07 7100 – Roof Specialties

07 7200 – Roof Accessories

07 8100 - Applied Fire Protection

07 8123 - Intumescent Fire Protection

07 8400 - Firestopping

07 9200 - Joint Sealants

07 9513 – Expansion Joint Cover Assemblies

DIVISION 08 -- OPENINGS

08 1113 - Hollow Metal Doors and Frames

08 1416 - Flush Wood Doors

08 3323 – Overhead Coiling Doors

08 3326 - Overhead Coiling Grilles

08 4313 - Aluminum-Framed Storefronts

08 4413 - Glazed Aluminum Curtain Walls

08 6300 - Metal-Framed Skylights

08 7100 – Door Hardware

08 7101 – Door Hardware Schedule

08 8000 – Glazing

08 8300 – Mirrors

08 9100 – Louvers

08 9200 – Louvered Equipment Enclosure

DIVISION 09 -- FINISHES

09 0561 - Common Work Results for Flooring Preparation

09 2116 - Gypsum Board Assemblies

09 2216 - Non-Structural Metal Framing

09 3000 - Tiling

09 5100 - Acoustical Ceilings

09 6429 – Wood Strip and Plank Flooring

09 6466 - Wood Athletic Flooring

09 6500 - Resilient Flooring

09 6566 - Resilient Athletic Flooring

09 6700 - Fluid-Applied Flooring

09 6813 - Tile Carpeting

09 7200 – Wall Coverings

09 7800 – Interior Wall Paneling

09 8300 – Acoustic Finishes

09 8416 – Fixed Sound Reflective Panels

09 8430 – Sound-Absorbing Wall and Ceiling Units

09 9123 - Interior Painting

DIVISION 10 -- SPECIALTIES

10 1100 - Visual Display Units

10 1416 – Plaques

10 1419 – Dimensional Letter Signage

10 1423 - Panel Signage

10 1453 – Traffic Signage [Landscape]

10 1453 – Traffic Signage [Civil]

10 1454 – Traffic Signage Removal and Relocation

10 1473 – Painted Signage

10 2113.19 - Plastic Toilet Compartments

10 2123 - Cubicle Curtains and Track

10 2800 - Toilet Accessories

10 4400 - Fire Protection Specialties

10 5113 - Metal Lockers

10 5502 – Mail Sorter

10 7516 – Ground-Set Flagpoles

DIVISION 11 -- EQUIPMENT

11 0610 – Stage Rigging and Curtains

11 3013 –Appliances

11 4000 – Foodservice Equipment

11 5400 – Art Education Equipment

11 5410 – Technology Education Equipment

11 6623 – Gymnasium Equipment

11 6643 – Interior Electronic Scoreboard

11 6833 – Athletic Field Equipment

11 7300 – Patient Care Equipment

DIVISION 12 -- FURNISHINGS

12 2401 – Window Shades

12 3553.19 – Wood Laboratory Casework

12 3600 – Countertops

12 6100 - Fixed Audience Seating

12 6613 – Telescoping Bleachers

12 9300 – Site Furnishings

DIVISION 13 -- SPECIAL CONSTRUCTION [NOT USED]

DIVISION 14 -- CONVEYING EQUIPMENT

DIVISION 21 -- FIRE SUPPRESSION

21 0400 – General Conditions for Fire Protection Trades

21 0516 - Expansion Fittings and Loops for Fire Suppression Piping

21 0548 - Vibration and Seismic Controls for Fire Suppression Piping and Equipment

21 1313 – Wet Pipe Sprinkler Systems

21 3000 – Fire Pumps

DIVISION 22 -- PLUMBING

22 0400 – General Conditions for Plumbing Trades

22 0516 - Expansion Fittings and Loops for Plumbing Piping

22 0517 - Sleeves and Sleeve Seals for Plumbing Piping

22 0519 - Meters and Gauges for Plumbing Piping

22 0523 – General Duty Valves for Plumbing Piping

22 0529 - Hangers and Supports for Plumbing Piping and Equipment

22 0548 - Vibration and Seismic Controls for Plumbing Piping and Equipment

22 0553 - Identification for Plumbing Piping and Equipment

22 0700 – Plumbing Insulation

22 1005 – Plumbing Piping

22 1123 – Fuel Gas Piping

22 1124 – Domestic Water Pumps

22 1500 – General Service Compressed Air Systems

22 3000 – Plumbing Equipment [Water Heaters]

22 4000 - Plumbing Fixtures and Specialties

DIVISION 23 -- HEATING, VENTILATING, AND AIR-CONDITIONING (HVAC)

23 0400 – General Conditions for Mechanical Trades

23 0516 - Expansion Fittings and Loops for HVAC Piping

23 0517 - Sleeves and Sleeve Seals for HVAC Piping

23 0523 – General Duty Valves for HVAC Piping

23 0529 - Hangers and Supports for HVAC Piping, Ductwork, and Equipment

23 0548 - Vibration and Seismic Controls for HVAC Piping and Equipment

23 0553 - Identification for HVAC Piping and Equipment

23 0593 - Testing, Adjusting, and Balancing for HVAC

23 0700 – HVAC Insulation

23 0900 - Instrumentation and Controls for HVAC

23 0993 - Sequence of Operations

23 2113 – Hydronic Piping

23 2114 – Hydronic Specialties

23 2123 – Hydronic Pumps

23 2500 – HVAC Water Treatment

23 3100 – HVAC Ducts and Casings

23 3300 – Air Duct Accessories

23 3400 – HVAC Fans

23 3600 – Air Terminal Units

23 3700 – Air Outlets and Inlets

23 5100 - Breechings, Chimneys, and Stacks

23 5239 – Fire-Tube Boilers

23 5700 - Heat Exchangers for HVAC

23 6411 – Packaged Water Chillers - Scroll

23 7413 – Modular Central-Station Air-handling Units

23 8126 - Split-System Air-Conditioners

23 8200 - Convection Heating and Cooling Units

DIVISION 25 -- INTEGRATED AUTOMATION [NOT USED]

DIVISION 26 -- ELECTRICAL

26 0400 - General Conditions for Electrical Trades

26 0503 - Equipment Wiring Connections

26 0519 - Electrical Power Conductors and Cables

26 0526 - Grounding and Bonding for Electrical Systems

26 0529 - Hangers and Supports for Electrical Systems

26 0533 - Raceway and Boxes for Electrical Systems

26 0534 - Floor Boxes for Electrical Systems

26 0536 - Cable Trays for Electrical Systems

26 0553 - Identification for Electrical Systems

26 0573 – Overcurrent Protective Device Coordination Study

26 0923 - Lighting Control Devices

26 2200 - Low-Voltage Transformers

26 2413 - Switchboards

26 2416 - Panelboards

26 2653 - Electric Vehicle Charging Equipment

26 2716 – Electrical Cabinets and Enclosures

32 9113 – Soil Preparation

32 9113.29 – Athletic Field Root Zone

32 9200 – Turf and Grasses

32 9219.22 – Athletic Field Seeding and Sodding

32 9300 - Plants

DIVISION 33 -- UTILITIES

33 0513 - Manholes and Catch basins

33 0514 - Breaking into Existing Manholes and Catch Basins

33 1113 – Ductile Iron Pipe and Fittings

33 1300 - Disinfection of Water Distribution Systems

33 1400 - Testing of Water Distribution Systems

33 3113 - Polyvinyl Chloride (PVC) Pipe and Fittings

33 3114 - Testing of Sanitary Sewer and Storm Drainage Systems

33 4100 – Storm Drainage

33 4113 - High Density Polyethylene Pipe and Fittings

33 4114 - Underground Warning Tape

33 4419 - Stormwater Treatment System

DIVISION 34 -- TRANSPORTATION

34 0000 – Transportation

34 4114 – Rectangular Rapid Flashing Beacon

34 4115 – LED School Radar Speed Display with Flashing Beacons

34 4117 – Pedestrian Push Button

34 7001 -Traffic Person

34 7002 – Maintenance and Protection of Traffic

DIVISION 40 -- PROCESS INTEGRATION [NOT USED]

DIVISION 46 -- WATER AND WASTEWATER EQUIPMENT [NOT USED]

END OF SECTION 00 0110

SECTION 003132 – GEOTECHNICAL DATA

PART 1 GENERAL

1.1 SUMMARY

A. For the preparation of Bidding Documents, Engineer has relied upon the following reports and tests of subsurface and latent physical conditions of the site. The location of all bore holes and test pits is shown on the Drawings.

1. Soil boring and test pit data (attached)

a. The subsurface data are not guaranteed as to accuracy or completeness, nor are they a part of the Contract Documents.

b. Bidders are cautioned that the subsurface data have been utilized for general design purposes only. No explicit or implicit representation is made as to the nature of the materials which may be encountered below the surface of the ground.

c. The making available of this subsurface data to Bidders is not intended to relieve them from their responsibility to familiarize themselves with the subsurface and other site conditions.

PART 2 PRODUCTS – NOT USED

PART 3 EXECUTION – NOT USED

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

GENERAL NOTES:

1. EXISTING CONDITIONS SHOWN BASED ON "PROPERTY / BOUNDARY & TOPOGRAPHIC SURVEY" BY MARTIN SURVEYING ASSOCIATES, LLC AND DATED MAY 22, 2023.
2. ELEVATIONS SHOWN REFERENCE NAVD88.
3. TIGHE & BOND EXPLORATION LOCATIONS WERE LAID OUT BY TIGHE & BOND REPRESENTATIVES USING A HANDHELD GPS. LOCATIONS SHOULD BE CONSIDERED APPROXIMATE.
4. ATANE BORINGS AND TEST PITS WERE LOCATED ON THIS PLAN BY OVERLAYING A "BORING AND TEST PIT LOCATION PLAN" ON THE BASE PLAN REFERENCED HEREON. THE LOCATIONS SHOULD BE CONSIDERED APPROXIMATE.
5. REFER TO BORING AND TEST PIT LOGS FOR DETAILED INFORMATION.

LEGEND:

T&B-B5	APPROXIMATE LOCATION OF BORING BY TIGHE & BOND
TP-101	APPROXIMATE LOCATION OF TEST PIT BY TIGHE & BOND

PROJECT

PRELIMINARY GEOTECHNICAL INVESTIGATION
Greenwich Public Schools – Central Middle School
9, Indian Rock Lane, Greenwich, CT 06830

Test Pit No: TP-02
Surface Elevation: ~ 50 Feet
Drilling Method: Trench Excavation
Sampling Method: Grab
Completion depth: 10.0 Feet BGS

Test Pit Subcontractor: J.J.K. Electric
Compact Excavators: Bobcat E35
Excavator Dig Depth in feet: 10’3”

Weather: Sunny, 84 F
Time Test Pit Started: 8:40 a.m.
Time Test Pit Ended: 9:27 a.m.

Date Test Pit Started: 08/12/2022
Date Test Pit Completed: 08/12/2022

In progress TP-02. – Short-term equilibrium groundwater level measured at approximately 6.5 feet below ground surfaces

Mixture of fine to coarse Sand, some Silt, some Gravel, and trace of cobbles

Trace of cobbles in mixture of sand and gravel

LOG OF TEST PIT – TP-03

PRELIMINARY GEOTECHNICAL INVESTIGATION
Greenwich Public Schools – Central Middle School
9, Indian Rock Lane, Greenwich, CT 06830

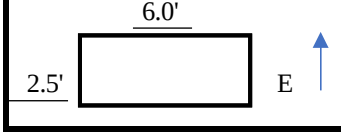
Test Pit No: TP-10
Surface Elevation: ~ 50 Feet
Drilling Method: Trench Excavation
Sampling Method: Grab
Completion depth: 10.0 Feet BGS

Test Pit Subcontractor: J.J.K. Electric
Compact Excavators: Bobcat E35
Excavator Dig Depth in feet: 10'3"

Weather: Sunny, 84 F
Time Test Pit Started: 1:35 p.m.
Time Test Pit Ended: 2:39 p.m.

Date Test Pit Started: 08/12/2022
Date Test Pit Completed: 08/12/2022



Depth Below Ground Surface (BGS) in feet	Strata Change & Water Level	Subsurface Description	Excavation Effort	Boulder Qty/Class	Comments
1	**TOPSOIL**	Light brown; SILT; dry; loose to medium dense; with some fine Sand, with little Organics.	E	None	
2	**Silty SAND**	Light brown; fine to medium SAND and SILT; dry; loose to medium dense; with some gravel, with some cobbles, with some boulders.	M	>4/C	
3					
4					
5.5					
6.5	**Silty SAND**	Dark gray and black; fine to coarse SAND; dry; loose to medium dense; with some silt, with some organic material.	E	None	
7					
8	**SILT & CLAY**	Gray; CLAYS of low to medium plasticity; dry to slightly moist; little sandy clays; little silty clays.	E	None	
9					
10					
11		Bottom of Exploration ±10.0'			
12					

Note 1: No groundwater encountered.

Note 2: Test pit backfilled with excavated soils and compacted with excavator bucket at ground surface.

INVITATION TO BID

RFI DUE DATE: **Friday, October 25, 2024**
RFI RESPONSES ISSUED BY: **Tuesday, October 29, 2024**
BID DUE DATE: **Tuesday, November 5, 2024**
TIME: 11:00 AM
Location: 290 Greenwich Ave. Greenwich CT 06830
PROJECT: Board of Education of The Town of Greenwich
New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT

ATTENTION ESTIMATING DEPARTMENT:
You are invited to submit your lump sum proposal for your work and materials in accordance with the plans and specifications for the work of your bid package (s) on the following project:

Board of Education of The Town of Greenwich
New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT

Bids will be received for the bid packages listed below and publicly opened shortly after the bid due date and time deadline at the location indicated. All Bids shall be submitted in a sealed envelope with hard copies in duplicate by mail or in person. The envelope shall be labeled by bid package number, GPS number and bid package description. Bidders submitting for multiple bid packages must submit each bid package sealed and labeled separately by bid package. Bids may be submitted at any time leading up to the specified due date and time, and will remain sealed until the specified due date and time. Turner Construction will be conducting a in person public bid opening at 290 Greenwich Ave, Greenwich CT. Bids received after the specified due date and time will not be allowed to be submitted.
The Form of Proposal and all attachments per the Bid Submission Checklist must included as part of the Bid Submission.

Project General Description:

The project includes approximate 133,500 SF New Central Middle School Project. The overall project consists of the construction of a new building including gymnasium, auditorium, cafeteria and classroom spaces on the north portion of the site where existing fields are currently located. The existing building will be occupied until the new facility is complete and will be demolished once construction is finished. Construction will take place in phases to allow the existing facility to remain functioning. The final site work will include access lanes, parking, athletic fields, and necessary drainage, utilities, and connections.

A list of preliminary trade packages for the project is as follows. If there are any changes to this trade package list, these will be identified in a future Bid Notice.

Requests For Information Procedure:

Any technical questions which bidders may have should be directed, in writing to the corresponding trade contact listed above. Questions received verbally will not be answered. All answers will be published by written Bid Notice. It is the responsibility of all bidders to verify that they are current with all bid notices issued with the blueprinter prior to bid submission and verify receipt of most current information. ***At a minimum bidders questions should include: specific drawing and or specification references and a detailed description of the issue***. **Bidder Question Deadline is October 25, 2024**

Turner

INVITATION TO BID

INSTRUCTIONS TO BIDDERS:

1) The following documentation **MUST** be submitted with each bid (2 copies of each) in order per below:
   a) Turner Form of Proposal
   b) Inititaled Scope of work sheet for your assigned Bid Package
   c) Non- Collusion Affidavit
   d) Bid Bond (if applicable)
   e) Turner Prequalification Response Form
   f) Curret DAS certificate (as applicable)
   g) Curret SBE/MBE Certificate (Set-aside Packages Only)
   h) OPM Ethics Form 1 or 6 as applicable

2) **BID OPENING:** Bids will be received for the bid packages listed below and publicly opened shortly after the bid due date and time deadline at the location indicated. All Bids shall be submitted in a sealed envelope with hard copies in duplicate by mail or in person. The envelope shall be labeled by bid package number, GPS number and bid package description. Bidders submitting for multiple bid packages must submit each bid package sealed and labeled separately by bid package. Bids may be submitted at any time leading up to the specified due date and time, and will remain sealed until the specified due date and time. Turner Construction will be conducting a in person public bid opening at 290 Greenwich Ave, Greenwich CT. Bids received after the specified due date and time will not be allowed to be submitted.

3) Each bidder shall utilize the specified manufacturers. Any requests for substitutions **(Including "or equals")** must be submitted in writing by the RFI procedure and deadline. Acceptance or rejection of a substitution will be issued to all bidders as an addendum.
   NOTE: Manufacturers listed in the specifications are not considered a substitution.

4) Each form of proposal contains a section for alternates and/or unit prices. **All alternate prices must be completed with a dollar value**. Blanks, not applicable (n/a), no effect, etc. in these portions of the form of proposal shall be construed to indicate that the particular alternate shall be performed without increase to the contract price as they relate to the scope of the trade package.

5) Unit prices which do not affect the work of your trade may be filled in "not applicable (n/a)". "Not applicable or blanks in these portions of the form of proposal shall be construed to indicate that the unit price is not applicable as they relate to the scope of the trade package.

6) The successful bidder will produce a current audited or reviewed financial statement included with the proposal, for Turner Construction Company's review, which will remain strictly confidential, **NO EXCEPTIONS.**

7) All lines on the bid form must be completed. All items which do not apply to the work in the specified bid package, must be filled in with a dollar amount (n/a or no bid is considered $0 and can be grounds for bid dismissal).

8) No Bidder may withdraw it's Bid within 90 days after the actual date of Bid Opening.

9) **All bid awards must be approved by Turner Construction Company and The Owner. All contractors shall be required to execute the Turner Construction Company's standard Form of Contract (Form 36) or Purchase Order Goods as solely determined by Turner Construction Company.**

10) Bid packages that the Construction Manager estimates are greater $1,000,000 are marked with (Yes) in "DAS Cert. Req'd" column above. For these packages, prospective bidders must be pre-qualified by State of Connecticut Department of Administrative Services (DAS) for the classification of work indicated at the time of Bid. The contractor shall hold a current "DAS" Contractor Prequalification Certificate" (not a predetermination letter) from the Department of Administrative Services of the State of Connecticut according to Connecticut General Statutes Section 4a-100, 4a-101 and 4b-91. Bidders shall submit with their bids, unless noted otherwise, a current "DAS Contractor Prequalification Certificate" along with a current "Update (bid) Statement". If you have any questions regarding these requirements contact the State of CT.DAS, at telephone number 860-713-5280 or visit their web site at www.das.state.ct.us.

11) There will be no extensions of the bid date, unless issued thru Bid Notification. No bids will be accepted after the designated time.

12) Each bid shall be signed and accompanied by a bid security payable to Turner Construction Company in the amount of ten (10%) percent of the bid proposal (for Bids in excess of $100,000) and shall be in the form of Bid Bond Only. Bid Bonds must use the Bond Form issued in the bid documents, issued by a Surety Company listed on the Current U.S. Department of Treasury's Federal Register and be licensed to underwrite bonds in the State of Connecticut.

13) If awarded the Contract, the Successful Bidder will be required to furnish a Performance Bond and a Labor and Materials Payment bond, each in an amount equal to 100% of the Contract Price, in favor of Turner Construction Company and the Town of Greenwich. The premium for these bonds shall be paid by the Contractor and be included in the contract price.

Turner

INVITATION TO BID

14) The contract for each Bid Package shall be awarded to the bidder who provides the best combination of price competitiveness, responsiveness and who is highly qualified for work of this project. The successful bidder shall possess the skill, financial strength, technical ability and integrity necessary to ensure the faithful performance of the work. Turner Construction Company and/or The Owner reserve the right to consider as unqualified any bidder that does not habitually perform, with its own forces, the major portion of the work involved in their respective Bid Package. No contract will be awarded to any bidder who is at the time of award not qualified under applicable regulations issued by the Secretary of Labor, United States Department of Labor or any applicable State and local laws and regulations.

15) All bids shall be based on a project classified as tax exempt for New Construction.

16) If awarded the contract, the successful bidder will be responsible to execute The STATE OF CONNECTICUT SUMMARY OF REVISED ETHICS AND AFFIDAVITS ACKNOWLEDGEMENT. This is required for a large State construction or procurement contract, pursuant to C.G.S. §§ 4a-60(b)(c), 4a-81(c) and 1-101qq and 4-252 and Executive Order 21-2.

17) Turner Construction Company and/or The Owner reserve the right to reject any and all bids, waive defects in same, or accept any bid deemed to be in the best interest of Turner Construction Company and/or The Owner.

Please Advise Via BUILDING CONNECTED Immediately If You Do Not Intend To Bid

Very truly yours,

TURNER CONSTRUCTION COMPANY
Joseph Phelan
Senior Procurement Agent

j. State of Connecticut Public Act 89-255, License Requirements for Subcontractors.

k. Turner Construction Company's TurnerTracker Manual dated December 2023

l. Turner Construction's Code of Conduct

m. The Turner Corporation Jobsite and Office Vandalism, Graffiti and Defacement of Property Policy dated September 15, 2022

n. **Standard Form of Agreement between Owner and CM AIA A133 for the *New Central Middle School Project.***

o. General Conditions from Owner Agreement AIA A201 for the *New Central Middle School Project*

p. Form 36 Public Work Rider dated 2022

q. UBE Subcontractor Commitment Plan

These documents are available for viewing at Turner Construction Company's office located at 6 Corporate Drive, Suite 820, Shelton, CT 06484 (contact the Purchasing Dept. @ 203-712-6070).****Note**:** By signing this agreement, the Subcontractor acknowledges that he has read these referenced documents and will unconditionally abide by its terms and conditions.

3. **Diversity:** Turner Construction believes that its success comes from the value it places on diversity. To Turner, Diversity is a way of life. In an ever-changing global marketplace, diversity is good for business. It positions us well to meet the needs of our evolving customer base, and it facilitates the exchange of new perspectives and ideas. When all employees feel they can achieve their full potential, quality and productivity thrive.

Turner's environment, culture, policies, programs, and practices reflect the high value we place on diversity. We have an unwavering commitment to:

a. Promote an open and supportive work environment;
b. Value diversity in all its forms;
c. Encourage the candid expression of ideas;
d. Allow a free exchange of points of view; and
e. Support each other in the pursuit of common goals

It is the expectation of Turner, and the responsibility of every Subcontractor and Vendor with whom we work, to respect, value, and display Diversity through their daily actions on this and every project which we perform together.

Turner has and shall enforce a **Zero-Tolerance Policy** with Subcontractors, Vendors and/or workers who violate this policy and Federal, State, and Local law as it applies.

Additional Provisions/Scope of Work

New Central Middle School
State Project No. 057-0114 N
Greenwich, CT
<<For All Bid Packages>>
Dated: 07.08.2024
Revised: 09.30.2024

THIS AGREEMENT INCLUDES AND ACKNOWLEDGES THE ADDITION OF THE FOLLOWING ARTICLE AS IF INSERTED IMMEDIATELY FOLLOWING THE ETHICS AND COMPLIANCE ARTICLE OF THIS AGREEMENT AS FOLLOWS:

"IT IS THE GOAL OF CONTRACTOR TO PROMOTE A WORK ENVIRONMENT AT THE PROJECT THAT IS FREE FROM HARASSMENT OF ANY KIND. CONTRACTOR HAS ZERO TOLERANCE FOR HARASSMENT, INCLUDING HARASSMENT ON THE BASIS OF RACE, SEX, GENDER, GENDER IDENTITY, GENDER EXPRESSION, TRANSGENDER STATUS, SEXUAL ORIENTATION, PREGNANCY, CHILDBIRTH AND OTHER PREGNANCY-RELATED CONDITIONS, COLOR, NATIONAL ORIGIN, ANCESTRY, AGE, RELIGIOUS CREED, CITIZENSHIP, MARITAL STATUS (INCLUDING REGISTERED DOMESTIC PARTNERS), PARENTAL STATUS, PHYSICAL DISABILITY, MENTAL DISABILITY, MEDICAL CONDITION, GENETIC INFORMATION, MILITARY OR VETERAN STATUS (INCLUDING PROTECTED VETERAN STATUS), OR ANY OTHER CHARACTERISTIC OR STATUS PROTECTED BY LAW. SUBCONTRACTOR AGREES TO BE BOUND BY THE POLICY STATEMENT ON HARASSMENT REFERENCED IN ARTICLE XXII BELOW, AND ANY VIOLATION OR SUSPECTED VIOLATION OF SUCH POLICY BY SUBCONTRACTOR OR ANY OF ITS OFFICERS, AGENTS, SERVANTS, EMPLOYEES, SUBCONTRACTORS OR SUPPLIERS SHALL BE CONSIDERED AS SUBCONTRACTOR'S FAILURE TO PERFORM ITS OBLIGATIONS UNDER THE TERMS AND CONDITIONS OF THIS AGREEMENT. SUCH FAILURE SHALL BE CONSIDERED ADEQUATE AND JUSTIFIABLE GROUNDS FOR CONTRACTOR TO EFFECTUATE ITS RIGHTS AND REMEDIES UNDER THE PROVISIONS OF ARTICLE XI OF THIS AGREEMENT. SUBCONTRACTOR SHALL ACTIVELY PROMOTE A HARASSMENT-FREE WORK ENVIRONMENT AMONG ITS OFFICERS, AGENTS, SERVANTS, EMPLOYEES, SUBCONTRACTORS, AND SUPPLIERS."

4. **SMALL AND MINORITY OWNED BUSINESS ENTERPRISES (SBE OR MBE):** The Owner and Turner Construction support and encourage SBE and MBE participation in this project.

   Aspirational inclusion goals for this project are 25% DAS-certified Small and Minority owned business, with 25% of that specific with DAS-certified Minority (6.25%). Successful prime bidders will be expected to make every effort to provide opportunities to MBE by actively soliciting bids for portions of the package prior to submitting a bid to Turner, and state on the Form of Proposal the specific intended percentage of awards to MBE firms. Where MBE utilization is intended but the specific subcontractor is still unknown, note a "TBD" and dollar amount on the plan. The Contracting Plan will be reviewed during the subcontractor closedown meeting. If you are unable to satisfy the package goals, be prepared to discuss your good efforts and plan for Set-Aside plan approval from CHRO.

   On a monthly basis, all subcontractors will be expected to report on the payment status of their subcontractors (sub tiers). The format of the MBE reporting tool is nearly identical to the Contracting Plan and is accessed through Textura, the monthly billing website. Failure to report on a monthly basis could result in a delay of payment.

   All Subcontractors noted as requiring CHRO SBE/MBE participation on the invitation to bid must follow required measures and submit appropriate Set-Aside plans to the Commission on Human Rights and Opportunities per the State of Connecticut requirements for approval.

5. Subcontractor acknowledges that this Subcontract is based on reasonable interpretation and within the confines of the documents / information/ specifications provided. This pricing shall be full compensation to the subcontractor for the complete work of the associated trade required at the Project. Subcontractor has included any necessary elaboration, missing segments, obvious requirements, etc. that would be necessary for a functioning system at the quality level established by the Contract Documents.

6. All pricing submitted by Subcontractors and Vendors, including pricing of change orders, alternates, and unit pricing, shall include all things necessary for a complete installation of the work. This includes, but is not limited to, all labor, materials, tools, bond premiums, shop drawings, allowances for waste, equipment, shipping costs, handling, storing, hoisting, rigging, distribution, protection of materials, fringe benefits, taxes, overhead, profit, applicable insurance, etc.. Pricing of RFP's and other proposed extras must be submitted within the time period as per Form 36, Article IX.

Additional Provisions/Scope of Work

New Central Middle School
State Project No. 057-0114 N
Greenwich, CT
<<For All Bid Packages>>
Dated: 07.08.2024
Revised: 09.30.2024

7. The allowable combined percentage mark-up for overhead and profit on direct costs of changes when work is performed by the Subcontractor shall be as noted in Form 36, Artcle IX.b or as governed by the General Contract. This same percentage shall be allowed for any changes performed by Sub-Subcontractors and five percent (5%) may be added by the Subcontractor to the Sub-Subcontractor's estimate. The total on all tiers shall not exceed fifteen percent (15%) in the aggregate. If this subcontractor subcontracts work to a subsidiary or parent company of itself, the total markup shall not exceed ten percent (10%).

8. **Subcontractor's Partial Waiver of Lien, Sub-Subcontractor/ Supplier Affidavit and Partial Release of Claims and Lien Waiver, and Contractors Sworn Statement** for the Project is hereby made part of this Contract Agreement. Refer to Progress Payment Procedures in Section C below.

9. The following are hourly wage rates for all tradesmen associated with this bid package for performing extra work on a time and material basis. These rates are fully loaded (including benefits, taxes (All Sales Taxes, Labor and Material as applicable for this project and type of work), applicable insurance, overhead and profit, bond costs (if Subcontractor has provided Surety Bonds), small tools, travel, parking, and any other costs associated with labor, etc.) and are in accordance with the prevailing wages of the trade having jurisdiction in areas where the work is performed. The wage rates that are agreed upon shall be valid for the life of the project unless union contract or union contract renewal indicates periodic adjustment OR unless annual wage rate adjustment is issued by the CT Department of Labor. ***NOTE: Further, no mark-up shall be allowed on the premium time portion of the wage rate.*** These wage rates including detail and supporting documentation shall be made available within 5 days of verbal award and shall be broken down sufficiently representing all of the items noted above. ***All rates are subject to thorough analysis and subject to reduction if deemed inaccurate by Turner Construction Company and/or The Owner. THESE RATES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

New Central Middle School
State Project No. 057-0114 N
Greenwich, CT
<<For All Bid Packages>>
Dated: 07.08.2024
Revised: 09.30.2024

10. Refer to Subcontract Article XV, Labor to be Employed, 2nd paragraph which refers to "Davis-Bacon Act or the Walsh-Healy Act, or other similar laws, statutes or requirements at a state or local level" and the requirement to "submit to Turner, as a condition for payment, certified payrolls in the form prescribed by any such laws, regulations or requirements". In compliance with this requirement, this project requires that this Subcontractor shall pay wages to workers in strict accordance with the laws of the State of Connecticut. This Subcontractor shall electronically submit payroll records, certified payroll, and related or required payroll documentation through www.LCPTracker.net hereinafter referred to as "certified payroll compliance system", within 14 days after the end of each payroll period. Failure to submit this information shall constitute a breach of this requirement. This requirement shall apply to [and Subcontractor shall be obligated to ensure that] all lower tier Subcontractors comply with these requirements. Access to the certified payroll compliance system and training will be facilitated by Turner Construction Company. Cost of access to the certified payroll compliance system shall be borne by Turner. Up to date payroll submissions are necessary to maintain monthly progress payments.

11. The successful bidder is responsible for procuring all documents required for construction purposes once awarded the contract. Neither Turner Construction Company nor The Owner will be furnishing construction documents to the successful bidder.

12. All bidders performing or subcontracting carpentry work (including resilient flooring and carpet) shall be union contractors and any work subcontracted shall utilize union labor. The successful bidder will furnish evidence of such.

