User Notes: (1363232823)

§ 3.5.3 The Contractor shall procure and assign to the Owner at the time of Substantial Completion of the Work any and all Subcontractor, manufacturer or supplier warranties relating to any materials and labor used in the Work. Such warranties shall supplement the warranties provided by the Contractor in Section 3.5.1.

§ 3.5.4 Substitutions not properly approved and authorized and work, materials or equipment which fail to perform under the proper use and normal wear for intended purposes shall be considered defective. If required by the Architect or the Owner, the Contractor shall furnish satisfactory evidence as to the kind and quality of materials and equipment to be incorporated in the Work.

§ 3.5.5 The warranties under this Section 3.5 shall be in addition to, and not a substitute for, any other rights of the Owner under the Contract Documents or existing in law or equity.

§ 3.5.6 The warranties set forth in this Section 3.5 shall survive final payment and termination of this Contract.

The ~~Contractor shall pay sales, consumer, use and similar taxes for the Work provided by the Contractor that are legally enacted when bids are received or negotiations concluded, whether or not yet effective or merely scheduled to go into effect.~~Owner is a tax-exempt entity. The Contractor shall be familiar with the current regulations of the Connecticut Department of Revenue Services and the sales or use tax on materials or supplies exempted by such regulations shall not be included as part of the bid or the Contract Sum. A sales tax certificate is available upon written request.

...

§ 3.7.1 Unless otherwise provided in the Contract Documents, the Contractor shall secure and pay for the building permit as well as for other permits, fees, licenses, certifications and inspections by government agencies necessary for proper execution and completion of the Work that are customarily secured after execution of the Contract and ~~legally required at the time bids are received or negotiations concluded.~~required by Applicable Laws. The Contractor shall provide the Owner and Architect with reproductions of all permits, licenses, permissions, certifications and receipts for payments and, upon final completion, shall deliver all originals of such documents to the Owner with copies to the Architect.

...

§ 3.7.3 If the Contractor performs Work knowing it to be contrary to ~~applicable laws, statutes, ordinances, codes, rules and regulations, or lawful orders of public authorities.~~ Applicable Law, the Contractor shall assume appropriate responsibility for such Work and shall bear the costs attributable to correction.

...

If the Contractor encounters conditions at the site that are (1) subsurface or otherwise concealed physical conditions that differ materially from those indicated in the Contract Documents or (2) unknown physical conditions of an unusual nature that differ materially from those ordinarily found to exist and generally recognized as inherent in construction activities of the character provided for in the Contract Documents, the Contractor shall promptly provide notice to the Owner and the Architect before conditions are disturbed and in no event later than ~~14~~ seven (7) days after first observance of the conditions. The Architect will promptly investigate such conditions and, if the Architect determines that they differ materially and cause an increase or decrease in the Contractor's cost of, or time required for, performance of any part of the Work, will recommend that an equitable adjustment be made in the Contract Sum or Contract Time, or both. If the Architect determines that the conditions at the site are not materially different from those indicated in the Contract Documents and that no change in the terms of the Contract is justified, the Architect shall promptly notify the Owner and Contractor, stating the reasons. If either party disputes the Architect's determination or recommendation, that party may submit a Claim as provided in Article 15.

§ 3.7.5 If, in the course of the Work, the Contractor encounters human remains or recognizes the existence of burial markers, archaeological sites or wetlands or other conditions that would warrant a suspicion that such matters are being encountered during the performance of the Work although they are not indicated in the Contract Documents, the Contractor shall immediately suspend any operations that would affect them and shall notify the Owner and Architect. Upon receipt of such notice, the Owner shall promptly take any action necessary to obtain governmental authorization

required to resume the operations. The Contractor shall continue to suspend such operations until otherwise instructed by the Owner but shall continue with all other operations that do not affect those remains or features. Requests for adjustments in the Contract Sum and Contract Time arising from the existence of such remains or features may be made as provided in Article 15.
PAGE 18

.2 Contractor's costs for unloading and handling at the site, labor, installation costs, overhead, profit, and other expenses contemplated for stated allowance amounts ~~shall~~ shall, unless otherwise stated in the Contract Documents, be included in the Contract Sum but not in the allowances; and

...

§ 3.9.3 The Contractor shall not employ a proposed superintendent to whom the Owner or Architect has made reasonable and timely objection. The Contractor shall not change the superintendent without the Owner's prior written consent, which shall not unreasonably be withheld or delayed. The list of all supervisory personnel, including the project manager and superintendent that the Contractor intends to use on the Project and an organizational chart reflecting the chain of command among such personnel, shall be submitted to the Owner for approval prior to the commencement of the Work. The Contractor shall not engage supervisory personnel other than as approved by Owner in writing and shall not change such personnel without the prior written approval of the Owner.

...

§ 3.10.1 The ~~Contractor, promptly after being awarded the Contract, shall~~ Contractor shall, as required pursuant to the Agreement, prepare and submit for the Owner's and Architect's ~~information a Contractor's construction schedule for the Work. The schedule shall contain detail appropriate for the Project, including (1) the date of commencement of the Work, interim schedule milestone dates, and the date of Substantial Completion; (2) an apportionment of the Work by construction activity; and (3) the time required for completion of each portion of the Work. The schedule shall provide for the orderly progression of the Work to completion and shall not exceed time limits current under the Contract Documents. The schedule shall be revised at appropriate intervals~~ approval a construction schedule for the Work (as approved by the Owner and the Architect, the "Construction Schedule"). The Construction Schedule (i) shall comply with all of the applicable requirements of, the Contract Documents; (ii) shall be revised (which revisions shall be subject to the approval of the Owner and the Architect) at appropriate intervals as determined by the Contractor and as required by the conditions of the Work and ~~Project,~~ the Project; (iii) shall be related to the entire Project to the extent required by the Contract Documents, and (iv) shall provide for expeditious and practicable execution of the Work. The initial Construction Schedule is based on the scheduling requirements of the RFP.

§ 3.10.2 The Contractor, promptly after being awarded the Contract and thereafter as necessary to maintain a current submittal schedule, shall submit a submittal schedule for the Architect's approval. The Architect's approval shall not be unreasonably delayed or withheld. The submittal schedule shall (1) be coordinated with the Contractor's construction schedule, and (2) allow the Architect reasonable time to review submittals. If the Contractor fails to submit a submittal ~~schedule,~~ schedule or fails to provide submittals in accordance with the approved submittal schedule, the Contractor shall not be entitled to any increase in Contract Sum or extension of Contract Time based on the time required for review of submittals.

§ 3.10.3 The Contractor shall perform the Work in general accordance with the most recent schedules submitted ~~to the Owner and Architect.~~ to, and approved by, the Owner and Architect.

§ 3.10.4 The Construction Schedule shall be in such detail and include such content as required by the Owner. If the Owner requires a precedence-style critical path method (CPM), the Construction Schedule shall: (i) provide a graphic representation of all activities and events that will occur during performance of the Work; (ii) identify each phase of construction and occupancy (if applicable); and (iii) set forth dates that are critical in ensuring the timely and orderly completion of the Work (hereinafter referred to as "Milestone Dates"). Upon review and acceptance by the Owner of the Milestone Dates, the Construction Schedule shall be attached to the Agreement as Schedule 2. If not accepted, the Construction Schedule shall be promptly revised by the Contractor in accordance with the recommendations of the Owner and the Architect and resubmitted for acceptance. The Contractor shall monitor the progress of the Work for conformance with the requirements of the Construction Schedule and shall promptly advise the Owner of any delays or potential delays. The accepted Construction Schedule shall be updated to reflect actual conditions ("Progress

Reports") as set forth in Section 3.10.1 above or as otherwise requested by the Owner and the final version shall be included as part of the GMP. In the event any Progress Report indicates any delays to the GMP Project Schedule, the Contractor shall propose an affirmative plan to correct the delay, including overtime and/or additional labor, if necessary. In no event shall any Progress Report constitute an adjustment in the Contract Time, any Milestone Date or the Contract Sum unless any such adjustment is agreed to by the Owner and authorized pursuant to Change Order.

§ 3.10.5 In the event the Owner determines that the performance of the Work as of a Milestone Date has not progressed or reached the level of completion required by the GMP Project Schedule because of delays caused by the Contractor, its Subcontractors or those for whom they are responsible, the Owner shall have the right, but not the obligation, to order the Contractor to take corrective measures necessary to expedite the progress of construction, including, without limitation, (1) working additional shifts or overtime, (2) supplying additional manpower, equipment, and facilities, and (3) other similar measures (hereinafter referred to collectively as "Extraordinary Measures"). Such Extraordinary Measures shall continue until the progress of the Work complies with the stage of completion required by the Contract Documents. The Owner's right to require Extraordinary Measures is solely for the purposes of ensuring the Contractor's compliance with the GMP Project Schedule as adjusted for time extensions granted pursuant to Section 8.3. Except as provided in Section 8.3, the Contractor shall not be entitled to an adjustment in the Contract Sum in connection with Extraordinary Measures required by the Owner pursuant to this Section 3.10.5. The Owner may exercise the rights furnished the Owner under or pursuant to this Section 3.10.5 as frequently as the Owner deems necessary to ensure that that Contractor's performance of the Work will comply with any Milestone Date or the Substantial Completion Date, as the same may be extended by Change Order.

§ 3.10.6 The Owner shall have the right to direct a postponement or rescheduling of any date or time for the performance of any part of the Work that may interfere with the Owner's operations. Any postponement, rescheduling or performance of the Work under this Section 3.10.6 may be grounds for an extension of the Contract Time, if permitted under Section 8.3 and an equitable adjustment in the Contract Sum if: (1) the performance of the Work was properly scheduled by the Contractor in compliance with the requirements of the Contract Documents and (2) such rescheduling or postponement is requested by or required for the convenience of the Owner. Without limiting the foregoing, the Contractor will not be entitled to an extension of the Contract Time or an adjustment of the Contract Sum to the extent the interfering Work so interferes as a result of the negligent act or omission of the Contractor or its subcontractors of any tier or the failure of any of the same to perform the Work in a manner consistent with the Contract Documents, including Section 3.10.3 hereof, except for Concurrent Delays, for which the Construction Manager's sole remedy shall be a non-compensable extension of time. The term "Concurrent Delays" refers to delays set forth in Section 8.3 that are concurrent with delays caused by Contractor, its subcontractors or those for whom it is responsible.

The Contractor shall make available, at the Project site, the Contract Documents, including Change Orders, Construction Change Directives, and other Modifications, in good order and marked currently to indicate field changes and selections made during construction, and the approved Shop Drawings, Product Data, Samples, and similar required submittals. These shall be in electronic form or paper copy, available to the Architect and Owner, and delivered to the Architect for submittal to the Owner upon completion of the Work as a record of the Work as constructed. The Contractor shall coordinate and cooperate with the Architect in the Architect's preparation of the "as constructed" electronics file for the Project.

...

§ 3.12.5 The Contractor shall review for compliance with the Contract ~~Documents, approve,~~ Documents and submit to the Architect, Shop Drawings, Product Data, Samples, and similar submittals required by the Contract Documents, in accordance with the submittal schedule approved by the Architect or, in the absence of an approved submittal schedule, with reasonable promptness and in such sequence as to cause no delay in the Work or in the activities of the Owner or of Separate Contractors. The Contractor shall be responsible for the Owner's costs associated with the Architect's time for submittal review if any submittal must be reviewed by the Architect more than two (2) times due to the fault of the Contractor, or as otherwise approved by the Owner.

§ 3.12.6 By submitting Shop Drawings, Product Data, Samples, and similar submittals, the Contractor represents to the Owner and Architect that the Contractor has (1) reviewed ~~and approved~~ them, (2) determined and verified materials, field measurements and field construction criteria related thereto, or will do so, and (3) checked and

coordinated the information contained within such submittals with the requirements of the Work and of the Contract Documents. The Contractor shall indicate its review of the submittals as evidence of such review and coordination. Submittals made to the Architect without such indication of review may be returned to the Contractor for resubmission.
PAGE 21

§ 3.12.10 The Contractor shall not be required to provide professional services that constitute the practice of architecture or engineering unless such services are specifically ~~required by the Contract Documents for a portion of the Work.~~ agreed by the parties as part of the GMP or unless the Contractor needs to provide such services in order to carry out the Contractor's responsibilities for construction ~~means, methods, techniques, sequences, and procedures.~~ means and methods. The Contractor shall not be required to provide professional services in violation of applicable law.

§ 3.12.10.1 If professional design services or certifications by a design professional related to systems, materials, or equipment are specifically required of the Contractor by the Contract Documents, the Owner and the Architect will specify all performance and design criteria that such services must satisfy. The Contractor shall be entitled to rely upon the adequacy and accuracy of the performance and design criteria provided in the Contract Documents. The Contractor shall cause such services or certifications to be provided by an appropriately licensed design ~~professional.~~ professional that has been approved by the Owner and that carries such professional liability insurance as required by the Owner, whose signature and seal shall appear on all drawings, calculations, specifications, certifications, Shop Drawings, and other submittals prepared by such professional. Shop Drawings, and other submittals related to the Work, designed or certified by such professional, if prepared by others, shall bear such professional's written approval when submitted to the Architect. The Owner and the Architect shall be entitled to rely upon the adequacy and accuracy of the services, certifications, and approvals performed or provided by such design professionals, provided the Owner and Architect have specified to the Contractor the performance and design criteria that such services must satisfy. Pursuant to this Section 3.12.10, the Architect will review and approve or take other appropriate action on submittals only for the limited purpose of checking for conformance with information given and the design concept expressed in the Contract Documents.

...

~~The Contractor shall confine operations at the site to areas permitted by applicable laws, statutes, ordinances, codes, rules and regulations, lawful orders of public authorities, and the Contract Documents and shall not unreasonably encumber the site with materials or equipment.~~ § 3.13.1 The Contractor shall confine operations at the site to areas permitted by Applicable Laws and the Contract Documents and shall not unreasonably encumber the site with materials or equipment.

§ 3.13.2 The Contract Documents shall provide current location of utilities and utility lines. Contractor shall protect and save from damage or disruption those known utilities and utility services lines of all kinds, either above or below grade found in the areas affected by the Work. The Contractor shall be responsible for all damage caused to such known utilities by the operation of equipment or delivery of materials or as the direct or indirect result of any of the Work and shall repair all such damage at its expense and as part of the Work included in the Contract Documents.

...

§ 3.14.2 The Contractor shall not damage or endanger a portion of the Work or fully or partially completed construction of the Owner or Separate Contractors by cutting, patching, or otherwise altering such construction, or by excavation. The Contractor shall not cut or otherwise alter construction by the Owner or a Separate Contractor except with written consent of the Owner and of the Separate Contractor. Consent shall not be unreasonably withheld. The Contractor shall not unreasonably ~~withhold.~~ withhold from the Owner or a Separate Contractor, its consent to cutting or otherwise altering the Work.

...

§ 3.15.1 The Contractor shall keep the premises and surrounding area free from accumulation of waste materials and rubbish caused by operations under the Contract. At completion of the Work, the Contractor shall remove waste materials, rubbish, the Contractor's tools, construction equipment, machinery, and surplus materials from and about

the ~~Project.~~Project and shall clean and/or remove all stains, spots, marks, blemishes, foreign matter and dirt from surfaces of the Work and from other surfaces not a part of the Work but where such condition resulted from the Contractor's operations.

§ 3.15.2 If the Contractor fails to clean up as provided in the Contract Documents, the Owner may do so and the Owner shall be entitled to reimbursement from the ~~Contractor.~~Contractor for the full cost of such clean up.
PAGE 22

The Contractor shall pay all royalties and license fees. The Contractor shall defend suits or claims for infringement of copyrights and patent ~~rights~~ rights, or failure to pay such royalty and license fees, and shall hold the Owner and Architect harmless from loss on account thereof, but shall not be responsible for defense or loss when a particular design, process, or product of a particular manufacturer or manufacturers is required by the Contract Documents, or where the copyright violations are contained in Drawings, Specifications, or other documents prepared by the Owner or Architect. However, if an infringement of a copyright or patent is discovered by, or made known to, the Contractor, the Contractor shall be responsible for ~~the loss unless the information is promptly furnished to the Architect,~~such losses to the Owner unless the Contractor had furnished such information to the Owner and the Architect promptly upon obtaining such knowledge.

...

§ 3.18.1 To the fullest extent permitted by law, the Contractor shall ~~indemnify and hold harmless the Owner, Architect, Architect's consultants, and~~ indemnify, defend and hold harmless the Owner, the Owner's Designated Representative, and the directors, officers, owners, agents and employees of any of them as well as the Building Committee appointed by the Owner for the Project, from and against any and all claims, liens, judgments, damages, losses, and expenses, including but not limited to attorneys' fees, arising out of or resulting from performance of the Work, provided that such claim, damage, loss, or expense is attributable to bodily injury, sickness, disease or death, or to injury to or destruction of tangible property (other than ~~the Work itself),~~ the Work itself) except to the extent such injury to or destruction of the Work itself is covered by builder's risk insurance, but only to the extent caused by the negligent acts or omissions of the Contractor, a Subcontractor, anyone directly or indirectly employed by them, or anyone for whose acts they may be ~~liable, regardless of whether or not such claim, damage, loss, or expense is caused in part by a party indemnified hereunder.~~ liable; provided however that such indemnity obligations shall not include liability for damage arising out of bodily injury to person or damage to property caused by or resulting from the negligence of the indemnitee, such indemnitee's agents or employees. Such obligation shall not be construed to negate, abridge, or reduce other rights or obligations of indemnity that would otherwise exist as to a party or person described in this Section 3.18.

§ 3.18.2 In claims against any person or entity indemnified under this Section 3.18 by an employee of the Contractor, a Subcontractor, anyone directly or indirectly employed by them, or anyone for whose acts they may be damages, compensation, or benefits payable by or for the Contractor or a Subcontractor under workers' liable, the indemnification obligation under Section 3.18.1 shall not be limited by a limitation on amount or type of ~~damages, compensation, or benefits payable by or for the Contractor or a Subcontractor under workers'~~ compensation acts, disability benefit acts, or other employee benefit acts.

§ 3.19 MEETINGS

§ 3.19.1 A qualified representative of the Contractor shall attend periodic progress meetings held at such time and as such place as the Architect or the Owner shall designate.

§ 3.19.2 The Contractor shall schedule and conduct progress meetings at the site on a bi-weekly basis (or interval appropriate for the level of jobsite activity). Attendance is required of each Subcontractor, supplier or other entity whose portion of the Work is currently the subject of concern or discussion or planning of future construction activities. Owner and Architect shall be provided with forty-eight (48) hour prior notice of each such progress meetings and be permitted to attend and participate in the meetings.
PAGE 23

§ 4.2.1 The Architect will provide administration of the Contract as described in the Contract Documents and will be an Owner's representative ~~during construction until the date the~~ (i) during construction; (ii) until the date that final payment under the Contract is due and payable; and (iii) with the concurrence of the Owner, during the one-year

period described in Section 12.2. The Architect issues the final Certificate for Payment. The Architect will have authority to act on behalf of the Owner only to the extent provided in the Contract Documents.

§ 4.2.2 The Architect will visit the site at intervals appropriate to the stage of construction, or as otherwise agreed with the Owner, to become ~~generally~~ familiar with the progress and quality of the portion of the Work completed, and to determine in general if the Work observed is being performed in a manner indicating that ~~the Work, when fully completed,~~ such portion of the Work is, and when the Work is fully completed the entirety of the Work, will be in accordance with the Contract Documents. However, the Architect will not be required to make exhaustive or continuous on-site inspections to check the quality or quantity of the Work. The Architect will not have control over, charge of, or responsibility for the construction means, methods, techniques, sequences or procedures, or for the safety precautions and programs in connection with the Work, since these are solely the Contractor's rights and responsibilities under the Contract Documents.

§ 4.2.3 On the basis of the site visits, the Architect will keep the Owner reasonably informed about the progress and quality of the portion of the Work completed, and promptly report to the Owner (1) known deviations from the Contract Documents, (2) known deviations from the most recent construction schedule submitted by the Contractor, and (3) defects and deficiencies observed in the Work. The Architect will not be responsible for the Contractor's failure to perform the Work in accordance with the requirements of the Contract Documents. The Architect will not have control over or charge of, and will not be responsible ~~for~~ for, acts or omissions of, the Contractor, Subcontractors, or their agents or employees, or any other persons or entities performing portions of the Work.

...

The Owner and Contractor shall include the Architect in all communications that relate to or affect the Architect's services or professional responsibilities. The Owner shall promptly notify the Architect of the substance of any direct communications between the Owner and the Contractor otherwise relating to the Project. Communications by ~~and~~ the Contractor with the Architect's consultants shall be through the Architect. Communications by ~~and~~ the Architect with Subcontractors and suppliers shall be through the Contractor. Communications by ~~and~~ the Contractor with Separate Contractors shall be through the Owner. The Contract Documents may specify other communication protocols.

...

§ 4.2.6 The Architect has authority to reject Work that does not conform to the Contract Documents. Whenever the Architect considers it necessary or advisable, the Architect will have authority to require inspection or testing of the Work in accordance with Sections 13.4.1, 13.4.2 and 13.4.3, whether or not the Work is fabricated, installed or completed. However, neither this authority of the Architect nor a decision made in good faith either to exercise or not to exercise such authority shall give rise to a duty or responsibility of the Architect to the Contractor, Subcontractors, suppliers, their agents or employees, or other persons or entities performing portions of the Work.

§ 4.2.7 The Architect will review and approve, or take other appropriate action upon, the Contractor's submittals such as Shop Drawings, Product Data, and Samples, but only for the limited purpose of checking for conformance with information given and the design concept expressed in the Contract Documents. The Architect's action will be taken in accordance with the submittal schedule approved by the Architect or, in the absence of an approved submittal schedule, with reasonable promptness while allowing sufficient time in the Architect's professional judgment to permit adequate review. Review of such submittals is not conducted for the purpose of determining the accuracy and completeness of other details such as dimensions and quantities, or for substantiating instructions for installation or performance of equipment or systems, all of which remain the responsibility of the Contractor as required by the Contract Documents. The Architect's review of the Contractor's submittals shall not relieve the Contractor of the obligations under Sections 3.3, 3.5, and 3.12. The Architect's review shall not constitute approval of safety precautions or of any construction means, methods, techniques, sequences, or ~~procedures.~~ procedures that are not specified by the Architect or in the Contract Documents. The Architect's approval of a specific item shall not indicate approval of an assembly of which the item is a component.

§ 4.2.8 The Architect will prepare Change Orders and Construction Change ~~Directives.~~ Directives and may order minor changes in the Work as provided in Section 7.4. The Architect will investigate and make determinations and recommendations regarding concealed and unknown conditions as provided in Section 3.7.4.

§ 4.2.9 The Architect will conduct inspections to determine the date or dates of Substantial Completion and the date of final completion; issue Certificates of Substantial Completion pursuant to Section 9.8; receive and forward to the Owner, for the Owner's review and records, written warranties and related documents required by the Contract Documents and assembled by the Contractor pursuant to Section 9.10; and issue a final Certificate for Payment pursuant to Section 9.10.
PAGE 24

§ 5.2.1 Unless otherwise stated in the Contract Documents, the Contractor, as soon as practicable after award of the Contract, shall notify the Owner and Architect of the persons or entities proposed for each principal portion of the Work, including those who are to furnish materials or equipment fabricated to a special design. Within 14 days of receipt of the information, the Architect may notify the Contractor whether the Owner or the Architect (1) has reasonable objection to the identity or fee proposal of any such proposed person or entity or (2) requires additional time for review. Failure of the Architect to provide notice within the 14-day period shall constitute notice of no reasonable objection.

§ 5.2.1.1 To facilitate and expedite the investigations of such proposed persons or entities, the Contractor shall, upon the Owner's request, provide to the Owner and Architect a list of the names and addresses of all prospective subcontractors and such other information as may be reasonably requested by the Owner.
PAGE 25

§ 5.2.4 The Contractor shall not substitute a Subcontractor, person, or entity for one previously selected if the Owner or Architect makes reasonable objection to such substitution. If the Contractor wishes to substitute a different person or entity for a person or entity previously selected and approved as a Subcontractor pursuant to this Section 5.2, the procedure set forth in Section 5.2.1 shall be followed.

...

~~By appropriate written agreement, the Contractor shall require each Subcontractor, to the extent of the Work to be performed by the Subcontractor, to be bound to the Contractor by terms of the Contract Documents, and to assume toward the Contractor all the obligations and responsibilities, including the responsibility for safety of the Subcontractor's Work that the Contractor, by these Contract Documents, assumes toward the Owner and Architect. Each subcontract agreement shall preserve and protect the rights of the Owner and Architect under the Contract Documents with respect to the Work to be performed by the Subcontractor so that subcontracting thereof will not prejudice such rights, and shall allow to the Subcontractor, unless specifically provided otherwise in the subcontract agreement, the benefit of all rights, remedies, and redress against the Contractor that the Contractor, by the Contract Documents, has against the Owner. Where appropriate, the Contractor shall require each Subcontractor to enter into similar agreements with Sub-subcontractors. The Contractor shall make available to each proposed Subcontractor, prior to the execution of the subcontract agreement, copies of the Contract Documents to which the Subcontractor will be bound, and, upon written request of the Subcontractor, identify to the Subcontractor terms and conditions of the proposed subcontract agreement that may be at variance with the Contract Documents. Subcontractors will similarly make copies of applicable portions of such documents available to their respective proposed Sub-subcontractors.~~§ 5.3.1 Any part of the Work performed by a Subcontractor shall be pursuant to a written Subcontract between the Contractor and Subcontractor, which form of Subcontract shall be reasonably satisfactory to the Owner in all respects. Copies of all Subcontractor bids or proposals shall, upon request of Owner, be submitted to the Owner and Architect.

§ 5.3.2 By appropriate agreement, written where legally required for validity, the Contractor shall require each Subcontractor, to the extent of the Work to be performed by the Subcontractor, to be bound to the Contractor by terms of the Contract Documents, and to assume toward the Contractor all the obligations and responsibilities, including the responsibility for safety of the Subcontractor's Work, which the Contractor, by these Documents, assumes toward the Owner. Each subcontract agreement shall preserve and protect the rights of the Owner under the Contract Documents with respect to the Work to be performed by the Subcontractor so that the subcontracting thereof will not prejudice such rights. Where appropriate, the Contractor shall require each Subcontractor to enter into similar agreements with Sub-subcontractors. The Contractor shall make available to each proposed Subcontractor, prior to the execution of the subcontract agreement, redacted copies of the Contract Documents to which the Subcontractor will be bound. Subcontractors will similarly make copies of applicable portions of such documents available to their respective proposed Sub-subcontractors.

§ 5.3.3 The Contractor shall be fully responsible for coordinating and expediting the work of all Subcontractors and shall employ the necessary and qualified personnel to produce the required quality of labor and materials and to prevent delays in the progress of the Project. The Contractor shall afford each trade with all reasonable opportunities for the installation of its work and for the storage and handling of its materials

...

.1 assignment is effective only after termination of the Contract by the Owner for cause pursuant ~~to~~ to, and in accordance with, Section 14.2 and only for those subcontract agreements that the Owner accepts by notifying the Subcontractor and Contractor; and

...

When the Owner accepts the assignment of a subcontract agreement, the Owner assumes the Contractor's rights and obligations under the subcontract. The Contractor agrees to execute any and all other documents required to effect this assignment, which form of assignment shall include the indemnity of the Contractor against all claims of Subcontractors that arose prior to the date of assignment, regardless of whether such claims are regarding matters that arose prior to the date of assignment.
PAGE 26

§ 5.4.3 Upon assignment to the Owner under this Section 5.4, the Owner may further assign the subcontract to a successor contractor or other ~~entity. If the Owner assigns the subcontract to a successor contractor or other entity, the Owner shall nevertheless remain legally responsible for all of the successor contractor's obligations under the subcontract.~~entity

§ 5.5 Payment of Subcontractors

§ 5.5.1 After payment to Contractor by the Owner, the Contractor shall pay any amounts due any Subcontractor, whether for labor performed or materials furnished, when such labor or material has been included in a requisition submitted by such Contractor and paid by Owner. Such payments shall be made within thirty (30) days after the Contractor receives payment from the Owner. The Contractor shall promptly give notice to the Owner of any claim or demand by a Subcontractor claiming that any amount is due to such Subcontractor or claiming any default by the Contractor in any of the Contractor's obligations to such Subcontractor.

§ 5.5.2 The Contractor shall include in each of the subcontracts a provision requiring each Subcontractor to pay any amounts due to any Sub-Subcontractors, whether for labor performed or materials furnished, within thirty (30) days after such Subcontractor receives a payment from the Contractor which encompasses labor or materials furnished by such Sub-subcontractor and a provision requiring each Subcontractor to promptly give notice to the Contractor of any claim or demand by a Sub-subcontractor claiming that any amount is due to such Sub-Subcontractor or claiming any default by such Subcontractor in any of its obligations to such Sub-subcontractor which notice the Contractor shall promptly relay to the Owner.

...

§ 6.1.4 ~~Unless otherwise provided in the Contract Documents, when the Owner performs construction or operations related to the Project with the Owner's own forces or with Separate Contractors, the Owner or its Separate Contractors shall have the same obligations and rights that the Contractor has under the Conditions of the Contract, including, without excluding others, those stated in Article 3, this Article 6, and Articles 10, 11, and 12.~~Intentionally Omitted.

...

§ 6.2.1 The Contractor shall afford the Owner and Separate Contractors reasonable opportunity for introduction and storage of their materials and equipment and performance of their ~~activities.~~activities and shall connect and coordinate the Contractor's construction and operations with theirs as required by the Contract Documents.

§ 6.2.3 The Contractor shall reimburse the Owner for costs the Owner incurs that are payable to a Separate Contractor because of the Contractor's delays, disruptions to the work of such separate contractor, improperly timed activities or defective construction. The Owner shall be responsible to the Contractor for costs the Contractor incurs because of a Separate Contractor's delays, disruptions to the Work, improperly timed activities, damage to the Work or defective construction.

...

§ 6.2.6 Upon the Owner's request, the Contractor shall defend any proceedings brought against the Owner by any separate contractor on account of any damage alleged to have been caused by the Contractor which arises from the Contractor's failure to comply with the terms and conditions of this Section 6.2.

...

§ 7.2.2 A Change Order executed by the Owner and the Contractor shall constitute a final settlement of all matters relating to the subject matter of the Change Order including, without limitation, compensation to be paid in connection with any change in the Work required by the Change Order (provided that the Work that is the subject of such change is performed in a manner consistent with the provisions of the Contract Documents and the applicable Change Order), including but not limited to all direct and indirect costs, profit, overhead, extended overhead, loss of productivity and general conditions associated with such change, and any and all adjustments to the Contract Sum and to the Contract Time. In the event a Change Order affects an increase in the Contract Sum, Contractor shall include the work covered by such Change Order in Applications for Payment for such work as if the work were originally part of the Work as set forth in the Contract Documents.

§ 7.2.3 Notwithstanding anything to the contrary set forth in these General Conditions, if the Agreement sets forth the methodology for calculating adjustments in the Contract Sum associated with a change in the Work, and if, under the terms of the Contract Documents, an adjustment in the Contract Sum would be required, then the adjustment will be based on such methodology unless otherwise mutually agreed by the parties. This paragraph shall be applicable in the case of a change in the Work effected by a Change Order as well as a Construction Change Directive.

§ 7.2.4 Unless otherwise instructed by the Owner, Change Orders shall be prepared on the form AIA G-701.

PAGE 28

§ 7.3.3 If the Construction Change Directive provides for an adjustment to the Contract Sum, the adjustment shall be based on one of the following ~~methods:~~methods as selected by the Architect and approved by the Owner:

...

§ 7.3.4 If the Contractor does not respond promptly or disagrees with the method for adjustment in the Contract Sum, the Architect shall determine the adjustment on the basis of reasonable expenditures and savings of those performing the Work attributable to the change, including, in case of an increase in the Contract Sum, an amount for General Conditions Costs as provided by the A133, overhead and profit as set forth in the Agreement, or if no such amount is set forth in the Agreement, a reasonable amount. In such case, and also under Section 7.3.3.3, the Contractor shall keep and present, in such form as the Architect may prescribe, an itemized accounting together with appropriate supporting data. Unless otherwise provided in the Contract Documents, costs for the purposes of this Section 7.3.4 shall be limited to the Cost of the Work as defined by the Agreement, including without limitation the following:

...

.3 Rental costs of machinery and equipment, exclusive of hand tools, whether rented from the Contractor or ~~others;~~others, provided, if rented from the Contractor, such rental and the rental rates have been approved by the Owner;

.5 Costs of supervision and field office personnel directly attributable to the change.

The costs described in Section 7.3.4.1 through and including 7.3.4.5 shall not include any of the following:

.1 Salaries and other compensation of the Contractor's personnel stationed at the Contractor's principal office or offices other than the site office, except as otherwise allowed by the A133;
.2 Expenses of the Contractor's principal office and offices other than the site office;
.3 Overhead and general expenses, except as may be expressly included in this Section or the A133;
.4 The Contractor's capital expenses, including interest on the Contractor's capital employed for the Work;
.5 Costs due to the negligence or failure of the Contractor, Subcontractors, material or equipment suppliers or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable to fulfill a specific responsibility of the Contract Documents; or
.6 Any cost not described in this Section or the A133.

PAGE 29

§ 7.3.9 Pending final determination of the total cost of a Construction Change Directive to the Owner, the Contractor may request payment for Work completed under the Construction Change Directive in Applications for Payment. The Architect will make an interim determination for purposes of monthly certification for payment for those costs and certify for payment the ~~amount~~ actual costs incurred by the Contractor as a result of such Construction Change Directive; provided, however, to the extent such Construction Change Directive is made necessary by the act or omission of the Contractor or of anyone for whom the Contractor is responsible, the Architect shall certify for payment the amount, if any, that the Architect determines, in the Architect's professional judgment, to be ~~reasonably justified.~~ necessary for the Contractor to continue the Work. The Architect's interim determination of cost shall adjust the Contract Sum on the same basis as a Change Order, subject to the right of either party to disagree and assert a Claim in accordance with Article 15.

...

§ 8.1.3 The date of Substantial Completion is the date ~~certified by the Architect~~ Substantial Completion is achieved in accordance with Section 9.8.

...

§ 8.2.1 Time limits stated in the Contract Documents applicable to the Substantial Completion of the new building and the Milestone dates are of the essence of the Contract. By executing the ~~Agreement.~~ GMP Amendment, the Contractor confirms that the ~~Contract Time~~ GMP Project Schedule is a reasonable period for performing the Work.

PAGE 30

§ 8.2.3 The Contractor shall proceed expeditiously with adequate forces and shall achieve Substantial Completion within the ~~Contract Time.~~GMP Project Schedule, as that may be amended in accordance with the Agreement.

§ 8.2.4 Accelerated GMP Project Schedule

§ 8.2.4.1 Although the RFP Construction Schedule is based on a twenty-seven month duration based on following overlapping phases: (a) Construction, 21 months; (b) Owner move-in and fixtures, furniture and equipment, 5 months; and Demolition and Site Work, 2 months, the Contractor acknowledges and agrees that it may be able to the reduce the duration of the Work: (i) by sequencing the demolition, sitework and closeout phase of the Work immediately after the completion of the Building Construction phase of the Work; and (ii) based on certain assumptions and clarifications set forth in **Attachment 2 to the Agreement** ("Accelerated Schedule").

§ 8.2.4.2 The Contractor further acknowledges and agrees that the Accelerated Schedule, which would result in a reduction of its General Conditions Cost, was a material inducement to the Owner's award of the Agreement.

§ 8.2.4.3 In accordance with said inducement, Contractor agrees that its GMP proposal shall, in addition to a GMP Project Schedule based on RFP Construction Schedule, include an Accelerated GMP Project Schedule proposal which shall be prepared in accordance with **Attachment 2** and designed to achieve the same magnitude of General Conditions Cost savings in its original Accelerated Schedule proposal.

§ 8.2.4.4 The Owner acknowledges and agrees that the Accelerated Schedule will require the Owner to comply with the noted assumptions set forth in **Attachment 2**, including without limitation the delivery date of the issued-for-construction documents. To the extent the assumptions or durations noted in **Attachment 2** require revision at time of the GMP proposal, the parties shall negotiate an alternative accelerated schedule proposal accordingly.

...

§ 8.3.1 If the Contractor is delayed at any time in the commencement or progress of the Work by (1) an act or neglect of the Owner or Architect, of an employee of either, or of a Separate Contractor; (2) by changes ordered in the Work; (3) by labor disputes, fire, war, terrorism, incidence of disease or other illness that reaches outbreak, epidemic, endemic and/or pandemic proportions or other causes affecting the area in which the Project is located and/or the Contractor's labor and/or supply chain, unusual delay in deliveries, unavoidable casualties, adverse weather conditions documented in accordance with Section 15.1.6.2, or other causes beyond the Contractor's reasonable control; (4) by delay authorized by the Owner pending mediation and binding dispute resolution; or (5) by other causes that the Contractor asserts, and the Architect determines, justify delay, then the Contract Time shall be extended for such reasonable ~~time as the Architect may determine.~~time, and the GMP may be adjusted for the additional Cost of Work caused by any such delay, as the Architect may determine, provided that (i) the Contractor notifies the Owner and Architect in writing of the alleged cause of such delay within ten (10) days after the Contractor became aware of the delay-precipitating event, and (ii) the Contractor demonstrates by a detailed and substantiated analysis the effects of the delay, if any, upon the construction schedule and Contract Time and GMP.
PAGE 31

Where the Contract is based on a stipulated sum or Guaranteed Maximum Price, the Contractor shall submit a schedule of values to the Architect before the first Application for Payment, allocating the entire Contract Sum to the various portions of the Work. The schedule of values shall be prepared in the form, and supported by the data to substantiate its accuracy, required by the Architect. This schedule, ~~unless objected to by~~ upon the approval of the Owner and the Architect, shall be used as a basis for reviewing the Contractor's Applications for Payment. Any changes to the schedule of values shall be submitted to the Architect and supported by such data to substantiate its accuracy as the Architect may require, and unless objected to by the Architect, shall be used as a basis for reviewing the Contractor's subsequent Applications for Payment.

...

§ 9.3.1 At least ten days before the date established for each progress payment, the Contractor shall submit to the Architect an itemized Application for Payment prepared in accordance with Contract Documents and the schedule of values, if required under Section 9.2, for completed portions of the Work. The application shall be notarized, if required, and supported by all data substantiating the Contractor's right to payment that the ~~Owner or Architect~~ Owner, the Architect, or any person or entity providing funding for the Project, may require, such as copies of requisitions, and releases and waivers of liens from Subcontractors and suppliers, and shall reflect retainage if provided for in the Contract Documents. All Applications for Payment shall be in the form and contain the information and supporting documentation as required in this Section 9.3 and such additional information and documentation and as may be reasonably requested by the Owner.

...

§ 9.3.1.2 Applications for Payment shall not include requests for payment for portions of the Work for which the Contractor does not intend to pay a Subcontractor or ~~supplier,~~ supplier unless such Work has been performed by others whom the Contractor intends to pay.

§ 9.3.2 Unless otherwise provided in the Contract ~~Documents.~~ Documents or prohibited by any person or entity providing funding for the Project, payments shall be made on account of materials and equipment delivered and suitably stored at the site for subsequent incorporation in the Work. If approved in advance by the ~~Owner,~~ Owner and not prohibited by any person or entity providing funding for the Project, payment may similarly be made for materials and equipment suitably stored off the site at a location agreed upon in writing. Payment for materials and equipment stored on or off the site shall be conditioned upon compliance by the Contractor with procedures satisfactory to the

Owner to establish the Owner's title to such materials and equipment or otherwise protect the Owner's interest, and shall include the costs of applicable insurance, storage, and transportation to the site, for such materials and equipment stored off the site.

...

§ 9.3.3.1 The Contractor further expressly undertakes to defend the Owner, at the Contractor's sole cost and expense, against any actions, lawsuits, or proceedings brought against Owner as a result of liens filed against the Work, the Project site and any improvements thereon (referred to collectively as "Liens" in this Section 9.3.3), by the Contractor, any Subcontractor, Sub-subcontractor or anyone claiming by, through or under them. The Contractor hereby agrees to indemnify and hold Owner harmless against any such Liens or claims of Liens and agrees to pay any judgment or Lien resulting from any such actions, lawsuits or proceedings. The Contractor's obligations under this Section 9.3.3 are conditioned upon Owner having fulfilled its payment obligations to the Contractor with respect to the Work that is the subject of the Lien or claim and for which indemnification is sought.

§ 9.3.3.2 Commencing with the second Application for Payment, and continuing with each Application for Payment submitted thereafter, the Contractor shall furnish to the Owner a properly executed release and waiver of mechanics liens from the Contractor and each Subcontractor and material supplier whose Work was included on the previous Application for Payment for which payment by Owner was made to the Contractor.

§ 9.3.3 Applications for Payment, and invoices in support of the same, shall clearly distinguish between amounts charged for labor and amounts charged for materials.

§ 9.3.4 Unless otherwise required by the Owner, Applications for Payment shall be on AIA documents G702 and G703.

PAGE 32

§ 9.4.2 The issuance of a Certificate for Payment will constitute a representation by the Architect to the Owner, based on the Architect's evaluation of the Work and the data in the Application for Payment, that, to the best of the Architect's knowledge, information, and belief, the Work has progressed to the point indicated, the quality of the Work is in accordance with the Contract Documents, ~~and~~ and, as a representation made by the Architect solely to the Owner, that the Contractor is entitled to payment in the amount certified. The foregoing representations are subject to an evaluation of the Work for conformance with the Contract Documents upon Substantial Completion, to results of subsequent tests and inspections, to correction of minor deviations from the Contract Documents prior to completion, and to specific qualifications expressed by the Architect. However, the issuance of a Certificate for Payment will not be a representation that the Architect has (1) made exhaustive or continuous on-site inspections to check the quality or quantity of the Work; (2) reviewed construction means, methods, techniques, sequences, or procedures; (3) reviewed copies of requisitions received from Subcontractors and suppliers and other data requested by the Owner to substantiate the Contractor's right to payment; or (4) made examination to ascertain how or for what purpose the Contractor has used money previously paid on account of the Contract Sum.

§ 9.4.3 Notwithstanding anything to the contrary, issuance of a Certificate for Payment by the Architect is a recommendation only and payment to the Contractor of amounts certified in a Certificate for Payment is subject to the Owner's approval.

§ 9.4.4 Certificates for Payment shall be on AIA documents G702 and G703.

...

.2 ~~third-party~~ uninsured third-party claims filed or reasonable evidence indicating probable filing of such claims, unless security acceptable to the Owner is provided by the Contractor;

...

.5 uninsured property damage to the Owner or a Separate ~~Contractor;~~Contractor (excluding the Work);

§ 9.5.3 When the reasons for withholding ~~certification are removed, certification will be made for amounts previously~~ a Certificate for Payment are removed, the Certificate for Payment will be issued as regards amounts previously withheld. The Owner shall not be deemed to be in default by reason of withholding payment while any of the above grounds remained uncured, nor shall any interest accrue or be payable with respect to any payments so withheld.

...

§ 9.6.1 After the Architect has issued a Certificate for Payment, the Owner shall make payment in the manner and within the time provided in the Contract ~~Documents,~~ Documents and shall so notify the Architect.
PAGE 34

§ 9.6.9 Any provision in the Contract Documents to the contrary notwithstanding, the Owner shall not be obligated to make payment to the Contractor hereunder to the extent that the Contractor has not performed the Work or supplied the materials, for which payment is requested, in accordance with the Contract Documents.

If the Architect does not issue a Certificate for ~~Payment,~~ Payment as required by the Contract Documents, through no fault of the Contractor, within ~~seven~~ ten (10) days after receipt of the Contractor's Application for Payment, or if the Owner does not pay the Contractor within seven days after the date established in the Contract Documents, the amount certified by the Architect or awarded by binding dispute resolution, then the Contractor may, upon ~~seven~~ ten (10) additional days' notice to the Owner and Architect, stop the Work until payment of the amount owing has been received. The Contract Time shall be extended ~~appropriately~~ appropriately, and the Contract Sum shall be increased by the amount of the Contractor's reasonable costs of shutdown, delay and start-up, plus interest as provided for in the Contract Documents.

...

§ 9.8.1 Substantial Completion is the stage in the progress of the Work when the Work or designated portion thereof is sufficiently complete in accordance with the Contract Documents so that the Owner can occupy or utilize the Work for its intended use. Substantial Completion shall not occur until: (i) the Owner's receipt of certification by the Architect that the Work is Substantially Complete in the form of a Certificate of Substantial Completion; and (ii) the Owner's receipt of a final and unconditional or a Temporary Certificate of Occupancy from the governmental authorities having jurisdiction that the Work has been completed in accordance with Applicable Laws. Notwithstanding the foregoing, if, but for the failure of the building department or governmental authorities having jurisdiction to timely issue the temporary certificate of occupancy for the Project ("Administrative Delay"), the Contractor would have been deemed to have achieved Substantial Completion of the Work within the Contract Time under the terms and conditions of the Contract Documents, the Contractor shall be entitled to an extension of the Contract Time equal to the duration of such Administrative Delay.
PAGE 35

§ 9.10.1 Upon receipt of the Contractor's notice that the Work is ready for final inspection and acceptance and upon receipt of a final Application for Payment, the Architect will promptly make such inspection. When the Architect finds the Work acceptable under the Contract Documents and the Contract fully performed, the Architect will promptly issue a final Certificate for Payment stating that to the best of the Architect's knowledge, information and belief, and on the basis of the Architect's on-site visits and inspections, the Work has been completed in accordance with the Contract Documents and that the entire balance found to be due the Contractor and noted in the final Certificate is due and payable. The Architect's final Certificate for Payment will constitute a further representation that conditions listed in Section 9.10.2 as precedent to the Contractor's being entitled to final payment have been fulfilled. All warranties and guarantees required under or pursuant to the Contract Documents not previously delivered shall be assembled and delivered by the Contractor to the Owner and Architect as part of the final Application for Payment. The final Certificate for Payment will not be issued by the Architect until all warranties and guarantees and all other close-out deliverables (including those set forth in Section 9.10.2 below) have been received and accepted by the Owner.

§ 9.10.2 Neither final payment nor any remaining retained percentage shall become due until the Contractor submits to the Architect (1) an affidavit that payrolls, bills for materials and equipment, and other indebtedness connected with the Work for which the Owner or the Owner's property might be responsible or encumbered (less amounts withheld by Owner) have been paid or otherwise satisfied, (2) a certificate evidencing that insurance required by the Contract

Documents to remain in force after final payment is currently in effect, (3) a written statement that the Contractor knows of no reason that the insurance will not be renewable to cover the period required by the Contract Documents, (4) consent of surety, if any, to final payment, (5) documentation of any special warranties, such as manufacturers' warranties or specific Subcontractor warranties, and (6) if required by the Owner, other data establishing payment or satisfaction of obligations, such as receipts and releases and waivers of mechanic's liens, claims, security interests, or other encumbrances arising out of the Contract, to the extent and in such form as may be designated by the Owner. If a Subcontractor refuses to furnish a release or waiver required by the Owner, the Contractor ~~may~~ shall furnish a bond satisfactory to the Owner to indemnify the Owner against such lien, claim, security interest, or encumbrance. If ~~a lien, claim, security interest, or encumbrance remains unsatisfied after payments are made, the~~ no such bond is provided, the Owner may, without limiting its remedies under law, in equity, or under the Contract Documents, withhold the portion of final payment claimed to be due by the relevant Subcontractor or supplier until such lien is no longer a viable encumbrance. The Contractor shall refund to the Owner all money that the Owner may be compelled to pay in discharging the lien, claim, security interest, or encumbrance, including all costs and reasonable attorneys' fees.

...

§ 9.10.4 ~~The making of final payment shall constitute a waiver of Claims by the Owner except those arising from~~
~~.1 liens, Claims, security interests, or encumbrances arising out of the Contract and unsettled;~~
~~.2 failure of the Work to comply with the requirements of the Contract Documents;~~
~~.3 terms of special warranties required by the Contract Documents; or~~
~~.4 audits performed by the Owner, if permitted by the Contract Documents, after final payment.~~ Intentionally Omitted.

PAGE 36

§ 10.2.2 The Contractor shall comply with, and give notices required ~~by applicable laws, statutes, ordinances, codes, rules and regulations, and lawful orders of public authorities,~~ by, Applicable Law bearing on safety of persons or property or their protection from damage, injury, or loss.

§ 10.2.3 The Contractor shall implement, erect, and maintain, as required by existing conditions and performance of the Contract, reasonable safeguards for safety and protection, including posting danger signs and other warnings against hazards; promulgating safety regulations; and notifying the owners and users of adjacent sites and utilities of the safeguards. The Contractor shall also be responsible for all measures necessary to protect any property adjacent to the Project and improvements thereon. Any damage to such property or improvements shall be promptly repaired by the Contractor at its cost and expense.

...

§ 10.2.4.1 When there are indications that the use of explosives or other hazardous materials, equipment or unusual methods is necessary for execution of the Work, the Contractor shall give the Owner and Architect reasonable advance notice of the conditions.

§ 10.2.4.2 The Contractor shall be solely responsible for the handling, storage and use of explosive or other hazardous materials when their use is permitted.

§ 10.2.4.3 The Contractor shall not bring explosives onto the Project site or use such in the Work without the prior written permission of the Architect and the Owner. For such use, the Contractor shall obtain necessary permits with copies to the Architect and the Owner. The Contractor shall furnish the Owner and Architect with certificates indicating proper and adequate insurance.

§ 10.2.5 The Contractor shall promptly remedy damage and loss (other than damage or loss insured under property insurance required by the Contract Documents) to property referred to in Sections 10.2.1.2 and 10.2.1.3 caused in whole or in part by the Contractor, a Subcontractor, a Sub-subcontractor, or anyone directly or indirectly employed by any of them, or by anyone for whose acts they may be liable and for which the Contractor is responsible under Sections 10.2.1.2 and 10.2.1.3. The Contractor may make a Claim for the cost to remedy the damage or loss to the extent such damage or loss is attributable to acts or omissions of the Owner or Architect or anyone directly or indirectly employed by either of them, or by anyone for whose acts either of them may be liable, and not attributable to

the fault or negligence of the Contractor. The foregoing obligations of the Contractor are separate from, in addition to, and are not to be construed as included as a part of the Contractor's obligations under Section 3.18.
PAGE 37

§ 10.2.9 In the event the Contractor identifies activities or conditions during performance of the Work or at the Project, which, in the Contractor's good faith opinion, pose an unreasonable risk of bodily injury or property damage, whether immediate or in the future, the Contractor shall have the right to immediately take steps to protect its personnel and Subcontractors and stop Work and remove its personnel from the affected area.

§ 10.2.10 The Contractor shall at all times provide protection against weather (rain, wind, storms or heat) so as to maintain all Work, materials, apparatus and fixtures free from damage. At the end of the day's work, all new Work likely to be damaged shall be reasonably protected against such weather.

§ 10.2.11 The Contractor shall provide adequate fire protection for all operations associated with the Work, and such protection must meet all applicable federal (including OSHA), State and municipal regulations.

§ 10.2.12 The Contractor shall remove and replace with new work, at the Contractor's own expense, any Work damaged by failure to provide protection pursuant to Sections 10.2.10 and 10.2.11, provided that this obligation shall not prohibit the Contractor's right to submit a claim with the Project's Builder's Risk or property insurance.

§ 10.2.13 The Contractor shall be responsible, to the extent not covered by insurance, for damage, loss or liability due to theft or vandalism to the Work and stored materials when work is not in progress at night, on weekends or holidays.

§ 10.2.14 The Contractor shall protect and prevent damage to all unfinished phases of the Work.

§ 10.2.15 SECURING THE SITE
The Contractor is responsible for securing, and preventing access by unauthorized individuals to, the Project site from such date as the Contractor, it subcontractors, consultants, or agents commence the Work until the date of Final Completion, unless the Owner and Contractor agree in writing to an earlier date.

§ 10.3.1 The Contractor is responsible for compliance with any requirements included in the Contract Documents regarding ~~hazardous materials or substances. If the Contractor encounters a hazardous material or substance not addressed in the Contract Documents and if reasonable precautions will be inadequate to prevent~~ any material, substance, chemical, waste, product, derivative, compound, mixture, solid, liquid, mineral or gas, whether naturally occurring or manmade, that is hazardous, toxic, or words of similar import or regulatory effect, and any petroleum or petroleum-derived products, radon, radioactive materials or wastes, asbestos in any form, lead or lead-containing materials, urea formaldehyde foam insulation, and polychlorinated biphenyls (collectively, "Hazardous Materials"). If the Contractor believes its Work will disturb or otherwise implicate any actual or suspected Hazardous Material or encounters a Hazardous Material not addressed in the Contract Documents, the Contractor shall not disturb any such Hazardous Material, immediately report the condition to the Owner and the Architect in writing and take all necessary precautions to prevent release of and exposure to the Hazardous Materials and the Contractor shall immediately report the condition to the Owner and the Architect in writing and take all necessary precautions to prevent release of and exposure to the Hazardous Materials and foreseeable bodily injury or death to persons resulting from ~~a material or substance, including but not limited to asbestos or polychlorinated biphenyl (PCB), encountered on the site by the Contractor, the~~ such Hazardous Material. If such reasonable precautions will be inadequate to prevent release of and exposure to Hazardous Materials, or foreseeable bodily injury and death, the Contractor shall, upon recognizing the condition, immediately stop Work in the affected ~~area and notify the Owner and Architect of the condition.~~area.

§ 10.3.2 Upon receipt of the Contractor's ~~notice,~~ notice pursuant to Section 10.3.1, of the existence of actual or suspect Hazardous Materials not addressed in the Contract Documents, the Owner shall obtain the services of a licensed laboratory to verify the presence or absence of the ~~material or substance~~ Hazardous Material reported by the Contractor and, in the event such ~~material or substance~~ Hazardous Material is found to be present, to cause it to be rendered ~~harmless.~~ harmless or otherwise abated. Unless otherwise required by the Contract Documents, the Owner shall furnish in writing to the Contractor and Architect the names and qualifications of persons or entities who are to perform tests verifying the presence or absence of the material or substance or who are to perform the task of removal or safe containment of the material or substance. The Contractor and the Architect will promptly reply to the Owner in writing stating whether or not either has reasonable objection to the persons or entities proposed by the Owner. If

either the Contractor or Architect has an objection to a person or entity proposed by the Owner, the Owner shall propose another to whom the Contractor and the Architect have no reasonable objection. When the ~~material or substance has been rendered harmless.~~ Hazardous Material has been rendered harmless and/or otherwise abated in accordance with all Applicable Laws. Work in the affected area shall resume upon written agreement of the Owner and Contractor. By Change Order, the Contract Time shall be extended appropriately and the Contract Sum shall be increased by the amount of the Contractor's reasonable additional costs of shutdown, delay, and ~~start-up.~~ start-up, except to the extent that the Hazardous Material was exacerbated due to the negligence, willful or intentional misconduct, or breach of contract of the Contractor.

§ 10.3.3 To the fullest extent permitted by law, the Owner shall indemnify and hold harmless the Contractor, Subcontractors, Architect, Architect's consultants, and agents and employees of any of them from and against claims, damages, losses, and expenses, including but not limited to attorneys' fees, arising out of or resulting from performance of the Work in the affected area ~~if in fact the material or substance~~ related to the presence of any actual or suspected Hazardous Materials if in fact such Hazardous Material presents the risk of bodily injury or death as described in Section 10.3.1 and has not been rendered ~~harmless.~~ harmless or otherwise abated, provided that such claim, damage, loss, or expense is attributable to bodily injury, sickness, disease or death, or to injury to or destruction of tangible property (other than the Work itself), except to the extent that such damage, loss, or expense ~~is due to the fault or negligence of the party seeking indemnity.~~ was caused by, or resulted from the negligence of, or the intentional or willful misconduct or breach of contract by the party seeking indemnity, or the negligence of, or intentional or willful misconduct or breach of contract by such party's agents (including Subcontractors) or employees.

§ 10.3.4 The Owner shall not be responsible under this Section 10.3 for hazardous materials or substances the ~~Contractor~~ Contractor, any Subcontractor or any materialman or supplier, or any entity for whom any of them is responsible, brings to the site unless such materials or substances are required by the Contract Documents. The Owner shall be responsible for hazardous materials or substances required by the Contract Documents, except to the extent of the Contractor's fault or negligence in the use and handling of such ~~materials or substances.~~ materials or substances or its failure to comply with the Contract Documents. The Contractor agrees not to use any fill or other materials to be incorporated into the Work which are hazardous, toxic or comprised of any items that are hazardous or toxic except to the extent required by the Contract Documents.

§ 10.3.5 ~~The Contractor shall reimburse the Owner for the cost and expense the Owner incurs (1) for remediation of hazardous materials or substances the Contractor brings to the site and negligently handles, or (2) where the Contractor fails to perform its obligations under Section 10.3.1, except to the extent that the cost and expense are due to the Owner's fault or negligence.~~ To the fullest extent permitted by law, the Contractor shall indemnify, defend and hold harmless the Owner, the Owner's Designated Representative, and the directors, officers, owners, agents and employees of any of them, as well as the Building Committee appointed by the Owner for the Project, and the fee owner of the Project site (if other than the Owner) against claims, damages, losses and expenses, including but not limited to reasonable attorney's fees, resulting from an actual or suspect Hazardous Material or which the Contractor or its agents (including Subcontractors) or employees brings to the site and improperly handles, or from the Contractor's failure to perform its obligations under Section 10.3.1, except to the extent that such damage, loss or expense was caused by, or resulting from the negligence of the indemnitee.

§ 10.3.6 If, without negligence ~~on the part of the Contractor,~~ or fault on the part of the Contractor or any party for whose acts the Contractor is responsible, the Contractor is held liable by a government agency for the cost of remediation of a hazardous material or substance solely by reason of properly performing Work as required by the Contract Documents, the Owner shall reimburse the Contractor for all cost and expense thereby incurred.

§ 10.3.7 The Contractor shall perform all required procedures necessary to ensure that there will be no actual or threatened release, discharge, spillage, uncontrolled loss, seepage or filtration (each a "Release") of any Hazardous Material on the site caused by its operations. The Contractor is responsible for any and all costs and liabilities associated with the investigation and remediation of any such Release, or as required by regulating authorities having jurisdiction under any of the Applicable Laws, and holds the Owner, its employees and agents, and the fee owner of the Project site (if other than the Owner), harmless against any current or future liabilities resulting from such incidents.

§ 10.3.8 All material and equipment furnished under the Contract Documents shall be free of asbestos, lead based paint, and PCBs. Unless otherwise specified in the Contract Documents, any material or equipment containing these,

User Notes:

and any other Hazardous Materials shall be considered defective and shall be removed by the Contractor at the Contractor's sole expense.

§ 10.3.9 The Contractor, when it will be providing, using, storing, delivering or disposing of any toxic, hazardous or potentially dangerous materials, shall advise in writing, and receive the written approval of, the Owner of the use of such hazardous materials in advance of conducting any such Work and the Contractor is responsible for protecting its own employees, those of the Owner, and all of its employees and agents from the hazards associated with such materials. The Contractor shall furnish written directions, precautions or training, provided or made available from the supplier of the materials, or other acceptable source, for use by all persons who may be subjected to the hazard. The Contractor shall comply with all Applicable Laws. The Contractor shall dispose of any hazardous or toxic substances in accordance with all Applicable Laws, including E.P.A. and D.O.T. regulations and requirements. The Contractor shall perform all required procedures necessary to ensure that there will be no discharge, spillage, uncontrolled loss, seepage or filtration of any hazardous or toxic waste on the site caused by its operations. The Contractor is responsible for any and all costs and liabilities associated with the clean-up of any such spillage, etc., or as required by regulating authorities having jurisdiction, and holds the Owner and its employees and agents harmless against any current or future liabilities resulting from such incidents.
PAGE 39

In an emergency affecting safety of persons or property, during which it is infeasible for the Contractor to consult with the Owner and/or Architect, the Contractor shall act, at the Contractor's discretion, to prevent threatened damage, injury, or loss. Additional compensation or extension of time claimed by the Contractor on account of an emergency shall be determined as provided in Article 15 and Article 7. The Contractor shall promptly notify insurers as applicable, and the Architect and the Owner of the nature of the emergency. Immediately thereafter, the Contractor shall submit to the Architect and the Owner a written report including description of circumstances of the emergency and details of actions taken.

...

§ 11.1.1 The Contractor shall purchase and maintain insurance of the types and limits of liability, containing the endorsements, and subject to the terms and conditions, as described in the ~~Agreement~~ Agreement, Exhibit B (Insurance and Bonds) or elsewhere in the Contract Documents. The Contractor shall purchase and maintain the required insurance from an insurance company or insurance companies lawfully authorized to issue insurance in the jurisdiction where the Project is located. The ~~Owner, Architect, and Architect's consultants~~ Owner shall be named as additional insureds under the Contractor's commercial general liability policy or as otherwise described in the Contract Documents.
PAGE 40

The Owner, at the Owner's option, may purchase and maintain insurance that will protect the Owner against loss of use of the Owner's property, or the inability to conduct normal operations, due to fire or other causes of loss. ~~The Owner waives all rights of action against the Contractor and Architect for loss of use of the Owner's property, due to fire or other hazards however caused.~~

...

§ 11.5.1 A loss insured under the property insurance required by the Agreement ~~shall~~ may be adjusted by the Owner as fiduciary and made payable to the Owner as fiduciary for the insureds, as their interests may appear, subject to requirements of any applicable mortgagee clause and of Section 11.5.2. The Owner shall pay the Architect and Contractor their just shares of insurance proceeds received by the Owner, and by appropriate agreements the Architect and Contractor shall make payments to their consultants and Subcontractors in similar manner.
PAGE 41

§ 12.2.2.1 In addition to the Contractor's obligations under Section 3.5, if, within one year after the date of Substantial Completion of the Work or designated portion thereof or after the date for commencement of warranties established under Section 9.9.1, or by terms of any applicable special warranty required by the Contract Documents, any of the Work is found to be not in accordance with the requirements of the Contract Documents, the Contractor shall correct it promptly after receipt of notice from the Owner to do so, unless the Owner has previously given the Contractor a written acceptance of such condition. The Owner shall give such notice promptly after discovery of the condition.

During the one-year period for correction of Work, if the Owner fails to notify the Contractor and give the Contractor an opportunity to make the correction, the Owner waives the rights to require correction by the Contractor and to make a claim for breach of warranty. If the Contractor fails to correct nonconforming Work within a reasonable time during that period after receipt of notice from the Owner or Architect, the Owner may correct it in accordance with Section 2.5. All warranties in excess of the one year noted above ("Extended Warranties") shall be assigned to the Owner, after which said assignment the Contractor's liability shall be limited to assisting the Owner with the enforcement of the Extended Warranties.
PAGE 42

§ 12.2.6 AUDITS
Upon request of the Owner, the Contractor will cooperate, secure the cooperation of all Subcontractors and Sub-subcontractors and assist the Owner during any audit of the Project conducted by the Owner or one or more Agencies (as defined in Section 2.2.1.2 of the Agreement) at any time after Substantial Completion. Such cooperation shall include providing the Owner with access to all records related to the Project.

...

The Contract shall be governed by the law of the ~~place where the Project is located, excluding that jurisdiction's choice of law rules. If the parties have selected arbitration as the method of binding dispute resolution, the Federal Arbitration Act shall govern Section 15.4.~~State of Connecticut.

...

§ 13.3.1 Duties and obligations imposed by the Contract Documents and rights and remedies available thereunder shall be in addition to and not a limitation of duties, obligations, rights, and remedies otherwise imposed or available by ~~law.~~law or in equity.

...

§ 13.4.3 The invalidity of any part or provision of the Contract Documents shall not impair or affect in any manner the validity, enforceability or effect of the remaining parts and provisions of the Contract Documents and the parties agree to substitute for the invalid provision the provision within the bounds of the law which most clearly effectuates the legal and economic intent of the invalid provision.

§ 13.4.4 No provision contained in the Contract Documents shall create or give to third parties any claim or right against the Owner.

§ 13.4.1 Tests, inspections, and approvals of portions of the Work shall be made as required by the Contract Documents and by ~~applicable laws, statutes, ordinances, codes, rules, and regulations or lawful orders of public authorities.~~ Applicable Law. Unless otherwise provided, the Contractor shall make arrangements for such tests, inspections, and approvals with an independent testing laboratory or entity acceptable to the Owner, or with the appropriate public authority, and shall bear all related costs of tests, inspections, and approvals. The Contractor shall give the Architect timely notice of when and where tests and inspections are to be made so that the Architect may be present for such procedures. The Owner shall bear costs of tests, inspections, or approvals that do not become requirements until after bids are received or negotiations concluded. The Owner shall directly arrange and pay for tests, inspections, or approvals where building codes or applicable laws or regulations so require.

§ 13.4.2 If the Architect, Owner, or public authorities having jurisdiction determine that portions of the Work require additional testing, inspection, or approval not included under Section 13.4.1, the Architect will, upon written authorization from the Owner, instruct the Contractor to make arrangements for such additional testing, inspection, or approval, by an entity acceptable to the Owner, and the Contractor shall give timely notice to the Architect of when and where tests and inspections are to be made so that the Architect may be present for such procedures. Such costs, except as provided in Section 13.4.3, shall be at the Owner's expense. If the inspections and tests conducted under Section 13.4.1 or this Section 13.4.2 reveal failure in a portion of the Work, the Owner may order the inspection and testing at the Contractor's expense of any and all portions of the Work that are identical or similar to the failing portion.

Payments due and unpaid under the Contract Documents shall bear interest ~~from the date payment is due at the rate the parties agree upon in writing or, in the absence thereof, at the legal rate prevailing from time to time at the place where the Project is located.~~as provided in the Agreement.

...

§ 14.1.1 The Contractor may terminate the Contract if the Work is stopped for a period of ~~30~~ sixty (60) consecutive days through no act or fault of the Contractor, a Subcontractor, a Sub-subcontractor, or any of their respective agents or employees, or any other persons or entities performing portions of the Work, for any of the following reasons:

...

.2 An act of government, such as a declaration of national emergency, that requires all Work to be stopped; or

.3 Because the Architect has not issued a Certificate for Payment and has not notified the Contractor of the reason for withholding certification as provided in Section 9.4.1, or because the Owner has not made payment on a Certificate for Payment within the time stated in the Contract ~~Documents; or~~

~~.4 The Owner has failed to furnish to the Contractor reasonable evidence as required by Section 2.2.~~Documents and has not notified the Contractor of the reason for withholding payment.

§ 14.1.2 The Contractor may terminate the Contract if, through no act or fault of the Contractor, a Subcontractor, a Sub-subcontractor, or any of their respective agents or employees, or any other persons or entities performing portions of the Work, repeated suspensions, delays, or interruptions of the entire Work by the Owner as described in Section 14.3, constitute in the aggregate more than 100 percent of the total number of days scheduled for completion, or 120 days in any 365-day period, whichever is less.

§ 14.1.3 If one of the reasons described in Section 14.1.1 or 14.1.2 exists, the Contractor may, upon ~~seven~~ fourteen (14) days' notice to the Owner and Architect, terminate the Contract and recover from the Owner payment ~~for Work executed, as well as reasonable overhead and profit on Work not executed, and~~ in accordance with the Contract Documents for Work executed in accordance with the Contract Documents and direct costs incurred by reason of such termination.

§ 14.1.4 If the Work is stopped for a period of ~~60~~ ninety (90) consecutive days through no act or fault of the Contractor, a Subcontractor, a Sub-subcontractor, or any of their respective agents or employees or any other persons or entities performing portions of the Work because the Owner has repeatedly failed to fulfill the Owner's obligations under the Contract Documents with respect to matters ~~important~~ material to the progress of the Work, the Contractor may, upon ~~seven~~ fourteen (14) additional days' notice to the Owner and the Architect, terminate the Contract and recover from the Owner as provided in Section 14.1.3.

§ 14.1.5 The notice of termination delivered pursuant to Section 14.1.3 or 14.1.4 must state with specificity the means by which the Owner may cure its nonperformance, and the Contractor shall not terminate this Contract if, within the applicable fourteen (14) day period, the Owner substantially takes such curative measures.

PAGE 44

§ 14.2.1 The Owner ~~may~~ may, without prejudice to any other rights or remedies available to the Owner under the Contract Documents or at law or in equity, terminate the Contract if the Contractor

...

.3 repeatedly disregards ~~applicable laws, statutes, ordinances, codes, rules and regulations, or lawful orders of a public authority; or~~Applicable Law;

.4 otherwise is guilty of substantial breach of a provision of the Contract ~~Documents.~~Documents;

.5 institutes proceedings or consent to proceedings requesting relief or arrangement under the Federal Bankruptcy Act or similar or applicable federal or state law, or a petition under any federal or state

User Notes:

bankruptcy or insolvency law is filed against the Contractor and such petition is not dismissed within sixty (60) days from the date of said filing, or the Contractor admits in writing its inability to pay its debts as they become due, or it makes a general assignment for the benefit of its creditors, or a receiver, liquidator, trustee, or assignee is appointed, or a receiver of all or any substantial portion of the Contractor's properties is appointed;

.6 abandons the Work;

.7 submits an Application for Payment, sworn statement, waiver of lien, affidavit or document of any nature whatsoever which is intentionally falsified;

.8 fails to make prompt payment to Subcontractors or for materials or labor in accordance with the respective subcontracts or otherwise breaches its obligations under any subcontract with a Subcontractor; or

.9 if a mechanics or materialman's lien or notice of lien is filed against any part of the Work or the Project site and not promptly bonded or insured over by the Contractor, provided the Owner has paid the Contractor for the Work which is the subject of the lien.

§ 14.2.2 When any of the reasons described in Section 14.2.1 exist, and upon certification by the Architect that sufficient cause exists to justify such action, the Owner may, if the Contractor fails to commence and diligently pursue a cure during such seven (7) day period, without prejudice to any other rights or remedies of the Owner and after giving the Contractor and the Contractor's surety, if any, seven days' notice, terminate employment of the Contractor and may, subject to any prior rights of the surety:

PAGE 45

§ 14.2.4 If the unpaid balance of the Contract Sum exceeds costs of finishing the Work, including compensation for the Architect's services and expenses made necessary thereby, and other damages incurred by the Owner and not expressly waived, such excess shall be paid to the Contractor. If such costs and damages exceed the unpaid ~~balance.~~ balance of the Guaranteed Maximum Price, the Contractor shall pay the difference to the Owner. The amount to be paid to the Contractor or Owner, as the case may be, shall be certified by the Initial Decision Maker, upon application, and this obligation for payment shall survive termination of the Contract.

...

§ 14.3.2 The Contract Sum and Contract Time shall be adjusted for increases in the cost and time caused by suspension, delay, or interruption under Section 14.3.1. Adjustment of the Contract Sum shall include ~~profit.~~ profit (or, as applicable, the Contractor's Fee). No adjustment shall be made to the extent

...

§ 14.4.1 The Owner may, ~~at any time,~~ upon ten (10) days prior written notice, without prejudice and without waiving any other unknown right or remedy available to the Owner and Construction Manager under the Contract Documents or at law or in equity, terminate the Contract for the Owner's convenience and without cause.

...

§ 14.4.3 In case of such termination for the Owner's convenience, the Owner shall pay the Contractor for Work properly ~~executed; costs~~ executed in accordance with the Contract Documents, and reasonably and satisfactorily documented direct and demobilization costs and earned Fee as of effective date of termination incurred by reason of the termination, including costs attributable to termination of ~~Subcontracts; and the termination fee, if any, set forth in the Agreement.~~ Subcontracts.

§ 14.5 Payment upon Termination

§ 14.5.1 Except for claims for such payments as the Owner is explicitly required to make upon termination pursuant to this Article 14, the Contractor hereby waives and forfeits all claims for payment and damages, including without limitation, anticipated profits.

§ 14.5.2 When making any payment upon termination required under this Article 14, the Owner shall be credited for (1) payment previously made to the Contractor for the terminated portion of the Work, (2) valid claims which the

Owner has against the Contractor under the Contract Documents, and (3) the value of the materials, supplies, equipment or other items that are to be disposed of by the Contractor that are included in the Contract Sum.
PAGE 46

The Owner and Contractor shall commence all Claims and causes of action against the other and arising out of or related to the Contract, whether in contract, tort, breach of warranty or otherwise, in accordance with the requirements of the binding dispute resolution method selected in the Agreement and within the period specified by ~~applicable law, but in any case not more than 10 years after the date of Substantial Completion of the Work. The Owner and Contractor waive all Claims and causes of action not commenced in accordance with this Section 15.1.2.~~Applicable Law.

...

§ 15.1.4.1 Pending final resolution of a Claim, except as otherwise agreed in writing or as provided in Section 9.7 and Article 14, the Contractor shall proceed diligently with the performance of its obligations under the Contract Documents and the Owner shall continue to make payments in accordance with the Contract Documents.

...

§ 15.1.6.3 Notwithstanding anything to the contrary herein or in the Contract Documents, but subject to the Contractor's remedy for Concurrent Delays, neither the Contract Sum nor the Contract Time shall be adjusted if the increased costs or delay underlying the Contractor's claim for adjustment stems from the negligent act or omission of the Contractor, its subcontractors of any tier, or of anyone for whose performance the Contractor is responsible to the Owner, or as a result of the error of any of the same or of the failure of any of the same to comply with, and fulfill their responsibilities under, the Contract Documents.

PAGE 47

§ 15.2.5 The Initial Decision Maker will render an initial decision approving or rejecting the ~~Claim,~~ Claim or indicating that the Initial Decision Maker is unable to resolve the Claim. This initial decision shall (1) be in writing; (2) state the reasons therefor; and (3) notify the parties and the Architect, if the Architect is not serving as the Initial Decision Maker, of any change in the Contract Sum or Contract Time or both. The initial decision shall be final and binding on the parties but subject to mediation and, if the parties fail to resolve their dispute through mediation, to binding dispute resolution.
PAGE 48

§ 15.2.8 If a Claim relates to or is the subject of a mechanic's lien, the party asserting such Claim may proceed in accordance with ~~applicable law~~ Applicable Law to comply with the lien notice or filing deadlines.

...

§ 15.3.1 Claims, disputes, or other matters in controversy arising out of or related to the Contract, except those waived as provided for in ~~Sections 9.10.4, 9.10.5, and 15.1.7,~~ the Contract Documents, shall be subject to mediation as a condition precedent to binding dispute resolution.

§ 15.3.2 The parties shall endeavor to resolve their Claims by mediation which, unless the parties mutually agree otherwise, shall be administered by the American Arbitration Association in accordance with its Construction Industry Mediation Procedures in effect on the date of the Agreement. A request for mediation shall be made in writing, delivered to the other party to the Contract, and filed with the person or entity administering the mediation. The request may be made concurrently with the filing of binding dispute resolution proceedings but, in such event, mediation shall proceed in advance of binding dispute resolution proceedings, which shall be stayed pending mediation for a period of 60 days from the date of filing, unless stayed for a longer period by agreement of the parties or court order.~~If an arbitration is stayed pursuant to this Section 15.3.2, the parties may nonetheless proceed to the selection of the arbitrator(s) and agree upon a schedule for later proceedings.~~

END OF
NON-COLLUSION AFFIDAVIT

National Anti-Harassment Policy

Caring for our people is always Turner's most important objective. We are dedicated to creating the right environment that is equitable, inclusive, and free from bias and hate, so we can be at our best at all times. Turner has zero tolerance for sexual and other unlawful harassment or discrimination by or against employees, applicants, temporary workers, gig workers, interns, volunteers, clients, independent contractors, vendors or non-employees of Turner (collectively, "Included Individuals") at a Turner work site or when you are involved in any Turner business relationship as part of your job.[1] Sexual and other unlawful harassment of employees or other individuals occurring in the workplace or in other settings in connection with their employment or engagement is unlawful and prohibited. This policy applies to all incidents of alleged harassment, including those which occur off premises or off-hours (including but not limited to at events, meetings, travel outside the office or work site, communications on personal devices, text or social media, or when working remotely including in virtual meetings or calls), and whether the alleged offender is a supervisor, manager, co-worker or even a third-party non-employee with whom you may be involved in any business or potential business relationship. This policy applies regardless of an individual's immigration status.

To maintain a workplace free from sexual and other unlawful harassment, the following procedures are in place to manage any such inappropriate conduct. Further, any retaliation against an individual who has complained about sexual or other unlawful harassment, or retaliation against individuals for cooperating with an investigation of a harassment complaint, is similarly unlawful. Turner is committed to a work environment where all are treated with respect and dignity. This is what we stand for, and anything less will not be tolerated.

Turner takes allegations of sexual and other unlawful harassment seriously. We will respond promptly to complaints of harassment or discrimination or and where it is determined that such inappropriate conduct has occurred, we will act to eliminate the conduct and impose such corrective action as is necessary, including disciplinary action where appropriate.

Please note that while this policy sets forth our goals of promoting a workplace that is free of sexual and other unlawful harassment or discrimination, the policy is not designed or intended to limit our authority to discipline or take remedial action for workplace conduct which we deem unacceptable, regardless of whether that conduct satisfies the definition of sexual or other unlawful harassment or otherwise violates this policy. Furthermore, the intent of someone's behavior is not a defense to violating this policy. The impact of the behavior is what matters.

SEXUAL HARASSMENT

Definition of Sexual Harassment

Turner specifically prohibits workplace sexual harassment, which it considers a form of employee misconduct. Workplace or work-related sexual harassment, including sex-based or gender-based discrimination is illegal under federal, state and local laws, and will not be tolerated by Turner. The prohibition against sexual harassment applies equally to all individuals regardless of their sex or gender identity. Sexual harassment includes harassment where the harasser and the victim are of the same or different sexes or gender identities.

[1] Issuance of this policy to a non-employee of Turner and/or coverage of a non-employee under this policy in no way creates any employment relationship between Turner and such individual. Furthermore, nothing in this policy in any way grants or confers any implied contractual right to any individual with respect to employment with Turner or alters any employment at-will status of a Turner employee.

Sexual harassment also includes harassment on the basis of sexual orientation, self-identified or perceived sex, gender expression, gender identity and transgender status. Understanding and respecting gender diversity is essential to an inclusive workplace and preventing sexual harassment.[2]

For the purposes of this policy, sexual harassment is defined as unwelcome sexual advances, requests for sexual favors and other verbal or physical conduct of a sexual nature when, for example:

(i) Submission to such conduct is made either explicitly or implicitly a term or condition of an individual's employment or a third party's engagement;

(ii) Submission to or rejection of such conduct is used as or threatened to be used as the basis for employment decisions affecting an individual's employment (such as favorable reviews, salary increases, promotions, increased benefits or continued employment); or

(iii) Such conduct has the purpose or effect of unreasonably interfering with an individual's work performance or creating an intimidating, hostile or offensive environment, even if the complaining individual is not the intended target of the sexual harassment.

Other sexually-oriented conduct, whether intended or not, that is unwelcome and has the effect of creating a workplace environment that is hostile, offensive, intimidating, or humiliating to male or female workers may also constitute sexual harassment.

While it is not possible to list all those additional circumstances that may constitute sexual harassment, the following are some examples of conduct which, if unwelcome, may constitute sexual harassment, depending upon the totality of the circumstances:

- Unwelcome sexual advances, whether they involve physical touching or not;
- Requests for sexual favors in exchange for actual or promised job benefits, such as a favorable review, salary increase, promotion, etc.
- Sexual epithets, slurs, jokes, written or oral references to sexual conduct; gossip regarding one's sex life; comments on an individual's body, comments about an individual's sexual activity, deficiencies, or prowess;
- Displaying sexually suggestive objects, pictures, cartoons;
- Leering, whistling, brushing against the body, sexual gestures, suggestive or insulting comments;
- Sending or circulating, whether in print or electronic form, literature or communications (articles, magazines or e-mails) of a sexual nature;
- Inquiries into one's sexual experiences;
- Discussion of one's sexual activities;
- Sex or gender-based stereotyping, i.e., judging a person's conduct or personality traits because they may not conform to others' ideas or perceptions about how individuals of a particular sex should act or look, including but not limited to: (a) remarks regarding an individual's gender expression; or (b) asking individuals to take on traditionally gendered roles;
- Other conduct directed toward a person because of their gender, gender identity, gender expression, or sexual orientation, including but not limited to: (a) intentional misuse of an individual's preferred pronouns or (b) creating different expectations for individuals based on their perceived identities;
- Other verbal or physical conduct of a sexual nature

[2] The three most common ways people may identify are: (1) cisgender (gender aligns with their sex assigned at birth, which generally aligns with the binary of male or female), (2) transgender (gender is different than the sex they were assigned at birth), and (3) non-binary (the person does not identify exclusively as man or woman; might identify as both, in between, or outside the gender binary).

Complaints of Sexual Harassment

Any of our employees or other included individuals who believe that they have been subjected to or witnessed sexual harassment, should promptly file a complaint, in writing or verbally, with a Turner Project Manager, Operations Manager, Project Executive, Department Head or Human Resources Director/Manager. These individuals are also available to discuss any concerns you may have and provide information about our policy on sexual harassment and complaint process. You can also raise the issue directly with a Turner business unit General Manager or equivalent senior executive, or Senior Human Resources Director. You may also follow Turner's internal complaint and grievance procedure to resolve complaints by contacting compliance@tcco.com or call The Network at 888-738-1924.

Any supervisor or manager who has reason to suspect harassment or retaliation is occurring must notify a Turner Human Resources Director/Manager.

Please be aware that early reporting and intervention have proven to be the most effective methods of resolving actual or perceived incidents of harassment. Turner expects prompt reporting of complaints or concerns so that rapid and constructive action can be taken. We will make every effort to stop alleged harassment, but can only do so with the cooperation of our employees.

The availability of this complaint procedure does not preclude individuals who believe they are being subjected to harassing conduct from promptly advising the offender that his or her behavior is unwelcome and requesting that it stop. Turner also encourages but does not require individuals who believe they are being harassed to promptly notify the offender that his or her behavior is unwelcome.

Retaliating against an individual who has complained about sexual harassment, and/or against individuals for cooperating with an investigation of a sexual harassment complaint, is unlawful and will not be tolerated byTurner. However, if after investigating any complaint of harassment, Turner determines that the complaint is frivolous and was not made in good faith, or that false information regarding the complaint was knowingly provided, disciplinary action may be taken against the employee who filed the bad-faith complaint or who knowingly gave the false information.

All complaints will be kept confidential to the maximum extent possible, and this confidentiality should be maintained whether employees are involved in the complaint or investigation or otherwise become aware of the complaint. There is a duty to report any conduct that they believe violates this policy. In addition, every employee and included individual has a duty to cooperate with any investigation conducted by Turner, regardless of whether the investigation is being conducted by Turner officials or outside parties retained for this purpose.

Bystander Intervention

In the event someone witnesses harassing behavior that violates this policy, there are bystander intervention methods that may be used, including letting the affected individual(s) know how to report the behavior by utilizing Turner's complaint procedures.[3]

Sexual Harassment Investigation

Complaints and allegations will be promptly investigated in a fair, timely, and thorough manner that provides all parties appropriate due process and reaches reasonable conclusions based on the evidence collected. The investigation will be conducted in such a way as to maintain confidentiality to the extent practicable under the circumstances. Our investigation may include a private interview with the person filing the complaint and with any witnesses. We may also interview the person alleged to have committed sexual harassment. When we have completed our investigation we

[3] Employees may also interrupt the harassment by engaging with the victim and distracting them from the behavior, asking another party present to help intervene, and checking in following the incident.

may, to the extent appropriate, inform the person filing the complaint and the person alleged to have committed the conduct of the results of that investigation.

If the result of the investigation indicates that corrective action is called for, such action may include disciplinary measures up to and including immediate termination of the employment of the offender (if a Turner employee) or other appropriate remedial measures (if the offender is not a Turner employee).

Turner's complaint and investigation process strives to maintain confidentiality to the extent practicable, provide timely responses, conduct impartial and timely investigations by qualified personnel, document and track investigations for reasonable progress, engage in appropriate options for remedial actions and resolutions, and provide for timely closures.

OTHER UNLAWFUL HARASSMENT

Turner strongly supports the rights of all its employees and included individuals to work in an environment free from all forms of unlawful harassment, including harassment on the basis of age, ancestry, ethnicity, color, religious creed (including religious dress and grooming practices), disability (mental and physical) including HIV and AIDS, marital status, familial status, partnership status, medical condition (cancer and genetic characteristics), genetic information, citizenship, military and veteran status (including protected veteran status and past, current, or prospective service in the uniformed services), national origin (including language use restrictions), race (including traits historically associated with race, including but not limited to hair texture and protected hairstyles), sex (which includes pregnancy, childbirth, breastfeeding and medical conditions related to pregnancy, childbirth or breastfeeding), sexual and reproductive health decisions, gender (including gender nonconformity and status as a transgender or transsexual individual, gender identity, and gender expression), sexual orientation, caregiver status, criminal history, domestic violence victim status, and any other characteristic protected under applicable federal, state, or city law.

Unlawful harassment is verbal or physical conduct that denigrates or shows hostility or aversion toward an individual because of a protected characteristic, and that:

(a) creates an intimidating, hostile or offensive working environment;
(b) unreasonably interferes with an individual's work performance; or
(c) otherwise adversely affects an individual's employment opportunities.

Unlawful harassing conduct includes, but is not limited to:

- epithets;
- slurs;
- negative stereotyping;
- threatening, intimidating or hostile acts that relate to a protected characteristic;
- written or graphic material that denigrates or shows hostility or aversion toward an individual or group because of a protected characteristic, and that is placed on walls, bulletin boards, or elsewhere on the Turner's premises, or circulated in the workplace on paper or electronically.

Retaliation Is Prohibited

Unlawful retaliation can be any action that could discourage an employee or other included individual from coming forward to make or support a harassment or discrimination claim and is prohibited by federal, state, and local law.

Applicable law protects any individual who has engaged in "protected activity." Protected activity occurs when a person has: made a complaint of harassment or discrimination, either internally or with any government agency; participated in an investigation of a harassment or discrimination complaint; testified or assisted in a proceeding involving harassment or discrimination under applicable law; opposed unlawful harassment or discrimination by making a verbal or informal complaint to management, or by simply informing a supervisor or manager of suspected harassment or

discrimination; reported that another employee or included individual has been harassed or discriminated against; or encouraged a fellow employee or included individual to report harassment or discrimination. Even if the alleged harassment or discrimination does not turn out to rise to the level of a violation of law, the individual is protected from retaliation if the person had a good faith belief that the practices were unlawful. However, this retaliation provision is not intended to protect persons making intentionally false charges of harassment or discrimination.

Examples of retaliation may include, but are not limited to:

- Implementing an unwarranted demotion or termination that is not based on a legitimate business and non-retaliatory reason;
- Issuing an unwarranted performance improvement plan or negative evaluation;
- Directing social isolation;
- Publicly releasing personnel files; or
- Undermining an individual's immigration status.

Retaliation against any employee for reporting discrimination or harassment, supporting another's complaint, or for participating in an investigation of a claim of discrimination or harassment is a serious violation of this policy and will result in the violator being subject to disciplinary action, up to and including termination of employment (if a Turner employee) or other appropriate remedial measures (if the offender is not a Turner employee). Further, retaliating against third parties who have complained about harassment or discrimination or cooperated in an investigation of a harassment or discrimination complaint is strictly prohibited under this policy.

Turner prohibits unlawful harassment, retaliation, and discrimination of any kind. Any violation of this policy should be reported in accordance with the complaint procedure in the Sexual Harassment policy and the complaint will be handled in the manner set forth in that procedure.

If the result of the investigation indicates that corrective action is called for, such action may include disciplinary measures up to and including immediate termination of the employment of the offender (if a Turner employee) or other appropriate remedial measures (if the offender is not a Turner employee).

Employee's Responsibility

- All employees and other included individuals should avoid contributing directly or indirectly to any form of harassment or discrimination in the workplace.
- Report any observed or potential harassment or discrimination promptly and confidentially to Turner management and/or to the Human Resources Director/Manager.
- Cooperate fully in any investigation in a discreet, confidential, and sensitive manner. Failure to cooperate may be grounds for disciplinary action.

Supervisor's Responsibility

- Maintain an open-door policy for employees to communicate potential concerns at an early stage and seek counsel from Turner's Human Resources Director/Manager.
- Take all complaints or concerns of alleged or possible harassment or discrimination seriously, no matter how minor or who is involved.
- Report any alleged incidents or receipt of formal complaints immediately to the appropriate management and to Turner's Human Resources Director/Manager.
- Cooperate fully in any investigation and maintain confidentiality to the extent possible.
- Take appropriate action to prevent retaliation or prohibited conduct from reoccurring during and after any investigations or complaints.

- Communicate support of the policy and guidelines throughout the organization.
- Make sure that all employees and other individuals within your area of responsibility are aware of this policy, ensure that personnel decisions are in compliance with this policy, and initiate corrective action (after consulting with Turner Human Resources Director/Manager, Operations Manager, Project Executive or the Senior Human Resources Director) when improper behavior is observed or reported.

Supervisors who knowingly allow or tolerate harassment, discrimination or retaliation are in violation of this policy and subject to disciplinary action.

Prevention Program

Avoidance of harassment, sexual harassment, and discrimination requires constant supervisory and management awareness. Publication of this policy reaffirms the Turner's desire to eliminate any form of harassment or discrimination. Anti-harassment training is provided to all employees throughout Turner annually, or as otherwise required by state or local law. The resulting work environment should be one sensitive to discrimination, harassment and sexual harassment issues and one positioned to prevent violations. We trust that all our employees will continue to act responsibly to establish and maintain a harassment-free and discrimination-free working environment.

Graffiti Prevention 2
Renovations to Existing Facilities 3

Introduction

Turner has zero tolerance for vandalism, graffiti and defacement of property in our workplace. This policy outlines steps to take to prevent incidents. As so much vandalism and graffiti is bias-motivated, we must take swift action if an incident occurs. We will hold ourselves and others accountable to ensure that our workplace is free from harassment, hate and bigotry of any kind.

Policy

Turner Construction Company has ZERO TOLERANCE for graffiti, vandalism, or defacement of property on our projects and in our offices. It damages property and is a crime (examples include images drawn, sprayed, or etched, stickers, non-work-related posters, etc.). The goal is to eliminate these types of incidents and this behavior on our projects.

Any graffiti, vandalism or defacement determined to be motivated by bias against a person's race, religion, disability, sexual orientation, ethnicity, gender, or gender identity or targeted to a specific individual triggers the steps outlined in the Bias-Motivated Events and Potential Hate Crimes Protocol.

Response

Turner's commitment to establishing a safe workplace through the elimination of graffiti, vandalism, or defacement of property should be a topic of discussion in all worker orientations and daily huddles. All graffiti found on our projects must be immediately reported to leadership (Operations Manager, Project Executive and Senior Project Manager) who will determine if it is bias-motivated. If unsure, contact **Rodney Pope at 347-203-4323** for assistance.

- If not bias-motivated, take the following measures:
  - Capture incident with photo(s) in Predictive Solutions or other tracking tool
  - Review the incident to determine the source and if identified, hold the offender(s) accountable
  - Consider a stand down with the entire workforce, principals of the trades and union representatives to discuss the situation and training may also be required
  - Remove the graffiti
- If graffiti is pervasive or continues, one or more of the following measures may be required:

© Turner Construction Company

Turner

Jobsite & Office Vandalism, Graffiti, and Defacement of Property Policy

August 21, 2020

a. Contact trades principals, client and property owner (as necessary) and reinforce zero tolerance for any defacement
a. Consider installing a camera(s) to monitor the site. (Type of camera will be project and location specific.)
b. Conduct a project shutdown and training of the entire workforce may be required.
c. If associated with a specific trade partner or individual, they may be removed from the project permanently and possibly be barred from future Turner projects.

- If **Bias-Motivated**, per Turner's Bias-Motivated Events and Potential Hate Crimes Protocols, within one hour of the event, the Environmental Health & Safety Director or Operations Manager must call the Turner Crisis Hotline - **1 (866) 3-TURNER/ 1 (866) 388-7637**.

Temporary Facilities (Port-a-Johns, toilet trailers, built on-site, pedestrian covered walkways, scaffolds, gang boxes, storage trailers, job trailers, etc.)

- Given the historical propensity of graffiti occurring in temporary facilities, project teams must perform an initial visual inspection of all temporary facilities, interior and exterior, prior to their acceptance for use on our projects. This inspection also applies to projects utilizing permanent facilities or field-built temporary facilities. If conditions are found to be unacceptable, the project staff must refuse delivery and notify the third-party vendor or building management immediately.

Contract Language

Include language specific to temporary facilities in the scope of work in the trade partner contract or purchase order to ensure that any facilities delivered to a Turner project will arrive in "like new" condition both inside and outside. **Use the required language below in trade partner contracts or purchase orders:**

> **Insert this language into the scope of work in the contract. Make reference to the harassment language in Form 16 BRA, Article IX.**
> In keeping with the obligations and expectations of Article IX Harassment, this contractor shall inspect portable toilets prior to delivery to the site to ensure that each unit is:
> 1. Clean and in "like new" condition
> 2. Free from any drawings, stickers or graffiti of any type
> 3. Free from any etched markings
>
> Turner will not accept any facility that does not meet the standards listed above. Any cost associated with the removal and replacement of a facility that was delivered in an unsatisfactory condition will be borne by this contractor.

Graffiti Prevention

In order to effectively eliminate defacement of property, the Operations Manager, in collaboration with Project Leadership, will determine implementation of the following and/or additional practices:

Temporary Facilities

After the acceptance of a facility, any graffiti found thereafter is considered to have originated on the project. In order to effectively monitor temporary facilities:

© Turner Construction Company

Turner

Jobsite & Office Vandalism, Graffiti, and Defacement of Property Policy

August 21, 2020

- Inspect facilities periodically throughout the workday as part of the regular routine and in conjunction with the regular sanitizing by on-site cleaners, on-site labor or Turner staff.
- If graffiti is found to be ongoing and pervasive, increase the frequency of these inspections as necessary.
- Group toilets together while adhering to COVID-19 physical distancing guidelines.
- Avoid placing isolated, standalone units in remote locations on the site whenever possible.
- If pre-existing graffiti previously painted over becomes visible, the unit will be removed.
- Apply anti-graffiti paint or coating to allow easy removal of markings on field-built facilities.

General Workplace

Graffiti is often found in less frequently traveled locations such as machine rooms, stairwells, closets, site fences, etc. Conduct regular inspections of the project to identify any graffiti,

- In addition to the measures above, consider isolating the area(s) of concern and develop a controlled access protocol.

Renovations to Existing Facilities

- Review Turner's Bias-Motivated Events and Potential Hate Crimes Protocol and Graffiti Policy with the client so there is a shared commitment and understanding of how the project will handle graffiti and bias-motivated events should they occur during construction.
- Prior to beginning work on any renovation project, an inspection and documented survey of the existing project is required to ensure the project is graffiti-free. The entire project site is to be inspected including stairwells, mechanical rooms (including inside and outside air handling units), electrical closets and existing building toilets planned to be used by workers during construction.
- Any graffiti found must be brought to the attention of project leadership, the client/building manager, and construction manager (if not Turner). The team must then develop and implement a plan to remove all graffiti prior to construction mobilization/continuation.

#4 - Project Response 7
#5 - Project Recovery 8

At Turner we will create an environment where everyone can be at their best, be authentic, and be treated with respect and dignity, and eliminate hate and bias every minute of every day. – Peter J. Davoren, CEO and President

Introduction

Turner trusts that if we communicate, model, train and implement consistent high standards for what is acceptable and unacceptable behavior across all worksites, we will ensure that every worker is treated with respect and dignity. Together, with industry partners, clients, and competitors, we can create lasting change in the industry and to the quality of people's work experience.

Purpose, Objective and Ownership

This playbook provides actionable steps during the lifecycle of a project to help inform and guide Turner Project Staff in creating an inclusive and respectful workplace. Worker Experience, Vandalism and Graffiti Policy, and Bias Motivated Events (BME) Protocol documents are included to ensure Turner Staff are promoting an inclusive and respectful workplace.

This Playbook has a shared responsibility for every project team to create an environment where everyone can be at their best, be authentic, and be treated with respect and dignity, and to eliminate hate and bias every minute of every day. Specific responsibilities are defined throughout each phase of the project lifecycle within this document:

Turner Team

The Turner team is responsible to communicate and set the expectations of the Inclusive and Respectful Workplace Playbook. Turner will provide adequate training and resources to Trade Partners. Trade Partners and other project partners will be held accountable to maintain an inclusive and respectful workplace that aligns with this playbook.

Trade Partner Leadership

All Trade Partner Principals will commit and actively engage with the contents of this playbook to communicate expectations and assure implementation to their respective supervisors, crew leads and craftworkers.

Crew Leaders

Turner recognizes that craftworkers on Turner projects will follow their Crew Leaders. Therefore, Crew Leaders must be the primary point for distribution of messaging, modeling desired behaviors, accountability for their crews and delivery of feedback to Trade Partner and Turner Leadership. It is the role of the Trade Partner Leadership and Turner to provide adequate training, resources, and support to assure successful messaging and implementation.

Joint Venture Partners

All Joint Venture Partners (majority or minority) are equally responsible for communicating and setting the expectations of the Inclusive and Respectful Workplace Playbook with Turner. They will commit and actively engage with the contents of this playbook to communicate expectations and assure its implementation on the project.

Project Phase Overview

Project teams should utilize this playbook during each of the five (5) project phases outlined below. See the respective sections for step-by-step guidance.

1	**Project Planning** Turner and Trade Partner responsibilities during the project award phase.
2	**Project Launch** Turner and Trade Partner alignment and implementation of the Playbook during mobilization and project kickoff.
3	**Project Execution** Perform 'Plan – Do – Check – Adjust" approach during the lifecycle of the project to ensure Inclusive and Respectful Workplace Playbook is effectively maintained.
4	**Project Response** Turner and Trade Partner responsibility, actions, and response during a Vandalism and Graffiti or Bias Motivated Event incident.
5	**Project Recovery** Mitigation strategies to ensure no repeat events occur.

#1 - Project Planning

Project Planning Actions - Responsible Party			
Preconstruction & Procurement	Turner & JV Partners	Trade Partner	Crew Leaders
Project team to create an Inclusive and Respectful Workplace project-specific plan and obtain GM/OM approval.	✓		
Preconstruction should include Inclusive and Respectful Workplace commitment and scope outlined in this playbook.	✓		
Alignment meeting with Turner Leadership and bidding Trade Partner Principals to ensure understanding and commitment to Worker Experience, Vandalism and Graffiti Policy, and BME Protocol.	✓	✓	
Project budget and Trade Partner bids and subcontracts to include scope and cost for the Worker Experience document.	✓	✓	

#2 - Project Launch

Project Launch Actions - Responsible Party			
Project Mobilization & Setup	Turner & JV Partners	Trade Partner	Crew Leaders
Plan project setup to include Worker Experience and Vandalism & Graffiti Policy for orientations, videos (Safety Orientation, Empathy, Inclusive and Respectful Workplace), toolbox talks, and posters to ensure inclusive and respectful environment.	✓	✓	
Share approved plan with Trade Partner leadership to ensure alignment and full commitment.	✓	✓	
Review Worker Experience and Vandalism and Graffiti Policy during project kickoff meetings with Turner team and Trade Partner crew leads to ensure commitment and understanding.	✓	✓	✓
Review the Inclusive and Respectful Workplace project-specific plan with Trade Partner crew leads to ensure Trade Partner input and buy-in.	✓	✓	✓
Obtain each Trade Partner's plan to train and support their Crew Leaders.	✓	✓	✓
Obtain each Trade Partner's plan for communicating with their craftworkers.	✓	✓	✓

#3 - Project Execution

Project Execution - Responsible Party			
Day-to-day initiatives to promote an Inclusive and respectful workplace	Turner & JV Partners	Trade Partner	Crew Leaders
Conduct regular stand-downs, huddles, and toolbox talks to support the inclusive and respectful workplace.	✓	✓	✓
Crew Leaders to regularly discuss the project environment with their craft workers and provide Turner team with improvement suggestions.		✓	✓
Review Worker Experience and Vandalism and Graffiti Policy documents throughout the life of the project and ensure 'Plan – Do – Check – Adjust' approach to improve and maintain Project Experience. *Minimum of once a quarter.*	✓	✓	✓
Provide training to Crew Leaders identified at launch and throughout the life of the project.		✓	✓
Provide regular updates on communication with craftworkers according to communication plan established during project launch.		✓	✓
Provide feedback on jobsite culture from craftworkers and adjust the project-specific Worker Experience plan as needed.	✓	✓	✓

#4 - Project Response

Project Response - Responsible Party			
BME Event Response	Turner & JV Partners	Trade Partner	Crew Leaders
In the event of an incident, immediately notify Site Leadership or call the Crisis Hotline 888-738-1924.	✓	✓	✓
Ensure all project staff and workforce are safe.	✓	✓	✓
Secure the area. DO NOT remove evidence or disturb the potential crime scene; take photos only.	✓	✓	✓
Initiate the Bias Motivated Event Response Protocol.	✓	✓	
Fully engage Trade Partners in planning and implementation of response.	✓	✓	✓
Once the proper response has been implemented, initiate Project Recovery phase.	✓	✓	✓
Develop and implement talking points and follow-up by Crew Leaders in response to BME event.	✓	✓	✓

Project Recovery - Responsible Party			
Moving Forward Post Event	Turner & JV Partners	Trade Partner	Crew Leaders
Ensure Project Launch and Project Execution Standard actions continue.	✓	✓	✓
Re-visit and update project-specific plans with Crew Leaders to implement any enhanced measures required due to BME event.	✓	✓	✓
Review and gain alignment of revised project-specific plans with PM/PX and GM/Operations Manager.	✓		

Crew Leader Training

Crew leaders who join a Turner site must receive training to help them build, model and maintain the culture we expect on every Turner site. As leaders, they are also expected to share certain trainings with their crews. Following are the minimum trainings required by audience:

Trade Partner Crew Leaders:

Required to take:

- ☐ Inclusive & Respectful Workplace *(10-minute video)*
- ☐ Empathy on the Jobsite *(5-minute video)*

Required training to deliver to crews:

- ☐ Inclusive & Respectful Workplace *(10-minute video)*
- ☐ Empathy on the Jobsite *(5-minute video)*
- ☐ Toolbox Talks *(15-minute huddle trainings)* Series available, suggest holding every 2-3 weeks

STATE OF CONNECTICUT
Contractor Verification
(in accordance with Public Act 16-67)

Directions to Contractor: Connecticut law requires that any contractor applying or bidding for a contract (including individuals who are independent contractors) with a local or regional board of education, a governing council of a state or local charter school, or interdistrict magnet school operator require any employee with the contractor who would be in a position involving direct student contact to supply the contractor with the information provided in this form. Information may be collected either through a written communication or telephonically.

In addition, pursuant to Connecticut General Statutes (C.G.S.) § 10-222c, the contractor is required to contact – either telephonically or through written communication – any current or former employer of an employee if such employer was a local or regional board of education, a governing council of a state or local charter school, or interdistrict magnet school operator or if the employment caused the employee to have contact with children, to request any information concerning whether there was a finding of abuse or neglect or sexual misconduct against the employee. If the contractor receives any information indicating such a finding, or otherwise has knowledge of such a condition, the contractor must immediately forward such information to any local or regional board of education with which the contractor is under contract.

Directions to Employee of Contractor: Pursuant to Connecticut state law, employees of a contractor who would be in a position involving direct student contact must supply all of the information provided in Section 2 of this form.

Section 1 – To be completed by Contractor

Name	
Street address	
City, State, Zip Code	
Contact person	
Telephone number/email address	

Section 2 – To be completed by Employee of Contractor

Part A. On a separate sheet of paper, please list the name, address and telephone number of each current or former employer, if such current or former employer was a local or regional board of education, a governing council of a state or local charter school, or interdistrict magnet school operator, or if such employment otherwise caused you to have contact with children.

Part B. Please complete the questions below in their entirety.

Have you ever:

Y ☐ N ☐ Been the subject of an abuse or neglect or sexual misconduct investigation by any employer, state agency or municipal police department (answer "no" if the investigation resulted in a finding that all allegations were unsubstantiated)?

Y ☐ N ☐ Been disciplined or asked to resign from employment or resigned from or otherwise separated from any employment while an allegation of abuse or neglect was pending or under investigation by the Department of Children and Families (the "department"), or an allegation of sexual misconduct was pending or under investigation or due to an allegation substantiated pursuant to section 17a-101g of abuse or neglect, or of sexual misconduct or a conviction for abuse or neglect or sexual misconduct?

Y ☐ N ☐ Had a professional or occupational license or certificate suspended or revoked or ever surrendered such a license or certificate while an allegation of abuse or neglect was pending or under investigation by the department or an investigation of sexual misconduct was pending or under investigation, or due to an allegation substantiated by the department of abuse or neglect or of sexual misconduct or a conviction for abuse or neglect or sexual misconduct?

Part C – Written Consent and Disclosure Authorization. I hereby authorize the entities I have listed in Section 2 of this form to release to the entity listed in Section 1 of this form the information required to be released by my previous employer pursuant to (C.G.S.) § 10-222c along with any related records. I hereby consent to and authorize disclosure by the State Department of Education of the information requested pursuant to C.G.S. § 10-222c, as amended by Public Act 16-67, and I hereby authorize the release by the State Department of Education of any related records. I further hereby release the above-named employer(s) and the State Department of Education from any and all liability of any kind that may arise from the disclosure or release of records requested pursuant to C.G.S. § 10-222c, as amended by Public Act 16-67.

NOTES:

The terms provided below are currently defined in state law as follows. Please note that statutes may be amended from time to time.

Sexual Misconduct means – "any verbal, nonverbal, written or electronic communication, or any other act directed toward or with a student that is designed to establish a sexual relationship with the student, including a sexual invitation, dating or soliciting a date, engaging in sexual dialog, making sexually suggestive comments, self-disclosure or physical exposure of a sexual or erotic nature and any other sexual, indecent or erotic contact with a student." Connecticut General Statutes § 10-222c(k).

Abuse or neglect means – "abuse or neglect as described in Section 46b-120, and includes any violation of Sections 53a-70, 53a-70a, 53a-71, 53a-72a, 53a-72b or 53a-73a." Connecticut General Statutes § 10-222c(k).

The Connecticut State Department of Education is an affirmative action/equal opportunity employer and does not discriminate on the basis of race, color, religion, sex, gender identity or expression, sexual orientation, marital status, national origin, ancestry, age, criminal record, political beliefs, genetic information, intellectual disability, past or present history of mental disability, learning disability, or physical disability, including, but not limited to, blindness or any other basis prohibited by Connecticut state and/or federal nondiscrimination laws.

RECEIPT VERIFICATION FORM

(for storage of materials at a Subcontractor's facility)

Project Name: _____

Manufacturer/Vendor: _____

Receiving Entity: _____

Equipment / Product: _____

This is to certify that on this day,_____that_____(name of individual) of, _____(receiving entity), has received the materials, goods, or equipment described below or described per the attached bill of lading ("Materials") and found them to be without damage, visible or otherwise. This is to further certify that the Materials that are being received are for the above-named project and in the quantities indicated by the General Contractor.

By signature of this document dated,_____(receiving entity) acknowledges full and total responsibility for the care and custody of these Materials, until final acceptance by the end user or Project Owner, including but not limited to, storage, removal from storage, disposal of debris, protection from the elements, installation, all necessary materials for installation, make ready for startup, startup or assistance as required and warranty support as previously agreed._____(receiving entity) acknowledges that the Materials are the property of the end user or Project Owner and warrants that it will not place any liens, encumbrances, or security interests on the Materials and that it will indemnify and defend SourceBlue, its general contractor, the end user or Project Owner against any claims arising out of any such lien, encumbrances, or security interests.

Delivery Information:

Date of Receipt: _____Quantity of Pallets/Sections/Units: _____

1) Package contents match Shipping List or Bill of Lading? YES NO *If NO, explain below.*

2) Package or content damaged? YES NO *If YES, notify immediately and provide description below.*

Comments: _____

Receiving Entity:

Name: _____

Title: _____

Date: _____

Visible/External Damage to be reported within two (2) Calendar Days. Internal Damage to be reported within fourteen (14) Calendar Days.

If left un-responded, after a duration of five (5) calendar days, we will proceed with this as a confirmation the delivery has been received undamaged and in compliance with the submittals and tickets.

Turner

Project Name: **New Greenwich Central Middle School**
Date: **July 8th, 2024**
PX: **Tim Klepps**
Project Superintendent: **Chris Chila**

Project Number: TBD
OM Approver: **Thomas Dutchyshyn**
Sr. PM/PM: **Joseph Phelan**

Project Overview

The project consists of building a brand new, two-story 130,000sqft Public Middle School in Greenwich, CT. Which provides new classroom spaces, a cafeteria, auditorium, gymnasium and ancillary spaces as well. The project is two phases, with the Second Phase consisting of the demolition of the Existing School and building new fields. The Project has a value of $98 million and a project duration of 25 months.

Signage and Communication

All signage must be visible from a distance of 25 to 50 feet away. The below signage will be posted at the construction site main entrances, bathrooms, breakroom, and Turner field office. The Turner project engineer and superintendent will be responsible for receiving and responding to workforce concerns. Note: Signage may be bi-lingual to accommodate the workforce as needed.

All signage is visible and posted in high traffic areas:

1. **Zero tolerance posters**
2. **Anti-graffiti signage**
3. **Turner Worker Commitment**
4. **Physical and Mental wellness – Union EAP QR codes and contacts**
5. **QR code safety surveys**
6. **All signage also available in Spanish**

Facilities

Every person who comes to a Turner site should expect that all facilities are appropriate to their intended use. They must be well-maintained, clean, and always stocked. Facilities will be provided and maintained as noted below.

Break Areas

A break room will be provided within the building for onsite workers throughout the duration of the project. The break room will consist of folding tables and chairs and a general use microwave. Location of the break room will be shifted during construction as needed. All trades people are required to clean up after themselves and dispose of garbage in the designated garbage receptacle

1. **Open Floor Plan Space with Tables and Chairs**
2. **Utilize project heating during the winter months / Fans and small ac-units during the summer months.**

3. **Provide common general use utilities, such as Microwaves, Hydration Station, Handwash Stations etc.**
4. **Provide tents and/or exterior picnic tables outside in designated areas to encourage eating outside the building.**
5. **Provide community shelving and coat hooks to laydown tools and/or hang helmets and vests.**

Toilet Facilities

This project will utilize a mobile restroom trailer for the duration of the project. The Turner Engineer / Superintendent will perform a thorough first inspection on all facilities to ensure they are free from any graffiti or BME symbols, graphics, etchings, or markings before they are put into service. Hot and cold water will be maintained for these spaces throughout the duration of construction. All facilities will be inspected by the Turner Project Team (3) times a day. A Turner Laborer will be assigned to this project, they will be responsible for daily cleanliness and stocking. Each trade partner employee is expected to help maintain cleanliness of toilet facilities.

1. **A Toilet Trailer with water and climate control will available adjacent to the construction space for use.**
2. **A handwashing station with soap to be provided.**
3. **Weekly cleaning of units by the vendor will be provided and modified as needed based on conditions/crew size.**
4. **Turner Personnel will check toilets on a daily basis to ensure conditions of satisfaction are met.**
5. **Cameras will monitor the toilets.**
6. **Each toilet has posted contact information for concerns.**
7. **QR Code Surveys will be provided for Surveys and opportunities for feedback within Toilet(s).**

Special Accommodations

The jobsite will provide special accommodations upon request such as: Mother's room, prayer/meditation, wellness room. The facilities must be well maintained, cleaned, and well stocked. Note: interior jobs or established jobsites may have access to existing space to accommodate these special requests.

1. **The Turner Trailer will have a separate private Wellness Room to accommodate both weekly wellness check-ins, but also facilitate the need for prayer/mediation, or act as a Mother's Room.**
2. **As the Project progresses, Turner may provide a separate lockable space within the Building Footprint to add as an additional Wellness Room.**

Hydration Options

1. **Area of refuge will be the Turner Field Office.**
2. **Hydration Station will be provided with electrolytes.**
3. **Popsicles with electrolytes will be provided in periods of hot weather days.**

4. **Each Trade Partner will be responsible in providing their employees with water, but supplemental electrolytes/water will be provided by Turner if needed.**

Parking and Access Ways

1. **Onsite parking will be available for one Trade Partner vehicle to allow for shuttling of employees to and from the jobsite.**
2. **There will be clear identifiable pathways to and from the Project Building – illuminated pathways.**

Orientations

Project Site Orientation will be performed onsite for new individuals prior to the start of work, instructed by a Turner team member. Upon completion, each attendee will receive a Project Specific Turner Orientation sticker for their helmet.

1. **Orientation is hosted every Tuesday and Thursday for all new employees on the project.**
2. **Discuss Project Specific items and Safety Protocols, along with general understanding of Safety Expectations.**
3. **Offer workers coffee and water during orientation.**
4. **Spanish signature sheets and handouts are available for when applicable.**
5. **Spanish videos are available for orientation as needed.**

Crew Leader and Trade Partner Training

Crew leaders who join a Turner site must receive training to help them build, model and maintain the culture we expect on every Turner site. As leaders, they are also expected to share certain trainings with their crews.

1. **Safety Orientation**
2. **Building L.I.F.E**
3. **Pre -Task Planning**
4. **Toolbox Talks (supplied by office and Turner) – toolbox talks distributed to foreman every Monday by Stephen Scavetta (Intern) and are returned here with crew acknowledgement by Friday each week. Signed toolbox talks are logged onto Procore.**
5. **Empathy on the Jobsite (Orientation)**
6. **Inclusive and Respectful Workplace (Orientation)**
7. **Extended foreman training after orientation on day-to-day operations and requirements**
8. **Training information is being logged through orientation signature sheets and sign in sheets for individual trainings being held**

Turner Crew Leaders*

Required to take the following which will automatically show up in Turner University home page:

- ☐ Safety Orientation (54 minute video includes Inclusive and Respectful Workplace and Empathy on the Jobsite videos).
- ☐ Ethics & Compliance for Crew Leaders *(1-hour web-based course)*
- ☐ Preventing Workplace Harassment for Crew Leaders *(1-hour web-based course)*
- ☐ Lead the Way *(4-hour Business Unit Instructor Led Training)*
- ☐ Pre-Task Planning *(3, 1-hour Business Unit Instructor Led Trainings)*

Required to deliver to crews:

- ☐ Safety Orientation (54 minute video includes Inclusive and Respectful Workplace and Empathy on the Jobsite videos). Click here for English. Click here for Spanish.
- ☐ Turner Proud (30-minute Business Unit Instructor Led Training)
- ☐ Culture of Compliance (30-minute Business Unit Instructor Led Training)
- ☐ Harassment-Free Workplace (30-minute Business Unit Instructor Led Training)
- ☐ Culture of Caring *(30-minute Business Unit Instructor Led Training)*

**Always refer to the Annual National Training Plan for the latest requirements*

Trade Partner Crew Leaders (all sub-tiers):

Required to take:

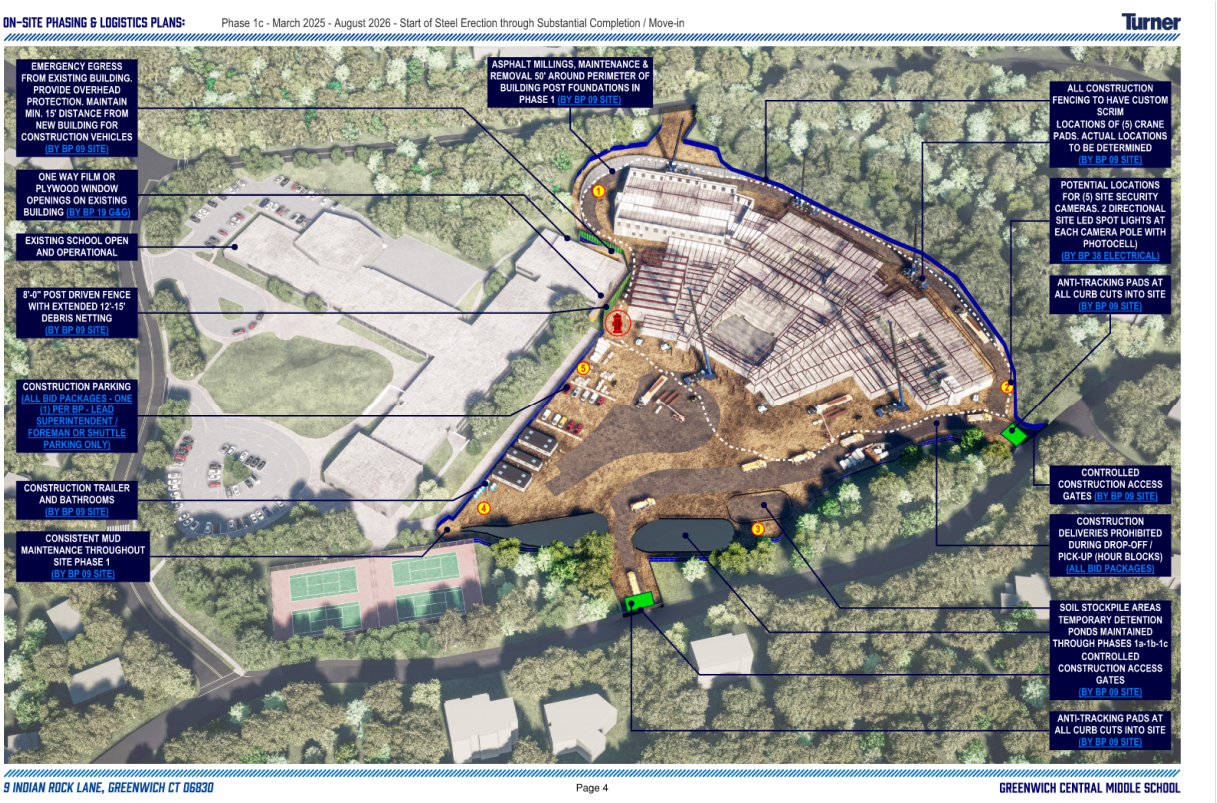
- ☐ Inclusive & Respectful Workplace *(10-minute video)*
- ☐ Empathy on the Jobsite *(5-minute video)*

Required training to deliver to crews:

- ☐ Inclusive & Respectful Workplace *(10-minute video)*
- ☐ Empathy on the Jobsite *(5-minute video)*
- ☐ Toolbox Talks *(15-minute huddle trainings)* Series available, suggest holding every 2-3 weeks

**Note: additional training requirements to be added if project team deem necessary based on project specific events.*

Worker Engagement Opportunities



Keeping our workers engaged and connected leads to professional development and an enhanced working environment.

1. **Project leadership will walk the job frequently**
2. **Weekly safety meetings held every Tuesday to gain feedback on site logistics, safety, and engagement**
3. **Routine coffee and donuts will be offered for Trade Partners.**
4. **Every 6 months an evacuation drill is held and lunch supplied to trades after the completion of the drill**
5. **Monthly 5-Worker Lunches**
6. **Hold a "Topping-Out" Lunch for the crew upon milestone completion.**
7. **Hold Quarterly vendor functions – work with local companies that can put on demonstrations.**
    a. **PPE / Fall Protection / New technologies.**

Feedback

Obtaining and responding to feedback is a way to express respect for our workers. Feedback can be obtained in multiple ways including:

1. Five worker lunch
    a. Provide an environment to create open dialog amongst project workers.
2. You Said, We Did
    a. Provides accountability of the Turner Team
3. SOAR (Safety Observation and Recognition) cards
    a. Provides a vehicle for Trade Partners to voice opinions for site improvements, safety concerns, or best practices.
4. QR codes with contact information in break areas, temp. facilities, etc.
5. During weekly coordination meeting, include an agenda item to discuss project environment and review any issue that affect the workforce.

G. Wage Rates:

The following are hourly wage rates for all tradespeople associated with this Bid Package for performing extra work on a time and material basis. These rates are fully loaded (including benefits, payroll and sales taxes, insurance, 10% overhead and profit, bond costs, small tools, travel, parking, supervision, and any other costs associated with labor, etc.). The wage rates shall be valid for the life of the project. ***NOTE: Further, no mark-up shall be allowed on the premium time portion of the wage rate. This Subcontractor is required to submit labor rate summary sheets, which will fully justify all these labor rates. All rates are subject to a thorough analysis and subject to reduction if deemed inaccurate at the time of Bid.***

H. ADDITIONAL BID REQUIREMENTS:

1 Bidder acknowledges that this proposal is based on reasonable interpretation of the documents / information/ specifications provided. This pricing shall be full compensation to the subcontractor for the complete work of the associated trade required at the Project. This proposal includes any necessary elaboration, missing segments, obvious requirements, etc. that would be necessary for a functioning system at the quality level established by the Contract Documents.

2 Your bid accounts for all information contained in the Contract Documents and Design Drawings, Bid Notifications, Project Memos all other correspondence provided to you as related to your work. If the Contract Documents and/or Contract Drawings and/or Specifications conflict, then the greater quantity shall apply.

3 Your bid shall remain valid for ninety (90) days.

4 Current Financial Statements will be required at time of final scope review for the competitive bidder(s).

5 All bids must be accompanied by the NCCI form from your insurance provider indicating the subcontractor’s current EMR (Experience Modification Rating).

Exhibit A
SUBCONTRACTOR Pre-Qualification Form
Safety Prequalification Form

1. Please list your Company's Workers' Compensation Interstate/Intrastate Experience Modification Rate for the most recent three years. (Attach a copy of your insurance carrier or state fund (on their letterhead) verifying the EMR data.

   Interstate (Yr./Rate)

   _____/_____ _____/_____ _____/_____

   Intrastate (Yr./Rate/Name state(s) with abbreviations next to modification rate)

_____/_____	_____/_____	_____/_____
_____/_____	_____/_____	_____/_____
_____/_____	_____/_____	_____/_____
_____/_____	_____/_____	_____/_____

   Note: Subcontractor's must have a current EMR less than or equal to 1.0 to qualify for Turner Construction's Bid List. Should your EMR exceed 1.0, the Contractor must demonstrate and document that it has or will initiate programs, policies, and attitudes which will result in a safety conscious performance in order to be included on Turner's Approved Contractor List. In this case it is the sole discretion of Turner to approve or disapprove a SUBCONTRACTOR.

2. Please use the three most recent year's OSHA No. 300/200 Log to fill in the number of cases for each of the following categories: (attach a copy of your last three years of OSHA 300/200 logs.)

Year			
No. of fatalities (Column G from 300) or (Columns 1 + 8 from200)	_____	_____	_____
No. of lost & restricted workday cases (Column H + I) or (Columns 2 + 9)	_____	_____	_____
No. of medical treatment cases (Column J) or (Columns 6 + 13)	_____	_____	_____
No. of lost workday cases (Column H) or (Columns 3 + 10)	_____	_____	_____
Employee Hours Worked	_____	_____	_____
OSHA Recordable Incidence Rate	_____	_____	_____
OSHA Lost Workday Incidence Rate	_____	_____	_____

   Note: --Items in parenthesis come from your OSHA 300/200 Log
   --**Recordable Incidence Rate = [G, H, I, & J] or [1,2,6,8,9,13] x 200,000 / Employee Hours Worked**
   --Lost Workday Incidence Rate = [H] or [3 + 10] x 200,000 / Employee Hours Worked
   --Employee Hours Worked = total number of hours worked during the year by all employees

3. How many OSHA violation(s) has your Company received in the last three years?
   (Yr. = # violations)

   _____ = _____ _____ = _____ _____ = _____

   Any willful OSHA violations: _____ Yes _____ No _____
   Please give a brief description of the violation(s); use additional paper if necessary

   _____
   _____
   _____

Safety Prequalification Form (Continued)

Any employee deaths in the past 3 years? ___ Yes ___ No
If yes, please give a brief description of the circumstances: _____

4. Do you have a qualified person responsible for safety within your Company: ___ Yes ___ No
Please describe his/her qualifications: _____

5. Does this person do safety inspections on all of your projects: ___ Yes ___ No Frequency _____

6. Do you have a written Company Safety Policy and Program and will you provide copies if requested: ___ Yes ___ No

7. Does your Company have a substance abuse policy: ___ Yes ___ No
If Yes, please check which are included in the policy:

Pre-hire/Initial Employment _____
Cause _____
Post Accident/Incident _____
Random _____
Periodic _____

8. Do you have a return to work\light duty program? ___ Yes ___ No
If yes, please describe: _____

9. Have you ever implemented 100% fall protection ___ Yes ___ No
If requested can you provide us with a site-specific program addressing the fall hazards in your work? ___ Yes ___ No

END OF SECTION 00 0110

SECTION 01 1000 - SUMMARY

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Project information.

B. Contract description.

C. Owner occupancy.

D. Contractor use of site and premises.

E. Work restrictions.

F. Specification sections applicable to all contracts.

G. Specification and drawing conventions.

1.2 PROJECT INFORMATION

A. Project Name: Central Middle School.

B. Owner's Name: Greenwich Public Schools.

C. Architect's Name: The S/L/A/M Collaborative.

D. Contract Documents, dated Juy 8, 2024 were prepared for the Project by The SLAM Collaborative, Somerset Square, 80 Glastonbury Boulevard, Glastonbury, Connecticut 06033-4415.

E. The Project consists of the construction of a two-story 156,000 s.f. secondary school facility and associated site work, including parking, vehicular circulation, and athletic fields.

1.3 CONTRACT DESCRIPTION

A. Contract Type: Multiple prime contracts, each based on a Stipulated Price as described in Document 00 5000 - Contracting Forms and Supplements.

1.4 OWNER OCCUPANCY

A. Owner intends to occupy the Project upon Substantial Completion.

B. Owner may allow others to occupy the Project for installation of materials and equipment during construction. Cooperate with suppliers and installers of such work.

C. Cooperate with Owner to minimize conflict and to facilitate Owner's operations.

D. Schedule the Work to accommodate Owner occupancy.

1.5 CONTRACTOR USE OF SITE AND PREMISES

A. Construction Operations: Limited to areas determined by Construction Manager in consultation with Owner.
   1. Locate and conduct construction activities in ways that will limit disturbance to site.
   2. Repair damage caused by construction operations.
   3. Protect the building and its occupants during the construction period.
   4. Permit Owner occupancy and public use of adjacent areas outside the Project limit lines.

B. Arrange use of site and premises to allow:
   1. Work by Others.

C. Provide access to and from site as required by law and by Owner:
   1. Emergency Building Exits During Construction: Keep all exits required by code open during construction period; provide temporary exit signs if exit routes are temporarily altered.
   2. Do not obstruct roadways, sidewalks, or other public ways without permit.

1.6 WORK RESTRICTIONS

A. Comply with restrictions on construction operations.
   1. Comply with limitations on use of public streets, work on public streets, rights of way, and other requirements of authorities having jurisdiction.

B. Nonsmoking Building: Smoking is not permitted within the building or within 25 feet of entrances, operable windows, or outdoor-air intakes.

C. Smoking and Controlled Substance Restrictions: Use of tobacco products, alcoholic beverages, and other controlled substances within the existing building is not permitted.

D. Employee Identification: Provide identification tags for Contractor personnel working on project site. Require personnel to use identification tags at all times.

1.7 SPECIFICATION SECTIONS APPLICABLE TO EVERY CONTRACT

A. Unless otherwise noted, provisions of the sections listed below apply to every contract. Specific items of work listed under individual contract descriptions constitute exceptions.

B. Section 01 2000 - Price and Payment Procedures.

C. Section 01 2300 - Alternates.

D. Section 01 2500 - Substitution Procedures.

E. Section 01 3000 - Administrative Requirements.

F. Section 01 3329.04 - Material Content Form

G. Section 01 3566.42 - Sustainability Compliance Procedures - CT-HPBS.

H. Section 01 4000 - Quality Requirements.

I. Section 01 4219 - Reference Standards.

J. Section 01 6000 - Product Requirements.

K. Section 01 7000 - Execution and Closeout Requirements.

L. Section 01 7800 - Closeout Submittals.

1.8 SPECIFICATION AND DRAWING CONVENTIONS

A. Basic Contract definitions are included in the General Conditions of the Contract.

B. Terms such as "directed," "requested," "authorized," "selected," "approved," "required," and "permitted" means "directed by the Architect," and similar phrases. However, no implied meaning shall be interpreted to extend the Architect's responsibility into the Contractor's area of construction supervision.

C. The term "approved," where used in conjunction with the Architect's action on the Contractor's submittals, applications, and requests, is limited to the duties and responsibilities of the Architect as stated in the General and Supplementary Conditions. Such approval shall not release the Contractor from responsibility to fulfill Contract requirements unless otherwise provided in the Contract Documents.

D. The term "Regulations" includes laws, ordinances, statutes, and lawful orders issued by authorities having jurisdiction, as well as rules, conventions, and agreements within the construction industry that control performance of the Work, whether lawfully imposed by authorities having jurisdiction or not.

E. The term "furnish" is used to mean "supply and deliver to the project site, ready for unloading, unpacking, assembly, installation, and similar operations."

F. The term "install" is used to describe operations at project site including the actual "unloading, unpacking, assembly, erection, placing, anchoring, applying, working to dimension, finishing, curing, protecting, cleaning, and similar operations."

G. The term "provide" means "to furnish and install, complete and ready for intended use."

H. Specification Content: The Specifications use certain conventions for the style of language and the intended meaning of certain terms, words, and phrases when used in particular situations. The conventions are as follows:
   1. Imperative mood and streamlined language are generally used in the Specifications. The words "shall," "shall be," or "shall comply with," depending on the context, are implied where a colon (:) is used within a sentence or phrase.
   2. Text Color: Text used in the Specifications, including units of measure, manufacturer and product names, and other text may appear in multiple colors or underlined as part of a hyperlink; no emphasis is implied by text with these characteristics.
   3. Hypertext: Text used in the Specifications may contain hyperlinks. Hyperlinks may allow for access to linked information that is not included in the Specifications. Unless otherwise noted, linked information is not part of the Contract Documents.
   4. Specification requirements are to be performed by Contractor unless specifically stated otherwise.

I. Installer: The Contractor or an entity engaged by the Contractor, either as an employee, subcontractor, or sub-subcontractor, for performance of a particular construction activity, including installation, erection, application, and similar operations.
   1. Installers are required to be experienced in the work they are engaged to perform.
   2. The term "experienced," when used with the term "Installer" means having successfully completed a minimum of 5 previous projects similar in size and scope to this Project, being familiar with the precautions required, and having complied with requirements of the authorities having jurisdiction.

J. Project Site: Space available to the Contractor for performance of construction activities, either exclusively or in conjunction with others performing other construction activities as part of the Project.
   1. The extent of the Project Site is indicated on the Drawings.

K. Testing Laboratories: A "testing laboratory" is an independent entity engaged to perform specific inspections or tests, either at the Project Site or elsewhere, and to report on and, if required, to interpret results of those inspections or tests.

L. Drawing Coordination: Requirements for materials and products identified on Drawings are described in detail in the Specifications. One of more of the following are used on Drawings to identify materials and products:
   1. Terminology: Materials and products are identified by the typical generic terms used in the individual specification sections.
   2. Abbreviations: Materials and products are identified by abbreviations scheduled on Drawings.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION - NOT USED

END OF SECTION 01 1000

SECTION 01 2000 - PRICE AND PAYMENT PROCEDURES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Procedures for preparation and submittal of applications for progress payments.

B. Documentation of changes in Contract Sum and Contract Time.

C. Change procedures.

D. Correlation of Contractor submittals based on changes.

E. Procedures for preparation and submittal of application for payment at substantial completion.

F. Procedures for preparation and submittal of application for final payment.

1.2 RELATED REQUIREMENTS

A. Section 01 7800 - Closeout Submittals: Project record documents.

1.3 SCHEDULE OF VALUES

A. Use Schedule of Values Form: AIA G703, edition stipulated in the Agreement.

B. Electronic media printout including equivalent information will be considered in lieu of standard form specified; submit draft to Architect for approval.

C. Forms filled out by hand will not be accepted.

D. Submit Schedule of Values in duplicate within 15 days after date of Owner-Contractor Agreement.

E. Format: Utilize the Table of Contents of this Project Manual. Identify each line item with number and title of the specification section. Identify site mobilization.

F. Include separately from each line item, a direct proportional amount of Contractor's overhead and profit.

G. Revise schedule to list approved Change Orders, with each Application For Payment.

1.4 APPLICATIONS FOR PROGRESS PAYMENTS

A. Payment Period: Submit at intervals stipulated in the Agreement.

B. Electronic media printout including equivalent information will be considered in lieu of standard form specified; submit sample to Architect for approval.

C. Forms filled out by hand will not be accepted.

D. Execute certification by signature of authorized officer.

E. Use data from approved Schedule of Values. Provide dollar value in each column for each line item for portion of work performed and for stored products.

F. List each authorized Change Order as a separate line item, listing Change Order number and dollar amount as for an original item of work.

G. Submit one electronic and three hard-copies of each Application for Payment.

H. Stored Materials:Include amounts in Application for Payment applied for materials or equipment purchased or fabricated and stored, but not yet installed. Differentiate between items stored on-site and items stored off-site.
   1. Provide certificate of insurance, evidence of transfer of title to Owner, and consent of surety to payment for stored materials.
   2. Provide supporting documentation that verifies amount requested, such as paid invoices. Match amount requested with amounts indicated on documentation; do not include overhead and profit on stored materials.
   3. Provide summary documentation for stored materials indicating the following:
      a) Value of materials previously stored and remaining stored as of date of previous Applications for Payment.
      b) Value of previously stored materials put in place after date of previous Application for Payment and on or before date of current Application for Payment.
      c) Value of materials stored since date of previous Application for Payment and remaining stored as of date of current Application for Payment.

I. When Architect requires substantiating information, submit data justifying dollar amounts in question. Provide one copy of data with cover letter for each copy of submittal. Show application number and date, and line item by number and description.

1.5 MODIFICATION PROCEDURES

A. For minor changes not involving an adjustment to the Contract Sum or Contract Time, Architect will issue instructions directly to Contractor.

B. For other required changes, Architect will issue a document signed by Owner instructing Contractor to proceed with the change, for subsequent inclusion in a Change Order.
   1. The document will describe the required changes and will designate method of determining any change in Contract Sum or Contract Time.
   2. Promptly execute the change.

C. For changes for which advance pricing is desired, Architect will issue a document that includes a detailed description of a proposed change with supplementary or revised drawings and specifications, a change in Contract Time for executing the change with a stipulation of any overtime work required and the period of time during which the requested price will be considered valid. Contractor shall prepare and submit a fixed price quotation within ____ days.

D. Computation of Change in Contract Amount: As specified in the Agreement and Conditions of the Contract.

E. Substantiation of Costs: Provide full information required for evaluation.
   1. On request, provide the following data:
      a) Quantities of products, labor, and equipment.
      b) Taxes, insurance, and bonds.
      c) Overhead and profit.
      d) Justification for any change in Contract Time.
      e) Credit for deletions from Contract, similarly documented.
   2. Support each claim for additional costs with additional information:
      a) Origin and date of claim.
      b) Dates and times work was performed, and by whom.
      c) Time records and wage rates paid.
      d) Invoices and receipts for products, equipment, and subcontracts, similarly documented.
   3. For Time and Material work, submit itemized account and supporting data after completion of change, within time limits indicated in the Conditions of the Contract.

F. Execution of Change Orders: Architect will issue Change Orders for signatures of parties as provided in the Conditions of the Contract.

G. After execution of Change Order, promptly revise Schedule of Values and Application for Payment forms to record each authorized Change Order as a separate line item and adjust the Contract Sum.

H. Promptly revise progress schedules to reflect any change in Contract Time, revise sub-schedules to adjust times for other items of work affected by the change, and resubmit.

I. Promptly enter changes in Project Record Documents.

1.6 APPLICATION FOR PAYMENT AT SUBSTANTIAL COMPLETION

A. Following issuance of the Certificate of Substantial Completion, submit at Application for Payment. This application shall reflect Certificates of Partial Substantial Completion issued previously for Owner occupancy of designated portions of the Work.
   1. Administrative actions and submittals that shall precede or coincide with this application include the following:
      a) Occupancy permits.
      b) Warranties and maintenance agreements.
      c) Test/adjust/balance records.
      d) Maintenance instructions.
      e) Changeover information related to Owner's occupancy.
      f) Final cleaning.
      g) Application for reduction of retainage and consent of surety.

1.7 APPLICATION FOR FINAL PAYMENT

A. Prepare Application for Final Payment as specified for progress payments, identifying total adjusted Contract Sum, previous payments, and sum remaining due.

B. Include the following submittals with the Application for Final Payment:
   1. Transmittal of project construction records to the Owner.

2. Insurance certificates for products and completed operations where required.
3. Proof that taxes, fees, and similar obligations were paid.
4. Waivers and releases.

C. Application for Final Payment will not be considered until the following have been accomplished:
   1. All closeout procedures specified in Section 01 7000.
   2. Completion of items specified for completion after Substantial Completion.
   3. Removal to temporary facilities and services.
   4. Change of door locks to Owner's access.

You are hereby directed to make the following change(s) in this Contract:

|

Proposed Adjustments

1. The Proposed basis of adjustment to the Contract Sum or Guaranteed Maximum Price is:
   Lump Sum increase / decrease of $
   Unit Price of $ per
   as provided in Subparagraph 7.3.3 of AIA Document A201, 2017 edition.
   as follows:
2. The Contract Time is proposed to be adjusted / remain unchanged. The proposed adjustment, if any, is an increase / a decrease of days.

When signed by the Owner and Architect and received by the Contractor, the document becomes effective IMMEDIATELY as a Construction Change Directive (CCD), and the Contractor shall proceed with the change described above.

Signature by the Contractor indicates the Contractor's agreement with the proposed adjustments in the Contract Sum and Construction Contract Time set forth in this Change Directive.

SECTION 01 2100 - ALLOWANCES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Lump Sum Trade allowances.

B. Unit-cost Trade Allowances

C. Quantity Trade Allowances

D. Payment and modification procedures relating to Trade Allowances.

1.2 RELATED REQUIREMENTS

A. Section 01 2000 - Price and Payment Procedures: Additional payment and modification procedures.

1.3 LUMP SUM, UNIT COST AND QUANTITY TRADE ALLOWANCES

A. Trade Allowance shall include cost to Trade Contractor of labor, specific products and materials ordered or directed under allowance and shall include supervision, taxes, freight, and delivery to Project site.
   1) Do not include Trade Contractor's or subcontractor's indirect expense in the Change Order cost.
   2) No change to Trade Contractor's indirect expense is permitted for selection of higher- or lower-priced materials or labor type of the same scope and nature as originally indicated.

B. Refer to Division 0 documents for contractor's costs for receiving and handling at Project site, labor, installation, overhead and profit, and similar costs related to labor, and materials ordered under trade allowance.

C. Trade Contractor Responsibilities:
   1. Value of Trade Allowance is to be indicated on Schedule of Values with pay application.
   2. Perform work of Allowance as directed by Contractor only.
   3. Provide Time and Material tickets to Superintendent for confirmation of Time and Material utilized.
   4. Submit invoices for actual quantities and materials utilized at the site for each allowance.
   5. Contractor to issue zero cost change order noting value of in contract Trade Allowance to be billed within Trade monthly application against original Schedule of Value.
   6. Prepare Change Order if necessary.

D. Differences in costs will be adjusted by Change Order. Any unused portion of Trade Allowance is to be returned to Owner via deduct change order based upon approved rates.

1.4 ALLOWANCES SCHEDULE

A. Refer to Bid Package Scope of Work for more information regarding Trade Allowances to include.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION - NOT USED

END OF SECTION 01 2100

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 01 2201 - UNIT PRICES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. List of unit prices, for use in preparing Bids.

B. Measurement and payment criteria applicable to Work performed under a unit price payment method.

C. Defect assessment and non-payment for rejected work.

1.2 RELATED REQUIREMENTS

A. Document 00 4000 - Procurement Manual: Refer to "Invitation to Bid" section for preparation of pricing for Unit Prices.

B. Section 31 6616 - Aggregate Piers: Unit prices and pricing notes for aggregate piers.

1.3 COSTS INCLUDED

A. Unit Prices included on the Bid Form shall include full compensation for all required labor, products, tools, equipment, plant, transportation, services and incidentals; erection, application or installation of an item of the Work; overhead and profit.

1.4 UNIT QUANTITIES SPECIFIED

A. Quantities indicated in the Bid Form are for bidding and contract purposes only. Quantities and measurements of actual Work will determine the payment amount.

1.5 MEASUREMENT OF QUANTITIES

A. Measurement methods delineated in the individual specification sections complement the criteria of this section. In the event of conflict, the requirements of the individual specification section govern.

B. Take all measurements and compute quantities. Measurements and quantities will be verified by Architect.

C. Assist by providing necessary equipment, workers, and survey personnel as required.

D. Measurement by Volume: Measured by cubic dimension using mean length, width and height or thickness.

E. Measurement by Area: Measured by square dimension using mean length and width or radius.

F. Linear Measurement: Measured by linear dimension, at the item centerline or mean chord.

1.6 PAYMENT

A. Payment for Work governed by unit prices will be made on the basis of the actual measurements and quantities of Work that is incorporated in or made necessary by the Work and accepted by the Architect, multiplied by the unit price.

B. Payment will not be made for any of the following:
   1. Products wasted or disposed of in a manner that is not acceptable.
   2. Products determined as unacceptable before or after placement.
   3. Products not completely unloaded from the transporting vehicle.
   4. Products placed beyond the lines and levels of the required Work.
   5. Products remaining on hand after completion of the Work.
   6. Loading, hauling, and disposing of rejected Products.

1.7 DEFECT ASSESSMENT

A. Replace Work, or portions of the Work, not complying with specified requirements.

B. If, in the opinion of Owner, it is not practical to remove and replace the Work, Owner will direct one of the following remedies:
   1. The defective Work may remain, but the unit price will be adjusted to a new unit price at the discretion of Owner.
   2. The defective Work will be partially repaired to the instructions of the Owner, and the unit price will be adjusted to a new unit price at the discretion of Owner.

C. The individual specification sections may modify these options or may identify a specific formula or percentage price reduction.

1.8 SCHEDULE OF UNIT PRICES - DIV. 02 - FOR HAZARDOUS BUILDING MATERIALS

A. Unit Price No. 1: Small Containment Preparation Containment (Less than 160 square\260 linear feet of asbestos containing material). Pricing for containments with larger amounts of materials are to be INCLUDED in the unit prices themselves listed below. There is no separate unit price for containments with larger amounts.
   1. $ _____ per containment

B. Unit Price No. 2: Floor Tile/Flooring Materials and Mastics (Includes all layers of carpeting, adhesives, multiple layers of floor tiles/flooring materials/linoleum/sheet flooring/vinyl stairwell flooring/wood/slate/ceramic/grout/mud bed/terrazzo/concrete/mastics, levelastics, contaminated flooring materials and substrates, etc.) Removal and Disposal as ACM.
   1. $ _____ per square foot

C. Unit Price No. 3: Cove Base and Adhesives (multiple layers) (including contaminated substrates) Removal and Disposal as ACM.
   1. $ _____ per linear foot

D. Unit Price No. 4: Mudded Pipe Fitting Insulation Removal and Disposal as ACM.
   1. $ _____ per fitting/joint

E. Unit Price No. 5: Glove Bag Removal and Disposal as ACM.

1. $ _____ per bag

F. Unit Price No. 6: Pipe and Pipe Fitting Insulation Removal and Disposal as ACM.
   1. $ _____ per linear foot

G. Unit Price No. 7: Pipe/Duct Insulation Buried under Floor Slabs Removal and Disposal as ACM.
   1. $ _____ per linear foot

H. Unit Price No. 8: Duct Insulation/Adhesives/Seam/Flange Sealant (including contaminated substrates) Removal and Disposal as ACM.
   1.

I. Unit Price No. 9: Air Duct Vibration Isolation Cloth Removal and Disposal as ACM.0
   1. $ _____ per cloth

J. Unit Price No. 10: Light Backing Paper Insulation Removal and Disposal as ACM.
   1. $ _____ per light fixture

K. Unit Price No. 11: Sink Undercoating Removal and Disposal as ACM.
   1. $ _____ per sink

L. Unit Price No. 12: Countertop/Millwork/Cabinet/Adhesives/Science Desk Tops Removal and Disposal as ACM.
   1. $ _____ per square foot

M. Unit Price No. 13: Transite Cement Board Removal and Disposal as ACM.
   1. $ _____ per square foot
   2. $ _____ per linear foot (buried transite piping)

N. Unit Price No. 14: Fire Door/Insulation Removal and Disposal as ACM.
   1. $ _____ per door

O. Unit Price No. 15: Wall Adhesives and Contaminated Substrates (mirrors/blackboards/bulletin boards, wood panel walls, etc.) Removal and Disposal as ACM.
   1. $ _____ per square foot

P. Unit Price No. 16: Vermiculite and Associated/Contaminated Wall/Ceiling Materials Removal and Disposal as ACM.
   1. $ _____ per square foot

Q. Unit Price No. 17: Ceramic Wall and Floor Tiles Adhesives, Damp-Proofing, Mud Bed/Grout and Contaminated Substrates Removal and Disposal as ACM.
   1. $ _____ per square foot

R. Unit Price No. 18: Wall/Ceiling Board/Sheetrock/Taping/Joint Compounds (multiple layers) and Removal and Disposal as ACM.
   1. $ _____ per square foot

S. Unit Price No. 19: Wall/Ceiling Plaster (multiple layers) and Supporting Systems and Contaminated Substrates Removal and Disposal as ACM.

1. $ _____ per square foot

T. Unit Price No. 20: Electrical Insulation Removal and Disposal as ACM.
   1. $ _____ per linear foot

U. Unit Price No. 21: Wall, Ceiling Tile and Glue Daubs and Contaminated Substrates Removal and Disposal as ACM.
   1. $ _____ per square foot

V. Unit Price No. 22: Water Fountain/Damp-Proofing Removal and Disposal as ACM.
   1. $ _____ per fountain

W. Unit Price No. 23: Custodial Slop Sink/Damp-Proofing Removal and Disposal as ACM.
   1. $ _____ per slop sink

X. Unit Price No. 24: Freezers/Damp-Proofing/Contaminated Cork/Contaminated Substrates/Other Material Removal and Disposal as ACM.
   1. $ _____ per freezer

Y. Unit Price No. 25: Incinerator/Boiler/Brick/Mortar/Interior and Exterior Insulation/Mastic/Fireproofing Materials/Gaskets/Roping Removal and Disposal as ACM.
   1. $ _____ per boiler/incinerator

Z. Unit Price No. 26: Gymnasium Flooring Materials (All Layers) and Mastics/Damp-proofing (including cleaning concrete substrates) Removal and Disposal as ACM.
   1. $ _____ per square foot

AA. Unit Price No. 27: Caulking, Glazing and Sealant Compounds (includes substrates and contaminated materials) Removal and Disposal as ACM.
   1. $ _____ per linear foot
   2. $ _____ per square foot
   3. $ _____ per window opening (multiple windows/sizes exist in openings)
   4. $ _____ per door opening (multiple doors/sizes exist in openings)

BB. Unit Price No. 28: Caulking, Glazing and Sealant Compounds (includes substrates and contaminated materials) Removal and Disposal as PCB>50 ppm Bulk Product Waste.
   1. $ _____ per linear foot
   2. $ _____ per square foot
   3. $ _____ per window opening (multiple windows/sizes exist in openings)
   4. $ _____ per door opening (multiple doors/sizes exist in openings)

CC. Unit Price No. 29: Caulking, Glazing and Sealant Compounds (includes substrates and contaminated materials) Removal and Disposal as ACM and PCB>50 ppm Bulk Product Waste.
   1. $ _____ per linear foot
   2. $ _____ per square foot
   3. $ _____ per window opening (multiple windows/sizes exist in openings)
   4. $ _____ per door opening (multiple doors/sizes exist in openings)

DD. Unit Price No. 30: Interior/Exterior Wall/Ceiling/Floor/Paint Removal and Disposal as PCB>50 Bulk Product Waste.

1. $ _____ per ton

EE. Unit Price No. 31: Interior/Exterior Wall/Ceiling/Floor/Paint Removal and Disposal as PCB<50 CT DEEP Regulated Waste.
1. $ _____ per ton

FF. Unit Price No. 32: Interior/Exterior Wall/Ceiling/Floor Removal and Disposal as PCB Remediation Waste.
1. $ _____ per ton

GG. Unit Price No. 33: Exterior Asphalt/Concrete Removal and Disposal as PCB Remediation Waste.
1. $ _____ per ton

HH. Unit Price No. 34: Exterior Soil Removal and Disposal as PCB Remediation Waste.
1. $ _____ per ton

II. Unit Price No. 35: Roofing Core/Field Base Material (includes multiple layers and substrates) Removal and Disposal as ACM.
1. $ _____ per square foot

JJ. Unit Price No. 36: Roof Flashing (includes multiple layers and substrates) Removal and Disposal as ACM.
1. $ _____ per square foot

KK. Unit Price No. 37: Damp-proofing/Tars/Mastics – Interior/Exterior Walls/Floors/Ceilings/Slab/Foundation and Associated Substrate/Adjacent Materials (includes multiple layers, contaminated materials and substrates) Removal and Disposal as ACM.
1. $ _____ per square foot
2. $ _____ per ton with substrate

LL. Unit Price No. 38: Off-Site Transportation and Disposal of Natural Soil.
1. $ _____ per ton.
   a) "Natural" Soil: Soils have no detectable concentrations of non-naturally occurring compounds.

MM. Unit Price No. 39: Off-Site Transportation and Disposal of Polluted Soil.
1. $ _____ per ton.
   a) "Polluted" Soils contain concentrations of non-naturally occurring compounds detected above laboratory reporting limits, but below the CTDEEP RSR criteria in accordance with RCSA 22a-133k-1(a)(45). Polluted soils can be reused on-site with the preparation of a Materials Management Plan and approval from the Engineer.

NN. Unit Price No. 40: Off-Site Transportation and Disposal of Contaminated Soil.
1. $ _____ per ton.
   a) "Contaminated Materials" contain concentrations of compounds that exceed CT DEEP RSR criteria in accordance with RCSA 22a-133k. Contaminated materials (concrete, soil, sediment, groundwater or surface water) can NOT be reused on-site and must be disposed of at an off-site disposal facility.

OO. Unit Price No. 41: Off-Site Transportation and Disposal of Hazardous Waste/Soils.

1. $ _____ per ton.
   a) "Hazardous Waste/Soils" Includes all soil/fill material that exceeds regulatory limits for hazardous substances as defined in 40 CFR, Part 261.20 Subpart C – Characteristics of Hazardous Waste. This material CANNNOT be reused on-site and must be disposed of at an off-site approved disposal facility.

PP. Unit Price No. 42: Off-Site Transportation and Disposal of Hazardous Lead-Based Paint Demolition Debris.
1. $ _____ per 40-yard dumpster.
2. $ _____ per 100-yard dumpster.

1.9 SCHEDULE OF UNIT PRICES - DIV. 03-14

A. Structural Steel, more than 30 LBS/LF - New Construction, Div 05.
1. Per ton, $_____, furnished and installed.

B. Structural Steel, less than, or equal to 30 LBS/LF – New Construction; Div 05
1. Per ton, $_____, furnished and installed.

C. Beam Penetrations, field fabricated and installed - each Type; Div 05
1. 6" x 6", $ _____, furnished and installed.
2. 8" x 8", $ _____, furnished and installed.
3. 12" x 12", $ _____, furnished and installed.

D. Epoxy anchor, 0.75 inch by 8 inches, full manufacturer in-place system installation ; Div 05.
1. Each, $_____, furnished and installed.

E. Alternate Flooring Adhesive; Section 09 0561. Square foot $_____.

F. MVE Control System; Section 09 0561. Square foot $ _____.

G. Traffic Signage; Each type with/post/bollard/base in place; Div. 10.
1. Each type $_____.

1.10 SCHEDULE OF UNIT PRICES - DIV. 21-28

A. Provide an additional sprinkler head including arm-over piping with an addition (6) six feet of piping to get back to nearest branch line; Div. 21
1. Per sprinkler head installed $_____.

B. Provide an additional duplex receptacle including wiring to nearest normal power panel with sufficient capacity, faceplate, back-box, conduits, bushing, and pull string. Also include cutting and patching of typical interior partition; Div. 26.
1. Per receptacle installed $_____.

C. Provide an additional duplex receptacle including wiring to nearest emergency power panel with sufficient capacity, faceplate, back-box, conduits, bushing, and pull string. Also include cutting and patching of typical interior partition; Div. 26
1. Per receptacle installed $_____.

D. Provide an additional exit sign including power wiring and conduit system from the nearest emergency electrical power panel. Extension of the nearest exit sign circuit is acceptable if the base bid circuit capacity is sufficient: Div. 26
   1. Per exit sign installed $_____.

E. Provide an additional fire alarm pull station, including wiring to panel. Also include cutting and patching of typical interior partition; Div. 28.
   1. Per pull station installed $_____.

F. Provide an additional combination audible/visual fire alarm device, including wiring to panel. Also include cutting and patching of typical interior partition; Div. 28
   1. Per fire alarm device installed $_____.

G. Provide an additional ceiling smoke detector including wiring and conduit system to the nearest node. Also include cutting and patching of typical acoustical ceiling panel; Div. 28
   1. Per smoke detector installed $_____.

H. Provide an additional carbon monoxide detector including wiring and conduit system to the nearest node. Also include cutting and patching of typical acoustical ceiling panel and/or typical interior partition; Div. 28
   1. Per carbon monoxide detector installed $_____.

I. Provide an additional combination audible/visual fire alarm device, including wiring to panel. Also include cutting and patching of typical interior partition; Div. 28
   1. Per fire alarm device installed $_____.

J. Single Data or Voice Outlet; Div 26 & 27.
   1. Provide an additional back-box, conduits, cable, bushing, and pull string. Include cutting and patching of typical interior partition, to accommodate installation of Single Data Outlet, including terminations, cable mounting devices, labeling, testing, documentation, installation and supervision.
   2. One (1) Category 6 rated RJ45 jack mounted on a single gang faceplate with one (1) Category 6, plenum rated, unshielded twisted pair cable installed to relevant IDF or MDF patch panel.
      a) Category 6 cable shall terminate onto an available port on the IDF or MDF patch panel.
      b) Cable length: Assume 285 feet.
   3. Per outlet installed $_____.

K. Dual Data Outlet; Div 26 & 27
   1. Provide an additional back-box, conduits, cable, bushing, and pull string. Include cutting and patching of typical interior partition, to accommodate installation of Dual Data Outlet, including terminations, cable mounting devices, labeling, testing, documentation, installation and supervision.
   2. Two (2) Category 6 rated RJ45 jacks, mounted on a single gang faceplate with one (2) Category 6, plenum rated, unshielded twisted pair cable installed to relevant IDF or MDF patch panel.
      a) Category 6 cable shall terminate onto an available port on the IDF or MDF patch panel.
      b) Cable length to assume 285 feet.

3. Per outlet installed $_____.

L. Wireless Access Point location; Div 26 & 27
   1. Provide pathway, and cable for additional WAP. Include cutting and patching of typical interior partition and/or ceiling tile, to accommodate installation of Wireless Access Point location, including terminations, cable mounting devices, labeling, testing, documentation, installation and supervision.
   2. One (1) Category 6 rated RJ45 plug, terminated onto (1) Category 6, plenum rated, unshielded twisted pair cable, with a 20ft. service loop, and installed to relevant IDF or MDF patch panel.
      a) Category 6 cable shall terminate onto an available port on the the IDF or MDF patch panel.
      b) Cable length to assume 285 feet.
   3. Per WAP installed $_____.

1.11 SCHEDULE OF UNIT PRICES - DIV. 31-32

A. Preparation of aggregate pier design, one mobilization, one modulus test, pre-auger each aggregate pier location, pre-drill or pre-excavate 50% of pier locations, installation of aggregate pier elements, and demobilization (See Note AG-1 below); Div 31
   1. Lump sum $_____.

B. Pre-drill aggregate pier location using down-hole hammer (See Note AG-2 below); Div 31
   1. Linear foot $_____.

C. Pre-excavate aggregate pier location, remove oversize materials that could obstruct aggregate pier, backfill excavation with excavated soils or imported borrow to satisfaction of aggregate pier designer (See Note AG-2 below); Div 31
   1. Linear foot $_____ .

D. Additional aggregate piers (See Note AG-3 below); Div 31.
   1. Linear foot $_____ .

E. Additional aggregate piers (See Note AG-3 below); Div 31.
   1. Linear foot $_____ .

F. Additional modulus tests; Div 31.
   1. Each $_____.

G. Additional mobilizations/demobilizations; Section 31 6616, page 11, Item 7.
   1. Each $_____.

H. Additional Contractor-provided information: Div 31.
   1. Total number of aggregate piers in base bid design: Quantity _____.
   2. Average installed pier length in base bid design:: Linear Foot _____.
   3. Volume of crushed stone import in base bid design: Cubic Yard _____.

I. NOTES AG-1 to AG-3

1. **AG-1**: Contractor's base bid shall include pre-drill or pre-excavate of 50% of the Contractor's design number of piers and based on the Contractor's average design pier length, in addition to pre-auger. Payment for pre-drill or pre-excavate will be based on actual installed length of pre-drill or pre-excavate in accordance with the unit costs provided under Item 2 and Item 3.
2. **AG-2**: Contractor will only be paid for one of pre-drill or pre-excavate - whichever is the method used to achieve the final installation depth.
3. **AG-3**: Additional aggregate pier unit cost shall only apply to additional piers required to be installed outside the limits of unsuitables shown on the Drawings. Unit cost shall be based on aggregate pier installation with pre-auger. Unit cost for pre-drill/pre-excavate, as applicable, will be paid in addition to aggregate pier with pre-auger unit cost.

J. Bituminous concrete paving regular duty, in place with base, Div 32.
   1. Square Foot $ _____.

K. Bituminous concrete paving heavy duty, in place with base, Div. 32
   1. Square Foot $ _____.

L. Bituminous concrete walk paving, in place with base, Div. 32.
   1. Square Foot $ _____.

M. Pavement Stripping – 4" wide striping, Div. 32.
   1. Linear Foot $ _____.

N. Gravel subbase placed and compacted, Div. 32
   1. Cubic Yard $ _____.

O. Processed aggregate, placed and compacted, Div. 32
   1. Cubic Yard $ _____.

P. Unit masonry pavers, in place with base, Div 32
   1. Square Foot $ _____.

Q. Washed stone aggregate surfacing, in place with geotextile fabric and base, Div. 32
   1. Square Foot $ _____.

R. Natural infield & warning track surfacing, spread and compacted, Div. 32.
   1. Cubic Yard $ _____.

S. Granite Curbing, in place with base, each, Div. 32
   1. Straight Section, Linear Foot $ _____.
   2. Curved Section, Linear Foot $ _____.

T. Chain link fence, each, Div. 32.
   1. 4-foot-tall fence, Linear Foot $ _____.
   2. 4-foot gate, Linear Foot $ _____.
   3. 6-foot-tall fence, Linear Foot $ _____.
   4. 6-foot gate, Linear Foot $ _____.
   5. 8-foot-tall fence, Linear Foot $ _____.
   6. 10-foot-tall fence, Linear Foot $ _____.
   7. 12-foot-tall fence, Linear Foot $ _____.

U. Segmental retaining walls with base, backfill, geotextile fiber and anchoring system, Div. 32.
   1. Face Foot $ _____.

V. Athletic Field Seeding/Sodding, each, Div. 32 .
   1. Seeding, Square Foot $ _____.
   2. Per Alternate 2 - Sodding, Square Foot $ _____.

W. Turf and Grasses, each, Div. 32.
   1. Seeding - Lawn, Square Foot $ _____.
   2. Seeding - Conservation Mix, Square Foot $ _____.

X. Plants, Div. 32.
   1. All planting listed on the plant list (each type), in place, with mulch.
      a) Each $ - Furnish as separate attachment.
   2. Mulch placed and fine raked, Cubic Yard $ _____.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION - NOT USED

END OF SECTION 01 2201

SECTION 01 2300 - ALTERNATES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Description of Alternates.

1.2 ACCEPTANCE OF ALTERNATES

A. Alternates quoted on Bid Forms will be reviewed and accepted or rejected at Owner's option. Accepted Alternates will be identified in the Owner-Contractor Agreement.

B. Coordinate related work and modify surrounding work to integrate the Work of each Alternate.

1.3 SCHEDULE OF ALTERNATES

A. Alternate No. 01 - Provide sod in lieu of seeding at the Baseball and Rectangular fields:

B. Alternate No. 02 - Provide sod in lieu of seeding at the Softball field:

C. Alternate No. 03 - Courtyards: Provide pavers in lieu of concrete:

D. Alternate No. 04 - Add painted graphics at all gym walls:
   1. Alternate Item: Drawing number A111.4 including elevations 1B, 1D, 1E, 3B.

E. Alternate No. 05 - Add full-height wall tile at sink wall in the following restrooms: 1105, 1104, 2021, 2027, 2055, 2061, 2092 and 2098.
   1. Alternate Item: Refer to Finish Plans and Finish Product List for type of tile.
   2. Alternate Item: Drawing number A131 and Section 09 3000.

F. Alternate No. 06 - Add dimensional letter signage at the following:
   1. Auditorium doors.
   2. Cafeteria.
   3. Art room.
   4. Construction Tech room.
   5. Main reception window.
   6. Gymnasium.
   7. See Drawings for specific dimensional letter signage at each location.
   8. Alternate Item: Section 10 1419.

G. Alternate No. 07 - Provide 250kW natural gas fueled generator in lieu of diesel fueled generator.

H. Alternate No. 08 - Delete lightning protection system:

I. Alternate No. 09 - Provide 80 mil roofing membrane and 30-year warranty in lieu of 60 mil roofing membrane and 20-year warranty:
   1. Alternate Item: Section 07 5423.

J. Alternate No. 10 – The hazardous buildings material contractor shall remove and dispose of PCB greater than 50PPM containing paint/painted materials as PCB bulk product waste
   1. Alternate Item: Section 02 8432

K. Alternate No. 11 - The hazardous buildings material contractor shall remove and dispose of PCB less than 50PPM containing paint/painted materials as PCB CTDEEP regulated waste.
   1. Alternate Item: Section 02 8432.

L. Alternate No. 12 - Aggregate pier ground improvement shall be provided as an alternate to complete removal and replacement of existing fill or buried organic-containing materials from below building structures.
   1. Alternate Item: Section 31 6616.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION - NOT USED

END OF SECTION 01 2300

SECTION 01 2500 - SUBSTITUTION PROCEDURES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Procedural requirements for proposed substitutions.

1.2 RELATED REQUIREMENTS

A. Section 01 2300 - Alternates, for product alternatives affecting this section.

B. Section 01 3000 - Administrative Requirements: Submittal procedures, coordination.

C. Section 01 6000 - Product Requirements: Fundamental product requirements, product options, delivery, storage, and handling.