B. Taxes, Bonds, Insurance, Etc.

1. If Turner Construction Company requires this Contractor to provide Payment and Performance Bonds, this Contractor shall provide Payment & Performance Bonds at the premium indicated by the Add Alternate on the Bid Form and the following shall apply:

   a) **100% Payment and Performance Bonds** are being furnished as part of this Agreement (Surety must be listed on the current issue of US Treasury Federal Register). Refer to Form 36, Article XV for Rider "A" requirements.

   b) The successful Subcontractor must be able to provide the Payment and Performance bonds on the Turner Bond Forms noted above.

   c). Bond costs shall be included in all Change Order Pricing however they shall be reconciled at the end of the project as substantiated by invoices from the Surety. Variations between cost charged for Bonds and actual invoices from Surety will result in downward adjustment if overcharged.

2. **Connecticut State Sales and Use Taxes are INCLUDED in this Subcontract Agreement as per the Project Status Noted:** ***(TAX EXEMPT STATUS)*** and shall be paid by this subcontractor in accordance with the Laws and Statutes of the State of Connecticut for a project with this Tax Status. Further, all applications for payment shall indicate on the G702 Application for Payment Form that "Connecticut State Sales and Use Tax is included".

3. **Non-Resident Subcontractor Requirements:**

   In accordance with State of Connecticut Department of Revenue Services SN 2012 (2) Special Notice 2011, Non-Resident Subcontractors must either provide a current State of Connecticut Department of Revenue Services "Nonresident Contractor Notice of Verified Status"

   OR

   In accordance with SN 2012(2), Turner must withhold 5% of the amount due to unverified subcontractor (e.g. 5% in addition to retainage) until the subcontractor obtains and furnishes Form AU-968 Certificate of Compliance from the Department of Revenue Services (DRS) at which time Turner will release monies to the extent approved.

   Further, when all work is completed under the contract and if unverified subcontractor has not submitted Form AU-967 (Request for Certificate of Compliance) within 90-days of the completion date, then Turner must remit the

State Project No. 057-0114 N
Greenwich, CT
<<For All Bid Packages>>
Dated: 07.08.2024
Revised: 09.30.2024

amount held back to the DRS on Form OS-114 on the first return due after the 90 day period following the completion of the Contract. In this event, Subcontractor explicitly agrees herein to execute a deduct Change Order for the amount held back.

Insurance:

4. **Additional Insured:** Turner Construction Company, The Turner Corporation, Owner, Town of Greenwich, the Greenwich Board of Education, the Central Middle School Building Committee, State of Connecticut, the Owner's Representative (Construction Solutions Group, LLC & Jones Lang LaSalle) and their respective, officers, agents, officials, employees, volunteers, boards and commissions shall be named as Additional Insured on all insurances required with exception of Workers Compensation and Professional Liability Coverages.

5. Additional insured coverage shall be provided on form CG 20 10 (11/85), or on forms providing equivalent coverage. In lieu of the aforementioned form, Turner will accept a combination of CG 20 10 (Ongoing Operations) and CG 20 37 (Products-Completed Operations). Coverage forms shall be submitted to Turner for review and approval.

6. **FOR BID PACKAGES EXCLUDED FROM CCIP (Demo & Abatement to be excluded from CCIP. All other subcontractors, only if alternate for traditional insurance is exercised)** Minimum insurance limits per occurrence of **$5,000,000** for General Liability, Statutory Workers Compensation, **$2,000,000** for Employers Liability, **$2,000,000** disease limit, **$2,000,000** disease-policy limit and **$2,000,000** for Automobile Liability – refer to Form 166 for additional requirements. Any subcontractor performing Structural Demolition to include $20,000,000 for General Liability limit.

7. **Pollution Liability Insurance: Subcontractor (for disposal of contaminated material)** shall provide a minimum insurance limit of **$5,000,000 /Occurrence and $10,000,000 Aggregate** for Pollution Liability (non-project specific) – refer to Form 36 for additional requirements. This subcontractor shall provide endorsements for contingent transportation and contingent non-owned disposal site.

    a. Lead Containing Material - **$5,000,000 /Occurrence and $10,000,000 Aggregate**

    b. Contaminated Materials- **$5,000,000 /Occurrence and $10,000,000 Aggregate**

    c. For all lead work performed by this Subcontractor, this Subcontractor shall be responsible to place all lead waste in a separate container provided by this Subcontractor, and remove this waste to a dumpster provided by this subcontractor and properly dispose of this material. This Subcontractor shall ensure that the hauler has the appropriate pollution liability insurance in accordance with the boilerplate additional provisions.

8. **CCIP FOR ALL OTHER BID PACKAGES**: In lieu of providing Commercial General Liability Insurance, Workers Compensation and Employer's Liability Insurance, **for on-site work activities**, directly through insurance carriers of the Subcontractors choosing, this Subcontractor shall enroll in Turner Construction Company's Contractor Controlled Insurance Program (CCIP). This Subcontractor shall provide all required information, including but not limited to, the Enrollment Application for the CCIP provided within the CCIP Insurance Manual and other forms as required in a timely manner as required. Failure to produce information for itself and the work of its secondary tier contractors will result in the lack of coverage in accordance with the insurance manual. Turner Construction Company pays the cost of the coverage provided under the CCIP directly, and **the related insurance premiums are NOT included in the Subcontract Price** in accordance with Article XXIV of Turner Construction Company's Standard Subcontract Agreement (Form 36S). ***Refer to the CCIP Insurance Manual for more complete coverage information, policy exclusions and additional Subcontractor Responsibilities.***

Additional Provisions/Scope of Work

New Central Middle School
State Project No. 057-0114 N
Greenwich, CT
<<For All Bid Packages>>
Dated: 07.08.2024
Revised: 09.30.2024

In addition to the insurance coverage provided under the CCIP, the following shall remain required to be provided by Subcontractor:

a. **Automobile Insurance:** A Minimum insurance limit per occurrence of **$2,000,000** for Automobile Liability insurance – refer to Form 36 for additional requirements.

Minimum insurance limits per occurrence of **$5,000,000** for General Liability and Statutory Coverage for Workers Compensation for **all off site work activities** – refer to Form 36 for additional requirements**.**

9. **Professional Liability Insurance:** For bid packages requiring stamped and certified design drawings, the Professional Engineer hired by this Subcontractor shall assume professional responsibility for any design work required in this Subcontract including but not limited Structural and Life Safety design components.

   a. This Subcontractor will include PRACTICE (OFFICE) PROFESSIONAL LIABILITY INSURANCE (E&0) for protection from claims arising out of the performance of any design or engineering services performed or furnished in connection with the Work caused by any negligent act error or omission for which Provider and/or the Provider's Architect(s) and/or Engineer(s) may become legally liable. If this subcontractor intends to have a lower tier subcontractor provide this insurance, this must be indicated with bid and prior to contract issuance and requires GM approval. Such professional liability insurance shall provide for coverage as follows:

   b. Limit of liability - **$3,000,000**

   c. Deductible Amount - Not more than **$50,000** (payable by the Subcontractor)

   d. Subcontractor agrees that he will maintain this Professional Liability coverage for **5 years** after substantial completion of the Project, will notify Turner of any changes in the policy in subsequent years and will ensure that the policy will not provide less limits or coverage than the current policy."

   e. Sixty (60) days prior written notice to Turner of cancellation of such insurance or any material change with respect thereof.

   f. Such professional liability insurance shall be in a form and from a company acceptable to Turner and policy shall be available for review by Turner as requested.

10. **Builders Risk Insurance Deductible: Turner Construction shall procure and maintain Property Insurance (Builders Risk). In the event that this Subcontractor is determined to be responsible for losses covered under this insurance, this Subcontractor shall bear and be responsible for the $10,000 deductible of each such occurrence.**

11. This Subcontractor hereby acknowledges that the Contract between Turner and the Owner provides that Turner shall become obligated to pay certain liquidated damages to the Owner in the event the Project is not completed in accordance with the time requirements set forth therein. Subcontractor hereby agrees, in addition to its other duties and obligations under this Agreement and not in limitation thereof, to indemnify and save harmless Turner Construction Company from any and all such penalties, including any loss, cost, expenses and/or legal fees and disbursements, incurred in connection therewith which Turner may become obligated to pay to the Owner by reason of, resulting from or otherwise caused by Subcontractor's failure to perform and prosecute its work in accordance with the terms of this Agreement and the Contract Documents.

Liquidated Damages shall be shall be $6,000 / Day for each day that Substantial Completion of the Work is delayed beyond Substantial Completion.

Subcontractor's Licenses:

12. This Subcontractor shall provide a **State of Connecticut Subcontractor's License** in accordance with The State of Connecticut Public Act 89-255 and Connecticut General Statutes Chapter 393c, Section 20-341gg. Furthermore, substantiating evidence must be forwarded to Turner Construction Company for new and renewal licensing, in the form of one of the following:

    a.) Copy of the actual Subcontractor's license.

    b.) Verification from The State of Connecticut that the license application has been received and is being processed (a copy of the actual license when received must be forwarded to Turner Construction Company).

    c.) Verification from the State of Connecticut stating that a Subcontractor's License is not required for your firm.

    GENERAL NOTE: No final payment or reduction in reserve or will be entertained until Turner Construction Company receives and verifies one of the above documents.

C. Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***<<Bid Package Name>> Work*** in accordance with the contract documents and as further enumerated herein:

1. Includes performing all the ***<<Bid Package Name>> Work*** in accordance with the Contract Documents and including but not limited to the following Specifications:

Division 0 – Bidding and Contract Requirements
Division 1 – General Requirements

See Section C.1 Trade Specific Scope of Work for Specifications List as per the Bid Package Breakdown

General Trade Requirements

2. This subcontractor has examined the Drawings and Specifications and any modifications necessary to conform to Code and/or good practice will be included at no additional cost.
3. This subcontractor represents that they are familiar with and have expertise in the performance of this work. Further, Subcontractor is cognizant of, and agrees to, the project requirement for premium quality consistent with a first class facility in accordance with the best practice of the trade.
4. Considering the Subcontractor's skills and knowledge of their specialty, it shall be their responsibility upon discovery to immediately notify Turner, in writing, of errors, omissions, discrepancies and non-compliance with applicable codes and regulations within the documents, or any work which will not fit or properly function if installed as indicated in the Contract Documents.
5. Each Subcontractor understands that Quality Control and Quality Assurance is a specific commitment and attitude, which is required during the implementation of the Work. The focus required to establish a first-class quality level by providing skilled supervision and by monitoring daily production quality are expected to be carried out during the execution of this Contract. With this commitment in mind, this Subcontractor shall cooperate and participate in the Project Specific Quality Program developed for this Project by Turner Construction's Project Team. This includes, but is not limited to the following:

    (a) At a minimum of 4-weeks prior to the start of Work, this Subcontractor shall furnish their own Subcontractor Project Specific Quality Program which shall be tailored specifically to the performance of Work on this project and include documented staff responsibility. This Subcontractor shall review this Program with Turner's Project Team and make any necessary adjustments prior to approval by Turner Construction. Turner reserves the right to approve or reject any Subcontractor Project Specific Quality Program that is not project specific and/or does not include sufficient detail to maintain a first-class quality level.

Additional Provisions/Scope of Work

New Central Middle School
State Project No. 057-0114 N
Greenwich, CT
<<For All Bid Packages>>
Dated: 07.08.2024
Revised: 09.30.2024

(b) This Subcontractor shall be responsible to attend, cooperate and participate in Pre-installation Meetings for Work items or Systems, also termed Definable Features of Work (DFOW), as determined by Turner Construction.

(c) This Subcontractor shall be responsible to coordinate and schedule First-Delivery Reviews with Turner.

(d) This Subcontractor shall include all mockups required by the Contract Documents and schedule / coordinate Mockup Reviews for the same. In addition, this Subcontractor shall include in-place mockups for DFOW's as determined by Turner Construction, including cooperation and coordination with other trades. This Subcontractor is responsible to schedule / coordinate First-Installation Reviews for the same.

(e) Non-Conformance and Deficiency Notifications will be issued throughout the performance of Work on this Project by Turner Construction, The Design Team, The Owner and their Consultants. This Subcontractor shall take immediate action and close all non-conformance items within 2-workdays following the date of notification. This Subcontractor shall coordinate and schedule Follow-up Inspections with Turner Construction prior to commencement of subsequent Work which may be affected by or will conceal such Work. In the case of repeat Work, this Subcontractor shall not proceed with such work until the Follow-up Inspection confirms that the non-conformance or deficiency has been corrected.

6. Each Subcontractor is expected to be experienced and familiar with the requirements and conditions of construction of similar buildings. One of these conditions is the necessary performance of "out of sequence" work. This terminology shall include "come-back", including but not necessarily limited to work that may be necessary for dirt chutes, plants, temporary wire and piping, protection, etc. "Sequence" work shall include phasing of the construction cycle to accommodate the installation of the work of all Subcontractors in a logical and orderly fashion, including all necessary temporary block outs, connections, framing, and supports as required for the work of others.

7. Subcontractor shall maintain a full-time superintendent at the jobsite during any time in which his employees or Subcontractors are involved on this project. This superintendent will be responsible to attend all coordination meetings as scheduled by the Construction Manager's Project Manager and have the authority to make decisions. This superintendent shall furthermore be equipped with a cellular phone for communication with Turner and other trades. In addition this superintendent shall maintain a full set of up to date drawings and specifications on site at all times.

8. This Subcontractor shall attend regularly scheduled job meetings. This Subcontractor will properly coordinate their work with other trades and will resolve coordination issues as required to ensure the completion of work in accordance with the Project Schedule. The work of Subcontractor shall be performed in a manner that does not impede or delay another Subcontractor in the performance of his work.

9. A principal of this Subcontractor shall be required to attend a monthly "Principal's Meeting" conducted by Turner Construction Company at the project site. This meeting is intended to cover current project-wide issues including scheduling and logistics.

Submittal Requirements

10. This project will utilize Procore for the submittal and RFI process. Subcontractors will be provided access and reasonable guidance for use of this site. All product data shall be submitted electronically. Hard copy shop drawings and product samples as required in the contract documents shall be submitted to the TCCo field office.

11. Key Personnel:

a.) Due from Subcontractor: Prior to the start of Subcontractor's start of Work

b.) Includes: list of key personnel with addresses and telephone numbers for emergency situations

12. Schedule of Submittals – Shop Drawings, Products Data, Samples, Etc:

a.) Due from Subcontractor: Within 10 working days of verbal award

Additional Provisions/Scope of Work

New Central Middle School
State Project No. 057-0114 N
Greenwich, CT
<<For All Bid Packages>>
Dated: 07.08.2024
Revised: 09.30.2024

b.) Includes: complete listing of all shop drawings, samples, manufacturer's data, certifications, warranties/guarantees, O & M Manuals, etc., required by the specifications to be submitted for review, along with the subcontractor's submission date for each item listed consistent with the Construction Schedule.

(i) Timing of Submittals: Submittals shall be provided allowing for sufficient time for review, approval, and delivery of materials in time as scheduled for this project, however, it remains the Subcontractors responsibility to ensure delivery of all material to the Jobsite to meet the schedule. The Architect will review these submittals on a priority basis. Subcontractors will be responsible for any delays to other Subcontractors as a result of delayed delivery of materials.

(ii) No substitutions or variations from the specified manufacturers will be allowed without written review and approval of both the Architect and Turner. Requests for substitutions must be submitted in writing as defined within the Division 1 specifications.

(iii) Shop drawings shall show all dimensions and clearances in coordination with other trades. All attachments must be designed and detailed on said shop drawings.

(iv) Mockups as required by any or all of the specification sections are included in this Agreement.

13. Schedule of Values:

a.) Due from Subcontractor: 30 working days prior to first application for payment

b.) Includes: Draft AIA G703 (or equal) broken down with individual line items for labor and material for each major component of the work, including values for Daily Cleaning and Safety and Protection, mobilization, submittals, punch list and closeout. This document shall be subject to review and approval by Turner.

14. Equipment Commissioning / Owner Training Required:

a.) Due from Subcontractor: Within 20 working days of verbal award where applicable. Source Blue providing Commissioning and Owner Training on equipment they furnished.

b.) Includes: A schedule of all equipment requiring commissioning and Owner training including at minimum equipment name (tag #), location, area served

15. Man-Loaded Schedule:

a.) Due from Subcontractor: Within 10 working days of verbal award

b.) Includes: Construction schedule for all of Subcontractor's activities that fits within the time frame allotted by the Construction Schedule. This schedule shall be updated monthly, submitted with the application of payment , shall reflect the actual progress achieved to date and shall incorporate any recovery program to maintain the original submitted schedule. The Subcontractor is responsible to meet the requirements of the overall Construction Schedule included in this Subcontract. This includes providing the appropriate resources, equipment, and resources.

16. List of proposed or anticipated Lower Tier Contractors & Vendors:

a.) Due from Subcontractor: 30 working days prior to first application for payment

b.) Includes: List of Proposed lower tier Contractors and Vendors.

17. Requests for Information shall be made on standard forms made available by Turner.

18. Daily Construction Reports, and Daily Safety Checklists

a.) Due from Subcontractor: by 9:30 a.m. of each workday for all work completed on the previous day. The Daily Construction Reports do not constitute notification to Turner of delays or provide any other notifications to Turner other than that represented below. DCRs shall be submitted by the Subcontractor Superintendent / Foreman utilizing the Procore Application Technology on a Smart Phone or Tablet for the Project.

b.) Includes:
(i) The number of employees at the site, broken down by trade

Additional Provisions/Scope of Work

New Central Middle School
State Project No. 057-0114 N
Greenwich, CT
<<For All Bid Packages>>
Dated: 07.08.2024
Revised: 09.30.2024

(ii) Indicate for each crew the classifications (i.e., foremen, journeymen, apprentices, etc.)
(iii) Indicate a count of minority and female employees
(iv) Include a description of the type of work being performed and the location
(v) Include a count of **TOWN/CITY** residents and **TOWN/CITY** resident apprentices
(vi) Failure to maintain these records on a daily basis may result in the delay in monthly requisition payments on a day for day basis.

19. All foreman must have electronic access to Procore site in the field via Ipad, Smart Phone, etc.

Schedule and Progress

20. The Subcontractor shall perform all out-of-sequence work, phasing of work and protection of work as required by the Logistics Plans and to maintain the schedule at no additional cost to the Owner or Turner Construction Company. No additional compensation will be considered for comeback work. Each subcontractor understands that the schedule drives the project and will cooperate with Turner in meeting the schedule.
21. All shutdowns and tie-ins for active MEP, Security and Data systems must be performed on off hours. Premium time is included for the performance of this Work. All off-hours work must be scheduled 24 hours in advance with Turner Construction Company.
22. Unless noted to the contrary within individual Additional Provisions / Scopes of Work (i.e. refer to Sections C.1 or above), Working hours for this Project are 7:00 a.m. to 3:30 p.m. All trades will work common eight-hour (8) days Monday through Friday. There will be a coffee break in the morning only at the assigned time of 9:00 a.m. All trades will celebrate the agreed upon Holidays specified. Any Subcontractor working beyond the normal hours of 7:00 a.m. to 3:30 p.m. must bear any added costs for providing temporary services such as electricity, and heat, and any personnel such as Shop Stewards, Turner Staff, or inspectors. The Subcontractor shall notify Turner 48 hours prior to their intention to work overtime to allow sufficient time for arrangement of any support services and/or personnel.

    a.) There will be no work on Saturdays or Sundays without direction and approval by Turner & the Owner. If work is performed on weekends, this subcontractor shall perform all work in accordance with the appropriate town ordinances.

    b.) all perform all work in accordance with the appropriate town ordinances.

Operations & Site Logistics

23. Permits: The General building permit will be obtained and paid for by others. The MEP subcontractors and any other subcontractors requiring a special permit will be required to pull their permits against the general building permit. This Subcontractor is required to meet and walk with local code officials at every inspection regardless if Turner is present.
24. This Subcontractor shall include all line & grade work for the performance of their work. Baseline survey only will be provided by Turner Construction. All other survey work required to perform this subcontractors work shall be provided under this contract. The layout within the building must be coordinated with all contractors onsite.
25. The Subcontractor shall locate and mark the exact locations of the utilities or during the work. This Subcontractor shall immediately repair or replace any utilities damaged by their work and restore service as promptly as possible at this Subcontractor's expense, including but not limited to Owner facility workers, utility companies, Town officials and resources. This subcontractor shall, at the time of installation, update their record set of documents and provide as-built information to Turner Construction. This is to be done as work is performed and evidence of such may, at Turner's discretion, be a requirement for progress payments.
26. Include all costs for erection aids, scaffolding, chain hoists, bracing, shoring, guy cables, falsework, and hoisting necessary to complete the work under this contract as well as all engineering, approvals, permits, and inspections for the same. This shall include providing shoring/re-shoring drawings stamped by a professional engineer licensed in the **State of Connecticut**.

Additional Provisions/Scope of Work

New Central Middle School
State Project No. 057-0114 N
Greenwich, CT
<<For All Bid Packages>>
Dated: 07.08.2024
Revised: 09.30.2024

a.) This Subcontractor shall comply with the requirements for the inspection and certification of lifting devices and include all costs for them in the lump sum base bid as required by the Contract Documents, and the **State of Connecticut** and local authorities.

27. Furnish and install all sleeves, inserts, hangers, supporting devices, equipment dunnage beyond that shown on the Contract Drawings as required in connection with this Subcontractor's work. Submit shop drawings for review by the Structural Engineer for any additional support/framing. All exterior metal supports must be galvanized.

28. Each Subcontractor shall be responsible for all cutting, patching and coring which may be required in connection with the installation of their work unless otherwise noted in the Subcontract Agreement. This will include repair of insulation or spray on fireproofing damaged during this work.

29. This Subcontractor shall protect all of the equipment furnished or installed by this Subcontractor from the elements, damage, dust, non-use, etc. until the Owner accepts it in writing.

Clean-up

30. This subcontractor shall abide by Turner Construction's safety policy of "Nothing hits the Ground".as defined more clearly in the Turner Construction Company's Master Safety and Health Program and as referenced in the Safety Additional Provisions. This Subcontractor shall perform all necessary cleanup of all rubbish, debris, excess materials; etc. associated with this Subcontractor's work on a daily basis to a dumpster to be provided by Turner (unless noted to the contrary below). This Subcontractor shall perform all necessary clean-up associated with or resulting from their work to maintain a clean and acceptable condition as determined by Turner at all times. All work areas are to be broom swept on a daily basis. Failure to keep a clean work area may result in a project "shut down" requiring all Subcontractors to stop work and clean. All costs associated with the "shut down" will be borne by the Subcontractors. The Subcontractors will be required to make up any lost time associated with a "shut down".

    (a) The following Bid Packages shall provide their own dumpsters: ***Demolition & Abatement, Sitework, Concrete, Masonry, Roofing, Concrete Flatwork and Landscaping.***

    (b) Dumpsters / Waste Removal Requirements: For all Subcontractors providing Dumpsters or Waste Removal under their Scope of Work, the following shall apply:

    This Subcontractor will make every effort possible to ensure that their waste is properly sorted and disposed of to divert as much waste as possible from disposal in a land fill. This Subcontractor will track this recycling effort using the TurnerTracker System established by Turner Construction Company. Each dumpster ticket is to be logged into this system and its recycled content reported as a means of tracking the total percentage of construction and demolition debris diverted from landfills. Refer to the Turner Construction Company TurnerTracker User Manual dated December 2023 included within the Project Manual and included as a reference document to this agreement. No payment will be authorized without On-Line Waste Reporting compliance.

31. **If any general debris is left behind by the trades, such as soda cans, juice bottles, paper products, banding material, snippets of wire, etc., Turner reserves the right to proportionately backcharge every Subcontractor on the site for this cleaning. In addition, eating in the building will be restricted. This will be a non-negotiable item.**

32. This Subcontractor is responsible to cleaning the tires of this subcontractor's vehicles and equipment exiting the site to avoid tracking mud, dust, etc. from the site and into public streets.

Site Logistics/Temporary Facilities

33. Provide traffic control for your work, including policemen, flagmen, barricades, signage, etc. as required by the City and/or The **State of Connecticut**.

Additional Provisions/Scope of Work

New Central Middle School
State Project No. 057-0114 N
Greenwich, CT
<<For All Bid Packages>>
Dated: 07.08.2024
Revised: 09.30.2024

34. This Subcontractor is to coordinate all requirements for testing and inspection in accordance with the specifications. The Owner will contract with the Testing and Inspection Company, but it is this Subcontractors responsibility to coordinate, schedule, provide access, and accommodate all testing and inspections as required for their work. This subcontractor shall include testing accessories as may be required, i.e. a cylinder curing box. Any testing or inspections by the Town, Municipal, or State Authorities will be the responsibility of this Subcontractor to coordinate.

35. Access to and use of the site is restricted in terms of space. See Site Logistics Plan for staging, parking, & loading areas. Onsite parking **IS NOT** permitted for contractors with the exception of 1 vehicle per Trade bid package can park on site. All other contractor Parking area will be provided at a location within 3 miles of the project site (Final location tbd), each contractor shall be responsible for shuttling of their employees to and from the site location from parking area.

36. Where material is specified to be furnished by others, it shall be understood that such materials are to be furnished and delivered F.O.B. Jobsite. The receiving, unloading, inventory, handling and storage of materials furnished by others, including security for such stored materials, is the responsibility and obligation of the Subcontractor to whom the materials are delivered.

37. "Substantial Completion" shall be defined as when the Owner accepts the space for the use intended as further defined within the General Contract. All required warranties and guarantees are to commence at this time. The Owner reserves the right to accept individual pieces of equipment or systems early. In these individual cases, the warranty/guarantee shall begin upon written acceptance by the Owner.

38. Office trailers will not be allowed on site without specific permission granted by the Turner Superintendent.

    a.) If any temporary facilities are permitted by the Turner Superintendent, they are to be constructed utilizing fire-resistant materials. Each of these must be equipped with an ABC type fire extinguisher and shall conform to applicable codes. Subcontractors may be required to relocate their trailers or shanties during the progress of the job at the Subcontractors expense. All Power and Telephone hook-up costs and usage fees will be the responsibility of this Subcontractor.

39. In support of Turner's safety initiative of "Nothing Hits the Ground", material delivery shall follow the premise of "Just in Time" delivery. The storage of materials and equipment anywhere around or within the Jobsite shall be permitted only as approved in advance by the Turner Superintendant AND shall include only materials that will be installed within a 72 Hour time frame from the date of delivery unless approved by the Turner Superintendent in writing prior to delivery. If material and/or equipment are stored in a manner, which obstructs the progress of any portion of the work without Turner's approval, the Subcontractor shall remove or relocate as directed by Turner immediately upon notification and without reimbursement of cost.

40. Temporary Power- will be provided as specified by the Electrical Subcontractor. Trade Subcontractors are responsible for hookups, extensions and removal of their equipment.

    a.) The Electrical Contractor shall provide temporary power and lighting within the work area during each phase of the project. Temporary lighting shall be provided in all areas in which work is being performed in order to adequately illuminate the work area. Trade Subcontractors are responsible for any task lighting required for their work.

    b.) actors are responsible for any task lighting required for their work.

41. Water - will be provided by the Plumbing Subcontractor as specified for reasonable construction purposes. Hoses, extensions and damage resulting from careless use will be each Trade Subcontractors responsibility.

42. Toilets – temporary toilets will be provided and maintained by the Sitework Subcontractor for the use of all workers.

Additional Provisions/Scope of Work

New Central Middle School
State Project No. 057-0114 N
Greenwich, CT
<<For All Bid Packages>>
Dated: 07.08.2024
Revised: 09.30.2024

43. Fire Protection - will be the responsibility of everyone on site. Adequate numbers of portable 20 lb ABC type extinguishers will be located within the work areas by Turner. Any Subcontractor performing cutting, grinding, burning, welding, or other heat, spark, or flame generating type of work will be required to submit a hot work permit with Turner Construction. A fire watch must be performed during the activity and for a minimum of one hour after completion. The subcontractor must have their own 20 lb Fire Extinguisher during hot work and they must be certified every year by a 3rd party and inspected monthly by a competent person by initialing the certification tag.
44. Drinking Water - Each Subcontractor will be responsible for all drinking water for their own forces, including containers, ice, and cups.

Stormwater Compliance –

45. Turner Construction Company ("Turner") is committed to achieving and maintaining full compliance with the federal Clean Water Act and applicable state statutes providing for the implementation of the National Pollutant Discharge Elimination System ("NPDES") related to the discharge of stormwater from construction activities. To that end, Turner has established and shall implement the following mandatory Construction Stormwater Compliance Program at all projects or portions of a project on which Turner is a party required by applicable federal or State law (1) to obtain a construction stormwater NPDES permit in its own name or (2) to assume responsibility for compliance with a construction stormwater NPDES permit obtained by another party (hereinafter, "Sites").
46. Specific Stormwater training requirements for Subcontractors engaged in earth moving/disturbing activities (excavation, grading, landscaping, paving, on site batch plant) or those responsible for installing or maintaining BMP's.
47. Requirement for subcontractor attendance at a project specific Stormwater Management orientation held in conjunction with a preconstruction meeting.
48. All subcontractors working on the site will be required to attend the Turner Stormwater Subcontractor Orientation which will be held in conjunction with the required Preconstruction Meeting and led by the Site SCC.
    a) Each subcontractor working on the site is required to have one subcontractor superintendent or field supervisor attend this orientation.
    b) Only those Subcontractors involved in earth moving/disturbing activities (excavation, grading, landscaping, paving, on site batch plant) or those responsible for installing or maintaining BMP's will be required to take the online Turner Stormwater Subcontractor Short Course Intro into Erosion and Sediment Control prior to attending the preconstruction meeting. The person or persons taking this online course must have a regular presence on the project.

Progress Payments

49. Applications for Payment and all supporting documents (including but not limited to lien waivers, sworn statements, and the like) for Subcontractor and its sub-subcontractors and suppliers, shall be in electronic format and shall be submitted to Turner using the Textura® Construction Payment Management (CPM) system. Subcontractor shall be responsible for the fees and costs owed associated with Subcontractor's use of the Textura CPM payment management system and shall enter into an agreement with Textura® directly and provide evidence of this agreement to Turner. Subcontractor shall include a similar provision in its sub-subcontracts and purchase orders. Fees to Subcontractors are calculated as 0.22% (22 basis points) of contract value, with a maximum fee of $5,000. Fees to Subcontractors' sub-subcontractors and suppliers are a fixed fee of $100 per sub-subcontractor or supplier contract. Subcontractor is directed to Subcontractor's Procedure Manual, Part IV, for Accounting – Payment Procedures and Textura® procedures.