1.3 DEFINITIONS

A. Substitutions: Changes from Contract Documents requirements proposed by Contractor to materials, products, assemblies, and equipment.
   1. Substitutions for Cause: Proposed due to changed Project circumstances beyond Contractor's control.
      a) Product unavailability.
      b) Regulatory changes.
      c) Warranty terms unavailability.
   2. Substitutions for Convenience: Proposed due to possibility of offering substantial advantage to the Project.

1.4 REFERENCE STANDARDS

A. CSI/CSC Form 1.5C - Substitution Request (During the Bidding/Negotiating Stage); Current Edition.

B. CSI/CSC Form 13.1A - Substitution Request (After the Bidding/Negotiating Phase); Current Edition.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.1 GENERAL REQUIREMENTS

A. A Substitution Request for products, assemblies, materials, and equipment constitutes a representation that the submitter:
   1. Has investigated proposed product and determined that it meets or exceeds the quality level of the specified product, equipment, assembly, or system.
   2. Agrees to provide the same warranty for the substitution as for the specified product.

3. Agrees to coordinate installation and make changes to other work that may be required for the work to be complete, with no additional cost to Owner.
4. Waives claims for additional costs or time extension that may subsequently become apparent.
5. Agrees to reimburse Owner and Architect for review or redesign services associated with re-approval by authorities.

B. Document each request with complete data substantiating compliance of proposed substitution with Contract Documents. Burden of proof is on proposer.
1. Note explicitly any non-compliant characteristics.

C. Content: Include information necessary for tracking the status of each Substitution Request, and information necessary to provide an actionable response.
1. Forms indicated in the Project Manual are adequate for this purpose, and must be used.

D. Limit each request to a single proposed substitution item.
1. Submit an electronic document, combining the request form with supporting data into single document.

3.2 SUBSTITUTION PROCEDURES DURING PROCUREMENT

A. Submittal Time Restrictions:
1. Instructions to Bidders specifies time restrictions and the documents required for submitting substitution requests during the bidding period.

B. Submittal Form (before award of contract):
1. Submit substitution requests by completing CSI/CSC Form 1.5C - Substitution Request. See this form for additional information and instructions. Use only this form; other forms of submission are unacceptable.

3.3 SUBSTITUTION PROCEDURES DURING CONSTRUCTION

A. Submittal Form (after award of contract):
1. Submit substitution requests by completing CSI/CSC Form 13.1A - Substitution Request. See this form for additional information and instructions. Use only this form; other forms of submission are unacceptable.

B. Submit request for Substitution for Cause within 14 days of discovery of need for substitution, but not later than 14 days prior to time required for review and approval by Architect, in order to stay on approved project schedule.

C. Submit request for Substitution for Convenience immediately upon discovery of its potential advantage to the project, but not later than 14 days prior to time required for review and approval by Architect, in order to stay on approved project schedule.
1. In addition to meeting general documentation requirements, document how the requested substitution benefits the Owner through cost savings, time savings, greater energy conservation, or in other specific ways.
2. Document means of coordinating of substitution item with other portions of the work, including work by affected subcontractors.
3. Bear the costs engendered by proposed substitution of:

a) Owner's compensation to the Architect for any required redesign, time spent processing and evaluating the request.
b) Other construction by Owner.
c) Other unanticipated project considerations.

D. Substitutions will not be considered under one or more of the following circumstances:
1. When they are indicated or implied on shop drawing or product data submittals, without having received prior approval.
2. Without a separate written request.
3. When acceptance will require revisions to Contract Documents.

3.4 RESOLUTION

A. Architect may request additional information and documentation prior to rendering a decision. Provide this data in an expeditious manner.

B. Architect will notify Contractor in writing of decision to accept or reject request.
1. Architect's decision following review of proposed substitution will be noted on the submitted form.

3.5 ACCEPTANCE

A. Accepted substitutions change the work of the Project. They will be documented and incorporated into work of the project by Change Order, Construction Change Directive, Architectural Supplementary Instructions, or similar instruments provided for in the Conditions of the Contract.

3.6 CLOSEOUT ACTIVITIES

A. See Section 01 7800 - Closeout Submittals, for closeout submittals.

B. Include completed Substitution Request Forms as part of the Project record. Include both approved and rejected Requests.

3.7 ATTACHMENTS

A. A facsimile of the Substitution Request Forms (During Bidding and During Construction) required to be used on the Project is included after this section.

MANUFACTURER: _____ **ADDRESS:** _____ **PHONE:** _____

TRADE NAME: _____ **MODEL NO.:** _____

Attached data includes product description, specifications, drawings, photographs, and performance and test data adequate for evaluation of the request; applicable portions of the data are clearly identified.
Attached data also includes a description of changes to the Contract Documents that the proposed substitution will require for its proper installation.

The Undersigned certifies:
- Proposed substitution has been fully investigated and determined to be equal or superior in all respects to specified product.
- Same warranty will be furnished for proposed substitution as for specified product.
- Same maintenance service and source of replacement parts, as applicable, is available.
- Proposed substitution will have no adverse effect on other trades and will not affect or delay progress schedule.
- Proposed substitution does not affect dimensions and functional clearances.
- Payment will be made for changes to building design, including A/E design, detailing, and construction costs caused by the substitution.

SUBSTITUTION REQUEST
(After the Bidding/Negotiating Phase—Continued)

The Undersigned certifies:
- Proposed substitution has been fully investigated and determined to be equal or superior in all respects to specified product.
- Same warranty will be furnished for proposed substitution as for specified product.
- Same maintenance service and source of replacement parts, as applicable, is available.
- Proposed substitution will have no adverse effect on other trades and will not affect or delay progress schedule.
- Cost data as stated above is complete. Claims for additional costs related to accepted substitution which may subsequently become apparent are to be waived.
- Proposed substitution does not affect dimensions and functional clearances.
- Payment will be made for changes to building design, including A/E design, detailing, and construction costs caused by the substitution.
- Coordination, installation, and changes in the Work as necessary for accepted substitution will be complete in all respects.

☐ **Attachments**

A/E's REVIEW AND RECOMMENDATION:

☐ Approve Substitution—Make submittals in accordance with Specification Section 01 33 00 Submittal Procedures.

☐ Approve Substitution as noted—Make submittals in accordance with Specification Section 01 33 00 Submittal Procedures.

☐ Reject Substitution—Use specified materials.

☐ Substitution Request received too late—Use specified materials.

SIGNED BY: **DATE:**

OWNER'S REVIEW AND ACTION:

☐ Substitution approved—Make submittals in accordance with Specification Section 01 33 00 Submittal Procedures. Prepare Change Order

☐ Substitution approved as noted—Make submittals in accordance with Specification Section 01 33 00 Submittal Procedures. Prepare Change Order.

☐ Substitution rejected—Use specified materials.

SECTION 01 3000 - ADMINISTRATIVE REQUIREMENTS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. General administrative requirements.

B. Electronic document submittal service.

C. Preconstruction meeting.

D. Progress meetings.

E. Construction progress schedule.

F. Coordination drawings.

G. Submittals for review, information, and project closeout.

H. Submittals for design-related professional design services (delegated design).

I. Number of copies of submittals.

J. Requests for Interpretation (RFI) procedures.

K. Submittal procedures.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures - CT-HPBS: Reporting related to sustainability compliance.

B. Section 01 6000 - Product Requirements: General product requirements.

C. Section 01 7000 - Execution and Closeout Requirements: Additional coordination requirements.

D. Section 01 7800 - Closeout Submittals: Project record documents; operation and maintenance data; warranties and bonds.

1.3 GENERAL ADMINISTRATIVE REQUIREMENTS

A. Comply with requirements of Section 01 7000 - Execution and Closeout Requirements for coordination of execution of administrative tasks with timing of construction activities.

B. Make the following types of submittals to Architect:
   1. Requests for Interpretation (RFI).
   2. Requests for substitution.
   3. Shop drawings, product data, and samples.
   4. Test and inspection reports.

5. Design data.
6. Manufacturer's instructions and field reports.
7. Applications for payment and change order requests.
8. Progress schedules.
9. Coordination drawings.
10. Correction Punch List and Final Correction Punch List for Substantial Completion.
11. Closeout submittals.

1.4 PROJECT COORDINATOR

A. Project Coordinator: Construction Manager.

B. Cooperate with the Project Coordinator in allocation of mobilization areas of site; for field offices and sheds, for building access, traffic, and parking facilities.

C. During construction, coordinate use of site and facilities through the Project Coordinator.

D. Comply with Project Coordinator's procedures for intra-project communications; submittals, reports and records, schedules, coordination drawings, and recommendations; and resolution of ambiguities and conflicts.

E. Comply with instructions of the Project Coordinator for use of temporary utilities and construction facilities. Responsibility for providing temporary utilities and construction facilities is identified in Section 01 1000 - Summary.

F. Coordinate field engineering and layout work under instructions of the Project Coordinator.

G. Make the following types of submittals to Architect through the Project Coordinator:
1. Requests for Interpretation.
2. Requests for substitution.
3. Shop drawings, product data, and samples.
4. Test and inspection reports.
5. Design data.
6. Manufacturer's instructions and field reports.
7. Applications for payment and change order requests.
8. Coordination drawings.
9. Closeout submittals.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.1 ELECTRONIC DOCUMENT SUBMITTAL SERVICE

A. All documents transmitted for purposes of administration of the contract are to be in electronic (PDF, MS Word, or MS Excel) format, as appropriate to the document, and transmitted via an Internet-based submittal service that receives, logs and stores documents, provides electronic stamping and signatures, and notifies addressees via email.

1. Besides submittals for review, information, and closeout, this procedure applies to Requests for Interpretation (RFIs), progress documentation, contract modification documents (e.g. supplementary instructions, change proposals, change orders), applications for payment, field reports and meeting minutes, Contractor's correction punchlist, and any other document any participant wishes to make part of the project record.
2. Contractor and Architect are required to use this service.
3. It is Contractor's responsibility to submit documents in allowable format.
4. Subcontractors, suppliers, and Architect's consultants will be permitted to use the service at no extra charge.
5. Users of the service need an email address, internet access, and PDF review software that includes ability to mark up and apply electronic stamps (such as Adobe Acrobat, www.adobe.com, or Bluebeam PDF Revu, www.bluebeam.com), unless such software capability is provided by the service provider.
6. Paper document transmittals will not be reviewed; emailed electronic documents will not be reviewed.
7. All other specified submittal and document transmission procedures apply, except that electronic document requirements do not apply to samples or color selection charts.

B. Training: One, one-hour, web-based training session will be arranged for all participants, with representatives of Architect and Contractor participating; further training is the responsibility of the user of the service.

C. Project Closeout: Architect will determine when to terminate the service for the project and is responsible for obtaining archive copies of files for Owner.

3.2 PRECONSTRUCTION MEETING

A. Project Coordinator will schedule a meeting after Notice of Award.

B. Attendance Required:
1. Owner.
2. Architect.
3. Contractor.

C. Agenda:
1. Execution of Owner-Contractor Agreement.
2. Submission of executed bonds and insurance certificates.
3. Distribution of Contract Documents.
4. Submission of list of subcontractors, list of products, schedule of values, and progress schedule.
5. Submission of initial Submittal schedule.
6. Schedule of meetings during construction.
7. Designation of personnel representing the parties to Contract and Architect.
8. Procedures and processing of field decisions, submittals, substitutions, applications for payments, proposal request, Change Orders, and Contract closeout procedures.
9. Construction facilities, controls and construction aids.
10. Temporary utilities.
11. Contractor's quality control/quality assurance program.
12. Scheduling.

13. Requirements for Substantial Completion.
14. Project Closeout procedures and submittals.

D. Record minutes and distribute copies within two days after meeting to participants, with two copies to Architect, Owner, participants, and those affected by decisions made.

3.3 PROGRESS MEETINGS

A. Schedule and administer meetings throughout progress of the work at maximum bi-monthly intervals.

B. Make arrangements for meetings, prepare agenda with copies for participants, preside at meetings.

C. Attendance Required:
1. Contractor.
2. Owner.
3. Architect.
4. Contractor's superintendent.
5. Major subcontractors.

D. Agenda:
1. Review minutes of previous meetings.
2. Review of work progress.
3. Field observations, problems, and decisions.
4. Identification of problems that impede, or will impede, planned progress.
5. Review of submittals schedule and status of submittals.
6. Review of RFIs log and status of responses.
7. Maintenance of progress schedule.
8. Corrective measures to regain projected schedules.
9. Planned progress during succeeding work period.
10. Maintenance of quality and work standards.
11. Effect of proposed changes on progress schedule and coordination.
12. Other business relating to work.

E. Record minutes and distribute copies within two days after meeting to participants, with two copies to Architect, Owner, participants, and those affected by decisions made.

3.4 CONSTRUCTION PROGRESS SCHEDULE

A. Within 10 days after date of the Agreement, submit preliminary schedule.

B. If preliminary schedule requires revision after review, submit revised schedule within 10 days.

C. Within 20 days after review of preliminary schedule, submit draft of proposed complete schedule for review.
1. Include written certification that major contractors have reviewed and accepted proposed schedule.

D. Within 10 days after joint review, submit complete schedule.

E. Submit updated schedule with each Application for Payment.

3.5 COORDINATION DRAWINGS

A. Prepare coordination drawings as required by individual sections and where installation is not completely indicated on shop drawings, where limited space availability requires coordination, or if coordination is required to facilitate integration of products and materials fabricated or installed by more than one contractor.
   1. Include project-specific information, shown accurately at a large enough scale to indicate and resolve conflicts. Do not base coordination drawings on standard printed data. Include the following information, as applicable:
      a) Base preparation of coordination drawings on applicable Drawings and include sections, elevations, and details as required to illustrate relationship of various systems and components.
      b) Coordinate the addition of trade-specific information to coordination drawings by multiple contractors in a sequence that best provides for coordination of the information and resolution of conflicts between installed components before submitting for review.
      c) Include functional and spatial relationships of components of architectural, structural, civil, plumbing, fire-protection, mechanical, fire-alarm, and electrical systems.
      d) Provide space for routine maintenance and for replacement of components during the life of the installation.
      e) Indicate location and size of access doors required for access to concealed damplers, valves, and other controls.
      f) Illustrate required installation sequences.
      g) Indicate dimensions shown on Drawings. Note dimensions that appear to be in conflict with submitted equipment and minimum clearance requirements. Submit alternative sketches to Architect indicating proposed resolution of such conflicts.
      h) Minor dimension changes and difficult installations will not be considered changes to the Contract.

B. Organize coordination drawings in the following manner:
   1. Floor Plans and Reflected Ceiling Plans: Indicate architectural and structural elements, and mechanical, plumbing, fire-protection, fire-alarm, and electrical work. Show locations of visible ceiling-mounted devices in relation to acoustical ceiling grid system. Provide section drawings to supplement plan drawings as required to adequately represent the Work.
   2. Plenum Space: Indicate subframing for ceiling support, raised access floor, and wall systems, mechanical and electrical equipment, and related Work. Show location of components within plenums to accommodate layout of light fixtures and other components shown on Drawings. Indicate areas of conflict between light fixtures and other components.
   3. Mechanical Rooms: Submit coordination drawings for mechanical rooms, showing plans and elevations of mechanical, plumbing, fire-protection, fire-alarm, and electrical equipment.
   4. Structural Penetrations: Indicate penetrations and openings required for all disciplines.
   5. Slab Edge and Embedded Items: Show slab edge locations and sizes and locations of embedded items for metal fabrications, sleeves, anchor bolts, bearing plates, angles, door floor closers, slab depressions for floor finishes, curbs and housekeeping pads, and similar items.

6. Mechanical and Plumbing Work: Indicate the following:
   a) Sizes and elevations of the bottom of ductwork, piping, and conduit runs. Include insulation, bracing, flanges, and support systems.
   b) Dimensions of major components, such as dampers, valves, diffusers, access doors, cleanouts and electrical distribution equipment.
   c) Fire-rated enclosures around ductwork.
7. Electrical Work: Indicate the following:
   a) Runs of vertical and horizontal conduit 1-1/4 inches in diameter and larger.
   b) Locations of light fixtures, exit lights, emergency battery packs, smoke detectors, and other fire-alarm devices.
   c) Location of panel boards, switchboards, switchgear, transformers, busways, generators, and motor-control centers.
   d) Location of pull boxes and junction boxes, dimensioned from column center lines.
8. Fire-Protection System: Indicate the following:
   a) Locations of standpipes, mains piping, branch lines, pipe drops, and sprinkler heads.

C. Review drawings prior to submission to Architect.

D. Architect will review coordination drawings to confirm that, in general, the Work is being coordinated, but not for the details of the coordination, which are the Contractor's responsibility. If Architect determines that coordination drawings are not being prepared in sufficient scope or detail, or are otherwise deficient, Architect will notify Contractor accordingly, who shall make required modifications and resubmit.

E. Prepare coordination drawing electronic files in accordance with Section 01 3000 - Administrative Requirements.

F. Coordination Digital Data Files: Prepare coordination digital data files in accordance with the following requirements:
1. File Preparation Format:
   a) Same digital data software program, version, and operating system as original Drawings.
2. File Submittal Format: Submit or post coordination drawing files using format same as file preparation format.
3. BIM File Incorporation: Develop and incorporate coordination drawing files into BIM setup for the project.
   a) Perform three-dimensional component conflict analysis as part of preparation of coordination drawings. Resolve components conflicts prior to submittal. Indicate where conflict resolution requires modification of design requirements by Architect.
4. Architect will furnish Contractor one set of digital files of Drawings for use in the preparation of coordination digital files.
   a) Architect makes no representations as to the accuracy or completeness of digital data files as they relate to Drawings.
   b) Digital Data Software Program: Drawings are available in Revit 2023 digital data software program and operating system.
   c) Contractor shall execute a data licensing agreement in the form of Agreement included following this section.

3.6 REQUESTS FOR INTERPRETATION (RFI)

A. Definition: A request seeking one of the following:
   1. An interpretation, amplification, or clarification of some requirement of Contract Documents arising from inability to determine from them the exact material, process, or system to be installed; or when the elements of construction are required to occupy the same space (interference); or when an item of work is described differently at more than one place in Contract Documents.
   2. A resolution to an issue which has arisen due to field conditions and affects design intent.

B. Whenever possible, request clarifications at the next appropriate project progress meeting, with response entered into meeting minutes, rendering unnecessary the issuance of a formal RFI.

C. Preparation: Prepare an RFI immediately upon discovery of a need for interpretation of the Contract Documents. Failure to submit a RFI in a timely manner is not a legitimate cause for claiming additional costs or delays in execution of the work.
   1. Prepare a separate RFI for each specific item.
      a) Review, coordinate, and comment on requests originating with subcontractors and/or materials suppliers.
      b) Do not forward requests which solely require internal coordination between subcontractors.
   2. Prepare in a format and with content acceptable to Owner.
   3. Prepare using software provided by the Electronic Document Submittal Service.
   4. Combine RFI and its attachments into a single electronic file. PDF format is preferred.

D. Reason for the RFI: Prior to initiation of an RFI, carefully study all Contract Documents to confirm that information sufficient for their interpretation is definitely not included.
   1. Include in each request Contractor's signature attesting to good faith effort to determine from Contract Documents information requiring interpretation.
   2. Unacceptable Uses for RFIs: Do not use RFIs to request the following:
      a) Approval of submittals (use procedures specified elsewhere in this section).
      b) Approval of substitutions (see Section - 01 6000 - Product Requirements)
      c) Changes that entail change in Contract Time and Contract Sum (comply with provisions of the Conditions of the Contract).
      d) Different methods of performing work than those indicated in the Contract Drawings and Specifications (comply with provisions of the Conditions of the Contract).
   3. Improper RFIs: Requests not prepared in compliance with requirements of this section, and/or missing key information required to render an actionable response. They will be returned without a response, with an explanatory notation.
   4. Frivolous RFIs: Requests regarding information that is clearly indicated on, or reasonably inferable from, the Contract Documents, with no additional input required to clarify the question. They will be returned without a response, with an explanatory notation.

E. Content: Include identifiers necessary for tracking the status of each RFI, and information necessary to provide an actionable response.
   1. Official Project name and number, and any additional required identifiers established in Contract Documents.
   2. Owner's, Architect's, and Contractor's names.
   3. Discrete and consecutive RFI number, and descriptive subject/title.

4. Issue date, and requested reply date.
5. Reference to particular Contract Document(s) requiring additional information/interpretation. Identify pertinent drawing and detail number and/or specification section number, title, and paragraph(s).
6. Annotations: Field dimensions and/or description of conditions which have engendered the request.
7. Contractor's Suggested Resolution: A written and/or a graphic solution, to scale, is required in cases where clarification of coordination issues is involved, for example; routing, clearances, and/or specific locations of work shown diagrammatically in Contract Documents. If applicable, state the likely impact of the suggested resolution on Contract Time or the Contract Sum.

F. Attachments: Include sketches, coordination drawings, descriptions, photos, submittals, and other information necessary to substantiate the reason for the request.

G. RFI Log: Prepare and maintain a tabular log of RFIs for the duration of the project.
1. Indicate current status of every RFI. Update log promptly and on a regular basis.
2. Note dates of when each request is made, and when a response is received.
3. Highlight items requiring priority or expedited response.
4. Highlight items for which a timely response has not been received to date.
5. Identify and include improper or frivolous RFIs.

H. Review Time: Architect will respond and return RFIs to Contractor within seven calendar days of receipt. For the purpose of establishing the start of the mandated response period, RFIs received after 12:00 noon will be considered as having been received on the following regular working day.

I. Responses: Content of answered RFIs will not constitute in any manner a directive or authorization to perform extra work or delay the project. If in Contractor's belief it is likely to lead to a change to Contract Sum or Contract Time, promptly issue a notice to this effect, and follow up with an appropriate Change Order request to Owner.
1. Response may include a request for additional information, in which case the original RFI will be deemed as having been answered, and an amended one is to be issued forthwith. Identify the amended RFI with an R suffix to the original number.
2. Do not extend applicability of a response to specific item to encompass other similar conditions, unless specifically so noted in the response.
3. Upon receipt of a response, promptly review and distribute it to all affected parties, and update the RFI Log.
4. Notify Architect within seven calendar days if an additional or corrected response is required by submitting an amended version of the original RFI, identified as specified above.

3.7 SUBMITTALS FOR REVIEW

A. When the following are specified in individual sections, submit them for review:
1. Product data.
2. Shop drawings.
3. Samples for selection.
4. Samples for verification.

B. Submit to Architect for review for the limited purpose of checking for compliance with information given and the design concept expressed in Contract Documents.

C. Samples will be reviewed for aesthetic, color, or finish selection.

D. After review, provide copies and distribute in accordance with SUBMITTAL PROCEDURES article below and for record documents purposes described in Section 01 7800 - Closeout Submittals.

3.8 SUBMITTALS FOR INFORMATION

A. When the following are specified in individual sections, submit them for information:
1. Design data.
2. Sustainability design submittals and reports.
3. Certificates.
4. Test reports.
5. Inspection reports.
6. Manufacturer's instructions.
7. Manufacturer's field reports.
8. Other types indicated.

B. Submit for Architect's knowledge as contract administrator or for Owner.

3.9 SUBMITTALS FOR DESIGN-RELATED PROFESSIONAL DESIGN SERVICES (DELEGATED DESIGN)

A. Architect and/or their consultants will review each submittal for general Contract Document conformance; indicate action taken and direction to the Contractor.
1. Architect's "Delegated Design Review Stamp" will be applied to this type of submittal.

B. Delegated Design Review Stamp: Review of calculations and design services provided by the Contractor's Professional Engineer is only for general conformance with the Contract Documents. The Architect and/or Structural Engineer will not review the proposed design and calculations in detail, since the design and calculations for this element are solely the responsibility of the Contractor and the Contractor's Professional Engineer.
1. The Contractor and the Contractor's Professional Engineer shall remain responsible for design and code compliance.
2. Annotations shall not be construed as relieving the Contractor or the Contractor's Professional Engineer from compliance with the project's Contract Documents, including applicable codes, laws and regulations.
3. The Design Review performed by the Architect and/or Structural Engineer shall not be interpreted as an independent confirmation of attached calculations, as this confirmation is the responsibility of the Contractor's Professional Engineer.
4. The Contractor shall confirm and correlate quantities, dimensions, and existing conditions, and shall select fabrication processes and techniques of construction, coordinate their work with that of other trades, and perform their work in a safe and satisfactory manner.
5. PDF Submittals: Architect will indicate, via markup on each submittal, the appropriate action as follows:
6. Submittals by Web-Based Project Software: Architect will indicate, on project software website, the appropriate action, as follows:

3.10 SUBMITTALS FOR PROJECT CLOSEOUT

A. Submit Correction Punch List for Substantial Completion.

B. Submit Final Correction Punch List for Substantial Completion.

C. When the following are specified in individual sections, submit them at project closeout in compliance with requirements of Section 01 7800 - Closeout Submittals:
   1. Project record documents.
   2. Operation and maintenance data.
   3. Warranties.
   4. Bonds.
   5. Other types as indicated.

D. Submit for Owner's benefit during and after project completion.

3.11 NUMBER OF COPIES OF SUBMITTALS

A. Electronic Documents: Submit one electronic copy in PDF format; an electronically-marked up file will be returned. Create PDFs at native size and right-side up; illegible files will be rejected.

B. Samples: Submit the number specified in individual specification sections; one of which will be retained by Architect.
   1. After review, produce duplicates.
   2. Retained samples will not be returned to Contractor unless specifically so stated.

3.12 SUBMITTAL PROCEDURES

A. General Requirements:
   1. Use a single transmittal for related items.
   2. Submit all product data required for each specification section as one submittal. Piecemeal submittals will not be reviewed.
   3. Identify each item using the specification section number followed by a unique sequential two-digit submittal identifier and single-digit submittal revision number. For example, 04-2100-01-0, where "04-2100" is the specification section number, "01" is the submittal identifier, and "0" is the revision number. The first submittal would use Revision Number "0".
   4. Identify: Project; Contractor; subcontractor or supplier; pertinent drawing and detail number; and specification section number and article/paragraph, as appropriate on each copy.
   5. Apply Contractor's stamp, signed or initialed certifying that review, approval, verification of products required, field dimensions, adjacent construction work, and coordination of information is in accordance with the requirements of the work and Contract Documents.
   6. Deliver each submittal on date noted in submittal schedule, unless an earlier date has been agreed to by all affected parties, and is of the benefit to the project.
      a) Upload submittals in electronic form to Electronic Document Submittal Service website.
   7. Schedule submittals to expedite the Project, and coordinate submission of related items.
      a) For each submittal for review, allow 15 days excluding delivery time to and from the Contractor.

b) For sequential reviews involving Architect's consultants, Owner, or another affected party, allow an additional 7 days.
c) Resubmittal Review: Allow 15 days for review of each resubmittal.
d) For sequential reviews involving approval from authorities having jurisdiction (AHJ), in addition to Architect's approval, allow an additional 30 days.
e) No extension of Contract Time will be authorized because of failure to transmit submittals to the Architect sufficiently in advance of the Work to permit processing.

8. Identify variations from Contract Documents and product or system limitations that may be detrimental to successful performance of the completed work.
9. When revised for resubmission, identify all changes made since previous submission.
10. Incomplete submittals will not be reviewed, unless they are partial submittals for distinct portion(s) of the work, and have received prior approval for their use.
11. Submittals received from sources other than Contractor will be returned without review.
12. Submittals not requested will be recognized, and will be returned "Not Reviewed",

B. Product Data Procedures:
1. Submit only information required by individual specification sections.
2. Collect required information into a single submittal.
3. Do not submit (Material) Safety Data Sheets for materials or products.

C. Shop Drawing Procedures:
1. Prepare accurate, drawn-to-scale, original shop drawing documentation by interpreting Contract Documents and coordinating related work.
2. Do not reproduce Contract Documents to create shop drawings.
3. Generic, non-project-specific information submitted as shop drawings do not meet the requirements for shop drawings.

D. Samples Procedures:
1. Transmit related items together as single package.
2. Identify each item to allow review for applicability in relation to shop drawings showing installation locations.

3.13 SUBMITTAL REVIEW

A. Submittals for Review: Architect and Construction Manager will review each submittal, and approve, or take other appropriate action.

B. Submittals for Information: Architect will acknowledge receipt and review. See below for actions to be taken.

C. Architect's actions will be reflected by marking each returned submittal using virtual stamp on electronic submittals.
1. Notations may be made directly on submitted items and/or listed on appended Submittal Review cover sheet.

D. Submittals for Review: PDF Submittals; Architect's and consultants' actions on items submitted for review:
1. Actions taken by indication on PDF submittals have the following meanings:
a) "APPROVED": Final unrestricted release; Work covered by the submittal may proceed provided it complies with the requirements of the Contract Documents. Payment for the Work depends on that compliance.

b) "APPROVED AS CORRECTED": Final-but-restricted-release; Work covered by the submittal may proceed provided it complies with notations or corrections on the submittal and it complies with the requirements of the Contract Documents. Payment for the Work depends on that compliance.
c) "APPROVED AS CORRECTED - RESUBMIT FOR RECORD WITH ALL CORRECTIONS INCORPORATED": Final-but-restricted-release; Work covered by the submittal may proceed provided it complies with notations or corrections on the submittal and it complies with the requirements of the Contract Documents. Submit corrected copies for distribution to all parties. Payment for the Work depends on that compliance.
d) "NOT APPROVED": Submittal is fundamentally not in compliance. No corrections or notations will be made. Do not proceed with the Work covered by the submittal in any aspect. Do not use or allow others to use these submittals. Discard submittal and prepare a new submittal immediately.
e) "NO ACTION REQUIRED": Submittal either not required for this item or provided for information or record purposes only. Follow Contract requirements in all cases.

E. Submittals for Information: Architect's and consultants' actions on items submitted for information:
1. Items for which no action was taken:
a) "Received" - to notify the Contractor that the submittal has been received for record only.
2. Items for which action was taken:
a) "Reviewed" - no further action is required from Contractor.

F. Submittals for Design-Related Professional Design Services (Delegated Design): PDF Submittals; Architect's and consultants' actions on items submitted for delegated design:
1. Actions taken by indication on PDF Submittals; have the following meanings:
a) "SEE COMMENTS": Final-but-restricted release; Work covered by the submittal may proceed provided it complies with notations or corrections on the submittal and complies with the requirements of the Contract Documents. Payment for the Work depends on that compliance.
b) "NO COMMENTS": Final unrestricted release; Work covered by the submittal may proceed provided it complies with the requirements of the Contract Documents. Payment for the Work depends on that compliance.
c) "NO ACTION REQUIRED": Submittal either not required for this item or provided for information or record purposes only. Follow Contract requirements in all cases.
d) "REVISE AND RESUBMIT": Do not proceed with the Work covered by the submittal, including purchasing, fabrication, delivery, or other activity for the product submitted. Revise or prepare a new submittal according to Architect’s notations and corrections.
e) "RESUBMIT FOR RECORD WITH ALL CORRECTIONS INCORPORATED": Final-but-restricted-release; Work covered by the submittal may proceed provided it complies with notations or corrections on the submittal and it complies with the requirements of the Contract Documents. Submit corrected copies for distribution to all parties. Payment for the Work depends on that compliance.

END OF SECTION 01 3000

FOR REFERENCE: THIS SECTION WAS ISSUED FOR PHASE 1 AND PHASE 2

Electronic File Transfer Agreement

Dear: {Contractor/Client/Consultant name}:

At your request, The S/L/A/M Collaborative, Inc. ("SLAM") or S/L/A/M Architects, Landscape Architects & Engineers, P.C ("SLAM") will provide electronic files for your convenience and use in the preparation of shop drawings related to *(name of project)*, subject to the following terms and conditions:

We make no representation as to the compatibility of these files with your hardware or your software.

Data contained on these electronic files are part of our instruments of service and shall not be used by you for any purpose other than as a convenience and for no other use other than specifically for the referenced project. Any other use or reuse will be at your sole risk and without liability or legal exposure to us. You agree to make no claim and hereby waive, to the fullest extent permitted by law, any claim or cause of action of any nature against us, our officers, directors, employees, agents or consultants that may arise out of or in connection with your use of the electronic files.

Furthermore, you shall, to the fullest extent permitted by law, indemnify and hold us harmless against all damages, liabilities or costs, including reasonable attorneys' fees and defense costs, arising out of or resulting from your use of the electronic files.

These electronic files are not Construction Documents. Differences may exist between these electronic files and corresponding hard-copy Construction Documents. We make no representation regarding the accuracy or completeness of the electronic files you receive. In the event a conflict arises between the signed or sealed hard-copy Construction Documents prepared by us and the electronic files, the signed or sealed hard-copy Construction Documents shall govern. You are responsible for determining if any conflict exists. By your use of these electronic files, you are not relieved of your duty to fully comply with the Contract Documents, including, and without limitations, the need to check, confirm and coordinate all dimensions and details, take field measurements, verify field conditions and coordinate your work with that of the contractors and subcontractors for the project.

Because information presented on the electronic files can be modified, unintentionally or otherwise, we reserve the right to remove all indicia of ownership and / or involvement from each electronic display.

UNDER NO CIRCUMSTANCES SHALL DELIVERY OF THE ELECTRONIC FILES FOR USE BY YOU BE DEEMED A SALE BY US, AND WE MAKE NO WARRANTIES, EITHER EXPRESS OR IMPLIED, OF MERCHANTABILITY AND FITNESS FOR ANY PARTICULAR PURPOSE. IN NO EVENT SHALL WE BE LIABLE FOR ANY LOSS OR PROFIT OR ANY CONSEQUENTIAL DAMAGES AS A RESULT OF YOUR USE OR REUSE OF THESE ELECTRONIC FILES.

AGREED TO BY:

FOR REFERENCE: THIS SECTION WAS ISSUED FOR PHASE 1 AND PHASE 2

BIM Access License Agreement

This Agreement is made by and between The S/L/A/M Collaborative, Inc. ("S/L/A/M") and _____ ("Licensee") as of the _____ day of _____ in the year Two Thousand _____, and shall govern the Licensee's use of the Building Information Model prepared by S/L/A/M for the ***Central Middle School*** Project ("Project"), located at ***Greenwich, CT.***
For purposes of this Agreement, the Building Information Model(s) is defined as a database that can be utilized to express a digital representation of the physical and functional characteristics of the Project and is referred to in this Agreement as the "Model(s)," which term may be used herein to describe a Model Element, a single Model or multiple Models used in the aggregate. "Building Information Modeling" means the process and technology used to create the Model.

The S/L/A/M Collaborative, Inc. ("S/L/A/M") hereby provides a non-exclusive license to the Licensee for the duration of the Project for access to the Models for the Licensee's use for construction coordination and modeling of construction related activities for the Project, subject to the following terms and conditions:

S/L/A/M will furnish the Licensee with access to use the following Models for the Project in exchange for the associated license fees identified below:

Fee waived

The Model(s) that are the subject of this Agreement are compatible with BIM file Revit 2014 ***[Enter software version]*** Format, and the Licensee is responsible for obtaining the rights to such hardware and software to assure the compatibility of these Models with its own hardware and software beyond the specified release of the referenced software and hardware specifications.

The Licensee, in its activities of construction coordination and modeling of construction related activities, is permitted to share the Model(s) with trade contractors, subcontractors and vendors (collectively, "Third Parties") with whom the Licensee is in privity of contract for the Project. In such case, the Licensee shall require any and all such Third Parties to comply with the terms of this Agreement without exception, and the Licensee shall indemnify S/L/A/M against any claims, actions or proceedings initiated by any of those Third Parties.

Data contained in the Model(s) is part of S/L/A/M's Instruments of Service and shall not be used by Licensee or anyone else receiving these Model(s) through or from the Licensee for any purpose other than use in construction coordination and modeling of construction related activities specific to and solely for the referenced Project. Any other use or reuse of the Model(s) by the Licensee or by any other party receiving the Model(s) from the Licensee shall be at the Licensee's sole risk and without any liability or legal exposure whatsoever to S/L/A/M. The Licensee shall make no claim and hereby waives, to the fullest extent permitted by law, any claim or cause of action of any nature against S/L/A/M, its officers, directors, employees, agents or consultants that may arise out of or in connection with the use of the Model(s) by the Licensee or by any other party receiving the Model(s) from the Licensee.

Furthermore, the Licensee shall, to the fullest extent permitted by law, indemnify and hold harmless S/L/A/M, and its officers, directors, employees, agents or consultants against and from all damages, liabilities or costs, including reasonable attorneys' fees and defense costs, arising out of or resulting from the use of the Model(s) by the Licensee or by any other party receiving the Model(s) from the Licensee.

The Licensee, by executing this Agreement, hereby acknowledges and agrees that the Model(s) are not Construction Documents, and that differences may exist between the Model(s) and the hard-

copy Construction Documents for the Project. Due to the inherent nature of how the Models are designed and created, often times requiring the use of multiple and different software packages, S/L/A/M makes no representation regarding the accuracy or completeness of the Model(s) that are the subject of this Agreement. In the event of any conflict or inconsistency in the information between the signed or sealed hard-copy Construction Documents and the Model(s,) the signed or sealed hard-copy Construction Documents shall prevail. The Licensee is responsible for determining if any such conflict or inconsistency exists. By its use of the Models, the Licensee and any other of its Third Parties are not relieved of their duty to fully comply with the requirements of the Contract Documents, including, and without limitations, the need to check, confirm and coordinate all dimensions and details, take field measurements, verify field conditions and coordinate the Licensee's or other Third Party's work with that of the other trades, subcontractors, vendors and materialmen, whether or not any such party is in privity of contract with the Licensee or the Owner for the Project.

The Licensee acknowledges and agrees that this Agreement, and the Licensee's use of the Model(s) as set forth herein, do not affect the Licensee's obligations, duties and responsibilities including, but not limited to, construction means, methods, sequence, techniques or coordinating all portions of the Work of construction in accordance with the Contract Documents and any health or safety precautions required by any regulatory agencies.

Because information presented in the Model(s) can be modified, unintentionally or otherwise, S/L/A/M reserves the right, but is not required, to remove all indicia of ownership from the Models.

UNDER NO CIRCUMSTANCES SHALL DELIVERY OF THE MODELS FOR USE BY THE LICENSEE BE DEEMED A SALE BY S/L/A/M, AND S/L/A/M MAKES NO WARRANTIES OR REPRESENTATIONS, EITHER EXPRESS OR IMPLIED, OF MERCHANTABILITY AND FITNESS FOR ANY PARTICULAR PURPOSE. IN NO EVENT SHALL S/L/A/M BE LIABLE FOR ANY LOSS OF PROFIT OR ANY CONSEQUENTIAL DAMAGES AS A RESULT OF THE LICENSEE'S OR ANY THIRD PARTY'S USE OR REUSE OF THE MODEL(S).

Any claim, dispute or other matter in question arising out of or related to this Agreement shall be subject to mediation as a condition precedent to binding arbitration by either party. Mediation and arbitration shall be conducted in accordance with the Construction Industry Mediation and Arbitration Rules of the American Arbitration Association currently in effect, but the parties may agree to the use of an independent mediator and alternate dispute resolution provider. Any mediation or arbitration proceeding arising out of or relating to this Agreement shall held in the greater Hartford region as mutually agreed between the parties.

This Agreement shall be governed by and construed in accordance with the laws of the State of Connecticut.

Both parties to this Agreement acknowledge and agree that this Agreement has been freely entered into, and that, in any dispute over the meaning, interpretation, validity or enforceability of this Agreement or any of its terms or conditions, there shall be no presumption whatsoever against either party by virtue of that party having drafted this Agreement of any portion hereof.

This Agreement may only be modified by a written amendment that is agreed to, and signed by, both parties to this Agreement.

This Agreement is entered into as of the day and year first written above.

The S/L/A/M Collaborative, Inc.

FOR REFERENCE: THIS SECTION WAS ISSUED FOR PHASE 1 AND PHASE 2

SECTION 01 3566.42 - SUSTAINABILITY COMPLIANCE PROCEDURES - CT HPBS

PART 1 GENERAL

1.1 PROJECT APPROACH

A. This project is required to comply with the State of Connecticut High Performance (Green) Building Standards for State Agency Buildings and School Buildings (abbreviated here to CT-HPBS).

B. This section includes general requirements and procedures for compliance with the CT-HPBS, which are based on certain U.S. Green Building Council (USGBC) LEED prerequisites and credits needed to obtain LEED Silver certification per the USGBC's "LEED 2009 for Schools - New Construction and Major Renovations".
   1. It has been determined that the project shall not be submitted to obtain LEED certification. However, the requirements as specified in this Section and other Sections in Divisions 01 through 33 shall be followed to assure compliance with CT-HPBS.
   2. Other LEED prerequisites and credits needed to obtain LEED certification and /or CT-HPBS compliance are dependent on product selections and may not be specifically identified as LEED requirements. Compliance with requirements needed to obtain LEED prerequisites and credits may be used as one criterion to evaluate substitution requests and comparable product requests.
   3. Additional LEED prerequisites and credits needed to obtain the indicated LEED certification and/or CT-HPBS compliance are dependent on the Architect's design and other aspects of the project that are not part of the work of the Contract.

C. Contractor is not responsible for the application for Sustainability certification, nor for determination of methods of achieving Sustainability credits unless specifically so indicated.

D. Many of the Sustainability credits can be achieved only through intelligent design of the project and are beyond the control of the Contractor. However, certain credits relate to the products and procedures used for construction. Therefore, full cooperation of the Contractor and subcontractors is essential to achieving final certification goal, and they must familiarize themselves with the relevant requirements, and provide the necessary information and instructions to product suppliers and installers.

E. Since Contractor and subcontractors may not be familiar with detailed CT-HPBS sustainability procedures, this section includes a list of other specifications sections that contain related requirements for products and procedures necessary for achievement of targeted Sustainability certification level.
   1. Achievement of many prerequisites and credits is dependent on proper performance by Contractor and subcontractors, using specific required project management and work execution means and methods.
   2. Achievement of other credits involves quantifying percentages of installed products by weight and cost; these require careful recordkeeping and reporting by the Contractor.

F. A copy of the CT HPBS Compliance Checklist is attached at the end of this section, for information only.

1.2 SECTION INCLUDES

A. General requirements and procedures for compliance with State of Connecticut High Performance (Green) Building Standards for State Agency Buildings and School Buildings (abbreviated here to CT HPBS)

1.3 RELATED REQUIREMENTS

A. General and Technical Sections: Sections that include requirements intended to achieve Sustainability Credits include, but are not limited to, the following:
   1. Divisions 01 through 33 Sections for CT HPBS requirements specific to the work of those sections. Those requirements may or may not include reerenes to LEED.

B. DIVISION 01 - GENERAL REQUIREMENTS
   1. Section 01 5719 - Temporary Environmental Controls.
      a) Basic construction procedures.
      b) Contractor's IAQ management plan and construction procedures.
      c) Building flush out is required, but at Contractor's option, may be performed before occupancy or partially after occupancy.
   2. Section 01 6000 - Product Requirements.
      a) Definitions of:
         1) Reused Products.
         2) Recycled Content.
         3) Bio-Based content.
         4) Sustainable forestry certified Wood.
         5) Source Location.
         6) Environmental Product Declarations.
         7) Health Product Declarations.
         8) Cradle-to-Cradle.
         9) GreenScreen Chemical Hazard Analysis.
         10) Manufacturer's Inventory of Product Content.
      b) Regionally-sourced products.
         1) Contractor is not required to provide any particular minimum percentage of regionally-sourced products; however, Contractor is required to collect and submit information necessary to determine whether the material is eligible for application of cost multiplier for products sourced within 100 miles of the project site.
   3. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions: List of indoor-emissions-restricted products and VOC-content-restricted products, requirements, evidence required, and reporting.
   4. Section 01 7000 - Execution and Closeout Requirements.
      a) Dust control and basic surface drainage.
      b) HEPA vacuuming of all carpet and soft surfaces.
   5. Section 01 7419 - Construction Waste Management and Disposal: Requirements for landfill diversion and reporting.
   6. Section 01 7800 - Closeout Submittals: Maintenance and operation manuals for commissioned systems.
   7. Section 01 9113 - General Commissioning Requirements.

C. DIVISION 03 - CONCRETE
   1. Section 03 3000 - Cast-in-Place Concrete: Replacement of Portland cement, to some extent, with recycled content.

D. DIVISION 06 - WOOD, PLASTICS, AND COMPOSITES
   1. Note: Definition of sustainable forestry certified wood is in Section 01 6000.
   2. Section 06 1000 - Rough Carpentry: Requirement to use sustainable forestry certified wood.
   3. Section 06 2000 - Finish Carpentry: Requirement to use sustainable forestry certified wood.
   4. Section 06 4100 - Architectural Wood Casework: Requirement to use sustainable forestry certified wood.
   5. Section 06 4200 - Wood Paneling: Requirement to use sustainable forestry certified wood.

E. DIVISION 07 - THERMAL AND MOISTURE PROTECTION
   1. Section 07 5423 - Thermoplastic Polyolefin (TPO) Roofing.
      a) Unballasted white or light-colored roofing with minimum SRI specified.
   2. Section 07 8400 - Firestopping.
      a) Emissions-compliant firestopping sealants.
   3. Section 07 9200 - Joint Sealants.
      a) Emissions-compliant sealants.

F. DIVISION 08 - OPENINGS
   1. Section 08 1416 - Flush Wood Doors: For sustainable forestry certified wood.
   2. Section 08 4313 - Aluminum-Framed Storefronts: For daylighting and views.
   3. Section 08 4413 - Glazed Aluminum Curtain Walls: For daylighting and views.
   4. Section 08 6300 - Metal-Framed Skylights: For daylighting.
   5. Section 08 8000 - Glazing: For daylighting and views.

G. DIVISION 09 - FINISHES
   1. Section 09 2116 - Gypsum Board Assemblies: Deck-to-deck sealed partitions around rooms where hazardous gases or chemicals are present or used.
   2. Section 09 5100 - Acoustical Ceilings: Low-Emitting Materials.
   3. Section 09 6429 - Wood Strip and Plank Flooring.
      a) Sustainable forestry certified wood.
      b) VOC-restrictions for flooring.
      c) VOC-restrictions for adhesives.
   4. Section 09 6500 - Resilient Flooring: VOC restrictions.
   5. Section 09 6813 - Tile Carpeting: Carpet tile complying with CRI Green Label Plus requirements.
   6. Section 09 9123 - Interior Painting: Emissions-compliant interior opaque paints and coatings.

H. DIVISION 10 - SPECIALTIES

I. DIVISION 31 - EARTHWORK
   1. 31 2500 - Soil Erosion and Sediment Controls.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Conference: Conduct conference at project site. Review CT-HPBS requirements and action plans for compliance with requirements.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for additional submittal procedures requirements.

B. General: Submit sustainable design submittals required by other Sections.

C. Sustainable design submittals are in addition to other submittals.

PART 2 PRODUCTS

2.1 MATERIALS AND PRODUCTS

A. Provide products and procedures necessary to comply with CT-HPBS requirements indicated as Contractor's responsibility. Although other sections may specify some requirements that contribute to these CT-HPBS requirements, Contractor shall provide additional materials and procedures necessary to comply with the requirements indicated.

B. Recycled Content: Building materials shall have recycled content such that postconsumer recycled content plus one-half of preconsumer recycled content for Project constitutes a minimum of 20 percent of cost of materials used for Project.

C. Local Materials: Use a minimum of 20 percent of building materials extracted from or manufactured within a 500-mile radius of the building site.

2.2 LOW-EMITTING MATERIALS

A. The following materials shall be certified for low emissions of volatile organic compounds (VOCs) using specifications or certification programs listed in the Connecticut Building Standard Guidelines Compliance Manual for High Performance Buildings.
   1. 50% of adhesives and sealants used in the interior of the building.
   2. Acoustic ceiling tiles and wall panels.
   3. Interior paints.
   4. Wall coverings.
   5. Carpet systems and associated adhesives.
   6. Composite and solid wood flooring.
   7. Resilient flooring and associated adhesives.

B. Provide material and products certified as low-VOC-emitting by one of the following organizations:
   1. Scientific Certification Systems - Indoor Advantage - Gold.
   2. GREENGUARD Certification Program.
   3. Carpet and Rug Institute's Green Label/Green Label Plus.
   4. Scientific Certification Systems Floorscore (for flooring products)

5. Green Seal-GS-11 (paints and coatings).
6. Green Seal-GS-36 (adhesives and sealants).
7. If any paints, coatings, adhesives, or sealants are not certified through any of the above organizations, the product must meet or exceeed the requirements of the South Coast Air Quality Management Distric (SCAQMD) Rule 1113 - for paints and coatings - or Rule 1168 - for adhesives and sealants. Supporting documentation must be provided to show the products meet those rules.

C. Composite Wood and Agrifiber Products: All composite wood and agrifiber products used within the shell of the building shall meet the California Department of Health Services *Standard Practice for the Testing of Volatile Organic Emssions from Various Sources Using Small Scale Environmental Chambers*, including 2004 Addenda. Downloadable version available at http://www.cal-iaq.org/VOC/.
   1. Alternative Compliance: Composite wood and agrifiber products must be documented not to contain added urea-formaldehyde resins. Adhesives used to fabricate wood and agrifiber assemblies on-site must be free of added urea-formaldehyde resins.
   2. Applicable products include particleboard, medium-density fiberboard (MDF), plywood, wheatboard, strawboard, panel substrates, and door cores.

2.3 ENERGY STAR PRODUCTS

A. Energy consuming products installed in the building shall be ENERGY STAR compliant if the product has an ENERGY STAR specification.

PART 3 EXECUTION

3.1 PROCEDURES

A. General: Conduct project management and construction operations in a manner consistent with, and in support of successful achievement of Owner's targeted compliance level.
   1. Collect and report the quantities, costs, weights, volumes and/or sourcing information for materials and products noted.
      a) Collect information for the volume used for following products:
         1) Interior paints and coatings applied on site.
         2) Interior adhesives and sealants applied on site.
   2. Collect VOC and other emissions information for:
      a) Interior paints and coatings applied on site. Calculated by volume.
      b) Interior adhesives and sealants applied on site (including flooring adhesive). Calculated by volume.
      c) Composite Wood. 100 percent not covered by other product categories.
      d) Furniture (include in calculations if part of scope of work). Calculated by cost.

B. Construction Waste Management and Disposal: Implement approved waste management plan during the entire duration of the Contract.

C. Commissioning Authority Activities: Cooperate with Commissioning Authority to coordinate construction and closeout activities scheduling.

3.2 SMOKING POLICY

A. General: Smoking policy on the project site is implemented for the following reasons:
   1. As a mandatory requirement for CT-HPBS compliance.
   2. Protection and promotion of health of all persons on the project site.

B. Smoking is not permitted anywhere on project site.

3.3 CONSTRUCTION WASTE MANAGEMENT

A. Comply with applicable requirements of Section 01 7419 - Construction Waste Management and Disposal.
   1. Project Sustainability Goal: Recycle or salavage at least 75 percent of non-hazardous construction and demolition debris.

Indoor Air Quality Field Report

Pollutant	Plan	Compliant	Comments
Smoking	Signage posted in building to prohibit any smoking		
Daily Cleanup	All debris removed at the end of each day		
Trash	Use of mobile trash bins in the building		
Electrical Cords	Electrical cords organized and out of walking paths		
Cut Rooms/Areas	Contractors protecting floor or using collection pans to prevent oils from penetrating and staining floors		
Material Storage			
Paint and Cleaning Supplies	Material is kept outside or in a contained area vented directly to the outside		
New porous material delivery (i.e. drywall, acoustical tile, carpet, etc	Materials not delivered into the space when VOCs or moisture is present. If moisture is present materials will be blocked off the ground at least 1.5" and covered with a breathable waterproof		
Mechanical Room	No material stored in mechanical rooms		
Other Material Deliveries	All new material delivered into the conditioned space, blocked off the floor, covered to protect from dust, VOCs, and moisture		
Construction Operations			
Construction Dust	Walk-off mats provided at all egress points to areas receiving finished flooring		
Construction Dirt	Boot scrape provided at all exterior entrances to building		
Liquid Spills	Spills cleaned up immediately and damaged materials replaced		
Concrete Block Sawing	Water used to cut block		
Drywall Cutting	Rotocut saws used with vacuum attachments or dust producing area is isolated & workers using PPE		
Drywall Sanding	Vacuum sanders used and workers using PPE		
Wood Saws	Work performed outside or vacuum attachments used		
Drilling	Vacuum attachments used or wetting and PPE when necessary		
Gas Powered Equipment	No gas or other fume producing equipment used in the building after enclosure, unless it can be vented directly		

Emissions Control	No idling policy indoors or outside. Prevent exhaust fumes from idling vehicles, equipment, or fossil fueled tools from entering the building		

Construction Byproducts

Drywall Dust	All workers in exposed areas wearing masks. Unprotected workers protected via dust partitioning or scheduled to work different hours		
Construction Dust	Work area swept daily with environmentally friendly sweeping		
Soldering & Welding	Area vented directly to the outside or smoke eaters used, and PPE provided to workers		
Isolating Areas	Contamination of other spaces prevented, whether they are finished or not. Seal doorways, windows, or tent off area as needed using temporary barriers, such as plastic separations		
Depressurized Areas	Allow differential between construction areas and clean areas. Exhaust to the outdoors using 100% outdoor air, if		

HVAC Installation and Operation

All Delivered Ductwork	All ductwork and associated elbows and fittings delivered to the jobsite sealed		
Insulated Ductwork	If delivered into open building, cap all ductwork and waterproof seals. During installation waterproof joints and capping at the end of each workday.		
During Ductwork Installation	All ductwork and HVAC equipment openings covered at the end of the day		
During HVAC Operation	Temporary filtration media with a MERV of at least 8 installed at all intake openings		
Immediately Before Occupancy	All HVAC equipment filters replaced with new

SECTION 01 3573 - DELEGATED DESIGN PROCEDURES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Summary of Delegated Design portion of Work.

B. Permitting for Delegated Design portion of Work.

C. Delegated Design submittals.

D. Coordinate and assume full responsibility for design, engineering, submittals, fabrication, transportation, and installation of this work.

1.2 RELATED REQUIREMENTS

A. Section 01 3000 - Administrative Requirements: Submittal procedures, project meetings, progress schedules and documentation, reports, coordination.

B. Section 01 4000 - Quality Requirements: Procedures for testing, inspection, mock-ups, reports, certificates; use of reference standards.

C. Section 01 4533 - Code-Required Special Inspections and Procedures.

D. Section 01 6000 - Product Requirements: Fundamental product requirements, substitutions and product options, delivery, storage, and handling.

E. Section 01 7000 - Execution and Closeout Requirements: Examination, preparation, and general installation procedures; preinstallation meetings; cutting and patching; cleaning and protection; starting of systems; demonstration and instruction; closeout procedures except payment procedures; requirements for alterations work.

F. Section 01 7800 - Closeout Submittals: Project record documents, operation and maintenance (O&M) data, warranties and bonds.

1.3 DEFINITIONS

A. Delegated Design: Professional design service or certification specifically required of the Contractor in the specifications.

B. AHJ: Authorities Having Jurisdiction, defined in AIA Document A201.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Design Data: Prepare and submit written and graphic information indicating compliance with indicated performance and design criteria in individual specification sections. Include list of assumptions and summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Number each page of submittal.

C. Preliminary Design: Submit drawings and product data that describe Contractor's design prior to performing engineering calculations and final drawings.
   1. Architect will evaluate proposed design and comment on conformance with intent of Contract Documents.
   2. Preliminary review is for aesthetic and general function concerns and will not constitute approval of engineering.
   3. Purpose of this submittal is to avoid engineering and detailing an unacceptable proposal.

D. Final Design: Submit drawings, product data and engineering calculations that describe Contractor's final design.

E. Permit Review: Submit Delegated Design documents to AHJ for review and approval as a Deferred Submittal. Architect will deliver submittal to the AHJ and be the main point of contact with the AHJ.
   1. Review by Architect or Architect's consultant prior to submittal to the AHJ is required. Allow adequate time for Architect's review as described in Section 01 3000 - Administrative Requirements.
   2. Make corrections noted by Architect.
   3. Obtain permits prior to executing work component.
   4. Comply with AHJ requirements.
   5. Execute corrections to Delegated Design work required by AHJ at no cost to Owner and prior to Substantial Completion.
      a) Notify Architect of changes required by AHJ as soon as they are known.
   6. Include design criteria, design assumptions, structural calculations, fabrication, and construction details, required clearances, and interface requirements.
      a) Delegated Design drawings are in addition to shop drawings.
   7. Affix Design Professional's State License seal on submittals.

F. Engineer's qualifications.

G. Product Data, Shop Drawings and Samples: Comply with requirements in Section 01 3000 - Administrative Requirements for each product of Delegated Design portion of work. Product submittals are in addition to submittals for permit and design data.

H. Erection Drawings: Indicate Connections of steel assemblies.

I. Designer's Qualification Statement.

J. Manufacturer's Qualification Statement.

K. Installer's Qualification Statement.

L. Maintenance Contracts.

1.5 QUALITY ASSURANCE

A. Engineer Qualifications: Perform design under direct supervision of a Professional Engineer experienced in providing engineering services of the find indicated and licensed in the State in which the Project is located.

B. Design requirements specific to Delegated Design portions of the Work are indicated on Drawings and in sections that specify the component.

C. Pre-Submittal Meeting: Contractor shall meet with Architect, consultant, and Delegated Designer to discuss requirements of work-portion, submittals, scheduling, and sequencing prior to start of Delegated Design.

1.6 DELEGATED DESIGN SERVICES

A. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.
   1. If criteria indicated are insufficient to perform services or certification required, submit a written request for additional information to Architect.

B. Delegated Design Services Certification: In addition to shop drawings, product data, and other required submittals, submit digitally signed PDF file and three paper copies of certificate, signed and sealed by the responsible design professional, for each product and system specifically assigned to Contractor to be designed or certified by a design professional.
   1. Indicate that products and systems comply with performance and design criteria in the Contract Documents. Include list of codes, loads, and other factors used in performing these services.

C. Schedule design process and submittals required for Delegated Design portions to fit within construction schedule.

D. Allow adequate time for AHJ review. Contact AHJ for time estimate and coordination of schedule.

E. Architect's approval of final design is required prior to submittal to the AHJ. Allow time specified in Section 01 3000 - Administrative Requirements for Architect's review prior to submittal to the AHJ.

F. Provide complete, operational systems that perform their intended use.

G. Engineer Delegated Design portions of the Work for gravity, lateral, and seismic loads.
   1. Load criteria is indicated on the Drawings and in the specific product sections.
   2. Indicate reactions to structure.

H. Execute the design intent as indicated on the Drawings and in the specific product sections.

I. Obtain permits and inspections and pay fees required by the AHJ.

J. The Owner will not pay for progress delays, additional Work, additional products, restocking, or re-working required by Contractor's failure to coordinate Delegated Design work with other project work.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.1 SCHEDULE OF DELEGATED DESIGN SPECIFICATION SECTIONS

A. Section 04 2000 - Unit Masonry: Engineered design of anchors for wide wall cavities.

B. Section 05 1200 - Structural Steel Framing: Structural steel connections designed by steel fabricator.

C. Section 05 2100 - Steel Joist Framing.

D. Section 05 4000 - Cold-Formed Metal Framing: Exterior wall stud design and cantilevered partial wall support systems.

E. Section 05 5000 - Metal Fabrications.

F. Section 05 5100 - Metal Stairs.

G. Section 05 7000 - Decorative Metal Railings.

H. Section 05 7100 - Monumental Stairs.

I. Section 07 4213.23 - Metal Composite Material Wall Panels: Cladding support system.

J. Section 07 4646 - Fiber Cement Wall Panels: Cladding support system.

K. Section 08 4413 - Aluminum Storefronts.

L. Section 08 4413 - Glazed Aluminum Curtain Walls.

M. Section 08 6300 - Metal-Framed Skylights.

N. Section 08 9200 - Louvered Equipment Enclosures.

O. Section 10 7516 - Ground Set Flagpoles.

P. Section 11 6833 - Athletic Field Equipment.

Q. Section 12 6613 - Telescoping Bleachers; Certification of design by professional engineer.

R. Section 12 9300 - Site Furnishings.

S. Fire Protection Sections 21 0400, 21 0516, 21 0548, 21 1313, and 21 3000.

T. Section 22 0548 - Vibration and Seismic Controls for Plumbing Piping and Equipment.

U. Section 23 0529 - Hangers and Supports for HVAC Piping, Ductwork, and Equipment.

V. Section 23 0548 - Vibration and Seismic Controls for HVAC Piping and Equipment.

W. Section 23 0573 - Overcurrent Protection Device Coordination Study

X. Section 26 4113 - Lightning Protection for Structures.

Y. Section 27 4100 - Speaker and Electric Rigging.

Z. Section 28 5319 - Distributed Antenna System.

AA. Section 32 3118 - Metal Fences and Gates.

BB. Secton 32 3223 - Segmental Retaining Walls.

CC. Section 32 8423 - Irrigation Systems.

END OF SECTION 01 3573

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 01 4000 - QUALITY REQUIREMENTS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Submittals.

B. Quality assurance.

C. Testing and inspection agencies and services.

D. Contractor's construction-related professional design services.

E. Contractor's design-related professional design services.

F. Control of installation.

G. Mock-ups.

H. Tolerances.

I. Manufacturers' field services.

J. Defect Assessment.

1.2 RELATED REQUIREMENTS

A. Section 01 3000 - Administrative Requirements: Submittal procedures.

B. Section 01 4219 - Reference Standards.

C. Section 01 6000 - Product Requirements: Requirements for material and product quality.

1.3 REFERENCE STANDARDS

A. IAS AC89 - Accreditation Criteria for Testing Laboratories; 2018.

1.4 DEFINITIONS

A. Contractor's Professional Design Services: Design of some aspect or portion of the project by party other than the design professional of record. Provide these services as part of the Contract for Construction.
   1. Design Services Types Required:
      a) Construction-Related: Services Contractor needs to provide in order to carry out the Contractor’s sole responsibilities for construction means, methods, techniques, sequences, and procedures.
      b) Design-Related: Design services explicitly required to be performed by another design professional due to highly-technical and/or specialized nature of a portion of the project. Services primarily involve engineering analysis, calculations, and design, and are not intended to alter the aesthetic aspects of the design.

B. Design Data: Design-related, signed and sealed drawings, calculations, specifications, certifications, shop drawings and other submittals provided by Contractor, and prepared directly by, or under direct supervision of, appropriately licensed design professional.

1.5 CONTRACTOR'S CONSTRUCTION-RELATED PROFESSIONAL DESIGN SERVICES

A. Coordination: Contractor's professional design services are subject to requirements of project's Conditions for Construction Contract.

B. Provide such engineering design services as may be necessary to plan and safely conduct certain construction operations, pertaining to, but not limited to the following:
   1. Temporary sheeting, shoring, or supports.
   2. Temporary scaffolding.
   3. Temporary bracing.
   4. Temporary foundation underpinning.
   5. Temporary stairs or steps required for construction access only.
   6. Temporary hoist(s) and rigging.
   7. Investigation of soil conditions to support construction equipment.

1.6 CONTRACTOR'S DESIGN-RELATED PROFESSIONAL DESIGN SERVICES

A. Coordination: Contractor's professional design services are subject to requirements of project's Conditions for Construction Contract.

B. Base design on performance and/or design criteria indicated in individual specification sections.
   1. Submit a Request for Interpretation to Architect if the criteria indicated are not sufficient to perform required design services.

C. Scope of Contractor's Professional Design Services: Provide for the following items of work:
   1. Refer to Section 01 3573 - Delegated Design Procedures for schedule of applicable specification sections.

1.7 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Designer's Qualification Statement: Submit for Architect's knowledge as contract administrator, or for Owner's information.
   1. Include information for each individual professional responsible for producing, or supervising production of, design-related professional services provided by Contractor.
      a) Full name.
      b) Professional licensure information.
      c) Statement addressing extent and depth of experience specifically relevant to design of items assigned to Contractor.

C. Design Data: Submit for Architect's knowledge as contract administrator for the limited purpose of assessing compliance with information given and the design concept expressed in the Contract Documents, or for Owner's information.
   1. Include calculations that have been used to demonstrate compliance to performance and regulatory criteria provided, and to determine design solutions.

2. Include required product data and shop drawings.
3. Include a statement or certification attesting that design data complies with criteria indicated, such as building codes, loads, functional, and similar engineering requirements.
4. Include signature and seal of design professional responsible for allocated design services on calculations and drawings.

D. Test Reports: After each test/inspection, promptly submit two copies of report to Architect and to Contractor.
1. Include:
   a) Date issued.
   b) Project title and number.
   c) Name of inspector.
   d) Date and time of sampling or inspection.
   e) Identification of product and specifications section.
   f) Location in the Project.
   g) Type of test/inspection.
   h) Date of test/inspection.
   i) Results of test/inspection.
   j) Compliance with Contract Documents.
   k) When requested by Architect, provide interpretation of results.
2. Test report submittals are for Architect's knowledge as contract administrator for the limited purpose of assessing compliance with information given and the design concept expressed in the Contract Documents, or for Owner's information.

E. Certificates: When specified in individual specification sections, submit certification by the manufacturer and Contractor or installation/application subcontractor to Architect, in quantities specified for Product Data.
1. Indicate material or product complies with or exceeds specified requirements. Submit supporting reference data, affidavits, and certifications as appropriate.
2. Certificates may be recent or previous test results on material or product, but must be acceptable to Architect.

F. Manufacturer's Instructions: When specified in individual specification sections, submit printed instructions for delivery, storage, assembly, installation, start-up, adjusting, and finishing, for the Owner's information. Indicate special procedures, perimeter conditions requiring special attention, and special environmental criteria required for application or installation.

G. Manufacturer's Field Reports: Submit reports for Architect's benefit as contract administrator or for Owner.
1. Submit for information for the limited purpose of assessing compliance with information given and the design concept expressed in the Contract Documents.

H. Erection Drawings: Submit drawings for Architect's benefit as contract administrator or for Owner.
1. Submit for information for the limited purpose of assessing compliance with information given and the design concept expressed in the Contract Documents.

1.8 QUALITY ASSURANCE

A. Testing Agency Qualifications:

1. Prior to start of work, submit agency name, address, and telephone number, and names of full time registered Engineer and responsible officer.
2. Submit copy of report of laboratory facilities inspection made by NIST Construction Materials Reference Laboratory during most recent inspection, with memorandum of remedies of any deficiencies reported by the inspection.
3. Qualification Statement: Provide documentation showing testing laboratory is accredited under IAS AC89.

B. Designer Qualifications: Where professional engineering design services and design data submittals are specifically required of Contractor by Contract Documents, provide services of a Professional Engineer experienced in design of this type of work and licensed in the State in which the Project is located.

1.9 TESTING AND INSPECTION AGENCIES AND SERVICES

A. Owner will employ and pay for services of an independent testing agency to perform specified testing.

B. Employment of agency in no way relieves Contractor of obligation to perform Work in accordance with requirements of Contract Documents.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.1 CONTROL OF INSTALLATION

A. Monitor quality control over suppliers, manufacturers, products, services, site conditions, and workmanship, to produce work of specified quality.

B. Comply with manufacturers' instructions, including each step in sequence.

C. Should manufacturers' instructions conflict with Contract Documents, request clarification from Architect before proceeding.

D. Comply with specified standards as minimum quality for the work except where more stringent tolerances, codes, or specified requirements indicate higher standards or more precise workmanship.

E. Have work performed by persons qualified to produce required and specified quality.

F. Verify that field measurements are as indicated on shop drawings or as instructed by the manufacturer.

G. Secure products in place with positive anchorage devices designed and sized to withstand stresses, vibration, physical distortion, and disfigurement.

3.2 MOCK-UPS

A. Before installing portions of the Work where mock-ups are required, construct mock-ups in location and size indicated for each form of construction and finish required to comply with the following requirements, using materials indicated for the completed Work. The purpose of mock-up is to demonstrate the proposed range of aesthetic effects and workmanship.

B. Accepted mock-ups establish the standard of quality the Architect will use to judge the Work.

C. Integrated Exterior Mock-ups: Construct integrated exterior mock-up as indicated on drawings. Coordinate installation of exterior envelope materials and products as required in individual Specification Sections. Provide adequate supporting structure for mock-up materials as necessary.

D. Tests shall be performed under provisions identified in this section and identified in the respective product specification sections.

E. Assemble and erect specified items with specified attachment and anchorage devices, flashings, seals, and finishes.

F. Architect will use accepted mock-ups as a comparison standard for the remaining Work.

G. Where mock-up has been accepted by Architect and is specified in product specification sections to be removed, protect mock-up throughout construction, remove mock-up and clear area when directed to do so by Architect.

3.3 TOLERANCES

A. Monitor fabrication and installation tolerance control of products to produce acceptable Work. Do not permit tolerances to accumulate.

B. Comply with manufacturers' tolerances. Should manufacturers' tolerances conflict with Contract Documents, request clarification from Architect before proceeding.

C. Adjust products to appropriate dimensions; position before securing products in place.

3.4 TESTING AND INSPECTION

A. Testing Agency Duties:
   1. Test samples of mixes submitted by Contractor.
   2. Provide qualified personnel at site. Cooperate with Architect and Contractor in performance of services.
   3. Perform specified sampling and testing of products in accordance with specified standards.
   4. Ascertain compliance of materials and mixes with requirements of Contract Documents.
   5. Promptly notify Architect and Contractor of observed irregularities or non-compliance of Work or products.
   6. Perform additional tests and inspections required by Architect.
   7. Submit reports of all tests/inspections specified.

B. Limits on Testing/Inspection Agency Authority:
   1. Agency may not release, revoke, alter, or enlarge on requirements of Contract Documents.
   2. Agency may not approve or accept any portion of the Work.
   3. Agency may not assume any duties of Contractor.
   4. Agency has no authority to stop the Work.

C. Contractor Responsibilities:
   1. Deliver to agency at designated location, adequate samples of materials proposed to be used that require testing, along with proposed mix designs.
   2. Cooperate with laboratory personnel, and provide access to the Work and to manufacturers' facilities.
   3. Provide incidental labor and facilities:
      a) To provide access to Work to be tested/inspected.
      b) To obtain and handle samples at the site or at source of Products to be tested/inspected.
      c) To facilitate tests/inspections.
      d) To provide storage and curing of test samples.
   4. Notify Architect and laboratory 24 hours prior to expected time for operations requiring testing/inspection services.
   5. Employ services of an independent qualified testing laboratory and pay for additional samples, tests, and inspections required by Contractor beyond specified requirements.
   6. Arrange with Owner's agency and pay for additional samples, tests, and inspections required by Contractor beyond specified requirements.

D. Re-testing required because of non-compliance with specified requirements shall be performed by the same agency on instructions by Architect.

E. Re-testing required because of non-compliance with specified requirements shall be paid for by Contractor.

3.5 MANUFACTURERS' FIELD SERVICES

A. When specified in individual specification sections, require material or product suppliers or manufacturers to provide qualified staff personnel to observe site conditions, conditions of surfaces and installation, quality of workmanship, start-up of equipment as applicable, and to initiate instructions when necessary.

B. Report observations and site decisions or instructions given to applicators or installers that are supplemental or contrary to manufacturers' written instructions.

3.6 DEFECT ASSESSMENT

A. Replace Work or portions of the Work not complying with specified requirements.

B. If, in the opinion of Construction Manager, it is not practical to remove and replace the work, Construction Manager will direct an appropriate remedy or adjust payment.

END OF SECTION 01 4000

FOR REFERENCE: THIS SECTION WAS ISSUED FOR PHASE 1 AND PHASE 2

SECTION 01 4219 - REFERENCE STANDARDS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Requirements relating to referenced standards.

B. Reference standards full title and edition date.

1.2 QUALITY ASSURANCE

A. For products or workmanship specified by reference to a document or documents not included in the Project Manual, also referred to as reference standards, comply with requirements of the standard, except when more rigid requirements are specified or are required by applicable codes.

B. Comply with the reference standard of date of issue specified in this section, except where a specific date is established by applicable code.

C. Should specified reference standards conflict with Contract Documents, request clarification from the Architect before proceeding.

D. Neither the contractual relationships, duties, or responsibilities of the parties in Contract nor those of the Architect shall be altered by Contract Documents by mention or inference otherwise in any reference document.

PART 2 CONSTRUCTION INDUSTRY ORGANIZATION DOCUMENTS

2.1 AA -- ALUMINUM ASSOCIATION, INC.

A. AA DAF-45 - Designation System for Aluminum Finishes; 2003 (Reaffirmed 2009).

B. AA SAAA-46 - Standards for Anodized Architectural Aluminum; 1978.

C. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix); 2017a.

2.2 AI -- THE ASPHALT INSTITUTE

2.3 AIA -- THE AMERICAN INSTITUTE OF ARCHITECTS

A. AIA A232 - General Conditions of the Contract for Construction, Construction Manager as Adviser Edition; 2009.

B. AIA A533 - Guide for Supplementary Condition, Construction Manager as Advisor Edition; 2009.

C. AIA A701 - Instructions to Bidders; 2018.

D. AIA G612 - Owner's Instructions to the Architect; 2017.

E. AIA G701 - Change Order; 2017.

F. AIA G702CMa - Application and Certificate for Payment, Construction Manager-Adviser Edition; 1992.

G. AIA G704CMa - Certificate of Substantial Completion, Construction Manager-Adviser Edition; 1992.

H. AIA G709 - Proposal Request; 2018.

I. AIA G710 - Architect's Supplemental Instructions; 2017.

J. AIA G714 - Construction Change Directive; 2017.

K. AIA G716 - Request for Information; 2004.

2.4 AISC -- AMERICAN INSTITUTE OF STEEL CONSTRUCTION, INC.

A. AISC 201 - AISC Certification Program for Structural Steel Fabricators, Standard for Steel Building Structures; 2006.

B. AISC 207 - Certification Standard for Steel Fabrication and Erection, and Manufacturing of Metal Components; 2016.

C. AISC 325 - Steel Construction Manual; 2017.

2.5 ANSI -- AMERICAN NATIONAL STANDARDS INSTITUTE

A. ANSI/FM 4474 - American National Standard for Evaluating the Simulated Wind Uplift Resistance of Roof Assemblies Using Static Positive and/or Negative Differential Pressures; 2004 (R2010).

2.6 ASCE -- AMERICAN SOCIETY OF CIVIL ENGINEERS

A. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures; Most Recent Edition Cited by Referring Code or Reference Standard.

2.7 ASHRAE -- AMERICAN SOCIETY OF HEATING, REFRIGERATING AND AIR-CONDITIONING ENGINEERS, INC.

A. ASHRAE (FUND)-2017 - ASHRAE Handbook - Fundamentals; 2017.

B. ASHRAE (HVACA) - ASHRAE Handbook - HVAC Applications; Most Recent Edition Cited by Referring Code or Reference Standard.

C. ASHRAE (REFR) - ASHRAE Handbook - Refrigeration; Most Recent Edition Cited by Referring Code or Reference Standard.

D. ASHRAE (HVACS) - ASHRAE Handbook - HVAC Systems and Equipment; Most Recent Edition Cited by Referring Code or Reference Standard.

E. ASHRAE Std 52.2 - Method of Testing General Ventilation Air-Cleaning Devices for Removal Efficiency by Particle Size; 2017 (Amended (2020).

F. ASHRAE Std 55 - Thermal Environmental Conditions for Human Occupancy; 2020.

G. ASHRAE Std 62.1 - Ventilation for Acceptable Indoor Air Quality; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

H. ASHRAE Std 62.1-2019 - Ventilation for Acceptable Indoor Air Quality; 2019, with Errata and Amendments (2021).

I. ASHRAE Std 68 - Laboratory Method of Testing to Determine the Sound Power in a Duct; 1997.

J. ASHRAE Std 70 - Method of Testing the Performance of Air Outlets and Inlets; 2006 (Reaffirmed 2011).

K. ASHRAE Std 84 - Method of Testing Air to Air Heat/Energy Exchangers; 2020.

L. ASHRAE Std 90.1 I-P - Energy Standard for Buildings Except Low-Rise Residential Buildings; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

M. ASHRAE Std 111 - Measurement, Testing, Adjusting, and Balancing of Building HVAC Systems; 2008 (Reaffirmed 2017).

N. ASHRAE Std 126 - Method of Testing HVAC Air Ducts; 2016.

O. ASHRAE Std 129 - Measuring Air-Change Effectiveness.; 1997 (Reaffirmed 2002).

P. ASHRAE Std 130 - Methods of Testing Air Terminal Units; 2016.

Q. ASHRAE Std 135 - A Data Communication Protocol for Building Automation and Control Networks; 2020.

R. ASHRAE Std 140 - Method of Test for Evaluating Building Performance Simulation Software; 2020, with Addenda (2023).

S. ASHRAE Std 180 - Standard Practice for Inspection and Maintenance of Commercial-Building HVAC Systems; 2018.

T. ASHRAE Std 189.1 - Standard for the Design of High-Performance Green Buildings; 2017.

U. ASHRAE Std 202 - Commissioning Process for Buildings and Systems; 2018.

2.8 ASTM A SERIES -- ASTM INTERNATIONAL

A. ASTM A6/A6M - Standard Specification for General Requirements for Rolled Structural Steel Bars, Plates, Shapes, and Sheet Piling; 2019.

B. ASTM A29/A29M - Standard Specification for General Requirements for Steel Bars, Carbon and Alloy, Hot-Wrought; 2020.

C. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

D. ASTM A48/A48M - Standard Specification for Gray Iron Castings; 2003 (Reapproved 2016).

E. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless; 2022.

F. ASTM A74 - Standard Specification for Cast Iron Soil Pipe and Fittings; 2020.

G. ASTM A108 - Standard Specification for Steel Bar, Carbon and Alloy, Cold-Finished; 2018.

H. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products; 2017.

I. ASTM A148/A148M - Standard Specification for Steel Castings, High Strength, for Structural Purposes; 2020, with Editorial Revision.

J. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware; 2023.

K. ASTM A645/A645M - Standard Specification for Pressure Vessel Plates, 5% and 5-1/2% Nickel Alloy Steels, Specially Heat Treated; 2010 (Reapproved 2016).

L. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.

M. ASTM A1008/A1008M - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Required Hardness, Solution Hardened, and Bake Hardenable; 2023, with Editorial Revision.

2.9 ASTM B SERIES -- ASTM INTERNATIONAL

A. ASTM B75/B75M - Standard Specification for Seamless Copper Tube; 2020.

B. ASTM B88 - Standard Specification for Seamless Copper Water Tube; 2020.

C. ASTM B88M - Standard Specification for Seamless Copper Water Tube (Metric); 2020.

D. ASTM B302 - Standard Specification for Threadless Copper Pipe, Standard Sizes; 2017.

E. ASTM B306 - Standard Specification for Copper Drainage Tube (DWV); 2020.

2.10 ASTM C SERIES -- ASTM INTERNATIONAL

A. ASTM C273/C273M - Standard Test Method for Shear Properties of Sandwich Core Materials; 2020.

B. ASTM C478 - Standard Specification for Circular Precast Reinforced Concrete Manhole Sections; 2019.

C. ASTM C478M - Standard Specification for Circular Precast Reinforced Concrete Manhole Sections (Metric); 2019.

D. ASTM C923M - Standard Specification for Resilient Connectors Between Reinforced Concrete Manhole Structures, Pipes, and Laterals (Metric); 2018.

E. ASTM C1262 - Standard Test Method for Evaluating the Freeze-Thaw Durability of Manufactured Concrete Masonry Units and Related Concrete Units; 2010.

2.11 ASTM D SERIES -- ASTM INTERNATIONAL

A. ASTM D779 - Standard Test Method for Determining the Water Vapor Resistance of Sheet Materials in Contact with Liquid Water by the Dry Indicator Method; 2016.

B. ASTM D785 - Standard Test Method for Rockwell Hardness of Plastics and Electrical Insulating Materials; 2008 (Reapproved 2015).

C. ASTM D790 - Standard Test Methods for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials; 2017.

D. ASTM D1079 - Standard Terminology Relating to Roofing and Waterproofing; 2020.

E. ASTM D2310 - Standard Classification for Machine-Made "Fiberglass" (Glass-Fiber-Reinforced Thermosetting-Resin) Pipe; 2006 (Reapproved 2012).

F. ASTM D4397 - Standard Specification for Polyethylene Sheeting for Construction, Industrial, and Agricultural Applications; 2016.

G. ASTM D6878/D6878M - Standard Specification for Thermoplastic Polyolefin Based Sheet Roofing; 2019.

H. ASTM D8257/D8257M - Standard Specification for Mechanically Attached Polymeric Roof Underlayment Used in Steep Slope Roofing; 2020.

2.12 ASTM E SERIES -- ASTM INTERNATIONAL

A. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2023d.

B. ASTM E108 - Standard Test Methods for Fire Tests of Roof Coverings; 2020a.

C. ASTM E985 - Standard Specification for Permanent Metal Railing Systems and Rails for Buildings; 2000 (Reapproved 2006).

D. ASTM E1980 - Standard Practice for Calculating Solar Reflectance Index of Horizontal and Low-Sloped Opaque Surfaces; 2011 (Reapproved 2019).

2.13 ASTM F SERIES -- ASTM INTERNATIONAL

2.14 AWS -- AMERICAN WELDING SOCIETY

A. AWS B2.1/B2.1M - Specification for Welding Procedure and Performance Qualification; 2021.

B. AWS B5.1 - Specification for the Qualification of Welding Inspectors; 2013, with Amendment (2014).

C. AWS D9.1/D9.1M - Sheet Metal Welding Code; 2018.

2.15 BHMA -- BUILDERS HARDWARE MANUFACTURERS ASSOCIATION

A. BHMA (CPD) - Certified Products Directory; Current Edition.

B. BHMA A156.9 - American National Standard for Cabinet Hardware; 2015.

2.16 CRRC -- COOL ROOF RATING COUNCIL

A. CRRC-1 - Standard; Cool Roofs Rating Council; 2017.

2.17 CSI/CSC -- CONSTRUCTION SPECIFICATIONS INSTITUTE/CONSTRUCTION SPECIFICATIONS CANADA

A. CSI/CSC Form 13.1A - Substitution Request (After the Bidding/Negotiating Phase); Current Edition.

2.18 FM -- FACTORY MUTUAL GLOBAL

A. FM (AG) - FM Approval Guide; Current Edition.

B. FM 4470 - Approval Standard for Single-Ply, Polymer-Modified Bitumen Sheet, Built-Up Roof (BUR) and Liquid Applied Roof Assemblies for use in Class 1 and Noncombustible Roof Deck Construction; 2016.

2.19 ICC -- INTERNATIONAL CODE COUNCIL, INC.

A. ICC A117.1 - Accessible and Usable Buildings and Facilities; 2017.

B. ICC (IBC) - International Building Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

C. ICC (IECC) - International Energy Conservation Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

D. ICC (IFC) - International Fire Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

E. ICC (IFGC) - International Fuel Gas Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

F. ICC (IMC) - International Mechanical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

G. ICC (IPC) - International Plumbing Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

2.20 NEMA -- NATIONAL ELECTRICAL MANUFACTURERS ASSOCIATION

A. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum); 2018.

B. NEMA 260 - Safety Labels for Padmounted Switchgear and Transformers Sited in Public Areas; 1996 (Reaffirmed 2004).

C. NEMA 410 - Performance Testing for Lighting Controls and Switching Devices with Electronic Drivers and Discharge Ballasts; 2016.

D. NEMA PB 1 - Panelboards; 2011.

E. NEMA PB 1.1 - General Instructions for Proper Installation, Operation and Maintenance of Panelboards Rated 600 Volts or Less; 2013.

2.21 NFPA -- NATIONAL FIRE PROTECTION ASSOCIATION

A. NFPA 1 - Fire Code; 2018.

B. NFPA 13 - Standard for the Installation of Sprinkler Systems; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

C. NFPA 30 - Flammable and Combustible Liquids Code; 2018.

D. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

E. NFPA 101 - Life Safety Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

2.22 NRCA -- NATIONAL ROOFING CONTRACTORS ASSOCIATION

A. NRCA (RM) - The NRCA Roofing Manual; 2019.

B. NRCA (WM) - The NRCA Waterproofing Manual; 2005.

2.23 NWFA -- NATIONAL WOOD FLOORING ASSOCIATION

2.24 TCNA -- TILE COUNCIL OF NORTH AMERICA, INC.

2.25 TPI -- TURFGRASS PRODUCERS INTERNATIONAL

2.26 UL -- UNDERWRITERS LABORATORIES INC.

A. UL (DIR) - Online Certifications Directory; Current Edition.

B. UL (FPED) - Fire Protection Equipment Directory; current edition.

C. UL (FPSD) - Fire Protection Systems Directory; current edition.

D. UL (FRD) - Fire Resistance Directory; Current Edition.

E. UL (HCVCE) - Heating, Cooling, Ventilating and Cooking Equipment Directory; current edition.

F. UL 1 - Flexible Metal Conduit; Current Edition, Including All Revisions.

G. UL 5 - Surface Metal Raceways and Fittings; Current Edition, Including All Revisions.

H. UL 6 - Electrical Rigid Metal Conduit-Steel; Current Edition, Including All Revisions.

I. UL 6A - Electrical Rigid Metal Conduit-Aluminum, Red Brass, and Stainless Steel; Current Edition, Including All Revisions.

J. UL 580 - Standard for Tests for Uplift Resistance of Roof Assemblies; Current Edition, Including All Revisions.

K. UL 790 - Standard for Standard Test Methods for Fire Tests of Roof Coverings; Current Edition, Including All Revisions.

L. UL 1053 - Ground-Fault Sensing and Relaying Equipment; Current Edition, Including All Revisions.

M. UL 1897 - Uplift Tests for Roof-Covering Systems; Underwriters Laboratories Inc.; Current Edition, Including All Revisions.

PART 3 UNITED STATES GOVERNMENT AND RELATED AGENCIES DOCUMENTS

3.1 CFR -- CODE OF FEDERAL REGULATIONS

A. ADA Standards - Americans with Disabilities Act (ADA) Standards for Accessible Design; 2010.

B. 36 CFR 1191 - Americans with Disabilities Act (ADA) Accessibility Guidelines for Buildings and Facilities; Architectural Barriers Act (ABA) Accessibility Guidelines; current edition.

3.2 FS -- FEDERAL SPECIFICATIONS AND STANDARDS (GENERAL SERVICES ADMINISTRATION)

3.3 MDOT -- MISSISSIPPI DEPARTMENT OF TRANSPORTATION SPECIFICATIONS AND STANDARDS

A. MDOT - Standard Specifications for Construction; 2015.

END OF SECTION 01 4219

THIS PAGE INTENTIONALLY LEFT BLANK

FOR REFERENCE: THIS SECTION WAS ISSUED FOR PHASE 1 AND PHASE 2

SECTION 01 4339 - MOCKUPS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Mockups.

1.2 RELATED REQUIREMENTS

A. Section 01 3000 - Administrative Requirements: Submittal procedures, project meetings, progress schedules and documentation, reports, coordination.

B. Section 01 4000 - Quality Requirements: Procedures for testing, inspection, reports, certificates; use of reference standards.

C. Section 01 6000 - Product Requirements: Fundamental product requirements, substitutions and product options, delivery, storage, and handling.

D. Sections with materials and products to be furnished and installed as components of an integrated exterior mockup include, but are not limited to, the following:
   1. Section 04 2000 - Unit Masonry.
   2. Section 04 7323 – Manufactured Building Stone Masonry
   3. Section 05 5400 – Cold-Formed Metal Framing.
   4. Section 05 5000 - Metal Fabrications.
   5. Section 06 1000 - Rough Carpentry
   6. Section 07 2100 - Thermal Insulation.
   7. Section 07 2726 – Fluid-Applied Membrane Air Barriers.
   8. Section 07 4213.23 – Metal Composite Material Wall Panels.
   9. Section 07 4646 - Fiber-Cement Wall Panels.
   10. Section 07 6200 - Sheet Metal Flashing and Trim.
   11. Section 08 4313 - Aluminum-Framed Storefronts.
   12. Section 08 4413 - Glazed Aluminum Curtain Walls.
   13. Section 08 8000 – Glazing.
   14. Section 08 9200 – Louvered Equipment Enclosure.

1.3 DEFINITIONS

A. Mockups (General): Full-size physical assemblies that are constructed on-site. Mockups are not samples.

B. Integrated Exterior Mockups: Mockups of the exterior envelope erected separately from the building but on project site, consisting of mulitple products, assemblies, and subassemblies.
   1. A standalone, integrated exterior envelope mockup is included in this project. Refer to Drawing A315 for mockup design and assemblies

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: For integrated exterior mockups.
   1. Include plans, sections, and elevations, indicating materials and size of mockup construction.
   2. Indicate manufacturer and model number of individual components.
   3. Provide axonometric drawings for conditions difficult to illustrate in two dimensions.

1.5 QUALITY ASSURANCE

A. Pre-Construction Conference: Prior to construction of the mockups, schedule a conference at the job site for the purpose of reviewing the requirements and intent of mockups.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.1 MOCKUPS

A. Before installing portions of the Work where mockups are required, construct mockups in location and size indicated for each form of construction and finish required to comply with the following requirements, using materials indicated for the completed Work. The purpose of mockups is to verify selections made under sample submittals, to demonstrate the proposed range of aesthetic effects and workmanship, and where indicated, qualities of materials and execution.
   1. Mockups will be used to make final material selection, to review coordination, testing, or operation, to show interface between dissimilar materials, evaluate installation techniques, demonstrate compliance with specified installation tolerances, and evaluate compatibility of selected components.
   2. Completed mockups will serve as a mutual understanding of the workmanship and methods to be used on actual installation.

B. See Section 01 4000 - Quality Requirements for additional requirements.

C. Notify Architect fifteen (15) working days in advance of dates and times when mockups will be constructed and available for review.

D. Provide supervisory personnel who will oversee mockup construction. Provide workers that will be employed during the construction at Project.

E. Perform tests under provisions identified in this section and identified in the respective product specification sections.

F. Assemble and erect mockups complete with specified attachment and anchorage devices, flashings, seals, and finishes.

G. Obtain Architect's approval of mockups before ordering materials and starting work, fabrication, or construction.
   1. Architect will issue written comments within seven (7) working days of initial review and each subsequent follow up review of each mockup.

2. Make corrections as necessary until Architect's approval is issued.

H. Accepted mockups establish the standard of quality the Architect will use to judge the Work.

I. Where mockup has been accepted by Architect and is specified in product specification sections to be removed, protect mockup throughout construction, remove mockup and clear area when directed to do so by Architect.

J. Where possible salvage and recycle the demolished mockup materials.

K. Integrated Exterior Mockups: Construct integrated exterior mockup in accordance with approved shop drawings. Coordinate installation of exterior envelope materials and products for which mockups are required in individual specification sections. Provide adequate supporting structure for mockup materials as necessary. Comply with requirements in this article.
   1. Provide the following integrated exterior mockup:
      a) Exterior wall assembly systems and finishes, including all transitions and interfaces between different materials and walls to openings/curtain wall and storefronts. Construct as a single comprehensive mockup.
         1) Refer to Drawing A315 for configuration and components of the mockup.

3.2 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for additional requirements.

B. Coordination of Other Tests and Inspections: Owner will employ independent testing agency to test and/or inspect integrated building mock-up; provide access as required to accommodate timely performance.

END OF SECTION 01 4339

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 01 4533 - CODE-REQUIRED SPECIAL INSPECTIONS AND PROCEDURES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Code-required special inspections.

B. Testing services incidental to special inspections.

C. Submittals.

D. Manufacturers' field services.

E. Fabricators' field services.

1.2 RELATED REQUIREMENTS

A. Section 01 3000 - Administrative Requirements: Submittal procedures.

B. Section 01 4219 - Reference Standards.

C. Section 01 6000 - Product Requirements: Requirements for material and product quality.

1.3 ABBREVIATIONS AND ACRONYMS

A. AHJ: Authority having jurisdiction.

B. IAS: International Accreditation Service, Inc.

C. NIST: National Institute of Standards and Technology.

1.4 DEFINITIONS

A. Code or Building Code: ICC (IBC), International Building Code, Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements and specifically, Chapter 17 - Special Inspections and Tests.

B. Authority Having Jurisdiction (AHJ): Agency or individual officially empowered to enforce the building, fire and life safety code requirements of the permitting jurisdiction in which the Project is located.

C. Special Inspection:
   1. Special inspections are inspections and testing of materials, installation, fabrication, erection or placement of components and connections mandated by the AHJ that also require special expertise to ensure compliance with the approved Contract Documents and the referenced standards.
   2. Special inspections are separate from and independent of tests and inspections conducted by Owner or Contractor for the purposes of quality assurance and contract administration.

1.5 REFERENCE STANDARDS

A. ASTM E329 - Standard Specification for Agencies Engaged in Construction Inspection, Testing, or Special Inspection; 2021.

B. IAS AC89 - Accreditation Criteria for Testing Laboratories; 2018.

C. IAS AC291 - Accreditation Criteria for Special Inspection Agencies; 2017.

D. ICC (IBC) - International Building Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

1.6 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Special Inspection Agency Qualifications: Prior to the start of work, the Special Inspection Agency is required to:
   1. Submit agency name, address, and telephone number, names of full time registered Engineer and responsible officer.
   2. Submit copy of report of laboratory facilities inspection made by NIST Construction Materials Reference Laboratory during most recent inspection, with memorandum of remedies of any deficiencies reported by the inspection.
   3. Submit certification that Special Inspection Agency is acceptable to AHJ.
   4. Submit documentation that Special Inspection Agency is accredited by IAS according to IAS AC291.

C. Testing Agency Qualifications: Prior to the start of work, the Testing Agency is required to:
   1. Submit agency name, address, and telephone number, and names of full time registered Engineer and responsible officer.
   2. Submit copy of report of laboratory facilities inspection made by NIST Construction Materials Reference Laboratory during most recent inspection, with memorandum of remedies of any deficiencies reported by the inspection.
   3. Submit certification that Testing Agency is acceptable to AHJ.
   4. Submit documentation that Testing Agency is accredited by IAS according to IAS AC89.

D. Special Inspection Reports: After each special inspection, Special Inspector is required to promptly submit at least two copies of report; one to Architect and one to the AHJ.
   1. Include:
      a) Date issued.
      b) Project title and number.
      c) Name of Special Inspector.
      d) Date and time of special inspection.
      e) Identification of product and specifications section.
      f) Location in the Project.
      g) Type of special inspection.
      h) Date of special inspection.
      i) Results of special inspection.
      j) Compliance with Contract Documents.

E. Test Reports: After each test or inspection, promptly submit at least two copies of report; one to Architect and one to AHJ.
   1. Include:
      a) Date issued.
      b) Project title and number.
      c) Name of inspector.
      d) Date and time of sampling or inspection.
      e) Identification of product and specifications section.
      f) Location in the Project.
      g) Type of test or inspection.
      h) Date of test or inspection.
      i) Results of test or inspection.
      j) Compliance with Contract Documents.

F. Certificates: When specified in individual special inspection requirements, Special Inspector shall submit certification by the manufacturer, fabricator, and installation subcontractor to Architect and AHJ, in quantities specified for Product Data.
   1. Indicate material or product complies with or exceeds specified requirements. Submit supporting reference data, affidavits, and certifications as appropriate.

1.7 SPECIAL INSPECTION AGENCY

A. Owner will employ services of a Special Inspection Agency to perform inspections and associated testing and sampling in accordance with ASTM E329 and required by the building code.

B. Employment of agency in no way relieves Contractor of obligation to perform work in accordance with requirements of Contract Documents.

1.8 TESTING AND INSPECTION AGENCIES

A. Owner may employ services of an independent testing agency to perform additional testing and sampling associated with special inspections but not required by the building code.

B. Employment of agency in no way relieves Contractor of obligation to perform work in accordance with requirements of Contract Documents.

1.9 QUALITY ASSURANCE

A. Special Inspection Agency Qualifications:
   1. Independent firm specializing in performing testing and inspections of the type specified in this section.
   2. Accredited by IAS according to IAS AC291.

B. Testing Agency Qualifications:
   1. Independent firm specializing in performing testing and inspections of the type specified in this section.
   2. Accredited by IAS according to IAS AC89.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.1 SCHEDULE OF SPECIAL INSPECTIONS, GENERAL

A. Frequency of Special Inspections: Special Inspections are indicated as continuous or periodic.
   1. Continuous Special Inspection: Special Inspection Agency is required to be present in the area where the work is being performed and observe the work at all times the work is in progress.
   2. Periodic Special Inspection: Special Inspection Agency is required to be present in the area where work is being performed and observe the work part-time or intermittently and at the completion of the work.

3.2 TESTING AGENCY DUTIES AND RESPONSIBILITIES

A. Testing Agency Duties:
   1. Provide qualified personnel at site. Cooperate with Architect and Contractor in performance of services.
   2. Perform specified sampling and testing of products in accordance with specified standards.
   3. Ascertain compliance of materials and mixes with requirements of Contract Documents.
   4. Promptly notify Architect and Contractor of observed irregularities or non-compliance of work or products.
   5. Perform additional tests and inspections required by Architect.
   6. Submit reports of all tests or inspections specified.

B. Limits on Testing or Inspection Agency Authority:
   1. Agency may not release, revoke, alter, or enlarge on requirements of Contract Documents.
   2. Agency may not approve or accept any portion of the work.
   3. Agency may not assume any duties of Contractor.
   4. Agency has no authority to stop the work.

C. On instructions by Architect, perform re-testing required because of non-compliance with specified requirements, using the same agency.

D. Contractor will pay for re-testing required because of non-compliance with specified requirements.

3.3 CONTRACTOR DUTIES AND RESPONSIBILITIES

A. Contractor Responsibilities, General:
   1. Deliver to agency at designated location, adequate samples of materials for special inspections that require material verification.
   2. Cooperate with agency and laboratory personnel; provide access to approved documents at project site, to the work, to manufacturers' facilities, and to fabricators' facilities.
   3. Provide incidental labor and facilities:
      a) To provide access to work to be tested or inspected.

b) To obtain and handle samples at the site or at source of Products to be tested or inspected.
c) To facilitate tests or inspections.
d) To provide storage and curing of test samples.

4. Notify Architect and laboratory 24 hours prior to expected time for operations requiring testing or inspection services.
5. Arrange with Owner's agency and pay for additional samples, tests, and inspections required by Contractor beyond specified requirements.

B. Contractor Responsibilities, Seismic Force-Resisting System, Designated Seismic System, and Seismic Force-Resisting Component: Submit written statement of responsibility for each item listed in the Statement of Special Inspections to AHJ and Owner prior to starting work. Statement of responsibility shall acknowledge awareness of special construction requirements and other requirements listed.

C. Contractor Responsibilities, Wind Force-Resisting System and Wind Force-Resisting Component: Submit written statement of responsibility for each item listed in the Statement of Special Inspections to AHJ and Owner prior to starting work. Statement of responsibility shall acknowledge awareness of special construction requirements and other requirements listed.

3.4 MANUFACTURERS' AND FABRICATORS' FIELD SERVICES

A. When specified in individual specification sections, require material suppliers, assembly fabricators, or product manufacturers to provide qualified staff personnel to observe site conditions, conditions of surfaces and installation, quality of workmanship, start-up of equipment, to test, adjust, and balance equipment as applicable, and to initiate instructions when necessary.

B. Report observations and site decisions or instructions given to applicators or installers that are supplemental or contrary to manufacturers' written instructions.

END OF SECTION 01 4533

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 01 5000 - TEMPORARY FACILITIES AND CONTROLS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Temporary utilities.

B. Temporary telecommunications services.

C. Temporary sanitary facilities.

D. Temporary Controls: Barriers, enclosures, and fencing.

E. Security requirements.

F. Vehicular access and parking.

G. Waste removal facilities and services.

H. Project identification sign.

I. Field offices.

1.2 REFERENCE STANDARDS

A. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2023d.

B. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements; 2009 (Reapproved 2016).

1.3 TEMPORARY UTILITIES

A. Owner will provide the following:
   1. Electrical power and metering, consisting of connection to existing facilities.
   2. Water supply, consisting of connection to existing facilities.

1.4 TELECOMMUNICATIONS SERVICES

A. Provide, maintain, and pay for telecommunications services to field office at time of project mobilization.

B. Telecommunications services shall include:
   1. Windows-based personal computer dedicated to project telecommunications, with necessary software and laser printer.
   2. Internet Connections: Minimum of one; Cable modem or faster.
   3. Project web site.

1.5 TEMPORARY SANITARY FACILITIES

A. Provide and maintain required facilities and enclosures. Provide at time of project mobilization.

B. Maintain daily in clean and sanitary condition.

1.6 BARRIERS

A. Provide barriers to prevent unauthorized entry to construction areas, to prevent access to areas that could be hazardous to workers or the public, to allow for owner's use of site and to protect existing facilities and adjacent properties from damage from construction operations and demolition.

B. Provide barricades and covered walkways required by governing authorities for public rights-of-way and for public access to existing building.

C. Provide protection for plants designated to remain. Replace damaged plants.

D. Protect non-owned vehicular traffic, stored materials, site, and structures from damage.

1.7 FENCING

A. Construction: Contractor's option.

B. Provide 6 foot high fence around construction site; equip with vehicular and pedestrian gates with locks.

1.8 SECURITY

A. Provide security and facilities to protect Work, existing facilities, and Owner's operations from unauthorized entry, vandalism, or theft.

1.9 VEHICULAR ACCESS AND PARKING

A. Comply with regulations relating to use of streets and sidewalks, access to emergency facilities, and access for emergency vehicles.

B. Coordinate access and haul routes with governing authorities and Owner.

C. Provide and maintain access to fire hydrants, free of obstructions.

D. Provide means of removing mud from vehicle wheels before entering streets.

E. Provide temporary parking areas to accommodate construction personnel. When site space is not adequate, provide additional off-site parking.

1.10 WASTE REMOVAL

A. See Section 01 7419 - Construction Waste Management and Disposal, for additional requirements.

B. Provide waste removal facilities and services as required to maintain the site in clean and orderly condition.

C. Provide containers with lids. Remove trash from site periodically.

D. If materials to be recycled or re-used on the project must be stored on-site, provide suitable non-combustible containers; locate containers holding flammable material outside the structure unless otherwise approved by the authorities having jurisdiction.

E. Open free-fall chutes are not permitted. Terminate closed chutes into appropriate containers with lids.

1.11 PROJECT IDENTIFICATION

A. Provide project identification sign of design and construction required by the CT Department of Administrative Service and as indicated in the Project Sign Form SCG-3021 attached to this section.

B. Erect on site at location indicated.

C. No other signs are allowed without Owner permission except those required by law.

1.12 FIELD OFFICES

A. Office: Weathertight, with lighting, electrical outlets, heating, cooling equipment, and equipped with sturdy furniture, drawing rack, and drawing display table.

B. Provide space for Project meetings, with table and chairs to accommodate 6 persons.

C. Locate offices a minimum distance of 30 feet from existing and new structures.

1.13 REMOVAL OF UTILITIES, FACILITIES, AND CONTROLS

A. Remove temporary utilities, equipment, facilities, materials, prior to Date of Substantial Completion inspection.

B. Remove underground installations to a minimum depth of 2 feet. Grade site as indicated.

C. Clean and repair damage caused by installation or use of temporary work.

D. Restore new permanent facilities used during construction to specified condition.

SECTION 01 5639 - TEMPORARY TREE AND PLANT PROTECTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including Division 00 Bidding and Contracting Requirements, and other Division 01 General Requirements Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes general protection and pruning of existing trees and plants that are affected by execution of the Work, whether temporary or permanent construction.

B. Related Requirements:

1. Division 01 Section "Temporary Facilities and Controls" for temporary site fencing.

2. Division 01 Section(s) “Construction Waste Management Disposal” and “Sustainability Compliance Procedures” for sustainability requirements.

3. Division 31 Section "Site Clearing" for removing existing trees and shrubs.

1.3 DEFINITIONS

A. Caliper: Diameter of a trunk measured by a diameter tape or the average of the smallest and largest diameters of multi-trunk trees at 6 inches (150 mm) above the ground for trees up to, and including, 4-inch (100-mm) size; and 12 inches (300 mm) above the ground for trees larger than 4-inch (100-mm) size.

B. Plant-Protection Zone: Area surrounding individual trees, groups of trees, shrubs, or other vegetation to be protected during construction, and indicated on Drawings.

C. Tree-Protection Zone: Area surrounding individual trees or groups of trees to be protected during construction, and defined by a circle concentric with each tree with a radius 1.5 times the diameter of the drip line unless otherwise indicated.

D. Vegetation: Trees, shrubs, groundcovers, grass, and other plants.

1.4 SUBMITTALS

A. Product Data: For each type of product indicated.

B. CTHPB Documentation Submittals: Comply with Section 01 3566.42 – Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

C. Samples for Verification: For each type of the following:

   1. Organic Mulch: 1-quart (1-L) volume of organic mulch; in sealed plastic bags labeled with composition of materials by percentage of weight and source of mulch.
   2. Protection-Zone Fencing: Assembled Samples of manufacturer's standard size made from full-size components.

D. Tree Pruning Schedule: Written schedule detailing scope and extent of pruning of trees to remain that interfere with or are affected by construction. Schedule to be provided to Landscape Architect and Town of Greenwich Tree Warden.

   1. Species and size of tree.
   2. Location on site plan. Include unique identifier for each.
   3. Reason for pruning.
   4. Description of pruning to be performed.
   5. Description of maintenance following pruning.

E. Qualification Data: For qualified arborist and tree service firm.

F. Certification: From arborist, certifying that trees indicated to remain have been protected during construction according to recognized standards and that trees were promptly and properly treated and repaired when damaged.

G. Maintenance Recommendations: From arborist, for care and protection of trees affected by construction during and after completing the Work.

H. Existing Conditions: Documentation of existing trees and plantings indicated to remain, which establishes preconstruction conditions that might be misconstrued as damage caused by construction activities.

   1. Use sufficiently detailed photographs or videotape.
   2. Include plans and notations to indicate specific wounds and damage conditions of each tree or other plants designated to remain.

1.5 QUALITY ASSURANCE

A. Arborist Qualifications: Licensed arborist in jurisdiction where Project is located. Arborist to work in conjunction with Town of Greenwich arborist per Tree Warden.

B. Tree Service Firm Qualifications: An experienced tree service firm that has successfully completed temporary tree and plant protection work similar to that required for this Project and that will assign an experienced, qualified arborist to Project site during execution of the Work.

C. Quality-Control Program: Prepare a written program to systematically demonstrate the ability of personnel to properly follow procedures and handle materials and equipment during the Work without damaging trees and plantings. Include dimensioned diagrams for placement of protection zone fencing and signage, the arborist's and tree-service firm's responsibilities, instructions given to workers on the use and care of protection zones, and enforcement of requirements for protection zones

D. Preinstallation Conference: Conduct conference at Project site.

1. Review methods and procedures related to temporary tree and plant protection including, but not limited to, the following:

a. Construction schedule. Verify availability of materials, personnel, and equipment needed to make progress and avoid delays.
b. Enforcing requirements for protection zones.
c. Arborist's responsibilities.
d. Field quality control.

1.6 PROJECT CONDITIONS

A. The following practices are prohibited within protection zones:

1. Storage of construction materials, debris, or excavated material.
2. Parking vehicles or equipment.
3. Foot traffic.
4. Erection of sheds or structures.
5. Impoundment of water.
6. Excavation or other digging unless otherwise indicated.
7. Attachment of signs to or wrapping materials around trees or plants unless otherwise indicated.

B. Do not direct vehicle or equipment exhaust toward protection zones.

C. Prohibit heat sources, flames, ignition sources, and smoking within or near protection zones and organic mulch.

1.7 SPECIAL CONDITIONS

A. Protection and repair of impacts to above ground portions of street trees:
1. Prior to beginning any construction activities, a qualified arborist or tree service should remove all trees designated for removal. Where appropriate, the arborist or tree service should prune tree branches to a height of 14 feet over streets and 7-8 feel over sidewalks

to reduce the possibility of breaking or damaging limbs with equipment during construction.

2. During construction, extreme care should be exercised to avoid equipment damage to the tree trunks and lower branches. Damaged or broken branches and tree trunk injuries should be reported to the Owner's Representative and be professionally treated as soon as possible

B. Root Zone Protection

1. Before beginning any construction activities, trees to be retained shall be protected with fencing. The purpose of the fencing is to prevent root damage due to soil compaction. Soil compaction can be caused by heavy equipment, truck traffic, and stockpiling fill or other construction materials on the root system of a tree. As much of the tree's root zone as possible should be fenced off. The minimum area to be fenced off would be that area within the dripline of the tree; otherwise known as the Critical Root Zone. The fencing should be highly visible, of sturdy construction, and at least four feet high. Fences may be snow fence, chain link, synthetic fabric, or plastic fence.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Topsoil: Stockpiled topsoil from location shown on Drawings and conforming to Division 32 Section "Soil Preparation".

B. Organic Mulch: Free from deleterious materials and suitable as a top dressing for trees and shrubs, consisting of one of the following:

1. Type: Wood and bark chips.
2. Size Range: 3 inches (76 mm) maximum, 1/2 inch (13 mm) minimum.
3. Color: Natural.

C. Protection-Zone Fencing: Fencing fixed in position and meeting the following requirements. Previously used materials may be used when approved by Architect.

1. Plastic Protection-Zone Fencing: Plastic construction fencing constructed of high-density extruded and stretched polyethylene fabric with 2-inch (50-mm) maximum opening in pattern and weighing a minimum of 0.4 lb/ft. (0.6 kg/m); remaining flexible from minus 60 to plus 200 deg F (minus 16 to plus 93 deg C); inert to most chemicals and acids; minimum tensile yield strength of 2000 psi (13.8 MPa) and ultimate tensile strength of 2680 psi (18.5 MPa); secured with plastic bands or galvanized-steel or stainless-steel wire ties; and supported by tubular or T-shape galvanized-steel posts spaced not more than 8 feet (2.4 m) apart.

a. Height: 4 feet (1.2 m).
b. Color: High-visibility orange, nonfading.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Erosion and Sedimentation Control: Examine the site to verify that temporary erosion- and sedimentation-control measures are in place. Verify that flows of water redirected from construction areas or generated by construction activity do not enter or cross protection zones.

B. For the record, prepare written report, endorsed by arborist, listing conditions detrimental to tree and plant protection.

3.2 PREPARATION

A. Locate and clearly identify trees, shrubs, and other vegetation to remain. Flag each tree trunk at 54 inches (1372 mm) above the ground.

B. Protect tree root systems from damage caused by runoff or spillage of noxious materials while mixing, placing, or storing construction materials. Protect root systems from ponding, eroding, or excessive wetting caused by dewatering operations.

C. Tree-Protection Zones: Mulch areas inside tree-protection zones and other areas indicated.

1. Apply 4-inch (100-mm) average thickness of organic mulch. Do not place mulch within 6 inches (150 mm) of tree trunks.

3.3 TREE- AND PLANT-PROTECTION ZONES

A. Protection-Zone Fencing: Install protection-zone fencing along edges of protection zones before materials or equipment are brought on the site and construction operations begin in a manner that will prevent people from easily entering protected area. Construct fencing so as not to obstruct safe passage or visibility at vehicle intersections where fencing is located adjacent to pedestrian walkways or in close proximity to street intersections, drives, or other vehicular circulation.

1. Posts: Set or drive posts into ground one-third the total height of the fence without concrete footings. Where a post is located on existing paving or concrete to remain, provide appropriate means of post support acceptable to Architect.

B. Maintain protection zones free of weeds and trash.

C. Repair or replace trees, shrubs, and other vegetation indicated to remain or be relocated that are damaged by construction operations, in a manner approved by Design/Builder.

D. Maintain protection-zone fencing in good condition as acceptable to Architect and remove when construction operations are complete and equipment has been removed from the site.

1. Do not remove protection-zone fencing, even temporarily, to allow deliveries or equipment access through the protection zone.
2. Temporary access is permitted subject to preapproval in writing by arborist if a root buffer effective against soil compaction is constructed as directed by arborist. Maintain root buffer so long as access is permitted.

3.4 EXCAVATION

A. General: Excavate at edge of protection zones and for trenches indicated within protection zones according to requirements in Division 31 Section "Excavation Backfill Compaction and Dewatering".

B. Trenching near Trees: Where utility trenches are required within protection zones, hand excavate under or around tree roots or tunnel under the roots by drilling, auger boring, or pipe jacking. Do not cut main lateral tree roots or taproots; cut only smaller roots that interfere with installation of utilities. Cut roots as required for root pruning.

C. Cut roots approximately 3 inches (75 mm) back from new construction and as required for root pruning.

D. Do not allow exposed roots to dry out before placing permanent backfill. Provide temporary earth cover or pack with peat moss and wrap with burlap. Water and maintain in a moist condition. Temporarily support and protect roots from damage until they are permanently relocated and covered with soil.

3.5 ROOT PRUNING

A. Prune roots that are affected by temporary and permanent construction. Prune roots as follows:

1. Cut roots manually by digging a trench and cutting exposed roots with sharp pruning instruments; do not break, tear, chop, or slant the cuts. Do not use a backhoe or other equipment that rips, tears, or pulls roots.
2. Cut Ends: Do not paint cut root ends.
3. Temporarily support and protect roots from damage until they are permanently covered with soil.
4. Cover exposed roots with burlap and water regularly.
5. Backfill as soon as possible according to requirements in Division 31 Section "Earthwork".

B. Root Pruning at Edge of Protection Zone: Prune roots 12 inches (300 mm) outside of the protection zone, by cleanly cutting all roots to the depth of the required excavation.

C. Root Pruning within Protection Zone: Clear and excavate by hand to the depth of the required excavation to minimize damage to root systems. Use narrow-tine spading forks, comb soil to expose roots, and cleanly cut roots as close to excavation as possible.

3.6 CROWN PRUNING

A. Prune branches that are affected by temporary and permanent construction. Prune branches as follows:

1. Prune trees to remain to compensate for root loss caused by damaging or cutting root system. Provide subsequent maintenance during Contract period as recommended by arborist.
2. Pruning Standards: Prune trees according to ANSI A300 (Part 1) and the following:

    a. Type of Pruning: Cleaning and Raising.
    b. Specialty Pruning: Restoration Vista Utility.

3. Cut branches with sharp pruning instruments; do not break or chop.
4. Do not apply pruning paint to wounds.

B. Chip removed branches and spread over areas identified by Architect.

3.7 REGRADING

A. Lowering Grade outside Protection Zone: Where new finish grade is indicated below existing grade around trees, slope grade beyond the protection zone. Maintain existing grades within the protection zone.

B. Lowering Grade within Protection Zone: Where new finish grade is indicated below existing grade around trees and where lowering of grade is unavoidable, slope grade away from trees as recommended by arborist unless otherwise indicated. Minimize area and depth of grade lowering operations to the greatest extent possible.

1. Root Pruning: Prune tree roots exposed by lowering the grade. Do not cut main lateral roots or taproots; cut only smaller roots. Cut roots as required for root pruning.

C. Raising Grade outside of Protection Zone: Where new finish grade is indicated above existing grade around trees, slope grade beyond the protection zone. Maintain existing grades within the protection zone.

D. Minor Fill within Protection Zone: Where existing grade is 2 inches (50 mm) or less below elevation of finish grade and where raising of grade is unavoidable, fill with topsoil. Place topsoil in a single uncompacted layer and hand grade to required finish elevations. Minimize area and depth of grade raising operations to the greatest extent possible.

3.8 FIELD QUALITY CONTROL

A. Inspections: Engage a qualified arborist to direct plant-protection measures in the vicinity of trees, shrubs, and other vegetation indicated to remain and to prepare inspection reports.

3.9 REPAIR AND REPLACEMENT

A. General: Repair or replace trees, shrubs, and other vegetation indicated to remain or be relocated that are damaged by construction operations, in a manner approved by Landscape Architect.

1. Submit details of proposed root cutting and tree and shrub repairs.
2. Have arborist perform the root cutting, branch pruning, and damage repair of trees and shrubs.
3. Treat damaged trunks, limbs, and roots according to arborist's written instructions.
4. Perform repairs within 24 hours.
5. Replace vegetation that cannot be repaired and restored to full-growth status, as determined by Architect and Arborist.

B. Trees: Remove and replace trees indicated to remain that are more than 25 percent dead or in an unhealthy condition before the end of the corrections period or are damaged during construction operations that Architect determines are incapable of restoring to normal growth pattern.

1. Provide one new tree(s) of 6-inch (150-mm) caliper size for each tree being replaced that measures more than 6 inches (150 mm) in caliper size.

    a. Species: Species selected by Landscape Architect.

2. Plant and maintain new trees as specified in Division 32 Section "Plants".

C. Soil Aeration: Where directed by Landscape Architect, aerate surface soil compacted during construction. Aerate 10 feet (3 m) beyond drip line and no closer than 36 inches (900 mm) to tree trunk. Drill 2-inch- (50-mm-) diameter holes a minimum of 12 inches (300 mm) deep at 24 inches (600 mm) o.c. Backfill holes with an equal mix of augered soil and sand.

3.10 DISPOSAL OF SURPLUS AND WASTE MATERIALS

A. Disposal: Remove excess excavated material, displaced trees, trash and debris, and legally dispose of them off Owner's property.

END OF SECTION 31 1010

SECTION 01 5719 - TEMPORARY ENVIRONMENTAL CONTROLS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Construction procedures to promote adequate indoor air quality after construction.

B. Building flush-out after construction and before occupancy.

C. Testing indoor air quality after completion of construction.

1.2 PROJECT GOALS

A. Dust and Airborne Particulates: Prevent deposition of dust and other particulates in HVAC ducts and equipment.
   1. Cleaning of ductwork is not contemplated under this Contract.
   2. Contractor shall bear the cost of cleaning required due to failure to protect ducts and equipment from construction dust.

B. Airborne Contaminants: Procedures and products have been specified to minimize indoor air pollutants.
   1. Furnish products meeting the specifications.
   2. Avoid construction practices that could result in contamination of installed products leading to indoor air pollution.

1.3 REFERENCE STANDARDS

A. ASTM D5197 - Standard Test Method for Determination of Formaldehyde and Other Carbonyl Compounds in Air (Active Sampler Methodology); 2016.

B. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions From Indoor Sources Using Environmental Chambers; 2017, v1.2.

C. EPA 600/4-90/010 - Compendium of Methods for the Determination of Air Pollutants in Indoor Air; 1990.

D. EPA 625/R-96/010b - Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air; 1999.

E. SMACNA (OCC) - IAQ Guidelines for Occupied Buildings Under Construction; 2007.

1.4 DEFINITIONS

A. Adsorptive Materials: Gypsum board, acoustical ceiling tile and panels, carpet and carpet tile, fabrics, fibrous insulation, and other similar products.

B. Contaminants: Gases, vapors, regulated pollutants, airborne mold and mildew, and the like, as specified.

C. Particulates: Dust, dirt, and other airborne solid matter.

D. Wet Work: Concrete, plaster, coatings, and other products that emit water vapor or volatile organic compounds during installation, drying, or curing.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Sustainability Documentation: Submit documentation required in this section.

C. Indoor Air Quality Management Plan: Describe, in detail, measures to be taken to promote adequate indoor air quality upon completion; use SMACNA (OCC) as a guide.
1. Submit not less than 60 days before enclosure of building.
2. Identify potential sources of odor and dust.
3. Identify construction activities likely to produce odor or dust.
4. Identify areas of project potentially affected, especially occupied areas.
5. Evaluate potential problems by severity and describe methods of control.
6. Describe construction ventilation to be provided, including type and duration of ventilation, use of permanent HVAC systems, types of filters and schedule for replacement of filters.
7. Describe cleaning and dust control procedures.

D. Interior Finishes Installation Schedule: Identify each interior finish that either generates odors, moisture, or vapors or is susceptible to adsorption of odors and vapors, and indicate air handling zone, sequence of application, and curing times.

E. Duct and Terminal Unit Inspection Report.

F. Air Contaminant Test Plan: Identify:
1. Testing agency qualifications.
2. Locations and scheduling of air sampling.
3. Test procedures, in detail.
4. Test instruments and apparatus.
5. Sampling methods.

G. Air Contaminant Test Reports: Show:
1. Location where each sample was taken, and time.
2. Test values for each air sample; average the values of each set of 3.
3. HVAC operating conditions.
4. Certification of test equipment calibration.
5. Other conditions or discrepancies that might have influenced results.

PART 3 EXECUTION

2.1 CONSTRUCTION PROCEDURES

A. Prevent the absorption of moisture and humidity by adsorptive materials by:

1. Sequencing the delivery of such materials so that they are not present in the building until wet work is completed and dry.
2. Delivery and storage of such materials in fully sealed moisture-impermeable packaging.
3. Provide sufficient ventilation for drying within reasonable time frame.

B. Begin construction ventilation when building is substantially enclosed.

C. Do not store construction materials or waste in mechanical or electrical rooms.

D. Prior to use of return air ductwork without intake filters clean up and remove dust and debris generated by construction activities.
1. Inspect duct intakes, return air grilles, and terminal units for dust.
2. Clean plenum spaces, including top sides of lay-in ceilings, outsides of ducts, tops of pipes and conduit.
3. Clean tops of doors and frames.
4. Clean mechanical and electrical rooms, including tops of pipes, ducts, and conduit, equipment, and supports.
5. Clean return plenums of air handling units.
6. Remove intake filters last, after cleaning is complete.

E. Do not perform dusty or dirty work after starting use of return air ducts without intake filters.

F. Use other relevant recommendations of SMACNA (OCC) for avoiding unnecessary contamination due to construction procedures.

2.2 BUILDING FLUSH-OUT

A. Contractor's Option: Either full continuous flush-out OR satisfactory air contaminant testing is required, not both.

B. Perform building flush-out before occupancy.

C. Do not start flush-out until:
1. All construction is complete.
2. HVAC systems have been tested, adjusted, and balanced for proper operation.
3. Inspection of inside of return air ducts and terminal units confirms that cleaning is not necessary.
4. New HVAC filtration media have been installed.

D. Building Flush-Out: Operate all ventilation systems at normal flow rates with 100 percent outside air until a total air volume of 14,000 cubic feet per square foot of floor area has been supplied.
1. Obtain Owner's concurrence that construction is complete enough before beginning flush-out.
2. Maintain interior temperature of at least 60 degrees F and interior relative humidity no higher than 60 percent.
3. If additional construction involving materials that produce particulates or any of the specified contaminants is conducted during flush-out, start flush-out over.
4. If interior spaces must be occupied prior to completion of the flush-out, supply a minimum of 25 percent of the total air volume prior to occupancy, and:
   a) Begin ventilation at least three hours prior to daily occupancy.

b) Continue ventilation during all occupied periods.
c) Provide minimum outside air volume of 0.30 cfm per square foot or design minimum outside air rate, whichever is greater.

E. Install new HVAC filtration media after completion of flush-out and before occupancy or further testing.

2.3 AIR CONTAMINANT TESTING

A. Contractor's Option: Either full continuous flush-out, or satisfactory air contaminant testing is required, not both.

B. Perform air contaminant testing before occupancy.

C. Do not start air contaminant testing until:
1. All construction is complete, including interior finishes.
2. HVAC systems have been tested, adjusted, and balanced for proper operation.
3. New HVAC filtration media have been installed.

D. Indoor Air Samples: Collect from spaces representative of occupied areas:
1. Collect samples while operable windows and exterior doors are closed, HVAC system is running normally as if occupied, with design minimum outdoor air, but with the building unoccupied.
2. Collect samples from spaces in each contiguous floor area in each air handler zone, but not less than one sample per 25,000 square feet; take samples from areas having the least ventilation and those having the greatest presumed source strength.
3. Collect samples from height from 36 inches to 72 inches above floor.
4. Collect samples from same locations on 3 consecutive days during normal business hours; average the results of each set of 3 samples.
5. Exception: Areas with normal very high outside air ventilation rates, such as laboratories, do not need to be tested.
6. When retesting the same building areas, take samples from at least the same locations as in first test.

E. Outdoor Air Samples: Collect samples at outside air intake of each air handler at the same time as indoor samples are taken.

F. Analyze air samples and submit report.

G. Volatile Organic Compounds Limits:
1. Formaldehyde: Not more than 27 parts per billion.
2. Total Volatile Organic Compounds (TVOCs): Not more than 500 micrograms per cubic meter.
3. Chemicals Listed in CAL (CDPH SM) Table 4-1, other than Formaldehyde: Not more than allowable concentrations listed in Table 4-1.

H. Air Contaminant Concentration Test Methods:
1. Formaldehyde: ASTM D5197, EPA 625/R-96/010b Method TO-11A, or EPA 600/4-90/010 Method IP-6A.
2. Particulates: EPA 600/4-90/010 Method IP-10.

3. Total Volatile Organic Compounds (TVOC): EPA 625/R-96/010b Method TO-1, TO-15, or TO-17; or EPA 600/4-90/010 Method IP-1.
4. Chemicals Listed in CAL (CDPH SM) Table 4-1, except Formaldehyde: ASTM D5197, or EPA 625/R-96/010b Method TO-1, TO-15, or TO-17.
5. Carbon Monoxide: EPA 600/4-90/010 Method IP-3, plus measure outdoor air; measure in ppm; report both indoor and outdoor measurements.

SECTION 01 6000 - PRODUCT REQUIREMENTS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. General product requirements.

B. Sustainable design-related product requirements.

C. Re-use of existing products.

D. Transportation, handling, storage and protection.

E. Product option requirements.

F. Substitution limitations.

G. Procedures for Owner-supplied products.

H. Maintenance materials, including extra materials, spare parts, tools, and software.

1.2 RELATED REQUIREMENTS

A. Section 01 2500 - Substitution Procedures: Substitutions made during procurement and/or construction phases.

B. Section 01 3566.42 - Sustainability Compliance Procedures - CT HPBS: Requirements for sustainability compliance procedures.

C. Section 01 4000 - Quality Requirements: Product quality monitoring.

D. Section 01 7419 - Construction Waste Management and Disposal: Waste disposal requirements potentially affecting product selection, packaging and substitutions.

1.3 REFERENCE STANDARDS

A. 16 CFR 260.13 - Guides for the Use of Environmental Marketing Claims; Federal Trade Commission; Recycled Content; Current Edition.

B. ASTM D6866 - Standard Test Methods for Determining the Biobased Content of Solid, Liquid, and Gaseous Samples Using Radiocarbon Analysis; 2021.

C. C2C (DIR) - C2C Certified Products Registry; Cradle to Cradle Products Innovation Institute; Current Edition.

D. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions From Indoor Sources Using Environmental Chambers; 2017, v1.2.

E. EN 15804 - Sustainability of construction works - Environmental product declarations - Core rules for the product category of construction products; 2014.

F. GreenScreen (LIST) - GreenScreen for Safer Chemicals List Translator; Clean Production Action; Current Edition.

G. GreenScreen (METH) - GreenScreen for Safer Chemicals Method v1.2; Clean Production Action; Current Edition.

H. ISO 14025 - Environmental labels and declarations -- Type III environmental declarations -- Principles and procedures; 2006.

I. ISO 14040 - Environmental management - Life cycle assessment - Principles and framework; 2006 (Amended 2020).

J. ISO 14044 - Environmental management - Life cycle assessment - Requirements and guidelines; 2006 (Amended 2020).

K. ISO 21930 - Sustainability in buildings and civil engineering works -- Core rules for environmental product declarations of construction products and services; 2017.

1.4 SUBMITTALS

A. Proposed Products List: Submit list of major products proposed for use, with name of manufacturer, trade name, and model number of each product.
   1. Submit within 15 days after date of Agreement.
   2. For products specified only by reference standards, list applicable reference standards.

B. Product Data Submittals: Submit manufacturer's standard published data. Mark each copy to identify applicable products, models, options, and other data. Supplement manufacturers' standard data to provide information specific to this Project.

C. Shop Drawing Submittals: Prepared specifically for this Project; indicate utility and electrical characteristics, utility connection requirements, and location of utility outlets for service for functional equipment and appliances.

D. Sample Submittals: Illustrate functional and aesthetic characteristics of the product, with integral parts and attachment devices. Coordinate sample submittals for interfacing work.
   1. For selection from standard finishes, submit samples of the full range of the manufacturer's standard colors, textures, and patterns.

E. Sustainable Design Submittals: Items necessary to document use of sustainable construction materials, products, and practices.
   1. See Section 01 3566.42 for Contractor's procedures necessary for achievement of targeted CT-HPBS sustainability compliance level.

1.5 QUALITY ASSURANCE

A. Bio-Based Content: Of vegetable or animal origin, not including products made by killing the animal.
   1. Determine percentage of bio-based content in accordance with ASTM D6866.
   2. Bio-based content must be sourced from a Sustainable Agriculture Network certified farm.

B. CAL (CDPH SM) v1.1: California Department of Public Health (CDPH) Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers, v. 1.1–2010, for the emissions testing and requirements of products and materials.

C. Chain-of-Custody (COC): A procedure that tracks a product from the point of harvest or extraction to its end use, including successive stages of processing, transformation, manufacturing, and distribution.

D. Chain-of-Custody Certificates: Certificates signed by manufacturers and fabricators certifying that wood used to make products was obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001.

E. Composite Wood and Agrifiber: Products made of wood particles and/or plant material pressed and bonded with adhesive or resin such as particleboard, medium density fiberboard (MDF), plywood, wheatboard, strawboard, panel substrates, and door cores.

F. Cradle-to-Cradle Certified: End use product certified Cradle-to-Cradle v2 Basic or Cradle-to-Cradle v3 Bronze, minimum, as evidenced by C2C (DIR).

G. Environmental Product Declaration (EPD): Publicly available, critically reviewed life cycle analysis having at least a cradle-to-gate scope.
   1. Good: Product-specific; compliant with ISO 14044.
   2. Better: Industry-wide, generic; compliant with ISO 21930, or with ISO 14044, ISO 14040, ISO 14025, and EN 15804; Type III third-party certification with external verification, in which the manufacturer is recognized as the program operator.
   3. Best: Commercial-product-specific; compliant with ISO 21930, or with ISO 14044, ISO 14040, ISO 14025, and EN 15804; Type III third-party certification with external verification, in which the manufacturer is recognized as the program operator.
   4. Where demonstration of impact reduction below industry average is required, submit both industry-wide and commercial-product-specific declarations; or submit at least 5 declarations for products of the same type by other manufacturers in the same industry.

H. GreenScreen Chemical Hazard Analysis: Ingredients of 100 parts-per-million or greater evaluated using GreenScreen (METH).
   1. Good: GreenScreen (LIST) evaluation to identify Benchmark 1 hazards; a Health Product Declaration includes this information.
   2. Better: GreenScreen Full Assessment.
   3. Best: GreenScreen Full Assessment by GreenScreen Licensed Profiler.
   4. Acceptable Evidence: GreenScreen report.

I. Health Product Declarations (HPD): Complete, published declaration with full disclosure of known hazards, prepared using one of the HPDC (HPD-OLT) online tools.

J. Manufacturer's Inventory of Product Content: Publicly available inventory of every ingredient identified by name and Chemical Abstract Service Registration Number (CAS RN).
   1. For ingredients considered a trade secret or intellectual property, the name and CAS RN may be omitted, provided the ingredient's role, amount, and GreenScreen Benchmark are given.

K. Recycled Content: Determine percentage of post-consumer and pre-consumer (post-industrial) content separately, using the guidelines contained in 16 CFR 260.13.
   1. Previously used, reused, refurbished, and salvaged products are not considered recycled.
   2. Wood fabricated from timber abandoned in transit to original mill is considered reused, not recycled.
   3. Determine percentage of recycled content of any item by dividing the weight of recycled content in the item by the total weight of materials in the item.
   4. Determine value of recycled content of each item separately, by multiplying the content percentage by the value of the item.
   5. Acceptable Evidence:
      a) For percentage of recycled content, information from manufacturer.
      b) For cost, Contractor's cost data.

L. Regional Materials: Materials that are extracted, harvested, recovered, and manufactured within a radius of 500 miles from the Project site.

M. Reused Products: Materials and equipment previously used in this or other construction, salvaged and refurbished as specified.
   1. Wood fabricated from timber abandoned in transit after harvesting is considered reused, not recycled.
   2. Acceptable Evidence: Information about the origin or source, from Contractor or supplier.

N. Source Location: Location of harvest, extraction, recovery, or manufacture; where information about source location is required to be submitted, give the postal address:
   1. In every case, indicate the location of final assembly.
   2. For harvested products, indicate location of harvest.
   3. For extracted (i.e. mined) products, indicate location of extraction.
   4. For recovered products, indicate location of recovery.
   5. For products involving multiple manufacturing steps, provide a description of the process at each step, with location.
   6. Acceptable Evidence:
      a) Manufacturer's certification.
      b) Life cycle analysis (LCA) performed by third-party.

O. Sustainably Harvested Wood: Solid wood, wood chips, and wood fiber certified or labeled by an organization accredited by one of the following:
   1. The Forest Stewardship Council, The Principles for Natural Forest Management; for Canada visit http://www.fsccanada.org, for the USA visit http://www.fscus.org.
   2. Acceptable Evidence: Copies of invoices bearing the certifying organization's certification numbers.

PART 2 PRODUCTS

2.1 EXISTING PRODUCTS

A. Do not use materials and equipment removed from existing premises unless specifically required or permitted by Contract Documents.

B. Unforeseen historic items encountered remain the property of the Owner; notify Owner promptly upon discovery; protect, remove, handle, and store as directed by Owner.

C. Existing materials and equipment indicated to be removed, but not to be re-used, relocated, reinstalled, delivered to the Owner, or otherwise indicated as to remain the property of the Owner, become the property of the Contractor; remove from site.

2.2 NEW PRODUCTS

A. Provide new products unless specifically required or permitted by Contract Documents.

B. See Section 01 4000 - Quality Requirements, for additional source quality control requirements.

C. Use of products having any of the following characteristics is not permitted:
1. Made using or containing CFC's or HCFC's.
2. Made of wood from newly cut old growth timber.
3. Containing lead, cadmium, or asbestos.

D. Where other criteria are met, Contractor shall give preference to products that:
1. If used on interior, have lower emissions, as defined in Section 01 6116.
2. If wet-applied, have lower VOC content, as defined in Section 01 6116.
3. Are extracted, harvested, and/or manufactured closer to the location of the project.
4. Result in less construction waste. See Section 01 7419
5. Are made of recycled materials.
6. If made of wood, are made of sustainably harvested wood, wood chips, or wood fiber.

2.3 PRODUCT OPTIONS

A. Products Specified by Reference Standards or by Description Only: Use any product meeting those standards or description.

B. Products Specified by Naming One or More Manufacturers: Use a product of one of the manufacturers named and meeting specifications, no options or substitutions allowed.

C. Products Specified by Naming One or More Manufacturers with a Provision for Substitutions: Submit a request for substitution for any manufacturer not named.

2.4 MAINTENANCE MATERIALS

A. Furnish extra materials, spare parts, tools, and software of types and in quantities specified in individual specification sections.

B. Deliver to Project site; obtain receipt prior to final payment.

PART 3 EXECUTION

3.1 SUBSTITUTION LIMITATIONS

A. See Section 01 2500 - Substitution Procedures.

3.2 OWNER-SUPPLIED PRODUCTS

A. Owner's Responsibilities:
   1. Arrange for and deliver Owner reviewed shop drawings, product data, and samples, to Contractor.
   2. Arrange and pay for product delivery to site.
   3. On delivery, inspect products jointly with Contractor.
   4. Submit claims for transportation damage and replace damaged, defective, or deficient items.
   5. Arrange for manufacturers' warranties, inspections, and service.

B. Contractor's Responsibilities:
   1. Review Owner reviewed shop drawings, product data, and samples.
   2. Receive and unload products at site; inspect for completeness or damage jointly with Owner.
   3. Handle, store, install and finish products.
   4. Repair or replace items damaged after receipt.

3.3 TRANSPORTATION AND HANDLING

A. Package products for shipment in manner to prevent damage; for equipment, package to avoid loss of factory calibration.

B. If special precautions are required, attach instructions prominently and legibly on outside of packaging.

C. Coordinate schedule of product delivery to designated prepared areas in order to minimize site storage time and potential damage to stored materials.

D. Transport and handle products in accordance with manufacturer's instructions.

E. Transport materials in covered trucks to prevent contamination of product and littering of surrounding areas.

F. Promptly inspect shipments to ensure that products comply with requirements, quantities are correct, and products are undamaged.

G. Provide equipment and personnel to handle products by methods to prevent soiling, disfigurement, or damage, and to minimize handling.

H. Arrange for the return of packing materials, such as wood pallets, where economically feasible.

3.4 STORAGE AND PROTECTION

A. Provide protection of stored materials and products against theft, casualty, or deterioration.

B. Designate receiving/storage areas for incoming products so that they are delivered according to installation schedule and placed convenient to work area in order to minimize waste due to excessive materials handling and misapplication. See Section 01 7419.

C. Store and protect products in accordance with manufacturers' instructions.

D. Store with seals and labels intact and legible.

E. Arrange storage of materials and products to allow for visual inspection for the purpose of determination of quantities, amounts, and unit counts.

F. Store sensitive products in weathertight, climate-controlled enclosures in an environment favorable to product.

G. For exterior storage of fabricated products, place on sloped supports above ground.

H. Provide off-site storage and protection when site does not permit on-site storage or protection.

I. Protect products from damage or deterioration due to construction operations, weather, precipitation, humidity, temperature, sunlight and ultraviolet light, dirt, dust, and other contaminants.

J. Comply with manufacturer's warranty conditions, if any.

K. Do not store products directly on the ground.

L. Cover products subject to deterioration with impervious sheet covering. Provide ventilation to prevent condensation and degradation of products.

M. Store loose granular materials on solid flat surfaces in a well-drained area. Prevent mixing with foreign matter.

N. Prevent contact with material that may cause corrosion, discoloration, or staining.

O. Provide equipment and personnel to store products by methods to prevent soiling, disfigurement, or damage.

P. Arrange storage of products to permit access for inspection. Periodically inspect to verify products are undamaged and are maintained in acceptable condition.

END OF SECTION 01 6000

THIS PAGE INTENTIONALLY LEFT BLANK

FOR REFERENCE: THIS SECTION WAS ISSUED FOR PHASE 1 AND PHASE 2

SECTION 01 6116 - VOLATILE ORGANIC COMPOUND (VOC) CONTENT RESTRICTIONS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Requirements for Indoor-Emissions-Restricted products.

B. Requirements for VOC-Content-Restricted products.

1.2 RELATED REQUIREMENTS

A. Section 01 3000 - Administrative Requirements: Submittal procedures.

B. Section 01 3566.42 - Sustainability Compliance Procedures

C. Section 01 4000 - Quality Requirements: Procedures for testing and certifications.

1.3 DEFINITIONS

A. Indoor-Emissions-Restricted Products: All products in the following product categories, whether specified or not:
   1. Interior paints and coatings applied on site.
   2. Interior adhesives and sealants applied on site, including flooring adhesives.
      a) See Section 01 3566.42 for specific extent.
   3. Flooring types indicated in Section 01 3566.42.
   4. Products making up wall and ceiling assemblies.

B. VOC-Content-Restricted Products: All products in the following product categories, whether specified or not:
   1. Interior paints and coatings applied on site.
   2. Interior adhesives and sealants applied on site, including flooring adhesives.

C. Interior of Building: Anywhere inside the exterior weather barrier.

D. Adhesives: All gunnable, trowelable, liquid-applied, and aerosol adhesives, whether specified or not; including flooring adhesives, resilient base adhesives, and pipe jointing adhesives.

E. Sealants: All gunnable, trowelable, and liquid-applied joint sealants and sealant primers, whether specified or not; including firestopping sealants and duct joint sealers.

F. Inherently Non-Emitting Materials: Products composed wholly of minerals or metals, unless they include organic-based surface coatings, binders, or sealants; and specifically the following:
   1. Concrete.
   2. Clay brick.
   3. Metals that are plated, anodized, or powder-coated.
   4. Glass.
   5. Ceramics.
   6. Solid wood flooring that is unfinished and untreated.

1.4 REFERENCE STANDARDS

A. 40 CFR 59, Subpart D - National Volatile Organic Compound Emission Standards for Architectural Coatings; U.S. Environmental Protection Agency; current edition.

B. ASTM D3960 - Standard Practice for Determining Volatile Organic Compound (VOC) Content of Paints and Related Coatings; 2005 (Reapproved 2018).

C. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions From Indoor Sources Using Environmental Chambers; 2017, v1.2.

D. CARB (SCM) - Suggested Control Measure for Architectural Coatings; California Air Resources Board; 2007.

E. CHPS (HPPD) - High Performance Products Database; Current Edition at www.chps.net/.

F. CRI (GLP) - Green Label Plus Testing Program - Certified Products; Current Edition.

G. SCAQMD 1113 - Architectural Coatings; 1977 (Amended 2016).

H. SCAQMD 1168 - Adhesive and Sealant Applications; 1989 (Amended 2017).

I. SCS (CPD) - SCS Certified Products; Current Edition.

J. UL (GGG) - GREENGUARD Gold Certified Products; Current Edition.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: For each VOC-restricted product used in the project, submit evidence of compliance.

1.6 QUALITY ASSURANCE

A. Indoor Emissions Standard and Test Method: CAL (CDPH SM), using Standard Private Office exposure scenario and the allowable concentrations specified in the method, and range of total VOC's after 14 days.
   1. Wet-Applied Products: State amount applied in mass per surface area.
   2. Paints and Coatings: Test tinted products, not just tinting bases.
   3. Evidence of Compliance: Acceptable types of evidence are the following;
      a) Current UL (GGG) certification.
      b) Current SCS (CPD) Floorscore certification.
      c) Current SCS (CPD) Indoor Advantage Gold certification.
      d) Current listing in CHPS (HPPD) as a low-emitting product.
      e) Current CRI (GLP) certification.
      f) Test report showing compliance and stating exposure scenario used.
   4. Product data submittal showing VOC content is NOT acceptable evidence.
   5. Manufacturer's certification without test report by independent agency is NOT acceptable evidence.

B. VOC Content Test Method: 40 CFR 59, Subpart D (EPA Method 24), or ASTM D3960, unless otherwise indicated.
   1. Evidence of Compliance: Acceptable types of evidence are:
      a) Report of laboratory testing performed in accordance with requirements.

C. Testing Agency Qualifications: Independent firm specializing in performing testing and inspections of the type specified in this section.

PART 2 PRODUCTS

2.1 MATERIALS

A. All Products: Comply with the most stringent of federal, State, and local requirements, or these specifications.

B. Indoor-Emissions-Restricted Products: Comply with Indoor Emissions Standard and Test Method, except for:
   1. Inherently Non-Emitting Materials.

C. VOC-Content-Restricted Products: VOC content not greater than required by the following:
   1. Adhesives, Including Flooring Adhesives: SCAQMD 1168 Rule.
   2. Joint Sealants: SCAQMD 1168 Rule.
   3. Paints and Coatings: Each color; most stringent of the following:
      a) 40 CFR 59, Subpart D.
      b) SCAQMD 1113 Rule.
      c) CARB (SCM).

PART 3 EXECUTION

3.1 FIELD QUALITY CONTROL

A. Owner reserves the right to reject non-compliant products, whether installed or not, and require their removal and replacement with compliant products at no extra cost to Owner.

B. Additional costs to restore indoor air quality due to installation of non-compliant products will be borne by Contractor.

END OF SECTION 01 6116

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 01 7000 - EXECUTION AND CLOSEOUT REQUIREMENTS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Examination, preparation, and general installation procedures.

B. Pre-installation meetings.

C. Surveying for laying out the work.

D. Cleaning and protection.

E. Starting of systems and equipment.

F. Closeout procedures, including Contractor's Correction Punch List, except payment procedures.

G. General requirements for maintenance service.

1.2 RELATED REQUIREMENTS

A. Section 01 1000 - Summary: Limitations on working in existing building; continued occupancy; work sequence; identification of salvaged and relocated materials.

B. Section 01 3566.42 - Sustainability Compliance Procedures.

C. Section 01 4000 - Quality Requirements: Testing and inspection procedures.

D. Section 01 7419 - Construction Waste Management and Disposal: Additional procedures for trash/waste removal, recycling, salvage, and reuse.

E. Section 01 7800 - Closeout Submittals: Project record documents, operation and maintenance data, warranties, and bonds.

F. Section 01 9113 - General Commissioning Requirements: Contractor's responsibilities in regard to commissioning.

1.3 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Survey Work: Submit name, address, and telephone number of Surveyor before starting survey work.
   1. On request, submit documentation verifying accuracy of survey work.
   2. Submit a copy of site drawing signed by the Land Surveyor, that the elevations and locations of the work are in compliance with Contract Documents.
   3. Submit surveys and survey logs for the project record.

1.4 QUALIFICATIONS

A. For surveying work, employ a land surveyor registered in the State in which the Project is located and acceptable to Architect. Submit evidence of surveyor's Errors and Omissions insurance coverage in the form of an Insurance Certificate. Employ only individual(s) trained and experienced in collecting and recording accurate data relevant to ongoing construction activities,

B. For field engineering, employ a professional engineer of the discipline required for specific service on Project, licensed in the State in which the Project is located. Employ only individual(s) trained and experienced in establishing and maintaining horizontal and vertical control points necessary for laying out construction work on project of similar size, scope and/or complexity.

C. For design of temporary shoring and bracing, employ a Professional Engineer experienced in design of this type of work and licensed in the State in which the Project is located.

1.5 PROJECT CONDITIONS

A. Use of explosives is not permitted.

B. Grade site to drain. Maintain excavations free of water. Provide, operate, and maintain pumping equipment.

C. Protect site from puddling or running water. Provide water barriers as required to protect site from soil erosion.

D. Perform dewatering activities, as required, for the duration of the project.

E. Ventilate enclosed areas to assist cure of materials, to dissipate humidity, and to prevent accumulation of dust, fumes, vapors, or gases.

F. Dust Control: Execute work by methods to minimize raising dust from construction operations. Provide positive means to prevent air-borne dust from dispersing into atmosphere and over adjacent property.

G. Erosion and Sediment Control: Plan and execute work by methods to control surface drainage from cuts and fills, from borrow and waste disposal areas. Prevent erosion and sedimentation.
   1. Minimize amount of bare soil exposed at one time.
   2. Provide temporary measures such as berms, dikes, and drains, to prevent water flow.
   3. Construct fill and waste areas by selective placement to avoid erosive surface silts or clays.
   4. Periodically inspect earthwork to detect evidence of erosion and sedimentation; promptly apply corrective measures.

H. Noise Control: Provide methods, means, and facilities to minimize noise produced by construction operations.

I. Pest and Rodent Control: Provide methods, means, and facilities to prevent pests and insects from damaging the work.

J. Rodent Control: Provide methods, means, and facilities to prevent rodents from accessing or invading premises.

K. Pollution Control: Provide methods, means, and facilities to prevent contamination of soil, water, and atmosphere from discharge of noxious, toxic substances, and pollutants produced by construction operations. Comply with federal, state, and local regulations.

1.6 COORDINATION

A. See Section 01 1000 for occupancy-related requirements.

B. Coordinate scheduling, submittals, and work of the various sections of the Project Manual to ensure efficient and orderly sequence of installation of interdependent construction elements, with provisions for accommodating items installed later.

C. Notify affected utility companies and comply with their requirements.

D. Verify that utility requirements and characteristics of new operating equipment are compatible with building utilities. Coordinate work of various sections having interdependent responsibilities for installing, connecting to, and placing in service, such equipment.

E. Coordinate space requirements, supports, and installation of mechanical and electrical work that are indicated diagrammatically on drawings. Follow routing indicated for pipes, ducts, and conduit, as closely as practicable; place runs parallel with lines of building. Utilize spaces efficiently to maximize accessibility for other installations, for maintenance, and for repairs.

F. In finished areas except as otherwise indicated, conceal pipes, ducts, and wiring within the construction. Coordinate locations of fixtures and outlets with finish elements.

G. Coordinate completion and clean-up of work of separate sections.

H. After Owner occupancy of premises, coordinate access to site for correction of defective work and work not in accordance with Contract Documents, to minimize disruption of Owner's activities.

PART 2 PRODUCTS [NOT USED]

PART 3 EXECUTION

3.1 EXAMINATION

A. The existence and location of underground and other utilities and construction indicated as existing are not guaranteed. Before beginning sitework, investigate and verify the existence and location of underground utilities, mechanical and electrical systems, and other construction affecting the Work.
   1. Before construction, verify the location and invert elevation at points of connection of sanitary sewer, storm sewer, gas service piping, and water-service piping; underground electrical services; and other utilities.

2. Furnish location data for work related to project that must be performed by public utilities serving project site.

B. Verify that existing site conditions and substrate surfaces are acceptable for subsequent work. Start of work means acceptance of existing conditions.

C. Verify that existing substrate is capable of structural support or attachment of new work being applied or attached.

D. Examine and verify specific conditions described in individual specification sections.

E. Take field measurements before confirming product orders or beginning fabrication, to minimize waste due to over-ordering or misfabrication.

F. Verify that utility services are available, of the correct characteristics, and in the correct locations.

3.2 PREPARATION

A. Verify space requirements and dimensions of items shown diagrammatically on Drawings.

B. Clean substrate surfaces prior to applying next material or substance.

C. Seal cracks or openings of substrate prior to applying next material or substance.

D. Apply manufacturer required or recommended substrate primer, sealer, or conditioner prior to applying any new material or substance in contact or bond.

3.3 PRE-INSTALLATION MEETINGS

A. When required in individual specification sections, convene a preinstallation meeting at the site prior to commencing work of the section.

B. Require attendance of parties directly affecting, or affected by, work of the specific section.

C. Notify Architect four days in advance of meeting date.

D. Prepare agenda and preside at meeting:
1. Review conditions of examination, preparation and installation procedures.
2. Review coordination with related work.

E. Record minutes and distribute copies within two days after meeting to participants, with two copies to Architect, Owner, participants, and those affected by decisions made.

F. Layout Meeting:
1. Prior to establishing layout of new perimeter and structural column grid(s), review building location requirements. Review benchmark, control point, and layout and dimension requirements. Inform Architect and Construction Manager of scheduled meeting. Require representatives of each entity directly concerned with Project layout to attend.

3.4 LAYING OUT THE WORK

A. Verify locations of survey control points prior to starting work.

B. Promptly notify Architect of any discrepancies discovered.

C. Contractor shall locate and protect survey control and reference points.

D. Protect survey control points prior to starting site work; preserve permanent reference points during construction.

E. Promptly report to Architect the loss or destruction of any reference point or relocation required because of changes in grades or other reasons.

F. Replace dislocated survey control points based on original survey control. Make no changes without prior written notice to Architect.

G. Utilize recognized engineering survey practices.

H. Establish elevations, lines and levels. Locate and lay out by instrumentation and similar appropriate means:
   1. Site improvements including pavements; stakes for grading, fill and topsoil placement; utility locations, slopes, and invert elevations.
   2. Grid or axis for structures.
   3. Building foundation, column locations, ground floor elevations.
   4. Controlling lines and levels required for mechanical and electrical trades.

I. Periodically verify layouts by same means.

J. Maintain a complete and accurate log of control and survey work as it progresses.

3.5 GENERAL INSTALLATION REQUIREMENTS

A. In addition to compliance with regulatory requirements, conduct construction operations in compliance with NFPA 241, including applicable recommendations in Appendix A.

B. Install products as specified in individual sections, in accordance with manufacturer's instructions and recommendations, and so as to avoid waste due to necessity for replacement.

C. Make vertical elements plumb and horizontal elements level, unless otherwise indicated.

D. Install equipment and fittings plumb and level, neatly aligned with adjacent vertical and horizontal lines, unless otherwise indicated.

E. Where space is limited, install components to maximize space available for maintenance and ease of removal for replacement.

F. Conceal pipes, ducts, and wiring in finished areas unless otherwise indicated.

G. Maintain minimum headroom clearance of 96 inches in occupied spaces and 90 inches in unoccupied spaces, unless otherwise indicated on Drawings.

H. Provide blocking and attachment plates and anchors and fasteners of adequate size and number to securely anchor each component in place, accurately located and aligned with other portions of the Work. Where size and type of attachments are not indicated, verify size and type required for load conditions with manufacturer.
   1. Where mounting heights are not indicated, mount components at heights directed by Architect.
   2. Allow for building movement, including thermal expansion and contraction.
   3. Coordinate installation of anchorages. Furnish setting drawings, templates, and directions for installation. Deliver these items to project site in time for installation.

I. Make consistent texture on surfaces, with seamless transitions, unless otherwise indicated.

J. Make neat transitions between different surfaces, maintaining texture and appearance.

K. Maintain conditions required for product performance until Substantial Completion.

L. Repair or remove and replace damaged, defective, or nonconforming Work.

3.6 PROGRESS CLEANING

A. Maintain areas free of waste materials, debris, and rubbish. Maintain site in a clean and orderly condition.

B. Remove debris and rubbish from pipe chases, plenums, attics, crawl spaces, and other closed or remote spaces, prior to enclosing the space.

C. Broom and HEPA vacuum clean interior areas prior to start of surface finishing, and continue cleaning to eliminate dust.

D. Collect and remove waste materials, debris, and trash/rubbish from site periodically and dispose off-site; do not burn or bury.

3.7 PROTECTION OF INSTALLED WORK

A. Protect installed work from damage by construction operations.

B. Provide special protection where specified in individual specification sections.

C. Provide temporary and removable protection for installed products. Control activity in immediate work area to prevent damage.

D. Provide protective coverings at walls, projections, jambs, sills, and soffits of openings.

E. Protect finished floors, stairs, and other surfaces from traffic, dirt, wear, damage, or movement of heavy objects, by protecting with durable sheet materials.

F. Protect work from spilled liquids. If work is exposed to spilled liquids, immediately remove protective coverings, dry out work, and replace protective coverings.

G. Prohibit traffic or storage upon waterproofed or roofed surfaces. If traffic or activity is necessary, obtain recommendations for protection from waterproofing or roofing material manufacturer.

H. Prohibit traffic from landscaped areas.

I. Remove protective coverings when no longer needed; reuse or recycle coverings if possible.

3.8 SYSTEM STARTUP

A. Coordinate with requirements of Section 01 9113 - General Commissioning Requirements.

B. Coordinate schedule for start-up of various equipment and systems.

C. Notify Architect and Owner seven days prior to start-up of each item.

D. Verify that each piece of equipment or system has been checked for proper lubrication, drive rotation, belt tension, control sequence, and for conditions that may cause damage.

E. Verify tests, meter readings, and specified electrical characteristics agree with those required by the equipment or system manufacturer.

F. Verify that wiring and support components for equipment are complete and tested.

G. Execute start-up under supervision of applicable Contractor personnel and manufacturer's representative in accordance with manufacturers' instructions.

H. When specified in individual specification Sections, require manufacturer to provide authorized representative to be present at site to inspect, check, and approve equipment or system installation prior to start-up, and to supervise placing equipment or system in operation.

I. Submit a written report that equipment or system has been properly installed and is functioning correctly.

3.9 ADJUSTING

A. Adjust operating products and equipment to ensure smooth and unhindered operation.

3.10 FINAL CLEANING

A. Use cleaning materials and agents recommended by manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished surfaces.

B. Clean interior and exterior glass, surfaces exposed to view; remove temporary labels, stains and foreign substances, polish transparent and glossy surfaces, vacuum carpeted and soft surfaces.
   1. Vacuum all carpeted and soft surfaces with a high-efficiency particulate arrestor (HEPA) vacuum clean in accordance with the Connecticut High Performance Building Standards mandatory requirements.

C. Remove all labels that are not permanent. Do not paint or otherwise cover fire test labels or nameplates on mechanical and electrical equipment.

D. Clean equipment and fixtures to a sanitary condition with cleaning materials appropriate to the surface and material being cleaned.

E. Clean filters of operating equipment.

F. Remove waste, surplus materials, trash/rubbish, and construction facilities from the site; dispose of in legal manner; do not burn or bury.

3.11 CLOSEOUT PROCEDURES

A. Make submittals that are required by governing or other authorities.

B. Accompany Project Coordinator on preliminary inspection to determine items to be listed for completion or correction in the Contractor's Correction Punch List for Contractor's Notice of Substantial Completion.

C. Notify Architect when work is considered ready for Architect's Substantial Completion inspection.

D. Submit written certification containing Contractor's Correction Punch List, that Contract Documents have been reviewed, work has been inspected, and that work is complete in accordance with Contract Documents and ready for Architect's Substantial Completion inspection.

E. Owner will occupy all of the building as specified in Section 01 1000.

F. Conduct Substantial Completion inspection and create Final Correction Punch List containing Architect's and Contractor's comprehensive list of items identified to be completed or corrected and submit to Architect.

G. Correct items of work listed in Final Correction Punch List and comply with requirements for access to Owner-occupied areas.

H. Notify Architect when work is considered finally complete and ready for Architect's Substantial Completion final inspection.

I. Complete items of work determined by Architect listed in executed Certificate of Substantial Completion.

3.12 MAINTENANCE

A. Provide service and maintenance of components indicated in specification sections.

B. Maintenance Period: As indicated in specification sections or, if not indicated, not less than one year from the Date of Substantial Completion or the length of the specified warranty, whichever is longer.

C. Examine system components at a frequency consistent with reliable operation. Clean, adjust, and lubricate as required.

D. Include systematic examination, adjustment, and lubrication of components. Repair or replace parts whenever required. Use parts produced by the manufacturer of the original component.

E. Maintenance service shall not be assigned or transferred to any agent or subcontractor without prior written consent of the Owner.

END OF SECTION 01 7000

THIS PAGE INTENTIONALLY LEFT BLANK

FOR REFERENCE: THIS SECTION WAS ISSUED FOR PHASE 1 AND PHASE 2

SECTION 01 7419 - CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL

PART 1 GENERAL

1.1 WASTE MANAGEMENT REQUIREMENTS

A. Employ processes that ensure the generation of as little waste as possible due to error, poor planning, breakage, mishandling, contamination, or other factors.

B. Minimize trash/waste disposal in landfills; reuse, salvage, or recycle as much waste as economically feasible.

C. Contractor Reporting Responsibilities: Submit periodic Waste Disposal Reports; report landfill disposal, incineration, recycling, salvage, and reuse regardless of to whom the cost or savings accrues; use the same units of measure on required reports.

D. Develop and follow a Waste Management Plan designed to implement these requirements.

E. The following sources may be useful in developing the Waste Management Plan:

F. Methods of trash/waste disposal that are not acceptable are:
   1. Burning on the project site.
   2. Burying on the project site.
   3. Dumping or burying on other property, public or private.
   4. Other illegal dumping or burying.

G. Regulatory Requirements: Contractor is responsible for knowing and complying with regulatory requirements, including but not limited to Federal, state and local requirements, pertaining to legal disposal of all construction and demolition waste materials.

1.2 RELATED REQUIREMENTS

A. Section 01 3000 - Administrative Requirements: Additional requirements for project meetings, reports, submittal procedures, and project documentation.

B. Section 01 3566.42 - Sustainability Compliance Procedures - CT HPBS: Procedures for sustainable design documentation.

C. Section 01 5000 - Temporary Facilities and Controls: Additional requirements related to trash/waste collection and removal facilities and services.

D. Section 01 6000 - Product Requirements: Waste prevention requirements related to delivery, storage, and handling.

E. Section 01 7000 - Execution and Closeout Requirements: Trash/waste prevention procedures related to demolition, cutting and patching, installation, protection, and cleaning.

1.3 DEFINITIONS

A. Clean: Untreated and unpainted; not contaminated with oils, solvents, caulk, or the like.

B. Construction and Demolition Waste: Solid wastes typically including building materials, packaging, trash, debris, and rubble resulting from construction, remodeling, repair and demolition operations.

C. Hazardous: Exhibiting the characteristics of hazardous substances, i.e., ignitibility, corrosivity, toxicity or reactivity.

D. Nonhazardous: Exhibiting none of the characteristics of hazardous substances, i.e., ignitibility, corrosivity, toxicity, or reactivity.

E. Nontoxic: Neither immediately poisonous to humans nor poisonous after a long period of exposure.

F. Recyclable: The ability of a product or material to be recovered at the end of its life cycle and remanufactured into a new product for reuse by others.

G. Recycle: To remove a waste material from the project site to another site for remanufacture into a new product for reuse by others.

H. Recycling: The process of sorting, cleansing, treating and reconstituting solid waste and other discarded materials for the purpose of using the altered form. Recycling does not include burning, incinerating, or thermally destroying waste.

I. Return: To give back reusable items or unused products to vendors for credit.

J. Reuse: To reuse a construction waste material in some manner on the project site.

K. Salvage: To remove a waste material from the project site to another site for resale or reuse by others.

L. Sediment: Soil and other debris that has been eroded and transported by storm or well production run-off water.

M. Source Separation: The act of keeping different types of waste materials separate beginning from the first time they become waste.

N. Toxic: Poisonous to humans either immediately or after a long period of exposure.

O. Trash: Any product or material unable to be reused, returned, recycled, or salvaged.

P. Waste: Extra material or material that has reached the end of its useful life in its intended use. Waste includes salvageable, returnable, recyclable, and reusable material.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Sustainable Design Submittals: Submit Waste Management Plan and Waste Disposal Reports in accordance with procedures specified in Section 01 3566.42 - Sustainability Compliance Procedures - CT HPBS.

C. Waste Management Plan: Include the following information:
   1. Analysis of the trash and waste projected to be generated during the entire project construction cycle, including types and quantities.
   2. Landfill Options: The name, address, and telephone number of the landfill(s) where trash/waste will be disposed of, the applicable landfill tipping fee(s), and the projected cost of disposing of all project trash/waste in the landfill(s).
   3. Landfill Alternatives: List all waste materials that will be diverted from landfills by reuse, salvage, or recycling.
   4. Meetings: Describe regular meetings to be held to address waste prevention, reduction, recycling, salvage, reuse, and disposal.
   5. Materials Handling Procedures: Describe the means by which materials to be diverted from landfills will be protected from contamination and prepared for acceptance by designated facilities; include separation procedures for recyclables, storage, and packaging.
   6. Transportation: Identify the destination and means of transportation of materials to be recycled; i.e. whether materials will be site-separated and self-hauled to designated centers, or whether mixed materials will be collected by a waste hauler.

D. Waste Disposal Reports: Submit at specified intervals, with details of quantities of trash and waste, means of disposal or reuse, and costs; show both totals to date and since last report.
   1. Submit updated Report with each Application for Progress Payment; failure to submit Report will delay payment.
   2. Submit Report on a form acceptable to Owner.
   3. Landfill Disposal: Include the following information:
      a) Identification of material.
      b) Amount, in tons or cubic yards, of trash/waste material from the project disposed of in landfills.
      c) State the identity of landfills, total amount of tipping fees paid to landfill, and total disposal cost.
      d) Include manifests, weight tickets, receipts, and invoices as evidence of quantity and cost.
   4. Incinerator Disposal: Include the following information:
      a) Identification of material.
      b) Amount, in tons or cubic yards, of trash/waste material from the project delivered to incinerators.
      c) State the identity of incinerators, total amount of fees paid to incinerator, and total disposal cost.
      d) Include manifests, weight tickets, receipts, and invoices as evidence of quantity and cost.
   5. Recycled and Salvaged Materials: Include the following information for each:
      a) Identification of material, including those retrieved by installer for use on other projects.
      b) Amount, in tons or cubic yards, date removed from the project site, and receiving party.
      c) Transportation cost, amount paid or received for the material, and the net total cost or savings of salvage or recycling each material.
      d) Include manifests, weight tickets, receipts, and invoices as evidence of quantity and cost.

e) Certification by receiving party that materials will not be disposed of in landfills or by incineration.

6. Material Reused on Project: Include the following information for each:
   a) Identification of material and how it was used in the project.
   b) Amount, in tons or cubic yards.
   c) Include weight tickets as evidence of quantity.
7. Other Disposal Methods: Include information similar to that described above, as appropriate to disposal method.

PART 3 EXECUTION

2.1 WASTE MANAGEMENT PROCEDURES

A. See Section 01 3000 for additional requirements for project meetings, reports, submittal procedures, and project documentation.

B. See Section 01 5000 for additional requirements related to trash/waste collection and removal facilities and services.

C. See Section 01 6000 for waste prevention requirements related to delivery, storage, and handling.

D. See Section 01 7000 for trash/waste prevention procedures related to demolition, cutting and patching, installation, protection, and cleaning.

2.2 WASTE MANAGEMENT PLAN IMPLEMENTATION

A. Manager: Designate an on-site person or persons responsible for instructing workers and overseeing and documenting results of the Waste Management Plan.

B. Communication: Distribute copies of the Waste Management Plan to job site foreman, each subcontractor, Owner, and Architect.

C. Instruction: Provide on-site instruction of appropriate separation, handling, and recycling, salvage, reuse, and return methods to be used by all parties at the appropriate stages of the project.

D. Meetings: Discuss trash/waste management goals and issues at project meetings.
   1. Prebid meeting.
   2. Preconstruction meeting.
   3. Regular job-site meetings.

E. Facilities: Provide specific facilities for separation and storage of materials for recycling, salvage, reuse, return, and trash disposal, for use by all contractors and installers.
   1. Provide containers as required.
   2. Provide adequate space for pick-up and delivery and convenience to subcontractors.
   3. Keep recycling and trash/waste bin areas neat and clean and clearly marked in order to avoid contamination of materials.

F. Hazardous Wastes: Separate, store, and dispose of hazardous wastes according to applicable regulations.

G. Recycling: Separate, store, protect, and handle at the site identified recyclable waste products in order to prevent contamination of materials and to maximize recyclability of identified materials. Arrange for timely pickups from the site or deliveries to recycling facility in order to prevent contamination of recyclable materials.

H. Reuse of Materials On-Site: Set aside, sort, and protect separated products in preparation for reuse.

I. Salvage: Set aside, sort, and protect products to be salvaged for reuse off-site.

SECTION 01 7800 - CLOSEOUT SUBMITTALS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Project record documents.

B. Operation and maintenance data.

C. Warranties and bonds.

1.2 RELATED REQUIREMENTS

A. Section 01 3000 - Administrative Requirements: Submittals procedures, shop drawings, product data, and samples.

B. Section 01 7000 - Execution and Closeout Requirements: Contract closeout procedures.

C. Section 01 9113 - General Commissioning Requirements: Verification and compilation of data into operation and maintenance manuals.

D. Individual Product Sections: Specific requirements for operation and maintenance data.

E. Individual Product Sections: Warranties required for specific products or Work.

1.3 SUBMITTALS

A. Project Record Documents: Submit documents to Architect with claim for final Application for Payment.

B. Electronic Manual Files: Submit manuals in the form of a multiple file composite electronic PDF file for each manual type required.

C. Operation and Maintenance Data:
1. Submit electronic copy of preliminary draft or proposed formats and outlines of contents before start of Work. Architect will review draft and return one copy with comments.
2. For equipment, or component parts of equipment put into service during construction and operated by Owner, submit completed documents within ten days after acceptance.
3. Submit electronic copy of completed documents 15 days prior to final inspection. This copy will be reviewed and returned after final inspection, with Architect comments. Revise content of document set as required prior to final submission.
4. Submit electronic set of revised final documents in final form within 10 days after final inspection.

D. Warranties and Bonds:
1. For equipment or component parts of equipment put into service during construction with Owner's permission, submit documents within 10 days after acceptance.
2. Make other submittals within 10 days after Date of Substantial Completion, prior to final Application for Payment.

3. For items of Work for which acceptance is delayed beyond Date of Substantial Completion, submit within 10 days after acceptance, listing the date of acceptance as the beginning of the warranty period.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.1 PROJECT RECORD DOCUMENTS

A. Maintain one set on site of the following record documents; record actual revisions to the Work:
   1. Drawings.
   2. Specifications.
   3. Addenda.
   4. Change Orders and other modifications to the Contract.
   5. Reviewed shop drawings, product data, and samples.
   6. Manufacturer's instruction for assembly, installation, and adjusting.

B. Ensure entries are complete and accurate, enabling future reference by Owner.

C. Store record documents separate from documents used for construction.

D. Record information concurrent with construction progress.

E. Do not use project record documents for construction purposes.

F. Specifications: Legibly mark and record at each product section description of actual products installed, including the following:
   1. Manufacturer's name and product model and number.
   2. Product substitutions or alternates utilized.
   3. Changes made by Addenda and modifications.

G. Record Drawings and Shop Drawings: Legibly mark each item to record actual construction including:
   1. Measured depths of foundations in relation to finish first floor datum.
   2. Revisions to routing of piping and conduits.
   3. Revisions to electrical circuitry.
   4. Actual equipment locations.
   5. Duct size and routing.
   6. Measured horizontal and vertical locations of underground utilities and appurtenances, referenced to permanent surface improvements.
   7. Measured locations of internal utilities and appurtenances concealed in construction, referenced to visible and accessible features of the Work.
   8. Field changes to dimension and detail.
   9. Details not on original Contract drawings.
   10. Field records for variable and concealed conditions.
   11. Information on the Work that is shown only schematically.
   12. Changes made by Change Order or Construction Change Directive.

13. Changes made following Architect's written orders.

H. Miscellaneous Record Documents: Assemble miscellaneous record documents required by other specification sections for miscellaneous record keeping and submittal in connection with actual performance of the Work. Bind and file miscellaneous record documents and identify each, ready for continued use and reference.
   1. Include miscellaneous record documents directory organized by specification section number and title, electronically linked to each item of miscellaneous record documents.

3.2 OPERATION AND MAINTENANCE DATA

A. Source Data: For each product or system, list names, addresses and telephone numbers of Subcontractors and suppliers, including local source of supplies and replacement parts.

B. Product Data: Mark each sheet to clearly identify specific products and component parts, and data applicable to installation. Delete inapplicable information.

C. Drawings: Supplement product data to illustrate relations of component parts of equipment and systems, to show control and flow diagrams. Do not use Project Record Documents as maintenance drawings.

D. Typed Text: As required to supplement product data. Provide logical sequence of instructions for each procedure, incorporating manufacturer's instructions.

3.3 OPERATION AND MAINTENANCE DATA FOR MATERIALS AND FINISHES

A. For Each Product, Applied Material, and Finish:
   1. Product data, with catalog number, size, composition, and color and texture designations.
   2. Include lists of materials and local sources of materials and related services for repairs.

B. Instructions for Care and Maintenance: Manufacturer's recommendations for cleaning agents and methods, precautions against detrimental cleaning agents and methods, and recommended schedule for cleaning and maintenance.

C. Moisture protection and weather-exposed products: Include product data listing applicable reference standards, chemical composition, and details of installation. Provide recommendations for inspections, maintenance, and repair.

D. Additional information as specified in individual product specification sections.

E. Where additional instructions are required, beyond the manufacturer's standard printed instructions, have instructions prepared by personnel experienced in the operation and maintenance of the specific products.

3.4 OPERATION AND MAINTENANCE DATA FOR EQUIPMENT AND SYSTEMS

A. For Each Item of Equipment and Each System:
   1. Description of unit or system, and component parts.
   2. Identify function, normal operating characteristics, and limiting conditions.
   3. Include performance curves, with engineering data and tests.
   4. Complete nomenclature and model number of replaceable parts.

B. Where additional instructions are required, beyond the manufacturer's standard printed instructions, have instructions prepared by personnel experienced in the operation and maintenance of the specific products.

C. Operating Procedures: Include start-up, break-in, and routine normal operating instructions and sequences. Include regulation, control, stopping, shut-down, and emergency instructions. Include summer, winter, and any special operating instructions.

D. Maintenance Requirements: Include routine procedures and guide for preventative maintenance and trouble shooting; disassembly, repair, and reassembly instructions; and alignment, adjusting, balancing, and checking instructions.

E. Provide servicing and lubrication schedule, and list of lubricants required.

F. Include manufacturer's printed operation and maintenance instructions.

G. Include sequence of operation by controls manufacturer.

H. Provide original manufacturer's parts list, illustrations, assembly drawings, and diagrams required for maintenance.

I. Provide control diagrams by controls manufacturer as installed.

J. Provide Contractor's coordination drawings, with color coded piping diagrams as installed.

K. Provide charts of valve tag numbers, with location and function of each valve, keyed to flow and control diagrams.

L. Provide list of original manufacturer's spare parts, current prices, and recommended quantities to be maintained in storage.

M. Include test and balancing reports.

N. Additional Requirements: As specified in individual product specification sections.

3.5 ASSEMBLY OF OPERATION AND MAINTENANCE MANUALS

A. Electronic Manuals: Assemble manuals in the form of a multiple file composite electronic PDF file for each manual type required.
   1. Use electronic files prepared by manufacturer where available. Where scanning of paper documents is required, configure scanned file for minimum readable file size.
   2. Bookmark individual documents based on file names. Name document files to correspond to system, subsystem, and equipment names used in manual directory and table of contents. Group documents for each system and subsystem into individual composite bookmarked files, then create composite manual, so that resulting bookmarks reflect the system, subsystem, and equipment names in a easily navigated file tree. Configure electronic manual to display bookmark panel on opening file.

B. Cover: Identify each binder with typed or printed title OPERATION AND MAINTENANCE INSTRUCTIONS; identify title of Project; identify subject matter of contents.

C. Project Directory: Title and address of Project; names, addresses, and telephone numbers of Architect, Consultants, Contractor and subcontractors, with names of responsible parties.

D. Tables of Contents: List every item separated by a divider, using the same identification as on the divider tab; where multiple volumes are required, include all volumes Tables of Contents in each volume, with the current volume clearly identified.

E. Arrangement of Contents: Organize each volume in parts as follows:
   1. Project Directory.
   2. Table of Contents, of all volumes, and of this volume.
   3. Operation and Maintenance Data: Arranged by system, then by product category.
      a) Source data.
      b) Product data, shop drawings, and other submittals.
      c) Operation and maintenance data.
      d) Field quality control data.
      e) Photocopies of warranties and bonds.
   4. Design Data: To allow for addition of design data furnished by Architect or others, provide a tab titled "Design Data".

3.6 WARRANTIES AND BONDS

A. Obtain warranties and bonds, executed in duplicate by responsible Subcontractors, suppliers, and manufacturers, within 10 days after completion of the applicable item of work. Except for items put into use with Owner's permission, leave date of beginning of time of warranty until Date of Substantial completion is determined.

B. Verify that documents are in proper form, contain full information, and are notarized.

C. Co-execute submittals when required.

D. Retain warranties and bonds until time specified for submittal.

E. List circumstances and conditions that would affect validity of warranties or bonds. Include procedures to follow and required notifications for warranty claims.

F. Electronic Manual: Assemble manual in the form of a multiple file composite electronic PDF file for each manual required.
   1. Use electronic files prepared by manufacturer where available. Where scanning of paper documents is required, configure scanned file for minimum readable file size.
   2. Bookmark individual documents based on file names. Name document files to correspond to system, subsystem, and equipment names used in manual directory and table of contents. Group documents for each system and subsystem into individual composite bookmarked files, then create composite manual, so that resulting bookmarks reflect the system, subsystem, and equipment names in a easily navigated file tree. Configure electronic manual to display bookmark panel on opening file.

G. Cover: Identify each manual with printed title WARRANTIES AND BONDS, with title of Project; name, address and telephone number of Contractor and equipment supplier; and name of responsible company principal.

H. Table of Contents: Use the sequence of the Table of Contents of the Project Manual, with each item identified with the number and title of the specification section in which specified, and the name of product or work item.

I. Separate each warranty or bond with sheet keyed to the Table of Contents listing. Provide full information, using separate as necessary. List Subcontractor, supplier, and manufacturer, with name, address, and telephone number of responsible principal.

END OF SECTION 01 7800

FOR REFERENCE: THIS SECTION WAS ISSUED FOR PHASE 1 AND PHASE 2

SECTION 01 7900 - DEMONSTRATION AND TRAINING

PART 1 GENERAL

1.1 SUMMARY

A. Demonstration of products and systems to be commissioned and where indicated in specific specification sections.

B. Training of Owner personnel in operation and maintenance is required for:
   1. HVAC systems and equipment.
   2. Electrical systems and equipment.
   3. Conveying systems.
   4. Items specified in individual product Sections.

C. Training of Owner personnel in care, cleaning, maintenance, and repair is required for:
   1. Roofing, waterproofing, and other weather-exposed or moisture protection products.
   2. Finishes, including flooring, wall finishes, ceiling finishes.
   3. Fixtures and fittings.
   4. Items specified in individual product Sections.

1.2 RELATED REQUIREMENTS

A. Section 01 7800 - Closeout Submittals: Operation and maintenance manuals.

B. Section 01 9113 - General Commissioning Requirements: Additional requirements applicable to demonstration and training.

C. Other Specification Sections: Additional requirements for demonstration and training.

1.3 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures; except:
   1. Make all submittals specified in this section, and elsewhere where indicated for commissioning purposes, directly to the Commissioning Authority.
   2. Submit one copy to the Commissioning Authority, not to be returned.
   3. Make commissioning submittals on time schedule specified by Commissioning Authority.
   4. Submittals indicated as "Draft" are intended for the use of the Commissioning Authority in preparation of overall Training Plan; submit in editable electronic format, Microsoft Word 2003 preferred.

B. Draft Training Plans: Owner will designate personnel to be trained; tailor training to needs and skill-level of attendees.
   1. Submit to Commissioning Authority for review and inclusion in overall training plan.
   2. Submit not less than four weeks prior to start of training.
   3. Revise and resubmit until acceptable.
   4. Provide an overall schedule showing all training sessions.
   5. Include at least the following for each training session:
      a) Identification, date, time, and duration.
      b) Description of products and/or systems to be covered.

c) Name of firm and person conducting training; include qualifications.
d) Intended audience, such as job description.
e) Objectives of training and suggested methods of ensuring adequate training.
f) Methods to be used, such as classroom lecture, live demonstrations, hands-on, etc.
g) Media to be used, such a slides, hand-outs, etc.
h) Training equipment required, such as projector, projection screen, etc., to be provided by Contractor.

C. Training Manuals: Provide training manual for each attendee; allow for minimum of two attendees per training session.
1. Include applicable portion of O&M manuals.
2. Include copies of all hand-outs, slides, overheads, video presentations, etc., that are not included in O&M manuals.
3. Provide one extra copy of each training manual to be included with operation and maintenance data.

D. Video Recordings: Submit digital video recording of each demonstration and training session for Owner's subsequent use.
1. Format: DVD Disc.
2. Label each disc and container with session identification and date.

1.4 QUALITY ASSURANCE

A. Instructor Qualifications: Familiar with design, operation, maintenance and troubleshooting of the relevant products and systems.
1. Provide as instructors the most qualified trainer of those contractors and/or installers who actually supplied and installed the systems and equipment.
2. Where a single person is not familiar with all aspects, provide specialists with necessary qualifications.

1.5 COORDINATION

A. Coordinate instruction schedule with Owner. Adjust schedule as required to minimize disruption to Owner's operations and and to ensure availability of Owner's personnel.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.1 DEMONSTRATION - GENERAL

A. Demonstrations conducted during system start-up do not qualify as demonstrations for the purposes of this section, unless approved in advance by Owner.

B. Demonstrations conducted during Functional Testing need not be repeated unless Owner personnel training is specified.

C. Demonstration may be combined with Owner personnel training if applicable.

D. Operating Equipment and Systems: Demonstrate operation in all modes, including start-up, shut-down, seasonal changeover, emergency conditions, and troubleshooting, and maintenance procedures, including scheduled and preventive maintenance.
   1. Perform demonstrations not less than two weeks prior to Substantial Completion.
   2. For equipment or systems requiring seasonal operation, perform demonstration for other season within six months.

E. Non-Operating Products: Demonstrate cleaning, scheduled and preventive maintenance, and repair procedures.
   1. Perform demonstrations not less than two weeks prior to Substantial Completion.

3.2 TRAINING - GENERAL

A. Commissioning Authority will prepare the Training Plan based on draft plans submitted.

B. Conduct training on-site unless otherwise indicated.

C. Owner will provide classroom and seating at no cost to Contractor.

D. Do not start training until Functional Testing is complete, unless otherwise specified or approved by the Commissioning Authority.

E. Provide training in minimum two hour segments.

F. The Commissioning Authority is responsible for determining that the training was satisfactorily completed and will provide approval forms.

G. Training schedule will be subject to availability of Owner's personnel to be trained; re-schedule training sessions as required by Owner; once schedule has been approved by Owner failure to conduct sessions according to schedule will be cause for Owner to charge Contractor for personnel "show-up" time.

H. Review of Facility Policy on Operation and Maintenance Data: During training discuss:
   1. The location of the O&M manuals and procedures for use and preservation; backup copies.
   2. Typical contents and organization of all manuals, including explanatory information, system narratives, and product specific information.
   3. Typical uses of the O&M manuals.

I. Product- and System-Specific Training:
   1. Review the applicable O&M manuals.
   2. For systems, provide an overview of system operation, design parameters and constraints, and operational strategies.
   3. Review instructions for proper operation in all modes, including start-up, shut-down, seasonal changeover and emergency procedures, and for maintenance, including preventative maintenance.
   4. Provide hands-on training on all operational modes possible and preventive maintenance.
   5. Emphasize safe and proper operating requirements; discuss relevant health and safety issues and emergency procedures.
   6. Discuss common troubleshooting problems and solutions.

7. Discuss any peculiarities of equipment installation or operation.
8. Discuss warranties and guarantees, including procedures necessary to avoid voiding coverage.
9. Review recommended tools and spare parts inventory suggestions of manufacturers.
10. Review spare parts and tools required to be furnished by Contractor.
11. Review spare parts suppliers and sources and procurement procedures.

J. Be prepared to answer questions raised by training attendees; if unable to answer during training session, provide written response within three days.

3.3 DEMONSTRATION AND TRAINING VIDEO RECORDINGS

A. General: Engage a qualified commercial videographer to record demonstration and training video recordings. Record each training module separately. Include classroom instructions and demonstrations, board diagrams, and other visual aids, but not student practice.

B. Digital Video Recordings: Provide high-resolution, digital video in MPEG format, produced by a digital camera with minimum sensor resolution of 12 megapixels and capable of recording in full HD mode with vibration reduction technology.

END OF SECTION 01 7900

FOR REFERENCE: THIS SECTION WAS ISSUED FOR PHASE 1 AND PHASE 2

SECTION 019113 - GENERAL COMMISSIONING REQUIREMENTS

PART 1 - GENERAL

1.1 DESCRIPTION

A. Commissioning is a quality-oriented process for achieving, verifying, and documenting that the performance of facilities, systems, and assemblies meet defined objectives and criteria. The Commissioning process begins at project inception (during the pre-design phase) and continues through the life of the facility. The commissioning process includes specific tasks to be conducted during each phase in order to verify that design, construction, and training meet the Owner's Project Requirements.

B. The Goals of the Commissioning Process are to:

1. Verify that applicable equipment and systems are installed according to the contract documents, manufacturer's recommendations, and industry accepted minimum standards, and that they receive adequate operational checkout by installing contractors.
2. Verify and document proper performance of equipment and systems.
3. Verify that O&M documentation has been provided to the client.
4. Verify that the owner's operating personnel are adequately trained.

C. The commissioning process does not take away from or reduce the responsibility of the system designers or installing contractors to provide a finished and fully functioning product.

1.2 RELATED DOCUMENTS

A. Drawings and general provisions of the contract, including General and Supplementary Conditions, Division 1, and other trade specific specification sections shall apply to this section.

B. Owner's Project Requirements and Basis of Design documents are included by reference for information only.

C. ASHRAE Guideline 0-2005, The Commissioning Process

1.3 SUMMARY

A. This section includes general requirements that apply to the implementation of the commissioning process without regard to specific systems, assemblies, and components.

B. Related sections include the following:

1. Section 013300 Submittal Procedures
2. Section 017823 Operation and Maintenance Data
3. Section 017900 Demonstration and Training
4. Division 21 Fire Suppression

5. Division 22 Plumbing
6. Division 23 Heating Ventilating and Air Conditioning (Mechanical)
7. Division 25 Integrated Automation
8. Division 26 Electrical
9. Division 27 Communications
10. Division 28 Electronic Safety and Security

1.4 DEFINITIONS

A. Acceptance - A formal action, taken by a person with appropriate provider (which may or may not be contractually defined) to declare that some aspect of the project meets defined requirements, thus permitting subsequent activities to proceed.

B. Approval - Acceptance that a piece of equipment or system has been properly installed and is functioning in the tested modes according to the contract documents.

C. Basis of Design - A document that records the concepts, calculations, decisions, and product selections used to meet the Owner's Project Requirements and to satisfy applicable regulatory requirements, standards, and guidelines. The document includes both narrative descriptions and lists of individual items that support the design process.

D. Checklists, Construction Checklists, Installation Checklists, or Pre-Functional Checklists - Checklists that are developed by the CxA and completed by the Construction Team during all phases of the construction process to verify that materials, equipment, assemblies, and systems are installed in accordance with the Contract Documents.

E. Commissioning Authority or Agent (CxA) - The entity identified by the owner who leads, plans, schedules, and coordinates the commissioning team to implement the commissioning process.

F. Commissioning Plan (CxP) - A document developed by the CxA that outlines the organization, schedule, roles and responsibilities, and documentation requirements of the Commissioning Process. The CxP is initially developed in the design phase.

G. Commissioning Process - A quality-focused process for enhancing the delivery of a project. The process focuses upon verifying and documenting that the facility and all of its systems and assemblies are planned, designed, installed, tested, operated, and maintained to meet the Owner's Project Requirements.

H. Commissioning Team - The individuals who through coordinated actions are responsible for implementing the commissioning process.

I. Data logging -The monitoring and recording of flows, currents, status, pressures, etc., of equipment using stand-alone data recorders separate from the control system or the trending capabilities of control systems.

J. Deferred Performance Tests (DPTs) - Performance tests that are performed, at the discretion of the CxA, after substantial completion, due to partial occupancy, equipment, seasonal requirements, design, or other site conditions that disallow the test from being performed.

K. Deficiency, Non-Compliance, Non-Conformance - A condition in the installation or function of a component, piece of equipment, or system that is not in compliance with the contract documents.

L. Factory Testing - Testing of equipment on-site or at the factory, by factory personnel, with or without an owner's representative present.

M. Issues Log - A formal and ongoing record of problems or concerns – and their resolution – that have been raised by members of the commissioning team during the course of the commissioning process.

N. Owner's Project Requirements - A written document that details the functional requirements of a project and the expectations of how it will be used and operated. These include project goals, measurable performance criteria, cost considerations, benchmarks, success criteria, and supporting information. This is also referred to as the Project Intent or Design Intent.

O. Pre-Functional Testing – testing performed by the contractors to verify complete system operation and system readiness.

P. Quality Based Sampling - A process for evaluating a sub-set (sample) of the total population. The sample is based upon a known or estimated probability distribution of expected values; an assumed statistical distribution based upon data from a similar product, assembly, or system; or a random sampling that has scientific statistical basis.

Q. Seasonal Performance Tests - Performance tests that are deferred until the system(s) will experience conditions closer to their design conditions based on weather conditions.

R. Startup - The initial starting or activating of dynamic equipment, including completing construction checklists.

S. Systems Manual - A system-focused composite document that includes the operation manual, maintenance manual, and additional information of use to the owner during the occupancy and operations phase.

T. Functional Performance Test (FPT) - A protocol written by the CxA that defines methods, personnel, and expectations for tests conducted on components, equipment, assemblies, systems, and interfaces among systems. Performance testing includes the dynamic functions and operations of equipment and systems using manual or monitoring methods under various levels of operation. Systems are tested under various modes, such as during low cooling loads, high loads, component failures, unoccupied, varying outside air temperatures, fire alarm, power failure, etc. The systems are run through all the control system's sequences of operation and components are verified to respond as the sequences state.

U. Training Plan or Instruction Program - A written document that details the expectations, schedule, and deliverables related to the training of project operating and maintenance personnel, users, and occupants.

V. Verification - The process by which specific documents, components, equipment, assemblies, systems, and interfaces among systems are confirmed to comply with the criteria

described in the Owner's Project Requirements.

W. Trending – The monitoring, by a building management system or other electronic data gathering equipment, and analyzing of the data gathered over a period of time.

1.5 COORDINATION

A. Coordination of the Cx process is the responsibility of all Cx Team members.

B. The CxA coordinates the commissioning activities through the construction manager or general contractor. All members shall work together to fulfill their contracted responsibilities and meet the objectives of the contract documents.

C. The CxA, through the Owner or CM, will provide sufficient notice to the contractor for scheduling commissioning activities with respect to the Owner's participation. The CM will integrate all commissioning activities into the overall project schedule. All parties will address scheduling problems and make necessary notifications in a timely manner in order to expedite the commissioning process.

1.6 REMOBILIZATION AND RETESTING FEES

A. In general, CxA testing will include one test of each system or equipment. The cost of any additional testing will be submitted to the Owner for review and direction. Following Owner review, the cost for additional testing to verify that performance is in accordance with the design intent may be deducted from the Contractor's final payment by the Owner.

B. In the event that a CxA site visit is scheduled in advance with the Contractor and testing is unable to be performed through no fault of the Owner and the CxA is not notified within 48 hours, the cost of the travel and time will be deducted from the contractor's final payment by the Owner.

1.7 COMMISSIONING PLAN

A. Commissioning during construction begins with an initial commissioning meeting conducted by the CxA where the commissioning process is reviewed with the project commissioning team members. This meeting shall be scheduled by the CM. Generally, the initial Cx Meeting will be scheduled within 60 days of the award of contracts related to commissioned systems and equipment.

B. Additional meetings will be required throughout construction, scheduled by the CxA, through the owner or CM, with necessary parties attending to plan, scope, coordinate, schedule future activities, and resolve problems. In general these meetings will be monthly with the frequency increasing towards substantial completion to accommodate start-ups, balancing, scheduling testing, and training.

C. The CxA reviews submittals for commissioned equipment and systems parallel with the Design Team for compliance with the OPR.

D. The construction checklists, developed by the CxA, are to be completed by the contractor (or its subcontractors), before and during the startup process and verified by the CxA.

E. The CxA may witness selected assembly mock-ups, equipment, and system start-ups.

F. The CxA develops equipment and system functional performance test (FPT) procedures. The FPT's are executed by the contractor and witnessed and documented by the CxA.

G. The CxA reviews the O&M documentation for completeness.

H. The CxA reviews the training plan provided by the contractor.

I. Deferred performance testing will be conducted as required.

1.8 COMMISSIONING TEAM

A. Members appointed by Contractor(s): Individuals, each having authority to act on behalf of the entity he or she represents, explicitly organized to implement the commissioning process through coordinated actions. The commissioning team shall consist of, but not be limited to, representatives of each contractor, including project superintendent and subcontractors, installers, suppliers, and specialists deemed appropriate by the CxA.

B. Members appointed by Owner:

1. CxA - An entity identified by the owner who leads, plans, schedules, and coordinates the commissioning team to implement the commissioning process. Owner will engage the CxA under a separate contract.
2. Representatives of the facility Users and Operation and Maintenance personnel.
3. Architect and engineering design professionals.

1.9 RESPONSIBILITIES

Understanding and defining the roles of each participant are vital to the success of the Commissioning Process. This provides an outline of the responsibilities of each participant in the Commissioning Process. These responsibilities are typically formalized in the contracts between the Owner and the various parties and this section is not intended to supersede or negate any contracted relationships.

A. Owner (or Designated Representative)

1. Include the design professionals' Commissioning related responsibilities and scope of work in the design request for proposal and contract.
2. Oversee the development of the Owner's Project Requirements and approve any changes.
3. Designate a representative, ideally from the building's operations and maintenance team, to participate in the Commissioning Process including:

    a. Design Phase coordination meetings
    b. Construction Phase coordination meetings

c. Informal owner-training as equipment is installed and started
d. Maintenance orientation and inspections
e. System testing and verification meetings
f. Functional procedure review meetings before testing of systems
g. Training sessions
h. Verification demonstrations
i. Systems and assemblies tests
j. Final review at acceptance meeting

4. Review and approve any changes made to the Owner's Project Requirements.
5. Review, comment on, and accept the Commissioning Authority's progress and final reports.

B. Commissioning Authority (CxA)

C. The Commissioning Authority is responsible to verify that the Owner's Project Requirements for the project are satisfactorily achieved. The CxA leads, plans, schedules, and coordinates the commissioning team to implement the commissioning process. Specific tasks performed by the CxA include:

Design Phase

1. Develop and update the design phase commissioning plan.
2. Perform focused review of the design, drawings and specifications at various stages of development as required.
3. Review documents and responses from A/E to ensure that all previous comments have been addressed by the appropriate party.
4. Develop full commissioning specifications for all commissioned equipment. The specifications will be consistent in content, rigor and format to the referenced standards.

    a. A detailed description of the responsibilities of all parties.
    b. Details of the commissioning process.
    c. Reporting and documentation requirements, including formats; alerts to coordination issues, deficiency resolution; construction checklist and start up requirement.
    d. The functional testing processes.
    e. Specific functional test requirements, including testing conditions and acceptance criteria for each piece of equipment being commissioned.
    f. Review the Owner's Project Requirements and Basis of Design.
    g. Develop a Design Phase Commissioning Plan.

Bid Phase

1. Answer commissioning related questions throughout the bid process.

Construction Phase

1. Perform the tasks and functions to be incorporated in the specifications ascribed to the CxA.
2. Coordinate and direct the commissioning activities in a logical, sequential and efficient manner using consistent protocols and forms, centralized documentation, clear and regular communications and consultations with all necessary parties.
3. Coordinate the commissioning work, with the Construction Manager, Contractor, Architect and Owner's representatives to ensure that commissioning activities are being scheduled into the master schedule.
4. Plan and conduct commissioning meetings and distribute minutes.
5. Coordinate control integration meetings where the owner, design team, mechanical engineers, building management system programmer, equipment factory representative and CxA discuss integration requirements between equipment, systems and disciplines to ensure the equipment and systems operate to meet the design intent.
6. Request and review information required to perform commissioning tasks, including O&M materials, contractor start-up and checkout procedures.
7. Review coordination drawings to ensure that trades are making a reasonable effort to coordinate work. Coordinate submittal review with the architect so that the CxA/A/E comments are combined into one review submitted to the contractor.
8. Write and distribute construction checklists for commissioned equipment.
9. Perform site visits to observe component and system installations. Attend selected planning and job-site meetings to obtain information on construction progress. Review construction meeting minutes for revisions/substitutions relating to the commissioning process. Assist in resolving any discrepancies.
10. Provide construction checklists for equipment/systems within the scope of work to the contractors.
11. Document construction checklist completion by reviewing completed checklists and by site observation.
12. Verify air and water systems balancing by reviewing completed TAB report.
13. With assistance and review from the installing contractor, CxA will write functional performance test procedures for equipment and systems.
14. Analyze functional performance trend logs and monitoring data to verify performance.
15. Coordinate, witness and document manual functional performance tests performed by installing contractors.
16. Maintain a master issues log and report all issues as they occur directly to the Owner's representative and the architect.
17. Verify the training of the Owner's operating personnel.
18. Review the preparation of the O&M manuals for commissioned equipment. Coordinate submittal review with the architect so that the CxA/A/E comments are combined into one review submitted to the contractor.
19. Compile a final commissioning Report, which shall include:

    a. An executive summary that includes a summary of findings and system descriptions.
    b. All outstanding non-compliance items shall be specifically listed. Each non-compliance issue shall be referenced to the specific functional test, inspection, trend log, etc. where the deficiency is documented.

c. Also included in the Commissioning Record shall be the issues log, commissioning plan, progress reports, submittal and O&M manual reviews, training record, construction checklists, start-up reports, and functional tests.

20. Comply with the requirements of any applicable green-building rating systems (i.e. LEED, High Performance Buildings, Green Guide for Healthcare, etc.).

Warranty Period

1. Coordinate and supervise required opposite season or deferred testing as needed.
2. Return to the site approximately10 months into the warranty period and review with facility staff the current building operation and the condition of outstanding issues related to the original and seasonal commissioning. Also interview facility staff and identify problems or concerns they have with operating the building as originally intended.
3. Identify areas that may come under warranty or under the original construction contract. The CxA is not responsible for verifying that the deficiencies have been corrected.

D. Design Team

The primary role of the Design Team is to translate the Owner's Project Requirements into a complete design. Relative to commissioning, the design team's responsibilities vary depending on the specific project and contract, but may include:

1. Participate in the development and documentation of the initial Owner's Project Requirements.
2. Document revisions to the Owner's Project Requirements as approved by the Owner.
3. Document the Basis of Design.
4. Integrate the Commissioning Process requirements provided by CxA in the Contract Documents.
5. Respond to Commissioning Team design review comments.
6. Adequately detail the Operations and Maintenance of the systems and assemblies in Contract Documents.
7. Review and incorporate the CxA's comments from submittal reviews.
8. Participate in the initial Operation and Maintenance personnel training sessions. Include a presentation of the project's Basis of Design and descriptions of the associated systems.
9. Review functional test procedures.
10. Review the CxA's reports and logs and comment as appropriate.
11. Review and comment on the final Cx Report.

E. Construction Manager

The Construction Manager provides management, technical, and administrative expertise during the Construction phase to ensure the building Owner's goals relating to schedule and quality are met. The Construction Manager's responsibilities related to the Commissioning Process typically include:

1. Include any costs for Commissioning Process activities in the contract price.
2. Include Commissioning Process requirements and activities in all contractors' contracts.
3. Include Cx-related milestones in the construction schedule.
4. Ensure necessary accessibility to all equipment to allow for proper operation and maintenance of the building.
5. Provide individuals with the required background and authority to implement the Commissioning Process activities as outlined in the Contract Documents.
6. Issue a statement at the end of the project certifying that all work has been completed in accordance with the Contract Documents and the facility is operational.
7. Respond to Commissioning Process reports and correct deficiencies identified during installation verification or functional testing.
8. Review and comment on the final Cx Report.

F. Contractors

Many different contractors will be involved in the Commissioning Process. The various contractors may include the building contractors (general, mechanical and electrical), the

testing, adjusting, and balancing contractor, the building automation system contractor and others as required by the contract documents. As a member of the Commissioning Team, the responsibilities of the various building contractors include:

1. Include any costs for Commissioning Process activities in the contract price.
2. Include Commissioning Process requirements and activities in all subcontracts or equipment purchases.
3. Ensure the cooperation and participation of all subcontractors and manufacturers of equipment or systems to be commissioned.
4. Attend Commissioning Team meetings.
5. Include Cx-related milestones in the construction schedule.
6. Implement the training program as described in the Contract Documents. Coordinate related activities with the CxA.
7. Provide submittals to the Owner, Design Team, and CxA as detailed in the Contract Documents.
8. Respond to and resolve issues identified in the Cx Issues Log.
9. Notify the CxA when systems and assemblies are ready for installation verification and testing. For repetitive assemblies, notify the CxA upon the completion of the prototype for a First Piece or Mock-Up review.
10. Complete system and equipment checklists developed by the CxA. Complete the Checklists as the work is completed. Provide completed copies to the CxA at regular intervals for verification.
11. Complete Pre-Functional test procedures. Functional testing will not take place until all Pre-Functional Tests have been fully executed.
12. Functional testing. Once pre-functional tests are complete, functional test verification will be scheduled and demonstrated in the presence of the CxA.
13. Maintain the Project Record Documents in accordance with the requirements of the Contract Documents.

G. Manufacturers

The suppliers of major equipment are required to support the Commissioning Team in the following manner:

1. Provide all information required for the proper Start-up and Operation and Maintenance of the system or assembly in the initial submittal, as detailed in the Contract Documents.
2. Provide the requirements to maintain the warranty in the initial submittal, as detailed in the Contract Documents.
3. Coordinate and provide results of all factory tests required in the Contract Documents.
4. Participate in the training process as detailed in the Contract Documents.
5. Demonstrate operation and performance of equipment and assemblies as detailed in the Contract Documents.

H. Operations and Maintenance Staff

The Operations and Maintenance staff will participate in the Commissioning Process in the following areas:

1. Define Operations and Maintenance related requirements of the building.
2. Participate in design review for O&M impacts.
3. Review maintenance manual, record drawing and documentation requirements developed by the Design Team.
4. Define training program requirements.
5. Participate/witness functional performance testing.
6. Attend contractor and vendor training sessions.

1.10 EQUIPMENT/SYSTEMS TO BE COMMISSIONED

A. The following equipment/systems will be commissioned in this project:

HVAC/Mechanical:
Air Handling Units
Humidifiers
Fans
Demand Control Ventilators
Variable Air Volume Terminal Units
Lab Terminal Units
Chiller
Cooling Tower
Boiler
Pumps
Heat Exchangers
Pressure Reducing Valves
Energy Recover Ventilators
Refrigeration Systems
Ductless Split Air Conditioning Systems
Unit Heaters & Cabinet Unit Heaters
Building Management System

Electrical:
Emergency Generator
Automatic Transfer Switch
Lighting & Daylighting Controls
Renewable Energy Systems
Switchgear
Main Switchboards
Uninterrupted Power Supply
Telecommunications System
Security System

Fire Protection:
Fire Alarm System
Fire Suppression

Plumbing:
Domestic Hot Water System

Piping
Sanitary Waste Piping
Storm Drainage
Plumbing Fixtures

Envelope:
Roof
Walls
Windows
Doors

PART 2 - **PRODUCTS**

2.1 TEST EQUIPMENT

A. All standard testing equipment required to perform startup and initial checkout and required performance testing shall be provided by the contractor for the equipment being tested. This includes, but is not limited to, two-way radios, meters, and data recorders. Data recorders may be provided by the CxA at the option of the CxA.

B. Special equipment, tools, and instruments required for testing equipment according to these contract documents shall be included in the contractor's base bid price and shall be turned over to the owner at Project close-out.

C. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance within the tolerances specified in the specifications. If not otherwise noted, the following minimum requirements apply: Temperature sensors and digital thermometers shall have a certified calibration to NIST traceable standards within the past year to an accuracy of 0.5 degree F and a resolution of + or - 0.1 degree F. Pressure sensors shall have an accuracy of + or - 2.0% of the value range being measured (not full range of meter) and have been calibrated within the last year. All equipment shall be calibrated according to the manufacturer's recommended intervals and when dropped or damaged. Calibration tags shall be affixed or certificates readily available.

PART 3 - **EXECUTION**

3.1 OVERVIEW

Through the Construction Phase of the project, it is the responsibility of the CxA to coordinate and direct the Commissioning Process activities in a logical, sequential, and efficient manner using protocols and forms, centralized documentation, clear and regular communications and consultations with all necessary parties.

3.2 CONDUCT PRE-CONSTRUCTION MEETING

The Pre-Construction Meeting is an opportunity for the CxA to meet with the Construction Team and discuss the general Commissioning Process. It is the ideal time to identify Commissioning Team members, discuss the integration of the Commissioning Process Schedule with the

Construction Schedule, review the submittal review requirements, review the inspection and testing process, and develop the formal lines of communication between all parties.

3.3 CONDUCT REGULAR COMMISSIONING MEETINGS

Once the Commissioning Team (Cx Team) has been formed, regular Commissioning Meetings are held. These meetings vary in frequency based upon the activity level at the time, but will generally be held monthly and will be coordinated to coincide with Construction Meeting days for convenience. At the Commissioning Meetings, past Commissioning Process activities are reviewed, future Commissioning Process activities are planned and coordinated, Commissioning documentation is requested and exchanged, and the Commissioning Schedule is updated and integrated into the Construction Schedule. The CxA will request all documentation necessary to develop the installation checklists, requirements for equipment start-ups, pre-functional and functional performance tests at these meetings and review the draft versions of these documents with the contractors that are responsible for implementing them. The CxA leads these meetings, records the minutes, and distributes the minutes with action items to all Cx Team members.

3.4 CONTRACTOR SUBMITTAL REVIEW

The CxA will review the Contractor submittals coincident with the Design Team and provide comments to the Design Team for inclusion with their review so a single set of review comments can be provided to the Contractors. The reviewed submittals will include commissioned equipment and coordination drawings that include commissioned equipment and systems, control drawings and sequences, and interfaces and interlocks between systems. In addition, the CxA will periodically review the final Design Team comments to ensure a quality review process.

The review will focus on operations, maintenance, and commissioning related issues with the goal of ensuring the submitted equipment complies with the Owner's Project Requirements. The CxA review will NOT include a detailed review of system capacities, sizes, and other technical data that are the responsibility of the Engineer of Record. CxA submittal reviews will frequently request additional information from the Contractors, including specific operations and maintenance data, performance curves, and targeted coordination drawings for areas of concern.

3.5 MAINTAIN ISSUES LOGS

Throughout the Construction Process, the CxA will maintain a Commissioning Issues Log. This log will document all Construction Phase issues that identifies the following fields.

A. The responsible party, either Construction Team member, Design Team member, or Owner

B. The exact location of the issue (floor and room)

C. The applicable system component, i.e. lighting, ductwork, pump, etc.

D. The project impact

E. Priority

F. A reference to the Contract Documents (if applicable)

G. A detailed description of the issue

H. A status, i.e. complete, incomplete, accepted, unverifiable

The issues log will be available online and reviewed at each Commissioning Meeting and each issue will be tracked by the CxA.

3.6 CONSTRUCTION CHECKLISTS

The Contractors will be responsible for completing documentation related to the installation, start-up, and testing of all commissioned equipment and systems.

The CxA will develop the installation checklists and will be available online to the Construction Team. The Construction Team will be responsible for completing the installation checklists for 100% of the commissioned systems and equipment. The checklists will include best practices related to the specific equipment or system, highlights of required installation details from the drawings and specifications, and equipment manufacturer, model number, serial number, and capacity verification information.

These checklists will be reviewed at every commissioning meeting with the expectation that checklists will be completed as the work progresses.

The CxA will use sampling strategies to field verify the proper completion of the checklists with sampling rates determined based upon the success of the verification process, the quantity of each type of equipment, and the relative importance of the equipment's operation related to the overall building operation.

The Functional Testing of the equipment and systems will not be scheduled until all relevant Installation Checklists are submitted to the Commissioning Agent.

3.7 PRE-FUNCTIONAL CHECKLISTS

In order to verify that the systems and equipment are ready for final Functional Testing witnessed by the CxA, the Contractor will perform Pre-Functional Testing independent of the CxA. Pre-Functional Testing shall consist of performing the complete Functional Testing (described below) with tests provided by the CxA. Through this process, the Contractor will validate the test procedure and provide a marked-up version of the test complete with results. Once a completed test is provided indicating successful operation of the system, the CxA will schedule the Functional Testing as described below.

3.8 SITE OBSERVATIONS

Periodically throughout the Construction process, the CxA will perform site visits to observe component and systems installations. These visits will be planned to coincide with selected planning and job-site meetings, installation milestones, component and assembly mock-ups, and equipment and system start-ups. A field report will be provided at the conclusion of each visit documenting the tasks accomplished during the visit.

3.9 FUNCTIONAL TESTING

The performance of the testing of all commissioned equipment and systems is the responsibility of the Contractors. The CxA will develop the functional performance tests with the assistance of the installing contractors, and upon the successful completion of Pre-Functional Testing as described above, will coordinate the testing process, and witness the tests that are performed by the Contractors. The CxA will coordinate the retesting of equipment to verify satisfactory performance is achieved.

The functional performance testing will include operating the systems and components through each of the written sequences of operation, other significant modes and miscellaneous alarms, power failure, and security alarm when impacted by and interlocked with commissioned equipment. Sensors and actuators shall be calibrated during construction check listing by the installing contractors and spot checked by the CxA during functional testing. Tests on HVAC equipment shall be done, if possible, in their proper operating season (cooling in summer, heating in winter). Any equipment that operates in both seasons, such as the heat pumps, should ideally be tested in both seasons. However, if this is not possible, some manipulation of setpoints and control points will be done to simulate the necessary conditions. Functional testing will be done using conventional manual methods and control system trend logs as required to provide a high level of confidence in proper system function, as deemed appropriate by the CxA and the Owner. A report will be provided that includes all of the issues identified during the testing process.

As a component of the test procedures, the CxA will identify specific system trends to be set up and then analyze the trend and monitoring data as a method of verifying performance.

3.10 TRAINING AND O&M REVIEW

Planning for the training of the Owner's operations and maintenance staff begins in the design phase with the development of training requirements.

The Owner's operations and maintenance staff will commence training sessions during the construction phase through a combination of formal and informal training activities. Although the informal training sessions, such a project walkthroughs or submittal reviews, will take place throughout the construction process, the formal training program should not be initiated until the successful completion of functional testing to ensure that the operations and maintenance personnel receive accurate training and are able to witness the systems operating properly during the training.

The CxA will verify the Contractor-provided training of the Owner's operating personnel. The training agendas, attendance logs, and materials will be reviewed by the CxA and any additional or supplemental training required for the Owner's operating personnel to properly and efficiently operate the building will be highlighted to the Owner by the CxA.

The CxA may attend select training sessions to participate, document, monitor, and provide quality control. If required, the sessions may be video recorded by the Contractors or Owner without CxA involvement or coordination of the recording.

The CxA will review the commissioned systems and equipment sections of the Operations and Maintenance (O&M) manuals prepared by the Contractors. Comments will be provided to the Design Team to allow one submittal review to be sent to the Contractor. The Contractor is to have the O&M manuals ready and available for use in the training process.

PART 4 - **OCCUPANCY AND OPERATIONS PHASE**

4.1 FINAL COMMISSIONING PROCESS REPORT

At the completion of the Commissioning Process, the CxA will provide a final report based on the framework of the Commissioning Plan. An Executive Summary will be included that provides a summary of the participants and their roles, a brief building description, an overview of the commissioning and testing scope, and a general description of testing and verification methods.

The final report will specifically identify all outstanding non-compliance issues, recommendations for improvement to equipment or operations, future actions required, and recommended changes to the Commissioning Process. In addition, the Report shall include a final issues log with all issues identified through the Commissioning Process, progress and field reports, submittal and O&M manual reviews, training record, test schedules, construction checklists, start-up reports, functional tests, and trend log analysis.

4.2 SEASONAL TESTING

Any equipment or system that cannot be adequately tested at the time of the initial testing due to seasonal operating issues will be retested in their primary operating season. Whenever possible, systems will be tested under load to verify system capacity and function.

4.3 WARRANTY REVIEW

The CxA will return to the site approximately10 months into the 12 month warranty period and review with facility staff the current building operation and condition of outstanding issues related to the original and seasonal commissioning. Any issues that may come under warranty or under the original construction contract will be identified. The CxA is not responsible for correcting or tracking deficiencies identified during the warranty review.

4.4 HIGH PERFORMANCE BUILDING RATING SYSTEMS (IF APPLICABLE)

In addition to the reports described above, all paperwork required to satisfy the High Performance Building Commissioning Requirements and/or of LEED EA Prerequisite 1, Fundamental Building Systems Commissioning and EA Credit 3, Enhanced Commissioning will be provided. This includes submittal paperwork and any work required for audits of these points.

Commissioning Plan Overview

1 COMMISSIONING PLAN OVERVIEW

1.1 General

The Commissioning Plan is a tool developed by the CxA to clearly define the processes and procedures required for a successful commissioning process. It is continually updated throughout the project and becomes the basis of the final commissioning report when complete.

1.2 Abbreviations and Definitions

The following are common abbreviations used in this document.

A/E	Architecture and Engineering Design Team	FPT	Functional Performance Test
CxA	Commissioning Authority	GC	General Contractor
CC	Controls Contractor	MC	Mechanical Contractor
CM	Construction Manager	PC	Plumbing Contractor
Cx	Commissioning	PM	Project Manager
Cx Plan	Commissioning Plan Document	Subs	Subcontractors to the CM
EC	Electrical Contractor	TAB	Test, Adjust, and Balance Contractor
FIF	Field Inspection Form	CIL	Commissioning Issues Log
OPR	Owner's Project Requirements	BOD	Basis of Design
ATC	Automatic Temperature Controls Contractor		

2 COMMISSIONING PROCESS DESCRIPTION

Commissioning is a systematic process designed to ensure that the building and its systems function properly to meet the Owner's requirements. This is typically achieved by applying quality control principles to all aspects of the project, from pre-design through the first year of occupancy and includes design reviews, inspections, equipment and systems testing, and training. The commissioning process is defined by several different organizations, the generally accepted best practice is ASHRAE Guideline 0-2005, *The Commissioning Process*. This guideline, available at www.ashrae.org, provides the foundation for building commissioning by defining the general process to be followed for the commissioning of all building systems.

The primary objectives of this Commissioning Process are:

1. Confirm and document that this facility fulfills the functional and performance requirements of the Owner, occupants, and operators.
2. Document the Owner's criteria for system function, performance, and maintainability; verify and document compliance with these criteria throughout design construction, start-up and the initial period of operation.
3. Ensure that complete operation and maintenance (O&M) manuals, as well as training on system operation, are provided to the building operators to allow the building to operate as intended.
4. Develop and coordinate the execution of a testing plan which will include observing and documenting performance of all commissioned systems to ensure they are functioning in accordance with the Owner's objectives and the contract documents.

3 BUILDING DESCRIPTION

Project Name	Central Middle School
Project Address	9 Indian Rock Ln, Greenwich, CT 06830
Building Type	Public School Grades 6, 7 & 8
Project Square Footage	~124,000 GSF
Owner	Town of Greenwich, CT

4 CONSTRUCTION PHASE

4.1 Overview

Through the Construction Phase of the project, it is the responsibility of the CxA to coordinate and direct the Commissioning Process activities in a logical, sequential, and efficient manner using protocols and forms, centralized documentation, clear and regular communications and consultations with all necessary parties.

4.3 Conduct Commissioning Meetings

Once the Commissioning Team (Cx Team) has been formed, Commissioning Meetings will be held as required. These meetings vary in frequency based upon the activity level at the time, but generally are coordinated to coincide with Construction Meeting days for convenience. At the Commissioning Meetings, past Commissioning Process activities are reviewed, future Commissioning Process activities are planned and coordinated, Commissioning documentation is requested and exchanged, and the Commissioning Schedule is updated and integrated into the Construction Schedule. The CxA will request all documentation necessary to develop the installation checklists, contractor start-up checklists, and the functional performance tests at these meetings and review the draft versions of these documents with the contractors that are responsible for implementing them. The CxA leads these meetings, records the minutes, and distributes the minutes with action items to all Cx Team members.

The CxA reserves the right to modify the schedule periodically as needed to accommodate the commissioning activities and the construction schedule.

4.4 Contractor Submittal Review

The CxA will review the Contractor submittals coincident with the Design Team and provide comments to the Design Team for inclusion with their review so a single set of review comments can be provided to the Contractors. The reviewed submittals will include commissioned equipment identified in Appendix A and coordination drawings that include commissioned equipment and systems, control drawings and sequences, and interfaces and interlocks between systems. In addition, the CxA will periodically review the final Design Team comments to ensure a quality review process.

The review will focus on operations, maintenance, and commissioning related issues with the goal of ensuring the submitted equipment complies with the Owner's Project Requirements. The CxA review will NOT include a detailed review of system capacities, sizes, and other technical data that are the responsibility of the Engineer of Record. CxA submittal reviews will frequently request additional information from the Contractors, including specific operations and maintenance data, performance curves, and targeted coordination drawings for areas of concern.

4.5 Maintain Issues Logs

Throughout the Construction Process, the CxA will maintain an on-line Commissioning Issues Log. Members of the Cx team will be assigned a username and password to access the on-line system. As issues are identified, the responsible party will be able to log into the system and update the project team on the status and/or resolution of their incomplete issues. Once an item has been identified by the team member as complete, it will change to a pending status to alert the CxA that an item is ready for field verification. Each issue will be tracked by the CxA.

This log will document all Construction Phase issues through a sortable database that identifies the following fields.

1. The responsible party, either Construction Team member, Design Team member, or Owner
2. The exact location of the issue (floor and room)

3. The applicable system component, i.e. lighting, a specific piece of equipment, or a system
4. A detailed description of the issue
5. A status, i.e. complete, incomplete, accepted, unverifiable

The issues log will be continually updated and also reviewed at each Commissioning Meeting.

4.6 Installation Checklists

The Contractors will be responsible for completing documentation related to the installation, start-up, and testing of all commissioned equipment and systems. This documentation will be available online.

The CxA will develop the installation checklists and provide them to the Construction Team. The Construction Team will be responsible for completing the installation checklists for 100% of the commissioned systems and equipment. The checklists will include best practices related to the specific equipment or system, highlights of required installation details from the drawings and specifications, and equipment manufacturer, model number, serial number, and capacity verification information.

These checklists will be reviewed at every commissioning meeting with the expectation that checklists will be completed as the work progresses.

The CxA will use sampling strategies to field verify the proper completion of the checklists with sampling rates determined based upon the success of the verification process, the quantity of each type of equipment, and the relative importance of the equipment's operation related to the overall building operation.

The Functional Testing of the equipment and systems will not be scheduled until all relevant Installation/Prefunctional Checklists are submitted to the Commissioning Agent.

4.7 Prefunctional Checklists and Tests

The Contractors will be responsible for completing documentation related to the installation, start-up, and testing of all commissioned equipment and systems.

The Functional Testing of the equipment and systems will not be scheduled until all relevant Prefunctional Tests are submitted to the Commissioning Agent.

4.8 Site Observations

During the Construction process, the CxA will perform site visits to observe component and systems installations. These visits will be strategically planned to coincide with selected planning and job-site meetings, installation milestones, component and assembly mock-ups, and equipment and system start-ups. The CxA will use these site visits to verify the proper completion of installation and start-up checklists through sampling, witness selected HVAC pipe and duct testing if required, review air and water systems balancing, and generally track the progress of the construction. A field report will be provided at the conclusion of each visit documenting the tasks accomplished during the visit.

4.9 Testing

The performance of all of the building's systems and equipment and the completion of the testing of the commissioned equipment and systems are the responsibility of the Contractors. The CxA will develop the functional performance tests with the assistance of the installing contractors, coordinate the testing process, and witness the tests that are performed by the Contractors. In addition, the CxA will document selected tests of commissioned equipment overseen by regulatory authorities if required. The CxA will coordinate one day of retesting of equipment until satisfactory performance is achieved. However, witnessing of follow up testing will be at the expense of the Contractor. Added expenses, including time, travel, and incidentals for retesting

of failed system tests, or for tests that cannot be performed due to contractors' lack of preparedness, attendance, or system completeness, will be charged to the Contractors through the Owner.

Prior to the CxA witnessing functional testing for any commissioned systems, the Contractor will perform and complete internal functional testing with the CxA-provided functional tests. A Statement of Readiness must be provided before scheduling the verification of the functional testing by the CxA. While the Statement of Readiness will vary for each system, at a minimum, the following documentation must be provided: Installation Checklists, Prefunctional Checklists, equipment start-up reports, approved air and water balancing reports, and completed Functional Tests. All controls, graphics, safeties, and alarms must be fully operational.

Functional performance testing will include operating the systems and components through each of the written sequences of operation, other significant modes and miscellaneous alarms, power failure, and security alarm when impacted by and interlocked with commissioned equipment. Sensors and actuators shall be calibrated during construction check listing by the installing contractors and spot checked by the CxA during functional testing. Tests on HVAC equipment shall be done, if possible, in their proper operating season (cooling in summer, heating in winter). Any equipment that operates in both seasons, such as the heat pumps, should ideally be tested in both seasons. However, if this is not possible, some manipulation of setpoints and control points will be done to simulate the necessary conditions. Functional testing will be done using conventional manual methods, control system trend logs, and stand-alone data loggers as required to provide a high level of confidence in proper system function, as deemed appropriate by the CxA and the Owner.

As a component of the test procedures, the CxA will identify specific system trends to be set up and then analyze the trend and monitoring data as a method of verifying performance.

Systems that fail a functional performance test will not be retested under the base commissioning contract, but rather this will be addressed as added scope. However, if an isolated portion of a sequence fails, this portion will be retested with a maximum for all failures combined of one day of retesting.

4.10 Training and O&M Review

Planning for the training of the Owner's operations and maintenance staff begins in the design phase with the development of a training matrix. The matrix, indicates the breadth and depth of training desired by the Owner. The information from this matrix is incorporated into the Construction Documents by the Design Team to ensure that the appropriate level of training is procured and provided.

The Owner's operations and maintenance staff will commence training sessions during the construction phase through a combination of formal and informal training activities. Although the informal training sessions, such as project walkthroughs or submittal reviews, will take place throughout the construction process, the formal training program should not be initiated until the successful completion of functional testing to ensure that the operations and maintenance personnel receive accurate training and are able to witness the systems operating properly during the training.

The CxA will oversee and verify the Contractor-provided training of the Owner's operating personnel. The training agendas, attendance logs, and materials will be documented by the CxA and any additional or supplemental training required for the Owner's operating personnel to properly and efficiently operate the building will be highlighted to the Owner by the CxA.

The CxA will verify operating personnel training. The sessions will be video recorded (if required) by the Contractors or Owner without CxA involvement or coordination of the recording.

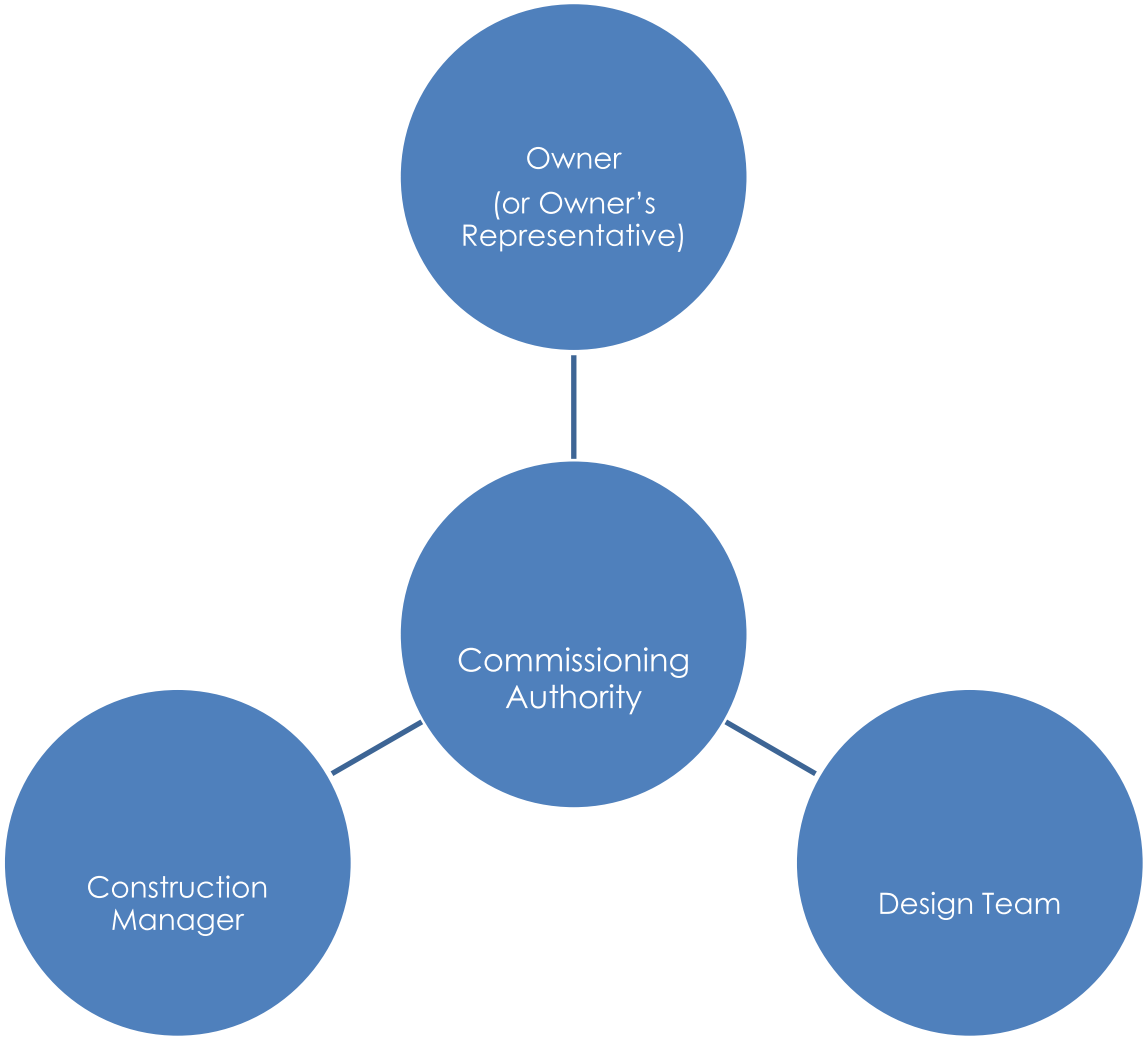
The CxA will review and verify the commissioned systems and equipment sections of the Operations and Maintenance (O&M) manuals prepared by the Contractors. Comments will be provided to the Design Team to allow one submittal review to be sent to the Contractor. The Contractor is to have the O&M manuals ready and available for use in the training process.

5 OCCUPANCY AND OPERATIONS PHASE

5.1 Final Commissioning Process Report

At the completion of the Commissioning Process, the CxA will provide a final report based on the framework of this Commissioning Plan. An Executive Summary will be included that provides a summary of the participants and their roles, a brief building description, an overview of the commissioning and testing scope, and a general description of testing and verification methods. Included with the summary will be a matrix that provides the disposition of the CxA regarding the adequacy of the commissioned equipment and system in the following five areas: equipment meeting the equipment specifications, equipment installation, functional performance and efficiency, equipment documentation, and operator training.

The final report will specifically identify all outstanding non-compliance issues, recommendations for improvement to equipment or operations, future actions required, and recommended changes to the Commissioning Process. In addition, the Report shall include a final issues log with all issues identified through the Commissioning Process, field reports, submittal and O&M manual reviews, training record, construction checklists, and functional tests.



5.2 Seasonal Testing

Any equipment or system that cannot be adequately tested at the time of the initial testing due to seasonal operating issues will be retested in its primary operating season. Whenever possible, systems will be tested under load to verify system capacity and function.

5.3 Warranty Review

The CxA will schedule a warranty review site visit approximately 10 months into the 12 month warranty period and review with facility staff the current building operation and condition of outstanding issues related to the original and seasonal commissioning. Any issues that may come under warranty or under the original construction contract will be identified and the CxA will assist the facility staff in requests for services to remedy outstanding problems. The CxA is not responsible for correcting deficiencies.

6 COMMUNICATIONS STRUCTURE

In general, the CxA communicates directly with the Construction Manager for issues related to construction deficiencies and scheduling of Cx activities and the Design Team for issues related to design. The Owner, or Owner's representative, is kept informed and consulted for decisions as necessary on all Cx issues and activities. In addition, the CxA has informal conversations with subcontractors in the field to discuss construction issues and related Cx activities. The CxA does not, under any circumstances, provide direction to subcontractors other than through the Construction Manager.

7 ROLES AND RESPONSIBILITIES

Understanding and defining the roles of each participant is vital to the success of the Commissioning Process. This section provides an outline of the responsibilities of each participant in the Commissioning Process. These responsibilities are typically formalized in the contracts between the Owner and the various parties and this section is not intended to supersede or negate any contracted relationships.

7.1 Owner (or Designated Representative)

- Include the design professionals' Commissioning related responsibilities and scope of work in the design request for proposal and contract.
- Oversee the development of the Owner's Project Requirements and approve any changes.
- Designate a representative, ideally from the building's operations and maintenance team, to participate in the Commissioning Process including
    - Design Phase coordination meetings
    - Construction Phase coordination meetings
    - Informal owner-training as equipment is installed and started
    - Maintenance orientation and inspections
    - System testing and verification meetings
    - Functional procedure review meetings before testing of systems
    - Training sessions
    - Verification demonstrations
    - Systems and assemblies tests
    - Final review at acceptance meeting
- Review and approve any changes made to the Owner's Project Requirements
- Review and approve the Construction Documents
- Review, comment on, and accept the Commissioning Authority's progress and final reports

7.2 Commissioning Authority

The Commissioning Authority is responsible to verify that the Owner's Project Requirements for the project are satisfactorily achieved. The CxA is comprised of building commissioning experts who maintain a broad understanding of all aspects of building construction, maintenance, and operations. Specific tasks performed by the CxA include:

Construction Phase

1. Perform the tasks and functions to be incorporated in the specifications ascribed to the CxA.
2. Coordinate and direct the commissioning activities in a logical, sequential and efficient manner using consistent protocols and forms, centralized documentation, clear and regular communications and consultations with all necessary parties. Frequently updated timelines and schedules and technical expertise.
3. Coordinate the commissioning work with the contractor, architect and Owner's representatives to ensure that commissioning activities are being scheduled into the master schedule.
4. Revise the construction phase commissioning plan developed during the design phase as required to include refined scope and schedule.
5. Plan and conduct commissioning meetings and distribute minutes.
6. Request and review information required to perform commissioning tasks, including O&M materials, contractor start-up and checkout procedures. Before start-up, gather and review current control sequence and interlocks. Work with the architect so that the CxA/A/E comments are combined into one review submitted to the contractor.

7. Review coordination drawings to ensure that trades are making a reasonable effort to coordinate work. Coordinate submittal review with the architect so that the CxA/A/E comments are combined into one review submitted to the contractor.
8. Write and distribute construction checklists for commissioned systems and equipment.
9. Perform site visits to observe component and system installations. Attend selected planning and job-site meetings to obtain information on construction progress. Review construction meeting minutes for revisions/substitutions relating to the commissioning process. Assist in resolving any discrepancies.
10. Provide construction checklists for equipment/systems within the scope of work to the contractors.
11. Document construction checklist completion by reviewing completed checklists and by site observation.
12. Document system start-up by reviewing start-up reports and by select site observations.
13. Verify air and water systems balancing which may include spot testing, by reviewing completed reports, and by select site observation. Coordinate submittal review with the architect so that the CxA/A/E comments are combined into one review submitted to the contractor.
14. With assistance and review from the installing contractor, CxA will write functional performance test procedures for equipment and systems. This will include manual functional testing, energy management control system trending and may include stand-alone data-logging monitoring.
15. Analyze functional performance trend logs and monitoring data to verify performance.
16. Coordinate, witness and document manual functional performance tests performed by installing contractors.
17. Tests on respective HVAC equipment shall be executed, if possible, during both the heating and cooling seasons. However, some overwriting of control values to simulate conditions shall be allowed. Functional testing shall be done using conventional manual methods, control system trend logs, and read-outs or stand-alone data loggers, to provide a high level of confidence in proper system function, as deemed appropriate by the CxA and the Owner.
18. Prepare test plans for, assist with execution of, and document tests of commissioned equipment requiring oversight by regulatory authorities and ensure that such tests meet the testing rigor desired by the Owner.
19. Maintain a master issues log. Report all issues as they occur directly to the Owner's representative and the architect. Provide directly to the Owner's representative and the architect written progress reports and test results with recommended actions.
20. Oversee and verify the training plans to be implemented by the contractors for training of the Owner's operating personnel.
21. Compile a Commissioning Record.
22. Comply with the requirements of any applicable green-building rating systems (i.e. LEED, High Performance Buildings, Green Guide for Healthcare, etc.).

Warranty Period

1. Coordinate and supervise required opposite season or deferred testing and deficiency corrections.
2. Schedule a remote meeting approximately 10 months warranty period and review with facility staff the current building operation and the condition of outstanding issues related to the original and seasonal commissioning. Also interview facility staff and identify problems or concerns they have with operating the building as originally intended. Make suggestions for improvements and for recording these changes in the O&M manuals.
3. Identify areas that may come under warranty or under the original construction contract. Assist facility staff in requesting service to remedy outstanding problems. The CxA is not responsible for correcting deficiencies.

7.3 Construction Manager

The Construction Manager provides management, technical, and administrative expertise during the Construction phase to ensure the building Owner's goals relating to schedule and quality are met. The Construction Manager's responsibilities related to the Commissioning Process typically include:

- Include any costs for Commissioning Process activities in the contract price.
- Coordinate and include all Cx-related milestones into the overall construction schedule.
- Include Commissioning Process requirements and activities in all contractors' contracts.
- Ensure that sub or trade contractors execute their commissioning responsibilities according to the project specifications and Cx Plan.
- Ensure necessary accessibility to all equipment to allow for proper operation and maintenance of the building.
- Provide individuals with the required background and authority to implement the Commissioning Process activities as outlined in the Contract Documents.
- Issue a statement at the end of the project certifying that all work has been completed in accordance with the Contract Documents and the facility is operational.
- Respond to Commissioning Process reports and correct deficiencies identified during installation verification or functional testing.
- Review and comment on the final Cx Report.

7.4 Contractors

Many different contractors are involved in the Commissioning Process. The various contractors may include the building contractors (general, mechanical, plumbing, and electrical), the testing, adjusting, and balancing contractor, the building automation system (ATC) contractor and others as required by the contract documents. As a member of the Commissioning Team, the responsibilities of the various building contractors include:

- Include any costs for Commissioning Process activities in the contract price.
- Include Commissioning Process requirements and activities in all subcontracts or equipment purchases.
- Ensure the cooperation and participation of all subcontractors and manufacturers of equipment or systems to be commissioned.
- Attend Commissioning Team meetings.
- Include Cx-related milestones in the construction schedule.
- Implement the training program as described in the Contract Documents. Coordinate related activities with the CxA.
- Provide submittals to the Owner, Design Team, and CxA as detailed in the Contract Documents.

- Complete the Construction Checklists as the work is completed. Provide completed copies to the CxA at regular intervals for verification.
- Complete Pre-functional tests for all systems and equipment.
- Notify the CxA when systems and assemblies are ready for installation verification and testing. For repetitive assemblies, notify the CxA upon the completion of the prototype for a First Piece or Mock-Up review.
- Demonstrate the performance of assemblies and operate systems as required to fulfill the requirements of the Functional Test Procedures detailed in the Commissioning Plan and the Contract Documents.
- Maintain the Project Record Documents in accordance with the requirements of the Contract Documents.

7.5 **Manufacturers**

The suppliers of major equipment are required to support the Commissioning Team in the following manner:

- Provide all information required for the proper Start-up and Operation and Maintenance of the system or assembly in the initial submittal, as detailed in the Contract Documents.
- Provide the requirements to maintain the warranty in the initial submittal, as detailed in the Contract Documents.
- Coordinate and provide results of all factory tests required in the Contract Documents.
- Participate in the training process as detailed in the Contract Documents.
- Demonstrate the performance of assemblies and operate systems as required to fulfill the requirements of the Functional Test Procedures detailed in the Commissioning Plan and the Contract Documents.
- Confirm all packaged controls are functioning as designed and that interlocks and communications to the Building Management System are fully functional.

7.6 **Operations and Maintenance Staff**

The Operations and Maintenance staff will participate in the Commissioning Process in the following areas:

- Define Operations and Maintenance related requirements of the building.
- Participate in design review for O&M impacts.
- Review maintenance manual, record drawings and documentation requirements developed by the Design Team.
- Define training program requirements.
- Participate in/witness functional performance testing.
- Attend contractor and vendor training sessions.

APPENDIX A Commissioned Systems

Commissioned Systems

System or Equipment	Submittal Review	Installation Checklist	Functional Test
HVAC/Mechanical			
Air Handling Units	x	x	x
Humidifiers	x	x	x
Fans	x	x	x
Demand Control Ventilators	x	x	x
Variable Air Volume Terminal Units	x	x	x
Lab Terminal Units	x	x	x
Chiller	x	x	x
Cooling Tower	x	x	x
Boiler	x	x	x
Pumps	x	x	x
Heat Exchangers	x	x	x
Pressure Reducing Valves		x	x
Energy Recover Ventilators	x	x	x
Refrigeration Systems	x	x	x
Ductless Split Air Conditioning Systems	x	x	x
Unit Heaters & Cabinet Unit Heaters	x	x	x
Building Management System	x		x
Electrical			
Emergency Generator		x	x
Automatic Transfer Switch			x
Lighting & Daylighting Controls	x	x	x

Plumbing			
Domestic Hot Water System	x	x	x
Piping		x	
Sanitary Waste Piping		x	
Storm Drainage		x	
Plumbing Fixtures		x	x
Envelope			
Roof		x	x
Walls		x	x
Windows	x	x	x
Doors	x	x	x

Note 1: Testing will be done by witnessing with approving authority and/or reviewing approving authority's report.

APPENDIX B Commissioning Milestone Schedule

Commissioning Milestone Schedule

The following Commissioning Process activities and milestones are to be integrated into the overall project schedules maintained either by the Design Team or the Construction Manager, depending on the phase of the project.

Milestone	Date	Status
Design Phase		
Design Review	FEB 2024	Underway
Develop Cx Plan	MAR 2024	Closed
Submittal Review	OCT 2024	Open
Construction Phase		
Develop construction checklists	JAN 2025	Open
Begin site visits to observe component and system installations	JUN 2025	Open
Review Controls submittal	JUL 2025	Open
Develop functional performance test procedures	AUG 2025	Open
Update Construction Phase Cx Plan	AUG 2025	Open
System fill and flush	MAR 2026	Open
DDC programming	MAR 2026	Open
Major Equipment Factory Startup	APR 2026	Open
Testing and balancing tasks	APR 2026	Open
Contractor performs preliminary Functional Tests	MAY 2026	Open
Contractors provide Statement of Readiness	MAY 2026	Open
CxA witnesses and documents Functional Tests	JUN 2026	Open
Operation and Maintenance Manual review	JUL 2026	Open
Training: Colliers & Daiken on site	JUL 2026	Open
Final Commissioning Process Report	AUG 2026	Open
Warranty Period		
Deferred seasonal testing	NOV 2026	Open
Near End of Warranty Review (One remote Meeting)	MAR 2027	Open

APPENDIX C Submittal Review Forms

This Page Intentionally Left Blank

Submittal Review Forms will be added in the Construction Phase Cx Plan

APPENDIX D Installation Checklists

This Page Intentionally Left Blank

Installation Checklists will be added in the Construction Phase Cx Plan

APPENDIX E Functional Performance Tests

This Page Intentionally Left Blank

Functional Performance Tests will be added in the Construction Phase Cx Plan

APPENDIX F Sample Training Plan (may be used by contractors)

Project Name

Project Training Plan – General Scope and Responsible Parties

Equipment/System	Spec Section	Total Hours (if spec'd)	Scope Code[1]	Trainee Type[2] (list no. of each)	Primary Responsible Contractor	Trainers' Company	Agenda Rec'd?	Planned Training Date(s)

[1]General Scope Codes: (Refer to the Training Agendas for the specific equipment for additional details.)

A Provide an overview of the purpose and operation of this equipment, including required interactions of trainees with the equipment.

B At an intermediate level, provide technical information regarding the purpose, operation and maintenance of this equipment, expecting that serious malfunctions will be addressed by factory representatives.

C At a very technical level, provide information regarding the purpose, operation, troubleshooting and maintenance of this equipment, expecting that almost all operation, service and repair will be provided by the trainees.

[2]Trainee Types:

FM = Facility Manager
FE = Facility Engineer
FT = Facility Technician/Maintenance
PM = Project Manager
U = Users/Occupants
O = Other

Owner Approval:

_____ _____

Owner Date

Commissioning Agent Approval:

_____ _____

SECTION 023000 - SUBSURFACE INVESTIGATIONS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes

1. Pipe and utility subsurface investigations, test pits, which are required in order to properly locate, plan for and/or connect to the various existing pipelines.

B. Related Sections

1. Section 312300 - Excavation, Backfill, Compaction and Dewatering

1.2 REFERENCES

A. 29 CFR Part 1926 Subpart P - OSHA Excavation Regulations 1926.560 through 1926.562 including Appendices A through F.

1.3 PIPELINE AND UTILITY INVESTIGATIONS

A. The Drawings show available data relative to existing underground pipe and utilities.

B. During the course of the Work, excavate to locate various existing pipelines and utilities, where they are involved in the Work.

PART 2 PRODUCTS – NOT USED

PART 3 EXECUTION

3.1 TEST PITS

A. Excavate test pits as indicated, or as requested by the Owner. Expose the top of the pipeline, and adjacent utilities, at each test pit location.

B. Perform test pits in accordance with the requirements of Section 31 2333, Trenching and Backfilling. Excavate the bottom 2 feet of the test pit by hand. Excavate to top of pipeline by hand. Test pits shall be braced, sheeted, and dewatered or as otherwise required for safe excavation and examination of the structure or utility to be exposed.

C. Measure the depth to the top of the pipeline, as well as to adjacent utilities, from the ground surface, at each test pit location. Record location, depth and size of pipelines and utilities uncovered during the test pits.

D. Prior to test pitting operations, delineate the general scope of the excavation or boring on the paved surface of the ground using white paint, or stakes or other suitable white markings on non-paved surfaces and coordinate with the appropriate agencies in accordance state regulations. Pre-marking will not be acceptable if such marks can interfere with traffic or pedestrian control or are misleading to the general public. Pre-marking will not be required of any continuous excavation that is over 500 feet in length

E. Excavate test pits of an appropriate size with equipment suitable for the location and character of the pit to be excavated.

F. All subsurface investigations shall be conducted in accordance 29 CFR Part 1926 Subpart P - OSHA Excavation Regulations 1926.650 through 1926.652 including Appendices A through F.

G. After examination by the Engineer, backfill and compact the test pits in accordance with Section 312300.

H. Repair paved surfaces in accordance with Landscape Architect Specification.

I. Repair lawn areas or grass surfaces in accordance with Landscape Architect Specification

END OF SECTION 023000

SECTION 02 4100 - DEMOLITION

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Building demolition excluding removal of hazardous materials and toxic substances.

B. Abandonment and removal of existing utilities and utility structures.

1.2 RELATED REQUIREMENTS

A. Section 01 1000 - Summary: Limitations on Contractor's use of site and premises.

B. Section 01 1000 - Summary: Description of items to be salvaged or removed for re-use by Contractor.

C. Section 01 3566.42 - Sustainability Compliance Procedures.

D. Section 01 5000 - Temporary Facilities and Controls: Site fences, security, protective barriers, and waste removal.

E. Section 015639 - Temporary Tree and Plant Protection: Pruning of existing trees to remain.

F. Section 01 6000 - Product Requirements: Handling and storage of items removed for salvage and relocation.

G. Section 01 7000 - Execution and Closeout Requirements: Project conditions; protection of bench marks, survey control points, and existing construction to remain; reinstallation of removed products; temporary bracing and shoring.

H. Section 01 7419 - Construction Waste Management and Disposal: Limitations on disposal of removed materials; requirements for recycling.

1.3 DEFINITIONS

A. Demolition: Dismantle, raze, destroy or wreck any building or structure or any part thereof.

B. Remove: Detach or dismantle items from existing construction and dispose of them off site, unless items are indicated to be salvaged or reinstalled.

C. Remove and Salvage: Detach or dismantle items from existing construction in a manner to prevent damage. Clean, package, label and deliver salvaged items to Owner in ready-for-reuse condition.

D. Remove and Reinstall: Detach or dismantle items from existing construction in a manner to prevent damage. Clean and prepare for reuse and reinstall where indicated.

E. Existing to Remain: Designation for existing items that are not to be removed and that are not otherwise indicated to be salvaged or reinstalled.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Site Plan: Indicate:
   1. Vegetation to be protected.
   2. Areas for temporary construction and field offices.

C. Demolition Plan: Submit demolition plan as required by OSHA and local AHJs.
   1. Indicate extent of demolition, removal sequencing, bracing and shoring, and location and construction of barricades and fences.
   2. Demolition firm qualifications.

D. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Reports for Credit d5: Waste Disposal Reports tracking recycling and /or salvage of demolition debris, in accordance with Section 01 7419.

E. Project Record Documents: Accurately record actual locations of capped and active utilities and subsurface construction.

1.5 QUALITY ASSURANCE

A. Demolition Firm Qualifications: Company specializing in the type of work required.

PART 2 PRODUCTS -- NOT USED

PART 3 EXECUTION

3.1 DEMOLITION

A. Remove the entire building existing on the project site.

B. Remove all paving and curbs within site boundaries.

C. Remove other items indicated, for salvage, relocation, and recycling.

D. Fill excavations, open pits, and holes in ground areas generated as result of removals, using specified fill; compact fill as required so that required rough grade elevations do not subside within one year after completion.

3.2 GENERAL PROCEDURES AND PROJECT CONDITIONS

A. Comply with requirements in Section 01 7000.

B. Comply with applicable codes and regulations for demolition operations and safety of adjacent structures and the public.
   1. Obtain required permits.

2. Take precautions to prevent catastrophic or uncontrolled collapse of structures to be removed; do not allow worker or public access within range of potential collapse of unstable structures.
3. Provide, erect, and maintain temporary barriers and security devices.
4. Conduct operations to minimize effects on and interference with adjacent structures and occupants.
5. Do not close or obstruct roadways or sidewalks without permits from authority having jurisdiction.
6. Conduct operations to minimize obstruction of public and private entrances and exits. Do not obstruct required exits at any time. Protect persons using entrances and exits from removal operations.
7. Obtain written permission from owners of adjacent properties when demolition equipment will traverse, infringe upon, or limit access to their property.

C. Do not begin removal until receipt of notification to proceed from Owner.

D. Do not begin removal until built elements to be salvaged or relocated have been removed.

E. Do not begin removal until vegetation to be relocated has been removed and vegetation to remain has been protected from damage.

F. Protect existing structures and other elements to remain in place and not removed.
1. Provide bracing and shoring.
2. Prevent movement or settlement of adjacent structures.
3. Stop work immediately if adjacent structures appear to be in danger.

G. Minimize production of dust due to demolition operations. Do not use water if that will result in ice, flooding, sedimentation of public waterways or storm sewers, or other pollution.

H. Hazardous Materials:
1. If hazardous materials are discovered during removal operations, stop work and notify Architect and Owner; hazardous materials include regulated asbestos containing materials, lead, PCBs, and mercury.

I. Perform demolition in a manner that maximizes salvage and recycling of materials.
1. Comply with requirements of Section 01 7419 - Construction Waste Management and Disposal.
2. Dismantle existing construction and separate materials.
3. Set aside reusable, recyclable, and salvageable materials; store and deliver to collection point or point of reuse.

3.3 EXISTING UTILITIES

A. Coordinate work with utility companies. Notify utilities before starting work, comply with their requirements, and obtain required permits.

B. Protect existing utilities to remain from damage.

C. Do not disrupt public utilities without permit from authority having jurisdiction.

D. Do not close, shut off, or disrupt existing life safety systems that are in use without at least 7 days prior written notification to Owner.

E. Do not close, shut off, or disrupt existing utility branches or take-offs that are in use without at least 3 days prior written notification to Owner.

F. Locate and mark utilities to remain; mark using highly visible tags or flags, with identification of utility type; protect from damage due to subsequent construction, using substantial barricades if necessary.

G. Remove exposed piping, valves, meters, equipment, supports, and foundations of disconnected and abandoned utilities.

H. Prepare building demolition areas by disconnecting and capping utilities outside the demolition zone. Identify and mark, in same manner as other utilities to remain, utilities to be reconnected.

3.4 DEBRIS AND WASTE REMOVAL

A. Remove debris, junk, and trash from site.

B. Remove materials not to be reused on site; comply with requirements of Section 01 7419 - Waste Management.

C. Leave site in clean condition, ready for subsequent work.

D. Clean up spillage and wind-blown debris from public and private lands.

END OF SECTION 02 4100

SECTION 024113 - SITE UTILITY ABANDONMENT

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the contract, including general and supplementary conditions and other Division 1 Specifications apply to this section.

1.2 SUMMARY

A. This section specifies the work to be performed by Contractor for abandonment of utilities at the Project Site. This Section includes:

1. Removal and abandonment of pipe, manholes, catch basins, conduit, duct bank, hand holes, wiring and pole bases, fixtures, poles.

2. Abandonment of above- and below-grade utilities and related facilities including but not necessarily limited to electric, tel-data, catv, conduits, utility structures, sewerage, grease traps, drainage, gas, and water, fire protection on, or serving the Project Area as shown on the Drawings or indicated herein.

B. Contractor shall coordinate work between all Subcontractors, sections, and trades required for the proper completion of the work.

C. Contractor is responsible for the health and safety of all Subcontractor workers during progress of the work.

D. Site utility removals and abandonments shall conform with the respective utility company standards to the extent required by the respective utility company.

E. All sanitary sewer abandonments shall conform with the Town of Greenwich Sewer Division requirements and the contractor shall obtain all required permits and approvals from the Town of Greenwich Sewer Division prior to any demolition, removal, or abandonment operations.

F. All water service abandonments and removals shall conform with the requirements of the Aquarion Water Company.

G. All electric and gas service abandonments and removals shall conform with Eversource Electric and Eversource Gas requirements.

H. All tel-data, cable tv, communications service abandonments and removals shall conform with Frontier Communications, Comcast and any other affected respective communications company affected by the demolition operations.

I. The contractor shall contact all affected utility companies to coordinate the timing and exact abandonments and demolition requirements prior to any demolition operations.

1.3 SUBMITTALS

A. Abandonment procedures required by the owner of each utility prior to performing the work of utility termination/cutting/capping/plugging.

B. Material specifications and shop drawings for all materials and equipment furnished under this section, prior to performing the work of utility abandonment.

C. As-built drawings showing locations of all terminated/cut/capped/plugged utilities and service disconnections at or before project close-out.

PART 2 PRODUCTS

2.1 MATERIALS

A. Comply with the material specifications required by the owner of each utility. Where such material specifications may conflict with this Specification, utility owner's requirements shall prevail.

B. Borrow Material: Conform to applicable Specifications.

C. Portland Cement: ASTM C 150, Type II.

D. Mortar Aggregate: ASTM C 144, standard masonry type, clean, dry, free of deleterious materials.

E. Concrete: Design of mix in accordance with ASTM C-94, ASTM C-150, Type II Portland Cement, washed and graded sand, and aggregate with maximum size of 1-inch; or pre-packaged concrete mix with maximum aggregate size of 1-inch, ASTM C 387. Minimum 28-day compressive strength of 4000 psi.

F. Masonry Mix: Washed and graded mason sand, lime, and Portland Cement, ASTM C 270; or pre-packaged, dry, sand/lime/cement mortar mixture, ASTM C 387. Minimum 28-day compressive strength of 1200 psi.

G. Water: Potable, free of deleterious materials.

H. Solid Concrete Masonry Unit: ASTM C55, sized per pipe diameter to minimize requirements for cutting.

PART 3 EXECUTION

3.1 GENERAL

A. Notify Call Before You Dig (CBYD) 72 hours prior to any excavation operation and obtain CBYD tracking number.

B. Notify utility owners in reasonable advance of the work and request the utility owner to stake out on the ground surface the underground facilities and structures. Notify the Engineer in writing of any refusal or failure to stake out such underground utilities after reasonable notice.

C. Contractor is solely responsible for providing coordination and obtaining permits with owners of the various utilities serving, or present at, the Project Site as required to complete termination and demolition work. Coordinate as required for termination of service, temporary termination of service, relocation of facilities, abandonment of facilities, demolition of facilities, cutting, capping, and bracing. Comply at all times with the procedures for terminations of utility services as required by the owner of each utility serving, or present at, the Project Site.

D. When utilities are encountered that are not indicated on the drawings, notify Engineer before proceeding with work in such area.

3.2 UTILITY TERMINATION

A. Terminate utilities serving the Project Site as indicated on the Drawings. Terminate, cut, cap, or plug utilities in accordance with each utility owner's requirements, including, but not necessarily limited to, scheduling of inspections by utility company personnel, permits, licenses, approvals, insurance, or bonds.

3.3 DEMOLITION

A. Do not demolish any utility until termination has been verified.

B. Remove and dispose of all overhead and underground utilities and related systems and appurtenances on the Project Site, including but not necessarily limited to water, electric, sanitary sewer, storm sewer, miscellaneous drainage, heating and cooling facilities, communications, exterior lighting supplies; utility poles, light standards, utility foundations, supports and ancillary equipment; hydrants and other similar supply facilities, valves and meters; site drainage and catch basins and related structures; sanitary sewerage piping, manholes, pumps, and related facilities; and other miscellaneous plumbing, piping and conveyances if called out on the plans.

3.4 BACKFILL

A. Replace soil material excavated for utility removal, termination, or abandonment in accordance with applicable Specifications.

1. Backfilling to grade is required with satisfactory soils.

2. Import satisfactory soils if none are available on site.

B. Provide OSHA-compliant barriers or smooth edges of all excavations to produce a stable slope, with smooth grade transitions and no vertical cuts from top of slope to lower limits of the excavation in compliance with the requirements of OSHA. Maximum slope into any excavated area under ideal soil conditions shall be 1 to 1 ½, vertical: horizontal.

3.5 PROTECTION

A. Subcontractor shall take measures to protect from damage those utilities, or portions thereof, which are designated to remain. Provide protection as required such as marking, blocking, bracing, stabilizing, supporting, and retaining.

B. Utilities to remain damaged by Subcontractor shall be repaired/replaced to the satisfaction of the utility owner at Contractor's expense.

3.6 DOCUMENTATION

A. Contractor shall provide as-built documentation for each utility termination, including location, depth, and method and material of construction for termination. Such as-built documentation shall be on the appropriate site plans.

B. Contractor shall physically mark the location of each subsurface utility termination with a surveyor's stake, with such stake identifying the utility type and depth below grade. Where the use of stakes at a utility termination location may be inappropriate, Subcontractor shall provide staking at an adjacent location(s) and include appropriate offset dimensions or other suitable demarcation.

END OF SECTION

SECTION 02 8200 – SELECTIVE HAZARDOUS BUILDING MATERIALS ABATEMENT DEMOLITION

PART 1 GENERAL

1.1 SUMMARY

A. Provide selective demolition to remove existing carpeting/multiple layers of flooring/wood/concrete and demolish multiple layers of ceilings/walls/floors /doors/windows/lighting/millwork/shelving/countertops/slop sinks/water fountains/science countertops/radiators/ventilators/piping/sinks/test tube racks/etc./elevators/shafts/lifts /showers/ceramic tiles/gymnasium flooring/ /door and window systems/lockers/concrete/ incinerators/chases/mechanical systems/wall paneling/equipment/boilers/tanks/piping/ ductwork/freezers/roofing/siding/masonry/stone/brick/ foundations/wall and ceiling systems/ raised flooring/wall materials (bulletin/chalk/white/etc. boards, mirrors), non-moveable objects, etc. as necessary to access all asbestos/PCB/other hazardous containing materials as specified herein, and as required for complete and proper abatement.

B. The hazardous building materials contractor (contractor) will be responsible for performing additional selective interior demolition throughout the original 1957 building (including tunnels, crawl spaces, basement areas and ductwork) and the 2000 addition which are scheduled for demolition. Contractor shall open walls and ceilings to check for hidden piping (as required for entire building) as well as demolishing millwork, cabinetry, sheetrock walls, all non-moveable objects, black/white/green/bulletin boards, flooring under top layer(s) of flooring, walls, chases etc. to located potential asbestos containing flooring materials and other suspect asbestos containing materials that may be hidden, buried, inaccessible. Contractor shall demolish concrete floors throughout to access buried piping that cannot be accessed from the tunnels/crawl spaces.

C. The contractor(s) will be responsible for hiring an engineer and other appropriate personnel to ensure that all required selective demolition and demolition activities are safe to perform for all personnel on site. The contractor(s) will be financially responsible for any damage that may occur to the site, on-site personnel, fines, penalties, etc. They will also be responsible for paying/reimbursing all legal fees/costs for all parties involved with the project should selective demolition or demolition activities cause injury or death to any persons on site.

D. Please note there are several layers of flooring, ceilings, walls, chases, non-moveable objects, roofing, etc. requiring demolition to access all asbestos/PCB containing or assumed materials, some of which are contaminated with asbestos and require removal and disposal as such.

E. Required permits shall be obtained by the Contractor at no additional cost to the Owner.

F. Notes: Contractor is responsible for removing all asbestos/PCB containing materials (behind walls, ceilings, windows, chases, doors, windows, concrete, non-moveable objects, etc.) in demolition areas as noted by the architect's specifications and drawings.

G. The contractor will be required to remove carpeting and other flooring, wood floors, multiple layers of wall and ceiling structures/systems, raised flooring, multiple layers of mixed flooring, non-moveable objects to gain access to the asbestos flooring and/or mastic and carpet adhesives in all areas. There may be more than one layer of flooring in some locations. All layers of floor tile, leveling materials, mastic, concrete, wood, thinset, sheet flooring, carpet adhesives, etc. are included in the base work, no extra change will be accepted. Demolition or moving typical non-movable objects by the abatement contractor is required to gain access to all flooring materials to be removed. SD sheets for chemicals to be used during the project must be submitted to the owners' representative prior to site delivery.

H. The contractor will be required to remove roofing, window and door systems, mechanical systems, wall, ceiling and floor applications/masonry and foundations and floor slabs to access all asbestos/PCB containing materials for abatement/remediation and packaging for recycling/removal/abatement and disposal.

I. Related Sections:
1. Section 02 8213 – Asbestos Abatement
2. Section 02 8313 – Lead-Based Paint Awareness
3. Section 02 8416 – Universal Waste Removal and Recycling
4. Section 02 8432 – PCBs Greater than 50 PPM Remediation
5. HBM – 01, 02 & 03 – Hazardous Building Materials Abatement Drawings

1.2 PROJECT CONDITIONS

A . Occupancy:
1. Areas of the buildings in which demolition will occur will be unoccupied during work.

B. Existing Conditions:
1. After the project is begun, the Contractor is responsible for the condition of the structures to be selectively demolished.
2. Unforeseen Conditions: Should unforeseen conditions be encountered that affect design or function of project, investigate and fully submit an accurate, detailed, written report to the office of the Consultant. While awaiting a response, reschedule operations if necessary to avoid delay of overall project.

PART 2 PRODUCTS

NOT USED.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that utilities have been disconnected and sealed.

B. Insofar as is practicable, arrange operations to reveal unknown or concealed conditions for examination and verification before removal or demolition.

C. Verify actual conditions to determine, in advance, whether removal or demolition of any element will result in structural deficiency, overloading, failure, or unplanned collapse.
   1. Demolish and remove connections to all electrical gas, and plumbing fixtures required to remove asbestos containing materials.

3.2 PREPARATION

A. Traffic: Do not obstruct walks or public ways without the written permission of governing authorities and of the Owner. Where routes are permitted to be closed, provide alternate routes if required.

B. Protection:
   1. Provide for the protection of persons passing around or through the area of demolition.
   2. Perform demolition so as to prevent damage to adjacent improvements and facilities to remain.
   3. Protect walls, floors, and other new or existing work from damage during demolition operations.

C. Damages: Without cost to the Owner and without delay, repair any damage caused to facilities to remain.

3.3 POLLUTION CONTROLS

A. Control as much as practicable the spread of dust and dirt.

B. Observe environmental regulations.

C. Do not allow water usage resulting in freezing or flooding.

D. Do not allow adjacent improvements to remain to become soiled by demolition operations.

3.4 DEMOLITION - GENERAL

A. Remove: Items indicated to be removed shall be removed by the Contractor.

B. Existing to Remain: Construction or items indicated to remain shall be protected against damage during demolition operations. Where practical, and with the Owner's permission, the Contractor may elect to remove items to a suitable storage location during demolition and then properly clean and reinstall the items.

C. Perform work in a systematic manner.

D. Demolish and remove existing construction only to the extent required, as indicated in the Contract Documents.

E. Perform selective demolition using methods that are least likely to damage work to remain and which will provide proper surfaces for patching.

F. Remove debris daily.

G. Use any methods permitted by governing regulations and the requirements of the Contract Documents.

3.5 DISPOSAL OF DEMOLISHED MATERIALS

A. Promptly dispose of materials resulting from demolition operations. Non-contaminated material (materials not containing residue asbestos, lead, PCB or other hazardous, regulated or special waste) may be disposed of as construction waste. Do not allow materials to accumulate on site.

B. All rubbish and waste material from the Work shall be neatly stacked or kept in suitable containers and removed from the premises daily. The premises shall be kept clean and in an orderly condition at all times to the satisfaction of the Owner and the Consultant.

C. Transport materials resulting from demolition operations and legally dispose of off-site.

D. Off-site disposal location shall not be within one-half mile of any portion of the project site or within sight of the project site.

E. Remove decayed, vermin-infested, or otherwise dangerous or unsuitable materials and promptly dispose of off-site.

3.6 CLEANING

A. Throughout the construction period, the Contractor shall maintain the building and site free of rubbish, debris, surplus materials, and other items not required for the Work.

B. Remove such material from the site daily to prevent accumulations.

C. Remove all construction debris from work areas, and remove all hazardous waste and asbestos waste as required by the most current federal, state, and local regulations and the requirements of the specifications.

END OF SECTION 02 8200

SECTION 02 8213 – ASBESTOS ABATEMENT

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and General Provisions of Contract, including General Supplementary Conditions and Division 1 Specifications Sections, apply to this Section.

B. Sections containing requirements related to this Section include, but are not limited to:
   1. Section 02 8200 – Selective Hazardous Building Materials Abatement Demolition
   2. Section 02 8313 – Lead-Based Paint Awareness
   3. Section 02 8416 – Universal Waste Removal and Recycling
   4. Section 02 8432 – PCBs Greater than 50 PPM Remediation
   5. HBM – 01, 02 & 03 – Hazardous Building Materials Abatement Drawings

1.2 CONSULTANT

A. The Owner shall retain Langan for the purposes of project management and monitoring during Asbestos Abatement. The Consultant will represent the Owner in all phases of the abatement project at the discretion of the Owner. The Asbestos Abatement Contractor will regard the Consultant's direction as authoritative and binding as provided herein, in matters particularly but not limited to approval of work areas, review of monitoring results, completion of the various segments of work, final completion of the abatement, submission of data, and daily field punch list items. The State of Connecticut licensed Asbestos Consultant — Project Designer is Matthew Myers (license no. 000058).

1.3 USE OF THE CONTRACT DOCUMENTS

A. It shall be incumbent upon the Contractor to visit the Site and determine what exists, its condition, and what will be required to accomplish the Work intended by the Contract Documents. No increase in the Contract Sum will be permitted as a result of the Contractor's failure to visit the Site and understand the existing conditions.

B. All work shall comply with the Contract Documents and with applicable Codes, laws, regulations, and ordinances wherever applicable. The most stringent of all the foregoing shall govern.

C. It is not intended that the Specifications show every detail of the Work, but the Contractor shall be required to furnish within the Contract Sum all material and labor necessary for the completion of the Work in accordance with the intent of the Specifications.

D. In case of ambiguity among the Contract documents, the more stringent requirement as determined by the Consultant shall prevail.

E. The Work of this Contract includes making modifications as necessary, subject to approval by Owner in consultation with the Consultant, to correct any conflicts.

F. All items, not specifically mentioned in the Specifications but implied by trade practices to complete the work, shall be included.

G. This specification and drawings cover the proper and legal removal and disposal of all asbestos-containing materials (ACM) and asbestos contaminated waste from the Central Middle School project site located in Greenwich, Connecticut. The abatement activities shall comply with all aspects of the contract documents and Federal, State and local requirements.

H. Whenever there is a conflict or overlap within these specifications and between applicable codes and regulations, the most stringent provision specified shall apply.

1.4 EXAMINATION OF THE SITE

A. It is understood that the Contractor has examined the Site and made his own estimates of the facilities and difficulties attending the execution of the Work, and has based his price thereon.

B. Except for unforeseeable concealed conditions as determined by the Consultant, the Contractor shall make no claim for additional cost due to the existing conditions at the Site.

1.5 CONTRACTOR QUALIFICATIONS

A. All bidders shall submit a record of prior experience in asbestos abatement projects, listing no less than three (3) completed jobs in the past year, with all projects of similar size and scope. The Contractor shall list the experience and training of the project foremen and all on-site personnel. The information that should be included is as follows:
   1. Project Name and Address
   2. Owner's Name and Address
   3. Architect/Consultant
   4. Contract Amount
   5. Date of Completion
   6. Extras and Changes

B. The Contractor selected must appear on the approved list of Asbestos Abatement contractors on file at the State of Connecticut Department of Public Health (CT DPH) and hold a valid license for asbestos abatement within the State of Connecticut.

C. Submit a written statement regarding whether the Contractor has ever been found out-of-compliance with federal or state asbestos and/or lead regulations pertaining to worker protection, removal, transport, or disposal.

D. The Contractor shall be responsible for obtaining all necessary or required permits from the Federal, State and local agencies having jurisdiction over this asbestos abatement project. Failure on behalf of the Contractor to obtain these permits shall not result in any extension for the timely results of completion of the work set forth in the Contract. The Contractor shall be responsible

and shall be required to pay any administrative penalties imposed on the owner for actions taken or lack thereof by the Contractor.

E. Work includes any and all selective demolition and protective measures required to access and remove ACM and maintain a safe working environment.

F. Upon completion of asbestos removal, the contractor shall provide completed, signed and notarized statements indicating that all asbestos-containing materials identified in the scope of work and project description (Section 1.08 and 1.09) were properly removed and disposed of in accordance with applicable Federal, State, and local regulations.

G. All contractors submitting a bid for this work shall visit the work site, attend a pre-bid meeting and walk-through, to be scheduled by the Owner, and be familiar with the work in its entirety. The contractors pre-meeting attendance and bid submission affirms his/her acceptance of the work, site, and building conditions as is.

H. The contractor shall be responsible for paying the utility bills for the use of power and water (unless owner agrees to supply at no cost to contractor). However, if any such temporary facilities cannot be provided, it shall be the contractor's responsibility to provide all temporary connections and hook-ups as well as obtaining permits and paying all fees for making such services available for his work as is necessary. If necessary, the Contractor shall provide temporary services as specified herein, and as required or as necessary to carry out the work. This may include such items as portable generators, water tank trucks, pumps and necessary accessories or the means and equipment and services necessary to temporarily connect to and maintain such services from adjacent utility systems. The use of portable generators will require 24 hour a day, 7 day a week continuous operation if negative air machines in containments are powered by them. This continuous operation must remain in place from the time the pre-abatement visual is completed up until clearance re-occupancy sampling results have passed. The contractor will pay the owner a $2,500 penalty should the power found to not be running the negative air machines in active abatement containments. This penalty will apply daily and the contractor is also responsible for paying all CT DPH fines that may be imposed on the contractor and owner. The contractor shall also comply with any local permits that may be required as well as local noise ordinances.

I. All Contractor personnel involved with asbestos removal work must be thoroughly familiar with the standard operating procedures of the Contractor for removal work as well as all applicable Federal and State regulations governing asbestos removal work.

J. The Supervisor and Asbestos Abatement workers shall be accredited in accordance with EPA regulation 40 CFR Part 763, subpart E, Appendix C; and CT DPH regulations as outlined in Section 19a-332a-1 through 19a-332a-16 (Standards for Asbestos Abatement), and Section 20-440-1 through 20-440-9 (Licensure and Training Requirements for Persons Engaged in Asbestos Abatement and Consulting Services).

K. The Contractor shall be aware of all conditions of the Project and is responsible for verifying quantities and locations of all Work to be performed. Failure to do so shall not relieve the Contractor of its obligation to furnish all labor and materials necessary to perform the work. Any

discrepancies noted shall be brought to the attention of the Owner and Engineer prior to bidding the project. No claims for extras shall be made during construction/abatement/demolition.

L. Work includes necessary selective demolition and protective measures required to access and remove ACM and maintain a safe working environment. Asbestos containing materials that would be impacted by selective demolition of wall, ceiling and floor cavities shall be performed within negative pressure enclosure.

M. It is the sole responsibility of the Contractor to determine what, if any patents are applicable to the Project. The Contractor will pay all royalties and/or license fees, and will defend all suits or claims for infringement of any patent rights and save the Owner, Architect, Asbestos Safety Control Monitor, Design Sub-Consultant, and Construction Manager harmless from loss, including attorney's fees, on account thereof.

N. The Contractor shall coordinate with the Consultant and maintain the project schedule.

O. The abatement contractor shall hold and document daily pre-abatement safety tool box meeting to review safe work practices and emergency communication program for the project. The abatement contractor's supervisor and the consultant's project monitor must also ensure that proper fire extinguishing equipment is present. The supervisor shall be knowledgeable in use of fire extinguishing equipment, and emergency exit plans.

1.6 TESTING LABORATORY SERVICES

A. The Contractor shall submit to the Consultant the name; address and qualifications of proposed laboratories intended to be utilized for sample analysis as required by this section and the laboratories must be approved by CT DPH.

1.7 ADDITIONAL GENERAL REQUIREMENTS

A. The Asbestos Abatement Contractor shall employ a competent Asbestos Abatement Supervisor with at least three (3) years' experience on projects of similar scope and magnitude who shall be responsible for all work involving asbestos abatement as described in the specifications and defined in applicable regulations, and have full time daily supervision of the same. The Supervisor shall be the competent person as defined by OSHA regulations.

B. The Contractor shall allow the work of this contract to be inspected if required by local, state, federal, and any other authorities having jurisdiction over such work. The Contractor shall immediately notify the Owner and Consultant and shall maintain written evidence of such inspection for review by the Owner and Consultant.

C. The Contractor shall incur the cost of all fines resulting from regulatory non-compliance as issued by federal, state, and local agencies. The Contractor shall incur the cost of all work requirements mandated by federal, state, and local agencies as a result of regulatory non-compliance or negligence.

D. The Contractor shall immediately notify the Owner and Consultant of the delivery of all permits, licenses, certificates of inspection, of approval, or occupancy, etc., and any other such instruments required under codes by authorities having jurisdiction, regardless of who issued, and shall cause them to be displayed to the Owner and Consultant for verification and recording.

1.8 SCOPE OF WORK

A. This specification and drawings HBM-01, 02 & 03 cover the proper and legal removal and disposal of all asbestos-containing materials (ACM) and asbestos contaminated waste from the Central Middle School project site located in Greenwich, Connecticut. The abatement activities shall comply with all aspects of the contract documents and Federal, State and local requirements. There is interior and exterior, friable and non-friable asbestos containing materials (thermal system insulation and miscellaneous materials) identified on the site. Building materials assumed to contain greater than 50 ppm PCBs are located throughout the original 1957 building (see PCB specifications). XRF screening found that some ceramic, metal, and wood components have lead-based paint or lead. All materials should be considered to contain some amounts of lead. Universal wastes are located throughout the building.

1.9 PROJECT DESCRIPTION

A. Central Middle School was constructed in 1957 with an addition in 2000. The school has two stories with approximately 112,000 square feet of gross area. Interior areas consist of classrooms, offices, auditorium, gymnasium, media center, kitchen, cafeterias, toilet rooms, storage rooms, boiler/mechanical rooms, and tunnel/crawlspace/mechanical duct areas.

B. The base bid work includes the removal and disposal of all asbestos containing materials as identified herein, and on the architect's drawings by workers meeting requirements of OSHA 1926.1101 for Class 1 and 2 work. The base bid work will include the cost for removal and disposal of asbestos-containing flooring materials, pipe and pipe fitting insulation, sink undercoating, ceramic floor and cove base materials, wood wall panel adhesive, chalkboard/ bulletin board and other wall glue daubs/adhesives, several types of interior and exterior caulking/glazing/sealant compounds, and roof penetration flashing. Many building materials are assumed to contain PCBs > 50 ppm and will be removed and disposed of as mixed asbestos/PCB waste (see PCB specification). Alternate pricing is requested for painted building materials for possible PCB disposal. Work includes filing and permitting all necessary applications, notifications, requirements and fees; insurance; necessary design services; providing skilled, licensed and certified labor; materials; and equipment necessary for proper preparation, handling, removal and legal disposal of all asbestos-containing materials and asbestos contaminated waste from the subject building in accordance with all requirements of applicable federal, state and local regulations, these specifications and the contract drawings. The following materials and amounts are included in the base bid work.

Base Bid – Original 1957 Building

Material	Location	Estimated Quantity of ACM
Pipe and/or Pipe Fitting, Pipe Hanger and Roof Drain Insulation – Thermal System Insulation	Kitchen/Kitchen Office/Kitchen Storage Room Areas, Large Custodial Storage Room (Adjacent 101), Throughout Building in Inaccessible Locations (Chases, Behind Ceilings, Walls, Under Stage, Auditorium Cat Walk, etc.), and Limited Areas of Tunnel/Crawl/Mechanical Duct Spaces (Some Going into Stone/Concrete Walls)	ALL – Estimate 1,000 Linear Feet (Includes removing contaminated fiberglass) Negotiated Unit Pricing will be used to add or deduct to the estimated asbestos quantity if the amount removed is different by less/more than 20%
Black and Pink Sink Undercoating – Miscellaneous Materials	Classrooms 206, 207 and 218	ALL - 5 Sinks (Double Sinks)
Ceramic Floor and Cove Base Mud Bed and Adhesive/Backing – Miscellaneous Materials (Adjacent Materials/Substrates are Contaminated)	Nurse's Office Toilet Room, Main Office Conference Room Toilet Room and Boys Locker Room Toilet and Shower Areas	ALL - 1,800 Square Feet
Wood Wall Panel Adhesive (Black) – Miscellaneous Material (Adjacent Materials/Substrates are Contaminated)	Main Office and Conference Room	ALL - 660 Square Feet

Material	Location	Estimated Quantity of ACM
9”x9”/Lower Layer Floor Tiles – Miscellaneous Materials (Adjacent Materials/Substrates are Contaminated) Some of the black flooring mastic throughout the building was found to contain less than one percent asbestos by TEM analysis. Contractor(s) must comply with OSHA regulations and some landfills may not accept this waste as clean construction debris. Contractor(s) are responsible for proper disposal and no change orders will be accepted for proper disposal and no change orders will be accepted if concrete flooring with black mastic cannot be used as fill for the site.	Classrooms 206, 106 and 101, Classroom 203 Closet, Cafeteria, Staff Cafeteria, Corridor Along Classrooms 201 - 207, Elevator Mechanical Room, Small Closets in Main Office Conference Room and Classrooms 105-107, 112, 113, 205-207 and 217-225 (May Exist Throughout Building Underneath Gypsum Walls, Millwork, Fixed/Non-Moveable Objects, Inaccessible Areas)	ALL - 7,000 Square Feet Negotiated Unit Pricing will be used to add or deduct to the estimated asbestos quantity if the amount removed is different by less/more than 20%
Bulletin Board, “Chalk” Board and Other Wall Adhesives/Glue Daubs – Miscellaneous Materials (Adjacent Materials/Substrates are Contaminated – Multiple Layers of Boards/Materials Also)	Throughout Building	ALL - Estimate 9,500 Square Feet Negotiated Unit Pricing will be used to add or deduct to the estimated asbestos quantity if the amount removed is different by less/more than 20%

Material	Location	Estimated Quantity of ACM
Ceiling/Deck Caulking Compound – Miscellaneous Material (Located at Ceilings/Deck Panels and Metal Beams/Columns) (Adjacent Materials/Substrates are Contaminated) (Assumed PCB Bulk Product Waste > 50 ppm also)	Throughout Second Floor	ALL – Throughout All Areas of Second Floor Negotiated Unit Pricing will be used to add, if additional asbestos-containing caulking compounds are found on the First Floor during selective demolition and require abatement
Interior Window Glazing Compounds – Miscellaneous Materials (Adjacent Materials/Substrates are Contaminated) (Assumed PCB Bulk Product Waste > 50 ppm also)	Main Office Wall, Classrooms 201/201A and Gymnasium Offices	ALL - L Shaped Window Wall (Main Office). Classrooms 201/201A and Gymnasium Offices
Interior Wall/Wall and Wall/Column Caulking Compounds – Miscellaneous Materials (Multiple Layers/Types of Materials and Adjacent Materials/Substrates are Contaminated) (Assumed PCB Bulk Product Waste > 50 ppm also)	Classrooms 201, 201 Spray Booth, 201A, 202 - 207, Throughout Main Office Areas, Teachers Break/Faculty Room and Nurse Areas, Throughout Building Corridors and Stairwells, Throughout Gymnasium Areas, Corridor Custodial Closets and Throughout Building (Several are Grout/Mortar Only)	ALL

Material	Location	Estimated Quantity of ACM
Interior/Exterior Door/Window/Door Window/Wall/Column Caulking and Glazing Compounds – Miscellaneous Materials (Multiple Layers/Types of Materials and Adjacent Materials/Substrates are Contaminated) (Assumed PCB Bulk Product Waste > 50 ppm also)	Entry/Exit Areas to Building Adjacent Custodial Office, Main Office, Cafeteria, Room 208 and Gymnasium	ALL - Ten Openings (Multiple Sizes and Multiple Door/Window Walls)
Interior/Exterior Vent Caulking Compounds – Miscellaneous Material (Multiple Layers/Types of Materials and Adjacent Materials/Substrates are Contaminated) (Assumed PCB Bulk Product Waste > 50 ppm also)	Throughout Building Perimeter Walls	ALL - Eight Vent Openings
Interior/Exterior Door/Window/Wall/Column Caulking and Glazing Compounds – Miscellaneous Materials (Multiple Layers/Types of Materials and Adjacent Materials/Substrates are Contaminated) (Assumed PCB Bulk Product Waste > 50 ppm also)	Throughout Building Perimeter Walls	ALL - 17 Door/Window Openings (Multiple Sizes)

Material	Location	Estimated Quantity of ACM
Interior/Exterior Window/Wall/Column/Window Walls/Door Caulking and Glazing Compounds – Miscellaneous Materials (Multiple Layers/Types of Materials and Adjacent Materials/Substrates are Contaminated) (Assumed PCB Bulk Product Waste > 50 ppm also)	Throughout Building Perimeter Walls/Window Walls	ALL (Multiple Sizes)
Exterior Wall/Wall Expansion and Column Caulking Compounds – Miscellaneous Materials (Multiple Layers/Types of Materials and Adjacent Materials/Substrates are Contaminated) (Some Materials at Gymnasium and Auditorium are Assumed Behind Building Where They Abut Lower Elevations and Behind Roof Flashing Trim Throughout) (Assumed PCB Bulk Product Waste > 50 ppm also)	Throughout Exterior	ALL
Roofing Penetration Flashing Materials (Tar on Wood – Bottom Layer) – Miscellaneous Material (Adjacent Materials/Substrates are Contaminated)	Throughout Building Exterior	ALL

PLEASE SEE PCB REMEDIATION SPECIFICATIONS FOR POSSIBLE ADD ALTERNATE WORK.

C. Abatement and Remediation in all areas will start with removing materials at the ceiling/roof deck level and end with the materials at the flooring level. The hazardous building materials contractor will coordinate and perform enough selective demolition/demolition to access all materials to be removed/abated/remediated. The hazardous building materials contractor will be responsible for performing additional selective interior demolition throughout the original 1957 original building and the 2000 addition which are scheduled for demolition. Contractor shall open walls and ceilings to check for hidden piping (as required for entire building in areas of work) as well as demolishing millwork, cabinetry, all non-moveable objects, bulletin/chalk/white/etc. boards, mirrors, flooring, walls, chases etc. to located potential asbestos containing flooring materials and other suspect asbestos containing materials that may be hidden, buried, inaccessible. **Assume the abatement work will include full containments throughout the entire interior of the 1957 original building.** Exterior abatement/remediation will be either removed in containment (interior) or the abatement/remediation contractor will install polyethylene sheeting on the interior of the building and remove materials from the exterior. All ground surfaces must also be protected with plywood and two layers 10-mil reinforced polyethylene sheeting. This ground protection must extend at least 20 feet away from the building foundation (or farther - enough to prevent building materials from touching unprotected ground and floor surfaces). The contractor will pay for all contamination/remediation/ abatement of interior and exterior surfaces, including ground surfaces if Langan deems they have contaminated these surfaces. The contractor will supply lifts, scaffolding, staging, etc. to Langan in areas of remediation/abatement until all visual inspections and sampling has passed. The contractor will supply labor to assist in PCB verification sampling (including cleaning/re-cleaning) throughout as well as removing and disposing of all waste created by PCB verification sampling (if sampling is required). The contractor will provide temporary shoring in areas that require it.

D. Additional materials as discovered outside of those listed will be covered by unit prices if all is not listed as the quantity. Quantities are estimates only and should be verified by the Contractor. Safety data sheets for chemicals to be used during the project must be submitted to the Owner's Representative prior to site delivery.

E. The contractor is responsible for providing temporary water, power, and heat as needed at the site. Temporary lighting/Blast Trac machines/Negative air units within the work areas must be connected to Ground Fault Circuit Interrupter (GFCI) Power Panels installed by a State of Connecticut licensed electrician and located outside of the work areas. The contractor shall be responsible for paying for the use of power and water unless the owner agrees to supply free of charge. It shall also be the contractor's responsibility to provide all fixed and temporary connections and hook-ups as well as obtaining permits and paying all fees for making such services available for his work as is necessary. The Contractor shall provide services as specified herein, and as required or as necessary to carry out the work. This will include such items as temporary hard line installation, portable generators for short term work, water tank trucks, pumps and necessary accessories or the means and equipment and services necessary to temporarily connect to and maintain such services from adjacent utility systems. The contractor is responsible for contacting all utility services and getting power connections from the electrical lines located on or adjacent to the properties. All power and water must be supplied 24 hours a

day throughout the abatement project. CT DPH will be notified immediately if active containments do not have sufficient negative pressure throughout the abatement process until acceptable reoccupancy air results are received. The use of portable generators will require 24 hours a day, 7 day a week continuous operation if negative air machines in containments are powered by them. This continuous operation must remain in place from the time the pre-abatement visual is completed up until clearance re-occupancy sampling results have passed. The contractor will pay the owner a $2,500 penalty should the power found to not be running the negative air machines in active abatement containments. This penalty will apply daily and the contractor is also responsible for paying all CT DPH fines that may be imposed on the contractor and owner.

F. The general/abatement contractors shall only use heavy equipment operators that have proper asbestos and/or HAZWOPER training when disturbing/removing/moving and packing asbestos, lead and PCB containing materials. Acceptable training for asbestos can be 32 or 40 hour asbestos worker/supervisor with annual refresher training. 40 hour HAZWOPER training and annual refresher training is required for operators handling lead and/or PCB containing/contaminated materials. All operators must also have current medicals, fit test data and wear respirators during work.

G. The remediation/asbestos abatement contractor, their subcontractors, waste transporters and/or landfill(s) do not have permission to take/analyze building materials for PCB content/ concentrations without written permission from the building owner prior to such sampling. Should the contractor or other parties listed above take/analyze PCB samples without the owner's permission and PCB's are found to be >1 ppm, the hazardous materials/remediation contractor will be responsible for **all costs** associated with the abatement/remediation/replacement of all the interior/exterior building materials and adjacent surfaces, including soil/asphalt/concrete/etc. as well as all costs associated with project delays, attorney fees for all parties affected and all costs resulting from CT DEEP/EPA requirements that may occur as a result.

H. The remediation/asbestos abatement contractor, their subcontractors, waste transporters must submit landfill information to Langan and the owner prior to the shipment of any waste. The contractor(s)/hauler(s) cannot ship waste until Langan and the owner have approved the landfill the contractor/hauler is/are proposing to ship the waste to. PCB TCLP sampling of the waste may be required by the landfills permits and this testing must be performed by the contractor (if testing is approved by Langan and the owner), with Langan present during sampling, and the results made available to Langan and the owner prior to waste shipment. If Langan is not present during the sampling, Langan may perform additional PCB TCLP sampling to confirm the contractor's results and these results will supersede the contractors sample results.

I. The contractor(s) will be responsible for hiring an engineer and other appropriate personnel to ensure that all required selective demolition and demolition activities are safe to perform for all personnel on site. The contractor(s) will be financially responsible for any damage that may occur to the site, on-site personnel, fines, penalties, etc. They will also be responsible for paying/reimbursing all legal fees/costs for all parties involved with the project should selective demolition or demolition activities cause injury or death to any persons on site.

J. The Owner shall retain a Consultant for the purposes of project management and monitoring during asbestos abatement. The Consultant will represent the Owner in all phases of the abatement project at the discretion of the Owner. The asbestos abatement contractor will regard the consultant's direction as authoritative and binding as provided herein, in matters particularly but not limited to approval of work areas, review of monitoring results, completion of the various segments of work, final completion of the abatement, submission of data, and daily field punch list items. The State of Connecticut licensed Asbestos Consultant — Project Designer is Matthew Myers (license no. 000058).

1.10 DEFINITIONS

A. The following definitions relative to asbestos abatement apply:
1. Abatement - Procedures to control fiber release from asbestos-containing materials; includes removal, encapsulation, and enclosure.
2. Air Monitoring - The process of measuring the fiber concentration of an area or of a person.
3. Amended Water - Water to which a surfactant has been added.
4. Asbestos - The name given to a number of naturally occurring fibrous silicates. This includes the serpentine forms and the amphiboles and includes chrysotile, amosite, crocidolite, tremolite, anthophyllite, and actinolite, or any of these forms, which have been chemically altered.
5. Asbestos Felt - a product made by saturating felted asbestos with asphalt or other suitable bindery, such as a synthetic elastomer.
6. Asbestos Fibers - Those particles with a length greater than five (5) microns and a length to diameter ratio of 3:1 or greater.
7. Asbestos Work Area - a regulated area as defined by OSHA 29 CFR 1926.1101 where asbestos abatement operations are performed which is isolated by physical barriers to prevent the spread of asbestos dust, fibers, or debris. The regulated area shall comply with requirements of regulated area for demarcation, access, respirators, prohibited activities, competent persons and exposure assessments and monitoring.
8. Asphalt Shingles, Composition Shingles or Strip Slates: (Pitched Roof Shingle) - a roofing material manufactured by saturating a dry felt with asphalt then coating the saturated felt with a harder asphalt mixed with a fine mineral, glass fiber, asbestos or organic stabilizer. All or part of the weather side may be covered with mineral granules, or with powdered talc or mica.
9. Base Flashing (roof) - the flashing provided by upturned edges of a water tight membrane on a roof. May contain metal and associated waterproofing material or combination of roofing felts and waterproofing at the joint between a roofing surface and a vertical surface such as a wall or parapet. Also base flashing may be present at perimeter of completely flat roof.
10. Built-Up Roofing (Composition Roofing, Felt and Gravel Roofing, Gravel Roofing) - a continuous roof covering made up of laminations or plies of saturated or coated roofing felts, alternated with layers of asphalt or coal-tar pitch and surfaced with gravel, paint or finish coat.
11. Caulking - resilient mastic compound often having a silicone bituminous or rubber base; used to seal cracks, fill joints, and prevent leakage. Typical applications: around windows, and doors. Caulking is at joints between two dissimilar materials. (i.e. masonry to wood, masonry to steel)

12. Clean Room - An uncontaminated area or room, which is a part of the worker decontamination enclosure with provisions for storage of workers' street clothes and protective equipment.
13. Clearance Sampling - Final air sampling performed aggressively after the completion of the abatement project in a regulated area.
    Air samples collected by the air sampling professional having a fiber concentration of less than 0.01 fibers/cc of air in each of five (5) samples collected inside the containment will denote acceptable clearance sampling by Phase Contrast Microscopy.
    or
    Five air samples collected inside the containment by the air sampling professional having an average asbestos concentration of less than 70 structures per square millimeter of air will denote acceptable clearance sampling for Transmission Electron Microscopy.
14. Competent Person - As defined by 29 CFR 1926.1101, a representative of the Abatement Contractor who is capable of identifying existing asbestos hazards in the workplace and selecting the appropriate control strategy for asbestos exposure. Who has authority to take prompt corrective measures to eliminate such hazards during asbestos removal. Competent person shall be properly trained in accordance with EPA's Model Accreditation Plan.
15. Curtained Doorway - A device to allow ingress and egress from one area to another while permitting minimal air movement between the areas. Two curtained doorways spaced a minimum of six feet apart can form an airlock.
16. Damp Proofing - application of a water impervious material to surface such as wall to prevent penetration of moisture, typically at foundation or below grade surface.
17. Decontamination Enclosure System - A series of connected areas, with curtained doorways between any two adjacent areas, for the decontamination of workers and equipment. A decontamination enclosure system always contains at least one airlock and is adjacent and connected to the regulated area, where possible.
18. Encapsulant - A liquid material which can be applied to asbestos-containing materials which controls the possible release of asbestos fibers from the materials either by creating a membrane over the surface (bridging encapsulant) or penetrating the material and binding its components together (penetrating encapsulant).
19. Equipment Room - Any contaminated area or a room that is part of the worker decontamination enclosure with provisions for storage of contaminated clothing and equipment.
20. Fixed Object - Unit of equipment or furniture in the work areas that cannot be removed from the work area.
21. Friable Asbestos Materials - Any material that contains more than 1% asbestos by weight, that can be crumbled, pulverized or reduced to powder by hand pressure.
22. Glazing Compound - any compound used to hold window glass in place, also referred to as putty, or glazier's putty, is not field applied, usually installed during manufacture of windows.
23. HEPA Filter - High Efficiency Particulate Air (HEPA) filter in compliance with ANSI Z9.2-1979.
24. HEPA Vacuum Equipment - Vacuum equipment equipped with a HEPA filter system for filtering the effluent air from the unit.
25. Movable Object - Unit of equipment of furniture in the work area that can be removed from the work area.

26. Negative Air Pressure Equipment - A portable local exhaust system equipped with HEPA filtration used to create negative pressure in a regulated area (negative with respect to adjacent unregulated areas) and capable of maintaining a constant, low velocity air flow into regulated areas from adjacent unregulated areas.
27. NESHAPS - National Emissions Standard for Hazardous Air Pollutants regulations enforced by the EPA.
28. Permissible Exposure Level (PEL) - The maximum airborne concentration of asbestos fibers to which an employee is allowed to be exposed. The new level established by OSHA 29 CFR 1926.1101 is 0.1 fibers per cubic centimeter of air as an eight (8) hour time weighted average and 1.0 fibers /cc averaged over a sampling period of 30 minutes as an Excursion Limit. The Contractor is responsible for maintaining work areas in a manner that this standard is not exceeded.
29. Project Monitor - A professional capable of conducting air monitoring and analysis of schemes. This individual should be an industrial hygienist, an environmental scientist, or an engineer with experience in asbestos air monitoring and worker protection equipment and procedures. This individual should have demonstrated proficiency in conducting air sample collection in accordance with 29 CFR 1910.1001 and 29 CFR 1926.1101.
30. Regulated Area - An area established by the employer to demarcate where Class I, II, and III asbestos work is conducted and any adjoining area where debris and waste from such asbestos work accumulate, and a work area within which airborne concentrations of asbestos exceed or there is a reasonable possibility that they may exceed the PEL.
31. Shower Room - A room between the clean room and the equipment room in the work decontamination enclosure with hot and cold running water and suitably arranged for employee showering during decontamination. The shower room is located in an airlock between the contaminated area and the clean area.
32. Waterproofing - material, usually a membrane or applied compound (tar/mastic), used to make a surface impervious to water, includes concealed conditions (applications around doors, windows, and in wall cavities). Sometimes combined with felts.

1.11 SUBMITTALS

A. Pre-Work Submittals: Within 7 days prior to the pre-construction conference, the Contractor shall submit 3 copies of the documents listed below to the Owner and Engineer for review:
   1. Valid Contractor's Asbestos Removal license issued by the Connecticut Department of Public Health (CT DPH).
   2. Certificate of insurance covering work of this Contract.
   3. Name, experience of supervisors, and copies of valid Asbestos Supervisor permits issued by the CT DPH.
   4. Citations/Violations/Legal Proceedings: Submit a statement describing:
      a. Any citations, violations, criminal charges, or legal proceedings undertaken or issued within the past two years by any law enforcement, regulatory agency, or consultant concerning performance on previous abatement contracts. Briefly describe the circumstances citing the Project and involved persons and agencies as well as the outcome of any actions.
      b. Any litigation or arbitration proceedings arising out of performance on past Projects.
   5. Work Schedule:

a. Show the complete sequence of abatement activities and the sequencing of work within each building section.
b. Show the dates for the beginning and completion of each major element of work including substantial completion dates for each work area, building, or phase.
c. Show projected percentage of completion for each item, as of the first day of each month.
d. Show final inspection dates.

6. Project Notifications: As required by Federal, State, and local regulatory agencies together with proof of transmittal (i.e. certified mail return receipt). The contractor shall notify the Connecticut Department of Public Health and US EPA Region 1 at least ten (10) days prior to the start of asbestos abatement, as required by the Regulations of Connecticut State Agencies, Section 19a-332a-3 and EPA.
7. Abatement Work Plan: The Contractor shall design, prepare and submit to the Authority for review and approval, a detailed asbestos removal plan for the project in accordance with the applicable regulations and these specifications. The plan shall, at minimum, show limits of containment and work areas, methods of removal, location of decontamination units, number and location of negative air units, waste routes, waste storage location, entrance and exits, emergency exits, and any necessary details. Work shall not commence until the Authority has reviewed, commented and approved the contractor's asbestos removal plan. Provide plans which clearly indicate the following:
    a. All Work Areas/containment numbered sequentially.
    b. Locations and types of all decontamination enclosures.
    c. Entrances and exits to the Work Areas/containment.
    d. Type of abatement activity/technique for each Work Area/containment.
    e. Number and location of negative air units and exhaust. Also provide calculations for determining number of negative air pressure units.
    f. Proposed location and construction of storage facilities and field office.
    g. Location of water and electrical connections to building services.
    h. Waste transport routes through the building to the waste storage container.
8. Contingency plan.
9. Name, location, and applicable licenses for primary and secondary landfill for disposal of asbestos-containing material and asbestos contaminated waste.
10. Summary of proposed materials, and equipment to be used.
11. Certification that vacuums, temporary ventilation equipment, and other equipment to be used meet the ANSI 29.2-79 requirement for airborne fiber filtration.
12. If rental equipment is to be used in work area or to transport asbestos contaminated waste, provide notice to rental agency stating intended use of equipment, with copy to the Authority.
13. Summary of the Contractor's workforce by disciplines. Include a notarized statement signed by the Contractor documenting that all proposed workers, by name, have received all required medical examinations and have been properly trained and certified in asbestos removal work, respirator use, to appropriate EPA and OSHA standards for asbestos removal. Include on statement Contractor's compliance with OSHA medical surveillance requirements.
14. The Contractor shall submit his/her Health and Safety Plan and Standard Operating Procedures for this project for use in complying with the requirements of these

Specifications and applicable regulations. The Plan shall include, but shall not be limited to: distribution and use of amended water, the sequencing of asbestos work, detailed schedules and dates, shift times, and work activities during that shift, the interface of other trades involved in the performance of work, methods to be used to assure the safety of building occupants and visitors to the Site, security of the work areas, and a detailed description of the methods to be employed to control airborne fiber concentrations.

15. Written description of emergency procedures to be followed in case of injury or fire. This section must also include evacuation procedures, sources of medical assistance and procedures for access by medical personnel.
16. Level of respiratory protection intended for each operation for the project.

B. Project Closeout Submittals: Submit the following to Owner and Consultant at the close out of the Project (no later than 15 days subsequent to site demobilization):
   1. Originals of all waste disposal manifests, seals, and disposal logs.
   2. OSHA compliance air monitoring records conducted during the work.
   3. Daily progress log.
      a. A list of all workers used in the performance of the Project, including name, social security number, and CT DPH certification number.
      b. For each worker used in the performance of the project, submit required employee statements including Medical Examination Statement, Worker's Acknowledgment Statement, Respirator Fit Test, and Employee Training Statement.
      c. Certification for the laboratory that analyzed the OSHA personnel air samples.
      d. A notarized “Release of Liens” in a form acceptable to the owner. Such notarized release of liens shall certify that all sub-contractors, labor suppliers, etc. have been paid their pro rate share of all payments to date for the project, that the contractor has no basis for further claims, and will not make further claims for payment in any account after the first payment is made to him.

1.12 MEDICAL REQUIREMENTS

A. Prior to potential exposure to airborne asbestos fibers, provide workers with a comprehensive medical examination as required by 29 CFR 1910.1001, and 29 CFR 1926.1101.
   1. This examination is not required if adequate records show the employee has been examined as required by 29 CFR 1910.1001, and 29 CFR 1926.1101 within the past year.
   2. The same medical examination shall be given on an annual basis to employees engaged in an occupation involving asbestos fibers and within thirty (30) calendar days before or after the termination of employment in such occupations.

B. As required by 29 CFR 1910.1001, and 29 CFR 1926.1101 maintain complete and accurate records of employees' medical examinations for a period of thirty (30) years after termination of employment and make records of the required medical examinations available for inspection and copying to: The Assistant Secretary of Labor for Occupational Safety and Health, the Director of the National Institute for Occupational Safety and Health (NIOSH), authorized representatives of either of them, and an employee’s physician upon the request of the employee or former employee.

C. The Contractor shall furnish the Owner evidence of its firm's medical surveillance program required under 29 CFR 1910.1001, and 29 CFR 1926.1101.

1.13 REGULATIONS AND STANDARDS

Regulatory compliance includes but is not necessarily limited to applicable requirements set forth by:

A. Federal Regulations:
1. 29 CFR 1910 and 1926 – Construction and General Industry Standards
2. 29 CFR 1910.1001, "Asbestos" (OSHA)
3. 29 CFR 1910.1200, "Hazard Communication" (OSHA)
4. 29 CFR 1910.134, "Respiratory Protection" (OSHA)
5. 29 CFR 1910.145, "Specification for Accident Prevention Signs and Tags" (OSHA)
6. 29 CFR 1910.146, “Permit Required Confined Spaces” (OSHA)
7. 29 CFR 1926, "Construction Industry" (OSHA)
8. 29 CFR 1926.1101, "Asbestos, Tremolite, Anthophyllite, and Actinolite" (OSHA)
9. 29 CFR 1926.500 "Guardrails, Handrails and Covers" (OSHA)
10. 40 CFR 61, Subpart A, "General Provisions" (EPA)
11. 40 CFR 61, Subpart M, "National Emission Standards for Hazardous Air Pollutants (NESHAP)" (EPA)
12. 40 CFR 763 Subpart E, “Asbestos in Schools Regulations” (EPA)
13. 49 CFR 171-172, Transportation Standards (DOT)

B. Connecticut Regulations:
State requirements which govern asbestos abatement work and hauling and disposal of asbestos waste materials include but are not necessarily limited to the following:
1. Connecticut Department of Energy and Environmental Protection (Solid Waste Management Regulations).
2. Connecticut Department of Public Health (CT DPH) regulations outlined in Section 19a-332a-1 through 19a-332a-16 “Standards for Asbestos Abatement”
3. CT DPH regulations outlined in Section 20-440-1 through 20-440-9 “Licensure and Training Requirements for Persons Engaged in Asbestos Abatement and Consulting Services”
4. Connecticut Department of Labor (CT DOL)
5. Connecticut Department of Transportation (CT DOT)

C. Local Regulations:
Local agencies which may govern or have certain requirements regarding asbestos abatement work or hauling and disposal of asbestos waste materials include but are not necessarily limited to the following:
1. Building Department
2. Health Department
3. Fire Department

D. Standards and Guidance Documents:
   1. American National Standard Institute (ANSI) Z88.2-80, Practices for Respiratory Protection
   2. ANSI Z9.2-79, Fundamentals Governing the Design and Operation of Local Exhaust Systems
   3. EPA 560/585-024, Guidance for Controlling Asbestos Containing Materials in Buildings (Purple Book)
   4. EPA 530-SW-85-007, Asbestos Waste Management Guidance

1.14 EXEMPTIONS

A. Any deviations from these specifications require the written approval and authorization from the Owner and Consultant.

B. Any modifications from the standard work practices identified in the CT DPH Standards for Asbestos Abatement, Sections 19a-332a-1 to 19a-332a-16 must be requested in writing, and approved in writing from the CT DPH.

1.15 FINAL AIR CLEARANCE

A. Following the completion of the encapsulation phase of the work, the Consultant shall collect final air clearance samples inside the work area per AHERA regulation 40 CFR Part 763 and in compliance with CT DPH regulations. The Owner of the facility shall be responsible for payment of the sampling and analysis of the initial final air clearance samples only. The contractor shall be responsible for payment of all costs associated with the collection and analysis of additional final air clearance samples if the first set of samples fail to satisfy the clearance criteria.

1.16 NOTIFICATIONS, POSTINGS, SUBMITTALS, AND PERMITS

A. The contractor shall make the following notifications, and provide the submittals to the following agencies prior to the commencement of removal work. This notification is required ten (10) calendar days prior to the start of the abatement project:
   1. U.S. EPA, Region 1
      5 Post Office Square, Suite 100 (OES05-4)
      Boston, MA 02109-3912
   2. Connecticut Department of Public Health
      410 Capital Avenue MS #12 AIR
      P.O. Box 340308
      Hartford, CT 06134

B. The minimum information included in the notification to these agencies includes:
   1. Name and address of building Owner/Operator
   2. Building location
   3. Building size, age, and use
   4. Amount of friable asbestos
   5. Work schedule, including proposed start and completion date

6. Asbestos removal procedures to be used
7. Name and location of disposal site for generated asbestos waste, residue, and debris
8. If landfill opens in Connecticut to accept ACM waste, Consultant will notify CT DEEP prior to utilizing said landfill.

1.17 WORK SITE SAFETY PLAN

A. The contractor shall establish a set of emergency procedures and shall post them in a conspicuous place at the work site. The safety plan should include provisions for the following:
   1. Evacuation of injured workers.
   2. Emergency and fire exit routes from all work areas.
   3. Emergency first aid treatment
   4. Local telephone numbers for emergency services including ambulance, fire, and police.
   5. A method to notify occupants of the building in the event of a fire or other emergency requiring evacuation of the building.

B. The contractor is responsible for training all workers in these procedures.

1.18 INDEPENDENT AIR SAMPLING AND ASBESTOS ABATEMENT MONITORING

A. This section describes independent air sampling work being performed on behalf of the Owner. This work is not in the Contract Sum. This section describes air monitoring carried out by the Owner's Consultant to verify that the building beyond the work area and the outside environment remains uncontaminated. (Personal air monitoring required by OSHA is work to be performed by the Contractor and is within the Contract Sum.)

B. The purpose of the Owner's Consultant's air monitoring is to detect faults in the work are isolation such as:
   1. Contamination of the building outside of the work area by airborne asbestos fibers.
   2. Failure of filtration or rupture in the differential pressure system.
   3. Contamination of air outside the building envelope by airborne asbestos fibers.

   Should any of the above occur the Contractor shall immediately cease asbestos abatement activities until the fault is corrected. Do not recommence work until authorized by the Owner's Consultant.

C. The Owner's Consultant will monitor airborne fiber counts in the Work Area. The purpose of this air monitoring will be to detect airborne asbestos concentrations, which may challenge the ability of the Work Area isolation procedures to protect the balance of the building or outside of the building from contamination by airborne fibers.

D. To determine if the elevated airborne fiber counts encountered during abatement operations have been reduced to an acceptable level, the Consultant will sample and analyze air in accordance with clearance air sampling requirements.

E. The Owner's Consultant will perform on-site monitoring throughout the course of the project, as follows:
   1. All work procedures shall be continuously monitored by the Consultant to assure that areas outside the designated work locations in the buildings will not be contaminated.
   2. Prior to work on any given day, the Contractor's designated "competent person" shall discuss the day's work schedule with the Consultant to evaluate job tasks with respect to safety procedures and requirements specified to prevent contamination of the building or the employees. This includes a visual survey of the work area and the decontamination of the building or the employees. This includes a visual survey of the work area and the decontamination enclosure systems.

1.19 CONTRACTOR'S AIR SAMPLING RESPONSIBILITY

A. The contractor shall independently retain a CT licensed asbestos project monitor to monitor airborne asbestos concentrations in the workers' breathing zone and to establish conditions and work procedures for maintaining compliance with OSHA Regulations 29 CFR 1910.1001 and 1926.1101.

B. The Contractor's project monitor shall document all air sampling results and provide a report to the Consultant within 24 hours after sample collection.

C. All air sampling shall be conducted in accordance with methods described in OSHA Standards 29 CFR 1910.1001 and 1926.1101 and the OSHA Respiratory Protection Standard 29 CFR 1910.134.

D. A minimum of 20% of all workers in each working category (i.e., gross removal, final clearance, etc.) must be monitored each day of asbestos removal activities.

E. Phase Contrast Microscopy may be used to analyze personal air samples. The Contractor shall arrange and pay for all costs of the testing. Laboratories used shall be currently enrolled in the American Industrial Hygiene Association Proficiency Analytical Testing Program or an equivalent recognized program and approved by CT DPH.

1.20 PROPER WORKER PROTECTION

A. This section describes the equipment and procedures required for protecting workers against asbestos contamination and other workplace hazards except for respiratory protection.

B. All workers are to be accredited as abatement workers as required by the AHERA regulation 40 CFR 763 Appendix C to Subpart E, February 3, 1994.

C. The contractor is required to be certified and accredited as required by the State of Connecticut Department of Public Health Services.

D. In accordance with 29 CFR 1926 and 20-440-7 RCSA, all workers shall receive a training course covering the dangers inherent in handling asbestos, the dangers of breathing asbestos dust, proper work procedures, and proper worker protective measures. This course must include but is not limited to the following:
   1. Methods of recognizing asbestos
   2. Health effects associated with asbestos
   3. Relationship between smoking and asbestos in producing lung cancer
   4. Nature of operations that could result in exposure to asbestos
   5. Importance of and instruction in the use of necessary protective controls, practices and procedures to minimize exposure including:
      a. Engineering controls
      b. Work Practices
      c. Respirators
      d. Housekeeping procedures
      e. Hygiene facilities
      f. Protective clothing
      g. Decontamination procedures
      h. Emergency procedures
   6. Waste disposal procedures
   7. Purpose, proper use, fitting, instructions, and limitations of respirators as required by 29 CFR 1910.134
   8. Appropriate work practices for the work
   9. Requirements of medical surveillance program
   10. Review of 29 CFR 1926
   11. Pressure Differential Systems
   12. Work practices including hands on or on-job training
   13. Personal Decontamination procedures
   14. Air monitoring, personal and area

E. The Contractor shall provide medical examinations for all workers who may encounter an airborne fiber level of 0.1 f/cc or greater for an 8-hour Time Weighted Average and/or enter regulated areas. In the absence of specific airborne fiber data provide medical examinations for all workers who will enter the Work Area for any reason. Examination shall, at a minimum, meet OSHA requirements as set forth in 29 CFR 1926 In addition, provide an evaluation of the individual's ability to work in environments capable of producing heat stress in the worker.

F. Submit the following to the consultant for review. The contractor shall not start work until these submittals are returned with consultant action stamp indicating that they are approved.
   1. Submit copies of certificates from an EPA-approved AHERA abatement workers course for each worker as evidence that each asbestos abatement worker is accredited as required by the AHERA Regulation 40 CFR 763 Appendix C to Subpart E, February 3, 1994.
   2. Submit evidence that the contractor is certified to perform asbestos abatement work by the State of Connecticut Department of Public Health services.
   3. Submit documents verifying that each worker has had a medical examination within the last 12 months as part of compliance with OSHA medical surveillance requirements. Submit, at a minimum, for each worker the following:

a. Name and Social Security Number
b. Physicians Written Opinion from examining physician including at a minimum the following:

4. Whether worker has any detected medical conditions that would place the worker at an increased risk of material health impairment from exposure to asbestos.
5. Any recommended limitations on the worker or on the use of personal protective equipment such as respirators.
6. Statement that the worker has been informed by the physician of the results of the medical examination and of any medical conditions that may result from asbestos exposure.
7. Copy of information that was provided to physician in compliance with 29 CFR 1926
8. Statement that worker is able to wear and use the type of respiratory protection proposed for the project, and is able to work safely in an environment capable of producing heat stress in the worker.
9. Submit copies of certificates for the site supervisor and the workers issued by CT DPH.

G. Submit certification signed by an officer of the abatement-contracting firm and notarized that exposure measurements, medical surveillance, and worker training records are being kept in conformance with 29 CFR 1926.

H. The Contractor shall maintain control of and be responsible for access to all work areas to ensure the following requirements:
1. Non-essential personnel are prohibited from entering the area.
2. All authorized personnel entering the work area shall read the "Worker Protection Procedures" which are posted at the entry points to the enclosure system, and shall be equipped with properly fitted respirators and protective clothing.
3. All personnel who are exiting from the decontamination enclosure system shall be properly decontaminated.
4. Asbestos waste that is taken out of the work area must be properly bagged and labeled in accordance with these specifications. The surface of the bags shall be decontaminated. Asbestos leaving the enclosure system must be immediately transported off-site or immediately placed in locked, posted temporary storage on-site, and removed within 24 hours of the project conclusion.
5. Any material, equipment, or supplies that are brought out of the decontamination enclosure system shall be cleaned and decontaminated by wet cleaning and/or HEPA vacuuming of all surfaces.

1.21 ALTERNATE WORK PRACTICES

A. The contractor and/or consultant may obtain services of a CT DPH certified asbestos project designer and submit application for variances to the CT DPH, as applicable for any alterations, modifications or non-conforming methods intended of asbestos removal. Methods requiring variances include but are not necessarily limited to glove-bagging, use of tent procedures, remote decons, etc. The alternative procedures shall be submitted in writing and hand delivered or post marked at least ten (10) days before the project start date. CT DPH may approve an alternative procedure for an asbestos abatement project with certain conditions that would provide equivalent or a greater measure of asbestos emission control than the conventional work practices. The alternate work practice request form shall be signed and sealed by a Licensed Designer. Any fees associated with the application shall be paid by the Contractor. All alternative work practices must be approved and accepted by Langan's project designer regardless if they have been approved by CT DPH. The abatement contractor will be required to propose a credit to the building owner/client/consultant that must be reviewed and accepted prior to AWP submission to CT DPH.

1.22 POST-PROJECT CLOSEOUT

A. The contractor shall provide all required documentation as required by this specification once his/her work is complete, final clearances passed and asbestos waste disposed of. This should include but not be limited to: bound copy of the daily log containing log of daily work activities, all supervisor and worker certificates of training and Connecticut licenses, certificates of insurance, daily sign in sheets, containment entry/exit logs, copy of recording manometer charts, waste shipment records, personal air monitoring laboratory reports and chain-of-custody documentation, and project completion certificate. Final payment shall not be made to the contractor until all required documentation is submitted and verified.

PART 2 PRODUCTS

2.1 MATERIALS

A. Deliver all materials in the original packages, containers, or bundles bearing the name of the manufacturer and the brand name and product technical description.

B. Damaged or deteriorating materials shall not be used and shall be removed from the premises. Material that becomes contaminated with asbestos shall be decontaminated or disposed of as asbestos waste.

C. Polyethylene sheet in a roll size to minimize the frequency of joints shall be delivered to the job site with factory label indicating 4 or 6 mil.

D. Polyethylene disposable bags shall be six (6) mil with pertinent pre-printed label. Tie wraps for bags shall be plastic, five (5) inches long (minimum), pointed and looped to secure filled plastic bags.

E. Tape or adhesive spray will be capable of sealing joints in adjacent polyethylene sheets and for attachment of polyethylene sheet to finished or unfinished surfaces of dissimilar materials and capable of adhering under both dry and wet conditions, including use of amended water.

F. Surfactant (wetting agent), shall consist of fifty (50) percent polyoxyethylene ether and fifty (50) percent polyoxyethylene ester, or equivalent, and shall be mixed with water to provide a concentration of one (1) ounce surfactant to five (5) gallons of water or as directed by manufacturer.

G. Removal encapsulant shall be non-flammable factory prepared penetrating chemical encapsulant found acceptable to Consultant. Usage shall be in accordance with manufacturer's printed technical data.

H. The contractor shall have available spray equipment capable of mixing wetting agent with water and capable of generating sufficient pressure and volume and having sufficient hose length to reach all areas with asbestos.

I. Impermeable containers are to be used to received and retain any asbestos-containing or contaminated materials until disposal at an acceptable disposal site. The containers shall be labeled in accordance with OSHA Standard 29 CFR 1926.1101. Containers must be both air and watertight.

J. Labels and signs, as required by OSHA Standard 29 CFR 1926.1101, will be used.

K. Encapsulant shall be bridging or penetrating type which has been found acceptable to the consultant. Usage shall be in accordance with manufacturer's printed technical data.

L. HEPA filtered local exhaust ventilation shall be utilized during the installation of enclosures and supports where asbestos-containing materials may be disturbed.

2.2 TOOLS AND EQUIPMENT

A. The contractor shall provide all tools and equipment necessary for asbestos removal, encapsulation and enclosure.

B. The contractor's air monitoring professional shall have air-monitoring equipment of type and quantity to monitor operations and conduct personnel exposure surveillance per OSHA requirements.

C. The contractor shall have available sufficient inventory or dated purchase orders for materials necessary for the job including protective clothing, respirators, filter cartridges, polyethylene sheeting of proper size and thickness, tape and air filters.

D. The contractor shall provide (as needed) temporary electrical power panels, electrical power cables, and electrical power sources (such as generators). Any electrical connection work affecting the building electrical power system shall be performed by a State of Connecticut licensed electrician and the contractor shall obtain all necessary local permits.

E. The contractor shall have available shower stalls and plumbing to support same to include sufficient hose length and drain system or an acceptable alternate.

F. Exhaust air filtration system units shall contain HEPA filter(s) capable of sufficient air exhaust to create negative pressure of -0.02 inches of water within enclosure with respect to outside area. Equipment shall be checked for proper operation by smoke tubes or differential pressure gauge before the start of each shift and at least twice during the shift. Adequate exhaust air shall be provided for a minimum of four (4) air changes per hour within the enclosure. No air movement system or air filtering equipment shall discharge unfiltered air outside.

G. Vacuum units, of suitable size and capacities for the project, shall have HEPA filter(s) capable of trapping and retaining at least 99.97 percent of all monodispersed particles of 0.3 micrometers in diameter or larger.

H. The contractor will have reserve units so that systems will operate continuously.

2.3 RESPIRATORY PROTECTION

A. Select respirators from those approved by the Mine Safety and Health Administration (MSHA), and the National Institute for Occupational Safety and Health (NIOSH), Department of Health and Human Services.

B. Respirators shall be individually fit-tested to personnel under the direction of an Industrial Hygienist on a yearly basis. Fit-tested respirators shall be permanently marked to identify the individual fitted, and use shall be limited to that individual. Fit-test records shall be maintained on-site for each employee.

C. Where fiber levels permit, and in compliance with regulatory requirements, Powered Air Purifying Respirators (PAPR) are the minimum allowable respiratory protection permitted to be utilized during gross removal operations. The Contractor shall use supplied air respirator for confined space requirements. PAPR’s are the minimal respiratory protection required for all thermal system insulation and surfacing asbestos abatement.

D. No respirators shall be issued to personnel without such personnel participating in a respirator training program.

E. High Efficiency Particulate Air (HEPA) respirator filters shall be approved by NIOSH and shall conform to the OSHA requirements in 29 CFR 1910.134 and 29 CFR 1926.1101.

F. A storage area for respirators shall be provided by the contractor in the clean room side of the personnel decontamination enclosure where they will be kept in a clean environment.

G. The contractor shall provide and make available a sufficient quantity of respirator filters so that filter changes can be made as necessary during the work day. Filters will be removed and discarded during the decontamination process. Filters cannot be reused. Filters must be changed if breathing becomes difficult.

H. Filters used with negative pressure air purifying respirators shall not be used any longer than one eight (8) hour work day.

I. Any authorized visitor, worker, or supervisor found in the work area not wearing the required respiratory protection shall be removed from the project site and not be permitted to return.

J. The contractor shall have at least two (2) Powered Air Purifying Respirators stored on-site designated for authorized visitors use. Appropriate respirator filters for authorized visitors shall be made available by the contractor.

K. Establish a respirator program as required by ANSI Z88.2 and 29 CFR 1910.134, and 29 CFR 1926.1101. Provide respirator training and fit-testing.

2.4 PROTECTIVE CLOTHING

A. Provide personnel utilized during the Project with disposable protective whole body clothing, head coverings, gloves and foot coverings. Provide disposable plastic or rubber gloves to protect hands. Cloth gloves may also be worn. Make sleeves secure at the wrists and make foot coverings secure at the ankles by the use of tape, or provide disposable coverings with elastic wrists or tops.

B. Provide sufficient quantities of protective clothing to assure a minimum of four (4) complete disposable outfits per day for each individual performing abatement Work.

C. Eye protection and hard hats shall be provided and made available for all personnel entering any work area.

D. Authorized visitors shall be provided with suitable protective clothing, headgear, eye protection, and footwear whenever they enter the work area.

PART 3 EXECUTION

3.1 PRE-ABATEMENT MEETING

A. At least one week prior to the start of work a Pre-Construction Meeting will be scheduled and must be attended by the contractor and any sub-contractors. The assigned contractor site supervisor is also required to attend this meeting.

B. The contractor shall present a detailed project schedule and project submittals at the Pre-Construction Meeting. Variations, amendments, and corrections to the presented schedule will be discussed, and the Owner and consultant will inform the contractor of any scheduling adjustments for this project.

C. Following the Pre-Construction Meeting, the contractor shall submit a revised schedule (if needed) no later than one week after the meeting.

3.2 WORK AREA PREPARATION

A. Where necessary, shut down electrical power, including receptacles and light fixtures. Under no circumstances during the decontamination procedures will lighting fixtures be permitted to be operating when the spraying of amended water may contact the fixture. Provide GFCI devices, temporary power, and temporary lighting installed in compliance with the applicable electrical codes. All installations are to be made by a State of Connecticut licensed electrician.

B. Shut down and/or isolate heating, cooling, and ventilation air systems or zones to prevent contamination and fiber dispersal to other areas of the structure. During the work, vents within the work area shall be "criticalled" with duct tape and polyethylene sheeting.

C. The contractor shall be responsible for removing furniture from the work areas. The contractor shall pre-clean moveable objects within the proposed work areas using HEPA vacuum equipment and/or wet cleaning methods as appropriate and remove such objects from work areas to a temporary location. For example, cabinets to gain access to floor tile and associated mastic.

D. Seal off all openings, including, but not limited to, windows, corridors, doorways, skylights, ducts, grills, diffusers, and any other penetration of the work areas, with polyethylene sheeting a minimum of six (6) mils thick, sealed with duct tape. This includes doorways and corridors that will not be used for passage during work areas and occupied areas.

E. Pre-clean fixed objects within the work areas, using HEPA vacuum equipment and/or wet cleaning methods as appropriate, and enclose with a minimum six (6) mil plastic sheeting sealed with duct tape.

F. Clean the proposed work areas using HEPA vacuum equipment or wet cleaning methods as appropriate. Do not use methods that raise dust, such as dry sweeping or vacuuming with equipment not equipped with HEPA filters.

G. After HEPA vacuum cleaning, cover fixed walls with two (2) layers of four (4) mil polyethylene sheeting to the floor level. Where fixed walls are not used, two layers of six (6) mil polyethylene sheeting will be applied to a rigid framework of wood, metal, or PVC. Where floor tile/mastic is not being abated, cover the floor with two (2) layers of six-mil polyethylene sheeting. All overlaps shall be sealed with tape or spray adhesive.

H. Maintain emergency and fire exits from the work areas, or establish alternate exits satisfactory to fire officials.

I. Clean and remove ceiling mounted objects, such as lights and other items not sealed off, which interfere with asbestos abatement. Use hand-held amended water spraying or HEPA vacuuming equipment during fixture removal to reduce settled fiber dispersal.

J. Create pressure differential between work areas and uncontaminated areas by the use of acceptable negative air pressure equipment sufficient to provide four (4) air changes per hour and create negative pressure of -0.02 inches of water within enclosure with respect to outside area as measured on a water gauge.

3.3 DECONTAMINATION SYSTEM

A. The following requirements shall be followed for the worker decontamination unit:
   1. At all asbestos abatement projects, work areas shall be equipped with decontamination facilities consisting of: a clean room, a shower room, and an equipment room attached to each containment.
   2. The decontamination enclosure system chambers shall be constructed to meet the criteria of the Specification. The decontamination enclosure shall be installed watertight to prevent water leaks. The interior shall be lined with two layers of 6-mil fire-retardant plastic sheeting, with a minimum overlap of 16 inches at seams and sealed (airtight) by tape and adhesive. The interior floor shall be sheathed with (2) layers of reinforced fire retardant plastic sheeting with a minimum overlap on the wall of sixteen (16) inches. The contractor shall ensure compliance with local building codes and other regulations governing temporary structures.
   3. Curtained Doorways: Three overlapping sheets of 6-mil polyethylene shall be placed over a framed doorway and secured along the top of the doorway. Secure the vertical edge of the outer sheets along one vertical side of the doorway and the vertical edge of the center sheet along the opposite vertical side of the doorway. The sheets shall be weighted so that they close quickly after being released.
   4. Air Locks: Air locks shall consist of two curtained doorways placed a minimum of three feet apart.
      a. Clean Room: In this room, persons remove and leave all street clothes and put on clean disposable coveralls. Approved respiratory protection equipment is stored in this area. The floor of the clean room must be kept dry at all times. At the end of each shift, the room must be cleaned using wet rags. Also, a lockable door may be installed. No asbestos-containing materials are allowed in this room. The clean room shall be equipped with suitable hooks, lockers, shelves, etc. for workers to store personal articles and clothing. THIS IS NOT A CONTAMINATED AREA.
      b. Shower Room: Provide a completely watertight operational shower to be used by cleanly dressed workers heading for the Work area from the clean room or for showering workers headed out of the Work Area after dressing in the Equipment Room. Shower must be constructed so that water leakage is minimized. The shower shall have one shower per six full shift abatement people, calculated on the basis of the largest shift. Any leaking water must be cleaned immediately. Showers must be equipped with hot and cold running water, soap and sufficient disposable towels for the number of workers at the job site. Arrange water shut off and drain pump operation controls, so that a single individual can shower without assistance from either inside or outside the work area. THIS IS A CONTAMINATED AREA.

         Pump wastewater into a polyethylene lined 55-gallon drum located in the work area to be added to the asbestos waste. If the water is allowed by the work treatment workers to be pumped into a drain, provide 20 micron and 5 micron waste water filters in line

to drain. Change filters at a minimum of once a day. Locate filters inside the shower unit, so that the shower pan catches the water lost during filter change.

c. Equipment Room: Work equipment, footwear, and all other contaminated work clothing are to be left here upon exiting work area. A walk-off pan filled with water shall be located in the work area just outside the equipment room for workers to clean foot coverings while exiting the work area. This is a change and transit area for workers. Provide a drop cloth layer of sheet plastic on the floor of the Equipment Room for every shift change. Roll drop cloth layer in upon itself at the end of each shift and dispose of as contaminated waste. THIS IS A CONTAMINATED AREA.

Each room shall be separated from the other and from the work area by airlocks such as will prevent the free passage of air or asbestos fibers and shall be accessible through doorways protected with three (3) overlapping 6 mil polyethylene sheets which shall be weighed, so as to fall into place when people pass through the area. The shower room shall be contiguous to the clean room and equipment room. All personnel entering or leaving the work area shall pass through the shower room. The number of showers provided shall satisfy the requirements of OSHA 29 CFR 1910.141. Hot and cold water shall be supplied to the showers. The equipment room (dirty room) shall be situated between the shower room and the work area and separated from both by means of suitable barriers or overlapping flaps such as will prevent the free passage of air or asbestos fibers.

Decontamination chamber doors shall be of sufficient height and width to enable replacement of equipment, which may fall, and to safely stretcher or carry an injured worker from the site without destruction of the chamber or unnecessary risk to the integrity of the work area. Such doors must be at least four (4) feet wide, and the distance between sets of doors must be at least four (4) feet.

5. No person or equipment shall leave the asbestos abatement project work area unless first decontaminated by showering, wet washing or HEPA vacuuming to remove all asbestos debris. No asbestos contaminated materials or persons shall enter the clean room.
6. Where feasible, decontamination systems shall abut the work area. In situations where it is not possible, due to unusual conditions, to establish decontamination systems contiguous to the work area, personnel shall be directed to remove visible asbestos debris from their persons by HEPA-filtered vacuuming prior to donning clean disposable coveralls while still in the work area, and proceeding directly to a remote decontamination system to shower and change clothes to follow work area exit procedures.
7. In specific situations where the asbestos contractor determines that it is not feasible to establish a contiguous decontamination system at a work site, the asbestos contractor shall utilize a remote decontamination system if approved by Langan. Such systems must be operated in conformance with 29 CFR 1926.1101, Appendix F.

B. Remote Decontamination Facility:

For exterior work on the roof, glove bag or tent procedures, when full containment enclosure is not feasible, the Contractor shall provide remote personnel decontamination enclosure system if approved by the Consultant - Langan.

C. Occupied areas and/or building space not within the work areas shall be separated from asbestos abatement work areas by means of airtight barriers.

D. Construct the decontamination system with wood or metal framing, 3/8" sheathing and cover both sides with a double layer of six (6) mil polyethylene sheeting, spray glued or taped at the joints. Caulk joints watertight at floor, walls, and ceiling.

E. The contractor and the consultant shall visually inspect barrier several times daily to assure effective seal and the contractor shall repair defects immediately

F. Waste/Equipment Decontamination Enclosure System:
This system is located adjacent to the work area. The equipment decontamination enclosure system, consisting of two totally enclosed spaces, shall be constructed as follows:

1. Equipment Washroom: An equipment washroom shall have two air locks: one adjacent to the work area and one common air lock which separate it from the holding area. The washroom shall have facilities for washing material containers and equipment. Gross removal of dust and debris from contaminated material containers and equipment shall be accomplished in the work area, prior to moving to the washroom.
2. Holding Area: A holding area shall share a common air lock with the equipment washroom and shall have a curtained doorway to outside areas. A hinged, lockable door shall be placed at the holding area entrance to prevent unauthorized access into the work area.
3. Remote Decontamination Facility: For exterior work on the roof, glove bag or tent procedures, when full containment enclosure is not required, the contractor shall provide remote Waste/Equipment decontamination enclosure system as specified.

3.4 ABATEMENT REMOVAL PROCEDURES

A. Regulatory compliance will include, but is not necessarily limited to, applicable requirements set forth by the Federal Environmental Protection Agency (EPA), Connecticut Departments of Public Health (CT DPH), Connecticut Department of Environmental Protection, and Local Health and Building Departments.

B. The following procedures shall be followed while performing the abatement activities:

1. No asbestos abatement work, including preparation, shall be performed or continued without having proper notification and a certified supervisor at the work area. The contractor shall have a designated "competent person" on the job at all times to ensure establishment of a proper enclosure system and proper work practices throughout the project.
2. Abatement work will not commence until authorized by the consultant.