Additional Provisions/Scope of Work

New Central Middle School
State Project No. 057-0114 N
Greenwich, CT
<<For All Bid Packages>>
Dated: 07.08.2024
Revised: 09.30.2024

50. The attached Accelerated Payment Program Rider [State] amends and supplements your Agreement with Turner and provides you the opportunity to enroll in the Program through Textura CPM and receive accelerated payments from Turner on your invoices. Formal enrollment into the Program can then be accomplished via the Textura CPM system. Additional information and Program benefits are included in the attached Turner Accelerated Payment Program summary. You may be contacted by a representative from Turner or Textura who can provide additional information on the Program and answer questions you may have or you may call Textura at 1-866-TEXTURA (839-8872) with any questions.
51. All invoices and requisitions for payment shall be submitted on AIA Document G-702 and G-703 or such other forms as may be required by the Owner. All forms must include a breakdown by area for material and labor. Turner shall approve this breakdown and format prior to submittal of the first application for payment (refer to Submittal requirements above).
    a.) With the second Application for Payment, and with each application thereafter, this Subcontractor shall provide along with the Application for payment a **Subcontractor's Partial Waiver of Lien, Contractors Sworn Statement, and Sub-Subcontractor/ Supplier Affidavit and Partial Release of Claims and Lien Waiver (for each sub-subcontractor or vendor / supplier listed on the Contractors Sworn Statement)** whereby this Subcontractor and its Subcontractors, Laborers, Material-men and Suppliers do hereby expressly waive, release and relinquish all rights to file or maintain such liens and claims and agrees further the right to file or maintain such liens and claims shall apply as well to work, labor and services performed and materials, supplies, equipment, applicable taxes and other items furnished under any change order or supplemental agreement for extra or additional work in connection with the project as the original work covered by this agreement. Waivers shall be for work paid for from the previous Payment Applications beginning with the second Application and shall be on the job specific forms provided by Turner Construction Company. ***Note: Failure to provide all documents will delay the issuance of progress payments.***
52. All applications for payment drafts are required to be submitted to the Turner Project Superintendent for initial review by the **20th of the month**. This Turner review will occur within one week of receipt of application. The revised/corrected application is due for formal submission no more than 2 business days after approval. . Note: This Subcontractor will project their billings through the entire month.
53. Should this Subcontractor fail to submit their formal corrected version of their application for payment as stated above, they will miss the billing cycle and may not bill until the following billing cycle.

Stored Materials

54. If authorized by Turner Construction Company and the Owner, it is agreed that progress payments may be made for materials stored in a secure off-site location (less retention as required by contract) based upon TCCo's receipt of the documentation required by Turner's Procurement Department including but not limited to: Bill of Sale, Schedule A, Consent of Surety (if applicable), Insurance Certificate, Loss Payable Endorsement, Lease Agreement, and UCC-1.
    a. It shall be the responsibility of this Subcontractor to properly mark/identify all materials being stored with Project Name or similar so they may be inspected/quantified in an expeditious manner by all parties. This Subcontractor must submit all documentation referenced above prior to this inspection being scheduled, and this Subcontractor shall reimburse Turner for all travel expenses associated with the required inspections.
    b. Any subcontractor receiving and storing pre-purchased Sourceblue equipment shall complete the Receipt Verification Form and provide stored material paperwork for this equipment.

MEP Coordination

Additional Provisions/Scope of Work

New Central Middle School
State Project No. 057-0114 N
Greenwich, CT
<<For All Bid Packages>>
Dated: 07.08.2024
Revised: 09.30.2024

55. This project shall utilize 3D Modeling for the coordination of all Structural Steel, HVAC & Controls, Plumbing, Elevator, Electrical & Fire Alarm (include all conduit 1" and larger), Low Voltage & AV(include all conduit 1" and larger), Fire Protection, Misc Metal (stairs, gym supports), Acoustical Ceilings, Drywall & General Trades(CFMF, Drywall ceilings/supports), Kitchen Equipment, Masonry openings for MEPs and Steel support, etc. This includes performing all work in accordance with the Contract Documents and including but not limited to the following Guidelines:

    a. **Subcontractor** agrees to participate in the use of digital/computer based three dimensional models and other related functionality, generally referred to as building information modeling (such models and functionality are referred to herein as BIM) as Turner may determine to be beneficial for use in facilitating coordination, sequencing, scheduling and/or production of as- built depictions of the Project and performance of the Work and as hereafter provided. The Subcontractor's costs of such participation are included in the Price unless explicitly outlined herein.

    b. **Subcontractor** shall participate in BIM coordination and review meetings as Turner Construction may require. **Subcontractor** acknowledges that such meetings will require attendance of personnel that are familiar with both the data entry aspects of the BIM as well as an understanding of the work to be performed and its relation to other elements of the Project, and subcontractor therefore agrees that personnel conversant in both shall attend all such meetings.

    c. **Subcontractor** agrees that neither the BIM nor the use of the BIM is in lieu of nor intended to relieve the **Subcontractor** of its responsibilities under the Subcontract.

    d. In the event the **Subcontractor** discovers any error, inconsistency, or omission in its information or submissions, the information or submissions provided by others or any BIM, it shall be reported to Turner via written notice which shall contain all relevant specifics.

    e. **Subcontractor** acknowledges that the BIM may require updating throughout the life of the Project to addresses any changes to the Work so that the BIM at the conclusion of the Project accurately depicts the Work as actually performed and installed. **Subcontractor** agrees to promptly update and provide revised submissions to Turner throughout the course of the Project.

    f. Turner Construction will make available their *Document Management Server (DMS)* that will enable all project parties to upload and download their respective models, manage electronic drawing files, and other electronic documents used in the coordination process. When the coordination drawings are uploaded, **The BP#37 HVAC & Controls Contractor** will be the ***"Gatekeeper"*** and download all trade models and integrate them into a consolidated model. After this a clash report will be created by the **Gatekeeper** identifying all the clashes and conflicts between trade systems. This report will be issued to the subcontractors for action and resolution. Turner may require that subcontractors divide their systems models by floors, zones, and/or areas in order to better manage the coordination process in a manner that is most conducive to meeting the project's schedule and needs.

    g. Turner will collect and distribute 3-Dimensional Architectural and Structural Models from the design team in their native format for use as backgrounds for coordination. *If a 3D model (.rvt) format is provided, it is **Subcontractor's** responsibility to export into other formats if required for their work (ie. 2D CAD (.dwg) format, etc…).* Models may only include basic architectural features, such as the floors, a rough approximation of ceilings chases, door openings, partitions exterior wall surfaces, window openings, roofs, elevator shafts, and stairs, and basic Structural features such as slabs and walls, steel framing – columns, beams, and major structural elements. **Subcontractor** is ultimately responsible for coordinating to all information contained in the 2-Dimensional Contract Drawings and Specifications as related to their work.

    h. Once the Architectural/Structural models are posted on the DMS, **Subcontractor** is required to download and use

these files to create their respective system models by sequence or geographic area dictated by Turner's representatives.

i. **Subcontractor** is required to run the clash detection analysis for their respective trade system against the Architectural/Structural models to ensure that there are no conflicts with their respective system(s).

j. **Subcontractor** is required to post to the DMS, up-dated drawings/models at least once per week, and one day prior to the clash detection analysis run by the **Gatekeeper**. (Day and time to be determined). This will continue until the area is completely coordinated.

k. The clash reports will be run for MEP systems in conflict with other trades and systems. A clash analysis report will be generated by the **Gatekeeper**. The **Gatekeeper** will create a Navisworks .NWD (or BIM 360 Glue view) file showing the clash viewpoints. This Clash report & Navisworks .NWD file will be posted to the DMS by the **Gatekeeper** and a corresponding notice sent by the **Gatekeeper** to all parties involved that the report is ready. **The Gatekeeper** will run the clash detection analysis as frequently as required for all systems modeled.

l. **Subcontractor** is required to review the clash detection report generated by the **Gatekeeper** before the weekly meeting, and arrive at the meeting prepared to address the unresolved clashes in a constructive manner.

m. **Subcontractor** is responsible for producing a traditional 2-Dimensional coordination drawing after cleaning up resolved all clashes and collisions. The final Coordination CAD drawing file will be re-circulated through all trades after a BIM sign-off meeting. This electronic coordination drawing files shall include all coordinated drawing information, fully dimensions (especially elevation dimensions), texts, and tags, etc.

n. **Subcontractor** is required upload their 3-Dimensional As- Built models, once all issues are addressed from above. Turner reserves the right to request additional file formats as the needs of the client or project require.

o. **Subcontractor** is required to update and post any changes originating from RFI's, Submittal's and Bulletin's that have changed their perspective work. **Subcontractor** making changes shall post onto the BIM Server site and send out a corresponding notice indicating the changes and reasoning behind the change with-in two weeks from receipt of changes.

p. All work on the coordination drawings (including 3D models) shall be performed by competent draftsmen in a clear legible manner utilizing standard industry conventions. **Subcontractor** shall be responsible for providing their coordination drawing files according to the established coordination schedule. It is the responsibility of each contractor to supply a sufficient number of draftsmen so as not to delay the BIM 3-Dimensional coordination process and shop drawing submittals.

q. **Subcontractor** will use a mandated file naming convention for their files. *During the Coordination Kickoff meeting Turner will provide the detailed file naming convention to all subcontractors.* Any files that do not follow the file naming convention will be deleted and removed from the server at any time without any notification.

r. **Subcontractor's** drawing and model files shall be based on an agreed upon and authorized origin point. The cost of any changes required by the **Subcontractor** to their drawings or models due to the use of an unauthorized origin shall be borne by the trade contractor.

Jobsite Metering & Utility Tracking

56. The Electrical Subcontractor shall provide the following:

Additional Provisions/Scope of Work

New Central Middle School
State Project No. 057-0114 N
Greenwich, CT
<<For All Bid Packages>>
Dated: 07.08.2024
Revised: 09.30.2024

(a) This Subcontractor shall furnish and install hardware for metering temporary electrical usage for the project. Commissioning of hardware and metering system to be purchased from Vitality. Coordinate with Turner Construction for vendor information. Components include:

(i) A8810 AcquiSuite Gateway Panel and Power Supply located within the jobsite trailer/office (Part# IDAS-A8810)

(ii) Wireless Enclosed Metering Panel. Contains Veris Power Meter, Wireless Modbus/Pulse Transceiver, Power Supply and Antenna. Rope CT Included. UL 508A (Part # IDAS-MH-V1A). Meter panel communicates via Modbus RS485 to the Gateway Panel.

(iii) Wireless Modbus/Pulse Transceiver radio transmitters

(b) This Subcontractor shall provide 120v electrical service to radio transmitters, data acquisition hub, and water/electrical meters

(c) This Subcontractor shall wire the water meter furnished and installed by the plumbing subcontractor. This includes providing 120v power and step-down connections between metering components (e.g. water meter to modhopper via RS485 cabling) for a complete system connection.

(d) This Subcontractor shall install Antenna at jobsite trailer/office as required

(e) This Subcontractor shall perform amperage test post-install to verify that meter readings are accurate to field conditions.

(f) This Subcontractor shall disconnect and remove metering equipment installed under this scope prior to turnover of building. Disconnect CT cables to maximize reusable length. Return to Turner in original packaging.

(g) This Subcontractor shall engage with 3rd-party commissioning agent (Vitality) prior to, during, and after installation to ensure hardware is correctly communicating with network.

57. The Plumbing Subcontractor shall provide the following:

(a) This Subcontractor shall furnish and install hardware for metering temporary water usage for the project. Commissioning of hardware and metering system to be purchased from Vitality. Coordinate with Turner Construction for vendor information. Components include:

(i) Micronics Clamp-On Water Meter. Measurement Value: Gallons Per Minute, Modbus Comms, Factory Calibrated. (Part# U1000 Ultrasonic Meter)

(b) The electrical subcontractor shall wire the water meter once installed by this subcontractor.

(c) Relocate water meters upon switchover to permanent water source.

(d) Disconnect and remove water metering equipment under this scope prior to turnover of building. Return to Turner in original packaging.

58. All Subcontractors shall provide the following Fuel Tracking:

(a) On a monthly basis, submit Monthly Fuel Tracking Log with all fuel (diesel, gasoline) used by Contractor's onsite equipment and trucked-in water. Data shall be categorized by fuel type (Diesel, E10 gasoline, E85 gasoline, biodiesel, ethanol, etc.). Tracking form to be provided by Turner - see Monthly Fuel Tracking Log). Transient and/or personal vehicles not stationed for use within the project boundary are exempt from this tracking requirement.

Additional Provisions/Scope of Work

New Central Middle School
State Project No. 057-0114 N
Greenwich, CT
<<For All Bid Packages>>
Dated: 07.08.2024
Revised: 09.30.2024

(b) On a monthly basis, submit tracking log of all natural gas, propane and steam and other energy sources used for temporary services. Example include generators, temp heating, etc. Tracking form to be provided by Turner- see Monthly Fuel Tracking Log.

59. **Earthwork/Sitework Tracking & Reporting:** Subcontractor will submit documentation via Turner Tracker on a monthly basis memorializing cut/fill on site as well as materials removed from site. A 'Disposal Method' must be selected for each material group reported to accurately represent next use of material. Data must be entered into Turner Tracker by the fifth (5th) day of the month following the invoice period. The Subcontractor shall make every effort to maximize diversion from landfill.

Green Equipment

60. All light towers, electric sign boards and security cameras to be fully electric, hybridized or solar.
61. All Small Off-Road Engine-powered equipment (under 25HP) that has an electric alternative and that does not impede production to be battery electric.
62. Compact telehandlers and warehouse forklifts to be fully electric unless vertical reach height required does not exist in that product line.
63. Slab-driven boom lifts to be fully electric or hybrid. When able, 60' hybrid off-road lifts are preferred (e.g. M-600 JLG).
64. All small tools to be run off of temporary power. In emergency situations, if generators are required, generators are required to be coupled with battery storage, use load sharing technology, utilize energy storage systems, or utilize renewable energy in order to reduce the project's greenhouse gas emissions.

Close Out

65. Turner follows the philosophy that "Project close-out begins with job start-up." Therefore, the following close-out procedures shall be adhered to:
    (a) The Schedule of Values on the Subcontractor's application for payment shall include line items and values for all close-out documents and activities, such as as-builts, O&M Manuals, punchlist, attic stock, etc.
    (b) Operations and Maintenance Manuals are due three months prior to anticipated turnover of each phase to the Owner. This subcontractor is required to provide 4 sets of CD's and 4 sets of Hard Copies for O&M's and As-Builts.
    (c) Final As-built drawings, attic stock, and special tools shall be submitted within one month following Substantial Completion.
    (d) Warranties and Guarantees are due within one month following substantial completion of the Project. This Subcontractor shall provide warranties and guarantees which start upon substantial completion for each phase of this project.
    (e) The punchlist work must be complete per Turner's punchlist completion schedule (and prior to turnover to the Owner).
    (f) The final application for payment is to be submitted no later than three months after substantial completion. All work must be complete and verified prior to review of this final application.
66. Failure to comply with the above requirements will result in a $1,000 deduct change order per item and will result in delays in progress and final payment(s).

Personnel Conduct

Additional Provisions/Scope of Work

New Central Middle School
State Project No. 057-0114 N
Greenwich, CT
<<For All Bid Packages>>
Dated: 07.08.2024
Revised: 09.30.2024

67. There shall be NO FRATERNIZATION OR INTERFERENCE with the Owner staff, neighboring businesses, or visitors; no verbal, physical, telephone or electronic contact with students or minor on the property of any kind, by any Construction Workers on or near the **Project** site. Any complaints by the Owner with regard to this matter will result in the immediate and permanent dismissal of the said employee from the Project site. Reference also AIA A133 section 14.7.6.2, all subcontractors to include this language in any subcontract to lower tier.
68. NO FOUL OR ABUSIVE LANGUAGE will be tolerated or allowed, also there is NO SMOKING/VAPING OR DRINKING allowed on the Owner's property and either infraction will result in immediate and permanent dismissal.
69. ALL EMPLOYEES AND VISITORS SHALL WEAR "SAFETY TRAINED HARD HAT LABEL IDENTIFICATION" AT ALL TIMES WHILE ON THE PROJECT JOB SITE. THE METHOD OF IDENTIFICATION IS FURTHER DESCRIBED IN TURNER'S SAFETY & HEALTH PROGRAM. LABELS WILL BE DISTRIBUTED UPON COMPLETION OF THE WORKERS SAFETY ORIENTATION TRAINING.
70. This subcontractor shall comply with all badging/background check requirements associated with performing work on the Owner's property as defined per **State of Connecticut Contractor Verification (in accordance with Public Act 16-67), reference form to be completed within Project Manual.**
71. Drug Testing: This Subcontractor shall participate in the drug testing required per the Project Specific Safety Manual and in accordance with Turner's Substance Abuse Policy. As part of your proposal, this Subcontractor shall include **$48/worker** for the drug testing associated with your workforce. Upon award, this Subcontractor will register all workers with Concentra via an online portal and shall report to a predetermined Concentra facility at the time that the drug screen testing is performed.

LEAN Approach

72. Lean focuses on maximizing customer value while eliminating waste through continuous improvement and respect for people. Turner requires that all subcontractors actively participate with Turner in the continuous improvement of the construction process. Turner and subcontractors will collaboratively participate in learning, planning, control processes, and strategies to achieve the goal of the greatest productivity for the project, thereby maximizing the value delivered to the customer. Maximizing value requires elimination of waste in all processes and implementing improvements at every opportunity. Subcontractors will assign an individual to represent them in these efforts. Qualifications for this individual include that they are on site daily, have the authority to make decisions and commitments on behalf of the subcontractor (including lower tiers) and whose behaviors support collaboration with the project team. This individual will be referred to as "On-Site Field Supervisor" throughout this Section.

Additional Provisions/Scope of Work

New Central Middle School
State Project No. 057-0114 N
Greenwich, CT
<<For All Bid Packages>>
Dated: 07.08.2024
Revised: 09.30.2024

Turner may utilize some or all of the approaches and tools listed below for the betterment of the project, and Subcontractor will cooperate, contribute, and participate with Turner in these endeavors:

5S Methodology

5S is a system to optimize safety and productivity through maintaining an orderly workplace and using visual cues to achieve more consistent operational results.

1. Sort – Eliminate all unnecessary tools, parts, materials. Keep only essential items, eliminate what is not required, prioritize things per schedules/requirements and keeping them in easily accessible places.
2. Straighten (Set in Order for Flow) – Arrange the work, workers, equipment, parts, and instructions in such a way that workflows free of waste through value added tasks. Identify locations where items will be used and place those items close. Organize and communicate the location for items needed in the area.
3. Shine (Systematic Cleaning) – Clean the workspace, jobsite, and all equipment, and keep it clean, tidy and organized. At the end of each shift, clean the work area and be sure everything is restored to its place. Create elevated workstations for ergonomic working and more efficient cleanup. Employ a 'Nothing Hits the Ground' mentality to keep the project clean and free of waste.
4. Standardize – Develop cleaning schedules and cleanliness standards to maintain the first 3S's. Employ visual management to reveal abnormalities and potential problems.
5. Sustain – Follow the rules, schedules, and established standards.

Last Planner System®: Production System Planning

73. **Pull Planning** – This represents the Project team's (Turner and subcontractors) specific plan for how they intend to reach the milestone dates in the contract schedule. Pull plans must meet the contract schedule requirements, and teams must work together to achieve these project milestones. Turner requires team members to make and keep commitments based on their confidence that prerequisite work, design information, materials, labor, and equipment will be ready so they can start and complete installations to meet their commitments to reach milestones in the contract schedule.
74. **Make Ready Planning** – Make ready planning is a process of identifying work, typically six weeks out and verifying the work will be able to be completed as planned. Constraints that will prevent these activities in the next six weeks from starting and/or finishing are identified and added to the Constraint Log.
75. **Weekly Work Plans (WWP)** –The WWP is a detailed day-by-day, one week production plan created by each subcontractor's On-Site Field Supervisor to plan the next week's work, based on the project's production plan. WWP's are due weekly at a time established by Turner for the work to be performed the following week. Turner will establish the format for WWP's and the method of delivery for each project.
76. **Daily Production Huddle** – Subcontractor's On-Site Field Supervisor and Turner will meet for a daily stand-up discussion with their peers from other subcontractors and Turner field staff to assess the day's performance and discuss any new issues discovered. Turner's Project Superintendent will identify the time and place of the daily huddle, which will typically occur on the project site and last approximately 15 minutes.
77. **The Last Planner System® (LPS)** provides principles to improve coordination and create flow between contract milestone dates in the contract (or master) schedule. When production planning becomes reliable, and people fulfill their commitments, workflow, performance, and productivity are improved. Turner may require Subcontractor's On-Site Field Supervisor(s), Superintendents and/or the Project Manager to attend orientation and training sessions to prepare for the implementation of LPS.

Additional Provisions/Scope of Work

New Central Middle School
State Project No. 057-0114 N
Greenwich, CT
<<For All Bid Packages>>
Dated: 07.08.2024
Revised: 09.30.2024

78. When requested, Subcontractor shall participate in weekly coordination meetings with other subcontractors and shall provide updated weekly work plans on a weekly basis throughout the scheduled installation period. All subcontractors pledge to cooperate with each other and coordinate their work for the overall good of the project. Turner reserves the right to adjust and update the overall project schedule based on project conditions, the actual performance of the work, and detailed schedule information obtained from subcontractors. This update is intended to be for the betterment of the project as a whole. At Turner's discretion, it may utilize The Last Planner System® for developing additional coordination details over the life of the project.
79. Subcontractor will require its On-Site Field Supervisor(s) to participate in all the steps that comprise LPS and be able to commit to perform work they know can be made ready for their crews and to collaborate with the team to ensure this work can be started and completed without interruption. Subcontractor shall ensure that its On-Site Field Supervisors, the "Last Planners", have the authority to make decisions and plan the work and are involved before Subcontractor mobilizes to the project. Subcontractor shall direct its On-Site Field Supervisors to attend planning meetings

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***<<Bid Package Description>> Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***<<Bid Package Description>> Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Additional Provisions/Scope of Work

New Central Middle School
State Project No. 057-0114 N
Greenwich, CT
<<For All Bid Packages>>
Dated: 07.08.2024
Revised: 09.30.2024

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name

General Items

1. The Bidder shall note that the use of the term "Subcontractor" shall be synonymous with the term "Bidder".
2. This Subcontractor has reviewed the Logistics Plans and the Construction Schedule and has included all associated costs as relevant to this scope of work. This includes all necessary lifts, cranes, scaffolding and all other equipment as required to perform the work. It is extremely important to coordinate your work with the other adjacent Subcontractors during the various phases and perform the work as required by these documents. No come back costs will be entertained.
3. This Subcontractor will provide all pricing for changes within five (5) calendar days of notice of change (without exception). If subcontractor does not submit pricing within these terms, it will be assumed a ZERO cost change. The change orders shall include man-hours, material costs, tax (if applicable) and mark-ups as line items broken out separately.
4. Intent of the project Lean initiative is that all items that are to be installed are to prefabricated, arranged and shipped to project for ease of installation. Deliveries are to be packaged and labeled by room/area for ease of installation (kit-of-parts).
5. This Subcontractor shall be responsible to provide out of sequence work at no additional costs when required in coordination with other trades.
6. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.

Additional Provisions/Scope of Work

New Central Middle School
State Project No. 057-0114 N
Greenwich, CT
<<For All Bid Packages>>
Dated: 07.08.2024
Revised: 09.30.2024

7. This Subcontractor's Project Manager/Foreman shall participate in Pull Planning Sessions which affect their scope of work. This Project Manager/Foreman shall provide input to further develop the accurate sequence and timing for completion of the work.
8. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
9. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
10. This Subcontractor shall organize and neatly place all materials, tools, etc. This Subcontractor shall remove all debris resulting from their work on a daily basis to a trash Rubbermaid tilt truck provided by Drywall Contractor. Each subcontractor shall be responsible for emptying their trash from the Rubbermaids to the dumpster at the end of each shift. No trash or debris will remain in the work areas at the end of the shift. If debris is left in the work areas, it will be removed to the dumpster by others, and the labor expense back-charged to the responsible Subcontractor. Large sections of debris shall be disposed of to a dumpster provided by others by this Subcontractor.
11. This Subcontractor shall be required to store all onsite material on racks, carts or pallets capable of being easily moved and shall coordinate the delivery of and location of stored material with the Turner Superintendent. If material is stored on pallets, this Subcontractor is responsible to have a pallet jack onsite at all times. This Subcontractor shall include relocation and consolidation of materials as directed by Turner.
12. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
13. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.
14. This Subcontractor shall review, conform to, and furnish and install all requirements included in the Safety Additional Provisions included in this Agreement. This Subcontractor understands that this document is project specific and all provisions must be included in this Subcontractors' bid.
15. This Subcontractor shall ensure that they are able to supply the necessary manpower, equipment and materials to complete the Work for each Phase in its entirety as identified in Turner's Project Schedule.
16. This Subcontractor acknowledges that NO additional compensation will be considered for comeback work required as a result of your failure to perform work in accordance with the Contract Documents or your failure to coordinate your work with the work of others.
17. This Subcontractor will be responsible for the third-party engineering review for utilizing equipment and/or lifts on elevated slabs.
18. This subcontractor shall only be permitted one vehicle for onsite parking per the Logistics plans.
19. This subcontractor shall provide all hoses for when requiring water. A water source will be provided per the Logistics plans.
20. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible to remove snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.
21. This Subcontractor shall provide a site-specific plan on how they will comply with Turner's Ladder's Last Program.
22. This subcontractor shall ensure that any Lulls used on site are equipped with hydraulic fork positioners.

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Demolition and Abatement Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detailed references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***Demolition and Abatement Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

01 2200 – Unit Prices - Hazardous Building Materials
02 4100 – Demolition
02 8200 – Selective Hazardous Building Materials Abatement Demolition
02 8213 – Asbestos Abatement
02 8313 – Lead-Based Paint Awareness
02 8416 – Universal Waste Removal and Recycling
02 8432 – PCBs Greater than 50ppm Remediation

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Revised: 09.30.2024

Bid Package Specific Scope

2. This subcontractor shall be responsible for the abatement and demolition of the existing Greenwich Central Middle School. This shall include PCB's, asbestos, lead, etc. See Specification Sections listed above for additional requirements and scope.
3. This subcontractor shall be responsible for any Demolition or Hazardous Materials permits that will be required to perform the work of this Bid Package. The General Permit will be provided by Turner Construction.
4. This subcontractor shall provide a decontamination enclosure system and negative air requirements per the specifications.
5. This subcontractor shall provide all selective demolition required to access hidden, buried or inaccessible asbestos containing materials.
6. This subcontractor shall provide workers' licensing and training information as requested by the specifications.
7. This subcontractor shall provide the complete demolition including underslab utilities and all footings and foundations.
8. This subcontractor shall provide a CT Licensed Asbestos Monitor to monitor airborne asbestos concentrations in the workers' breathing zone, etc.
9. This subcontractor shall coordinate with the Owner's Independent Air Sampling and Asbestos Abatement monitoring Consultant.
10. This subcontractor shall provide all scope of work per the General Notes and Hazardous Building Materials Abatement Notes on drawings HBM-01, HBM-02 and HBM-03.
11. This subcontractor shall provide all submittals as required per Specification Section 02 4100 - Demolition.
12. This subcontractor shall abide by the Medical Requirements indicated in the specifications.
13. This Subcontractor has reviewed the Logistics & Phasing Plans and the Construction Schedule and has included all associated costs as relevant to this scope of work. It is extremely important to coordinate your work with the other adjacent Subcontractors during the various phases and perform the work as required by these documents.
14. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
15. This Subcontractor will perform all necessary cleanup associated with or resultant to his work and to maintain all areas in a clean and acceptable condition, as determined by the Turner Superintendent, at all times. All dumpsters required for the debris generated under this scope of work are to be furnished and paid for by this Subcontractor. Schedule pick-up and delivery of dumpsters as required to maintain progress of work.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT

Revised: 09.30.2024

16. This Subcontractor will make every effort possible to ensure that their waste is properly sorted and disposed of to divert as much waste as possible from disposal in a landfill. This Subcontractor will track this recycling effort using the Online Waste Tracking System established by Turner Construction Company. Each dumpster ticket is to be logged into this system and its recycled content reported as a means of tracking the total percentage of construction and demolition debris diverted from landfills. There is a $50 per month fee for use of this website and this Subcontractor shall include all costs in his bid for use of this service. Refer to the attached User's Manual for more information about this system. Refer to the Turner Tracker Manual in the referenced "Forms and Policies in Turner's Project Manual.
17. This Subcontractor shall coordinate the sequence of the work between abatement and demolition such that all durations identified in the project schedule are realized. This Subcontractor shall be prepared to provide shift work, additional manpower, and/or extended work hours to realize the durations identified.
18. This Subcontractor shall include all the abatement and demolition of the gymnasium area and demolition of the Northwest Building (2000 addition) assuming all premium time for (5) -10 hour days per week and Saturday work.
19. This Subcontractor acknowledges that NO additional compensation will be considered for comeback work required as a result of your failure to perform work in accordance with the Contract Documents or your failure to coordinate your work with the work of others.
20. This Subcontractor shall coordinate with the MEP contractors for the cut, cap and make safe requirements prior to any phase of the abatement and demolition. This subcontractor shall abide by the MEP Demolition Notes on drawings MEPD000 and MEPD001.
21. This Subcontractor acknowledges that it has completed a thorough site walk-through prior to the bid and is aware of all existing conditions.
22. This Subcontractor shall be responsible for the verification of all existing conditions and quantities.
23. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of any demolition or abatement and shall report to Turner in writing any discrepancies that may affect this subcontractors work or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
24. This Subcontractor shall provide proof of all required Heavy equipment operator training and requirements as indicated in General Note 4 on the Hazardous Building Materials Drawings.
25. This Subcontractor shall be responsible for the abatement / demolition work in the tunnel / crawl / mechanical duct spaces. These areas are not shown in the drawings.
26. This Subcontractor shall perform demolition in a manner that maximizes salvage and recycling of materials.
27. This Subcontractor shall comply with the requirements of Section 01 7419 - Construction Waste Management and Disposal.
28. This Subcontractor shall comply with Project Sustainability Goal: Recycle or salvage at least 75 percent of non-hazardous construction and demolition debris per Specification Section 01 3566.42 - Sustainability Compliance Procedures - CT HPBS paragraph 3.3.A.1.
29. This Subcontractor shall coordinate with the Sitework subcontractor regarding the disconnection and removal of the existing utilities tied into the building. These will be disconnected 5 ft outside the building by the Sitework Subcontractor. This subcontractor is responsible for all demolition and abatement from 5' outside the building.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#08 – Demolition and Abatement
Dated: 07.08.2024
Revised: 09.30.2024

30. This subcontractor shall provide abatement and demolition in all areas which will start with selective demolition and removing materials at the ceiling level and end with the materials at the flooring level. This subcontractor shall coordinate and perform enough selective demolition/demolition to identify/locate and access all materials to be removed/abated/remediated. This subcontractor shall open up walls, and ceilings to check for hidden piping, duct, etc. As well as demolishing millwork, cabinetry, all non-moveable objects, layer(s) of flooring, walls, materials attached to walls, etc. To locate known and potential asbestos and assumed PCB containing materials. Interior and exterior selective demolition/demolition and probing must occur throughout the work areas before containment construction and abatement can start. Exterior abatement/remediation will be either performed in containment (interior) or the hazardous building materials abatement contractor will install polyethylene sheeting on the interior of the building and remove materials from the exterior. All ground surfaces must also be protected with plywood and two layers of 10-mil reinforced polyethylene sheeting. This ground protection must extend at least 20 feet away from the building foundation (or farther - enough to prevent building materials from touching unprotected ground and floor surfaces). This subcontractor shall pay for all contamination/remediation/abatement of interior and exterior surfaces, including ground surfaces if AHJ deems they have contaminated these surfaces. This subcontractor shall supply lifts, scaffolding, staging, etc. which shall remain in areas of remediation/abatement until all visual inspections have passed. This subcontractor shall provide temporary shoring in areas where required.
31. This subcontractor shall abate the floor tiles, pipe insulation, pipe fittings insulation, pipe hangers insulation and roof drain insulation, sink undercoating, ceramic floor and cove base mud bed and adhesive/backing, wood wall panel adhesive, bulletin boards, chalk boards, and other adhesives/glue daubs, ceiling/deck caulking, interior caulking compounds, interior/exterior door and window glazing compounds, exterior vent caulking, roof penetration flashing materials as indicated on contract documents.
32. This subcontractor shall remove the existing building in its entirety. Demolition includes, but is not limited to, walls and other partitions, structure, concrete slab-on-grade, concrete foundations, floor finishes, roofing, roof top units, HVAC, plumbing and electrical systems. Refer to mechanical and civil drawings for extent of existing site utilities removal and termination.
33. Erect temporary enclosure(s) around all exterior openings created in the building. The building shall be left weather-tight and secure at the end of each workday.
34. This subcontractor will not participate in the Contractor Controlled Insurance Program (CCIP). This subcontractor shall provide a General Liability Insurance program inclusive of a $20 MM per occurrence and $20MM per aggregate. Refer to CCIP Manual for additional information.
35. This Subcontractor (for disposal of demolished material) shall provide a minimum insurance limits for Pollution Liability Insurance. Refer to insurance requirements for additional information.
36. This Subcontractor shall provide a video pre-demo site survey of existing conditions of all affected and adjacent areas.
37. This subcontractor shall verify the cut, cap, make safe of existing utilities servicing existing utilities.
38. This subcontractor shall coordinate all selective demolition with Turner and the Owner. This includes all utility shut-downs.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#08 – Demolition and Abatement
Dated: 07.08.2024
Revised: 09.30.2024

39. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to cleanup general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)
40. This Subcontractor to include all costs to provide the necessary electrical hook-ups for all their equipment which may require special connections beyond 110v outlet connections or as defined in the Temporary Electrical Specification. Any electrical work will fully comply with NFPA 70E and lock-out/ tag-out.
41. This Subcontractor shall provide for their own temporary power and lighting in the event no power is available on the premises which shall be GFCI protected. Include generator as required for power requirements above and beyond that identified in the Temporary Electrical specification.
42. This Subcontractor must provide daily dust control for all demolition and site work so that dust is controlled to the point that it is not visible. This subcontractor shall provide their own water connection.
43. This Subcontractor to furnish, install and maintain temporary protection of adjacent structures and walkways as defined by the specific scope of work and Turner Site Logistics plans.
44. This Subcontractor shall provide all State, Federal and locally required documentation for abated areas to Turner to enable official turnover of spaces or land areas. This includes a written notification to the appropriate authorities upon completion of this scope of work.
45. This Subcontractor, as part of this scope of work, shall obtain and post as required all permits, approvals & notifications required in the performance of the abatement work, in accordance with all applicable codes and regulations.
46. This Subcontractor shall be responsible for control of all moisture applied during the abatement process, to “Adequately Wet” surfaces, and shall ensure any excess moisture is cleaned up and any porous & non-porous surfaces that are called to remain that become wet in this process are dried or removed. The means and methods of moisture control within the building shall be clearly defined in the Abatement work plan and be in compliance with all applicable codes.
47. This Subcontractor shall perform all removal of existing surfaces within containments, as described in the project specifications to provide access for the removal of the materials called for abatement. This subcontractor shall coordinate this work with all the applicable trades to ensure safe completion of this scope of work.
48. This Subcontractor shall coordinate and plan all containments with Turner and shall at all times maintain clear safe access and egress. This Subcontractor shall provide all signage to redirect personnel to a safe alternate egress.
49. This Subcontractor shall provide all documentation per the contract documents including but not limited to all manifests, clearance tests, certifications, personnel documentation etc. as required by AHJ.
50. This Subcontractor shall provide a dedicated container for off-site removal of abated material with the required danger postings affixed, placed in accordance with Turner's logistics plan.
51. This Subcontractor shall include any selective demolition that may be required to access the abatement work.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#08 – Demolition and Abatement
Dated: 07.08.2024
Revised: 09.30.2024

52. This Subcontractor shall include removal and disposal of materials containing lead paint, PCB's, ACM, Mercury and all hazardous material identified in the project scope of work in accordance with OSHA, EPA, State and Local guidelines. This Subcontractor shall provide affidavits indicating proper disposal of all lead coated material through domestic, governmentally approved sources.
53. If unanticipated hazardous waste is encountered, this Subcontractor shall notify Turner immediately in writing.
54. This subcontractor shall provide air monitoring, personnel sampling or adequate historical data to determine if PEL/Action levels are being reached.
55. This Subcontractor shall ensure proper offsite disposal and removal of all paints, chemicals, flammable or combustible materials including but not limited to rags, brushes, etc. immediately after they have been used. Washing out of paint materials into new or existing onsite plumbing is strictly prohibited.
56. This Subcontractor shall comply with all requirements set forth in OSHA 1926.152 Flammable and combustible liquids. Proper storage of paints or any strippers/thinners shall be followed. Refer to standard for specific quantities and storage requirements.
57. This subcontractor shall ensure all work related to construction alteration, removal, or repair of lead containing material must be reviewed with Turner representatives. Each worker must be trained in conjunction with OSHA Subpart D 1926.62 before performing construction activities including removal or encapsulation of materials containing lead."
58. This Subcontractor shall include 200 hours of labor time for additional Safety & Protection as directed by TCCo Superintendent. Time to be included as journeyman rate including any required supervision. This will be billed based on the final agreed contractual wage rates and may only be expended by written authorization of Turner Construction and any unspent portion of this unused scope hours will be credited at the end of your contract based on approved labor rate.

D. Safety

1. This Subcontractor shall provide a site-specific plan on how they will comply with Turner's Ladder's Last Program.
2. This subcontractor shall ensure that any Lulls used on site are equipped with hydraulic fork positioners.
3. This subcontractor shall engage a 3rd Party to complete a GPR Survey to mark out existing utilities under and in the general area of any proposed Mobile Crane locations.
4. This subcontractor provides and manage a comprehensive dust and debris management plan that satisfies the local authority having jurisdiction and that meets the requirements of the contract documents. The effective absence of visible dust will be the criteria by which the effectiveness of dust suppression is measured. Include a site-specific dust control plan.
5. This subcontractor shall provide vibration monitoring to determine effect on existing structures as directed by Turner.
6. This subcontractor shall provide an engineering survey of the building completed by a competent person prior to initiating demolition activities to determine the condition of the structure and identify areas subject to unplanned collapse. This inspection survey needs to remain on site at all times. This Subcontractor shall retain the services of a 3rd Party Professional Engineer to supplement and review this Subcontractors Structural Demolition Plan.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#08 – Demolition and Abatement
Dated: 07.08.2024
Revised: 09.30.2024

7. This subcontractor shall submit an engineer stamped Demolition Plan prior to performing any structural demolition. This plan will include plans for any equipment to be placed on decks, any shoring requirements, etc. This includes any vertical wall penetration cut outs that weigh 50lbs or more. Turner's Vertical Wall Penetration Cut Out Policy defined in the HASP must be followed for all vertical wall cut outs of 50lbs or more.
8. This Subcontractor submit a plan with drawings outlying necessary means and methods to protect existing structures and adjacent properties from being damaged as a result of demolition operations. This shall be defined in the overall demolition plan provided by this subcontractor. The Demolition Plan will also outline means and methods to ensure that job personnel and members of the public are not struck by flying debris or dust emanating from demolition activities. All barriers to be hard barriers, danger or caution tape is not acceptable. Methodology should be described in the Subcontractors JHA Demolition Plan.
9. This Subcontractor shall supply at a minimum one spill kit per floor for interior demolition adjacent to active space, containing the following: 3 Kibosh 3/4" pipe menders, 3 Kibosh 1" pipe menders, 1 shut gun, 2 (3/4" & 1") shark bite fitting with ball valve, portable electric submersible pump with 3/4" threaded hose nipple, 50 feet of 3/4" hose, Rubbermaid with castors labeled with cover, a water diversion tarp and water barriers, and a new/working wet/dry shop vacuum (with correct filters installed).
10. This Subcontractor is required to protect with standard guardrails or fall protection nets all existing skylights and openings as to prevent anyone from falling through where the hazard exists.
11. This subcontractor shall protect excavator cab windshields with both a suitable cage covering and safety glass when the excavator is being used in conjunction with a hydraulic breaker or hoe ram and during structural demolition operations
12. This Subcontractor to patch level and smooth all surface irregularities resulting from demo operation including but not limited to the removal of all partition types to prevent trip hazards.
13. This Subcontractor shall hire an independent GPR Subcontractor approved by Turner to grid out, locate and mark all existing underground and in slab utilities to be cut, cored, demolished, excavated or otherwise impacted. This GPR Subcontractor shall provide subsurface utility profiles in plan and elevation with dimensions off existing site benchmarks that will remain throughout the project and submit copies to Turner.
14. This Subcontractor shall provide an engineered plan for all scaffolding and shoring that will be used.
15. This subcontractor to provide and maintain appropriate number of 20 lb. ABC fire extinguishers and stands for the duration of their work on site. They are to be placed every 3000 SF around the site at a travel distance which is not to exceed 100 feet in between. Stands to be Fire-Mate Extinguisher Stand P14-1137 or equal. This subcontractor shall provide annual inspections of all fire extinguishers by a licensed 3rd party inspection company in addition to the required monthly inspections. Final locations and quantities to be approved in field by Turner.

E. Logistics & Schedule

1. This Subcontractor shall include the potential early abatement areas in Summer 2025 and the priority demolition per the Logistics Plans. This subcontractor shall assist and evaluate the potential feasibility of early abatement in the gymnasium area of the existing school (summer 2025). After exploring the feasibility and of scope, this subcontractor shall provide a report of locations and durations of potential work, including any potential required temporary measures of existing to remain conditions to determine the feasibility of early abatement work.

C.1 **Specific Scope of Work**

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Sitework*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***Sitework*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

02 3000 – Subsurface Investigations
02 4113 – Site Utility Abandonment
10 1453 – Traffic Signage [Landscape]
10 1453 – Traffic Signage [Civil]
10 1454 – Traffic Signage Removal and Relocation
10 7516 – Ground-Set Flagpoles
12 9300 – Site Furnishings
31 1000 – Site Clearing
31 1000 – Selective Clearing and Thinning [Civil]
31 1005 – Athletic Field Site Preparation
31 1006 – Soil Striping and Stocking
31 1200 – Site Utility Preparation
31 2200 - Grading
31 2300 - Excavation, Backfill, Compaction and Dewatering
31 2316.26 – Rock Removal
31 2323 – Borrow Material
31 2333 – Trenching and Backfilling
31 2500 - Soil Erosion and Sediment Controls

Shared Specifications

Specification Sections listed below as ‘Shared’ shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

BP#9 - Sitework
Dated: 07.08.2024
Revised: 09.30.2024

General Items

2. This Subcontractor has reviewed the Logistics & Phasing Plans and the Construction Schedule and has included all associated costs as relevant to this scope of work. It is extremely important to coordinate your work with the other adjacent Subcontractors during the various phases and perform the work as required by these documents. No come back costs will be entertained.
3. This Subcontractor will provide all pricing for changes within five (5) calendar days of notice of change (without exception). If subcontractor does not submit pricing within these terms, it will be assumed a ZERO cost change. The change orders shall include man-hours, material costs, tax (if applicable) and mark-ups as line items broken out separately.
4. Intent of the project Lean initiative is that all items that are to be installed are to prefabricated, arranged and shipped to project for ease of installation. Deliveries are to be packaged and labeled by room/area for ease of installation (kit-of-parts).
5. This Subcontractor shall be responsible to provide out of sequence work at no additional costs when required in coordination with other trades.
6. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
7. This Subcontractor's Project Manager/Foreman shall participate in Pull Planning Sessions which affect their scope of work. This Project Manager/Foreman shall provide input to further develop the accurate sequence and timing for completion of the work.
8. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
9. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
10. This Subcontractor shall organize and neatly place all materials, tools, etc.. This Subcontractor shall remove all debris resulting from their work on a daily basis to a trash Rubbermaid tilt truck provided by Others while working inside the building. This Subcontractor shall be responsible for all debris removal and disposal outside of the building. No trash or debris will remain in the work areas at the end of the shift. If debris is left in the work areas, it will be removed to the dumpster by others, and the labor expense back-charged to the responsible Subcontractor. Large sections of debris shall be disposed of to a dumpster provided by others by this Subcontractor.
11. For any materials stored inside the building, this Subcontractor shall be required to store all onsite material on racks, carts or pallets capable of being easily moved and shall coordinate the delivery of and location of stored material with the Turner Superintendent. If material is stored on pallets, this Subcontractor is responsible to have a pallet jack onsite at all times. This Subcontractor shall include relocation and consolidation of materials as directed by Turner.
12. This Subcontractor shall review, conform to, and furnish and install all requirements included in the Safety Additional Provisions included in this Agreement. This Subcontractor understands that this document is project specific and all provisions must be included in this Subcontractors' bid.
13. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#9 - Sitework
Dated: 07.08.2024
Revised: 09.30.2024

14. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.
15. This Subcontractor shall be responsible for the removal and proper legal disposal of all rubbish and/or materials associated with the site demolition (exterior of the buildings) and all other work performed by this subcontractor.
16. This Subcontractor will make every effort possible to ensure that their waste is properly sorted and disposed of to divert as much waste as possible from disposal in a landfill. This Subcontractor will track this recycling effort using the Online Waste Tracking System established by Turner Construction Company. Each dumpster ticket is to be logged into this system and its recycled content reported as a means of tracking the total percentage of construction and demolition debris diverted from landfills. There is a $50 per month fee for use of this website and this Subcontractor shall include all costs in his bid for use of this service. Refer to the attached User's Manual for more information about this system. Refer to the Turner Tracker Manual in the referenced "Forms and Policies," dated January 2015, in Turner's Project Manual.
17. This Subcontractor shall furnish, remove, and dispose of the contents of 150 ea. thirty cubic yard dumpsters for the entire duration of the project above and beyond that of which is required by this subcontractor for the Sitework scope of work. This Subcontractor shall remove and replace dumpsters per the direction of Turner's Superintendent and shall have Turner sign the hauler's ticket for each load. Unsigned tickets will not be charged against this allowance and any unused portion of these allowances will be credited to the project upon the completion of each phase. Additional dumpsters in excess of the defined allowances for general debris will be reimbursed per the unit cost included with this bid proposal. This Subcontractor shall provide their own dumpsters for the sitework debris, which are not included as part of this allowance.
18. Any and all excavations or trenching outside the construction fence MUST be covered up and protected each night and work coordinated with Turner to ensure that no unnecessary hardships are imposed on the school or the community.
19. This Subcontractor shall include all casual dewatering of all excavations, trenches, or footings from the start of the foundations to project completion. Water discharged from the dewatering operation shall be discharged into the dewatering basin or unless otherwise indicated.
20. This Subcontractor shall assume that temporary electric will not be available for this Subcontractor's use during the various stages of Sitework. This Subcontractor shall include the use of generators as required for the duration of their Work.
21. This Subcontractor shall include an Initial Baseline Survey (with Control Points for lay-out) for the Project and line and grade layout for the building provided by a licensed surveyor. Prior to beginning construction of the new foundation work, a review meeting on site of these layout points must be held. Subsequent to this initial survey control and the provision of two X axis and four Y axis and 3 benchmark elevations for each phase of the project, this Subcontractor shall provide five (5) additional days for each phase (1,2, and 3 equals 15 additional days and 18 days total) for the installation of control in the building for use by Turner. The control points shall be established on a monument or a permanent surface that will protected and not be lost or altered. These point locations shall also be transferred and memorialized on a drawing to be submitted to Turner. This Subcontractor shall be responsible for all of their own surveying and layout using Total Station or a licensed surveyor after the initial control is established.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#9 - Sitework
Dated: 07.08.2024
Revised: 09.30.2024

22. This Subcontractor shall include an underground utility survey with ground penetrating radar at the complete scope area to locate the existing utilities and immediately document same on the site utility drawings. This survey shall include the entire construction zone and shall be performed prior to the installation of the construction fence. This Subcontractor shall also contact "Call BeforeYou Dig" for each phase, prior to beginning excavation.

23. This Subcontractor's work shall be tested and inspected by an independent testing agency hired by the Owner, in accordance with the specifications. Such testing agency shall be selected by the Owner and all compensation for the testing agency shall by borne by Owner. This Subcontractor shall schedule all inspections 72 hours in advance of the time of the inspection.

24. This Subcontractor shall include furnishing, installing, and removing orange temporary construction fencing around any open trench within or outside of the construction fence at the end of each day or when work at the trench is suspended and the manpower and equipment is removed from the work zone. This Subcontractor shall install hard barriers for excavations deeper than 5'. For example, but not limited to temporary protection for the new sanitary line schedule for the summer of 2025, refer to page #3 of the Turner Logistics Plan as well as contract documents.

25. This Subcontractor shall provide steel plating over all utility trenching in the parking lots or roadways, outside the construction fence, at the end of each day or when the work is suspended and the manpower or equipment is removed from the work zone.

26. This Subcontractor shall be responsible for all site snow removal, including but not limited to Subcontractor access to the building, Subcontractor parking areas and trailer / tent entrances/exits and general construction circulation within the construction fence and at the Center School satellite parking lot for all phases of the project, as directed and to the satisfaction of Turner, on the day of each clean-up event. This Subcontractor shall also furnish and maintain three 5 gallon buckets of ice melt at the entryways to the building under construction over the course of the project, include spreading as required during snow/ice events. This Subcontractor shall remove all snow from excavated trenches and protect the trenches until formwork is installed, at which point the concrete Subcontractor shall protect his work. The Municipality will be responsible for all driveways, parking lots, and walkways outside the construction fence. This subcontractor shall provide breakout pricing for Weather Protection by phase in Application for Payment.

27. This Subcontractor shall include the furnishing, maintaining, and the removal of the temporary toilets as defined below and per the site logistics scope of work and as required for durations per the Project Schedule.

    a. This subcontractor shall provide, for the duration of the project schedule, self-contained temporary toilet trailer consisting of a minimum of 8 stall bathroom trailer – 2 women stall, 6 men stall, and 4 urinal restroom trailer (with flushable toilets) and hot water handwash stations similar to those provided by United Site Services, Bonavita Luxury Lavatories, WILLSCOTT (or approved equal) including delivery, set up, rental and removal at the completion of the project.

    b. This subcontractor shall provide excavation and backfill for temporary power.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#9 - Sitework
Dated: 07.08.2024
Revised: 09.30.2024

c. Trailer to include sanitary tanks that allow for pumpout and domestic water tank for self-contained toilet trailer complex. Include domestic water tank until this subcontractor furnish and installs tie in of a temporary water line from the onsite temp hydrant – include heat trace as required for water line to prevent freezing. Include sanitary tanks & pumpout until the sanitary line can tied in along Indian Rock Lane in June 2025, this subcontractor shall then tie in toilet trailer by furnish and installing temporary sanitary line from toilet trailer to new sanitary manhole. Once these temp tie ins are in place domestic water tank and regular tank pumping are no longer required. This subcontractor shall include required hand soap refill, toilet tissue and paper towels at toilet trailer, and cleaning services at a minimum of 3 times per week. Include cap and remain in place the temporary sewer connection piping when toilet trailer is removed at the end of the project.

28. This Subcontractor shall include the furnishing, maintaining, and the removal of the Turner's Site Trailer(s) and as required for durations per the Project Schedule and per below.

a. This Subcontractor shall furnish, install, maintain and remove temporary trailer for Turner similar or equal to WILLSCOTT Redi-plex, triple 60x36 trailer (56x36 box), min 8' ceiling height, metal clad insulated panel exterior walls, combination through wall heating and cooling unit(s). All lighting and data to be included with unit. See plans for required layout and furniture requirements. Include window/door security bundle, 3 data hubs, 15 manager chairs, 38 stackable side chairs with arms, 31 standard desks (5ftx2.5ft), 15 Pedestal filing cabinets (3 drawer), 5 small white boards (3ft x 4ft), 9 large white boards (4ftx6ft), 13 L-desk privacy shields.

b. This Subcontractor shall furnish, install and maintain 4 stairs and platforms at Turner's office trailer with Canopy. Include all required support and rails to meet the requirements of the local AHJ. Include complex anchor setup and associated anchors, and complex vinyl skirting.

c. This Subcontractor shall provide and maintain a 4 CY closed top dumpster at the Turner Office Trailer.

d. This subcontractor shall provide excavation and backfill for temporary power and internet to trailer complex including the excavation/backfill as required for eventual removal of temp power. Include furnish and install of 4" pvc conduit for power service and 2" pvc conduit for internet to the jobsite from Orchard Street or Stanwich Road (tbd by utility). In addition, This subcontractor shall excavate and backfill as required for a 2" below grade conduit (F&I by electrical) to bring internet cable from Turner Trailer to the media center room 1055. Assume all conduits to be 3' below finish grade.

e. This Subcontractor shall include 3 - ten person conference tables and 1 – 4 person conference table.

f. This Subcontractor shall include cleaning the construction manager's construction trailer once per week by a professional cleaning company. Cleaning shall include vacuum and/or sweep, wet mop, trash removal, cleaning of all exposed surfaces and toilets and sinks.

g. This Subcontractor shall include relocation of Turner Trailer to Demolition area – Phase 2 per logistics plans in July 2026 until the completion of the project. Include single 36ft trailer for Phase 2 portion of the project with similar layout to WILLSCOTT Redi-Plex per Phase 1 requirements.

29. This Subcontractor shall furnish, install and continuously maintain the anti-tracking pads indicated on the Logistics Plans in conformance with the details included in the contract documents, including a wheel wash station and water hook-ups at the Main Exit. This subcontractor shall furnish, install and continuously maintain the 15' wide crushed stone drive, crushed stone Subcontractor parking area, and weed-block/crushed stone at Turner's Office Trailer at the sizes/depths/coverage areas indicated. This Subcontractor shall include continuous maintenance of the anti-tracking pads, wheel wash station, and crushed stone for the duration of this Phase of Work. This subcontractor to provide high pressure washers at each exit location for tire washing purposes. This subcontractor is to provide all materials necessary to hook up and retrieve water and a water truck must be provided by this subcontractor if water is not available on site. This subcontractor shall be responsible for street sweeping to maintain clear roadways around the site as directed by Turner. It is the intent of this scope that the sitework subcontractor manages the site to limit the amount of mud to exit the site on any truck or vehicle. Include removal and disposal of stone and anti-tracking pad at the time, and as required, for new work to be put in place.
30. This Subcontractor is responsible for all the Sitework scope clarified in the final Bidder's Question Log, which includes, but is not limited to, the items identified for the Sitework Bid Package #9.
31. This Subcontractor shall provide the final A-2 Site Survey at the completion of each phase, and provide the comprehensive survey at the completion of the entire project.
32. This Subcontractor shall furnish and install 2 each worker break heavy duty outdoor event tents inclusive of tables and seating for the duration of the project. Tents shall allow 50 workers each a place to eat lunch and take breaks.
    a. Include required tie down points to prevent damage to tent and to properly hold in place.
    b. Include 1 – microwave at each tent for use by workers.
    c. Include outdoor picnic tables with integral benches capable of seating 50 workers per tent.
    d. Include retractable sidewalls (or walls cable of being tied to vertical posts when not required for use) with entrances at two ends.
    e. In lieu of 2 tents, this subcontractor can install an Allshelter between the 40' connex provided under this agreement plus 1 additional as required for support and use by this subcontractor. All shelter to be fully enclosed and include full Endwall at one end and doorway endwall & doors at the other.
33. This Subcontractor shall follow and include all Town of Greenwich Standard Construction Notes including but not limited to soil tilling 12-16 inches and amended used for all construction equipment and used for contractor parking per note #10 on drawing C001.
34. This Subcontractor shall be responsible for the demolition, removal, and disposal of all existing site demolition as indicated on the contract documents. This includes, but is not limited to, the removal of existing concrete pads, benches, flagpoles, athletic/sports equipment, sheds, posts, concrete stairs, ramps, handrails, retaining walls, fencing, trees, paving, sidewalks, curbs, storm water structures and associated piping, sanitary structure and associated piping, water systems, piping, electrical systems as indicated in the contract documents. This Subcontractor shall coordinate any service suspensions with the utility company and pay for any associated permits or fees.
35. Given the limited space for storage on the site, this Subcontractor shall export from the site all topsoil compiled as part of the clearing and grubbing process in accordance with the contract documents.

Dated: 07.08.2024
Revised: 09.30.2024

36. This Subcontractor shall be responsible for the protection of any underground or above ground utilities or structures within construction area or adjacent to new construction affected by this subcontractors scope.
37. This Subcontractor shall remove paving, walks and curbing as required to install site utilities and replace/restore in kind.
38. This Subcontractor shall salvage items as indicated on the contract documents including but not limited to plaque and bolder and plaque and bench, per drawing L101B. This Subcontractor shall also survey any memorial plaques that are not identified on the drawings, and turn them over to the Owner.
39. This Subcontractor shall provide the tree protection identified on the contract document.
40. This Subcontractor shall be responsible for removing any preexisting materials from the athletic field area as indicated on the contract documents including but not limited to the 32 9119.29 Athletic Field Root Zone.
41. This Subcontractor shall not store, clean or service equipment within 100' of the wetlands. This Subcontractor shall create a fueling area with a liner or pavement in a location that is coordinated with Turner's site logistics plan and this scope of work.
42. Any work performed by this Subcontractor for curb cuts, street work, all work outside property line, our outside of the construction temporary fence will require temporary fence protection installed, maintained and eventually removed by this Subcontractor.
43. This Subcontractor shall prepare the subgrade at the slabs on grade to accommodate the requirements for the haunches for the slab on grade indicated on the structural drawings.
44. This Subcontractor shall furnish, install and maintain wood framed platform and stairs at Turner's office trailer. Include all required support and rails to meet the requirements of the local AHJ.
45. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to cleanup general debris not necessarily associated with particular subcontractor ***(cardboard, plastic bottles, misc. trash item, general sweeping, etc.)***
46. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
47. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
48. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
49. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

50. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
51. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
52. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
53. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.
54. This Subcontractor shall furnish and install the project sign for the Department of Administrative Services as noted in spec section 01 5000. The location and details of the sign shall be coordinated with TCCO.

Site Logistics

55. This Subcontractor shall include the rental of a 40 ft connex box for Turner use to the site scope with the dates Phase 1, from January 2025 to March 2026 or at a minimum 15 months.
56. This Subcontractor shall furnish and install 2 ea. color, exterior grade project sign approx. 48’x96” (Graphics will be provided by others) including posts set into concrete and relocated 2 additional times for phasing. Include furnish and install of an additional 16 aluminum signs for use at vehicle gate locations and as directed by Turner(Graphics will be provided-include provisions for fence mounting).
57. This Subcontractor furnish, install and maintain 8-**Foot-High** temporary construction fence with full height blue scrim per the Turner Logistics Plans. The post shall be driven posts and this subcontractor shall include GPR or other non-destructive testing to scan for underground utilities prior to install driven posts. Temp fence details shall include but not be limited to the details on drawing C418. Additionally, beyond the details on the contract documents, this Subcontractor shall include top and bottom rails on temporary fence and include providing scrim with graphics that includes Greenwich BOE & CMS name and logo repeated on the scrim.
58. This Subcontractor shall furnish and install 20-foot slide style construction gates at locations designated by the Turner Logistics Plans. Construction Entrance/Anti Tracking Pads shall be installed and maintain at construction entrance gates. All Sliding gate posts shall be cast into below grade 3’ deep concrete sonotube base for support.
    a. This subcontractor shall furnish (10) – 5’ length stainless steel chain link for locking gates and (10) – 2” Master Combination outdoor lock, shakel, resettable.
59. This Subcontractor shall furnish and install 1 ea. pedestrian gate and pedestrian entry portal at each temporary fence vehicular slide gate unless otherwise shown on the logistics plans. This subcontractor shall include 2 additional pedestrian gates at upper portion of the site opposite of the entrance gates to be located by Turner Construction. Include hardware for latching and locking of gates.
60. This Subcontractor shall furnish install and maintain temporary construction drives as indicated on the contract documents and the Turner Logistics Plans, drives shall consist of a minimum of 6 inches of crushed stone or unless otherwise noted.

61. Per the Turner Logistics Plans, at emergency egress from existing building, this Subcontractor shall provide and maintain overhead protection. Temporary overhead protection shall maintain minimum 15' distance from new building for construction vehicles and allow for egress from the existing building. Include ¾" minimum plywood barrier at Construction side of overhead protection locations.
62. This Subcontractor shall provide post driven temporary wood poles for the site security cameras to be mounted at locations identified on the Turner Logistics Plans. (Cameras by others) This subcontractor shall include GPR or other non-destructive testing to scan for underground utilities prior to install driven posts.
63. This Subcontractor shall furnish and maintain grading and temporary crushed stone at 6-inch minimum depth as required for contractor parking area per the Turner Logistics Plans.
64. This Subcontractor shall furnish, install and maintain a minimum of 6 crane pads per the Turner Logistics Plans, crane pads shall include compaction of subgrade and minimum of 12" of crushed stone and measure 40ft by 40ft.
65. This Subcontractor shall include the removal and relocation of all temp fence, gates, construction entrances, security camera posts, construction drives, construction gates, anti-tracking pads, crane pads, contractor parking areas and relocation of temporary trailer and temp trailer bathroom complexes or proving new as required for the phasing, refer to the Turner Logistics Plans for specifics.
66. This Subcontractor shall include eventual removals of all temporary sitework logistics scope and temporary erosion controls at the completion of the project and restoration as required.
67. This Subcontractor shall furnish and install Metered Yard Hydrant with hose bib manifold at approx. location per the Logistics Plans, 100 lf of buried HDPE pipe for pathways of hoses for Phase 1. At phase 2 include relocating yard hydrant into out construction space to help facilitate demolition and furnish and install (2ea) 300 Gallon HDPE Containers with ball valves for distribution around site for other trade use.
68. This Subcontractor shall furnish and install the expansion of the heavy-duty concrete to accommodate temporary road access including but not limited to as shown on page 5 of the Turner Logistics Plans.
69. This Subcontractor shall include the creation of a temporary sidewalk including but not limited to as shown on page 5 of the Turner Logistics Plans. This Subcontractor shall also include the removal at the completion of the phase and removal/restoration.
70. This Subcontractor shall furnish, install and maintain asphalt millings, including removal for 50' around perimeter of building post foundations in phase 1 including but not limited to as shown on page 4 of the Turner Logistics Plans. Intent is that this Subcontractor shall be responsible for providing a uniform and level compacted grade around the building perimeter suitable for the support of scaffolding and lifts.
71. This Subcontractor shall furnish, install and maintain temporary 4-foot-wide stone walkways from Turner trailers, toilet trailer and parking area locations to the two entrances located each side of the Auditorium. Coordinate final layout with Turner superintendent. Assume 6" depth of ¾" stone. This Subcontractor shall remove all temporary sidewalks at the direction of Turner.
72. This Subcontractor to furnish, install and remove (4) Jersey barriers for protection against vehicular traffic at any and all O2, Flammable Gas and LPG storage tanks within the construction area, location tbd.
73. This Subcontractor will provide 30 traffic cones with telescoping cone bars to be used in areas designated at the direction of Turner.
74. This Subcontractor shall furnish, install, relocate and remove (6) additional jersey barriers in locations directed by Turner.