3. Provide and display danger signs at every entrance to the work areas in clearly visible locations indicating that asbestos removal work is being conducted and unauthorized and not protected persons should not enter.
   Signs must use the following legend:
   DANGER
   ASBESTOS
   MAY CAUSE CANCER
   CAUSES DAMAGE TO LUNGS
   AUTHORIZED PERSONNEL ONLY
   WEAR RESPIRATORY PROTECTION AND
   PROTECTIVE CLOTHING IN THIS AREA

   Signs shall be posted which meet the specifications set forth in 29 CFR 1926.1101 at all approaches to the work area. Signs shall be posted a sufficient distance from the work area to permit a person to read the sign and take precautionary measures to avoid exposure to asbestos.
4. The worker decontamination enclosure system shall be installed or constructed prior to plasticizing the work area or before disturbing ACM. The waste decontamination enclosure system shall be installed or constructed prior to commencement of gross removal work.
5. All asbestos handlers shall wear disposable suits, including gloves, hood and footwear, and appropriate respiratory equipment, after removing street clothes in the clean room.
6. Abatement of asbestos-containing materials shall be done by wet methods only.
7. ACM shall be sprayed with amended water in sufficient frequency and quantity for enhanced penetration. Sufficient time shall be allowed for penetration to occur prior to removal action or other disturbance-taking place. Dry removal of asbestos materials is prohibited.
8. In order to maintain indoor asbestos concentrations to the minimum, the wet asbestos must be removed in manageable sections. Material drop shall not exceed eight (8) feet. For heights up to 15 feet, provide inclined chutes or scaffolding to intercept drop.
9. Remove asbestos containing materials as appropriate by standard methods. Fill disposal containers as removal proceeds; seal filled containers and clean containers before removal to equipment decontamination system. Wet clean each container thoroughly, double bag and apply caution label. Ensure that workers do not exit the work area thorough the equipment decontamination enclosure.
10. After completion of stripping work, all surfaces from which asbestos has been removed shall be wet brushed, using a nylon brush, wet wiped, and sponged or cleaned by an equivalent method to remove all visible material (wire brushes are not permitted). During this work, the surfaces being cleaned shall be kept wet.
11. Remove and containerize all visible accumulations of asbestos-containing and/or asbestos-contaminated debris. During cleanup, utilize brooms, rubber dustpan, and rubber squeegees to minimize damage to floor covering.
12. Retrieve all free water in contaminated areas and place in plastic lined leak-tight drums.
13. Sealed disposal containers, and all equipment used in the work area, shall be included in the cleanup and shall be removed from work areas via the equipment decontamination enclosure at an appropriate time in the cleaning sequence. All asbestos waste in 6-mil

polyethylene disposal bags shall be double bagged in the equipment decontamination enclosure before removal from the Site.

14. At any time during asbestos removal, should the consultant suspect contamination of areas outside the work area(s), he shall cause all abatement work to stop until the contractor takes steps to decontaminate these areas and eliminate the causes of such contamination. Unprotected individuals shall be prohibited from entering suspected contaminated areas until air sampling and visual inspections certify decontamination.
15. After completion of the initial final cleaning procedure including removal of the inner layers of polyethylene sheeting, but prior to encapsulation, a pre-sealant inspection shall be conducted by the consultant. The pre-sealant inspection shall verify that ACM and residual dust has been removed from the work area.
16. After the work area has been inspected by the Engineer and rendered free of visible debris, a thin coat of a pigmented (non-transparent) encapsulating agent shall be applied to all surfaces in the work area from which ACM was removed, to lockdown nonvisible fibers.
17. Removal of asbestos containing materials shall be done under negative pressure containment. All OSHA Class I, Class III, and interior Class II asbestos abatement projects shall employ HEPA negative air pressure equipment ventilation. The negative air pressure equipment shall operate continuously, twenty-four (24) hours a day, from startup of negative air pressure equipment, through the cleanup operations. A negative air pressure, relative to areas outside of the enclosure, shall be maintained at all times in the regulated abatement work area during the asbestos abatement project to ensure that contaminated air in the regulated abatement work area does not escape back to an uncontaminated area. A manometer shall be used to document the pressure differential for all OSHA Class I Large and Small size asbestos project regulated abatement work areas. A minimum of -0.02 column inches of water pressure differential, relative to pressure outside the regulated abatement work area, shall be maintained within the regulated abatement work area, as evidenced by manometric measurements.

3.5 CONSULTANT

A. The Owner has retained Langan Engineering (Langan) as the Hazardous Materials Consultant for the purpose of project design, construction administration, and project monitoring during Asbestos Abatement. Mr. Matthew Myers (License #000058) of Langan is the DPH-approved Asbestos Project Designer for this project. The Consultant will represent the Owner in all tasks of the abatement project at the discretion of the Owner. The Asbestos Abatement Contractor will regard the Consultant's direction as authoritative and binding as provided herein, in matters particularly but not limited to approval of work areas, review of monitoring results, completion of the various segments of work, final completion of the abatement, submission of data, and daily field punch list items.

3.6 CONSULTANT'S RESPONSIBILITIES

A. Air sampling shall be conducted by the consultant to ascertain the integrity of controls that protect the building from asbestos contamination. Independently, the contractor shall monitor air quality

within the work area to ascertain the protection of employees and to comply with OSHA regulations.

B. The consultant's CT DPH licensed asbestos project monitor shall collect and analyze air samples during two time periods:
   1. Abatement Period: If required, the consultant's project monitor shall collect samples on a daily basis during the work period. A sufficient number of area samples shall be taken outside of the work area, at the exhaust of the negative pressure system, and outside of the building to judge the degree of cleanliness or contamination of the building during removal. Additional samples may be taken inside the work area and decontamination enclosure system, at the discretion of the project monitor.
   2. Post-Abatement Period: The consultant's project monitor shall conduct air sampling following the final cleanup phase of the project, once the "no visible residue" criterion, as established by the project monitor, has been met. Five (5) samples shall be collected inside the work area utilizing aggressive methods to comply with the State of Connecticut Department of Public Health Standards for Asbestos Abatement, sections 19a-332a-12. Analysis of the samples to determine airborne concentrations of asbestos shall be conducted by Transmission Electron Microscopy (TEM) method with an average limit of 70.0 structures per square millimeter of filter surface or by Phase Contrast Microscopy (PCM) with a limit of 0.010 fibers per cubic centimeters of air in accordance with the above Connecticut regulation sections.

C. The consultant's project monitor shall provide continual evaluation of the air quality of the building during removal, using his/her best professional judgment in respect to the State of Connecticut Department of Public Health guideline of 0.010 fibers/cc and the background air quality established during the pre-abatement period.

D. If the project monitor determines that the building air quality has become contaminated from the project, he/she shall immediately inform the contractor to cease all removal operations and implement a work stoppage clean up procedure. The contractor shall conduct a thorough cleanup of the areas of the building designated by the consultant. No further removal work can take place until the project monitor has assessed that the building air has been decontaminated.

E. Pre-abatement and abatement air samples shall be collected as required to obtain a volume of 1,200 liters. Samples shall be analyzed by Phase Contrast Microscopy (PCM) methodology using the NIOSH 7400 protocol.

3.7 CONSULTANT'S INSPECTION RESPONSIBILITIES

A. The consultant shall conduct inspection throughout the progress of the abatement project. Inspections shall be conducted in order to document the progress of the abatement work as well as the procedures and practices employed by the abatement contractor.

B. The consultant shall perform the following inspections during the course of abatement activities:
   1. Pre-commencement Inspection: Pre-commencement inspections shall be performed at the time requested by the abatement contractor. The consultant shall be informed 12 hours prior

to the time the inspection is needed. If, during the course of the pre-commencement inspection, deficiencies are found, the contractor shall perform the necessary adjustments in order to obtain compliance.

2. Work Area Inspections: Work area inspections shall be conducted on a daily basis at the discretion of the consultant. During the course of the work inspections, the consultant shall observe the contractor's removal procedures, verify barrier integrity, monitor negative air filtration devices, assess project progress, and inform the abatement contractor of specific remedial activities if deficiencies are noted.
3. Pre-encapsulation/Final Visual Inspection: The consultant, upon the request of the abatement Contractor, shall conduct a pre-sealant inspection. The consultant shall be informed 24 hours prior the time that the inspection is needed. The pre-encapsulation inspection shall be conducted after completion of the all cleaning procedures, but prior to encapsulation. The pre-encapsulation inspection shall verify that all ACM and residual debris have been removed from the work area. If, during the course of the pre-encapsulation inspection, the consultant identifies residual dust or debris, the contractor shall comply with the request of the consultant in order to render the area "dust free."

3.8 CLEARANCE AIR TESTING

A. After the visual inspection is completed and all surfaces in the abatement area have dried, final air clearance sampling shall be performed by the consultant. Aggressive air monitoring will be used. Selection of location and samples shall be the responsibility of the consultant. Air monitoring volumes shall be sufficient to provide a detection limit of 0.010 f/cc using NIOSH-approved method for PCM analysis. For air clearance by Transmission Electron Microscopy, air-monitoring volumes shall be sufficient to provide a detection limit of 0.005 f/cc using the AHERA Level II Yamate Method.

B. Areas which do not comply with the Standard for Cleaning for Initial Clearance shall continue to be cleaned by and at the contractor's expense until the specified Standard of Cleaning is achieved as evidenced by results of air testing as previously specified.

3.9 ASBESTOS WASTE DISPOSAL

A. The contractor shall package, label, and remove all asbestos waste from the work area in accordance with Connecticut DEEP and DPH regulations, all other applicable regulations, and as specified below. Packaging shall be accomplished in a manner that minimizes waste volume, but insures waste containers shall not tear or break. All waste shall be transported in leak tight containers.

B. Asbestos wastes may include building materials, insulation, disposable clothing and protective equipment, plastic sheeting and tape, exhaust systems or vacuum filters, contractor equipment, or other materials designated by state or local authorities which have been potentially contaminated with asbestos and have not been fully cleaned.

C. Waste Labeling
1. Warning labels, having waterproof print and permanent adhesive in compliance with OSHA, EPA, CT DEEP/DOT and CT DPH requirements, shall be affixed to or printed on

the sides of all waste bags or transfer containers. Warning labels shall be conspicuous and legible, and contain the following words:

DANGER
CONTAINS ASBESTOS FIBERS
MAY CAUSE CANCER
CAUSES DAMAGE TO LUNGS
DO NOT BREATHE DUST
AVOID CREATING DUST

2. In compliance with NESHAP, 40 CFR, Part 61.150, all waste containers or bags shall be labeled with the following generator information:
   a. Name of waste generator
   b. Location of where waste was generated

D. Wetting of Waste: A fine water spray shall be used to keep the top layers of waste in containers thoroughly wet at all times. When a waste bag is full, air within the bags shall be evacuated with a HEPA equipped vacuum and be securely sealed with tape or other secure fastener.

E. Use and Decontamination of Fiber Drums: The Contractor's use and decontamination of fiber drums shall be in accordance with CT DPH, EPA and DOT requirements. The drums shall be lined with a minimum of two layers of 6-mil asbestos waste bags. The waste will be appropriately labeled and sealed. The drums shall be sealed with an airtight lid and shall be decontaminated and/or additionally bagged if the drums are filled inside the containment and visible debris/contamination is observed on the exterior of the drums. All waste shall be labeled as previously described. The drums and waste will be re-containerized should their integrity be compromised and/or liquid is visibly passing through or staining the container.

F. Waste Container Storage: The container used for the storage of bagged contaminated waste shall be an enclosed dumpster. The dumpster shall have a solid metal roof and a solid metal door with padlock. At a minimum, line the cargo area with two layers of a 6-mil polyethylene sheeting to prevent contamination from damaged or leaking containers. Floor sheeting shall be installed first and shall extend up the sidewalls 24 inches minimum. Wall sheeting shall be overlapped and taped securely into place. No un-bagged contaminated waste or non-asbestos waste shall be stored in these dumpsters. Ensure that bags placed in dumpsters are undamaged. Warning signs shall be posted on the dumpster in accordance with Sections 29 CFR 1926.1101 of the OSHA regulations.

G. Waste Removal Scheduling: All waste containers shall be decontaminated and removed from the Site before final cleanup is started and isolation barriers are taken down.

H. Waste Transportation and Disposal
   1. It is the responsibility of the contractor to determine and insure that the contractor and his/her subcontractor are complying with: 1) current waste handling regulations; and 2) the current regulations for transporting and disposing waste at the ultimate disposal landfill. The contractor must comply fully with these regulations, and with all U.S. Department of Transportation, State, local, and EPA requirements.

2. The contractor's waste hauler and disposal contractor shall maintain a valid hazardous waste transporter's permit and identification number; and obtain complete, and fully comply with any other local hazardous waste manifesting requirements.
3. Exercise care before and during transport to ensure that no unauthorized persons have access to the containerized ACW.
4. Do not transport ACW on open trucks. Treat and dispose of drums that have been contaminated as asbestos-containing waste.
5. A copy of ACW manifest forms shall be sent to the Owner after each disposal is completed and all required data and signatures have been inserted.

SECTION 02 8313 – LEAD-BASED PAINT AWARENESS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

B. Refer to all drawings and/or other Sections of these specifications to determine the type and extent of work therein affecting the work of this Section, whether or not such work is specifically mentioned herein.

C. Sections containing requirements related to this Section include, but are not limited to:
1. Section 02 8200 – Selective Hazardous Building Materials Abatement Demolition
2. Section 02 8213 – Asbestos Abatement
3. Section 02 8416 – Universal Waste Removal and Recycling
4. Section 02 8432 – PCBs Greater than 50 PPM Remediation
5. HBM – 01, 02 & 03 – Hazardous Building Materials Abatement Drawings

1.2 SUMMARY OF WORK

A. Work of this Section includes, requirements for worker protection and waste disposal related to the demolition work involving components and surfaces containing lead at the Central Middle School Site. XRF screening found that some painted ceramic, metal and wood components/ materials have lead-based paint, lead as defined by the CT DPH or lead content. All materials should be considered to contain some amounts of lead per OSHA.

B. The procedures referenced herein shall be utilized during required demolition work specified elsewhere in the Architect's Specification that might impact lead.

C. The demolition may result in dust and debris exposing workers to levels of lead above the OSHA Action Level. Worker protection, training, and engineering controls referenced herein shall be strictly adhered to, until completion of exposure assessment with results indicating exposures below the "Action Level". This section does not involve lead abatement by CT DPH regulation, but identified worker protection requirements for trades involved in the demolition and disposal procedures if lead is involved in the waste stream.

1.3 DEFINITIONS

A. The following definitions relative to lead paint as used in this Section are offered:
1. Action Level (AL): The allowable employee exposure, without regard to use of respiratory protection, to an airborne concentration of lead over an eight (8) hour time weighted average (TWA), as defined by OSHA. The current action level is thirty micrograms per cubic meter of air (30 $\mu g/m^3$).

2. Area Monitoring: The sampling of lead concentrations, which is representative of the airborne lead concentrations that may reach the breathing zone of personnel potentially exposed to lead.
3. Biological Monitoring: The analysis of a person's blood and/or urine, to determine the level of lead concentration in the body.
4. Change Room: An area provided with separate facilities for clean protective work clothing and equipment and for street clothes, which prevents cross-contamination.
5. Competent Person: A person employed by the Contractor who is capable of identifying existing and predictable lead hazards in the surroundings or working conditions, and who has authorization to take prompt corrective measures to eliminate them as defined by OSHA.
6. Exposure Assessment: An assessment conducted by an employer to determine if any employee may be exposed to lead at or above the action level.
7. "High Efficiency Particulate Air" (HEPA): A type of filtering system capable of filtering out particles of 0.3 microns diameter from a body of air at 99.97% efficiency or greater.
8. Lead: Refers to metallic lead, inorganic lead compounds and organic lead soaps. Excluded from this definition are other organic lead compounds.
9. Lead Work Area: An area enclosed in a manner to prevent the spread of lead dust, paint chips, or debris resulting from lead-containing paint disturbance.
10. Lead Paint: Refers to paints, glazes and other surface coverings containing a toxic level of lead.
11. Permissible Exposure Limit (PEL): The maximum allowable limit of exposure to an airborne concentration of lead over an eight (8) hour time weighted average (TWA), as defined by OSHA. The current PEL is fifty micrograms per cubic meter of air (50 $\mu g/m^3$). Extended workdays lower the PEL by the formula: PEL equals 400 divided by the number of hours of work.
12. Personal Monitoring: Sampling of lead concentrations within the breathing zone of an employee to determine the 8-hour time weighted average concentration in accordance with 29 CFR 1926.62 and 29 CFR 1910.1025. Samples shall be representative of the employee's work tasks. Breathing zone shall be considered an area within a sphere with a radius of 18 inches and centered at the nose or mouth of an employee.
13. Resource Conservation Recovery Act (RCRA): RCRA establishes regulatory levels of hazardous chemicals. There are eight (8) heavy metals of concern for disposal: arsenic, barium, cadmium, chromium, lead, mercury, selenium, and silver. Six (6) of the metals are typically found in paints, excluding selenium and silver.
14. Toxic Level Of Lead: A level of lead, when present in dried paint or plaster, contains more than 0.50% lead by dry weight as measured by atomic absorption spectrophotometry (AAS) or 1.0 mg/cm^2 as measured by on-site testing utilizing an x-ray fluorescence analyzer. (Term is specific to State of CT regulations and HUD guidelines only)
15. Toxicity Characteristic Leachate Procedure (TCLP): The U.S. Environmental Protection Agency (US EPA) required sample preparation and analysis for determining the hazard characteristics of a waste material.

1.4 REGULATIONS AND STANDARDS

A. The following regulations, standards, and ordinances of federal, state, and local agencies are applicable and made a part of this specification by reference:
   1. American National Standards Institute (ANSI) ANSI 288.2 - 1980 Respiratory Protection
   2. Code of Federal Regulation (CFR)
      a. 29 CFR 1910.134 - Respiratory Protection

b. 29 CFR 1910.1025 - Lead
c. 29 CFR 1926.62 - Lead in Construction Interim Final Rule
d. 29 CFR 1910.1200 - Hazard Communication
e. 29 CFR 1926.59 - Hazard Communication in Construction
f. 29 CFR 1926.55 - Gases, Vapors, Fumes, Dusts, and Mists
g. 29 CFR 1926.57 - Ventilation
h. 40 CFR 260 - Hazardous Waste Management Systems: General

3. 40 CFR 261 - Identification and Listing of Hazardous Waste
4. 40 CFR 262 - Generators of Hazardous Waste
5. 40 CFR 263 - Transporters of Hazardous Waste
6 40 CFR 264 - Owner and Operators of Hazardous Waste Treatment, Storage, and
7. Disposal Facilities
   a. 40 CFR 265 - Interim Statutes for Owner and Operators of Hazardous Waste Treatment, Storage, and Disposal Facilities
   b. 40 CFR 268 - Lead Disposal Restrictions
   c. 40 CFR 172 - Hazardous Materials Tables and Communication Regulations
   d. 40 CFR 178 - Shipping Container Specifications
   e. 40 CFR 270 and 124 - Hazardous Waste Permits
8. Underwriters Laboratories, Inc. (UL) UL586 - 1990 High Efficiency Particulate Air Filter Units

1.5 QUALITY ASSURANCE

A. Hazard Communication Program
The Contractor shall establish and implement a Hazard Communication Program as required by 29 CFR 1926.59.

B. Compliance Plan (Site Specific)
The contractor shall establish a written compliance plan, which is specific to the project site, to include the following:
1. A description of work activity involving lead including equipment used, material included, controls in place, crew size, employee job responsibilities, operating procedures, and maintenance practices.
2. Methods of engineering controls to be used to control lead exposure.
3. The proposed technology the Contractor will implement in meeting the PEL.
4. Air monitoring data documenting the source of lead emissions.
5. A detailed schedule for implementing the program, including documentation of appropriate supply of equipment, etc.
6. Proposed work practice which establishes proper protective work clothing, housekeeping methods, hygiene facilities, and practices.
7. Worker rotation schedule, if proposed, to reduce TWA.
8 A description of methods for informing workers of potential lead exposure.

C. Hazardous Waste Management
The Contractor shall establish a Hazardous Waste Management Plan, which shall comply with applicable regulations and address the following:
1. Identification of hazardous wastes
2. Estimated quantity of waste to be disposed of

3. Names and qualifications of each sub-contractor that will be transporting, storing, treating, and disposing of wastes
4. Disposal facility location and 24 hour point of contact
5. Establish EPA state hazardous waste and identification numbers if applicable
6. Names and qualifications (experience and training) of personnel who will be working on-site with hazardous wastes
7. List of waste handling equipment to be used in performing the work to include cleaning, volume reduction, if applicable, and transport equipment
8. Qualifications of laboratory to be utilized for TCLP sampling and analysis
9. Spill prevention, containment, and cleanup contingency measures
10. Work plan and schedule for waste containment, removal, treatment, and disposal

D. Medical Examinations
1. Before exposure to lead contaminated dust, provide workers with a comprehensive medical examination as required by 29 CFR 1910.1025 and 29 CFR 1926.62.
2. The examination shall not be required if adequate records show that employees have been examined as required by 29 CFR 1926.62 within the last year.
3. Medical examination shall include, at a minimum, approval to wear respiratory protection and biological monitoring.

E. Training
1. The Contractor shall ensure that workers are trained to perform lead paint disturbing activities and disposal operations prior to the start of work in accordance with 29 CFR 1926.62.

F. Respiratory Protection Program
1. The Contractor shall furnish each employee required to wear a negative pressure respirator with a respirator fit test at the time of initial fitting and at least once every six (6) months thereafter as required by 29 CFR 1926.62.
2. The Contractor shall establish a Respiratory Protection Program in accordance with ANSI Z88.2, 29 CFR 1910.134, and 29 CFR 1926.62.

1.6 SUBMITTALS

A. The Contractor shall submit to the Owner the following submittals prior to start of work:
1. Copies of medical records for each employee to be used on the project, including results of biological monitoring and a notarized statement by the examining physician that such an examination took place.
2. Copies of workers' training certificates.
3. Submit record of successful respirator fit testing performed by a qualified individual within the previous six (6) months, for each employee to be used on this project with the employee's name and social security number with each record.
4. The name and address of Contractor's blood lead testing lab, OSHA-CDC listing, and Certification in the State of Connecticut.
5. The name and address of Contractor's personal air monitoring and waste disposal lead testing laboratory/ies.
6. Name, address, and ID number of the hazardous waste hauler, waste transfer route, and proposed disposal site.

B. The Contractor shall submit to the Owner the following submittals during the job:
   1. Results from personal air samples.
   2. Medicals, certificates, and fit test 24 hours in advance of any new employee starting on the project.

C. The Contractor shall submit to the Owner the following submittals upon completion of the work:
   1. Copies of manifests and receipts acknowledging disposal of all hazardous waste material from the project showing delivery date, quantity, and appropriate signature of landfill's authorized representative.

1.7 PERSONAL PROTECTION

A. Exposure Assessment
   1. The Contractor shall determine if any worker will be exposed to lead at or above the action level.
   2. The exposure assessment shall identify the level of exposure a worker would be subjected to without respiratory protection.
   3. The exposure assessment shall be achieved by obtaining personal monitoring samples representative of a full shift at least (8-hour TWA).
   4. During the period of the exposure assessment, the Contractor shall institute the following procedures for protection of workers.
      a. Protective clothing shall be utilized
      b. Respiratory protection
      c. Change areas shall be provided
      d. Hand washing facilities and shower
      e. Biological monitoring
      f. Training of workers

B. Respiratory Protection
   1. The Contractor shall furnish appropriate respirators approved by NIOSH/MSHA for use in atmospheres containing lead dust.
   2. Respirators shall comply with the requirements of 29 CFR 1926.62.
   3. Workers shall be instructed in all aspects of respiratory protection.
   4. The Contractor shall have an adequate supply of HEPA filter elements and spare parts on site for all types of respirators in use.
   5. The following minimum respirator protection for use during paint removal or demolition of components and surfaces with lead paint shall be the 1/2 mask air purifying respirator with high efficiency filters for exposures (not in excess of 500 ug/m^3 or 10 x PEL).

C. Protective Clothing
   1. Personal protective clothing shall be provided for all workers, supervisors, and authorized visitors entering the work area.
   2. Each worker shall be provided with a minimum of two (2) complete disposable coverall suits.
   3. Removal workers shall not be limited to two (2) suits, and the Contractor shall supply additional suits as necessary.
   4. Under no circumstances shall anyone entering the abatement area be allowed to re-use a contaminated disposable suit.

5. Disposable suits, such as TYVEK suits, and other personal protective equipment (PPE) shall be donned prior to entering the lead control area. A change room shall be provided for workers to put on suits and other personal protective equipment with separate areas to store their street clothes.
6. Eye protection for personnel engaged in lead operations shall be furnished when the use of a full-face respirator is not required.
7. Goggles with side shields shall be worn when working with power tools or a material that may splash or fragment, or if protective eye wear is specified on the Safety Data Sheet (SDS) for a particular product to be used on the project.

1.8 PERSONAL MONITORING

A. General: The Contractor is required to perform the personal air sampling activities during lead paint disturbing work. The results of such sampling shall be posted, provided to individual workers and submitted to the Owner as described herein.

B. Sampling: Samples shall be taken for the duration of the work shift or for eight hours, whichever is less. Personal samples need not be taken every day after the first day if working conditions remain unchanged, but must be taken every time there is a change in removal operations, either in terms of the location or the type of work. Sampling will be used to determine eight-hour Time-weighted averages (TWA). The Contractor is responsible for personal sampling as outlined in OSHA Standard 29 CFR 1926.62 and 29 CFR 1910.1025.

C. Sampling Results: Air sampling results shall be reported to individual workers in written form no more than forty-eight (48) hours after the completion of a sampling cycle. The reporting document shall list each sample's result, sampling time and date, personnel monitored and their social security numbers, flow rate, sample duration, sample yield, cassette size, and analysts' name and company, and shall include an interpretation of the results. Air sample analysis results will be reported in micrograms/cubic meter ($\mu g/m^3$).

D. Testing Laboratory: The Contractor's testing lab shall be participating in AIHA's Environmental Lead Laboratory Accreditation Program (ELLAP). The Contractor shall submit to the Consultant for review and acceptance, the name and address of the laboratory, certification(s) of AIHA participation, a listing of relevant experience in air_lead analysis, and presentation of a documented Quality Assurance and Quality Control Program.

PART 2 PRODUCTS

2.1 GENERAL

A. Any substitution in materials, equipment, or methods to those specified shall be approved by the Owner prior to use. Any requests for substitution shall be provided in writing to the Owner. The request shall clearly state the rationale for the substitution.

B. Submit to the Owner product data of all materials and equipment and samples of all materials to be considered as an alternate.

C. Product data shall consist of manufacturer; catalog sheets, brochures, diagrams, schedules, performance charts, illustrations, safety data sheets (SDS), and other standard descriptive data.

Submittal data shall be clearly marked to identify pertinent materials, products or equipment and show performance characteristics and capacities.

D. Samples shall be of sufficient size and quantity to clearly illustrate the functional characteristics of the product or material with integrally related parts and attachment devices.

2.2 MATERIALS AND PRODUCTS

A. Deliver all materials in the original packages, containers, or bundles bearing the name of the manufacturer and the brand name and product technical description.

B. Damaged or deteriorating materials shall not be used and shall be removed from the premises.

C. The Contractor shall have available sufficient inventory or dated purchase orders for materials necessary for the job including protective clothing, respirators, filter cartridges, polyethylene sheeting of proper size and thickness, tape, and air filters.

D. Materials:
1. Polyethylene sheet in a roll size to minimize the frequency of joints shall be delivered to job site with factory label indicating 6 mil.
2. Polyethylene disposable bags shall be six (6) mil. Tie wraps for bags shall be plastic, five (5) inches long (minimum), pointed and looped to secure filled plastic bags.
3. Tape or adhesive spray will be capable of sealing joints in adjacent polyethylene sheets and for attachment of polyethylene sheet to finished or unfinished surfaces of dissimilar materials and capable of adhering under both dry and wet conditions, including use of amended water.
4. Impermeable containers are to be used to receive and retain any lead containing or contaminated materials until disposal at an acceptable disposal site. (The containers shall be labeled in accordance with EPA and DOT standards.)
5. HEPA filtered exhaust systems shall be used during powered dust generating abatement operations. The use of powered equipment without HEPA exhausts is prohibited.

2.3 TOOLS AND EQUIPMENT

A. Provide suitable tools for all lead disturbing operations.

B. The Contractor shall have available power cables or sources such as generators (where required).

C. Vacuum units, of suitable size and capacities for the project, shall have HEPA filter(s) capable of trapping and retaining 99.97% of all mono-dispersed particles of 0.3 micrometers in diameter.

PART 3 EXECUTION

3.1 WORKER PROTECTION/TRAINING

A. The Contractor shall provide appropriate training, respiratory and other personal protection, and biological monitoring for each worker and ensure proper usage during potential lead exposure and the initial exposure assessment.

B. Workers who will perform procedures must have completed one of the following training courses:
   1. EPA Lead Abatement Supervisor (40 hours)
   2. EPA Lead Abatement Worker (32 hours)
   3. HUD/EPA course "Work Smart, Work Wet, and Work Clean to Work Lead Safe" (8 hours)
   4. HUD/NARI course "The Remodeler's and Renovator's Lead Based Paint Training Program" (8 hours).
   5. HUD "Lead Safe Work Practices" (8 hours)

3.2 CONTRACTOR'S RESPONSIBILITIES

A. The Contractor is responsible for establishing and maintaining controls referenced herein to prevent dispersal of lead contamination from the lead work area.

B. The Contractor is also responsible for conducting work with applicable federal, state, and local regulations as referenced herein.

3.3 WORKER HYGIENE PRACTICES (REQUIRED DURING INITIAL EXPOSURE ASSESSMENT AND IF RESULTS OF AIR SAMPLING ARE ABOVE OSHA ACTION LEVEL)

A. Work Area Entry: Workers shall don personal protective equipment prior to entering work area, including respiratory protection, disposable coveralls, gloves, headgear, and footwear.

B. Work Area Departure: While leaving respirators on, workers shall remove all gross contamination, debris, and dust from disposable coveralls and proceed to change room and remove coveralls and footwear and place in hazardous waste disposal container.

C. Hand washing Facilities: All workers must wash their hands and faces upon leaving the work area.

D. Equipment: All equipment used by workers inside the work area shall be wet wiped or bagged for later decontamination before removal from the work area.

E. Prohibited Activities: Under no circumstances shall workers eat, drink, smoke, chew gum, or tobacco, or remove their respirators in the work area.

F. Shock Hazards: The Contractor is responsible for using safe procedures to avoid electrical hazards. All temporary electrical wiring will be protected by ground fault circuit interrupters (GFI).

3.4 LEAD WORK AREA (REQUIRED DURING INITIAL EXPOSURE ASSESSMENT AND IF RESULTS OF AIR SAMPLING ARE ABOVE OSHA ACTION LEVEL)

A. The Contractor shall place warning signs at all entrances and exits from the work area. Signage shall be a minimum of 20" x 14" and shall state the following:

DANGER
LEAD WORK AREA
MAY DAMAGE FERTILITY OR THE UNBORN CHILD

CAUSES DAMAGE TO THE CENTRAL NERVOUS SYSTEM
DO NOT EAT, DRINK OR SMOKE IN THIS AREA

B. The Contractor shall designate a change room as specified in this Section. The change room shall consist of two (2) layers of sheeting on the floor surface adjacent to the lead work area. The change room shall have separate storage facilities for street clothes to avoid cross contamination.

C. The Contractor shall provide potable water for hand and face washing and provide a portable shower unit.

D. The Contractor shall place six-mil polyethylene drop cloths on floor/ ground surfaces prior to beginning removal work to facilitate clean-up.

3.5 WORK AREA CLEAN UP

A. The Contractor shall remove all loose chips and debris from floor surfaces and place in hazardous waste disposal bags.

B. The Contractor shall HEPA vacuum adjacent surfaces to remove dust and debris.

C. Polyethylene drop cloths shall be properly disposed of.

3.6 WASTE DISPOSAL

A. The Contractor's contractual liability shall be the proper disposal of all non-hazardous and hazardous wastes generated at the site in accordance with all applicable federal, state, and local regulations as referenced herein. Metal lead based paint components may be segregated for recycling at an approved facility. Lead TCLP sampling will be performed by the owner’s representative Langan. The contractor will be responsible for all costs associated with lead/hazardous waste disposal should they, their haulers and/or the landfill of their choosing take samples and declare the waste as regulated hazardous waste.

END OF SECTION 02 8313

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 02 8416 – UNIVERSAL WASTE REMOVAL AND RECYCLING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. General Provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

B. Refer to all drawings and/or other Sections of these specifications to determine the type and extent of work therein affecting the work of this Section, whether or not such work is specifically mentioned herein.

C. Sections containing requirements related to this Section include, but are not limited to:
1. Section 02 8200 – Selective Hazardous Building Materials Abatement Demolition
2. Section 02 8213 – Asbestos Abatement
3. Section 02 8313 – Lead-Based Paint Awareness
4. Section 02 8432 – PCBs Greater than 50 PPM Remediation
5. HBM – 01, 02 & 03 – Hazardous Building Materials Abatement Drawings

1.2 SUMMARY OF WORK

A. Work of this Section includes, but is not necessarily limited to, all which is necessary for complete removal and recycling/disposal of all PCB-containing ballasts, newer ballasts, mercury containing devices, electronics, alarms, emergency lighting, signage, paints, chemicals/ contaminated piping/waste traps, batteries, window air conditioning units, CFC's, boiler and HVAC controls, other hazardous materials, wastes and special wastes that exist in the interior/exterior of the building structure(s) that might be impacted by proposed demolition of the original building and building addition. The hazardous materials contractor will supply the packaging materials and pay for the proper disposal of these materials. The hazardous materials contractor will provide the labor to put the materials into the proper packaging for disposal.
1. All work including the removal, characterization (any testing that may be required by disposal facility) and disposal of hazardous materials and chemicals.
2. Removal, characterization (any testing that may be required by disposal facility) and disposal of fluorescent light ballasts and capacitors throughout all site structures.
3. Removal, characterization (any testing that may be required by disposal facility) and disposal of all containers, drums and unknown materials as well as fire extinguishers.
4. Removal, characterization (any testing that may be required by disposal facility) and disposal of contained gear oils, hydraulic oils and refrigeration liquids, etc. from various pieces of equipment.
5. Removal, characterization (any testing that may be required by disposal facility) and recycling/disposal of batteries, electronic devices, lighting signage, etc.
6. Removal, characterization (any testing that may be required by disposal facility) and recycling/disposal of science equipment, contaminated piping, chemicals, waste traps, etc.
7. File all necessary notices, obtain all permits and licenses, and pay all governmental taxes, fees, and other costs in connection with the work. Obtain all necessary approvals of all governmental departments having jurisdiction.

8. Comply with Health and Safety Plans.

B. The Contractor, under this Section, shall provide all materials, labor, equipment and appliances as necessary to properly remove and recycle/dispose of materials.

1.3 DESCRIPTION OF WORK

A. This specification covers the proper and legal removal and disposal of all Hazardous/Universal Waste from the Central Middle School Site located in Greenwich, Connecticut. The removal and disposal activities shall comply with all aspects of the contract documents and federal, state and local requirements.

B. Universal Wastes shall include, but not be limited to, fluorescent bulbs, light fixture ballasts containing polychlorinated bi-phenyls (PCBs) or DEHP, mercury lamps, mercury containing devices, thermostats and switches, batteries, fire extinguishers, Halon fire suppression systems, alarms, emergency lighting, paint, chemicals, window air conditioning units, CFC's, boiler and HVAC controls, science equipment/chemicals/contaminated piping/waste traps, refrigerants, electronic devices (computers, monitors and signage), and other compressed gases, mechanical fluids, oils, and lubricants. Whenever there is a conflict or overlap within these specifications and between applicable codes and regulations, the most stringent provision specified shall apply.

C. Central Middle School was constructed in 1957 with an addition in 2000. The school has two stories with basement mechanical areas and tunnels and crawl spaces with approximately 112,000 square feet of gross area. Interior areas consist of classrooms, offices, auditorium, gymnasium, media center, kitchen, cafeterias, toilet rooms, storage rooms, boiler/mechanical rooms, and tunnel/crawlspace/mechanical duct areas.

D. The proposed redevelopment consists of demolition of the original building and addition.

E. The Contractor shall independently identify and quantify all Universal Waste Items.

1.4 SUBMITTALS

A. Before Start of Work: Submit the following to the Owner's Representative for review. Do not start work until these submittals are returned with Owner's Representative's approval.
   1. Copy of State or local license for hazardous waste hauler;
   2. Certification of at least one on-site supervisor which has satisfactorily completed the OSHA 40 Hour Health and Safety Course for Handling Hazardous Materials;
   3. Certificates of workers which have successfully completed at least the OSHA 40-Hour Health and Safety Course for Hazardous Materials;
   4. Certificates of workers which have successfully completed the required employee training for universal/hazardous waste or appropriate type of training to the type of wastes being managed;
   5. Name and address of the universal waste handler and/or a destination facility where the waste materials is to be treated, deposited or recycled in accordance with all regulatory requirements (include contact person and telephone numbers), if the universal waste meets the definition of hazardous waste, the name and address of the hazardous waste treatment, storage and disposal (TSD) facility;

6. Work Plan: Provide a detailed written work plan that describes the procedures for the removal,
    a. Proposed level of worker training for each type of regulated and/or hazardous material to be removed.
    b. Names and applicable licenses of key personnel.
    c. Proof of appropriate training for workers.
    d. Proof of a current medical surveillance program for all personnel.
    e. Safety Data Sheets (SDS) for any chemicals to be used on the project. All products to be used on this project must have SDS approved by the Owner's Environmental Consultant.
    f. Proposed detailed work schedule.
7. Following final removal, and disposal or destruction, provide Owner with waste transport and disposal documents (e.g., manifests), as well as certificates of destruction and recycling as appropriate.

1.5 CODES AND REGULATIONS

A. Regulatory compliance includes but is not necessarily limited to applicable requirements set forth by :
    1. Federal Regulations:
        a. 29 CFR 1910, "Occupational Safety and Health Standards"(General Industry Standards)
        b. 29 CFR 1910.134 "Respiratory Protection"
        c. 29 CFR 1910.1200 "Hazard Communication"
        d. 29 CFR 1926, "Safety and Health Regulations for Construction" (Construction Industry Standards)
        e. 40 CFR 50, "National Primary and Secondary Ambient Air Quality Standards"
        f. 40 CFR 60, "Standards of Performance for New Stationary Sources," Appendix B, "Test Methods"
        g. 40 CFR 117, "Determination of Reportable Quantities for Hazardous Substances"
        h. 40 CFR 122, "USEPA Administered Permit Program: The National Pollutant Discharge Elimination System"
        i. 40 CFR 172, "Hazardous Waste Transportation"
        j. 40 CFR 261, "Identification and Listing of Hazardous Waste"
        k. 40 CFR 262, "Standards Applicable to Generators of Hazardous Waste"
        l. 40 CFR 263, "Standards Applicable to Transporters of Hazardous Waste"
        m. 40 CFR 268, "Land Disposal Restrictions"
        n. 40 CFR 273, "Universal Waste Rule"
        o. 40 CFR 300, "National Oil and Hazardous Substances Pollution Contingency Plan"
        p. 40 CFR 302, "Designation, Reportable Quantities, and Notification"
        q. 40 CFR 112 (oil pollution prevention)
        r. 40 CFR 279 (used oil)
        s. 40 CFR 273 (Universal Wastes)
        t. 40 CFR 761 (PCBs)
    2. Toxic Substances Control Act (TSCA), US-EPA
    3. Resource Conservation and Recovery Act (RCRA)
        a. Comprehensive Environmental Response, Compensation & Liability Act (CERCLA) (Superfund Law)

4. Connecticut Regulations:
   State requirements which govern universal waste removal and disposal include but are not necessarily limited to the following:

   a. Connecticut Department of Energy and Environmental Protection (CT DEEP) (Hazardous and Universal Waste Management Regulations); Section 22a-454, 456 Waste Facility and Section 22a-449(c)-113 of the Regulations of Connecticut State Agencies (RCSA), respectively.
   b. Connecticut DEEP; 310 CMR 40 Connecticut Contingency Plan, 310 CMR 30 Hazardous Waste Regulations, 310 CMR 1-7 Clean Water Act, 310 CMR 16, 19 Solid Waste Regulations, 314 CMR 1-8 Clean Air Act
   c. Local Town, City or County Bylaws, rules and regulations.

B. Under TSCA, items that contain more than 500 parts per million (PPM) of PCBs are classified as PCB material, items that contain between 50 ppm and 500 ppm of PCB are classified as PCB-contaminated and items that contain less than 50 ppm of PCBs are classified as non-PCB items.

Under the Small Capacitor Exemption, TSCA has allowed the disposal of non-leaking, intact "small capacitors", defined as containing less than three pounds of PCB dielectric fluid, in a municipal solid waste landfill. Light ballasts containing a small PCB capacitor are covered under this category. The intent of the "small capacitor" disposal rule is for "random disposal" in a landfill by "householders and other infrequent disposers". When commercial and industrial entities dispose of large quantities of small PCB capacitors, the EPA strongly encourages voluntary collection and disposal of PCB capacitors in chemical waste landfills or high-temperature incinerators.

C. Under the "Superfund" laws, PCBs are specifically listed as a hazardous substance. The "release" of more than one pound of PCBs into the environment triggers a "Superfund" notification and cleanup requirement.

Since twenty-five ballasts collectively contain approximately one pound of PCBs, the disposal of twenty five or more PCB-containing ballast in a landfill would trigger a "Superfund" action.

D. The State of Connecticut General Hazardous Waste Statue 22A 454, 456 requires that PCB ballast must be incinerated or sent to a chemical waste landfill. The statue defines PCB waste, including PCB ballast, as Connecticut Regulated Wastes.

E. Other Regulations: The other relevant regulations affecting disposal of PCBs include the following:
   1. Department of Transportation (DOT) regulations – DOT regulation HM-181 regulates transportation of hazardous materials, including PCBs.
   2. Occupational Safety and Health Administration (OSHA) – OSHA regulates worker's safety and exposure to a variety of chemicals including PCB's.
   3. Resource Conservation and Recovery Act (RCRA) – RCRA regulates wastes, which fail Toxic Characteristic Leachate Procedure (TCLP) and which contain more than 50 ppm of PCBs.

PART 2 PRODUCTS

2.1 GENERAL

A. 35 or 55-gallon metal, fiber drums or containers with lids that can be secured and sealed, DOT approved.

B. Appropriate waste labels identifying contents as regulated and hazardous wastes as defined by 49 CFR 172.

C. Fluorescent Lamp Disposal (Crusher) units, such as DexTrite Fluorescent® Lamp Disposal equipment, or equivalent. Such equipment must be capable of capturing fugitive mercury vapors during the bulb crushing process, as well as the fractured and broken waste products.

D. HEPA and charcoal filter equipped mercury capture vacuum.

E. Cardboard boxes and sleeves for packaging lamps that will be removed from the site intact or unbroken.

F. Recovery tanks to temporarily hold compressed gasses.

G. Health & Safety equipment complying with health and safety plan.

PART 3 EXECUTION

3.1 GENERAL

A. Procedures and methods contained herein are to provide guidance to protect from the contamination of the environment, and exposure to workers, while handling hazardous waste and regulated waste-streams for disposal/recycling/destruction.

B. Owner to Stop Work: The Owner's representative and the Owner's Environmental Consultant shall have the authority to stop the work at any time that conditions are not within Specification and/or applicable regulations. The stoppage of work shall continue until conditions have been corrected to the satisfaction of the Owner's representative or Owner's Environmental Consultant. Standby time to resolve the problems shall be at the Contractor's expense.

C. Personal Protective Equipment:
   1. Personal protective equipment shall consist of (at a minimum) safety goggles or other protective eye-ware, work shoes with non-slip soles (e.g., neoprene), chemical resistant gloves that cover the hand and an apron that covers the front of the worker's body from shoulder to toes (e.g., neoprene or nitrile gloves).
   2. Personal protective equipment contaminated by handling operations should be disposed of as contaminated waste.
   3. Hammering or sudden impact methods for removing ballast's from the light fixture shall not be employed, as such methods may cause leakage in an otherwise non-leaking ballast.
   4. Throwing and tossing of ballast's into disposal drums shall not be conducted, as such activities may cause leakage in an otherwise non-leaking ballast.

D. Work Procedures
   1. Contractor shall obtain a hazardous waste generator number from Region I, US EPA for the Owner.
   2. During the light fixture removal stage during demolition, the following procedures (or equivalent alternate but protective measures) shall be followed:
      a. Carefully remove fixtures, and stack them in a designated portion of the work area.
      b. Designate an area where the fixtures can be disassembled, and components removed and segregated (e.g., lamps, ballasts). The area should be remote from other demolition activities, and have adequate ventilation and lighting.
      c. The work area for fixture disassembly shall (at a minimum) have the floor lined with one layer of 6-mil fire-retardant polyethylene plastic to control accidental spills or breakage. The work area should have a table or other solid work platform to facilitate disassembly of the fixtures, and the protective plastic sheeting should cover the work table area and waste drums/lamp crushing/lamp repackaging equipment.
      d. Carefully remove lamps from fixtures, and either crush them or repackage them for disposal.
      e. In the event a lamp breaks, utilize the mercury capture vacuum to remove all debris generated.
   3. Carefully remove ballasts, and segregate for disposal in the following manner:
      a. Ballasts labeled as "No-PCBs" shall NOT be segregated and shall be treated as PCB waste as potting material may contain PCBs and DEHP. Handle and dispose of in the same manner as ballasts containing PCBs and/or DEHP.
      b. Non-leaking ballasts shall be segregated and drummed for disposal as hazardous wastes. These ballasts may be destroyed by high temperature incineration, or land filled at a properly permitted facility.
      c. Leaking ballasts shall be segregated and drummed. Punctures or damage to these ballasts exposes an oily or tar-like substance. These ballasts, and all materials it contacts, MUST be incinerated under TSCA; they cannot be landfilled.

E. Miscellaneous Stored Materials In Containers
   1. Miscellaneous materials may include antifreeze, cleaning solutions, paints, and other miscellaneous materials.
   2. During removing/recycling of materials enclosed in their original container, the Contractor shall package, and label (lab packed) by waste classification in accordance with appropriate RCRA and Connecticut Department of Transportation (ConnDOT). In turn these containers shall be transported, under proper manifesting procedures, to a recycling facility. The facility shall forward a certificate of recycling or disposal to the Contractor, who shall submit this information to the Owner.

F. Universal Waste
   1. Universal waste includes, but is not limited to, fluorescent bulbs, light fixture ballasts containing polychlorinated bi-phenyls (PCBs) or DEHP, mercury lamps and switches, batteries, fire extinguishers, Halon fire suppression systems, paint, refrigerants, electronic devices (computers and monitors), and other compressed gases, mechanical fluids, oils, and lubricants, as defined in 40 CFR 273 and Section 22a-449(c)-113 of the Regulations of Connecticut State Agencies (RCSA). Follow procedures for handling, storage, labeling, shipping, recording keeping and other procedures as required in 40 CFR 273 and Section 22a-449(c)-113.

G. Regulated Waste
   1. Non-thermostat mercury switches: Handle and dispose of in accordance with State regulation and applicable Federal regulations.
   2. Used oil: Handle and dispose of in accordance with State regulations.
   3. Refrigerants: Prior to disposal of refrigerant containing equipment, verify that refrigerant has been removed per the requirements of 40 CFR Part 82 (Protection of Stratospheric Ozone).
   4. Diesel fuel: If possible, use on site to run equipment. Dispose of or recycle any remaining fuel as per applicable regulations.
   5. Fire extinguishers: Contact manufacturer for recycling or donate to local fire department.
   6. Halon Fire Suppression System: For recovery and management of Halon, utilize a technician EPA certified in appropriate level for the system. Technician is to use an EPA-certified reclaimer for disposal.

H. Transportation
   1. Transport waste materials using properly permitted vehicles operated by drivers with Commercial Drivers Licenses (CDLs) and Hazardous Materials endorsements. Coordinate transportation routes with Connecticut Department of Transportation (ConnDOT). Provide Owner with copies of transporter certifications and EPA ID number a minimum of seven (7) days prior to first use. Chain of custody records shall be maintained which include the date of pickup, number of drums, name of transporter and destination.

I. Waste Disposal Documentation
   1. Waste shipment records and manifests for all materials transported from the site as required by regulations and disposal facility are to be provided to the Owner every five (5) business days. Incorporate this information into the close out package to be provided to the Owner. Within thirty (30) days of generation, Contractor shall provide waste manifests/shipment records and Certificates of Recycling and Disposal (CRD) to Owner.
   2. Certificates of Discontinuance for all equipment and fixtures.

J. Disposal Facilities
   1. Contractor shall use only disposal facilities which have been pre-approved by the Owner and its insurers and with valid regulatory permits for type of waste being handled. Provide Owner with copies of disposal facility regulatory permits and EPA identification number a minimum of seven (7) days prior to shipping to that facility. Provide disposal facility required documentation including additional waste sampling.

END OF SECTION 02 8416

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 028432 – PCBS GREATER THAN 50 PPM REMEDIATION

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and General Provisions of Contract, including General Supplementary Conditions apply to this Section.

B. Sections containing requirements related to this Section include, but are not limited to:
1. Section 02 8200 – Selective Hazardous Building Materials Abatement Demolition
2. Section 02 8213 – Asbestos Abatement
3. Section 02 8313 – Lead-Based Paint Awareness
4. Section 02 8416 – Universal Waste Removal and Recycling
5. HBM – 01, 02 & 03 – Hazardous Building Materials Abatement Drawings

1.2 CONSULTANT

A. Langan CT, Inc. (Langan) has been retained as the Consultant for the purposes of construction administration and project monitoring during PCB Remediation. The Consultant will represent the Owner in all phases of the remediation project at the discretion of the Owner. The PCB Remediation Contractor shall regard the Consultant's direction as authoritative and binding as provided herein, in matters particularly but not limited to approval of work areas, review of monitoring results, completion of the various segments of work, final completion of the remediation, submission of data, and daily field punch list items.

1.3 USE OF THE CONTRACT DOCUMENTS

A. It shall be incumbent upon the PCB Remediation Contractor to visit the Site and determine what exists, its condition, and what will be required to accomplish the Work intended by the Contract Documents. No increase in the Contract Sum will be permitted as a result of the PCB Remediation Contractor's failure to visit the Site and understand the existing conditions.

B. All work shall comply with applicable Codes, laws, regulations, and ordinances wherever applicable. The most stringent of all the foregoing shall govern.

C. It is not intended that the Specifications show every detail of the Work, but the PCB Remediation Contractor shall be required to furnish within the Contract Sum all material and labor necessary for the completion of the Work in accordance with the intent of the Specifications.

D. In case of ambiguity among the Contract Documents, the more stringent requirement as determined by the Consultant shall prevail.

E. The Work of this Contract includes making modifications as necessary, subject to approval by Owner in consultation with the Consultant, to correct any conflicts.

F. All items, not specifically mentioned in the Specifications but implied by trade practices to complete the work, shall be included.

1.4 EXAMINATION OF THE SITE

A. It is understood that the PCB Remediation Contractor has examined the Site and made his/her own estimates of the facilities and difficulties attending the execution of the Work, and has based his price thereon.

B. Except for unforeseeable concealed conditions as determined by the Consultant, the PCB Remediation Contractor shall make no claim for additional cost due to the existing conditions at the Site.

1.5 CONTRACTOR QUALIFICATIONS

A. All bidders shall submit a record of prior experience in PCB remediation projects, specifically including removal of PCB-containing materials listing no less than three (3) completed jobs in the past year, with all projects being of similar size and scope. The PCB Remediation Contractor shall list the experience and training of the project foremen and all on-site personnel. The information that should be included is as follows:
   1. Project Name and Address
   2. Owner's Name and Address
   3. Architect/Consultant
   4. Contract Amount
   5. Date of Completion
   6. Extras and Changes

B. Submit a written statement regarding whether the PCB Remediation Contractor has ever been found out-of-compliance with federal or state regulations pertaining to worker protection, removal, transport, or disposal.

1.6 TESTING LABORATORY SERVICES

A. The PCB Remediation Contractor shall submit to the Consultant the name; address and qualifications of proposed laboratories intended to be utilized for sample analysis as required by this section.

1.7 GENERAL REQUIREMENTS

A. The PCB Remediation Contractor shall furnish all labor, materials, facilities, equipment, installation services, employee training, notifications, permits, licenses, certifications, agreements and incidentals necessary to perform the specified work. Work shall be performed in accordance with the contract documents, the latest regulations from the Occupational Safety and Health Administration (OSHA), the United States Environmental Protection Agency (US EPA), Connecticut Department of Energy and Environmental Protection (CT DEEP) and all other applicable federal, state and local agencies. Whenever the requirements of the above references conflict or overlap, the more stringent provision shall apply.

B. All project personnel engaged in the work covered under this section shall be trained in accordance with OSHA Regulations 29 CFR 1910.1000 and 29 CFR 1910.1200. It should also be noted that work associated with PCB removal may also involve exposure to PCBs during demolition and removal activities specified herein and the PCB Remediation Contractor shall perform required exposure assessment for PCBs.

C. The PCB Remediation Contractor shall provide a Project Health and Safety Officer having a minimum of eight (8) hours of supervisor training in hazardous waste site operations in accordance with the requirements of 29 CFR 1910.1200. The supervisor must be on site at all times during remediation work. This supervisor and other contractor representatives must attend a pre-remediation meeting to be scheduled by the building owner/owners representative.

D. This section specifies the procedures for removal of the 1957 original building existing materials assumed to contain polychlorinated biphenyls (PCB), equal to or greater than (>)50 parts per million (ppm) bulk product waste (caulking/glazing/sealant compounds also contain asbestos), in the form of:

Base Bid – 1957 Original Building

- Ceiling/Deck Caulking Compound and Contaminated Substrates (Located at Ceilings/Deck Panels and Metal Beams/Columns) – ALL – Throughout All Areas of Second Floor (asbestos-containing also);

- Interior Window Glazing Compounds and Contaminated Substrates - ALL - Main Office L Shaped Window Wall, Classrooms 201/201A and Gymnasium Offices (asbestos-containing also);

- Interior Wall/Wall and Wall/Column Caulking Compounds and Contaminated Substrates – ALL - Classrooms 201, 201 Spray Booth, 201A, 202-207, Throughout Main Office Areas, Teachers Break/Faculty Room and Nurse Areas, Throughout Building Corridors and Stairwells, Throughout Gymnasium Areas, Corridor Custodial Closets and Throughout Building (asbestos-containing also);

- Interior/Exterior Door Window Glazing Compounds and Contaminated Substrates – ALL - Throughout Building;

- Interior/Exterior Door/Window/Door Window/Wall/Column Caulking and Glazing Compounds and Contaminated Substrates – ALL – Ten Openings (Multiple Sizes and Multiple Door/Window Walls) - Entry/Exit Areas to Building Adjacent Custodial Office, Main Office, Cafeteria, Room 208 and Gymnasium (Multiple Sizes and Multiple Door/Window Walls) (asbestos-containing also);

- Interior/Exterior Vent Caulking Compounds and Contaminated Substrates – ALL – Eight Openings – Throughout Building Perimeter Walls (asbestos-containing also);

- Interior/Exterior Door/Window/Wall/Column Caulking and Glazing Compounds and Contaminated Substrates – ALL – 17 Door/Window Openings (Multiple Sizes) - Throughout Building Perimeter Walls (asbestos-containing also);

- Interior/Exterior Window/Wall/Column/Window Walls/Door Caulking and Glazing Compounds and Contaminated Substrates – ALL (Multiple Sizes) – Throughout Building Perimeter Walls/Window Walls (asbestos-containing also); and

- Exterior Wall/Wall Expansion and Column Caulking Compounds and Contaminated Substrates – ALL - Throughout Exterior (asbestos-containing also).

Add Alternates – 1957 Original Building

Add Alternate HBM #10 – Disposal of Painted Concrete, Concrete Block, Brick, Glazed Block, Other Materials, Ceilings, Walls and Floors, Other Painted Materials – Throughout – as > 50 ppm PCB Bulk Product Waste.

Add Alternate HBM #11 – Disposal of Painted Concrete, Concrete Block, Brick, Glazed Block, Other Materials, Ceilings, Walls and Floors, Other Painted Materials – Throughout – as < 50 ppm PCB CTDEEP Regulated Waste.

The materials throughout the building are assumed PCB Bulk Product Waste (EPA Bulk Product Waste Reinterpretation dated October 24, 2012). Remediated surfaces may have to pass EPA post remediation verification sampling and areas that fail will require additional remediation at no additional cost to the owner, until verification sampling passes and/or visual inspection deems all the materials have been removed (contractor owns additional remediation for verification sampling failures up to 20% however if the contractor is deemed by Langan to have contaminated the wall surfaces, all additional remediation is to be performed by the contractor at no additional cost to the owner). Abatement and Remediation in all areas will start with removing materials at the ceiling level and end with the materials at the flooring level. The contractor shall assume they will be setting up full containments throughout all areas of the original school. The contractor will coordinate and perform enough selective demolition/demolition to access all materials to be removed/abated/remediated. Exterior abatement/remediation will be either removed in containment (interior) or the abatement/remediation contractor will install polyethylene sheeting on the interior of the building and remove materials from the exterior. All ground surfaces must also be protected with plywood and two layers 10-mil reinforced polyethylene sheeting. This ground protection must extend at least 20 feet away from the building foundation (or farther - enough to prevent building materials from touching unprotected ground and floor surfaces). The contractor will pay for all contamination/remediation/ abatement of interior and exterior surfaces, including ground surfaces if Langan deems they have contaminated these surfaces.

The contractor must dispose of Remediation Waste (segregated adjacent materials, materials that fail verification sampling, sandblasted paint/debris and waste from remediation - suits, polyethylene sheeting, towels/rags, respirator cartridges, etc.) in addition to the Bulk Product Waste.

E. Disturbance or removal of polychlorinated biphenyls (PCB) containing materials may cause a health hazard to workers and building occupants. The PCB Remediation Contractor shall disclose to all of his workers, supervisory personnel, subcontractors and consultants who will be at job site of the seriousness of the hazard and of proper work procedures which must be followed.

F. Where in the performance of the work, workers, supervisory personnel, subcontractors, or consultants may encounter, disturb or otherwise function in the immediate vicinity of polychlorinated biphenyls (PCB) containing materials, appropriate, continuous measures as necessary to protect all workers from the hazard of exposure shall be taken. Such measures shall include the procedures and methods described herein, regulations of the OSHA, US EPA, and local requirements as applicable.

G. The PCB Remediation Contractor shall employ a Competent Person (Supervisor) with at least three (3) years' experience on projects of similar scope and magnitude who shall be responsible for all work involving PCB remediation as described in the specifications and defined in applicable regulations, and have full time daily supervision of the same. The Supervisor shall be the Competent Person as defined by OSHA regulations and have experience in the proper removal and disposal of PCB-Containing Materials.

H. The PCB Remediation Contractor shall allow the work of this contract to be inspected, if required, by local, state, federal, and any other authorities having jurisdiction over such work. The PCB Remediation Contractor shall immediately notify the Owner and Consultant and shall maintain written evidence of such inspection for review by the Owner and Consultant.

I. The PCB Remediation Contractor shall incur the cost of all fines resulting from regulatory non-compliance as issued by federal, state, and local agencies. The PCB Remediation Contractor shall incur the cost of all work requirements mandated by federal, state, and local agencies as a result of regulatory non-compliance or negligence. The PCB Remediation Contractor shall incur all costs associated with contaminating the school property and adjacent properties, including but not limited to all possible litigation costs of the owners, consultants and other involved parties.

J. The PCB Remediation Contractor shall immediately notify the Owner and Consultant of the delivery of all permits, licenses, certificates of inspection, of approval, or occupancy, etc., and any other such instruments required under codes by authorities having jurisdiction, regardless of who issued, and shall cause them to be displayed to the Owner and Consultant for verification and recording.

K. The PCB Remediation Contractor shall provide enough labor to guarantee completion of the work within the time frame given and within the normal operating hours of the buildings.

L. The remediation/asbestos abatement contractor, their subcontractors, waste transporters and/or landfill(s) do not have permission to take/analyze building materials for PCB content/ concentrations without written permission from the building owner prior to such sampling. Should the contractor or other parties listed above take/analyze PCB samples without the owner's permission and PCB's are found to be >1 ppm, the hazardous materials/remediation contractor will be responsible for all costs associated with the abatement/ remediation/replacement of all the interior/exterior building materials and adjacent surfaces, including soil/asphalt/concrete/etc. as

well as all costs associated with project delays, attorney fees for all parties affected and all costs resulting from CT DEEP/EPA requirements that may occur as a result.

1.8 SCOPE OF WORK

A. This specification covers the proper and legal removal and disposal of removal of the existing materials within the original building assumed to contain polychlorinated biphenyls (PCB), equal to or greater than (>)50 parts per million (ppm) throughout the Central Middle School Site located in Greenwich, Connecticut. The remediation activities shall comply with all aspects of the contract documents and federal, state and local requirements.

B. Whenever there is a conflict or overlap within these specifications and between applicable codes and regulations, the most stringent provision specified shall apply.

C. The General Contractor or Remediation Subcontractor shall be aware of all conditions of the Project and is responsible for verifying quantities and locations of all Work to be performed. Failure to do so shall not relieve the General Contractor or Remediation Subcontractor of its obligation to furnish all labor and materials necessary to perform the Work.

D. Work outlined in this Section includes all work necessary for the complete removal and disposal of all PCB-Containing Materials impacted by the proposed work associated with the demolition project for the Central Middle School Site located in Greenwich, Connecticut.

E. Note the work in this section is subject to TSCA regulation 40 CFR 761 and Connecticut General Statutes in accordance with CT DEEP requirements for materials containing >50/1 ppm (PCB-Containing Materials). The Owner or the Owner's Authorized Representative is responsible for notifying the CT DEEP.

F. The quantities, if given below, are provided to establish the order of magnitude of the remediation project. Actual quantities may vary. The PCB Remediation Contractor is responsible for verification of all quantities scheduled for removal. This verification shall include an on-site walk-through inspection of the building. The materials/quantities listed are estimates and no extra will be accepted. All of the listed materials are included in the base bid work (no extra cost accepted) until <1 ppm PCB is obtained by verification sampling and/or visual inspection deems all the materials have been removed (contractor owns additional remediation for verification sampling failures up to 20% however if the contractor is deemed by Langan to have contaminated the wall surfaces, all additional remediation is to be performed by the contractor at no additional cost to the owner). Location, materials, and estimated quantities included in the base bid are noted below:

G. The remediation/asbestos abatement contractor, their subcontractors, waste transporters must submit landfill information to Langan and the owner prior to the shipment of any waste. The contractor(s)/hauler(s) cannot ship waste until Langan and the owner have approved the landfill the contractor/hauler is/are proposing to ship the waste to. PCB TCLP sampling of the waste may be required by the landfills permits and this testing must be performed by the contractor (if testing is approved by Langan and the owner), with Langan present during sampling, and the results made available to Langan and the owner prior to waste shipment. If Langan is not present during

the sampling, Langan may perform additional PCB TCLP sampling to confirm the contractor's results and these results will supersede the contractors sample results.

H. The scope of work is summarized as the following:

1. PCB Summary

The following materials are assumed to contain PCBs above the EPA threshold of >50 ppm source material bulk product waste (caulking/glazing/sealant compounds also contain asbestos):

Base Bid – 1957 Original Building

- Ceiling/Deck Caulking Compound and Contaminated Substrates (Located at Ceilings/Deck Panels and Metal Beams/Columns) – ALL – Throughout All Areas of Second Floor (asbestos-containing also);

- Interior Window Glazing Compounds and Contaminated Substrates - ALL - Main Office L Shaped Window Wall, Classrooms 201/201A and Gymnasium Offices (asbestos-containing also);

- Interior Wall/Wall and Wall/Column Caulking Compounds and Contaminated Substrates – ALL - Classrooms 201, 201 Spray Booth, 201A, 202-207, Throughout Main Office Areas, Teachers Break/Faculty Room and Nurse Areas, Throughout Building Corridors and Stairwells, Throughout Gymnasium Areas, Corridor Custodial Closets and Throughout Building (asbestos-containing also);

- Interior/Exterior Door Window Glazing Compounds and Contaminated Substrates – ALL - Throughout Building;

- Interior/Exterior Door/Window/Door Window/Wall/Column Caulking and Glazing Compounds and Contaminated Substrates – ALL – Ten Openings (Multiple Sizes and Multiple Door/Window Walls) - Entry/Exit Areas to Building Adjacent Custodial Office, Main Office, Cafeteria, Room 208 and Gymnasium (Multiple Sizes and Multiple Door/Window Walls) (asbestos-containing also);

- Interior/Exterior Vent Caulking Compounds and Contaminated Substrates – ALL – Eight Openings – Throughout Building Perimeter Walls (asbestos-containing also);

- Interior/Exterior Door/Window/Wall/Column Caulking and Glazing Compounds and Contaminated Substrates – ALL – 17 Door/Window Openings (Multiple Sizes) - Throughout Building Perimeter Walls (asbestos-containing also);

- Interior/Exterior Window/Wall/Column/Window Walls/Door Caulking and Glazing Compounds and Contaminated Substrates – ALL (Multiple Sizes) – Throughout Building Perimeter Walls/Window Walls (asbestos-containing also); and

- Exterior Wall/Wall Expansion and Column Caulking Compounds and Contaminated Substrates – ALL - Throughout Exterior (asbestos-containing also).

Add Alternates – 1957 Original Building

Add Alternate HBM #10 – Disposal of Painted Concrete, Concrete Block, Brick, Glazed Block, Other Materials, Ceilings, Walls and Floors, Other Painted Materials – Throughout – as > 50 ppm PCB Bulk Product Waste.

Add Alternate HBM #11 – Disposal of Painted Concrete, Concrete Block, Brick, Glazed Block, Other Materials, Ceilings, Walls and Floors, Other Painted Materials – Throughout – as < 50 ppm PCB CTDEEP Regulated Waste.

I. Project Scope Locations and Work Statement: The remediation site is located at 9 Indian Rock Lane, Greenwich, Connecticut. The proposed removal and disposal activities to be performed by PCB Remediation Contractor shall include the following:
   1. Site preparation and controls to facilitate remediation of PCBs. Containment procedures referenced for the remediation zone must be utilized for PCB Bulk Product Waste removal.
   2. Health and Safety in accordance with Occupation Safety and Health Administration (OSHA) requirements.
   3. Remove and dispose of entire/all materials assumed to contain PCBs > 50 ppm listed above throughout the original building. All exterior protection shall include the use of water impervious membrane covering which shall be secured to the ground surface. Edges shall be raised to prevent water run-off used for dust control during cutting and demolition of structures. Plywood will be installed on all exterior ground surfaces first. The exterior membrane shall be covered with a minimum of 2 layers of 10-mil reinforced polyethylene sheeting securely fastened to foundation. This ground protection must extend at least 20 feet away from the building foundation.
   4. Cleaning of each work area following complete removal of PCB containing materials to ensure adherence for post cleaning verification levels and/or visual inspection.
   5. Recordkeeping and distribution as required in accordance with 40 CFR part 761.125 (c)(5).

J. Abatement and Remediation in all areas will start with removing materials at the ceiling level and end with the materials at the flooring level. The contractor shall assume they will be setting up full containments throughout all areas of the original school. The contractor will coordinate and perform enough selective demolition/demolition to access all materials to be removed/abated/remediated. Exterior abatement/remediation will be either removed in containment (interior) or the abatement/remediation contractor will install polyethylene sheeting on the interior of the building and remove materials from the exterior. All ground surfaces must also be protected with plywood and two layers 10-mil reinforced polyethylene sheeting. This ground protection must extend at least 20 feet away from the building foundation (far enough to prevent building materials from touching unprotected ground and floor surfaces). The contractor will pay for all contamination/remediation/ abatement of interior and exterior surfaces, including ground surfaces if Langan deems they have contaminated these surfaces. The contractor will supply lifts, scaffolding, staging, etc. to Langan in areas of remediation/abatement until all PCB verification sampling has passed. The contractor will supply labor to assist in PCB verification sampling (including cleaning/re-cleaning) throughout as well as removing and disposing of all

waste created by PCB verification sampling. The contractor will provide temporary shoring in areas that require it. Roofing abatement must occur prior to performing demolition activities.

K. Additional materials as discovered outside of those listed will be covered by unit prices if all is not listed as the quantity. Quantities are estimates only and should be verified by the Contractor. Safety data sheets for chemicals to be used during the project must be submitted to the Owner's Representative prior to site delivery. The contractor is responsible for providing temporary water, power, and heat as needed at the site. Temporary lighting/Blast Trac machines/Negative air units within the work areas must be connected to Ground Fault Circuit Interrupter (GFCI) Power Panels installed by a State of Connecticut licensed electrician and located outside of the work areas. The contractor shall be responsible for paying for the use of power and water unless the owner agrees to supply free of charge. It shall also be the contractor's responsibility to provide all fixed and temporary connections and hook-ups as well as obtaining permits and paying all fees for making such services available for his work as is necessary. The Contractor shall provide services as specified herein, and as required or as necessary to carry out the work. This will include such items as temporary hard line installation, portable generators for short term work, water tank trucks, pumps and necessary accessories or the means and equipment and services necessary to temporarily connect to and maintain such services from adjacent utility systems. The contractor is responsible for contacting all utility services and getting power connections from the electrical lines located on or adjacent to the properties. All power and water must be supplied 24 hours a day throughout the abatement project. CT DPH will be notified immediately if active containments do not have sufficient negative pressure throughout the abatement process until acceptable reoccupancy air results are received. The use of portable generators will require 24 hour a day, 7 day a week continuous operation if negative air machines in containments are powered by them. This continuous operation must remain in place from the time the pre-abatement visual is completed up until clearance re-occupancy sampling results have passed. The contractor will pay the owner a $2,500 penalty should the power found to not be running the negative air machines in active abatement containments. This penalty will apply daily and the contractor is also responsible for paying all CT DPH fines that may be imposed on the contractor and owner.

L. The contractor(s) will be responsible for hiring an engineer and other appropriate personnel to ensure that all required selective demolition and demolition activities are safe to perform for all personnel on site. The contractor(s) will be financially responsible for any damage that may occur to the site, on-site personnel, fines, penalties, etc. They will also be responsible for paying/reimbursing all legal fees/costs for all parties involved with the project should selective demolition or demolition activities cause injury or death to any persons on site.

M. The general/remediation contractors shall only use heavy equipment operators that have proper asbestos and/or HAZWOPER training when disturbing/removing/moving and packing asbestos, lead and PCB containing materials. Acceptable training for asbestos can be 32/40 hour asbestos worker/supervisor training with annual refresher training. 40 hour HAZWOPER training and annual refresher training is required for operators handling lead and/or PCB containing/contaminated materials. All operators must also have current medicals, fit test data and wear respirators during work. Respirator usage can be suspended if personal air sampling shows appropriate air concentrations complying with OSHA.

N. The General Contractor, or Remediation Subcontractor, is responsible for conducting all work involving the removal, management, storage, and disposal of PCB waste materials in accordance with this specification, with all referenced documents included as part of this specification, with the standards and guidance documents listed below, and with all Federal, state and local regulations. The General Contractor or Remediation Subcontractor shall provide all labor, materials, and equipment necessary to complete the work of this Section.

1.10 DEFINITIONS

A. The following definitions as used within this technical specification as well as references to specific sections of the Code of Federal Regulation section 40 CRF Part 761 are provided. Definitions are extracted in part from 40 CFR Part 761.3, for full definitions refer to the specified section of regulations.
   1. CERCLA means the Comprehensive Environmental Response, Compensation, and Liability Act (42 U.S.C. 9601-9657).
   2. Chemical waste landfill means a landfill at which protection against risk of injury to health or the environment from migration of PCBs to land, water, or the atmosphere is provided from PCBs and PCB Items deposited therein by locating, engineering, and operating the landfill as specified in §761.75.
   3. Cleanup Site means the areal extent of contamination and all suitable areas in very close proximity to the contamination necessary for implementation of a cleanup of PCB remediation waste, regardless of whether the site was intended for management of waste.
   4. Containment means the enclosure within the building which establishes a contaminated area and surrounds the location where PCB and/or other toxic or hazardous substance removal is taking place and establishes a Control Work Area.
   5. Designated Facility means the off-site disposer or commercial storer of PCB waste designated on the manifest as the facility that will receive a manifested shipment of PCB waste.
   6. Disposal means intentionally or accidentally to discard, throw away, or otherwise complete or terminate the useful life of PCBs and PCB Items. Disposal includes spills, leaks, and

other uncontrolled discharges of PCBs as well as actions related to containing, transporting, destroying, degrading, decontaminating, or confining PCBs and PCB Items.

7. DOT means the United States Department of Transportation.
8. EPA identification number means the 12-digit number assigned to a facility by EPA upon notification of PCB waste activity under §761.205.
9. Excluded PCB products means PCB materials which appear at concentrations less than 50 ppm as defined in 40 CFR §761.3.
10. Fixed Object means mechanical equipment, electrical equipment, fire detection systems, alarms, and all other fixed equipment, fixtures or other items which cannot be removed from the work area.
11. Generator of PCB waste means any person whose act or process produces PCBs that are regulated for disposal under subpart D of 40 CFR Part 761, or whose act first causes PCBs or PCB Items to become subject to the disposal requirements of subpart D, or who has physical control over the PCBs when a decision is made that the use of the PCBs has been terminated and therefore is subject to the disposal requirements of subpart D. Unless another provision of 40 CFR Part 761 specifically requires a site-specific meaning, "generator of PCB waste" includes all of the sites of PCB waste generation owned or operated by the person who generates PCB waste.
12. HEPA means High Efficiency Particulate Air filtration efficiency of 99.97 percent down to 0.3 microns. Filtration provided on specialized vacuums and air filtration devices to trap particles.
13. High occupancy area means any area where PCB remediation waste has been disposed of on-site and where occupancy for any individual not wearing dermal and respiratory protection for a calendar year is: 840 hours or more (an average of 16.8 hours or more per week) for non-porous surfaces and 335 hours or more (an average of 6.7 hours or more per week) for bulk PCB remediation waste. Examples could include a residence, school, day care center, sleeping quarters, a single or multiple occupancy 40 hours per week work station, a school class room, a cafeteria in an industrial facility, a control room, and a work station at an assembly line.
14. Incinerator means an engineered device using controlled flame combustion to thermally degrade PCBs and PCB Items. Examples of devices used for incineration include rotary kilns, liquid injection incinerators, cement kilns, and high temperature boilers.
15. Laboratory means a facility that analyzes samples for PCBs and is unaffiliated with any entity whose activities involve PCBs.
16. Liquid PCBs means a homogenous flowable material containing PCBs and no more than 0.5 percent by weight non-dissolved material.
17. Low occupancy area means any area where PCB remediation waste has been disposed of on-site and where occupancy for any individual not wearing dermal and respiratory protection for a calendar year is: less than 840 hours (an average of 16.8 hours per week) for non-porous surfaces and less than 335 hours (an average of 6.7 hours per week) for bulk PCB remediation waste. Examples could include an electrical substation or a location in an industrial facility where a worker spends small amounts of time per week (such as an unoccupied area outside a building, an electrical equipment vault, or in the non-office space in a warehouse where occupancy is transitory).
18. Manifest means the shipping document EPA form 8700-22 and any continuation sheet attached to EPA form 8700-22, originated and signed by the generator of PCB waste in accordance with the instructions included with the form and subpart K of this part.

19. Mark means the descriptive name, instructions, cautions, or other information applied to PCBs and PCB Items, or other objects subject to these regulations.
20. Marked means the marking of PCB Items and PCB storage areas and transport vehicles by means of applying a legible mark by painting, fixation of an adhesive label, or by any other method that meets the requirements of these regulations.
21. Municipal solid wastes means garbage, refuse, sludges, wastes, and other discarded materials resulting from residential and non-industrial operations and activities, such as household activities, office functions, and commercial housekeeping wastes.
22. Non-liquid PCBs means materials containing PCBs that by visual inspection do not flow at room temperature (25°C or 77°F) or from which no liquid passes when a 100 g or 100 ml representative sample is placed in a mesh number 60 ±5 percent paint filter and allowed to drain at room temperature for 5 minutes.
23. Non-porous surface means a smooth, unpainted solid surface that limits penetration of liquid containing PCBs beyond the immediate surface. Examples are: smooth un-corroded metal; natural gas pipe with a thin porous coating originally applied to inhibit corrosion; smooth glass; smooth glazed ceramics; impermeable polished building stone such as marble or granite; and high density plastics, such as polycarbonates and melamines, that do not absorb organic solvents.
24. On site means within the boundaries of a contiguous property unit.
25. PCB and PCBs means any chemical substance that is limited to the biphenyl molecule that has been chlorinated to varying degrees or any combination of substances which contains such substance. Refer to §761.1(b) for applicable concentrations of PCBs. PCB and PCBs as contained in PCB items are defined in §761.3. For any purposes under this part, inadvertently generated non-Aroclor PCBs are defined as the total PCBs calculated following division of the quantity of mono-chlorinated biphenyls by 50 and di-chlorinated biphenyls by 5.
26. PCB Article means any manufactured article, other than a PCB Container, that contains PCBs and whose surface(s) has been in direct contact with PCBs. "PCB Article" includes capacitors, transformers, electric motors, pumps, pipes and any other manufactured item (1) which is formed to a specific shape or design during manufacture, (2) which has end use function(s) dependent in whole or in part upon its shape or design during end use, and (3) which has either no change of chemical composition during its end use or only those changes of composition which have no commercial purpose separate from that of the PCB Article.
27. PCB Article Container means any package, can, bottle, bag, barrel, drum, tank, or other device used to contain PCB Articles or PCB Equipment, and whose surface(s) has not been in direct contact with PCBs.
28. PCB Bulk Product Waste means waste derived from manufactured products containing PCBs in a non-liquid state, at any concentration where the concentration at the time of designation for disposal is >50 ppm PCBs. PCB bulk product waste does not include PCBs or PCB Items regulated for disposal under §761.60(a) through (c), §761.61, §761.63, or §761.64. PCB bulk product waste is further defined in 40 CFR §761.3. Note in accordance with October 2012 re-interpretation from the U.S. Environmental Protection Agency (EPA), adjacent porous materials in contact with PCB Bulk Products shall be considered PCB Bulk Product Material for disposal purposes.
29. PCB Capacitor means any capacitor that contains >500 ppm PCB. Concentration assumptions applicable to capacitors appear under §761.2.

30. PCB Container means any package, can, bottle, bag, barrel, drum, tank, or other device that contains PCBs or PCB Articles and whose surface(s) has been in direct contact with PCBs.
31. PCB-Contaminated means a non-liquid material containing PCBs at concentrations >50 ppm but < 500 ppm; a liquid material containing PCBs at concentrations >50 ppm but < 500 ppm or where insufficient liquid material is available for analysis, a non-porous surface having a surface concentration >10 pg/100 cm2 but < 100 pg/100 cm2 , measured by a standard wipe test as defined in §761.123.
32. PCB Equipment means any manufactured item, other than a PCB Container or a PCB Article Container, which contains a PCB Article or other PCB Equipment, and includes microwave ovens, electronic equipment, and fluorescent light ballasts and fixtures.
33. PCB Item means any PCB Article, PCB Article Container, PCB Container, PCB Equipment, or anything that deliberately or unintentionally contains or has as a part of it any PCB or PCBs.
34. PCB Remediation Waste means waste containing PCBs as a result of a spill, release, or other unauthorized disposal, at the following concentrations: Materials disposed of prior to April 18, 1978, that are currently at concentrations >50 ppm PCBs, regardless of the concentration of the original spill; materials which are currently at any volume or concentration where the original source was >500 ppm PCBs beginning on April 18, 1978, or >50 ppm PCBs beginning on July 2, 1979; and materials which are currently at any concentration if the PCBs are spilled or released from a source not authorized for use under this part. PCB remediation waste means soil, rags, and other debris generated as a result of any PCB spill cleanup, as further defined in 40 CFR §761.3.
35. PCB waste(s) means those PCBs and PCB Items that are subject to the disposal requirements of subpart D in 40 CFR Part 761.
36. Porous surface means any surface that allows PCBs to penetrate or pass into itself including, but not limited to, paint or coating on metal; corroded metal; fibrous glass or glass wool; unglazed ceramics; ceramics with a porous glaze; porous building stone such as sandstone, travertine, limestone, or coral rock; low-density plastics such as Styrofoam and low-density polyethylene; coated (varnished or painted) or uncoated wood; concrete or cement; plaster; plasterboard; wallboard; rubber; fiberboard; chipboard; asphalt; or tar paper. For purposes of cleaning and disposing of PCB remediation waste, porous surfaces have different requirements than nonporous surfaces.
37. RCRA means the Resource Conservation and Recovery Act (40 U.S.C. 6901 et seq.).
38. Standard wipe sample means a sample collected for chemical extraction and analysis using the standard wipe test as defined in §761.123. Except as designated elsewhere in part 761, the minimum surface area to be sampled shall be 100 cm2.
39. Storage for disposal means temporary storage of PCBs that have been designated for disposal.
40. SW-846 means the document having the title "SW-846, Test Methods for Evaluating Solid Waste,"
41. Totally enclosed manner means any manner that will ensure no exposure of human beings or the environment to any concentration of PCBs.
42. Transfer facility means any transportation-related facility including loading docks, parking areas, and other similar areas where shipments of PCB waste are held during the normal course of transportation. Transport vehicles are not transfer facilities under this definition, unless they are used for the storage of PCB waste, rather than for actual transport activities. Storage areas for PCB waste at transfer facilities are subject to the storage facility standards

of §761.65, but such storage areas are exempt from the approval requirements of §761.65(d) and the recordkeeping requirements of §761.180, unless the same PCB waste is stored there for a period of more than 10 consecutive days between destinations.

43. Transporter of PCB waste means, for the purposes of subpart K of 40 CFR Part 761, any person engaged in the transportation of regulated PCB waste by air, rail, highway, or water for purposes other than consolidation by a generator.
44. Transport vehicle means a motor vehicle or rail car used for the transportation of cargo by any mode. Each cargo-carrying body (e.g., trailer, railroad freight car) is a separate transport vehicle.
45. TSCA means the Toxic Substances Control Act (15 U.S.C. 2601 et seq.).

1.11 SUBMITTALS

A. A pre-remediation meeting shall occur with the PCB Remediation Contractor, Owner or the Owner's Authorized Representative, and environmental consultant two weeks prior to commencement of work. The following documents shall be submitted immediately upon project award to the Owner prior to commencement of PCB Removal work:

1. Site Specific Health and Safety Plan (HASP): The PCB Remediation Contractor shall prepare a site specific HASP plan for protection of workers and control of the work site in accordance with OSHA regulatory requirements. The HASP shall govern all work conducted at the site during the remediation of PCB materials and related debris; waste handling, sampling, waste management; and waste transportation. At a minimum, the HASP shall address the requirements set forth in 29 CFR 1910.120, as further outlined below:
    a. Health and Safety Organization
    b. Site Description and Hazard Assessment
    c. Training
    d. Medical Surveillance
    e. Work Areas
    f. Personal Protective Equipment
    g. Personal Hygiene and Decontamination
    h. Standard Operating Procedures and Engineering Controls
2. Emergency Equipment and First Aid Provisions
    a. Equipment Decontamination
    b. Air Monitoring
3. Telephone List
    a. Emergency Response and Evacuation Procedures and Routes
    b. Site Control
    c. Permit-Required Confined Space Procedures
    d. Spill prevention and Containment Plan
    e. Heat and Cold Stress
    f. Record Keeping
    g. Community Protection Plan
4. Training Documentation: Documentation of OSHA 40-Hour HAZWOPER Training for all employees and subcontractors to be used for the remediation work, and 8-Hour HAZWOPER Supervisor Training for the designated on-site Health and Safety Officer for the remediation work.

5. PCB and or other Toxic or Hazardous Substances Disposal Plan: A written plan that details the PCB Remediation Contractor's plan for transportation and disposal of PCB-containing or other Toxic or Hazardous Substance wastes generated during the project. The Disposal Plan shall identify:
   a. Waste packaging, labeling, placarding and manifesting procedures.
   b. The name, address and 24-hour contact number for the proposed treatment or disposal facility or facilities to which waste generated during the project will be transported.
   c. The name, address, contact person(s) and state-specific permit numbers for proposed waste transporters, and EPA identification number for firms that will transport waste.
   d. The license plate numbers of vehicles to be used in transporting of the waste from the site to the disposal facility.
   e. The route(s) by which the waste will be transported to the designated disposal facility, and states or territories through which the waste will pass.
   f. disposal facility, and states or territories through which the waste will pass.
6. Safely Data Sheets: Safety Data Sheets (OSHA Form 174 or equivalent) and manufacturer's information shall be provided for all chemicals and materials to be used during the project including but not limited to specialty cleaners and chemical stripping products.

B. The following documents shall be submitted to the Owner within fifteen (15) work days following removal of waste from the site:
   1. Waste Profile Sheets
   2. Pre-Disposal Analysis Test Results (If required by disposal facility)
   3. Manifests signed by the disposal facility
   4. Tipping Receipts provided by the disposal facility
   5. Certification of Final Treatment/Disposal signed by the responsible disposal facility official.

C. PCB Work Closeout Submittals:
   1. Disposal Site Receipts: Copy of waste shipment record and disposal site receipt showing the PCB-containing or other Toxic or Hazardous Substances materials have been properly disposed.

D. Product Data: Catalog sheets, specifications, and application instructions for any removal products, if used.

1.12 REGULATIONS AND STANDARDS

A. The PCB Remediation Contractor shall be solely responsible for conducting this project and supervising all work in a manner that will be in conformance with all federal, state, and local regulations and guidelines pertaining to PCB Containing Material removal. Specifically, The PCB Remediation Contractor shall comply with the requirements of the following as applicable to the work to be performed:
   1. Toxic Substance Control Act (TSCA) (40 CFR Part 761).
   2. Comprehensive Environmental Response, Compensation, and Liability Act (Superfund Law).
   3. Department of Transportation (DOT) regulations - DOT regulation HM-181 regulates transportation of hazardous materials, including PCBs.

4. Occupational Safety and Health Administration (OSHA) - OSHA regulates workers' safety and exposure to a variety of chemicals including PCBs.
5. Connecticut Basic Building Code (BOCA) (including Connecticut Supplements);
6. Life Safety Code (NFPA); and
7. Local health and safety codes, ordinances or regulations pertaining to hazardous materials remediation and all national codes and standards including ASTM, ANSI, and Underwriter's Laboratories.

1.13 FINAL VISUAL CLEARANCE

A. Following the completion of the work, the Consultant shall perform a final visual inspection of the work area per guidelines EPA and State of Connecticut CT DEEP regulations and to assess that the above-indicated PCB-containing materials were removed.

1.14 POSTING AND RECORD MAINTENANCE REQUIREMENTS

A. The following items shall be conspicuously displayed proximate but outside of remediation work areas.
   1. Exit Routes -Emergency exit procedures and routes
   2. Emergency Phone Numbers - A list indicating the telephone numbers and locations of the local hospital(s); the local emergency squad; the local fire department; the local police department; the Poison Control Center; Chemical Emergency Advise (CHEMTREC); the local Department of Health's local office; the PCB Remediation Contractor (on-site and after hours numbers); and the environmental consultant (on-site and after hours numbers).
   3. Warning Signs - Warning signs shall be in English and the language of any workers onsite who do not speak English, and be of sufficient size to be clearly legible and display the following or similar language in accordance with 29 CFR 1910.1200:

      WARNING
      HAZARDOUS WASTE WORK AREA
      PCBs-POISON
      NO SMOKING, EATING OR DRINKING
      AUTHORIZED PERSONNEL ONLY
      PROTECTIVE CLOTHING IS REQUIRED IN THIS AREA

      In addition, all entrances to work areas shall be posted with a PCB M_L marker.

B. The PCB Remediation Contractor shall maintain the following items on-site and available for review by all employees and authorized visitors:
   1. PCB Remediation Contractor's Project Specific Health and Safety Plan
   2. Certificates of Training for all employees and the project Supervisor
   3. Codes, Standards and Publications
   4. Safety Data Sheets (SDS) for all chemicals used during the project.
   5. Copies of the PCB Remediation Contractor's written hazard communication, respiratory protection, and confined space entry programs.

C. Fees, Permits and Licenses. The PCB Remediation Contractor shall pay all licensing fees, royalties, and other costs necessary for the use of any copyrighted or patented product, design, invention, or processing in the performance of the work specified in this Section.
   1. The PCB Remediation Contractor shall be solely responsible for costs, damages, or losses resulting from any infringement of these patent rights or copyrights. The PCB Remediation Contractor shall hold the Owner and the Owner's Authorized Representative harmless from any costs, damages, and losses resulting from any infringement of these patent rights or copyrights.
   2. The PCB Remediation Contractor shall be responsible for securing all necessary permits for work under this Section, including hauling, removal, and disposal, fire, and materials usage, or any other permits required to perform the specified work.

1.15 QUALITY ASSURANCE

A. The PCB Remediation Contractor shall provide and assure that the quality of work practices and procedures to be utilized are consistent with the above listed agencies and regulations. PCB Remediation Contractor shall utilize the latest edition, including all addenda, revisions and supplements for all regulatory agencies codes, etc.

B. Worker's Qualifications: The persons performing PCB remediation and their supervisors shall be personally experienced in PCB remediation work and shall have been regularly employed by a company performing PCB remediation for a minimum of 3 years.

C. Pre-Work Conference: Before the Work of this Section is scheduled to commence, a conference will be held by the Owner at the Site for the purpose of reviewing the Contract Documents, discussing requirements for the Work, and reviewing the Work procedures.
   1. The conference shall be attended by the PCB Remediation Contractor, and the Owner's Authorized Representative employed by the Owner. This pre-remediation meeting may consist of multiple meetings.

1.16 MINIMUM REQUIREMENTS FOR WORKER HEALTH AND SAFETY

A. The PCB Remediation Contractor is responsible and liable for the health and safety of all onsite personnel and the offsite community affected by the project. All onsite workers or other persons entering the remediation work areas, decontamination areas or waste handling and staging areas shall be knowledgeable of and comply with the requirements of the site specific Health and Safety Plan at all times. The PCB Remediation Contractor's HASP shall comply with all applicable federal, state, and local regulations protecting human health and the environment from the hazards posed by the work to be performed under this project.

B. Consistent disregard for the provisions of the HASP shall be deemed as sufficient cause for immediate stoppage of work and termination of the Contract or any Sub Contracts without compromise or prejudice to the rights of the Owner or the Owner's Authorized Representative.

C. Any discrepancies between the PCB Remediation Contractor's HASP and these specifications or federal and state regulations shall be resolved in favor of the more stringent requirements that

provide the highest degree of protection to the project personnel and the surrounding community and environment

D. In addition to exposure concerns relating to the presence of PCBs, other health and safety considerations will apply to the work. The PCB Remediation Contractor shall be responsible for recognizing such hazards and shall be responsible for the health and safety of PCB Remediation Contractor employees at all times. It is the PCB Remediation Contractor's responsibility to comply with all applicable health and safety regulations.

E. The HASP shall be reviewed by all persons prior to entry into the remediation, decontamination, or waste staging areas, whether a representative of the PCB Remediation Contractor, owner, architect/engineer, environmental consultant, subcontractor(s), waste transporter or federal, state or local regulatory agency. Such review shall be acknowledged and documented by the PCB Remediation Contractor's Health and Safety Officer by obtaining the name, signature and affiliation of all persons reviewing the HASP.

F. The HASP shall be maintained so as to be readily accessible and reviewable by all site personnel throughout the duration of the remediation project and until all waste materials are removed from the site and disposed of at the appropriate disposal facility.

G. The PCB Remediation Contractor's on-site Health and Safety Officer shall be responsible for ensuring that project personnel and site visitors are informed of and comply with the provisions of the HASP at all times during the project.

1.17 WORK AREAS AND ZONES

A. The PCB Remediation Contractor shall lay-out and clearly identify work areas in the field. Access by equipment, site personnel, and the public to the work areas shall be limited as follows:
   1. Remediation Zone: The Remediation Zone(s) shall consist of all interior and exterior areas where removal of PCBs and other Toxic or Hazardous Substances and waste handling and staging activities are on-going and the immediately surrounding locale or other areas where contamination could occur. The Remediation Zone for purposes of interior and exterior removal of PCB materials or other Toxic or Hazardous Substances for disposal shall be performed within a containment to isolate work areas from non-work areas. The containment shall be visibly delineated with appropriate warning signs at all approaches to Remediation (including a PCB ML marker), and be restricted from access by all persons except those directly necessary for the completion of the respective remediation tasks. The Remediation Zone shall be located and delineated as necessary to limit access to the remediation area and to minimize risk of exposure to site workers and the general public. Access shall be controlled at the periphery of the Remediation Zone to regulate the flow of personnel and equipment into and out of the zone and to help verify that proper procedures for entering and exiting are followed. All persons within the Remediation Zone shall wear the appropriate level of protection established in the HASP.
   2. Decontamination Zone: The Decontamination Zone is the transition zone between the remediation area and the clean support zone of the project site, and is intended to reduce the potential for contaminants from being dispersed from the Remediation Zone to clean areas of the site. The Decontamination Zone shall consist of a buffer area surrounding the

Remediation Zone through which the transfer of equipment, materials, personnel and containerized waste products will occur and in which decontamination of equipment, personnel, and clothing will occur. The Decontamination Zones shall be constructed as a three chamber decontamination unit for workers and a two chamber equipment room for waste load out as detailed in Section 3.4. All emergency response and first aid equipment shall be readily maintained in this Zone. All protective equipment and clothing shall be removed or decontaminated in the Decontamination Zone prior to exiting to the Support Zone.

3. Support Zone: The Support Zone will consist of the area outside the Decontamination Zone and the remainder of the project site. Administrative and other support functions and any activities that by nature need not be conducted in the Remediation or Decontamination Zone related to the project shall occur in the Support Zone, Access to the Remediation and Decontamination Zones shall be controlled by the Health and Safety Officer and limited to those persons necessary to complete the remediation work and which have reviewed and signed the HASP.
4. The remediation contractor is responsible for supplying the direct-reading particulate meter, performing testing and documenting the daily readings. The consultant may choose to perform independent sampling as well.

1.18 PERSONNEL PROTECTIVE EQUIPMENT

A. The PCB Remediation Contractor shall be responsible to determine and provide the appropriate level of personal protective equipment in accordance with applicable regulations and standards necessary to protect the PCB Remediation Contractor's employees from all hazards present.

B. The PCB Remediation Contractor shall provide all employees with the appropriate safety equipment and protective clothing to ensure an appropriate level of protection for each task, taking into consideration the chemical, physical, ergonomic and biological hazards posed by the site and work activities.

C. The PCB Remediation Contractor shall establish in the HASP criteria for the selection and use of personal protective equipment (PPE).

D. The PPE to be utilized for the project shall be selected based upon the potential hazards associated with the project site and the work to be performed. Appropriate protective clothing shall be worn at all times within the Remediation Zone.

E. The PCB Remediation Contractor shall provide the appropriate level of respiratory protection to all field personnel engaged in activities where respiratory hazards exist or there is a potential for such hazard to exit.

F. The PCB Remediation Contractor shall provide, as necessary, protective coveralls, disposable gloves and other protective clothing for all personnel that will be actively involved in remediation activities or waste handling activities or otherwise present in the Remediation Zones. Coveralls shall be of Tyvek or equivalent material. Should the potential for exposure to liquids exist, splash

resistant disposable suits shall be provided and utilized.

G. Protective coveralls, and other protective clothing shall be donned and removed within the Decontamination Zone and shall be disposed of at the end of each day. Ripped coveralls shall be immediately replaced after appropriate decontamination has been completed to the satisfaction of the Health and Safety Officer. Protective clothing shall not be worn outside of the Decontamination Zone.

H. Hard Hats, protective eyewear, rubber boots and or other non-skid footwear shall be provided by the PCB Remediation Contractor as required for workers and authorized visitors.

I. All contaminated protective clothing, respirator cartridges and disposable protective items shall be placed into proper containers to be provided by the PCB Remediation Contractor for transport and proper disposal in accordance with 40 CFR 262.

1.19 EMERGENCY EQUIPMENT AND FIRST AID REQUIREMENTS

A. The PCB Remediation Contractor shall provide and maintain at the site, at a minimum, the following Emergency and First Aid Equipment:
   1. Fire Extinguishers: A minimum one (1) fire extinguisher shall be supplied and maintained at the site by the PCB Remediation Contractor throughout the duration of the project. Each extinguisher shall be a minimum of a 20 pound Class ABC dry fire extinguisher with Underwriters Laboratory approval per 29 CFR 1910.157.
   2. First Aid Kit: A minimum of one (1) first aid kit meeting the requirements of 29 CFR 1910,151 shall be supplied and maintained at the site by the PCB Remediation Contractor throughout the duration of the project.
   3. Communications: Telephone communications (either cellular or land line) shall be provided by the PCB Remediation Contractor for use by site personnel at all times during the project.

B. The Health and Safely Officer shall be notified immediately in the event of personal injury, potential exposure to contaminants, or other emergency. The Health and Safety Officer shall then immediately notify the Owner's Authorized Representative.

1.20 STANDARD SAFETY AND HEALTH PROCEDURES AND ENGINEERING CONTROLS

A. The following provisions shall be employed to promote overall safety, personnel hygiene and personnel decontamination:
   1. Each PCB Remediation Contractor or Subcontractor shall ensure that all safety equipment and protective clothing to be utilized by its personnel is maintained in a clean and readily accessible manner at the site.
   2. All prescription eyeglasses in use on this project shall be safety glasses conforming to ANSI Standard Z87.1. No contact lenses shall be allowed on the site.
   3. Prior to exiting the delineated Decontamination Zone(s), all personnel shall remove protective clothing, and place disposable items in appropriate disposal containers to be dedicated to that purpose. Following removal of PPE, personnel shall thoroughly wash and rinse their face, hands, arms and other exposed areas with soap and tap water wash and

subsequent tap water rinse. A fresh supply of tap water shall be provided at the site on each work day by the PCB Remediation Contractor for this purpose.

4. All PPE used on site shall be decontaminated or disposed of at the end of each work day. Discarded PPE shall be placed in sealed DOT approved 55-gallon barrels for off-site disposal.
5. Respirators, if necessary due to an upgrade to Level C PPE, shall be dedicated to each employee, and not interchanged between workers without cleaning and sanitizing.
6. Eating, drinking, chewing gum or tobacco, smoking, and any other practice that increases the likelihood of hand to mouth contact shall be prohibited within the delineated remediation and decontamination work zones. Prior to performing these activities, each employee shall thoroughly cleanse their face, hands, arms and other exposed areas.
7. All personnel shall thoroughly cleanse their face hands, arms and other exposed areas prior to using toilet facilities.
8. No alcohol, tobacco, illicit drugs or firearms will be allowed on the site at any time.
9. Contact with potentially contaminated surfaces should be avoided, if possible. Field personnel should minimize walking through standing water/puddles, mud or other wet or discolored surfaces; kneeling on ground; and placing equipment, materials or food on ground or other potentially contaminated surface.
10. The use of the "Buddy System" shall be employed at all times while conducting work at the site. Each employee shall frequently monitor other workers for signs of heat stress or chemical exposure or fatigue: periodically examine others PPE for signs of wear or damage; routinely communicate with others; and notify the Health and Safety Officer in the case of an emergency.

B. Workers must wear protective suits, protective gloves, eye protection and a minimum of half-face respirator with HEPA filter cartridge for all projects. Respiratory protection shall be in accordance with OSHA regulation 1910.134 and ANSI Z88.2.

C. Workers must be trained as per OSHA and US EPA requirements, have medical clearance and must have recently received pulmonary function test (PFT) and respirator fit tested by a trained professional.
   1. A personal air sampling program shall be in place as required by OSHA.
   2. The use of respirators must also follow a complete respiratory protection program as specified by OSHA.

1.21 INDEPENDENT INSPECTION AND MONITORING

A. This section describes independent visual inspection and monitoring work being performed on behalf of the Owner. This work is not in the Contract Sum. This section describes monitoring carried out by the Owner's Consultant (Langan) to verify that the building beyond the work area and the outside environment remains uncontaminated.

B. The purpose of the Owner's Consultant's monitoring is to detect faults in the work area isolation such as:
   1. Contamination of the building outside of the work area by PCB dust.
   2. Failure of filtration or rupture in the differential pressure system as applicable.
   3. Contamination of the outside of the containment.

C. Should any of the above occur, the PCB Remediation Contractor shall immediately cease removal activities until the fault is corrected. Do not recommence work until authorized by the Owner's Consultant.

D. The Owner's Consultant may monitor the Work Area. The purpose of this monitoring will be to detect dust outside containment, which may challenge the ability of the Work Area isolation procedures to protect the balance of the building or outside of the building from contamination.

E. The Owner's Consultant will perform on-site monitoring throughout the course of the project, as follows:
   1. All work procedures shall be continuously monitored by the Consultant to assure that areas outside the designated work locations in the buildings will not be contaminated.
   2. Prior to work on any given day, The PCB Remediation Contractor's designated "competent person" shall discuss the day's work schedule with the Consultant to evaluate job tasks with respect to safety procedures and requirements specified to prevent contamination of the building or the employees. This includes a visual survey of the work area and the decontamination of the building or the employees.

PART 2 PRODUCTS

2.1 REMEDIATION PRODUCTS

A. Deliver all materials in the original packages, containers, or bundles bearing the name of the manufacturer and the brand name and product technical description.

B. Damaged or deteriorating materials shall not be used and shall be removed from the premises. Material that becomes contaminated with PCBs shall be decontaminated or disposed of as PCB waste.

C. Polyethylene sheet in a roll size to minimize the frequency of joints shall be delivered to the job site with factory label indicating:
   1. Type: Minimum 6 mil., opaque, fire retardant polyethylene sheets.
   2. Floor/Ground Protective Layer: Minimum of multiple layers of 10 mil., reinforced polyethylene sheets (minimum of 20 feet out/away from building footprint).

D. Respirators:
   1. Type: Approved by the Mine Safety and Health Administration (MSHA), Department of Labor, or the National Institute for Occupational Safety and Health (NIOSH), Department of Health and Human Services.

E. Polyethylene disposable bags shall be six (6) mil with pertinent pre-printed label. Tie wraps for bags shall be plastic, five (5) inches long (minimum), pointed and looped to secure filled plastic bags.

F. Tape or adhesive spray will be capable of sealing joints in adjacent polyethylene sheets and for attachment of polyethylene sheet to finished or unfinished surfaces of dissimilar materials and capable of adhering under both dry and wet conditions, including use of amended water.

G. Cleaning Products: Contractor shall at their discretion utilize specialty cleaning products such as Capsur, TechXtract or other cleaners for use in decontaminating porous and nonporous surfaces to remain. All such products shall be utilized in accordance with manufacturer's specifications as intended. PCB Remediation Contractor shall ensure appropriate use and disposal associated with use in accordance with the SDS sheets for each product utilized. It shall be incumbent upon the PCB Remediation Contractor to determine the need for use of specialty products to meet required cleaning verification levels established herein and in accordance with the SIP or Performance Based Plan.

H. The PCB Remediation Contractor shall have available spray equipment capable of mixing wetting agent with water and capable of generating sufficient pressure and volume and having sufficient hose length to reach all areas with PCBs.

I. HEPA filtered local exhaust ventilation shall be utilized during the installation of enclosures and supports where PCB-containing materials may be disturbed.

2.2 TOOLS AND EQUIPMENT

A. The PCB Remediation Contractor shall provide a sufficient supply of disposable mops, rags, and sponges for work area cleaning and decontamination shall be available.

B. The PCB Remediation Contractor shall provide a sufficient supply of scaffolding, ladders, lifts, and hand tools (e.g., scrapers, wire cutters, brushes, utility knives, wire saws, etc.) shall be provided as needed.

C. The PCB Remediation Contractor shall provide all tools and equipment necessary for PCB removal.

D. The PCB Remediation Contractor's air monitoring professional shall have air-monitoring equipment of type and quantity to monitor operations and conduct personnel exposure surveillance per OSHA requirements.

E. The Remediation Contractor is responsible for supplying direct-reading particulate meters, performing testing and documenting the daily readings for exterior, and if requested, interior areas. The consultant may choose to perform independent sampling as well.

F. The PCB Remediation Contractor shall have available sufficient inventory or dated purchase orders for materials necessary for the job including protective clothing, respirators, filter cartridges, polyethylene sheeting of proper size and thickness, tape and air filters.

G. The PCB Remediation Contractor shall provide (as needed) temporary electrical power panels, electrical power cables, and electrical power sources (such as generators). Any electrical

connection work affecting the building electrical power system shall be performed by a State of Connecticut licensed electrician.

H. The PCB Remediation Contractor shall have available shower stalls and plumbing to support same to include sufficient hose length and drain system or an acceptable alternate.

I. Exhaust air filtration system units shall contain HEPA filter(s) capable of sufficient air exhaust to create negative pressure of -0.02 inches of water within enclosure with respect to outside area. Equipment shall be checked for proper operation by smoke tubes or differential pressure gauge before the start of each shift and at least twice during the shift. Adequate exhaust air shall be provided for a minimum of four (4) air changes per hour within the enclosure. No air movement system or air filtering equipment shall discharge unfiltered air outside.

J. Vacuum units, of suitable size and capacities for the project, shall have HEPA filter(s) capable of trapping and retaining at least 99.97 percent of all mono-dispersed particles of 0.3 micrometers in diameter or larger.

2.3 PERSONNEL PROTECTION

A. Safety equipment (e.g., hard hats meeting the requirements of ANSI Standard 289.11981, eye protection meeting the requirements of ANSI Standard Z87.1-1979, safety shoes meeting the requirements of ANSI Standard Z41.1-1967, disposable PVC gloves or other work gloves), shall be provided to all workers and authorized visitors.

B. Non-skid footwear shall be provided to all remediation workers. Disposable clothing shall be adequately sealed to the footwear to prevent body contamination.

PART 3 EXECUTION

3.1 WORK AREA PROTECTION — REMEDIATION ZONE GENERAL

A. Protection of Existing Construction: Perform PCB Bulk Product Waste and PCB Remediation Waste removal work without damage or contamination of adjacent areas, asphalt and/or concrete paving, soils, and existing construction.

B. Prior to commencement of PCB remediation activities at each work area, a containment system shall be constructed by the PCB Remediation Contractor to capture and contain all materials removed during the remediation. Containment procedures referenced for the remediation zone must be utilized for PCB Bulk Product Waste removal.

C. During all remediation activities, PCB Remediation Contractor shall maintain control of all entrances and exits to the work areas to ensure only authorized personnel enter the work areas and are afforded proper personal protective equipment and as required respiratory protection. All approaches to work areas shall be demarcated with appropriately worded warning signs.

D. Work zones shall be established in accordance with this section to include remediation zone, decontamination zone, and support zone.

E. Negative pressure containments shall be constructed consisting of two layers of 6-mil polyethylene sheeting on wall surfaces and two layers of 10-mil polyethylene sheeting on floor surfaces if required.

3.2 WORK AREA PROTECTION — REMEDIATION ZONE FOR PCB BULK PRODUCT

A. Ground protection to prevent debris from escaping the remediation zone and to protect areas outside of remediation zone from PCB contamination shall be utilized. Protection shall include the use of water impervious membrane covering which shall be secured to the ground surface. Edges shall be raised to prevent water run-off used for dust control during cutting and demolition of structures. The membrane shall be covered with plywood and multiple layers of 10-mil reinforced polyethylene sheeting securely fastened to foundation (extending a minimum of 20 feet away from the building foundation). All interior removal will occur with full containments – negative pressure enclosures including hard solid barriers (wood or similar material), 6 and 10-mil fire retardant polyethylene sheeting on the interior/exterior to maintain containment integrity and abutting decontamination units.

B. Isolation barriers shall be installed on the interior of the building to isolate the building exterior where work shall be performed. Protection shall be affixed to the inside finish surfaces to isolate window. One layer of 6-mil polyethylene sheeting shall create the exterior critical barrier between the Remediation Zone and Interior of the Building.

C. All other openings to the building interior such as ducts, grilles, etc. shall be securely sealed with a single layer of 6-mil polyethylene sheeting from the building exterior.

D. Ground protection and isolation barriers shall remain in place throughout work to collect dust and debris resulting from PCB Bulk Product Waste removal.

E. All debris and dust generated during operations shall be HEPA vacuumed continuously throughout the work shift and at the end of a work shift to avoid accumulation. Any tears or rips that occur in protections shall be repaired or removed and replaced with new protections.

F. All surfaces adjacent to materials removed shall be properly decontaminated upon completing the removal of PCB Bulk Product Waste.

G. Warning Signage: Post warning signs in accordance with 29 CFR 1910.1200 at all approaches to the work area. Signs shall be conspicuously posted to permit a person to read signs and take precautionary measures to avoid exposure to PCBs or other Toxic or Hazardous Substances. These signs should include the PCB ML markers at each entrance to the work area.

H. Waste Containers for PCB Bulk Product Waste: Appropriate PCB waste containers shall be placed adjacent to remediation zones. Containers shall be lined covered and secured. The PCB waste containers shall be properly marked as described in 40 CFR part §761.40. Marking shall

include a PCB ML marker formatted in accordance with 40 CFR part §761.45.

3.3 DECONTAMINATION ZONE

A. The PCB Remediation Contractor shall establish contiguous to the work area, a decontamination enclosure consisting of equipment room, shower room, and clean room in series. The only access between contaminated and uncontaminated areas shall be through this decontamination enclosure. The PCB Remediation Contractor shall ensure that employees enter and exit the Remediation Zone through the decontamination area.

B. Access between rooms in the decontamination system shall be through double flap curtain opening airlocks. The clean room, shower and equipment room within the decontamination enclosure, shall be completely sealed ensuring that the sole source of airflow through this area originates from uncontaminated areas outside the work area.

C. Construct the decontamination systems with wood or metal framing, 3/8" sheathing and cover both sides with a double layer of six (6) mil polyethylene sheeting, spray glued or taped at the joints. Caulk joints watertight at floor, walls, and ceiling.

D. The PCB Remediation Contractor shall visually inspect interior and exterior critical barriers that separate the Remediation Zone and the Interior of the Building, respectively, several times daily to assure effective seal and the PCB Remediation Contractor shall repair defects immediately.

E. Equipment room. The equipment room shall be supplied with impermeable, labeled bags and containers for the containment and disposal of contaminated protective equipment.

F. Shower area. Shower facilities shall be provided which comply with 29 CFR 1910.141(d)(3). The showers shall be adjacent both to the equipment room and the clean room.

G. Clean change room. The clean room shall be equipped with a locker or appropriate storage container for each worker's use. Following showering, each worker must then change into street clothing in clean change areas.

H. Decontamination area entry procedures. The PCB Remediation Contractor shall ensure that all workers follow proper decontamination procedures for entry into a Regulated Work area including but not limited to the following:
   1. Enter the decontamination area through the clean room;
   2. Remove and deposit street clothing within a locker provided for their use;
   3. Put on protective clothing and respiratory protection before leaving the clean room.
   4. Before entering the Remediation Zone, the PCB Remediation Contractor shall ensure that workers pass through the equipment room.

I. Decontamination area exit procedures. The PCB Remediation Contractor shall ensure that all workers follow proper decontamination procedures for exit from a Regulated Work area including but not limited to the following:
   1. Before leaving the regulated area, workers shall remove all gross contamination and debris from their protective clothing.

2. Workers shall remove their protective clothing in the equipment room and deposit the clothing in labeled impermeable bags or containers.
3. Workers shall not remove their respirators in the equipment room.
4. Workers shall shower prior to entering the clean room.
5. After showering, workers shall enter the clean room before changing into street clothes.

J. Equipment Room for Waste Removal: The PCB Remediation Contractor shall establish a two chamber equipment room or area that is adjacent to the Remediation Zone for the decontamination of waste containers and equipment as noted above.
1. The area must be of sufficient size as to accommodate cleaning of equipment and removing waste without spreading contamination beyond the area (as determined by visible accumulations).
2. All equipment and surfaces of containers filled with PCB waste must be cleaned prior to removing them from the equipment room or area.

3.4 PCB BULK PRODUCT MATERIAL REMOVAL

A. PCB Bulk Product Waste Materials – Interior and exterior materials listed in 1.08 Scope of Work per the EPA PCB Bulk Waste Reinterpretation Memorandum dated October 24, 2012. The PCB Bulk Product Waste will also include asbestos containing materials (see asbestos specifications).

B. Materials shall be removed in a manner which does not breakdown the materials into fine dust or powder to the extent feasible. Equipment and tools to be utilized shall include hand tools and mechanical equipment such as demolition hammers to remove materials from adjacent substrates. Mechanical removal equipment shall as appropriate be fitted with dust collection systems.

C. Any dry or brittle sealant/caulking/glazing materials shall be removed with additional engineering controls such as use of a HEPA vacuum to remove accumulated dust or debris during removal.

D. Sequence of removal shall follow the following general requirements:
1. Site preparation and controls shall be completed. Work shall not proceed until authorized by owner's representative.
2. The materials listed in 1.08 shall be removed in their entirety for disposal as PCB Bulk Product Waste. The removal of the systems shall be performed so that the sealant/caulking/glazing compounds and other source/adjacent materials are not disturbed.
3. The adjacent surfaces shall be cleaned of all residue using EPA recommended methods.

E. Waste shall be immediately containerized in temporary 6-mil polyethylene disposal bags for disposal. These containers shall be sealed in remediation zone when full during collection and then placed in disposal containers/storage trailers. The containers shall not be emptied into other containers to avoid dispersal of dust or fugitive emissions.

F. The use of minimal quantities of water to moisten the generated dust prior to collection shall be utilized. Under no circumstances shall the PCB waste show evidence of free liquid water, pooling or ponding within the waste stream. Any liquid used to wet the dust and debris to control fugitive

emissions shall be properly containerized and decontaminated in accordance with 40 CFR Part §761.79 (b)(1) or disposed of in accordance with40 CFR Part §761.60 (a).

G. PCB Bulk Product Waste shall be stored for disposal in accordance with 40 CFR Part §761.65 and marked in accordance with 40 CFR Part §761.40 and §761.45.

H. All waste containers shall be appropriately labeled in accordance with 40 CFR Part §761.40 and §761.45. Labeling shall include the PCB ML marker.

3.5 PCB REMEDIATION WASTE — IF VERFIFICATON SAMPLING FINDS >1 PPM PCB

A. All adjacent components (if failing verification sampling – if required) shall be removed, in containments and transported off-site for disposal as PCB Remediation Waste. This includes adjacent building materials/asphalt/soil failing verification sampling (if contractor contaminates these surfaces/materials) and will be performed at no extra cost to the owner. The contractor owns additional remediation for verification sampling failures up to 20% however if the contractor is deemed by Langan to have contaminated the wall surfaces, all additional remediation is to be performed by the contractor at no additional cost to the owner.

B. All PCB Remediation Waste shall be stored for disposal in accordance with 40 CFR Part §761.65.

C. All waste containers shall be appropriately labeled in accordance with 40 CFR Part §761.40 and §761.45. Marking shall include the PCB M_L marker.

D. Soil excavations will be backfilled with certified clean soil meeting the CT DEEP Remediation Standards Regulations (RSRs) for the Residential Direct Exposure Criteria (RDEC) and Groundwater Classification A (GB) Pollutant Mobility Criteria (PMC). Asphalt excavations shall be replaced in kind. Additionally brushes removed during soil excavation shall be replaced in kind.
   1. Scope for soil sample collection:
      a. Owner's Representative will review the characterization data of soil being brought on-site
      b. Collect one composite soil sample (made up of three sample locations) for every 500 cubic yards (CY) of material planned to be brought to the site for use as clean fill.
   2. Laboratory analysis of soil characterization shall include the following:
      a. Volatile Organic Compounds (VOCs by method 8260)
      b. Polynuclear Aromatic Hydrocarbons (PAHs by method 8270)
      c. Extractable Total Petroleum Hydrocarbons (ETPH)
      d. Polychlorinated Biphenyls (PCBs by method 8082)
      e. Pesticides and Herbicides (by method 8081)
      f. RSR metals (Mass and SPLP)

3.6 CLEANING AND DECONTAMINATION

A. The PCB Remediation Contractor shall be responsible for complete cleaning and decontamination of the Remediation Zone upon completion of work. The Remediation Zone will be required to meet proposed Verification Sampling limits prior to containment tear down.

B. The PCB Remediation Contractor shall utilize HEPA vacuum and wet cleaning products to remove all visible dust and debris from all surfaces within the work area. If specialty products are utilized the PCB Remediation Contractor shall utilize in accordance with manufacturer's specifications including any additional safety and disposal requirements for such use.

C. Cleaning of containment barriers shall be performed prior to removal leaving critical barriers at openings, decontamination units and negative air filtration devices in place until results of post verification sampling indicate acceptable limits. Cleaning shall be performed from ceiling to floors.

D. Any liquid used to wet the dust and debris to control fugitive emissions shall be collected and decontaminated in accordance with 40 CFR Part §761.79 (b)(1) or disposed of in accordance with §761.60 (a).

E. All rags and other cleaning materials used to clean shall also be properly disposed as PCB Remediation Waste. All PCB Remediation Waste shall be stored for disposal in accordance with 40 CFR Part §761.65. All waste containers shall be appropriately marked in accordance with 40 CFR Part §761.40 and §761.45.

F. Equipment to be utilized in connection with the removal of PCB Bulk Product Waste and PCB Remediation Waste including waste collection or that will or may come in direct contact with the site contaminants shall be decontaminated prior to leaving the site to prevent migration of the contaminated residues from the project site. Decontamination shall be in accordance with 40 CFR Part §761.79 and Subpart S procedures.

G. All non-disposable equipment and tools employed in the course of the project will be decontaminated at the conclusion of each work day through the following sequence:

Initial tap water rinse, to remove gross contaminants

1. Tap water and hexane or equivalent wash
2. Tap water rinse
3. Second tap water and hexane or equivalent wash
4. Second tap water rinse

H. The wash water and decontamination liquids shall be captured and containerized in DOT approved 55-gallon barrels for off-site disposal.

3.7 CONSULTANTS INSPECTION RESPONSIBILITIES

A. The Owner shall retain an industrial hygiene firm (Owner's Authorized Representative) to perform periodic inspections and sampling during the work. Site visits shall be scheduled based on the progress of the work and at critical time periods.

B. Consultant shall conduct inspections throughout the progress of the removal project. Inspections shall be conducted in order to document the progress of the removal work as well as the procedures and practices employed by the PCB Remediation Contractor.

C. The Consultant shall perform the following inspections during the course of remediation activities:
   1. Pre-commencement Inspection. Pre-commencement inspections shall be performed at the time requested by the remediation Contractor. The Consultant shall be informed 12 hours prior to the time the inspection is needed. If, during the course of the pre-commencement inspection, deficiencies are found, the PCB Remediation Contractor shall perform the necessary adjustments in order to obtain compliance.
   2. Work Area Inspections. Work area inspections shall be conducted on a daily basis at the discretion of the Consultant. During the course of the work inspections, the Consultant shall observe the PCB Remediation Contractor's removal procedures, verify barrier integrity, assess project progress, and inform the remediation Contractor of specific remedial activities if deficiencies are noted.

D. The Owner's Authorized Representative may perform real time monitoring for dust particulate using Dust Trak or equivalent monitoring devices for total dust. Sampling may be performed prior to remediation for background comparison to during remediation sampling. In addition, air sampling outside of the Remediation Zone, may be performed periodically during active removal activities at the Owner's Authorized Representative's discretion for laboratory confirmation. **The remediation contractor is responsible for supplying the direct-reading particulate meters (minimum of 2), performing testing and documenting the daily readings. The consultant may choose to perform independent sampling as well.**

E. It should be noted that if the results of air samples exceed established action levels or ambient background conditions for real time monitoring whichever is less the PCB Remediation Contractor will be required to implement work stoppage to determine causes of exceeding results and as necessary utilize additional containment measures or engineering controls. Any resulting decontamination of areas beyond the Remediation Zone shall be responsibility of the PCB Remediation Contractor.

F. The Owner's Authorized Representative shall perform post removal and decontamination visual clearance inspection as necessary to determine complete removal of PCB's. Verification sampling may be performed on adjacent building materials.

G. Once verification sampling and/or visual inspection has documented the Remediation Zone meets required criteria, the PCB Remediation Contractor shall be permitted to remove decontamination unit, critical barriers, etc. These areas shall be subjected to a visual inspection to ensure no visible dust is present.

3.8 MARKING OF WASTE CONTAINERS

A. All waste containers must be marked with the name of the waste contained; the date in which the first material was placed in the vessel; and the last date at which addition of waste occurred. All waste containers must be marked with a PCB M_L marker.

B. All waste containers containing PCB Bulk Product Waste, Bulk PCB Remediation Waste and PCB contaminated debris, containment system components, used personnel protective equipment, personal and equipment wash water and decontamination fluids, or other wastes generated during the remediation work shall be labeled as follows:

DOT Class 9 UN3432 (solid)
Or UN2315 (liquid) PCB Waste
RQ
Waste for Disposal
Federal law prohibits improper disposal.
If found, contact the nearest police or public safety authority or the U.S. Environmental Protection Agency.
Generator's Information: NOa-g
Manifest Tracking No.:
Accumulation Start Date:
EPA ID No.:
EPA Waste No.:
Total Weight:
Container No.:
HANDLE WITH CARE!

In addition, these containers must be marked with a PCB M_L marker.

C. Such marking must be durable, in English and printed on or affixed to the surface of the package or on a label, tag or sign; displayed on a background of sharply contrasting color; un-obscured by labels or attachments and located away from any other marking (such as advertising) that could substantially reduce its effectiveness.

3.9 ON-SITE WASTE MANAGEMENT AND DISPOSAL OF SOLID HAZARDOUS WASTES

A. All solid waste material, containment system components, used personnel protective equipment, and other solid wastes generated during the work, shall be placed directly in appropriate waste receptacles immediately upon removal from its in-situ position. Suitable waste receptacles may consist of roll-off containers or DOT-approved 55-gallon barrels.

B. The PCB Remediation Contractor shall be responsible for all packaging, labeling, transport, disposal and record-keeping associated with PCB or PCB contaminated waste in accordance with all federal, state and local regulations.

C. The PCB Remediation Contractor shall ensure that the person transporting the waste holds a valid permit issued in accordance with appropriate federal, state, and local regulations.

D. The PCB Remediation Contractor shall provide to the transporter at the time of transfer appropriate shipping records or uniform waste manifests as required by the federal, state and local regulations with a copy to the Owner and Owner's Authorized Representative.

E. PCB Remediation Contractor shall maintain proper follow up procedures to assure that waste materials have been received by the designated waste site in a timely manner and in accordance with all federal, state and local regulations.

F. The PCB Remediation Contractor shall assure that disposal of polychlorinated biphenyls (PCB) containing waste material is at a facility approved to accept such waste and shall provide a tracking/manifest form signed by the landfill's authorized representative.

G. If roll-off containers are to be utilized for containerization of the remediation wastes the following shall apply:
   1. All roll-off containers or other similar vessels utilized shall be watertight and lined with 6-mil polyethylene sheeting or equivalent impermeable lining, and equipped with a secured and impermeable cover.
   2. The impermeable cover shall remain securely in place at all times when material is not being actively placed in the vessels. The PCB Remediation Contractor shall be responsible for ensuring that the cover remains securely intact until the container is removed from the site.

H. If 55-Gallon barrels are to be utilized for waste containerization, the barrels shall consists of suitable DOT-approved 55-gallon barrels that are watertight and free of corrosion, perforations, punctures, or other damage. All barrels shall be securely covered and sealed at the conclusion of each work day.

I. The waste containers shall remain staged at the site with a secure impermeable cover in place until the materials are transported from the site to be delivered to the designated disposal facility.

J. A waste roll-off and barrel staging area shall be designated prior to initiation of the remediation work, and approved by the Owner's Authorized Representative. If this area is located outside of the building, the area (or areas) shall be surrounded by a chain-link fence with a minimum height of six feet. The fence shall be labeled with a PCB ML marker.

K. Properly containerized waste must be transported by a licensed hauler and shipped as PCB Bulk Product Waste for disposal at a permitted waste facility in accordance with 761.62.

L. PCB Remediation Waste must be transported by a licensed hauler and shipped as PCB Remediation Waste for disposal in accordance with 40 CFR 761.61(b) to a EPA TSCA permitted hazardous waste landfill (EQ's Wayne Disposal Landfill in Belleville, Michigan, CWM Model City Disposal Landfill in Youngstown, NY or equivalent); and dispose of non-liquid PCB remediation waste in a high temperature incinerator approved under 761.70, alternate disposal method approved under 761.60(e), and/or a chemical waste landfill approved under 40 CFR 761.75 which is an EPA, TSCA approved facility for PCB Remediation Waste. Provide required copies of the uniform waste manifests for hazardous wastes to the Owner, waste generation State and waste destination State as required.

M. Bulk Product Waste will be transported under manifest for off-site disposal to a hazardous waste landfill (EQ's Wayne Disposal Landfill in Belleville, Michigan or equivalent); and/or other appropriate waste will be transported under manifest for off-site disposal at a non-hazardous waste landfill permitted to accept such materials (Waste Management's Turnkey Landfill in Rochester, New Hampshire, Minerva, Ohio or GROWS Landfill in Morrisville, Pennsylvania or equivalent).

N. Provide required copies of the uniform waste manifests for hazardous wastes to the Owner, waste generation State and waste destination State as required.

O. Any PCB Liquid Water Waste shall be properly containerized and decontaminated in accordance with 40 CFR Part §761.79 (b)(1) or disposed of in accordance with 40 CFR Part §761.60 (a).

P. Any chemicals, solvents or other products used during decontamination shall be properly containerized as PCB Liquid Waste. Waste must be properly decontaminated or disposed in accordance with 40 CFR Part §761.60 (a) or 40 CFR Part §761.79 (g). PCB Liquid Waste shall be transported by a licensed hauler and shipped for treatment or disposal. Provide required copies of the uniform waste manifests for hazardous wastes to the Owner, waste generation State and waste destination State as required.

Q. All contaminated waste shall be carefully loaded on trucks or other appropriate vehicles for transport. Before and during transport, care shall be exercised to insure that no unauthorized persons have access to the material.

R. Transporters of the waste are prohibited from "back hauling" any freight after the disposition of the Owner's waste stream until decontamination of the vehicle and/or trailer is assured.

PCB Caulk Letter
FORM SCG-9008

Subject: PCB in Caulk Products: specific to this Project Phase submission to the OSCG&R

Facility Name: Central Middle School

State Project No.: 057-0114 N

Phase: *2 of 3*

I/We, the undersigned, certify that I/We have read the Division of Construction Services (DCS) PCBs in Caulk Policy (Form 1170). I/We further understand that:

- According to EPA, caulk products containing PCBs at concentrations greater than or equal to 50 parts per million (ppm) are not authorized for use and must be removed and properly disposed of as PCB Bulk Product Waste as defined in 40 CFR 761.3.

- If PCBs are detected in caulk products at concentrations between 1 ppm and 50 ppm and the caulk products meet the definition of a PCB Excluded Product as defined in 40 CFR 761.3, then the Connecticut Department of Energy and Environmental Protection (CT DEEP) recommends that the caulk products be removed.

- Adjacent porous building materials (e.g., concrete, brick, CMU, wood, etc.) that were coated with ≥ 50 ppm PCB-containing caulk may contain PCBs. According to the EPA, if PCBs are present in these materials as a result of the subject caulk and at concentrations greater than or equal to 1 ppm, then EPA considers the materials as PCB Bulk Product Waste per the EPA October 24, 2012 PCB Bulk Product Reinterpretation decision, provided it is removed at the same time as the caulk. In addition, soils beneath ≥ 50 ppm PCB-containing caulk may contain PCBs.

Based on the latest project plans, the following information is provided to the OSCG&R (*check the box, or boxes, adjacent to the applicable statement[s]*):

1. The project ☒ **WILL** ☐ **WILL NOT** disturb existing caulk products as part of the project

2. The original building ☒ **WAS** ☐ **WAS NOT** constructed/renovated/repaired between 1950 and 1979

3. This building has had one or more extensions which has modified the original building footprint. The portion of the building specific to the Project Phase submission noted above ☐ **WAS** ☒ **WAS NOT** constructed/renovated/repaired between 1950 and 1979

4. ☒ The District has decided **NOT TO TEST** caulk products for PCBs

5. ☐ The District has decided **TO TEST** caulk products for PCBs

6. The District **HAS TESTED** caulk products for PCBs and the test results indicate the following:

   a. ☐ PCBs concentrations are **LESS** than 1 ppm

   b. ☐ PCBs concentrations are **BETWEEN** 1 ppm and 50 ppm

   c. ☐ PCBs concentrations are **GREATER** than or **EQUAL** to 50 ppm

For caulk products containing PCB, the District will address the material in the following manner:

7. ☐ The District has developed a PCB Abatement and Management Plan and will be utilizing the "Performance Based" option for material with PCB test results greater than 50 ppm.

8. ☐ The District has developed a PCB Abatement and Management Plan and will be utilizing the "Self-Implementing Plan (SIP)" option for material with PCB test results greater than 50 ppm and has received EPA approval of the SIP (attach a copy of the approval).

9. ☐ The District has developed a PCB Abatement and Management Plan and has submitted a copy to the CT DEEP PCB Unit for material with PCB test results between 1 ppm and 50 ppm (attach a copy of such notice to the CT DEEP).

10. ☒ Other: The sealant compounds throughout the original 1957 building are presumed to contain PCBs > 50 ppm and will be removed and properly disposed of accordingly. A specification section has been created for PCBs assumed > 50 ppm.

If a PCB Abatement and Management Plan has been prepared, attach **FORM SCG-3012** PCB Plan Checklist.

SECTION 03 0516 - UNDER-SLAB VAPOR RETARDER

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Sheet vapor retarder, seam tape, mastic, pipe boots, detail strip for installation under concrete slabs on grade.

1.2 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete: Preparation of subgrade, granular fill, placement of concrete.

1.3 REFERENCE STANDARDS

A. ASTM D1709 - Standard Test Methods for Impact Resistance of Plastic Film by the Free-Falling Dart Method; 2016.

B. ASTM D882 - Standard Test Method for Tensile Properties of Thin Plastic Sheeting; 2018.

C. ASTM E154/E154M - Standard Test Methods for Water Vapor Retarders Used in Contact with Earth Under Concrete Slabs, on Walls, or as Ground Cover; 2008a (Reapproved 2019).

D. ASTM E1643 - Standard Practice for Selection, Design, Installation, and Inspection of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs; 2018a.

E. ASTM E1745 - Standard Specification for Plastic Water Vapor Retarders Used in Contact with Soil or Granular Fill under Concrete Slabs; 2017 (Reapproved 2023).

F. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials; 2023.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Submit manufacturers' data on manufactured products.

C. Samples: Submit samples of underslab vapor barrier to be used.
   1. 4 inch-by-4-inch (minimum) square of vapor retarder sheet.
   2. 12-inch (300 mm) long piece of seam tape.

D. Manufacturer's Installation Instructions: Indicate installation procedures and interface required with adjacent construction.

E. Field quality-control reports. Reports shall be submitted to Architect.

PART 2 PRODUCTS

2.1 MATERIALS

A. Underslab Vapor Retarder:
   1. Water Vapor Permeance: Not more than 0.010 perms, maximum.
   2. Thickness: 15 mils.
   3. Puncture Resistance: 2200 grams minimum; ASTM D1709.
   4. Tensile Strength: 57 lbf/in. minimum when tested in accordance with ASTM E154/E154M or ASTM D882.
   5. Material: Manufactured using prime virgin (non-recycled) polyolefin resin and constructed in a multi-layer plastic extrusion process.
   6. Basis of Design:
      a) Stego Industries LLC; Stego Wrap Vapor Barrier (15-mil): www.stegoindustries.com.
      b) Perminator 15 mil by W.R. Meadows, Inc tel (847) 214-2100; (800) 342-5976, www.wrmeadows.com
      c) Viper Vaporcheck II 15 Mil manufactured by Insulation Solutions Inc., tel. (866) 698-6562, www.viper2.com

B. Accessory Products: Vapor barrier manufacturer's recommended tape, adhesive, mastic, pipe boots, etc., for sealing seams and penetrations in vapor barrier.
   1. Seam Tape:
      a) Water Vapor Transmission Rate: 0.3 perms maximum, ASTM E96/E96M.
      b) Roll Width: 4” minimum
      c) Subject to requirements, available products include:
         1) Stego Tape manufactured by Stego Industries, LLC, tel. (877) 464-7834, www.stegoindustries.com
         2) Viper Double Bond Tape manufactured by Insulation Solutions Inc., tel. (866) 698-6562, www.viper2.com
         3) Perminator Tape by W.R. Medows, Inc tel (847) 214-2100; (800) 342-5976, www.wrmeadows.com
   2. Vapor Proofing Mastic:
      a) Water Vapor Transmission Rate: 0.3 perms maximum, ASTM E96/E96M.
      b) Subject to requirements, available products include:
         1) Stego Mastic manufactured by Stego Industries, LLC, tel. (877) 464-7834, www.stegoindustries.com
         2) Vapercheck Mastic manufactured by Insulation Solutions Inc., tel. (866) 698-6562, www.viper2.com
         3) Pointing Mastic or MEL-ROL® LM by W.R. Medows, Inc tel (847) 214-2100; (800) 342-5976, www.wrmeadows.com
   3. Pipe Boots:
      a) Pre-fabricated or construct pipe boots from vapor retarder material, pressure sensitive tape and/or mastic per manufacturer’s instructions.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that surface over which vapor barrier is to be installed is complete and ready before proceeding with installation of vapor barrier.

B. Ensure that subsoil is approved by Architect or Geotechnical firm.

3.2 INSTALLATION

A. Install vapor barrier in accordance with manufacturer's instructions and ASTM E1643. Where inconsistencies occur between this practice and the manufacturer's instructions, conform to the manufacturer's instructions. Unroll vapor retarder with the longest dimension parallel with the direction of the pour.

B. Install vapor barrier under interior slabs on grade; lap sheet over footings and seal to foundation walls.

C. Lap joints minimum 6 inches and seal with approved seam tape.

D. Seal joints, seams and penetrations watertight with manufacturer's recommended products and follow manufacturer's written instructions.

E. No penetration of vapor barrier is allowed except for reinforcing steel and permanent utilities that have been sealed with seam tape and/or mastic in accordance with manufacturer's instructions.

F. Repair damaged vapor retarder before covering with other materials by cutting patches of vapor retarder, overlapping damaged area 6 inches, and taping all four sides with tape.

3.3 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Section 01 4000 - Quality Requirements.

B. Inspect and repair sheet vapor retarder in accordance with ASTM E1643, items below and manufacturer's written instructions prior to placement of the slab.
   1. Inspect and mark all areas of damage and insufficient installation of the vapor retarder sufficiently in advance of concrete placement such that deficiencies may be corrected before concrete is placed.
   2. Repair vapor retarder damaged during placement of reinforcing or concrete with vapor barrier material or as instructed by manufacturer.
   3. Lap beyond damaged areas a minimum of 6 in. (50 mm) and seal as prescribed for sheet joints.
   4. Avoid the use of non-permanent stakes driven through vapor retarder.
   5. If non-permanent stakes are driven through vapor retarder, repair as recommended by vapor retarder manufacturer.
   6. Seal permanent penetrations as recommended by vapor retarder manufacturer.

C. Review of representative portions of the vapor barrier membrane installation (digitally or in-person, when possible) prior to concrete placement to help ensure compliance with governing installation standard, ASTM E1643, and Contract Documents.

D. Provide letter from manufacturer to document installation review (in the manner described above) and consistent with governing installation standard, ASTM E1643.

3.4 PROTECTION

A. Take precaution to protect installed Vapor Retarder. Replace or repair any areas where Vapor Retarder has been punctured, regardless of the size of the puncture.

B. Avoid driving stakes through Vapor Retarder. Where this cannot be avoided, each individual penetration must be sealed.

END OF SECTION 03 0516

SECTION 03 1000 - CONCRETE FORMING AND ACCESSORIES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Formwork for cast-in-place concrete, with shoring, bracing and anchorage.

B. Form accessories.

C. Form stripping.

1.2 RELATED REQUIREMENTS

A. Section 03 2000 - Concrete Reinforcing.

B. Section 05 1200 - Structural Steel Framing: Placement of embedded steel anchors and plates in cast-in-place concrete.

1.3 REFERENCE STANDARDS

A. ACI CODE-318 - Building Code Requirements for Structural Concrete and Commentary; 2019 (Reapproved 2022).

B. ACI PRC-347 - Guide to Formwork for Concrete; 2014 (Reapproved 2021).

C. ACI SPEC-117 - Specification for Tolerances for Concrete Construction and Materials; 2010 (Reapproved 2015).

D. ACI SPEC-301 - Specifications for Concrete Construction; 2020.

E. ASME A17.1 - Safety Code for Elevators and Escalators Includes Requirements for Elevators, Escalators, Dumbwaiters, Moving Walks, Material Lifts, and Dumbwaiters with Automatic Transfer Devices; 2022.

F. COE CRD-C 513 - Handbook for Concrete and Cement Corps of Engineers Specifications for Rubber Waterstops; 1974.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Reproduction of any portion of the structural contract drawings for resubmittal as shop drawings is prohibited. Shop drawings produced in such a manner will be rejected and returned.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Protect plastic foam products from damage and exposure to sunlight.

B. Store waterstops under cover to protect from moisture, sunlight, dirt, oil, and other contaminants.

PART 2 PRODUCTS

2.1 FORMWORK - GENERAL

A. Provide concrete forms, accessories, shoring, and bracing as required to accomplish cast-in-place concrete work.

B. Design and construct concrete that complies with design with respect to shape, lines, and dimensions.

C. Comply with applicable state and local codes with respect to design, fabrication, erection, and removal of formwork.

D. Comply with relevant portions of ACI CODE-318, ACI PRC-347, and ACI SPEC-301.

2.2 WOOD FORM MATERIALS

A. Form Materials: At the discretion of the Contractor.

2.3 FORMWORK ACCESSORIES

A. Form Ties: Snap-off type, galvanized metal, fixed length, cone type, with waterproofing washer, 1 inch back break dimension, free of defects that could leave holes larger than 1 inch in concrete surface.

B. Form Release Agent: Capable of releasing forms from hardened concrete without staining or discoloring concrete or forming bugholes and other surface defects, compatible with concrete and form materials, and not requiring removal for satisfactory bonding of coatings to be applied.
   1. Do not use materials containing diesel oil or petroleum-based compounds.

C. Dowel Sleeves: Plastic sleeve and nailable plastic base for smooth, round, steel load-transfer dowels.

D. Plate Dowel System: Steel plate dowel and plastic dowel sleeve; with integral fasteners for attachment to formwork.

E. Filler Strips for Chamfered Corners: Wood strip type; 3/4" by 3/4" inch size; maximum possible lengths.

F. Embedded Anchor Shapes, Plates, Angles and Bars: As specified in Section 05 1200.

G. Reinforcing bar and mesh supports: Supports to hold rebar or wire mesh in place to allow the correct depth and placement, prior to the rebar or wire mesh being encased in concrete.
   1. Metal supports:
      a) Slab bolster with continuous bottom plate or continuous bottom rails.
   2. Precast/concrete blocks:

a)

2.4 WATERSTOPS

A. Flexible Rubber Waterstops: U.S. Army COE CRD-C 513, for embedding in concrete to prevent passage of fluids through joints, with factory fabricated corners, intersections, and directional changes.
   1. Profile: Ribbed with center bulb

B. Self-Expanding Butyl Strip Waterstops: Manufactured rectangular or trapezoidal strip, butyl rubber with sodium bentonite or other hydrophilic polymers, for adhesive bonding to concrete, 3/4 by 1 inch (19 by 25 mm). Apply adhesive primer to the joint surface (especially vertical joints) before applying waterstop as recommended by Manufacturer.
   1. Manufacturers:
      a) Cetco; Waterstop-RX: www.cetco.com
      b) Sika; Swellstop: www.usa.sika.com/
      c) Henry; HYDRO-FLEX® WATERSTOP: www.henry.com/
      d) GCP Applied Technologies; ADCOR 500S Waterstop: www.gcpat.com

PART 3 EXECUTION

3.1 EARTH FORMS

A. Earth forms are not permitted.

3.2 ERECTION - FORMWORK

A. Erect formwork, shoring and bracing to achieve design requirements, in accordance with requirements of ACI SPEC-301.

B. Provide bracing to ensure stability of formwork. Shore or strengthen formwork subject to overstressing by construction loads.

C. Align joints and make watertight. Keep form joints to a minimum.

D. Coordinate this section with other sections of work that require attachment of components to formwork.

E. If formwork is placed after reinforcement, resulting in insufficient concrete cover over reinforcement, request instructions from Architect before proceeding.

3.3 APPLICATION - FORM RELEASE AGENT

A. Apply form release agent on formwork in accordance with manufacturer's recommendations.

3.4 INSERTS, EMBEDDED PARTS, AND OPENINGS

A. Locate and set in place items that will be cast directly into concrete.

B. Coordinate with work of other sections in forming and placing openings, slots, reglets, recesses, sleeves, bolts, anchors, other inserts, and components of other work.

C. Chamfer where shown on drawings, exterior corners, top of foundation walls, housekeeping pads, and edges of permanently exposed concrete.

D. Provide temporary ports or openings in formwork where required to facilitate cleaning and inspection. Locate openings at bottom of forms to allow flushing water to drain.

E. Close temporary openings with tight fitting panels, flush with inside face of forms, and neatly fitted so joints will not be apparent in exposed concrete surfaces.

3.5 WATERSTOPS

A. Flexible Waterstops: Install in construction joints and at other joints indicated to form a continuous diaphragm.
   1. Install in longest lengths practicable.
   2. Locate waterstops in center of joint unless otherwise indicated on Drawings.
   3. Allow clearance between waterstop and reinforcing steel of not less than 2 times the largest concrete aggregate size specified in 03 3000 - Cast-in-Place Concrete.
   4. Secure waterstops in correct position at 12 inches on center.
   5. Clean waterstops immediately prior to placement of concrete.
   6. Support and protect exposed waterstops during progress of the Work.

B. Self-Expanding Strip Waterstops: Install in construction joints and at other locations indicated on Drawings, according to manufacturer's written instructions, by adhesive bonding, mechanically fastening, and firmly pressing into place.
   1. Install in longest lengths practicable.
   2. Locate waterstops in center of joint unless otherwise indicated on Drawings.
   3. Protect exposed waterstops during progress of the Work.

3.6 FORM CLEANING

A. Clean forms as erection proceeds, to remove foreign matter within forms.

B. Clean formed cavities of debris prior to placing concrete.
   1. Flush with water or use compressed air to remove remaining foreign matter. Ensure that water and debris drain to exterior through clean-out ports.
   2. During cold weather, remove ice and snow from within forms. Do not use de-icing salts. Do not use water to clean out forms, unless formwork and concrete construction proceed within heated enclosure. Use compressed air or other means to remove foreign matter.

3.7 FORMWORK TOLERANCES

A. Construct formwork to maintain tolerances required by ACI SPEC-117, unless otherwise indicated.

B. Construct and align formwork for elevator hoistway in accordance with ASME A17.1.

3.8 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Section 01 4000 - Quality Requirements.

B. Inspect erected formwork, shoring, and bracing to ensure that work is in accordance with formwork design, and to verify that supports, fastenings, wedges, ties, and items are secure.

3.9 FORM REMOVAL

A. Do not remove forms or bracing until concrete has gained sufficient strength to carry its own weight and imposed loads.

B. Loosen forms carefully. Do not wedge pry bars, hammers, or tools against finish concrete surfaces scheduled for exposure to view.

C. Store removed forms to prevent damage to form materials or to fresh concrete. Discard damaged forms.

END OF SECTION 03 1000

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 03 2000 - CONCRETE REINFORCING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Reinforcing steel for cast-in-place concrete.

B. Supports and accessories for steel reinforcement.

C. Welded-wire reinforcement.

1.2 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete.

1.3 REFERENCE STANDARDS

A. ACI MNL-66 - ACI Detailing Manual; 2020.

B. ACI SPEC-301 - Specifications for Concrete Construction; 2020.

C. ACI 117 - Specification for Tolerances for Concrete Construction and Materials; 2010 (Reapproved 2015).

D. ACI 302.1R - Guide to Concrete Floor and Slab Construction; 2015.

E. ACI 315R - Guide to Presenting Reinforcing Steel Design Details; 2018.

F. ASTM A615/A615M - Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement; 2022.

G. ASTM A1064/A1064M - Standard Specification for Carbon-Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete; 2022.

H. CRSI (DA4) - Manual of Standard Practice; 2023.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Comply with requirements of ACI MNL-66 Include bar schedules, shapes of bent bars, spacing of bars, and location of splices.

C. Shop Drawings: Placing drawings that detail fabrication, bending, and placement, prepared according to ACI 315R. Include wall elevations, material, grade, bar schedules, stirrup spacing, bent bar diagrams, splices and laps, mechanical connections, tie spacing, hoop spacing, arrangement, and supports of concrete reinforcement. Include special reinforcement required for openings through concrete structures.

D. Reproduction of any portion of the structural contract drawings for resubmittal as shop drawings is prohibited. Shop drawings produced in such a manner will be rejected and returned.

E. Resubmitted drawings shall have all revisions clouded or clearly identified on the drawings.

F. CTHPB Documentation Submittals: Comply with Division 01 Section "Sustainable Design Requirements" and provide the following in addition to other action submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

G. Manufacturer's Certificate: Certify that reinforcing steel and accessories supplied for this project meet or exceed specified requirements.

H. Field quality-control and special inspection reports.

I. Minutes of preinstallation conference.

1.5 QUALITY ASSURANCE

A. Perform work of this section in accordance with ACI SPEC-301.
   1. Maintain one copy of each document on project site.

B. Preinstallation Conference: Conduct conference at Project site to comply with requirements in 01 3000 - Administrative Requirements.
   1. Review the following:
      a) Special inspection and testing and inspecting agency procedures for field quality control.
      b) Construction, contraction and isolation joints.
      c) Steel-reinforcement installation.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Steel Reinforcement: Deliver, store, and handle steel reinforcement to prevent bending and damage and to avoid damaging coatings on steel reinforcement.

PART 2 PRODUCTS

2.1 REINFORCEMENT

A. Reinforcing Steel: ASTM A615/A615M, Grade 60 (60,000 psi).
   1. Deformed billet-steel bars.
   2. Unfinished.

B. Steel Welded Wire Reinforcement (WWR): Plain type; ASTM A1064/A1064M.
   1. Form: Flat Sheets.
   2. WWR Style: As indicated on drawings.

C. Reinforcement Accessories:
   1. Tie Wire: Annealed, minimum 16 gauge, 0.0508 inch.
   2. Chairs, Bolsters, Bar Supports, Spacers: Sized and shaped for adequate support of reinforcement during concrete placement.
      a) Manufacture bar supports from steel wire, plastic, or precast concrete in accordance with CRSI's "Manual of Standard Practice," of greater compressive strength than concrete.
   3. Provide plastic coated steel components for placement within 1-1/2 inches of weathering surfaces.
   4. Joint Dowel Bars: ASTM A615/A615M, Grade 60 (Grade 420), plain-steel bars, cut true to length with ends square and free of burrs.

2.2 FABRICATION

A. Fabricate concrete reinforcing in accordance with CRSI (DA4) - Manual of Standard Practice.

B. Welding of reinforcement is not permitted.

C. Locate reinforcing splices not indicated on drawings at point of minimum stress.

PART 3 EXECUTION

3.1 PREPARATION

A. Protection of In-Place Conditions:
   1. Do not cut or puncture vapor retarder.
   2. Repair damage and reseal vapor retarder before placing concrete.

3.2 PLACEMENT

A. Place, support and secure reinforcement against displacement. Do not deviate from required position.

B. Installation tolerances: Comply with ACI 117.

C. Do not displace or damage vapor retarder.

D. Accommodate placement of formed openings.

E. Comply with applicable code for concrete cover over reinforcement.

F. Bond and ground all reinforcement to requirements of Section 26 0526.

G. Clean reinforcement of loose rust and mill scale, earth, ice, and other foreign materials that reduce bond to concrete.

H. Set wire ties with ends directed into concrete, not toward exposed concrete surfaces.

I. Lap splices as indicated on Drawings.
   1. Bars indicated to be continuous, and all vertical bars shall be lapped per "Reinforcing Splice Length Schedule.
   2. Stagger splices in accordance with ACI 318.
   3. Mechanical Splice Couplers: Install in accordance with manufacturer's instructions.

J. Install welded-wire reinforcement in longest practicable lengths.
   1. Support welded-wire reinforcement in accordance with CRSI "Manual of Standard Practice."
      a) For reinforcement less than W4.0 or D4.0, continuous support spacing shall not exceed 24 inches.
   2. Support: Provide support adequate to maintain WWR 1 1/2 inches from the surface of the slab on grade. Supports should be close enough that the welded wire reinforcement cannot be forced out of location by construction foot traffic.
   3. Welded wire reinforcement should not be placed on the ground and pulled up after placement of the concrete, nor should the mats be walked in after placing the concrete per ACI 302.1R .
   4. Lap edges and ends of adjoining sheets at least one wire spacing plus 2 inches (50 mm) for plain wire and 8 inches (200 mm) for deformed wire.
   5. Offset laps of adjoining sheet widths to prevent continuous laps in either direction.
   6. Lace overlaps with wire.

3.3 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a qualified special inspector to perform the inspections indicated in the Statement of Special Inspections.

END OF SECTION 03 2000

SECTION 03 3000 - CAST-IN-PLACE CONCRETE

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Joint devices associated with concrete work.

B. Miscellaneous concrete elements, including equipment pads and steel pan stairs.

C. Concrete curing.

1.2 RELATED REQUIREMENTS

A. Section 03 1000 - Concrete Forming and Accessories: Forms and accessories for formwork.

B. Section 03 2000 - Concrete Reinforcing.

C. Section 03 6213 - Non-Metallic Non-Shrink Grouting: For grout beneath base and bearing plates.

D. Section 03 0516 - Under-Slab Vapor Retarder: For vapor barrier placed directly under slabs on grade.

E. Section 07 9200 - Joint Sealants: Products and installation for sealants for saw cut joints and isolation joints in slabs.

1.3 REFERENCE STANDARDS

A. ACI 211.2 - Standard Practice for Selecting Proportions for Structural Lightweight Concrete; 1998 (Reapproved 2004).

B. ACI CODE-318 - Building Code Requirements for Structural Concrete and Commentary; 2019 (Reapproved 2022).

C. ACI PRC-211.1 - Selecting Proportions for Normal-Density and High Density-Concrete - Guide; 2022.

D. ACI 228.1R - In-Place Methods to Estimate Concrete Strength; 2003.

UU. ISO 14040 - Environmental management - Life cycle assessment - Principles and framework; 2006 (Amended 2020).

VV. ISO 14044 - Environmental management - Life cycle assessment - Requirements and guidelines; 2006 (Amended 2020).

WW. ISO 21930 - Sustainability in buildings and civil engineering works -- Core rules for environmental product declarations of construction products and services; 2017.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Shop Drawings:
   1. Construction/Control Joint Layout Plan: Indicate proposed construction/control joints required to construct the structure.
      a) Layout of construction/control joints is subject to approval of the Architect.
      b) For slab on grade construction/control joint layout, include size and shape of boxouts for column/pier conditions.

C. Product Data: Submit manufacturers' data on manufactured products showing compliance with specified requirements and installation instructions.

D. Mix Design: Submit proposed concrete mix design.
   1. Indicate proposed mix design complies with requirements of ACI SPEC-301, Section 4 - Concrete Mixtures.
   2. Indicate proposed mix design complies with requirements of ACI CODE-318, Chapter 5 - Concrete Quality, Mixing and Placing.
   3. Indicate proposed mix design complies with fiber reinforcing manufacturer's written recommendations.
   4. For structural lightweight concrete, submit test results and correlation between equilibrium density and the fresh bulk density of concrete for review. The fresh bulk density shall be used as the basis for acceptance during construction.
   5. Design Mixtures: For each concrete mixture, include the following: mixture identification, minimum 28-day compressive strength, durability exposure class, maximum w/cm, calculated equilibrium unit weight for lightweight concrete, slump limit, air content, nominal maximum aggregate size, fiber reinforcement dosage, intended placement method, indicate amounts of mixing water to be withheld for later addition at Project site if any, and submit alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

E. Test Reports: Submit report for each test or series of tests specified.

F. Field quality-control and special inspection reports.

G. Cold and hot weather concreting procedures.
   1. Contractor shall indicate how they intend to implement cold and hot weather concreting, as indicated in "PLACING CONCRETE" section below, including materials used and specific examples for this Project.

H. Sustainable Design Submittal: If any fly ash, ground granulated blast furnace slag, silica fume, rice hull ash, or other waste material is used in mix designs to replace Portland cement, submit the total volume of concrete cast in place, mix design(s) used showing the quantity of portland cement replaced, reports showing successful cylinder testing, and temperature on day of pour if cold weather mix is used.

I. CTHPB Documentation Submittals: Comply with Division 01 Section "Sustainable Design Requirements" and provide the following in addition to other action submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

J. Environmental Product Declaration (EPD): Submit in accordance with the following.
   1. Publicly available, critically reviewed life cycle analysis having at least a cradle-to-gate scope conforming to one of the below criteria.
      a) Good: Product-specific; compliant with ISO 14044.
      b) Better: Industry-wide, generic; compliant with ISO 21930, or with ISO 14044, ISO 14040, ISO 14025, and EN 15804; Type III third-party certification with external verification, in which the manufacturer is recognized as the program operator.
      c) Best: Commercial-product-specific; compliant with ISO 21930, or with ISO 14044, ISO 14040, ISO 14025, and EN 15804; Type III third-party certification with external verification, in which the manufacturer is recognized as the program operator.
      d) Where demonstration of impact reduction below industry average is required, submit both industry-wide and commercial-product-specific declarations; or submit at least 5 declarations for products of the same type by other manufacturers in the same industry.
   2. Submit EPD for 90% by volume for all concrete mixes used in the project.
   3. For products delivered in multiple shipments to the jobsite, an EPD must be provided for each separate shipment from a different point of production, or from a a different supplier.
   4. Impact Categories:
      a) Global Warming Potential (GWP): All GWP information submitted shall be in the form of $kgCO_2eq/kg$.

K. Bill of Materials: Material supplier(s) shall provide a report, when the material sources are known, and at the completion of the primary structural frame, summarizing all concrete quantities and the location where each material was obtained. Each unique mix design used on the project shall be itemized.
   1. In addition to the requirements above, report the following in cubic yards for concrete and itemize as required for each unique mix design:
      a) Total Concrete Volume

L. Minutes of preinstallation conference.

1.5 QUALITY ASSURANCE

A. Perform work of this section in accordance with ACI SPEC-301 and ACI CODE-318.
   1. Maintain one copy of each document on site.

B. Follow recommendations of ACI PRC-305 when concreting during hot weather.

C. Follow recommendations of ACI PRC-306 when concreting during cold weather.

D. For slabs required to include moisture vapor reducing admixture (MVRA), do not proceed with placement unless manufacturer's representative is present for every day of placement.

E. Preinstallation Conference: Conduct conference at Project site to comply with requirements in 01 3000 - Administrative Requirements.
   1. Before submitting design mixtures, review concrete design mixture and examine procedures for ensuring quality of concrete materials. Require representatives of each entity directly concerned with cast-in-place concrete to attend, including the following:
      a) Contractor's superintendent.
      b) Independent testing agency responsible for concrete design mixtures.
      c) Ready-mix concrete manufacturer.
      d) Concrete subcontractor.
      e) Special Inspector.
      f) Architect
      g) Structural Engineer of Record
   2. Review the following:
      a) Special inspection and testing and inspecting agency procedures for field quality control.
      b) Construction, control and isolation joints, joint-filler strips and keyway forming.
      c) Semirigid joint fillers.
      d) Vapor-retarder installation and inspection.
      e) Anchor rod and anchorage device installation tolerances.
      f) Cold and hot weather concreting procedures.
      g) Concrete finishes and finishing. Mockups if required.
      h) Curing procedures.
      i) Methods for achieving specified floor and slab flatness and levelness.
      j) Floor and slab flatness and levelness measurements.
      k) Concrete repair procedures.
      l) Concrete protection.
      m) Initial curing and field curing of field test cylinders (ASTM C31/C31M.)
      n) Protection of field cured field test cylinders.
      o) Determine point at which samples are taken.
      p) Distribution list for Test Reports.

F. Installer Qualifications: A qualified installer who employs Project personnel qualified as an ACI-certified Flatwork Technician and Finisher and a supervisor who is a certified ACI Flatwork Concrete Finisher/Technician or an ACI Concrete Flatwork Technician .
   1. Post-Installed Concrete Anchors Installers: ACI-certified Adhesive Anchor Installer.

G. Ready-Mixed Concrete Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C94/C94M requirements for production facilities and equipment.
   1. Manufacturer certified in accordance with NRMCA's "Certification of Ready Mixed Concrete Production Facilities."

PART 2 PRODUCTS

2.1 FORMWORK

A. Comply with requirements of Section 03 1000.

2.2 REINFORCEMENT MATERIALS

A. Comply with requirements of Section 03 2000.

2.3 CONCRETE MATERIALS

A. Cement: ASTM C150/C150M, Type I/II Portland type or ASTM C595/C595M, Portland-limestone cement (PLC) Type IL.
   1. Acquire cement for entire project from same source.

B. Fine and Coarse Aggregates: ASTM C 33. Class 3S coarse aggregate or better, graded.
   1. Acquire aggregates for entire project from same source.

C. Lightweight Aggregate: ASTM C330/C330M.

D. Fly Ash: ASTM C618, Class C or F. LOI shall not exceed 3%, specific gravity shall not be less than 2.2.

E. Ground Granulated Blast-Furnace Slag: ASTM C989/C989M, Grade 120.

F. Ground Glass Pozzolan: ASTM C1866/C1866M.

G. Water and Water Used to Make Ice: ASTM C94/C94M , potable or complying with ASTM C1602/C1602M, including all limits listed in Table 2 and the requirements of paragraph 5.4.

H. Structural Fiber Reinforcement: ASTM C1116/C1116M.
   1. Fiber Length: 2.0 inch , nominal.
   2. Products:
      a) Euclid Chemical Company; TUF-STRAND SF: www.euclidchemical.com/#sle.
      b) Fibermesh; Fibermesh 650: www.fibermesh.com/#sle.
      c) GCP Applied Technologies; STRUX 90/40: www.gcpat.com/#sle.
      d) GCP Applied Technologies; STRUX BT50: www.gcpat.com/#sle.
      e) ABC Polymer Industries, LLC; FiberForce 650TM; www.abcpolymerindustries.com

2.4 ADMIXTURES

A. Do not use chemicals that will result in soluble chloride ions in excess of 0.1 percent by weight of cement.

B. Air Entrainment Admixture: ASTM C260/C260M.

C. High Range Water Reducing and Retarding Admixture: ASTM C494/C494M Type G.

D. High Range Water Reducing Admixture: ASTM C494/C494M Type F.

E. Water Reducing and Accelerating Admixture: ASTM C494/C494M Type E.

F. Water Reducing and Retarding Admixture: ASTM C494/C494M Type D.

G. Accelerating Admixture: ASTM C494/C494M Type C.

H. Retarding Admixture: ASTM C494/C494M Type B.

I. Water Reducing Admixture: ASTM C494/C494M Type A.

2.5 ACCESSORY MATERIALS

A. Underslab Vapor Retarder: Comply with requirements of Section 03 0516 - Under-Slab Vapor Retarder.

B. Non-Shrink Cementitious Grout: Comply with requirements of Section 03 6213 - Non-Metallic Non-Shrink Grouting

C. Structural Grade Rigid Filler Material: Complies with ASTM C578 or ASTM D6817/D6817M.
   1. Expanded Polystyrene (EPS)
   2. Type and Compressive Resistance: Type XIV, 40 psi (276 kPa) compressive resistance at 10% strain, minimum.
   3. Type and Thermal Resistance, R-value: Type XIV, 4.2 (0.74), minimum, per 1 inch thickness at 75 degrees F mean temperature, when tested in accordance with ASTM C518 .
   4. Board Size: 48 inch by 96 inch.
   5. Board Thickness: As Indicated on Drawings.
   6. Board Edges: Square, at long edges.
   7. Recycled Content: Minimum 20%, certified by independent third party such as Scientific Certification Systems.
   8. Manufacturers:
      a) DiversiFoam Products; RayLite® EPS Insulation, Type XIV: www.diversifoam.com
      b) Atlas Molded Products; ThermalStar Insulation Board 40 or Atlas Geofoam 39 www.atlasmoldedproducts.com.
      c) Insulfoam, a Carlisle Company; InsulFoam XIV 40psi: www.Insulfoam.com
      d) ISOLOFOAM Group; ISOLOFOAM XHD 400/600: www.isolofoam.com
      e) Plymouth Foam Incorporated; Durafill 39: www.goplymouthfoam.com
      f) ____.
      g) Substitutions: See Section 01 6000 - Product Requirements.

2.6 BONDING AND JOINTING PRODUCTS

A. Latex Bonding Agent: Non-redispersable acrylic latex, complying with ASTM C1059/C1059M, Type II. For use in non-structural applications i.e. bonding new concrete to old concrete per typical detail "Typical Wall Joints".

B. Epoxy Bonding System:
   1. Complying with ASTM C881/C881M and of Type required for specific application. For use in structural bearing applications.

C. Slab Isolation Joint Filler: 1/2-inch thick, height equal to slab thickness, with removable top section forming 1/2-inch deep sealant pocket after removal.
   1. Material: ASTM D8139, semi-rigid, closed-cell polypropylene foam.
   2. Products:
      a) Nomaco, Inc; Fastflex Slab Isolation Joint Filler with Tear-Off Strip: www.nomaco.com/#sle.
      b) W. R. Meadows, Inc; Deck-O-Foam Joint Filler with pre-scored top strip: www.wrmeadows.com/#sle.
      c) Right / Pointe, LLC; Flex Foam Expansion Joint
      d) Substitutions: See Section 01 6000 - Product Requirements.

D. Slab Construction Joint Devices: Combination keyed joint form and screed, galvanized steel, with rectangular or round knockout holes for conduit or rebar to pass through joint form at 6 inches on center; ribbed steel stakes for setting.