Additional Provisions/Scope of Work

Revised: 09.30.2024

75. This Subcontractor shall furnish to the jobsite a Stihl Kombi system KM 131 R with Power Sweep, Bristle Bush and FS-KM Line Head Trimmer. Unit to be run-ready and include a 5.0-gallon safety gas can filled with mixed gas.
76. This Subcontractor shall furnish to the jobsite one Stihl BR 800 C-e Magnum backpack blower. Blower shall be run-ready.
77. This Subcontractor shall furnish to the jobsite one Toro Power Clear 721 R Snow Blower. Snow blowers shall be run-ready.

Erosion Control and Stormwater Management

78. This Subcontractor shall provide grading as required to create and maintain temporary swales as indicated on the contract documents.
79. This Subcontractor shall furnish install and maintain temporary water bars on construction drives as indicated on the contract documents.
80. This Subcontractor shall furnish and install all temporary sediment basins including but not limited to stone, drainage pipe/structures, dams, and connections to existing drainage systems as indicated on the contract documents.
81. This Subcontractor shall include cleaning / mechanical sweeping of any soil or debris from the construction site on the adjacent streets and the school's driveways and parking lot areas as required or within 24 hours of a request by Turner during the entire duration of the project.
82. This Subcontractor shall include dust control as required per the contract documents for duration of the Project. This Subcontractor shall provide a water truck, buffalo misters, or other means of dust control as needed to control the dust on site.
83. This Subcontractor shall tarp the stockpiles of onsite material, as required, to protect it from saturation during a rain event and to control dust migration on windy days with wind speeds over 10 mph.
84. This Subcontractor shall furnish, install and maintain all geotextile silt fence, inlet protection, silt sacks, hay bales/hay bale barriers, erosion control blankets and temporary sediment traps as indicated on the contract documents. Any stockpiled areas shall be surrounded in additional silt fencing.
85. This Subcontractor shall furnish, install and continuously maintain Erosion Control Measures required per the contract documents. This Subcontractor shall include all costs to remove and dispose of Erosion Control Measures at the end of the Project. Note that the quantity of anti-tracking pads shall be installed per Turner’s site logistics plan and not the civil drawings.
86. This Subcontractor shall coordinate/cooperate with the Greenwich authorities and the independent inspector, as necessary, to ensure proper erosion control methods/practices are in place at all times. This Subcontractor shall inspect the erosion control measures on a weekly basis and as required per the SWPPP. This Subcontractor shall maintain a log book documenting the condition and/or repairs implemented following each inspection. This Subcontractor shall also provide a rain gauge and maintain a daily log documenting the actual rainfall on site on a daily basis.
87. This Subcontractor shall furnish and install all storm water management structures, chambers, isolators, drains, inlets/outlets, manholes, manhole accessories, cleanouts, hydrodynamic separator(s) and accessories including but not limited to excavate and backfill required for installation, bedding materials, piping and connections to existing piping as indicated on the contract documents.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#9 - Sitework

88. This Subcontractor shall furnish and install all Rain Gardens and Swales including but not limited to filter fabric, pipe, crushed stone, bedding materials, subgrade, grading, soils and scarifying and tilling soil beneath gardens. Refer to Rain Garden Typical Cross Section and 5' Wide Stone Swale With 6" Underdrain details on drawing C504.
89. This Subcontractor shall furnish and install all below grade under drainage piping, roof leader drain piping and the above grade downspout boots between roof leaders and drain piping. Building mounted roof leaders are by others. Refer to drawing C504.
90. This Subcontractor shall furnish and install the below Second floor slab storm piping from 5' outside of the foundation (retaining) wall. Reference multiple locations as shown on PSU001 and associated scope shown on the Civil drawings.
91. This Subcontractor shall provide Greenwich soil mix as indicated on the contract documents including but not limited to where shown on drawing C504 beneath rain garden(s).

Excavation, Backfill and Trenching

92. This Subcontractor shall furnish and install fill materials as required by the contract documents to fill excavation at demolished building(s). Coordinate with Demolition Subcontractor and specification section 024100 3.1.
93. This Subcontractor shall include all of the excavation and backfill for the foundation system per the contract documents. With the use of the geotechnical information, the excavation is considered to be unclassified and this Subcontractor shall be responsible for all rock removal and the removal and replacement of unsuitable soils necessary for the installation of the new structures and the associated site utilities. No additional compensation will be made to complete work as shown on the Contract Documents
    a. This subcontractor shall assume line drilling of rock along the Emergency Path rock face (at the rear of the new building). Intent would be to achieve a clean wall of rock where visible.
94. This Subcontractor shall provide the fill material necessary to achieve the designated grades on site, as well as the fill material identified inside the building including as required by the contract documents.
95. This Subcontractor shall include all trench excavation, bedding and backfill for removal of existing and installation of all new underground utilities beneath slabs-on-grade (see Fire Protection, Plumbing, Mechanical, & Electrical drawings) in accordance with the contract documents.
96. This Subcontractor shall furnish and install the bedding material, filter fabric, and crushed stone required per the contract documents for all installations performed by this Subcontractor. Under-slab vapor barrier will be furnished and installed by the Concrete Subcontractor after this Subcontractor shall furnish and install the crushed stone under slab as indicated on the contract documents.
97. This Subcontractor shall ensure that all excavations are properly sloped or laid back per OSHA regulations to avoid any collapses or cave-ins. Shoring will be required for all trenches over 5' deep. Materials shall not be stockpiled within 4' of an open excavation edge. This Subcontractor to provide trench boxes as required for any excavation requiring workers to enter the trench(es).

Site Utilities

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#9 - Sitework
Dated: 07.08.2024
Revised: 09.30.2024

98. This Subcontractor shall furnish and install all drainage, water, gas, sewer, and fire protection services outside of the building foundation walls and extend to 5 feet from foundation walls. These site utilities 5 feet from the building and closer shall be by respective MEP trades. This Subcontractor shall include any these site utilities shown under slabs but outside of the foundations walls that are shown on civil drawings for example: drainage piping on drawings C102 from grid 2 to 3, D to E.
99. This Subcontractor shall demolish and dispose of all existing site utilities as indicated on the contract documents including but not limited to drainage/drainage structures, sewer, light pole bases, overhead electrical/telecom poles, gas, water and fire services and components.
100. This Subcontractor shall provide excavation and back fill to expose any electrical / communications conduits / services scheduled for demolition. Removal of conduit in soil shall be by this subcontractor, any concrete encased ductback scheduled for demolition shall be removed by this Subcontractor after the electrical subcontractor cuts and makes safes.
101. This Subcontractor shall abandon existing utilities including but not limited to plugging piping, filling piping with pumpable controlled low strength materials, removing portions of manholes, removing manhole frames and covers, breaking existing structures and filling with material as indicated on the contract documents.
102. This Subcontractor shall provide warning tapes for all underground utilities as indicated on the contract documents.
103. This Subcontractor shall saw cut / patch and restore any existing finish including but not limited to lawn, concrete sidewalk/curb or bituminous pavement/curb scheduled to remain as required to demolish, provide or otherwise access trenches for all proposed underground utilities.
104. This Subcontractor shall furnish and install all gas piping up to and including meter and manifold, connection to existing main, excavate and back fill and provide bedding materials for all gas piping as indicated on the contract documents. This Scope shall include contacting and coordinating with local utility and providing any gas connection fees.
105. This Subcontractor shall furnish and install all the site utilities including but not limited to Sanitary Sewer piping, manholes, structures, connections to existing, trenching and backfilling, and bedding materials as indicated on the contract documents. Include any sewer connection fees to local utility/municipality. Additionally, this scope shall include coring / patching existing sanitary structures as required for connections, refer to E303 for example.
106. This Subcontractor shall provide all concrete encasement for sanitary sewers as indicated on the contract documents including but not limited to what is shown on drawing C303.
107. This Subcontractor shall furnish and install all fire protection and water service piping, connections to existing, taps, valves, trust blocks, air vents, blow off boxes/covers, piping restraints, providing trenching and backfilling, and bedding materials as indicated on the contract documents.
108. This Subcontractor shall flush and chlorinate the water lines prior to putting them into service. This Subcontractor shall coordinate with the plumber and the fire protection contractors prior to performing this work.

State Project No. 057-0114 N
Greenwich, CT
BP#9 - Sitework
Dated: 07.08.2024
Revised: 09.30.2024

109. This Subcontractor shall coordinate with Aquarion for the installation of new and removal of existing water service and the tapping of all new water lines to the project. This Subcontractor shall provide all fees associated with this work and shall perform the taps or hire an approved subcontractors to perform this work. This Subcontractor shall furnish and install all vaults/water meter pits per Aquarion's requirements for the new water connections to the buildings. This Subcontractor shall install the domestic water service lines to within 5' of the foundation wall, all fire protection piping shall be extended through the foundation wall by this Subcontractor. The fire protection line shall have a flanged connections or otherwise coordinated with fire protection Subcontractor.

110. This Subcontractor shall provide excavation and backfill, including furnishing and install bedding materials for the fire protection service and any new hydrants as indicated on the contract documents. Coordinate with the local fire department for the thread connection requirements for these hydrants. This subcontractor shall furnish and install all piping, automatic ball drip and Siamese connection scope at the exterior of the building, reference detail 8/FP500.

111. This Subcontractor shall coordinate with the Gas Company for the installation of the new or relocated services to the buildings including any underground gas piping scheduled for removal. This Subcontractor shall excavate and backfill per the gas company's specifications for the primary piping to be installed by the gas company. This subcontractor shall furnish and install the gas meter pads per the Gas Company's specifications.

112. This Subcontractor shall excavate and backfill for temporary 4" x 4" x 20' power poles to be installed by the electrician as defined in the logistics plan and scope of work. At the end of the project, this Subcontractor shall remove these poles, backfill the hole, and grade the area in preparation for the site improvements and landscaping for this area.

113. This Subcontractor shall coordinate with the various utility companies (power, telephone, cable) regarding the installation of new utility poles, the relocation of existing utility poles, and the removal of utility poles as defined in the contract documents. This Subcontractor shall include all fees associated with this work.

114. This Subcontractor shall obtain the proper permits for all utility work and provide the police for traffic control at any street opening as required by Greenwich.

115. This Subcontractor shall hand dig around existing utilities to ensure that they are not damaged or broken by excavating equipment.

116. This Subcontractor shall excavate and backfill all electrical, security, and communication conduits including but not limited to the primary and secondary electric services as indicated the contract documents.

117. This Subcontractor shall coordinate with the power company and shall furnish and install the concrete transformer pad(s) in accordance with the power company's specifications. The electrical contractor shall furnish and install all underground conduits.

118. This Subcontractor shall furnish and install all electrical manholes including the primary electrical manhole and include patching around the knockouts once the EC runs the conduits/ductbank.

119. This Subcontractor shall encase all underground conduits in concrete as indicated on the contract documents and install warning tape in accordance with the contract documents.

120. This Subcontractor shall excavate and backfill all the electrical conduits between the building and the emergency generator. The electrical subcontractor shall furnish and install all conduits/ductbanks. This Subcontractor shall furnish and install the concrete pad(s) for the generator(s).

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N

121. This Subcontractor shall excavate and backfill for all the telecom ductbanks between the utility poles and the buildings. The electrical subcontractor shall furnish and install all conduits/ductbanks. This Subcontractor shall encase these conduits and install a warning tape in accordance with the contract documents.

122. This Subcontractor shall excavate and backfill for the site power, EV charging, lighting conduits and the traffic control gates / motorized gate controller conduits as indicated on the contract documents, including but not limited to what is indicated on drawing SU100.

123. This Subcontractor shall also furnish and install the concrete light pole bases, blue light concrete bases, and site entrance sign (A924) as indicated on the contractor documents. This Subcontractor shall coordinate with the electrical contractor (or Vendor) for the anchor bolts layouts and the installation of the conduit, prior to pouring the concrete.

124. This Subcontractor shall furnish and install all anchor bolt for concrete bases that are indicated to be "by Site Contractor" including but not limited to site lighting concrete bases, refer to details on SU501, EV charging station concrete base anchor bolts, refer to detail 3/SU500 for example and blue light concrete base anchor bolts per 7/SU500.

125. This Subcontractor shall excavate, backfill, rig and set electrical/telcom vaults / hand-holes and electrical / telcom manholes provided by the electrical subcontractor or utility as indicated on the contract documents. This scope shall also include preparing subgrade and bedding materials for vaults/hand holes/manholes as required by the contract documents.

126. This Subcontractor shall excavate and backfill, provide bedding materials for and furnish and install all grease waste, connections, structures, grease traps and oil/water separators, and inspections as indicated by the contract documents.

127. This Subcontractor shall furnish and install all exterior grease traps as indicated on the contract documents.

128. This Subcontractor shall furnish and install the footing underdrain system and the defined enclosure (filter fabric and crushed stone) around these pipes at all the new foundations, and as indicated on the contract documents. These drains shall connect to the storm system as indicated on the contract documents.

Site Paving, Curbing, and Pavement Marking

129. This Subcontractor shall furnish and install all bituminous concrete pavements and walks shown on the Contract Documents. This scope includes all pavement patching associated with the installation of all utilities. See Turner's Sitework/Hardscape & Utility Phasing Plan, dated 3/22/17, for out of sequence utility work and paving requirements.

130. This Subcontractor will be responsible for all new or replacement Pavement Markings required for roadways, walkways and parking lots. This Subcontractor shall also furnish and install the transverse rumble strips and the speed humps with pavement markings, as indicated in the contract documents.

Site Concrete

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#9 - Sitework
Dated: 07.08.2024
Revised: 09.30.2024

131. This Subcontractor shall be responsible for the site concrete including but is not limited to; fence and gate footings, light pole bases, thrust blocks, encasement of ductbanks. This Subcontractor shall include sub-grade preparation for the concrete Subcontractor. This Subcontractor shall coordinate with the concrete Subcontractor for the connections of the sitework walkways to the concrete contractor's step and walkways.

132. This Subcontractor shall furnish and install rigid insulation between frost pads and adjacent construction including but not limited to detail 5 on drawing S200.

133. This Subcontractor shall furnish and install vertical rigid insulation and required protection board on interior & exterior side of foundation walls as indicated on the contract documents including but not limited to details 1D, 2D, 3D/A410, 3E, 1E, 1C, 2C/A412, all details on A413 and A418, 4D, 5D, 6D, 3E, 2E/A414, 2D, 3D/A415,1E, 3E, 4E, 5E/A417, 1E, 2E, 3E, 4E/A416 and 1D, 2D, 5D, 4E/A411. Include per typical foundation wall vertical insulation, ref A501.

134. This Subcontractor shall furnish and install decorative boulder selected from the site coordinate with Owner, Architect and Landscape Architect and furnish and install all concrete for signage including the foundation/footing for Street Front Signage. Refer to drawing A924

135. This Subcontractor shall furnish and install a 15' x 20'x 5" concrete pad for a free-standing mock in a location to follow. The removal of the mock-up and the pad will be by the demolition contractor. This scope of work shall also include but not be limited to subsurface prep of gravel below the slab as reference of drawing A315 and furnishing and installing a mockup of the louver screen wall.

Site Improvements

136. This Subcontractor shall remove, store and re-install existing batting cage scheduled for re-use as indicated on the contract documents.

137. This Subcontractor shall furnish and install the dumpster enclosures as indicated on the contact documents including but not limited to all slab(s) walls, fencing and doors/gates and associated hardware at dumpster enclosure. Reference drawing L504.

138. This Subcontractor shall furnish and install all metal screen fencing as indicated on the contract documents including but not limited to fencing per details 3A, 3D, 1D on drawing L503.

139. This Subcontractor shall furnish and install the site and traffic signage, wayfinding and parking signage, and pavement markings as indicated in the contract documents including but not limited to demolishing, relocating any existing traffic signage and/or eradicating any existing conflicting pavement markings.

140. This Subcontractor shall furnish and install all unit pavers on sand bed with metal edge restraint and the flagpole(s) per the contract documents.

141. This subcontractor shall provide a value for Alternate #3 as defined in the form of proposal.

142. This Subcontractor shall furnish and install all ADA traffic Control Bollards, Electronic ADA stanchions, site planters, site benches, bicycle racks, steppingstones, stone mulch and metal edging, seating and tables, live edge wood benches and boulders as indicated on the contract documents.

143. This Subcontractor shall furnish and install all gates including but not limited to vehicular double swing gate per detail 3B on drawing L502 and Cantilever chain-link fence sliding gate (if this alternate is accepted) per detail 3A on drawing L601. Include any required painting of gate per documents.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#9 - Sitework
Dated: 07.08.2024
Revised: 09.30.2024

144. This Subcontractor shall furnish and install all combination sign/boards, steel concrete filled and removable type bollards (including the footings, concrete fill and painting), timber guiderails, vehicles access gates, automatic traffic control gates (along with the footing specified by the manufacturer) , and chain link fencing as indicated in the contract documents. This Subcontractor shall coordinate with the Landscaper for the installation of the timber rails relative to their access for the installation of the landscaping.

145. This subcontractor shall engineer, furnish and install the segmental block retaining walls indicated in the contract documents including but not limited to Diamond Pro PS Block – Victorian Face per detail 1D/L503 and Metal Screen Fence(s) including but not limited to details shown on L503.

146. This Subcontractor shall furnish and install all exterior litter receptacles as indicated in the contract documents.

147. This Subcontractor shall furnish and install all Safety Netting as indicated on the contract documents, reference detail 1A on drawing L601.

148. This Subcontractor furnish and install all baseball and softball backstop systems as indicated on the contract documents including but not limited to the details on drawing L602.

149. This Subcontractor furnish and install the baseball/softball shade enclosures including but not limited to the benches and corrugated roofing the as indicated on the contract documents including but not limited to the details on drawing L602.

150. This Subcontractor shall provide all metal fencing, metal screen fencing, shade enclosures, bollards, backstop assemblies, stanchions, safety netting support metal, dumpster enclosure gates, vehicle gates, and foul ball poles in a painted or factory applied finish. All finish painting or providing in factory finish shall be included for exposed metals supplied by this Subcontractor.

151. This Subcontractor shall furnish and install the raised planters as indicated on the contract documents including but not limited to raised concrete planters per detail 3E on drawing L501.

152. This Subcontractor shall include the follow **Trade Allowances**: 120 hours of machine time (assume small wheel loader similar to CAT 930) and 320 hours of a laborer for required site logistic modifications associated with phasing and restoration of areas. Laborer Time to be included as journeyman rate including any required supervision. This will be billed based on the final agreed contractual wage rates and may only be expended by written authorization of Turner Construction and any unspent portion of this unused scope hours will be credited at the end of your contract based on approved labor rate.

Additional Items

D. Exclusions

1. Exclude fiber mulch. (by Landscape)
2. Exclude polymer Concrete handholes (by EC)
3. Exclude heat trace at exterior sanitary piping.
4. Exclude furnishing and installing under-slab sanitary piping (By Plumbing Bid Package)
5. Exclude Soil Preparation specification 32 9113 (By Landscape Bid Package)
6. This Subcontractor shall exclude the following flatwork concrete unless otherwise indicated above including frost pads, sidewalks, sidewalk ramps and curbing as indicted on the contract documents

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#9 - Sitework
Dated: 07.08.2024
Revised: 09.30.2024

which shall include the detectable warning strips. Exclude spec sections 32 1313 – Concrete Paving and 32 1373 – Concrete Paving Joint Sealants.

7. Excludes concrete washout.

E. Safety

1. This Subcontractor shall excavate all trenches assuming all soil to be Type C. Meaning all excavations shall be continuously sloped at a 34-degree angle in accordance to the OSHA standards. Sloping cannot exceed 20 feet without verification by a PE. BENCHING NOT ALLOWED IN TYPE C SOIL. This Subcontractor shall provide a detailed sheeting and soil retention plan for the work to be undertaken. This requirement does not attempt to characterize soil suitability for the support of structures or equipment but is only recommended for the purposes of trench collapse prevention.
2. This Subcontractor to provide a fall protection plan for all excavations 6 feet or greater in depth. This Subcontractor shall ensure excavation fall exposures are guarded by a hard barrier that meets OSHA's definition of guard railing. Orange fencing, danger or caution tape will not be acceptable.
3. This Subcontractor shall furnish, install and maintain an OSHA compliant wire rope guardrail system atop ALL site perimeter H pile soil retention systems. This is to be installed before any mass excavation begins to eliminate fall hazards during its installation. This Subcontractor will furnish and install a 3x3 steel angle posts atop each H pile sized to accommodate a toprail cable at 42" inches above walking surface and a midrail cable at 21" above the walking surface, terminated by 3 appropriately sized and spaced forged steel wire rope clips (Crosby or equal) torqued to manufacturers specifications. All steel posts, cabling, hardware and turnbuckles are to be furnished and installed by this Subcontractor. The minimum allowable cable size will be 3/8ths only if aircraft rated cable is used. The perimeter cable system is to include turnbuckles spaced at no more than every 100 feet with terminations made at all corners. This Subcontractor to also furnish, install and maintain orange mesh secured to the top rail and terminated into the top piece of lagging. This Subcontractor is to inspect and maintain all guardrails and mesh on a daily basis until backfilling is complete and railing no longer necessary for fall protection. Daily inspections shall be documented by this Subcontractor and made available to Turner upon request. Removal of safety cabling systems will be by others. This Subcontractor to incorporate four (4) pedestrian access/material loading areas independent of perimeter protection with removable cables and tie-off points for three (3) workers. These material loading areas to be located by Turner's Superintendent. This subcontractor to use the top edge of the lagging as a toe board and means to secure orange mesh, it is important that this Subcontractor allow for the height of the H-pile to be at least 6 inches above the adjacent walking surface elevation.
4. This Subcontractor shall provide (prior to arriving on site) all tabulated data for shoring boxes utilized for soil retention, including soil retention at the site utilities. This Subcontractor must ensure that they furnish, install, maintain and remove guard railing (includes a continuous top rail at 42 inches above grade, a midrail at 21 inches above grade, a toe board 4 inches above grade) at all sheeting, soldier pile or trench box that terminates 6 feet or greater above a lower level. This Subcontractor to furnish, install, maintain and remove such guard railing as well as provide daily documented inspections.
5. This Subcontractor shall have a 40-hour Hazwoper trained employee on site at all times. (for projects with the requirement outlined in the soils management plan.)

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#9 - Sitework
Dated: 07.08.2024
Revised: 09.30.2024

6. This Subcontractor to provide snow removal for the entire site including all areas identified within the Turner site logistics plan. Removal must be continuous throughout all areas within the site fencing and all access paths to all entries into the building including any areas in the building impacted by snow and ice. Snow removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms. This Subcontractor shall sand and de-ice as required to maintain safe conditions on site including: egress from each building, trailers and to the Site Emergency Rally / Muster location per the Crisis Management Plan. The snow removal will be accomplished prior to commencement of the days work shift to allow for safe entry without delay into the jobsite. This subcontractor is required to maintain at all times roadways and foot paths in a safe traversable condition by plowing, shoveling and utilizing surface treatments.
7. This Subcontractor shall ensure the grade differential between any (concrete) surface and adjacent rough grade is no more than 10 inches below finish floor elevation during all phases of construction. This Subcontractor shall be responsible for providing a uniform and level compacted grade around the building perimeter suitable for the support of scaffolding and lifts.
8. This Subcontractor shall provide and maintain anti-tracking pads and tire wash stations per the Turner Site Logistics Plan or as required by Turner. Each anti-tracking pad shall be constructed as specified by the contract documents or Turner. Tracking pads as defined by the site logistics plan or site improvement plan will prevail if more stringent than this requirement or if the area is required to be greater in size. This subcontractor to provide high pressure washers at each location for tire washing purposes. This Subcontractor shall provide the appropriate manpower to ensure ALL vehicular traffic is washed at these locations before entering onto municipal streets. These areas must be isolated from coming in contact with any soil remediation areas where required. This subcontractor is to provide all materials necessary to hook up and retrieve water and a water truck must be provided by this subcontractor if water is not available on site. This subcontractor shall be responsible for street sweeping to maintain clear roadways around the site as directed by Turner.
9. This subcontractor shall perform inspections of the erosion/stormwater control measure for the project, this Subcontractor is responsible to furnish, install, repair and remove all stormwater/erosion control measures, devices, fixtures, etc. per the Project SWPPP (Stormwater Pollution Prevention Plan) and all terms and conditions associated with this work. This includes responsibility for all corrective action required to remediate the stormwater controls per the inspections by Turner and by all 3rd party inspectors and maintain a documentation log confirming all corrective actions. See Turner Construction Company Stormwater Compliance Program for additional requirements.
10. This Subcontractor will be required to maintain a lined concrete wash out for their concrete work and will be responsible for removing all surplus concrete from the job site in accordance with contract documents. Concrete surplus must be removed on a weekly basis or as directed by Turner.
11. This Subcontractor shall ensure safe access in and around all footings by providing ramps at every footing and every 25’ along the foundation walls. If trenches are to be traversed ensure that walkways are at least 18 inches wide and are secured together when using two planks to make up the required width. If the height of the walkway exceeds 4 feet vertically this subcontractor will install guardrails to prevent falls from same walkway.
12. This subcontractor shall excavate around footings to allow for an unobstructed 2 foot wide clear path around all footings during wall construction, drainage and waterproofing installation activities. The adjacent footing grade must be maintained no lower than 16 inches below top of footing.
13. This Subcontractor shall coordinate with Turner Superintendent and backfill to within 2” the top of all footings, compacted and leveled prior to the commencement of wall forming operations.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#9 - Sitework
Dated: 07.08.2024
Revised: 09.30.2024

14. This Subcontractor shall verify the presence of all existing underground utilities that may be affected by their work. This includes the use of non-intrusive methods such as hand digging or vacuum excavation of pot holes every 15' to locate known utilities per the Surface Penetrating Request Permit. This includes areas where fence posts for site containment fences are to be driven. This Subcontractor will contact "Call before You Dig" for layout of existing utilities and coordinate with the facilities department. This subcontractor will be responsible for maintaining utility markings.
15. This Subcontractor shall hire an independent GPR Subcontractor approved by Turner to grid out, locate and mark all existing underground utilities in all areas of disturbance. This GPR Subcontractor shall provide subsurface utility profiles in plan and elevation as built by a licensed surveyor with dimensions off existing site benchmarks that will remain throughout the project and submit copies to Turner. This subcontractor will be responsible to maintain with updated as builts and remark utilities for the duration of the project when needed.
16. This Subcontractor shall ensure that the soil/ fill conditions under any equipment i.e. SCAFFOLDING/HYDROMOBILES/CRANES have been coordinated with the Subcontractor providing the equipment to ensure suitable soil bearing capacity.
17. All building and structure shoring/underpinning systems must be designed by a professional engineer. Plans and calculations must be submitted to the engineer of record for approval prior to undertaking the work. Inspections must be performed daily by a qualified party designated by the subcontractor and maintain a documentation log confirming any corrective actions required.
18. This subcontractor shall ensure that if self-supporting temporary fence is required tube bases that project into adjacent walkways will not be permitted. Temporary fencing must be supported by one sided fence bases (either steel and/or sand bagged) or low profile high-visibility bases shall be used to eliminate tripping hazards to the public side. In general, scrim shall be wind resistant scrim.
19. This Subcontractor shall ensure that all temporary fence panels are free from protruding wires or other components that could scratch, catch or snag pedestrians as the pass by the fence.
20. This subcontractor is to furnish, install, maintain and remove all fencing, scrim covering, and gates for the full duration of the project as outlined in the project schedule and layout defined by Turner's Site Logistics Plan. Fence must be inspected for integrity and this contractor will perform any necessary repairs identified.
21. All designated walking paths must be temporarily graveled and regularly maintained using ¾" stone maximum. A path must be furnished and maintained from the site entry gate to the building perimeter entry location at all times.
22. This Subcontractor must provide daily dust control for all sitework so that dust is controlled to the point that it is not visible. This subcontractor shall provide their own water connection.
23. Excavator cabs windshield must be protected with both a suitable cage covering and safety glass when the excavator is being used in conjunction with a hydraulic breaker, hoe ram and during clearing and grubbing operations.
24. This contractor will coordinate with Turner to determine the location of air intakes into other buildings that could be adversely affected by exhaust fumes from its machinery. This contractor will be expected to protect the fresh air intake of existing buildings from exhaust, mists or dusts generated by their work.
25. This Subcontractor will provide 80 traffic cones with telescoping cone bars to be used in areas designated at the direction of Turner.
26. This subcontractor shall furnish, install, relocate and remove (10) additional jersey barriers in locations directed by Turner.

Additional Provisions/Scope of Work

Revised: 09.30.2024

27. This subcontractor shall furnish, install, maintain, relocate as needed and remove jersey barriers or dead men along ramp excavation inclines as guardrail protection for motor vehicles and construction equipment.
28. This Subcontractor shall ensure all street plates have anti-skid surfaces with no open lift holes.
29. Blasting Operations to be governed OSHA and the Manual of Accident Prevention in Construction of the Associated General Contractors of America. This contractor will be required to submit blasting plans to be reviewed by a 3rd Party. A Pre-Blast Permit will be required to be completed for each blast sequence. Include all Town permits and associated cost as required for Blasting.
30. This Subcontractor shall develop, implement and maintain a road closure plan that follows MUTCD requirements for any road/lane closures or work adjacent to public roadways.
31. This subcontractor shall provide "Danger Construction Do Not Enter" on the exterior scrim of the site fence every 20'.
32. This Subcontractor to furnish, install and remove concrete barriers for protection against vehicular traffic at any and all O2, Flammable Gas and LPG storage tanks within the construction area as further defined by Turner's Site Logistics Plan. Also provide grading and 3/4" stone as a base for these enclosures.
33. This Subcontractor shall relocate the existing two (2) storage sheds on the property. Reference drawing L101A and Drawing L301A at grid line E & 1 for shaded rectangle intended to show existing sheds location. Please note – sheds will not be demolished, shed will be relocated per Owner's direction on the property.

F. Logistics and Schedule

1. This subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

G. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for a complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

Unit Prices:	**Amount**
Refer to Form of Proposal	

H. Alternate Prices

The following Alternate Prices reflect the work of this bid package under which the bid proposal was ***submitted, and these alternate shall remain valid for the life of the project and include all costs for a*** complete installation.

Alternates:	**Amount**
Refer to Form of Proposal

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Concrete Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***Concrete Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
03 0156	Under-Slab Vapor Retarder

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

03 3250	Concrete Post Installed Anchors
03 6213	Non-Metallic Non-Shrink Grouting
07 2100	Thermal Insulation
07 9200	Joint Sealants

General Items

2. This Subcontractor will make every effort possible to ensure that their waste is properly sorted and disposed of to divert as much waste as possible from disposal in a landfill. This Subcontractor will track this recycling effort using the Online Waste Tracking System established by Turner Construction Company. Each dumpster ticket is to be logged into this system and its recycled content reported as a means of tracking the total percentage of construction and demolition debris diverted from landfills. There is a $50 per month fee for use of this website and this Subcontractor shall include all costs in his bid for use of this service. Refer to the attached User's Manual for more information about this system. Refer to the Turner Tracker Manual in the referenced "Forms and Policies," dated January 2015, in Turner's Project Manual.
3. This Subcontractor shall assume that temporary electric will not be available for this Subcontractor's use during the various stages of Sitework. This Subcontractor shall include the use of generators furnished and maintained by this subcontractor as required for the duration of their Work.

Bid Package Specific Scope

4. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
5. This Subcontractor shall include all measures needed for winter concrete installation as required based on the construction schedule timing of this work, including but not limited to tarps, blankets, electric blankets, heaters, enclosures, concrete admixtures, etc. This Subcontractor shall protect all concrete from freezing temperatures per the specifications. Upon finish grading and turnover from the Sitework Subcontractor, this Subcontractor shall include any snow removal and protect the subbase from winter weather.
6. This Subcontractor shall provide a lined dumpster for the purposes of wash out to be available for cleaning all concrete trucks, including concrete provided by other trades. Any concrete truck not using this for clean-out will be noted and the clean-up back-charge from the Site Subcontractor will be the Concrete Subcontractor's responsibility. Any excess concrete due to over placement shall be the responsibility of this Subcontractor to remove to this lined dumpster.
7. This Subcontractor shall repair, clean or restore any existing or new areas that are disturbed by concrete operations to the satisfaction of Owner and Construction Manager. This includes immediately cleaning all concrete splatter and spills due to concrete placement by this Subcontractor on all surfaces exposed to view. This includes, but is not limited to, stair stringers, stair landings, stair risers, architecturally exposed structural steel, and masonry walls.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#10 - Concrete
Dated: 07.08.2024
Revised: 09.30.2024

8. This Subcontractor shall attend a pre-installation meeting 30 working days prior to any concrete being placed. The meeting will be organized by Turner and the following people should be in attendance; the Building official, Testing Agency, Special Inspector, Structural Engineer, Architect, Concrete Supplier and this Subcontractor. The purpose of the meeting is to review proposed concrete mix designs and as well as project specific requirements and how they are to be achieved.

9. This Subcontractor shall submit cold weather and hot weather concrete placement plans in accordance with ACI and include all costs to implement these plans.

10. This Subcontractor shall furnish and install all layout, concrete formwork, concrete reinforcement and cast-in- place concrete placement per the contract documents including but not limited to the following items. This shall include all accessories and means and methods required to provide a completed product per the documents.

    a. Foundation walls, strip footings, spread footings, piers
    b. Frost Pads and Recessed Frost Pads
    c. Slab on Grade
    d. Slab on Decks, supported slabs
    e. Elevator pits, including sump pits
    f. Slab for Radon Pits
    g. All concrete stairs, ramps, and walls connected to the building or within the building footprint
    h. Housekeeping pads required for all mechanical, electrical, plumbing, etc. equipment inside of the building
    i. All concrete on S-Series Drawings

11. This Subcontractor shall furnish and install all frost pads, recessed frost pads and supporting frost walls as shown on the contract documents. See L501 and Structural S200 drawings for details. Include rigid insulation between slabs per details.

12. This Subcontractor shall furnish and install the 8” reinforced frost walls and pad at perimeter of the two Chiller pads at the exterior of the building, as shown on S101A.

13. This Subcontractor shall furnish and install all Portland cement based underlayment at ramps, as shown on but not limited to detail 2/S201.

14. This Subcontractor shall furnish and install any structural grade rigid filler material at applicable locations, including but not limited to detail 2/S201.

15. This Subcontractor shall furnish and install all cast in place concrete stairs including at the Auditorium leading to the Stage Level.

16. This Subcontractor shall furnish and install masonry/brick shelves at the concrete foundation wall. Refer to details on the Structural drawing series for examples of this condition. This includes all preparation work and coordination with the Masonry Subcontractor for sizing and locations.

17. This Subcontractor shall be responsible for all coordination with the Elevator Subcontractor for dimensions, inserts and keeping the elevator pits clear of all debris and water.

18. This Subcontractor shall layout, form and place concrete and reinforcement for all stepped footings where indicated. Reference the Structural drawings.

19. This Subcontractor shall monitor the formwork during and after concrete placement to ensure the plumbness of walls and make adjustments as necessary.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#10 - Concrete
Dated: 07.08.2024
Revised: 09.30.2024

20. This Subcontractor shall receive, distribute, and install all concrete embedded items supplied by others, including but not limited to anchor bolts, bearing pads, masonry embeds-dovetail slots, embedded angles, wall sleeves, etc. All locations of embedded items to be set via Total Station layout or similar.
21. This Subcontractor shall remove all snap ties, cut concrete fins and fill voids in the concrete surfaces within two weeks of concrete placement, refer to requirements of project specifications.
22. This Subcontractor shall provide a hand-rubbed finish on concrete foundations, walls and sides of slabs where they are exposed to view.
23. This Subcontractor shall provide all surveying and layout required for the work included with this package.
24. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
25. This Subcontractor shall include all horizontal underslab insulation where shown in the contract documents, including but not limited to 1D, 2D, 3D/A410, 3E, 1E, 1C, 2C/A412, all details on A413 and A418, 4D, 5D, 6D, 3E, 2E/A414, 2D, 3D/A415,1E, 3E, 4E, 5E/A417, 1E, 2E, 3E, 4E/A416 and 1D, 2D, 5D, 4E/A411.
26. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to cleanup general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)
27. This Subcontractor shall include a control joint layout shop drawings for submission to design team for approval include details for required joint sealants by this subcontractor.
28. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
29. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
30. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
31. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

Slab-On-Grade / Slab-On-Deck

32. Immediately prior to the placement of concrete slabs, this Subcontractor shall thoroughly clean all areas to receive concrete. Compressed air shall not be used. This Subcontractor shall use vacuums or other methods that minimize dust.
33. This Subcontractor shall furnish and install haunched slabs where slab on grade abuts the foundation walls. Reference details in the Structural drawings.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#10 - Concrete
Dated: 07.08.2024
Revised: 09.30.2024

34. This Subcontractor shall furnish and install haunched slabs underneath CMU walls as detailed on Drawings S-301 thru S-303 for example. Refer to architectural drawings for full extent of CMU walls.
35. This Subcontractor shall include furnishing and installing all vapor retarder beneath the slab on grade shown on the Contract Documents and as specified in Specification Section 030156. This Subcontractor shall inspect the under slab vapor barrier system prior to slab placement and repair any damage prior to concrete placement.
36. This Subcontractor shall coordinate with the finish flooring subcontractors for their trade's tolerance level for flatness and curing procedures to understand if any conflicts exist between the trades. If there are differences in the requirements, this needs to be addressed upfront with Turner Construction prior to slab placement. This subcontractor shall include laser float at all slab on grade locations for level slabs. Include total station layout of Auditorium sloped slab on grade.
    a. Subcontractor shall, in addition to the floor leveling required for their own work, provide an additional 1000sf of ¼" thick floor leveling to be completed at the direction of the Turner Superintendent.

Miscellaneous Concrete Work

37. This Subcontractor shall furnish and install all concrete housekeeping pads required for mechanical, electrical, and plumbing equipment including but not limited to those shown on the Structural S100 series drawings. Coordinate layout with the mechanical subcontractors. Scope shall include doweling into the slab.
38. This Subcontractor shall be responsible for furnishing and installing all non-shrink grout where new structural members are to be installed at concrete construction; including, but not limited to details on column baseplates and beam bearing plates.
39. This Subcontractor shall furnish and install all toe boards and scrim at all slab on grade and slab on deck locations where a fall hazard exists in accordance with Turner Safety Additional Provisions. Removal will be by others.
40. This Subcontractor shall furnish and install wire mesh (or acceptable concrete reinforcement) at all stair tread infills and landings. This Subcontractor is to include furnishing and installing all concrete fill at metal stair pans.
41. This Subcontractor shall include the removal of temporary wood infills at metal stair pans. Installation of temporary wood infills by others.
42. This Subcontractor shall include furnishing and installing any slab depressions required for wood flooring or other similar finishes, including but not limited to those shown on drawing A091.
43. This Subcontractor shall furnish and install vertical wall dowel reinforcing as required at masonry or concrete walls. Coordinate dowel locations for masonry walls with the Masonry Subcontractor.
44. This Subcontractor shall coordinate with the Plumbing Subcontractor for location of radon pit venting.

Coordination with Other Trades

45. This Subcontractor shall coordinate all requirements for Testing and Inspection in accordance with Field Quality Control section found in the Division 1 specifications and Concrete Specifications. This Subcontractor shall furnish any required cure box (or boxes) of sufficient capacity for concrete placement schedule. Inspections will be scheduled through the Construction Manager.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#10 - Concrete
Dated: 07.08.2024
Revised: 09.30.2024

46. This Subcontractor shall be responsible for ordering, scheduling and sequencing of concrete deliveries required for the work. This shall include any premium time and standby labor required for continuous work (including the concrete supplier if required).
47. This Subcontractor will work closely with the Sitework Subcontractor to coordinate the scheduling and installation of excavation of concrete footings/foundations as shown. It is to be understood that this Subcontractor will give a minimum of (24) hour notice to the Sitework Subcontractor of specific footings/foundations to be excavated. If it is not feasible to access for direct concrete placement, this subcontractor shall include pump for concrete placement. At a minimum, this subcontractor shall assume concrete pump will be required for all slab on grade, slab on deck, walls, foundation walls, elevated slabs.
48. This Subcontractor shall coordinate all concrete work with all other subcontractors having work adjacent to or embedded within the concrete.
49. This Subcontractor shall coordinate and provide all openings in formwork for other trades as required. This includes box-outs and/or sleeves in walls and/or slabs for MEP/FP trades or other work that penetrates the concrete. Layout and sleeves shall be furnished by others and installed by this Subcontractor. All openings through concrete slabs will be formed and stripped to provide opening size unless they are shown on the structural steel drawings to receive an edge stop.
50. This Subcontractor shall coordinate all work with Plumbing Subcontractor for installation of trap primers and floor drains at concrete slabs on grade.
51. This Subcontractor shall coordinate with the Plumbing Subcontractor for floor drain heights to be maintained during the concrete pour.
52. This Subcontractor shall include costs to assist the Sitework Subcontractor in dewatering of footings and open foundations as required to perform the concrete work. The Sitework Subcontractor's work shall include, but not be limited to, pumping water, mud removal from excavations, clean-up, etc. This Subcontractor shall be responsible for the removal and reinstallation of formwork and/or reinforcement if deemed necessary.
53. This Subcontractor shall use anchor bolt patterns supplied by Steel Subcontractor for the setting of anchor bolts. This Subcontractor shall also include installation of anchor bolts and leveling plates provided by the Steel Subcontractor. All locations of embedded items to be set via Total Station layout or similar.
54. This Subcontractor shall include grouting of leveling plates. This Subcontractor shall include providing an as built survey of installed anchor bolts, embedded items and bearing plates prior to the scheduled start of structural steel erection. This survey shall be by a licensed registered surveyor independent of any other survey performed by the Steel Subcontractor. A combined survey from this Subcontractor and the Steel Subcontractor will not be accepted**.** The cost to replace or reset any bolt, embedded item or plate found out of tolerance for location or elevation will be the responsibility of this Subcontractor. The survey / corrective work shall be done so as to not delay steel erection or work of other trades. Coordinate the phasing of the work with Turner Superintendent and the Steel Subcontractor.
55. This Subcontractor shall grout in elevator door sills.
56. This subcontractor shall furnish and install all fall protection at the level two slab on grade areas for the entire length of the retaining wall per Turners EH&S program upon removal of the retaining wall formwork. Fall protection will be removed by the Steel subcontractor for installation of metal decking.
57. This Subcontractor shall include and implement a 5S (sort, straighten, shine, standardize and sustain) Lean system strategy onsite to be approved by Turner Construction. If in Turner's observation 5S implementation is insufficient (i.e. lack of organization, excess trash/material accumulation), Turner

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#10 - Concrete
Dated: 07.08.2024
Revised: 09.30.2024

reserves the right to direct this subcontractor to add a full time designated laborer at this subcontractors expense to comply with approved 5S strategy, or Turner will hire one at this Subcontractor's expense.

58. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.

Joint Sealants:

59. This Subcontractor will furnish and install all Joint Sealants within and at perimeter of work where called out.

Expansion Control:

60. This Subcontractor will furnish and install expansion joints or expansion control items where required within the concrete slabs and walls. This work includes but is not limited to furnishing any expansion joint covers as well as boxing out for them in the slab pour and then grouting them in as part of the installation by this Subcontractor if required.

D. Safety/Logistics

1. This Subcontractor has reviewed the Logistics Plans and the Construction Schedule and shall include all associated costs as relevant to achieve this scope of work within the Project Schedule. No come back costs will be entertained.

2. This Subcontractor shall review, conform to, and furnish and install all requirements included in the Safety Additional Provisions included in this Agreement. This Subcontractor understands that this document is project specific, and all provisions must be included in this Subcontractors' bid.

3. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible for removing snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.

4. This Subcontractor shall provide a site-specific plan on how they will comply with Turner's Ladder's Last Program.

5. This subcontractor shall ensure that any Lulls used on site are equipped with hydraulic fork positioners.

6. This subcontractor shall engage a 3rd Party to complete a GPR Survey to mark out existing utilities under and in the general area of any proposed Mobile Crane locations.

7. This Subcontractor to provide, install and maintain a safe, secured transition strip with beveled edges around the entire perimeter between all elevated and depressed slabs. This Subcontractor shall remove and dispose of the transition strip as directed by Turner.

8. Winter weather tarps are not allowed to be hung from the perimeter guardrail cables. This Subcontractor to furnish an independent means to secure the tarps. All tarps must be fire rated.

Additional Provisions/Scope of Work

State Project No. 057-0114 N
Greenwich, CT
BP#10 - Concrete
Dated: 07.08.2024
Revised: 09.30.2024

9. This contractor shall provide (50) D-Ring Fall Protection straps to be cast in place or wrapped around the exterior beams at locations identified by the Turner Superintendent. Straps shall be accessible between 7 and 8 feet AFF. Each contractor is responsible for visibly inspecting each tie off point before using. This subcontractor is responsible to inspect each strap after installation. All anchorage points shall be installed prior to turnover of each deck and to be removed by others.

10. This subcontractor shall furnish and install plywood over rebar mats that must be traversed either by this contractor or by any trade. The solid walking surface must be made of suitable material 4' in width and the full length of the mat.

11. This Subcontractor shall install one layer of mesh on mat slabs to prevent workers from falling within the rebar in between top and bottom mat.

12. This Subcontractor shall utilize a rebar shear in lieu of a chop saw or grinder to cut rebar.

E. Exclusions

1 This Subcontractor shall exclude all vertical underslab insulation where shown in the contract documents, including but not limited to 1D, 2D, 3D/A410, 3E, 1E, 1C, 2C/A412, all details on A413 and A418, 4D, 5D, 6D, 3E, 2E/A414, 2D, 3D/A415,1E, 3E, 4E, 5E/A417, 1E, 2E, 3E, 4E/A416and 1D, 2D, 5D, 4E/A411. (By BP#9 Sitework).

2 This Subcontractor shall exclude flatwork concrete outside of the building footprint, such as concrete sidewalks (2A/L501), concrete pavement (2B/L501), and concrete curbing (By BP#40 Concrete Flatwork).

3 This Subcontractor shall exclude concrete lightpole bases or concrete fill for bollards (By BP#9 Sitework).

4 This Subcontractor shall exclude excavation, preparation of subgrade, backfill and dewatering (By BP#9 Sitework).

5 This Subcontractor shall exclude dumpster enclosure pads, gas meter pads, generator pad(s), fence and gate footings, furniture footings, sign footings, light pole bases, thrust blocks, encasement of ductbanks. (By BP#40 Concrete Flatwork or BP #9 Sitework).

F. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for a complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Masonry Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***Masonry Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
04 2000	Unit Masonry
04 7323	Manufactured Building Stone Masonry

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Bid Package Specific Scope

1. This subcontractor shall include all costs for access to work including, but not limited to, scaffolding, stair towers, lifts, etc. This subcontractor shall furnish, install, inspect, maintain and remove all scaffolding required for the performance of the work of this Contract. This Subcontractor shall provide protection under work access to protect slabs. All other subcontractors requiring access shall complete liability waivers as determined by this subcontractor.
2. This subcontractor shall leave all work areas broom clean at the completion of this subcontractor's daily work this includes continuous housekeeping at the base of any scaffolding system.
3. This Subcontractor includes all blocking, brackets, fixtures, shims, connections, and other items necessary for a complete system.
4. This Subcontractor shall include all cutting, coring & sleeving for penetrations relative to your trade for a complete system.
5. This Subcontractor shall be responsible for all testing required per the drawings, specs, and state requirements.
6. This Subcontractor shall include all Sustainability requirements, including but not limited to CTHB Documentation.
7. This subcontractor shall receive, store and install all embeds, sleeves, access doors, louvers, vents, etc. within masonry partitions. This subcontractor shall coordinate with the MEP/FP and Elevator Subcontractors for the installation of electrical conduits and mechanical sleeves/pipes within masonry partitions. All embeds and sleeves are to be furnished by the respective trades requiring such, along with dimensioned shop drawings indicating locations. This subcontractor shall not accept material without formal transfer of care and custody paperwork. This subcontractor shall provide copies to Turner upon request. This subcontractor shall coordinate with respective subcontractors for, including but not limited to, all in-wall rough-in for electrical, elevator, and controls devices.
8. This subcontractor shall perform all layout of masonry partitions including locations of door openings. This subcontractor shall use a laser to ensure that all masonry walls are level and plumb. This subcontractor shall verify that door frames have been installed plumb and level and shall ensure they remain plumb and level during the masonry installation. The setting of hollow metal frames shall be by BP #21 Drywall & General Trades and aluminum frames by BP #19 Glass, Glazing, & Metal Panels.
9. This Subcontractor shall provide all surveying and layout for the work of this package. Survey will be by a Total Station or a Licensed Surveyor.
10. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
11. This Subcontractor shall furnish all the standard, special, finish, etc. warranties identified in the specifications.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP11 – Masonry
Dated: 07.08.2024
Revised: 09.30.2024

12. This subcontractor shall furnish and install all Exterior and Interior Masonry and Architectural Precast Concrete Work as required for complete systems. This shall include, but is not limited to, furnishing and installing all CMU, Masonry Veneer, Glass Unit Masonry, Cast Stone, Precast Architectural Concrete, accessories, etc. as shown on the Contract Documents.
13. This subcontractor will be responsible for any temporary connections, shoring or bracing and additional miscellaneous structural support not indicated on Contract Documents and required for a complete masonry system.
14. This subcontractor shall furnish, install, maintain and remove all weather protection required for the completion of the masonry work in accordance with the Project Schedule. This work shall include, but is not be limited to, shrink wrap (similar to Global Wrap or equal), enclosures, temporary heaters with fuel, admixtures, etc. and costs for hot water. This subcontractor shall include all heated enclosures, as required, for installation of masonry work in compliance with the specifications. The heated enclosure shall adhere to ALL safety policies required by the Safety Additional Provisions, and all safety requirements by Authorities Having Jurisdiction. If required for open flame heating source, this shall include 24-hour safety standby monitoring of the heating equipment and enclosures while in operation. This subcontractor shall provide breakout pricing for Weather Protection by phase in Application for Payment.
15. This subcontractor is required to provide a mixing station in a location acceptable to Turner and the Owner. This subcontractor shall keep mixing station clean and organized including, but not limited to, stockpile material, controlling dust, and daily removal of debris this subcontractor's dumpster. This subcontractor shall include weather protection as required.
16. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection of unfinished and finished work to prohibit damage from subsequent work. Protection must be approved by Turner.
17. This Subcontractor shall include the follow **Trade Allowance**: 80 hours of labor time for 5S and safety, protection and logistics requirements as directed by TCCo Superintendent. Laborer Time to be included as journeyman rate including any required supervision. This will be billed based on the final agreed contractual wage rates and may only be expended by written authorization of Turner Construction and any unspent portion of this unused scope hours will be credited at the end of your contract based on approved labor rate.
18. This Subcontractor shall coordinate all work with all other Subcontractors having work adjacent to or connecting to the work of this Subcontract.
19. This subcontractor shall protect roofing and metal deck, as per Roofing Subcontractor's recommendations, while performing work on upper masonry walls. Where this subcontractor is working on a finished roof, this subcontractor shall provide photographic documentation of the roof condition prior to the start of work. Failure to provide documentation will result in this subcontractor's responsibility to pay for costs associated with exterior and interior damage.
20. This subcontractor shall coordinate with MEP trades for locating and installing block outs in new masonry walls for duct and MEP raceways. This Contractor shall furnish and install lintels in masonry walls where block outs for MEPs are required. This Contractor shall coordinate these openings with the MEP contractors prior to wall construction, if this does not occur this Contractor shall cut and patch the partition at their own expense. See the MEP drawings for the extent of the new penetrations.
21. This Subcontractor shall furnish and install all mock-ups required for this scope of work per the contract documents, for example as shown on Drawing A-315.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP11 – Masonry
Dated: 07.08.2024
Revised: 09.30.2024

22. This Subcontractor shall provide engineering stamp drawings and calculations of all delegated design items as indicated on the contract drawings.
23. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to clean up general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)
24. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
25. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule. Include separate early mobilization for install of all CMU that supports structural steel.
26. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
27. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.
28. This Subcontractor shall furnish and install all masonry components of the front signage as shown on documents, including but not limited to masonry veneer and flashing, for example as shown on 5D/A924.

Exclusive Specifications

Spec. 04 2000 Unit Masonry

29. This Subcontractor shall furnish and install all unit masonry and accessories as shown on the contract documents required for a complete system, including but not limited to grouting, masonry ties, anchorage, reinforcing steel, flashing, termination bars, drip edges, movement joints, weeps, etc.
30. This Subcontractor shall coordinate, furnish and install anchors as required, for example 13/S410 connection to steel tube.
31. This Subcontractor shall furnish and install all acoustical concrete masonry units as shown on documents for a complete system, for example as shown at Gymnasium A111.4.
32. This Subcontractor shall furnish and install all top of wall anchors for connecting interior masonry to underside of structure for joint stabilization, for example, as shown on Detail 1B/A605.
33. This Subcontractor shall exclude welded L anchorage at slab edge, for example 1A/A605. To be furnished and installed by BP #12 Structural Steel.
34. The BP #10 Concrete Subcontractor will furnish and install reinforcing steel dowels shown to be installed in cast-in-place concrete for reinforced CMU partitions. This subcontractor shall coordinate layout of masonry partitions with BP #10 Concrete Subcontractor.

Spec. 04 7323 Manufactured Building Stone Masonry

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP11 – Masonry
Dated: 07.08.2024
Revised: 09.30.2024

35. This Subcontractor shall furnish and install all manufactured stone masonry as shown on the contract documents for a complete system, including but not limited to anchor system, angles, mortar net, drainage mat, masonry ties, flashing, continuous metal flashing and sill drip edge, etc.
36. This Subcontractor shall design, furnish, and install anchors as shown on contract documents, for example ashlar stone anchor system as shown at detail 5B/A500.

Shared Specifications

Spec. 03 6213 Non-Metallic Non-Shrinking Grouting

37. This Subcontractor shall furnish and install all grout as shown on the contract documents for a complete system of this subcontractor's work.
38. This Subcontractor shall grout all new interior and exterior door frames installed in masonry interior and exterior walls. This subcontractor shall protect hinges from grouting operations in order to ensure a smooth door installation. Upon completion of grouting, this subcontractor shall clean excess grout to prepare for painting.

Spec. 05 5000 Metal Fabrications

39. This Subcontractor shall furnish and install all steel loose lintels as required per the contract documents, for example as shown on drawings A641 -A642 and lintel schedules on A606.

Spec. 07 2100 Thermal Insulation

40. This Subcontractor shall furnish and install insulation at all exterior veneer locations provided as part of this bid package scope of work. This includes but is not limited to all exterior wall assemblies with CMU back-up, concrete back-up, or stud and sheathing back-up with veneer provided by this subcontractor.

Spec. 07 2726 Fluid-Applied Membrane Air Barriers

41. This Contractor shall furnish and install **ALL** fluid-applied membrane air barriers as shown on the Contract Documents, including but not limited to masonry, FCP, skylight, louvers, curtainwall/storefront, rainscreen system, and metal panel locations with a minimum 1-foot overlap or per manufacturers requirements on vertical face with adjacent work. For example, this Subcontractor shall install membrane air barrier per detail 3A/A520.
42. This subcontractor shall provide all required termination bars as required per the Contract Documents for example as shown on 3D/A641.
43. This subcontractor shall furnish and install sealant at all through-wall penetrations and attachments that penetrate the air/vapor barrier as per manufacturer's requirements.

Spec. 07 6200 Sheet Metal Flashing and Trim

44. This Subcontractor shall furnish and install all formed wall flashings and trim within or adjacent to exterior wall veneer provided by this Subcontractor.

Spec. 07 9200 Joint Sealants

45. This Subcontractor shall furnish and install all joint sealants, control joints and joint sealant assemblies within and at the perimeter of this subcontractor's work.
46. This Subcontractor shall furnish and install all joint sealants including but not limited to door frames, louvers, access doors and other items installed within masonry partitions.

D. Safety

1. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible to remove snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.
2. This Subcontractor shall provide a site-specific plan on how they will comply with Turner's Ladder's Last Program.
3. This Subcontractor shall ensure that any Lulls used on site are equipped with hydraulic fork positioners.
4. This Subcontractor shall engage a 3rd Party to complete a GPR Survey to mark out existing utilities under and in the general area of any proposed Mobile Crane locations.
5. This subcontractor shall ensure scaffolding more than 4 tiers high is installed with debris netting covering the entirety of the non- working sides of the scaffolding full height extending to the top guardrail height of the upper most platform. All working platforms to include a guardrail, mid-rail and toe board per OSHA specifications. All scaffold bases will be installed on wood mudsills regardless if on level concrete. All scaffolding sections to be fully pinned and coupled. Stair towers are the required method of scaffold access. Others means such as ladders will be acceptable only when stair towers are not feasible. Fall protection must be provided at all scaffold access points by temporary gates, offset guardrails or other means to eliminate the fall hazard at access opening. All components are to be compatible. This subcontractor is responsible for a fully engineered scaffolding system that accounts for wind loading that may be imposed by scrim or tarp enclosures.
6. This Subcontractor shall ensure that Mortar tubs and other materials are prohibited from being landed on scaffold extended bracket support platforms. The subcontractor will be required to construct a separate scaffold bay/section bump out for which to receive material on. Workers must be protected from fall exposures should top or mid rails be removed when landing material on the scaffold structure. This Subcontractor shall provide a comprehensive scaffold and fall protection plan rendered by a qualified person. Plan should include plan and elevation renderings of the scaffold structure and key assembly and connection details. Scaffold erection and dismantling procedures must obey all regulations set forth by OSHA Subpart L 1926.451 and Turner's Site Safety Program. Maximum loading requirements must be provided for each bay. In the event the scaffolding needs to be built on an existing structure it shall be the responsibility of this Subcontractor to perform an engineering survey to determine if it can support the load of the scaffolding. In the event the existing structure needs to be shored or supported it shall be the responsibility of this Subcontractor to do so. The structure must be designed by an engineer to sustain potential wind loads produced from the encapsulating debris scrim or any winter weather protection barriers.
7. This Subcontractor shall ensure mixer staging areas if elevated above 2 feet have guard rails and stairs for access. The platform must be of solid construction and not a stack of pallets. All guards to mixers must be in place.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP11 – Masonry
Dated: 07.08.2024
Revised: 09.30.2024

8. This Subcontractor is responsible to ensure that the perimeter protection of each floor that is affected by their work be maintained on a daily basis. If Guardrail systems need to be modified or removed to install the work this Subcontractor must ensure that they protect the floor edge by replacing the guardrails or installing a separate standard guardrail system. Open sided floors cannot be unprotected at any time. If this subcontractor's work replaces the guardrail edge protection this contractor will be responsible for removing and coordinating the return of the reusable guardrail/fall protection system (posts, cables, turnbuckles, clips,) to the concrete or structural steel subcontractors. Material should be palletized and returned in an orderly fashion.
9. This Subcontractor shall utilize a rebar shear in lieu of a chop saw or grinder to cut rebar.
10. This Subcontractor shall ensure stair access is provided for all scaffolding.
11. This Subcontractor shall ensure that all guardrails on scaffold systems are manufacturer fabricated standard fall protection rails.
12. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible to remove snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.

E. Exclusions

1. This Subcontractor shall exclude welded L anchorage at slab edge, for example 1A/A605 (By BP #12 Structural Steel).
2. This Subcontractor shall exclude hung lintels (By BP #12 Structural Steel).
3. This Subcontractor shall exclude masonry dowels cast in concrete and slab reinforcement at masonry partitions (By BP#10 Concrete).

F. Logistics and Schedule

1. This subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

G. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for a complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

Unit Prices:	**Amount**
Refer to Form of Proposal	

H. Alternate Prices

The following Alternate Prices reflect the work of this bid package under which the bid proposal was ***submitted, and these alternates shall remain valid for the life of the project and include all costs for a*** complete installation.