2.7 CURING MATERIALS

A. Moisture-Retaining Sheet: ASTM C171.
   1. White-burlap-polyethylene sheet, weighing not less than 3.8 ounces per square yard.
      a) 10 oz. burlap laminated onto 5 mil white coated polyethylene

B. Water and Water Used to Make Ice: Potable, not detrimental to concrete.

2.8 CONCRETE MIX DESIGN

A. Proportioning Normal Weight Concrete: Comply with ACI PRC-211.1 recommendations.
   1. Replace as much Portland cement as possible with fly ash, ground granulated blast furnace slag, silica fume, or rice hull ash as is consistent with ACI recommendations.

B. Proportioning Structural Lightweight Concrete: Comply with ACI 211.2 recommendations.
   1. Replace as much Portland cement as possible with fly ash, ground granulated blast furnace slag, silica fume, or rice hull ash as is consistent with ACI recommendations.

C. Concrete Strength: Establish required average strength for each type of concrete on the basis of field experience or trial mixtures, as specified in ACI SPEC-301.
   1. For trial mixtures method, employ independent testing agency acceptable to Architect for preparing and reporting proposed mix designs.

D. Admixtures: Add acceptable admixtures as recommended in ACI PRC-211.1 and at rates recommended or required by manufacturer.

E. Fiber Reinforcement: Add to mix at rate of 3.0 pounds per cubic yard minimum, or as recommended by manufacturer for specific project conditions.

F. Normal Weight Concrete: Footings and Foundation Walls
   1. Exposure Category: Freezing and Thawing (F)
   2. Exposure Class: ACI 318 F1
   3. Compressive Strength, when tested in accordance with ASTM C39/C39M at 56 days: 4,000 pounds per square inch.
   4. Supplementary Cementitious Materials (SCMs): Mix design must meet a minimum of one of the criteria below.
      a) Fly Ash or Ground Glass Pozzolan Content: Between 15 and 25 percent of cementitious materials by weight.
      b) Ground Granulated Blast-Furnace Slag: Between 30 and 50 percent.
      c) Combined Fly Ash or Ground Glass Pozzolan and Ground Granulated Blast-Furnace Slag: Between 30 and 50 percent by mass, with fly ash or pozzolan not exceeding 25 percent.
   5. Total Air Content: 6 percent plus or minus 1.5 percent at point of placement, determined in accordance with ASTM C173/C173M.
   6. Limit water-soluble, chloride-ion content in hardened concrete to 0.15 percent by weight of cement.

G. Normal Weight Concrete: Exterior Building Slabs on Grade
   1. Exposure Category: Freezing and Thawing (F)
   2. Exposure Class: ACI 318 F3
   3. Compressive Strength, when tested in accordance with ASTM C39/C39M at 28 days: 4,500 pounds per square inch.
   4. Supplementary Cementitious Materials (SCMs): Mix design must meet a minimum of one of the criteria below.
      a) Fly Ash or Ground Glass Pozzolan Content: Between 10 and 15 percent of cementitious materials by weight.
      b) Ground Granulated Blast-Furnace Slag: Between 10 and 15 percent.
      c) Combined Fly Ash or Ground Glass Pozzolan and Ground Granulated Blast-Furnace Slag: Between 10 and 15 percent by mass, with fly ash or pozzolan not exceeding 15 percent.
   5. Total Air Content: 6 percent plus or minus 1.5 percent at point of placement, determined in accordance with ASTM C173/C173M.
   6. Limit water-soluble, chloride-ion content in hardened concrete to 0.15 percent by weight of cement.

H. Normal Weight Concrete: Interior Slabs on Grade and Haunched Slabs
   1. Compressive Strength, when tested in accordance with ASTM C39/C39M at 28 days: 4,000 pounds per square inch.
   2. Supplementary Cementitious Materials (SCMs): Mix design must meet a minimum of one of the criteria below.
      a) Fly Ash or Ground Glass Pozzolan Content: Between 10 and 15 percent of cementitious materials by weight.
      b) Ground Granulated Blast-Furnace Slag: Between 10 and 15 percent.

c) Combined Fly Ash or Ground Glass Pozzolan and Ground Granulated Blast-Furnace Slag: Between 10 and 15 percent by mass, with fly ash or pozzolan not exceeding 15 percent.

3. Total Air Content: Do not allow air content of trowel-finished floors to exceed 3 percent.
4. Limit water-soluble, chloride-ion content in hardened concrete to 0.15 percent by weight of cement.

I. Structural Lightweight Concrete: Suspended Slabs and Housekeeping Pads
1. Compressive Strength, when tested in accordance with ASTM C39/C39M at 28 days: 4,000 pounds per square inch.
2. Supplementary Cementitious Materials (SCMs): Mix design must meet a minimum of one of the criteria below.
a) Fly Ash or Ground Glass Pozzolan Content: Between 10 and 15 percent of cementitious materials by weight.
b) Ground Granulated Blast-Furnace Slag: Between 10 and 15 percent.
c) Combined Fly Ash or Ground Glass Pozzolan and Ground Granulated Blast-Furnace Slag: Between 10 and 15 percent by mass, with fly ash or pozzolan not exceeding 15 percent.
3. Total Air Content: Do not allow air content of trowel-finished floors to exceed 3 percent.
4. Maximum dry unit weight: 115 pounds per cubic foot plus or minus 3 lb/cu. ft. (48.1 kg/cu. m). The calculated value per ASTM C567/C567M shall be included in the submittal.
5. Limit water-soluble, chloride-ion content in hardened concrete to 0.15 percent by weight of cement.

J. Steel Pan Stairs: Provide 3000 psi normal weight concrete fill with 3/8” maximum aggregate reinforced with WWR 6 x 6-W1.4 x W1.4 for steel pan stair treads, landings, and associated items. Cast-in inserts and accessories as shown on Drawings. Screed, tamp, and trowel-finish concrete surfaces.

2.9 MIXING

A. Transit Mixers: Comply with ASTM C94/C94M.
1. Furnish batch ticket information.
2. When air temperature is between 85 and 90 deg F, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above **90 deg F reduce mixing and delivery time to 60 minutes.**

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify lines, levels, and dimensions before proceeding with work of this section.

B. Before placing concrete, verify that installation of concrete forms, accessories, and reinforcement, and embedded items is complete and that required inspections have been performed.

C. Immediately prior to concrete placement, inspect vapor retarder for damage and deficient installation, and repair defective areas and that required inspections are completed.

D. Do not proceed until unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Where new concrete is to be bonded to previously placed concrete, prepare existing surface by cleaning and applying bonding agent in according to bonding agent manufacturer's instructions.
   1. Use epoxy bonding system for bonding to damp surfaces, for structural load-bearing applications, and where curing under humid conditions is required.
   2. Use latex bonding agent only for non-load-bearing applications.

3.3 PLACING CONCRETE

A. Before placing concrete, verify that installation of formwork, reinforcement, embedded items, and vapor retarder is complete and that required inspections are completed.
   1. Immediately prior to concrete placement, inspect vapor retarder for damage and deficient installation, and repair defective areas.
   2. Provide continuous inspection of vapor retarder during concrete placement and make necessary repairs to damaged areas as Work progresses.

B. Place concrete in accordance with ACI PRC-304.

C. Place concrete for floor slabs in accordance with ACI PRC-302.1.

D. Cold-Weather Placement: Comply with ACI 301 and ACI 306.1 and as follows.
   1. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.
   2. When average high and low temperature is expected to fall below 40 deg F (4.4 deg C) for three successive days, maintain delivered concrete mixture temperature within the temperature range required by ACI 301.
   3. Do not use frozen materials or materials containing ice or snow.
   4. Do not place concrete in contact with surfaces less than 35 deg F (1.7 deg C), other than reinforcing steel.
   5. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.
   6. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in mixture designs.

E. Hot-Weather Placement: Comply with ACI 301 and ACI 305.1 (ACI 305.1M), and as follows:
   1. Maintain concrete temperature at time of discharge to not exceed 95 deg F (35 deg C).
   2. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor’s option.
   3. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade uniformly moist without standing water, soft spots, or dry areas.
   4. Cover steel reinforcement with water-soaked burlap so steel temperature will not exceed ambient air temperature immediately before embedding in concrete.
   5. An alternate concrete mix design may be submitted for approval using a retarding admixture.

F. Notify Architect not less than 24 hours prior to commencement of placement operations.

G. Maintain records of concrete placement. Record date, location, quantity, air temperature, and test samples taken.

H. Ensure reinforcement, inserts, waterstops, embedded parts, and formed construction joint devices will not be disturbed during concrete placement.

I. Place concrete continuously without construction (cold) joints wherever possible; where construction joints are necessary, before next placement prepare joint surface by removing laitance and exposing the sand and sound surface mortar, by sandblasting or high-pressure water jetting.

J. Consolidate placed concrete with mechanical vibrating equipment in accordance with ACI 301.
   1. Do not use vibrators to transport concrete inside forms.
   2. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least 6 inches (150 mm) into preceding layer.
   3. Do not insert vibrators into lower layers of concrete that have begun to lose plasticity.
   4. At each insertion, limit duration of vibration to time necessary to consolidate concrete, and complete embedment of reinforcement and other embedded items without causing mixture constituents to segregate.

K. Do not add water to concrete during delivery, at Project site, or during placement unless approved by Architect.
   1. If permitted, the contractor is required to clearly note on the delivery ticket the quantity of water withheld at the batching plant that can be added on site.
   2. Do not add water to concrete after adding high-range water-reducing admixtures to mixture.

L. Finish floors level and flat, unless otherwise indicated, within the tolerances specified below.

3.4 SLAB JOINTING

A. Locate joints as indicated on drawings.

B. Anchor joint fillers and devices to prevent movement during concrete placement.

C. Isolation Joints: Use preformed joint filler with removable top section for joint sealant specified in 07 9200 - Joint Sealants, total height equal to thickness of slab, set flush with top of slab.

D. Saw Cut Contraction Joints: Saw cut joints before concrete begins to cool, within 4 to 12 hours after placing when cutting action does not tear, abrade, or otherwise damage surface and before concrete develops random contraction cracks; use 1/8 inch thick shatterproof abrasive or diamond-rimmed blade and cut at least 1 inch deep but not less than one quarter (1/4) the depth of the slab.
   1. For slabs on grade where fiber reinforcment is used in lieu of WWR, saw cut shall be at least one third (1/3) the depth of the slab.

E. Construction Joints: Where not otherwise indicated, use metal combination screed and key form, with removable top section for joint sealant.

F. Construction Joints in Slabs on Steel Deck: Where not otherwise indicated,

1. Joints parallel to girder shall be located minimum 5'-0" off girder centerline.
2. Joints parallel to infill beams shall be located half way between adjacent beam.
3. Submit layout plan for A/E approval.

3.5 FLOOR FLATNESS AND LEVELNESS TOLERANCES

A. Minimum F(F) Floor Flatness and F(L) Floor Levelness Values:
   1. Exposed to View and Foot Traffic: F(F) of 20; F(L) of 15, on-grade only.
   2. Under Thick-Bed Tile: F(F) of 20; F(L) of 15, on-grade only.
   3. Under Carpeting: F(F) of 25; F(L) of 20, on-grade only.
   4. Under Thin Resilient Flooring and Thinset Tile: F(F) of 35; F(L) of 25, on-grade only.

B. Maintain F(F) numbers only for elevated slabs on steel deck for areas listed above.

C. Measure F(F) Floor Flatness and F(L) Floor Levelness in accordance with ASTM E1155 (ASTM E1155M), within 48 hours after slab installation; report both composite overall values and local values for each measured section.

D. Correct the slab surface if composite overall value is less than specified and if local value is less than two-thirds of specified value or less than F(F) 13/F(L) 10.

E. Correct defects by grinding or by removal and replacement of the defective work. Areas requiring corrective work will be identified. Re-measure corrected areas by the same process.

3.6 CONCRETE FINISHING

A. Repair surface defects, including tie holes, immediately after removing formwork.

B. Unexposed Form Finish: Rub down or chip off fins or other raised areas 1/4 inch or more in height.

C. Exposed Form Finish: Rub down or chip off and smooth fins or other raised areas 1/4 inch or more in height. Provide finish as follows:
   1. Smooth Rubbed Finish: Wet concrete and rub with carborundum brick or other abrasive, not more than 24 hours after form removal.

D. Concrete Slabs: Finish to requirements of ACI PRC-302.1 and as follows:
   1. Surfaces to Receive Thin Floor Coverings: "Steel trowel" as described in ACI 302.1R; thin floor coverings include Resilient Flooring, Resilient Athletic Flooring, Tile Carpeting, Tiling, and Fluid-Applied Flooring.
   2. Broom Finish: Apply a broom finish to exterior concrete platforms, steps, ramps, and elsewhere as indicated.
      a) Immediately after float finishing, slightly roughen trafficked surface by brooming with fiber-bristle broom perpendicular to main traffic route. Coordinate required final finish with Architect before application.
   3. Other Surfaces to Be Left Exposed: Trowel as described in ACI PRC-302.1, minimizing burnish marks and other appearance defects.

3.7 CURING AND PROTECTION

A. Comply with requirements of ACI PRC-308. Immediately after placement, protect concrete from premature drying, excessively hot or cold temperatures, and mechanical injury.

B. Wet coverings should be laid over the concrete as soon as finishing operations are complete and surface marring can be avoided. Exposed concrete edges should be carefully covered. The coverings should be kept wet so that a film of moisture remains continuously in contact with the concrete throughout the curing period.

C. Maintain concrete with minimal moisture loss at relatively constant temperature for period necessary for hydration of cement and hardening of concrete.
   1. Curing Period: Not less than seven days.

D. Formed Surfaces: Cure by moist curing with forms in place for full curing period.

E. Surfaces Not in Contact with Forms:
   1. Slabs and Floors To Receive Adhesive-Applied Flooring: Curing compounds and other surface coatings are usually considered unacceptable by flooring and adhesive manufacturers. If such materials must be used, either obtain the approval of the flooring and adhesive manufacturers prior to use or remove the surface coating after curing to flooring manufacturer's satisfaction.
   2. Curing: Start as soon as free water has disappeared and before surface is dry. Keep continuously moist.
      a) Saturated Burlap: Saturate burlap-polyethylene and place burlap-side down over floor slab areas, lapping ends and sides; maintain in place.

3.8 TOLERANCES

A. Conform to ACI 117.

3.9 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Section 01 4000 - Quality Requirements.

B. Special Inspections: Owner will engage a qualified special inspector to perform the inspections indicated in the Statement of Special Inspections.

C. Provide free access to concrete operations at project site and cooperate with appointed firm.

D. Submit proposed mix design of each class of concrete to inspection and testing firm for review prior to commencement of concrete operations.

E. Tests of concrete and concrete materials may be performed at any time to ensure compliance with specified requirements.

F. All field quality control tests shall be performed at point of concrete placement.

G. Compressive Strength Tests: ASTM C39/C39M, for each test, mold and cure three concrete test cylinders. Obtain test samples for every 50 cubic yards or less of each class of concrete placed but not less than one per day. Test cylinders at 28 days except for foundation and footing mixes shall be tested at 56 days.

H. In the event that a compressive strength test of standard cured cylinders is more than 500 psi (3.5 MPa) below the design f'c, cores shall be drilled to verify the in-place strength. Three cores are required for each strength test failing to meet the specified criteria per ACI 214.4R.

I. Take three additional test cylinders during cold weather concreting, cured on job site under same conditions as concrete it represents. Test cylinders at 28 days except for foundation and footing mixes shall be tested at 56 days.

J. During cold weather concreting, a number of techniques are available for estimating the in-place strength of concrete per ACI 228.1R. When these have been correlated to standard-cured cylinders, they can be used to determine the concrete strength. Tests are performed using simple handheld equipment. Use one of the following to estimate concrete strength.
   1. Pullout strength testing (ASTM C900) requires placing bolts in the concrete before casting. Individual bolts are then pulled out of the structure.
   2. Penetration resistance (ASTM C803/C803M) is a technique that involves placing pins in the concrete using a powder-actuated tool.
   3. Pulse velocity measurements (ASTM C597) determines the propagation velocity of a pulse of vibrational energy through a concrete member.
   4. Rebound hammer measurements (ASTM C805/C805M) are also used to estimate concrete strength.

K. Perform one slump test for each set of test cylinders taken, following procedures of ASTM C143/C143M.

L. Air Content: Perform one test for each set of test cylinders taken, following procedures of ASTM C231/C231M, pressure method, for normal-weight concrete; ASTM C173/C173M, volumetric method, for structural lightweight concrete.

M. Concrete Temperature: ASTM C1064/C1064M; one test hourly when air temperature is 40 degrees F and below or 80 degrees F and above, and one test for each set of test cylinders taken.

N. Fresh Bulk Unit Weight: ASTM C138/C138M; For normal weight and structural lightweight concrete, perform one test for each set of test cylinders taken, but not less than one test for each day's pour of each concrete mixture.

O. Equilibrium Unit Weight: ASTM C567/C567M; For structural lightweight concrete, perform one test for each set of test cylinders taken, but not less than one test for each day's pour of each concrete mixture.

3.10 DEFECTIVE CONCRETE

A. Test Results: The testing agency shall report test results in writing to Architect and Contractor within 24 hours of test.

B. Defective Concrete: Concrete not complying with required lines, details, dimensions, tolerances or specified requirements.

C. Repair or replacement of defective concrete will be determined by the Architect. The cost of additional testing shall be borne by Contractor when defective concrete is identified.

D. Do not patch, fill, touch-up, repair, or replace exposed concrete except upon express direction of Architect for each individual area.

E. Repairing Formed Surfaces: Surface defects include color and texture irregularities, cracks, spalls, air bubbles, honeycombs, rock pockets, fins and other projections on the surface, and stains and other discolorations that cannot be removed by cleaning.
   1. Immediately after form removal, cut out honeycombs, rock pockets, and voids more than 1/2 inch in any dimension to solid concrete.
      a) Limit cut depth to 3/4 inch.
      b) Make edges of cuts perpendicular to concrete surface.
      c) Clean, dampen with water, and brush-coat holes and voids with bonding agent.
      d) Fill and compact with patching mortar before bonding agent has dried.
      e) Fill form-tie voids with patching mortar or cone plugs secured in place with bonding agent.
   2. Repair defects on surfaces exposed to view by blending white portland cement and standard portland cement, so that, when dry, patching mortar matches surrounding color.
      a) Patch a test area at inconspicuous locations to verify mixture and color match before proceeding with patching.
      b) Compact mortar in place and strike off slightly higher than surrounding surface.
   3. Repair defects on concealed formed surfaces that will affect concrete's durability and structural performance as determined by Architect.

3.11 PROTECTION

A. Do not permit traffic over unprotected concrete floor surface until fully cured.

END OF SECTION 03 3000

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 03 3250 - CONCRETE POST-INSTALLED ANCHORS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Post installed anchors for concrete.

B. Post installed anchors for masonry.

1.2 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete.

B. Section 04 2000 - Unit Masonry.

C. Section 04 2900 - Engineered Unit Masonry.

D. Section 05 1200 - Structural Steel Framing.

1.3 REFERENCE STANDARDS

A. ASTM A108 - Standard Specification for Steel Bar, Carbon and Alloy, Cold-Finished

B. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware

C. ASTM A193/A193M - Standard Specification for Alloy-Steel and Stainless Steel Bolting for High Temperature or High Pressure Service and Other Special Purpose Applications

D. ASTM A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength

E. ASTM A36/A36M - Standard Specification for Carbon Structural Steel

F. ASTM A510/A510M - Standard Specification for General Requirements for Wire Rods and Coarse Round Wire, Carbon Steel, and Alloy Steel

G. ASTM A563 - Standard Specification for Carbon and Alloy Steel Nuts

H. ASTM A563M - Standard Specification for Carbon and Alloy Steel Nuts (Metric)

I. ASTM A615/A615M - Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement

J. ASTM B633 - Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel

K. ASTM C42/C42M - Standard Test Method for Obtaining and Testing Drilled Cores and Sawed Beams of Concrete

L. ASTM C642 - Standard Test Method for Density, Absorption, and Voids in Hardened Concrete

M. ASTM C90 - Standard Specification for Loadbearing Concrete Masonry Units

N. ASTM E1512 - Standard Test Methods for Testing Bond Performance of Bonded Anchors

O. ASTM E488/E488M - Standard Test Methods for Strength of Anchors in Concrete Elements

P. ASTM F3125/F3125M - Standard Specification for High Strength Structural Bolts, Steel and Alloy Steel, Heat Treated, 120 ksi (830 MPa) and 150 ksi (1040 MPa) Minimum Tensile Strength, Inch and Metric Dimensions

Q. ASTM F436/F436M - Standard Specification for Hardened Steel Washers Inch and Metric Dimensions

R. ASTM F593 - Standard Specification for Stainless Steel Bolts, Hex Cap Screws, and Studs

S. ASTM F594 - Standard Specification for Stainless Steel Nuts

T. ASTM F844 - Standard Specification for Washers, Steel, Plain (Flat), Unhardened for General Use

U. ICC-ES AC01 - Acceptance Criteria for Expansion Anchors in Masonry Elements

V. ICC-ES AC58 - Acceptance Criteria for Adhesive Anchors in Masonry Elements

W. ICC-ES AC106 - Acceptance Criteria for Predrilled Fasteners (Screw Anchors) in Concrete or Masonry Elements

X. ICC-ES AC193 - Acceptance Criteria for Mechanical Anchors in Concrete Elements

Y. ICC-ES AC308 - Acceptance Criteria for Post-Installed Adhesive Anchors in Concrete Elements

1.4 SUBMITTALS

A. General: Submit in accordance with Conditions of the Contract and Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product specifications with recommended design values and physical characteristics for adhesive and mechanical anchors.

C. Quality Assurance Submittals:
   1. Test Reports: Certified test reports (ICC-ES Evaluation Report) showing compliance with ICC-ES AC193 , ICC-ES AC308 , ICC-ES AC01 or ICC-ES AC58.

D. Manufacturer’s installation instructions.

E. Installer Qualifications & Procedures: Submit installer qualifications. Submit a letter of procedure stating method of drilling, the product proposed for use, the complete installation procedure, manufacturer training date, and a list of the personnel to be trained on anchor installation.

F. Substitutions: Contractor shall submit for Structural Engineer's review calculations prepared and sealed by Contractors Professional Engineer indicating substituted product is capable of resisting loads indicated on Construction Documents. Substituted anchors shall be submitted with ICC-ES Evaluation Report indicating anchor conforms with ICC-ES AC308, ICC-ES AC193, ICC-ES AC01 or ICC-ES AC58 . Engineer shall be registered to practice in the State of the State in which the Project is located.

1.5 QUALITY ASSURANCE

A. Installer Qualifications:
   1. Drilled-in anchors shall be installed by a contractor with at least five years of experience performing similar installations. Contractor to be a certified installer of chemical anchors. Certification is achieved by completing the "basic anchor installation training program" prepared by manufacturer. Please call your local Hilti representative to schedule this no-charge service [800.879.8000].

B. Installer Training: Conduct a thorough training with the manufacturer or the manufacturer's representative for the contractor on the project. Training to consist of a review of the complete installation process for drilled-in anchors, to include but not limited to:
   1. Hole drilling procedure.
   2. Hole preparation & cleaning technique using the 2 x 2 x 2 method with compressed air or utilizing a hand-pump if compressed air is not available. 2 x 2 x 2 is equivalent to two passes with compressed air (min 90 psi @ 3.5 CFM), two passes with a manufacturer approved wire brush (correct diameter and length), and a final two passes with compressed air. If compressed air is not available, then the hand-pump requires 4 to 6 pumps or passes. Only two pumps with the hand-pump will not be sufficient for removing the dust and debris from the bore hole.
   3. Hole preparation and cleaning technique using Hilti Safe Set automatic hole cleaning with Hilti TE-CD or TE-YD hollow drill bits used in conjunction with a Hilti vacuum with a minimum value for the maximum volumetric flow rate of 129 cfm.
   4. Adhesive injection techniques and dispenser training/maintenance. Determining when to use the piston plug and extension hoses and when not too. Deep embedment's versus standard and shallow embedment's plus dispenser training. Deep embedment is considered to be greater than 10". Piston plug should be used in all overhead applications.
   5. Rebar dowel preparation and installation.
   6. Proof loading/torquing.

C. Certifications: Unless otherwise authorized by the Engineer, anchors shall have the following certification:
   1. ICC-ESR Evaluation Service Report indicating conformance with current applicable ICC-ES acceptance criteria's ICC-ES AC308 or ICC-ES AC193 reports for building code compliance. Acceptance Criteria.
   2. ACI 355.2 Evaluation Report

1.6 DELIVERY, STORAGE AND HANDLING

A. General: Deliver, store, and handle anchors in accordance with manufacturer's recommendations.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Fasteners and Anchors:
   1. Structural Bolts and Nuts: Carbon steel, ASTM A307, Grade A and galvanized in compliance with ASTM A153/A153M Class C.
   2. High-Strength Structural Bolts, Nuts, and Washers: ASTM F3125/F3125M, Type 1, with matching compatible ASTM A563 or ASTM A563M nuts and ASTM F436/F436M washers.
   3. Carbon Steel Threaded Rod: ASTM A36/A36M; or ASTM A193/A193M Grade B7 or ISO 898 Class 5.8.
   4. Wedge Anchors: ASTM A510/A510M; or ASTM A108.
   5. Stainless Steel Bolts, Hex Cap Screws, and Studs: ASTM F593.
   6. Stainless Steel Nuts: ASTM F594.
   7. Zinc Plating: ASTM B633.
   8. Hot-Dip Galvanizing: ASTM A153/A153M.
   9. Metric Anchor Bolts, Screws, and Studs: ISO 898 Part 1.
   10. Metric Anchor Nuts: EN 24033.
   11. Metric Anchor Stainless Steel Bolts, Screws, and Studs: ISO 3506 Part 1.
   12. Metric Anchor Stainless Steel Nuts: ISO 3506 Part 2.
   13. Reinforcing Dowels: ASTM A615/A615M

2.2 POST INSTALLED ANCHORS

A. Screw Anchors: Screw type. Pre-drilling of the hole requires a standard ANSI drill bit with the same diameter as the anchor and installing the anchor will be done with an impact wrench. Provide anchors with a diameter and anchor length marking on the head. Type and size as indicated on Drawings.
   1. Interior Use: Unless otherwise indicated on the Drawings, provide carbon steel anchors with zinc plating equivalent to DIN EN ISO 4042 (8mm min.).
   2. Where anchor manufacturer is not indicated, subject to compliance with requirements and acceptance by the Engineer, provide the following:
      a) Hilti Kwik-HUS EZ, ICC-ESR 3027 for concrete, ICC-ESR 3056 for masonry.
      b) Hilti Kwik-HUS EZ-I, ICC-ESR 3027.
      c) Hilti Kwik-HUS EZ-P, ICC-ESR 3027 for concrete, ICC-ESR 3056 for masonry.

B. Wedge Anchors: Wedge type, torque-controlled, with impact section to prevent thread damage and wedge dimples to prevent spinning during installation, complete with required nuts and washers. Provide anchors with length identification markings conforming to ICC-ES AC193 or ICC-ES AC01. Type and size as indicated on Drawings.
   1. Interior Use: Unless otherwise indicated on the Drawings, provide carbon steel anchors manufactured from materials conforming to ASTM A510/A510M or ASTM A108 with zinc plating in accordance with ASTM B633, Type III Fe/Zn 5 (SC1). Anchors in contact with preservative-treated and fire retardant treated wood shall be zinc coated or stainless steel.

2. Exterior Use: As indicated on the Drawings, provide stainless steel anchors. Stainless steel anchors shall be AISI Type 304 and Type 316 stainless steel provided with stainless steel nuts and washers of matching alloy group and minimum proof stress equal to or greater than the specified minimum full-size tensile strength of the externally threaded fastener. Stainless steel nuts shall conform to ASTM F594 unless otherwise specified. Avoid installing stainless steel anchors in contact with galvanically dissimilar metals.
3. Acceptable base material: Normal weight concrete, light weight concrete, normal weight concrete on metal deck, light weight concrete on metal deck and grouted masonry units.
4. Base material compressive strength:
   a) Fastening into concrete: Between 2500 psi and 8500 psi
   b) Fastening into concrete over metal deck: Minimum of 3000 psi
   c) Fastening into grouted masonry units: CMU's must be fully grouted and compressive strength of masonry f'm at 28 days must be a minimum of 1500 psi. CMU must conform to ASTM C90 and minimum nominal dimensions of 8 inches wide by 8 inches high by 16 inches long.
5. Where anchor manufacturer is not indicated, subject to compliance with requirements and acceptance by the Engineer, provide the following:
   a) Hilti Kwik Bolt 3 [KB3], ICC-ESR 2302 for uncracked concrete, ICC-ESR 1385 for masonry.
   b) Hilti Kwik Bolt-TZ [KB-TZ], ICC-ESR 1917 for cracked concrete, ICC-ESR 3785 for masonry.

C. Heavy Duty Metric Sleeve Anchors: Torque-controlled, exhibiting follow-up expansion under load, with provision for rotation prevention during installation. Type and size as indicated on Drawings.
   1. Interior Use: Unless otherwise indicated on the Drawings, provide carbon steel anchors manufactured from materials conforming to ISO 898 Part 1, with zinc plating equivalent to ASTM B633, Type III Fe/Zn 5 (5 mm min.). Anchors in contact with preservative-treated and fire retardant treated wood shall be zinc coated or stainless steel.
   2. Exterior Use: As indicated on the Drawings, provide stainless steel anchors. Stainless steel anchors shall be manufactured from materials conforming to ISO 3506 Part 1 and having corrosion resistance equivalent to AISI Type 304 and Type 316 stainless steel. Stainless steel anchors shall be provided with stainless steel nuts and washers of matching alloy group and minimum proof stress equal to or greater than the specified minimum full-size tensile strength of the externally threaded fastener. All nuts shall conform to ISO 3506 Part 2 unless otherwise specified. Avoid installing stainless steel anchors in contact with galvanically dissimilar metals.
   3. Acceptable base material: Normal weight concrete and light weight concrete.
   4. Base material compressive strength: Between 2500 psi and 8500 psi
   5. Where anchor manufacturer is not indicated, subject to compliance with requirements and acceptance by the Engineer, provide the following:
      a) Hilti HSL-3, HSL-3-G, or HSL-3-B, ICC-ESR-1545 (carbon steel).

D. Heavy Duty Metric Undercut Anchors: Bearing-type. Installed anchor shall have a minimum tension bearing area in the concrete, measured as the horizontal projection of the bearing surface, not less than two times the net tensile area of the anchor bolt. The installed anchor shall exhibit a form fit between the bearing elements and the undercut in the concrete. Type and size as indicated on Drawings.

1. Interior Use: Unless otherwise indicated on the Drawings, provide carbon steel anchors manufactured from materials conforming to ISO 898 Part 1, with zinc plating equivalent to ASTM B633, Type III Fe/Zn 5 (5mm min.). Anchors in contact with preservative-treated and fire retardant treated wood shall be zinc coated or stainless steel.
2. Exterior Use: As indicated on the Drawings, provide sherardized or stainless steel anchors. Sherardized anchors shall be manufactured from materials conforming to ISO 898 Part 1 and having corrosion resistance equivalent to ASTM A153/A153M with sherardized dry diffusion zinc coating (50 mm min.). Stainless steel anchors shall be manufactured from materials conforming to ISO 3506 Part 1 and having corrosion resistance equivalent to AISI Type 304 and Type 316 stainless steel. Stainless steel anchors shall be provided with stainless steel nuts and washers of matching alloy group and minimum proof stress equal to or greater than the specified minimum full-size tensile strength of the externally threaded fastener. All nuts shall conform to ISO 3506 Part 2 unless otherwise specified. Avoid installing stainless steel anchors in contact with galvanically dissimilar metals.
3. Acceptable base material: Normal weight concrete and light weight concrete.
4. Base material compressive strength: Between 2500 psi and 8500 psi
5. Where anchor manufacturer is not indicated, subject to compliance with requirements and acceptance by the Engineer, provide the following:
   a) Hilti HDA, ICC-ESR-1546.

E. Cartridge Injection Adhesive Anchors: Threaded steel rod, inserts or reinforcing dowels, complete with nuts, washers, polymer [epoxy] or hybrid mortar adhesive injection system, and manufacturer's installation instructions. Type and size as indicated on Drawings.
   1. Interior Use: Unless otherwise indicated on the Drawings, provide carbon steel rods conforming to ASTM A36/A36M, ISO 898 Class 5.8 HAS-E rod, or ASTM A193/A193M Type B7 with zinc plating in accordance with ASTM B633, Type III Fe/Zn 5 (SC1). Anchors in contact with preservative-treated and fire retardant treated wood shall be zinc coated or stainless steel.
   2. Exterior Use: As indicated on the Drawings, provide stainless steel anchors. Stainless steel anchors shall be AISI Type 304 and Type 316 stainless steel provided with stainless steel nuts and washers of matching alloy group and minimum proof stress equal to or greater than the specified minimum full-size tensile strength of the externally threaded fastener. All nuts shall conform to ASTM F594 unless otherwise specified. Avoid installing stainless steel anchors in contact with galvanically dissimilar metals.
   3. Reinforcing dowels shall be ASTM A615/A615M Grade 60.
   4. Acceptable base material: Normal weight concrete grouted masonry units.
   5. Base material compressive strength:
      a) Fastening into concrete: Between 2500 psi and 8500 psi
      b) Fastening into concrete over metal deck: Minimum of 3000 psi
      c) Fastening into grouted masonry units: CMU must be fully grouted and compressive strength of masonry f'm at 28 days must be a minimum of 1500 psi. CMU must conform to ASTM C90 and minimum nominal dimensions of 8 inches wide by 8 inches high by 16 inches long.
   6. Where anchor manufacturer is not indicated, subject to compliance with requirements and acceptance by the Architect, provide the following:
      a) Hilti HAS threaded rods with HIT-HY 200 Safe Set System using Hilti Hollow Drill Bit and VC 20/40 vacuum System for anchor and rebar anchorage to concrete, ICC ESR-3187.
      b) Hilti HIT-Z anchor rods with HIT-HY 200 Safe Set System for anchorage to concrete, ICC ESR-3187.

c) Hilti HAS threaded rods with HIT-RE 500 V3 Safe Set System using Hilti Hollow Drill Bit and VC 20/40 vacuum System for anchor and rebar anchorage to concrete, ICC ESR-3814.
d) Hilti HAS-E, HAS-B7 threaded rods with Hilti HIT-HY 70 Adhesive Anchor System for anchorage to fully grouted masonry units, ICC-ESR 2682; AC58

PART 3 - EXECUTION

3.1 INSTALLATION

A. Post Installed Anchors:
1. Drill holes with rotary impact hammer drills using carbide-tipped bits. Drill bits shall be of diameters as specified by the anchor manufacturer. Unless otherwise shown on the Drawings, all holes shall be drilled perpendicular to the concrete surface. Edge distance, spacing and required embedment depth of holes should be in conformance with the Construction Documents.
   a) Cored Holes: Where anchors are permitted to be installed in cored holes, use core bits with matched tolerances as specified by the manufacturer. Properly clean cored hole per manufacturer's instructions.
   b) Embedded Items: Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Exercise care in coring or drilling to avoid damaging existing reinforcing or embedded items. Notify the Engineer if reinforcing steel or other embedded items are encountered during drilling. Take precautions as necessary to avoid damaging prestressing tendons, electrical and telecommunications conduit, and gas lines.
   c) Base Material Compressive Strength: Unless otherwise specified, do not drill holes in concrete or masonry until it has achieved full design strength. If compressive strength is unknown, contractor shall take concrete core complying with ASTM C42/C42M and perform compressive strength test complying with ASTM C39/C39M to determine strength.
   d) Acceptable Base Material: If concrete density is unknown, contractor shall take concrete core complying with ASTM C42/C42M to determine concrete weight in conformance with ASTM C642 (normal or lightweight) and to determine if base material is suitable for post installed anchor.
2. Perform anchor installation in accordance with manufacturer instructions. Contractor shall contact manufacturer for proper overhead application installation procedure.
3. Wedge Anchors and Heavy-Duty Sleeve Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in part to be fastened. Set anchors to manufacturer's recommended torque, using a torque wrench. Following attainment of 10% of the specified torque, 100% of the specified torque shall be reached within 7 or fewer complete turns of the nut. If the specified torque is not achieved within the required number of turns, the anchor shall be removed and replaced unless otherwise directed by the Engineer.
4. Undercut Anchors:

5. Cartridge Injection Adhesive Anchors: Clean all holes per manufacturer instructions to remove loose material and drilling dust prior to installation of adhesive. Holes may be dry, damp or wet. Inject adhesive into holes proceeding from the bottom of the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive Follow manufacturer recommendations to ensure proper mixing of adhesive components. Sufficient adhesive shall be injected in the hole to ensure that the annular gap is filled to the surface [use of piston plug to achieve these results]. Remove excess adhesive from the surface. Shim anchors with suitable device to center the anchor in the hole. Do not disturb or load anchors before manufacturer specified cure time has elapsed.
6. Observe manufacturer recommendations with respect to installation temperatures for cartridge injection adhesive anchors.

3.2 FIELD QUALITY CONTROL

A. Testing and Inspecting: Owner will engage a special inspector and qualified testing agency to provide continuous inspection during installation. Special inspector and qualified testing agency inspector shall be a certified installer of chemical anchors. Certification is achieved by completing the "basic anchor installation training program" prepared by manufacturer. Please call your local Hilti representative to schedule this no-charge service [800.879.8000].
Inspecting agency to provide field reports which document the following information:
   1. Anchor location and description, including adhesive product name, anchor type, nominal anchor diameter, and anchor length.
   2. Verify hole dimensions, hole cleaning procedures, drill bit, drilling procedures and anchor tightening torque are in compliance with the manufacturer's installation instructions.
   3. Verification of anchor spacing, edge distances, concrete base material thickness and anchor embedment depth are in conformance with Construction Documents and manufacturer's recommendations.

3.3 POST INSTALLED ANCHOR LOAD TESTING

A. Anchors which the structural engineer requires load testing or any anchor that the special inspector or inspecting agency is concerned with the anchor installation or was damaged after installation may require load testing. Load testing is to be performed by a qualified testing agency or the manufacturer and results of test shall be provided in a report to the Structural Engineer of Record. Structural Engineer of Record shall provide the desired load for the test.

B. Anchor tension test procedure is listed below and is derived from ASTM E488/E488M and ASTM E1512 . If Structural Engineer of Record requires a shear load test, agency performing test shall provide testing procedure to engineer for their review prior to performing test.
   1. Locate area in base material where test fasteners will not interfere with permanent connections unless noted otherwise.
   2. Using a rotary hammer drill, drill bore holes with matched tolerance drill bits to specified hole diameters and embedment depths.
   3. Bore hole preparation: Mechanical fasteners: use compressed air or Hilti hand pump. (wire brushing is not needed with mechanical or undercut fasteners).
   4. Bore hole preparation: Chemical anchors: wire brushing and blowing out the hole is required. With two repetitions, first wire brush and then use compressed air.
   5. The bore hole cleaning procedure is the 2x2x2 method. This consists of two passes with compressed air (4+ with hand pump), 2 passes with same size wire brush, and a final two passes (4+ with hand pump) to fully prepare the bore hole for injection.

6. For mechanical anchors, hammer in mechanical fastener until embedment depth is reached, then torque fastener to specified value.
7. For chemical anchors, discard the first two trigger pulls at minimum but not less than required by manufacturer of the adhesive, then start injecting into the bottom of the hole, moving outward, filling up approximately 1/2 to 2/3 full. If piston plugs are used to inject, then the bore hole is only filled half way. Insert threaded rod or rebar with a turning motion, (approximately 1 turn during insertion). Wipe away any excess chemical anchor and let sit until full cure time has been reached.
8. After post installed anchor is set, connect a coupler to test fastener, screw on pull rod to other end of coupler (recommended larger pull rod than test rod), set reaction frame or back to back angles on blocking over pull rod (this constitutes as a Unconfined test; of which this means we are testing bond, concrete and steel), set hollow core ram (i.e. load cell) through pull rod and rest on frame or angles, and then put a nut and washer on the top side of the pull rod to complete the connection.
9. Reaction frame shall span over the test fastener allowing visual inspection of test fastener. Reaction frame should ideally span around fastener equal to embedment depth of test fastener in all directions.
10. Pre-load system to approximately 5% of published failure load and let sit for 1 minute. Then apply incremental increases, i.e. approximately 10%, until desired load is reached. This is done slowly and evenly; the hand pump hand creates the tension force, again, continue this until failure is observed or a desired load is reached.
11. Hold test load for 60 a minumum of seconds.
12. Record load PSI gauge. Convert psi to pounds by multiplying by square inches of hollow-core ram.

3.4 REPAIR OF DEFECTIVE WORK

A. Remove and replace misplaced or malfunctioning anchors. Fill empty anchor holes and patch failed anchor locations with high-strength non-shrink, nonmetallic grout. Anchors that fail to meet proof load or installation torque requirements shall be regarded as malfunctioning.

END OF SECTION 03 3250

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 03 3511 - CONCRETE FLOOR FINISHES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Clear coatings.

B. Color coatings.

1.2 RELATED REQUIREMENTS

A. Section 01 3329.04 – Material Content Form.

B. Section 01 3566.42 - Sustainability Compliance Procedures

1.3 ADMINISTRATIVE REQUIREMENTS

A. Coordinate the work with concrete floor placement and concrete floor curing.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's published data on each finishing product, including information on compatibility of different products and limitations.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Maintenance Data: Provide data on maintenance and renewal of applied finishes.

E. Warranty Documentation: Manufacturer warranty; ensure that forms have been completed in Owner's name and registered with manufacturer.

F. Specimen Warranty: Manufacturer warranty.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in manufacturer's sealed packaging, including application instructions.

1.6 FIELD CONDITIONS

A. Maintain light level equivalent to a minimum 200 W light source at 8 feet above the floor surface over each 20 foot square area of floor being finished.

B. Maintain ambient temperature of 50 degrees F minimum, or as required by the coating manufacturer's written installation instructions.

1.7 WARRANTY

A. See Section 01 7800 - Closeout Submittals for additional warranty requirements.

B. Correct defective work within a one-year period commencing on the Date of Substantial Completion.

PART 2 PRODUCTS

2.1 CONCRETE FLOOR FINISH APPLICATIONS

A. Color Coatings:
   1. Use at following locations: Floors with finish designations SC2, SC3 .

B. Clear Coating:
   1. Use at following locations: Floors with designation SC1.

2.2 COATINGS

A. High Gloss Clear Coating: Transparent, nonyellowing, acrylic polymer-based coating.
   1. Composition: Solvent-based.

B. Low Gloss Clear Coating **SC1**: Transparent, nonyellowing, acrylic polymer-based coating.
   1. Composition: Water-based.
      a) VOC Content: 100 g/L maximum.
      b) Number of Coats: Two.
      c) Application Temperature Range: 40 - 100 degrees F.
      d) Products:
         1) Basis-of-Design: **Prosoco**; **Consolideck PolishGuard**.
         2) _____.

C. Color Coating **SC2**, **SC3**: Pigmented coating recommended by manufacturer for finishing concrete floors and slabs.
   1. Gloss: Satin.
   2. VOC Content: Less than 50 g/L.
   3. Adhesion: 550 psi, per ASTM D541.
   4. Abrasion Resistance: 150 mg loss, per ASTM D4060 (CS17 wheel, 100 cycles, 1 kg load).
   5. Impact Resistance, per ADTM D2794:
      a) Direct: 100 in. lb.
      b) Indirect: 80 in. lb.
   6. Color(s): As indicated on the Finish Product List on the drawings.

7. Type: High solids epoxy; two-component.
   a) Products:
      1) Basis-of-Design: **Sherwin-Williams**; **Armorseal 8100**.
      2) Substitutions: See Section 01 6000 - Product Requirements.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that floor surfaces are acceptable to receive the work of this section.

B. Verify that flaws in concrete have been patched and joints filled with methods and materials suitable for further finishes.

3.2 PREPARATION

A. Follow manufacturer's written instructions for substrate preparation and environmental limitations.

3.3 GENERAL

A. Apply materials in accordance with manufacturer's instructions.

3.4 COATING APPLICATION

A. Verify that surface is free of previous coatings, sealers, curing compounds, water repellents, laitance, efflorescence, fats, oils, grease, wax, soluble salts, residues from cleaning agents, and other impediments to adhesion.

B. Verify that water vapor emission from concrete and relative humidity in concrete are within limits established by coating manufacturer.

C. Protect adjacent non-coated areas from drips, overflow, and overspray; immediately remove excess material.

D. Apply coatings in accordance with manufacturer's instructions, matching approved mock-ups for color, special effects, sealing and workmanship.

END OF SECTION 03 3511

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 03 6213 - NON-METALLIC NON-SHRINK GROUTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

A. This Section specifies high-precision, fluid, non-shrink, grouting material formulated to be used for applications requiring high strength such as column base plates, beam bearing plates, and leveling plates.

1.3 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete: For general foundation specifications and concrete for housekeeping pads.

B. Section 05 1200 - Structural Steel Framing

1.4 REFERENCE STANDARDS

A. AASHTO M 182 - Standard Specification for Burlap Cloth Made from Jute or Kenaf and Cotton Mats; 2005.

B. ACI 301 - Specifications for Concrete Construction; 2020.

C. ACI 305R - Guide to Hot Weather Concreting; 2020.

D. ACI 306R - Guide to Cold Weather Concreting; 2016.

E. ASTM C1107/C1107M - Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink); 2020.

F. ASTM C309 - Standard Specification for Liquid Membrane-Forming Compounds for Curing Concrete; 2019.

G. ASTM C33/C33M - Standard Specification for Concrete Aggregates; 2023.

H. ASTM C94/C94M - Standard Specification for Ready-Mixed Concrete; 2024.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: For each type of product indicated below.
   1. Non-Metallic, Non-shrink, Natural Aggregate Grout
   2. Curing Compound

C. Design Mixtures: For each grout mixture: Include the following information:
   1. Proposed consistency (Stiff, Plastic, Flowable, or Fluid)
   2. Amount of water to be added to manufacturer's pre-packaged material.
   3. Additional aggregate (required when manufacturer requires additional aggregate to be added to prepackaged material to extend grout heights, etc.).

1.6 QUALITY ASSURANCE

A. Source Limitations:
   1. Obtain all base and bearing plate grout from the same manufacturer.
   2. Obtain aggregate from one source

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver Materials to project in Manufacturer's original, unopened packaging, with labels clearly identifying product name, Manufacturer, and expiration date.

B. Store materials to permit easy access for inspection and identification.

C. Store grout in a cool, dry place, out of the sun.

PART 2 - PRODUCTS

2.1 FORMWORK

A. Furnish formwork and formwork accessories according to ACI 301.

2.2 GROUT MATERIALS

A. Non-Metallic, Non-shrink, Natural Aggregate Grout: Use one of the following:
   1. Five Star Fluid Grout 100, manufactured by Five Star Products, Inc. - www.fivestarproducts.com
   2. Masterflow 928, manufactured by BASF Construction Chemicals, LLC - Building Systems - www.master-builders-solutions.basf.us
   3. Crystex, manufactured by L&M Construction Chemicals, Inc. - www.lmcc.com
   4. 1107 Advantage Grout, manufactured by Dayton Superior - www.daytonsuperior.com
   5. Rapid Set/CTS Construction Grout, manufactured by CTS Cement Manufacturing Corp. - www.ctscement.com
   6. NS Grout, manufactured by Euclid Chemical - www.euclidchemical.com

B. Normal-Weight Aggregate: ASTM C33/C33M, graded, 3/8-inch nominal maximum aggregate size.

C. Water: ASTM C94/C94M; potable.

2.3 CURING MATERIALS

A. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. (305 g/sq. m) when dry.

B. Water: Potable.

C. Clear, Waterborne, Membrane-Forming Curing Compound: ASTM C309, Type 1, Class B.

2.4 GROUT MIXTURES

A. Comply with manufacturer's written instructions for grout mixtures.

B. Prepare grout mixes as follows:
   1. Minimum Compressive Strength: 8000 psi at 28 days.
   2. Minimum Working Time: 20 minutes
   3. Consistency: As required for workability and to meet compressive strength requirements.

PART 3 - EXECUTION

3.1 FORMWORK

A. Comply with grout manufacturer's recommendations for form construction. Construct forms to be liquid tight.

3.2 PREPARATION

A. Mechanically remove all unsound concrete to the limits indicated on the drawings. Remove cement paste and laitance to expose sound aggregate.

B. Thoroughly clean the roughened surface of dirt, loose chips, and dust.

C. Clean rust from base plates and other metal surfaces to be grouted to obtain satisfactory adhesion. Remove loose rust and scale by grinding or sanding.

D. Maintain substrate in a saturated condition for 24 hours prior to grouting. Surface should be saturated, surface dry (SSD) at time of grout installation.

3.3 MIXING

A. Comply with grout manufacturer's recommendations for mixing procedures.

B. When using less than a full bag of grout, always mix the bag first so that a representative sample is obtained.

C. Adjust water temperature to keep mixed grout temperature in the range of 45°F (7°C) and 90°F (32°C) minimum/maximum.
   1. Use cold or iced water to extend working time in hot weather or in large placements.
   2. Use warm water in cold conditions to achieve minimum as mixed temperatures.

3.4 HOT AND COLD WEATHER GROUTING

A. Cold Weather Grouting: Follow ACI 306R - Guide to Cold Weather Concreting recommendations. Heat water, precondition (warm) the grout, heat the substrate and protect from freezing until sufficient compressive strength is reached to protect the grout from freeze-thaw damage

B. Hot Weather Grouting: Follow ACI 305R - Guide to Hot Weather Concreting recommendations. Use cold water, precondition (cool) the grout by removing shrink wrap & keeping out of the sun, cool the substrate

3.5 INSTALLATION

A. The use of a head box is recommended on larger applications

B. Bevel the edge of the grout at a 45º angle from the underside of base plates.

C. Place grout mixture into prepared areas from one side to the other, rapidly and continuously, to reduce air entrapment. Avoid placing grout from opposite sides.

D. Ensure that foundation and baseplate are within maximum/minimum placement temperatures. Shade foundation from summer sunlight under hot conditions. Warm foundation when foundation temperature is below 45°F (7°C).

E. Cut back or form exposed shoulders when grout reaches initial set.

3.6 CURING

A. Begin curing after finishing concrete but not before free water has disappeared from concrete surface.

B. Wet cure exposed shoulders for 24 hours followed by two coats of curing compound.
   1. Wet Curing: Keep surfaces continuously moist for not less than 24 hours with the following materials:
      a) Water.
      b) Absorptive cover, water saturated and kept continuously wet.
   2. Curing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating and repair damage during curing period.

C. Protect freshly placed grout from excessive cold or hot temperatures. Comply with applicable provisions of ACI 306R for cold-weather protection and with ACI 305R for hot-weather protection during curing.

3.7 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to observe installation, sample materials, perform tests, and submit test reports during grout placement according to requirements specified in this Article.

B. Tests: Fabricate and test non-shrink grout specimens in accordance with the following:
   1. ASTM C1107/C1107M Article 12.1 Consistency:
   2. ASTM C1107/C1107M Article 12.5 Compressive Strength:
      a) Test three cubes for compressive strength at each age - 1, 3, 7, and 28 days.
   3. Testing Frequency: At least one composite sample shall be obtained for each day's pour of each grout mix.
      a) Obtain additional samples as necessary if any property of one particular batch is noticeably different from others.

C. Reports: Report test results in accordance with ASTM C1107/C1107M Article 13 with the following exceptions:
   1. Articles 13.1.7, 13.1.8, and 13.1.9 - Height change need not be reported
   2. Articles 13.1.11 - Yield need not be reported

3.8 REPAIRS

A. Remove and replace grout that does not comply with requirements in this Section.

END OF SECTION 03 6213

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 04 2000 - UNIT MASONRY

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Concrete masonry units.

B. Sound-absorbing concrete masonry units.

C. Mortar and Grout.

D. Reinforcement and anchorage.

E. Flashings.

F. Accessories.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures

B. Section 03 2000 - Concrete Reinforcing: Reinforcing steel for grouted masonry.

C. Section 05 5000 - Metal Fabrications: Loose steel lintels and Fabricated steel items.

D. Section 07 2100 - Thermal Insulation: Insulation for cavity spaces.

E. Section 07 6200 - Sheet Metal Flashing and Trim: Through-wall masonry flashings.

F. Section 07 8400 - Firestopping: Firestopping at penetrations of fire-rated masonry and at top of fire-rated walls.

G. Section 07 9200 - Joint Sealants: Sealing control and expansion joints.

1.3 REFERENCE STANDARDS

A. ACI 315R - Guide to Presenting Reinforcing Steel Design Details; 2018.

B. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware; 2023.

C. ASTM A580/A580M - Standard Specification for Stainless Steel Wire; 2018.

D. ASTM A951/A951M - Standard Specification for Steel Wire for Masonry Joint Reinforcement; 2016, with Editorial Revision (2018).

E. ASTM C114 - Standard Test Methods for Chemical Analysis of Hydraulic Cement; 2015.

F. 16 CFR 1201 - Safety Standard for Architectural Glazing Materials; Current Edition.

G. ASTM C423 - Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method; 2023.

H. ASTM C90 - Standard Specification for Loadbearing Concrete Masonry Units; 2023.

I. ASTM C129 - Standard Specification for Nonloadbearing Concrete Masonry Units; 2017.

J. ASTM C144 - Standard Specification for Aggregate for Masonry Mortar; 2018.

K. ASTM C150/C150M - Standard Specification for Portland Cement; 2022.

L. ASTM C207 - Standard Specification for Hydrated Lime for Masonry Purposes; 2018.

M. ASTM C270 - Standard Specification for Mortar for Unit Masonry; 2019.

N. ASTM C476 - Standard Specification for Grout for Masonry; 2023.

O. ASTM C1072 - Standard Test Methods for Measurement of Masonry Flexural Bond Strength; 2019.

P. ASTM C1314 - Standard Test Method for Compressive Strength of Masonry Prisms; 2018.

Q. ASTM C1714/C1714M - Standard Specification for Preblended Dry Mortar Mix for Unit Masonry; 2016.

R. ASTM E514/E514M - Standard Test Method for Water Penetration and Leakage Through Masonry; 2014a.

S. BIA Technical Notes No. 7 - Water Penetration Resistance – Design and Detailing; 2017.

T. BIA Technical Notes No. 13 - Ceramic Glazed Brick Exterior Walls; 2017.

U. BIA Technical Notes No. 28B - Brick Veneer/Steel Stud Walls; 2005.

V. BIA Technical Notes No. 46 - Maintenance of Brick Masonry; 2017.

W. TMS 402/602 - Building Code Requirements and Specification for Masonry Structures; 2016.

X. UL (FRD) - Fire Resistance Directory; Current Edition.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene a preinstallation meeting at least one week before starting work of this section; require attendance by all relevant installers.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data for masonry units, fabricated wire reinforcement, mortar, and masonry accessories.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Shop Drawings: Submit for the following:
   1. Reinforcing Steel: Detail bending, lap lengths, and placement of unit masonry reinforcing bars. Comply with ACI 315R. Show elevations of reinforced walls.

E. Samples: Submit four samples of decorative block units to illustrate color, texture, and extremes of color range.

F. Delegated Design Submittals: For anchorage for wide wall cavities, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

G. Manufacturer's Certificate: Certify that masonry units meet or exceed specified requirements.

H. Manufacturer's Certificate: Certify that water repellent admixture manufacturer has certified masonry unit manufacturer as an approved user of water repellent admixture in the manufacture of concrete block.

I. Cold-Weather and Hot-Weather Procedures: Submit detailed description of methods, materials, and equipment to be used to comply with requirements.

1.6 QUALITY ASSURANCE

A. Comply with provisions of TMS 402/602, except where exceeded by requirements of Contract Documents.

B. Fire Rated Assemblies: Conform to applicable code for indicated requirements for fire rated masonry construction.

C. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section with minimum five years of documented experience.

D. Installer Qualifications: Company specializing in performing work of the type specified and with at least five years of documented experience.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver, handle, and store masonry units by means that will prevent mechanical damage and contamination by other materials.

1.8 FIELD CONDITIONS

A. Cold-Weather Requirements: Comply with cold-weather construction requirements contained in TMS 402/602.

B. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in TMS 402/602.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations for Masonry Units: Obtain exposed masonry units of a uniform texture and color, or a uniform blend within the ranges accepted for these characteristics, from a single source from a single manufacturer for each product required.

B. Source Limitations for Mortar Materials: Obtain mortar ingredients of a uniform quality, including color for exposed masonry, from a single manufacturer for each cementitious component and from a single source or producer for each aggregate.

2.2 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 4000, to design anchorage for wide wall cavities.
   1. Wide wall cavities are defined as those cavities where the nominal width of the wall cavity is greater than 4-1/2 inches.

2.3 CONCRETE MASONRY UNITS

A. Concrete Masonry Units (CMU): Comply with referenced standards and as follows:
   1. Size: Standard units with nominal face dimensions of 16 by 8 inches and nominal depths as indicated on drawings for specific locations.
   2. Special Shapes: Provide nonstandard blocks configured for corners.
      a) Provide bullnose units for outside corners, for all CMU at the building interior.
   3. Load-Bearing Units: ASTM C90, lightweight.
      a) Hollow block.
      b) Minimum Compressive Strength: As indicated on the drawings.
      c) Exposed Faces: Manufacturer's standard color and texture.
   4. Non-Loadbearing Units for Exterior Back-Up and Interior Partitions: ASTM C129.
      a) Hollow block, unless otherwise indicated on the drawings.
      b) Lightweight.
      c) Minimum Net Area Compressive Strength:3,000 psi
      d) Exposed Faces: Manufacturer's standard color and texture.
   5. Sound-Absorbing Units: ASTM C90 hollow block; with specially molded faces and apertures to provide sound absorption into the masonry unit cavity and allow placement of vertical reinforcement.
      a) Lightweight.
      b) Minimum Net Area Compressive Strength: 2000 psi.
      c) Acoustical Fillers: Noise attenuating, noncombustible fibrous filler.

d) Grout Shields: Manufacturer's standard.
e) Sound Absorption: ASTM ASTM C423.
   1) 12 inch Units: NRC .74 minimum.
f) Basis-of Design Product: Sound Seal; **SOUNDBLOX Acoustical Concrete Masonry Units, Type RSC/RF4.**

6. Units with Integral Water Repellent: Concrete block units as specified in this section with polymeric liquid admixture added to concrete masonry units at the time of manufacture.
   a) Performance of Units with Integral Water Repellent:
      1) Water Permeance: When tested per ASTM E514/E514M and for a minimum of 72 hours.
         (a) No water visible on back of wall above flashing at the end of 24 hours.
         (b) No flow of water from flashing equal to or greater than 0.032 gallons per hour at the end of 24 hours.
         (c) No more than 25 percent of wall area above flashing visibly damp at end of test.
      2) Flexural Bond Strength: ASTM C1072; minimum 10 percent increase.
      3) Compressive Strength: ASTM C1314; maximum 5 percent decrease.
   b) Use only in combination with mortar that also has integral water repellent admixture.
   c) Use water repellent admixtures for masonry units and mortar by a single manufacturer.

2.4 MORTAR AND GROUT MATERIALS

A. Portland Cement: ASTM C150/C150M, Type I; color as required to produce approved color sample.
   1. Alkali content shall not be more than 0.1 percent when tested according to ASTM C114.

B. Hydrated Lime: ASTM C207, Type S.

C. Mortar Aggregate: ASTM C144.

D. Grout Aggregate: ASTM C404.

E. Pigments for Colored Mortar: Pure, concentrated mineral pigments specifically intended for mixing into mortar and complying with ASTM C979/C979M.
   1. Color(s): As selected by Architect from manufacturer's full range.

F. Water: Clean and potable.

G. Packaged Dry Material for Mortar for Unit Masonry: Premixed Portland cement, hydrated lime, and sand; complying with ASTM C1714/C1714M and capable of producing mortar of the specified strength in accordance with ASTM C270 with the addition of water only.
   1. Application: Interior unit masonry partitions.
      a) Type: Type N.
      b) Color: Standard gray.
   2. Application: Exterior back-up walls.
      a) Type: Type S.
      b) Color: Standard gray.
   3. Application: Elevator shaft.
      a) Type: Type S.

b) Color: Standard gray.

H. Packaged Dry Material for Grout for Masonry: Premixed cementitious materials and dried aggregates; capable of producing grout of the specified strength in accordance with ASTM C476 with the addition of water only.
1. Type: Fine.

2.5 REINFORCEMENT AND ANCHORAGE

A. Manufacturers:
1. Basis-of-Design: Hohmann & Barnard, Inc: www.h-b.com/sle.

B. Reinforcing Steel: Type specified in Section 03 2000; size as indicated on drawings; uncoated finish.

C. Anchorage for Wide Wall Cavities: Provide engineered masonry anchors where wall cavity exceeds 4-1/2 inches in depth (inclusive of cavity insulation thickness).

D. Single Wythe Joint Reinforcement: ASTM A951/A951M.
1. Type: Ladder.
2. Material: stainless steel complying with ASTM A580/A580M Type 304.
3. Size: 0.1875 inch side rods with 0.1483 inch cross rods; width as required to provide not less than 5/8 inch of mortar coverage on each exposure.

E. Adjustable Anchor System for Random Ashlar (Rubble Stone): ASTM A951/A951M. Anchors that permit differential movement between masonry veneer and structural backup.
1. Clip-style sytem with wire ties, vertical J-hooks, and backplates.
2. Material: stainless steel complying with ASTM A580/A580M Type 304.
3. Wire Tie: TYpe 304 stainless steel, 3/16 inch diameter.
4. J-Hooks: Type 304 stainless steel.
5. Backplate: 12 gauge, type 304 stainless steel, custom depth to accommodate insulation depth(s) indicated on drawings.
6. Basis-of-Design Product: Hohmann & Barnard; **Tie-HVR-195B Anchor System**.

F. Partition Top Anchors: Formed sheet metal, 4 inch wide by 8 inch long with 2 inch long legs, 12 gauge thick with two anchor holes.

G. Reinforcement for Stack Bond Masonry: Provide W1.7 horizontal reinforcing wire in every other course for 8 inch wide masonry, unless otherwise required by TMS 402/602.

H. Metal-to-Metal Fasteners: Self-drilling, self-tapping screws; corrosion resistant finish or hot dip galvanized to ASTM A153/A153M.

2.6 FLASHINGS

A. Metal Flashing Materials: Stainless Steel, as specified in Section 07 6200.

B. Factory-Fabricated Flashing Corners and End Dams: Stainless steel.

C. Flashing Sealant/Adhesives: Silicone, polyurethane, or silyl-terminated polyether/polyurethane or other type required or recommended by flashing manufacturer; type capable of adhering to type of flashing used.
   1. Manufacturers, Synthetic Rubber Products:
      a) Tremco Commercial Sealants & Waterproofing; Butyl Sealant: www.tremcosealants.com.
      b) Pecora Corporation; BC-158 One-Part Butyl Rubber Sealant: www.pecora.com.
      c) Substitutions: See Section 01 6000 - Product Requirements.

D. Termination Bars: Stainless steel; compatible with membrane and adhesives.

E. Drip Edge: Stainless steel; angled drip with hemmed edge; compatible with membrane and adhesives.

F. Water Cut-off Mastic: One-component, self-wetting butyl based mastic.

2.7 ACCESSORIES

A. Preformed Control Joints: Neoprene material. Provide with corner and tee accessories, fused joints.

B. Joint Filler: Closed cell neoprene; compressible up to 50 percent to joint width; self expanding; in maximum lengths available.
   1. Manufacturers:
      a) Hohmann & Barnard, Inc; NS - Closed Cell Neoprene Sponge: www.h-b.com/#sle.
      b) W.R. Meadows; X-Foam.
   2. Color: Black.
   3. Thicknesses as required for joints indicated on drawings.

C. Cavity Mortar Control: Semi-rigid polyethylene or polyester mesh panels, sized to thickness of wall cavity, and designed to prevent mortar droppings from clogging weeps and cavity vents and allow proper cavity drainage.
   1. Full-Height Airspace Maintenance and Drainage Material: Mesh panels fitted between masonry ties.
      a) Drainage Material Thickness: 1/2 inch.
      b) Manufacturers:
         1) Basis-of-Design: **CavClear, a Division of Archovations Inc; CavClear Masonry Mat:** www.cavclear.com/#sle.
         2) Acceptable Alternate Products: Subjet to compliance with the requirements.
            (a) Advanced Building Products, Inc; Mortairvent-CW: www.advancedbuildingproducts.com/#sle.
         3) Substitutions: See Section 01 6000 - Product Requirements.

D. Weeps:
   1. Type: Molded PVC grilles, insect resistant.
   2. Manufacturers:
      a) Blok-Lok Limited: www.blok-lok.com.
      b) Hohmann & Barnard, Inc; _____: www.h-b.com/#sle.
      c) WIRE-BOND; _____: www.wirebond.com/#sle.

E. Cavity Vents:
   1. Type: Molded PVC grilles, insect resistant.
   2. Manufacturers:
      a) Blok-Lok Limited: www.blok-lok.com.
      b) Hohmann & Barnard, Inc: www.h-b.com/sle.
      c) WIRE-BOND: www.wirebond.com.

F. Cleaning Solution: Non-acidic, not harmful to masonry work or adjacent materials.

2.8 MORTAR AND GROUT MIXING

A. General: Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures unless otherwise indicated.
   1. Do not use calcium chloride in mortar or grout.

B. Mortar for Unit Masonry: ASTM C270, using the Proportion Specification.
   1. Masonry below grade and in contact with earth: Type M.
   2. Exterior, loadbearing masonry: Type S.
   3. Exterior, non-loadbearing masonry: Type S.
   4. Interior, loadbearing masonry: Type N.
   5. Interior, non-loadbearing masonry: Type N.

C. Colored Mortar: Proportion selected pigments and other ingredients to match Architect's sample, without exceeding manufacturer's recommended pigment-to-cement ratio.

D. Grout: ASTM C476; consistency required to fill completely volumes indicated for grouting; fine grout for spaces with smallest horizontal dimension of 2 inches or less; coarse grout for spaces with smallest horizontal dimension greater than 2 inches.
   1. Use grout of type indicated or, if not otherwise indicated, of type (fine or coarse) that will comply with TMS 402/602TMS 602/ACI 530.1/ASCE 6 for dimensions of grout spaces and pour height.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field conditions are acceptable and are ready to receive masonry.

B. Verify that related items provided under other sections are properly sized and located.

C. Verify that built-in items are in proper location, and ready for roughing into masonry work.

3.2 PREPARATION

A. Direct and coordinate placement of metal anchors supplied for installation under other sections.

B. Provide temporary bracing during installation of masonry work. Maintain in place until building structure provides permanent bracing.

3.3 COLD AND HOT WEATHER REQUIREMENTS

A. Comply with requirements of TMS 402/602 or applicable building code, whichever is more stringent.

3.4 COURSING

A. Establish lines, levels, and coursing indicated. Protect from displacement.

B. Maintain masonry courses to uniform dimension. Form vertical and horizontal joints of uniform thickness.

C. Concrete Masonry Units:
   1. Bond: Running.
   2. Coursing: One unit and one mortar joint to equal 8 inches.
   3. Mortar Joints: Concave.

D. Acoustical Concrete Masonry Units:
   1. Bond: Stacked, with open ends of acoustical cavity facing downward.
   2. Orientation of Slotted Units: Slotted face to face area where sound absorption and diffusion is desired.

3.5 PLACING AND BONDING

A. Lay hollow masonry units with face shell bedding on head and bed joints.

B. Buttering corners of joints or excessive furrowing of mortar joints is not permitted.

C. Remove excess mortar and mortar smears as work progresses.

D. Interlock intersections and external corners, except for units laid in stack bond.

E. Do not shift or tap masonry units after mortar has achieved initial set. Where adjustment must be made, remove mortar and replace.

F. Perform job site cutting of masonry units with proper tools to provide straight, clean, unchipped edges. Prevent broken masonry unit corners or edges.

G. Cut mortar joints flush where wall tile is scheduled or resilient base is scheduled.

H. Isolate masonry partitions from vertical structural framing members with a control joint.

I. Isolate top joint of masonry partitions from horizontal structural framing members and slabs or decks with compressible joint filler.

3.6 WEEPS/CAVITY VENTS

A. Install weeps in veneer and cavity walls at 24 inches on center horizontally on top of through-wall flashing above shelf angles and lintels and at bottom of walls.

B. Install cavity vents in veneer and cavity walls at 32 inches on center horizontally below shelf angles and lintels and near top of walls.

3.7 CAVITY MORTAR CONTROL

A. Do not permit mortar to drop or accumulate into cavity air space or to plug weep/cavity vents.

3.8 REINFORCEMENT AND ANCHORAGE - GENERAL, SINGLE WYTHE MASONRY, AND CAVITY WALL MASONRY

A. Unless otherwise indicated on drawings or specified under specific wall type, install horizontal joint reinforcement 16 inches on center.

B. Place masonry joint reinforcement in first and second horizontal joints above and below openings. Extend minimum 16 inches each side of opening.

C. Place continuous joint reinforcement in first and second joint below top of walls.

D. Embed longitudinal wires of joint reinforcement in mortar joint with at least 5/8 inch mortar cover on each side.

E. Lap joint reinforcement ends minimum 6 inches.

F. Reinforce stack bonded unit joint corners and intersections with strap anchors 16 inches on center.

G. Embed ties and anchors in mortar joint and extend into masonry unit a minimum of 1-1/2 inches with at least 5/8 inch mortar cover to the outside face of the anchor.

3.9 REINFORCEMENT AND ANCHORAGE - MASONRY VENEER

A. Masonry Back-Up: Embed anchors to bond veneer at maximum 16 inches on center vertically and 36 inches on center horizontally. Place additional anchors at perimeter of openings and ends of panels, so maximum spacing of anchors is 8 inches on center.

B. Stud Back-Up: Secure veneer anchors to stud framed back-up and embed into masonry veneer at maximum 16 inches on center vertically and 24 inches on center horizontally. Place additional anchors at perimeter of openings and ends of panels, so maximum spacing of anchors is 8 inches on center.

3.10 REINFORCEMENT AND ANCHORAGES - MULTIPLE WYTHE UNIT MASONRY

A. Support and secure reinforcing bars from displacement. Maintain position within 1/2 inch of dimensioned position.

3.11 MASONRY FLASHINGS

A. Whether or not specifically indicated, install masonry flashing to divert water to exterior at all locations where downward flow of water will be interrupted.
   1. Remove or cover protrusions or sharp edges that could puncture flashings.
   2. Seal lapped ends and penetrations of flashing before covering with mortar.

B. Terminate flashing up 8 inches minimum on vertical surface of backing:

C. Install flashing in accordance with manufacturer's instructions and BIA Technical Notes No. 7.

D. Extend metal flashings through exterior face of masonry and terminate in a flat drip with hemmed edge. Install joint sealer below drip edge to prevent moisture migration under flashing.

E. Lap end joints of flashings at least 6 inches, minimum, and seal watertight with flashing sealant/adhesive.

3.12 LINTELS

A. Install loose steel lintels over openings.

B. Maintain minimum ____ inch bearing on each side of opening.

3.13 GROUTED COMPONENTS

A. Lap splices minimum 24 bar diameters.

B. Support and secure reinforcing bars from displacement. Maintain position within 1/2 inch of dimensioned position.

C. Place and consolidate grout fill without displacing reinforcing.

D. At bearing locations, fill masonry cores with grout for a minimum 12 inches either side of opening.

3.14 CONTROL AND EXPANSION JOINTS

A. Do not continue horizontal joint reinforcement through control or expansion joints.

B. Install preformed control joint device in continuous lengths. Seal butt and corner joints in accordance with manufacturer's instructions.

C. Size control joints as indicated on drawings; if not indicated, 3/4 inch wide and deep.

3.15 BUILT-IN WORK

A. As work progresses, install built-in metal door frames and glazed frames and other items to be built into the work and furnished under other sections.

B. Install built-in items plumb, level, and true to line.

C. Bed anchors of metal door and glazed frames in adjacent mortar joints. Fill frame voids solid with grout.
   1. Fill adjacent masonry cores with grout minimum 12 inches from framed openings.

D. Do not build into masonry construction organic materials that are subject to deterioration.

3.16 TOLERANCES

A. Maximum Variation from Alignment of Columns: 1/4 inch.

B. Maximum Variation From Unit to Adjacent Unit: 1/16 inch.

C. Maximum Variation from Plane of Wall: 1/4 inch in 10 ft and 1/2 inch in 20 ft or more.

D. Maximum Variation from Plumb: 1/4 inch per story non-cumulative; 1/2 inch in two stories or more.

E. Maximum Variation from Level Coursing: 1/8 inch in 3 ft and 1/4 inch in 10 ft; 1/2 inch in 30 ft.

F. Maximum Variation of Mortar Joint Thickness: Head joint, minus 1/4 inch, plus 3/8 inch.

G. Maximum Variation from Cross Sectional Thickness of Walls: 1/4 inch.

3.17 CUTTING AND FITTING

A. Cut and fit for chases, pipes, conduit, and sleeves. Coordinate with other sections of work to provide correct size, shape, and location.

B. Obtain approval prior to cutting or fitting masonry work not indicated or where appearance or strength of masonry work may be impaired.

3.18 FIELD QUALITY CONTROL

A. Inspections: Perform special inspections according to Level B in TMS 402/602.

B. An independent testing agency will perform field quality control tests, as specified in Section 01 4000 - Quality Requirements.

3.19 CLEANING

A. Remove excess mortar and mortar droppings.

B. Replace defective mortar. Match adjacent work.

C. Clean soiled surfaces with cleaning solution.

D. Use non-metallic tools in cleaning operations.

3.20 PROTECTION

A. Without damaging completed work, provide protective boards at exposed external corners that are subject to damage by construction activities.

END OF SECTION 04 2000

SECTION 04 7323 - MANUFACTURED BUILDING STONE MASONRY

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Manufactured stone masonry.
   1. Calcium silicate building stone units.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 04 2000 - Unit Masonry: Through-wall masonry flashings, masonry anchors and other masonry accessories.

1.3 REFERENCE STANDARDS

A. TMS 402/602 - Building Code Requirements and Specification for Masonry Structures; 2016.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene one week before starting work of this section.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data for manufactured building stone units.
   1. Preparation instructions and recommendations.
   2. Storage and handling requirements and recommendations.
   3. Color charts.
   4. Installation methods.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Shop Drawings: Submit detail drawings depicting proper installation and flashing techniques. Coordinate locations with those found on drawings.

E. Verification Samples: Submit two sample boards of manufactured building stone units to illustrate color, texture, and extremes of color range. Minimum size 24 inches by 12 inches.

F. Manufacturer's Certificate: Certify that manufactured building stone units meet or exceed specified requirements.

G. Test Reports: Test results prepared by an independent testing agency, indicating tested material characteristics as part of a source quality control program, current within the past five (5) years.

H. Installer's Qualification Statement.

I. Specimen Warranty.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the types of products specified in this section, with minimum ten years of documented experience.

B. Installer Qualifications: Company specializing in performing work of type specified, with at least five years of documented experience.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Prevent mechanical damage and contamination by other materials.

C. Store units in a manner designed to prevent damage and staining of units.
   1. Stack units on timbers or platforms at least 3 inches above grade.
   2. Place polyethylene or other plastic film between wood and other finished surfaces of units when stored for extended periods of time.

D. Protect products from precipitation combined with freezing temperatures. Do not install products with visible frozen moisture.

E. Do not use salt or calcium-chloride to remove ice from masonry surfaces.

1.8 FIELD CONDITIONS

A. Cold and Hot Weather Requirements: Comply with requirements of TMS 402/602 or applicable building code, whichever is more stringent.

1.9 WARRANTY

A. See Section 01 7800 - Closeout Submittals for additional warranty requirements.

B. Correct defective work within a one year period after Date of Substantial Completion.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Manufacturer:

1. Basis of Design: **Arriscraft; Citadel Building Stone**: www.arriscraft.com.
2. Substitutions: See Section 01 6000 - Product Requirements.
   a) For any product not identified as "Basis of Design", submit information as specified for substitutions.

2.2 MANUFACTURED BUILDING STONE MASONRY MATERIALS

A. Calcium Silicate Building Stone Units: to ASTM C73, Grade SW; solid units that have been pressure formed and autoclaved; special shapes as indicated; four-size configuration as follows:
   1. Modular Sizes:
      a) CIT23: 2-3/8" high, 3-5/8" bed, various lengths up to 23-5/8".
      b) CIT36: 3-13/16" high, 3-5/8" bed, various lengths up to 23-5/8".
      c) CIT52: 5-1/4" high, 3-1/2" bed, various lengths up to 23-5/8".
      d) CIT81: 8-1/8" high, 3-1/2" bed, various lengths up to 23-5/8".
   2. Texture: Tumbled finish on exposed faces and ends.
   3. Color: "**French Country**" as manufactured by Arriscraft for Citadel Building Stone.

B. Mortar: 1:1:6 Portland cement-hydrated lime-sand mix, as specified in Section 04 2000.

C. Grout: maximum 6,500 psi at 28 days, as specified in Section 04 2000.

D. Wall Ties and Anchorages: as specified in Section 04 2000.

E. Joint Sealants and Backer Rods: non-staining type, as specified in Section 07 92 00.

F. Flashing, Vents, and Masonry Accessories: as specified in Section 04 2000.

2.3 FABRICATION TOLERANCE

A. Fabricate calcium silicate building stone units to a pressed tolerance of plus or minus 1/8 inch.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify site conditions are ready to receive work.

B. Inspect materials for fit and finish prior to installation. Do not set unacceptable units.

C. Beginning of installation means acceptance of existing conditions.

3.2 PREPARATION

A. Cutting Masonry Units:
   1. Cut masonry units to length with a masonry splitter.
   2. Dress split end to match face when exposed in wall.

B. Wetting Masonry Units:
   1. Where the ambient air temperature exceeds 100°F or exceeds 90°F with a wind velocity greater than 8 mph, pre-wet building stone units.

2. Lay wetted units when surface dry.

3.3 INSTALLATION

A. Place masonry to lines and levels indicated.

B. Maintain masonry courses to uniform width. Make vertical and horizontal joints equal and of uniform thickness.

C. Lay building stone units in random bond pattern, to the following percentage ratio, described from smallest to largest sized units: 20:20:40:20.
   1. Lay masonry in full bed of mortar, properly jointed with other work. Buttering corners of joints, [and] deep or excessive furrowing of mortar joints [and] [__] are not permitted.
   2. Fully bond intersections, and external corners.
   3. Do not adjust masonry units after laying. Where resetting of masonry is required, remove, clean units and reset in new mortar.

D. Construct movement joints as indicated on drawings.

E. Maintain mortar joint thickness of 1/2 inch.

F. Tool mortar joints by compacting the surface when thumbprint hard, to a concave finish.

3.4 CUTTING AND FITTING

A. Cut and fit for wall-penetrating pipes and conduit. Coordinate with other sections of work to provide correct size, shape, and location.

3.5 FIELD QUALITY CONTROL

A. Architect's Inspection: Architect, together with Owner's representative, will inspect installed masonry and reject masonry that is chipped, cracked, or blemished (streaked, stained or otherwise damaged), as described below.
   1. Masonry will be inspected to be free of cracks or other blemishes on the finished face or front edges of the masonry units exceeding 3/8 inch or that can be seen from a distance of 20 feet.
   2. Units shall exhibit a texture approximately equal to the approved sample when viewed under diffused daylight illumination at a 20 foot distance.
   3. Minor chipping resulting from shipment and delivery shall not be grounds for rejection. Minor chips shall not be obvious under diffused daylight illumination from a 20 foot distance.
   4. Efflorescence will not be cause for rejection

3.6 CLEANING

A. Remove excess mortar and mortar smears as work progresses.

B. Replace defective mortar. Match adjacent work.

3.7 PROTECTION

A. Protect units from damage resulting from subsequent construction operations.

B. Use protection materials and methods which will not stain or damage units.

C. Remove protection materials at Date of Substantial Completion, or when risk of damage is no longer present.

END OF SECTION 04 7323

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 0805 - FACTORY-APPLIED COATINGS FOR METAL

GENERAL

1.1 SECTION INCLUDES

A. General requirements for hot-dip galvanizing steel fabrications.

B. Requirements for preparing hot-dip galvanized surfaces for painting.

C. Hot-dip galvanizing and factory-applied prime-coat for the following metal fabrications including, but not limited to the items below. All items noted below are to receive a field-applied topcoating.
   1. Loose steel lintels.
   2. Steel framing for rooftop equipment screen.

D. Hot-dip galvanizing, factory-applied prime coat, factory-applied high performance color topcoat, and factory-applied clearcoat:
   1. Exposed steel columns at Main Entrance (no applied fireproofing required).
      a) Framing connection components, including but not limited to: bolts, angles, and washers, for these exposed steel columns.

1.2 RELATED SECTIONS

A. Section 05 1200 - Structural Steel: Design and surface preparation of structural steel indicated to receive hot-dip galvanizing and factory-applied primer coating

B. Section 05 500 - Metal fabrications: Non-structural metal fabrications indicated to receive hot-dip galvanizing and factory-applied primer coating.

C. Section 09 9113 - Exterior Painting: Field-applied topcoats.

1.3 NE-CHPS GENERAL REQUIREMENTS

A. The work of this section is required to comply with general requirements and procedures for compliance with certain prerequisites and credits needed for the Project to obtain CHPS Verified certification based on Northeast Collaborative for High Performance Schools Criteria Version 4.0 (NE-CHPS) as as outlined in Section 01 8113.63 - Sustainable Design Requirements.
   1. The Construction Manager is required to coordinate with the work of other sections and to comply with all NE-CHPS requirements in accordance with the Contract Documents such that the work carried out by this section does not compromise the achievement of any other NE-CHPS prerequisites and credits applicable to the entire project.

B. Related Sections for Sustainable Design Requirements:
   1. Section 01 3000 - Administrative Requirements: General submittal requirements, including NE-CHPS submittals.
   2. Section 01 7419 - Construction Waste Management and Disposal: Waste management, recycling and disposal requirements.

3. Section 01 8113.63 -Sustainable Design Requirements - NE-CHPS: General procedures for compliance with NE-CHPS requirements and credits; credit checklist.

1.4 REFERENCE STANDARDS

A. ASTM A 123 - Standard Specification for Zinc (Hot Dip Galvanized) Coatings on Iron and Steel Products.

B. ASTM A 143 - Safeguarding Against Embrittlement.

C. ASTM A 153 - Standard Specification for Zinc (Hot Dip Galvanizing) on Iron and Steel Hardware.

D. ASTM A 384 - Safeguarding Against Warpage.

E. ASTM A 385 - Providing High Quality Zinc Coatings.

F. ASTM A 780 - Repair of Hot Dip Galvanizing.
   1. Refer to Section 01 8113.13 “Sustainable Design Requirements - LEED for New Construction” for LEED requirements affecting work in this section.

G. ASTM D6386 - Practice for Preparation of Zinc (Hot-Dip Galvanized) Coated Iron and Steel Product and Hardware Surfaces for Painting.

1.5 SUBMITTALS

A. Product Data:
   1. Galvanizer’s product literature for coatings specified in this Section indicating type of product and performance requirements.
   2. Galvanizer's coatings data sheets for coatings specified in this Section including physical performance data.
   3. Product data for shop-applied primer, for coordination with field-applied top coat.

B. Verification Samples: Submit five (5) 3-inch by 6-inch samples of factory-applied coating and colors proposed for use for approval prior to coating applications.
   1. Verification samples shall be prepared on substrate of actual material to receive specified factory-applied coating systems. Fabricator shall furnish galvanizer with samples of actual materials (substrates). Galvanizer shall hot-dip and finish sample in selected color.
   2. Architect will approve sample for surface color and gloss prior to full fabrication and production

C. Manufacturer's Certification: Coating applicator's notarized Certificate of Compliance that hot dip galvanized coating meets or exceeds the requirements of ASTM A123/A123M, ASTM A153/153M, or A767, as applicable.

D. Certificate of Compliance for Shop Drawing Review by Galvanizer: Submit galvanizer’s certificate that shop drawings for metal fabrications to receive metal coatings have been reviewed; and fabrications are acceptable to the galvanizer for proper application of galvanizing and factory-applied metal coatings. Drawings shall be stamped by the galvanizer to indicate approval of the design for galvanizing.

E. Certificate of Compliance for Items Coated by Galvanizer: Submit notarized Certificate of Compliance with application for payment for galvanizing, signed by galvanizer, indicating compliance with requirements of specifications. Include scope of services provided, and quantity and itemized description of items processed.
   1. Include galvanizer's certification that shop-applied primer is completely compatible with field-applied topcoats specified in Division 09 Section "Exterior Painting."

F. Paint Applicator shall provide a certificate of compliance that all coatings have been performed in accordance with SSPC QP3/AISC 420 - Qualification of Paint Shops, standards and procedures.

1.6 QUALITY ASSURANCE

A. Galvanizer Qualifications: Engage the services of a galvanizer who has demonstrated a minimum of five (5) years experience in the successful performance of the processes outlined in this specification.

B. Coating Applicator: Company specializing in coating hot-dip galvanized steel after fabrication and in following the procedures in the Quality Assurance Manual of the American Galvanizers Association and ASTM D6386.

C. Pre-installation Conference: Before starting factory-applied metal coating process, conduct conference at Project site. Comply with requirements for pre-installation conferences in Section 01 3000 - Administrative Requirements. Review methods and procedures related to factory-applied metal coatings for exterior metal fabrications indicated including, but not limited to, the following:
   1. Project schedule.
   2. Scope of services.
   3. Coordination between fabricator and galvanizer.
   4. Finish of metal surfaces.
   5. Application of coatings,
   6. Submittals and approvals process and schedule.

D. Coordination Between Fabricator and Galvanizer: Prior to fabrication, fabricator shall submit approved shop drawings to the galvanizer for all fabrications. Galvanizer shall review fabricator's shop drawings for suitability of materials for galvanizing and coatings and coordinate any required modifications to fabrications which shall be completed by the fabricator.

E. Steel Materials: For steel to be hot dip-galvanized, provide steel chemically suitable for metal coatings complying with the following requirements: Carbon below 0.25 percent, silicon below 0.04 percent, phosphorous below 0.05 percent, and manganese below 1.3 percent. Notify galvanizer if steel does not comply with these requirements to determine suitability for processing.
   1. Assemblies: Where size of assembly is too large for galvanizing kettle, galvanize components prior to fabrication and assemble after galvanizing.

1.7 WARRANTY

A. Warranty: Provide galvanizer's standard warranty that materials will be free from 10 percent or more visible rust for 20 years.

PART 2 - PRODUCTS

2.1 STEEL MATERIALS FOR GALVANIZING

A. Material for galvanizing to be geometrically suitable for galvanizing as described in ASTM A384 and A385. Steel materials suitable for galvanizing include structural shapes, pipe, sheet, fabrications, and assemblies

B. Material to be chemically suitable for galvanizing.

2.2 HOT-DIP GALVANIZING REQUIREMENTS

A. Hot-dip galvanizing practices shall be in accordance with the applicable portions of ASTM A123/A123M or A153/A153M.

B. Galvanizing Post-Treatments: For galvanized steel items to receive paint coating, water quenching or chromate conversion coating shall be avoided by the galvanizer as these processes interfere with paint adhesion and surface preparation.

C. Galvanizing finish shall be in accordance with ASTM A123 Section 6.2. After galvanizing, the presence of roughness, small dross inclusions, and zinc runs which negatively affect adhesion of the paint/powder coating shall be smoothed.
   1. Responsibility for surface smoothing after galvanizing shall be the responsibility of the galvanizer, performed prior to sending steel items to the liquid coating applicator. Scope includes items noted above and the following:
      a) Grinding off all zinc drips and runs.
      b) Grinding off excess zinc at welds.
      c) Visual criterion for smoothing: Not visible at a distance of 6 feet.
   2. Refer to Article 3.2 below for standards for surface preparation of galvanized steel to receive paint coatings.
   3. Surface smoothing, cleaning, and other required processing of galvanized steel to receive painting shall be in accordance with ASTM D6386 as noted in Part 3.

2.3 FACTORY-APPLIED PRIMER OVER HOT-DIP GALVANIZING

A. Provide factory-applied polyamide epoxy primer, 2.0 mils dry film thickness minimum, and as follows:
   1. Thickness: Minimum 2 mils dry film thickness (DFT).
   2. Performance Criteria: Coating shall meet or exceed the following performance criteria:
      a) Adhesion: 5000 psi when tested in accordance with ASTM D 4541.
      b) Corrosion Weathering: ASTM D 5894.
      c) Direct Impact Resistance: 140 in. lbs. when tested in accordance with ASTM D 2794.
      d) Dry Heat Resistance: 200 degrees F minimum.
      e) Wet Heat Resistance: 150 degrees F minimum.

f) Pencil Hardness: Tested in accordance with ASTM D 3363.
g) Moisture Condensation Resistance: Coating shall pass with no cracking or delamination when tested in accordance with ASTM D 4585, 100 degrees F., 1250 hours.

3. Color: Gray.

2.4 FACTORY-APPLIED TOP COAT OVER HOT-DIP GALVANIZING AND PRIMER

A. Provide factory-applied high-performance urethane color coating over primed galvanized steel as previously referenced, and as follows:
   1. Apply coating in a controlled environment meeting applicable environmental regulations.

B. Color: As selected by Architect from top coat manufacturer's standard range.

PART 3 - EXECUTION

3.1 SURFACE PREPARATION FOR GALVANIZING

A. Pre-clean steel work in accordance with accepted methods to produce an acceptable surface for quality hot-dip galvanizing.

3.2 SHOP REPAIR OF STEEL SURFACES AFTER GALVANZING

A. Grind and smooth zinc drips, runs, and areas of roughness that can impair adhesion of primer, powder, and / or paint coatings. Refer to Paragraph 2-C for full requirements.
   1. Applications:
      a) Steel indicated to be shop- or factory-primed and field-painted.
      b) Steel indicated to be shop- or factory-painted or shop- or factory-coated.
      c) Steel indicated as AESS.

3.3 REPAIR OF DAMAGED GALVANIZING

A. The maximum area to be repaired is defined in accordance with ASTM A123/A123M Section 6.2.

B. Repair areas damaged by welding, flame cutting or during handling, transport or erection, by one of the approved methods in accordance with ASTM A780/A780M. Minimum thickness requirements for the repair are those described in ASTM A123/A123M Section 6.2 current edition.

C. Zinc rich paint used for repair of hot-dip galvanized coatings shall be compatible with the paint system specified and applied in accordance with the manufacturer’s instructions.

D. Zinc rich paint used for repair of hot-dip galvanized coatings shall be top coated within the recommended overcoat time windows according to the manufacturers directions.

3.4 PREPARATION OF GALVANIZED STEEL FOR PRIMING/PAINTING

A. Comply with ASTM D6386 procedures for cleaning and surface preparation of galvanized steel for painting, as required for the applicable category:

1. Newly galvanized steel:
   a) Nominally, steel that has been galvanized within the past 48 hours prior to paint application. See 2-b below.
   b) Steel that has not received any surface treatment after galvanizing, such as water quenching or chromate conversion.
   c) Steel with no visible signs of zinc oxide or zinc hydroxide.
2. Partially weathered galvanized steel:
   a) Steel that has been galvanizd more than 48 hours and less than 1 year prior to paint application.
   b) Exposure of newly galvanized to humidity or moisture may reduce the 48-hour time period that galvanized steel remains free of zinc compounds that impact surface adhesion of coatings. It is coating applicator's responsibility to determine appropriate preparation in accordance with ASTM D6386.
3. Paint Shop Notification: Galvanizer to advise party responsible for painting galvanized items as to how the items were processed and which surface treatment(s), if any, were used.

3.5 APPLICATION OF GALVANIZING AND METAL COATINGS

A. Galvanize materials in accordance with referenced standards and this specification.
   1. Galvanizing shall provide an acceptable substrate for applied coatings.

B. Apply primer over hot-dip galvanizing in accordance with specified requirements and recommendations of galvanizer.

C. The primer and topcoat materials shall be certified VOC compliant, <2.9 lbs/gal., and conform to the following:
   1. Primer: High-solid polyamide epoxy applied to a DFT of 3 mils minimum.
   2. Topcoat: : Color pigmented, two-component high build aliphatic polyurethane applied to a DFT of 3 mils (0.08 mm) minimum.

3.6 INSTALLATION

A. Installation: Comply with fabricator’s, galvanizer’s, and coating applicator's requirements for installation of materials and fabrications, including use of nylon slings or padded cables for handling factory-primed or factory-finished materials.

B. Touch-Up and Repair: For damaged and field-welded metal coated surfaces, clean welds, bolted connections and abraded areas.
   1. On galvanized surfaces, apply organic zinc repair paint complying with requirements of ASTM A 780, modified to 95 percent zinc in dry film.
      a) Thickness of applied galvanizing repair paint shall be not less than coating thickness required by ASTM A 123 or A 153 as applicable.
      b) Touch-up of galvanized surfaces with silver paint, brite paint, or aluminum paints is not acceptable.
   2. On factory-primed surfaces, field-touch-up shall be performed in accordance with factory-applied metal coating manufacturer’s requirements and in the presence of a technical representative of the factory-applied metal coating manufacturer. If non-factory technicians are used for field touch-up, no warranties shall exist. Provide touch-up such that repair is not visible from a distance of 6 feet.

3. Provide touch up repair kit and touchup instructions with each order for each type of factory-applied finish coating.

END OF SECTION 05 0805 05 0805

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 1200 - STRUCTURAL STEEL FRAMING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Structural steel framing members.

1.2 RELATED REQUIREMENTS

A. Section 03 6213 - Non-Metallic Non-Shrink Grouting: For grout beneath base and bearing plates.

B. Section 05 2100 - Steel Joist Framing.

C. Section 05 3100 - Steel Decking: Support framing for small openings in deck.

D. Section 07 8100 - Applied Fire Protection: Fireproof protection to framing and metal deck systems.

1.3 REFERENCE STANDARDS

A. AISC (MAN) - Steel Construction Manual; 2023.

B. AISC 303 - Code of Standard Practice for Steel Buildings and Bridges; 2010.

C. AISC 360 - Specification for Structural Steel Buildings; 2022.

D. AISC S303 - Code of Standard Practice for Steel Buildings and Bridges; 2016.

E. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products; 2017.

F. ASTM A780/A780M - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings; 2020.

G. ASTM C518 - Standard Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus; 2021.

H. ASTM D638 - Standard Test Method for Tensile Properties of Plastics; 2022.

I. ASTM D695 - Standard Test Method for Compressive Properties of Rigid Plastics; 2023.

J. ASTM C177 - Standard Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus; 2019, with Editorial Revision (2023).

K. ASTM D1187/D1187M - Standard Specification for Asphalt-Base Emulsions for Use as Protective Coatings for Metal; 1997 (Reapproved 2018).

L. ASTM D638 - Standard Test Method for Tensile Properties of Plastics; 2022.

M. ASTM D790 - Standard Test Methods for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials; 2017.

N. ASTM D695 - Standard Test Method for Compressive Properties of Rigid Plastics; 2023.

O. ASTM D2863 - Standard Test Method for Measuring the Minimum Oxygen Concentration to Support Candle-Like Combustion of Plastics (Oxygen Index); 2023.

P. ASTM D696 - Standard Test Method for Coefficient of Linear Thermal Expansion of Plastics Between -30°C and 30°C with a Vitreous Silica Dilatometer; 2016.

Q. ASTM D732 - Standard Test Method for Shear Strength of Plastics by Punch Tool; 2017.

R. AWS A2.4 - Standard Symbols for Welding, Brazing, and Nondestructive Examination; 2020.

S. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2020, with Errata (2023).

T. EN 15804 - Sustainability of construction works - Environmental product declarations - Core rules for the product category of construction products; 2014.

U. IAS AC172 - Accreditation Criteria for Fabricator Inspection Programs for Structural Steel AC172; 2019.

V. ISO 14025 - Environmental labels and declarations -- Type III environmental declarations -- Principles and procedures; 2006.

W. ISO 14040 - Environmental management - Life cycle assessment - Principles and framework; 2006 (Amended 2020).

X. ISO 14044 - Environmental management - Life cycle assessment - Requirements and guidelines; 2006 (Amended 2020).

Y. ISO 21930 - Sustainability in buildings and civil engineering works -- Core rules for environmental product declarations of construction products and services; 2017.

Z. RCSC (HSBOLT) - Specification for Structural Joints Using High-Strength Bolts; Research Council on Structural Connections; 2020.

AA. SSPC-SP 3 - Power Tool Cleaning; 2018.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Pre-Installation Meeting: Meet at project site prior to beginning of installation to review requirements. Require attendance by representatives of the following:
   1. Contractor's superintendent.
   2. Independent testing agency.
   3. Structural steel erector.
   4. Steel subcontractor
   5. Special Inspector.
   6. Structural Engineer of Record.
   7. Other entities affected by the work of this section.

B. Review special inspection and testing and inspecting agency procedures for field quality control, temporary bracing of structure, shop drawing submittals, AESS requirements.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings:
1. Indicate profiles, sizes, spacing, locations of structural members, openings, attachments, and fasteners.
2. Connections not detailed.
3. Indicate cambers and loads.
4. Indicate welded connections with AWS A2.4 welding symbols. Indicate net weld lengths.
5. Grid locations of the individual pieces shall be provided on the detail drawings.
6. Resubmitted drawings shall have all revisions clouded or clearly identified on the drawings.
7. Reproduction of any portion of the structural contract drawings for resubmittal as shop drawings is prohibited. Shop drawings produced in such a manner will be rejected and returned. See AISC 303 Section 4.3 for additional information.

C. Steel Connection Calculations:
1. Fabricator's responsibilities include using a qualified registered professional engineer licensed in the State in which the Project is located to prepare structural analysis data for structural steel connections.
2. Submit shop standards for typical steel framing connections. Shop standards shall be signed and sealed by the registered professional engineer responsible for their preparation. Shop drawings will not be reviewed until applicable shop standards have been submitted and approved.
3. Submit calculations for bracing connections, splices, connections not covered by shop standards, and other connections as indicated in the Contract Documents. Calculations shall be signed and sealed by the registered professional engineer responsible for their preparation. Shop drawings will not be reviewed until applicable calculations have been submitted and approved.

D. Connection design Engineer shall review fabricators shop drawings for implementation of their connection design and provide letter stating such per AISC 303 Section 3.1.2 Option (3).

E. The connections shall be designed by a licensed professional engineer working for the fabricator.

F. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:
1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

G. Environmental Product Declaration (EPD): Submit in accordance with following.
   1. Publicly available, critically reviewed life cycle analysis having at least a cradle-to-gate scope conforming to one of the below criteria.
      a) Good: Product-specific; compliant with ISO 14044.
      b) Better: Industry-wide, generic; compliant with ISO 21930, or with ISO 14044, ISO 14040, ISO 14025, and EN 15804; Type III third-party certification with external verification, in which the manufacturer is recognized as the program operator.
      c) Best: Commercial-product-specific; compliant with ISO 21930, or with ISO 14044, ISO 14040, ISO 14025, and EN 15804; Type III third-party certification with external verification, in which the manufacturer is recognized as the program operator.
      d) Where demonstration of impact reduction below industry average is required, submit both industry-wide and commercial-product-specific declarations; or submit at least 5 declarations for products of the same type by other manufacturers in the same industry.
   2. For products delivered in multiple shipments to the jobsite, an EPD must be provided for each separate shipment from a different point of production, or from a a different supplier.
   3. Submit an EPD for each structural steel type specified in the Steel section of the structural general notes.

H. Bill of Materials: Material supplier(s) shall provide a report, at the completion of the primary structural frame, summarizing all structural steel quantities and the location where each material was obtained. Each unique ASTM material grade used on the project to be itemized.
   1. In addition to the requirements above, report the following in pounds and itemize as required for each unique steel product:
      a) Total Structural Steel Weight

I. Manufacturer's Mill Certificate: Certify that products meet or exceed specified requirements.

J. Field quality-control and special inspection reports.

K. Fabricator's Qualification Statement: Provide documentation showing steel fabricator is accredited under IAS AC172 or that participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant.

L. Delegated-Design Submittal: For structural-steel connections indicated to comply with design loads, include analysis data signed and sealed by the qualified professional engineer responsible for their preparation licensed in the State in which the Project is located.

1.6 QUALITY ASSURANCE

A. Fabricate structural steel members in accordance with AISC (MAN) "Steel Construction Manual."

B. Welder Qualifications: Welding processes and welding operators qualified in accordance with AWS D1.1/D1.1M and no more than 12 months before start of scheduled welding work.

C. Fabricator Qualifications: A qualified steel fabricator that is accredited by the International Accreditation Service (IAS) Fabricator Inspection Program for Structural Steel in accordance with IAS AC172 or that participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant.

D. Erector: Company specializing in performing the work of this section with minimum 10 years of documented experience.

PART 2 PRODUCTS

2.1 MATERIALS

A. As indicated on drawings.

B. Non-Shrink Cementitious Grout: Comply with requirements of Section 03 6213 - Non-Metallic Non-Shrink Grouting

C. Structural Thermal Break/Insulation Material:
1. Fiberglass-Reinforced Laminate Composite: Basis of design: Fabreeka-TIM® , as manufactured by Fabreeka International, Inc.
2. Include thermal break washers and bushings made from Fabreeka® material. **Steel fabricator note:** When bushings are used, the holes for standard bolt diameters have to be increased to account for these.
3. Material shall maintain structural integrity of connections. Refer to Structural Drawings for specific Load requirements.
4. Ultimate Material Properties:
   a) Tensile Strength: ASTM D638; 11,000 psi (75.8 MPa).
   b) Flexural Strength: ASTM D790; 25,000 psi (172.4 MPa).
   c) Compressive Strength: ASTM D695; 38,900 psi (268.2 MPa).
   d) Compressive Modulus: ASTM D695
      1) 1/2" (12.7mm) thick: 291,194 psi (2,007.7 MPa)
      2) 1" (25.4mm) thick: 519,531 psi (3,582.0 MPa)
   e) Shear Strength: ASTM D732; 15,000 psi (103.4 MPa)
   f) Thickness: 1" (25.4mm) or as indicated.
   g) Oxygen Index: ASTM D2863; 21.8%.
   h) Coefficient of Thermal Expansion: ASTM D696; 2.2.
   i) Thermal Conductivity: ASTM C177; 1.8 BTU/Hr/ft2/in/°F (0.259 W/m*°K).
   j) Density: 107.83 lb/ft3 (1727Kg/M3).

D. Bituminous Paint: Cold-applied water-based emulsion; asphalt with mineral colloid or chemical emulsifying agent; with or without fiber reinforcement; asbestos-free; suitable for application on vertical and horizontal surfaces.
1. Composition - ASTM D1187/D1187M, Type I.
2. VOC Content: Not more than permitted by local, State, and federal regulations.
3. Applied Thickness: 1/16 inch, minimum, wet film.
4. Products:
   a) W. R. Meadows, Inc; Sealmastic Emulsion: www.wrmeadows.com/#sel.
   b) KARNAC; 220 Fibered Emulsion (Brush or Spray):www.karnakcorp.com.
   c) BASF Corporation; MasterSeal ® 610, 614, 615: www.basf.com
   d) Uniflex®; Non-Fibered Asphalt Emulsion Dampproofing 40-324: www.uniflexroof.com
   e) Henry® Company; Non-Fibered Asphalt Emulsion Dampproofing 788: www.henry.com

5. Substitutions: See Section 01 6000 - Product Requirements.

E. Expanded Metal: Standard, Carbon Steel, Cold Rolled, 1/2" No. 20 Standard
   1. For use in radon pits.
   2. Products:
      a) McNICHOLS® EXPANDED METAL; www.mcnichols.com
      b) Direct Metals; www.directmetals.com
      c) MarCo Specialty Steel; www.marcospecialtysteel.com
      d) P+R Metals; www.prmetals.com
      e) Russell Metals; www.russelmetals.com
   3. Substitutions: See Section 01 6000 - Product Requirements.

F. Shop and Touch-Up Primer: Fabricator's standard, complying with VOC limitations of authorities having jurisdiction.

G. Touch-Up Primer for Galvanized Surfaces: Fabricator's standard, complying with VOC limitations of authorities having jurisdiction.

H. Reinforced Thermoset Resin Structural Thermal Break Pads: High-strength structural framing accessory boards with the following characteristics.
   1. Structural Performance: Provide pads capable of withstanding or transferring structural loads.
      a) Load Types: Shear, moment, and wind loads.
   2. Pad Design: Allow for fabrication and construction tolerances, accommodating live load deflection, shrinkage, and creep of the building structure and other building movements; maintain structural steel deflections as required by applicable codes.
   3. Board Size: 48 by 96 inches.
   4. Pad Thickness: As indicated on drawings.
   5. Apparent Thermal Conductivity: K-value of 1.05 Btu-in/h sq ft degrees F when tested in accordance with ASTM C518.
   6. Compressive Strength: 40,000 psi, minimum, when tested in accordance with ASTM D638.
   7. Compressive Modulus: 673,400 psi, minimum, when tested in accordance with ASTM D695.
   8. Accessories: Manufacturer's standard bushings and washers, minimum 1/4 inch thick, designed to provide thermal break between structural steel washer/bolt and internal element.
   9. Manufacturers:
      a) Armatherm; FRR Structural Thermal Break Material: www.armatherm.com/#sle.

2.2 FABRICATION

A. Shop fabricate to greatest extent possible.

B. Space shear stud connectors as indicated on drawings.

C. Fabricate connections for bolt, nut, and washer connectors.

2.3 FINISH

A. Prepare structural component surfaces in accordance with SSPC-SP 3.

B. Shop prime structural steel members. Do not prime surfaces that will be sprayed fire-resistive material (SFRM), field welded, in contact with concrete, high strength bolted, slip-critical connections, or galvanized.

C. Structural steel members to receive intumescent mastic fire-resistive coatings shall be shop primed with a special compatible primer. See Section 07 8100 - Applied Fire Protection for these requirements.

D. Galvanize structural steel members to comply with ASTM A123/A123M. Provide minimum 1.7 oz/sq ft galvanized coating.
   1. Fill vent and drain holes that will be exposed in the finished Work, unless they will function as weep holes, with tapered plugs.
   2. Provide tapered plugs with diameter at mid-point same as drilled hole in steel member. Install and hammer to a tight fit. File excess flush and touch-up if necessary.
      a) Tapered plugs shall be zinc or aluminum to match hole size.
   3. Galvanize lintels attached to structural-steel frame and located in exterior walls and other items indicated on the Drawings.

E. Refer to Architectural drawings for steel finishes plan.

2.4 SOURCE QUALITY CONTROL

A. Special Inspections: Owner will engage a qualified special inspector to perform the inspections indicated in the Statement of Special Inspections.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that conditions are appropriate for erection of structural steel and that the work may properly proceed.

3.2 ERECTION

A. Erect structural steel in compliance with AISC 303.

B. Allow for erection loads and provide sufficient temporary bracing to maintain structure in safe condition, plumb, and in true alignment until completion of erection and installation of permanent bracing.

C. Field weld components and shear studs indicated on shop drawings.

D. Use carbon steel bolts only for temporary bracing during construction, unless otherwise specifically permitted on drawings. Install high-strength bolts in accordance with RCSC (HSBOLT) "Specification for Structural Joints Using High-Strength Bolts".

E. Do not field cut or alter structural members without approval of Architect. Finish thermally cut sections within smoothness limits in AWS D1.1/D1.1M.

F. After erection, prime welds, abrasions, and surfaces not shop primed, except surfaces to be in contact with concrete.

3.3 TOLERANCES

A. Set structural steel accurately in locations and to elevations indicated and according to AISC 360 Specification for Structural Steel Buildings and AISC S303 Code of Standard Practice for Steel Buildings and Bridges.

3.4 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Section 01 4000 - Quality Requirements.

B. Special Inspections: Owner will engage a qualified special inspector to perform the inspections indicated in the Statement of Special Inspections.

3.5 REPAIRS AND PROTECTION

A. Galvanized Surfaces: Clean areas where galvanizing is damaged or missing and repair galvanizing to comply with ASTM A780/A780M and manufacturer's written instructions.

END OF SECTION 05 1200

SECTION 05 2100 - STEEL JOIST FRAMING

PART 1 GENERAL

1.1 RELATED REQUIREMENTS

A. Section 05 1200 - Structural Steel Framing: Superstructure framing.

B. Section 05 3100 - Steel Decking: Support framing for openings less than 12 inches in decking.

1.2 REFERENCE STANDARDS

A. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

B. ASTM A563/A563M - Standard Specification for Carbon and Alloy Steel Nuts (Inch and Metric); 2021a.

C. ASTM A780/A780M - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings; 2020.

D. ASTM F436/F436M - Standard Specification for Hardened Steel Washers Inch and Metric Dimensions; 2019.

E. ASTM F3125/F3125M - Standard Specification for High Strength Structural Bolts and Assemblies, Steel and Alloy Steel, Heat Treated, Inch Dimensions 120 ksi and 150 ksi Minimum Tensile Strength, and Metric Dimensions 830 MPa and 1040 MPa Minimum Tensile Strength; 2023.

F. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2020, with Errata (2023).

G. IAS AC172 - Accreditation Criteria for Fabricator Inspection Programs for Structural Steel AC172; 2019.

H. SJI 100 - Standard Specifications for K-Series, LH-Series, and DLH-Series Open Web Steel Joists, and for Joist Girders; 2020.

I. SJI Technical Digest No. 9 - Handling and Erection of Steel Joists and Joist Girders; 2008.

J. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer; 2004.

K. SSPC-SP 2 - Hand Tool Cleaning; 2018.

1.3 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Comprehensive engineering analysis of special joists signed and sealed by the qualified professional engineer responsible for its preparation.

C. Shop Drawings: Indicate standard designations, joist coding, configurations, sizes, spacings, cambers, locations of joists, joist leg extensions, bridging, connections, and attachments.

D. Reproduction of any portion of the structural contract drawings for resubmittal as shop drawings is prohibited. Shop drawings produced in such a manner will be rejected and returned.

E. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

F. Manufacturer's Qualification Statement.

G. Fabricator's Qualification Statement.

1.4 QUALITY ASSURANCE

A. Design connections not detailed on drawings under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in the State in which the Project is located.

B. Perform Work, including that for headers and other supplementary framing, in accordance with SJI 100 Standard Specifications Load Tables and SJI Technical Digest No. 9.

C. Manufacturer Qualifications: A manufacturer certified by SJI to manufacture joists complying with applicable standard specifications and load tables in SJI's "Specifications"
   1. Manufacturer's responsibilities include providing professional engineering services for designing special joists to comply with performance requirements.

D. Fabricator Qualifications: A qualified steel joist fabricator who is a member of the Steel Joist Institute and has completed the Institute's examination of complete engineering design details and calculations of joists, bridging and accessories for which standards have been adopted.

E. Welding Qualifications: Qualify field-welding procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

1.5 DELIVERY, STORAGE, AND HANDLING

A. Transport, handle, store, and protect products to SJI requirements.

B. Protect joists from corrosion, deformation, and other damage during delivery, storage, and handling.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Steel Joists:
   1. Canam Group Inc: www.canam-steeljoists.ws
   2. Nucor-Vulcraft Group: www.vulcraft.com/#sle.
   3. New Millennium Building Systems, LLC: www.newmill.com

2.2 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide special joists and connections capable of withstanding design loads indicated including any hanging equipment or roof equipment supported by the joist not indicated. Coordinate exact location and magnitude of loads with the equipment supplier.
   1. Use ASD; data are given at service-load level.
   2. Design special joists to withstand design loads with live-load deflections no greater than the following:
      a) Roof Joists: Vertical deflection of 1/360 of the span.

2.3 MATERIALS

A. Open Web Joists: SJI 100 Type LH Joists:
   1. Provide bottom chord extensions as indicated.
   2. Minimum End Bearing on Steel Supports: Comply with referenced SJI standards.
   3. Minimum End Bearing on Masonry or Concrete Supports: Comply with referenced SJI standards.
   4. Finish: Shop primed.
   5. End Arrangement: Underslung.
   6. Top-Chord Arrangement: Pitched 1/4 inch per 12 inches (1:48), two ways.
   7. Camber joists according to SJI's "Specifications."

B. High-Strength Structural Bolts, Nuts, and Washers: ASTM F3125/F3125M, Type 1, with matching compatible ASTM A563/A563M nuts and ASTM F436/F436M washers.

C. Bridging: Comply with referenced SJI standards.
   1. Furnish additional erection bridging if required for stability.

D. Furnish miscellaneous accessories including splice plates and bolts required by joist manufacturer to complete joist assembly.

E. Structural Steel For Supplementary Framing and Joist Leg Extensions: ASTM A36/A36M.

F. Welding Materials: AWS D1.1/D1.1M; type required for materials being welded.

G. Shop and Touch-Up Primer: SSPC-Paint 15, complying with VOC limitations of authorities having jurisdiction.

2.4 FABRICATION

A. Coordinate web configuation with mechanical duct runs.

2.5 FINISH

A. Shop prime joists as specified.
   1. Do not prime surfaces that will be fireproofed, field welded, or in contact with concrete.

B. Prepare surfaces to be finished in accordance with SSPC-SP 2.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify existing conditions prior to beginning work.

B. Coordinate layout of hanging equipment that imparts non-uniform loads to the joist top or bottom chords. These loads shall be included in the design of the joist.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 ERECTION

A. Erect joists with correct bearing on supports.

B. Allow for erection loads. Provide sufficient temporary bracing to maintain framing safe, plumb, and in true alignment.

C. Coordinate the placement of anchors for securing loose bearing members furnished as part of the work of this section.

D. After joist alignment and installation of framing, bolt joist seats to steel bearing surfaces.

E. Position and bolt joist chord extensions and wall attachments as detailed.

F. Install supplementary framing for floor and roof openings greater than 12 inches.

G. Do not permit erection of decking until joists are braced, bridged, and secured or until completion of erection and installation of permanent bridging and bracing.

H. Do not field cut or alter structural members without approval of joist manufacturer.

3.3 TOLERANCES

A. Maximum Variation From Plumb: 1/4 inch.

B. Maximum Offset From True Alignment: 1/4 inch.

C. Install joists and accessories plumb, square, and true to line; securely fasten to supporting construction according to SJI's "Specifications," joist manufacturer's written instructions, and requirements in this Section.

3.4 FIELD QUALITY CONTROL

A. Engage an independent testing agency to perform field quality control tests, as specified in Section 01 4000 - Quality Requirements.

B. Visually inspect field welds according to AWS D1.1/D1.1M.

C. Visually inspect bolted connections.

D. Prepare test and inspection reports.

3.5 REPAIRS AND PROTECTION

A. Repair damaged galvanized coatings on galvanized items with galvanized repair paint according to ASTM A780/A780M and manufacturer's written instructions.

END OF SECTION 05 2100

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 3100 - STEEL DECKING

PART 1 GENERAL

1.1 RELATED REQUIREMENTS

1.2 REFERENCE STANDARDS

A. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

B. ASTM A108 - Standard Specification for Steel Bar, Carbon and Alloy, Cold-Finished; 2018.

C. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.

D. ASTM A780/A780M - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings; 2020.

E. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2020, with Errata (2023).

F. AWS D1.3/D1.3M - Structural Welding Code - Sheet Steel; 2018, with Errata (2022).

G. ICC-ES AC43 - Acceptance Criteria for Steel Deck Roof and Floor Systems; 2022.

H. ICC-ES AC70 - Acceptance Criteria for Power-Actuated Fasteners Driven into Concrete, Steel and Masonry Elements; 2019, with Editorial Revision (2021).

I. SDI (DM) - Publication No.30, Design Manual for Composite Decks, Form Decks, and Roof Decks; 2007.

J. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer; 2004.

1.3 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittals procedures.

B. Shop Drawings: Indicate deck plan, support locations, projections, openings, reinforcement, pertinent details, and accessories.

C. Reproduction of any portion of the structural contract drawings for resubmittal as shop drawings is prohibited. Shop drawings produced in such a manner will be rejected and returned.

D. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.

2. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

E. Certificates: Certify that products furnished meet or exceed specified requirements.

F. Powder Actuated Fasteners: For PAF submittals, for fastening metal deck to either structural steel or bar joist, the individual(s) performing the installation shall have submitted for record and approval a package, from the manufacturer of the PAF system, pertinent information such as: a summary table of the correct fastener, pattern, span, deck gauge & type, side-lap fastener and pattern, and shear capacity for the specific zone of work, fastener technical data (pullover & pullout allowable loads), fastening comparison tables for allowable tension and shear values of PAF/puddle welds/screws, proper roof and composite diaphragm shear tables for the given job design application showing the PLF at the correct span and with the correct number of side-lap stitch fasteners (from steel Deck Institute Diaphragm Design Manual), tool descriptions for the tools to be used, and details of each application.

G. Submit manufacturer's installation instructions.

1.4 QUALITY ASSURANCE

A. PAF: Use of powder actuated tools shall only be by a qualified operator, trained and licensed by the tool manufacturer in accordance with the manufacturers and OSHA requirements.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Cut plastic wrap to encourage ventilation.

B. Separate sheets and store deck on dry wood sleepers; slope for positive drainage.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Steel Deck:
1. Canam Steel Corporation: www.canam-steeljoists.ws.
2. Cordeck, Inc: www.cordeck.com.
3. Nucor-Vulcraft Group: www.vulcraft.com.
4. ASC Profiles, Inc.: www.ascprofiles.com
5. Roof Deck, Inc.: roofdeckinc.com
6. New Millennium Building Systems, LLC: www.newmill.com
7. Epic Metals Corporation: www.epicmetals.com

2.2 STEEL DECK

A. Acoustical Cellular Roof Deck: Non-composite type, steel sheet with plain vertical flute faces with a perforated liner panel attached to the bottom flutes with 1/8 inch diameter holes staggered 3/8 inch on center:

1. Galvanized Steel Sheet: ASTM A653/A653M, Structural Steel (SS) Grade 33/230, with G90/Z275 galvanized coating.
2. Span Design: Triple.
3. Minimum Base Metal Thickness: As indicated on drawings.
4. Nominal Height: As indicated on drawings.
5. Profile: Fluted; As indicated on drawings.
6. Side Joints: Lapped, mechanically fastened.

B. Roof Deck: Non-composite type, fluted steel sheet:
1. Galvanized Steel Sheet: ASTM A653/A653M, Structural Steel (SS) Grade 33/230, with G90/Z275 galvanized coating.
2. Span Design: Triple.
3. Minimum Base Metal Thickness: As indicated on drawings.
4. Nominal Height: As indicated on dawings.
5. Profile: Fluted; As indicated on drawings.
6. Side Joints: Lapped, mechanically fastened.

C. Composite Floor Deck: Fluted steel sheet embossed to interlock with concrete:
1. Galvanized Steel Sheet: ASTM A653/A653M, Structural Steel (SS) Grade 33/230, with G60/Z180 galvanized coating.
2. Span Design: Triple.
3. Minimum Base Metal Thickness: As indicated on drawings.
4. Nominal Height: As indicated on drawings.
5. Profile: Fluted; As indicated on drawings.
6. Side Joints: Lapped, mechanically fastened.
7. Extended Female Leg Option: Fabricate panels with an extended female leg at interlocking seams that allows for sidelap screws to be installed vertically.

D. Metal Form Deck: Corrugated sheet steel, with provision for ventilation of concrete:
1. Galvanized Steel Sheet: ASTM A653/A653M, Structural Steel (SS) Grade 33/230, with G90/Z275 galvanized coating.
2. Minimum Base Metal Thickness: As indicated on drawings.
3. Nominal Height: As indicated on drawings.
4. Side Joints: Lapped, mechanically fastened.

2.3 ACCESSORY MATERIALS

A. Bearing Plates and Angles: ASTM A36/A36M steel, galvanized per ASTM A123/A123M.

B. Stud Shear Connectors: Made from ASTM A108 Grade 1015 bars.

C. Welding Materials: AWS D1.1/D1.1M.

D. Fasteners: Galvanized hardened steel, self tapping.

E. Powder Actuated Mechanical Fasteners: Steel; with knurled shank and forged ballistic point. Comply with applicable requirements of ICC-ES AC70.
1. Design Requirements: Provide number and type of fasteners that comply with the applicable requirements of SDI (DM) design method for roof deck and floor deck applications and ICC-ES AC43.

2. Equivalent values in schedule on drawing.
3. Products:
   a) Basis-of-Design Product: Hilti: www.hilti.com
   b) Simpson Strong-Tie: www.strongtie.com.
   c) DEWALT Fasteners: www.anchors.dewalt.com
   d) Ramset: www.ramset.com
   e) Substitutions: See Section 01 6000 - Product Requirements.

F. Mechanical Fasteners: Steel; hex washer head, self-drilling, self-tapping.
   1. Design Requirements for Sidelap Connections: Provide number and type of fasteners that comply with the applicable requirements of SDI (DM) design method for roof deck and floor deck applications and ICC-ES AC43.

G. Shop and Touch-Up Primer: SSPC-Paint 15, complying with VOC limitations of authorities having jurisdiction.

H. Touch-Up Primer for Galvanized Surfaces: ASTM A 780/A 780M, complying with VOC limitations of authorities having jurisdiction.

I. Flute Closures: Closed cell foam rubber, 1 inch thick; profiled to fit tight to the deck.

J. Acoustical Insulation: Glass fiber type, minimum 1.1 lb/cu ft density; profiled to suit deck.

K. Pour Stops and Girder Fillers: Steel sheet, minimum yield strength of 33,000 psi, of same material and finish as deck, and of thickness and profile recommended by SDI Floor Deck Design Manual Latest Edition for overhang and slab depth.

L. Column Closures, End Closures, Z-Closures, and Cover Plates: Steel sheet, of same material, finish, and thickness as deck unless otherwise indicated.

2.4 FABRICATED DECK ACCESSORIES

A. Sheet Metal Deck Accessories: Metal closure strips, wet concrete stops, cover plates, finish strips, and reinforcing channels same gage as deck; of profile and size as indicated; finished same as deck.

B. Roof Sump Pans: Formed sheet steel, 14 gauge, 0.0747 inch minimum thickness, flat bottom, sloped sides, recessed 1-1/2 inches below roof deck surface, bearing flange 3 inches wide, sealed watertight.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify existing conditions prior to beginning work.

B. Examine supporting frame and field conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Erect metal deck in accordance with SDI Design Manual and manufacturer's instructions. Align and level.

B. On concrete and masonry surfaces provide minimum 4 inch bearing.

C. On steel supports provide minimum 1-1/2 inch bearing.

D. Install temporary shoring before placing deck panels if required to meet deflection limitations.

E. Locate deck bundles to prevent overloading of supporting members.

F. Place deck panels on supporting frame and adjust to final position with ends accurately aligned and bearing on supporting frame before being permanently fastened. Do not stretch or contract side-lap interlocks.

G. The steel roof deck has been designed for uniformly distributed loads and must not be used as the equivalent of point loads or linear loads. Concentrated loads applied to steel roof deck shall not be permitted unless authorized in writing by the structural engineer.

H. Suspended ceilings, excluding acoustical ceiling tile (ACT) or single-layer gypsum wall board (GWB) types, light fixtures, ducts or other utilities shall not be supported from steel roof deck. Install carrying channels or supplemental supports that connect to main structural framing members.

I. The steel deck has not been designed or analyzed for their ability to support the load/weight of scaffolding, stored materials, etc. during construction. All contractors and/or sub-contractors shall hire their own independent engineer, licensed in the jurisdiction of this project, to determine the adequacy of the steel deck to support these loads/weight.

J. Fasten deck as indicated on drawings.

K. Fasten roof deck panels to steel supporting members with low velocity powder actuated fasteners. Installation of fasteners shall be in accordance with design requirements of SDI and installed by an operator licensed by the manufacturer which Hilti provides.
   1. For bar joist base material thicknesses between 3/16” to 3/8” use the Hilti X-EDN19 fastener. For base material thicknesses between 1/8” to 1/4” use the Hilti X-EDNK22 fastener. Mechanically fasten using Hilti DX 460 (hand-held) or DX 860 HSN (stand-up) tools.
   2. For heavy bar joists or beams with base materials thicknesses of Tf >= 1/4” use the Hilti X-ENP19 fastener. Mechanically fasten using Hilti DX76 (hand-held) or DX860 ENP (stand-up) tools.

L. Fasten floor deck panels to steel supporting members with low velocity powder actuated fasteners. Installation of fasteners shall be in accordance with design requirements of SDI or ICC and installed by an operator licensed by the manufacturer which Hilti provides.
   1. Mechanically fasten using Hilti DX76 (hand-held), DX860 ENP (stand-up). For heavy bar-joist or beam base material thicknesses greater than or equal to ¼” use the Hilti X-ENP19 fastener.

M. At mechanically fastened male/female side laps fasten at 18 inches on center maximum.

N. Drive mechanical sidelap connectors completely through adjacent lapped sheets; positively engage adjacent sheets with minimum three-thread penetration.

O. Weld deck in accordance with AWS D1.3/D1.3M.

P. At floor edges, install concrete stops upturned to top surface of slab, to contain wet concrete. Provide stops of sufficient strength to remain stationary without distortion.

Q. At openings between deck and walls, columns, and openings, provide sheet steel closures and angle flashings to close openings.

R. Close openings above walls and partitions perpendicular to deck flutes with single row of foam cell closures.

S. Position roof drain pans with flange bearing on top surface of deck. Fusion weld at each deck flute.

T. Weld stud shear connectors through steel deck to structural members below.

U. Immediately after welding deck and other metal components in position, coat welds, burned areas, and damaged surface coating, with touch-up primer.

V. When installation of deck is complete and prior to placing concrete, all deck shall be cleaned of all debris.

3.3 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Section 01 4000 - Quality Requirements.

B. Special Inspections: Owner will engage a qualified special inspector to perform the inspections indicated in the Statement of Special Inspections.

C. Comply with quality assurance inspection requirements of SDI (QA/QC), "Standard for Quality Control and Quality Assurance for the Installation of Steel Deck", as modified by Table C1 contained in the Commentary to that Standard and the Statement of Special Inspections.

D. Welds: Verify compliance with AWS D1.3/D1.3M; continuous.

E. PAF: The manufacturer of the powder actuated system (tools and fasteners) shall be involved in the inspection and quality control process. This will require site visits for training and during installation to assist in the proper installation. Proper installation is determined by pin-head standoff.

F. Remove and replace work that does not comply with specified requirements.

G. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of corrected work with specified requirements.

3.4 REPAIRS AND PROTECTION

A. Prepare and repair damaged galvanized coatings on both surfaces of roof deck with galvanized repair paint according to ASTM A780/A780M and manufacturer's written instructions.

B. Touchup Painting: Wire brushing, cleaning, and repair painting of rust spots, welds, and abraded areas on both deck surfaces are included in Section 09 9113 - Exterior Painting and Section 09 9123 - Interior Painting.

END OF SECTION 05 3100

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 4000 - COLD-FORMED METAL FRAMING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Formed steel stud exterior wall framing.

B. Cold-formed framing accessories.

C. Exterior wall sheathing.

D. Water-resistive barrier over sheathing.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 06 1000 - Rough Carpentry: Wall sheathing.

C. Section 07 9200 - Joint Sealants.

D. Section 09 2116 - Gypsum Board Assemblies: Gypsum-based sheathing.

1.3 DEFINITIONS

A. General: See AISI S240 for definitions of terms used in this section.

B. Connection: A combination of structural elements and joints used to transmit forces between two or more members.

C. Connector: A device used to transmit forces between cold-formed steel structural members or between a cold-formed steel structural member and another structural element.

1.4 REFERENCE STANDARDS

A. AISI S100 - North American Specification for the Design of Cold-Formed Steel Structural Members; 2016, with Supplement (2020).

B. AISI S240 - North American Standard for Cold-Formed Steel Structural Framing; 2015, with Errata (2020).

C. AISI S200-12 - North American Standard for Cold-Formed Steel Framing – General Provisions, 2012 Edition; 2012.

D. AISI S211-07 - North American Standard for Cold-Formed Steel Framing - Wall Stud Design, 2007 Edition (Reaffirmed 2012); 2012.

E. AISI S212-07 - AISI North American Standard For Cold-Formed Steel Framing - Header Design, 2007 Edition (Reaffirmed 2012); 2012.

F. AISI S213-07 w/ S1-09 - North American Standard for Cold-Formed Steel Framing – Lateral Design, 2007 Edition With Supplement 1 (Reaffirmed 2012); 2012.

G. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures; Most Recent Edition Cited by Referring Code or Reference Standard.

H. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures; Most Recent Edition Cited by Referring Code or Reference Standard.

I. ASTM A780/A780M - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings; 2020.

J. ASTM A1003/A1003M - Standard Specification for Steel Sheet, Carbon, Metallic- and Nonmetallic-Coated for Cold-Formed Framing Members; 2015.

K. ASTM C1513 - Standard Specification for Steel Tapping Screws for Cold-Formed Steel Framing Connections; 2013.

L. ASTM C1007 - Standard Specification for Installation of Load Bearing (Transverse and Axial) Steel Studs and Related Accessories; 2020.

M. AWS B2.1/B2.1M - Specification for Welding Procedure and Performance Qualification; 2021.

N. ASTM E329 - Standard Specification for Agencies Engaged in Construction Inspection, Testing, or Special Inspection; 2021.

O. AWS D1.3/D1.3M - Structural Welding Code - Sheet Steel; 2018, with Errata (2022).

P. ICC (IBC) - International Building Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

Q. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer; 2004.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Pre-Installation Meeting: Conduct meeting attended by Owner, Architect, manufacturer's technical representative, and other trade contractors at project site prior to beginning of installation to review requirements.
   1. Convene one week before starting work of this section.

B. Coordinate with work of other sections that is to be installed in or adjacent to metal framing systems, including but not limited to structural anchors, cladding anchors, utilities, insulation, and firestopping.

C. Coordinate cold-formed metal wall and soffit framing with masonry veneer, EIFS system, metal wall tile system, phenolic wall panel system, composite soffit panel system, and terra cotta clay tile cladding system, as specified in Divisions 04 and 07 sections.

1.6 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data on standard framing members; describe materials and finish, product criteria, limitations.

C. Product Data: Provide manufacturer's data on factory-made framing connectors, showing compliance with requirements.

D. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

E. Delegated Design Submittal: For cold-formed metal framing, including cantilevered partial wall support system(s) for low wall partitions.

F. Shop Drawings: Indicate component details, framed openings, bearing, anchorage, loading, welds, and type and location of fasteners, and accessories or items required of related work.
   1. Indicate stud and ceiling joist layout.
   2. Indicate cantilevered partial wall support system layouts.
   3. Describe method for securing studs to tracks and for bolted framing connections.

G. Steel Framing Industry Association (SFIA) Certification:
   1. Submittals that do not bear the Contractor's Professional Structural Engineer's seal and signature will be returned, without review.

H. Designer's Qualification Statement.

I. Manufacturer's Qualification statement.

J. Welders' Qualification Statement: Welders' certificates in accordance with AWS B2.1/B2.1M and dated no more than 12 months before the start of scheduled welding work.

1.7 QUALITY ASSURANCE

A. See Section 01 4000 - Quality Requirements for additional requirements.

B. Professional Structural Engineer Qualifications: A professional engineer who is legally qualified to practice in Connecticut and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of cold-formed metal framing that are similar to those indicated for this project in material, design, and extent.

C. Manufacturer Qualifications: Company specializing in manufacturing the types of products specified in this section, and with minimum ten years of documented experience.

D. Welder Qualifications: Welding processes and welding operators qualified in accordance with AWS D1.1/D1.1M and AWS D1.3/D1.3M and dated no more than 12 months before start of scheduled welding work.

E. Installer Qualifications: Company specializing in performing the work of this section with minimum five years documented experience.

F. Welding Qualifications: Qualify procedures and personnel according to the following:
   1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
   2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."

G. Testing Agency Qualifications: Qualified according to ASTM E329 for testing indicated.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Protect cold-formed metal framing from corrosion, deformation, and other damage during delivery, storage, and handling.

B. Store cold-formed metal framing, protect with a waterproof covering, and ventilate to avoid condensation.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Structural Framing:
   1. ClarkDietrich Building Systems; : www.clarkdietrich.com.
   2. The Steel Network, Inc; : www.SteelNetwork.com.
   3. Substitutions: See Section 01 6000 - Product Requirements.

B. Basis-of-Design Framing Connectors and Accessories: The design of connector devices is based on products manufactured by The Steel Network, Inc. Subject to compliance with requirements, provide either the named products or comparable products by one of the following, as approved by the Architect.
   1. Same manufacturer as metal framing.

2.2 PERFORMANCE REQUIREMENTS

A. Comply with requirements for Contractor's design-related professional design services indicated in Section 01 4000 - Quality Requirements.

B. Design Requirements: Design cold-formed framing systems, components, framing accessories, and connectors to withstand specified design loads in compliance with ICC (IBC), ASCE 7, AISI S100, and AISI S240.

C. Regulatory Requirements: Comply with applicable building code criteria for loads, including seismic loads.
   1. Cold-Formed Steel Framing Standards: Unless more stringent requirements are indicated, framing shall comply with AISI S100-12, AISI S200-12, and the following:

a) Wall Studs: AISI S211-07.
b) Headers: AISI S212-07.
c) Lateral Design: AISI S213-07 w/ S1-09.

2. Design Loads: As indicated on the drawings.
   a) Wind Loads: Calculate wind loads in accordance with ASCE 7.
      1) Design Criteria: As indicated on Structural Drawing S001.
   b) Seismic Loads: Calculate seismic loads in accordance with ASCE 7.
      1) Design Criteria: As indicated on Structural Drawing S001.
3. Live load deflection meeting the following, unless otherwise indicated:
   a) Floors: Maximum vertical deflection under live load of 1/480 of span.
   b) Roofs: Maximum vertical deflection under live load of 1/360 of span.
4. Exterior Walls and Parapets: Maximum horizontal deflection under wind load 1/600 of span, unless otherwise indicated.
5. Exterior Soffit Framing: Vertical deflection of 1/240 of the span under total load, and 1/360 of the span under the live load, unless otherwise indicated.
6. Design non-axial loadbearing framing to accommodate not less than 3/4 in vertical deflection.
7. Able to tolerate movement of components without damage, failure of joint seals, undue stress on fasteners, or other detrimental effects when subject to seasonal or cyclic day/night temperature ranges.
8. Able to accommodate construction tolerances, deflection of building structural members, and clearances of intended openings.

2.3 MATERIALS

A. Steel Sheet: ASTM A1003/A1003M, subject to the ductility limitations indicated in AISI S240.

2.4 STRUCTURAL FRAMING COMPONENTS

A. Wall Studs and Track Sections: AISI S240; c-shaped studs and u-shaped track sections in stud-matching nominal width and compatible height.
   1. Structural Grade: As required to meet design criteria.
   2. Corrosion Protection Coating Designation: CP 90 CP 90 in accordance with AISI S240.

B. Non-Load Bearing Wall and Parapet Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths as indicated on the Drawings, punched, with stiffened flanges, and as follows:
   1. Minimum Uncoated-Steel Thickness: As required to comply with structural performance requirements, but not less than thickness indicated.
      a) Exterior Applications: 0.0538 inch.
      b) Interior Applications Using Abuse-Resistant/Impact Resistant Gypsum Board: 0.0312 inch.
   2. Flange Width: 2 inches minimum.
   3. Punched openings shall not be located within 12 inches from the ends of in-place wall framing.
   4. Galvanized in accordance with ASTM A653/A653M, and coating indicated.
      a) Coating for Exterior Framing: G90/Z275.
      b) Coating for Interior Framing: G60/Z180.
   5. Grade: As required by structural performance.

C. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with unstiffened flange, and as follows:
   1. Minimum Uncoated-Steel Thickness: As required to comply with structural performance requirements, but not less than thickness of steel studs.
   2. Flange Width: As required to comply with structural performance requirements, but not less than 1-1/4 inches.

D. Single Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; unpunched, with unstiffened flanges, of web depth to contain studs while allowing free vertical movement, with flanges designed to support horizontal and lateral loads, and as follows:
   1. Minimum Uncoated-Steel Thickness: As required to comply with structural performance requirements, but not less than 0.0538 inch.
   2. Flange Width: A minimum of 3 inches, and as required to comply with structural performance requirements, and to accommodate upward and downward deflection of 3/4 inch.

E. Exterior Soffit Framing: Manufacturer's standard C-shaped steel studs, of web depths as indicated on Drawings, unpunched, with stiffened flanges; U-shaped steel track, in matching nominal width, unpunched, with unstiffened flanges, and as follows:
   1. Minimum Uncoated-Steel Thickness: As required to comply with structural performance requirements, but not less than 0.0538 inch.
   2. Stud Flange Width: 2 inches minimum.
   3. Track Flange Width: As required to comply with structural performance requirements, but not less than 1-1/4 inches.

F. Accessory Items: Manufacturer's standard cold-formed plates, angles,

2.5 LATERAL FORCE-RESISTING SYSTEMS

A. Steel Sheet: ASTM A1003/A1003M, subject to the ductility limitations indicated in AISI S240.
   1. Structural Grade: As required to meet design criteria.
   2. Corrosion Protection Coating Designation: CP 90 in accordance with AISI S240.

B. Cantilevered Partial Wall Support System (Low Wall Partitions): Manufacturer's standard partial height wall support system capable of supporting out-of-plane loading in cantilevered partial wall systems that are unsupported at the top track. The out-of-plane loads shall be transferred to the floor system through a 1/2-inch thick plate nested in the flanges of the framing member with two 3/8-inch diameter fasteners.
   1. Products:
      a) Clark Dietrich; **Pony Wall**.
         1) Provide **Pony Wall Heavy** and / or **Pony Wall Lite** as required to comply with the structural design criteria for each condition indicated on drawings.
      b) The Steel Network; **Midwall**.

2.6 MISCELLANEOUS CONNECTIONS

A. Self-Drilling, Self-Tapping Screws, Bolts, Nuts and Washers: Hot dip galvanized per ASTM A153/A153M to match coating level of framing member.

B. Mechanical Fasteners: Self-drilling, self-tapping screws, bolts, nuts and washers per ASTM C1513 corrosion-resistant-coated.
   1. Head Type: Low-profile head beneath sheathing and gypsum board, manufacturer's standard elsewhere.

C. Anchorage Devices: Powder actuated.

2.7 FRAMING ACCESSORIES

A. Fabricate steel-framing accessories from ASTM A1003/A1003M, Structural Grade, Type H, metallic coated steel sheet, of same grade and coating designation used for framing members.

B. Framing accessories are subject to the delegated design requirements.

C. Provide accessories of manufacturer's standard thickness and configuration, unless otherwise indicated, as follows:
   1. CFMF Plates for Parapet Support: Formed sheet steel, thickness determined for conditions encountered; finish to match framing components.
   2. Bracing, Furring, Bridging: Formed sheet steel, thickness determined for conditions encountered; finish to match framing components.
   3. Plates, Gussets, Clips: Formed Sheet Steel, thickness determined for conditions encountered; finish to match framing components.
   4. Stud kickers.
   5. Angles.
   6. Backer plates.

2.8 MISCELLANEOUS MATERIALS

A. Galvanizing Repair: Touch up bare steel with zinc-rich paint in compliance with ASTM A780/A780M.

B. Shop and Touch-Up Primer: SSPC-Paint 15, complying with VOC limitations of authorities having jurisdiction.

C. Touch-Up Primer for Galvanized Surfaces: ASTM A780/A780M, complying with VOC limitations of authorities having jurisdiction.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that substrate surfaces are ready to receive work.

B. Verify field measurements and adjust installation as required.

3.2 PREPARATION

A. Suspended Assemblies: Coordinate installation of suspension systems with installation of overhead structure to ensure that inserts and other provisions for anchorages to building structure have been installed to receive hangers at spacing required to support the Work and that hangers will develop their full strength.
   1. Furnish concrete inserts and other devices indicated to other trades for installation in advance of time needed for coordination and construction.

B. Before sprayed fire-resistive materials are applied, attach continuous angles, clips, supplementary framing, or tracks to structural members indicated to receive sprayed fire-resistive materials.

C. After applying sprayed fire-resistive materials, remove only as much of these materials as needed to complete installation of cold-formed framing without reducing thickness of fire-resistive materials below that are required to obtain fire-resistive rating indicated. Protect remaining fire-resistive materials from damage.

3.3 INSTALLATION - GENERAL

A. Install structural members and connections in compliance with ASTM C1007 and approved shop drawings.

3.4 INSTALLATION OF STUDS

A. Install wall studs plumb and level.

B. Construct corners using minimum of three studs. Install double studs at wall openings, door and window jambs.

C. Provide deflection allowance in stud track, directly below horizontal building framing at non-loadbearing framing.

3.5 INSTALLATION OF EXTERIOR SOFFIT FRAMING

A. Install perimeter track sized to match stud framing. Align and securely anchor or fasten track to supporting structure at corners, ends, and spacings indicated on approved shop drawings.

3.6 TOLERANCES

A. Stud Spacing: 1/8 inch from the designated spacing, provided that the cumulative error does not exceed the requirements of the finishing materials in accordance with ASTM C1007.

END OF SECTION 05 4000

SECTION 05 5000 - METAL FABRICATIONS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Miscellaneous framing and supports.
   1. General: Provide miscellaneous steel framing and equipment support framing not specified in other Sections as needed to complete the work. Applications include but are not limited to:
      a) Secondary support framing for basketball backstop assemblies.
      b) Support of equipment, ducts, piping, and other items indicated to be suspended from the floor/roof deck above.
         1) Slotted channel framing.
      c) Above ceiling support of cubicle curtain track.
      d) Miscellaneous steel trim.
      e) Elevator machine beams, hoist beam, and /or divider beams.
      f) Supports for overhead doors and grilles.
      g) Tube reinforcement for low partitions.
      h) Miscellaneous steel angles, plates, and channels.
      i) Tower stanchion for automatic door operator activation device.

B. Metal ladders and ships ladders

C. Products furnished, but not installed, under this section include the following:
   1. Loose steel lintels.
   2. Shelf (relieving) angles.
   3. Anchor bolts, steel pipe sleeves, slotted-channel inserts, and wedge type inserts indicated to be cast into concrete or built into unit masonry.

1.2 RELATED REQUIREMENTS

A. Section 01 3573 - Delegated Design Procedures.

B. Section 01 3566.42 - Sustainability Compliance Procedures.

C. Section 01 7419 – Construction Waste Management and Disposal.

1.3 REFERENCE STANDARDS

A. AAMA 611 - Voluntary Specification for Anodized Architectural Aluminum; 2014 (2015 Errata).

B. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

C. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless; 2022.

D. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products; 2017.

E. ASTM A283/A283M - Standard Specification for Low and Intermediate Tensile Strength Carbon Steel Plates; 2018.

F. ASTM A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength; 2021.

G. ASTM A501/A501M - Standard Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing; 2021.

H. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.

I. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength; 2023.

J. ASTM B210/B210M - Standard Specification for Aluminum and Aluminum-Alloy Drawn Seamless Tubes; 2019a.

K. ASTM B211/B211M - Standard Specification for Aluminum and Aluminum-Alloy Rolled or Cold Finished Bar, Rod, and Wire; 2019.

L. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2021.

M. ASTM F3125/F3125M - Standard Specification for High Strength Structural Bolts and Assemblies, Steel and Alloy Steel, Heat Treated, Inch Dimensions 120 ksi and 150 ksi Minimum Tensile Strength, and Metric Dimensions 830 MPa and 1040 MPa Minimum Tensile Strength; 2023.

N. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2020, with Errata (2023).

O. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer; 2004.

P. SSPC-Paint 20 - Zinc-Rich Coating (Type I - Inorganic, and Type II - Organic); 2019.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data:
   1. Slotted channel framing.
   2. Manufactured metal ladders and ships ladders.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.

2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Shop Drawings: Show fabrication and installation details. Indicate profiles, sizes, connection attachments, reinforcing, anchorage, size and type of fasteners, and accessories. Include erection drawings, elevations, and details where applicable. Provide shop drawings for the following:
   1. Miscellaneous framing and supports for applications where framing and supports are not specified in other sections. These may include, but are not limited to:
      a) Secondary support framing for gymnasium equipment (basketball backstop assemblies and gymnasium divider).
      b) Above-ceiling support of cubicle ceiling track.
      c) Supports for overhead coiling doors and grilles.
   2. Elevator machine beams, hoist beams, and/or divider beams.
   3. Metal ladders.
   4. Shelf angles.
   5. Miscellaneous steel trim including steel angle bases and edging.
   6. Loose steel lintels.
   7. Design data: Submit drawings and supporting calculations, signed and sealed by a qualified professional structural engineer.

E. Designer's Qualification Statement.

1.5 QUALITY ASSURANCE

A. Design ladders, backstop and equipment supports, and elevator beams under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in the State in which the Project is located.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Structural Performance of Aluminum Ladders: Ladders, including landings, are to withstand the effects of loads and stresses within limits and under conditions specified in ANSI/ASC A14.3.

2.2 MATERIALS - STEEL

A. Steel Sections: ASTM A36/A36M.

B. Steel Tubing: ASTM A501/A501M hot-formed structural tubing.

C. Plates: ASTM A283/A283M.

D. Pipe: ASTM A53/A53M, Grade B Schedule 40, black finish.

E. Slotted Channel Framing: ASTM A653/A653M, Grade 33.

F. Slotted Channel Fittings: ASTM A1011/A1011M.

G. Bolts, Nuts, and Washers: ASTM A307, Grade A, plain.

H. Bolts, Nuts, and Washers: ASTM F3125/F3125M, Type 1, plain.

I. Welding Materials: AWS D1.1/D1.1M; type required for materials being welded.

J. Shop and Touch-Up Primer: SSPC-Paint 15, complying with VOC limitations of authorities having jurisdiction.

K. Touch-Up Primer for Galvanized Surfaces: SSPC-Paint 20, Type I - Inorganic, complying with VOC limitations of authorities having jurisdiction.

2.3 MATERIALS - ALUMINUM

A. Extruded Aluminum: ASTM B221 (ASTM B221M), 6063 alloy, T6 temper.

B. Sheet Aluminum: ASTM B209 (ASTM B209M), 5052 alloy, H32 or H22 temper.ladder

C. Aluminum-Alloy Drawn Seamless Tubes: ASTM B210/B210M, 6063 alloy, T6 temper.

D. Aluminum-Alloy Bars: ASTM B211/B211M, 6061 alloy, T6 temper.

E. Bolts, Nuts, and Washers: Stainless steel.

2.4 FABRICATION

A. Fit and shop assemble items in largest practical sections, for delivery to site.

B. Fabricate items with joints tightly fitted and secured.

C. Continuously seal joined members by intermittent welds and plastic filler.

D. Grind exposed joints flush and smooth with adjacent finish surface. Make exposed joints butt tight, flush, and hairline. Ease exposed edges to small uniform radius.

E. Exposed Mechanical Fastenings: Flush countersunk screws or bolts; unobtrusively located; consistent with design of component, except where specifically noted otherwise.

F. Furnish components required for anchorage of fabrications. Fabricate anchors and related components of same material and finish as fabrication, except where specifically noted otherwise.

2.5 FABRICATED ITEMS

A. Shelf Angles, Channels, and Plates Not Attached to Structural Framing.

B. Lintels: As detailed.

C. Elevator Hoistway Divider Beams: Beam sections; prime paint finish.

D. Slotted Channel Framing: Fabricate channels and fittings from structural steel complying with the referenced standards; hot-dipped galvanized per ASTM A1 Grade G65. finish.

2.6 METAL LADDERS

A. General:
   1. Comply with ANSI A14.3, except for elevator pit ladders.
   2. For elevator pit ladders, comply with ASME A17.1/CSA B44.

B. Elevator pit ladder.

C. Ships Ladders: Provide metal ships' ladders where indicated. Fabricate of open-type construction with channel or plate stringers and pipe and tube railings unless otherwise indicated. Provide brackets and fittings for installation.

2.7 MISCELLANEOUS STEEL TRIM

A. Unless otherwise indicated, fabricate units from steel shapes, plates, and bars of profiles shown with continuously welded joints and smooth exposed edges. Miter corners and use concealed field splices where possible.

B. Provide cutouts, fittings, and anchorages as needed to coordinate assembly and installation with other work.

2.8 LOOSE STEEL LINTELS

A. Fabricate loose steel lintels from steel angles and shapes of size indicated for openings and recesses in masonry walls and partitions at locations indicated. Fabricate in single lengths for each opening unless otherwise indicated. Weld adjoining members together to form a single unit where indicated.
   1. Shop-galvanize and shop-prime loose steel lintels located in exterior walls.

2.9 FINISHES - STEEL

A. Prime paint steel items.
   1. Exceptions: Galvanize items to be embedded in concrete and items to be embedded in masonry.

B. Prime Painting: One coat.

C. Galvanizing of Non-structural Items: Galvanize after fabrication to ASTM A123/A123M requirements.

2.10 FINISHES - ALUMINUM

A. As-Fabricated Finish: AA-M12.

B. Class I Natural Anodized Finish: AAMA 611 AA-M12C22A41 Clear anodic coating not less than 0.7 mils thick.

2.11 FABRICATION TOLERANCES

A. Squareness: 1/8 inch maximum difference in diagonal measurements.

B. Maximum Offset Between Faces: 1/16 inch.

C. Maximum Misalignment of Adjacent Members: 1/16 inch.

D. Maximum Bow: 1/8 inch in 48 inches.

E. Maximum Deviation From Plane: 1/16 inch in 48 inches.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field conditions are acceptable and are ready to receive work.

3.2 PREPARATION

A. Clean and strip primed steel items to bare metal where site welding is required.

3.3 INSTALLATION

A. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal fabrications. Set metal fabrications accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.

B. Fastening to In-Place Construction: Provide anchorage devices and fasteners where metal fabrications are required to be fastened to in-place construction. Provide threaded fasteners for use with concrete and masonry inserts, toggle bolts, through bolts, lag screws, wood screws, and other connectors.

C. Install items plumb and level, accurately fitted, free from distortion or defects.

D. Provide for erection loads, and for sufficient temporary bracing to maintain true alignment until completion of erection and installation of permanent attachments.

E. Field weld components as indicated on drawings.

F. Perform field welding in accordance with AWS D1.1/D1.1M.

G. Obtain approval prior to site cutting or making adjustments not scheduled.

H. After erection, prime welds, abrasions, and surfaces not shop primed , except surfaces to be in contact with concrete.

I. Metal Framing and Supports: Install framing and supports to comply with requirements of items being supported, including manufacturers' written instructions and requirements indicated on Shop Drawings.
   1. Anchor supports for operable partitions, overhead doors, and overhead grilles securely to, and rigidly brace from, building structure.

3.4 TOLERANCES

A. Maximum Variation From Plumb: 1/4 inch per story, non-cumulative.

B. Maximum Offset From True Alignment: 1/4 inch.

C. Maximum Out-of-Position: 1/4 inch.

END OF SECTION 05 5000

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 5100 - METAL STAIRS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Stairs with concrete treads.

B. Structural steel stair framing and supports.

C. Handrails and guards.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 03 3000 - Cast-in-Place Concrete: Concrete fill in stair pans; mesh reinforcement for landings.

C. Section 05 5213 - Pipe and Tube Railings: Metal handrails and balusters other than specified in this section.

D. Section 09 9123 - Interior Painting: Paint finish.

1.3 REFERENCE STANDARDS

A. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

B. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless; 2022.

C. ASTM A500/A500M - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes; 2023.

D. ASTM A501/A501M - Standard Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing; 2021.

E. ASTM A1008/A1008M - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Required Hardness, Solution Hardened, and Bake Hardenable; 2023, with Editorial Revision.

F. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength; 2023.

G. ASTM F3125/F3125M - Standard Specification for High Strength Structural Bolts and Assemblies, Steel and Alloy Steel, Heat Treated, Inch Dimensions 120 ksi and 150 ksi Minimum Tensile Strength, and Metric Dimensions 830 MPa and 1040 MPa Minimum Tensile Strength; 2023.

H. AWS A2.4 - Standard Symbols for Welding, Brazing, and Nondestructive Examination; 2020.

I. AWS B2.1/B2.1M - Specification for Welding Procedure and Performance Qualification; 2021.

J. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2020, with Errata (2023).

K. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer; 2004.

L. SSPC-SP 2 - Hand Tool Cleaning; 2018.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide Submit manufacturer's product data, including description of materials, components, finishes, fabrication details, anchors, and accessories.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Shop Drawings: Indicate profiles, sizes, connection attachments, reinforcing, anchorage, size and type of fasteners, and accessories.
   1. Indicate welded connections using standard AWS A2.4 welding symbols. Indicate net weld lengths.
   2. Include the design engineer's seal and signature on each sheet of shop drawings.

E. Design Data, Seismic Performance: Submit documentation that stairs meet performance requirements specified.

F. Delegated Design Submittal: For stairs, railings, and guards, indicate compliance with performance requirements and design criteria, including analysis data signed and sealed by the qualified Professional Structural Engineer responsible for their preparation.

G. Welders' Qualification Statement: Welders' certificates in accordance with AWS B2.1/B2.1M and dated no more than 12 months before start of scheduled welding work.

H. Designer's Qualification Statement.

1.5 QUALITY ASSURANCE

A. Structural Designer Qualifications: Professional Structural Engineer experienced in design of this work and licensed in the State in which the Project is located, or personnel under direct supervision of such an engineer.

B. Welder Qualifications: Welding processes and welding operators qualified in accordance with AWS D1.1/D1.1M and dated no more than 12 months before start of scheduled welding work.

C. Fabricator Qualifications:
   1. A company specializing in manufacturing products specified in this section, with not less than ten years of documented experience.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 4000, to design stairs, railings and guards, including attachment to building construction.

2.2 METAL STAIRS - GENERAL

A. Metal Stairs: Provide stairs of the design specified, complete with landing platforms, vertical and horizontal supports, railings, and guards, fabricated accurately for anchorage to each other and to building structure.
   1. Regulatory Requirements: Provide stairs and railings complying with the most stringent requirements of local, state, and federal regulations; where requirements of Contract Documents exceed those of regulations, comply with Contract Documents.
   2. Handrails: Comply with applicable accessibility requirements of ADA Standards.
   3. Structural Design: Provide complete stair and railing assemblies complying with the applicable local code.
      a) Stair Capacity: Uniform live load of 100 lb/sq ft and a concentrated load of 300 lb with deflection of stringer and landing framing not to exceed 1/360 of span or 1/4-inch, whichever is less. Total load deflection of treads and landings shall not exceed 1/360 or 1/720 for brittle material.
      b) Stair Framing: Capable of withstanding stresses resulting from railing and guard loads in addition to loads specified above.
   4. Dimensions: As indicated on drawings.
   5. Shop assemble components; disassemble into largest practical sections suitable for transport and access to site.
   6. No sharp or rough areas on exposed travel surfaces and surfaces accessible to touch.
   7. Separate dissimilar metals using paint or permanent tape.

B. Structural Performance of Railings and Guards: Railings and guards, including attachment to building construction, shall be designed to withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
   1. Handrails and Top Rails of Guards:
      a) Uniform load of 50 lbf/ft. applied in any direction.
      b) Concentrated load of 200 lbf applied in any direction.
      c) Uniform and concentrated loads need not be assumed to act concurrently.
   2. Infill of Guards:
      a) Concentrated load of 50 lbf applied horizontally on an area of 1 sq. ft.
      b) Infill load and other loads need not be assumed to act concurrently.

C. Metal Jointing and Finish Quality Levels:

1. Architectural: All joints as inconspicuous as possible, whether welded or mechanical.
   a) Welded Joints: Continuously welded and ground smooth and flush.
   b) Mechanical Joints: Butted tight, flush, and hairline; concealed fastenings only.
   c) Exposed Edges and Corners: Eased to small uniform radius.
   d) Metal Surfaces to be Painted: Sanded or ground smooth, suitable for highest quality gloss finish.

D. Fasteners: Same material or compatible with materials being fastened; type consistent with design and specified quality level.

E. Anchors and Related Components: Same material and finish as item to be anchored, except where specifically indicated otherwise; provide all anchors and fasteners required.

2.3 METAL STAIRS WITH CONCRETE TREADS

A. Jointing and Finish Quality Level: Architectural, as defined above.

B. Risers: Closed.

C. Treads: Metal pan with field-installed concrete fill.
   1. Concrete Depth: 1-1/2 inches, minimum.
   2. Tread Pan Material: Steel sheet.
   3. Tread Pan Thickness: As required by design; 14 gage, 0.075 inch minimum.
   4. Pan Anchorage to Stringers: Continuously welded, from top or bottom.
   5. Concrete Reinforcement: None.
   6. Concrete Finish: Refer to Drawing A910 - Finish Product Schedule - for stair tread and riser finish(es).

D. Risers: Same material and thickness as tread pans.
   1. Nosing Depth: Not more than 1-1/2 inch overhang.
   2. Nosing Return: Flush with top of concrete fill, not more than 1/2 inch wide.

E. Stringers: As indicated on the drawings.
   1. Stringer Depth: As indicated on drawings.
   2. End Closure: Sheet steel of same thickness as risers welded across ends.

F. Landings: Same construction as treads, supported and reinforced as required to achieve design load capacity.

G. Railings: Steel pipe railings.

H. Finish: Shop- or factory-prime painted.

I. Under Side of Stair: Exposed to view, to be finished same as specified for other exposed to view surfaces.

2.4 HANDRAILS AND GUARDS

A. Wall-Mounted Rails: Round pipe or tube rails unless otherwise indicated.
   1. Actual Outside Diameter: 1-1/4 inch, minimum, to 2 inches, maximum.
   2. Refer to drawings for specific railing details.

3. Handrail Brackets:
   a) Basis of Design: **Wagner Companies**; **Wall Mount Handrail Bracket RB14130**.
   b) Substitutions: See Section 01 6000 - Product Requirements.

B. Guards:
1. Top Rails: Round pipe or tube rails unless otherwise indicated.
   a) Outside Diameter: 1-1/4 inch, minimum, to 1-1/2 inches, maximum.
2. Infill at Picket Railings: Vertical pickets.
   a) Horizontal Spacing: Maximum 4 inches on center.
   b) Material: Solid steel bar.
   c) Shape: As indicated on the drawings.
   d) Size: As indicated on the drawings.
   e) Top Mounting: Welded to underside of top rail.
   f) Bottom Mounting: As indicated on drawings.
3. Infill at Pipe Railings: Pipe or tube rails sloped parallel to stair.
   a) Outside Diameter: 1 inch.
   b) Material: Steel pipe or tube, round.
   c) Vertical Spacing: Maximum 4 inches on center.
   d) Jointing: Welded and ground smooth and flush.
4. Infill at Mesh Railings: Woven wire mesh panels.
   a) Material and Finish: Same as stair.
   b) Wire Size: _____ inch.
   c) Wire Spacing: _____ inch.
   d) Mounting: Mesh welded to steel bar frame, frame welded to posts.
5. End and Intermediate Posts: Same material and size as top rails.
   a) Horizontal Spacing: As indicated on drawings.
   b) Mounting: Welded to top surface of stringer.

2.5 MATERIALS

A. Steel Sections: ASTM A36/A36M.

B. Steel Tubing: ASTM A500/A500M or ASTM A501/A501M structural tubing, round and shapes as indicated.

C. Pipe: ASTM A53/A53M Grade B Schedule 40, black finish.

D. Ungalvanized Steel Sheet: Hot- or cold-rolled, except use cold-rolled where finished work will be exposed to view.
1. Hot-Rolled Steel Sheet: ASTM A1011/A1011M, Designation CS (commercial steel).
2. Cold-Rolled Steel Sheet: ASTM A1008/A1008M, Designation CS (commercial steel).

E. Concrete Fill: See Section 03 3000.

2.6 ACCESSORIES

A. Steel Bolts, Nuts, and Washers: ASTM F3125/F3125M, Type 1, plain.

B. Welding Materials: AWS D1.1/D1.1M; type required for materials being welded.

C. Shop and Touch-Up Primer: SSPC-Paint 15, and comply with VOC limitations of authorities having jurisdiction.

2.7 SHOP FINISHING

A. Clean surfaces of rust, scale, grease, and foreign matter prior to finishing.

B. Do not prime surfaces in direct contact with concrete or where field welding is required.

C. Prime Painting: Use specified shop- and touch-up primer.
   1. Preparation of Steel: In accordance with SSPC-SP 2 Hand Tool Cleaning.
   2. Number of Coats: One.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field conditions are acceptable and are ready to receive work.

3.2 PREPARATION

A. When field welding is required, clean and strip primed steel items to bare metal.

3.3 INSTALLATION

A. Install components plumb and level, accurately fitted, free from distortion or defects.

B. Install metal stairs and railings in accordance with approved shop drawings.

C. Provide anchors, plates, angles, hangers, and struts required for connecting stairs to structure.

D. Allow for erection loads, and for sufficient temporary bracing to maintain true alignment until completion of erection and installation of permanent attachments.

E. Provide welded field joints where specifically indicated on drawings. Perform field welding in accordance with AWS D1.1/D1.1M.

   Other field joints may be either welded or bolted provided the result complies with the limitations specified for jointing quality levels.

F. Obtain approval prior to site cutting or creating adjustments not scheduled.

G. After erection, prime welds, abrasions, and surfaces not shop primed or galvanized, except surfaces to be in contact with concrete.

3.4 TOLERANCES

A. Maximum Variation From Plumb: 1/4 inch per story, non-cumulative.

B. Maximum Offset From True Alignment: 1/4 inch.

END OF SECTION 05 5100

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 7000 - DECORATIVE METAL RAILINGS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Steel railing and guardrail assembly for monumental (open) stairs, with stainless steel handrails.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 01 7419 - Construction Waste Management and Disposal: Additional requirements for cleaning.

C. Section 05 5000 - Metal Fabrications: Supports.

D. Section 05 7100 - Monumental Metal Stairs.

E. Section 09 9123 - Interior Painting: Field-applied finish.

1.3 REFERENCE STANDARDS

A. ADA Standards - Americans with Disabilities Act (ADA) Standards for Accessible Design; 2010.

B. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

C. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless; 2022.

D. ASTM A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength; 2021.

E. ASTM A501/A501M - Standard Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing; 2021.

F. ASTM A554 - Standard Specification for Welded Stainless Steel Mechanical Tubing; 2016.

G. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar; 2023.

H. ASTM A1008/A1008M - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Required Hardness, Solution Hardened, and Bake Hardenable; 2023, with Editorial Revision.

I. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength; 2023.

J. ASTM E935 - Standard Test Methods for Performance of Permanent Metal Railing Systems and Rails for Buildings; 2013, with Editorial Revision.

K. ASTM F3125/F3125M - Standard Specification for High Strength Structural Bolts and Assemblies, Steel and Alloy Steel, Heat Treated, Inch Dimensions 120 ksi and 150 ksi Minimum Tensile Strength, and Metric Dimensions 830 MPa and 1040 MPa Minimum Tensile Strength; 2023.

L. AWS B2.1/B2.1M - Specification for Welding Procedure and Performance Qualification; 2021.

M. AWS C3.4M/C3.4 - Specification for Torch Brazing; 2016.

N. AWS C3.5M/C3.5 - Specification for Induction Brazing; 2016 (Amended 2017).

O. AWS C3.9M/C3.9 - Specification for Resistance Brazing; 2009.

P. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2020, with Errata (2023).

Q. AWS D1.6/D1.6M - Structural Welding Code - Stainless Steel; 2017.

R. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer; 2004.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Pre-Installation Meeting: Schedule and conduct a preinstallation meeting one week before starting work of this section. Attendees shall include, but not be limited to:
   1. Contractor.
   2. Manufacturer's representative.
   3. Architect.
   4. Owner's representative.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Submit manufacturer's product data, including description of materials, components, finishes, fabrication details, glass, anchors, and accessories.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Shop Drawings: Indicate railing system elevations and sections, details of profile, dimensions, sizes, connection attachments, anchorage, size and type of fasteners, and accessories. Indicate anchor and joint locations, brazed connections, transitions, and terminations.
   1. Include the design engineer's stamp or seal on each sheet of shop drawings.

E. Delegated Design Submittal: For stairs, indicate compliance with performance requirements and design criteria, including analysis data signed and sealed by the qualified Professional Structural Engineer responsible for their preparation.

F. Test Reports: Submit test reports from an independent testing agency showing compliance with specified design and performance requirements.

G. Installer's qualification statement.

H. Welders' qualification statement: Welders' certificates in accordance with AWS B2.1/B2.1M and dated no more than 12 months before start of scheduled welding work.

1.6 QUALITY ASSURANCE

A. Structural Design Qualifications: Professional Structural Engineer experienced in design of this work and licensed in the State in which the project is located, or personnel under direct supervision of such an engineer.

B. Installer Qualifications: Company specializing in installing decorative stairs and railing systems and acceptable to stair fabricator.

C. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with not less than five years of documented experience.

D. Welder Qualifications: Welding processes and welding operators qualified in accordance with AWS D1.1/D1.1M and AWS D1.6/D1.6M no more than 12 months before start of scheduled welding work.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in factory-provided protective coverings and packaging.

B. Protect materials against damage during transit, delivery, storage, and installation at site.

C. Inspect materials upon delivery for damage. Repair damage to be indistinguishable from undamaged areas; if damage cannot be repaired to be indistinguishable from undamaged parts and finishes, replace damaged items.

D. Prior to installation, store materials and components under cover in a dry location.

1.8 FIELD CONDITIONS

A. Do not install railings until project is enclosed and ambient temperature of space is minimum 65 degrees F and maximum 95 degrees F.

B. Maintain ambient temperature of space at minimum 65 degrees F and maximum 95 degrees F for 24 hours before, during, and after railing installation.

PART 2 PRODUCTS

2.1 MANUFACTURERS

2.2 RAILING SYSTEMS

A. Railing Systems - General: Factory- or shop-fabricated in design indicated, to suit specific project conditions, and for proper connection to building structure, and in largest practical sizes for delivery to site.
   1. Performance Requirements: Design and fabricate railings and anchorages to resist the following loads without failure, damage, or permanent set; loads do not need to be applied simultaneously.
      a) Lateral Force: 75 lb minimum, at any point, when tested in accordance with ASTM E935.
      b) Distributed Load: 50 lb/ft minimum, applied in any direction at the top of the handrail, when tested in accordance with ASTM E935.
      c) Concentrated Loads on Intermediate Rails: 50 psf, minimum.
      d) Concentrated Load: 200 lbs minimum, applied in any direction at any point along the handrail system, when tested in accordance with ASTM E935.
      e) Handrails: Comply with applicable accessibility requirements of ADA Standards.
   2. Assembly: Join lengths, seal open ends, and conceal exposed mounting bolts and nuts using slip-on non-weld mechanical fittings, flanges, escutcheons, and wall brackets.
   3. Joints: Tightly fitted and secured, machined smooth with hairline seams.
   4. Field Connections: Provide sleeves to accommodate site assembly and installation.
   5. Welded and Brazed Joints: Make visible joints butt tight, flush, and hairline; use methods that avoid discoloration and damage of finish; grind smooth, polish, and restore to required finish.
      a) Ease exposed edges to a small uniform radius.
      b) Welded Joints:
         1) Carbon Steel: Perform welding in accordance with AWS D1.1/D1.1M.
         2) Stainless Steel: Perform welding in accordance with AWS D1.6/D1.6M.
      c) Brass/Bronze Brazed Joints:
         1) Perform torch brazing in accordance with AWS C3.4M/C3.4.
         2) Perform induction brazing in accordance with AWS C3.5M/C 3.5.
         3) Perform resistance brazing in accordance with AWS C3.9M/C3.9.

B. Metal Railing: Engineered, post-supported railing system with metal infill.
   1. Configuration: Guardrail with separate handrail. Unless otherwise indicated on drawings, provide the following components:
   2. Top Rail: 1-1/2 inch diameter pipe or tube.
      a) Provide steel channel at bottom of top rail as indicated on drawings, to receive pickets.
   3. Grip Rail: Round, stainless steel, 1-1/4 inch diameter nominal (1.66 inch O.D. actual).
   4. Wall Mounted Components: Components necessary to support railing with 1-1/2 inch clearance from wall, and as follows:

5. Handrail Brackets: Steel rod brackets as indicated on drawings.
6. Fasteners: Concealed.
7. Infill at Picket Railings: Vertical pickets.
   a) Horizontal Spacing: Maximum 4 inches on center.
   b) Material: Solid steel bar.
   c) Shape: Round.
   d) Size: 3/4 inch square.
   e) Top Mounting: Mechanically attached by internal fittings.
   f) Bottom Mounting: Welded to side of stringer as indicated on drawings.
8. End and Intermediate Posts: As shown on drawings.
   a) Horizontal Spacing: As indicated on drawings.
   b) Mounting: Welded.

2.3 MATERIALS

A. Steel Components:
   1. Sections, Shapes, Plate and Bar: ASTM A36/A36M.
   2. Tubing: ASTM A501/A501M structural tubing, round and shapes as indicated.
   3. Pipe: ASTM A53/A53M Grade B Schedule 40, black finish.
   4. Ungalvanized Steel Sheet: Hot- or cold-rolled, except use cold-rolled where finished work will be exposed to view.
      a) Hot-Rolled Steel Sheet: ASTM A1011/A1011M, Designation CS (commercial steel).
      b) Cold-Rolled Steel Sheet: ASTM A1008/A1008M, Designation CS (commercial steel).
   5. Bolts, Nuts, and Washers: ASTM F3125/F3125M, Type 1, plain.
   6. Welding Materials: AWS D1.1/D1.1M; type required for materials being welded.

B. Stainless Steel Components:
   1. ASTM A666, Type 304.
   2. Stainless Steel Tubing: ASTM A554, Type 304, 16 gauge, 0.0625 inch minimum metal thickness, 1-1/2 inch diameter.
   3. Stainless Steel Finish: No. 4 Bright Polished finish.

2.4 ACCESSORIES

A. Welding Fittings: Factory- or shop-welded from matching pipe or tube; joints and seams ground smooth.

B. Anchors and Fasteners: Provide anchors and other materials as required to attach to structure, made of same materials as railing components unless otherwise indicated; where exposed fasteners are unavoidable provide flush countersunk fasteners.
   1. For anchorage to concrete, provide inserts to be cast into concrete for bolt anchors.
   2. For anchorage to masonry, provide brackets to be embedded in masonry for bolt anchors.
   3. For anchorage to stud walls, provide backing plates for bolt anchors.
   4. Exposed Fasteners: No exposed bolts or screws.

C. Carbon Steel Bolts and Nuts: ASTM A307.

D. Finish Touch-Up Materials: As recommended by manufacturer for field application.

E. Shop and Touch-Up Primer: SSPC-Paint 15, complying with VOC limitations of authorities having jurisdiction.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that substrate and site conditions are acceptable and ready to receive work.

B. Verify field dimensions of locations and areas to receive work.

C. Notify Architect immediately of conditions that would prevent satisfactory installation.

D. Do not proceed with work until detrimental conditions have been corrected.

E. Furnish components to be installed in other work to installer of that other work, including but not limited to blocking, sleeves, inserts, anchor bolts, embedded plates, and supports for attachment of anchors.

3.2 PREPARATION

A. Review installation drawings before beginning installation. Coordinate diagrams, templates, instructions, and directions for installation of anchorages and fasteners.

B. Clean surfaces to receive units. Remove materials and substances detrimental to the installation.

3.3 INSTALLATION

A. Comply with approved shop drawings and written instructions.

B. Install components plumb and level, accurately fitted, free from distortion or defects, and with tight joints, except where necessary for expansion.

C. Anchor securely to structure.

D. Conceal anchor bolts and screws whenever possible. Where not concealed, use flush countersunk fastenings.

E. Isolate dissimilar materials with bituminous coating, bushings, grommets, or washers to prevent electrolytic corrosion.

3.4 TOLERANCES

A. Maximum Variation From Plumb: 1/4 inch per floor level, non-cumulative.

B. Maximum Offset From True Alignment: 1/4 inch.

C. Maximum Out-of-Position: 1/4 inch.

3.5 CLEANING

A. Remove protective film from exposed metal surfaces.

B. Metal: Clean exposed metal finishes with potable water and mild detergent, in accordance with manufacturer recommendations; do not use abrasive materials or chemicals, detergents, or other substances that may damage the material or finish.

C. See Section 01 7419 - Construction Waste Management and Disposal for additional requirements.

3.6 PROTECTION

A. Protect installed components and finishes from damage after installation.

B. Repair damage to exposed finishes to be indistinguishable from undamaged areas.
   1. If damage to finishes and components cannot be repaired to be indistinguishable from undamaged finishes and components, replace damaged items.

END OF SECTION 05 7000

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 7100 - MONUMENTAL METAL STAIRS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Decorative monumental metal stairs - Stairs 3 and 4.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 01 7419 – Construction Waste Management and Disposal.

C. Section 05 7000 - Decorative Metal Railings: Railing and guardrail assemblies.

D. Section 09 3000 - Tiling: Porcelain tile treads and landings.

1.3 REFERENCE STANDARDS

A. AISC 201 - AISC Certification Program for Structural Steel Fabricators, Standard for Steel Building Structures; 2006.

B. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

C. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware; 2023.

D. ASTM A276/A276M - Standard Specification for Stainless Steel Bars and Shapes; 2023.

E. ASTM A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength; 2021.

F. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.

G. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar; 2023.

H. ASTM F3125/F3125M - Standard Specification for High Strength Structural Bolts and Assemblies, Steel and Alloy Steel, Heat Treated, Inch Dimensions 120 ksi and 150 ksi Minimum Tensile Strength, and Metric Dimensions 830 MPa and 1040 MPa Minimum Tensile Strength; 2023.

I. AWS A2.4 - Standard Symbols for Welding, Brazing, and Nondestructive Examination; 2020.

J. AWS B2.1/B2.1M - Specification for Welding Procedure and Performance Qualification; 2021.

K. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2020, with Errata (2023).

L. AWS D1.6/D1.6M - Structural Welding Code - Stainless Steel; 2017.

M. IAS AC172 - Accreditation Criteria for Fabricator Inspection Programs for Structural Steel AC172; 2019.

N. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer; 2004.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate the installation of railings and guards with work specified in this section.

B. Preinstallation Meeting: Schedule and conduct a preinstallation meeting one week before starting work of this section. Attendees shall include, but not be limited to:
   1. Contractor.
   2. Manufacturer's representative.
   3. Architect.
   4. Owner's representative.
   5. Other subcontractors of adjacent work.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Submit manufacturer's product data, including description of materials, components, finishes, fabrication details, anchors, and accessories.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Shop Drawings: Indicate stair plans, elevations, and sections, details of profiles, dimensions, sizes, connection attachments, anchorage, size and type of fasteners, and accessories. Indicate anchor and joint locations, brazed connections, transitions, and terminations.
   1. Indicate welded connections using standard AWS A2.4 welding symbols. Indicate net weld lengths.
   2. Include the design engineer's seal and signature on each sheet of shop drawings.

E. Welders' Qualification Statement: Welders' certificates in accordance with AWS B2.1/B2.1M and dated no more than 12 months before start of scheduled welding work.

F. Designer's Qualification Statement.

G. Fabricator's Qualification Statement: Provide either of the following.
   1. Provide documentation showing steel fabricator is certified under AISC 201.

2. Fabricator's Qualification Statement: Provide documentation showing steel fabricator is accredited under IAS AC172.

1.6 QUALITY ASSURANCE

A. Structural Designer Qualifications: Professional Structural Engineer experienced in design of this work and licensed in the State in which the Project is located or personnel under direct supervision of such an engineer.

B. Welder Qualifications: Welding processes and welding operators qualified in accordance with AWS D1.1/D1.1M and AWS D1.6/D1.6M no more than 12 months before start of scheduled welding work.

C. Fabricator Qualifications: Either of the following.
   1. Certified by the American Institute for Steel Construction (AISC) under AISC 201.
   2. Accredited by the International Accreditation Service (IAS) Fabricator Inspection Program for Structural Steel in accordance with IAS AC172.

D. Installer Qualifications: Installation by fabricator.

E. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with not less than five years of documented experience.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in factory-provided protective coverings and packaging.

B. Protect materials against damage during transit, delivery, storage, and installation at site.

C. Inspect materials for damage upon delivery. Replace damaged materials that cannot be repaired to be indistinguishable from undamaged parts and finishes.

D. Prior to installation, store materials and components under cover in a dry location.

1.8 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Warranty: Installer's standard one year warranty against defects in installation commencing on Date of Substantial Completion.

PART 2 PRODUCTS

2.1 MONUMENTAL METAL STAIRS

A. Monumental Metal Stairs: Provide stairs of the design specified, complete with landing platforms, vertical and horizontal supports, railings and guards, fabricated for anchorage to each other and to building structure.
   1. Regulatory Requirements: Comply with the most stringent requirements of local, state, and federal regulations; where requirements of Contract Documents exceed those of regulations, comply with Contract Documents.

2. Structural Design: Comply with the following:
   a) Stair Capacity:
      1) Live Load: Uniform live load of 100 lb/sq ft and a maximum concentrated load of 300 lb.
      2) Dead Load: Weight of stair, associated railing system, concrete fill, cladding and other finishes.
      3) Deflection Limits: Deflection of stringer or landing framing not to exceed 1/360 of span.
      4) Stair Framing: Capable of withstanding stresses resulting from railing loads in addition to loads specified above.
      5) In addition to the gravity loads indicated above, the stair framing system shall be evaluated for vibration serviceability due to human activity, walking and running excitations, rhythmic excitation from jumping.
         (a) Refer to AISC Design Guide Number 11, Vibrations of Steel-Framed Structural Systems Due to Human Activity (2016) - Chapter 2.3 "Walking and Running Excitations – Monumental Stairs".
3. Configuration and Dimensions: As indicated on drawings.

B. Metal Jointing and Finish Quality Levels: Architectural, as defined below.
1. Architectural: Inconspicuous joints, whether welded or mechanical.
   a) Welded Joints: Continuously welded and ground smooth and flush.
   b) Mechanical Joints: Butted tight, flush, and hairline; concealed fastenings only.
   c) Exposed Edges and Corners: Eased to small uniform radius.
   d) Metal Surfaces to be Painted: Sanded or ground smooth, suitable for highest quality gloss finish.

C. Provide required fasteners and anchors:
1. Fasteners: Same material or compatible with materials being fastened; type consistent with design and specified quality level.
2. Anchors and Related Components: Same material and finish as item to be anchored, except where specifically indicated otherwise.

2.2 COMPONENTS

A. Treads: Porcelain tile on steel plate subtreads.
1. Steel Plate Subtread Thickness: 1/4 inch, minimum.
2. Tread Thickness: 1-1/2 inches.
3. Porcelain Tile Treads: See Section 09 3000.
4. Nosing: As indicated ont he "Finish Product List" on the drawings.
5. Anchorage to Stringers: Welded or bolted to carrier angles welded or bolted to stringers.

B. Risers: Woven wire mesh.
1. Riser/Nosing Profile: Sloped wire mesh riser with stainless steel U-channel at top and bottom, as indicated on drawings.
2. Wire Mesh: Stainless steel wire, Type 304, woven into a rectangular mesh.
   a) Basis of Design: **McNichols**; **Chateau 3110 Designer Mesh**.
   b) Openness: 67% open area.

C. Stringers: Steel channels.
1. Stringer Depth: As indicated on drawings.

D. Landings: Same construction as treads, supported and reinforced as required to achieve design load capacity.

E. Finish: Shop- or factory-prime painted.

F. Under Side of Stair: Exposed to view, to be finished same as specified for other exposed to view surfaces.

2.3 MATERIALS

A. Steel Components:
   1. Sections, Shapes, Plate and Bar: ASTM A36/A36M.
   2. Ungalvanized Steel Sheet: Hot- or cold-rolled, except use cold-rolled where finished work will be exposed to view.
   3. Galvanized Steel Sheet: ASTM A653/A653M, Structural Steel (SS) Grade 33/230 with G40/Z120 coating.

B. Stainless Steel Components:
   1. ASTM A666, Type 304.
   2. Stainless Steel Bars, Shapes and Moldings: ASTM A276/A276M, Type 304.
   3. Stainless Steel Finish: No.4 Bright Polished finish.

2.4 ACCESSORIES

A. Anchors and Fasteners: Provide anchors and other materials as required to attach to structure, made of same materials as stair components unless otherwise indicated; where exposed fasteners are unavoidable provide flush countersunk fasteners.
   1. For anchorage to concrete, provide inserts to be cast into concrete for bolt anchors.
   2. For anchorage to masonry, provide brackets to be embedded in masonry for bolt anchors.
   3. For anchorage to stud walls, provide backing plates for bolt anchors.
   4. Exposed Fasteners: No exposed bolts or screws.

B. Steel Bolts, Nuts, and Washers: ASTM A307, Grade A, plain.

C. Steel Bolts, Nuts, and Washers: ASTM F3125/F3125M, Type 1, and galvanized to ASTM A153/A153M where connecting galvanized components.

D. Welding Materials: AWS D1.1/D1.1M; type required for materials being welded.

E. Bituminous Coating: Cold-applied asphalt mastic, noncorrosive compound free of asbestos, sulfur, and other deleterious impurities; 0.015 inch dry film thickness per coat.

F. Sealant: Silicone; clear.

G. Shop and Touch-Up Primer: SSPC-Paint 15, complying with VOC limitations of authorities having jurisdiction.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that substrate and site conditions are acceptable and ready to receive work.

B. Verify field dimensions of locations and areas to receive work.

C. Notify Architect immediately of conditions that would prevent satisfactory installation.

D. Do not proceed with work until detrimental conditions have been corrected.

E. Furnish components to be installed in other work to installer of that other work, including but not limited to blocking, sleeves, inserts, anchor bolts, embedded plates, and supports for attachment of anchors.

3.2 PREPARATION

A. Review installation drawings before beginning installation. Coordinate diagrams, templates, instructions, and directions for installation of anchorages and fasteners.

B. Clean surfaces to receive units. Remove materials and substances detrimental to the installation.

3.3 INSTALLATION

A. Comply with approved shop drawings and written instructions.

B. Install components plumb and level, accurately fitted, free from distortion or defects, and with tight joints, except where necessary for expansion.

C. Anchor securely to structure.

D. Conceal anchor bolts and screws whenever possible. Where not concealed, use flush countersunk fastenings.

E. Weld connections that cannot be shop welded due to size limitations.
   1. Match shop welding and bolting.
   2. Clean welds, bolted connections, and abraded areas.
   3. Touch up shop primer and factory-applied finishes.

F. Isolate dissimilar materials with bituminous coating, bushings, grommets, or washers to prevent electrolytic corrosion.

3.4 TOLERANCES

A. Maximum Variation From Plumb: 1/4 inch per floor level, non-cumulative.

B. Maximum Offset From True Alignment: 1/4 inch.

C. Maximum Out-of-Position: 1/4 inch.

3.5 CLEANING

A. Remove protective film from exposed metal surfaces.

B. Metal: Clean exposed metal finishes with potable water and mild detergent, in accordance with manufacturer recommendations; do not use abrasive materials or chemicals, detergents, or other substances that may damage the material or finish.

C. See Section 01 7419 - Construction Waste Management and Disposal, for additional requirements.

3.6 PROTECTION

A. Protect installed components and finishes from damage after installation.

B. Repair damage to exposed finishes to be indistinguishable from undamaged areas.
   1. If damage to finishes and components cannot be repaired to be indistinguishable from undamaged finishes and components, replace damaged items.

END OF SECTION 05 7100

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 06 1000 - ROUGH CARPENTRY

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Nonstructural dimension lumber for miscellaneous uses.

B. Plywood panels for miscellaneous uses.

C. Sheathing.

D. Subflooring.

E. High density fiberboard for stage flooring.

F. Preservative treated wood materials.

G. Fire retardant treated wood materials.

H. Concealed wood blocking, nailers, and supports.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

1.3 REFERENCE STANDARDS

A. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware; 2023.

B. ASTM C1177/C1177M - Standard Specification for Glass Mat Gypsum Substrate for Use as Sheathing; 2017.

C. ASTM D2898 - Standard Practice for Accelerated Weathering of Fire-Retardant-Treated Wood for Fire Testing; 2010 (Reapproved 2017).

D. ASTM D3273 - Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber; 2021.

E. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2023d.

F. AWPA U1 - Use Category System: User Specification for Treated Wood; 2023.

G. NELMA (SGR) - Standard Grading Rules for Northeastern Lumber; 2021.

H. PS 1 - Structural Plywood; 2023.

I. PS 20 - American Softwood Lumber Standard; 2021.

J. SPIB (GR) - Standard Grading Rules; 2021.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide technical data on wood preservative materials and fire retardant treatments.

C. Product Data: Provide product data for high density fiberboard.

D. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Laboratory Test Reports for Credit b4: For composite wood products, documentation indicating that product comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
   2. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Inlcude statement indicating cost for each certified wood product.

E. Manufacturer's Certificate: Certify that wood products supplied for rough carpentry meet or exceed specified requirements.
   1. High Density Fiberboard: Submit manufacturer's certificate that products meet or exceed specified requirements, in lieu of grade stamping.

1.5 DELIVERY, STORAGE, AND HANDLING

A. General: Cover wood products to protect against moisture. Support stacked products to prevent deformation and to allow air circulation.

B. Fire Retardant Treated Wood: Prevent exposure to precipitation during shipping, storage, and installation.

1.6 WARRANTY

A. See Section 01 7800 - Closeout Submittals for additional warranty requirements.

B. Correct defective work within a one-year period commencing on Date of Substantial Completion.

PART 2 PRODUCTS

2.1 GENERAL REQUIREMENTS

A. Dimension Lumber: Comply with PS 20 and requirements of specified grading agencies.
   1. If no species is specified, provide species graded by the agency specified; if no grading agency is specified, provide lumber graded by grading agency meeting the specified requirements.

2. Grading Agency: Grading agency whose rules are approved by the Board of Review, American Lumber Standard Committee at www.alsc.org, and who provides grading service for the species and grade specified; provide lumber stamped with grade mark unless otherwise indicated.

B. Provide sustainably harvested wood; see Section 01 6000 - Product Requirements for requirements.

2.2 DIMENSION LUMBER FOR CONCEALED APPLICATIONS

A. Grading Agency: Northeastern Lumber Manufacturers Association; NELMA (SGR).

B. Grading Agency: Southern Pine Inspection Bureau, Inc; SPIB (GR).

C. Sizes: Nominal sizes as indicated on drawings, S4S.

D. Moisture Content: S-dry or MC19.

E. Miscellaneous Framing, Blocking, Nailers, Grounds, and Furring:
1. Lumber: S4S, No. 2 or Standard Grade.
2. Boards: Standard or No. 3.

2.3 EXPOSED BOARDS

A. High Density Fiberboard **WF2**: Tempered, engineered composite wood board, consisting of wood fibers and resin heated and highly compressed to form a hard, dense board.
1. Refer to Finish Product List on the Drawings for Basis-of-Design product.
2. Density: 50 - 65 lbs/cu. ft.
3. Thickness: As indicated on the Finish Product List on the drawings.
4. Exposed and Back Surface: Smooth, paintable.
a) Paint all sides and edges.

B. Moisture Content: Kiln-dry (15 percent maximum).

C. Surfacing: S2S.

D. Species: Manufacturer's standard.

E. Grade: No. 2, 2 Common, or Construction.

2.4 CONSTRUCTION PANELS

A. Subfloor/Underlayment Combination: PS 1 or PS 2 type, rated Single Floor.
1. Panel Type: Plywood.
2. Bond Classification: Exposure 1.
3. Span Rating: 48.
4. Performance Category: 1-1/8 PERF CAT.
5. Edges: Tongue and groove.

B. Exterior Wall Sheathing: Glass mat faced gypsum, ASTM C1177/C1177M, 5/8 inch Type X fire resistant.

1. At Assemblies Indicated with Fire-Rating: Use type required by indicated tested assembly.
2. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.
3. Edges: Square.
4. Products:
   a) CertainTeed Corporation; GlasRoc Brand: www.certainteed.com/#sle.
   b) Georgia-Pacific Gypsum; DensGlass Sheathing: www.gpgypsum.com/#sle.
   c) USG Corporation; Securock Brand Glass-Mat Sheathing Regular 5/8 in. (15.9 mm): www.usg.com/#sle.

C. Exterior Parapet Sheathing, For use at parapet framing and any other location where roofing membrane will be adhered over sheathing: Glass mat faced gypsum, ASTM C1177/C1177M, 5/8 inch Type X fire resistant.
1. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.
2. Edges: Square.
3. Manufacturers:
   a) Georgia-Pacific Gypsum; DensDeck Prime Roof Board: www.gpgypsum.com/#sle.
   b) National Gypsum; DEXcell Glass Mat Roof Board.
   c) US Gypsum; Securock Gypsum Fiber Roof Board.
   d) Substitutions: See Section 01 6000 - Product Requirements.

D. Communications and Electrical Room Mounting Boards: PS 1 A-D plywood, or medium density fiberboard; 3/4 inch thick; flame spread index of 25 or less, smoke developed index of 450 or less, when tested in accordance with ASTM E84.

E. Other Applications:
1. Plywood Concealed From View But Located Within Exterior Enclosure: PS 1, C-C Plugged or better, Exterior grade.
2. Plywood Exposed to View But Not Exposed to Weather: PS 1, A-D, or better.
3. Other Locations: PS 1, C-D Plugged or better.

2.5 ACCESSORIES

A. Fasteners and Anchors:
1. Metal and Finish: Hot-dipped galvanized steel complying with ASTM A153/A153M for high humidity and preservative-treated wood locations, unfinished steel elsewhere.
2. Drywall Screws: Bugle head, hardened steel, power driven type, length three times thickness of sheathing.
3. Anchors: Toggle bolt type for anchorage to hollow masonry.

B. Air Barrier: See Section 07 2670.

2.6 FACTORY WOOD TREATMENT

A. Treated Lumber and Plywood: Comply with requirements of AWPA U1 - Use Category System for wood treatments determined by use categories, expected service conditions, and specific applications.
1. Fire-Retardant Treated Wood: Mark each piece of wood with producer's stamp indicating compliance with specified requirements.

2. Preservative-Treated Wood: Provide lumber and plywood marked or stamped by an ALSC-accredited testing agency, certifying level and type of treatment in accordance with AWPA standards.

B. Fire Retardant Treatment:
   1. Exterior Type: AWPA U1, Category UCFB, Commodity Specification H, chemically treated and pressure impregnated; capable of providing a maximum flame spread index of 25 when tested in accordance with ASTM E84, with no evidence of significant combustion when test is extended for an additional 20 minutes both before and after accelerated weathering test performed in accordance with ASTM D2898.
      a) Kiln dry wood after treatment to a maximum moisture content of 19 percent for lumber and 15 percent for plywood.
      b) Do not use treated wood in direct contact with the ground.
   2. Interior Type A: AWPA U1, Use Category UCFA, Commodity Specification H, low temperature (low hygroscopic) type, chemically treated and pressure impregnated; capable of providing a maximum flame spread index of 25 when tested in accordance with ASTM E84, with no evidence of significant combustion when test is extended for an additional 20 minutes.
      a) Kiln dry wood after treatment to a maximum moisture content of 19 percent for lumber and 15 percent for plywood.
      b) Treat rough carpentry items as indicated .
      c) Do not use treated wood in applications exposed to weather or where the wood may become wet.

C. Preservative Treatment:
   1. Preservative Pressure Treatment of Lumber Above Grade: AWPA U1, Use Category UC3B, Commodity Specification A using waterborne preservative.
      a) Kiln dry lumber after treatment to maximum moisture content of 19 percent.
      b) Treat lumber exposed to weather.
      c) Treat lumber in contact with roofing, flashing, or waterproofing.
      d) Treat lumber in contact with masonry or concrete.
      e) Treat lumber less than 18 inches above grade.
      f) Treat lumber in other locations as indicated.
   2. Preservative Pressure Treatment of Plywood Above Grade: AWPA U1, Use Category UC2 and UC3B, Commodity Specification F using waterborne preservative.
      a) Kiln dry plywood after treatment to maximum moisture content of 19 percent.
      b) Treat plywood in contact with roofing, flashing, or waterproofing.
      c) Treat plywood in contact with masonry or concrete.
      d) Treat plywood less than 18 inches above grade.
      e) Treat plywood in other locations as indicated.
   3. Preservative Pressure Treatment of Lumber in Contact with Soil: AWPA U1, Use Category UC4A, Commodity Specification A using waterborne preservative.
      a) Preservative for Field Application to Cut Surfaces: As recommended by manufacturer of factory treatment chemicals for brush-application in the field.

PART 3 EXECUTION

3.1 INSTALLATION - GENERAL

A. Select material sizes to minimize waste.

B. Reuse scrap to the greatest extent possible; clearly separate scrap for use on site as accessory components, including: shims, bracing, and blocking.

C. Where treated wood is used on interior, provide temporary ventilation during and immediately after installation sufficient to remove indoor air contaminants.

3.2 BLOCKING, NAILERS, AND SUPPORTS

A. Provide framing and blocking members as indicated or as required to support finishes, fixtures, specialty items, and trim.

B. Provide the following specific nonstructural framing and blocking:
1. Cabinets and shelf supports.
2. Wall brackets.
3. Handrails.
4. Grab bars.
5. Towel and bath accessories.
6. Wall-mounted door stops.
7. Visual display units.
8. Wall paneling and trim.
9. Joints of rigid wall coverings that occur between studs.

3.3 INSTALLATION OF CONSTRUCTION PANELS

A. Subflooring: Glue and nail to framing; staples are not permitted.

B. Wall Sheathing: Secure with long dimension perpendicular to wall studs, with ends over firm bearing and staggered, using nails, screws, or staples.

C. Communications and Electrical Room Mounting Boards: Secure with screws to studs with edges over firm bearing; space fasteners at maximum 24 inches on center on all edges and into studs in field of board.
1. At fire-rated walls, install board over wall board indicated as part of the fire-rated assembly.
2. Where boards are indicated as full floor-to-ceiling height, install with long edge of board parallel to studs.
3. Install adjacent boards without gaps.

3.4 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements for additional requirements.

3.5 CLEANING

A. Waste Disposal: See Section 01 7419 - Construction Waste Management and Disposal.
   1. Comply with applicable regulations.
   2. Do not burn scrap on project site.
   3. Do not burn scraps that have been pressure treated.
   4. Do not send materials treated with pentachlorophenol, CCA, or ACA to co-generation facilities or "waste-to-energy" facilities.

B. Do not leave wood, shavings, sawdust, etc. on the ground or buried in fill.

C. Prevent sawdust and wood shavings from entering the storm drainage system.

END OF SECTION 06 1000

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 06 2000 - FINISH CARPENTRY

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Finish carpentry items.
   1. Wood wall base.
   2. Miscellaneous edge trim.
   3. Wood display rail.

B. High density fiberboard for Stage flooring.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 06 1000 - Rough Carpentry: Support framing, grounds, and concealed blocking.

1.3 REFERENCE STANDARDS

A. AWI/AWMAC/WI (AWS) - Architectural Woodwork Standards; 2014, with Errata (2018).

B. AWMAC/WI (NAAWS) - North American Architectural Woodwork Standards, U.S. Version 3.1; 2017, with Errata (2019).

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data:
   1. Provide data on fire retardant treatment materials and application instructions.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit b4: For composite wood products, documentation indicating that product contains no urea formaldehyde.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
   3. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Inlcude statement indicating cost for each certified wood product.

D. Shop Drawings: Indicate materials, component profiles, fastening methods, jointing details, and accessories.
   1. Scale of Drawings: 1-1/2 inch to 1 foot, minimum.

2. Provide information as required by AWI/AWMAC/WI (AWS) or AWMAC/WI (NAAWS).

E. Samples: Submit two samples of finish plywood, minimum 4 x 4 inch in size illustrating wood grain and specified finish.

F. Samples: Submit two samples of high density fiberboard, 4 x 4 inch in size illustrating specified finish.

G. Samples: Submit two samples of wood trim 3 inch long.

1.5 QUALITY ASSURANCE

A. Fabricator Qualifications: Company specializing in fabricating the products specified in this section with minimum five years of documented experience.
   1. Single Source Responsibility: Provide and install this work from single fabricator.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver factory-fabricated units to project site in original packages, containers or bundles bearing brand name and identification.

B. Store finish carpentry items under cover, elevated above grade, and in a dry, well-ventilated area not exposed to heat or sunlight.

C. Protect from moisture damage.

D. Handle materials and products to prevent damage to edges, ends, or surfaces.

PART 2 PRODUCTS

2.1 FINISH CARPENTRY ITEMS

A. Quality Standard: Custom Grade, in accordance with AWI/AWMAC/WI (AWS) or AWMAC/WI (NAAWS), unless noted otherwise.

B. Surface Burning Characteristics: Provide materials having fire and smoke properties as required by applicable code.

C. Interior Woodwork Items:
   1. Base **WB1**: White maple, prepare for stained finish.
   2. Miscellaneous Solid Wood Trim, designated **WD1**: White maple, prepare for stained finish.
   3. Display Rail: White birch, soft maple, or poplar; prepare for paint finish.
   4. Solid Wood Trim, Painted: MDF, White birch, soft maple, or poplar; prepare for paint finish.

2.2 SUSTAINABILITY CHARACTERISTICS

A. Provide sustainably harvested wood, certified or labeled; see Section 01 6000.

B. Provide composite wood products complying with composite wood indoor emission requirements in Section 01 3566.42.

2.3 LUMBER MATERIALS

A. Hardwood Lumber: White maple species, plain sawn, maximum moisture content of 6 percent ; with vertical grain , of quality suitable for transparent finish.

2.4 SHEET MATERIALS

2.5 FABRICATION

A. Shop assemble work for delivery to site, permitting passage through building openings.

B. When necessary to cut and fit on site, provide materials with ample allowance for cutting. Provide trim for scribing and site cutting.

END OF SECTION 06 2000

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 06 4100 - ARCHITECTURAL WOOD CASEWORK

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Specially fabricated cabinet units.
   1. Base and upper cabinets.
   2. Art cabinets.

B. Floating shelves.

C. Built-in display cases.

D. Built-in benches.

E. Custom slat wall assembly.

F. Hardware.

G. Glass display door hardware.

H. Upholstery for casework.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 06 1000 - Rough Carpentry: Support framing, grounds, and concealed blocking.

C. Section 08 8000 - Glazing: Glass for casework.

D. Section 12 3553.19 - Wood Laboratory Casework.

E. Section 12 3600 - Countertops.

1.3 REFERENCE STANDARDS

A. ANSI A208.2 - American National Standard for Medium Density Fiberboard for Interior Use; 2016.

B. AWI/AWMAC/WI (AWS) - Architectural Woodwork Standards; 2014, with Errata (2018).

C. BHMA A156.9 - American National Standard for Cabinet Hardware; 2015.

D. HPVA HP-1 - American National Standard for Hardwood and Decorative Plywood; 2016.

E. NEMA LD 3 - High-Pressure Decorative Laminates; 2005.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene a preinstallation meeting not less than one week before starting work of this section; require attendance by all affected installers.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data for hardware accessories.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit 5d: For adhesives, documentation including printed statement of VOC content.
   2. Product Data for Credit b4: For composite wood products, documentation indicating that product contains no urea formaldehyde.
   3. Laboratory Test Reports for Credit b4: For composite wood products, documentation indicating that product comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
   4. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
   5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Inlcude statement indicating cost for each certified wood product.

D. Shop Drawings: Provide plans, elevations, sections, and details. Indicate materials, component profiles, fastening methods, jointing details, and accessories.
   1. Scale of Drawings: 1-1/2 inch to 1 foot, minimum.

E. Samples: Submit actual sample items of proposed pulls, demonstrating hardware design, quality, and finish.

F. Verification Samples: Submit actual samples of each specified plastic laminate color and texture.

1.6 QUALITY ASSURANCE

A. Fabricator Qualifications: Company specializing in fabricating the products specified in this section with minimum five years of documented experience.
   1. Company with at least one project in the past 5 years with value of woodwork within 20 percent of cost of woodwork for this Project.
   2. Single Source Responsibility: Provide and install this work from single fabricator.

B. Quality Certification:

1. Provide labels or certificates indicating that the installed work complies with AWI/AWMAC/WI (AWS) requirements for grade or grades specified.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Protect units from moisture damage.

1.8 FIELD CONDITIONS

A. During and after installation of custom cabinets, maintain temperature and humidity conditions in building spaces at same levels planned for occupancy.

PART 2 PRODUCTS

2.1 CABINETS

A. Quality Standard: Custom Grade, in accordance with AWI/AWMAC/WI (AWS), unless noted otherwise.
   1. Premium Grade: Reception desks.

B. Plastic Laminate Faced Cabinets: Custom grade.

C. Cabinets:
   1. Finish - Exposed Exterior Surfaces: Decorative laminate.
   2. Finish - Exposed Interior Surfaces: Decorative laminate.
   3. Finish - Semi-Exposed Surfaces: Decorative laminate
   4. Finish - Concealed Surfaces: Manufacturer's option.
   5. Door and Drawer Front Edge Profiles: Square edge with thick applied band.
   6. Casework Construction Type: Type A - Frameless.
   7. Interface Style for Cabinet and Door: Style 1 - Overlay; reveal overlay.
   8. Adjustable Shelf Loading: 40 psf.
      a) Deflection: L/144.
   9. Cabinet Style: Flush overlay.
   10. Cabinet Doors and Drawer Fronts: Flush style.
   11. Drawer Side Construction: Multiple-dovetailed.
   12. Drawer Construction Technique: Dovetail joints.

2.2 FLOATING SHELVES

A. Shelf Material: 3/4-inch plastic-laminate clad MDF with valance as indicated on drawings and PVC edge banding.

2.3 WOOD-BASED COMPONENTS

A. Wood fabricated from old growth timber is not permitted.

B. Provide sustainably harvested wood, certified or labeled; see Section 01 3566.42.

2.4 PANEL CORE MATERIALS

A. Medium Density Fiberboard (MDF): Composite panel composed of cellulosic fibers, additives, and bonding system; cured under heat and pressure; comply with ANSI A208.2.
   1. Grade: 115; moisture resistance: MR10.

2.5 HARDWOOD PLYWOOD PANELS

A. Hardwood Plywood: Plywood manufactured for nonstructural decorative applications; consisting of faces and backs applied to a variety of core types; comply with HPVA HP-1.
   1. Woodwork Quality Standard: Panels complying with specified woodwork quality standard.
   2. Veneer Face: See Casework Finish Type **WD1** on the "Finish Product List" on the drawings.
   3. Face: Maple; plain-sliced; grade AA.
      a) Finish: Stained, with transparent topcoat.
   4. Core, Medium Density Fiberboard: Comply with ANSI A208.2.
      a) Grade: 115; moisture resistance: MR10.
      b) Construction and Thickness: 3 plies, 1/2 inch unless otherwise indicated on drawings.
   5. Provide solid hardwood trim to match veneer at all wood-veneered shelf edges.

2.6 LAMINATE MATERIALS

A. Basis of Design Manufacturers: As indicated for each Casework Finish Type "**PL**" on the "Finish Product List" on the drawings.
   1. Formica Corporation: www.formica.com/#sle.
   2. Wilsonart LLC: www.wilsonart.com/#sle.
   3. Other Acceptable Manufacturers:
      a) Formica: www.formica.com.
      b) Nevamar: www.panolam/nevamar.com.
      c) Pionite: www.panolam/pionite.com
   4. Substitutions: See Section 01 6000 - Product Requirements.

B. High Pressure Decorative Laminate (HPDL): NEMA LD 3, types as recommended for specific applications.

C. Provide specific types as indicated.
   1. Horizontal Surfaces: HGS, 0.048 inch nominal thickness, refer to Finish Product List on the drawings for specific products, textures, and colors.
   2. Vertical Surfaces: VGS, 0.028 inch nominal thickness, refer to Finish Product List on the drawings for specific products, textures, and colors.
   3. Laminate Backer: BKL, 0.020 inch nominal thickness, undecorated; for application to concealed backside of panels faced with high pressure decorative laminate.

2.7 COUNTERTOPS

A. Countertops: See Section 12 3600.

2.8 ACCESSORIES

A. Adhesive: Type recommended by fabricator to suit application.

B. Plastic Edge Banding: Extruded PVC, flat shaped; smooth finish; self locking serrated tongue; of width to match component thickness.
   1. Color: As selected by Architect from manufacturer's standard range.
   2. Use at all exposed plywood edges, where plastic laminate is the finish material.
   3. Use at all exposed shelf edges, where plastic laminate is the finish material.

C. Bolts, Nuts, Washers, Lags, Pins, and Screws: Of size and type to suit application; galvanized or chrome-plated finish in concealed locations and stainless steel or chrome-plated finish in exposed locations.

D. Grommets: Standard plastic, painted metal, or rubber grommets for cut-outs, in color to match adjacent surface.

2.9 HARDWARE

A. Cabinet Hardware: Comply with BHMA A156.9 for hardware types and grades indicated below:
   1. Hardware Types: As indicated on drawings.
   2. Product Grade: Grade 2.

B. Metal Z-Shaped Wall Cabinet Support Clips: Paired, cleated, structural anchorage components applied to back of cabinets and walls for wall cabinet mounting.

C. Adjustable Shelf Supports: Standard side-mounted system using recessed metal shelf standards or multiple holes for pin supports and coordinated shelf rests, polished chrome finish, for nominal 1 inch spacing adjustments.
   1. Materials: Formed steel shapes.
   2. Finish: As selected by Architect from manufacturer's standard finishes.
   3. Manufacturers:
      a) Hafele.
      b) Hardware Resources.
      c) Knape & Vog
      d) Sugatsune.

D. Adjustable Shelf Supports - Floating Shelves: Heavy-duty back-mounted system using surface mounted metal shelf standards and coordinated cantilevered shelf brackets, satin chrome finish, for nominal 1 inch spacing adjustments.
   1. Materials: Formed steel shapes.
   2. Support Length: Manufacturer's standard length, to support shelf depth indicated on drawings.
   3. Finish: As selected by Architect from manufacturer's standard finishes.
   4. Products:
      a) Hafele; 186 and 187 Series Backets, KV, with 86 and 187 Standards.
      b) Hardware Resources; Extra Heavy Duty Bracket with TRK07 Standards,
      c) Knape & Vogt; Series 187.
      d) Substitutions: See Section 01 6000 - Product Requirements.

E. Countertop Support Brackets: Fixed, L-shaped, face-of-stud mounting.
   1. Materials: Steel; T-shape cross-section.
      a) Finish: Manufacturer's standard, factory-applied, powder coat.
      b) Color: As selected by Architect from manufacturers standard colors.
      c) Height: 18 inches.
      d) Support Length: As required to support counter depth indicated on drawings.
      e) Width: 2 inches.
   2. Products:
      a) Basis of Design: Rakks/Rangine Corporation; EH Series Brackets: www.rakks.com/#sle.
      b) Substitutions: See Section 01 6000 - Product Requirements.

F. Countertop Brackets: Fixed, concealed vertical leg, side-of-stud mounting.

G. Drawer and Door Pulls: "U" shaped wire pull, steel with chrome finish, 4 inch centers.

H. Cabinet Catches and Latches:

I. Drawer Slides:
   1. Type: Full extension.
   2. Static Load Capacity: Commercial grade.
   3. Mounting: Bottom mounted.

J. Soft-Close, Door and Drawer Adjustable Dampers: Concealed, frame-mounted, screw-adjustable damper; steel with satin finish.
   1. Manufacturers:
      a) Grass America Inc: www.grassusa.com/#sle.
      b) Titus Cabinet Hardware: www.titusplus.com/us/en/#sle.

K. Hinges: European style concealed self-closing type, steel with nickel-plated finish.

L. Slat Wall Hardware:
   1. Slat Wall Insert: Extruded aluminum insert design to receive various hanger accessories.
      a) Basis of Design: **Eagle Aluminum**; **Aluminum Slatwall Insert,** Legacy Part No. E-182.
      b) Nominal Overall Dimension: 1-1/8 inches wide by 19/32 inches deep.
      c) Length: As indicated on drawings.
      d) Finish: Black powder coat.
   2. Slat Wall Shelf Bracket: Extruded aluminum bracket for mounting shelves to slat wall.
      a) Basis of Design: **Hangman Products**; **Slatwall 3/4" Shelf Bracket, 6882-96B.**
      b) Shelf Thickness Supported: 3/4 inches.
      c) Finish: Black powder coat.

M. Closet Pole / Coat Rod: Round metal tube with wall brackets, removable.
   1. Outside Diameter: 1-1/4 inch nominal.
   2. Lengths: As indicated on drawings.
   3. Finish: Brushed nickel.

2.10 DISPLAY CASE COMPONENTS

A. Display Door Hardware: Extruded aluminum top channel and bottom tracks with rollers intended to be installed with glass panels to serve as sliding display cabinet doors. Provide a metal ratchet type lock to secure the glass panel doors.
   1. Basis-of-Design Products:
      a) Tracks: C.R. Laurence Co.; **CRL Double Roller Track System**.
         1) Top channel and bottom track.
      b) Lock: C.R. Laurence Co.; **CRL Chrome "Tamper Proof" Sliding Glass Door Lock with Standard Ratchet Bar**.
      c) Finger Pull: C.R. Laurence Co.; **CRL Anachrome Showcase Threaded Finger Pull**.

B. Glazed Sliding Doors:
   1. 1/4 inch clear tempered glass with threaded finger pulls.
      a) Exposed edges to be flat-polished, if applicable.
   2. Door track: See above.
   3. Lock: See above.

C. Glass Shelves:
   1. 1/4 inch clear tempered glass with flat-polished edges.
   2. Shelf Depth: As indicated on drawings.
   3. Shelves per Unit: As indicated on drawings.

2.11 UPHOLSTERY FOR CASEWORK

A. General:
   1. Unless otherwise indicated, casework supplier shall provide and install all materials and accessories for upholstery for built-in casework specified in this section and indicated on the drawings.
   2. Upholstery and upholstery materials shall meet requirements of applicable State codes and Federal regulations.

B. Materials
   1. Fabrics, Finish Type **UPH1, UPH2**: See Finish Product List on A900 series drawings for specific fabric product(s) and location(s).
   2. All upholstery fabrics shall be treated with an approved stain and soil resistant finish. Such treatment shall be in accordance with applicable code restrictions and in accordance with manufacturer's recommendations.
   3. Upholstery shall comply with CAL TB 117-2013 for flammability.

2.12 FABRICATION

A. Assembly: Shop assemble cabinets for delivery to site in units easily handled and to permit passage through building openings.

B. Edging: Fit shelves, doors, and exposed edges with specified edging. Do not use more than one piece for any single length.

C. Fitting: When necessary to cut and fit on site, provide materials with ample allowance for cutting. Provide matching trim for scribing and site cutting.

D. Plastic Laminate: Apply plastic laminate finish in full uninterrupted sheets consistent with manufactured sizes. Fit corners and joints hairline; secure with concealed fasteners. Slightly bevel arises. Locate counter butt joints minimum 2 feet from sink cut-outs.
   1. Apply laminate backing sheet to reverse side of plastic laminate finished surfaces.

E. Mechanically fasten back splash to countertops as recommended by laminate manufacturer at 16 inches on center.

F. Provide cutouts for plumbing fixtures. Verify locations of cutouts from on-site dimensions. Prime paint cut edges.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify adequacy of backing and support framing.

B. Verify location and sizes of utility rough-in associated with work of this section.

3.2 INSTALLATION

A. Install work in accordance with AWI/AWMAC/WI (AWS) requirements for grade indicated.

B. Set and secure custom cabinets in place, assuring that they are rigid, plumb, and level.

C. Use concealed joint fasteners to align and secure adjoining cabinet units.

D. Carefully scribe casework abutting other components, with maximum gaps of 1/32 inch. Do not use additional overlay trim for this purpose.

E. Secure cabinets to floor using appropriate angles and anchorages.

3.3 ADJUSTING

A. Adjust installed work.

B. Adjust moving or operating parts to function smoothly and correctly.

3.4 CLEANING

A. Clean casework, counters, shelves, hardware, fittings, and fixtures.

END OF SECTION 06 4100

SECTION 06 4200 - WOOD PANELING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Custom wood veneer paneling.

B. Shop finishing.

C. Installation accessories.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

1.3 REFERENCE STANDARDS

A. AWI/AWMAC/WI (AWS) - Architectural Woodwork Standards; 2014, with Errata (2018).

B. AWMAC/WI (NAAWS) - North American Architectural Woodwork Standards, U.S. Version 3.1; 2017, with Errata (2019).

C. HPVA HP-1 - American National Standard for Hardwood and Decorative Plywood; 2016.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data on fire-retardant treatment materials and application instructions.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit b4: For composite wood products, documentation indicating that product contains no urea formaldehyde.
   2. Laboratory Test Reports for Credit b4: For composite wood products, documentation indicating that product comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
   3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   4. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

5. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Inlcude statement indicating cost for each certified wood product.

D. Shop Drawings: Provide elevations, sections, and details. Indicate materials, component profiles, fastening methods, jointing details, and accessories.
   1. Scale of Drawings: 1-1/2 inch to 1 foot, minimum.
   2. Provide plan of panel number sequencing.

E. Samples: Submit two samples of finished panels, 6 x 6 inch in size, illustrating wood grain and specified finish.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Protect work from moisture damage.

B. Do not deliver wood materials to project site until building is fully enclosed and interior temperature and humidity are in accordance with recommendations of AWI/AWMAC/WI (AWS) or AWMAC/WI (NAAWS).

1.6 FIELD CONDITIONS

A. Environmental Limitations: Do not install wood wall panels until spaces are enclosed and weatherproof, wet-work in spaces is completed and dry, work above ceilings is complete, and ambient temperature and humidity conditions are being maintained at the levels indicated for Project when occupied for its intended use.

1.7 WARRANTY

A. Warranty: Provide a one-year warranty for materials and workmanship.

B. Installer's Warranty: Provide a one-year warranty for installation, from Date of Substantial Completion.

PART 2 PRODUCTS

2.1 REGULATORY REQUIREMENTS

A. Comply with applicable codes for fire-retardant requirements.

2.2 WOOD WALL PANEL SYSTEM

A. Quality Standard: Custom Grade, in accordance with AWI/AWMAC/WI (AWS) or AWMAC/WI (NAAWS), unless otherwise indicated.

B. Flat Paneling **WWP1**:
   1. Species: As indicated on the "Finish Product List" on the drawings.
   2. Cut: As indicated on the "Finish Product List" on the drawings.
   3. Panels: Veneer of full width and balanced sequence matched.
      a) Panels More Than One Leaf High: Architectural end matching.

4. Visible Edges and Reveals: Filled and painted.
5. Outside Corners: Mitered and splined, unless otherwise indicated on drawings.

2.3 MATERIALS

A. Provide sustainably harvested wood, certified or labeled as specified in Section 01 3566.42.

B. Hardwood Plywood: HPVA HP-1 Grade A; veneer core, type of glue recommended for application; of grain quality suitable for transparent finish.

C. Wood Veneer Panels: Select AA grade quality wood veneer laminated to wood fiber substrate and coated with furniture grade catalyzed finish as protective topcoat.

2.4 INSTALLATION MATERIALS

A. Furring, Blocking, Shims, and Hanging Strips: Fire-retardant-treated softwood lumber, kiln-dried to less than 15 percent moisture content.

B. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide metal expansion sleeves or expansion bolts for post-installed anchors. Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls.

2.5 FABRICATION

A. Shop prepare and identify panels for grain matching during site erection.

B. Prepare panels for delivery to site, permitting passage through building openings.

C. Finish exposed edges of panels as specified by grade requirements.

D. When necessary to cut and fit on site, provide materials with ample allowance for cutting and scribing.

E. Shop cut openings, to maximum extent possible, to receive hardware, appliances, plumbing fixtures, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.

2.6 SHOP FINISHING

A. Preparation for Finishing: Comply with referenced quality standard for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing paneling, as applicable to each unit of work.
   1. Backpriming: Apply two coats of sealer or primer, compatible with finish coats, to concealed surfaces of paneling.

B. Sand work smooth and set exposed nails and screws.

C. Apply wood filler in exposed nail and screw indentations.

D. Finish work in accordance with AWI/AWMAC/WI (AWS) or AWMAC/WI (NAAWS), Section 5 - Finishing for grade specified and as follows:

1. Transparent:
   a) System - 11, Polyurethane, Catalyzed.
   b) Stain: As selected by Architect.
   c) Sheen: Satin.

E. Wood Sealer: Factory-applied, water-based polymer, water-repellent sealer that reacts chemically with untreated, natural wood surfaces.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as indicated on shop drawings.

B. Verify adequacy of backing and support framing.

C. Verify mechanical, electrical, and building items affecting work of this section are placed and ready to receive this work.

3.2 PREPARATION

A. Before installation, condition paneling to humidity conditions in installation areas.

B. Before installing paneling, examine shop-fabricated work for completion and complete work as required, including removal of packing and backpriming.

3.3 INSTALLATION

A. Install wood wall panels in accordance with manufacturer's written instructions and approved shop drawings.

B. Install work in accordance with AWI/AWMAC/WI (AWS) or AWMAC/WI (NAAWS) requirements for grade indicated.

C. Do not begin installation until wood materials have been fully acclimated to interior conditions.

D. Anchor paneling to supporting substrate with concealed panel-hanger clips, splined connection strips, or blind nailing.

E. Set and secure materials and components in place, plumb and level, using concealed fasteners wherever possible.

F. Where necessary to cut and fit on site, scribe work abutting other components. Do not use additional overlay trim to conceal gaps.

G. Avoid contamination of the panel faces with adhesives, solvents, or cleaners during installation.

H. Touch up damaged finish to match original, using materials provided by fabricator; replace components that cannot be refinished like new.

3.4 CLEANING

A. Clean exposed wood surfaces in compliance with manufacturer's instructions for cleaning and touchup of minor finish damage. Remove and replace wood wall components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

3.5 TOLERANCES

A. Maximum Variation from True Position: 1/16 inch.

B. Maximum Offset from True Alignment with Abutting Materials: 1/32 inch.

END OF SECTION 06 4200

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 06 6116 - SOLID SURFACING FABRICATIONS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Solid surfacing fabrications including the following:
   1. Windowsills.
   2. Cane detection at stairs.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures - CT HPBS: General LEED requirements.

B. Section 01 7419 - Construction Waste Management and Disposal: Waste management and disposal requirements.

C. Section 07 9200 - Joint Sealants: Elastomeric joint sealants.

D. Section 12 3600 - Countertops: Solid surface material and epoxy for countertops.

1.3 DEFINITIONS

A. Solid Surface: Non-porous, homogeneous material maintaining the same composition throughout the part with a composition of acrylic polymer, aluminum trihydrate filler and pigment.

1.4 REFERENCE STANDARDS

A. ASTM C920 - Standard Specification for Elastomeric Joint Sealants; 2018.

B. ASTM D638 - Standard Test Method for Tensile Properties of Plastics; 2014.

C. ASTM D785 - Standard Test Method for Rockwell Hardness of Plastics and Electrical Insulating Materials; 2008 (Reapproved 2015).

D. ASTM D790 - Standard Test Methods for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials; 2017.

E. ASTM E228 - Standard Test Method for Linear Thermal Expansion of Solid Materials With a Push-Rod Dilatometer; 2017.

F. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2019b.

G. ASTM G155 - Standard Practice for Operating Xenon Arc Light Apparatus for Exposure of Nonmetallic Materials; 2013.

H. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi; 2015.

I. ASTM G22 - Standard Practice for Determining Resistance of Plastics to Bacteria; 1976(96).

J. NEMA LD 3 - High-Pressure Decorative Laminates; 2005.

K. NFPA 101 - Life Safety Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

L. NFPA 255 - Standard Method of Test of Surface Burning Characteristics of Building Materials; 2006.

M. UL 2824 - GREENGUARD Certification Program Method for Measuring Microbial Resistance From Various Sources Using Static Environmental Chambers; Current Edition, Including All Revisions.

N. UL 723 - Standard for Test for Surface Burning Characteristics of Building Materials; Current Edition, Including All Revisions.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meetings: Conduct a preinstallation meeting one week prior to the start of the work of this section; require attendance by all affected installers.
   1. Review Contract Documents for Work included in this section and determine complete understanding of requirements and responsibilities relative to work included, storage and handling of materials, materials to be used, installation of materials, sequence and quality control, project staffing, restrictions on areas of work and other matters affecting construction, to permit compliance with intent of work of this section.

1.6 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Indicate product description including solid surface sills illustrating full range of standard colors, fabrication information and compliance with specified performance requirements. Include resistance to list of chemicals.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Shop Drawings: Indicate plans, sections, dimensions, component sizes, edge details, thermosetting requirements, fabrication details, attachment provisions, sizes of furring, blocking, including concealed blocking and coordination requirements with adjacent work. Show locations and sizes of cutouts and holes for plumbing fixtures, faucets, soap dispensers, waste receptacles and other items installed in solid surface.

E. Samples: Submit two samples, minimum 6 by 6 inch in size. Cut sample and seam together for representation of inconspicuous seam. Indicate full range of color and pattern variation. Approved samples will be retained as standards for work.

F. Operational and Maintenance Data:
   1. Submit manufacturer's care and maintenance data, including repair and cleaning instructions. Include in project closeout documents.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with at least five years of documented experience.

B. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years of documented experience and approved by manufacturer.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements: Deliver no components to project site until areas are ready for installation.

B. Storage and Handling Requirements:
   1. Store components indoors prior to installation.
   2. Handle materials to prevent damage to finished surfaces.

1.9 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Manufacturer Warranty: Provide manufacturer’s standard warranty for material only for period of 10 years against defects and/or deficiencies in accordance with General Conditions of the Contract. Promptly correct any defects or deficiencies which become apparent within warranty period, to satisfaction of Architect and at no expense to Owner.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers/Products:
   1. Refer to the Finish Product List on the drawings for basis-of-design manufacturers, products, colors, and textures.

2.2 MATERIALS

A. Performance/Design Criteria:
   1. Fire Performance : Class A, per ASTM E84. Smoke Developed < 25; Flame Spread <25.
   2. Property Requirement (min or max) Test Procedure
   3. Solid Surface Based Products:

a) Tensile Strength 6000 psi min ASTM D638
b) Tensile Modulus 1.5 x 10-6 psi min ASTM D638
c) Tensile Elongation 0.4% min. ASTM D638
d) Flexural Strength 10000 psi min ASTM D790
e) Flexural Modulus 1.2 x 106 psi min ASTM D790
f) Hardness >85-Rockwell "M" scale min. ASTM D785
g) Thermal Expansion 2.2 x 10-5 in./in./°F ASTM E228
h) Fungi and Bacteria Does not support microbial growth ASTM G21 & ASTM G22
i) Microbial Resistance Highly resistant to mold growth UL 2824
j) Ball Impact No fracture - 1/2 lb. Ball: NEMA LD 3, Method 3.8
6 mm slab - 36" drop 12 mm slab - 144" drop
k) Weatherability ^E*94<5 in 1,000 hrs. ASTM G155
l) Flammability ASTM E84, NFPA 255 & UL 723
1) All Colors
2) 6 mm 12 mm
m) Flame Spread <25 <25
n) Smoke Developed <25 <25
o) Class A A (NFPA 101)

B. Solid Surface Material **SOSF4**: Non-porous, homogeneous material maintaining the same composition throughout the part with a composition of acrylic polymer, aluminum trihydrate filler and pigment; not coated, laminated or of composite construction; meeting following criteria:

C. Flammability: Class 1 and A when tested to UL 723.

D. Adhesive for Bonding to Other Products: One component silicone complying with ASTM C920.

E. Joint Adhesive: Two-part reactive non-sagging seam adhesive for use with solid surfacing materials; comply with ASTM D790; color-coordinated with solid surfacing materials; DuPont Corian Joint Adhesive.

F. Sealant: A standard mildew-resistant, FDA/UL and NSF 51 compliant in Food Zone area, recognized silicone color matched sealant or clear silicone sealants.

2.3 COMPONENTS

A. Windowsills: 1/2 inch thick solid surfacing material, adhesively joined with inconspicuous seams and edge details as indicated on Drawings. Color selected by Architect from manufacturer’s full color range.

2.4 FABRICATION

A. Fabricate components in shop to greatest extent practical to sizes and shapes indicated, in accordance with approved shop drawings and solid polymer manufacturer requirements. Form joints between components using manufacturer’s standard joint adhesive without conspicuous joints. Provide factory cutouts for plumbing fittings and bath accessories as indicated on Drawings.

B. Where indicated, thermoform corners and edges or other objects to shapes and sizes indicated on Drawings, prior to seaming and joining. Cut components larger than finished dimensions and sand edges to remove nicks and scratches. Heat entire component uniformly prior to forming.

C. Ensure no blistering, whitening and cracking of components during forming.

D. Fabricate joints between components using manufacturer's standard joint adhesive. Ensure joints are inconspicuous in appearance and without voids. Attach 2 inches wide reinforcing strip of solid polymer material under each joint. Reinforcing strip of solid polymer material is not required when using manufacturer's recommended joint adhesive.

E. Rout and finish component edges to a smooth, uniform finish. Rout cutouts, then sand edges smooth. Repair or reject defective or inaccurate work.

F. Finish: Ensure surfaces have uniform finish:
   1. Matte, with a 60-degree gloss rating of 5 - 20.
   2. Semi-gloss, with a 60° gloss rating of 25 - 50.

G. Fabrication Tolerances:
   1. Variation in Component Size: +/-1/8 inch.
   2. Location of Openings: +/-1/8 inch from indicated location.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verification of Conditions: Examine substrates and conditions, with fabricator present for compliance with requirements for installation tolerances and other conditions affecting performance of work. Proceed with installation only after unsatisfactory conditions have been corrected.
   1. Verify actual site dimensions and location of adjacent materials prior to commencing work.
   2. Examine cabinets upon which counter tops are to be installed. Verify cabinets are level to within 1/8 inch in 10' - 0".
   3. Notify Architect in writing of any conditions which would be detrimental to installation.

B. Commencement of work implies acceptance of previously completed work.

3.2 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

C. Provide anchoring devices for installation and embedding.

D. Provide templates and rough-in measurements.

3.3 INSTALLATION

A. Install components plumb, level, rigid, scribed to adjacent finishes in accordance with approved shop drawings and product installation details.

B. Fabricate field joints using manufacturer's recommended adhesive, with joints being inconspicuous in finished work. Exposed joints/seams are not permitted. Keep components and hands clean when making joints. Reinforce field joints as specified herein. Cut and finish component edges with clean, sharp returns.

C. Rout radii and contours to template. Anchor securely to base component or other supports. Align adjacent components and form seams to comply with manufacturer’s written recommendations using adhesive in color to match work. Carefully dress joints smooth, remove surface scratches and clean entire surface.

D. Seal between wall and components with joint sealant as specified herein and in Section 07 9200, as applicable.

E. Keep components and hands clean during installation. Remove adhesives, sealants and other stains. Ensure components are clean on date of Substantial Completion of the Work.

3.4 TOLERANCES

A. Maximum Variation From True Dimension: 1/8 inch.

B. Maximum Offset From True Position: 1/8 inch.

3.5 REPAIR

A. Repair minor imperfections and cracked seams and replace areas of severely damaged surfaces in accordance with manufacturer’s technical bulletins.

3.6 FIELD QUALITY CONTROL

A. Non-Conforming Work: Replace damaged work which cannot be satisfactorily repaired, restored or cleaned, to satisfaction of Architect at no cost to Owner.

3.7 CLEANING

A. Remove excess adhesive and sealant from visible surfaces.

B. Clean and polish surfaces in accordance with manufacturer’s care and maintenance instructions.

3.8 PROTECTION

A. Provide protective coverings to prevent physical damage or staining following installation for duration of project.

B. Protect surfaces from damage until date of Substantial Completion of the Work.

END OF SECTION 06 6116

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 06 8316 - FIBERGLASS REINFORCED PANELING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Fiberglass reinforced plastic panels.

B. Trim.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

1.3 REFERENCE STANDARDS

A. 9 CFR 416.2 - Regulatory Requirements Under the Federal Meat Inspection Act and the Poultry Products Inspection Act, Part 416-Sanitation; current edition.

B. ASTM D256 - Standard Test Methods for Determining the Izod Pendulum Impact Resistance of Plastics; 2010 (Reapproved 2018).

C. ASTM D3273 - Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber; 2021.

D. ASTM D5319 - Standard Specification for Glass-Fiber Reinforced Polyester Wall and Ceiling Panels; 2017.

E. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2023d.

F. FM 4880 - Approval Standard for Class 1 Fire Rating of Building Panels or Interior Finish Materials; 2015.

G. ISO 846 - Plastics - Evaluation of the action of microorganisms; 2019.

H. ISO 2812-1 - Paints and varnishes -- Determination of resistance to liquids -- Part 1: Immersion in liquids other than water; 2017.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on specified products, describing physical and performance characteristics; including sizes, patterns and colors available; and installation instructions.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.

2. Laboratory Test Reports for Credit 5d: For adhesives and sealants, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Samples: Submit two samples 6_by_6 inch in size illustrating material and surface design of panels.

E. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
1. See Section 01 6000 - Product Requirements, for additional provisions.
2. Extra Panels: Quantity equal to 1 percent of total installed.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Store panels flat, indoors, on a clean, dry surface. Remove packaging and allow panels to acclimate to room temperature for 48 hours prior to installation.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Fiberglass Reinforced Plastic Panels:
1. Basis-of-Design: Marlite, Inc: www.marlite.com/#sle.
2. Other Acceptable Manufactuers:
a) Crane Composites, Inc: www.cranecomposites.com/#sle.

2.2 PANEL SYSTEMS

A. Wall Panels **FRP1, FRP2**:
1. Panel Size: 4 by 8 feet.
2. Panel Thickness: 0.10 inch.
3. Surface Design: Smooth.
4. Color: As selected by Architect. Refer to Finish Product List on the drawings.
5. Attachment Method: Adhesive only, sealant joints, no trim.

2.3 MATERIALS

A. Panels: Fiberglass reinforced plastic (FRP), complying with ASTM D5319.
1. Surface Burning Characteristics: Maximum flame spread index of 25 and smoke developed index of 450; when system tested in accordance with ASTM E84.
2. Class 1 fire rated when tested in accordance with FM 4880.
3. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.

4. Impact Strength: Greater than 6 ft lb force per inch, when tested in accordance with ASTM D256.
5. Sanitation and Cleanability: Comply with 9 CFR 416.2.
6. Chemical Cleanability: Excellent chemical resistance to common cleaners and detergents when tested in accordance with ISO 2812-1.
7. Biological Resistance: Rating of 0, when tested in accordance with ISO 846.

B. Trim: Vinyl; color coordinating with panel.

C. Adhesive: Type recommended by panel manufacturer.

D. Sealant: Type recommended by panel manufacturer; white.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify existing conditions and substrate flatness before starting work.

B. Verify that substrate conditions are ready to receive the work of this section.

3.2 INSTALLATION - WALLS

A. Install panels in accordance with manufacturer's instructions.

B. Cut and drill panels with carbide tipped saw blades, drill bits, or snips.

C. Pre-drill fastener holes in panels, 1/8 inch greater in diameter than fastener, spaced as indicated by panel manufacturer.

D. Apply adhesive to the back side of the panel using trowel as recommended by adhesive manufacturer.

E. Apply panels to wall with seams plumb and pattern aligned with adjoining panels.

F. Install panels with manufacturer's recommended gap for panel field and corner joints.

G. Place trim on panel before fastening edges, as required.

H. Fill channels in trim with sealant before attaching to panel.

I. Install trim with adhesive and screws or nails, as required.

J. Seal gaps at floor, ceiling, and between panels with applicable sealant to prevent moisture intrusion.

K. Remove excess sealant after paneling is installed and prior to curing.

END OF SECTION 06 8316

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 1400 - FLUID-APPLIED WATERPROOFING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Modified-polymer elastomeric waterproofing.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 03 3000 - Cast-in-Place Concrete: Concrete substrate.

C. Section 07 2100 - Thermal Insulation: Insulation used for protective cover.

1.3 REFERENCE STANDARDS

A. ASTM D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers--Tension; 2016.

B. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials; 2023.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data for each product specified and/or each components of the system, including membrane, surface conditioner, flexible flashings, joint cover sheet, and joint and crack sealants.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Shop Drawings: Indicate special joint or termination conditions and conditions of interface with other materials.

E. Manufacturer's Installation Instructions: Indicate special procedures, perimeter conditions requiring special attention, and acceptable installation temperatures.

F. Manufacturer's qualification statement.

G. Installer's qualification statement.

H. Warranty Documentation:
   1. Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.
   2. Submit installer's documentation that installation complies with warranty conditions for the field-applied waterproofing.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than ten years documented experience.

B. Installer Qualifications: Company specializing in performing work of the type specified and with at least five years of documented experience.

1.6 FIELD CONDITIONS

A. Perform work only when existing and forecasted weather conditions are within the limits established by the manufacturer of the materials and products used.

B. Proceed with installation only when substrate construction and preparation work is complete and in condition to receive membrane waterproofing.

1.7 WARRANTY

A. See Section 01 7800 - Closeout Submittals for additional warranty requirements.

B. Installer Warranty: Provide 5-year warranty for waterproofing failing to resist penetration of water commencing on Date of Substantial Completion. Complete forms in Owner's name and register with installer.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Modified-Polymer Elastomeric Waterproofing:
   1. Basis-of-Design:. GCP Applied Technologies; **PROCOR Below-Grade**.
   2. Provide the basis of design product, or a comparable product by one of the following, subject to compliance with reqirements:
      a) Carlisle Coatings & Waterproofing, Inc.
      b) Henry Company.
      c) W.R. Meadows.
   3. Substitutions: See Section 01 6000 - Product Requirements.

2.2 FLUID-APPLIED WATERPROOFING APPLICATIONS

A. Modified-Polymer Elastomeric Waterproofing:
   1. Location: Foundation walls, where indicated on drawings.

a) Includes elevator pit waterproofing, all walls.

2. Cover with protection board and drainage panel.

2.3 FLUID-APPLIED WATERPROOFING MATERIALS

A. Polymer-Modified Elastomeric Waterproofing: Two-component, 100% solids, cold-fluid-applied waterproofing membrane, ASTM C386.
   1. Cured Thickness: 60 mil, 0.060 inch, minimum.
   2. Volatile Organc Compound (VOC) Content: Less than 75 g/L.
   3. Water Vapor Permeance: 0.08 perms, maximum, measured in accordance with ASTM E96/E96M.
   4. Ultimate Elongation: 450 percent, minimum, measured in accordance with ASTM D412.
   5. Peel Adhesion to Concrete: 5 lbs/inch nominal, per ASTM D903.

2.4 ACCESSORIES

A. Surface Conditioner: Compatible with membrane compound; as recommended by membrane manufacturer.

B. Sealant for Joints and Cracks in Substrate: Type compatible with waterproofing material and as recommended by waterproofing manufacturer.

C. Fluid-Applied Detailing Membrane: Type compatible with waterproofing material and as recommended by waterproofing manufacturer. Applications include flashing around penentrations and curbs, sealing waterproofing material terminations, and reinforcing inside corners.

D. Protection Board: Provide type capable of preventing damage to waterproofing due to backfilling and construction traffic.

E. Drainage Panel: Drainage layer with geotextile filter fabric on earth side.
   1. Composition: Dimpled polyethylene, polypropylene, or polystyrene core; polypropylene or polyester filter fabric.
   2. Thickness: As indicated on drawings.

F. Tape: Type compatible with waterproofing material and as recommended by waterproofing manufacturer.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine existing conditions before starting work, with installer present. The installer shall examine conditions of substrates and other conditions under which this work is to be performed and notify the contractor, in writing, of circumstances detrimental to the proper completion of the work. Do not proceed with work until unsatisfactory conditions are corrected.

B. Verify substrate surfaces are free of frozen matter, dampness, loose particles, cracks, pits, projections, penetrations, or foreign matter detrimental to adhesion or application of waterproofing system.

C. Verify that substrate surfaces are smooth, free of honeycomb or pitting, and not detrimental to full contact bond of waterproofing materials.

D. Verify that items penetrating surfaces to receive waterproofing are securely installed.

E. Where existing conditions are responsibility of another installer, notify Architect of unsatisfactory conditions.

F. Do not proceed with this work until unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Protect adjacent surfaces from damage not designated to receive waterproofing.

B. Clean and prepare surfaces to receive waterproofing in accordance with manufacturer's instructions; vacuum substrate clean.

C. Do not apply waterproofing to surfaces unacceptable to waterproofing manufacturer.

D. Fill non-moving joints and cracks with a filler compatible with waterproofing materials.

E. Seal moving cracks with sealant and non-rigid filler, using procedures recommended by sealant and waterproofing manufacturers.

F. Treat tie-holes and cracked, pitted, honeycombed or heavily bugholed surfaces as recommended by the waterproofin manufacturer.

G. Grind irregular construction joints to suitable flush surface.

H. Prepare building expansion joints at locations as indicated on drawings.

I. Install cant strips at inside corners.

3.3 INSTALLATION

A. Install waterproofing system, including all accessories and substate treatments, in accordance with manufacturer's written instructions , and approved shop drawings.

B. Apply primer or surface conditioner, where required or recommended by manufacturer, at a rate recommended by manufacturer, and protect conditioner from rain or frost until dry.

C. Seal membrane and flashings to adjoining surfaces.

3.4 INSTALLATION - DRAINAGE PANEL AND PROTECTION BOARD

A. General: Apply protection board and related materials in accordance with manufacturer’s recommendations and approved shop drawings.

B. Place drainage panel directly against membrane, butt joints, place to encourage drainage downward, and scribe and cut boards around projections, penetrations, and interruptions.

C. Place protection board directly against drainage panel; butt joints, and scribe and cut boards around projections, penetrations, and interruptions.

3.5 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements for additional requirements.

B. Owner will provide testing services, and Contractor to provide temporary construction and materials for testing.

C. Provide daily on-site attendance of waterproofing manufacturer's representative during installation of this work.

3.6 PROTECTION

A. Do not permit traffic over unprotected or uncovered membrane.

END OF SECTION 07 1400

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 2100 - THERMAL INSULATION

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Board insulation at cavity wall construction, perimeter foundation wall, underside of floor slabs, and exterior wall behind rainscreen cladding.

B. Batt insulation in exterior wall construction (firesafing).

1.2 RELATED REQUIREMENTS

A. Section 01 3329.04 – Material Content Form

B. Section 01 3566.42 - Sustainability Compliance Procedures.

C. Section 01 7419 – Construction Waste Management and Disposal

D. Section 07 2119 - Foamed-in-Place Insulation: Spray-applied insulation materials.

E. Section 07 5423 - Thermoplastic-Polyolefin (TPO) Roofing: Insulation specified as part of roofing construction.

1.3 DEFINITIONS

A. Mineral Fiber Material Composition: Insulation referred to as mineral fiber block, board, and blanket insulation is composed of fibers from mineral based substances such as rock, slag, or glass and processed from the molten state into fibrous form.
   1. Based on type of insulation substance, the material will be referred to as a mineral fiber when having a rock or slag base, and glass fiber with a glass or silica sand base, also considered a mineral.
   2. Insulation blankets are flexible units consisting of felted, bonded, or unbonded fibers formed into rolls or flat cut pieces referred to as batts; rolls are simply longer versions of batts.
   3. For additional information about mineral fiber and the various classification types, refer to the following reference standards; ASTM C553, ASTM C612, ASTM C665, and ASTM C726.

1.4 REFERENCE STANDARDS

A. ASTM C518 - Standard Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus; 2021.

B. ASTM C553 - Standard Specification for Mineral Fiber Blanket Thermal Insulation for Commercial and Industrial Applications; 2013 (Reapproved 2019).

C. ASTM C578 - Standard Specification for Rigid, Cellular Polystyrene Thermal Insulation; 2023.

D. ASTM C612 - Standard Specification for Mineral Fiber Block and Board Thermal Insulation; 2014 (Reapproved 2019).

E. ASTM C665 - Standard Specification for Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction and Manufactured Housing; 2017.

F. ASTM C726 - Standard Specification for Mineral Wool Roof Insulation Board; 2017.

G. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2023d.

H. NFPA 285 - Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Wall Assemblies Containing Combustible Components; 2023.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data on product characteristics, performance criteria, and product limitations.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Shop Drawings: Submit drawings that indicate location of joint or termination detail conditions.

E. ABAA Field Quality Control Submittals: Submit third-party reports of testing and inspection required by ABAA QAP.

F. Manufacturer's Installation Instructions: Include information on special environmental conditions required for installation and installation techniques.

G. ABAA Manufacturer Qualification: Submit documentation of current evaluation of proposed manufacturer and materials.

H. ABAA Installer Qualification: Submit documentation of current contractor accreditation and current installer certification. Keep copies of contractor accreditation and installer certification on site during and after installation. Present on-site documentation upon request.

1.6 QUALITY ASSURANCE

A. Air Barrier Association of America (ABAA) Quality Assurance Program (QAP); www.airbarrier.org/#sle:
   1. Installer Qualification: Use accredited contractor, certified installers, evaluated materials, and third-party field quality control audit.
   2. Manufacturer Qualification: Use evaluated materials from a single manufacturer regularly engaged in air barrier material manufacture. Use secondary materials approved in writing by primary material manufacturer.

1.7 FIELD CONDITIONS

A. Do not install insulation adhesives when temperature or weather conditions are detrimental to successful installation.

PART 2 PRODUCTS

2.1 APPLICATIONS

A. Insulation Under Concrete Slabs: Extruded polystyrene (XPS) board.

B. Insulation at Perimeter of Foundation: Extruded polystyrene (XPS) board.

C. Insulation Inside Masonry Cavity Walls: Extruded polystyrene (XPS) board.

D. Insulation for Rainscreen Assemblies, Continuous: Mineral fiber board.

E. Insulation at Slab Edges: Mineral fiber batt (blanket) insulation.

2.2 FOAM BOARD INSULATION MATERIALS

A. Extruded Polystyrene (XPS) Board Insulation: Complies with ASTM C578.
   1. Application: Foundation walls.
   2. Flame Spread Index (FSI): Class A - 0 to 25, when tested in accordance with ASTM E84.
   3. Smoke Developed Index (SDI): 450 or less, when tested in accordance with ASTM E84.
   4. Complies with fire resistance requirements indicated on drawings as part of an exterior non-load-bearing exterior wall assembly when tested in accordance with NFPA 285.
   5. Type and Compressive Resistance: Type IV, 25 psi, minimum. ASTM C578
   6. Water Absorption: 0.3 percent by volume maximum, ASTM C272.
   7. Drainage Capacity: At 500 psf, gals/min/ft: 12.0, ASTM D4716.
   8. Thermal Resistance, R-value: 10.6 per 2.25 inch thickness at 75 degrees F mean temperature.
   9. Basis of Design Product:
      a) Basis-of-Design: Owens Corning; **FOAMULAR NGX Insul-Drain**.
      b) Substitutions: See Section 01 6000 - Product Requirements.

B. \Extruded Polystyrene (XPS) Board Insulation: Complies with ASTM C578 with either natural skin or cut cell surfaces.
   1. Application: Under slab.

2. Type and Compressive Resistance: Type VI, 40 psi (276 kPa), minimum.
3. Flame Spread Index (FSI): Class A - 0 to 25, when tested in accordance with ASTM E84.
4. Smoke Developed Index (SDI): 450 or less, when tested in accordance with ASTM E84.
5. Type and Thermal Resistance, R-value: Type VI, 5.0 (0.88) per 1 inch thickness at 75 degrees F mean temperature.
6. Complies with fire resistance requirements indicated on drawings as part of an approved exterior non-load-bearing exterior wall assembly when tested in accordance with NFPA 285.
    a) Product must be approved for use in Type I construction in accordance with Connecticut State Building Code (IBC) Section 2603.5 and comply with the acceptance criteria of NFPA 285
7. Type and Water Absorption: Type VI, 0.3 percent by volume, maximum, by total immersion.
8. Products:
    a) Basis-of-Design: Owens Corning; **FOAMULAR NGX 400**.
    b) Substitutions: See Section 01 6000 - Product Requirements.

C. Extruded Polystyrene (XPS) Board Insulation: Complies with ASTM C578 with either natural skin or cut cell surfaces.
1. Application: Masonry veneer cavity walls.
2. Type and Compressive Resistance: Type IV, 25 psi (173 kPa), minimum.
3. Flame Spread Index (FSI): Class A - 0 to 25, when tested in accordance with ASTM E84.
4. Smoke Developed Index (SDI): 450 or less, when tested in accordance with ASTM E84.
5. Type and Thermal Resistance, R-value: Type IV, 5.0 (0.88) per 1 inch thickness at 75 degrees F mean temperature.
6. Complies with fire resistance requirements indicated on drawings as part of an exterior non-load-bearing exterior wall assembly when tested in accordance with NFPA 285.
    a) Product must be approved for use in Type I construction in accordance with Connecticut State Building Code (IBC) Section 2603.5 and comply with the acceptance criteria of NFPA 285
7. Type and Water Absorption: Type IV, 0.3 percent by volume, maximum, by total immersion.
8. Products:
    a) Basis-of-Design: Owens Corning Corporation**; FOAMULAR NGX CW25**: www.ocbuildingspec.com/#sle.
    b) Alternate Acceptable Product:
        1) Kingspan Insulation LLC; GreenGuard GG25-LG XPS Type IV: www.kingspan.com/#sle.
        2) DuPont de Nemours, Inc; Low-GWP Styrofoam Brand XPS Insulation: building.dupont.com/#sle.
    c) Substitutions: See Section 01 6000 - Product Requirements.

2.3 MINERAL FIBER BOARD INSULATION MATERIALS

A. Mineral Fiberboard Insulation: Rigid or semi-rigid mineral fiber, ASTM C612 or ASTM C553; unfaced flame spread index of 0 (zero) when tested in accordance with ASTM E84.
1. Application: Exterior wall assemblies as indicated on drawings. See A500 - Typical Exterior Assemblies.
2. Smoke Developed Index: 450 or less, when tested in accordance with ASTM E84.
3. Board Size: 16 by 48 inches.

4. Thermal Resistance: R-value of 4.2 degrees F hr sq ft/Btu per inch at 75 degrees F, minimum, when tested according to ASTM C518.
5. Maximum Density: 8.0 pounds per cubic foot, nominal.
6. Products:
   a) Basis-of-Design: Thermafiber, Inc; RainBarrier Dark: www.thermafiber.com/#sle.
   b) Other Acceptable Products: Subject to compliance with requiremetns.
      1) ROCKWOOL (ROXUL, Inc); CAVITYROCK / CAVITYROCK BLACK: www.rockwool.com/#sle.
   c) Substitutions: See Section 01 6000 - Product Requirements.

B. Mineral Fiberboard Insulation (Perimeter Fire Containment): Semi-rigid mineral fiber, ASTM C612, Type III; faced on one side with foil-scrim vapor retarder, formaldehyde free. Flame spread index of 25 when tested in accordance with ASTM E84.
1. Application: Aluminum curtain wall spandrel.
2. Smoke Developed Index: 450 or less, when tested in accordance with ASTM E84.
3. Board Thickness: Provide board thicknesses indicated on the drawings.
4. Thermal Resistance: R-value of 4.0 - 4.3 degrees F hr sq ft/Btu per inch at 75 degrees F, minimum, when tested according to ASTM C518.
5. Water Vapor Permeance: 27 perms minimum, per ASTM E96.
6. Water Vapor Sorption: < 1% by weight, tested in accordance with ASTM C1104.
7. Density: 8.0 pounds per cubic foot, nominal.
8. Basis-of-Design Product:
   a) Owens Corning; **Thermafiber Firespan 90**.
   b) Substitutions: See Section 01 6000 - Product Requirements.
9. Perimeter Fire Containment System: Provide where indicated for gaps between the perimeter edge of fire-resistance-rated floor assemblies and non-fire-resistance rated exterior curtain walls.
   a) Refer to Section 07 8400 - Firestopping for additional requirements.

2.4 MINERAL FIBER BLANKET INSULATION MATERIALS

A. Mineral Fiber Batt Insulation: Flexible or semi-rigid preformed batt or blanket, complying with ASTM C665; friction fit; unfaced flame spread index of 0 (zero) when tested in accordance with ASTM E84.
1. Application: Firesafing at slab edges.
2. Flame Spread Index: 25 or less, when tested in accordance with ASTM E84.
3. Smoke Developed Index: 0 (zero), when tested in accordance with ASTM E84.
4. Products:
   a) Basis-of-Design: Thermafiber, Inc**; Thermafiber Safing:** www.thermafiber.com/#sle.
   b) Substitutions: See Section 01 6000 - Product Requirements.

2.5 ACCESSORIES

A. Tape: Reinforced polyethylene film with acrylic pressure sensitive adhesive.
1. Application: Sealing of interior circular penetrations, such as pipes or cables.
2. Width: As required for application.

B. Self-Adhered Transition Flashing: Multipurpose, self-adhered flashing with modified butyl adhesive, polyester fiber top sheet, and polypropylene interlayer.

1. Application: Primerless adhesion for use as through-wall flashings and wall transitions to roof and below-grade systems.
2. Thickness: 45 mil, 0.045 inch, nominal.
3. Size: 6 inches wide, in rolls 75 feet long.

C. Flashing Tape: Special polyolefin film with high performance adhesive.
1. Application: Interior window and door sill flashing tape.
2. Width: As required for application.

D. Tape joints of rigid insulation in accordance with roofing and insulation manufacturers' instructions.

E. Liquid Flashing: Single-component, nonsag flashing and weather barrier sealant.
1. Products:

F. Accessories for Dark Insulation:
1. Black Facing: Additional black facing material, matching mineral wool facing, for treating exposed edges and joints.
2. Black Coating: Black coating, matching mineral wood facing, rolled or painted onto exposed edges of a/nd or joints in insulation with dark facing. Use product recommended by insulation manufacturer.

G. Rigid Insulation Pronged Attachment Washers: Solid plastic cap washer attached to wall ties for attachment of rigid insulation and to help seal against air and moisture penetration through weather barrier assembly.
1. Basis-of-Design Product: Owens-Corning; **Thermafiber RainBarrier Clip**.
a) Basis-of-Design: Thermafiber; **RainBarrier Clip**.

H. Support for Cladding and Continuous Insulation: See respective cladding section.

I. Black Facing Material: As recommended by insulation manufacturer for concealing exposed edges and joints in dark-faced mineral eiberboard insulation

J. Nails: Steel wire; galvanized; type and size to suit application.

K. Adhesive: Type recommended by insulation manufacturer for application.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that substrate, adjacent materials, and insulation materials are dry and that substrates are ready to receive insulation.

B. Verify substrate surfaces are flat, free of honeycomb, fins, irregularities, or materials or substances that may impede adhesive bond.

3.2 BOARD INSTALLATION AT FOUNDATION PERIMETER

A. Install boards horizontally on foundation perimeter.

B. Extend boards over expansion joints, unbonded to foundation on one side of joint.

C. Cut and fit insulation tightly to protrusions or interruptions to the insulation plane.

3.3 BOARD INSTALLATION AT EXTERIOR WALLS

A. Install boards horizontally on walls.

B. Cut and fit insulation tightly to protrusions or interruptions to the insulation plane.

3.4 BOARD INSTALLATION AT CAVITY WALLS

A. Install boards to fit snugly between wall ties.

B. Install boards horizontally on walls.

C. Cut and fit insulation tightly to protrusions or interruptions to the insulation plane.

3.5 BOARD INSTALLATION UNDER CONCRETE SLABS

A. Place insulation under slabs on grade after base for slab has been compacted.

B. Cut and fit insulation tightly to protrusions or interruptions to the insulation plane.

C. Prevent insulation from being displaced or damaged while placing vapor retarder and placing slab.

3.6 BATT INSTALLATION

A. Install insulation and vapor retarder in accordance with manufacturer's instructions.

B. Install in exterior wall and roof spaces without gaps or voids. Do not compress insulation.

C. Trim insulation neatly to fit spaces. Insulate miscellaneous gaps and voids.

D. Fit insulation tightly in cavities and tightly to exterior side of mechanical and electrical services within the plane of the insulation.

3.7 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements for additional requirements.

B. Coordination of Air Barrier Association of America (ABAA) Tests and Inspections:
   1. Provide testing and inspection required by ABAA Quality Assurance Program (QAP).
   2. Notify ABAA in writing of schedule for air barrier work, and allow adequate time for testing and inspection.
   3. Cooperate with ABAA testing agency.
   4. Allow access to air barrier work areas and staging.
   5. Do not cover air barrier work until tested, inspected, and accepted.

3.8 PROTECTION

A. Do not permit installed insulation to be damaged prior to its concealment.

END OF SECTION 07 2100

SECTION 07 2119 - FOAMED-IN-PLACE INSULATION

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Foamed-in-place insulation.
   1. In masonry cavity walls.
   2. In exterior framed walls.
   3. At junctions of dissimilar wall and roof materials.
   4. At steel roof deck to fill in deck flutes.

B. Foamed-in-place insulating sealant.
   1. In exterior wall crevices.
   2. For filling perimeter window and door shim spaces and crevices in exterior wall and roof.

C. Protective intumescent coating.

D. Preformed closure plugs for metal deck.

1.2 RELATED REQUIREMENTS

A. Section 01 3329.04 – Material Content Form

B. Section 01 3566.42 - Sustainability Compliance Procedures

C. Section 01 7419 – Construction Waste Management and Disposal

1.3 REFERENCE STANDARDS

A. ASTM C518 - Standard Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus; 2021.

B. ASTM D2842 - Standard Test Method for Water Absorption of Rigid Cellular Plastics; 2019.

C. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2023d.

D. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials; 2023.

E. ASTM E2178 - Standard Test Method for Determining Air Leakage Rate and Calculation of Air Permeance of Building Materials; 2021a.

F. FM 4880 - Approval Standard for Class 1 Fire Rating of Building Panels or Interior Finish Materials; 2015.

G. NFPA 275 - Standard Method of Fire Tests for the Evaluation of Thermal Barriers; 2022.

H. NFPA 285 - Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Wall Assemblies Containing Combustible Components; 2023.

I. NFPA 286 - Standard Methods of Fire Tests for Evaluating Contribution of Wall and Ceiling Interior Finish to Room Fire Growth; 2019.

J. UL 1040 - Standard for Safety Fire Test of Insulated Wall Construction; Current Edition, Including All Revisions.

K. UL 1715 - Standard for Safety Fire Test of Interior Finish Material; Current Edition, Including All Revisions.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene one week prior to commencing work of this section.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide product description, insulation properties, overcoat properties, and preparation requirements.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Certificates: Certify that products of this section meet or exceed specified requirements.

E. Manufacturer's Installation Instructions: Indicate special procedures, and perimeter conditions requiring special attention.

F. Manufacturer Qualification: Submit documentation of current evaluation of proposed manufacturer and materials.

G. Installer Qualification: Submit documentation of current contractor accreditation and current installer certification. Keep copies of all contractor accreditation and installer certification on site during and after installation. Present on-site documentation upon request.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products of the type specified in this section, with not less than seven years of documented experience.

B. Installer Qualifications: Company specializing in performing work of the type specified, with minimum five years of documented experience, and approved by manufacturer.

1.7 FIELD CONDITIONS

A. Do not apply foam when temperature is below that specified by the manufacturer for ambient air and substrate.

B. Do not apply foam when temperature is within 5 degrees F of dew point.

PART 2 PRODUCTS

2.1 MATERIALS

A. Foamed-In-Place Insulation: Low-density, flexible, open cell, water vapor permeable polyurethane foam; foamed on-site, using blowing agent of water or non-ozone-depleting gas.
   1. Regulatory Requirements: Comply with applicable code for flame and smoke, concealment, and fire protection requirements.
      a) Fire Protection: Provide 15-minute thermal barrier of 1/2 inch gypsum board or equivalent material complying with NFPA 275 test method, or foamed-in-place insulation either exposed or with covering that complies with FM 4880, NFPA 286, UL 1040, or UL 1715.
   2. Thermal Resistance: R-value of 3.0, minimum, per 1 inch thickness at 75 degrees F mean temperature when tested in accordance with ASTM C518.
   3. Air Permeance: 0.04 cfm per square foot, maximum, when tested at intended thickness in accordance with ASTM E2178 at 1.57 psf.
   4. Surface Burning Characteristics: Flame spread/smoke developed index of 25/450, maximum, when tested in accordance with ASTM E84.
   5. Products:
      a) BASF Corporation; ENERTITE Max: www.spf.basf.com/#sle.
      b) Carlisle Spray Foam Insulation; SealTite PRO High Yield: www.carlislesfi.com/#sle.
      c) Huntsman Building Solutions; Classic Ultra: www.huntsmanbuildingsolutions.com/#sle.
      d) Huntsman Building Solutions;[Icynene Ultra 50]: www.huntsmanbuildingsolutions.com/#sle.
      e) Johns Manville; JM ocSPF Open Cell Spray Polyurethane Foam: www.jm.com/#sle.
   6. Substitutions: See Section 01 6000 - Product Requirements.

B. Foamed-In-Place Insulation: Medium-density, rigid or semi-rigid, closed cell polyurethane foam; foamed on-site, using blowing agent of water or EPA-approved zero-ozone-depleting, low-global warming potential (GWP<1) hydrofluoroolefin (HFO) gas. Use of hydrofluorocarbon (HFC) blowing agents is prohibited.
   1. Application(s):
      a) At steel roof deck to fill in deck flutes. See drawings for specific locations.
   2. Regulatory Requirements: Comply with applicable code for flame and smoke, concealment, and fire protection requirements.

a) Fire Protection: Provide 15-minute thermal barrier of 1/2 inch gypsum board or equivalent material complying with NFPA 275 test method, or foamed-in-place insulation either exposed or with covering that complies with FM 4880, NFPA 286, UL 1040, or UL 1715.

3. Thermal Resistance: R-value of 6.9, minimum, per 1 inch thickness at 75 degrees F mean temperature when tested in accordance with ASTM C518.
4. Water Vapor Permeance: Vapor retarder; 1.1 perms, maximum, when tested at intended thickness in accordance with ASTM E96/E96M, desiccant method.
5. Water Absorption: Less than 2 percent by volume, maximum, when tested in accordance with ASTM D2842.
6. Air Permeance: 0.04 cfm per square foot, maximum, when tested at intended thickness in accordance with ASTM E2178 at 1.57 psf.
7. Closed Cell Content: At least 90 percent.
8. Surface Burning Characteristics: Flame spread/smoke developed index of 25/450, maximum, when tested in accordance with ASTM E84.
9. Products:
   a) BASF Corporation; Walltite Plus: www.spf.basf.com/#sle.
   b) Carlisle Spray Foam Insulation; SealTite PRO HFO: www.carlislesfi.com/#sle.
   c) Henry Company; Permax 2.0 HFO: www.henry.com/#sle.
   d) Huntsman Building Solutions; Icynene ProSeal HFO: www.huntsmanbuildingsolutions.com/#sle.
   e) Johns Manville; JM Corbond IV Closed Cell Spray Polyurethane Foam: www.jm.com/#sle.
10. Substitutions: See Section 01 6000 - Product Requirements.

C. Foamed-in-Place Insulating Sealant: ASTM C 1620. Low pressure, one-component, insulating polyurethane foam intended for use in filling gaps and voids in wall assemblies, including at door and window frames.Packaged in self-contained pressurized containers, gun grade, containing no urea formaldehyde.
1. Performance Requirements: Tested in accordance with AAMA 812.
   a) Pressure Build: Tested in accordance with AAMA 812.
   b) Flame Spread Index: 25 or less, tested per ASTM E 84.
   c) Smoke Developed Index: 100 or less, tested per ASTM E 84.
   d) Air Infiltration: Less than 0.025 cfm/sf @ 1.57 psf when tested in accordance with ASTM E283.
   e) Water Infiltration: No leakage after 15 min. exposure (@ 2.9 psf). ASTM E 331.
   f) Non-ozone depleting.
2. Manufacturers/Products:
   a) Everkem; **Thermal Seal All-in-One Fireblock + Window & Door Insulating Foam Sealant**.
   b) Hilti; **CF 812 WD Low Pressure Door and Window Foam**.
   c) Owens Corning; **Insulating Foam Sealant.**

2.2 ACCESSORIES

A. Primer: As required by insulation manufacturer.

B. Protective Coating: Intumescent coating of type recommended by insulation manufacturer and as required to comply with applicable codes. Capable of acting as an ignition barrier.
1. Coating Type: Single component, water-based.

2. Protected Insulation Type: Spray polyurethane foam (SPF).
3. Application: Apply using brush, roller, or airless sprayer.
4. Surface Burning Characteristics: Flame spread/smoke developed index of 25/450, maximum, when tested in accordance with ASTM E84.
5. Exterior Wall System: Comply with NFPA 285.
6. Color: White.
7. Products:
   a) International Fireproof Technology Inc; DC315 Intumescent Coating: www.painttoprotect.com/#sle.
   b) No-Burn, Inc; Plus ThB Intumescent Coating: www.noburn.com/#sle.
   c) TPR Corporation; Fireshell IB4 Ignition Barrier Coating.

C. Metal Lath: Expanded galvanized metal lath fabricated from material of weight and configuration required to anchor insulation. Include clips and other anchorage devices required to attach lath to substrates and to receive foamed-in-place insulation material.

D. Preformed Closure Plugs for Metal Deck: Formed ~~foam~~ plugs or plug strips for filling in flutes of metal deck.
   1. Applications: As indicated on drawings for each type.
   2. Mineral Wool Deck Plugs:
      a) Basis of Design Product: Hilti; Firestop Top Track Seal CFS-TT MD P Series Flute Plug: www.hilti.com.
         1) Select product sizes to fit specific deck size(s).
   3. Rubber Deck Plugs: Formed foam or foam rubber individual plugs. Manufacturers of individual deck plugs include:
      a) A.C.T. Metal Deck Supply; Rubber Plugs: www.metaldecksupply.com.
      b) Carrington Specialty Products: www.carringtonbp.com.
      c) Cordeck Building Supply: www.cordeck.com.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify work within construction spaces or crevices is complete before insulation application.

B. Verify that surfaces are clean, dry, and free of matter that may inhibit insulation adhesion.

3.2 PREPARATION

A. Mask and protect adjacent surfaces from over spray or dusting.

B. Apply primer in accordance with manufacturer's instructions.

C. Install metal lath to anchor insulation as needed. Use standoff clips where lath fastens to structural steel.

3.3 APPLICATION

A. Apply each type of foamed-in-place insulation in accordance with manufacturer's written instructions.

B. Apply insulation by spray method, to a uniform monolithic density without voids.

C. Apply in multiple passes to not exceed maximum thicknesses recommended by manufacturer. Do not spray into rising foam.

D. Apply protective coating monolithically, without voids, to fully cover foam insulation, to achieve fire rating required.
   1. Do not cover insulation prior to any required spray foam insulation inspections.

E. Patch damaged areas.

F. Where applied to voids and gaps assure space for expansion to avoid pressure on adjacent materials that may bind operable parts.

G. Trim excess away for applied trim or remove as required for continuous sealant bead.

3.4 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements for additional requirements.

B. Field inspections and tests will be performed by an independent testing agency.

C. Inspection will include verification of insulation and protective coating thickness and density.

3.5 PROTECTION

A. Do not permit subsequent construction work to disturb applied insulation.

END OF SECTION 07 2119

SECTION 07 2163 - FLUID-APPLIED INSULATIVE COATING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Spray-applied insulative coating system (a/k/a "thermal coating") for stuctural steel, including primer, insulative coating and topcoat.
   1. Refer to GC series "Fireproofing and Steel Treatment" drawings for specific locations and extent of coverage.
   2. All spray-applied insulative coating is to be shop-applied.

1.2 RELATED REQUIREMENTS

A. Section 05 1200 - Structural Steel Framing.

B. Section 05 5000 - Metal Fabrications.

C. Section 09 9600 - High-Performance Coatings.

1.3 REFERENCE STANDARDS

A. ASTM B117 - Standard Practice for Operating Salt Spray (Fog) Apparatus; 2019.

B. ASTM C177 - Standard Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus; 2019, with Editorial Revision (2023).

C. ASTM C272/C272M - Standard Test Method for Water Absorption of Core Materials for Sandwich Constructions; 2018.

D. ASTM C518 - Standard Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus; 2021.

E. ASTM D870 - Standard Practice for Testing Water Resistance of Coatings Using Water Immersion; 2015 (2020).

F. ASTM D4060 - Standard Test Method for Abrasion Resistance of Organic Coatings by the Taber Abraser; 2019.

G. ASTM D4585/D4585M - Standard Practice for Testing Water Resistance of Coatings Using Controlled Condensation.; 2013.

H. ASTM D5894 - Standard Practice for Cyclic Salt Fog/UV Exposure of Painted Metal, (Alternating Exposures in a Fog/Dry Cabinet and a UV/Condensation Cabinet).; 2016.

I. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2023d.

J. SSPC-SP 6 - Commercial Blast Cleaning; 2007.

1.4 SYSTEM DESCRIPTION

A. The liquid applied thermal break acrylic material shall be applied at the required thickness specified by the manufacturer in order to mitigate thermal bridging. In no case shall the K-value of the liquid applied thermal break be more than 0.040 W/mK.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Submit product data including manufacturer's technical data indicating product performance characteristics, performance and limitation criteria.

C. Shop Drawings: Show layout of steel framing showing locations to receive insulative coating.
   1. Include sequencing of insulative coating installation with respect to construction that will subsequently conceal it.

D. Manufacturer’s Instructions: Submit manufacturer written installation instructions.

E. Applicator Qualifications: Submit applicators current certification as a manufacturer trained applicator.

1.6 QUALITY ASSURANCE

A. Manufacturer: Company specializing in manufacturing product in this section with a minimum of 2 years documented experience in manufacturing insulative technology.

B. Applicator: Company specializing in applying the work of this section with documented experience and trained by the manufacturer.

C. Fluid-Applied Thermal Break Acrylic system shall be the complete system from a sole source consisting of primer, acrylic thermal break material and topcoat.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to site in sealed and label

B. Storage: Materials shall be stored in strict accordance with manufacturers documented instructions.

C. Documentation: All batch numbers, product identification and quantities shall be recorded on appropriate QC documents. A copy of the transport documents and manufacturer's conformance certificate shall be attached to the material delivery on site.

1.8 FIELD CONDITIONS

A. Project Environmental Requirements: Substrate and air temperature shall be in accordance with the manufacturers’ requirements.
   1. Protect work area from windblown dust and rain. Protect adjacent areas from over spray of material.

2. Provide ventilation in areas to receive work of this section during application and minimum 24 hours after application.

B. Temperature and Humidity Requirements: Maintain air temperature and relative humidity in areas where products will be applied for a time period before during and after application as recommended by manufacturer.
   1. Do not apply Fluid Applied Acrylic Thermal Break when temperature of substrate and/or surrounding ambient air temperature is below 45 degrees F. Temporary protection and heat shall be maintained at this minimum temperature for 24 hours before, during and 24 hours after material application.
   2. Steel substrate temperature shall be a minimum of 5 degrees F above the dew point of the surrounding air for a period of 24 hours prior, during the application of the material and 24 hour cure period.
   3. If necessary for job schedule, provide enclosures and heat to maintain proper temperatures and humidity levels in the application areas.
   4. The relative humidity of the application area shall not exceed a maximum of 85 percent 24 hours prior, during and 24 hours after the application of the material. The relative humidity shall not exceed 75 percent throughout the application and curing of the decorative top coat finish.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design: Tnemec Company, Inc; **Aerolon Series 971 Insulative Coating System**: www.tnemec.com.

B. Substitutions: Section 01 6000 - Product Requirements.

2.2 FLUID-APPLIED INSULATIVE COATING, GENERAL

A. Materials Compatibility:
   1. Provide shop and field primers, and finish-coat materials that are compatible with one another and with the substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.
   2. Provide products of same manufacturer for each coat in a coating system.

B. Material Thickness: Provide the insulative coating thickness indicated, exclusive of primer or topcoat, for the typical conditions noted below:
   1. Standard "W" Shapes (Beams and Columns): 60 mils dry film thickness (DFT), 18" sphere.
   2. Tubes and Pipes: 120 mils dry film thickness (DFT), 18 " sphere.

C. Installation:
   1. Apply insulative coating at maximum 60 mils per wet film thickness (50 mils DFT) per lift. Apply additional coatings until specified thickness is achieved.
   2. Apply primer and coating at the specified thickness to all exposed sides of each steel member indicated to receive the insulative coating system.
   3. Shop application of primer and insulative coating is recommended where steel will subsequently be hidden by the normal sequence of construction.

2.3 FLUID-APPLIED INSULATIVE COATING SYSTEM

A. Fluid-Applied Insulative Coating System: Provide coating system that meets the following minimum performance criteria, unless more stringent criteria are specified:
   1. Surface Burning Characteristics: Flame spread/Smoke developed index of Class A, when tested in accordance with ASTM E84.
   2. Thermal Conductivity: 0.0356 W/m-^{O}K (0.2468 BTU-in/ft^2-hr-^{O}F), R value at one inch equals 4.1, when tested in accordance with ASTM C518 at 77 degrees F.
   3. Accelerated Aging: 5000 hrs prohesion when tested in accordance with ASTM D5894.
   4. Corrosion Resistance: 5000 hrs salt spray when tested in accordance with ASTM B117.
   5. Water Resistance: 18 months of continuous tap water immersion when tested in accordance with ASTM D870.
   6. Water Resistance With Controlled Condensation: No effect after 2000 hrs of controlled condensation when tested in accordance with ASTM D4585/D4585M.
   7. Water Resistance With Immersion: No effect after 2000 hrs at 140 degrees F when tested in accordance with ASTM D870 Method B.
   8. Abrasion Resistance: No more than 50.2 mg loss after 1000 cycles when tested in accordance with ASTM D4060 on the Taber Abraser CS-17 wheel with a 1000g load.
   9. Water Absorption: Less than 1 percent weight gain after 24-hour cure when tested in accordance with ASTM C272/C272M.

B. Primer: Refer to the Fluid-Applied Insulative Coating Schedule in Part 3.

C. Acrylic Insulative Coating: **Tnemec Series 971 Aerolon Acrylic**; fluid-applied, thermal insulating coating containing aerogel particles.
   1. VOC Content: 1.9 grams/liter.
   2. Solids by Volume: 76 percent.
   3. Color: 1278 Insulation Yellow.
   4. Finish: Matte.
   5. Requirements:
      a) Abrasion Resistance: No more than 50.2 mg loss after 1000 cycles when tested in accordance with ASTM D4060.
      b) Cyclic Salt Fog/UV Exposure: No blistering, cracking, rusting or delamination of film after 5000 hours when tested in accordance with ASTM D5894.
      c) Humidity Resistance: No blistering, cracking, rusting, or delamination after 2000 hours when tested in accordance with ASTM D4585/D4585M.
      d) Immersion: No blistering, cracking, rusting, or delamination after six months continuous tap water immersion when tested in accordance with ASTM D870.
      e) Surface Burning Characteristics: Class A when tested in accordance with ASTM E84.
      f) Thermal Conductivity: No greater than 0.0356 W/m-°K or 0.2468 BTU-in/ft2-hr-°F when tested in accordance with ASTM C518.
         1) NORSOK M-501 ISO 20340: Passed 25 cycles.

2.4 ACCESSORIES

A. Thermally Insulative Tape: **Tnemec Aerolon Tape Series 945**; self-adhesive tape containing a blend of insulative particles for low thermal conductivity.
   1. Requirements:

a) Thermal Conductivity: 0.0497 W/m-°K or 0.3446 BTU-in/ft^2-hr-°F (R-value at one inch equal to 2.9) when tested in accordance with ASTM C177 at 79 degrees F.
b) Thickness: 1.5 mm (+/- 0.25 mm).

PART 3 EXECUTION

3.1 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. Surfaces to receive the fluid-applied insulative coating system shall follow the manufacturer's printed instructions and be clean, dry and free of oil, grease, loose mill scale, dirt, dust or other foreign substances which would impair bond of the material to the substrate.

C. Other corrections of the surfaces to receive the fluid applied insulative coating material shall be the responsibility of the Contractor, at no additional cost to the Owner.

D. Application of the primer, insulative coating material, and topcoat shall not commence until the contractor, applicator and inspector have examined the surfaces to receive the primer and determined the surfaces are acceptable to receive the primer and coating. Commencement of application means acceptance of substrate.

E. Verify that substrate and workspace temperature and humidity conditions are in accordance with manufacturers recommendations.

3.2 SURFACE PREPARATION

A. Prepare surfaces in accordance with manufacturer's instructions.

B. Weld spatter and defects shall be ground smooth prior to commencement of primer and fluid applied thermal break material.

C. Primer shall not be applied to prepared substrate until the area has been adequately vented to remove all airborne dust. Prior to the application of any coating material, the blast products, dust and debris shall be removed by vacuuming.

D. Steel Substrates: Remove rust and loose mill scale.
1. Fabrication defects:
   a) Correct steel and fabrication defects revealed by surface preparation.
   b) Remove weld spatter and slag.
   c) Round sharp edges and corners of welds to a smooth contour.
   d) Smooth weld undercuts and recesses.
   e) Grind down porous welds to pinhole-free metal.
   f) Remove weld flux from surface.
2. Ensure surfaces are dry.
3. Remove visible oil, grease, dirt, dust, mill scale, rust, paint, oxides, corrosion products, and other foreign matter in accordance with SSPC-SP 6, unless otherwise specified.

E. Abrasive Blast-Cleaned Surfaces: Coat abrasive blast-cleaned surfaces with primer before visible rust forms on surface. Do not leave blast-cleaned surfaces uncoated for more than 8 hours.

3.3 SHOP COATING APPLICATION

A. Apply coatings in accordance with manufacturer's instructions.
   1. Mix and thin coatings, including multi-component materials, in accordance with manufacturer's instructions.
   2. Keep containers closed when not in use to avoid contamination.
   3. Do not use mixed coatings beyond pot life limits.
   4. Use application equipment, tools, pressure settings, and techniques in accordance with manufacturer's instructions.

B. Uniformly apply coatings at spreading rate required to achieve specified dry film thickness (DFT).

C. Apply coatings to be free of film characteristics or defects that would adversely affect performance or appearance of coating systems.

D. Apply primer at thickness recommended by manufacturer.

E. Apply thermal insulative coating as specified in the Fluid-Applied Insulative Coating Schedule.

F. Apply topcoat at thickness recommended by the manufacturer.

G. Final dry film thickness (DFT) shall be measured with a dry film thickness gauge.

3.4 FIELD REPAIR

A. Damaged Coatings: All patching and repair to material, due to damage by other trades, shall be performed under this section and paid for by the trade responsible for the damage. Patching shall be performed by applicators certified by the manufacturer and applied in accordance with the manufacturer application instructions.

B. Coating Defects: Repair in accordance with manufacturer's instructions coatings that exhibit film characteristics or defects that would adversely affect performance or appearance of coating systems.

3.5 FIELD QUALITY CONTROL

A. The Owner will engage an independent testing laboratory inspect and verify the application of material in accordance with the provisions of the Tnemec Company.
   1. Material inspection and testing shall be performed 24 hours after completion of final application coat.
   2. The results of the above tests shall be made available to all parties at the completion of each pre-designated area and approval.
   3. In-place material not in compliance with the specified thickness requirements shall be corrected prior to final acceptance.

B. The dry film thickness (DFT) of the applied material shall be measured with a non-destructive coating thickness gage after material has completely cured. All measurements shall be documented in writing and furnished to the Owner.

C. Manufacturer's Technical Services: Coordinate with coating manufacturer's technical service department or independent sales representative for current technical data and instructions.

3.6 CLEANING AND PROTECTION

A. Remove overspray materials from surfaces not required to be thermally protected.

B. Protect surfaces of coating systems from damage during transportatino to site and construction.

C. Touch-up, or repair damaged products before Substantial Completion.

3.7 ONE-YEAR INSPECTION

A. Owner will set date for one-year inspection of coating systems.

B. Inspection shall be attended by Owner, Contractor, Architect, and manufacturer's representative.

C. Repair deficiencies in coating systems as determined by Architect in accordance with manufacturer’s instructions.

3.8 FLUID-APPLIED INSULATIVE COATING SCHEDULE

A. Steel Members Penetrating Exterior Building Envelope/Inside Face of Metal Framing/Concrete Slab Edges/Aluminum Window Frames, Condensation Control: Basis of Design Systems.
   1. Fluid-Applied Thermal Break System, Water-Based (for Galvanized Steel):
      a) Surface Preparation: SSPC-16, unless otherwise recommended by coating manufacturer.
      b) Prime Coat (Shop): Tnemec; **Series 1224 Epoxoline WB**, DFT of 4.0 to 10.0 mils (100 to 250 microns) per coat.
      c) Intermediate Coat (Shop or Field) – Two Coats: **Tnemec**: **Series 971 Aerolon Acrylic**, DFT of 40.0 to 50.0 mils (1000 to 1250 microns) per coat. Total thickness of Series 971: 80 to 100 mils (2000 to 2500 microns).
      d) Finish Coat: **Tnemec**; **Series 1028 Enduratone**, DFT of 2.0 to 3.0 mils (50 to 75 microns) per coat.
   2. Fluid-Applied Thermal Break System, Mio-Zinc MCU Primer (Ungalvanized Steel):
      a) Surface Preparation: SSPC-SP 6, unless otherwise recommended by coating manufacturer.
      b) Prime Coat (Shop): **Tnemec**; **Series 394-0250 PerimePrime**, DFT of 2.5 to 3.5 mils (65 to 90 microns) per coat.
      c) Intermediate Coat (Shop or Field) – Two Coats: **Tnemec**; **Series 971 Aerolon Acrylic**, DFT of 40.0 to 50.0 mils (1000 to 1250 microns) per coat. Total thickness of Series 971: 80 to 100 mils (2000 to 2500 microns).

d) Finish Coat: **Tnemec**; **Series 1028 Enduratone**, DFT of 2.0 to 3.0 mils (50 to 75 microns) per coat.

END OF SECTION 07 2163

SECTION 07 2410 - DIRECT-APPLIED EXTERIOR FINISH SYSTEMS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Direct-Applied Exterior Finish System (DEFS): Finish coating applied to cement-based sheathing fastened over metal stud framing infilled with insulation.
   1. Soffits.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 01 7419 – Construction Waste Management and Disposal.

C. Section 06 1000 - Rough Carpentry: Exterior sheathing.

1.3 REFERENCE STANDARDS

A. ASTM B117 - Standard Practice for Operating Salt Spray (Fog) Apparatus; 2019.

B. ASTM C1325 - Standard Specification for Fiber-Mat Reinforced Cementitious Backer Units; 2019.

C. ASTM C1397 - Standard Practice for Application of Class PB Exterior Insulation and Finish Systems (EIFS) and EIFS with Drainage; 2013 (Reapproved 2019).

D. ASTM D968 - Standard Test Methods for Abrasion Resistance of Organic Coatings by Falling Abrasive; 2017.

E. ASTM D2247 - Standard Practice for Testing Water Resistance of Coatings in 100% Relative Humidity; 2015.

F. ASTM D3273 - Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber; 2021.

G. ASTM E331 - Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference; 2000 (Reapproved 2023).

H. ASTM E2273 - Standard Test Method for Determining the Drainage Efficiency of Exterior Insulation and Finish Systems (EIFS) Clad Wall Assemblies; 2018.

I. ASTM G153 - Standard Practice for Operating Enclosed Carbon Arc Light Apparatus for Exposure of Nonmetallic Materials; 2013.

J. ASTM G155 - Standard Practice for Operating Xenon Arc Light Apparatus for Exposure of Nonmetallic Materials; 2013.

K. ICC-ES AC219 - Acceptance Criteria for Exterior Insulation and Finish Systems; 2009, with Editorial Revision (2014).

L. ICC-ES AC235 - Acceptance Criteria for EIFS Clad Drainage Wall Assemblies; 2009, with Editorial Revision (2012).

M. NFPA 259 - Standard Test Method for Potential Heat of Building Materials; 2018.

N. NFPA 268 - Standard Test Method for Determining Ignitibility of Exterior Wall Assemblies Using a Radiant Heat Energy Source; 2017.

O. NFPA 285 - Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Wall Assemblies Containing Combustible Components; 2023.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data on system materials, product characteristics, performance criteria, and system limitations.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Shop Drawings: Indicate soffit joint patterns, joint details, and molding profiles.

E. Verification Samples: Submit actual samples of selected coating on specified substrate, minimum 12 inches square, illustrating project colors and textures.

F. Manufacturer's Installation Instructions: Indicate preparation required, installation techniques, and jointing requirements.

G. Installer's qualification statement.

1.5 QUALITY ASSURANCE

A. Maintain copy of specified installation standard and manufacturer's installation instructions at project site during installation.

B. Installer Qualifications: Company specializing in the type of work specified and with at least three years of documented experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. See Section 01 7419 - Construction Waste Management and Disposal for packaging waste requirements.

B. Delivery: Deliver materials to project site in manufacturer's original, unopened containers with labels intact. Inspect materials and notify manufacturer of any discrepancies.

C. Storage: Store materials as directed by manufacturer's written instructions.
   1. Protect adhesives and finish materials from freezing, temperatures below 40 degrees F and temperatures in excess of 90 degrees F.
   2. Protect insulation materials from exposure to sunlight.

1.7 FIELD CONDITIONS

A. Do not prepare materials or apply DEFS under conditions other than those described in the manufacturer's written instructions.

B. Do not prepare materials or apply DEFS during inclement weather unless areas of installation are protected. Protect installed DEFS areas from inclement weather until dry.

C. Do not install coatings or sealants when ambient temperature is below 40 degrees F.

D. Do not leave installed insulation board exposed to sunlight for extended periods of time.

1.8 WARRANTY

A. See Section 01 7800 - Closeout Submittals for additional warranty requirements.

B. Provide manufacturer's standard material warranty, covering a period of not less than 5 years.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design:
   1. **Sto Corp**; **StoQuik Finish System**: www.stocorp.com/#sle.

B. Other Acceptable Direct-Applied Exterior Finish Systems Manufacturers:
   1. Dryvit Systems, Inc; Dryvit Cement Board MD Finish System: www.dryvit.com/#sle.
   2. Omega Products; AkroGold DEF System: www.omega-products.com.
   3. Parex USA, Inc; WaterMaster NuTech: www.parex.com/#sle.
   4. Substitutions: See Section 01 6000 - Product Requirements.

2.2 DIRECT-APPLIED EXTERIOR FINISH SYSTEM

A. Direct-Applied Exterior Fiinish System **DFS1**: Reinforced finish coating on cement board soffit panels mechanically fastened to framing.

B. Fire Characteristics:
   1. Flammability: Pass, when tested in accordance with NFPA 285.
   2. Ignitibility: No sustained flaming when tested in accordance with NFPA 268.

3. Fire Resistance: Complies with fire resistance requirements indicated on the drawings as part of an exterior non-load-bearing exterior wall assembly when tested in accordance with NFPA 285.
4. Potential Heat of Foam Plastic Insulation Tested Independently of Assembly: No portion of the assembly having potential heat that exceeds that of the insulation sample tested for flammability (above), when tested in accordance with NFPA 259 with results expressed in Btu per square foot.

C. Water Penetration Resistance: No water penetration beyond the plane of the base coat/insulation board interface after 15 minutes, when tested in accordance with ASTM E331 at 6.24 psf differential pressure with tracer dye in the water spray; include in tested sample at least two vertical joints and one horizontal joint of same type to be used in construction; disassemble sample if necessary to determine extent of water penetration.

D. Drainage Efficiency: Average minimum efficiency of 90 percent, when tested in accordance with ASTM E2273 for 75 minutes.

E. Salt Spray Resistance: No cracking, checking, crazing, erosion, blistering, peeling, delamination, or corrosion of finish coating after 300 hours exposure in accordance with ASTM B117, using at least three samples matching intended assembly, at least 4 by 6 inches in size.

F. Freeze-Thaw Resistance: No cracking, checking, crazing, erosion, blistering, peeling, delamination, or corrosion of finish coating when viewed under 5x magnification after 10 cycles, when tested in accordance with ICC-ES AC219 or ICC-ES AC235.

G. Weathering Resistance: No cracking, checking, crazing, erosion, blistering, peeling, delamination, or corrosion of finish coating when viewed under 5x magnification after 2000 hours of accelerated weathering conducted in accordance with ASTM G153 Cycle 1 or ASTM G155 Cycles 1, 5, or 9.

H. Water Degradation Resistance: No cracking, checking, crazing, erosion, blistering, peeling, delamination, or corrosion of finish coating after 14 days exposure, when tested in accordance with ASTM D2247.

I. Mold Resistance: No growth supported on finish coating during 60 day exposure period, when tested in accordance with ASTM D3273.

J. Abrasion Resistance Of Finish: No cracking, checking or loss of film integrity when tested in accordance with ASTM D968 with 113.5 gallons of sand.

2.3 MATERIALS

A. Finish Coating Top Coat: Water-based, air curing, acrylic or polymer-based finish with integral color and texture.
1. Texture: Sto Corp; Specialty Finish Stolit Milano; www.stocorp.com/#sle.
2. Color: As selected by Architect from manufacturer's custom range.

B. Base Coat: Acrylic- or polymer-modified, fiber reinforced Portland cement coating, Class PM.
1. Portland Cement: ASTM C150/C150M, Type I or II.
2. Base Coat Thickness: 1/4 inch, minimum.
3. Products:

a) Basis-of-Design: **Sto Corp**.; **Sto BTS Plus.**
b) Substitutions: See Section 01 6000 - Product Requirements.

C. Reinforcing Mesh: Balanced, open weave glass fiber fabric, treated for compatibility and improved bond with coating, weight, strength, and number of layers as required to meet required system impact rating.
1. Basis-of-Design: **Sto Corp**.: **Sto Mesh**.
2. Impact Resistance: Standard.

D. Primer: Acrylic-based sanded primer for use with textured finishes.
1. Basis-of-Design: **Sto Corp**; **StoPrime Sand**.

E. Cementitious Substrate Boards: Type A exterior units, fiber-mat reinforced; ASTM C1325.
1. Thickness: 5/8 inch, unless otherwise indicated on the drawings.
2. Size: 48 by 96 inches.
3. Products:
a) James Hardie; HardieBacker Cement Board.
b) National Gypsum Company; PermaBase Cement Board: https://nationalgypsum.com.
c) USG Corporation; Durock Brand Cement Board: www.usg.com.

2.4 ACCESSORIES

A. Sealant Materials: Compatible with DEFS materials and as recommended by DEFS manufacturer.

B. Water: Clean and potable.

C. Portland Cement: Type I, ASTM C150.

D. Exterior Soffit Vents: One piece, perforated, rigid solid vinyl, with edge suitable for direct application to cement board and manufactured especially for soffit application. Provide continuous vent as indicated on drawings.
1. Reveal Width: 3 inches.
2. Depth: 5/8 inch minimum.
3. Color: White.
4. Basis of Design: **ClarkDietrich**; **Architectural Vented "F" Channel Reveal - SurfaceMount, Model AFDCV58-300SE.**

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that cecment board substrate is sound and free of oil, dirt, other surface contaminants, efflorescence, loose materials, or protrusions that could interfere with DEFS installation and is of a type and construction that is acceptable to DEFS manufacturer. Do not begin work until substrate and adjacent materials are complete and thoroughly dry.

B. Verify that substrate surface is flat, with no deviation greater than 1/4 in when tested with a 10 ft straightedge.

3.2 PREPARATION

A. Prepare and mix DEFS materials in accordance with DEFS manufacturer's written instructions.

3.3 INSTALLATION - GENERAL

A. Install in accordance with DEFS manufacturer's instructions and ASTM C1397.
   1. Where different requirements appear in either document, comply with the most stringent.
   2. Neither of these documents supercedes provisions of Contract Documents that defines contractual relationships between parties or scope of this work.

3.4 INSTALLATION - DEFS

A. Install DEFS materials in accordance with manufacturer's written instructions and approved shop drawings.

B. Install corrosion proof termination accessories with perforated flanges for keying of the base coat at junctures with penetrations such as soffit vents, electrical fixtures, and with abutting walls and columns.

C. Base Coat: Apply in thickness as necessary to fully embed reinforcing mesh, wrinkle free, including back-wrap at terminations of DEFS. Install reinforcing fabric as recommended by DEFS manufacturer.

D. Apply primer to substrate as recommended by DEFS manufacturer for project conditions.

E. Apply finish coat after base and primers coats have dried not less than 24 hours, unless otherwise recommneded by DEFS manufacturer, and finish to a uniform texture and color.

F. Finish Coat Thickness: As recommended by manufacturer.

G. Seal control and expansion joints within the field of exterior finish and insulation system, using procedures recommended by sealant and finish system manufacturers.

3.5 PROTECTION

A. Protect installed materials from dust, dirt, precipitation, freezing, and / or continuou high humidity until they are fully dry.

B. Protect installed materials from water infiltration into or behind them.

C. Protect completed work from damage and soiling by subsequent work.

END OF SECTION 07 2410

SECTION 07 2726 - FLUID-APPLIED MEMBRANE AIR BARRIERS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Vapor-permeable, fluid-applied air barriers.

B. Vapor-retarding (vapor impermeable), fluid-applied air barriers.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 01 4000 - Quality Requirements: Procedures for testing, inspection, mockups, reports, certificates; use of reference standards.

C. Section 01 6000 - Product Requirements: Fundamental product requirements, substitutions and product options, delivery, storage, and handling.

D. Section 07 9200 - Joint Sealants: Joint-sealant materials and installation.

1.3 DEFINITIONS

A. Air-Barrier Material: A primary element that provides a continuous barrier to the movement of air.

B. Air-Barrier Accessory: A transitional component of the air barrier that provides continuity.

C. Air-Barrier Assembly: The collection of air-barrier materials and accessories applied to an opaque wall, including joints and junctions to abutting construction, to control air movement through the wall.

1.4 REFERENCE STANDARDS

A. ASTM A240/A240M - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications; 2020a.

B. ASTM C1193 - Standard Guide for Use of Joint Sealants; 2016.

C. ASTM D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers--Tension; 2016.

D. ASTM D4258 - Standard Practice for Surface Cleaning Concrete for Coating; 2005 (Reapproved 2017).

E. ASTM D4541 - Standard Test Method for Pull-Off Strength of Coatings Using Portable Adhesion Testers; 2017.

F. ASTM E2178 - Standard Test Method for Determining Air Leakage Rate and Calculation of Air Permeance of Building Materials; 2021a.

G. ASTM E2357 - Standard Test Method for Determining Air Leakage Rate of Air Barrier Assemblies; 2023a.

H. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2023d.

I. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials; 2023.

J. NFPA 285 - Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Wall Assemblies Containing Combustible Components; 2023.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Conduct a preinstallation meeting at project site one week prior to the start of the work of this section; require attendance by all affected installers.
   1. Review air-barrier requirements and installation, special details, mockups, air-leakage and bond testing, air-barrier protection, and work scheduling that covers air barriers.
   2. Include installers of other construction connecting to air-barrier, such as roofing, waterproofing, masonry, joint sealants, windows, and door frames.
   3. Review air-barrier requirements including surface preparation, substrate condition and pretreatment, minimum substrate curing period, forecasted weather conditions, special details and sheet flashings, mockups, installation procedures, sequence of installation, air-leakage and bond testing, inspecting procedures, and protection and repairs.

1.6 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide for each type of product.
   1. Include manufacturer's written instructions for evaluating, preparing, and treating each substrate; technical data; dry film thickness; and tested physical and performance properties of products.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit 5d: For air-barrier products, documentation including printed statement of VOC content.
   2. Laboratory Test Reports for Credit 5d: For air-barriers, documentation indicating that products comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

D. Shop Drawings: Submit for air-barrier assemblies.
   1. Show locations and extent of air-barrier materials, accessories, and assemblies specific to project conditions.
   2. Include details for substrate joints and cracks, counterflashing strips, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.
   3. Include details of interfaces with curtain walls, storefronts, doors, windows, louvers, and other materials that form part of the air-barrier.

4. Include details specific to this project; generic details are not permitted.

E. Qualification Data: Provide for installer. Include list of ABAA-certified installers and supervisors employed by installer, who work on project.

F. Product Certificates: From air-barrier manufacturer, certifying compatibility of air barriers and accessory materials with project materials that connect to or that come in contact with the barrier.

G. Product Test Reports: For each air-barrier assembly indicating and interpreting test results of air and vapor barrier system performed by a qualified testing agency.
1. Submit test results for air permeance in accordance with ASTM E2178.
2. Submit test results for air leakage volume testing in accordance with ASTM E2357.

H. Field quality-control reports.

I. Warranty Documentation: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

J. Specimen Warranty: Submit copy of special air and vapor barrier system manufacturer's warranty stating obligations, remedies, limitations, and exclusions before starting air and vapor barrier system installation.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with at least 10 years of documented experience.

B. Installer Qualifications: Company specializing in performing work of the type specified and with at least five years of documented experience and approved by manufacturer.
1. Installer shall have successfully completed at least three projects of similar scope and complexity to this project within the past five years.
2. Installer must show evidence of adequate equipment and trained field personnel to successfully complete the project.

C. Material Compatibility: Air and vapor barrier system primary materials including fluid-applied membrane, flashing primer, and transition membranes shall be compatible with adjacent materials and sourced from one manufacturer regularly engaged in the production of air and vapor barrier materials.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver liquid materials to project site in original containers with seals unbroken, labeled with manufacturer's name, product brand name and type, date of manufacture, shelf life, and directions for storing and mixing with other components.

B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by air barrier system manufacturer. Do not double stack pallets of materials.

C. Remove and replace liquid materials that cannot be applied within their stated shelf life.

D. Protect stored materials from direct sunlight, extreme heat, and freezing.

1.9 FIELD CONDITIONS

A. Environmental Limitations: Apply air barrier within the range of ambient and substrate temperatures recommended in writing by air-barrier manufacturer, but at not less than 40 degrees F. Do not apply air barrier system when relative humidity exceeds 85 percent, or when temperatures are less than 5 degrees F above dew point.
   1. Do not apply air barrier system to a damp or wet substrate or during snow, rain, fog, or mist.
   2. Protect substrates from environmental conditions that affect air-barrier performance.

1.10 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Special Manufacturer's Warranty: Written warranty, signed by air barrier system manufacturer agreeing to repair or replace air barrier system that does not comply with requirements or that does not remain watertight within specified warranty period.
   1. Warranty does not include failure of air barrier system due to failure of substrate prepared and treated according to requirements or formation of new joints and cracks in substrate that exceed 1/16 inch in width.
   2. Warranty Period: Correct defective Work within a two year period after Date of Substantial Completion.
   3. Warranty Period for Material Only:five years from Date of Substantial Completion.

C. Installer Warranty: Written warranty, signed by installer, agreeing to repair or replace materials installed according to manufacturer's written recommendations, that fails in performance, materials, or workmanship within specified warranty period.
   1. Warranty Period: Two years from date of Substantial Completion.

PART 2 PRODUCTS

2.1 MATERIALS

A. Source Limitations: Obtain primary air-barrier materials and accessories from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Air-Barrier Performance: Air-barrier assembly and seals with adjacent construction shall be capable of performing as a continuous air barrier and as a liquid-water drainage plane flashed to discharge to the exterior incidental condensation or water penetration. Air-barrier assemblies shall be capable of accommodating substrate movement and of sealing substrate expansion and control joints, construction material changes, penetrations, tie-ins to installed waterproofing, and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.

B. Air-Barrier Assembly Air Leakage: Maximum 0.04 cfm/sq. ft. of surface area at 1.57 lbf/sq. ft., when tested according to ASTM E2357.

C. UV Resistance: Air-barrier can be exposed to sunlight for 30 days in accordance with manufacturer's written instructions.

D. Fire Performance Characteristics: Provide air-barrier meeting the following fire-test characteristics:
   1. Surface Burning Characteristics: ASTM E84.
      a) Flame Spread Index: 25 or less.
      b) Smoke Developed Index: 450 or less.

E. Vapor-permeable membrane air barrier shall be chemically and adhesively compatible with substrate and adjacent materials and been tested in an assembly with the insulation in accordance with NFPA 285.

F. Low Temperature Installation: Provide products suitable for low temperature installation as required by construction schedule. Apply air barrier system within the range of ambient and substrate temperatures recommended by air barrier manufacturer, but a not less than 25 degrees F.

2.3 HIGH-BUILD AIR BARRIERS, VAPOR PERMEABLE

A. High-Build, Vapor-Permeable Air Barrier Synthetic Polymer Type: Elastomeric membrane with an installed dry film thickness, according to manufacturer's written instructions, of 35 mils or thicker over smooth, void-free substrates..
   1. Basis-of-Design Product: Subject to compliance with requirements, provide **Air-Bloc 33MR** manufactured by **Henry Company:** www.henry.com, or one of the following:
      a) Carlisle Coatings & Waterproofing; Barritech VP: www.carlisleccw.com,
      b) Tremco; ExoAir 220: www.tremcosealants.com.
      c) Substitutions: See Section 01 6000 - Product Requirements.

B. Physical and Performance Properties:
   1. Air Permeance: Maximum 0.004 cfm/sq. ft. of surface area at 1.57-lbf/sq. ft. pressure difference; ASTM E2178.
   2. Vapor Permeance: Nominal 11; ASTM E96/E96M, Method B,
   3. Adhesion to Substrate: Minimum 16 lbf/sq. in. when tested according to ASTM D4541.
   4. Fire Propagation Characteristics: Passes NFPA 285 testing as part of an approved assembly.
   5. UV Resistance: Can be exposed to sunlight for 30 days in accordance with manufacturer's written instructions.

2.4 HIGH-BUILD VAPOR-RETARDING AIR BARRIERS

A. High-Build, Vapor-Retarding (Vapor Impermeable) Air Barrier Synthetic Polymer Type: Synthetic polymer membrane with an installed dry film thickness, according to manufacturer's written instructions, of 35 mils or thicker over smooth, void-free substrates.
   1. Basis-of-Design Product: Subject to compliance with requirements, provide **Air-Bloc 16MR** manufactured by **Henry Company** or one of the following:
      a) Henry Company; Air-Bloc 16MR: www.henry.com.

b) GCP Applied Technologies; Perm-A-Barrier NPL 10: www.gcpat.com.
c) Substitutions: See Section 01 6000 - Product Requirements.

B. Physical and Performance Properties:
1. Air Permeance: Maximum 0.004 cfm/sq. ft. of surface area at 1.57-lbf/sq. ft. (0.02 L/s x sq. m of surface area at 75-Pa) pressure difference; ASTM E2178.
2. Vapor Permeance: Maximum 0.1 perm (5.8 ng/Pa x s x sq. m); ASTM E96/E96M, Procedure A, Desiccant Method.
3. Ultimate Elongation: Minimum 500 percent; ASTM D412, Die C.
4. Adhesion to Substrate: Minimum 16 lbf/sq. in. (110 kPa) when tested according to ASTM D4541.
5. Fire Propagation Characteristics: Passes NFPA 285 testing as part of an approved assembly.
6. UV Resistance: Can be exposed to sunlight for 90 days according to manufacturer's written instructions.

2.5 ACCESSORY MATERIALS

A. Provide primers, transition strips, termination strips, joint reinforcing fabric and strips, joint sealants, counterflashing strips, flashing sheets and metal termination bars, termination mastic, substrate patching materials, adhesives, tapes, foam sealants, lap sealants, and other accessory materials that are recommended in writing by air-barrier manufacturer to produce a complete air-barrier assembly and that are compatible with primary air-barrier material and adjacent construction to which they may seal.

B. Primer: Liquid waterborne primer recommended for substrate by air barrier material manufacturer.

C. Stainless Steel Sheet: ASTM A240/A240M, Type 304, 0.0187 inch thick, and Series 300 stainless steel fasteners.

D. Preformed Silicone Extrusion: Manufacturer's standard system consisting of cured low-modulus silicone extrusion, sized to fit opening widths, with a single-component, neutral-curing, Class 100/50 (low-modulus) silicone sealant for bonding extrusions to substrates.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verification of Conditions: Verify that substrates, areas, and conditions comply with requirements and other conditions affecting performance of the Work.
1. Verify that substrates are sound and free of oil, grease, dirt, excess mortar, or other contaminants.
2. Verify that substrates have cured and aged for minimum time recommended in writing by air-barrier manufacturer.
3. Verify that substrates are visibly dry and free of moisture. Test concrete and masonry substrates for capillary moisture by plastic sheet method in accordance with ASTM D4263.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

A. Clean, prepare, treat, fill, and seal substrate and joints and cracks in substrate according to manufacturer's written instructions and details. Provide clean, dust-free, and dry substrate for air-barrier application.

B. Mask off adjoining surfaces not covered by air-barrier to prevent spillage and overspray affecting other construction.

C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.

D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids in concrete with substrate-patching material.

E. Remove excess mortar from masonry ties, shelf angles, and other obstructions.

F. At changes in substrate plane, apply sealant or termination mastic beads at sharp corners and edges to form a smooth transition from one plane to another.

G. Cover gaps in substrate plane and form a smooth transition from one substrate plane to another with stainless-steel sheet mechanically fastened to structural framing to provide continuous support for air barrier.

H. Bridge isolation joints and expansion joints and discontinuous wall-to-wall, deck-to-wall, and deck-to-deck joints with air-barrier accessory material that accommodates joint movement according to manufacturer's written instructions and details.

3.3 SUBSTRATE JOINT TREATMENT

A. Masonry: Prepare, treat, rout, and fill joints and cracks in substrate in accordance with ASTM C1193 and air-barrier manufacturer's written instructions. Remove dust and dirt from joints and cracks in compliance with ASTM D4258 befoere coating substrate surfaces.
   1. Prime substrate and apply a single thickness of preparation coat strip extending a minimum of 3 inches along each side of joints and cracks. Apply a double thickness of air-barrier membrane and embed a joint reinforcing strip in preparation coat.

B. Gypsum Sheathing: Apply first layer of fluid air-barrier material at joints. Tape joints with joint reinforcing strip after first layer is dry. Apply a second layer of fluid air-barrier material over joint reinforcing strip.
   1. Fill joints greater than 1/4 inch in accordance with ASTM C1193 and air-barrier manufacturer's written instructions.

3.4 ACCESSORIES INSTALLATION

A. Install accessory materials in accordance with air-barrier manufacturer's written instructions and details to form a seal with adjacent construction and ensure continuity of air and water barrier.
   1. Coordinate the installation of air barrier with installation of roofing membrane and base flashing to ensure continuity of air barrier with roofing membrane.

2. Install transition strip on roofing membrane or base flashing so that a minimum of 3 inches of coverage is achieved over each substrate.
3. Unless manufacturer recommends in writing against priming, apply primer to substrates at required rate and allow it to dry.
4. Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by air-barrier material on same day. Reprime areas exposed for more than 24 hours.

B. Connect and seal exterior wall air-barrier material continuously to roofing-membrane air barrier, concrete below-grade structures, floor-to-floor construction, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials.

C. At end of each working day, seal top edge of strips and transition strips to substrate with termination mastic.

D. Apply joint sealants forming part of air-barrier assembly within manufacturer's recommended application temperature ranges. Consult manufacturer when sealant cannot be applied within these temperature ranges.

E. Wall Openings: Prime concealed, perimeter frame surfaces of windows, curtain walls, storefronts, and doors. Apply transition strip so that a minimum of 3 inches of coverage is achieved over each substrate. Maintain 3 inches of full contact over firm bearing to perimeter frames, with not less than 1 inch of full contact.
1. Transition Strip: Roll firmly to enhance adhesion.

F. Fill gaps in perimeter frame surfaces of windows, curtain walls, storefronts, and doors, and miscellaneous penetrations of air-barrier material with foam sealant.

G. Seal strips and transition strips around masonry reinforcing or ties and penetrations with termination mastic.

H. Seal top of through-wall flashings to air barrier with an additional 6-inch wide, transition strip.

I. Seal exposed edges of strips at seams, cuts, penetrations, and terminations not concealed by metal counterflashings or ending in reglets with termination mastic.

J. Repair punctures, voids, and deficient lapped seams in strips and transition strips. Slit and flatten fishmouths and blisters. Patch with transition strips extending 6 inches beyond repaired areas in strip direction.

3.5 PRIMARY AIR-BARRIER MATERIAL INSTALLATION

A. Apply air-barrier material to form a seal with strips and transition strips and to achieve a continuous air barrier according to air-barrier manufacturer's written instructions and details. Apply air-barrier material within manufacturer's recommended application temperature ranges.
1. Unless manufacturer recommends in writing against priming, apply primer to substrates at required rate and allow it to dry.
2. Limit priming to areas that will be covered by air-barrier material on same day. Reprime areas exposed for more than 24 hours.

3. Where multiple prime coats are needed to achieve required bond, allow adequate drying time between coats.

B. High-Build Air Barriers: Apply continuous unbroken air-barrier material to substrates according to the following thickness. Apply air-barrier material in full contact around protrusions such as masonry ties.
   1. Vapor-Retarding, High-Build Air Barrier: Total dry film thickness [as recommended in writing by manufacturer to comply with performance requirements, but not less than 35 mils, applied in one coat.
   2. Vapor-Permeable, High-Build Air Barrier: Total dry film thickness as recommended in writing by manufacturer to comply with performance requirements, but not less than 35 mils (0.9 mm), applied in one coat.

C. Do not cover air barrier until it has been tested and inspected by testing agency.

D. Correct deficiencies in or remove air barrier that does not comply with requirements; repair substrates and reapply air-barrier components.

3.6 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for additional requirements.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

C. Inspections: Air-barrier materials, accessories, and installation are subject to inspection for compliance with requirements. Inspections may include the following:
   1. Verify that continuity of air-barrier system has been achieved throughout the building envelope with no gaps or holes.
   2. Verify air-barrier dry film thickness.
   3. Verify that continuous structural support of air-barrier system has been provided.
   4. Verify that masonry and concrete surfaces are smooth, clean, and free of cavities, protrusions, and mortar droppings.
   5. Verify that site conditions for application temperature and dryness of substrates have been maintained.
   6. Verify that maximum exposure time of materials to UV deterioration has not been exceeded.
   7. Verify that surface have been primed, if applicable.
   8. Verify that laps in strips and transition strips have complied with minimum requirements and have been shingled in the correct direction (or mastic has been applied on exposed edges), with no fishmouths.
   9. Verify that termination mastic has been applied on cut edges.
   10. Verify that strips and transition strips have been firmly adhered to substrate.
   11. Verify that compatible materials have been used.
   12. Verify that transitions at changes in direction and structural support at gaps have been provided.
   13. Verify that connections between assemblies (air-barrier and sealants) have complied with requirements for cleanliness, surface preparation and priming, structural support, integrity, and continuity of seal.
   14. Verify that all penetrations have been sealed.

D. Tests: As determined by testing agency from among the following tests:

1. Air-Leakage-Location Testing: Air-barrier assemblies will be tested for evidence of air leakage in accordance with ASTM E1186, chamber pressurization or depressurization with smoke tracers.
2. Air-Leakage-Volume Testing: Air-barrier assemblies will be tested for air-leakage rate in accordance with ASTM E783.
3. Adhesion Testing: Air-barrier assemblies will be tested for required adhesion to substrate according to ASTM D4541 for each 600 sq. ft. of installed air barrier or part thereof.
4. Air barriers will be considered defective if they do not pass tests and inspections.
   a) Apply additional air-barrier material, according to manufacturer's written instructions, where inspection results indicate insufficient thickness.
   b) Remove and replace deficient air-barrier components for retesting as specified above.
5. Repair damage to air barriers caused by testing; follow manufacturer's written instructions.
6. Prepare test and inspection reports.

3.7 CLEANING

A. Clean spills, stains, and soiling from construction that would be exposed in the completed work using cleaning agents and procedures recommended in writing by manufacturer of affected construction.

B. Remove masking materials upon completion of installation.

3.8 PROTECTION

A. Protect installed air-barrier system from damage during application and remainder of construction period, in accordance with manufacturer's written instructions.
   1. Protect air barrier from exposure to UV light and harmful weather exposure as recommended in writing by manufacturer. If exposed to these conditions for longer than recommended, remove and replace air barrier or install additional, full-thickness, air-barrier application after repairing and preparing the overexposed materials according to air-barrier manufacturer's written instructions.
   2. Protect air barrier from contact with incompatible materials and sealants not approved by air-barrier manufacturer.

END OF SECTION 07 2726

SECTION 07 4213.23 - METAL COMPOSITE MATERIAL WALL PANELS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Exterior cladding panels consisting of formed metal composite material (MCM) sheet, secondary supports, and anchors to structure, attached to solid backup. Provide all accessories required for a complete installation.

B. Matching flashing and trim.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 01 7419 – Construction Waste Management and Disposal

C. Section 07 2726 - Fluid-Applied Membrane Air Barriers: Air and water barrier behind wall panel system.

D. Section 07 6200 - Sheet Metal Flashing and Trim: Metal flashing components integrated with this wall system.

E. Section 07 9200 - Joint Sealants: Sealing joints between siding and adjacent construction and fixtures.

1.3 REFERENCE STANDARDS

A. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix); 2017a.

B. ASHRAE Std 90.1 I-P - Energy Standard for Buildings Except Low-Rise Residential Buildings; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

C. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

D. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products; 2017.

E. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware; 2023.

F. ASTM A276/A276M - Standard Specification for Stainless Steel Bars and Shapes; 2023.

G. ASTM A480/A480M - Standard Specification for General Requirements for Flat-Rolled Stainless and Heat-Resisting Steel Plate, Sheet, and Strip; 2020a.

H. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.

I. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar; 2023.

J. ASTM A792/A792M - Standard Specification for Steel Sheet, 55% Aluminum-Zinc Alloy-Coated by the Hot-Dip Process; 2010 (Reapproved 2015).

K. ASTM B209/B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate; 2021a.

L. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2021.

M. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric); 2021.

N. ASTM C920 - Standard Specification for Elastomeric Joint Sealants; 2018.

O. ASTM D1781 - Standard Test Method for Climbing Drum Peel for Adhesives; 1998 (Reapproved 2012).

P. ASTM D1929 - Standard Test Method for Determining Ignition Temperature of Plastics; 2020.

Q. ASTM D4145 - Standard Test Method for Coating Flexibility of Prepainted Sheet; 2010 (Reapproved 2018).

R. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2023d.

S. ASTM E283/E283M - Standard Test Method for Determining Rate of Air Leakage Through Exterior Windows, Skylights, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen; 2019.

T. ASTM E330/E330M - Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference; 2014 (Reapproved 2021).

U. ASTM E331 - Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference; 2000 (Reapproved 2023).

V. NFPA 285 - Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Wall Assemblies Containing Combustible Components; 2023.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Pre-Installation Meeting: Convene one week before starting work of this section to verify project requirements, coordinate with installers of other work, establish condition and completeness of building substrate, and review manufacturers' installation instructions and warranty requirements.

1. Require attendance by the installer and relevant sub-contractors.
2. Include MCM sheet manufacturer's representative and wall system manufacturer's representative to review storage and handling procedures.
3. Review in detail truck transportation, parking, vertical transportation, schedule, personnel, installation of adjacent materials and substrate.
4. Review procedures for protection of work and other construction.
5. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
6. Review methods and procedures related to metal panel installation, including manufacturer's written instructions.
7. Examine support conditions for compliance with requirements, including alignment between and attachment to structural members.
8. Review flashings, special siding details, wall penetrations, openings, and condition of other construction that affect metal panels.
9. Review governing regulations and requirements for insurance, certificates, and tests and inspections if applicable.
10. Review temporary protection requirements for metal panel assembly during and after installation.
11. Review of procedures for repair of metal panels damaged after installation.
12. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data - MCM Sheets: Manufacturer's data sheets on each product to be used, including thickness, physical characteristics, and finish, and:
   1. Finish manufacturer's data sheet showing physical and performance characteristics.
   2. Storage and handling requirements and recommendations.
   3. Fabrication instructions and recommendations.
   4. Specimen warranty for finish, as specified herein.

C. Product Data - Wall System: Manufacturer's data sheets on each product to be used, including:
   1. Physical characteristics of components shown on shop drawings.
   2. Storage and handling requirements and recommendations.
   3. Installation instructions and recommendations.
   4. Specimen warranty for wall system, as specified herein.

D. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products an materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

E. Shop Drawings: Show layout and elevations, dimensions and thickness of panels, connections, details and location of joints, sealants and gaskets, method of anchorage, support clips, number of anchors, supports, reinforcement, trim, flashings, and accessories.
   1. Indicate panel numbering system.
   2. Differentiate between shop and field fabrication.
   3. Indicate substrates and adjacent work with which the wall system must be coordinated.
   4. Include large-scale details of anchorages and connecting elements.
   5. Include large-scale details or schematic, exploded or isometric diagrams to fully explain flashing at a scale of not less than 1-1/2 inches per 12 inches.
   6. Include design engineer's stamp or seal on shop drawings for attachments and anchors.

F. Verification Samples: For each finish product specified, submit at least three samples, minimum size 12 inch square, and representing actual product in color and texture.

G. Delegated Design Submittal: For metal wall panel asembly indicated to comply with performance requirements and design criteria, submit structural calculations signed and sealed by the qualified professional structural engineer responsible for their preparation.

H. Coordination Drawings: Exterior elevations drawn to scale and coordinating penetrations and wall-mounted items. Show the following:
   1. Wall panels and attachments.
   2. Wall-mounted items including doors, windows, louvers, and lighting fixtures.
   3. Penetrations of wall by pipes and utilities.

I. Test Report: Submit report of full-size mock-up tests for air infiltration, water penetration, and wind performance.

J. Test Report: Submit test report verifying compliance with NFPA 285 for previously-tested exterior wall assembly.

K. Manufacturer's Field Reports: Provide within 48 hours of field review. State what was observed and what changes, if any, were requested or required.

L. Designer's qualification statement.

M. Manufacturer's qualification statement.

N. Installer's qualification statement.

O. Testing agency's qualification statement.

P. Maintenance Data: Care of finishes and warranty requirements.

Q. Executed Warranty: Submit warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

1.6 QUALITY ASSURANCE

A. Field Measurements: Verify actual dimensions by field measurement before fabrication; show recorded measurements on shop drawings.

B. Design Engineer's Qualifications: Design structural supports and anchorages under direct supervision of a Structural Engineer experienced in design of this type of work and licensed in the State in which the Project is located.

C. Manufacturer Qualifications: Company specializing in manufacturing wall panel systems specified in this section.
   1. With not less than seven years of documented experience.
   2. Approved by MCM sheet manufacturer.

D. Installer Qualifications: Company specializing in performing work of type specified in this section.
   1. With minimum five years of documented experience.
   2. Approved by wall panel system manufacturer.

E. Testing Agency Qualifications: Independent agency experienced in testing assemblies of the type required for this project and having the necessary facilities for full-size mock-up testing of the type specified.

1.7 MOCK-UPS

A. See Section 01 4000 - Quality Requirements for additional requirements.

B. Provide a mock-up for evaluation of fabrication workmanship.

C. Locate where directed.

D. Provide specified finish on panels.

E. Mock-up may remain as part of work.

1.8 DELIVERY, STORAGE, AND HANDLING

A. See Section 01 7419 - Construction Waste Management and Disposal for packaging waste requirements.

B. Deliver products in manufacturer's original, unopened, undamaged containers with identification labels intact.
   1. Protect finishes by applying heavy-duty removable plastic film during production.
   2. Package for protection against transportation damage.
   3. Provide markings to identify components consistently with drawings.
   4. Exercise care in unloading, storing, and installing panels to prevent bending, warping, twisting, and surface damage.

C. Store products protected from exposure to harmful weather conditions and at temperature conditions recommended by manufacturer.
   1. Store in well-ventilated space out of direct sunlight.
   2. Protect from moisture and condensation with tarpaulins or other suitable weathertight covering installed to provide ventilation.
   3. Store at a slope to ensure positive drainage of accumulated water.
   4. Do not store in enclosed space where ambient temperature can exceed 120 degrees F.

5. Avoid contact with other materials that might cause staining, denting, or other surface damage.

1.9 FIELD CONDITIONS

A. Do not install panels when air temperature or relative humidity are outside manufacturer's limits.

1.10 WARRANTY

A. See Section 01 7800 - Closeout Submittals for additional warranty requirements.

B. Correct defective work within a one-year period after Date of Substantial Completion.

C. Finish Warranty: Provide 20-year manufacturer warranty against excessive degradation of exterior finish. Include provision for replacement of units with excessive fading, chalking, or flaking. Complete forms in Owner's name and register with warrantor.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Metal Composite Material (MCM) Sheet Manufacturers:
1. Basis of Design: **3A Composites USA; ALUCOBOND PLUS:** www.alucobondusa.com/#sle.
2. ALPOLIC Materials; ALPOLIC/fr (Fire Retardant core): www.alpolic-americas.com/#sle.
3. Arconic Architectural Products LLC; Reynobond FR - RB160FR.
4. Fairview Architectural LLC; VitraBond (Fire Rated): www.fairview-na.com/#sle.
5. Substitutions: See Section 01 6000 - Product Requirements.

B. Wall Panel System Manufacturers:
1. Alucoil North America LLC: www.evopanels.com/#sle.
2. East Coast Metal Systems, Inc: www.ecmsinc.net/#sle.
3. Fairview Architectural LLC: www.fairview-na.com/#sle.
4. Kanalco Ltd: www.kanalco.com/#sle.
5. Petersen Aluminum Corporation: www.pac-clad.com/#sle.
6. Substitutions: See Section 01 6000 - Product Requirements.

2.2 WALL PANEL SYSTEM

A. Wall Panel System: Metal panels, fasteners, and anchors designed to be supported by framing or other substrate provided by others; provide installed panel system capable of maintaining specified performance without defects, damage, or failure.
1. Provide structural design by or under direct supervision of a Structural Engineer licensed in the State in which the Project is located.
2. Provide panel jointing and weatherseal using reveal joints and gaskets but no sealant.
3. Anchor panels to supporting framing without exposed fasteners.

B. Performance Requirements:

1. Thermal Movement: Provide for free and noiseless vertical and horizontal thermal movement due to expansion and contraction under material temperature range of minus 20 degrees F to 180 degrees F without buckling, opening of joints, undue stress on fasteners, or other detrimental effects; allow for ambient temperature at time of fabrication, assembly, and erection procedures.
2. Wind Performance: Provide system tested in accordance with ASTM E330/E330M without permanent deformation or failures of structural members under the following conditions:
   a) Design Wind Pressure: As indicated on the Structural drawings.
   b) Wind Load: panels shall be designed to withstand the design loads indicated, but not less than 20 psf and 30 psf on parapet and corner panels.
3. Maximum deflection of perimeter framing member of L/175 normal to plane of the wall; maximum deflection of individual panels of L/60.
4. Maximum anchor deflection in any direction of 1/16 inch at connection points of framing members to anchors.
5. Seismic Loads: Provde metal wall panel assemblies capable of withstanding the effects of earthquake motions calculatd according to the Connecticut State Building Code, as determined by the fabricator's design engineer.
6. Air Leakage: 0.06 cfm/sq ft maximum leakage when tested at 1.57 psf pressure difference in accordance with ASTM E283/E283M.
7. Water Penetration: No water penetration under static pressure when tested in accordance with ASTM E331 at a differential of 10 percent of inward acting design load, 6.27 psf minimum, after 15 minutes.
   a) Water penetration is defined as the appearance of uncontrolled water on the interior face of the wall.
   b) Design to drain leakage and condensation to the exterior face of the wall.
8. Fire Performance: Pass, using test method complying with NFPA 285.
9. Building Envelope Performance: Comply with ASHRAE Std 90.1 I-P when tested as part of building envelope assembly.

2.3 PANELS

A. General: Provide factory-formed and -assembled metal-faced wall panels fabricated from metal composite material and formed into profile for installation method indicated. Include attachment system components and accessories required for complete weathertight system and installation.

B. Panels: 2 inch deep pans formed of metal composite material sheet by routing back edges of sheet, removing corners, and folding edges.
   1. Reinforce corners with riveted aluminum angles.
   2. Provide concealed attachment to supporting structure by adhering attachment members to back of panel; attachment members may also function as stiffeners.
   3. Maintain maximum panel bow of 0.8 percent of panel dimension in width and length; provide stiffeners of sufficient size and strength to maintain panel flatness without showing local stresses or read-through on panel face.
   4. Reinforce panels over 48 inches long with metal angle braces 24 inches on center in short direction.
   5. Secure members to back face of panels using structural silicone sealant approved by MCM sheet manufacturer.

6. Metallic Finished Panels: Maintain consistent grain of MCM sheet; specifically, do not rotate sheet purely to avoid waste.
7. Fabricate panels under controlled shop conditions.
8. Where final dimensions cannot be established by field measurement before commencement of manufacturing, make allowance for field adjustments without requiring field fabrication of panels.
9. Fabricate as indicated on drawings and as recommended by MCM sheet manufacturer.
   a) Make panel lines, breaks, curves, and angles sharp and true.
   b) Keep plane surfaces free from warp or buckle.
   c) Keep panel surfaces free of scratches or marks caused during fabrication.
10. Provide joint details providing a watertight and structurally sound wall panel system that allows no uncontrolled water penetration on inside face of panel system.
11. For "dry" jointing, secure extrusions to returned pan edges with stainless steel rivets; provide means of concealed drainage with baffles and weeps for water that might accumulate in members of system.

C. Attachment Assembly: Manufacturer's standard rainscreen system.
   1. System utilizes an extruded horizontal and vertical extrusion system. Reveal joint is open dry joint in accordance with rainscreen principles.

D. Attachment System Components: Formed from extruded aluminum.
   1. Include manufacturer's standard perimeter extrusions with silicone sealant, panel stiffeners, panel clips. and anchor channels.

2.4 MATERIALS

A. Metal Composite Material (MCM) Sheet: Two sheets of aluminum sandwiching a core of extruded thermoplastic material; no foamed insulation material content.
   1. Overall Sheet Thickness: 4mm / 0.157 inch, minimum.
   2. Face Sheet Thickness: 0.019 inch, minimum.
   3. Core: FR, fire retardant.
   4. Alloy: Manufacturer's standard, selected for best appearance and finish durability.
   5. Bond and Peel Strength: No adhesive failure of the bond between the core and the skin nor cohesive failure of the core itself below 22.4 inch-pound/inch with no degradation in bond performance, when tested in accordance with ASTM D1781, simulating resistance to panel delamination, after 8 hours of submersion in boiling water and after 21 days of immersion in water at 70 degrees F.
   6. Surface Burning Characteristics: Flame spread index of 25, maximum; smoke developed index of 450, maximum; when tested in accordance with ASTM E84.
   7. Flammability: Self-ignition temperature of 650 degrees F or greater when tested in accordance with ASTM D1929.

B. Metal Framing Members: Include sub-girts, zee-clips, base and sill angles and channels, hat-shaped and rigid channels, and furring channels required for complete installation.
   1. Provide material strength, dimensions, configuration as required to meet applied loads, structural design criteria indicated o Structural drawings, and in compliance with applicable building code.
   2. Sheet Steel Components: ASTM A653/A653M galvanized to G90/Z275 or zinc-iron alloy-coated to A60/ZF180; or ASTM A792/A792M aluminum-zinc coated to AZ60/AZM180.

3. Stainless Steel Sheet Components: ASTM A480/A480M.
4. Aluminum Components: ASTM B209/B209M; or ASTM B221 (ASTM B221M).

2.5 FINISHES

A. Factory Finish: Three coat fluoropolymer resin coating, approved by coating manufacturer for length of warranty specified for project, and applied by coil manufacturing facility that specializes in coil applied finishes.
   1. Coating Flexibility: Pass ASTM D4145 minimum 1T Bend at time of manufacturing.
   2. Long-Term Performance: Not less than that specified under WARRANTY in PART 1.

B. Fluoropolymer Coil Coating System: Polyvinylidene fluoride (PVDF) multi-coat superior performing organic coatings system complying with AAMA 2605, including at least 70 percent PVDF resin, with at least 80 percent of coil coated metal surfaces having minimum total dry film thickness (DFT) of 0.9 mil, 0.0009 inch.
   1. Color: Custom, match Architect's sample.

C. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

D. Appearance of Finished Work:Variations in the appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved samples. Noticeable variations in the same piece are not acceptable. Variations in the appearance of other components are acceptable if they are within the range of the approved samples and are assembled or installed to minimize contrast.

2.6 ACCESSORIES

A. Flashing: Sheet aluminum; 0.032 inch thick, minimum; finish system and color to match MCM sheet; see Section 07 6200 for additional requirements.
   1. Provide flashing and trim as required to sal against weather and provide a finished appearance. Locations include, but are not limited to: bases, drips, sills, corners, jambs, endwalls, framed openings, soffits, and fillers.

B. Support for Cladding and Continuous Insulation: Thermal clip and rail.
   1. Thermally-broken clips / brackets that provide attachment support for girts, angles, channels, and other cladding support framing. Contractor's option to provide either of the following types:
      a) Thermal Clips: Pultruded fiberglass resin allowing field adjustment and alignment of rails.
      b) Thermal Clips: Extruded aluminum, with thermal spacer at base and slot at top to allow field adjustment and alignment of rails.
         1) Thermal Spacer: Prefastened flame retardant polypropylene copolymer isolator at base of brackets. 3/8 inch nominal thickness.
      c) Range of Height Adjustment: As indicated on drawings.
   2. Extruded vertical and horizontal aluminum rails (girts and subgirts) as indicated on the drawings. Dimensions and thickness(es) as determined by engineering requirements.
   3. Fasteners: Provide support system and cladding attachment fasteners as recommended by system manufacturer in accordance with requirements and as required by the structural design for the wall assembly.

C. Anchors, Clips, and Accessories: Use one of the following:
   1. Stainless steel complying with ASTM A276/A276M, ASTM A480/A480M, or ASTM A666.
   2. Steel complying with ASTM A36/A36M and hot-dip zinc coating to ASTM A153/A153M.
   3. Steel complying with ASTM A36/A36M and hot-dip galvanized to ASTM A123/A123M, with Coating Thickness Grade of 100.