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***BP #12 Structural Steel Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detailed references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***BP #12 Structural Steel Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
051200	Structural Steel Framing
052100	Structural Joist Framing
053100	Steel Decking
072163	Fluid Applied Insulative Coating

Shared Specifications

Additional Provisions/Scope of Work

Revised: 09.30.2024

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
Div 00	Division 00 – Procurement and Contracting Requirements
Div 01	Division 01 – General Requirements
033250	Concrete Post-Installed Anchors
050805	Factory-Applied Coatings for Metal
055000	Metal Fabrications

Bid Package Specific Scope

General

2. This subcontractor shall fully participate in all 3-D coordination - All work per 3-D MEP Coordination Additional Provisions. This shall include modeling all roof joists. This subcontractor is responsible for coordinating with all the MEP trades and resolve any conflicts or coordination issues.
3. This Subcontractor is aware that this is a High-Performance Building and submittals should be submitted according to these standards. This Subcontractor has included all costs associated with meeting these requirements as set forth in the Division 1 Specifications.
4. This Subcontractor will provide the necessary written documentation for meeting the CT High Performance requirements as outlined in the Division 1 specifications.
5. This Subcontractor is responsible for distributing material to all floors as required and its protection from damage during delivery, handling, storage, and installation.
6. Temporary power will not be available for Structural Steel erection. It is agreed and understood that this Subcontractor shall utilize gasoline-powered welders or similar in order to perform the welding associated with erection of the Structural Steel for this Project. In addition, this Subcontractor shall assume that temporary electric will not be available for this Subcontractor's use during steel erection. This Subcontractor shall include the use of generators as required for the duration of their Work.
7. Prior to entering the site this Subcontractor shall submit all fitness for use / inspection certifications required for cranes to the Construction Manager. This Subcontractor shall be responsible for all crane permits for his work. This matter is a very important safety requirement to follow, and no crane will be allowed to be used unless this paperwork is submitted and up to date. There shall be a pre-planning meeting prior to erecting the crane on site.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP12 – Structural Steel
Dated: 07.08.2024
Revised: 09.30.2024

8. This Subcontractor shall be responsible for ordering, scheduling, and sequencing of steel deliveries required for the work. This shall include any premium time.
9. No truck parking/idling is allowed on streets adjacent to project site while waiting to unload. This Subcontractor shall include accommodations as required to adhere to "just in time" deliveries. Refer to Turner's "Logistic Plans – Scope of Work" for delivery restrictions.
10. This Subcontractor shall include all costs for two (2) round trip inspection visits for two (2) individuals at the structural steel fabrication plant. These costs should include travel, meals, lodging, and round-trip airfare if necessary, from Greenwich, CT.
11. This Subcontractor shall review, conform to, and furnish and install all requirements included in the Safety Additional Provisions included in this Agreement. This Subcontractor understands that this document is project specific, and all provisions must be included in this Subcontractor's bid.
12. This Subcontractor is responsible for leaving the metal deck cleaned of all debris resulting from erection of structural steel and metal deck including removal of stud ferrules. Due to dust concerns, blowers and compressed air are prohibited. Prior to turnover, the Construction Manager shall review and accept metal deck cleanliness.
13. This Subcontractor shall provide snow/ice removal as required to perform the work of this trade. Provide all preheating of welds, covering etc. to work during winter conditions. Site Access/egress snow removal will be by Sitework Subcontractor.
14. The Sitework Subcontractor (BP #09) shall provide 5 crane pads (40'x40'each of 12" crushed stone). This Subcontractor shall coordinate locations and sizes with the Sitework Subcontractor. This subcontractor shall furnish & install their own additional pads, and any cribbing, dunnage, etc. that may be required for their crane set-up and steel erection.
15. This Subcontractor shall coordinate with the Owner's Special Inspections Testing Agency (TBD) as required per the plans and specifications including those referenced in The Statement of Special Inspections. This Subcontractor shall provide the Construction Manager with seventy-two (72) hour advance notice for all required inspections. This subcontractor shall provide means for the inspector to access work, including but not limited to appropriate lifts, ladders, scaffold, etc.
16. This Subcontractor shall furnish and install decking with support framing for a 6' x 6' Slab-On-Deck mock-up for firestopping penetrations.
17. This subcontractor shall provide PE stamped drawings, calculations, & all delegated design as indicated in the contract documents.
18. This subcontractor shall design, furnish, & install the roof safety tie off system. For an example see sheet A103D.
19. This subcontractor is responsible for pulling all permits as required for their scope of work. Any filing of permits associated with this scope to be performed by this subcontractor including associated filing fees to be paid by this subcontractor, permit fees by others.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP12 – Structural Steel
Dated: 07.08.2024
Revised: 09.30.2024

20. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to cleanup general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)
21. This Subcontractor shall furnish and install "Safe-T-Strap" systems in accordance with Turner Safety Additional Provisions.
22. This Subcontractor shall provide holes in structural steel required by other trades including, but not limited to the Gymnasium folding partition, Auditorium rigging beams, etc. Coordinate work with applicable Subcontractors. Include 20 shop installed beam penetrations (assume no plate reinforcing required) with maximum diameter of 4", location TBD.
23. This subcontractor shall remove the fall protection at the level two slab on grade areas for the entire length of the retaining installed by the Concrete subcontractor prior to the installation of metal decking adjacent to this area.
24. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
25. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
26. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
27. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

050805 Factory-Applied Coatings for Metal

28. This Subcontractor shall furnish and install all hot-dipped galvanized structural steel as shown on the contract drawings, and as specified and required for complete systems regardless of details shown on drawings. This subcontractor shall include high performance factory applied primer and color topcoat, including but not limited to the structural members indicated on the GC series of drawings.
29. This subcontractor shall repair any damage to the applied steel coatings that occurs during the course of delivery, rigging, and installation. Welds made on architecturally exposed steel shall be ground smooth by this subcontractor for finishes. This Subcontractor shall also provide field touch up of galvanizing due to field welds and areas adjacent to welds as required.
30. This subcontractor shall furnish & install mock-ups of all exposed steel finishes, including but not limited to colored galvanized steel.

051200 Structural Steel Framing

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP12 – Structural Steel
Dated: 07.08.2024
Revised: 09.30.2024

31. This Subcontractor shall be responsible to furnish and install all Structural Steel and Exterior Wall Support Steel Work on the Structural & Architectural Drawings as required for complete systems regardless of detail, unless otherwise specifically called out in this scope of work. This work shall include, but not be limited to, all structural steel, angles, braces, bent plates, HSS steel framing, HSS steel posts, hung lintels, deck support angles, support angles bolted to CMU, embeds, fasteners, accessories including shims, clips, bolts, and studs, etc. This Subcontractor shall **exclude** loose lintels not attached to structural steel unless specifically called out in this scope of work.
32. This Subcontractor shall be responsible for designing, furnish and install all steel connections unless noted otherwise.
33. This Subcontractor shall be required to coordinate all Structural Steel Work with all other Subcontractors having work adjacent to or connecting to the Structural Steel Scope of Work.
34. This Subcontractor shall furnish all anchor bolts and other embedded items that are required for this scope of work. These are required to be on site at the start of the concrete operation with a complete set of layout drawings and templates. This Subcontractor shall coordinate with the Concrete and Masonry Subcontractors and the project schedule for the timing of this work. This Subcontractor shall document transfer of care and custody of embedded items to the Concrete and Masonry Subcontractor's and provide the Construction Manager with a copy upon request. This subcontractor is solely responsible for the care & custody of their materials.
35. This subcontractor must field verify & confirm that all cast in and embed layout & types are correctly installed before & after concrete or grout placement. This survey must be performed prior to the start of Structural Steel erection, by a licensed registered surveyor and be independent of any other survey performed by the Concrete Subcontractor. Notify the Construction Manager in writing of any deviations so that corrections can be made in ample time so as not to delay the Structural Steel erection.
36. This Subcontractor shall provide all necessary survey layout, etc. in order to properly perform their work. This includes, but is not limited to, a preconstruction survey for areas where interfacing with existing construction occurs. Surveys shall be submitted before related shop drawings are prepared. All Surveys shall be performed by a licensed surveyor or by Total Station as modeled.
37. This Subcontractor shall provide a Certified Survey of the plumbness of all columns as well as the elevations of all the column splices for submission to the Engineer & Turner to document compliance with Specifications.
38. This Subcontractor shall provide a Certified Survey of all framing members and metal deck, including but not limited to their elevations and indication that they are installed per allowable tolerances, for submission to the Engineer & Turner to document compliance with Specifications including prior to concrete placement where applicable.
39. This Subcontractor shall be responsible for providing framed openings in structural slabs. For example, refer to typical details on Drawing S400.
40. This subcontractor shall furnish & install all dunnage steel for mechanical equipment per the contract documents.
41. This subcontractor shall furnish & install all steel stub-ups for the louvered roof screens, for example see detail 12 on S410, coordinate final locations with exterior wall subcontractor.
42. This subcontractor shall furnish & install all lateral framing indicated on the contract drawings, including but not limited to all lateral brace frame connections (for examples see S500 & S501).
43. This subcontractor shall furnish & install temporary erection bracing as needed for all structural steel.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP12 – Structural Steel
Dated: 07.08.2024
Revised: 09.30.2024

44. This Subcontractor shall furnish and install all support steel (i.e., channels and angles) and deck reinforcing / support (i.e. bent plates) required. For example, refer to the details on the S400 series of drawings. This Subcontractor shall coordinate with the Exterior Wall, Roofing and MEP Subcontractors for installation requirements. This subcontractor must confirm all steel is fully coordinated with the exterior wall prior to installation.
45. This Subcontractor shall coordinate steel coatings such as spray-on fireproofing, intumescent paint, thermal coatings, or concrete encasement with associated trades for primer requirements per the project specifications. Reference fireproofing plans for locations.
46. This Subcontractor shall coordinate with the painting specifications for steel that is exposed to view regarding paint finish. This Subcontractor shall coordinate with partition plans for steel columns exposed to view and shall be conscience of where factory labeling is placed so as not to require additional prep work by the painter.
47. This Subcontractor shall stencil column identification on all columns on all 4 sides approximately 7-8 ft. above floor. Stencils shall be in inconspicuous locations and compatible with finish and fireproofing material on columns. The stencil marks must be a minimum of 6” tall. Coordinate final locations during shop drawing submission.
48. This subcontractor shall make all pour stops and supplemental support steel adjustable to allow for flexibility during installation where possible and allowed / approved by the design team & the EOR.
49. This subcontractor shall furnish & install all steel supports required for the exterior wall mock-up shown on A315, including but not limited to HSS members, steel angles, connections, etc. Members required should be the same as those shown in similar permanent steel details, such as hung lintels.
50. This subcontractor shall furnish & install bituminous paint on structural steel members as indicated in the contract documents, for example see detail 4 on S200.
51. This subcontractor shall furnish & install all CMU supports that are required to be welded to structural steel, including but not limited to angles, bent plates, epoxy anchors into CMU, etc. This subcontractor shall coordinate with the Mason (BP #11) for layout of supports. For an example see detail 1A on A605.
52. This subcontractor shall furnish & install the Auditorium rigging beams, including not limited to connections to the roof joists. For examples see S301D and detail 6 on S402. This subcontractor must coordinate layout and locations of the rigging beams with the Theatrical Lighting Subcontractor (BP #38) and Theatrical Equipment Subcontractor (BP #31).

052100 Steel Joist

53. This Subcontractor shall design, furnish, and install all steel joists as shown on the contract drawings, and as specified and required for complete systems regardless of details shown on drawings.

053100 Steel Decking

54. This Subcontractor shall design, furnish, and install all steel decking as shown on the contract drawings, and as specified and required for complete systems regardless of details shown on drawings. The metal deck must be able to accommodate and be compatible to receive SOFP and or painted finish per the contract documents.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP12 – Structural Steel
Dated: 07.08.2024
Revised: 09.30.2024

55. This Subcontractor shall furnish and install all metal deck & composite deck components for a complete floor system including but not limited to shear studs, connectors, flashings, metal closures, concrete stops, accessories, and fittings.
56. This subcontractor shall furnish & install acoustical insulation within flutes of acoustical metal deck to provide a complete acoustical deck system. This subcontractor must coordinate with the Roofing Subcontractor, General Trades, and MEP subcontractors to ensure there are no compatibility issues or conflicts.
57. This Subcontractor shall furnish and install roof drain sump pans. Coordinate installation locations of roof sump pans with Plumbing Subcontractor.
58. This Subcontractor shall deck over all framed openings, and coordinate & remobilize to cut the decking back for the MEP Subcontractors prior to the start of their MEP installations.
59. This Subcontractor shall survey perimeter pour stops with Total Station prior to deck pours and provide written confirmation to the construction Manager that all pour stops are within allowable tolerances.
60. This Subcontractor shall include metal deck layout and thickness so that shoring during of the deck is not required during concrete placement.

055000 Metal Fabrication

61. This Subcontractor shall furnish all loose bearing and leveling plates that are required for this scope of work. These are required to be on site at the start of the concrete operation with a complete set of layout drawings and templates. This Subcontractor shall coordinate with the Concrete and Masonry Subcontractor (BP #10 & 11) and the project schedule for the timing of this work. This Subcontractor shall document transfer of care and custody of embedded items to the Concrete Subcontractor and provide the Construction Manager with a copy upon request.
62. This Subcontractor shall furnish and install all steel required for the support of the exterior wall and window systems, including but not limited to HSS tubes, angles, bent plates, channels, hung lintels, etc. For example, see structural details on S410 through S430 and architectural detail 2A/A641.

072163 Fluid-Applied Insulative Coating

63. This Subcontractor shall furnish and install all spray-applied insulative coating systems for structural steel as shown on the contract drawings, and as specified and required for complete systems regardless of details shown on drawings, including but not limited to primer, insulative coating, and topcoat. For examples of where this system is required see the GC series of drawings and detail 2B on A521.
64. This subcontractor shall repair any damage to the applied steel coatings that occurs during the course of delivery, rigging, and installation.

D. Safety - See Safety Additional Provisions

1. This Subcontractor shall furnish & install (2) temporary stair towers for means of egress during construction. Stair towers to provide access to all floor levels and the roof.
2. This subcontractor shall furnish & install a scaffold platform at the deck height of their trailers for unloading steel. This platform must include adequate stairs for access.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP12 – Structural Steel
Dated: 07.08.2024
Revised: 09.30.2024

3. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible to remove snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.
4. This Subcontractor shall provide a site-specific plan on how they will comply with Turner's Ladder's Last Program.
5. This subcontractor shall ensure that any Lulls used on site are equipped with hydraulic fork positioners.
6. This subcontractor shall engage a 3rd Party to complete a GPR Survey to mark out existing utilities under and in the general area of any proposed Mobile Crane locations.
7. This Subcontractor shall ensure all connections involving washer plates are made final while the steel is still supported by the crane. Washer plates must be installed at the time of initial connection at all slap connections.
8. This Subcontractor shall furnish and install at locations of Structural Steel Framing, a complete safety cable guardrail system around all elevators, stair shafts and any openings of size 2 inches x 2 inches or greater and the entire building perimeter at each level including the ground floor and any other locations with elevation changes of more than 4 feet. A reusable guardrails system shall be of equal performance or greater than Perimeter Protection Products system. The posts shall be installed no more than ten feet apart. The post shall be "reusable type system" with adjustable cable guides. The cable heights of 42 and 21 inches must be maintained by this subcontractor. **Perimeter and shaft way beams that are to receive posts shall be hole punched in the fabrication shop and the under-mount post receiver is to be welded under the flange at the fabrication shop and shipped to the job ready for post installation.** Steel columns will be equipped with column clips of adjustable type to facilitate cable heights on column. Be sure to coordinate enough length into the posts in order to maintain rail height at the finish floor level and the finished roof elevation. Posts will need to be longer than 42 inches to accommodate the concrete thickness of the finished slabs and the composite roofing thickness. The Perimeter Protection Products 5'-6" post is to be used. This Subcontractor to install the cables into the posts and they shall be terminated by 3 appropriately sized and spaced forged steel wire rope clips (Crosby or equal) torqued to manufacturers specifications. The minimum allowable cable size will be 3/8ths only if aircraft rated cable is used. The perimeter cable system is to include turnbuckles spaced at no more than every three (3) columns. This Subcontractor is to inspect and maintain all guardrails on a daily basis until Structural Steel Work is complete and this subcontractor has demobilized from the site. Daily inspections shall be documented. Removal of safety cabling systems will be by others. This Subcontractor to incorporate four (4) material loading areas independent of perimeter protection with removable cables and tie-off points for three (3) workers. These material loading areas are to be located by Turner's Superintendent.
9. This subcontractor shall include furnish and install an additional (20) 3"x3" angle post welded at designated access points by Turner to secure temporary rails.
10. This Subcontractor shall detail and fabricate beam connections and column splices for safe erection as outlined in OSHA 1926, Subpart R, Section 1926.756 (c)(1). Include all costs for engineering and detailing as required. There shall be NO <u>double live connections at columns or beams.</u>
11. This Subcontractor shall furnish, install and maintain at all shaft openings at every other level debris net capable of supporting a person for the purposes of fall arrest and left in place. Nets shall be inspected daily until this contractor demobilizes from the site.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP12 – Structural Steel
Dated: 07.08.2024
Revised: 09.30.2024

12. This Subcontractor is required to prevent and contain all slag from hitting the ground and levels below. Flame resistant blankets and other suitable means are acceptable.
13. This subcontractor shall furnish and install all stairways in pace with the erection of each floor. All stairways will be shipped to the project with the necessary tread infills attached. The interior guardrails are to be installed in pace with the erection of each floor.
14. This Subcontractor shall investigate and review deck/beam capacity prior to loading any floors with its materials and provide an engineered loading plan/drawing. This may include additional supports required to utilize any floor/deck and or identifying specific areas that can be utilized to pick from. This plan should account for tripping of columns not to exceed or point load structural assemblies. Loading plan must be reviewed and approved by the structural engineer prior to delivery. Post material loading specs on each floor and at location of a critical nature.
15. This Subcontractor shall provide all new rigging at the start of the project. Monthly documented inspections of all rigging shall be completed by this Subcontractor and provided to Turner upon request.
16. This Subcontractor shall provide a man basket on site at all times during the scope of work. The basket shall comply with all Turner and OSHA requirements and a test pick shall be performed once a week.

E. Exclusions

1. Demolition of existing structure (by Demolition Subcontractor, BP #08)
2. CFMF exterior wall clip / slip connections to base building steel (by General Trade Subcontractor, BP #21)
3. Furnishing and installing of loose lintels (by Masonry Subcontractor, BP #11)
4. Typical CFMF Seismic Restraint Details at Tops of Masonry Walls (By Masonry Subcontractor, BP #11), for an example see detail 1B on A605.
5. Expansion & Seismic joints (by Concrete, Roofing, and Exterior Wall Subcontractors (BP #10, 15, 19)
6. Exterior bollards (by Sitework Subcontractor, BP #09)
7. Steel for Street Signage, for example details 4, 5, & 6 on S212 (by Misc. Metals Subcontractor BP #13)
8. Miscellaneous Metals (by Miscellaneous Metals Subcontractor, BP #13), such as the metal stairs, elevator pit ladders, elevator hoist beams, areaway grating, vanity supports, overhead coiling door supports, Street sign framing (S212), and elevator pit ladders.
9. Exterior chain link fence (by Sitework Subcontractor, BP #09)
10. Roof screen at rooftop MEP equipment (by Roofing Subcontractor, BP #15)
11. Grouting of elevator sill angles, column baseplates, and beam bearing plates (by Concrete Subcontractor, BP #10)

F. Logistics and Schedule

1. This subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP13 – Miscellaneous Metals
Dated: 07.08.2024
Revised: 09.30.2024

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***BP #13 Miscellaneous Metals Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***BP #13 Miscellaneous Metals Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
055100	Metal Stairs
057000	Decorative Metal Railings
057100	Monumental Metal Stairs

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

050805	Factory-Applied Coatings for Metal
055000	Metal Fabrications
079200	Joint Sealants

Bid Package Specific Scope

General

2. This Subcontractor shall include all 3D modelling in accordance with Turner's BIM Coordination Additional Provisions; this shall also include modeling all miscellaneous metals steel that is part of this subcontractor's scope of work. This subcontractor is responsible to coordinate with all the MEP trades and resolve any conflicts or coordination issues.
3. This Subcontractor is aware that this is a High-Performance Building and submittals should be submitted according to these standards. This Subcontractor has included all costs associated with meeting these requirements as set forth in the Division 1 Specifications.
4. This Subcontractor will provide the necessary written documentation for meeting the CT High Performance requirements as outlined in the Division 1 specifications.
5. This Subcontractor is responsible for distributing material to all floors as required and its protection from damage during delivery, handling, storage, and installation.
6. Temporary power will not be available for Misc Metal installation. It is agreed and understood that this Subcontractor shall utilize gasoline-powered welders or similar in order to perform the welding associated with erection of the Misc. Metal for this Project. In addition, this Subcontractor shall assume that temporary electric will not be available for this Subcontractor's use during steel erection. This Subcontractor shall include the use of generators as required for the duration of their Work.
7. Prior to entering the site this Subcontractor shall submit all fitness for use / inspection certifications required for cranes to the Construction Manager. This Subcontractor shall be responsible for all crane permits for his work. This matter is a very important safety requirement to follow and no crane will be allowed to be used unless this paperwork is submitted and up to date. There shall be a pre-planning meeting prior to erecting the crane on site.
8. This Subcontractor shall be responsible for ordering, scheduling and sequencing of steel deliveries required for the work. This shall include any premium time.
9. No truck parking/idling is allowed on streets adjacent to project site while waiting to unload. This Subcontractor shall include accommodations as required to adhere to "just in time" deliveries. Refer to Turner's "Logistic Plans – Scope of Work" for delivery restrictions.
10. This Subcontractor shall include all costs for two (2) round trip inspection visits for two (2) individuals at the structural steel fabrication plant. These costs should include travel, meals, lodging, and round-trip airfare if necessary, from Greenwich, CT.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP13 – Miscellaneous Metals
Dated: 07.08.2024
Revised: 09.30.2024

11. This Subcontractor shall review, conform to, and furnish and install all requirements included in the Safety Additional Provisions included in this Agreement. This Subcontractor understands that this document is project specific, and all provisions must be included in this Subcontractor's bid.
12. This Subcontractor shall perform all field touchup of finishes as it relates to this scope of work.
13. This Subcontractor shall provide snow/ice removal as required to perform work of this trade. Provide all preheating of welds, covering etc. to work during winter conditions. Access /egress snow removal will be by Sitework Subcontractor. This subcontractor shall provide breakout pricing for Weather Protection in Application for Payment.
14. This subcontractor shall furnish & install their own pads, cribbing, dunnage, etc. that may be required for the rigging associated with the Miscellaneous Metals scope of work.
15. This Subcontractor shall coordinate with the Owner's Special Inspections Testing Agency (TBD) as required per the plans and specifications including those referenced in The Statement of Special Inspections. This Subcontractor shall provide the Construction Manager with a minimum of seventy-two (72) hour advance notice for all required inspections. This subcontractor shall provide means for the inspector to access work, including but not limited to appropriate lifts, ladders, scaffold, etc.
16. This subcontractor is solely responsible for the care & custody of their materials.
17. This subcontractor shall provide PE stamped drawings, calculations, & all delegated design as indicated in the contract documents.
18. This subcontractor is responsible to pull all permits as required for their scope of work. Any filing of permits associated with this scope to be performed by this subcontractor including associated filing fees to be paid by this subcontractor, permit fees by others.
19. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to cleanup general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)
20. This Subcontractor shall coordinate all Miscellaneous Metals with all other Subcontractors having work adjacent to or connecting to the Miscellaneous Metals scope of work.
21. This Subcontractor shall provide holes in Miscellaneous Metals required by other trades including, but not limited to the, vanity supports, etc. Coordinate work with applicable Subcontractors.
22. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
23. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
24. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP13 – Miscellaneous Metals
Dated: 07.08.2024
Revised: 09.30.2024

25. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

050805 Factory-Applied Coatings for Metal

26. This Subcontractor shall furnish and install all hot-dipped galvanized Miscellaneous Metals as shown on the contract drawings, and as specified and required for complete systems regardless of details shown on drawings.

27. This subcontractor shall repair any damage to the applied steel coatings that occurs during the course of delivery, rigging, and installation. Welds made on architecturally exposed steel shall be ground smooth by this subcontractor for finishes. This Subcontractor shall also provide field touch up of galvanizing due to field welds and areas adjacent to welds as required.

055000 Metal Fabrication

28. This Subcontractor shall design, furnish and install all miscellaneous metals, including but not limited to vanity supports, basketball hoop support steel, metal ladders, elevator hoist beam, elevator sump pump grating, gymnasium dividing partition support, etc. Note miscellaneous support steel framing includes framing and supports that are not specified in other specification sections but required for installation and are indicated on the contract documents. This subcontractor must coordinate with all other trades that are being supported by the miscellaneous metal.
29. This subcontractor shall furnish & install all necessary miscellaneous metals components, including but not limited to all connections, bearing plates, anchor bolts, embeds, etc. This subcontractor must coordinate with the concrete and or masonry subcontractor regarding embed layout and transfer of care & custody of these embedded components.

30. This Subcontractor shall be responsible to design, furnish and install all miscellaneous metals unless noted otherwise. This Subcontractor shall also be responsible to design, furnish and install all miscellaneous metals connections unless noted otherwise.

31. This subcontractor shall furnish & install miscellaneous metal support beams as needed for the divider curtain partition in the Gym.
32. This subcontractor shall furnish & install miscellaneous steel supports for the basketball hoops at the Gym.
33. This subcontractor shall furnish & install roof hatch ladders. For an example see A102C and A103C. Roof hatches themselves shall be **excluded** by this Subcontractor, as they will be furnished and installed by the roofing subcontractor.
34. This Subcontractor shall furnish and install the elevator sill support angles at each floor required but may not be shown on drawings.
35. This Subcontractor shall furnish and install the elevator hoist beam. This Subcontractor shall coordinate size and installation with Elevator Subcontractor.
36. This Subcontractor shall furnish and install the elevator sump pit covers and supports.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP13 – Miscellaneous Metals
Dated: 07.08.2024
Revised: 09.30.2024

37. This Subcontractor shall furnish and install the elevator pit ladder.
38. This subcontractor shall furnish & install all radon pit framing, including but not limited to angles, deck, etc. See Detail 3 on S201 on sheet for an example. The radon pit framing must be expedited to not delay underground work and placing the slabs on grade per the contract schedule. Coordinate piping requirements with Plumbing subcontractor.
39. This subcontractor shall furnish & install all steel framing, components, and connections necessary for the street signage. For examples see details 4, 5, & 6 on S212. This subcontractor must coordinate with the signage subcontractor prior to creating shop drawings, engineering, furnishing & installing.
40. This Subcontractor shall furnish all loose bearing and leveling plates that are required for this scope of work. These are required to be on site at the start of the concrete operation with a complete set of layout drawings and templates. This Subcontractor shall coordinate with the Concrete and Masonry Subcontractor and the project schedule for the timing of this work. This Subcontractor shall document transfer of care and custody of embedded items to the Concrete Subcontractor and provide the Construction Manager with a copy upon request.

055100 Metal Stairs, 057000 Decorative Metal Railings, & 057100 Monumental Metal Stairs

41. This Subcontractor shall design, furnish, and install all metal stairs, all guardrails and all handrails as complete systems, as shown on the contract documents and as specified. This shall include the appropriate design calculations for the stairs, railings, guardrails, and all supplemental support steel required beyond the structural members indicated on the contract documents.
42. This subcontractor shall design, furnish & install all connections required for metal stairs, handrails, guardrails, etc., including but not limited to any supplemental steel that may be required.
43. This subcontractor must expedite Stair 1 & Stair 2 per the contract schedule so that these stairs can be utilized for construction access and egress.
44. This subcontractor shall repair any damage to the applied steel coatings that occurs during the course of delivery, rigging, and installation. Welds made on architecturally exposed steel shall be ground smooth by this subcontractor for finishes. This Subcontractor shall also provide field touch up of galvanizing due to field welds and areas adjacent to welds as required.
45. This subcontractor shall furnish & install mock-ups of all exposed steel finishes, including but not limited to stainless steel rails.

079200 Joint Sealants

46. This Subcontractor shall furnish and install all joint sealants related to the miscellaneous metals scope as shown on the contract drawings

D. Safety - See Safety Additional Provisions

1. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible for removing snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP13 – Miscellaneous Metals
Dated: 07.08.2024
Revised: 09.30.2024

2. This Subcontractor shall provide a site-specific plan on how they will comply with Turner's Ladder's Last Program.
3. This subcontractor shall ensure that any Lulls used on site are equipped with hydraulic fork positioners.
4. This subcontractor shall engage a 3rd Party to complete a GPR Survey to mark out existing utilities under and in the general area of any proposed Mobile Crane locations.
5. This Subcontractor shall ensure all connections involving washer plates are made final while the steel is still supported by the crane. Washer plates must be installed at the time of initial connection at all slap connections.
6. This Subcontractor shall furnish, install and maintain at all shaft opening for stairs at every other level debris nets capable of supporting a person for the purposes of fall arrest and left in place. Nets shall be inspected daily until this contractor demobilizes from the site.
7. This Subcontractor is required to prevent and contain all slag from hitting the ground and levels below. Flame resistant blankets and other suitable means are acceptable.
8. This subcontractor shall furnish and install all stairways in pace with the erection of each floor. All stairways will be shipped to the project with the necessary tread infills attached. The interior guardrails are to be installed in pace with the erection of each floor.
9. This Subcontractor to investigate and review deck/beam capacity prior to loading any floors with its materials and provide an engineered loading plan/drawing. **This may include additional supports required to utilize any floor/deck and or identifying specific areas that can be utilized to pick** from. This plan should account for tripping of columns not to exceed or point load structural assemblies. The loading plan must be reviewed and approved by the structural engineer prior to delivery. Post material loading specs on each floor and at location of a critical nature.
10. This Subcontractor shall provide all new rigging at the start of the project. Monthly documented inspections of all rigging shall be completed by this Subcontractor and provided to Turner upon request.

E. Exclusions

1. Demolition of existing structure (by Demolition Subcontractor, BP #08)
2. Furnishing and installing of loose lintels (by Masonry Subcontractor, BP #11)
3. Typical Seismic Restraint Details at Tops of Walls Under Metal Deck (By Masonry & Steel Subcontractors, BP #11 & 12)
4. Expansion & Seismic joints (by Concrete, Roofing, and Exterior Wall Subcontractors (BP #10, 15, 19)
5. Exterior bollards (by Sitework Subcontractor, BP #09)
6. Structural Steel (by Structural Steel Subcontractor, BP #12), such as the floor framing, roof joists, lateral bracing, and mechanical equipment dunnage
7. Concrete fill at stairs (by Concrete Subcontractor, BP #10)
8. Exterior fence & rails (by Sitework Subcontractor, BP #09)
9. Roof screen at rooftop MEP equipment (by Roofing Subcontractor, BP #15)

Greenwich, CT
BP#14 - Waterproofing
Dated: 07.08.2024
Revised: 09.30.2024

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Waterproofing Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***Waterproofing Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
07 1400	Fluid-Applied Waterproofing

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Bid Package Specific Scope

1. This Subcontractor shall be responsible for all testing required per the drawings, specs, and state requirements.
2. This Subcontractor shall include all Sustainability requirements, including but not limited to CTHB Documentation.
3. This Subcontractor shall include the cost of all surveying and layout (baseline survey to be provided by others).
4. This Subcontractor shall coordinate all work with all other Subcontractors having work adjacent to or connecting to the work of this Subcontract.
5. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
6. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
7. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
8. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

Exclusive Specifications

Spec. 07 1400 Fluid-Applied Waterproofing

9. This Subcontractor shall furnish and install fluid-applied waterproofing as required per contract documents for a complete system, including but not limited to drainage mat, and waterproofing membrane system, for example as shown on 3A/A501 and as shown at Elevator Pit 5E/A122 and 2B/A122 Blind-Side Waterproofing system.