D. Fasteners:
   1. Screws: Self-drilling or self-tapping Type 410 stainless steel or zinc-alloy steel hex washer head, with EPDM or PVC washer under heads of fasteners bearing on weather side of metal wall panels.
   2. Bolts: Stainless steel.
   3. Fasteners for Flashing and Trim: Blind fasteners of high-strength stainless steel.

E. Bituminous Coating: Cold-applied asphalt mastic, noncorrosive compound free of asbestos, sulfur, and other deleterious impurities; 15-mil dry film thickness per coat.

F. Joint Sealer: Provide color to match wall panels silicone sealant of type approved by MCM sheet manufacturer, and in compliance with ASTM C920.

G. Provide panel system manufacturer's and installer’s standard corrosion resistant accessories, including fasteners, clips, anchorage devices, and attachments.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine dimensions, tolerances, and interfaces with other work.
   1. Verify that weather barrier system is properly installed

B. Provide tests on full-size mock-ups, performed specifically for this project, unless otherwise indicated.

C. Examine substrate on-site to determine that conditions are acceptable for product installation in accordance with manufacturer's written instructions.
   1. Examine wall framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by panel manufacturer.
   2. Examine wall sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by panel manufacturer.
   3. Verify that air barrier has been installed over sheathing or backing substrate to prevent air infiltration and water penetration.

D. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

E. Notify Architect in writing of conditions detrimental to proper and timely completion of work, and do not proceed with erection until unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Protect adjacent work areas and finish surfaces from damage during installation.

3.3 INSTALLATION

A. Do not install products that are defective, including warped, bowed, dented, and broken members, and members with damaged finishes.

B. Comply with instructions and recommendations of MCM sheet manufacturer and wall system manufacturer, as well as with approved shop drawings.

C. Install wall system securely allowing for necessary thermal and structural movement; comply with wall system manufacturer's instructions for installation of concealed fasteners.

D. Fasteners: Use stainless steel fasteners for all surfaces.

E. Do not handle or tool products during erection in manner that damages finish, decreases strength, or results in visual imperfection or failure in performance. Return component parts that require alteration to shop for refabrication, if possible, or for replacement with new parts.

F. Do not form panels in field unless required by wall system manufacturer and approved by the Architect; comply with MCM sheet manufacturer's instructions and recommendations for field forming.

G. Separate dissimilar metals; use gasket fasteners, isolation shims, or isolation tape where needed to eliminate possibility of electrolytic action between metals.

H. Install flashings as indicated on shop drawings. At flashing butt joints, provide a lap strap under flashing and seal lapped surfaces with a full bed of non-hardening sealant.

I. Install square, plumb, straight, and true, accurately fitted, with tight joints and intersections maintaining the following installation tolerances:
   1. Variation From Plane or Location: 1/2 inch in 30 feet of length and up to 3/4 inch in 300 feet, maximum.
   2. Deviation of Vertical Member From True Line: 0.1 inch in 25 feet run, maximum.
   3. Deviation of Horizontal Member From True Line: 0.1 inch in 25 feet run, maximum.
   4. Offset From True Alignment Between Two Adjacent Members Abutting End To End, In Line: 0.03 inch, maximum.

J. Replace damaged products.

3.4 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements for additional requirements.

B. Wall System Manufacturer's Field Services: Provide field services consisting of product use recommendations and periodic site visits for inspection of product installation in accordance with instructions.
   1. Site Visits: Schedule two site visits during execution of installation.

C. Water Spray Test: After installation is 35% complete, test area of assembly as directed by Construction Manager for water penetration per AAMA 501.2.

D. Metal composite panels will be considered defective if they do not pass testing and inspections.

3.5 CLEANING

A. See Section 01 7000 - Execution and Closeout Requirements for additional requirements.

B. Ensure weep holes and drainage channels are unobstructed and free of dirt and sealants.

C. Remove protective film after installation of joint sealers, after cleaning of adjacent materials, and immediately prior to completion of work.

D. Remove temporary coverings and protection of adjacent work areas.

E. Clean installed products in accordance with manufacturer's instructions.

F. Replace panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

3.6 PROTECTION

A. Protect installed panel system from damage until Date of Substantial Completion.

END OF SECTION 07 4213.23

SECTION 07 4646 - FIBER-CEMENT WALL PANELS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Fiber-cement siding installed in a rainscreen wall assembly.

B. Cladding support system.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 01 7419 – Construction Waste Management and Disposal

C. Section 05 4000 - Cold-Formed Metal Framing: Cladding substrate.

D. Section 05 4000 - Cold-Formed Metal Framing: Water-resistive barrier under siding.

E. Section 06 1000 - Rough Carpentry: Exterior wall sheathing.

1.3 REFERENCE STANDARDS

A. ASTM C1186 - Standard Specification for Flat Fiber Cement Sheets; 2008 (Reapproved 2016).

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Submit manufacturer's data sheets on each product to be used, including:
   1. Manufacturer's requirements for related materials to be installed by others.
   2. Preparation instructions and recommendations.
   3. Storage and handling requirements and recommendations.
   4. Installation methods, including nail patterns.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Shop Drawings: Provide key plans, elevations, sections, and details. Indicate dimensions, layout, joints, construction details, support clips, interface with adjacent construction, and methods of anchorage.

E. Delegated Design Documents: Submit for information, signed and sealed documents by structural engineer of record responsible for comprehensive design package of cladding support system, including wall fasteners and anchors. Submit structural design, rail spacing, and calculations sufficient to comply with structural design criteria of this section.

F. Manufacturer's qualification statement.

G. Installer's qualification statement.

H. Warranty: Submit copy of manufacturer's warranty, made out in Owner's name, showing that it has been registered with manufacturer.

1.5 QUALITY ASSURANCE

A. Designer Qualifications: Qualified professional structural engineer experienced in design of cladding support systems, associated wall fasteners and anchors, and licensed in the State in which the Project is located.

B. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than seven years of documented experience.

C. Installer Qualifications: Company specializing in performing work of type specified in this section with not less than five years of experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. See Section 01 7419 - Construction Waste Management and Disposal for packaging waste requirements.

B. Deliver and store materials in manufacturer's unopened packaging, with labels intact, until ready for installation.

C. Store materials under dry and waterproof cover, well ventilated, and elevated above grade on a flat surface.

D. Protect materials from harmful environmental elements, construction dust, and other potentially detrimental conditions.

1.7 FIELD CONDITIONS

A. Do not install panels when air temperature or relative humidity are outside manufacturer's limits.

1.8 WARRANTY

A. See Section 01 7800 - Closeout Submittals for additional warranty requirements.

B. Correction Period: Correct defective work within 1-year period commencing on Date of Substantial Completion.

C. Manufacturer Warranty: Provide manufacturer 15-year warranty against manufactured defects in the panels and panel finish.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide composite panel systems capable of withstanding the effects of the following loads, based on testing in accordance with ASTM E330/E330M:
   1. Design Loads: In accordance with the structural design criteria indicated on Drawing S000.
   2. Deflection Limits: For wind loads, panel deflection no greater than L/120 of the span.

B. Thermal Expansion: Maximum 0.00000318 deg F to minus 1 when tested in accordance with ASTM E228.

C. Air Leakage: 1.53 cfm/sq. ft. or less in accordance with AAMA5094.

D. Physical Performance: Provide composite panel system in accordance with ASTM C1186.
   1. Wet Flexural Strength: Result: 1418 psi , Lower Limit: 1015 psi .
   2. Water Tightness: No water droplets observed on any specimen.
   3. Freeze-Thaw: No damage or defects observed.
   4. Warm Water: No evidence of cracking, delamination, swelling, or other defects observed.
   5. Heat-Rain: No crazing, cracking, or other deleterious effects, or surface or joint changes observed in any specimen.

E. Fire Propagation Characteristics: Fiber cement panel wall assembly passes NFPA 285.

2.2 FIBER-CEMENT PANELS

A. Wall Panels: Vertically oriented panels made of cement and cellulose fiber formed under high pressure with integral surface texture, complying with ASTM C1186, Type A, Grade II; with machined edges, for nail attachment.
   1. Texture: Simulated cedar grain.
   2. Length (Height): 120 inches, nominal, unless otherwise indicated on drawings.
   3. Width: 18 inches, nominal, unless otherwise indicated on drawings.
   4. Thickness: 5/8 inch, nominal.
   5. Finish: Factory applied stain.
   6. Products:
      a) Basis-of-Design: **Nichiha USA, Inc; Architectural Wall Panels - Vintagewood:** www.nichiha.com/#sle.
         1) Color #1: "Cedar".
         2) Color #2: "Bark".
      b) Other Accceptable Products:
         1) KMEW USA Inc; Ceraclad: www.ceraclad.com.
      c) Substitutions: See Section 01 6000 - Product Requirements.

2.3 CLADDING SUPPORT SYSTEM

A. Cladding Support System: Non-continuous, stainless steel rainscreen cladding attachment system, installed in conjunction with exterior insulation and thermally isolated from building substrate. Noncombustible in accordance with NFPA 285.
   1. Basis-of-Design: **ECO Cladding**; **Sigma Vci Stainless Steel Rain Screen Attachment System**.
      a) For attaching vertical panels with concealed fasteners.
   2. Provide all cladding support system components from a single source. Scope includes full engineering design of cladding attachment to building back-up walls.
      a) Bracket and rail components (stainless steel).
      b) Brackets shall be self-shimming for out-of-plumb comditions.
      c) Fasteners (Type 304 stainless steel).
   3. Substitutions: See Section 01 6000 - Product Requirements.

2.4 ACCESSORIES

A. Metal Trim: Extruded aluminum alloy 6063-T5 temper.
   1. Finish: Powder coating.
      a) Colors: To match siding color, unless otherwise indicated on drawings.
         1) Trim to match either Color #1 or Color #2, whichever is in direct contact with trim.
   2. Metal Trim, Multi-Purpose: Preformed panel trim and flashing pieces.
      a) Dimensions, Profile, Type, and Layout: As indicated on drawings.

B. Fasteners: Galvanized or corrosion resistant; length as required to penetrate, 1-1/4 inches, minimum.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine substrate, with installer present, for compliance with requirements for installation tolerances, composite panel supports, and other conditions affecting performance of the work. Clean and repair as required to eliminate conditions that would be detrimental to proper installation.
   1. Examine wall framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by composite panel manufacturer.
   2. Examine wall sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by composite panel manufacturer.

B. Verify that air-vapor barrier has been installed over substrate completely and correctly.

C. Examine roughing-in for components and assemblies penetrating composite panels to verify actual locations of penetrations relative to seam locations of composite panels before installation.

D. Do not begin until unacceptable conditions have been corrected.

E. If substrate preparation is responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 INSTALLATION

A. Install cladding support system in accordance with manufacturer's instructions and approved shop drawings

B. Install exterior insulation to fit between wall brackets as specified by Section 07 2100.

C. Install fiber cement panels in accordance with manufacturer's instructions and recommendations, and approved shop drawings.
   1. Read warranty and comply with terms necessary to maintain warranty coverage.
   2. Use trim details as indicated on drawings.
   3. Touch up field cut edges before installing.
   4. Pre-drill nail holes if necessary to prevent breakage.

D. Attachment Assembly, General: Install attachment assembly required to support composite wall panels and to provide a complete weathertight wall system, including subgirts, perimeter extrusions, tracks, drainage channels, panel clips, and anchor channels.
   1. Include attachment to supports, panel-to-panel joinery, panel-to-dissimilar-material joinery, and panel-system joint seals.

E. Joints in Vertical Siding: Install Z-flashing in horizontal joints between successive courses of vertical siding.

F. Do not install siding less than 6 inches from ground surface, or closer than 1 inch to roofs, patios, porches, and other surfaces where water may collect.

G. After installation, seal joints except lap joints of lap siding; seal around penetrations, and paint exposed cut edges.

H. Accessory Installation: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.

3.3 ERECTION TOLERANCES

A. Site Verifications of Conditions:
   1. Verify that conditions of substrate previously installed under other Sections are acceptable for composite system installation. Provide documentation indicating detrimental conditions to composite system performance.
   2. Once conditions are verified, composite system installation tolerances are as follows:
      a) Shim and align composite wall panel units within installed tolerance of 1/4 inch in 20 ft. (non-accumulative, on level, plumb, and location lines as indicated, and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

3.4 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Water-Spray Test: After installation is 35% complete, test area of assembly directed by Architect or Construction Manager for water penetration in accordance with AAMA 501.2.

C. Composite wall panels will be considered defective if they do not pass test and inspections.

D. Additional tests and inspections, at Contractor's expense, are performed to determine compliance of replaced or additional work with specified requirements.

E. Prepare test and inspection reports.

3.5 CLEANING

A. See Section 01 7000 - Execution and Closeout Requirements for additional requirements.

B. Clean faced panels in accordance with manufacturer’s maintenance instructions, using cleaning materials and methods acceptable to manufacturer.

3.6 PROTECTION

A. Protect installed products until Date of Substantial Completion.

B. Touch-up, repair or replace damaged products before Date of Substantial Completion.

END OF SECTION 07 4646

SECTION 07 5423 - THERMOPLASTIC POLYOLEFIN (TPO) ROOFING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Thermoplastic polyolefin (TPO) induction welded roofing system.

B. Insulation, flat and tapered.

C. Vapor retarder.

D. Cover board.

E. Flashings.

F. Roofing walkway pads.

1.2 RELATED REQUIREMENTS

A. Section 01 2300 - Alternates.

B. Section 01 3566.42 - Sustainability Compliance Procedures.

C. Section 01 7419 – Construction Waste Management and Disposal

D. Section 06 1000 - Rough Carpentry: Wood nailers, curbs, blocking, and wood cant strips.

E. Section 07 7100 - Roof Specialties: Manufactured roof edge fascia, copings, and scuppers.

F. Section 07 7200 - Roof Accessories: Roof hatches and vents.

G. Section 08 6300- Metal-Framed Skylights.

1.3 DEFINITIONS

A. Roofing Terminology: Definitions in ASTM D1079 and glossary in NRCA (RM) apply to work of this section.

1.4 REFERENCE STANDARDS

A. ANSI/FM 4474 - American National Standard for Evaluating the Simulated Wind Uplift Resistance of Roof Assemblies Using Static Positive and/or Negative Differential Pressures; 2004 (R2010).

B. ASTM C1289 - Standard Specification for Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board; 2023a.

C. ASTM D1079 - Standard Terminology Relating to Roofing and Waterproofing; 2020.

D. ASTM D4397 - Standard Specification for Polyethylene Sheeting for Construction, Industrial, and Agricultural Applications; 2016.

E. ASTM D6878/D6878M - Standard Specification for Thermoplastic Polyolefin Based Sheet Roofing; 2019.

F. ASTM E108 - Standard Test Methods for Fire Tests of Roof Coverings; 2020a.

G. ASTM E1980 - Standard Practice for Calculating Solar Reflectance Index of Horizontal and Low-Sloped Opaque Surfaces; 2011 (Reapproved 2019).

H. FM (AG) - FM Approval Guide; Current Edition.

I. FM 4470 - Approval Standard for Single-Ply, Polymer-Modified Bitumen Sheet, Built-Up Roof (BUR) and Liquid Applied Roof Assemblies for use in Class 1 and Noncombustible Roof Deck Construction; 2016.

J. NRCA (RM) - The NRCA Roofing Manual; 2019.

K. NRCA (WM) - The NRCA Waterproofing Manual; 2005.

L. UL 1897 - Uplift Tests for Roof-Covering Systems; Underwriters Laboratories Inc.; Current Edition, Including All Revisions.

M. UL 580 - Standard for Tests for Uplift Resistance of Roof Assemblies; Current Edition, Including All Revisions.

N. UL 790 - Standard for Standard Test Methods for Fire Tests of Roof Coverings; Current Edition, Including All Revisions.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Preliminary Roofing Conference: Before starting roof deck construction, conduct conference at project site.

B. Preinstallation Meeting: Convene at project site one week before starting work of this section.
   1. Review preparation and installation procedures and coordinating and scheduling required with related work.

1.6 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data indicating membrane materials, flashing materials, insulation, vapor retarder, surfacing, and fasteners. Include copy of FM Approvals' RoofNav listing.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit 5d: For adhesives and sealants used within the weatherproofing system, documentation including printed statement of VOC content.

2. Product Data for Credit e11: For roof materials, indicating that roof materials comply with Solar Reflectance Index requirement.
3. Product Data for Credit d8: For insulation, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
4. Product Data for Credit d10: For insulations, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Shop Drawings: Submit drawings that indicate joint or termination detail conditions, conditions of interface with other materials, and paver layout. Include roof plans, sections, and details.

E. Samples of Walkway Pads or Rolls: Submit two samples 12 by 12 inches in size.

F. Wind Uplift Resistance: Submit documentation indicating compliance with wind uplift performance requirements.

G. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

H. Performance Requirement Certificate: Certify that roofing system complies with specified performance requirements.

I. Manufacturer's Installation Instructions: Indicate membrane seaming precautions and perimeter conditions requiring special attention.

J. Manufacturer's Field Reports: Indicate procedures followed, ambient temperatures, humidity, wind velocity during application, and supplementary instructions given.

K. Installer's Qualification Statement.

L. Specimen Warranty: For approval.

M. Warranty Documentation:
1. Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.
2. Submit installer's certification that installation complies with warranty conditions for waterproof membrane.

N. Inspection Report: Copy of roofing system manufacturer's inspection report of completed roofing installation.

O. Maintenance Data: For roofing system to include in maintenance manuals.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum 10 years of documented experience and is UL listed for roofing system identical to that used for this project.

B. Installer Qualifications: Company specializing in performing the work of this section with at least five years of documented experience and approved by manufacturer.

C. Source Limitations: Obtain components for roofing system, including roof insulation and fasteners, from same manufacturer as membrane roofing or approved by membrane roofing manufacturer.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver products in manufacturer's original containers, dry, undamaged, with seals and labels intact. Label containers with manufacturer's name, product brand name and type, date of manufacture, and approval or listing agency markings.

B. Store products in weather protected environment, clear of ground and moisture.

C. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location.

D. Handle and store roofing materials, and place equipment in a manner to avoid permanent deflection of deck.

1.9 FIELD CONDITIONS

A. Do not apply roofing membrane during unsuitable weather.

B. Do not apply roofing membrane when ambient temperature is below 40 degrees F. Confirm hot weather storage and installation requirements with roofing membrane manufacturer.

C. Do not apply roofing membrane to damp or frozen deck surface or when precipitation is expected or occurring.

D. Do not expose materials vulnerable to water or sun damage in quantities greater than can be weatherproofed the same day.

1.10 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. System Warranty: Provide manufacturer's system warranty agreeing to repair or replace roofing that leaks or is damaged due to wind or other natural causes.
   1. Warranty includes roof membrane, base flashings, roof insulation, and other components of roofing system; this is all inclusive of the entire roofing system and its components.
   2. Base Bid Warranty Term: 20 years.
   3. **Alternate #09** Warranty Term: 25-30 years.
   4. For repair and replacement include costs of both the materials listed in item 1 above and all related labor required to complete the work, through the entire system covered in the project's warranty.

C. Project Warranty: Provide roofing installer's warranty, signed by installer, covering work of this section, including all components of roofing system such as roof membrane, base flashing, roof insulation, and walkway products (edge-to-edge coverage).
   1. Warranty Term: Two years.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Thermoplastic Polyolefin (TPO) Membrane Roofing Materials:
   1. Basis-of-Design: Carlisle SynTec Systems; Sure-Weld TPO: www.carlisle-syntec.com/#sle.

B. Other Acceptable Manufacturers/Products: Subject to compliance with requirements:
   1. Elevate; UltraPly TPO Membrane: www.holcimelevate.com/#sle.
   2. GAF; EverGuard TPO 60 mil: www.gaf.com/#sle.
   3. Johns Manville; JM TPO - 60 Mil: www.jm.com/#sle.
   4. Tremco; TremPly Max TPO: www.tremcoroofing.com.
   5. Substitutions: See Section 01 6000 - Product Requirements.

2.2 PERFORMANCE REQUIREMENTS

A. General: Installed roofing system and flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Roof system and flashings shall remain watertight.

B. Material Compatibility: Roofing materials shall be compatible with one another and adjacent materials under conditions of service and application required, as demonstrated by roof membrane manufacturer based on testing and field experience.

C. Wind Uplift Resistance: Design roofing system to resist the following wind uplift pressures when tested according to ANSI/FM 4474, UL 580, or UL 1897:
   1. Structural design criteria indicated on Drawing S001.

D. Solar Reflectance Index (SRI): Minimum of 78 based on three-year aged value.
   1. Calculate SRI in accordance with ASTM E1980.
   2. Field applied coating may not be used to achieve specified SRI.

E. Exterior Fire-Test Exposure: ASTM E108 or UL 790, Class A; for application and roof slopes indicate; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

F. Physical Properties:
   1. Breaking Strength: Minimum 250 lbf, tested in accordance with ASTM D751 (grab).
   2. Elongation Break of Reinforcement: Minimum 15% , tested in accordance with ASTM D751 (grab).
   3. Tearing Strength: Minimum 55 lbf , tested in accordance with ASTM D751. proc. B.
   4. Water Vapor Permeance: Maximum 0.10 perms, tested in accordance with ASTM E96, procedure B.
   5. Puncture Resistance: Minimum 300 lbf, tested in accordance with FTM 101C, method 2031.

2.3 ROOFING

A. Thermoplastic Polyolefin (TPO) Roofing: One ply membrane, heat induction welded, over insulation.

B. Acceptable Insulation Types - Constant Thickness Application:
   1. Minimum 2 layers of polyisocyanurate board.

C. Acceptable Insulation Types - Tapered Application:
   1. Tapered polyisocyanurate board.

2.4 MEMBRANE ROOFING AND ASSOCIATED MATERIALS

A. Membrane Roofing Materials:
   1. TPO: Thermoplastic polyolefin (TPO) conforming to ASTM D6878/D6878M, fabric-backed sheet containing reinforcing fabrics or scrims.
      a) Thickness: 60 mil, 0.060 inch, minimum.
      b) **Alternate No. 09**: 80 mil, 0.080 inch.
   2. Sheet Width: Factory fabricated into largest sheets possible.
   3. Color: White or tan, as required to comply with Credit e11.

B. Seaming Materials: As recommended by membrane manufacturer.

C. Membrane Fasteners: As recommended and approved by membrane manufacturer, complying with corrosion-resistance provisions of FM 4470, designed for fastening roofing components to substrate.

D. Vapor Retarder: Polyethylene film; ASTM D4397, 6 mils thick, minimum, with maximum permeance rating of 0.13 perm.
   1. Loose-laid, with joints and penetrations taped and sealed.

E. Flexible Flashing Material: Same material as membrane; same color as roofing membrane.

F. Metal Termination Bars: Manufacturer's standard, predrilled stainless steel bars, approximately 1 by 1/8 inch thick; with anchors.

2.5 COVER BOARDS

A. Cover Boards: Faced, and with high compressive strength polyisocyanurate (ISO) insulation complying with ASTM C1289, and the following characteristics:
   1. Classifications: Type II, Class 4 - Faced with coated or uncoated glass fiber mat facers on both major surfaces of the core foam.
   2. Grade and Compressive Strength: Grade 1, 80 psi (Grade 1, 551 kPa).
   3. Board Size: 48 by 96 inch.
   4. Board Thickness: 1/2 inch.
   5. Insulation Thermal Resistance: R-value: 2.4 (0.42), nominal.
   6. Products: By same manufacturer as roofing membrane.
      a) **Alternate #09**: Provide Carlisle SynTec Systems; SecurShield HD.

2.6 INSULATION

A. General: Preformed roof insulation boards manufactured or approved by TPO roof membrane manufacturer.

B. Polyisocyanurate (ISO) Board Insulation: Rigid cellular foam, complying with ASTM C1289.
   1. Classifications:
      a) Type IV: Faced with cellulosic fiber insulating board on one major surface of core foam and glass fiber reinforced cellulosic felt or uncoated or coated polymer-bonded glass fiber mat facer on other major surface of core foam.
         1) Compressive Strength: 16 psi, minimum.
         2) Thermal Resistance, R-value: At 1-1/2 inch thick; 6.9 at 75 degrees F.
   2. Board Size: 48 by 48 inch.
   3. Board Thickness: 1.5 inch.
   4. Tapered Board: Slope as indicated; minimum thickness 1/2 inch; fabricate of fewest layers possible.
   5. Board Edges: Square.
   6. Products:
      a) Basis of Design: **Carlisle Syntec Systems**; **SecurShield Polyiso Insulation**.
      b) GAF; EnergyGuard Polyiso Insulation: www.gaf.com/#sle.
      c) Holcim Elevate; ISOGARD GL: www.holcimelevate.com.
      d) Johns Manville; ENRGY 3: www.jm.com.
      e) Substitutions: See Section 01 6000 - Product Requirements.

2.7 ACCESSORIES

A. Miscellaneous Accessories: Provide pourable sealers, preformed cone and vent sheet flashings, preformed inside and outside corner sheet flashings, T-joint covers, lap sealants, termination reglets, and other accessories.

B. Roofing Expansion Joint Support: Manufacturer's standard extruded EPDM profile for transition between roof and wall, compatible with roofing membrane.

C. Insulation Fasteners: Appropriate for purpose intended and approved for the induction welding system.
   1. Length as required for thickness of insulation material and penetration of deck substrate, with metal washers.

D. Membrane Adhesive: As recommended by membrane manufacturer, water based.

E. Sealants: As recommended by membrane manufacturer.

F. Walkway Pads: Suitable for maintenance traffic, contrasting color or otherwise visually distinctive from roof membrane.
   1. Composition: Roofing membrane manufacturer's standard.
   2. Size: Manufacturer's standard size(s).
   3. Surface Color: As selected by Architect from roof membrane manufacturer's standard colors.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that surfaces and site conditions are ready to receive work.

B. Verify deck is supported and secure.

C. Verify deck is clean and smooth, flat, free of depressions, waves, or projections, properly sloped and suitable for installation of roof system.

D. Verify deck surfaces are dry and free of snow or ice.

E. Verify that roof openings, curbs, and penetrations through roof are solidly set, roof-drain bodies are securely clamped in place, and cant strips are in place.

F. Verify that wood blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.

G. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION - GENERAL

A. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing system installation according to roofing system manufacturer's written instructions. Remove sharp projections.

B. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.

3.3 INSTALLATION - GENERAL

A. Perform work in accordance with manufacturer's instructions, NRCA (RM), and NRCA (WM) applicable requirements, and approved shop drawings.

B. **Alternate #09**: Install roofing system with all components, including fastener patterns and methods, required by manufacturer to achieve the specified warranty term.

C. Do not apply roofing membrane during unsuitable weather.

D. Do not apply roofing membrane when ambient temperature is outside the temperature range recommended by manufacturer.

E. Do not apply roofing membrane to damp or frozen deck surface or when precipitation is expected or occurring.

F. Do not expose materials vulnerable to water or sun damage in quantities greater than can be weatherproofed the same day.

G. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system at end of workday or when rain is forecast. Remove and discard temporary seals before beginning Work on adjoining roofing.

H. Coordinate this work with installation of associated counterflashings installed by other sections as the work of this section proceeds.

3.4 INSULATION - UNDER MEMBRANE

A. Coordinate installation of roofing system components so insulation is not exposed to precipitation or left exposed at end of workday.

B. Comply with roofing system and roof insulation manufacturer's written instructions for installing roof insulation.

C. Attachment of Insulation: Mechanically fasten insulation to deck in accordance with roofing manufacturer's instructions for the induction welding attachment method.

D. Lay subsequent layers of insulation with joints staggered minimum 6 inch from joints of preceding layer.

E. Place tapered insulation to the required slope pattern in accordance with manufacturer's instructions.

F. Lay boards with edges in moderate contact without forcing. Cut insulation to fit neatly to perimeter blocking and around penetrations through roof.

G. Do not apply more insulation than can be covered with membrane in same day.

H. Cover Boards: Mechanically fasten cover boards in accordance with roofing manufacturer's instructions and FM (AG) Factory Mutual requirements.

I. Install slip sheet over cover boards and beneath roof membrane.

3.5 MEMBRANE APPLICATION

A. Roll out membrane, free from wrinkles or tears. Place sheet into place without stretching.

B. Shingle joints on sloped substrate in direction of drainage.

C. Induction Welding/Fastening System Application:
   1. Follow manufacturer's written instructions and best practices for performing induction weld fastening.
   2. Follow roof fastening pattern supplied by roof membrane manufacturer for the specific project conditions.
   3. A minimum of 1-1/2 inches is required over metal deck for proper tool operation.
   4. Eliminate all debris from the roof membrane surface prior to welding.

D. Overlap edges and ends and seal seams by contact adhesive, minimum 3 inches. Seal permanently waterproof. Apply uniform bead of sealant to joint edge.

E. Secure the membrane at the perimeter of each roof level, expansion joint, curb, interior wall, at any angle change exceeding 2 inches in one horizontal foot, and at all other penetrations in accordance with roofing membrane manufacurer's written instructions and details.

F. At intersections with vertical surfaces:
   1. Extend membrane over cant strips and up a minimum of 4 inches onto vertical surfaces.
   2. Fully adhere flexible flashing over membrane and up to nailing strips.

G. At roof fascias and copings, extend membrane under fascias and copings and to the outside face of the wall.

H. Around roof penetrations, seal flanges and flashings with flexible flashing.

I. Coordinate installation of roof drains and sumps and related flashings.

3.6 PAVERS AND ACCESSORIES INSTALLATION

A. Flexible Walkway Installation: Install walkways at the following locations.
   1. Perimeter of each rooftop unit.
   2. Between each rooftop unit location, creating a continuous path connecting rooftop unit locations.
   3. Between each roof hatch and each rooftop unit location or path connecting rooftop unit locations.
   4. Top and bottom of each roof access ladder.
   5. Between each roof access ladder and each rooftop unit location or path connecting rooftop unit locations.
   6. Locations indicated on drawings.
   7. As required by roof membrane manufacturer's warranty requirements.

3.7 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for general requirements for field quality control and inspection.

B. Require site attendance of roofing material manufacturer daily during installation of the Work.

C. Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion, in presence of Architect, and to prepare inspection report.

D. Repair or remove and replace components of roofing system where inspections indicate that they do not comply with specified requirements.

3.8 CLEANING

A. See Section 01 7419 - Construction Waste Management and Disposal, for additional requirements.

B. Remove bituminous markings from finished surfaces.

C. In areas where finished surfaces are soiled by work of this section, consult manufacturer of surfaces for cleaning advice and conform to their documented instructions.

D. Repair or replace defaced or damaged finishes caused by work of this section.

3.9 PROTECTION

A. Protect installed roofing and flashings from construction operations.

B. Where traffic must continue over finished roof membrane, protect surfaces using durable materials.

END OF SECTION 07 5423

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 6200 - SHEET METAL FLASHING AND TRIM

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Fabricated sheet metal items, including flashings, counterflashings, and masonry through-wall flashing.

B. Sealants for joints within sheet metal fabrications.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 01 7419 – Construction Waste Management and Disposal

C. Section 06 1000 - Rough Carpentry: Wood nailers for sheet metal work and Field fabricated roof curbs.

D. Section 07 7100 - Roof Specialties: Manufactured metal roof specialties, including roof edge fascia, gutters, and downspouts.

1.3 REFERENCE STANDARDS

A. AAMA 2604 - Voluntary Specification, Performance Requirements and Test Procedures for High Performance Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix); 2017a.

B. ASTM A240/A240M - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications; 2020a.

C. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar; 2023.

D. ASTM B209/B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate; 2021a.

E. ASTM C920 - Standard Specification for Elastomeric Joint Sealants; 2018.

F. ASTM D4586/D4586M - Standard Specification for Asphalt Roof Cement, Asbestos-Free; 2007 (Reapproved 2018).

G. NRCA (RM) - The NRCA Roofing Manual; 2019.

H. SMACNA (ASMM) - Architectural Sheet Metal Manual; 2012.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene one week before starting work of this section.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

C. Shop Drawings: Indicate material profile, jointing pattern, jointing details, fastening methods, flashings, terminations, and installation details.

D. Samples: Submit two samples, 4 by 4 inches in size, illustrating metal finish color.

1.6 QUALITY ASSURANCE

A. Perform work in accordance with SMACNA (ASMM) requirements, except as otherwise indicated.

B. Fabricator and Installer Qualifications: Company specializing in sheet metal work with minimum five years of documented experience.

1.7 DELIVERY, STORAGE, AND HANDLING

A. See Section 01 7419 - Construction Waste Management and Disposal for packaging waste requirements.

B. Stack material to prevent twisting, bending, and abrasion, and to provide ventilation. Slope metal sheets to ensure drainage.

C. Prevent contact with materials that could cause discoloration or staining.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General: Sheet metal flashing and trim assemblies, including cleats, anchors, and fasteners, shall withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Completed sheet metal flashing and trim shall not rattle, leak, or loosen, and shall remain watertight.

B. Sheet Metal Standard for Flashing and Trim: Comply with NRCA (RM) and SMACNA (ASMM) requirements for dimensions and profiles shown unless more stringent requirements are indicated.

C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes to prevent buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

2.2 SHEET MATERIALS

A. Pre-Finished Aluminum: ASTM B209/B209M, 3005 alloy, H12 or H14 temper; 18 gauge, 0.040 inch thick; plain finish shop pre-coated with silicone modified polyester coating.
   1. Application: Gutters and downspouts.
   2. Fluoropolymer Coating: High performance organic powder coating, AAMA 2604; multiple coat, thermally cured fluoropolymer finish system.
   3. Color: To match approved sample.

B. Stainless Steel: ASTM A240/A240M or ASTM A666, Type 304 alloy, dead soft temper, 26 gage, 0.019 inch thick; smooth flat surface, cold-rolled No. 2D - Dull finish.
   1. Application: Through-wall flashing, overflow scuppers, roof counterflashing,

2.3 FABRICATION

A. Form sections true to shape, accurate in size, square, and free from distortion or defects.

B. Form pieces in longest possible lengths.

C. Hem exposed edges on underside 1/2 inch; miter and seam corners.

D. Form material with flat lock seams, except where otherwise indicated; at moving joints, use sealed lapped, bayonet-type or interlocking hooked seams.

E. Fabricate corners from one piece with minimum 18-inch long legs; seam for rigidity, seal with sealant.

F. Fabricate vertical faces with bottom edge formed outward 1/4 inch and hemmed to form drip.

2.4 ACCESSORIES

A. Fasteners: Stainless steel, with soft neoprene washers.

B. Primer Type: Zinc chromate.

C. Concealed Sealants: Non-curing butyl sealant.

D. Exposed Sealants: ASTM C920; elastomeric sealant, with minimum movement capability as recommended by manufacturer for substrates to be sealed; color to match adjacent material.

E. Asphalt Roof Cement: ASTM D4586/D4586M, Type I, asbestos-free.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify roof openings, curbs, pipes, sleeves, ducts, and vents through roof are solidly set, reglets in place, and nailing strips located.

B. Verify roofing termination and base flashings are in place, sealed, and secure.

3.2 PREPARATION

A. Install starter and edge strips, and cleats before starting installation.

B. Back paint concealed metal surfaces with protective backing paint to a minimum dry film thickness of 15 mil, 0.015 inch.

3.3 INSTALLATION

A. Comply with drawing details and approved shop drawings.

B. Secure flashings in place using concealed fasteners, and use exposed fasteners only where permitted..

C. Apply plastic cement compound between metal flashings and felt flashings.

D. Fit flashings tight in place; make corners square, surfaces true and straight in planes, and lines accurate to profiles.

E. Seal metal joints watertight.

F. Slope gutters 1/4 inch per 10 feet, minimum.

3.4 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements for field inspection requirements.

B. Inspection will involve surveillance of work during installation to ascertain compliance with specified requirements.

END OF SECTION 07 6200

SECTION 07 7100 - ROOF SPECIALTIES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Manufactured roof specialties, including gutters, downspouts, collector heads, copings, fascias, and overflow scuppers.

B. Roof expansion joint covers.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 01 7419 – Construction Waste Management and Disposal

C. Section 07 7200 - Roof Accessories: Manufactured roof hatches.

1.3 REFERENCE STANDARDS

A. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix); 2017a.

B. ANSI/SPRI/FM 4435/ES-1 - Test Standard for Edge Systems Used with Low Slope Roofing Systems; 2017.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data on shape of components, materials and finishes, anchor types and locations.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Shop Drawings: Indicate configuration and dimension of components, adjacent construction, required clearances and tolerances, and other affected work.

E. Samples: Submit two samples, 6 by 6 inches, illustrating finish and color, for each color specified.

F. Samples: Submit two appropriately sized samples of coping and roof edge fascia.

G. Manufacturer's Installation Instructions: Indicate special procedures, fasteners, supporting members, and perimeter conditions requiring special attention.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Roof Edge Flashings, Copings, Conductor Heads, and Overflow Scuppers:
1. Basis of Design: **Metal-Era Inc**;: www.metalera.com/#sle.

B. Other Acceptable Manufacturers:
1. ATAS International, Inc: www.atas.com/#sle.
2. Drexel Metals Inc: www.drexmet.com/#sle.
3. Hickman Edge Systems: www.hickmanedgesystems.com/#sle.

C. Expansion Joint Covers:
1. Construction Specialties, Inc: www.c-sgroup.com/#sle.
2. EMSEAL Joint Systems, Ltd: www.emseal.com/#sle.
3. MM Systems Corp: www.mmsystemscorp.com/#sle.

2.2 COPINGS AND ROOF EDGE SPECIALTIES

A. Roof Edge Flashings: Factory fabricated to sizes required; corners mitered; concealed fasteners.
1. Configuration: Fascia, and edge securement for roof membrane.
2. Pull-Off Resistance: Tested in accordance with ANSI/SPRI/FM 4435/ES-1 using test methods RE-1 and RE-2 to positive and negative design wind pressure as defined by applicable local building code and design criteria indicated on Structural drawings.
3. Material: Formed aluminum sheet, 0.040 inch thick, minimum.
4. Finish: 70 percent polyvinylidene fluoride.
5. Color(s): See Article "FINISHES" below and refer to drawing for specific applications of each color.
6. Basis-of-Design Product:
a) Hickman Edge Systems; TerminEdge Fascia: www.hickmanedgesystems.com/#sle.
b) **Metal-Era; Anchor-Tite Standard Fascia**.
1) **Alternate #10**: Equal product by Carlisle SynTec Systems (SecurEdge) must be used to achieve specified roofing system warranty .
7. Other Acceptable Products: Subject to compliance with requirements.
a) ATAS International, Inc; Rapid-Lok Extruded Fascia: www.atas.com/#sle.
b) Hickman Edge Systems; TerminEdge Fascia: www.hickmanedgesystems.com/#sle.

B. Copings: Factory fabricated to sizes required; corners mitered; concealed fasteners.
1. Configuration: Concealed continuous hold down cleat at both legs; internal splice piece at joints of same material, thickness, and finish as cap; concealed stainless steel fasteners.

2. Pull-Off Resistance: Tested in accordance with ANSI/SPRI/FM 4435/ES-1 using test method RE-3 to positive and negative design wind pressure as defined by applicable local building code and design criteria indicated on Structural drawings.
3. Wall Width: As indicated on drawings.
4. Outside Face Height: As indicated on drawings.
5. Inside Face Height: As indicated on drawings.
6. Material: Formed aluminum sheet, 0.050 inch thick, minimum.
7. Color(s): See Article "FINISHES" below and refer to drawings for specific applications of each color.
8. Basis-of-Design Product:
   a) Metal Era; **Perma-Tite Continuous Cleat Coping**.
      1) **Alternate #10**: Equal product by Carlisle SynTec Systems (SecurEdge) must be used to achieve specified roofing system warranty (for basis-of-design roofing membrane).
9. Other Acceptable Products: Subject to compliance with requirements.
   a) ATAS International, Inc; Rapid-Lok Coping: www.atas.com/#sle.
   b) Hickman Edge Systems; Formed Coping Plus: www.hickmanedgesystems.com/#sle.

C. Trim: Additional vertical and horizontal metal roof edge trim and drip edges at fascia locations. Factory fabricated to sizes required; corners mitered; concealed fasteners. Form cleats as indicated on drawings.
1. Face Heights: As indicated on drawings.
2. Material: Formed aluminum sheet, 0.050 inch thick, minimum.
3. Color(s): As indicated on drawings.

2.3 ROOF DRAINAGE SPECIALTIES

A. Overflow Scuppers: Manufactured with closure flange trim to exterior, 4-inch-wide wall flanges to interior, and base extending 4 inches beyond cant or tapered strip into field of roof.
1. Material: 0.050” aluminum
2. Picture Frames: Front and back, 3” wide.
3. Overall Sizes: Fabricate to size(s) indicated on drawngs.
4. Basis of Design Manufacturer: **Metal-Era; Thru-Wall Scupper.**

B. Gutters: Fabricated in uniform section lengths not exceeding 12 feet, with matching corner units, ends, outlet tubes, and other accessories. Elevate back edge at least 1 inch above front edge. Furnish flat-stock gutter straps, gutter brackets, expansion joints, and expansion-joint covers fabricated from same metal as gutters.
1. Gutters, Pull-Off Resistance: Tested in accordance with ANSI/SPRI/FM 4435/GT-1 using test methods G-1 and G-2 to positive and negative design wind pressure as defined by applicable local building code and design criteria indicated on Structural drawings.
2. Dimensions: See drawings for descriptions of "Gutter Profile 1" and "Gutter Profile 2".
3. Material: Formed aluminum sheet, 0.050 inch thick, minimum.
4. Basis-of-Design Product: **Metal-Era**; **Seal-Tite WR Gutter**.
5. Colors: Two custom colors.
   a) Color 1: Match EFCO "Mineral Brown PNTKYC34".
   b) Color 2: Match fiber cement panel color by Nichiha "Vintagewood".

C. Downspouts (also referred to as "RWL" on drawings): Profile as indicated on drawings, complete with mitered elbows, manufactured from the following exposed metal. Furnish with metal hangers, from same material as downspouts, and anchors.
   1. Material: Formed aluminum sheet, 0.050 inch thick, minimum.
   2. Basis-of-Design Product: **Metal-Era**; **Industrial Downspout (Closed Face Version)** and **Downspout Elbows**.
   3. Downspout Straps: **Style 1**.
   4. Color(s): See Article "FINISHES" below and refer to drawings for specific applications of each color.

D. Conductor Heads: Manufactured conductor heads, welded construction, each with flanged back and stiffened top edge, and of dimensions and shape indicated, complete with outlet tube that nests into upper end of downspout.
   1. Material: Formed aluminum sheet, 0.063 inch thick, minimum
   2. Basis-of-Design Product: **Metal-Era**; **Collector Box, Welded Version, Style 3**.
   3. Color(s): See Article "FINISHES" below and refer to drawings for specific applications of each color.

2.4 EXPANSION JOINT COVERS

A. Expansion Joint Covers: Composite construction of ____-inch wide flexible EPDM flashing of black color with closed cell urethane foam backing, each edge seamed to aluminum sheet metal flanges, designed for nominal joint width of 2 inches. Include special formed corners, tees, intersections, and wall flashings, each sealed watertight.

2.5 FINISHES

A. All Roof Edge and Roof Drainage Specialties: PVDF (Polyvinylidene Fluoride) Coating: Superior Performance Organic Finish, AAMA 2605; multiple coat, thermally cured fluoropolymer finish system; custom color to match approved sample.
   1. Colors: Custom colors.
      a) **Color 1**: Match EFCO "Mineral Brown PNTKYC34".
      b) **Color 2**: Match fiber cement panel color, Nichiha "Vintagewood".

2.6 ACCESSORIES

A. Provide materials and types of fasteners, protective coatings, sealants, and other miscellaneous items required by manufacturer for a complete installation.

B. Fasteners: Roof specialty manufacturer's recommended fasteners, designed to meet performance requirements, suitable for application and metals being fastened. Match finish of exposed fasteners with finish of material being fastened. Provide nonremovable fastener heads to exterior exposed fasteners. Furnish the following unless otherwise indicated:
   1. Fasteners for Aluminum Sheet: Aluminum or Series 300 stainless steel.

C. Endwall Flashing: Match material and finish of roof specialty items.

D. Coping Cleats: Galvanized steel, gauge as recommended by roof specialty manufacturer.

E. Butyl Sealant: ASTM C1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for hooked-type joints with limited movement.

F. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.

G. Adhesive for Anchoring to Roof Membrane: Compatible with roof membrane and approved by roof membrane manufacturer.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that deck, curbs, roof membrane, base flashing, and other items affecting work of this Section are in place and positioned correctly.

3.2 INSTALLATION

A. Install roof specialties in accordance with manufacturer's written instructions and approved shop drawings. Anchor roof specialties securely in place, with provisions for thermal and structural movement. Use fasteners, solder, protective coatings, separators, underlayments, sealants, and other miscellaneous items as required to complete roof-specialty systems.

B. Seal joints within components when required by component manufacturer.

C. Coordinate installation of components of this section with installation of roofing membrane and base flashings.

D. Metal Protection: Protect metals against galvanic action by separating dissimilar metals from contact with each other or with corrosive substrates by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer's written installation instructions.

E. Expansion Provisions: Allow for thermal expansion of exposed roof specialties.
   1. Space movement joints at a maximum of 12 feet with no joints within 18 inches of corners or intersections unless otherwise indicated on Drawings.
   2. When ambient temperature at time of installation is between 40 and 70 deg F, set joint members for 50 percent movement each way. Adjust setting proportionately for installation at higher ambient temperatures.

F. Fastener Sizes: Use fasteners of sizes that penetrate substrate not less than recommended in writing by fastener manufacturer to achieve maximum pull-out resistance.

G. Seal concealed joints with butyl sealant as required by roof specialty manufacturer.

H. Seal joints as required for weathertight construction. Place sealant to be completely concealed in joint. Do not install sealants at temperatures below 40 deg F.

3.3 INSTALLATION OF GUTTERS

A. Gutters: Join and seal gutter lengths. Allow for thermal expansion. Attach gutters to firmly anchored gutter supports spaced not more than 30 inches apart, unless otherwise indicated on drawings. Attach ends with rivets and seal to make watertight. Slope to downspouts.
   1. Install gutter with expansion joints at locations indicated but not exceeding 50 feet apart. Install expansion-joint caps.

3.4 CLEANING AND PROTECTION

A. Remove temporary protective coverings and strippable films as roof specialties are installed. On completion of installation, clean finished surfaces, including removing unused fasteners, metal filings, pop rivet stems, and pieces of flashing. Maintain roof specialties in a clean condition during construction.

B. Replace roof specialties that have been damaged or that cannot be successfully repaired by finish touchup or similar minor repair procedures, as determined by Architect.

END OF SECTION 07 7100

SECTION 07 7200 - ROOF ACCESSORIES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Roof hatches, manual and automatic operation, including smoke vents.

B. Pipe portals.

C. Pipe box.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 01 7419 – Construction Waste Management and Disposal

C. Section 07 7100 - Roof Specialties: Other manufactured roof specialty items.

1.3 REFERENCE STANDARDS

A. 29 CFR 1910.23 - Ladders; current edition.

B. 29 CFR 1910.29 - Fall Protection Systems and Falling Object Protection - Criteria and Practices; Current Edition.

C. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products; 2017.

D. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2021.

E. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric); 2021.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Manufacturer's data sheets on each product to be used.
   1. Preparation instructions and recommendations.
   2. Storage and handling requirements and recommendations.
   3. Installation methods.
   4. Maintenance requirements.
   5. For smoke hatches, submit evidence of approval by evaluation agency specified.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:

1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Shop Drawings: Submit detailed layout developed for this project and provide dimensioned location and number for each type of roof accessory.

E. Certificate: For smoke hatches, provide certificate of approval from authority having jurisdiction.

F. Warranty Documentation:
1. Submit manufacturer warranty.
2. Ensure that forms have been completed in Owner's name and registered with manufacturer.

1.5 DELIVERY, STORAGE, AND HANDLING

A. See Section 01 7419 - Construction Waste Management and Disposal for packaging waste requirements.

B. Store products in manufacturer's unopened packaging until ready for installation.

C. Store products under cover and elevated above grade.

1.6 WARRANTY

A. See Section 01 7800 - Closeout Submittals for additional warranty requirements.

B. Manufacturer Warranty: Provide 5-year manufacturer warranty for defective components. Complete forms in Owner's name and register with manufacturer.

PART 2 PRODUCTS

2.1 ROOF HATCHES AND VENTS, MANUAL AND AUTOMATIC OPERATION

A. Roof Hatch Manufacturers:
1. Basis of Design: **BILCO Company; Type F**: www.bilco.com/#sle.

B. Other Acceptable Manufacturers:
1. Activar Construction Products Group, Inc. - JL Industries; Diamond Series Roof Hatches, Model _____: www.activarcpg.com/#sle.
2. Babcock-Davis; ThermalMAX: www.babcockdavis.com/#sle.
3. Best Access Doors; Series BA-GRH - Ladder Access Roof Hatch, Galvanized: www.bestaccessdoors.com/#sle.

C. Smoke and Heat Vent Manufacturers:
   1. Basis of Design: **BILCO Company; Type ACDSV**: www.bilco.com/#sle.

D. Other Acceptable Manufacturers:
   1. Babcock-Davis; SafeMax: www.babcockdavis.com/#sle.
   2. Best Access Doors; Series BA-ASV-DL - UL Listed Smoke Vent, Double Leaf, Aluminum: www.bestaccessdoors.com/#sle.
   3. Nystrom, Inc; SmokEscape (double leaf): www.nystrom.com/#sle.

E. Roof Hatches: Factory-assembled aluminum frame and cover, complete with operating and release hardware.
   1. Style: Provide flat metal covers unless otherwise indicated.
   2. Mounting: Provide frames and curbs suitable for mounting conditions as indicated on drawings.
   3. Thermally Broken Hatches: Provide insulation within frame and cover.
   4. For Ladder Access: Single leaf; 48 by 48 inches.
   5. Materials:
      a) Steel: 14 gauge steel, G-90 paint bond galvanized steel.
      b) Insulation: 3 inches thick polyisocyanurate - in cover and curb.
      c) Finish: Manufacturer's standard red oxide primer.
      d) Hardware: Stainless steel.

F. Smoke Vents: Factory-assembled aluminum frame and cover, complete with operating and release hardware, including curb-mounted fusible link.
   1. Style: Provide flat metal covers unless otherwise indicated.
   2. Mounting: Provide frames and curbs suitable for mounting conditions as indicated on drawings.
   3. Sound Rated Hatches: Two sets of double leaf doors with air space between upper and lower doors; upper doors to open upward, lower doors to open downward; minimum Sound Transmission Coefficient (STC) of 45 / Outdoor-Indoor Sound Transmission Coefficient (OITC) of 46.
   4. Thermally Broken Hatches: Provide insulation within frame and cover.
   5. Size: 96 inches by 48 inches; double-leaf style.
   6. Cover Requirements:
      a) Capable of remaining closed under 90 psf wind uplift force.
      b) Capable of opening against 10 psf (snow/wind/rain.
   7. Materials:
      a) Steel: 14 gauge steel, G-90 paint bond galvanized steel.
      b) Insulation: 4 inches thick mineral wool insulation.
      c) Finish: Manufacturer's standard red oxide primer.
      d) Hardware: Zinc plated/chromate sealed.
         1) Thermolatch Mechanism: Covers open only when manually activated or by heat at 165 deg. F (fusible link).
         2) Provide label with reset instructions at interior of hatch.

G. Frames and Curbs: Fully enclosed; one-piece curb and frame with integral cap flashing to receive roof flashings; extended bottom flange to suit mounting.
   1. Curb Height: 12 inches from finished surface of roof, minimum.

H. Metal Covers: Flush, insulated, hollow metal construction.
   1. Capable of supporting 40 psf live load.
   2. Gasket: Neoprene, continuous around cover perimeter.

I. Safety Railing System: Roof hatch safety rail system mounted directly to curb without penetration of roofing system.
   1. Railing Size: As indicated on drawings.
   2. Railing: Comply with 29 CFR 1910.23 for ladder safety, with a safety factor of two.
   3. Self-Closing Gate: Comply with 29 CFR 1910.29 for safe egress and fall protection through hatch opening.
   4. Posts and Rails: Galvanized steel tubing.
   5. Gate: Same material as railing; automatic closing with latch.
   6. Finish: Manufacturer's standard, factory applied finish.
   7. Gate Hinges and Post Guides: ASTM B221 (ASTM B221M), 6063 alloy, T5 temper aluminum.
   8. Mounting Brackets: Hot dipped galvanized steel, 1/4 inch thick, minimum.
   9. Products:
      a) Basis-of Design: **BILCO Company; Bil-Guard 2.0, Model RL2-F:** www.bilco.com/#sle.

J. Roof Ladder Safety Post: Provide at top of ladder terminating at roof hatch.
   1. Basis of Design: **BILCO; LadderUp Safety Post, Model LU-1.**
      Material and Finish: Steel with yellow powder coat finish.

2.2 PIPE PORTALS

A. Curb-Mounted Pipe Portal: Insulated roof-curb units with welded or mechanically fastened and sealed corner joints, straight sides and integrally formed deck-mounting flange at perimeter bottom; with weathertight curb cover with single or multiple collared openings and pressure-sealed conically shaped EPDM protective rubber caps sized for piping indicated, with stainless steel snaplock swivel clamps.
   1. Manufacturers:
      a) Greenheck Fan Corporation; www.greenheck.com.
      b) Portals Plus by Duravent; www.portalsplus.com.
      c) RPS Curbs; www.rpscurbs.com.

B. Pipe Flashing Portal: Formed aluminum membrane-mounting flashing flange and sleeve with collared opening and pressure-sealed conically shaped EPDM protective rubber cap (or "boot") sized for piping indicated, with stainless steel snaplock swivel clamps.
   1. Portals Plus by Duravent; www.portalsplus.com.RPS Curbs; www.rpscurbs.com.
   2. RPS Curbs; www.rpscurbs.com.

2.3 PIPE BOX

A. Pipe Box: Premium style pipe box designed to house and flash piping and conduit through the roof while allowing access via a slide top. Included closed cell foam for weatherproofing and insulation.
   1. Materials:
      a) Metal: 26 ga. Type 304 stainless steel.

b) Neoprene: Closed cell block foam.
c) Solder: Non-lead ASTM 96.5TS.

2. Basis of Design: **SBC Industries**; **Line Shack Model LS**.

PART 3 EXECUTION

3.1 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using methods recommended by manufacturer for achieving acceptable results for applicable substrate under project conditions.

3.3 INSTALLATION

A. Install in accordance with manufacturer's written instructions and approved shop drawings, in manner that maintains roofing system weather-tight integrity.
   1. Install roof accessories level; plumb; true to line and elevation; and without warping, jogs in alignment, buckling, or tool marks.
   2. Anchor roof accessories securely in place so they are capable of resisting indicated loads.
   3. Use fasteners, separators, sealants, and other miscellaneous items as required to complete installation of roof accessories and fit them to substrates.
   4. Install roof accessories to resist exposure to weather without failing, rattling, leaking, or loosening of fasteners and seals.

B. Roof-Hatch:
   1. Verify that roof hatch operates properly. Clean, lubricate, and adjust operating mechanism and hardware.
   2. Attach safety railing system to roof-hatch curb.

C. Heat and Smoke Vent:
   1. Install heat and smoke vent so top perimeter surfaces are level.
   2. Install and test heat and smoke vents and their components for proper operation in accordance with NFPA 204.

D. Preformed Flashing-Sleeve and Flashing-Pipe Portal: Secure flashing sleeve to roof membrane in accordance with flashing-sleeve manufacturer's written instructions; flash sleeve flange to surrounding roof membrane in accordance with roof membrane manufacturer's instructions.

E. Metal Protection: Protect metals against galvanic action by separating dissimilar metals from contact with each other or with corrosive substrates by painting contact surfaces with bituminous coating or by other permanent separation as recommended in writing by manufacturer's written installation instructions.

1. Coat concealed side of uncoated aluminum and stainless steel roof accessories with bituminous coating where in contact with wood, ferrous metal, or cementitious construction.
2. Bed flanges in thick coat of asphalt roofing cement where required by manufacturers of roof accessories for waterproof performance.

3.4 CLEANING

A. See Section 01 7000 - Execution and Closeout Requirements for additional requirements.

B. Remove temporary protective coverings and strippable films as roof accessories are installed. On completion of installation, clean finished surfaces, including removing unused fasteners, metal filings, pop rivet stems, and pieces of flashing. Maintain roof accessories in a clean condition during construction.

C. Clean installed work to like-new condition, using materials and techniques recommended by hatch and vent manufacturer.

3.5 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Date of Substantial Completion.

C. Replace roof accessories that have been damaged or that cannot be successfully repaired by finish touchup or similar minor repair procedures, as determined by Architect.

END OF SECTION 07 7200

SECTION 07 8100 - APPLIED FIRE PROTECTION

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Applied fire protection of interior structural steel not exposed to damage or moisture.

B. Applied fire protection of structural steel exposed to damage or moisture.

C. Preparation of applied fire protection for application of exposed overcoat finish specified elsewhere.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

1.3 REFERENCE STANDARDS

A. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2023d.

B. ASTM E605/E605M - Standard Test Methods for Thickness and Density of Sprayed Fire-Resistive Material (SFRM) Applied to Structural Members; 1993, with Editorial Revision (2015).

C. ASTM E736/E736M - Standard Test Method for Cohesion/Adhesion of Sprayed Fire-Resistive Materials Applied to Structural Members; 2019.

D. ASTM E759/E759M - Standard Test Method for Effect of Deflection on Sprayed Fire-Resistive Material Applied to Structural Members; 1992 (Reapproved 2020).

E. ASTM E760/E760M - Standard Test Method for Effect of Impact on Bonding of Sprayed Fire-Resistive Material Applied to Structural Members; 1992 (Reapproved 2020).

F. ASTM E859/E859M - Standard Test Method for Air Erosion of Sprayed Fire-Resistive Material (SFRMs) Applied to Structural Members; 1993 (Reapproved 2020).

G. ASTM E937/E937M - Standard Test Method for Corrosion of Steel by Sprayed Fire-Resistive Material (SFRM) Applied to Structural Members; 1993 (Reapproved 2020).

H. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi; 2015, with Editorial Revision (2021).

I. UL (FRD) - Fire Resistance Directory; Current Edition.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordinate with placement of ceiling hanger tabs, mechanical component hangers, and electrical components.

B. Preinstallation Meeting: Convene one week before starting work of this section.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittals procedures.

B. Product Data: Provide data indicating product characteristics.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating

D. Manufacturer's Certificate: Certify that applied fireproofing products meet or exceed requirements of Contract Documents.

E. Test Reports: Reports from reputable independent testing agencies for proposed products, indicating compliance with specified criteria, conducted under conditions similar to those on project, as follows:
   1. Bond strength.
   2. Bond impact.
   3. Compressive strength.
   4. Fire tests using substrate materials similar those on project.

F. Manufacturer's Installation Instructions: Indicate special procedures.

G. Field Quality Control Submittals: Submit field test report.

H. Manufacturer's Qualification Statement.

I. Installer's Qualification Statement.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than three years of documented experience.

B. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years of documented experience

1.7 MOCK-UP

A. Construct mock-up, 100 square feet in size.

B. Comply with project requirements for fire ratings.

C. Locate where directed.

D. Examine installation within one hour of application to determine variances from specified requirements due to shrinkage, temperature, and humidity.

E. Where shrinkage and cracking are evident, adjust mixture and method of application as necessary; remove materials and re-construct mock-up.

F. Mock-up may remain as part of the Work.

1.8 FIELD CONDITIONS

A. Do not apply fireproofing when temperature of substrate material and surrounding air is below 40 degrees F or when temperature is predicted to be below said temperature for 24 hours after application.

B. Provide ventilation in areas to receive fireproofing during application and 24 hours afterward, to dry applied material.

C. Provide temporary enclosure to prevent spray from contaminating air.

1.9 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective Work within a one year period after Date of Substantial Completion.
   1. Include coverage for fireproofing to remain free from cracking, checking, dusting, flaking, spalling, separation, and blistering.
   2. Reinstall or repair failures that occur within warranty period.

PART 2 PRODUCTS

2.1 MANUFACTURERS

2.2 APPLIED FIRE PROTECTION ASSEMBLIES

A. Provide assemblies as indicated on Drawings.

B. UL listings with a Load Restriction are not allowed.

2.3 MATERIALS

A. Applied Fire Protection Material, Medium Density. Manufacturer's standard factory mixed material, which when combined with water is capable of providing indicated fire resistance, and complying with following requirements:
   1. Composition: Portland cement-based; not mineral-fiber-based.
   2. Bond Strength: 430 pounds per square foot, minimum, when tested in accordance with ASTM E736/E736M when set and dry.
   3. Dry Density: 21 lb/cu ft, minimum, when tested in accordance with ASTM E605/E605M.
   4. Compressive Strength: 7,344 psf , minimum, tested in accordance with ASTM E761.

5. Effect of Impact on Bonding: No cracking, spalling or delamination, when tested in accordance with ASTM E760/E760M.
6. Corrosivity: No evidence of corrosion, when tested in accordance with ASTM E937/E937M.
7. Air Erosion Resistance: Weight loss of 0.025 g/sq ft, maximum, when tested in accordance with ASTM E859/E859M after 24 hours.
8. Surface Burning Characteristics: Maximum flame spread index of 0 (zero) and maximum smoke developed index of 0 (zero), when tested in accordance with ASTM E84.
9. Effect of Deflection: No cracking, spalling, or delamination, when tested in accordance with ASTM E759/E759M.
10. Fungal Resistance: No growth after 28 days when tested according to ASTM G21.
11. Manufacturers:
    a) Basis-of-Design: Isolatek International; **CAFCO BLAZE-SHIELD HP.**
    b) Provide the basis of design or comparable product by one of the following, subject to compliance with requirements:
        1) Carboline: www.carboline.com.
        2) GCP Applied Technologies.
    c) Substitutions: See Section 01 6000 - Product Requirements.

B. Applied Fire Protection Material, High Density: Manufacturer's standard factory mixed material, which when combined with water is capable of providing indicated fire resistance, and complying with following requirements:
1. Composition: Portland cement-based; not mineral fiber-based.
2. Bond Strength: 1,000 psf, minimum, when tested in accordance with ASTM E736/E736M when set and dry.
3. Dry Density: 39 lb/cu ft, minimum, when tested in accordance with ASTM E605/E605M.
4. Compressive Strength: 43,200 psf minimum, tested in accordance with ASTM E761.
5. Effect of Impact on Bonding: No cracking, spalling or delamination, when tested in accordance with ASTM E760/E760M.
6. Corrosivity: No evidence of corrosion, when tested in accordance with ASTM E937/E937M.
7. Air Erosion Resistance: Weight loss of 0.025 g/sq ft, maximum, when tested in accordance with ASTM E859/E859M after 24 hours.
8. Surface Burning Characteristics: Maximum flame spread index of 0 (zero) and maximum smoke developed index of 0 (zero), when tested in accordance with ASTM E84.
9. Fungal Resistance: No growth after 28 days when tested according to ASTM G21.
10. Manufacturers:
    a) Basis-of-Design: Isolatek International; **CAFCO FENDOLITE M-II**.
    b) Provide the basis of design or comparable product by one of the following, subject to compliance with requirements:
        1) Carboline: www.carboline.com.
        2) GCP Applied Technologies.
    c) Substitutions: See Section 01 6000 - Product Requirements.

C. Applied Fire Protection Material, Low Density: Manufacturer's standard factory mixed material, which when combined with water is capable of providing indicated fire resistance, and complying with following requirements:
1. Composition: Portland cement-based; not mineral fiber-based.
2. Bond Strength: 600 psf, minimum, when tested in accordance with ASTM E736/E736M when set and dry.

3. Dry Density: Minimum average density of 15 lb/cu ft, with minimum individual density of any test sample of 14 lb/cu ft, when tested in accordance with ASTM E605/E605M.
4. Compressive Strength: 1,440 psf minimum, tested in accordance with ASTM E761.
5. Effect of Impact on Bonding: No cracking, spalling or delamination, when tested in accordance with ASTM E760/E760M.
6. Corrosivity: No evidence of corrosion, when tested in accordance with ASTM E937/E937M.
7. Air Erosion Resistance: Weight loss of 0.025 g/sq ft, maximum, when tested in accordance with ASTM E859/E859M after 24 hours.
8. Surface Burning Characteristics: Maximum flame spread index of 0 (zero) and maximum smoke developed index of 0 (zero), when tested in accordance with ASTM E84.
9. Fungal Resistance: No growth after 28 days when tested according to ASTM G21.
10. Manufacturers:
    a) Basis-of-Design: Isolatek International; **CAFCO BLAZE-SHIELD II HS**.
    b) Provide the basis of design or comparable product by one of the following, subject to compliance with requirements:
        1) Carboline: www.carboline.com.
        2) GCP Applied Technologies.
    c) Substitutions: See Section 01 6000 - Product Requirements.

2.4 ACCESSORIES

A. Primers: Primers approved by applied fire protection manufacturer and complying with one or both of the following requirements:
    1. Primer and substrate are identical to those tested in required fire-resistance design by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
    2. Primer's bond strength in required fire-resistance design complies with specified bond strength for applied fire protection material and with requirements in UL (FRD) or in the listings of another qualified testing agency acceptable to authorities having jurisdiction, based on a series of bond tests in accordance with ASTM E736/E736M.

B. Bonding Agent: Product approved by applied fire protection material manufacturer and complying with requirements in UL (FRD) or in the listings of another qualified testing agency acceptable to authorities having jurisdiction.

C. Overcoat: As recommended by manufacturer of applied fire protection material.

D. Water: Clean, potable.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that surfaces are ready to receive fireproofing.

B. Verify that clips, hangers, supports, sleeves, and other items required to penetrate fireproofing are in place.

C. Verify that ducts, piping, equipment, or other items that would interfere with application of fireproofing have not been installed.

D. Verify that voids and cracks in substrate have been filled.

E. Verify that projections have been removed where fireproofing will be exposed to view as a finish material.

3.2 PREPARATION

A. Perform tests as recommended by fireproofing manufacturer in applications where adhesion of fireproofing to substrate is in question.

B. Remove incompatible materials that could effect bond by scraping, brushing, scrubbing, or sandblasting.

C. Prepare substrates to receive fireproofing in strict accordance with instructions of fireproofing manufacturer.

D. Prime substrates where included in fire-resistance design and where recommended in writing by applied fire protection material manufacturer unless compatible shop primer has been applied and is in satisfactory condition to receive fire protection.

E. Protect surfaces not scheduled for fireproofing and equipment from damage by overspray, fall-out, and dusting.

F. Close off and seal duct work in areas where fireproofing is being applied.

3.3 APPLICATION

A. Do not apply fireproofing directly over zinc-rich primers or galvanizing without the use of an approved primer.

B. Apply primer adhesive in accordance with manufacturer's instructions.

C. Apply fireproofing in uniform thickness and density as necessary to achieve required ratings.

3.4 FIELD QUALITY CONTROL

A. Perform field inspection and testing in accordance with Section 01 4000 - Quality Requirements.

B. Inspect installed fireproofing after application and curing for integrity, prior to its concealment.
   1. Submit field test reports promptly to Contractor and Architect.

C. Ensure that actual thicknesses, densities, and bond strengths meet requirements for specified ratings and requirements of authorities having jurisdiction (AHJ).

D. Repair or replace applied fireproofing at locations where test results indicate fireproofing does not meet specified requirements.

E. Re-inspect installed fireproofing for integrity of fire protection, after installation of subsequent Work.

3.5 CLEANING

A. Remove excess material, overspray, droppings, and debris.

B. Remove fireproofing from materials and surfaces not required to be fireproofed.

C. At exposed fireproofing, clean surfaces that have become soiled or stained, using manufacturer's recommended procedures.

END OF SECTION 07 8100

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 8123 - INTUMESCENT FIRE PROTECTION

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Thin-film intumescent fire protection.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 01 7419 – Construction Waste Management and Disposal

C. Section 07 8100 - Applied Fire Protection: Conventional cementitious and mineral fiber fireproofing.

D. Section 09 9123 - Interior Painting: Field-applied paints for coating and /or matching intumescent fireproofing.

1.3 REFERENCE STANDARDS

A. ASTM D2240 - Standard Test Method for Rubber Property--Durometer Hardness; 2015, with Editorial Revision (2017).

B. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2023d.

C. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials; 2022.

D. SSPC-PA 2 - Procedure For Determining Conformance To Dry Coating Thickness Requirements; 2015, with Editorial Revision (2018).

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittals procedures.

B. Product Data: Manufacturer's data sheets on each product to be used, including:
   1. Performance characteristics and test results.
   2. Preparation instructions and recommendations.
   3. Storage and handling requirements and recommendations.
   4. Installation methods.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.

2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Verification Samples: For each thickness, color, sheen, and finish required, submit samples not less than 4 inches square on designated substrate illustrating finished appearance.

E. Certificates: Certify that intumescent fireproofing provided for this project meets or exceeds specified requirements in all respects.

F. Test Reports: Published fire resistive designs for structural elements of the types required for the project, indicating hourly ratings of each assembly.

G. Field Quality Control Submittals: Submit field test report.

H. Manufacturer's qualification statement.

I. Installer's qualification statement.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company that specializes in manufacturing the type of products specified, with minimum of ten years of documented experience.

B. Installer Qualifications: Company specializing in performing work of the type specified and with at least five years of documented experience.

1.6 MOCK-UP

A. MOCK-UPS

B. Provide a mock-up for evaluation of surface preparation techniques and application workmanship; approved mock-up will serve as a standard of comparison for subsequent work of this section.

C. Finish at least 100 sq ft of surface in areas as designated by Architect.

D. Evaluate mock-up for compliance with specified requirements, including thickness and finish texture.

E. Do not proceed with remaining work until workmanship, color, and sheen are approved by Architect.

F. Refinish mock-up area as required to produce acceptable work.

G. Approved mock-up may remain as part of the project.

1.7 DELIVERY, STORAGE, AND HANDLING

A. See Section 01 7419 - Construction Waste Management and Disposal for packaging waste requirements.

B. Deliver materials in manufacturer's original, unopened containers with identification labels and testing agency markings intact and legible.

C. Store products in manufacturer's unopened packaging until ready for installation.
   1. Store at temperatures not less than 50 degrees F in dry, protected area.
   2. Protect from freezing, and do not store in direct sunlight.
   3. Dispose of any materials that have come into contact with contaminants of any kind prior to application.

D. Dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with requirements of local authorities having jurisdiction.

1.8 FIELD CONDITIONS

A. Protect areas of application from windblown dust and rain.

B. Maintain ambient field conditions, such as temperature, humidity, and ventilation, within limits recommended by manufacturer for optimum results. Do not install products under ambient conditions outside manufacturer's absolute limits.
   1. Provide temporary enclosures as required to control ambient conditions.
   2. Do not apply intumescent fireproofing when ambient temperatures are below 50 degrees F without specific approval from manufacturer.
   3. Ensure that relative humidity is between 40 and 60 percent in areas of application.
   4. Provide ventilation in enclosed spaces during application and for not less than 72 hours afterward.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Intumescent Thin-Film Fire Protection for Metal (IFRM):
   1. Basis of Design, **IFRM/P19**: Sherwin Williams; Firetex FX5090 Waterbased Intumescent Coating: www.industrial-sherwinwilliams.com
      a) Provide the basis of design product or a comparable product by one of the following, subject to compliance with requirements:
         1) Albi Protective Coatings:w www.albi.com.
         2) Carboline: www.carboline.com.
         3) Isolatek/CAFCO: www.isolatek.com.
      b) Color Topcoat **P19**: Must be compatible with IFRM and approved by IFRM manufacturer. See Section 09 9123.
   2. Substitutions: See Section 01 6000 - Product Requirements.

2.2 SYSTEM REQUIREMENTS

A. Fireproofing: Provide intumescent thin-film fire protection systems tested by an independent testing agency in accordance with ASTM E119 and acceptable to authorities having jurisdiction (AHJ).
   1. Provide assemblies listed by UL or FM and bearing listing agency label or mark.

2.3 MATERIALS

A. Fire Resistive Coating System **IFRM**: Thin film intumescent mastic fireproofing system for fire protection of structural steel.
   1. Surface Burning Characteristics: Class A, tested in accordance with ASTM E84.
   2. For Interior Use:
      a) Use only water-based products.
      b) Density: 12.0 lb/gal., nominal.
      c) Bond Strength: 480 psi, minimum, in accordance with ASTM D4541.
      d) Durometer Hardness, Type D: 65, minimum, in accordance with ASTM D2240.
      e) Impact Resistance: 160 inch-lb, minimum, in accordance with ASTM D2794.

B. Fire Resistive Finish Coating System **P19**: Thin film intumescent waterbased fire protection coating for use on interior exposed structural steel, intended to provide a smooth paint-like finish and serve as a topcoat for structrural steel.
   1. Applications: As indicated on the "Finish Product List" on the drawings and on the Finish Plan drawings.
   2. Surface Burning Characteristics: Class A, tested in accordance with ASTM E84.
   3. For Interior Use:
      a) Use only water-based products.
      b) Bond Strength: 540 psi, minimum, in accordance with ASTM D4541.
      c) Durometer Hardness, Type D: 70, minimum, in accordance with ASTM D2240.
      d) Impact Resistance: 83 inch-lb, minimum, in accordance with ASTM D2794.
      e) Primer: Steel must be primed, with primer approved by coating manufacturer.

C. Primers: Primers approved by intumescent fire protection manufacturers and complying with required fire-resistance design by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine substrates to determine if they are in satisfactory condition to receive intumescent fire protection; verify that substrates are clean and free of oil, grease, incompatible primers, or other foreign substances capable of impairing bond to fireproofing system.

B. Do not begin installation until substrates have been properly prepared.

C. If substrate preparation is responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

A. Thoroughly clean surfaces to receive fireproofing.

B. Repair substrates to remove surface imperfections that could effect uniformity of texture and thickness of fireproofing system, and remove minor projections and fill voids that could telegraph through finished work.

C. Prime substrates where included in fire-resistance design and where recommended in writing by intumescent fire protection material manufacturer unless compatible shop primer has been applied and is in satisfactory condition to receive fire protection.

D. Cover or otherwise protect other work that might be damaged by fallout or overspray of fireproofing system, and provide temporary enclosures as necessary to confine operations and maintain required ambient field conditions.

3.3 APPLICATION

A. A compatible primer must be applied to steel substrates prior to application of intumescent fireproofing.
   1. Use only primers approved by fireproofing manufacturer for each specific condition (bare steel, galvanized steel, and/or steel primed with zinc-rich primers).

B. Comply with manufacturer's instructions for each particular intumescent fire protection system installation application as indicated.

C. Apply manufacturer’s recommended primer to required coating thickness.

D. Apply fireproofing to full thickness over entire area of each substrate to be protected.

E. Apply coats at manufacturer’s recommended rate to achieve dry film thickness (DFT) as required for fire resistance ratings designated for each condition.

F. Apply intumescent fire protection by spraying to maximum extent possible, and as necessary complete coverage by roller application or other method acceptable to manufacturer.

G. Achieve uniform finished appearance complying with approved mock-up.

3.4 FIELD QUALITY CONTROL

A. Perform field inspection and testing in accordance with Section 01 4000 - Quality Requirements.
   1. Arrange for testing of installed intumescent fire protection by an independent testing laboratory using magnetic pull-off dry film thickness gauge in accordance with SSPC-PA 2, and ensure it meets requirements of authorities having jurisdiction (AHJ).
   2. Submit field test reports promptly to Contractor and Architect.

B. Repair or replace intumescent fire protection at locations where test results indicate fireproofing does not meet specified requirements.

3.5 CLEANING

A. See Section 01 7000 - Execution and Closeout Requirements for additional requirements.

B. Immediately after installation of fireproofing in each area, remove overspray and fallout from other surfaces and clean soiled areas.

3.6 PROTECTION

A. Protect installed intumescent fire protection from damage due to subsequent construction activities, so fireproofing is without damage or deterioration before Date of Substantial Completion.

B. Touch-up, repair or replace damaged products before Date of Substantial Completion.

END OF SECTION 07 8123

SECTION 07 8400 - FIRESTOPPING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Firestopping systems.

B. Firestopping of joints and penetrations in fire-resistance-rated and smoke-resistant assemblies, whether indicated on drawings or not, and other openings indicated.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 01 7419 – Construction Waste Management and Disposal

C. Section 07 8100 - Applied Fire Protection.

1.3 REFERENCE STANDARDS

A. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials; 2022.

B. ASTM E814 - Standard Test Method for Fire Tests of Penetration Firestop Systems; 2013a (Reapproved 2017).

C. ASTM E1966 - Standard Test Method for Fire-Resistive Joint Systems; 2015 (Reapproved 2019).

D. ASTM E2174 - Standard Practice for On-Site Inspection of Installed Firestop Systems; 2020a.

E. ASTM E2393 - Standard Practice for On-Site Inspection of Installed Fire Resistive Joint Systems and Perimeter Fire Barriers; 2020a.

F. ASTM E2307 - Standard Test Method for Determining Fire Resistance of Perimeter Fire Barriers Using Intermediate-Scale, Multi-story Test Apparatus; 2020.

G. ASTM E2837 - Standard Test Method for Determining the Fire Resistance of Continuity Head-of-Wall Joint Systems Installed Between Rated Wall Assemblies and Nonrated Horizontal Assemblies; 2013 (Reapproved 2017).

H. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi; 2015, with Editorial Revision (2021).

I. ITS (DIR) - Directory of Listed Products; Current Edition.

J. FM 4991 - Approval Standard for Firestop Contractors; 2013.

K. FM (AG) - FM Approval Guide; Current Edition.

L. UL 1479 - Standard for Fire Tests of Penetration Firestops; Current Edition, Including All Revisions.

M. UL 2079 - Standard for Tests for Fire Resistance of Building Joint Systems; Current Edition, Including All Revisions.

N. UL (DIR) - Online Certifications Directory; Current Edition.

O. UL (FRD) - Fire Resistance Directory; Current Edition.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Schedule of Firestopping: List each type of penetration, fire rating of the penetrated assembly, and firestopping test or design number.

C. Product Data: Provide data on product characteristics, performance ratings, and limitations.

D. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit 5d: For non-preformed sealants, documentation including printed statement of VOC content.
   2. Laboratory Test Reports for Credit 5d: For non-preformed sealants, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
   3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   4. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

E. Manufacturer's Installation Instructions: Indicate preparation and installation instructions.

F. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

G. Manufacturer's qualification statement.

H. Installer's qualification statement.

1.5 QUALITY ASSURANCE

A. Fire Testing: Provide firestopping assemblies of designs that provide the scheduled fire ratings when tested in accordance with methods indicated.
   1. Listing in UL (FRD), FM (AG), or ITS (DIR) will be considered as constituting an acceptable test report.

2. Valid evaluation report published by ICC Evaluation Service, Inc. (ICC-ES) at www.icc-es.org will be considered as constituting an acceptable test report.
3. Submission of actual test reports is required for assemblies for which none of the above substantiation exists.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

C. Installer Qualifications: Company specializing in performing the work of this section and:
1. Trained by manufacturer.
2. Approved by Factory Mutual Research Corporation under FM 4991, or meeting any two of the following requirements:
3. Verification of minimum three years documented experience installing work of this type.
4. Verification of at least five satisfactorily completed projects of comparable size and type.
5. Licensed by local authorities having jurisdiction (AHJ).

1.6 MOCK-UPS

A. See Section 01 4000 - Quality Requirements for additional requirements.

B. Install one firestopping assembly representative of each fire rating design required on project.
1. Where one design may be used for different penetrating items or in different wall constructions, install one assembly for each different combination.

C. Obtain approval of authorities having jurisdiction (AHJ) before proceeding.

D. If accepted, mock-up will represent minimum standard for this work.

E. If accepted, mock-up may remain as part of this work. Remove and replace mock-ups not accepted.

1.7 FIELD CONDITIONS

A. Comply with firestopping manufacturer's recommendations for temperature and conditions during and after installation; maintain minimum temperature before, during, and for three days after installation of materials.

B. Provide ventilation in areas where solvent-cured materials are being installed.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Firestopping Manufacturers:
1. 3M Fire Protection Products: www.3m.com/firestop/#sle.
2. Hilti, Inc: www.us.hilti.com/#sle.
3. Specified Technologies Inc: www.stifirestop.com/#sle.
4. Tremco Commercial Sealants & Waterproofing: www.tremcosealants.com/#sle.
5. Substitutions: See Section 01 6000 - Product Requirements.

2.2 MATERIALS

A. Firestopping Materials: Any materials meeting requirements.

B. Mold and Mildew Resistance: Provide firestopping materials with mold and mildew resistance rating of zero(0) in accordance with ASTM G21.

C. Primers, Sleeves, Forms, Insulation, Packing, Stuffing, and Accessories: Provide type of materials as required for tested firestopping assembly.

D. Fire Ratings: Refer to Drawings for required systems and ratings.

2.3 FIRESTOPPING ASSEMBLY REQUIREMENTS

A. Perimeter Fire Containment Firestopping: Use system that has been tested according to ASTM E2307 to have fire resistance F Rating equal to required fire rating of floor assembly.
   1. Movement: Provide systems that have been tested to show movement capability as indicated.
   2. Temperature Rise: Provide systems that have been tested to show T Rating as indicated.
   3. Air Leakage: Provide systems that have been tested to show L Rating as indicated.
   4. Where floor assembly is not required to have a fire rating, provide systems that have been tested to show L Rating as indicated.

B. Head-of-Wall (HW) Joint System Firestopping at Joints Between Fire-Rated Wall Assemblies and Non-Rated Horizontal Assemblies: Use system that has been tested according to ASTM E2837 to have fire resistance F Rating equal to required fire rating of wall assembly.
   1. Movement: Provide systems that have been tested to show movement capability as indicated.

C. Floor-to-Floor (FF), Floor-to-Wall (FW), Head-of-Wall (HW), and Wall-to-Wall (WW) Joints, Except Perimeter, Where Both Are Fire-Rated: Use system that has been tested according to ASTM E1966 or UL 2079 to have fire resistance F Rating equal to required fire rating of the assembly in which the joint occurs.
   1. Movement: Provide systems that have been tested to show movement capability as indicated.
   2. Air Leakage: Provide systems that have been tested to show L Rating as indicated.
   3. Watertightness: Provide systems that have been tested to show W Rating as indicated.
   4. Listing by FM (AG), ITS (DIR), UL (DIR), or UL (FRD) in their certification directories will be considered evidence of successful testing.

D. Through Penetration Firestopping: Use system that has been tested according to ASTM E814 to have fire resistance F Rating equal to required fire rating of penetrated assembly.
   1. Temperature Rise: Provide systems that have been tested to show T Rating as indicated.
   2. Air Leakage: Provide systems that have been tested to show L Rating as indicated.
   3. Watertightness: Provide systems that have been tested to show W Rating as indicated.
   4. Listing by FM (AG), ITS (DIR), UL (DIR), or UL (FRD) in their certification directories will be considered evidence of successful testing.

2.4 FIRESTOPPING SYSTEMS

A. Firestopping: Any material meeting requirements.
   1. Fire Ratings: Use system that is listed by FM (AG), ITS (DIR), or UL (FRD) and tested in accordance with ASTM E814, ASTM E119, or UL 1479 with F Rating equal to fire rating of penetrated assembly and minimum T Rating Equal to F Rating and in compliance with other specified requirements.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify openings are ready to receive the work of this section.

3.2 PREPARATION

A. Clean substrate surfaces of dirt, dust, grease, oil, loose material, or other materials that could adversely affect bond of firestopping material.

B. Remove incompatible materials that could adversely affect bond.

C. Install backing materials to prevent liquid material from leakage.

3.3 INSTALLATION

A. Install materials in manner described in fire test report and in accordance with manufacturer's instructions, completely closing openings.

B. Do not cover installed firestopping until inspected by Owner's Independent Testing Agency.

C. Do not cover installed firestopping until inspected by authorities having jurisdiction.

D. Install labeling required by code.

3.4 FIELD QUALITY CONTROL

A. Independent Testing Agency: Inspection agency employed and paid by Owner, will examine penetration firestopping in accordance with ASTM E2174 and ASTM E2393.

B. Repair or replace penetration firestopping and joints at locations where inspection results indicate firestopping or joints do not meet specified requirements.

3.5 CLEANING

A. Clean adjacent surfaces of firestopping materials.

3.6 PROTECTION

A. Protect adjacent surfaces from damage by material installation.

END OF SECTION 07 8400

SECTION 07 9200 - JOINT SEALANTS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Nonsag gunnable joint sealants.

B. Self-leveling pourable joint sealants.

C. Joint backings and accessories, including secondary joint sealant.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures

B. Section 01 7419 – Construction Waste Management and Disposal

C. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions: Additional requirements for sealants and primers.

1.3 REFERENCE STANDARDS

A. ASTM C661 - Standard Test Method for Indentation Hardness of Elastomeric-Type Sealants by Means of a Durometer; 2015.

B. ASTM C794 - Standard Test Method for Adhesion-In-Peel of Elastomeric Joint Sealants; 2018.

C. {RSTEMP#798}ASTM C834 - Standard Specification for Latex Sealants{CH#186315}.

D. ASTM C919 - Standard Practice for Use of Sealants in Acoustical Applications; 2018.

E. ASTM C920 - Standard Specification for Elastomeric Joint Sealants; 2018.

F. ASTM C1087 - Standard Test Method for Determining Compatibility of Liquid-Applied Sealants with Accessories Used in Structural Glazing Systems; 2016.

G. ASTM C1193 - Standard Guide for Use of Joint Sealants; 2016.

H. ASTM C1248 - Standard Test Method for Staining of Porous Substrate by Joint Sealants; 2018.

I. ASTM C1330 - Standard Specification for Cylindrical Sealant Backing for Use with Cold Liquid-Applied Sealants; 2018.

J. ASTM C1521 - Standard Practice for Evaluating Adhesion of Installed Weatherproofing Sealant Joints; 2019 (Reapproved 2020).

K. ASTM D2240 - Standard Test Method for Rubber Property--Durometer Hardness; 2015, with Editorial Revision (2017).

L. SCAQMD 1168 - Adhesive and Sealant Applications; 1989 (Amended 2017).

M. SWRI (VAL) - SWR Institute Validated Products Directory; Current Edition.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Submit manufacturer's technical datasheets for each product to be used; include the following:
   1. Physical characteristics, including movement capability, VOC content, hardness, cure time, and color availability.
   2. List of backing materials approved for use with the specific product.
   3. Backing material recommended by sealant manufacturer.
   4. Substrates that product is known to satisfactorily adhere to and with which it is compatible.
   5. Substrates the product should not be used on.
   6. Substrates for which use of primer is required.
   7. Installation instructions, including precautions, limitations, and recommended backing materials and tools.
   8. Sample product warranty.
   9. Certification by manufacturer indicating that product complies with specification requirements.
   10. SWRI Validation: Provide currently available sealant product validations as listed by SWRI (VAL) for specified sealants.

C. Product Data for Accessory Products: Submit manufacturer's technical data sheet for each product to be used, including physical characteristics, installation instructions, and recommended tools.

D. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit 5d: For sealants installed at the building interior, documentation including printed statement of VOC content.
   2. Laboratory Test Reports for Credit 5d: For sealants installed at the building interior, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
   3. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   4. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

E. Color Cards for Selection: Where sealant color is not specified, submit manufacturer's color cards showing standard colors available for selection.

F. Samples for Verification: Where custom sealant color is specified, obtain directions from Architect and submit at least two physical samples for verification of color of each required sealant.

G. Sustainable Design Documentation: For sealants and primers, submit VOC content and emissions documentation.

H. Preconstruction Laboratory Test Reports: Submit at least four weeks prior to start of installation.

I. Installation Plan: Submit at least four weeks prior to start of installation.

J. Preinstallation Field Adhesion Test Plan: Submit at least two weeks prior to start of installation.

K. Field Quality Control Plan: Submit at least two weeks prior to start of installation.

L. Preinstallation Field Adhesion Test Reports: Submit filled out Preinstallation Field Adhesion Test Reports log within 10 days after completion of tests; include bagged test samples and photographic records.

M. Installation Log: Submit filled-out log for each length or instance of sealant installed.

N. Field Quality Control Log: Submit filled-out log for each length or instance of sealant installed, within 10 days after completion of inspections/tests; include bagged test samples and photographic records, if any.

O. Manufacturer's qualification statement.

P. Installer's qualification statement.

Q. Executed warranty.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum seven years documented experience.

B. Installer Qualifications: Company specializing in performing the work of this section and with at least three years of documented experience.

C. Testing Agency Qualifications: Independent firm specializing in performing testing and inspections of the type specified in this section.

D. Preconstruction Laboratory Testing: Arrange for sealant manufacturer(s) to test each combination of sealant, substrate, backing, and accessories.
   1. Adhesion Testing: In accordance with ASTM C794.
   2. Compatibility Testing: In accordance with ASTM C1087.
   3. Allow sufficient time for testing to avoid delaying the work.
   4. Deliver sufficient samples to manufacturer for testing.

5. Report manufacturer's recommended corrective measures, if any, including primers or techniques not indicated in product data submittals.
6. Testing is not required if sealant manufacturer provides data showing previous testing, not older than 24 months, that shows satisfactory adhesion, lack of staining, and compatibility.

E. Installation Plan: Include schedule of sealed joints, including the following:
1. Joint width indicated in Contract Documents.
2. Joint depth indicated in Contract Documents; to face of backing material at centerline of joint.
3. Method to be used to protect adjacent surfaces from sealant droppings and smears, with acknowledgment that some surfaces cannot be cleaned to like-new condition and therefore prevention is imperative.
4. Approximate date of installation, for evaluation of thermal movement influence.
5. Installation Log Form: Include the following data fields, with known information filled out.
   a) Unique identification of each length or instance of sealant installed.
   b) Location on project.
   c) Substrates.
   d) Sealant used.
   e) Stated movement capability of sealant.
   f) Primer to be used, or indicate no primer is used.
   g) Size and actual backing material used.
   h) Date of installation.
   i) Name of installer.
   j) Actual joint width; provide space to indicate maximum and minimum width.
   k) Actual joint depth to face of backing material at centerline of joint.
   l) Air temperature.

F. Preinstallation Field Adhesion Test Plan: Include destructive field adhesion testing of one sample of each combination of sealant type and substrate, except interior acrylic latex sealants, and include the following for each tested sample.
1. Identification of testing agency.
2. Name(s) of sealant manufacturer's field representatives who will be observing.
3. Preinstallation Field Adhesion Test Log Form: Include the following data fields, with known information filled out.
   a) Substrate; if more than one type of substrate is involved in a single joint, provide two entries on form, for testing each sealant substrate side separately.
   b) Test date.
   c) Location on project.
   d) Sealant used.
   e) Stated movement capability of sealant.
   f) Test method used.
   g) Date of installation of field sample to be tested.
   h) Copy of test method documents.
   i) Age of sealant upon date of testing.
   j) Test results, modeled after the sample form in the test method document.
   k) Indicate use of photographic record of test.

G. Field Quality Control Plan:
1. Visual inspection of entire length of sealant joints.

2. Destructive field adhesion testing of sealant joints, except interior acrylic latex sealant.
   a) For each different sealant and substrate combination, allow for one test every 100 feet in the first 1,000 linear feet, and one test per 1,000 linear feet thereafter, or once per floor on each elevation.
   b) If any failures occur in the first 1,000 linear feet, continue testing at frequency of one test per 500 linear feet at no extra cost to Owner.
3. Field testing agency's qualifications.
4. Field Quality Control Log Form: Show same data fields as on Preinstallation Field Adhesion Test Log, with known information filled out and lines for multiple tests per sealant/substrate combinations; include visual inspection and specified field testing; allow for possibility that more tests than minimum specified may be necessary.

H. Field Adhesion Test Procedures:
1. Allow sealants to fully cure as recommended by manufacturer before testing.
2. Have a copy of the test method document available during tests.
3. Take photographs or make video records of each test, with joint identification provided in the photos/videos; for example, provide small erasable whiteboard positioned next to joint.
4. Record the type of failure that occurred, other information required by test method, and the information required on the Field Quality Control Log.
5. When performing destructive tests, also inspect the opened joint for proper installation characteristics recommended by manufacturer, and report any deficiencies.
6. Deliver the samples removed during destructive tests in separate sealed plastic bags, identified with project, location, test date, and test results, to Owner.
7. If any combination of sealant type and substrate does not show evidence of minimum adhesion or shows cohesion failure before minimum adhesion, report results to Architect.

I. Destructive Field Adhesion Test: Test for adhesion in accordance with ASTM C1521, using Destructive Tail Procedure.
1. Sample: At least 18 inches long.
2. Minimum Elongation Without Adhesive Failure: Consider the tail at rest, not under any elongation stress; multiply the stated movement capability of the sealant in percent by two; then multiply 1 inch by that percentage; if adhesion failure occurs before the 1-inch mark is that distance from the substrate, the test has failed.
3. If either adhesive or cohesive failure occurs before minimum elongation, take necessary measures to correct conditions and retest; record each modification to products or installation procedures.
4. Record results on Field Quality Control Log.
5. Repair failed portions of joints.

J. Field Adhesion Tests of Joints: Test for adhesion using most appropriate method in accordance with ASTM C1521, or another applicable method as recommended by manufacturer.

1.6 WARRANTY

A. See Section 01 7800 - Closeout Submittals for additional warranty requirements.

B. Manufacturer Warranty: Provide 5-year manufacturer warranty for repair or replacemtn of installed sealants and accessories that demonstrate deterioration or adhesive or cohesive failure under normal use within warranty period specified. Complete forms in Owner's name and register with manufacturer.

C. Correction Period: Correct defective work within 2-year period commencing on Date of Substantial Completion.

PART 2 PRODUCTS

2.1 MANUFACTURERS

2.2 JOINT SEALANT APPLICATIONS

A. Scope:
   1. Exterior Joints:
      a) Do not seal exterior joints unless indicated on drawings as sealed.
      b) Seal the following joints:
         1) Wall expansion and control joints.
         2) Joints between doors, windows, and other frames or adjacent construction.
         3) Joints between different exposed materials.
   2. Interior Joints:
      a) Do not seal interior joints indicated on drawings as not sealed.
      b) Do not seal gaps and openings in gypsum board and suspended ceilings
      c) Do not seal through-penetrations in sound-rated assemblies that are also fire-rated assemblies.
      d) Seal the following joints:
         1) Joints between door frames, window frames, and other frames and adjacent construction.
         2) In sound-rated wall and ceiling assemblies, gaps at electrical outlets, wiring devices, and piping penetrations.
         3) In sound-rated wall and ceiling assemblies, seal joints between wall assemblies and ceiling assemblies; between wall assemblies and other construction; between ceiling assemblies and other construction.
   3. Do Not Seal:
      a) Intentional weep holes in masonry.
      b) Joints indicated to be covered with expansion joint cover assemblies.
      c) Joints where sealant is specified to be furnished and installed by manufacturer of product to be sealed.
      d) Joints where sealant installation is specified in other sections.

B. Type EJ1 - Exterior Joints: Use nonsag nonstaining silicone sealant, unless otherwise indicated.
   1. Type EJ2 - Lap Joints in Sheet Metal Fabrications: Butyl rubber, noncuring.

C. Type IJ1 - Interior Joints: Use nonsag polyurethane sealant, unless otherwise indicated.
   1. Type IJ2 - Not Used.
   2. Type IJ7 - Wall and Ceiling Joints in Wet Areas: Nonsag polyurethane sealant for continuous liquid immersion.
   3. Type IJ8 - Floor Joints in Wet Areas: Nonsag polyurethane non-traffic-grade sealant suitable for continuous liquid immersion.
   4. Type IJ3 - Joints between Tile in Wet Areas and Floors, Walls, and Ceilings: Mildew-resistant silicone sealant; white.

5. Type IJ4 - In Sound-Rated Assemblies: Acrylic emulsion latex sealant.
6. Type IJ5 - Narrow Control Joints in Interior Concrete Slabs: Self-leveling epoxy sealant.
7. Type IJ6 - Other Floor Joints: Self-leveling polyurethane traffic-grade sealant.

D. Interior Wet Areas: restrooms and food service areas; fixtures in wet areas include plumbing fixtures, food service equipment, countertops, cabinets, and other similar items.

E. Sound-Rated Assemblies: Walls and ceilings identified as STC-rated, sound-rated, or acoustical.

2.3 JOINT SEALANTS - GENERAL

A. Sealants and Primers: Provide products having lower volatile organic compound (VOC) content than indicated in SCAQMD 1168. See also Section 01 3566.42.

B. Sealant Colors:
1. Color and texture of sealants used with exposed masonry are to match color of mortar joints.
2. Color and texture of sealants used with unpainted concrete are to match color of adjacent concrete.
3. Color of sealants for other locations to be light gray, unless otherwise indicated.
4. Provide custom colors for use around window perimeters, to match window frame or masonry, or colors as determined by the Architect.
5. Provide custom colors for use at relieving angles. If custom colors are required, specify paint color and coordinate with sealant manufacturer for paint products to be used at relieving angles.
6. Match window perimeter sealant color to the color of window frame or masonry using custom color sealant. Sealant color at relieving angles to match mortar color. If manufacturer's standard colors do not match, use sealants that are available in custom colors. Specify paint color and coordinate with sealant manufacturer for paint products to be used.

2.4 NONSAG JOINT SEALANTS

A. Type EJ1 - Non-Staining Silicone Sealant: ASTM C920, Grade NS, Uses M and A; not expected to withstand continuous water immersion or traffic.
1. Movement Capability: Plus and minus 50 percent, minimum.
2. Non-Staining To Porous Stone: Non-staining to light-colored natural stone when tested in accordance with ASTM C1248.
3. Dirt Pick-Up: Reduced dirt pick-up compared to other silicone sealants.
4. Hardness Range: 15 to 35, Shore A, when tested in accordance with ASTM C661.
5. Color: To be selected by Architect from manufacturer's standard range.
6. Service Temperature Range: Minus 20 to 180 degrees F.
7. Products:
   a) Dow; DOWSIL 795 Silicone Building Sealant: www.dow.com/#sle.
   b) Pecora Corporation; Pecora 890 NST (Non-Staining Technology): www.pecora.com/#sle.
   c) Tremco Commercial Sealants & Waterproofing; Spectrem 2: www.tremcosealants.com/#sle.

B. Type IJ3 - Mildew-Resistant Silicone Sealant: ASTM C920, Grade NS, Uses M and A; single component, mildew resistant; not expected to withstand continuous water immersion or traffic.
   1. Color: White.

C. Type IJ1 - Polyurethane Sealant: ASTM C920, Grade NS, Uses M and A; single or multi-component; not expected to withstand continuous water immersion or traffic.
   1. Movement Capability: Plus and minus 12.5 percent, minimum.
   2. Hardness Range: 20 to 35, Shore A, when tested in accordance with ASTM C661.
   3. Color: To be selected by Architect from manufacturer's standard range.
   4. Service Temperature Range: Minus 40 to 180 degrees F.
   5. Products:
      a) Pecora Corporation; DynaFlex: www.pecora.com/#sle.
      b) Sika Corporation; Sikaflex-1a: www.usa.sika.com/#sle.
      c) W. R. Meadows, Inc; POURTHANE NS: www.wrmeadows.com/#sle.
      d) Substitutions: See Section 01 6000 - Product Requirements.

D. Type IJ7 - Polyurethane Sealant for Continuous Water Immersion: ASTM C920, Grade NS, Uses M and A; single or multi-component; explicitly approved by manufacturer for continuous water immersion; suitable for traffic exposure when recessed below traffic surface .
   1. Movement Capability: Plus and minus 35 percent, minimum.
   2. Hardness Range: 20 to 35, Shore A, when tested in accordance with ASTM C661.
   3. Color: To be selected by Architect from manufacturer's standard range.
   4. Service Temperature Range: Minus 40 to 180 degrees F.
   5. Products:
      a) Sika Corporation; Sikaflex-1a: www.usa.sika.com/#sle.
      b) Tremco; Dymonic 100: www.tremcosealants.com.
      c) Substitutions: See Section 01 6000 - Product Requirements.

E. Type IJ4 - Acrylic Emulsion Latex: Water-based; {RS#798}, single component, nonstaining, nonbleeding, nonsagging; not intended for exterior use.
   1. Color: Standard colors matching finished surfaces, Type OP (opaque).
   2. Grade: {RS#798}; Grade 0 Degrees F (Minus 18 Degrees C).
   3. Products:
      a) Franklin International, Inc; Titebond Acoustical Smoke & Sound Sealant: www.titebond.com/#sle.
      b) Hilti, Inc; CP 506 Smoke and Acoustical Sealant: www.us.hilti.com/#sle.
      c) Specified Technologies Inc; Smoke N' Sound Acoustical Sealant: www.stifirestop.com/#sle.
      d) Tremco Commercial Sealants & Waterproofing; Tremstop Smoke and Sound: www.tremcosealants.com/#sle.

F. Type EJ2 - Noncuring Butyl Sealant: Solvent-based, single component, nonsag, nonskinning, nonhardening, nonbleeding; nonvapor permeable; intended for fully concealed applications.
   1. Products:
      a) Pecora Corporation; Pecora BA-98 Non-Skinning Butyl Sealant: www.pecora.com/#sle.
      b) Tremco Commercial Sealants & Waterproofing; Acoustical/Curtainwall Sealant: www.tremcosealants.com/#sle.

2.5 SELF-LEVELING JOINT SEALANTS

A. Type IJ8 - Self-Leveling Polyurethane Sealant for Continuous Water Immersion: Polyurethane; ASTM C920, Grade P, Uses M and A; single component; explicitly approved by manufacturer for traffic exposure and continuous water immersion.
   1. Movement Capability: Plus and minus 25 percent, minimum.
   2. Hardness Range: 35 to 55, Shore A, when tested in accordance with ASTM C661.
   3. Color: To be selected by Architect from manufacturer's standard range.
   4. Service Temperature Range: Minus 40 to 180 degrees F.
   5. Products:
      a) Sika Corporation; Sikaflex-1c SL: www.usa.sika.com/#sle.
      b) W. R. MEADOWS, Inc; POURTHANE SL: www.wrmeadows.com/#sle.
      c) Substitutions: See Section 01 6000 - Product Requirements.

B. Type IJ5 - Semi-Rigid Self-Leveling Epoxy Joint Filler: Epoxy or epoxy/polyurethane copolymer; intended for filling cracks and control joints not subject to significant movement; rigid enough to support concrete edges under traffic.
   1. Composition: Multicomponent, 100 percent solids by weight.
   2. Durometer Hardness: Minimum of 85 for Type A or 35 for Type D, after seven days when tested in accordance with ASTM D2240.
   3. Color: To be selected by Architect from manufacturer's standard colors.
   4. Joint Width, Minimum: 1/8 inch.
   5. Joint Width, Maximum: 1/4 inch.
   6. Joint Depth: Provide product suitable for joints from 1/8 inch to 2 inches in depth including space for backer rod.
   7. Products:
      a) Adhesives Technology Corporation; CRACKBOND JF-90 HD: www.atcepoxy.com/#sle.
      b) Euclid Chemical Company; EUCO 700: www.euclidchemical.com/#sle.
      c) Mapei; Mapeiflex Joint Sealant EP 90/50: www.mapei.com/#sle.
      d) W.R. Meadows, Inc; Rezi-Weld Flex: www.wrmeadows.com/#sle.

C. Type IJ6 - Semi-Rigid Self-Leveling Polyurea Joint Filler: Two-component, 100 percent solids; intended for filling cracks and control joints not subject to significant movement; rigid enough to support concrete edges under traffic.
   1. Durometer Hardness, Type A: 75, minimum, after seven days when tested in accordance with ASTM D2240.
   2. Color: Concrete gray.
   3. Color: To be selected by Architect from manufacturer's standard colors.
   4. Products:
      a) ARDEX Engineered Cements; ARDEX ARDISEAL RAPID PLUS: www.ardexamericas.com/#sle.
      b) Euclid Chemical Company; EUCO QWIKjoint UVR: www.euclidchemical.com/#sle.
      c) Mapei; Mapeiflex Joint Sealant PO 95/100: www.mapei.com/#sle.

2.6 ACCESSORIES

A. Sealant Backing Materials, General: Materials placed in joint before applying sealants; assists sealant performance and service life by developing optimum sealant profile and preventing three-sided adhesion; type and size recommended by sealant manufacturer for compatibility with sealant, substrate, and application.

B. Sealant Backing Rod, Closed-Cell Type:
   1. Cylindrical flexible sealant backings complying with ASTM C1330 Type C.
   2. Size: 25 to 50 percent larger in diameter than joint width.

C. Secondary Joint Sealant: Precompressed, self-expanding polyurethane foam sealant secondary to field-applied liquid sealants in exterior wall assemblies.
   1. Width(s): As indicated on drawings.
   2. Tensile Strength: 21 psi minimum, tested in accordance with ASTM D3574.
   3. Air Leakage: Pass, tested in accordance with ASTM E283.
   4. Water Penetration: Pass, tested in accordance with ASTM E331.
   5. Movement Capability: 25%+, 25%- (50% overall).
   6. Products:
      a) Balco; BBSW - Precompressed Secondary Seal: www.balcousa.com.
      b) Sika/Emseal; Backerseal: www.emseal.com.
      c) Sika/Emseal; 25V: www.emseal.com.

D. Backing Tape: Self-adhesive polyethylene tape with surface that sealant will not adhere to and recommended by tape and sealant manufacturers for specific application.

E. Masking Tape: Self-adhesive, nonabsorbent, nonstaining, removable without adhesive residue, and compatible with surfaces adjacent to joints and sealants.

F. Joint Cleaner: Noncorrosive and nonstaining type, type recommended by sealant manufacturer; compatible with joint forming materials.

G. Primers: Type recommended by sealant manufacturer to suit application; nonstaining.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that joints are ready to receive work.

B. Verify that backing materials are compatible with sealants.

C. Verify that backer rods are of the correct size.

D. Preinstallation Adhesion Testing: Install a sample for each test location indicated in the test plan.
   1. Test each sample as specified in PART 1 under QUALITY ASSURANCE article.
   2. Notify Architect of date and time that tests will be performed, at least seven days in advance.

3. Arrange for sealant manufacturer's technical representative to be present during tests.
4. Record each test on Preinstallation Adhesion Test Log as indicated.
5. If any sample fails, review products and installation procedures, consult manufacturer, or take other measures that are necessary to ensure adhesion; retest in a different location; if unable to obtain satisfactory adhesion, report to Architect.
6. After completion of tests, remove remaining sample material and prepare joints for new sealant installation.

3.2 PREPARATION

A. Remove loose materials and foreign matter that could impair adhesion of sealant.

B. Clean joints, and prime as necessary, in accordance with manufacturer's instructions.

C. Perform preparation in accordance with manufacturer's instructions and ASTM C1193.

D. Mask elements and surfaces adjacent to joints from damage and disfigurement due to sealant work; be aware that sealant drips and smears may not be completely removable.

E. Concrete Floor Joints That Will Be Exposed in Completed Work: Test joint filler in an inconspicuous area to verify that it does not stain or discolor slab.

3.3 INSTALLATION

A. Install this work in accordance with sealant manufacturer's requirements for preparation of surfaces and material installation instructions.

B. Provide joint sealant installations complying with ASTM C1193.

C. Install acoustical sealant application work in accordance with ASTM C919.

D. Measure joint dimensions and size joint backers to achieve width-to-depth ratio, neck dimension, and surface bond area as recommended by manufacturer, except where specific dimensions are indicated.

E. Install bond breaker backing tape where backer rod cannot be used.

F. Install sealant free of air pockets, foreign embedded matter, ridges, and sags, and without getting sealant on adjacent surfaces.

G. Do not install sealant when ambient temperature is outside manufacturer's recommended temperature range, or will be outside that range during the entire curing period, unless manufacturer's approval is obtained and instructions are followed.

H. Nonsag Sealants: Tool surface concave, unless otherwise indicated; remove masking tape immediately after tooling sealant surface.

I. Concrete Floor Joint Filler: After full cure, shave joint filler flush with top of concrete slab.

3.4 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements for additional requirements.

B. Perform field quality control inspection/testing as specified in PART 1 under QUALITY ASSURANCE article.

C. Destructive Adhesion Testing: If there are any failures in first 1,000 linear feet, notify Architect immediately.

D. Remove and replace failed portions of sealants using same materials and procedures as indicated for original installation.

E. Repair destructive test location damage immediately after evaluation and recording of results.

END OF SECTION 07 9200

SECTION 07 9513 - EXPANSION JOINT COVER ASSEMBLIES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Expansion joint cover assemblies for floor, wall, and ceiling surfaces.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 01 7419 – Construction Waste Management and Disposal.

1.3 REFERENCE STANDARDS

1.4 ADMINISTRATIVE REQUIREMENTS

A. Installation Templates: For frames and anchors to be embedded in concrete or masonry, furnish templates to relevant installers; include installation instructions and tolerances.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: For each type of expansion joint cover specified. Provide joint assembly profiles, profile dimensions, anchorage devices and available colors and finish.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Shop Drawings: Indicate joint and splice locations, miters, layout of the work, affected adjacent construction and anchorage locations.

E. Manufacturer's Installation Instructions: Indicate rough-in sizes and required tolerances for item placement.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Expansion Joint Cover Assemblies:

1. Basis of Design: Construction Specialties, Inc: www.c-sgroup.com/#sle, unless otherwise noted.
2. Other Acceptable Manufacturers, subject to compliance with requirements:
   a) Balco, Inc: www.balcousa.com/#sle.
   b) EMSEAL Joint Systems, Ltd: www.emseal.com/#sle.
   c) MM Systems Corp: www.mmsystemscorp.com/#sle.
   d) Sika Emseal; www.emseal.com
3. Substitutions: See Section 01 6000 - Product Requirements.

2.2 EXPANSION JOINT COVER ASSEMBLY APPLICATIONS

A. Interior Non-Fire-Rated Wall/Ceiling Joints - Gypsum Wallboard Ceilings **CWJ-1**:
   1. Basis of Design:
      a) **Construction Specialties, Inc; FWFC-200**: www.c-sgroup.com/#sle.
      b) Substitutions: See Section 01 6000 - Product Requirements.

B. Interior Non-Fire-Rated Wall/Ceiling Joints - Acoustic Panel Ceilings **CWJ-2**:
   1. Basis of Design:
      a) **Construction Specialties, Inc; FCFC-200**: www.c-sgroup.com/#sle.
      b) Substitutions: See Section 01 6000 - Product Requirements.

C. Interior Non-Fire-Rated Ceiling/Ceiling Joints - Gypsum Wallboard Ceilings **CCJ-1**:
   1. Basis of Design:
      a) **Construction Specialties, Inc; FWF-200**: www.c-sgroup.com/#sle.
      b) Substitutions: See Section 01 6000 - Product Requirements.

D. Interior Non-Fire-Rated Ceiling/Ceiling Joints - Acoustic Panel Ceilings **CCJ-2**:
   1. Basis of Design:
      a) **Construction Specialties, Inc; FCF-200:** www.c-sgroup.com/#sle.
      b) Substitutions: See Section 01 6000 - Product Requirements.

E. Interior Fire-Rated Floor/Wall Joints **IFJ-1**:
   1. Basis of Design:
      a) **Construction Specialties, Inc**; **GFSTW-200M W/FB**: www.c-sgroup.com/#sle.
      b) Substitutions: See Section 01 6000 - Product Requirements.

F. Interior Non-Fire-Rated Wall/Wall Joints (Flush) - **IWJ-1**:
   1. Basis of Design:
      a) **Construction Specialties, Inc; FWF-200:** www.c-sgroup.com/#sle.
      b) Substitutions: See Section 01 6000 - Product Requirements.

G. Interior Non-Fire-Rated Wall/Wall Joints (Corner) - **IWJ-2**:
   1. Basis of Design:
      a) **Construction Specialties, Inc; FCF-200:** www.c-sgroup.com/#sle.
      b) Substitutions: See Section 01 6000 - Product Requirements.

H. Exterior Wall Joints Subject to Thermal Movement **EWJ-1**:
   1. Basis of Design:
      a) **Construction Specialties, Inc; VF-200**: www.c-sgroup.com/#sle.
      b) Substitutions: See Section 01 6000 - Product Requirements.

I. Exterior Wall - Concealed Vertical and Horizontal Applications - Non-Fire-Rated:
   1. Basis of Design: **Tremco**; **Willseal 150:** tremcosealants.com.
   2. Joint Widths: As indicated on drawings.
   3. Color: Manufacturer's standard.
   4. Alternate Comparable Product:
      a) Sika; Emseal 25V: www.emseal.com.

J. Exterior Wall - Concealed Vertical and Horizontal Applications - Fire-Rated:
   1. Basis of Design: **Tremco**; **Willseal FR-V:** tremcosealants.com.
   2. Joint Widths: As indicated on drawings.
   3. Color: Manufacturer's standard.

2.3 EXPANSION JOINT COVER ASSEMBLIES

A. Expansion Joint Cover Assemblies - General: Factory-fabricated and assembled; designed to completely fill joint openings, sealed to prevent passage of air, dust, water, smoke; suitable for traffic expected.
   1. Joint Dimensions and Configurations: As indicated on drawings.
   2. Joint Cover Sizes: Selected to suit joint width and configuration, based on manufacturer's published recommendations and limitations.
   3. Lengths: Provide covers in full lengths required; avoid splicing wherever possible.
   4. Anchors, Fasteners, and Fittings: Provided by cover manufacturer.

B. Covers in Fire Rated Assemblies: Provide cover assembly having fire rating equivalent to that of assembly into which it is installed.

2.4 MATERIALS

2.5 ACCESSORIES

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that joint preparation and dimensions are acceptable and in accordance with manufacturer's requirements.

3.2 INSTALLATION

A. Install components and accessories in accordance with manufacturer's instructions.

B. Align work plumb and level, flush with adjacent surfaces.

C. Rigidly anchor to substrate to prevent misalignment.

3.3 PROTECTION

A. Do not permit traffic over unprotected floor joint surfaces.

END OF SECTION 07 9513

SECTION 08 1113 - HOLLOW METAL DOORS AND FRAMES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Non-fire-rated hollow metal doors and frames.

B. Hollow metal frames for wood doors.

C. Fire-rated hollow metal doors and frames.

D. Thermally insulated exterior hollow metal doors with frames.

E. Bullet-resistant hollow metal frames for glazing.

F. Hollow metal borrowed lites glazing frames.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 01 7419 – Construction Waste Management and Disposal.

C. Section 08 0671- Door Hardware Schedule.

D. Section 08 1416 - Flush Wood Doors: Wood doors installed in hollow metal frames, and requirements for sound-rated doors.

E. Section 08 7100 - Door Hardware.

F. Section 08 8000 - Glazing: Glass for doors and borrowed lites.

G. Section 09 9123 - Interior Painting: Field painting.

1.3 ABBREVIATIONS AND ACRONYMS

A. ANSI: American National Standards Institute.

B. HMMA: Hollow Metal Manufacturers Association.

C. NAAMM: National Association of Architectural Metal Manufacturers.

D. NFPA: National Fire Protection Association.

E. SDI: Steel Door Institute.

F. UL: Underwriters Laboratories.

1.4 REFERENCE STANDARDS

A. ADA Standards - Americans with Disabilities Act (ADA) Standards for Accessible Design; 2010.

B. ANSI/SDI A250.4 - Test Procedure and Acceptance Criteria for Physical Endurance for Steel Doors, Frames and Frame Anchors; 2011.

C. ANSI/SDI A250.6 - Recommended Practice for Hardware Reinforcing on Standard Steel Doors and Frames; 2003 (R2009).

D. ANSI/SDI A250.8 - Specifications for Standard Steel Doors and Frames (SDI-100); 2017.

E. ANSI/SDI A250.10 - Test Procedure and Acceptance Criteria for Prime Painted Steel Surfaces for Steel Doors and Frames; 2011.

F. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.

G. ASTM A1008/A1008M - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Required Hardness, Solution Hardened, and Bake Hardenable; 2023, with Editorial Revision.

H. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength; 2023.

I. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2023d.

J. BHMA A156.115 - American National Standard for Hardware Preparation in Steel Doors and Steel Frames; 2016.

K. ICC A117.1 - Accessible and Usable Buildings and Facilities; 2017.

L. ITS (DIR) - Directory of Listed Products; Current Edition.

M. NAAMM HMMA 830 - Hardware Selection for Hollow Metal Doors and Frames; 2002.

N. NAAMM HMMA 831 - Hardware Locations for Hollow Metal Doors and Frames; 2011.

O. NAAMM HMMA 840 - Guide Specifications For Receipt, Storage and Installation of Hollow Metal Doors and Frames; 2007.

P. NAAMM HMMA 861 - Guide Specifications for Commercial Hollow Metal Doors and Frames; 2014.

Q. NFPA 80 - Standard for Fire Doors and Other Opening Protectives; 2019.

R. NFPA 252 - Standard Methods of Fire Tests of Door Assemblies; 2017.

S. SDI 117 - Manufacturing Tolerances for Standard Steel Doors and Frames; 2013.

T. UL (DIR) - Online Certifications Directory; Current Edition.

U. UL 10C - Standard for Positive Pressure Fire Tests of Door Assemblies; Current Edition, Including All Revisions.

V. UL 752 - Standard for Bullet-Resisting Equipment; Current Edition, Including All Revisions.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Materials and details of design and construction, hardware locations, reinforcement type and locations, anchorage and fastening methods, and finishes.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Shop Drawings: Details of each opening, showing elevations, glazing, frame profiles, and any indicated finish requirements.

E. Samples: Submit two samples of metal, 2 by 2 inches in size, showing factory finishes, colors, and surface texture.

F. Test Reports: Show compliance with specified requirements for the following:
   1. Sound-retardant doors and frames; sealed panel tests are not acceptable.
   2. Bullet resistant doors and/or frames.

G. Installation Instructions: Manufacturer's published instructions, including any special installation instructions relating to this project.

H. Manufacturer's Certificate: Certification that products meet or exceed specified requirements.

I. Installer's Qualification Statement.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than seven years documented experience.

B. Installer Qualifications: Company specializing in performing work of the type specified and with at least five years of documented experience.

C. Maintain at project site copies of reference standards relating to installation of products specified.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Comply with NAAMM HMMA 840 or ANSI/SDI A250.8 (SDI-100) in accordance with specified requirements.

B. Protect with resilient packaging; avoid humidity build-up under coverings; prevent corrosion and adverse effects on factory applied painted finish.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Hollow Metal Doors and Frames:
1. Ceco Door, an Assa Abloy Group company: www.assaabloydss.com/#sle.
2. Curries, an Assa Abloy Group company: www.assaabloydss.com/#sle.
3. Mesker, dormakaba Group: www.meskeropeningsgroup.com/#sle.
4. Republic Doors, an Allegion brand: www.republicdoor.com/#sle.
5. Steelcraft, an Allegion brand: www.allegion.com/#sle.
6. Substitutions: See Section 01 6000 - Product Requirements.

B. Exterior Insulated Hollow Metal Doors and Frames:
1. Basis-of-Design: Ceco; **Trio-E Energy Effficient Heavy Duty Exterior Doors** and **Thermal Break SQT** and **SRT** Frames.
2. Substitutions: See Section 01 6000 - Product Requirements.

C. Bullet-Resistant Hollow Metal Frames:
1. **Basis of Design**: Republic Doors, an Allegion brand; ME Series Frames: www.republicdoor.com/#sle.
2. Other Acceptable Manufacturers:
   a) Curries/ASSA ABLOY; Bullet Resistant Assemblies.
   b) Mesker, dormakaba Group; BR Series Bullet-Resistant Doors and Frames: www.meskeropeningsgroup.com/#sle.
3. Substitutions: See Section 01 6000 - Product Requirements.

2.2 PERFORMANCE REQUIREMENTS

A. Requirements for Hollow Metal Doors and Frames:
1. Steel Sheet: Comply with one or more of the following requirements; galvannealed steel complying with ASTM A653/A653M, cold-rolled steel complying with ASTM A1008/A1008M, or hot-rolled pickled and oiled (HRPO) steel complying with ASTM A1011/A1011M, commercial steel (CS) Type B, for each.
2. Accessibility: Comply with ICC A117.1 and ADA Standards.
3. Exterior Door Top Closures: Flush end closure channel, with top and door faces aligned.
4. Door Edge Profile: Manufacturers standard for application indicated.
5. Typical Door Face Sheets: Flush.

6. Hardware Preparations, Selections and Locations: Comply with NAAMM HMMA 830 and NAAMM HMMA 831 or BHMA A156.115 and ANSI/SDI A250.8 (SDI-100) in accordance with specified requirements.
7. Zinc Coating for Typical Interior (where indicated) and/or Exterior Locations: Provide metal components zinc-coated (galvanized) and/or zinc-iron alloy-coated (galvannealed) by the hot-dip process in accordance with ASTM A653/A653M, with manufacturer's standard coating thickness, unless noted otherwise for specific hollow metal doors and frames.
    a) Based on SDI Standards: Provide at least A40/ZF120 (galvannealed) when necessary, coating not required for typical interior door applications, and at least A60/ZF180 (galvannealed) for corrosive locations.

B. Combined Requirements: If a particular door and frame unit is indicated to comply with more than one type of requirement, comply with the specified requirements for each type; for instance, an exterior door that is also indicated as being sound-rated must comply with the requirements specified for exterior doors and for sound-rated doors; where two requirements conflict, comply with the most stringent.

2.3 HOLLOW METAL DOORS

A. Door Finish: Factory primed and field finished.

B. Exterior Doors: Thermally insulated.
1. Based on SDI Standards: ANSI/SDI A250.8 (SDI-100).
    a) Level 3 - Extra Heavy-duty.
    b) Physical Performance Level A 1 000 000 cycles; in accordance with ANSI/SDI A250.4.
    c) Model 2 - Seamless.
    d) Door Face Metal Thickness: 16 gauge, 0.053 inch, minimum.
    e) Zinc Coating: A60/ZF180 galvannealed coating; ASTM A653/A653M.
2. Door Core Material: Polyurethane, 1.8 lbs/cu ft minimum density.
    a) Foam Plastic Insulation: Manufacturer's standard board insulation with maximum flame spread index (FSI) of 75, and maximum smoke developed index (SDI) of 450 in accordance with ASTM E84, and completely enclosed within interior of door.
3. Door Thermal Resistance: R-Value of 8.7, minimum, for installed thickness of polyurethane.
4. Door Thickness: 1-3/4 inches, nominal.
5. Weatherstripping: Refer to Section 08 7100.

C. Interior Doors, Non-Fire-Rated:
1. Based on SDI Standards: ANSI/SDI A250.8 (SDI-100).
    a) Level 3 - Extra Heavy-duty.
    b) Physical Performance Level A 1 000 000 cycles; in accordance with ANSI/SDI A250.4.
    c) Model 2 - Seamless.
    d) Door Face Metal Thickness: 16 gage, 0.053 inch, minimum.
        1) Doors over 48" shall be minimum thickness of 0.0598 inch (16 ga).
2. Door Thickness: 1-3/4 inches, nominal.

D. Fire-Rated Doors:

1. Based on SDI Standards: ANSI/SDI A250.8 (SDI-100).
   a) Level 3 - Extra Heavy-duty.
   b) Physical Performance Level A 1 000 000 cycles; in accordance with ANSI/SDI A250.4.
   c) Model 2 - Seamless.
   d) Door Face Metal Thickness: 16 gauge, 0.053 inch, minimum.
2. Fire Rating: As indicated on Door Schedule, tested in accordance with UL 10C and NFPA 252 ("positive pressure fire tests").
3. Temperature-Rise Rating (TRR) Across Door Thickness: In accordance with local building code and authorities having jurisdiction.
4. Provide units listed and labeled by UL (DIR) or ITS (DIR).
   a) Attach fire rating label to each fire rated unit.
5. Door Core Material: Manufacturers standard core material/construction in compliance with requirements.
6. Door Thickness: 1-3/4 inches, nominal.

2.4 HOLLOW METAL FRAMES

A. Comply with standards and/or custom guidelines as indicated for corresponding door in accordance with applicable door frame requirements.

B. Frame Finish: Factory primed and field finished.

C. Exterior Door Frames: Full profile/continuously welded type.
   1. Galvanizing: Components hot-dipped zinc-iron alloy-coated (galvannealed) in accordance with ASTM A653/A653M, with A40/ZF120 coating.
   2. Frame Metal Thickness: 14 gauge, 0.067 inch, minimum.
   3. Weatherstripping: Separate, see Section 08 7100.

D. Interior Door Frames, Non-Fire Rated: Full profile/continuously welded type.
   1. Frame Metal Thickness: 14 gage, 0.067 inch, minimum.
   2. Door Frames for Openings More Than 48 Inches (1219 mm) Wide: Fabricated from 0.067inch- (14 Ga) thick steel sheet.
   3. Sound Transmission Class (STC) Rating of Door and Frame Assembly: STC of 40, minimum, calculated in accordance with ASTM E413, and tested in accordance with ASTM E90 - at locations indicated on the Door Schedule on the drawings.

E. Door Frames, Fire-Rated: Full profile/continuously welded type.
   1. Fire Rating: Same as door, labeled.
   2. Frame Metal Thickness: 14 gage, 0.067 inch, minimum.
   3. Door Frames for Openings More Than 48 Inches (1219 mm) Wide: Fabricated from 0.067inch- (14 Ga) thick steel sheet.

F. Frames for Wood Doors: Comply with frame requirements in accordance with corresponding door.

G. Borrowed Lites Glazing Frames: Construction and face dimensions to match door frames, and as indicated on drawings.

H. Provide mortar guard boxes for hardware cut-outs in frames to be installed in masonry or to be grouted.

I. Frames in Masonry Walls: Size to suit masonry coursing with head member 4 inches high to fill opening without cutting masonry units.

J. Frames Wider than 48 inches: Reinforce with steel channel fitted tightly into frame head, flush with top.

2.5 BULLET RESISTANT HOLLOW METAL FRAMES

A. Bullet-Resistant Frames for Glazing; Interior: Comply with UL 752; face welded construction, ground smooth, fully prepared and reinforced for hardware installation.
   1. Based on SDI Standards: ANSI/SDI A250.8 (SDI-100).
      a) Level 4 - Maximum-duty.
      b) Physical Performance Level A 1 000 000 cycles; in accordance with ANSI/SDI A250.4.
      c) Model 1 - Full Flush.
      d) Zinc Coating: A60/ZF180 galvannealed coating; ASTM A653/A653M.
   2. Bullet Resistance: UL 752, Threat Level Rating - Level 3.
   3. Frame Metal Thickness: 14 gauge, 0.067 inch, minimum.
   4. Glazing Thickness for Level 3: As indicated for glazing Type BG.
   5. Bullet-Resistant Glazing: See Type **BG**, furnished in Section 08 8000.

2.6 FINISHES

A. Primer: Rust-inhibiting, complying with ANSI/SDI A250.10, door manufacturer's standard.

B. Bituminous Coating: Cold-applied asphalt mastic, compounded for 15 mil, 0.015 inch dry film thickness (DFT) per coat; provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.
   1. Fire-Rated Frames: Comply with fire rating requirements indicated.

2.7 FRAME ANCHORS

A. Jamb Anchors:
   1. Masonry Type: Adjustable strap and stirrup or T-shaped anchors to suit frame size, not less than 0.042 inches thick, with corrugated or perforated straps not less than 2 inches wide by 10 inches long; or wire anchors not less than 0.177 inches thick.
   2. Stud Wall Type: Designed to engage stud, welded to back of frames; not less than 0.042 inches thick.
   3. Compression Type for Drywall Slip-on Frames: Adjustable compression anchors.
   4. Postinstalled Expansion Type for In-place Concrete or Masonry: Minimum 3/8 inch diameter bolts with expansion shields or inserts. Provide pipe spacer from frame to wall, with throat reinforcement plate, welded to frame at each anchor location.

B. Floor Anchors: Formed from same material as frames, not less than 0.042 inches thick, and as follows:
   1. Monolithic Concrete Slabs: Clip type anchors, with two holes to receive fasteners.
   2. Separate Topping Concrete Slabs: Adjustable type anchors with extension clips, allowing not less than 2 inch height adjustment. Terminate bottom of frames at finish floor surface.

2.8 ACCESSORIES

A. Glazing: As specified in Section 08 8000, factory installed.

B. Silencers: Resilient rubber, fitted into drilled hole; provide three on strike side of single door, three on center mullion of pairs, and two on head of pairs without center mullions.

C. Temporary Frame Spreaders: Provide for factory- or shop-assembled frames.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify existing conditions before starting work with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the work.

B. Examine rough-in for embedded and built-in anchors to verify actual locations before frame installation.

C. Verify that opening sizes and tolerances are acceptable.

D. Verify that finished walls are in plane to ensure proper door alignment.

E. Prepare written report, endorsed by the Installer, listing conditions detrimental to performance of the work.

F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Remove welded-in shipping spreaders installed at factory. Restore exposed finish by grinding, filling and dressing as required to make area smooth, flush and invisible on exposed faces.

B. Coat inside of frames to be installed in masonry or to be grouted, with bituminous coating, prior to installation.

C. Prior to installation, adjust and securely brace welded hollow metal frames for squareness, alignment, twist and plumbness to the following tolerances:
   1. Squareness: Plus or minus 1/16", measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
   2. Alignment: Plus or minus 1/16" measured at jambs on a horizontal line parallel to plane of wall.
   3. Twist: Plus or minus 1/16" measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
   4. Plumbness: Plus or minus 1/16" measured at jambs on a perpendicular line from head to floor.

D. Drill and tap doors and frames to receive nontemplated, mortised and surface mounted door hardware.

3.3 INSTALLATION

A. Install doors and frames in accordance with manufacturer's instructions, approved shop drawings, and related requirements of specified door and frame standards or custom guidelines indicated.

B. Install fire rated units in accordance with NFPA 80.

C. Coordinate frame anchor placement with wall construction.
   1. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor, and secure with post installed expansion anchors.
      a) Floor anchors may be set with power actuated fasteners instead of post installed expansion anchors if so indicated and approved on shop drawings.
   2. Metal Stud Partitions: Solidly pack mineral fiber insulation behind frames.
   3. Masonry Walls: Coordinate installation of frames to allow for solidly filling space between frames and masonry with grout.
   4. Concrete Walls: Solidly fill space between frame and concrete with grout. Take precautions, including bracing frames, to ensure that frames are not deformed or damaged by grout forces.
   5. In-Place Concrete or Masonry Construction: Secure frames in place with post installed expansion anchors. Countersink anchors, and fill and make smooth, flush and invisible on exposed faces.
   6. In-Place Gypsum Board partitions: Secure frames in place with post installed expansion anchors through floor anchors at each jamb. Countersink anchors and fill and make smooth, flush and invisible on exposed faces.
   7. Installation Tolerances: Adjust hollow metal frames for squareness, alignment, twist and plumbness.

D. Hollow Metal Doors: Fit hollow metal doors accurately in frames, within clearances specified below. Shim as necessary.
   1. Non-Fire Rated Standard Steel Doors:
      a) Jambs and Head: 1/8" plus or minus 1/16".
      b) Between Edges of Pairs of Doors: 1/8" plus or minus 1/16".
      c) Between Bottom of Door and Top of Threshold: Maximum 3/8"
      d) Between Bottom of Door and Top of Finish Floor (no Threshold): Maximum 3/4"
   2. Fire Rated Doors: Install doors with clearances according to NFPA 80.
   3. Smoke Control Doors: Install doors according to NFPA 105.

E. Install door silencers in frames before grouting.
   1. Comply with recommended practice for hardware placement of doors and frames in accordance with ANSI/SDI A250.6 or NAAMM HMMA 861.

F. Install door hardware as specified in Section 08 7100.
   1. Comply with recommended practice for hardware placement of doors and frames in accordance with ANSI/SDI A250.6 or NAAMM HMMA 861.

G. Coordinate installation of electrical connections to electrical hardware items.

H. Touch up damaged factory finishes.

3.4 TOLERANCES

A. Clearances Between Door and Frame: Comply with related requirements of specified frame standards or custom guidelines indicated in accordance with SDI 117 or NAAMM HMMA 861.

B. Maximum Diagonal Distortion: 1/16 inch measured with straight edge, corner to corner.

3.5 ADJUSTING

A. Adjust for smooth and balanced door movement.

B. Adjust sound-rated doors so that seals are fully engaged when door is closed.

C. Remove grout and other bonding material from hollow metal work immediately after installation.

D. Prime Coat Touch-up: Immediately after erection, sand smooth rusted or damaged areas of prime coat and apply touchup of compatible air-drying, rust inhibitive primer.

E. Metallic Coated Surfaces: Clean abraded areas and repair with galvanizing repair paint according to manufacturer's written instructions.

3.6 SCHEDULE

A. Refer to Door and Frame Schedule on the drawings.

END OF SECTION 08 1113

SECTION 08 1416 - FLUSH WOOD DOORS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Flush wood doors; flush and flush glazed configuration; fire-rated, non-rated, and acoustical.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures

B. Section 01 7419 – Construction Waste Management and Disposal.

C. Section 08 1113 - Hollow Metal Doors and Frames.

D. Section 08 7100 - Door Hardware.

E. Section 08 8000 - Glazing.

F. Section 09 2116 - Gypsum Board Assemblies: Bullet-resistant sheathing and wallboard for bullet-resistant partitions and walls.

G. Section 09 9123 - Interior Painting: Field finishing of doors.

1.3 REFERENCE STANDARDS

A. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements; 2009 (Reapproved 2016).

B. ASTM E413 - Classification for Rating Sound Insulation; 2016.

C. AWI/AWMAC/WI (AWS) - Architectural Woodwork Standards; 2014, with Errata (2018).

D. AWMAC/WI (NAAWS) - North American Architectural Woodwork Standards, U.S. Version 3.1; 2017, with Errata (2019).

E. NFPA 80 - Standard for Fire Doors and Other Opening Protectives; 2019.

F. UL 10C - Standard for Positive Pressure Fire Tests of Door Assemblies; Current Edition, Including All Revisions.

G. UL 1784 - Standard for Air Leakage Tests of Door Assemblies; Current Edition, Including All Revisions.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Indicate door core materials and construction; veneer species, type and characteristics.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit 5d: For adhesives, documentation including printed statement of VOC content.
   2. Product Data for Credit b4: For composite wood products, documentation indicating that product contains no urea formaldehyde.
   3. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
   4. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Inlcude statement indicating cost for each certified wood product.

D. Shop Drawings: Show doors and frames, elevations, sizes, types, swings, undercuts, beveling, blocking for hardware, factory machining, factory finishing, cutouts for glazing and other details.
   1. Provide information as required by AWI/AWMAC/WI (AWS) or AWMAC/WI (NAAWS).

E. Samples: Submit two samples of door veneer, 6 by 6 inch in size illustrating wood grain, stain color, and sheen.

F. Test Reports: Show compliance with specified requirements for the following:
   1. Sound-retardant doors and frames; sealed panel tests are not acceptable.

G. Manufacturer's Installation Instructions: Indicate special installation instructions.

H. Installer's qualification statement.

I. Specimen warranty.

J. Warranty, executed in Owner's name.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section, with not less than seven years of documented experience.
   1. Accredited participant in the specified certification program prior to the commencement of fabrication and throughout the duration of the project.

B. Installer Qualifications: Company specializing in performing work of the type specified in this section, with not less than five years of documented experience.

C. Woodwork Quality Assurance Program:
   1. Provide labels indicating that the installed work complies with AWI/AWMAC/WI (AWS) or AWMAC/WI (NAAWS) requirements for grade or grades specified.

2. Submit documentation upon completion of installation that verifies this work is in compliance with specified requirements.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Package, deliver and store doors in accordance with specified quality standard.

B. Accept doors on site in manufacturer's packaging. Inspect for damage.

C. Protect doors with resilient packaging sealed with heat shrunk plastic. Do not store in damp or wet areas; or in areas where sunlight might bleach veneer. Seal top and bottom edges with tinted sealer if stored more than one week. Break seal on site to permit ventilation.

1.7 WARRANTY

A. See Section 01 7800 - Closeout Submittals for additional warranty requirements.

B. Manufacturer Warranty: Provide manufacturer's warranty on interior doors for the life of the installation. Complete forms in Owner's name and register with manufacturer.
1. Include coverage for delamination of veneer, warping beyond specified installation tolerances, defective materials, and telegraphing core construction.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Wood Veneer Faced Doors:
1. Oregon Door; Architectural Series: www.oregondoor.com/#sle.
2. Oshkosh Door Company; Architectural Flush Wood Doors.
3. **Basis-of-Design**: VT Industries, Inc; Heritage Collection Flush Wood Veneer Doors: www.vtindustries.com/#sle.

2.2 DOORS

A. Doors: See drawings for locations and additional requirements.
1. Quality Standard: Premium Grade, Heavy Duty performance, in accordance with AWI/AWMAC/WI (AWS) or AWMAC/WI (NAAWS), unless noted otherwise.
2. Wood Veneer Faced Doors: 5-ply unless otherwise indicated.

B. Interior Doors: 1-3/4 inches thick unless otherwise indicated; flush construction.
1. Provide solid core doors at each location.
a) Cores for Sound-Retardant Doors: Sound absorbent material encapsulated by stiles, rails, crossbands, and face veneers.
2. Fire Rated Doors: Tested to ratings indicated on drawings in accordance with UL 10C - Positive Pressure; Underwriters Laboratories Inc (UL) or Intertek/Warnock Hersey (WHI) labeled without any visible seals when door is open.
3. Smoke and Draft Control Doors: In addition to required fire rating, provide door assemblies tested in accordance with UL 1784 with maximum air leakage of 3.0 cfm per sq ft of door opening at 0.10 inch wg pressure at both ambient and elevated temperatures for "S" label; if necessary, provide additional gasketing or edge sealing.

4. Sound-Rated Doors: Minimum STC as indicated on drawings, calculated in accordance with ASTM E413, tested in accordance with ASTM E90.
5. Wood veneer facing with factory transparent finish as indicated on drawings.
   a) Refer to **WD1** and **WS1** on the "Finish Product List on the drawings.

2.3 DOOR AND PANEL CORES

A. Non-Rated Solid Core and 20 Minute Rated Doors: Type structural composite lumber core (SCLC), plies and faces as indicated.

B. Fire-Rated Doors: Mineral core type, with fire resistant composite core (FD), plies and faces as indicated above; with core blocking as required to provide adequate anchorage of hardware without through-bolting.

C. Sound-Rated Doors: Equivalent to type, with manufacturer's standard sound attenuation core construction as required to achieve STC rating specified; plies and faces as indicated above.

2.4 DOOR FACINGS

A. Veneer Facing for Transparent Finish: Select white maple, veneer grade in accordance with quality standard indicated, plain sliced (flat cut), with book match between leaves of veneer, running match of spliced veneer leaves assembled on door or panel face.
   1. Vertical Edges: Same species as face veneer.
   2. "Running Match" each pair of doors and doors in close proximity to each other.

B. Facing Adhesive: Type I - waterproof.

2.5 DOOR CONSTRUCTION

A. Fabricate doors in accordance with door quality standard specified.

B. Cores onstructed with stiles and rails:
   1. Provide solid blocks at lock edge for hardware reinforcement.
   2. Provide solid blocking for other throughbolted hardware.

C. Glazed Openings: Non-removable stops on non-secure side; sizes and configurations as indicated on drawings.

D. Factory machine doors for hardware other than surface-mounted hardware, in accordance with hardware requirements and dimensions.

E. Factory fit doors for frame opening dimensions identified on shop drawings, with edge clearances in accordance with specified quality standard.

F. Provide edge clearances in accordance with the quality standard specified.

2.6 FINISHES - WOOD VENEER DOORS

A. Finish work in accordance with AWI/AWMAC/WI (AWS) or AWMAC/WI (NAAWS), Section 5 - Finishing for grade specified and as follows:
   1. Transparent:

a) System - 11, Polyurethane, Catalyzed.
b) Stain: As selected by Architect.
   1) Refer to Casework Finish Type **WS1** on the "Finish Product List" on the drawings.
c) Sheen: Satin.

B. Factory finish doors in accordance with sample to be provided.

C. Seal door top edge with color sealer to match door facing.

2.7 ACCESSORIES

A. Hollow Metal Door Frames: As specified in Section 08 1113.

B. Glazing: As specified in Section 08 8000.

C. Glazing Stops: Wood, of same species as door facing, butted corners; prepared for countersink style tamper proof screws.

D. Door Hardware: See Sections 08 6710 and 08 7100.
   1. Sound-Rated Doors:
      a) Automatic Door Bottoms/Drop Seals: Provide type as required to meet specified sound rating.
      b) Contractor's option to have door bottoms factory- or field installed.
      c) Provide perimeter acoustic gasketing as specified in the Door Hardware sections.
      d) Provide astragals at double doors as specified in the Door Hardware sections.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify that opening sizes and tolerances are acceptable.

C. Verify frames are solidly anchored, allowing no deflection when doors are installed.

D. Do not install doors in frame openings that are not plumb or are out-of-tolerance for size or alignment.

3.2 PREPARATION

A. Allow doors to become acclimated to building temperature and relative humidity for a minimum of 24 hours before installation.

3.3 INSTALLATION

A. Install doors in accordance with manufacturer's instructions and specified quality standard.
   1. Install fire-rated doors in accordance with NFPA 80 requirements.

B. Factory-Finished Doors: Do not field cut or trim; if fit or clearance is not correct, replace door.

C. Use machine tools to cut or drill for hardware.

D. Coordinate installation of doors with installation of frames and hardware.

E. Coordinate installation of glazing.

3.4 TOLERANCES

A. Comply with specified quality standard for fit and clearance tolerances.

B. Comply with specified quality standard for telegraphing, warp, and squareness.

3.5 ADJUSTING

A. Adjust doors for smooth and balanced door movement.

B. Adjust closers for full closure.

C. Repair minor damages to finish in accordance with manufacturer's instructions and as approved by Architect.

D. Remove and replace damaged doors that cannot be successfully repaired, as determined by Architect.

3.6 CLEANING AND PROTECTION

A. Clean doors promptly after installation in accordance with manufacturer's instructions.

B. Do not use harsh cleaning materials or methods that could damage finish.

C. Protect installed doors from damage during construction.

3.7 SCHEDULE

A. Refer to door schedule on the drawings

END OF SECTION 08 1416

SECTION 08 3323 - OVERHEAD COILING DOORS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Exterior coiling doors.

B. Electric operators and control stations.

C. Wiring from electric circuit disconnect to operators and control stations.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 01 7419 – Construction Waste Management and Disposal.

C. Section 05 5000 - Metal Fabrications: Delegated design requirements for secondary structural members supporting overhead coiling doors, furnished and installed by overhead coiling door provider.

D. Section 07 9200 - Joint Sealants: Sealing joints between frames and adjacent construction.

E. Section 08 7100 - Door Hardware: Cylinder cores and keys.

F. Section 26 0583 - Wiring Connections: Power to disconnect.

1.3 REFERENCE STANDARDS

A. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

B. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products; 2017.

C. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.

D. ITS (DIR) - Directory of Listed Products; Current Edition.

E. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum); 2018.

F. NEMA ICS 2 - Industrial Control and Systems Controllers, Contactors and Overload Relays Rated 600 Volts; 2000, with Errata (2008).

G. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

H. UL (DIR) - Online Certifications Directory; Current Edition.

I. UL 325 - Standard for Door, Drapery, Gate, Louver, and Window Operators and Systems; Current Edition, Including All Revisions.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: For each type and size of overhead coiling door, provide data on general construction, electrical equipment, and component connections and details.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Shop Drawings: Provide plans, elevations, sections and details. Indicate pertinent dimensioning, anchorage methods, hardware locations, and installation details.
   1. Show locations of controls, locking devices, detectors or replaceable fusible links and other accessories.
   2. Include diagrams for power, signal, and control wiring.

E. Samples: Two slats, 2 by 6 inches in size illustrating shape, color and finish texture.

F. Manufacturer's Installation Instructions: Indicate installation sequence and procedures, adjustment and alignment procedures.

G. Manufacturer's qualification statement.

H. Installer's qualification statement.

I. Maintenance Data: Indicate lubrication requirements and frequency and periodic adjustments required.

J. Specimen warranty.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum 10 years of documented experience.

B. Installer Qualifications: Company specializing in performing work of type specified and with at least five years documented experience.

C. Products Requiring Electrical Connection: Listed and classified by ITS (DIR), UL (DIR), or testing firm acceptable to authorities having jurisdiction as suitable for purpose specified and indicated.

1.6 WARRANTY

A. See Section 01 7800 - Closeout Submittals for additional warranty requirements.

B. Manufacturer Warranty: Provide 2-year manufacturer warranty against defects in materials and workmanship. Complete forms in Owner's name and register with manufacturer.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Overhead Coiling Metal Doors:
1. **Basis-of-Design**: **Overhead Door Company; Stormtite AP Model 627**.

B. Other Acceptable Manufacturers:
1. Alpine Overhead Doors, Inc; IMB-V7 - Insulated Roll Up Door: www.alpinedoors.com/#sle.
2. CornellCookson; Thermiser Insulated Rolling Door: www.cooksondoor.com.
3. Basis-of-Design: Overhead Door Company; Stormtite AP Model 627.
4. Substitutions: See Section 01 6000 - Product Requirements.

2.2 PERFORMANCE CHARACTERISTICS

A. Wind Load: Manufacturer's standard design for 20 PSF wind load.

B. Operation: Design door assembly, including operator, to operate for not less than 20,000 cycles.

2.3 COILING DOORS

A. Exterior Coiling Doors: Steel slat curtain.
1. Capable of withstanding positive and negative wind loads of 20 psf without undue deflection or damage to components.
2. Sandwich Slats: Manufacturer's standard galvanized steel, 24 gauge, with core of CFC-free foamed-in-place polyurethane insulation; minimum R-value of 4.88.
3. Nominal Slat Size: 2 inches wide by required length.
4. Finish: Factory painted, color as selected.
5. Hood Enclosure: Manufacturer's standard; galvanized steel.
6. Electric operation.
7. Mounting: As indicated on drawings.
8. Locking Devices: Lock and latch handle on outside.

2.4 MATERIALS AND COMPONENTS

A. Metal Curtain Construction: Interlocking slats.

1. Curtain Bottom for Slat Curtains: Fitted with angles to provide reinforcement and positive contact in closed position.
   a) Material/Finish: Galvanized steel.
2. Weatherstripping for Exterior Doors: Moisture and rot proof, resilient type, located at jamb edges, bottom of curtain, and where curtain enters hood enclosure of exterior doors.
3. Steel Slats: Minimum thickness, 24 gauge, .0239 inch; ASTM A653/A653M galvanized steel sheet.
   a) Galvanizing: Minimum G90 coating.

B. Guide Construction: Continuous, of profile to retain door in place with snap-on trim, mounting brackets of same metal.

C. Guides - Angle: ASTM A36/A36M metal angles, size as required for wind loading.
1. Hot-dip galvanized in compliance with ASTM A123/A123M.

D. Brackets: Galvanized steel to support counterbalance, curtain, and hood.

E. Hood Enclosure and Trim: Internally reinforced to maintain rigidity and shape.

F. Lock Hardware:
1. Latchset Lock Cylinders: Standard mortise cylinder.
   a) Keying: Master keyed.
2. For motor operated units, additional lock or latching mechanisms are not required.
3. Latch Handle: Manufacturer's standard.

G. Roller Shaft Counterbalance: Steel pipe and helical steel spring system, capable of producing torque sufficient to ensure smooth operation of curtain from any position and capable of holding position at mid-travel; with adjustable spring tension; requiring 25 lb nominal force to operate.

2.5 ELECTRIC OPERATION

A. Operator, Controls, Actuators, and Safeties: Comply with UL 325; provide products listed by ITS (DIR), UL (DIR), or testing agency acceptable to authorities having jurisdiction.
1. Provide interlock switches on motor operated units.

B. Electric Operators:
1. Mounting: Side mounted.
2. Motor Enclosure:
3. Motor Rating: Size as recommended by manufacturer; continuous duty.
4. Motor Voltage: 120 volts, single phase, 60 Hz.
5. Motor Controller: NEMA ICS 2, full voltage, reversing magnetic motor starter.
6. Controller Enclosure: NEMA 250, Type 4.
7. Opening Speed: 12 inches per second.
8. Brake: Manufacturer's standard type, activated by motor controller.
9. Manual override in case of power failure.
10. See Section 26 0583 for electrical connections.

C. Wiring Terminations: Provide terminal lugs to match branch circuit conductor quantities, sizes, and materials indicated; enclose terminal lugs in terminal box sized to comply with NFPA 70.

D. Control Station: Provide standard three button, 'Open-Close-Stop' momentary-contact control device for each operator complying with UL 325.
   1. 24 volt circuit.
   2. Surface mounted, at interior door jamb.
   3. Entrapment Protection Devices: Provide sensing devices and safety mechanisms complying with UL 325.
      a) Primary Device: Provide electric sensing edge, wireless sensing, NEMA 1 photo eye sensors, or NEMA 4X photo eye sensors as required with momentary-contact control device.

E. Safety Edge: Located at bottom of coiling door, full width, electro-mechanical sensitized type, wired to stop and reverse door direction upon striking object, hollow neoprene covered.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that adjacent construction is suitable for door installation.

B. Verify that electrical services have been installed and are accessible.

C. Verify that door opening is plumb, header is level, and dimensions are correct.

D. Notify Architect of any unacceptable conditions or varying dimensions.

E. Commencement of installation indicates acceptance of substrate and door opening conditions.

3.2 INSTALLATION

A. Install units in accordance with manufacturer's instructions.

B. Use anchorage devices to securely fasten assembly to wall construction and building framing without distortion or stress.

C. Securely and rigidly brace components suspended from structure. Secure guides to structural members only.

D. Fit and align assembly including hardware; level and plumb, to provide smooth operation.

E. Coordinate installation of electrical service with Section 26 0583.

F. Complete wiring from disconnect to unit components.

G. Complete wiring from fire alarm system, where applicable

H. Install enclosure and perimeter trim.

3.3 TOLERANCES

A. Maintain dimensional tolerances and alignment with adjacent work.

B. Maximum Variation From Plumb: 1/16 inch.

C. Maximum Variation From Level: 1/16 inch.

D. Longitudinal or Diagonal Warp: Plus or minus 1/8 inch per 10 feet straight edge.

3.4 ADJUSTING

A. Adjust operating assemblies for smooth and noiseless operation.

3.5 CLEANING

A. Clean installed components.

B. Remove labels and visible markings.

END OF SECTION 08 3323

SECTION 08 3326 - OVERHEAD COILING GRILLES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Overhead coiling metal grilles and operating hardware; electrically operated.

B. Wiring from electric circuit disconnect to operator and to control station.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 01 7419 – Construction Waste Management and Disposal.

C. Section 05 5000 - Metal Fabrications: Delegated design requirements for secondary structural members supporting overhead coiling grilles, furnished and installed by overhead coiling grille provider.

D. Sections 08 0671 and 08 7100 - Door Hardware: Cylinder cores and keys.

E. Section 26 0583 - Wiring Connections: Power to disconnect.

1.3 REFERENCE STANDARDS

A. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.

B. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar; 2023.

C. ITS (DIR) - Directory of Listed Products; Current Edition.

D. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum); 2018.

E. NEMA ICS 2 - Industrial Control and Systems Controllers, Contactors and Overload Relays Rated 600 Volts; 2000, with Errata (2008).

F. NEMA MG 1 - Motors and Generators; 2018.

G. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

H. UL (DIR) - Online Certifications Directory; Current Edition.

I. UL 325 - Standard for Door, Drapery, Gate, Louver, and Window Operators and Systems; Current Edition, Including All Revisions.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: For each type of coiling grille, provide data for general construction component connections and details, and electrical equipment.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional

D. Shop Drawings: Provide plans, elevations, sections, and details.Indicate pertinent dimensioning, anchorage methods, hardware locations, and installation details.
   1. Include diagrams for power, signal, and control wiring.

E. Manufacturer's Installation Instructions: Indicate installation sequences and procedures, adjustment and alignment procedures.

F. Manufacturer's qualification statement.

G. Installer's qualification statement.

H. Specimen warranty.

I. Maintenance Data: Indicate lubrication requirements and frequency and periodic adjustments required.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years of documented experience.

B. Installer Qualifications: Company specializing in performing work of type specified and with at least three years documented experience.

C. Products Requiring Electrical Connection: Listed and classified by ITS (DIR), UL (DIR), or testing firm acceptable to authorities having jurisdiction as suitable for purpose specified.

1.6 WARRANTY

A. See Section 01 7800 - Closeout Submittals for additional warranty requirements.

B. Manufacturer Warranty: Provide 2-year manufacturer warranty against defects in materials and workmanship, on mechanical components, operator, and control panel. Complete forms in Owner's name and register with manufacturer.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design - Overhead Coiling Grilles:
   1. Cornell Iron Works, Inc; Visionaire MicroCoil Grille - Model ESG10: www.cornelliron.com/#sle.
   2. Substitutions: See Section 01 6000 - Product Requirements.

2.2 GRILLES AND COMPONENTS

A. Grille: Stainless steel; horizontal bar curtain, coiling on overhead counterbalanced shaft.
   1. Finish: No. 4 - Brushed.
   2. Lock Devices: Lock and latch handle on outside.
   3. Electric operation.
   4. Mounting: As indicated on Drawings.

B. Curtain: Round horizontal bars connected with vertical links.
   1. Horizontal bars: 5/16 inch diameter.
   2. Bar spacing: 1-1/2 inch on center.
   3. Tube spacers: 1/2 inch diameter.
   4. Spacer spacing: 3-1/4 inch on center.
   5. Link spacing: 6 inch on center.
   6. Bar Ends: Provide with nylon runners for quiet operation.
   7. Bottom Bar: Back-to-back angles with tubular resilient cushion.

C. Guides: Stainless steel angles, of profile to retain grille in place with snap-on trim, mounting brackets of same metal.
   1. Tube-Mounted Guides: Heavy duty Type 304 stainless steel sections. Provide

D. Hood Enclosure and Trim: Sheet metal; completely covering operating mechanisms; internally reinforced to maintain rigidity and shape.
   1. Material: Stainless steel.
   2. Sheet Metal Thickness: 24 gauge, 0.0235 inch.
   3. Finish: No. 4 - Brushed.

E. Locking:
   1. Keyed cylinder locking into both jambs operable from both sides of curtain with motor interlock cutout switches.

F. Roller Shaft Counterbalance: Steel pipe and helical steel spring system, capable of producing torque sufficient to ensure smooth operation of curtain from any position and capable of holding position at mid-travel; with adjustable spring tension; requiring 25 lb nominal force to operate.

G. Brackets: Minimum 1/4 inch steel plate with permanently lubricated ball or roller bearings at rotating support points to support counterbalance shaft assembly and form end closures.
   1. Finish: Hot-dip Galvanized, ASTM A 123, Grade 85 zinc coating, hot-dip galvanized after fabrication

H. Trim Package: Minimum 16 gauge Type 304 #4 finish stainless steel. Custom-made to hide visible bolts, fasteners and other exposed hardware.

2.3 MATERIALS

A. Aluminum: ASTM B221 (ASTM B221M).

B. Galvanized Steel Sheet: ASTM A653/A653M, galvanized to minimum G90/Z275 coating.

C. Stainless Steel: ASTM A666 Type 304, with rollable temper.

2.4 ELECTRIC OPERATION

A. Operator, Controls, Actuators, and Safeties: Comply with UL 325; provide products listed by ITS (DIR), UL (DIR), or testing agency acceptable to authorities having jurisdiction.
   1. Provide interlock switches on motor operated units.

B. Electric Operators:
   1. Mounting: Side mounted.
   2. Motor Enclosure:
      a) Interior Coiling Grilles: NEMA MG 1, Type 1; open drip proof.
   3. Motor Rating: As recommended by manufacturer for size and type of door; industrial duty, rated for mazimum 20 cycles per hour.
      a) Basis-of-Design: Cornell; **Supply Model MG Electric Motor Operator**.
   4. Motor Voltage: 120 volts, single phase, 60 Hz.
   5. Motor Controller: NEMA ICS 2, full voltage, reversing magnetic motor starter.
   6. Controller Enclosure: NEMA 250 Type 1.
   7. Opening Speed: 12 inches per second.
   8. Brake: Adjustable friction clutch type, activated by motor controller.
   9. Manual override in case of power failure.
   10. Refer to Section 26 0583 for electrical connections.

C. Wiring Terminations: Provide terminal lugs to match branch circuit conductor quantities, sizes, and materials indicated; enclose terminal lugs in terminal box sized to comply with NFPA 70.

D. Control Station: Provide flush mounted, "Open/Close" key switch with "Stop" push button; NEMA 1B, at each overhead coiling grille.
   1. Cylinder type as required by Owner.
   2. 24 volt circuit.
   3. Surface mounted, at interior door jamb.
   4. Entrapment Protection Devices: Provide sensing devices and safety mechanisms complying with UL 325.
      a) Primary Device: Provide electric sensing edge, wireless sensing, NEMA 1 photo eye sensors, or NEMA 4X photo eye sensors as required with momentary-contact control device.

E. Safety Edge: Located at bottom of coiling grill, full width, electro-mechanical sensitized type, wired to stop and reverse grill direction upon striking object, hollow neoprene covered.
   1. Basis-of-Design: Cornell;

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that adjacent construction is suitable for door installation.

B. Verify that electrical services have been installed and are accessible.

C. Verify that door opening is plumb, header is level, and dimensions are correct.

D. Notify Architect of any unacceptable conditions or varying dimensions.

E. Commencement of installation indicates acceptance of substrate and door opening conditions.

3.2 INSTALLATION

A. Install grille unit assembly in accordance with manufacturer's instructions.

B. Use anchorage devices to securely fasten assembly to wall construction and building framing without distortion or stress.

C. Securely and rigidly brace components suspended from structure. Secure guides to structural members only.

D. Fit and align assembly including hardware; level and plumb, to provide smooth operation.

E. Coordinate installation of electrical service with Section 26 0583.

F. Complete wiring from disconnect to unit components.

G. Install enclosure and perimeter trim.

3.3 TOLERANCES

A. Maintain dimensional tolerances and alignment with adjacent work.

B. Maximum Variation From Plumb: 1/16 inch.

C. Maximum Variation From Level: 1/16 inch.

D. Longitudinal or Diagonal Warp: Plus or minus 1/8 inch per 10 ft straight edge.

3.4 ADJUSTING

A. Adjust grille, hardware and operating assemblies for smooth and noiseless operation.

3.5 CLEANING

A. Clean grille and components.

B. Remove labels and visible markings.

END OF SECTION 08 3326

SECTION 08 4313 - ALUMINUM-FRAMED STOREFRONTS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Aluminum-framed storefront, with vision glass.

B. Aluminum doors and frames.

C. Weatherstripping.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 01 7419 – Construction Waste Management and Disposal.

C. Section 07 9200 - Joint Sealants: Sealing joints between frames and adjacent construction.

D. Section 08 4413 - Glazed Aluminum Curtain Walls.

E. Sections 08 0671 and 08 7100 - Door Hardware: Hardware items other than specified in this section.

F. Section 08 8000 - Glazing: Glass and glazing accessories.

1.3 REFERENCE STANDARDS

A. AAMA CW-10 - Care and Handling of Architectural Aluminum from Shop to Site; 2015.

B. AAMA 501.2 - Quality Assurance and Diagnostic Water Leakage Field Check of Installed Storefronts, Curtain Walls, and Sloped Glazing Systems; 2015.

C. AAMA 609 & 610 - Cleaning and Maintenance Guide for Architecturally Finished Aluminum (Combined Document); 2015.

D. AAMA 1503 - Voluntary Test Method for Thermal Transmittance and Condensation Resistance of Windows, Doors and Glazed Wall Sections; 2009.

E. AAMA 2604 - Voluntary Specification, Performance Requirements and Test Procedures for High Performance Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix); 2017a.

F. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix); 2017a.

G. ASTM B209/B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate; 2021a.

H. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2021.

I. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric); 2021.

J. ASTM E283/E283M - Standard Test Method for Determining Rate of Air Leakage Through Exterior Windows, Skylights, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen; 2019.

K. ASTM E330/E330M - Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference; 2014 (Reapproved 2021).

L. SSPC-Paint 20 - Zinc-Rich Coating (Type I - Inorganic, and Type II - Organic); 2019.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordinate with installation of other components that comprise the exterior enclosure.

B. Preinstallation Meeting: Conduct a preinstallation meeting one week before starting work of this section; require attendance by all affected installers.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide component dimensions, describe components within assembly, anchorage and fasteners, glass and infill, door hardware, and internal drainage details.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
   2. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content. Provide documentation that aluminum has a minimum of 50% mixed pre- and post-consumer recycled content.
   3. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Shop Drawings: Provide project-specific plans, elevations, sections, and details. Indicate system dimensions, framed opening requirements and tolerances, affected related work, expansion and contraction joint location and details, and field welding required.
   1. Include design engineer's stamp or seal on shop drawings for attachments and anchors.
   2. Include details for integration with adjacent building materials.

3. Include details of provisions for assembly expansion and contraction and for draining moisture occurring withi the assembly to the exterior.
4. For entrance doors, include hardware schedule and indicate operating hardware types, functions, quantities, and locations.

E. Design Data: Provide framing member structural and physical characteristics, engineering calculations, and dimensional limitations.

F. Field Quality Control Submittals: Report of field testing for water penetration and air leakage.

G. Designer's qualification statement.

H. Manufacturer's qualification statement.

I. Installer's qualification statement.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in performing work of type specified and with at least ten years of documented experience.

B. Installer Qualifications: Company specializing in performing work of type specified and with at least five years of documented experience.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Handle products of this section in accordance with AAMA CW-10.

B. Protect finished aluminum surfaces with wrapping. Do not use adhesive papers or sprayed coatings that bond to aluminum when exposed to sunlight or weather.

1.8 FIELD CONDITIONS

A. Do not install sealants when ambient temperature is less than 40 degrees F. Maintain this minimum temperature during and 48 hours after installation.

1.9 WARRANTY

A. See Section 01 7800 - Closeout Submittals for additional warranty requirements.

B. Correct defective Work within a one year period after Date of Substantial Completion.

C. Provide five year manufacturer warranty against failure of glass seal on insulating glass units, including interpane dusting or misting. Include provision for replacement of failed units.

D. Provide ten year manufacturer warranty against excessive degradation of exterior finish. Include provision for replacement of units with excessive fading, chalking, or flaking.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Aluminum-Framed Storefronts:
   1. **Basis of Design: EFCO Corporation**; :ww.efcocorporation.com
   2. Alternate Acceptable Manufacturers: Subject to compliance with requirements:
      a) Kawneer North America: www.kawneer.com/#sle.
      b) Oldcastle BuildingEnvelope: www.oldcastlebe.com/#sle.
      c) YKK AP America, Inc: www.ykkap.com/commercial/#sle.
   3. Substitutions: See Section 01 6000 - Product Requirements.
      a) For any product not identified as "Basis of Design", submit information as specified for substitutions.

2.2 BASIS OF DESIGN -- FRAMING FOR INSULATING GLAZING

A. Triple-Set Style, Thermally Broken:
   1. Basis-of-Design: EFCO; **System 433 Triple Set.**
   2. Vertical Mullion Dimensions: 2 inches wide by 4-1/2 inches deep.

B. Substitutions: See Section 01 6000 - Product Requirements.
   1. For any product not identified as "Basis of Design", submit information as specified for substitutions.

2.3 BASIS OF DESIGN -- FRAMING FOR MONOLITHIC GLAZING

A. Center-Set Style:
   1. Basis of Design: EFCO;**Series 402 (NT)**.
   2. Vertical Mullion Dimensions: 2 inches wide by 4-1/2 inches deep.

B. Substitutions: See Section 01 6000 - Product Requirements.
   1. For any product not identified as "Basis of Design", submit information as specified for substitutions.

2.4 BASIS OF DESIGN -- SWINGING DOORS

A. Wide Stile, Monolithic Glazing:
   1. Basis of Design: **EFCO; Durastile D518**.
   2. Thickness: 2 inches.

B. Wide Stile, Insulating Glazing, Thermally-Broken:
   1. Basis of Design: **EFCO; Thermastile D502**.
   2. Thickness: 2 inches.

C. Substitutions: See Section 01 6000 - Product Requirements.
   1. For any product not identified as "Basis of Design", submit information as specified for substitutions.

2.5 ALUMINUM-FRAMED STOREFRONT

A. Aluminum-Framed Storefront: Factory fabricated, factory finished aluminum framing members with infill, and related flashings, anchorage and attachment devices.
   1. Finish: High performance organic coatings.
      a) Factory finish all surfaces that will be exposed in completed assemblies.
      b) Touch-up surfaces cut during fabrication so that no natural aluminum is visible in completed assemblies, including joint edges.
      c) Coat concealed metal surfaces that will be in contact with cementitious materials or dissimilar metals with bituminous paint.
   2. Finish Color: As selected by Architect from manufacturer's standard line.
   3. Fabrication: Joints and corners flush, hairline, and weatherproof, accurately fitted and secured; prepared to receive anchors and hardware; fasteners and attachments concealed from view; reinforced as required for imposed loads.
   4. Construction: Eliminate noises caused by wind and thermal movement, prevent vibration harmonics, and prevent "stack effect" in internal spaces.
   5. System Internal Drainage: Drain to the exterior by means of a weep drainage network any water entering joints, condensation occurring in glazing channel, and migrating moisture occurring within system.
   6. Expansion/Contraction: Provide for expansion and contraction within system components caused by cycling temperature range of 170 degrees F over a 12 hour period without causing detrimental effect to system components, anchorages, and other building elements.
   7. Movement: Allow for movement between storefront and adjacent construction, without damage to components or deterioration of seals.
   8. Perimeter Clearance: Minimize space between framing members and adjacent construction while allowing expected movement.
   9. Air and Vapor Seal: Maintain continuous air barrier and vapor retarder throughout assembly, primarily in line with inside pane of glazing and heel bead of glazing compound.

B. Performance Requirements
   1. Wind Loads: Design and size components to withstand the specified load requirements without damage or permanent set, when tested in accordance with ASTM E330/E330M, using loads 1.5 times the design wind loads and 10 second duration of maximum load.
      a) Refer to Drawing S001 for structural design criteria, including design wind loads.
      b) Member Deflection: Limit member deflection to flexure limit of glass in any direction, with full recovery of glazing materials.
   2. Air Leakage: 0.06 cfm/sq ft maximum leakage of storefront wall area when tested in accordance with ASTM E283/E283M at 1.57 psf pressure difference.
   3. Condensation Resistance Factor of Framing: 50, minimum, measured in accordance with AAMA 1503.

2.6 COMPONENTS

A. Aluminum Framing Members: Tubular aluminum sections, thermally broken with interior section insulated from exterior, drainage holes and internal weep drainage system.
   1. Framing members for interior applications need not be thermally broken.
   2. Glazing Stops: Flush.

B. Glazing: See Section 08 8000.

C. Swing Doors: Glazed aluminum.
   1. Top Rail: 3 5 inches wide.
   2. Vertical Stiles: 3 5 inches wide.
   3. Bottom Rail: 10 inches wide.
   4. Glazing Stops: Square.
   5. Finish: Same as storefront.

D. Trims and Sills: Miscellaneous metal trim pieces and exposed sills, finished to match curtain wall framing.
   1. Material: Aluminum, 6063-T6.
      a) Thickness: As indicated on drawings.
   2. Profiles: As indicated on drawings.

2.7 MATERIALS

A. Extruded Aluminum: ASTM B221 (ASTM B221M).

B. Sheet Aluminum: ASTM B209/B209M.

C. Fasteners: Stainless steel.

D. Exposed Flashings: Aluminum sheet, 20 gauge, 0.032 inch minimum thickness; finish to match framing members.

E. Concealed Flashings: Stainless steel, 26 gauge, 0.0187 inch minimum thickness.

F. Sill Flashing Sealant: Elastomeric, silicone or polyurethane, compatible with flashing material.

G. Sealant for Setting Thresholds: Non-curing butyl type.

H. Glazing Gaskets: Type to suit application to achieve weather, moisture, and air infiltration requirements.

I. Glazing Accessories: See Section 08 8000.

J. Shop and Touch-Up Primer for Steel Components: Zinc oxide, alkyd, linseed oil primer appropriate for use over hand cleaned steel.

K. Touch-Up Primer for Galvanized Steel Surfaces: SSPC-Paint 20, zinc rich.

2.8 FINISHES

A. Interior Storefront and Entrances: High Performance Organic Coating: Primer and topcoat coatings system based on super durable polyester resin powder containing high level of isophthalic acid; with minimum dry film thickness (DFT) of 2 to 3.5 mil, 0.0020 to 0.0035 inch over aluminum extrusions and panels; meeting requirements of AAMA 2604.

B. Exterior Storefront and Entrances: Superior Performing Organic Coatings System: Manufacturer's standard multi-coat superior performing organic coatings system complying with AAMA 2605, including at least 70 percent polyvinylidene fluoride (PVDF) resin, and at least 80 percent of aluminum extrusion and panels surfaces having minimum total dry film thickness (DFT) of 1.2 mils, 0.0012 inch.

C. Color:
   1. Exterior Framing and Doors, Basis of Design: **EFCO Ultrapon "Mineral Brown".**
   2. Interior Framing and Doors: As selected by Architect from manufacturer's standard range.

D. Touch-Up Materials: As recommended by coating manufacturer for field application.

2.9 HARDWARE

A. For each door, include weatherstripping.

B. Other Door Hardware: See Section 08 7100.

C. Weatherstripping: Wool pile, continuous and replaceable; provide on all doors.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify dimensions, tolerances, and method of attachment with other work.

B. Verify that storefront wall openings and adjoining water-resistive and/or air barrier seal materials are ready to receive work of this section.

3.2 INSTALLATION

A. Install wall system in accordance with manufacturer's instructions and approved shop drawings.

B. Attach to structure to permit sufficient adjustment to accommodate construction tolerances and other irregularities.

C. Provide alignment attachments and shims to permanently fasten system to building structure.

D. Align assembly plumb and level, free of warp or twist. Maintain assembly dimensional tolerances, aligning with adjacent work.

E. Provide thermal isolation where components penetrate or disrupt building insulation.

F. Install sill flashings. Turn up ends and edges; seal to adjacent work to form water tight dam.

G. Where fasteners penetrate sill flashings, make watertight by seating and sealing fastener heads to sill flashing.

H. Pack fibrous insulation in shim spaces at perimeter of assembly to maintain continuity of thermal barrier.

I. Install glass in accordance with Section 08 8000, using glazing method required to achieve performance criteria.

J. Touch-up minor damage to factory applied finish; replace components that cannot be satisfactorily repaired.

3.3 TOLERANCES

A. Maximum Variation from Plumb: 0.06 inch per 3 feet non-cumulative or 0.06 inch per 10 feet, whichever is less.

B. Maximum Misalignment of Two Adjoining Members Abutting in Plane: 1/32 inch.

3.4 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements for general testing and inspection requirements.

B. Water-Spray Test: Provide water spray quality test of installed storefront components in accordance with AAMA 501.2 during construction process and before installation of interior finishes.
   1. Perform a minimum of two tests in each designated area as indicated on drawings.
   2. Conduct tests in each area prior to 10 percent and 50 percent completion of this work.

C. Repair or replace storefront components that have failed designated field testing, and retest to verify performance complies with specified requirements.

3.5 ADJUSTING

A. Adjust operating hardware and sash for smooth operation.

3.6 CLEANING

A. Remove protective material from pre-finished aluminum surfaces.

B. Wash down surfaces with a solution of mild detergent in warm water, applied with soft, clean wiping cloths, and take care to remove dirt from corners and to wipe surfaces clean.

C. Upon completion of installation, thoroughly clean aluminum surfaces in accordance with AAMA 609 & 610.

3.7 PROTECTION

A. Protect installed products from damage until Date of Substantial Completion.

END OF SECTION 08 4313

SECTION 08 4413 - GLAZED ALUMINUM CURTAIN WALLS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Aluminum-framed curtain wall, with vision glazing and glass infill panels.

B. Vertical sunshade devices.

C. Firestopping between curtain wall and edge of floor slab.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 01 7419 – Construction Waste Management and Disposal.

C. Section 05 1200 - Structural Steel Framing: Steel attachment members.

D. Section 07 2500 - Weather Barriers: Sealing framing to water-resistive barrier installed on adjacent construction.

E. Section 07 8400 - Firestopping: Firestop at system junction with structure.

F. Section 07 9200 - Joint Sealants: Sealing joints between frames and adjacent construction.

G. Section 08 8000 - Glazing.

1.3 REFERENCE STANDARDS

A. AAMA CW-10 - Care and Handling of Architectural Aluminum from Shop to Site; 2015.

B. AAMA 501.1 - Standard Test Method for Water Penetration of Windows, Curtain Walls and Doors Using Dynamic Pressure; 2017.

C. AAMA 501.2 - Quality Assurance and Diagnostic Water Leakage Field Check of Installed Storefronts, Curtain Walls, and Sloped Glazing Systems; 2015.

D. AAMA 503 - Voluntary Specification for Field Testing of Newly Installed Storefronts, Curtain Walls and Sloped Glazing Systems; 2014.

E. AAMA 609 & 610 - Cleaning and Maintenance Guide for Architecturally Finished Aluminum (Combined Document); 2015.

F. AAMA 1503 - Voluntary Test Method for Thermal Transmittance and Condensation Resistance of Windows, Doors and Glazed Wall Sections; 2009.

G. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix); 2017a.

H. ASTM B209/B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate; 2021a.

I. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2021.

J. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric); 2021.

K. ASTM C794 - Standard Test Method for Adhesion-In-Peel of Elastomeric Joint Sealants; 2018.

L. ASTM E283/E283M - Standard Test Method for Determining Rate of Air Leakage Through Exterior Windows, Skylights, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen; 2019.

M. ASTM E783 - Standard Test Method for Field Measurement of Air Leakage Through Installed Exterior Windows and Doors; 2002 (Reapproved 2018).

N. ASTM E1105 - Standard Test Method for Field Determination of Water Penetration of Installed Exterior Windows, Skylights, Doors, and Curtain Walls, by Uniform or Cyclic Static Air Pressure Difference; 2015.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordinate with installation of other components that comprise the exterior enclosure.

B. Preinstallation Meeting: Conduct a preinstallation meeting one week before starting work of this section; require attendance by all affected installers.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide component dimensions, describe components within assembly, anchorage and fasteners, internal drainage details, glazing, and infill.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
   2. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   3. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Shop Drawings: Provide project-specific elevations, plans, sections, and details. Indicate system dimensions, framed opening requirements and tolerances, attachments to related Work, expansion and contraction joint location and details, and field welding required.
   1. Include details for integration with adjacent building materials.
   2. Include details of provisions for assembly expansion and contraction and for draining moisture occurring withi the assembly to the exterior.
   3. Include full-size isometric details of each vertical-to-horizontal intersection of glazed aluminum curtain walls, showing the following:
      a) Joinery, including concealed welds.
      b) Anchorage.
      c) Expansion provisions.
      d) Glazing.
      e) Flashing and drainage.

E. Samples: Submit two samples 6 by 6 inches in size illustrating finished aluminum surface, for each color specified.

F. Design Data: Provide framing member structural and physical characteristics and engineering calculations, and identify dimensional limitations; include load calculations at points of attachment to building structure.

G. Test Reports: Submit results of full-size mock-up testing. Reports of tests previously performed on the same design are acceptable.

H. Field Quality Control Submittals: Report of field testing for water penetration and air leakage.

I. Designer's Qualification Statement.

J. Manufacturer's Qualification Statement.

K. Installer's Qualification Statement.

L. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.

1.6 QUALITY ASSURANCE

A. Designer Qualifications: Design curtain wall and its structural support framing components under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed at the State in which the Project is located.

B. Full-Size Mock-up Testing: Have a specimen representative of project conditions tested by an independent testing agency for compliance with specified thermal, structural, air infiltration, and water penetration criteria.

C. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with not less than five years of documented experience.

D. Installer Qualifications: Company specializing in performing work of type specified and with at least three years of documented experience.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Handle products of this section in accordance with AAMA CW-10.

B. Protect finished aluminum surfaces with wrapping. Do not use adhesive papers or sprayed coatings that bond to aluminum when exposed to sunlight or weather.

1.8 FIELD CONDITIONS

A. Do not install sealants when ambient temperature is less than 40 degrees F. Maintain this minimum temperature during and 48 hours after installation.

1.9 WARRANTY

A. See Section 01 7800 - Closeout Submittals for additional warranty requirements.

B. Correct defective Work within a one-year period after Date of Substantial Completion.

C. Manufacturer Warranty: Provide 5-year manufacturer warranty against failure of glass seal on insulating glass units, including interpane dusting or misting. Include provision for replacement of failed units. Complete forms in Owner's name and register with installer.

D. Finish Warranty: Provide ten-year manufacturer warranty against excessive degradation of exterior finish. Include provision for replacement of units with excessive fading, chalking, or flaking. Complete forms in Owner's name and register with warrantor.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Glazed Aluminum Curtain Walls Manufacturers:
   1. Basis of Design: **EFCO Corporation**: www.efcocorp.com.
   2. Alternate Acceptable Manufacturers: Subject to compliance with specified requirements.
      a) Kawneer North America: www.kawneer.com/#sle.
      b) Oldcastle Building Envelope: www.oldcastlebe.com/#sle.
      c) Tubelite, Inc: www.tubeliteinc.com/#sle.
      d) YKK AP America, Inc: www.ykkap.com/commercial/#sle.
   3. Substitutions: See Section 01 6000 - Product Requirements.
      a) For any product not identified as "Basis of Design", submit information as specified for substitutions.

2.2 BASIS OF DESIGN - CURTAIN WALL SYSTEMS

A. Pressure Cap Four Sides; Not Unitized, Field Assembled:
   1. Basis of Design: EFCO Corporation; **System 5600, with Duracast Fiberglass Pressure Plate,** 2 1/4 inch (57 mm) wide face: www.efcocorporation.com.

B. Other Manufacturers: Provide either product identified as "Basis of Design" or an equivalent product of one of the manufacturers listed below.

1. Kawneer: www.kawneer.us.com.
2. Oldcastle Building Envelope: www.obe.cm.
3. YKK AP: www.ykkap.com.

C. Substitutions: See Section 01 6000 - Product Requirements.
1. For any product not identified as "Basis of Design", submit information as specified for substitutions.

2.3 CURTAIN WALL

A. Aluminum-Framed Curtain Wall: Factory fabricated, factory finished aluminum framing members with infill, and related flashings, anchorage and attachment devices.
1. Outside glazed, with pressure plate and mullion cover.
2. Fabrication Method: Field fabricated stick system.
3. Glazing Method: Field glazed system.
4. Finish: Superior performing organic coatings.
5. Provide flush joints and corners, weathersealed, accurately fitted and secured; prepared to receive anchors; fasteners and attachments concealed from view; reinforced as required for imposed loads.
6. Construction: Eliminate noises caused by wind and thermal movement, prevent vibration harmonics, and prevent "stack effect" in internal spaces.
7. System Internal Drainage: Drain to the exterior by means of a weep drainage network any water entering joints, condensation occurring in glazing channel, and migrating moisture occurring within system.
8. Maintain continuous air barrier and/or vapor retarder seal throughout assembly, primarily in line with inside pane of glazing and inner sheet of infill panel and heel bead of glazing compound.

B. Structural Performance Requirements: Design and size components to withstand the following load requirements without damage or permanent set.
1. Design Wind Loads: Comply with structural design criteria indicated on Drawing S001 .
a) Member Deflection: For spans less than 13 feet 6 inches, limit member deflection to flexure limit of glass in any direction, and maximum of 1/175 of span or 3/4 inch, whichever is less and with full recovery of glazing materials.
b) Member Deflection: For spans over 13 feet 6 inches and less than 40 feet, limit member deflection to flexure limit of glass in any direction, and maximum of 1/240 of span plus 1/4 inch, with full recovery of glazing materials.
2. Movement: Accommodate the following movement without damage to components or deterioration of seals:
a) Expansion and contraction caused by 180 degrees F surface temperature.
b) Expansion and contraction caused by cycling temperature range of 170 degrees F over a 12 hour period.
c) Movement of curtain wall relative to perimeter framing.
d) Deflection of structural support framing, under permanent and dynamic loads.

C. Water Penetration Resistance on Manufactured Assembly: No uncontrolled water on indoor face when tested as follows:
1. Test Pressure Differential: 15 psf.
2. Test Method: AAMA 501.1.

D. Air Leakage: 0.06 cfm/sq ft maximum leakage of wall area when tested in accordance with ASTM E283/E283M at 6.24 psf pressure difference across assembly.

E. Thermal Performance Requirements:
   1. Condensation Resistance Factor of Framing: 50, minimum, measured in accordance with AAMA 1503.
   2. Overall U-value Including Glazing: 0.32 Btu/(hr sq ft deg F), maximum.

2.4 COMPONENTS

A. Aluminum Framing Members: Tubular aluminum sections, thermally broken with interior section insulated from exterior, drainage holes and internal weep drainage system.
   1. Framing members for interior applications need not be thermally broken.
   2. Cross-Section: As indicated on drawings.

B. Glazing: See Section 08 8000.

C. Fiberglass Pressure Plate: Fiberglass composite for enhanced thermal performance.
   1. Flexural strength: Minimum 82 ksi along the lineal's major axis.
   2. Material thermal conductivity: Maximum 2 BTU·in/hr·ft²·°F.

D. Sun Shades: Shop fabricated, shop finished, extruded aluminum sunshade louvers, free of defects impairing strength, durability or appearance.
   1. Sun Shade Configuration: As indicated on drawings.
   2. Louver Type: Tube. See drawings for profile.
   3. Materials: Aluminum, 6063-T6.
   4. Mounting Brackets: Same material and finish as sunshade louvers.
   5. Design Criteria: Design and fabricate to resist the same loads as curtain wall system as well as the following loads without failure, damage, or permanent deflection:
      a) Thermal Movement: Plus/minus 1/8 inch, maximum.
   6. Sizes: As indicated on drawings.
   7. Finish: Same as curtain wall mullion sections.
   8. Products:
      a) Same as manufacturer of curtain wall.
         1) Basis of Design: **EFCO; X-Therm E-Shades**.
      b) Substitutions: See Section 01 6000 - Product Requirements.

E. Trims and Sills: Miscellaneous metal trim pieces and exposed sills, finished to match curtain wall framing.
   1. Material: Aluminum, 6063-T6.
      a) Thickness: As indicated on drawings.
   2. Profiles: As indicated on drawings.

2.5 MATERIALS

A. Extruded Aluminum: ASTM B221 (ASTM B221M).

B. Sheet Aluminum: ASTM B209/B209M.

C. Structural Supporting Anchors: See Section 05 1200.

D. Structural Supporting Anchors Attached to Structural Steel: Design for bolted attachment.

E. Fasteners: Stainless steel; type as required or recommended by curtain wall manufacturer.

F. Exposed Flashings: Aluminum sheet, 20-gauge, 0.032-inch minimum thickness; finish to match framing members.

G. Concealed Flashings: Stainless steel, 26-gauge, 0.0187-inch minimum thickness.

H. Firestopping: See Section 07 8400.

I. Weatherseal Sealant: Silicone, with adhesion in compliance with ASTM C794; compatible with glazing accessories.

J. Sill Flashing Sealant: Elastomeric, silicone or polyurethane, and compatible with flashing material.

K. Glazing Gaskets: Type to suit application to achieve weather, moisture, and air infiltration requirements.

L. Glazing Accessories: See Section 08 8000.

2.6 FINISHES

A. Superior Performing Organic Coatings System: Manufacturer's standard multi-coat superior performing organic coatings system complying with AAMA 2605, including at least 70 percent polyvinylidene fluoride (PVDF) resin, and at least 80 percent of aluminum extrusion and panels surfaces having minimum total dry film thickness (DFT) of 1.2 mils, 0.0012 inch.

B. Color, Basis-of-Design: **EFCO Ultrapon "Mineral Brown".**

C. Touch-Up Materials: As recommended by coating manufacturer for field application.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify dimensions, tolerances, and method of attachment with other related work.

B. Verify that curtain wall openings and adjoining water-resistive and air barrier seal materials are ready to receive work of this section.

C. Verify that anchorage devices have been properly installed and located.

3.2 INSTALLATION

A. Install curtain wall system in accordance with manufacturer's instructions and approved shop drawings.

B. Attach to structure to permit sufficient adjustment to accommodate construction tolerances and other irregularities.

C. Provide alignment attachments and shims to permanently fasten system to building structure.

D. Align assembly plumb and level, free of warp or twist. Maintain assembly dimensional tolerances, aligning with adjacent work.

E. Provide thermal isolation where components penetrate or disrupt building insulation.

F. Install sill flashings. Turn up ends and edges; seal to adjacent work to form water tight dam.

G. Coordinate installation of firestopping at each floor slab edge.

H. Pressure Plate Framing: Install glazing and infill panels using exterior dry glazing method; see Section 08 8000.

I. Touch-up minor damage to factory applied finish; replace components that cannot be satisfactorily repaired.

3.3 TOLERANCES

A. Maximum Variation from Plumb: 0.06 inch per 3 feet noncumulative or 0.5 inches per 100 feet, whichever is less.

B. Maximum Misalignment of Two Adjoining Members Abutting in Plane: 1/32 inch.

C. Sealant Space Between Curtain Wall Mullions and Adjacent Construction: Maximum of 3/4 inch and minimum of 1/4 inch.

3.4 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements for general testing and inspection requirements.

B. Water-Spray Test: Provide water spray quality test of installed curtain wall components in accordance with AAMA 501.2 during construction process and before installation of interior finishes.
   1. Perform a minimum of two tests in each designated area as indicated on drawings.
   2. Conduct tests in each area prior to 10 percent and 50 percent completion of this work.

C. Provide field testing of installed curtain wall system by independent laboratory in accordance with AAMA 503 during construction process and before installation of interior finishes.
   1. Perform a minimum of two tests in each designated area as indicated on drawings.
   2. Conduct tests in each area prior to 10 percent and 50 percent completion of this work.
   3. Field test for water penetration in accordance with ASTM E1105 with uniform static air pressure difference (Procedure A) not less than 4.18 psf.
      a) Maximum allowable rate of water penetration in 15-minute test is 0.5 ounce that is not contained in an area with provisions to drain to exterior, or collected on surface of interior horizontal framing member.
   4. Field test for air leakage in accordance with ASTM E783 with uniform static air pressure difference of 1.57 psf.

D. Repair or replace curtain wall components that have failed designated field testing, and retest to verify performance complies with specified requirements.

3.5 CLEANING

A. Remove protective material from pre-finished aluminum surfaces.

B. Wash down surfaces with a solution of mild detergent in warm water, applied with soft, clean wiping cloths, take care to remove dirt from corners, and wipe surfaces clean.

C. Upon completion of installation, thoroughly clean aluminum surfaces in accordance with AAMA 609 & 610.

3.6 PROTECTION

A. Protect installed products from damage until mm-dd-yyyy.

END OF SECTION 08 4413

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 08 6300 - METAL-FRAMED SKYLIGHTS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Aluminum-clad polymer-framed skylight system.

B. Skylight glazing.

C. Skylight safety screen.

D. Fasteners, anchors, reinforcement, and flashings.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 01 7419 – Construction Waste Management and Disposal.

C. Section 07 9200 - Joint Sealants: Sealing joints between skylight frames and adjacent construction.

D. Section 08 8000 - Glazing.

1.3 REFERENCE STANDARDS

A. AAMA 501.2 - Quality Assurance and Diagnostic Water Leakage Field Check of Installed Storefronts, Curtain Walls, and Sloped Glazing Systems; 2015.

B. AAMA 609 & 610 - Cleaning and Maintenance Guide for Architecturally Finished Aluminum (Combined Document); 2015.

C. AAMA 2604 - Voluntary Specification, Performance Requirements and Test Procedures for High Performance Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix); 2017a.

D. ASHRAE Std 90.1 I-P - Energy Standard for Buildings Except Low-Rise Residential Buildings; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

E. ASTM B209/B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate; 2021a.

F. ASTM C794 - Standard Test Method for Adhesion-In-Peel of Elastomeric Joint Sealants; 2018.

G. ASTM D4479/D4479M - Standard Specification for Asphalt Roof Coatings - Asbestos-Free; 2007 (Reapproved 2018).

H. ASTM E283/E283M - Standard Test Method for Determining Rate of Air Leakage Through Exterior Windows, Skylights, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen; 2019.

I. ASTM E330/E330M - Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference; 2014 (Reapproved 2021).

J. ASTM E331 - Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference; 2000 (Reapproved 2023).

K. ICC (IBC) - International Building Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide manufacturer's specifications, standard details, and installation requirements for skylights, glazing, and safety screen.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
   2. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   3. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Shop Drawings: Provide plans, elevations, sections, and details.Indicate framed opening requirements and tolerances, spacing of members, anticipated deflection under load, affected related work, expansion and contraction joint locations and details, and sizes and locations for field welding.

E. Samples: Two samples, not less than 12 by 12 inches in size illustrating appearance of prefinished aluminum and specified glazing system, including glazed edge and corner.

F. Manufacturer's Certificate: Certify that the products supplied meet or exceed the specified requirements.

G. Design Data: Provide framing member structural and physical characteristics and engineering calculations, and identify dimensional limitations.
   1. Submit stamped calculations certified by a Professional Engineer located in the State where th project is located for review prior to fabrication.

H. Test Reports: Manufacturer's air and water resistance test reports showing compliance with requirements specified performance requirements. Test reports must show evidence that system experienced no uncontrolled water leakage after 150% positive and negative structural overload (ASTM E330) when system is retested in accordance with ASTM E331 at a static pressure of 15 psf (718 Pa). Include both published data and specific data prepared for this project.

I. Test Reports: Manufacturer's fall protection test reports showing manufacturer's glazing unit complies with requirements for fall protection.

J. Manufacturer's Installation Instructions: Indicate special procedures, safety precautions, and perimeter conditions requiring special attention.

K. Field Quality Control Submittals: Report of field testing for water penetration and air leakage.

L. Warranty Documentation: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

M. Designer's qualification statement.

N. Manufacturer's qualification statement.

O. Installer's qualification statement.

P. Warranty: Sample of manufacturer warranty.

1.5 QUALITY ASSURANCE

A. Designer Qualifications: Design skylight system under direct supervision of a professional engineer experienced in design of system type specified and licensed in the State in which the Project is located.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with not fewer than 10 years of documented experience.

C. Installer Qualifications: Company specializing in performing the type of work specified in this section with at least seven years of documented experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Provide wrapping to protect prefinished aluminum surfaces. Do not use adhesive papers or spray coatings that bond when exposed to sunlight or weather.

1.7 FIELD CONDITIONS

A. Do not install sealants when ambient temperature is less than 40 degrees F. Maintain this minimum temperature during and 48 hours after installation.

1.8 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Manufacturer's Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of skylights that fail in materials or workmanship under normal use within specified warranty period. Failures include, but are not limited to, the following:
   1. Deterioration of metals, metal finishes and other materials beyond normal weathering.
   2. Water infiltration through skylight assembly.
   3. Warranty period:
      a) Skylight Assembly: 10 years from completion of work.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design:
   1. Velux America, Inc; VELUX Modular Skylight: www.veluxusa.com/#sle.

B. Other Acceptable Metal-Framed Skylights Manufacturers:
   1. Acurlite Structural Skylights Inc.; www.acurlite.com.
   2. Oldcastle Building Envelope: www.obe.com/#sle.
   3. Wasco Skylights - Part of the VELUX Group: www.wascoskylights.com/#sle.
   4. Substitutions: See Section 01 6000 - Product Requirements.
      a) For any product not identified as "Basis of Design", submit information as specified for substitutions.

2.2 ALUMINUM-CLAD COMPOSITE POLYMER-FRAMED SKYLIGHTS

A. System Description: Modular skylight daylighting assemblies with composite polymer structural frames, formed aluminum exterior cladding, and prefinished interior surfaces, factory-assembled and factory-glazed with insulating glass units, with mounting hardware, prefabricated prefinished modular flashing, and accessories as required to meet installation and performance requirements indicated.
   1. Basis of Design Product: **VELUX America LLC; HFC Fixed Velux Modular Skylights** in the following configuration:
      a) Pitched Installation: **VELUX Longlight**.

B. Unit Frames and Sash: Pultruded glass-fiber and polyurethane composite frames, with interior factory-finished with white polyurethane coating.

C. Weatherproofing Gaskets: Manufacturer's standard dual-seal EPDM rubber and PVC perimeter gaskets.

D. Mounting Hardware: Manufacturer's standard mill-galvanized steel brackets, factory- supplied with flashing kits.

E. Exterior Cladding: Manufacturer's standard factory-formed 0.06 inch (1.5 mm) thick extruded aluminum, powder-coated in manufacturer standard grey and supplied with flashing kits.

F. Flashings: Manufacturer's standard factory-formed minimum 0.03 inch (0.8 mm) thick roll-formed aluminum sheet, with integrated mineral wool insulation and snow stop, of type required by skylight unit configuration indicated on drawings, powder-coated in manufacturer standard grey.

2.3 PERFORMANCE REQUIREMENTS

A. General: Provide metal-framed skylights which have been manufactured, fabricated and installed to withstand loading required by the current edition of the International Building Code (IBC). Provide performance criteria required by these specifications without defects, damage or failure.

B. Provide metal-framed skylights that comply with the following:
   1. Unit Skylight Standard: AAMA/WDMA/CSA 101/I.S.2/A440 (NAFS-edition 2017).
   2. Structural Design: Design thrusting (or minimally-thrusting) framing system, including glazing material to support the following load requirements with maximum allowable deflection of any glazing support: Member not to exceed L/180 or 1" maximum for spans less than 20'-0", and L/240 for spans greater than 20'-0" of the unsupported span:
      a) Ground snow load (psf) plus dead load
      b) Ground wind speed (mph) plus dead load
      c) Concentrated live load of 250 pounds applied to any framing member at a location that will produce the most severe stress or deflection.
   3. Wind Loads: Test in accordance with ASTM E330/E330M, using loads 1.5 times the specified design pressures and 10 second duration of maximum load.
   4. Refer to Structural drawings for project-specific structural design criteria.
   5. Glazing Support Member Deflection Under Wind Load: 1/180 of span, maximum.
   6. Energy Performance:
      a) Maximum U-Value: 0.38 Btu/sq. ft. x h x deg F.
      b) Solar Heat Gain Coefficient: 0.22.
      c) Visible Light Transmittance: 0.42.
   7. Thermal Movement: Design system to accommodate thermal expansion and contraction over ambient temperature range of 100 degrees F, dynamic loading and release of loads, creep of concrete structural members, and deflection of structural support framing without damage to skylight system components or loss of weathertightness.
   8. Energy Code Compliance: Comply with ICC (IBC), ASHRAE Std 90.1 I-P, or the authorities having jurisdiction as required for metal-framed skylights.
   9. Air Leakage: 0.06 cfm/sq ft maximum leakage when tested at 1.57 psf pressure difference in accordance with ASTM E283/E283M.
   10. Water Penetration: None, when measured in accordance with ASTM E331 at a test pressure difference of 15 pounds per square foot.
   11. Surface Burning Characteristics of Frames: Provide frames meeting current North American Fenestration Standard (NAFS) and identical to specimens tested for fire-exposure behavior in accordance with test method indicated below by a testing and inspecting agency acceptable to authorities having jurisdiction. Identify materials with appropriate markings of applicable testing and inspecting agency.
      a) Self-Ignition Temperature: 950 deg F or more with thickness indicated when tested per ASTM D 1929.
      b) Flash-Ignition Temperature: 806 deg F or more with thickness indicated when tested per ASTM D 1929.

c) Smoke Density: 70 or less when tested per ASTM D 2843.
d) Burning Characteristics: Tested and labeled in accordance with ASTM D 635: Class CC1.

2.4 GLAZING

A. High-Performance Low-E Insulating Laminated Glazing Unit:
1. Basis of Design Product: **VELUX, Type 11L Low Energy with Solar Protection Dual Pane**.
2. Outdoor lite: Fully hardened glass.
a) Thickness of outdoor glass lite: 0.24 inch (6 mm).
b) Coating: Sun protection coating referenced as Sun 1 (SunGuard SN 51 HT) on second surface.
3. Interspace: 0.87 inch thick, argon-filled.
4. Indoor lite: Two plies of float glass.
a) Minimum thickness of each glass ply: 0.19 inch.
b) Minimum thickness of interlayer: 0.03 inch.
5. Fall Protection Standard Compliance: 29 CFR 1910.29(e):
a) HFC fixed module 39.37 inches x 118.11 inches:
b) Static load: 400 pounds placed on center of glass with no damage.
c) Dynamic load: 100 pounds dropped from 20 feet (2000 lbf-ft) with no damage.

2.5 MATERIALS

A. Composite Polymer: 80 percent glass fiber and 20 percent two-component polyurethane resin formulated for use as pultruded structural composite.

B. Formed Aluminum: Sheet material of alloy 5052, 5005, or 6061-T651 members complying with ASTM B209/B209M, with minimum thickness 1/8 inch for structural members and 1/16 inch for non-structural members.

C. Insulating Glass: Sealed insulated units, outer pane of clear transparent, tempered glass; inner pane of clear transparent, laminated glass; space of sealed air, metal edge frame.
1. See Article 2.4 above.

D. Glazing Accessories: As recommended by manufacturer of skylight system.

E. Weatherseal Sealant: Silicone, with adhesion in compliance with ASTM C794; compatible with glazing accessories. See Section 07 9200.

F. Protective Back Coating: Asphaltic mastic, ASTM D4479/D4479M Type I.

G. Flashing: Matching finish of skylight frame system components; secure using un-concealed fastening method, and seal with weather-tight sealant.
1. Aluminum sheet, 20 gauge, 0.032 inch minimum thickness.

2.6 ACCESSORIES

A. Skylight Protection System: OSHA-compliant; nonpenetrating fall protection.

1. Provide skylight manufacturer's compatible exterior safety screen, fabricated from minimum 0.19 inch galvanized steel wire minimum into a 4-inch square mesh, capable of being permanently installed to the skylight curb.
2. Basis of Design Product:
   a) **VELUX Commercial; Exterior Safety Screen (CAEW/CAEB)**: www.veluxusa.com.
   b) _____.

2.7 FABRICATION

A. Provide manufactured modular skylight units completely factory-assembled including frames, sash, insulating glass units, flashings, and indicated accessories. Factory glaze units utilizing silicone-based exterior seal

B. Fabricate frame components to tolerances utilized on units tested to meet performance requirements, accommodating installation and movement of sash and dynamic movement of perimeter weather gasketing.

C. Incorporate permanent external drainage channels to manage water flow and drain to the exterior. Provide internal drainage of glazing spaces to exterior through gasketing.

D. Fabricate components to allow for expansion and contraction with minimum clearance and shim spacing around perimeter of assembly.

E. Prepare components to receive concealed anchorage devices, and ensure that fasteners will be concealed upon completion of installation.

F. Factory-glaze units with glazing selection specified.

2.8 FINISHES

A. High Performance Organic Coatings: AAMA 2604; multiple coats, thermally cured fluoropolymer system; interior surfaces only.
   1. Color: Match Architect's sample.
   2. Dry Film Thickness: Not less than 60 microns. ASTM D1400.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that structural curb is ready to receive skylight system. Coordinate installation of roofing and other adjacent work to ensure weathertight construction.

3.2 PREPARATION

A. Apply single coat of protective coating to concealed aluminum and steel surfaces in contact with dissimilar materials.

3.3 INSTALLATION

A. Install metal-framed skylights in accordance with manufacturer's written instructions, ASTM E2112, and approved shop drawings. Coordinate installation of units with installation of substrates, air and vapor retarders, roof insulation, roofing membrane, and flashing as required to ensure that each element of the Work performs properly and that finished installation is weather tight.
   1. Install skylights true to line and without distortion.
   2. Anchor skylights securely to supporting substrates.

B. Set skylight structure plumb, level, and true to line, without warp or rack of frames or glazing panels. Anchor securely in place in accordance with approved shop drawings.

C. Maintain assembly dimensional tolerances, aligning with adjacent work.

D. Where metal surfaces of skylights will contact incompatible metal or corrosive substrates, including preservative-treated wood, apply bituminous coating on concealed metal surfaces, or provide other permanent separation recommended in writing by skylight manufacturer.

E. Install base flashings in accordance with Section 07 6200.

F. Install glazing in accordance with manufacturer's recommended procedures.

G. Touch up damaged finishes so repair is imperceptible from 6 feet distance, and remove and replace components that cannot be acceptably touched up.

3.4 TOLERANCES

A. Maximum Variation from Plumb, Level, or Line: 1/8 inch per 10 feet, or 3/8 inch total in overall dimension.

B. Alignment of Two Adjoining Members Abutting in Plane: Within 1/16 inches.

3.5 FIELD QUALITY CONTROL

A. Provide services of metal-framed skylight manufacturer's field representative to observe for proper installation of system and submit report.

B. See Section 01 4000 - Quality Requirements for general testing and inspection requirements.

C. Water-Spray Test: Provide water spray quality test of installed metal-framed skylight components in accordance with AAMA 501.2 during construction process and before installation of interior finishes.
   1. Perform a minimum of two tests in each designated area as indicated on drawings.

D. Repair or replace metal-framed skylight components that have failed designated field testing, and retest to verify performance complies with specified requirements.

3.6 CLEANING

A. Upon completion of installation, thoroughly clean skylight aluminum surfaces in accordance with manufacturer's written instructions. Touch up damaged metal coatings and finishes. Remove excess sealants, glazing materials, dirt, and other substances.

B. Remove protective material from prefinished aluminum surfaces.

C. Remove excess sealant by methods recommended by skylight manufacturer.

D. Replace glazing that has been damaged during construction period.

E. Protect skylight surfaces from contact with contaminating substances resulting from construction operations.

END OF SECTION 08 6300

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 08 7100 - DOOR HARDWARE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes commercial door hardware for the following:

1. Swinging doors.
2. Sliding doors.
3. Other doors to the extent indicated.

B. Door hardware includes, but is not necessarily limited to, the following:

1. Mechanical door hardware.
2. Electromechanical door hardware.
3. Automatic operators.
4. Cylinders specified for doors in other sections.

C. Related Sections:

1. Division 08 Section “Hollow Metal Doors and Frames”.
2. Division 08 Section “Bullet Resistant Doors and Frame”.
3. Division 08 Section “Aluminum-Framed Entrances and Storefronts”.

D. Codes and References: Comply with the version year adopted by the Authority Having Jurisdiction.

1. ANSI A117.1 - Accessible and Usable Buildings and Facilities.
2. ICC/IBC - International Building Code.
3. NFPA 70 - National Electrical Code.
4. NFPA 80 - Fire Doors and Windows.
5. NFPA 101 - Life Safety Code.
6. NFPA 105 - Installation of Smoke Door Assemblies.
7. UL/ULC and CSA C22.2 - Standards for Automatic Door Operators Used on Fire and Smoke Barrier Doors and Systems of Doors.
8. State Building Codes, Local Amendments.

E. Standards: All hardware specified herein shall comply with the following industry standards as applicable. Any undated reference to a standard shall be interpreted as referring to the latest edition of that standard:

1. ANSI/BHMA Certified Product Standards - A156 Series.
2. UL10C - Positive Pressure Fire Tests of Door Assemblies.
3. ANSI/UL 294 - Access Control System Units.
4. UL 305 - Panic Hardware.
5. ANSI/UL 437- Key Locks.

1.3 SUBMITTALS

A. Product Data: Manufacturer's product data sheets including installation details, material descriptions, dimensions of individual components and profiles, operational descriptions and finishes.

B. Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing, fabrication and assembly of door hardware, as well as procedures and diagrams. Coordinate the final Door Hardware Schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.

1. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule."
2. Organization: Organize the Door Hardware Schedule into door hardware sets indicating complete designations of every item required for each door or opening. Organize door hardware sets in same order as in the Door Hardware Sets at the end of Part 3. Submittals that do not follow the same format and order as the Door Hardware Sets will be rejected and subject to resubmission.
3. Content: Include the following information:

    a. Type, style, function, size, label, hand, and finish of each door hardware item.
    b. Manufacturer of each item.
    c. Fastenings and other pertinent information.
    d. Location of door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.
    e. Explanation of abbreviations, symbols, and codes contained in schedule.
    f. Mounting locations for door hardware.
    g. Door and frame sizes and materials.
    h. Warranty information for each product.

4. Submittal Sequence: Submit the final Door Hardware Schedule at earliest possible date, particularly where approval of the Door Hardware Schedule must precede fabrication of other work that is critical in the Project construction schedule. Include Product Data, Samples, Shop Drawings of other work affected by door hardware, and other information essential to the coordinated review of the Door Hardware Schedule.

C. Shop Drawings: Details of electrified access control hardware indicating the following:

1. Wiring Diagrams: Upon receipt of approved schedules, submit detailed system wiring diagrams for power, signaling, monitoring, communication, and control of the access control system electrified hardware. Differentiate between manufacturer-installed and field-installed wiring. Include the following:

   a. Elevation diagram of each unique access controlled opening showing location and interconnection of major system components with respect to their placement in the respective door openings.
   b. Complete (risers, point-to-point) access control system block wiring diagrams.
   c. Wiring instructions for each electronic component scheduled herein.

2. Electrical Coordination: Coordinate with related sections the voltages and wiring details required at electrically controlled and operated hardware openings.

D. Keying Schedule: After a keying meeting with the owner has taken place prepare a separate keying schedule detailing final instructions. Submit the keying schedule in electronic format. Include keying system explanation, door numbers, key set symbols, hardware set numbers and special instructions. Owner must approve submitted keying schedule prior to the ordering of permanent cylinders/cores.

E. Informational Submittals:

1. Product Test Reports: Indicating compliance with cycle testing requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified independent testing agency.

F. Operating and Maintenance Manuals: Provide manufacturers operating and maintenance manuals for each item comprising the complete door hardware installation in quantity as required in Division 01, Closeout Procedures.

1.4 QUALITY ASSURANCE

A. Manufacturers Qualifications: Engage qualified manufacturers with a minimum 5 years of documented experience in producing hardware and equipment similar to that indicated for this Project and that have a proven record of successful in-service performance.

B. Certified Products: Where specified, products must maintain a current listing in the Builders Hardware Manufacturers Association (BHMA) Certified Products Directory (CPD).

C. Installer Qualifications: A minimum 3 years documented experience installing both standard and electrified door hardware similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

D. Door Hardware Supplier Qualifications: Experienced commercial door hardware distributors with a minimum 5 years documented experience supplying both mechanical and electromechanical hardware installations comparable in material, design, and extent to that indicated for this Project. Supplier recognized as a factory direct distributor by the manufacturers of the primary materials with a warehousing facility in Project's vicinity. Supplier to have on staff a certified Architectural Hardware Consultant (AHC) available during the course of the Work to consult with Contractor, Architect, and Owner concerning both standard and electromechanical door hardware and keying.

E. Source Limitations: Obtain each type and variety of door hardware specified in this section from a single source unless otherwise indicated.

1. Electrified modifications or enhancements made to a source manufacturer's product line by a secondary or third party source will not be accepted.
2. Provide electromechanical door hardware from the same manufacturer as mechanical door hardware, unless otherwise indicated.

F. Each unit to bear third party permanent label indicating compliance with the referenced testing standards.

G. Keying Conference: Conduct conference to comply with requirements in Division 01 Section "Project Meetings." Keying conference to incorporate the following criteria into the final keying schedule document:

1. Function of building, purpose of each area and degree of security required.
2. Plans for existing and future key system expansion.
3. Requirements for key control storage and software.
4. Installation of permanent keys, cylinder cores and software.
5. Address and requirements for delivery of keys.

H. Pre-Submittal Conference: Conduct coordination conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier(s), Installer(s), and Contractor(s) to review proper methods and the procedures for receiving, handling, and installing door hardware.

1. Prior to installation of door hardware, conduct a project specific training meeting to instruct the installing contractors' personnel on the proper installation and adjustment of their respective products. Product training to be attended by installers of door hardware (including electromechanical hardware) for aluminum, hollow metal and wood doors. Training will include the use of installation manuals, hardware schedules, templates and physical product samples as required.
2. Inspect and discuss electrical roughing-in, power supply connections, and other preparatory work performed by other trades.
3. Review sequence of operation narratives for each unique access controlled opening.
4. Review and finalize construction schedule and verify availability of materials.

5. Review the required inspecting, testing, commissioning, and demonstration procedures

I. At completion of installation, provide written documentation that components were applied according to manufacturer's instructions and recommendations and according to approved schedule.

1.5 DELIVERY, STORAGE AND HANDLING

A. Inventory door hardware on receipt and provide secure lock-up and shelving for door hardware delivered to Project site. Do not store electronic access control hardware, software or accessories at Project site without prior authorization.

B. Tag each item or package separately with identification related to the final Door Hardware Schedule, and include basic installation instructions with each item or package.

C. Deliver, as applicable, permanent keys, cylinders, cores, access control credentials, software and related accessories directly to Owner via registered mail or overnight package service. Instructions for delivery to the Owner shall be established at the "Keying Conference".

1.6 COORDINATION

A. Templates: Obtain and distribute to the parties involved templates for doors, frames, and other work specified to be factory prepared for installing standard and electrified hardware. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing hardware to comply with indicated requirements.

B. Door Hardware and Electrical Connections: Coordinate the layout and installation of scheduled electrified door hardware and related access control equipment with required connections to source power junction boxes, low voltage power supplies, detection and monitoring hardware, and fire and detection alarm systems.

C. Door and Frame Preparation: Doors and corresponding frames are to be prepared, reinforced and pre-wired (if applicable) to receive the installation of the specified electrified, monitoring, signaling and access control system hardware without additional in-field modifications.

1.7 WARRANTY

A. General Warranty: Reference Division 01, General Requirements. Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

B. Warranty Period: Written warranty, executed by manufacturer(s), agreeing to repair or replace components of standard and electrified door hardware that fails in materials or workmanship

within specified warranty period after final acceptance by the Owner. Failures include, but are not limited to, the following:

1. Structural failures including excessive deflection, cracking, or breakage.
2. Faulty operation of the hardware.
3. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
4. Electrical component defects and failures within the systems operation.

C. Warranty Period: Unless otherwise indicated, warranty shall be one year from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SCHEDULED DOOR HARDWARE

A. General: Provide door hardware for each door to comply with requirements in Door Hardware Sets and each referenced section that products are to be supplied under.

B. Designations: Requirements for quantity, item, size, finish or color, grade, function, and other distinctive qualities of each type of door hardware are indicated in the Door Hardware Sets at the end of Part 3. Products are identified by using door hardware designations, as follows:

1. Named Manufacturer's Products: Product designation and manufacturer are listed for each door hardware type required for the purpose of establishing requirements. Manufacturers' names are abbreviated in the Door Hardware Schedule.

C. Substitutions: Requests for substitution and product approval for inclusive mechanical and electromechanical door hardware in compliance with the specifications must be submitted in writing and in accordance with the procedures and time frames outlined in Division 01, Substitution Procedures. Approval of requests is at the discretion of the architect, owner, and their designated consultants.

2.2 BUTT HINGES

A. Hinges: ANSI/BHMA A156.1 butt hinges with number of hinge knuckles and other options as specified in the Door Hardware Sets.

1. Quantity: Provide the following hinge quantity:

a. Two Hinges: For doors with heights up to 60 inches.
b. Three Hinges: For doors with heights 61 to 90 inches.
c. Four Hinges: For doors with heights 91 to 120 inches.
d. For doors with heights more than 120 inches, provide 4 hinges, plus 1 hinge for every 30 inches of door height greater than 120 inches.

2. Hinge Size: Provide the following, unless otherwise indicated, with hinge widths sized for door thickness and clearances required:

    a. Widths up to 3’0”: 4-1/2” standard or heavy weight as specified.
    b. Sizes from 3’1” to 4’0”: 5” standard or heavy weight as specified.

3. Hinge Weight and Base Material: Unless otherwise indicated, provide the following:

    a. Exterior Doors: Heavy weight, non-ferrous, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate standard weight.
    b. Interior Doors: Standard weight, steel, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate heavy weight.

4. Hinge Options: Comply with the following:

    a. Non-removable Pins: With the exception of electric through wire hinges, provide set screw in hinge barrel that, when tightened into a groove in hinge pin, prevents removal of pin while door is closed; for the all out-swinging lockable doors.

5. Manufacturers:

    a. McKinney (MK) - TA/T4A Series, 5-knuckle.

2.3 CONTINUOUS HINGES

A. Continuous Geared Hinges: ANSI/BHMA A156.26 Grade 1-600 continuous geared hinge. with minimum 0.120-inch thick extruded 6063-T6 aluminum alloy hinge leaves and a minimum overall width of 4 inches. Hinges are non-handed, reversible and fabricated to template screw locations. Factory trim hinges to suit door height and prepare for electrical cut-outs.

1. Where specified, provide modular continuous geared hinges that ship in two or three pieces and form a single continuous hinge upon installation.
2. Manufacturers:.

    a. Pemko (PE).

2.4 SLIDING AND FOLDING HARDWARE

A. Sliding and Folding Door Hardware: Hardware is to be of type and design as specified and should conform with ANSI/BHMA A156.14.

1. Sliding Bi-Passing Pocket Door Hardware: Provide complete sets consisting of track, hangers, stops, bumpers, floor channel, guides, and accessories indicated.
2. Cascading: Provide a bi-parting or single direction telescoping system as required with a minimum 200 lb. per door capacity.

3. Bi-folding Door Hardware: Rated for door panels weighing up to 125 lb.
4. Pocket Sliding Door Hardware: Rated for doors weighing up to 200 lb.
5. Manufacturers:

    a. Pemko (PE).

2.5 POWER TRANSFER DEVICES

A. Concealed Quick Connect Electric Power Transfers: Provide concealed wiring pathway housing mortised into the door and frame for low voltage electrified door hardware. Furnish with Molex™ standardized plug connectors and sufficient number of concealed wires (up to 12) to accommodate the electrified functions specified in the Door Hardware Sets. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Wire nut connections are not acceptable.

1. Manufacturers:

    a. Pemko (PE) - EL-CEPT Series.
    b. Securitron (SU) - EL-CEPT Series.

B. Electric Door Wire Harnesses: Provide electric/data transfer wiring harnesses with standardized plug connectors to accommodate up to twelve (12) wires. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Provide sufficient number and type of concealed wires to accommodate electric function of specified hardware. Provide a connector for through-door electronic locking devices and from hinge to junction box above the opening. Wire nut connections are not acceptable. Determine the length required for each electrified hardware component for the door type, size and construction, minimum of two per electrified opening.

1. Provide one each of the following tools as part of the base bid contract:

    a. McKinney (MK) - Electrical Connecting Kit: QC-R001.
    b. McKinney (MK) - Connector Hand Tool: QC-R003.

2. Manufacturers:

    a. McKinney (MK) - QC-C Series.

2.6 DOOR OPERATING TRIM

A. Flush Bolts and Surface Bolts: Provide products conforming to ANSI/BHMA A156.3 and A156.16, Grade 1.

1. Flush bolts to be furnished with top rod of sufficient length to allow bolt retraction device location approximately six feet from the floor.

2. Furnish dust proof strikes for bottom bolts.
3. Surface bolts to be minimum 8” in length and U.L. listed for labeled fire doors and U.L. listed for windstorm components where applicable.
4. Provide related accessories (mounting brackets, strikes, coordinators, etc.) as required for appropriate installation and operation.
5. Manufacturers:

    a. Rockwood (RO).

B. Coordinators: ANSI/BHMA A156.3 door coordinators consisting of active-leaf, hold-open lever and inactive-leaf release trigger. Model as indicated in hardware sets.

1. Manufacturers:

    a. Rockwood (RO).

C. Door Push Plates and Pulls: ANSI/BHMA A156.6 door pushes and pull units of type and design specified in the Hardware Sets. Coordinate and provide proper width and height as required where conflicting hardware dictates.

1. Push/Pull Plates: Minimum .050 inch thick, size as indicated in hardware sets, with beveled edges, secured with exposed screws unless otherwise indicated.
2. Door Pull and Push Bar Design: Size, shape, and material as indicated in the hardware sets. Minimum clearance of 2 1/2-inches from face of door unless otherwise indicated.
3. Offset Pull Design: Size, shape, and material as indicated in the hardware sets. Minimum clearance of 2 1/2-inches from face of door and offset of 90 degrees unless otherwise indicated.
4. Pulls, where applicable, shall be provided with a 10” clearance from the finished floor on the push side to accommodate wheelchair accessibility.
5. Fasteners: Provide manufacturer's designated fastener type as indicated in Hardware Sets.
6. Manufacturers:

    a. Rockwood (RO).

2.7 CYLINDERS AND KEYING

A. General: Cylinder manufacturer to have minimum (10) years experience designing secured master key systems and have on record a published security keying system policy.

B. Cylinder Types: Original manufacturer cylinders able to supply the following cylinder formats and types:

1. Threaded mortise cylinders with rings and cams to suit hardware application.
2. Rim cylinders with back plate, flat-type vertical or horizontal tailpiece, and raised trim ring.

3. Bored or cylindrical lock cylinders with tailpieces as required to suit locks.
4. Tubular deadlocks and other auxiliary locks.
5. Mortise and rim cylinder collars to be solid and recessed to allow the cylinder face to be flush and be free spinning with matching finishes.
6. Keyway: Match Facility Standard.

C. Patented Cylinders: ANSI/BHMA A156.5, Grade 1 Certified Products Directory (CPD) listed cylinders employing a utility patented and restricted keyway requiring the use of a patented key. Cylinders are to be protected from unauthorized manufacture and distribution by manufacturer's United States patents.

1. Patented key systems shall not be established with products that have an expired patent. Expired systems shall only be specified and supplied to support existing systems.
2. Manufacturers:

    a. Medeco (MC) - X4.

D. Keying System: Each type of lock and cylinders to be factory keyed.

1. Supplier shall conduct a "Keying Conference" to define and document keying system instructions and requirements.
2. Furnish factory cut, nickel-silver large bow permanently inscribed with a visual key control number as directed by Owner.
3. Existing System: Field verify and key cylinders to match Owner's existing system.

E. Key Quantity: Provide the following minimum number of keys:

1. Change Keys per Cylinder: Two (2)
2. Master Keys (per Master Key Level/Group): Five (5).
3. Construction Control Keys (where required): Two (2).
4. Permanent Control Keys (where required): Two (2).

F. Construction Keying: Provide temporary keyed construction cores.

G. Key Registration List (Bitting List):

1. Provide keying transcript list to Owner's representative in the proper format for importing into key control software.
2. Provide transcript list in writing or electronic file as directed by the Owner.

2.8 MORTISE LOCKS AND LATCHING DEVICES

A. Mortise Locksets, Grade 1 (Heavy Duty): Provide ANSI/BHMA A156.13, Series 1000, Operational and Security Grade 1 Certified Products Directory (CPD) listed mortise locksets. Listed manufacturers shall meet all functions and features as specified herein.

1. Provide locksets with functions and features as follows:

    a. Heavy duty 12-gauge wrought steel case.
    b. Stainless steel 3/4" one-piece anti-friction reversible latchbolt with a one-piece hardened stainless steel 1” projection deadbolt.
    c. Where required by code, provide knurling or abrasive coating on all levers leading to hazardous areas.
    d. Meets UL and CUL Standard 10C Positive Pressure, Fire Test of Door Assemblies with levers that meet A117.1 Accessibility Code.
    e. Meets UL Certification Directory ZHLL.R21744 for products used in windstorm rated assemblies.
    f. Status indicators inside, outside, or on both sides of doors as specified; available with wording for “locked/unlocked”, “vacant/occupied” or custom wording options. Indicator to be located above the cylinder with the inside thumb-turn not blocking the visibility of the indicator status.
    g. Ten-year limited warranty for mechanical functions.

2. Manufacturers:

    a. Sargent Manufacturing (SA) - 8200 Series.

2.9 CYLINDRICAL LOCKS AND LATCHING DEVICES

A. Cylindrical Locksets, Grade 1 (Heavy Duty): ANSI/BHMA A156.2, Series 4000, Operational Grade 1 Certified Products Directory (CPD) listed cylindrical locksets. Listed manufacturers shall meet all functions and features as specified herein.

1. Provide locksets with functions and features as follows:

    a. Meets ANSI/BHMA A156.41 for single motion egress.
    b. Where required by code, provide knurling or abrasive coating on all levers leading to hazardous areas.
    c. Meets UL and CUL Standard 10C Positive Pressure, Fire Test of Door Assemblies with levers that meet A117.1 Accessibility Code.
    d. Exceeds ANSI/BHMA A156.2 requirements by 2.6 times for 3,100 in-lb. abusive locked lever torque with no entry while maintaining egress.
    e. Exceeds ANSI/BHMA A156.2 requirements by 8 times for 1,600 lbs. offset lever pull with no entry for protection against attacks.
    f. Exceeds ANSI/BHMA A156.3 requirements by 2 times for latch retraction with 100 lb. preload while maintaining operation in warped doors.
    g. Exceeds ANSI/BHMA A156.3 requirements by 20 times for no access with minimum 100 vertical impacts for protection against vandalism attempts.
    h. Independent return springs allow lock to exceed ANSI/BHMA A156.2 Grade 1 cycle requirements without lever sag.
    i. Ten-year limited warranty for mechanical functions.

2. Manufacturers:

    a. Sargent Manufacturing (SA) - 10X Line.

2.10 DEADLOCKS AND LATCHES

A. Cylindrical Deadlocks: ANSI/BHMA A156.36 Grade 1 Certified Products Directory (CPD) listed deadlocks to fit standard ANSI 161 preparation. Provide tapered collars to resist vandalism and 1" throw solid steel bolt with hardened steel roller pins. Deadlocks to be products of the same source manufacturer and keyway as other locksets.

1. Manufacturers:

    a. Sargent Manufacturing (SA) - 480 Series.

B. Narrow Case Deadlocks and Deadlatches: ANSI/BHMA 156.13 Series 1000 Grade 1 narrow case deadlocks and deadlatches for swinging or sliding door applications. All functions shall be manufactured in a single sized case formed from 12 gauge minimum, corrosion resistant steel (option for fully stainless steel case and components). Provide minimum 2 7/8" throw laminated stainless steel bolt. Bottom rail deadlocks to have 3/8” diameter bolts.

1. Manufacturers:

    a. Adams Rite Manufacturing (AD) - MS1850S / MS1950 Series.

2.11 LOCK AND LATCH STRIKES

A. Strikes: Provide manufacturer's standard strike with strike box for each latch or lock bolt, with curved lip extended to protect frame, finished to match door hardware set, unless otherwise indicated, and as follows:

1. Flat-Lip Strikes: For locks with three-piece antifriction latchbolts, as recommended by manufacturer.
2. Extra-Long-Lip Strikes: For locks used on frames with applied wood casing trim.
3. Aluminum-Frame Strike Box: Provide manufacturer's special strike box fabricated for aluminum framing.
4. Double-lipped strikes: For locks at double acting doors. Furnish with retractable stop for rescue hardware applications.

B. Standards: Comply with the following:

1. Strikes for Mortise Locks and Latches: BHMA A156.13.
2. Strikes for Bored Locks and Latches: BHMA A156.2.
3. Strikes for Auxiliary Deadlocks: BHMA A156.36.
4. Dustproof Strikes: BHMA A156.16.

2.12 CONVENTIONAL EXIT DEVICES

A. General Requirements: All exit devices specified herein shall meet or exceed the following criteria:

1. Exit devices shall have a five-year warranty.
2. At doors not requiring a fire rating, provide devices complying with NFPA 101 and listed and labeled for "Panic Hardware" according to UL305. Provide proper fasteners as required by manufacturer including sex nuts and bolts at openings specified in the Hardware Sets.
3. Where exit devices are required on fire rated doors, provide devices complying with NFPA 80 and with UL labeling indicating "Fire Exit Hardware". Provide devices with the proper fasteners for installation as tested and listed by UL. Consult manufacturer's catalog and template book for specific requirements.
4. Except on fire rated doors, provide exit devices with hex key dogging device to hold the pushbar and latch in a retracted position. Provide optional keyed cylinder dogging on devices where specified in Hardware Sets.
5. Devices must fit flat against the door face with no gap that permits unauthorized dogging of the push bar. The addition of filler strips is required in any case where the door light extends behind the device as in a full glass configuration.
6. Flush End Caps: Provide flush end caps made of architectural metal in the same finish as the devices as in the Hardware Sets. Plastic end caps will not be acceptable.
7. Lever Operating Trim: Where exit devices require lever trim, furnish manufacturer's heavy duty escutcheon trim with threaded studs for thru-bolts.
    a. Lock Trim Design: As indicated in Hardware Sets, provide finishes and designs to match that of the specified locksets.
    b. Where function of exit device requires a cylinder, provide a cylinder (Rim or Mortise) as specified in Hardware Sets.
8. Vertical Rod Exit Devices: Where surface or concealed vertical rod exit devices are used at interior openings, provide as less bottom rod (LBR) unless otherwise indicated. Provide dust proof strikes where thermal pins are required to project into the floor.
9. Narrow Stile Applications: At doors constructed with narrow stiles, or as specified in Hardware Sets, provide devices designed for maximum 2" wide stiles.
10. Dummy Push Bar: Nonfunctioning push bar matching functional push bar.
11. Rail Sizing: Provide exit device rails factory sized for proper door width application.
12. Through Bolt Installation: For exit devices and trim as indicated in Door Hardware Sets.

B. Conventional Push Rail Exit Devices (Heavy Duty): ANSI/BHMA A156.3, Grade 1 Certified Products Directory (CPD) listed exit devices. Listed manufacturers shall meet all functions and features as specified herein.

1. Provide exit devices with functions and features as follows:

a. Where required by code, provide knurling or abrasive coating on all levers leading to hazardous areas.
b. Meets UL and CUL Standard 10C Positive Pressure, Fire Test of Door Assemblies with levers that meet A117.1 Accessibility Code.
c. Five-year limited warranty for mechanical features.

2. Electromechanical exit devices shall have the following functions and features:

a. Universal Molex plug-in connectors that have standardized color-coded wiring and are field configurable in fail safe or fail secure and operate from 12vdc to 24vdc regulated.
b. EcoFlex or equivalent technology that reduces energy consumption up to 92% as certified by GreenCircle.
c. Options to be available for request-to-exit or enter signaling, latchbolt and touchbar monitoring.
d. Field configurable electrified trim to fail-safe or fail-secure that operates from 12-24VDC.
e. Five-year limited warranty for electromechanical features.

3. Manufacturers:

a. Sargent Manufacturing (SA) - 80 Series.

2.13 DOOR CLOSERS

A. All door closers specified herein shall meet or exceed the following criteria:

1. General: Door closers to be from one manufacturer, matching in design and style, with the same type door preparations and templates regardless of application or spring size. Closers to be non-handed with full sized covers.
2. Standards: Closers to comply with UL-10C for Positive Pressure Fire Test and be U.L. listed for use of fire rated doors.
3. Size of Units: Comply with manufacturer's written recommendations for sizing of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Where closers are indicated for doors required to be accessible to the Americans with Disabilities Act, provide units complying with ANSI ICC/A117.1.
4. Closer Arms: Provide heavy duty, forged steel closer arms unless otherwise indicated in Hardware Sets.
5. Closers shall not be installed on exterior or corridor side of doors; where possible install closers on door for optimum aesthetics.
6. Closer Accessories: Provide door closer accessories including custom templates, special mounting brackets, spacers and drop plates as required for proper installation. Provide through-bolt and security type fasteners as specified in the hardware sets.

B. Door Closers, Surface Mounted (Heavy Duty): ANSI/BHMA A156.4, Grade 1 Certified Products Directory (CPD) listed surface mounted, heavy duty door closers with complete spring power adjustment, sizes 1 thru 6; and fully operational adjustable according to door size, frequency of use, and opening force. Closers to be rack and pinion type, one piece cast iron or aluminum alloy body construction, with adjustable backcheck and separate non-critical valves for closing sweep and latch speed control. Provide non-handed units standard.

1. Heavy duty surface mounted door closers shall have a 30-year warranty.

2. Manufacturers:

   a. Sargent Manufacturing (SA) - 351 Series.
   b. Dorma 8900 Series.
   c. LCN Closers (LC) 4040XP Series.

2.14 ELECTROHYDRAULIC DOOR OPERATORS

A. Electrohydraulic Door Operators (High Traffic): Provide ANSI/BHMA A156.19 Certified Products Directory (CPD) listed low energy operators that meet ANSI/BHMA A156.4 requirements and are UL listed for use on fire rated doors and UL10C certified that comply with requirements for the Americans with Disabilities Act (ADA). Operators shall be verified by GreenCircle to offer energy savings of 19% when compared to similar products to accommodate openings up 250 pounds and 48” wide.

1. Provide operators with features as follows:

   a. Non-handed with push and pull side mounting.
   b. Operates as mechanical surface closer during close cycles, when door is opened manually or if power is off.
   c. Activation by push button, hands-free or radio frequency devices.
   d. On board electronics to collect usage and cycle count data to facilitate preventative maintenance/diagnostics.
   e. Two-year limited warranty.
   f. Wi-Fi interface where the operator is a secure, password protected WiFi hot spot with no connection to building’s IT required.
      1) Simple setup with no app required.
      2) View status and make adjustments without removing the cover.
      3) Built-in logic to support single use restroom applications with no external relay boards, logic modules, position switches required.
   g. Mounting backplate to simplify and speed up installation.

2. Operators shall have the following functionality:

   a. Adjustable Hold Open: Amount of time a door will stay in the full open position after an activation.

b. Blow Open for Smoke Ventilation: Door opens when signal is received from alarm system allowing air or smoke to flow through opening. Door will stay open until signal from alarm system is stopped.
c. Infinite Hold Open: Door will hold open at set position until power is turned off.
d. Obstruction Detection: Door closes if it hits an obstruction while opening; door will reverse to open position if it hits an obstruction while closing. Door will stop once it hits an obstruction and will rest against the obstruction until removed.
e. Open Delay: Delays operator opening for locking hardware.
f. Overload Safety Shut-Off: After two minutes of receiving a door activation signal, inverter times out and door closes to prevent motor/inverter damage.
g. Presence Detector Input: Input for external sensor to detect presence at door open or close position only.
h. Push & Go: As the door is manually opened, the operator "senses" movement and opens door to the full-open position.
i. Selector Mode Switch: Off disables the signal inputs unless Blow Open is activated, on activates the signal inputs, hold open activates the unit (unless Blow Closed is activated) to the hold open position.
j. Vestibule Delay: When the wall switch is pressed, first door in vestibule will open. Second door will open once vestibule door delay has expired. Delay is adjustable.

3. Manufacturers:

a. Norton Rixson (NO) - 6000 Series.

2.15 SURFACE MOUNTED CLOSER HOLDERS

A. Electromagnetic Door Holders: ANSI A156.15 electromagnetic door holder/releases with a minimum 20 to 40 pounds holding power and single coil construction able to accommodate.12VDC, 24VAC, 24VDC and 120VAC. Coils to be independently wound, employing an integral fuse and armatures to include a positive release button.

1. Manufacturers:

a. Norton Rixson (RF) - 980/990 Series.

2.16 ARCHITECTURAL TRIM

A. Door Protective Trim

1. General: Door protective trim units to be of type and design as specified below or in the Hardware Sets.
2. Size: Fabricate protection plates (kick, armor, or mop) not more than 2" less than door width (LDW) on stop side of single doors and 1” LDW on stop side of pairs of doors, and not more than 1" less than door width on pull side. Coordinate and provide proper width

and height as required where conflicting hardware dictates. Height to be as specified in the Hardware Sets.

3. Where plates are applied to fire rated doors with the top of the plate more than 16" above the bottom of the door, provide plates complying with NFPA 80. Consult manufacturer's catalog and template book for specific requirements for size and applications.
4. Protection Plates: ANSI/BHMA A156.6 protection plates (kick, armor, or mop), fabricated from the following:

    a. Stainless Steel: 300 grade, 050-inch thick.

5. Options and fasteners: Provide manufacturer's designated fastener type as specified in the Hardware Sets. Provide countersunk screw holes.
6. Manufacturers:

    a. Rockwood (RO).

2.17 DOOR STOPS AND HOLDERS

A. General: Door stops and holders to be of type and design as specified below or in the Hardware Sets.

B. Door Stops and Bumpers: ANSI/BHMA A156.16, Grade 1 door stops and wall bumpers. Provide wall bumpers, either convex or concave types with anchorage as indicated, unless floor or other types of door stops are specified in Hardware Sets. Do not mount floor stops where they will impede traffic. Where floor or wall bumpers are not appropriate, provide overhead type stops and holders.

1. Manufacturers:

    a. Rockwood (RO).

C. Overhead Door Stops and Holders: ANSI/BHMA A156.8, Grade 1 Certified Products Directory (CPD) listed overhead stops and holders to be surface or concealed types as indicated in Hardware Sets. Track, slide, arm and jamb bracket to be constructed of extruded bronze and shock absorber spring of heavy tempered steel. Provide non-handed design with mounting brackets as required for proper operation and function.

1. Manufacturers:

    a. Norton Rixson (RF).

2.18 ARCHITECTURAL SEALS

A. General: Thresholds, weatherstripping, and gasket seals to be of type and design as specified below or in the Hardware Sets. Provide continuous weatherstrip gasketing on exterior doors and

provide smoke, light, or sound gasketing on interior doors where indicated. At exterior applications provide non-corrosive fasteners and elsewhere where indicated.

B. Smoke Labeled Gasketing: Assemblies complying with NFPA 105 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for smoke control ratings indicated, based on testing according to UL 1784.

1. Provide smoke labeled perimeter gasketing at all smoke labeled openings.

C. Fire Labeled Gasketing: Assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to UL-10C.

1. Provide intumescent seals as indicated to meet UL10C Standard for Positive Pressure Fire Tests of Door Assemblies, and NFPA 252, Standard Methods of Fire Tests of Door Assemblies.

D. Sound-Rated Gasketing: Assemblies that are listed and labeled by a testing and inspecting agency, for sound ratings indicated.

E. Replaceable Seal Strips: Provide only those units where resilient or flexible seal strips are easily replaceable and readily available from stocks maintained by manufacturer.

F. Manufacturers:

1. Pemko (PE).

2.19 ELECTRONIC ACCESSORIES

A. Door Position Switches: Door position magnetic reed contact switches specifically designed for use in commercial door applications. On recessed models the contact and magnetic housing snap-lock into a 1" diameter hole. Surface mounted models include wide gap distance design complete with armored flex cabling. Provide SPDT, N/O switches with optional Rare Earth Magnet installation on steel doors with flush top channels.

1. Manufacturers:

a. Securitron (SU) - DPS Series.

B. Intelligent Switching Power Supplies: Provide power supplies with single, dual or multi-voltage configurations at 12 and/or 24VDC. Power Supply shall have battery backup function with an integrated battery charging circuit. The power supply shall have a standard, integrated Fire Alarm Interface (FAI). The power supply shall provide capability for secondary voltage, power distribution, direct lock control and network monitoring through add on modules. The power supply shall be expandable up to 16 individually protected outputs. Output modules shall

provide individually protected, continuous outputs and/or individually protected, relay controlled outputs. Network modules shall provide remote monitoring functions such as status reporting, fault reporting and information logging.

1. Manufacturers:

    a. Securitron (SU) - AQL Series.

2.20 FABRICATION

A. Fasteners: Provide door hardware manufactured to comply with published templates generally prepared for machine, wood, and sheet metal screws. Provide screws according to manufacturers recognized installation standards for application intended.

2.21 FINISHES

A. Standard: Designations used in the Hardware Sets and elsewhere indicate hardware finishes complying with ANSI/BHMA A156.18, including coordination with traditional U.S. finishes indicated by certain manufacturers for their products.

B. Provide quality of finish, including thickness of plating or coating (if any), composition, hardness, and other qualities complying with manufacturer's standards, but in no case less than specified by referenced standards for the applicable units of hardware

C. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine scheduled openings, with Installer present, for compliance with requirements for installation tolerances, labeled fire door assembly construction, wall and floor construction, and other conditions affecting performance.

B. Notify architect of any discrepancies or conflicts between the door schedule, door types, drawings and scheduled hardware. Proceed only after such discrepancies or conflicts have been resolved in writing.

3.2 PREPARATION

A. Hollow Metal Doors and Frames: Comply with ANSI/DHI A115 series.

B. Wood Doors: Comply with ANSI/DHI A115-W series.

3.3 INSTALLATION

A. Install each item of mechanical and electromechanical hardware and access control equipment to comply with manufacturer's written instructions and according to specifications.

1. Installers are to be trained and certified by the manufacturer on the proper installation and adjustment of fire, life safety, and security products including: hanging devices; locking devices; closing devices; and seals.

B. Mounting Heights: Mount door hardware units at heights indicated in following applicable publications, unless specifically indicated or required to comply with governing regulations:

1. Standard Steel Doors and Frames: DHI's "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames."
2. DHI TDH-007-20: Installation Guide for Doors and Hardware.
3. Where indicated to comply with accessibility requirements, comply with ANSI A117.1 "Accessibility Guidelines for Buildings and Facilities."
4. Provide blocking in drywall partitions where wall stops or other wall mounted hardware is located.

C. Retrofitting: Install door hardware to comply with manufacturer's published templates and written instructions. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work specified in Division 9 Sections. Do not install surface-mounted items until finishes have been completed on substrates involved.

D. Thresholds: Set thresholds for exterior and acoustical doors in full bed of sealant complying with requirements specified in Division 7 Section "Joint Sealants."

E. Storage: Provide a secure lock up for hardware delivered to the project but not yet installed. Control the handling and installation of hardware items so that the completion of the work will not be delayed by hardware losses before and after installation.

3.4 FIELD QUALITY CONTROL

A. Field Inspection (Punch Report): Reference Division 01 Sections “Closeout Procedures”. Produce project punch report for each installed door opening indicating compliance with approved submittals and verification hardware is properly installed, operating and adjusted. Include list of items to be completed and corrected, indicating the reasons or deficiencies causing the Work to be incomplete or rejected.

1. Organization of List: Include separate Door Opening and Deficiencies and Corrective Action Lists organized by Mark, Opening Remarks and Comments, and related Opening Images and Video Recordings.

3.5 ADJUSTING

A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.

3.6 CLEANING AND PROTECTION

A. Protect all hardware stored on construction site in a covered and dry place. Protect exposed hardware installed on doors during the construction phase. Install any and all hardware at the latest possible time frame.

B. Clean adjacent surfaces soiled by door hardware installation.

C. Clean operating items as necessary to restore proper finish. Provide final protection and maintain conditions that ensure door hardware is without damage or deterioration at time of owner occupancy.

3.7 DEMONSTRATION

A. Instruct Owner's maintenance personnel to adjust, operate, and maintain mechanical and electromechanical door hardware.

3.8 DOOR HARDWARE SETS

A. The hardware sets represent the design intent and direction of the owner and architect. They are a guideline only and should not be considered a detailed hardware schedule. Discrepancies, conflicting hardware and missing items should be brought to the attention of the architect with corrections made prior to the bidding process. Omitted items not included in a hardware set should be scheduled with the appropriate additional hardware required for proper application and functionality.

1. Quantities listed are for each pair of doors, or for each single door.
2. The supplier is responsible for handing and sizing all products.
3. Where multiple options for a piece of hardware are given in a single line item, the supplier shall provide the appropriate application for the opening.
4. At existing openings with new hardware the supplier shall field inspect existing conditions prior to the submittal stage to verify the specified hardware will work as required. Provide alternate solutions and proposals as needed.

B. Refer to Section 08 7101, Door Hardware Sets, for hardware sets.

END OF SECTION 087100

SECTION 08 7101 – DOOR HARDWARE SCHEDULE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section references specification sections relating to commercial door hardware for the following:

1. Swinging doors.
2. Sliding Doors.
3. Other doors to the extent indicated.

B. Commercial door hardware includes, but is not necessarily limited to, the following:

1. Mechanical door hardware.
2. Electromechanical and access control door hardware.
3. Electromechanical and access control door hardware power supplies, back-ups and surge protection.
4. Automatic operators.
5. Cylinders specified for doors in other sections.

C. Related Sections:

1. Division 08 Section “Door Hardware”.

D. Codes and References: Comply with the version year adopted by the Authority Having Jurisdiction.

1. ANSI A117.1 - Accessible and Usable Buildings and Facilities.
2. ICC/IBC - International Building Code.
3. NFPA 70 - National Electrical Code.
4. NFPA 80 - Fire Doors and Windows.
5. NFPA 101 - Life Safety Code.
6. NFPA 105 - Installation of Smoke Door Assemblies.
7. State Building Codes, Local Amendments.

E. Standards: Reference Related Sections for requirements regarding compliance with applicable industry standards.

1.3 SUBMITTALS

A. Product Data: Manufacturer's product data sheets including installation details, material descriptions, dimensions of individual components and profiles, operational descriptions and finishes.

B. Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing fabrication and assembly of door hardware, as well as procedures and diagrams. Coordinate the final Door Hardware Schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.

1. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule."

2. Organization: Organize the Door Hardware Schedule into door hardware sets indicating complete designations of every item required for each door or opening. Organize door hardware sets in same order as in the Door Hardware Sets at the end of Part 3. Submittals that do not follow the same format and order as the Door Hardware Sets will be rejected and subject to resubmission.

3. Content: Include the following information:

a. Type, style, function, size, label, hand, and finish of each door hardware item.
b. Manufacturer of each item.
c. Fastenings and other pertinent information.
d. Location of door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.
e. Explanation of abbreviations, symbols, and codes contained in schedule.
f. Mounting locations for door hardware.
g. Door and frame sizes and materials.

4. Submittal Sequence: Submit the final Door Hardware Schedule at earliest possible date, particularly where approval of the Door Hardware Schedule must precede fabrication of other work that is critical in the Project construction schedule. Include Product Data, Samples, Shop Drawings of other work affected by door hardware, and other information essential to the coordinated review of the Door Hardware Schedule.

C. Keying Schedule: Prepared under the supervision of the Owner, separate schedule detailing final keying instructions for locksets and cylinders in writing. Include keying system explanation, door numbers, key set symbols, hardware set numbers and special instructions. Owner to approve submitted keying schedule prior to the ordering of permanent cylinders.

D. Product Test Reports: Indicating compliance with cycle testing requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified independent testing agency.

E. Operating and Maintenance Manuals: Provide manufacturers operating and maintenance manuals for each item comprising the complete door hardware installation in quantity as required in Division 01, Closeout Submittals. The manual to include the name, address, and contact information of the manufacturers providing the hardware and their nearest service representatives. The final copies delivered after completion of the installation test to include "as built" modifications made during installation, checkout, and acceptance.

F. Warranties and Maintenance: Special warranties and maintenance agreements specified in the Related Sections.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Inventory door hardware on receipt and provide secure lock-up and shelving for door hardware delivered to Project site. Do not store electronic access control hardware, software or accessories at Project site without prior authorization.

B. Tag each item or package separately with identification related to the final Door Hardware Schedule, and include basic installation instructions with each item or package.

C. Deliver, as applicable, permanent keys, cylinders, cores, access control credentials, software and related accessories directly to Owner via registered mail or overnight package service. Instructions for delivery to the Owner shall be established at the "Keying Conference".

1.5 WARRANTY

A. General Warranty: Reference Division 01, General Requirements. Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

1.6 MAINTENANCE SERVICE

A. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.

PART 2 - PRODUCTS

2.1 SCHEDULED DOOR HARDWARE

A. Refer to "PART 3 – EXECUTION" for required specification sections.

PART 3 - EXECUTION

3.1 DOOR HARDWARE SETS

A. The door hardware sets represent the design intent and direction of the owner and architect. They are a guideline only and should not be considered a detailed hardware schedule. Discrepancies, conflicting hardware and missing items should be brought to the attention of the architect with corrections made prior to the bidding process. Omitted items not included in a hardware set should be scheduled with the appropriate additional hardware required for proper application and functionality.

1. Quantities listed are for each pair of doors, or for each single door.

2. The supplier is responsible for handing and sizing all products.

3. Where multiple options for a piece of hardware are given in a single line item, the supplier shall provide the appropriate application for the opening.

4. At existing openings with new hardware the supplier shall field inspect existing conditions prior to the submittal stage to verify the specified hardware will work as required. Provide alternate solutions and proposals as needed.

B. Products listed in the hardware sets shall be supplied by and in accordance with the requirements described in the specification section as noted for each item.

1. Section 08 71 00 – Door Hardware.

C. Manufacturer's Abbreviations:

1. MK - McKinney
2. PE - Pemko
3. SU - Securitron
4. RO - Rockwood
5. SA - SARGENT
6. AD - Adams Rite
7. MC - Medeco

8. RF - Rixson
9. NO - Norton
10. OT - Other

Hardware Sets

Set: 1.0

Doors: 1041B

1	Continuous Hinge	DFM-SLF-HD1 PT x Length Required		PE
1	Electric Power Transfer	EL-CEPT	613E	SU
1	Rim Exit Device, Dummy	LC 16 55 56 8810 FLW	US10BE	SA
2	Cylinder	Mececo SFIC cylinder (Type as required)	13	MC
1	Conc Overhead Stop	6-X36	613E	RF
1	Surface Closer	351 O/P10 (Arm to suit)	US10BE	SA
1	Drop Plate	As required	US10BE	SA
1	Blade Stop Spacer Kit	As required	US10BE	SA
1	Sweep	3452_NB x Length Required		PE
1	Threshold	273x224__FGT x Length Required		PE
1	ElectroLynx Harness - Frame	QC-C1500P		MK
1	ElectroLynx Harness - Door	QC-CXXX (Size as required)		MK
1	Card Reader	By Security Supplier		
1	Position Switch	DPS - M/W		SU
1	Power Supply	AQL4-R8E1 x Relays as Required		SU
1	Wiring Diagram	Elevation and Point to Point as Specified		OT

Notes: Perimeter seals by frame/door supplier.
Operational narrative: Authorized access by valid credential or key retracting latchbolt. Free egress. REX switch allows exit without alarm condition. Door position switches monitor open/closed status. Door remains latched and secure in event of power loss or fire alarm.

Set: 2.0

Doors: 1000B, 1102B

2	Continuous Hinge	DFM-SLF-HD1 PT x Length Required		PE

Notes: Perimeter and meeting seals by frame/door supplier.
Operational narrative: Authorized access by valid credential or key retracting latchbolts. Free egress. Hands free entry/egress by operator via switches - exterior switch only active after presentation of valid credential or when doors are manually or electrically dogged. REX switch allows exit without alarm condition. Door position switches monitor open/closed status. Door remains latched and secure in event of power loss or fire alarm.

END OF SECTION 08 7101

SECTION 08 8000 - GLAZING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Insulating glass units.

B. Glazing units.

C. Plastic films.

D. Laminated glass interlayers.

E. Glazing compounds.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 01 7419 – Construction Waste Management and Disposal.

C. Section 06 4100 - Architectural Wood Casework: Casework with requirements for glass shelves and glass display doors.

D. Section 07 9200 - Joint Sealants: Sealants for other than glazing purposes.

E. Section 08 1416 - Flush Wood Doors: Glazed lites in doors.

F. Section 08 4313 - Aluminum-Framed Storefronts: Glazing installed in storefront assembly.

G. Section 08 4413 - Glazed Aluminum Curtain Walls: Glazing installed in curtain wall assembly.

H. Section 08 6300 - Metal-Framed Skylights: Glazing furnished as part of skylight units.

I. Section 08 8300 - Mirrors.

J. Section 10 2800 - Toilet Accessories: Mirrors.

1.3 REFERENCE STANDARDS

A. 16 CFR 1201 - Safety Standard for Architectural Glazing Materials; Current Edition.

B. ANSI Z97.1 - American National Standard for Safety Glazing Materials Used in Buildings - Safety Performance Specifications and Methods of Test; 2015.

C. ASTM C864 - Standard Specification for Dense Elastomeric Compression Seal Gaskets, Setting Blocks, and Spacers; 2005 (Reapproved 2019).

D. ASTM C1036 - Standard Specification for Flat Glass; 2016.

E. ASTM C1048 - Standard Specification for Heat-Strengthened and Fully Tempered Flat Glass; 2018.

F. ASTM C1172 - Standard Specification for Laminated Architectural Flat Glass; 2014.

G. ASTM C1193 - Standard Guide for Use of Joint Sealants; 2016.

H. ASTM C1349 - Standard Specification for Architectural Flat Glass Clad Polycarbonate; 2017.

I. ASTM C1376 - Standard Specification for Pyrolytic and Vacuum Deposition Coatings on Flat Glass; 2015.

J. ASTM E1300 - Standard Practice for Determining Load Resistance of Glass in Buildings; 2016.

K. ASTM E2190 - Standard Specification for Insulating Glass Unit Performance and Evaluation; 2010.

L. GANA (GM) - GANA Glazing Manual; 2008.

M. GANA (SM) - GANA Sealant Manual; 2008.

N. GANA (LGRM) - Laminated Glazing Reference Manual; 2009.

O. ICC (IBC) - International Building Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

P. IGMA TB-3001 - Guidelines for Sloped Glazing; 2001.

Q. IGMA TM-3000 - North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial & Residential Use; 1990 (2016).

R. ITS (DIR) - Directory of Listed Products; Current Edition.

S. NFRC 100 - Procedure for Determining Fenestration Product U-factors; 2017.

T. NFRC 200 - Procedure for Determining Fenestration Product Solar Heat Gain Coefficient and Visible Transmittance at Normal Incidence; 2014, with Errata (2017).

U. NFRC 300 - Test Method for Determining the Solar Optical Properties of Glazing Materials and Systems; 2017.

V. UL (DIR) - Online Certifications Directory; Current Edition.

W. UL 752 - Standard for Bullet-Resisting Equipment; Current Edition, Including All Revisions.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene a preinstallation meeting at least one week before starting work of this section; require attendance by each of the affected installers.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data on Insulating Glass Unit and Glazing Unit Glazing Types: Provide structural, physical and environmental characteristics, size limitations, special handling and installation requirements.

C. Product Data on Glazing Compounds and Accessories: Provide chemical, functional, and environmental characteristics, limitations, special application requirements, and identify available colors.

D. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

E. Samples: Submit two samples 6 by 6 inch in size of glass units.

F. Certificate: Certify that products of this section meet or exceed specified requirements.

G. Manufacturer's qualification statement.

H. Installer's qualification statement.

I. Warranty Documentation: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

1.6 QUALITY ASSURANCE

A. Perform Work in accordance with GANA (GM), GANA (SM), GANA (LGRM), and IGMA TM-3000 for glazing installation methods. Maintain one copy on site.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum ten years of documented experience.
   1. Provide certified glass products through ANSI accredited certifications that include plant audits and independent laboratory performance testing.
      a) Insulating Glass Certification Council (IGCC).
      b) Safety Glazing Certification Council (SGCC).

C. Installer Qualifications: Company specializing in performing work of the type specified and with at least five years documented experience.

1.7 FIELD CONDITIONS

A. Do not install glazing when ambient temperature is less than 40 degrees F.

B. Maintain minimum ambient temperature before, during and 24 hours after installation of glazing compounds.

1.8 WARRANTY

A. See Section 01 7800 - Closeout Submittals for additional warranty requirements.

B. Insulating Glass Units: Provide a five (5) year manufacturer warranty to include coverage for seal failure, interpane dusting or misting, including providing products to replace failed units.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Float Glass Manufacturers:
   1. Basis-of-Design: Vitro Architectural Glass (formerly PPG Glass): www.vitroglazings.com/#sle.
      a) Provide **Starphire UltraClear** glass for all exterior glazing units.

2.2 PERFORMANCE REQUIREMENTS - EXTERIOR GLAZING ASSEMBLIES

A. Provide type and thickness of exterior glazing assemblies to support assembly dead loads, and to withstand live loads caused by positive and negative wind pressure acting normal to plane of glass.
   1. Design Pressure: Calculated in accordance with applicable codes and design load data provided on the Drawings.
   2. Comply with ASTM E1300 for design load resistance of glass type, thickness, dimensions, and maximum lateral deflection of supported glass.
   3. Seismic Loads: Design and size glazing components to withstand seismic loads and sway displacement in accordance with the requirements of ____ code.
   4. Provide glass edge support system sufficiently stiff to limit the lateral deflection of supported glass edges to less than 1/175 of their lengths under specified design load.
   5. Glass thicknesses listed are minimum.

B. Weather-Resistive Barrier Seals: Provide completed assemblies that maintain continuity of building enclosure water-resistive barrier, vapor retarder, and/or air barrier.
   1. In conjunction with weather barrier related materials described in other sections, as follows:
      a) Air Barriers: See Section 07 2726.
   2. To utilize inner pane of multiple pane insulating glass units for continuity of vapor retarder and/or air barrier seal.
   3. To maintain a continuous vapor retarder and/or air barrier throughout glazed assembly from glass pane to heel bead of glazing sealant.

C. Thermal and Optical Performance: Provide exterior glazing products with performance properties as indicated. Performance properties are in accordance with manufacturer's published data as determined with the following procedures and/or test methods:
   1. Center of Glass U-Value: Comply with NFRC 100 using Lawrence Berkeley National Laboratory (LBNL) WINDOW 6.3 computer program.
   2. Center of Glass Solar Heat Gain Coefficient (SHGC): Comply with NFRC 200 using Lawrence Berkeley National Laboratory (LBNL) WINDOW 6.3 computer program.
   3. Solar Optical Properties: Comply with NFRC 300 test method.

2.3 GLASS MATERIALS

A. Float Glass: Provide float glass based glazing unless otherwise indicated.
   1. Annealed Type: ASTM C1036, Type I - Transparent Flat, Class 1 - Clear, Quality - Q3.
   2. Kind HS - Heat-Strengthened Type: Complies with ASTM C1048.
   3. Kind FT - Fully Tempered Type: Complies with ASTM C1048.
   4. Fully Tempered Safety Glass: Complies with ANSI Z97.1 or 16 CFR 1201 criteria for safety glazing used in hazardous locations.
   5. Impact Resistant Safety Glass: Complies with ANSI Z97.1 - Class B, or 16 CFR 1201 - Category I criteria.
   6. Thicknesses: As indicated; provide greater thickness as required for exterior glazing wind load design.

B. Laminated Glass: Float glass laminated in accordance with ASTM C1172.
   1. Laminated Safety Glass: Complies with ANSI Z97.1 - Class B or 16 CFR 1201 - Category I impact test requirements.
   2. Polyvinyl Butyral (PVB) Interlayer: 0.030 inch thick, minimum.

2.4 INSULATING GLASS UNITS

A. Insulating Glass Units: Types as indicated.
   1. Durability: Certified by an independent testing agency to comply with ASTM E2190.
   2. Coated Glass: Comply with requirements of ASTM C1376 for pyrolytic (hard-coat) or magnetic sputter vapor deposition (soft-coat) type coatings on flat glass; coated vision glass, Kind CV; coated overhead glass, Kind CO; or coated spandrel glass, Kind CS.
   3. Warm-Edge Spacers: Low-conductivity thermoplastic with desiccant warm-edge technology design.
      a) Spacer Width: As required for specified insulating glass unit.
   4. Spacer Color: As selected by Architect from manufacturer's standard range.
   5. Edge Seal:
      a) Dual-Sealed System: Provide polyisobutylene sealant as primary seal applied between spacer and glass panes, and silicone, polysulfide, or polyurethane sealant as secondary seal applied around perimeter.
   6. Color: Black.
   7. Purge interpane space with dry air, hermetically sealed.

B. **Type IG** Insulating Glass Units: Vision glass, double glazed.
   1. Applications: Exterior glazing unless otherwise indicated.
   2. Space between lites filled with argon.
   3. Outboard Lite: Heat-strengthened float glass, 1/4 inch thick, minimum.

a) Tint: Clear.
b) Coating: Low-E (passive type), on #2 surface, medium iron glass.
1) Basis-of-Design: **Vitro Architectural Glass**; **Solarban 72 on Acuity Glass.**

4. Inboard Lite: Heat-strengthened float glass, 1/4 inch thick, minimum.
a) Tint: Clear.
b) Uncoated, medium iron glass.
1) Basis-of-Design Glass: **Vitro Architectural Glass; Acuity Glass**.
5. Total Thickness: 1 inch.
6. Visible Light Transmittance (VLT): 67 percent, nominal.
7. Solar Heat Gain Coefficient (SHGC): 0.28, nominal.

C. **Type ICS** Insulating Glass Units: Spandrel glazing.
1. Applications: Exterior spandrel glazing unless otherwise indicated.
2. Outboard Lite: Same as Type **IG**.
3. Inboard Lite: Heat-strengthened float glass, 1/4 inch thick.
a) Opacifier: Elastomeric coating, on #4 surface.
4. Total Thickness: 1 inch.
5. Glazing Method: Dry glazing method, gasket glazing.

D. **Type IL** Insulating Glass Units: Vision glass, double glazed, laminated.
1. Application: As indicated on drawings.
2. Space between lites filled with air.
3. Laminated Outboard Lite: Annealed float glass, 1/4 inch thick.
a) (2) layers 1/8 inch glass with 0.030 inch polyvinyl butyral (PVB) interlayer.
b) Tint: Clear.
c) Coating: Low-E (passive type), on #4 surface. See Type IG for low-e coating product..
4. Laminated Inboard Lite, Outer Pane: Annealed float glass, 1/4 inch thick.
a) (2) layers 1/8 inch glass with 0.030 inch polyvinyl butyral (PVB) interlayer.
b) Tint: Clear.
5. Laminated Inboard Lite, Inner Pane: Annealed float glass, 3/16 inch thick, minimum.
a) Tint: Clear.
6. Outside-Inside Transmission Class (OITC) rating of 33, with special acoustical spacer and edge seal.
a) Nominally equivalent to STC 42.
7. Total Thickness: 1-1/16 inch.

E. **Type IT** Insulating Glass Units: Safety glazing (tempered).
1. Applications:
a) Glazed lites in exterior doors, where indicated on the drawings.
b) Glazed sidelights and panels next to doors.
c) Other locations required by applicable federal, state, and local codes and regulations.
d) Other locations indicated on drawings.
2. Space between lites filled with argon.
3. Glass Type: Same as Type IG except use fully tempered float glass for both outboard and inboard lites.
4. Tint: Clear.
5. Total Thickness: 1 inch.
6. Visible Light Transmittance (VLT): 67 percent, nominal.

7. Solar Heat Gain Coefficient (SHGC): 0.28, nominal.
8. Glazing Method: Dry glazing method, gasket glazing.

F. **Type ISG** -Insulating Glass Units: Vision glass, double glazed, security glazing.
1. Applications: As indicated on the drawings.
2. Space between lites filled with argon.
   a) Air Space Depth: 3/8 inch.
3. Outboard Lite: Fully tempered float glass, 1/4 inch thick, minimum.
   a) Coating: Low-E (passive type), on #2 surface. Same as Type IG.
4. Inboard Lite: Laminated security glass - see Monolithic Glazing, **Type SG-1**.
   a) Tint: Clear.
5. Total Thickness: 1-1/16 inch.
6. Visible Light Reflectance, Outside: 13 percent, nominal.
7. Glazing Method: Dry glazing method, gasket glazing.

G. **Type IFG**- Insulating Glass Units: Vision glass, double glazed, with vision-obscuring acid-etching ("frosting") treatment.
1. Applications: Exterior glazing at locations indicated on the drawings.
2. Same as Type **IG**, with addition of vision-obscuring acid etching on #3 surface.

H. **Type IFSG** -Insulating Glass Units: Vision glass, double glazed, security glazing, with vision-obscuring acid-etching ("frosting") treatment.
1. Applications: As indicated on the drawings.
2. Space between lites filled with argon.
   a) Air Space Depth: 3/8 inch.
3. Outboard Lite: Fully tempered float glass, 1/4 inch thick, minimum.
   a) Coating: Low-E (passive type), on #2 surface. Same as Type IG.
4. Inboard Lite: Laminated security glass - see Monolithic Glazing, **Type SG-1.**
   a) Tint: Clear.
   b) Pattern: Vision-obscuring acid etching on #3 surface.
5. Total Thickness: 1-1/16 inch.
6. Visible Light Reflectance, Outside: 13 percent, nominal.
7. Glazing Method: Dry glazing method, gasket glazing.

2.5 GLAZING UNITS

A. **Type TS** Monolithic Safety Glazing: Non-fire-rated.
1. Applications:
   a) Interior glazing unless otherwise indicated.
   b) Glazed lites in doors, except fire doors.
   c) Glazed sidelights to doors, except in fire-rated walls and partitions.
   d) Other locations required by applicable federal, state, and local codes and regulations.
   e) Other locations indicated on drawings.
2. Glass Type: Fully tempered safety glass as specified.
3. Tint: Clear.
4. Thickness: 1/4 inch, nominal.
5. Glazing Method: Dry glazing method, gasket glazing.

B. **Type FR** Fire-Protection-Rated Glazing: Type, thickness, and configuration of glazing that contains flame, smoke, and does not block radiant heat, as required to achieve fire-doors indicated fire-rating period of 90 minutes or less.
   1. Applications:
      a) Glazing in fire-rated door assembly.
      b) Glazing in fire-rated window assembly.
      c) Other locations as indicated on drawings.
   2. Provide products listed by ITS (DIR) or UL (DIR) and approved by authorities having jurisdiction.
   3. Glazing Method: As required for fire rating.
   4. Markings for Fire-Protection-Rated Glazing Assemblies: Provide permanent markings on fire-protection-rated glazing in compliance with ICC (IBC), local building code, and authorities having jurisdiction
   5. Manufacturers:
      a) SAFTIFIRST, a division of O'Keeffe's Inc; SuperLite X-45: www.safti.com/#sle.
      b) SCHOTT North America Inc; PYRAN Platinum: www.us.schott.com/#sle.
      c) Technical Glass Products; Firelite Plus: www.fireglass.com/#sle.
      d) Vetrotech North America; Contraflam: www.vetrotechusa.com/#sle.
      e) Substitutions: See Section 01 6000 - Product Requirements.

C. **Type LS-1** Safety Glazing: Laminated glass, 2-Ply.
   1. Applications: Interior, locations as indicated on drawings.
   2. STC Rating: 35.
   3. Thickness: 1/4 inch.
   4. Outer Lite: Tempered glass, 1/8 inch.
   5. Interlayer: Polyvinyl butyral (PVB), thickness as required to meet performance criteria.
   6. Interlayer, Inboard Side : Polyvinyl butyral (PVB), 0.045 inch, or as required to meet performance criteria.
   7. Inside Lite: Tempered glass, 1/8 inch.

D. **Type LS-2** Safety Glazing: Laminated glass, 2-Ply.
   1. Applications: Interior, locations as indicated on drawings.
   2. Tint: Clear.
   3. STC Rating: 40.
   4. Thickness: 5/8 inch.
   5. Outer Lite: Tempered glass, 3/16 inch.
   6. Interlayer: Polyvinyl butyral (PVB), 0.060 inch.
   7. Inside Lite: Tempered glass, 1/8 inch.

E. Type **LS-3** Safety Glazing: Laminated glass, 2-Ply. Double glazed.
   1. Applications: Interior, locations as indicated on drawings.
   2. STC Rating: 45.
   3. Thickness: 2-1/2 inches inch.
   4. Outer Lite: Laminated annealed float glass, (2) layers of 1/8 inch glass.
      a) Interlayer: Polyvinyl butyral (PVB), 0.030 inch, or thickness as required to meet performance criteria.
   5. Inside Lite: Tempered glass, 1/4 inch.

F. **Type LS-4** ClearSafety Glazing: Double glazed, laminated glass, 2-Ply.

1. Applications: Interior, locations as indicated on drawings.
2. STC Rating: 50.
3. Thickness: 3 inches.
4. Outer Lite: Laminated annealed float glass, (2) layers of 1/4 inch glass.
   a) Interlayer: Polyvinyl butyral (PVB), 0.060 inch, or as required to meet performance criteria.
5. Inside Lite: Tempered glass, 1/2 inch.

G. Type **SG-1** - Security-strengthened laminated glass.
1. Basis-of-Design Product: Advanced Impact Technologies; **School Guard Glass SG4.**
2. Construction: Proprietary assembly consisting of outer layers of glass bonded to a custom security strengthened core substrate.
   a) Characteristics:
      1) Maximum 4.1 lbs/square foot.
      2) 5aa-1 rated for a minimum of 6 minutes.
      3) Thickness: 7/16 inch.
      4) Glass clad on outboard and inboard surfaces.
      5) Optical haze 1.8% maximum.
      6) Interlayer Color: Clear

H. **Type BG** Glass-Clad Polycarbonate Security Glazing: Laminated glass and polycarbonate, multi-ply; ASTM C1349.
1. Applications: Locations as indicated on drawings.
2. Tint: Clear.
3. Thickness: As required to meet performance criteria. Nominal 1 inch - 1.25 inch.
4. Outer Lite(s): Tempered glass.
5. Interlayers: Polyvinyl butyral (PVB), thickness as required to meet performance criteria.
6. Inside Lite: Polycarbonate.
7. Performance Criteria:
   a) Bullet Resistance: Pass UL 752 tests in compliance with ballistic criteria level and weapon description indicated; Level 3 - .44 magnum lead semi-wadcutter gas checked.
8. Glazing Method: As required to meet performance criteria.
9. Products - provide one of the following or an equivalent product complying with the specified requirements:
   a) Oldcastle Building Envelope; **ArmorResist Plus**.
   b) PRL Glass Systems Inc; **PRL 3004**.
   c) Total Security Solutions; **Glass-Clad Polycarbonate 1" No Spall**.
   d) [Vetrotech Saint Gobain;] **Polygard Bullet.**

2.6 PLASTIC FILMS

A. Type DF1 - Decorative Plastic Film: Polyester type.
1. Application: Locations as indicated on drawings.
2. Manufacturers:
   a) Basis-of-Design Manufacturer: Solyx.
      1) Refer to Finish Product List on the drawings for specific product, pattern, and color.

2.7 LAMINATED GLASS INTERLAYERS

A. Sound Control Polyvinyl Butyral (PVB) Interlayer for Laminated Glazing:
   1. Functionality: Post-breakage safety, security, and sound control.
   2. Applications:
   3. Color: Clear.
   4. Thickness: As required for indicated performance of laminated glass application, or as indicated.
   5. Improvement in Sound Transmission: Up to 3 dB.
   6. Manufacturers:
      a) Eastman Chemical Company; Saflex Acoustic PVB Interlayer: www.saflex.com/#sle.
      b) Kuraray America, Inc; Trosifol Sound Control (SC): www.kuraray.us.com/#sle.
      c) Sekisui S-LEC America, LLC; S-LEC Sound Acoustic Film: www.s-lec.us/#sle.

2.8 ACCESSORIES

A. Setting Blocks: Silicone, with 80 to 90 Shore A durometer hardness; ASTM C864 Option II. Length of 0.1 inch for each square foot of glazing or minimum 4 inch by width of glazing rabbet space minus 1/16 inch by height to suit glazing method and pane weight and area.

B. Spacer Shims: Neoprene, 50 to 60 Shore A durometer hardness; ASTM C864 Option II. Continuous by one half the height of the glazing stop by thickness to suit application, self adhesive on one face.

C. Glazing Splines: Resilient silicone extruded shape to suit glazing channel retaining slot; ASTM C864 Option II; color black.

PART 3 EXECUTION

3.1 VERIFICATION OF CONDITIONS

A. Verify that openings for glazing are correctly sized and within tolerances, including those for size, squareness, and offsets at corners.

B. Verify that the minimum required face and edge clearances are being provided.

C. Verify that surfaces of glazing channels or recesses are clean, free of obstructions that may impede moisture movement, weeps are clear, and support framing is ready to receive glazing system.

D. Proceed with glazing system installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean contact surfaces with appropriate solvent and wipe dry within maximum of 24 hours before glazing. Remove coatings that are not tightly bonded to substrates.

B. Seal porous glazing channels or recesses with substrate compatible primer or sealer.

C. Prime surfaces scheduled to receive sealant where required for proper sealant adhesion.

3.3 INSTALLATION, GENERAL

A. Install glazing in compliance with written instructions of glass, gaskets, and other glazing material manufacturers, unless more stringent requirements are indicated, including those in glazing referenced standards.

B. Install glazing sealants in accordance with ASTM C1193, GANA (SM), and manufacturer's instructions.

C. Do not exceed edge pressures around perimeter of glass lites as stipulated by glass manufacturer.

D. Set glass lites of system with uniform pattern, draw, bow, and similar characteristics.

E. Set glass lites in proper orientation so that coatings face exterior or interior as indicated.

F. Prevent glass from contact with any contaminating substances that may be the result of construction operations such as, and not limited to the following; weld splatter, fire-safing, plastering, mortar droppings, and paint.

3.4 INSTALLATION - DRY GLAZING METHOD (GASKET GLAZING)

A. Application - Exterior and/or Interior Glazed: Set glazing infills from either the exterior or the interior of the building.

B. Place setting blocks at 1/4 points with edge block no more than 6 inch from corners.

C. Rest glazing on setting blocks and push against fixed stop with sufficient pressure on gasket to attain full contact.

D. Install removable stops without displacing glazing gasket; exert pressure for full continuous contact.

3.5 INSTALLATION - DRY GLAZING METHOD (TAPE AND GASKET SPLINE GLAZING)

A. Application - Exterior Glazed: Set glazing infills from the exterior of the building.

B. Cut glazing tape to length; install on glazing pane. Seal corners by butting tape and sealing junctions with butyl sealant.

C. Place setting blocks at 1/4 points with edge block no more than 6 inch from corners.

D. Rest glazing on setting blocks and push against fixed stop with sufficient pressure to attain full contact.

E. Install removable stops without displacing glazing spline. Exert pressure for full continuous contact.

F. Carefully trim protruding tape with knife.

3.6 INSTALLATION - PRESSURE GLAZED SYSTEMS

A. Application - Exterior Glazed: Set glazing infills from exterior side of building.

B. Place setting blocks at 1/4 points with edge block no more than 6 inch from corners.

C. Rest glazing on setting blocks and push against fixed stop with sufficient pressure on gasket to attain full contact.

D. Install pressure plates without displacing glazing gasket; exert pressure for full continuous contact.

E. Install cover plate.

3.7 INSTALLATION - PLASTIC FILM

A. Install plastic film with adhesive, applied in accordance with film manufacturer's instructions.

B. Place without air bubbles, creases or visible distortion.

C. Install film tight to perimeter of glass and carefully trim film with razor sharp knife. Provide 1/16 inch to 1/8 inch gap at perimeter of glazed panel unless otherwise required. Do not score the glass.

3.8 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements for additional requirements.

B. Monitor and report installation procedures and unacceptable conditions.

3.9 CLEANING

A. See Section 01 7419 - Construction Waste Management and Disposal, for additional requirements.

B. Remove excess glazing materials from finish surfaces immediately after application using solvents or cleaners recommended by manufacturers.

C. Remove nonpermanent labels immediately after glazing installation is complete.

D. Clean glass and adjacent surfaces after sealants are fully cured, in accordance with manufacturer's instructions.

E. Clean glass on both exposed surfaces not more than 4 days prior to Date of Substantial Completion in accordance with glass manufacturer's written recommendations.

3.10 PROTECTION

A. After installation, mark pane with an 'X' by using removable plastic tape or paste; do not mark heat absorbing or reflective glass units.

B. Protect installed glass from damage during construction.

C. Remove and replace glass that is damaged during construction period prior to Date of Substantial Completion.

END OF SECTION 08 8000

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 08 8300 - MIRRORS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Glass mirrors.
   1. Film-backed safety glass **MR1**.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 01 7419 – Construction Waste Management and Disposal.

C. Section 10 2800 - Toilet Accessories: Metal mirror frames.

1.3 REFERENCE STANDARDS

A. ASTM C1048 - Standard Specification for Heat-Strengthened and Fully Tempered Flat Glass; 2018.

B. ASTM C1193 - Standard Guide for Use of Joint Sealants; 2016.

C. GANA (GM) - GANA Glazing Manual; 2008.

D. GANA (SM) - GANA Sealant Manual; 2008.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data on Mirror Types: Submit structural, physical and environmental characteristics, size limitations, special handling and installation requirements.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Manufacturer's Certificate: Certify that mirrors, meets or exceeds specified requirements.

E. Warranty: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

1.5 QUALITY ASSURANCE

A. Perform Work in accordance with GANA (GM) and GANA (SM) for glazing installation methods.

B. Fabricate, store, transport, receive, install, and clean mirrors in accordance with manufacturer's recommendations.

1.6 FIELD CONDITIONS

A. Do not install mirrors when ambient temperature is less than 50 degrees F.

B. Maintain minimum ambient temperature before, during and 24 hours after installation of glazing compounds.

1.7 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective Work within a [one] year period after Date of Substantial Completion.

PART 2 PRODUCTS

2.1 MANUFACTURERS

2.2 MATERIALS

A. Mirror Design Criteria: Select materials and/or provide supports as required to limit mirror material deflection to 1/200, or to the flexure limit of glass, with full recovery of glazing materials, whichever is less.

B. Safety Glazing Products: For film-backed mirrors, provide products that comply with 16 CFR 1201, Category II.

C. Tempered Mirror Glass: ASTM C1048, FT, Condition A, mirror glazing quality for blemish requirements, tempered float glass before silver coating is applied; clear.
   1. Thickness: 1/4 inch.
   2. Size: As noted on drawings.

2.3 ACCESSORIES

A. Mirror Attachment Accessories: Stainless steel clips.

B. Mirror Adhesive: Silicone pre-polymer based, chemically compatible with mirror coating and wall substrate.

PART 3 EXECUTION

3.1 PREPARATION

A. Clean contact surfaces with solvent and wipe dry.

B. Seal porous mirror frames or recesses with substrate compatible primer or sealer. Prime surfaces scheduled to receive sealant.

C. Prepare installation in accordance with ASTM C1193 for solvent release sealants, and install sealant in accordance with manufacturer's instructions.

3.2 INSTALLATION

A. Install mirrors in accordance with manufacturer's recommendations.

B. Set mirrors plumb and level, and free of optical distortion.

C. Set mirrors with edge clearance free of surrounding construction including countertops or backsplashes.

D. Frameless Mirrors: Set mirrors in proper place with adhesive, applied in accordance with adhesive manufacturer's instructions.

3.3 CLEANING

A. Remove wet glazing materials from finish surfaces.

B. Remove labels after work is complete.

C. Clean mirrors and adjacent surfaces.

END OF SECTION 08 8300

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 08 9100 - LOUVERS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Louvers, frames, and accessories.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 01 7419 – Construction Waste Management and Disposal.

C. Section 07 9200 - Joint Sealants: Sealing joints between frames and adjacent construction.

1.3 REFERENCE STANDARDS

A. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix); 2017a.

B. AMCA 511 - Certified Ratings Program for Air Control Devices; 2010.

C. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.

D. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar; 2023.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data describing design characteristics, maximum recommended air velocity, design free area, materials and finishes.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Shop Drawings: Indicate louver layout plan and elevations, opening and clearance dimensions, and tolerances; head, jamb and sill details; blade configuration, screens, blank-off areas required, and frames. Show interface(s) with and connections to adjacent construction.

E. Test Reports: Independent agency reports showing compliance with specified performance criteria.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products of the type specified in this section, with minimum three years of documented experience.

1.6 WARRANTY

A. See Section 01 7800 - Closeout Submittals for additional warranty requirements.

B. Provide five year manufacturer's warranty against distortion, metal degradation, and connection failures of louver components.
   1. Finish: Include twenty year coverage against degradation of exterior finish.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Louvers:
   1. Basis-of-Design: Airolite Company, LLC**; K6744**: www.airolite.com/#sle.
   2. Construction Specialties, Inc: www.c-sgroup.com/#sle.
   3. Greenheck.
   4. Ruskin Company: www.ruskin.com/#sle.
   5. Substitutions: See Section 01 6000 - Product Requirements.

2.2 LOUVERS

A. Louvers: Factory fabricated and assembled, complete with frame, mullions, and accessories; AMCA Certified in accordance with AMCA 511.
   1. Wind Load Resistance: Design to resist positive and negative wind load of 25 psf without damage or permanent deformation.
   2. Drainable Blades: Continuous rain stop at front or rear of blade aligned with vertical gutter recessed into both jambs of frame.
   3. Screens: Provide insect screens at intake louvers and bird screens at exhaust louvers.

B. Stationary Louvers: Drainable blade, extruded aluminum construction, with intermediate mullions matching frame.
   1. Free Area: 50 percent, minimum.
   2. Blades: Drainable.
   3. Frame: 4 inches deep, channel profile; corner joints mitered and , with continuous recessed caulking channel each side.
   4. Aluminum Thickness: Frame 12 gauge, 0.0808 inch minimum; blades 12 gauge, 0.0808 inch minimum.

5. Aluminum Finish: Superior performing organic coatings; finished after fabrication.
6. Construction: Mechanically fastened.

2.3 MATERIALS

A. Extruded Aluminum: ASTM B221 (ASTM B221M).

B. Steel Sheet: Hot-dipped galvanized steel sheet, ASTM A653/A653M, with G90/Z275 coating.

C. Stainless Steel: ASTM A666, Type 304, soft temper, smooth surface, No. 4 brushed finish.

2.4 FINISHES

A. Superior Performing Organic Coatings System: Manufacturer's standard multi-coat superior performing organic coatings system complying with AAMA 2605, including at least 70 percent polyvinylidene fluoride (PVDF) resin, and at least 80 percent of aluminum extrusion and panels surfaces having minimum total dry film thickness (DFT) of 1.2 mils, 0.0012 inch.

B. Color: As indicated on Drawings.

2.5 ACCESSORIES

A. Blank-Off Panels: Aluminum face and back sheets, polyisocyanurate foam core, 1-1/2 inch thick, painted black on exterior side; provide where duct connected to louver is smaller than louver frame, sealing off louver area outside duct.

B. Screens: Frame of same material as louver, with reinforced corners; removable, screw attached; installed on inside face of louver frame.

C. Bird Screen: Interwoven wire mesh of steel, 14 gauge, 0.0641 inch diameter wire, 1/2 inch open weave, diagonal design.

D. Insect Screen: 18 x 16 size aluminum mesh.

E. Fasteners and Anchors: Stainless steel.

F. Sealant for Setting Sills and Sill Flashing: Non-curing butyl type.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that prepared openings and flashings are ready to receive this work and opening dimensions are as indicated on shop drawings.

3.2 INSTALLATION

A. Install louver assembly in accordance with manufacturer's instructions.

B. Coordinate with installation of flashings by others.

C. Install louvers level and plumb.

D. Set sill members and sill flashing in continuous bead of sealant.

E. Align louver assembly to ensure moisture shed from flashings and diversion of moisture to exterior.

F. Secure louver frames in openings with concealed fasteners.

G. Coordinate with installation of mechanical ductwork.

3.3 CLEANING

END OF SECTION 08 9100

SECTION 08 9200 - LOUVERED EQUIPMENT ENCLOSURES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Louvered screening panels for rooftop equipment enclosure.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 01 7419 – Construction Waste Management and Disposal.

1.3 REFERENCE STANDARDS

A. ASTM B209/B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate; 2021a.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Manufacturer's data sheets on each product to be used, including:
   1. Storage and handling requirements and recommendations.
   2. Installation methods.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Shop Drawings: Include plans, elevations, sections, and details of connections and bracing.
   1. Design Data: Include structural calculations indicating compliance with wind loading requirements, signed and sealed by the Professional Engineer supervising the connection design.

E. Delegated Design Submittal: As noted above at 1.4-C-1.

F. Manufacturer's qualification statement.

G. Designer's qualifications.

H. Specimen warranty.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products of the type specified in this section, with not less than ten years of documented experience.

B. Design louver attachment to structural steel support framing under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in the State in which the Project is located.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Comply with manufacturer's instructions for handling of screen products.

1.7 WARRANTY

A. See Section 01 7800 - Closeout Submittals for additional warranty requirements.

B. Aluminum Finish Warranty: Provide 10-year manufacturer warranty against excessive degradation of exterior finish. Include provision for replacement of units with excessive fading, chalking, or flaking. Complete forms in Owner's name and register with warrantor.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Louvered Equipment Enclosures:
1. Basis-of-Design: **PalmSHIELD Manufacturing**; **Palisade Fortress Alternating Louvers**.
2. Provide the basis of design or one of the following:
3. The Airolite Company; Type SV961: www. airolite.com.
4. Ametco; Saturn Louver: www.ametco.com.
5. Substitutions: See Section 01 6000 - Product Requirements.

2.2 APPLICATIONS

A. Screens for concealing equipment.

2.3 PERFORMANCE REQUIREMENTS

A. Wind Resistance: Design louvered enclosures to withstand positive and negative wind loading in accordance with applicable building code and design criteria indicate on Drawing S001.

2.4 VERTICAL LOUVERED EQUIPMENT ENCLOSURE

A. Louver fencing system consisting of vertical, fixed louver, modular fence panels fabricated with extruded aluminum framing bars and supported by extruded aluminum fence posts.
1. Louver Panel Height: As indicated on drawings.
2. Louver Panel Width: 6 feet maximum.

3. Openness: 33 percent.
4. Louver Components:
   a) Extended tubular louver planks for 1/8" overlapfor 100% direct visual screening.
   b) Fixed Louver Planks: 1" x 4" x 0.1250" 6063-T52 aluminum tubular planks
   c) Louver Vertical End Caps: 3 x ¼" 60601 -T6 aluminum bar framework supporting the louvers shall be welded. .
   d) Louver Top & Bottom Rail: 3" x 2" x 1/8" 6063-T6 aluminum tubular top and bottom rail.
   e) Louver Middle Rail (If required) 3" x 2" x 1/8" 6063-T6 aluminum tubular middle rail.
5. Support Components;
   a) Panel posts: 4 inch square by ¼ inch minimum extruded tubular aluminum sections with solid aluminum caps. Length as specified on the contract drawings.
6. Gates: Swing to exterior of enclosure, size as shown on drawings. All gate hardware to be furnished and installed by the louvered enclosure manufacturer.

B. Aluminum Finish: For aluminum fence panels, posts and gates.
   1. Polyester powder coating: Electrostatically applied colored polyester powder coating heat cured to chemically bond finish to metal substrate.
      a) Minimum hardness measured in accordance with ASTM D3363 2H.
      b) Direct impact resistance tested in accordance with ASTM D2794. Withstand 160 inch-pounds.
      c) Salt spray resistance tested in accordance with ASTM B117: No undercutting, rusting, or blistering after 500 hours in 5 percent salt spray at 95° F and 95% relative humidity after 1,000 hours, less than 3/16 inches undercutting.
      d) Weatherability tested in accordance with ASTM D822: No film failure and 88 percent gloss retention after 1 year exposure in South Florida with test panels tilted 45°.
   2. Color: Custom color, Color 3, match Architect's sample.

2.5 MATERIALS

A. Extruded Aluminum: ASTM B 221, Alloy 6063 – Temper T-6.

B. Sheet Aluminum: ASTM B211, Alloy 6063 – Temper T6.

C. Powder Coating Material Hardness: ASTM 3363 2H.

2.6 ACCESSORIES

A. Miscellaneous Trim: ASTM B209/B209M aluminum sheet, alloy 3005-H25 temper, or equivalent, formed to shapes indicated and finished to match other components.

B. Provide all fasteners and clip angles as required to secure louver screens to structural support framing. Refer to structural drawings for design and details of structural support framing.

C. Fasteners: Self-tapping stainless steel screws, as approved by manufacturer of equipment screens.

PART 3 EXECUTION

3.1 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

A. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.3 INSTALLATION

A. Install equipment screens in accordance with manufacturer's printed instructions and as indicated on shop drawings.

B. Form tight joints and fit exposed connections accurately.

C. Do not install bent, bowed or otherwise damaged panels. Remove damaged components from site and replace.

D. Provide necessary fastenings and anchors required for a complete installation, and install units plumb, level, and in proper alignment with adjacent work.

E. Gates: Install gates and adjust hardware for smooth operation.

3.4 PROTECTION

A. Protect installed products until completion of project.

B. Protect metal surfaces from corrosion or galvanic action by application of a heavy coating of bituminous paint on surfaces that will be in contact with concrete, masonry or dissimilar metals.

C. Touch-up, repair, or replace damaged products before Date of Substantial Completion.

END OF SECTION 08 9200

SECTION 09 0561 - COMMON WORK RESULTS FOR FLOORING PREPARATION

PART 1 GENERAL

1.1 SECTION INCLUDES

A. This section applies to floors identified in Contract Documents that are receiving the following types of floor coverings:
   1. Resilient tile and sheet.
   2. Carpet tile.
   3. Thin-set ceramic tile and stone tile.
   4. Fluid-applied flooring.
   5. Wood flooring.

B. Removal of existing floor coverings.

C. Preparation of new concrete floor slabs for installation of floor coverings.

D. Testing of concrete floor slabs for moisture, relative humidity, alkalinity (pH), and pull strength.

E. Remediation of concrete floor slabs due to unsatisfactory moisture or alkalinity (pH) conditions.
   1. Contractor shall perform all specified remediation of concrete floor slabs. If such remediation is indicated by testing agency's report and is due to a condition not under Contractor's control or could not have been predicted by examination prior to entering into the contract, a contract modification will be issued.

F. Patching compound.

G. MVE-control system.

1.2 RELATED REQUIREMENTS

A. Section 01 2100 - Allowances: Bid pricing for remediation treatments.

B. Section 01 2201 - Unit Prices: Bid pricing for remediation treatments.

C. Section 01 3566.42 - Sustainability Compliance Procedures.

D. Section 01 4000 - Quality Requirements: Additional requirements relating to testing agencies and testing.

E. Section 01 7419 - Construction Waste Management and Disposal: Handling of existing floor coverings removed.

F. Section 03 3000 - Cast-in-Place Concrete: Limitations on curing requirements for new concrete floor slabs.

1.3 PRICE AND PAYMENT PROCEDURES

A. Unit Prices: See Section 01 2201 - Unit Prices.

B. Unit Price for Alternate Flooring Adhesive: Do not include the cost of the alternate adhesive in the base bid; state on the bid form the unit price per square foot for using the alternate adhesive, in the event such remediation is required.
   1. Base the unit price on a total quantity calculated by assuming that only 50 percent of the flooring will require the alternate adhesive.

C. Unit Price for MVE Control System: Do not include the cost of the floor coating or underlayment in the base bid; state on the bid form the unit price per square foot for the floor coating or underlayment, installed, in the event such remediation is required.
   1. Base the unit price on the assumption that the floor area to be treated is primarily open, not divided into rooms and corridors.
   2. Base the unit price on a total quantity calculated by assuming that only 50 percent of the flooring will require the alternate adhesive.

1.4 DEFINITIONS

A. MVE: Moisture vapor emission.

1.5 REFERENCE STANDARDS

A. ASTM C109/C109M - Standard Test Method for Compressive Strength of Hydraulic Cement Mortars (Using 50 mm [2 in.] Cube Specimens); 2023.

B. ASTM C472 - Standard Test Methods for Physical Testing of Gypsum, Gypsum Plasters, and Gypsum Concrete; 2020.

C. ASTM D7234 - Standard Test Method for Pull-Off Adhesion Strength of Coatings on Concrete Using Portable Pull-Off Adhesion Testers; 2019.

D. ASTM F710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring; 2019, with Editorial Revision (2020).

E. ASTM F1869 - Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride; 2016a.

F. ASTM F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes; 2019a.

G. ASTM F3010 - Standard Practice for Two-Component Resin Based Membrane-Forming Moisture Mitigation Systems for Use Under Resilient Floor Coverings; 2018.

H. ICRI 310.2R - Selecting and Specifying Concrete Surface Preparation for Sealers, Coatings, Polymer Overlays, and Concrete Repair; 2013.

I. RFCI (RWP) - Recommended Work Practices for Removal of Resilient Floor Coverings; 2011.

1.6 ADMINISTRATIVE REQUIREMENTS

A. Coordinate scheduling of cleaning and testing, so that preliminary cleaning has been completed for at least 24 hours prior to testing.

1.7 SUBMITTALS

A. Visual Observation Report: For existing floor coverings to be removed.

B. Floor Covering and Adhesive Manufacturers' Product Literature: For each specific combination of substrate, floor covering, and adhesive to be used; showing:
   1. Moisture and alkalinity (pH) limits and test methods.
   2. Manufacturer's required bond/compatibility test procedure.

C. MVE-Control System Product Data: Manufacturer's published data on each product to be used for remediation.
   1. Manufacturer's qualification statement.
   2. Certificate: Manufacturer's certification of compatibility with types of flooring applied over remedial product.
   3. Manufacturer's installation instructions.

D. Testing Agency's Report:
   1. Description of areas tested; include floor plans and photographs if helpful.
   2. Summary of conditions encountered.
   3. Moisture and alkalinity (pH) test reports.
   4. Copies of specified test methods.
   5. Recommendations for remediation of unsatisfactory surfaces.
   6. Submit report directly to Owner.
   7. Submit report not more than two business days after conclusion of testing.

E. Pull strength test report.

F. Copy of RFCI (RWP).

1.8 QUALITY ASSURANCE

A. Manufacturer Qualifications: Provide products of this section manufactured by companies which have successfully specialized in production of this type of work for not less than 5 years.

B. MVE-Control (Remedial Material) System Installer Qualifications: An authorized representative who is factory trained and approved by manufacturer.

C. Moisture, alkalinity (pH), relative humidity, and pull strength testing will be performed by an independent testing agency employed and paid by Owner.

D. Testing Agency Qualifications: Independent testing agency experienced in the types of testing specified.
   1. Submit evidence of experience consisting of at least 3 test reports of the type required, with project Owner's project contact information.

E. Contractor's Responsibility Relating to Independent Agency Testing:
   1. Provide access for and cooperate with testing agency.
   2. Confirm date of start of testing at least 10 days prior to actual start.
   3. Allow at least 4 business days on site for testing agency activities.
   4. Achieve and maintain specified ambient conditions.
   5. Notify Owner when specified ambient conditions have been achieved and when testing will start.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, handle, and protect products in accordance with manufacturer's instructions and recommendations.

B. Deliver materials in manufacturer's packaging; include installation instructions.

C. Keep materials from freezing.

1.10 FIELD CONDITIONS

A. Ambient Limitations: Comply with MVE-control system manufacturer's written instructions for substrate and ambient temperatures, humidity, ventilation, and other conditions affecting system installation.
   1. Store system components in a temperature-controlled environment and protected from weather and at ambient temperature of not less than 50 deg F and not more than 85 deg F at least 48 hours before use.
   2. Maintain ambient temperature and relative humidity in installation areas within range recommended in writing by MVE-control system manufacturer, but not less than 65 deg F or more than 85 deg F and not less than 40 or more than 60 percent relative humidity, for 48 hours before installation, during installation, and for 48 hours after installation unless longer period is recommended in writing by manufacturer.
   3. Install MVE-control systems where concrete surface temperatures will remain a minimum of 5 deg F higher than the dew point for ambient temperature and relative humidity conditions in installation areas for 48 hours before installation, during installation, and for 48 hours after installation unless longer period is recommended in writing by manufacturer.

B. Maintain ambient temperature in spaces where concrete testing is being performed, and for at least 48 hours prior to testing, at not less than 65 degrees F or more than 85 degrees F.

C. Maintain relative humidity in spaces where concrete testing is being performed, and for at least 48 hours prior to testing, at not less than 40 percent and not more than 60 percent.

1.11 WARRANTY

A. Manufacturer's Special Warranty: Manufacturer and factory-trained Installer agree to repair or replace MVE-control system product that fails in materials or workmanship within specified warranty period.
   1. Warranty Period: 20 years from date of Substantial Completion.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. MVE-Control System Capabilities: Capable of suppressing MVE without failure where installed on concrete that exhibits the following conditions:
   1. Relative Humidity: Maximum 100 percent when tested according to ASTM F2170 using in situ probes.

2.2 MATERIALS

A. Patching Compound: Floor covering manufacturer's recommended product, suitable for conditions, and compatible with adhesive and floor covering. In the absence of any recommendation from flooring manufacturer, provide a product with the following characteristics:
   1. Cementitious moisture-, mildew-, and alkali-resistant compound, compatible with floor, floor covering, and floor covering adhesive, and capable of being feathered to nothing at edges.
   2. Compressive Strength: 3000 psi, minimum, after 28 days, when tested in accordance with ASTM C109/C109M or ASTM C472, whichever is appropriate.

B. Alternate Flooring Adhesive: Floor covering manufacturer's recommended product, suitable for the moisture and pH conditions present; low-VOC. In the absence of any recommendation from flooring manufacturer, provide a product recommended by adhesive manufacturer as suitable for substrate and floor covering and for conditions present.

C. MVE-Control System: Single- or multi-layer coating or coating/overlay combination intended by its manufacturer to resist water vapor transmission to degree sufficient to meet flooring manufacturer's emission limits, resistant to the level of alkalinity (pH) found, and suitable for adhesion of flooring without further treatment.
   1. Thickness: As required for application and in accordance with manufacturer's installation instructions.
   2. MVE-Control System: ASTM F3010-qualified, fluid-applied, two-component, epoxy-resin, membrane-forming system; formulated for application on concrete substrates to reduce MVER to level required for installation of floor coverings indicated and acceptable to manufacturers of floor covering products indicated, including adhesives.
      a) Cementitious Underlayment Primer: If required for subsequent installation of cementitious underlayment products, provide MVE-control system manufacturer's primer to ensure adhesion of products to MVE-control system.
      b) Cementitious Underlayment: If required to maintain manufacturer's warranty, provide MVE-control system manufacturer's gypsum cement-based underlayment.
   3. Products:
      a) Basis-of-Design: ARDEX Engineered Cements; ARDEX MC RAPID: www.ardexamericas.com.
      b) Substitutions: See Section 01 6000 - Product Requirements.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with installer present, for compliance with requirements for maximum moisture content, installation tolerances, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.
   1. Installation of system indicates acceptance of surfaces and conditions.

3.2 CONCRETE SLAB PREPARATION

A. Perform following operations in the order indicated:
   1. Prepare and clean substrates according to MVE-control system manufacturer's written instructions to ensure adhesion of system to concrete.
   2. Prior to proceeding, refer to ASTM F710 . Concrete subfloors must be sound. Solid and clean, and free of all oil, grease, dirt, curing compounds, any substance that might act as a bond breaker, including coatings and other substances that are incompatible with MVE-control system and that contain soap, wax, oil, or silicone, using mechanical methods recommended in writing by MVE-control system manufacturer. Do not use solvents.
   3. Provide concrete surface profile complying with ICRI 310.2R CSP 3 by shot blasting using apparatus that abrades the concrete surface with shot, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
   4. After shot blasting, repair damaged and deteriorated concrete according to MVE-control system manufacturer's written instructions.
   5. Protect substrate voids and joints to prevent resins from flowing into or leaking through them.
   6. Moisture vapor emission tests; 3 tests in the first 1000 square feet and one test in each additional 1000 square feet, unless otherwise indicated or required by flooring manufacturer.
   7. Internal relative humidity tests in accordance with ASTM F2170; in same locations as moisture vapor emission tests, unless otherwise indicated.
   8. Alkalinity (pH) tests in accordance with ASTM F710; in same locations as moisture vapor emission tests, unless otherwise indicated.
   9. Pull strength tests for MVE-coating system, underlayment, patching compounds, etc. in accordance with ASTM D7234.
   10. Specified remediation, if required.
   11. Fill surface depressions and irregularities with patching and leveling materials.
   12. Fill surface cracks, grooves, control joints, and other nonmoving joints with crack-filling material.
   13. Allow concrete to dry, undisturbed, for period recommended in writing by MVE-control system manufacturer after surface preparation, but not less than 24 hours.
   14. Before installing MVE-control systems, broom sweep and vacuum prepared concrete.
   15. Pull strength test.
   16. Protection.

3.3 REMOVAL OF EXISTING FLOOR COVERINGS

A. Comply with local, State, and federal regulations and recommendations of RFCI (RWP), as applicable to floor covering being removed.

B. Dispose of removed materials in accordance with local, State, and federal regulations and as specified.

3.4 MOISTURE VAPOR EMISSION TESTING

A. Where the floor covering manufacturer's requirements conflict with either the referenced test method or this specification, comply with the manufacturer's requirements.

B. Where this specification conflicts with the referenced test method, comply with the requirements of this section.

C. Test in accordance with ASTM F1869 and as follows.

D. Plastic sheet test and mat bond test may not be substituted for the specified ASTM test method, as those methods do not quantify the moisture content sufficiently.

E. In the event that test values exceed floor covering manufacturer's limits, perform remediation as indicated. In the absence of manufacturer limits, perform remediation if test values exceed 3 pounds per 1000 square feet per 24 hours.

F. Report: Report the information required by the test method.

3.5 INTERNAL RELATIVE HUMIDITY TESTING

A. Where the floor covering manufacturer's requirements conflict with either the referenced test method or this specification, comply with the manufacturer's requirements.

B. Where this specification conflicts with the referenced test method, comply with the requirements of this section.

C. Test in accordance with ASTM F2170 Procedure A and as follows.

D. Testing with electrical impedance or resistance apparatus may not be substituted for the specified ASTM test method, as the values determined are not comparable to the ASTM test values and do not quantify the moisture content sufficiently.

E. In the event that test values exceed floor covering manufacturer's limits, perform remediation as indicated. In the absence of manufacturer limits, perform remediation if any test value exceeds 75 percent relative humidity.

F. Report: Report the information required by the test method.

3.6 ALKALINITY TESTING

A. Where the floor covering manufacturer's requirements conflict with either the referenced test method or this specification, comply with the manufacturer's requirements.

B. In the event that test values exceed floor covering manufacturer's limits, perform remediation as indicated. In the absence of manufacturer limits, perform remediation if alkalinity (pH) test value is over 10.

3.7 ADHESIVE BOND AND COMPATIBILITY TESTING

A. Comply with requirements and recommendations of floor covering manufacturer.

3.8 PULL STRENGTH TESTING

A. Comply with requirements and recommendations of MVE-control system manufacturer.

3.9 APPLICATION OF MVE-CONTROL SYSTEM

A. Comply with requirements and recommendations of MVE-control system manufacturer.

END OF SECTION 09 0561

SECTION 09 2116 - GYPSUM BOARD ASSEMBLIES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Performance criteria for gypsum board assemblies.

B. Resilient sound isolation clips.

C. Acoustic insulation.

D. Cementitious backing board.

E. Gypsum wallboard.

F. Partition closure for junction of partition and exterior window wall.

G. Joint treatment and accessories.

H. Bullet resistant sheathing and wallboard.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 01 7419 – Construction Waste Management and Disposal.

C. Section 06 1000 - Rough Carpentry: Wood blocking product and execution requirements.

D. Section 07 8400 - Firestopping: Top-of-wall assemblies at fire rated walls.

E. Section 07 9200 - Joint Sealants: Sealing acoustical gaps in construction other than gypsum board or plaster work.

F. Section 09 2216 - Non-Structural Metal Framing.

1.3 REFERENCE STANDARDS

A. ANSI A118.9 - American National Standard Specifications for Test Methods and Specifications for Cementitious Backer Units; 1999 (Reaffirmed 2016).

B. ASTM C475/C475M - Standard Specification for Joint Compound and Joint Tape for Finishing Gypsum Board; 2017.

C. ASTM C665 - Standard Specification for Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction and Manufactured Housing; 2017.

D. {RSTEMP#800}ASTM C840 - Standard Specification for Application and Finishing of Gypsum Board{CH#59583}.

E. ASTM C954 - Standard Specification for Steel Drill Screws for the Application of Gypsum Panel Products or Metal Plaster Bases to Steel Studs From 0.033 in. (0.84 mm) to 0.112 in. (2.84 mm) in Thickness; 2018.

F. ASTM C1047 - Standard Specification for Accessories For Gypsum Wallboard and Gypsum Veneer Base; 2019.

G. ASTM C1288 - Standard Specification for Discrete Non-Asbestos Fiber-Cement Interior Substrate Sheets; 2017.

H. ASTM C1325 - Standard Specification for Fiber-Mat Reinforced Cementitious Backer Units; 2019.

I. ASTM C1396/C1396M - Standard Specification for Gypsum Board; 2017.

J. ASTM C1629/C1629M - Standard Classification for Abuse-Resistant Nondecorated Interior Gypsum Panel Products and Fiber-Reinforced Cement Panels; 2019.

K. ASTM C1658/C1658M - Standard Specification for Glass Mat Gypsum Panels; 2019, with Ediorial Revision (2020).

L. ASTM D3273 - Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber; 2021.

M. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2023d.

N. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements; 2009 (Reapproved 2016).

O. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials; 2022.

P. ASTM E413 - Classification for Rating Sound Insulation; 2016.

Q. GA-216 - Application and Finishing of Gypsum Panel Products; 2016.

R. GA-226 - Application of Gypsum Board to Form Curved Surfaces; Gypsum Association; 2016.

S. UL 752 - Standard for Bullet-Resisting Equipment; Current Edition, Including All Revisions.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate the installation of gypsum board assemblies with size, location, and installation of service utilities.

B. Preinstallation Meeting: Conduct a preinstallation meeting one week prior to the start of the work of this section; require attendance by all affected installers.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data on gypsum board, accessories, and joint finishing system.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Shop Drawings: Indicate special details associated with fireproofing and acoustic seals.

E. Installer's Qualification Statement.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing work of the type specified and with at least five years of documented experience.

1.7 DELIVERY, STORAGE, AND HANDLING

A. See Section 01 7419 - Construction Waste Management and Disposal for packaging waste requirements.

B. Store gypsum products and accessories indoors and keep above freezing. Elevate boards above floor, on nonwicking supports, in accordance with manufacturer's recommendations.

PART 2 PRODUCTS

2.1 GYPSUM BOARD ASSEMBLIES

A. Provide completed assemblies complying with ASTM C840 and GA-216.
   1. See PART 3 for finishing requirements.

B. Interior Partitions: Provide completed assemblies with the following characteristics:
   1. Acoustic Attenuation: As indicated on the drawings.
   2. Deflection: L/240 unless otherwise noted or required by finish material ie tile walls L/360.
   3. Fire Rating: As indicated on the drawings.
   4. Acoustic Attenuation: STC of 45-49 calculated in accordance with ASTM E413, based on tests conducted in accordance with ASTM E90.

C. Shaft Walls at HVAC Shafts: Provide completed assemblies with the following characteristics:

1. Air Pressure Within Shaft: Sustained loads of 5 lbf/sq ft with maximum mid-span deflection of L/240. Walls with tile finish shall be L/360
2. Acoustic Attenuation: STC of 35-39 calculated in accordance with ASTM E413, based on tests conducted in accordance with ASTM E90.

D. Fire Rated Assemblies: Provide completed assemblies with the following characteristics:
1. Fire Rated Partitions: As indicated on the drawings.

2.2 METAL FRAMING MATERIALS

A. Nonstructural Steel Framing for Application of Gypsum Board: See Section 09 2216.

B. Structural Steel Framing for Application of Gypsum Board: See Section 05 4000.

C. Resilient Sound Isolation Clips: Steel resilient clips with molded rubber isolators, attaches to framing; improves noise isolation performance of wall and floor-ceiling assemblies.
1. Products:
a) Basis of Design: **Kinetics Noise Control; IsoMax**.
b) PAC International, Inc; RSIC-1: www.pac-intl.com.
c) Pliteq; GenieClip RST: www.pliteq.com.

2.3 BOARD MATERIALS

A. Manufacturers - Gypsum-Based Board:
1. American Gypsum Company: www.americangypsum.com.
2. CertainTeed Corporation: www.certainteed.com.
3. Georgia-Pacific Gypsum: https://buildgp.com.
4. National Gypsum Company; https://nationalgypsum.com.
5. USG Corporation; www.usg.com/content/usgcom/en.html.
6. Substitutions: See Section 01 6000 - Product Requirements.

B. Gypsum Wallboard: Paper-faced gypsum panels as defined in ASTM C1396/C1396M; sizes to minimize joints in place; ends square cut.
1. Application: Use for vertical surfaces and ceilings, unless otherwise indicated.
2. Glass mat faced gypsum panels, as defined in ASTM C1658/C1658M, suitable for paint finish, of the same core type and thickness may be substituted for paper-faced board.
3. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.
a) Mold resistant board is required at all locations.
4. At Assemblies Indicated with Fire-Rating: Use type required by indicated tested assembly; if no tested assembly is indicated, use Type X board, UL or WH listed.
5. Thickness:
a) Vertical Surfaces: 5/8 inch.
b) Ceilings: 1/2 inch.
c) Multi-Layer Assemblies: Thicknesses as indicated on drawings.
6. Mold-Resistant, Paper-Faced Products:
a) American Gypsum Company; M-Bloc Type X: www.americangypsum.com.
b) Georgia-Pacific Gypsum; ToughRock Fireguard X Mold-Guard: https://buildgp.com.
c) National Gypsum Company; Gold Bond XP Gypsum Board: www.nationalgypsum.com.

C. Impact/Abuse Resistant Wallboard:
   1. Application: High-traffic areas indicated.
   2. Surface Abrasion: Level 3, minimum, when tested in accordance with ASTM C1629/C1629M.
   3. Indentation: Level 1, minimum, when tested in accordance with ASTM C1629/C1629M.
   4. Soft Body Impact: Level 3, minimum, when tested in accordance with ASTM C1629/C1629M.
   5. Hard Body Impact: Level 2, minimum, when tested in accordance with ASTM C1629/C1629M.
   6. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.
   7. Type: Fire resistance rated Type X, UL or WH listed.
   8. Thickness: 5/8 inch.
   9. Edges: Tapered.
   10. Paper-Faced Products:
      a) American Gypsum Company; M-Bloc IR Type X: www.americangypsum.com.
      b) CertainTeed Corporation; Extreme Impact Resistant Drywall with M2Tech: www.certainteed.com.
      c) National Gypsum Company; Gold Bond Hi-Impact XP Gypsum Board: www.nationalgypsum.com.
      d) USG Corporation; USG Sheetrock Brand Mold Tough VHI Firecode X Panels: www.usg.com.

D. Tile Backing Board For Wet Areas: One of the following products:
   1. Application: Vertical surfaces behind tile in wet areas including toilet room plumbing fixture walls.
   2. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.
   3. ANSI Cement-Based Board: Non-gypsum-based; aggregated Portland cement panels with glass fiber mesh embedded in front and back surfaces complying with ANSI A118.9 or ASTM C1325.
      a) Thickness: 1/2 inch.
      b) Products:
         1) Custom Building Products; _____: www.custombuildingproducts.com.
         2) National Gypsum Company; PermaBase Cement Board: https://nationalgypsum.com.
         3) USG Corporation; Durock Brand Cement Board: www.usg.com.
         4) Substitutions: See Section 01 6000 - Product Requirements.
   4. ASTM Cement-Based Board: Non-gypsum-based, cementitious board complying with ASTM C1288.
      a) Thickness: 1/2 inch.
      b) Products:
         1) James Hardie Building Products, Inc; HardieBacker: www.jameshardie.com.
         2) Substitutions: See Section 01 6000 - Product Requirements.

E. Tile Backing Board For Non-Wet Areas: Water-resistant gypsum backing board as defined in ASTM C1396/C1396M; sizes to minimum joints in place; ends square cut.
   1. Application: Vertical surfaces behind thinset tile, except in wet areas.
   2. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.
   3. At Assemblies Indicated with Fire-Rating: Use type required by indicated tested assembly; if no tested assembly is indicated, use Type X board, UL or WH listed.

4. Type X Thickness: 5/8 inch.
5. Edges: Tapered.
6. Products:
   a) CertainTeed Corporation; Diamondback 1/2" Tile Backer: www.certainteed.com.
   b) Georgia-Pacific Gypsum; DensShield Tile Backer: www.gpgypsum.com.
   c) National Gypsum Company; Gold Bond eXP Tile Backer: www.nationalgypsum.com.

F. Bullet Resistant Sheathing and Wallboard: Woven roving, multi-ply, ballistic grade fiberglass cloth with thermoset polyester resin; comply with UL 752 Level 1.

G. Shaftwall and Coreboard: Type X; 1 inch thick by 24 inches wide, beveled long edges, ends square cut.
1. Paper Faced Type: Gypsum shaftliner board or gypsum coreboard as defined ASTM C1396/C1396M; water-resistant faces.
2. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.
3. Paper-Faced Products:
   a) American Gypsum Company; M-Bloc Shaft Liner: www.americangypsum.com.
   b) CertainTeed Corporation; M2Tech Type X Shaftliner: www.certainteed.com.
   c) Georgia-Pacific Gypsum; ToughRock Shaftliner: www.gpgypsum.com.
   d) National Gypsum Company; Gold Bond Fire-Shield Shaftliner XP: www.nationalgypsum.com.
   e) USG Corporation; Sheetrock Brand Gypsum Liner Panels 1 in. (25.4 mm) SLX: www.usg.com/#sle.
   f) USG Corporation; Sheetrock Brand Mold Tough Gypsum Liner Panels 1 in. (25.4 mm) SLX: www.usg.com/#sle.

2.4 GYPSUM BOARD ACCESSORIES

A. Partition Closures: Extruded aluminum partition closures, pre-assembled, spring-loaded, with continuous gasketing, to fit over window mullions and provide complte gap closure for vertical junctures of interior partition and window walls.
1. Basis-of-Design: **Mull it Over Products; 55 Classic**.
2. Aluminum Extrusion: 6063 T5 temper.
3. Acoustical Material: As specified.
4. Accessories:
   a) Snap covers to conceal fasteners.
   b) Compressible gaskets.
5. Finish: Powder coat paint finish, color to match exterior aluminum frames.

B. Acoustic Insulation: ASTM C665, Type I (blankets without membrane facing) produced by combining thermosetting resins with mineral fibers manufactured from glass, slag wool, or rock wool. Thickness: As indicated on the drawings.
1. Basis-of-Design Products: Subject to compliance with requirements, provide one of the following:
   a) Rockwool North America (ROXUL); ROXUL AFB: www.rockwool.com.
   b) Thermafiber, Inc.; Thermafiber SAFB: www.thermafiber.com.
2. Substitutions: See 01 6000 - Product Requirements.

C. Sound Isolation Tape: Elastomeric foam tape for sound decoupling.

1. Surface Burning Characteristics: Provide assemblies with flame spread index of 75 or less and smoke developed index of 450 or less, when tested in accordance with ASTM E84.
2. Tape Thickness: 1/4 inch.

D. Acoustical Sealant: As specified in Section 07 9200 - Joint Sealants.

E. Beads, Joint Accessories, and Other Trim: ASTM C1047, rigid plastic, galvanized steel, or rolled zinc, unless noted otherwise.
1. Rigid Corner Beads: Low profile, for 90 degree outside corners.
2. Expansion Joints:
a) Type: V-shaped PVC with tear away fins.

F. Joint Materials: ASTM C475/C475M and as recommended by gypsum board manufacturer for project conditions.
1. Paper Tape: 2 inch wide, creased paper tape for joints and corners, except as otherwise indicated.
2. Joint Compound: Drying type, vinyl-based, ready-mixed.

G. Screws for Fastening of Gypsum Panel Products to Steel Members from 0.033 to 0.112 inch in Thickness: ASTM C954; steel drill screws, corrosion resistant.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that project conditions are appropriate for work of this section to commence.

3.2 SHAFT WALL INSTALLATION

A. Shaft Wall Liner: Cut panels to accurate dimension and install sequentially between special friction studs.

3.3 ACOUSTIC ACCESSORIES INSTALLATION

A. Acoustic Insulation: Place tightly within spaces, around cut openings, behind and around electrical and mechanical items within partitions, and tight to items passing through partitions.

B. Sound Isolation Tape: Apply to vertical studs and top and bottom tracks/runners in accordance with manufacturer's instructions.

C. Acoustic Sealant: Install in accordance with manufacturer's instructions.

D. Resilient Sound Isolation Clips: Install in accordance with manufacturer's written instructions, at partition types indicated on drawings.

3.4 BOARD INSTALLATION

A. Comply with GA-216 and manufacturer's instructions. Install to minimize butt end joints, especially in highly visible locations.

B. Single-Layer Non-Rated: Install gypsum board parallel to framing, with ends and edges occurring over firm bearing.

C. Double-Layer Non-Rated: Use gypsum board for first layer, placed parallel to framing or furring members, with ends and edges occurring over firm bearing. Place second layer perpendicular to framing or furring members. Offset joints of second layer from joints of first layer.
   1. Fastening Methods: Fasten base layers and face layers separately to supports with screws.
   2. It is not necessary to tape joints of base layer(s) in multi-layer gypsum board wall assemblies.

D. Fire-Rated Construction: Install gypsum board in strict compliance with requirements of assembly listing.

E. Exposed Gypsum Board in Interior Wet Areas: Seal joints, cut edges, and holes with water-resistant sealant.

F. Cementitious Backing Board: Install over steel framing members where indicated, in accordance with ANSI A108/A118/A136.1 and manufacturer's instructions.

G. Installation on Metal Framing: Use screws for attachment of gypsum board.

H. Curved Surfaces: Apply gypsum board to curved substrates in accordance with GA-226.
   1. Install panels horizontally (perpendicular to supports) and unbroken, to extent possible, across curved surface plus 12 inch long straight sections at ends of curves and tangent to them.
   2. For double-layer construction, fasten base layer to studs with screws 16 inches o.c. Center gypsum board face layer over joints in base layer, and fasten to studs with screws spaced 12 inches o.c.

I. Bullet Resistant Sheathing and Wallboard:
   1. Install bullet-resistant sheathing according to manufacturer's written recommendations and with manufacturer-approved fasteners.
   2. Cover all joints between boards with a 4-inch strip of the same thickness material as the boards, centered on the joint.

3.5 INSTALLATION OF TRIM AND ACCESSORIES

A. Control Joints: Place control joints consistent with lines of building spaces and as indicated.
   1. Not more than 30 feet apart on walls and ceilings over 50 feet long.

B. Corner Beads: Install at external corners, using longest practical lengths.

C. Edge Trim: Install at locations where gypsum board abuts dissimilar materials.

3.6 JOINT TREATMENT

A. Paper Faced Gypsum Board: Use paper joint tape, embed with drying type joint compound and finish with drying type joint compound.

B. Finish gypsum board in accordance with levels defined in ASTM C840, as follows:
   1. Level 5: Walls and ceilings to receive semi-gloss or gloss paint finish and other areas specifically indicated.
   2. Level 4: Walls and ceilings to receive paint finish or wall coverings, unless otherwise indicated.
   3. Level 2: In utility areas, behind cabinetry, and on backing board to receive tile finish.
   4. Level 1: Fire rated wall areas above finished ceilings, whether or not accessible in the completed construction.

C. Tape, fill, and sand exposed joints, edges, and corners to produce smooth surface ready to receive finishes.
   1. Feather coats of joint compound so that camber is maximum 1/32 inch.
   2. Taping, filling, and sanding are not required at surfaces behind adhesive applied ceramic tile and fixed cabinetry.
   3. Taping, filling, and sanding are not required at base layer of double-layer applications.

D. Where Level 5 finish is indicated, spray apply high build drywall surfacer over entire surface after joints have been properly treated; achieve a flat and tool mark-free finish.

E. Fill and finish joints and corners of cementitious backing board as recommended by manufacturer.

3.7 TOLERANCES

A. Maximum Variation of Finished Gypsum Board Surface from True Flatness: 1/8 inch in 10 feet in any direction.

3.8 CLEANING

A. See Section 01 7000 - Execution and Closeout Requirements for additional requirements.

3.9 PROTECTION

A. Protect installed gypsum board assemblies from subsequent construction operations.

3.10 PROTECTION

A. Protect adjacent surfaces from drywall compound and promptly remove from floors and other non-drywall surfaces. Repair surfaces stained, marred, or otherwise damaged during drywall application.

B. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period

C. Remove and replace panels that are wet, moisture damaged, and mold damaged.
   1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.

2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

END OF SECTION 09 2116

SECTION 09 2216 - NON-STRUCTURAL METAL FRAMING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Metal partition, ceiling, and soffit framing.

B. Framing accessories.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 01 7419 – Construction Waste Management and Disposal.

C. Section 05 4000 - Cold-Formed Metal Framing: Structural load bearing metal stud framing and Exterior wall stud framing.

D. Section 05 5000 - Metal Fabrications: Metal fabrications attached to stud framing.

E. Section 06 1000 - Rough Carpentry: Wood blocking within stud framing.

F. Section 07 8400 - Firestopping: Sealing top-of-wall assemblies at fire rated walls.

G. Section 07 9200 - Joint Sealants: Sealing acoustical gaps in construction other than gypsum board or plaster work.

H. Section 08 3100 - Access Doors and Panels.

I. Section 09 2116 - Gypsum Board Assemblies: Gypsum wallboard for non-structural metal wall framing; acoustic insulation; sound isolation clips for partitions.

J. Section 09 2116 - Gypsum Board Assemblies: Execution requirements for anchors for attaching work of this section.

1.3 REFERENCE STANDARDS

A. AISI S220 - North American Standard for Cold-Formed Steel Framing - Nonstructural Members; 2015.

B. ASTM A641/A641M - Standard Specification for Zinc-Coated (Galvanized) Carbon Steel Wire; 2019.

C. ASTM A645/A645M - Standard Specification for Pressure Vessel Plates, 5% and 5-1/2% Nickel Alloy Steels, Specially Heat Treated; 2010 (Reapproved 2016).

D. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.

E. ASTM A1003/A1003M - Standard Specification for Steel Sheet, Carbon, Metallic- and Nonmetallic-Coated for Cold-Formed Framing Members; 2015.

F. ASTM C1007 - Standard Specification for Installation of Load Bearing (Transverse and Axial) Steel Studs and Related Accessories; 2020.

G. ASTM A780/A780M - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings; 2020.

H. ASTM C754 - Standard Specification for Installation of Steel Framing Members to Receive Screw-Attached Gypsum Panel Products; 2020.

I. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2023d.

J. ASTM D226/D226M - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing; 2017.

K. ASTM E1190 - Standard Test Methods for Strength of Power-Actuated Fasteners Installed in Structural Members; 2011.

L. ASTM E488/E488M - Standard Test Methods for Strength of Anchors in Concrete Elements; 2022.

M. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements; 2009 (Reapproved 2016).

N. ASTM E413 - Classification for Rating Sound Insulation; 2016.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Shop Drawings:
   1. Indicate prefabricated work, component details, stud layout, framed openings, anchorage to structure, acoustic details, type and location of fasteners, accessories, and items of other related work.
   2. Describe method for securing studs to tracks, splicing, and for blocking and reinforcement of framing connections.

C. Product Data: Provide data describing framing member materials and finish, product criteria, load charts, and limitations.

D. Product Data: Provide manufacturer's data on partition head to structure connectors, showing compliance with requirements.

E. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.

2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

F. Sustainable Design Submittal: Documentation of recycled content and location of manufacture.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing the work of this section with minimum five years documented experience and approved by manufacturer.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in original packaging or bundles bearing brand name and identification of manufacturer.

B. Store all materials inside, under cover, in a manner to keep them dry, protected from weather, surface contamination, corrosion and damage from construction traffic and other causes.

PART 2 PRODUCTS

2.1 FRAMING MATERIALS

A. Fire Rated Assemblies: Comply with applicable code and as indicated on drawings.

B. Loadbearing Studs: As specified in Section 05 4000.

C. Steel Sheet: ASTM A1003/A1003M, subject to the ductility limitations indicated in AISI S220.
   1. Structural Grade: As required to meet design criteria.
   2. Corrosion Protection Coating Designation: G60, or equivalent in accordance with AISI S220.

D. Non-Loadbearing Framing System Components: ASTM C645; galvanized sheet steel, of size and properties necessary to comply with ASTM C754 for the spacing indicated, with maximum deflection of wall framing of L/240 at 5 psf.
   1. Protective Coating: Coating with equivalent corrosion resistance of ASTM A653/A653M, G60 (Z180), hot-dip galvanized, unless otherwise indicated
   2. Deflection at tile walls L/360 at 5 psf.
   3. Studs: C shaped with flat or formed webs.
      a) Products:
         1) MarinoWARE; ViperStud Drywall Framing: www.marinoware.com/#sle.
         2) Substitutions: See Section 01 6000 - Product Requirements.
      b) Minimum Base-Metal Thickness: 0.0329 inch.
         1) No substitution of thinner base-metal thickness is permitted in locations where abuse/impact resistant gypsum wallboard is to be installed.

4. Paired Studs for Sound-Rated Assemblies: Engineered single-piece assemblies comprised of paired studs coupled by sound isolators, designed to replace conventional side-by-side, parallel, double-wall partition framing.
   a) Widths: As indicated on drawings.
   b) Products:
      1) MarinoWARE; SoundGuard Stud: www.marinoware.com/#sle.
      2) SCAFCO Corporation; SoundGuard Silent Steel Framing System: www.scafco.com/#sle.
      3) Substitutions: See Section 01 6000 - Product Requirements.
5. Runners: U shaped, sized to match studs.
6. Ceiling Channels: C shaped.
7. Furring: Hat-shaped sections, minimum depth of 7/8 inch.
   a) Minimum Base-Metal Thickness: 0.0329 inch.
8. Resilient Furring Channels: Single or double leg configuration; 1/2 inch channel depth.
   a) Products:
      1) ClarkDietrich; RC Deluxe Resilient Channel: www.clarkdietrich.com/#sle.
      2) Substitutions: See Section 01 6000 - Product Requirements.

E. Partition Head to Structure Connections: Provide track fastened to structure with legs of sufficient length to accommodate deflection, for friction fit of studs cut short and braced with continuous bridging on both sides.

F. Deflection and Firestop Track: Intumescent strip factory-applied to track flanges expands when exposed to heat or flames to provide a perimeter joint seal.

G. Sound Isolation Tape: Elastomeric foam tape for sound decoupling.
   1. Surface Burning Characteristics: Provide assemblies with flame spread index of 75 or less and smoke developed index of 450 or less, when tested in accordance with ASTM E84.
   2. Tape Thickness: 1/4 inch.

2.2 SUSPENSION SYSTEM COMPONETS

A. Tie Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper, 0.0625 inch diameter wire, or double strand of 0.0475 inch diameter wire.

B. Hanger Attachments to Concrete:
   1. Anchors: Fabricated from corrosion-resistant materials with holes or loops for attaching wire hangers and capable of sustaining, without failure, a load equal to 5 times that imposed by construction as determined by testing according to ASTM E488/E488M by an independent testing agency.
      a) Type: Postinstalled, expansion anchor.
   2. Powder-Actuated Fasteners: Suitable for application indicated, fabricated from corrosion-resistant materials with clips or other devices for attaching hangers of type indicated, and capable of sustaining, without failure, a load equal to 10 times that imposed by construction as determined by testing according to ASTM E1190 by an independent testing agency.

C. Wire Hangers: ASTM A641/A641M, Class 1 zinc coating, soft temper, 0.162 inch inch diameter.

D. Grid Suspension System for Ceilings: ASTM A645/A645M, direct-hung system composed of main beams and cross-furring members that interlock.

2.3 AUXILIARY MATERIALS

A. Isolation Strip at Exterior Walls: Provide one of the following:
   1. Asphalt-Saturated Organic Felt: ASTM D226/D226M, Type I (No. 15 asphalt felt), nonperforated.
   2. Foam Gasket: Adhesive-backed, closed-cell vinyl foam strips that allow fastener penetration without foam displacement, 1/8 inch thick, in width to suit steel stud size.

2.4 FABRICATION

A. Fabricate assemblies of framed sections to sizes and profiles required.

B. Fit, reinforce, and brace framing members to suit design requirements.

C. Fit and assemble in largest practical sections for delivery to site, ready for installation.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify that rough-in utilities are in proper location.

3.2 INSTALLATION OF STUD FRAMING

A. Comply with requirements of ASTM C1007.

B. Extend partition framing to structure where indicated and to ceiling in other locations.

C. Partitions Terminating at Ceiling: Attach ceiling runner securely to ceiling track in accordance with manufacturer's instructions.

D. Partitions Terminating at Structure: Attach top runner to structure, maintain clearance between top of studs and structure, and connect studs to track using specified mechanical devices in accordance with manufacturer's instructions; verify free movement of top of stud connections; do not leave studs unattached to track.

E. Align and secure top and bottom runners at 24 inches on center.

F. Where partition framing is subject to water on the floors during construction, provide a heavy coating of rust preventive paint, suitable for galvanized steel, on all surfaces of bottom runner tracks and the lower 3 inches of studs.
   1. Repair damaged and rusted areas of hot-dip galvanized coatings in accordance with ASTM A780/A780M.

G. At partitions indicated with an acoustic rating:

1. Provide components and install as required to produce STC ratings as indicated, based on published tests by manufacturer conducted in accordance with ASTM E90 with STC rating calculated in accordance with ASTM E413.
2. Place one bead of acoustic sealant between runners and substrate , studs and adjacent construction.
3. Place one bead of acoustic sealant between studs and adjacent vertical surfaces.
4. Sound Isolation Tape: Apply to vertical studs and top and bottom tracks/runners in accordance with manufacturer's instructions.

H. Fit runners under and above openings; secure intermediate studs to same spacing as wall studs.

I. Install studs vertically at spacing indicated on drawings.

J. Align stud web openings horizontally.

K. Secure studs to tracks using crimping method. Do not weld.

L. Stud splicing is not permissible.

M. Fabricate corners using a minimum of three studs.

N. Install double studs at wall openings, door and window jambs, not more than 2 inches from each side of openings.

O. Coordinate erection of studs with requirements of door frames; install supports and attachments.

P. Coordinate installation of bucks, anchors, and blocking with electrical, mechanical, and other work to be placed within or behind stud framing.

Q. Furring: Coordinate with sound isolation clip spacing and locations. Lap splices a minimum of 6 inches.

3.3 CEILING AND SOFFIT FRAMING

A. Comply with requirements of ASTM C754.

B. Install furring after work above ceiling or soffit is complete. Coordinate the location of hangers with other work.

C. Install furring independent of walls, columns, and above-ceiling work.