D. Safety

10. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible for removing snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.
11. This Subcontractor shall provide a site-specific plan on how they will comply with Turner's Ladder's Last Program.
12. This subcontractor shall ensure that any Lulls used on site are equipped with hydraulic fork positioners.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#14 - Waterproofing
Dated: 07.08.2024
Revised: 09.30.2024

13. This subcontractor shall engage a 3rd Party to complete a GPR Survey to mark out existing utilities under and in the general area of any proposed Mobile Crane locations.
14. This Subcontractor is to anticipate all moves on the roof and understand areas where fall protection may be required. In the event proper anchorage locations for fall protection do not exist it will be the responsibility of this Subcontractor to provide suitable anchorage points for their workers using Personal Fall Arrest Systems. A Site-Specific Fall Protection Plan including type of fall protection equipment, maintenance and use, fall hazard assessment, access and training of all employees involved with fall protection or work at heights. This must be submitted and documented with Turner Construction prior to beginning such work onsite.
15. This Subcontractor shall roof around and make watertight the temporary fall protection posts on all roofs and provide final termination of the roofing system once the posts are removed. This contractor shall remove and return the reusable perimeter guard railing system (installed by others), at all roof levels, in its entirety, including removing posts and all associated cables and hardware, wood and ensure roof is weather tight to allow for completion of the roofing system. This subcontractor shall maintain a standard guardrail system or other fall protection systems approved by the Turner Superintendent upon removing the reusable perimeter guard railing system.
16. This subcontractor shall ensure any fall protection roof flagging that is installed by this Subcontractor is adequate to accommodate all other trades working on the roof.
17. This Subcontractor shall provide necessary protection, whether existing or created by the Subcontractor, to prevent their employees and others from falling through holes, etc. Any hole or floor penetration 2 inches or greater in any dimension must be protected by a cover capable of supporting, without failure, at least twice the weight of employees, equipment, and material loads that may be imposed on the cover at any one time. Covers shall be secured when installed so as to prevent accidental displacement by the wind, equipment, or employees. All covers shall be color coded or they shall be marked with the word “Hole” to provide warning of the hazard. If for any reason this Subcontractor has to remove a cover it is their responsibility to replace cover, re-secure and mark. Caution or Danger Tapes shall not be considered as acceptable barriers.
18. This subcontractor shall ensure all flammable and combustible materials including but not limited to mop heads and solvent covered rags are removed from the site each day. Flammable/combustible materials will be properly stored in accordance with OSHA standards.
19. This Subcontractor shall provide all necessary means to prevent material from falling off the roof or scaffolding. Falling object protection below will be the responsibility of this Subcontractor.
20. This contractor shall ensure that a crane plan including crane layout, anticipated swing paths, loading calculations, etc. is provided for all crane picks. Preplanning meeting to be held at least 2 weeks before arrival of crane to the job site. A critical pick is any pick putting the crane at 75% of its rated lifting chart capacity and must include an approved Pre-Plan with Turner Construction.
21. This Subcontractor shall participate in a Safety preplanning meeting at least 4 weeks prior to the start of work. Subcontractor should be prepared to review Turner’s Safety and Health Program as well as their own including their Hazardous Communication Program. Logistical items to be discussed include crane layout and picks, kettle location, roof access, fire watch, material storage, fire prevention, crisis management plan, etc.
22. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible to remove snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Roofing Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***Roofing Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
07 5423	Thermoplastic Membrane Roofing
07 7100	Roof Specialties
07 7200	Roof Accessories

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#15 – Roofing
Dated: 07.08.2024
Revised: 09.30.2024

Spec. #	Specification Name
DIV 00	Division 00 – Procurement and Contracting Requirements
DIV 01	Division 01 – General Requirements
07 6200	Sheet Metal Flashing and Trim
07 9513	Expansion Joint Cover Assemblies

Bid Package Specific Scope

1. This Subcontractor shall include all hoisting/rigging/scaffolding required for this scope of work.
2. This Subcontractor shall include all Sustainability requirements, including but not limited to CTHB Documentation.
3. This Subcontractor shall be responsible for maintaining fall protection at all Roofs for the duration of the project and fall protection removal. This Fall Protection plan shall be coordinated with Turner Safety. This Subcontractor shall also furnish and install engineered temporary tie-off points per Safety Ad pros.
4. This Subcontractor shall furnish and install all roofing systems in their entirety for a complete watertight system as shown on the Contract Documents, including but not limited to, protection board, vapor barrier, insulation, rubber membrane, metal flashings, copings, all necessary accessories i.e. walk pads, boots pitch pockets etc.
5. This Subcontractor shall include all sealants as required for a complete watertight system. This Subcontractor shall ensure the compatibility of the sealants with adjacent materials.
6. This Subcontractor shall furnish and install temporary watertight covers for all MEP curbs. These must be fastened to the curb.
7. This Subcontractor shall coordinate with these trades to confirm proper protection. This Subcontractor shall also spot check protection provided by other trades and report to TCCo any lack of or inadequate protection.
8. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
9. This Subcontractor shall include following **Trade Allowance:** 3,008 sf of ¾" pressure treated plywood (94 – 4x8 sheets) for temp roof protection as directed by TCCo Superintendent.
10. This Subcontractor will provide a final sweep and washdown of the roof at the end of each phase. This will include but not be limited to cleaning debris out of the drains and removing any soiling from the roof membrane. Review when complete with TCCo for acceptance.
11. This Subcontractor shall include the following **Trade Allowance**: 160 hours for 5S, Safety & protection and logistics including temporary measures for watertight as directed by TCCo Superintendent. Laborer Time to be included as journeyman rate including any required supervision. This will be billed based on the final agreed contractual wage rates and may only be expended by written authorization of Turner Construction and any unspent portion of this unused scope hours will be credited at the end of your contract based on approved labor rate.
12. This Subcontractor shall be responsible to review the contract documents and compare the materials and procedures with the manufacturer's recommended details and procedures and shall report any discrepancies to Turner and the Architect prior to beginning any work.
13. This Subcontractor shall include securing the perimeter of the roof temporarily if the parapet is not installed by the time the roof is installed, and a comeback to seal to the parapet.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#15 – Roofing
Dated: 07.08.2024
Revised: 09.30.2024

14. Furnish and install any requirements shown on the contract documents for the Future PV Array system.
15. This Subcontractor shall furnish and install all mock-ups required for this scope of work per the contract documents, for example as shown on Drawing A-315.
16. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to clean up general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)
17. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
18. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
19. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
20. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

Spec. 07 5423 Thermoplastic Membrane Roofing

21. This Subcontractor shall furnish and install all TPO Roofing as shown on the contract documents for a complete system, including but not limited to Roofing Membrane and associated materials, coverboards, air vapor barriers, insulation, fasteners, sealants, walkway pads, etc.
22. This Subcontractor shall furnish and install flexible walkways per the contract documents. Include an additional 100’ of flexible walkway to be used at the discretion of the Turner Superintendent. This subcontractor will be responsible to protect the roof from damage and dirt and perform the work in a sequence that will keep the new roof clean.
23. This Subcontractor shall furnish all the standard, special, finish, etc. warranties identified in the specifications.
24. This Subcontractor shall furnish and install counterflashing, termination bar, and extended roofing system at skylight, for example as shown on 3B/A522.
25. This Subcontractor shall exclude furnish and install roof wood blocking, including but not limited to plywood, wood blocking, expansion joint blocking, wood curb blocking, etc. By BP #21 (Drywall & General Trades).

Spec. 07 7100 Roof Specialties

26. This Subcontractor shall furnish and install all roof specialties as required per contract documents, including but not limited to roof edge flashing, copings, fascia, expansion joint covers, scuppers, gutter & downspouts, and conductor heads.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#15 – Roofing
Dated: 07.08.2024
Revised: 09.30.2024

27. This Subcontractor shall furnish and install all movement joints, including but not limited to, Roof to Roof and Roof to Exterior Wall, for a complete system as shown in the Contract Documents; for example, as shown on 2D/A530.
28. This Subcontractor shall furnish and install all expansion joints for the roofing systems, for example as shown on 3E/A531. This Subcontractor shall coordinate with other trades for a complete system - BP #12 Structural Steel to furnish and install steel angles and BP #21 General Trades to furnish & install wood blocking & curb.
29. This Subcontractor shall furnish and install roof coverboard, roofing system, and stainless-steel sill pan at the Roof Louver Box Detail 1B/A531. Plywood sheathing, louver, CFMF, and insulation by BP #21 Drywall and General Trades.
30. This Subcontractor shall furnish and install thru-wall scuppers, for example as shown on 5E/A531.

Spec. 07 7200 Roof Accessories

31. This Subcontractor shall furnish and install all roof accessories per contract documents, including but not limited to roof hatches, smoke vents, curbs, metal covers, safety rail system, roof ladder safety post, pipe portals, pipe box, etc,
32. This Subcontractor shall furnish and install roof hatches with corresponding extended roof system as shown on contract documents, for example as shown on 1C/A530. Wood blocking by BP #21 Drywall and General Trades.
33. This Subcontractor shall furnish and install pipe portal system as shown on contract documents for a complete system, for example 5B/A530, 5D/A530 and 5E/A530.

Spec. 07 6200 Sheet Metal Flashing and Trim

34. This Subcontractor shall furnish and install all sheet metal flashing and trim at roofs as shown on contract documents, including but not limited to flashing of all roof penetrations and all MEP Curbs.
35. This Subcontractor shall furnish and install rainwater leader and custom fabricated galvanized bent plate, for example detail 3E/A511.

Add'l Items

36. This Subcontractor shall furnish and install all roofing systems of the front signage as shown on documents, including but not limited to membrane roof system, scupper, and fascia, for example as shown on 4D/A924.

D. Safety

1. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible to remove snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.
2. This Subcontractor shall provide a site-specific plan on how they will comply with Turner's Ladder's Last Program.
3. This subcontractor shall ensure that any Lulls used on site are equipped with hydraulic fork positioners.
4. This subcontractor shall engage a 3rd Party to complete a GPR Survey to mark out existing utilities under and in the general area of any proposed Mobile Crane locations.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#15 – Roofing
Dated: 07.08.2024
Revised: 09.30.2024

5. This Subcontractor is to anticipate all moves on the roof and understand areas where fall protection may be required. In the event proper anchorage locations for fall protection do not exist it will be the responsibility of this Subcontractor to provide suitable anchorage points for their workers using Personal Fall Arrest Systems. A Site-Specific Fall Protection Plan including type of fall protection equipment, maintenance and use, fall hazard assessment, access and training of all employees involved with fall protection or work at heights. This must be submitted and documented with Turner Construction prior to beginning such work onsite.
6. This Subcontractor shall roof around and make watertight the temporary fall protection posts on all roofs and provide final termination of the roofing system once the posts are removed. This contractor shall remove and return the reusable perimeter guard railing system (installed by others), at all roof levels, in its entirety, including removing posts and all associated cables and hardware, wood and ensure roof is weather tight to allow for completion of the roofing system. This subcontractor shall maintain a standard guardrail system or other fall protection systems approved by the Turner Superintendent upon removing the reusable perimeter guard railing system.
7. This subcontractor shall ensure any fall protection roof flagging that is installed by this Subcontractor is adequate to accommodate all other trades working on the roof.
8. This Subcontractor shall provide necessary protection, whether existing or created by the Subcontractor, to prevent their employees and others from falling through holes, etc. Any hole or floor penetration 2 inches or greater in any dimension must be protected by a cover capable of supporting, without failure, at least twice the weight of employees, equipment, and material loads that may be imposed on the cover at any one time. Covers shall be secured when installed so as to prevent accidental displacement by the wind, equipment, or employees. All covers shall be color coded or they shall be marked with the word “Hole” to provide warning of the hazard. If for any reason this Subcontractor has to remove a cover it is their responsibility to replace cover, re-secure and mark. Caution or Danger Tapes shall not be considered as acceptable barriers.
9. This subcontractor shall ensure all flammable and combustible materials including but not limited to mop heads and solvent covered rags are removed from the site each day. Flammable/combustible materials will be properly stored in accordance with OSHA standards.
10. This Subcontractor shall provide all necessary means to prevent material from falling off the roof or scaffolding. Falling object protection below will be the responsibility of this Subcontractor.
11. This contractor shall ensure that a crane plan including crane layout, anticipated swing paths, loading calculations, etc. is provided for all crane picks. Preplanning meeting to be held at least 2 weeks before arrival of crane to the job site. A critical pick is any pick putting the crane at 75% of its rated lifting chart capacity and must include an approved Pre-Plan with Turner Construction.
12. This Subcontractor shall participate in a Safety preplanning meeting at least 4 weeks prior to the start of work. This subcontractor should be prepared to review Turner’s Safety and Health Program as well as their own including their Hazardous Communication Program. Logistical items to be discussed include crane layout and picks, kettle location, roof access, fire watch, material storage, fire prevention, crisis management plan, etc.
13. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible to remove snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#15 – Roofing
Dated: 07.08.2024
Revised: 09.30.2024

14. This subcontractor shall provide (#) stair towers for access to all roofs on all buildings per the Turner Logistics Plans. This shall include all rental costs and daily/ per shift inspections by a competent person. This stair towers shall be 'Systems Scaffold' or equal. This shall extend to the roof and this Subcontractor shall include a walkway with rails to step off on to the upper roof. These shall Remain until all the trades have finished their work on these roofs.
15. This Subcontractor shall furnish, install, maintain and remove an engineered overhead protection system at (3) locations as protected building entrances.
16. This subcontractor shall furnish, install and remove (remove upon completion of all roof work) individual sets of temporary access stairs at all changes in roof levels exceeding 19 inches in height difference between the walking/working surfaces. This subcontractor will coordinate with the roofing subcontractor to adjust stair height and position to allow for permanent installation and access stairs to remain in service for access between roof levels. Each stair must meet OSHA stairways (1926.1052) requirements including handrails, guardrails (where a fall hazard exists), equal spacing of treads and anti-slip surface on stair surfaces and landings.
17. This Subcontractor shall provide a "Systems Scaffolding", or similar, stair tower at the exterior of the building structure, location to be coordinated with the Turner Superintendent onsite. This shall be erected allowing access to each level including the roof. This stair tower shall remain until at least one permanent stair has been installed and all work including stair pan infills, masonry and other work has been completed. Coordinate stair handrails and safety cables with stair layout and install cables at landings prior to stair removal. This subcontractor shall include all inspection and identification (red/green tags & sign off) associated with temporary work platforms and temporary access stairways per OSHA.

E. Exclusions

1. This Subcontractor shall exclude roof wood blocking (By BP#21 Drywall & General Trades)
2. This Subcontractor shall exclude skylight (By BP# 19 Glass, Glazing, and Metal Panels)

F. Logistics and Schedule

1. This subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

G. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for a complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Fireproofing Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***Fireproofing Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
07 8100	Applied Fire Protection
07 8123	Intumescent Fire Protection

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

State Project No. 057-0114 N
Greenwich, CT
BP#16 - Fireproofing
Dated: 07.08.2024
Revised: 09.30.2024

Bid Package Specific Scope

2. This Subcontractor shall furnish and install Spray applied fireproofing and intumescent paint fireproofing on new structural steel and deck as shown on the Code Drawings and as required to meet the fire resistance ratings indicated in the documents.
3. This Subcontractor shall provide the required thicknesses as required by code and meet the fire ratings indicated in the documents.
4. This Subcontractor shall be responsible to provide out of sequence work at no additional costs when required in coordination with other trades.
5. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement. This Subcontractor shall include premium time for the scope of work in the following Areas: Main Concourse 1001, Mechanical Room 1048, Corridor 1050, Mechanical Room 1060, Public Lobby 1101, Commons 2004, 2012, 2045, 2053 Corridors 2001, 2020, 2054, 2071, 2082, 2090, and Custodial 2095. Include cleanup prior to the start of the next shift.
6. This Subcontractor will be present the day of any 3rd Party or AHJ inspections of fireproofing and repair any deficiencies at that time. If a 3rd Party re-inspection is required due to deficient work this subcontractor will be responsible for the cost.
7. This subcontractor will assume that there may be some MEP work, in addition to hangers, will already installed prior to fireproofing and that there will be some material and equipment in the area of work. This subcontractor will protect all material, equipment and work in place and clean off any fireproofing that may get past the protection.
8. It is the intent to have all MEP Hangers and top of wall/acoustic panel clips in place prior to Fireproofing. This subcontractor should include the following **Trade Allowance**: 160 hours of crew time including patch material and associated equipment for any patching due to MEP coordination phasing. Laborer Time to be included as journeyman rate including any required supervision. This will be billed based on the final agreed contractual wage rates and may only be expended by written authorization of Turner Construction and any unspent portion of this unused scope hours will be credited at the end of your contract based on approved labor rate.
9. This Subcontractor shall include 1 full-time worker minimum just dedicated to cleanup. All areas must be clean at the end of shift.
10. This subcontractor shall coordinate with the Steel Subcontractor for proper prep/primer of steel to receive SOFP or intumescent. This should be included in this Subcontractor's Shop Drawings.
11. This Subcontractor shall model all fireproofing to be incorporated into the MEP BIM model and participate in the MEP coordination meetings.
12. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to cleanup general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)
13. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.

14. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
15. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
16. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

D. Safety

1. This subcontractor shall utilize HEPA negative air machines at all mixing station locations. Machines should be 2000 cfm or greater. Additional negative air machines may be necessary pending the negative exposure assessment results.
2. This subcontractor shall ensure mixing staging areas that are elevated have guardrails and stairs for access. The platform must be of solid construction, a stack of pallets is not acceptable. All guards on mixers must be in place.
3. This subcontractor shall adequately clean their work area daily as they spray to remove all overspray from the floor.
4. This subcontractor shall provide a plan for proper disposal of waste wash water. No waste wash water shall be disposed down any sanitary or storm systems. To be coordinated with Turner Superintendent.
5. This subcontractor shall provide perimeter protection from floor to ceiling preventing overspray to other trade work areas.
6. This subcontractor must elevate cords and tubing off the ground a minimum of 7'.
7. This Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible to remove snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.

Bid Package Specific Scope

2. This Subcontractor shall furnish and install firestopping for all top of walls and penetrations in rated or smoke partitions, slabs and roof assemblies. This includes but is not limited to Piping, conduit, ductwork, wiring, low voltage, electrical boxes cable tray and steel penetrations.
3. This Subcontractor shall furnish and install mineral wool and firestopping sealant where shown on any details on the wall section drawings including but not limited to A600 through A606.
4. This Subcontractor shall coordinate with the Drywall Contractor to install completely fire rated walls as required before installing the flanking CFMF Stud as shown on but not limited to 3D/A510.
5. This Subcontractor shall firestop walls shown on the Contract Documents as "None Rated Smoke Partition" as if they were 1 hour rated.
6. This subcontractor shall furnish and install a mockup of each type of penetration in each type of partition and slab as is required on the project.
7. This Subcontractor shall coordinate with the Firestopping manufacturer to visit the site to review the Mockups.
8. This Subcontractor shall install firestopping around MEP penetrations, penetration Sleeves will be provided by the MEP Trades per the MEP specifications.
9. This Subcontractor will be present the day of any 3rd Party or AHJ inspections of firestopping and repair any deficiencies at that time. If a 3rd Party re-inspection is required due to deficient work this subcontractor will be responsible for the cost.
10. This subcontractor shall coordinate with any trades that this subcontractor's work will affect or come in contact with. This subcontractor shall also be required to attend MEP Coordination Meetings to coordinate their work with the MEP Trades.
11. This subcontractor shall maintain an As-Built Drawing showing the location and type of all penetrations that they have fire stopped.
12. This subcontractor shall furnish and install smoke and firestopping as required at all backboxes installed in rated walls regardless of type. This includes "putty pads" or similar to create a UL assembly. Examples are outlets, switches, elevator call buttons etc.
13. This subcontractor shall furnish and install all parts and pieces required to make a complete assembly at the underside of through slab penetrations. Examples, floor drains, Floor sinks, roof drains, electrical poke thrus etc. where the drain body is below bottom of slab. This subcontractor includes the costs for an Engineering Judgment by a qualified Firestopping Engineer if required.
14. This subcontractor shall furnish and install all Fire Resistive Joint Systems as required by the Contract Documents including but not limited to floor, wall, ceiling, and roof joints.
15. This subcontractor shall coordinate with the concrete, General Trades, Ceiling, Roofing and Flooring Contractors for proper installation of the Fire Resistive Joint Systems.
16. This Subcontractor shall identify Fire Rated or Smoke Walls by painting with a stencil the rating of the wall on the wall above the ceiling. This is required in each room and if the wall is longer than 15' then it will be marked at least once every 15'.
17. This Subcontractor shall label all fire stopped top of wall and penetrations. Label should include UL system being maintained, the manufacturer of firestopping, the manufacturer fire stopping detail being utilized and the installing Contractor's contact information.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#17 - Firestopping
Dated: 07.08.2024
Revised: 09.30.2024

18. This Subcontractor shall furnish any pre-manufactured firestopping sleeves to be installed by the MEP contractors.
19. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
20. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
21. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
22. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

D. Exclusions

1. This Subcontractor shall exclude Acoustical Caulking
2. This Subcontractor shall exclude Sleeves for MEP Penetrations
3. This Subcontractor shall exclude Expansion Joint Covers

E. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for a complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

Unit Prices:	**Amount**
Refer to Form of Proposal

The following Alternate Prices reflect the work of this bid package under which the bid proposal was ***submitted, and these alternates shall remain valid for the life of the project and include all costs for a*** complete installation.

Alternates:	**Amount**
Refer to Form of Proposal	

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#18 – Millwork & Casework
Dated: 07.08.2024
Revised: 09.30.2024

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Millwork & Casework Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***Millwork & Casework Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
06 2000	Finish Carpentry
06 4100	Architectural Wood Casework
06 4200	Wood Paneling
06 6116	Solid Surfacing Fabrications
09 7800	Interior Wall Paneling
10 1100	Visual Display Units
10 1416	Plaques
10 5502	Mail Sorter
12 3553.19	Wood Laboratory Casework
12 3600	Countertops

Shared Specifications

BP#18 – Millwork & Casework
Dated: 07.08.2024
Revised: 09.30.2024

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
Division 00	Procurement and Contracting Requirements
Division 1	General Requirements
07 9200	Joint Sealants
09 8430	Sound-Absorbing Wall and Ceiling Units
09 8416	Fixed Sound Reflective Panels
07 9513	Expansion Joint Cover Assemblies

Bid Package Specific Scope

Millwork and Casework

1. This Subcontractor shall furnish a blocking schedule indicating the exact locations of all in wall blocking required for the installation of new millwork, casework, counters and other items furnished and installed by this Subcontractor. Any blocking not indicated on this blocking schedule will be the responsibility of this Subcontractor. The blocking schedule & associated submittals must be approved by the design team prior to the start of exterior wall framing.
2. This Subcontractor shall include field verification of all installation locations prior to fabrication. Any discrepancies shall be brought to the attention of Turner Superintendent immediately.
3. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates for the millwork.
4. This Subcontractor shall furnish and install all grommets in all counters as indicated. Coordinate exact locations with Owner Representative as located in the field. This Subcontractor shall include a 2nd mobilization for the installation of grommets in locations as required by the Owner.
5. This Subcontractor shall provide all cut outs in millwork cabinets, counters, etc. as required for the installation of items by others including, but not limited to, sinks, electrical devices, etc.
6. This Subcontractor shall be responsible for the shimming of the new millwork as required for a level and plumb installation. This Subcontractor shall include all field scribing as required for a tight installation.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#18 – Millwork & Casework
Dated: 07.08.2024
Revised: 09.30.2024

7. This Subcontractor shall broom sweep the entire work area where millwork operations are occurring at the end of each shift. This subcontractor shall utilize "dust-less" equipment while on the project.
8. This Subcontractor shall furnish and install all wood blocking required outside the GWB. This shall include counters mounted to plywood and all wood cleats. In wall blocking to be furnished and installed by the Drywall Subcontractor.
9. This Subcontractor shall furnish and install all counter, seating, and shelf support brackets, including, but not limited to, Rakks brackets, continuous aluminum angles, etc. This subcontractor shall coordinate with the Drywall subcontractor.
10. This Subcontractor shall include the costs for three full days of OFS to perform touch-ups of millwork and existing items throughout the project space. Turner / Owner / Architect will provide a list of items requiring touch-up including, but not limited to, doors, millwork, existing items.
11. This Subcontractor shall furnish and install protection over all horizontal and vertical items supplied by this Subcontractor. This subcontractor shall assume all protection is plastic corrugated board (correx) and is to be installed on an angle to avoid installed work being used as a surface to place material on. This Subcontractor shall maintain while your forces are onsite and prevent damage from dust, subsequent work, storage of materials, etc. as approved by Turner. This subcontractor shall provide a protection plan to Turner prior to installation.
12. This Subcontractor shall coordinate with the plumbing, mechanical, electrical, fire protection, low voltage and security subcontractors for final connections and equipment mounting in and through casework.
13. This Subcontractor shall furnish and install all trim/filler/etc. pieces required at built in appliances shown at this casework.
14. This subcontractor shall furnish and install all countertops, solid surfaces, windowsills, etc. This subcontractor shall coordinate and install all required cut outs with the MEP subcontractors.
15. This Subcontractor shall include all metal integral to the millwork and casework including, but not limited to trim, reveals, base, louvers, shelf channels, etc.
16. This Subcontractor shall include all glass integral to the millwork and casework including, but not limited to, shelves, sliding doors, etc.
17. This subcontractor shall furnish and install all display cases and all associated components, for example as shown on details 2E & 3E A805. This subcontractor shall include but not limited to all wood trim, ¾" plywood, shelving, glass, clad plywood, hardwood veneer, out of wall blocking/ shimming, etc. BP21 Drywall to install all framing, gypsum wall board, in wall blocking, GWB trim, and ½" plywood.
18. This subcontractor shall furnish and install all wire management systems, for example as shown on 1E/A803.
19. This subcontractor shall furnish and install all metal trim TRM1 through TRM5 as indicated on the plans. This subcontractor shall coordinate this work with adjacent trades work.
20. This subcontractor shall furnish and install all wood railings, wood shelves, wood base and brackets, for example as shown on detail 4A and 5A A805.
21. This subcontractor shall furnish and install all wood slats, shelf channels, etc. for a complete system. For example, as shown on 1E A804.
22. This subcontractor shall furnish and install all whiteboards and tack boards per plans.
23. This subcontractor shall furnish and install all plaques as indicated on the plans.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#18 – Millwork & Casework
Dated: 07.08.2024
Revised: 09.30.2024

24. This subcontractor shall furnish and install all sound absorbing wall panels. This shall include but not limited to all panels, clips, blocking, shimming, etc. to complete the system and install.
25. This subcontractor shall furnish and install all wood wall paneling, for example as shown on 2D A111.2.
26. This subcontractor shall furnish and install all wood benches for example as shown on 3B/A804, include wood framing for all wood bench supports.
27. This subcontractor shall furnish all Rakks brackets and any other brackets that are called out to be installed in wall. These are to be turned over to BP21 Drywall to install. For example, as shown on 5E/ A805 & 1B/A801.
28. This subcontractor shall furnish and install all support brackets out of wall for example as shown on 1C/A803.
29. This subcontractor shall furnish and install the plastic laminate fascia ¾" plywood laminated for example as shown on detail 2E/A211, include sealant and backer rod.
30. This subcontractor shall furnish and install all visual display boards and associated trim. For example, TRM3.
31. This subcontractor shall furnish and install all brackets, millwork etc. associated with the display shelfs. Concealed blocking by BP21 Drywall. For example, as shown on 5A/A805.
32. This subcontract shall furnish and install EQ11 Mail Sorter.
33. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
34. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
35. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
36. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.
37. This subcontractor shall provide all acoustical diffusion wall panels ADP1 & ADP2.

Joint Sealants

38. This Subcontractor shall furnish and install all caulk joints within and to the adjacent surfaces as required for the complete installation of their work. This includes, but is not limited to, new counters, cabinets, backsplashes, etc.

D. Exclusions

39. This subcontractor shall exclude trash bins in millwork (By owner)

Additional Provisions/Scope of Work

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#19 – Glass, Glazing, & Metal Panels
Dated: 07.08.2024
Revised: 09.30.2024

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Glass, Glazing, & Metal Panels Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***Glass, Glazing, & Metal Panels Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
DIV 00	Procurement and Contracting Requirements
DIV01	General Requirements
03 3250	Concrete Post-Installed Anchors
07 2100	Thermal Insulation
07 2726	Fluid-Applied Membrane Air Barriers
07 6200	Sheet Metal Flashing and Trim
07 9200	Joint Sealants
08 7100	Door Hardware
08 0671	Door Hardware Schedule
07 9513	Expansion Joint Cover Assemblies

Bid Package Specific Scope

1. This Subcontractor shall be responsible for all testing required per the drawings, specs, and state requirements.
2. This Subcontractor shall include all Sustainability requirements, including but not limited to CTHPB Documentation.
3. This Subcontractor shall include the cost of all surveying and layout (baseline survey to be provided by others).
4. This Subcontractor shall include field Measurement as required prior to fabrications. This Subcontractor shall have the responsibility to field verify dimensions of existing openings prior to start of fabrication. This Subcontractor shall also coordinate dimensions with other Subcontractors installing work adjacent to items installed under this Subcontract. This Subcontractor shall be required to attend multiple coordination meetings scheduled by Turner to review shop drawings, existing conditions and tie-in locations.
5. This Subcontractor includes all blocking, brackets, fixtures, shims, connections, and other items necessary for a complete system.
6. This Subcontractor shall include all cutting, coring, sleeving, & firestopping for penetrations relative to your trade for a complete system.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#19 – Glass, Glazing, & Metal Panels
Dated: 07.08.2024
Revised: 09.30.2024

7. This Subcontractor shall furnish all the standard, special, finish, etc. warranties identified in the specifications.
8. This Subcontractor shall be responsible to remove any temporary protection at window/door openings to perform their work and ensuring its weather tight at the end of each shift.
9. This Subcontractor shall be responsible for the removal of all factory stickers, emblems, and grease pencil marks, etc. adhered to the glass or frames. Final cleaning of the glass is by others.
10. This Subcontractor shall install shims as necessary to align and support their work in the proper location. In no case shall the shims interfere with or protrude into the caulking assembly identified in the design documents.
11. This Subcontractor shall take precautions where dissimilar metals will contact each other or corrosive substrates and protect against galvanic action by painting contact surfaces with bituminous coating or by other permanent separation as recommended by fabricators or manufacturers of dissimilar metals.
12. This Subcontractor shall provide a complete operating system for scope of work.
13. This Subcontractor shall coordinate all work with all other Subcontractors having work adjacent to or connecting to the work of this Subcontract.
14. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
15. This Subcontractor shall provide engineering stamp drawings and calculations of all delegated design items as indicated on the contract drawings.
16. This Subcontractor shall furnish and install all mock-ups required for this scope of work per the contract documents, for example as shown on Drawing A-315.
17. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to clean up general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)
18. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
19. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
20. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
21. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

Additional Provisions/Scope of Work

State Project No. 057-0114 N
Greenwich, CT
BP#19 – Glass, Glazing, & Metal Panels
Dated: 07.08.2024
Revised: 09.30.2024

Spec. 07 4213.23 Metal Composite Material Wall Panels

22. This Subcontractor shall design, furnish and install metal composite wall panels as shown on documents for a complete system. This scope of work shall include, but is not limited to, clips, fastening and support required. This Subcontractor shall coordinate with BP #21 Drywall and BP #15 Roofing.
23. This Subcontractor shall include any internal supports for the metal panels as required to withstand the designed loads for the project.
24. This Subcontractor shall include full coordination of membrane flashing(s) and composite metal panels glazed into the window system as indicated.
25. This Subcontractor shall design, furnish and install Exterior Wall Assembly Type 07 & Type 06, including metal wall panel system, CFMF subgirt furring, fluid applied vapor barrier 4" Mineral Wool insulation, thermally broken wall bracket, CFMF "Z" Furring, and vertical L-girt. This Subcontractor shall exclude the wall back up, that includes the gypsum sheathing, CFMF, and gyp board, to be by BP #21 (Drywall & General Trades).
26. This Subcontractor shall design, furnish and install metal panels at soffits, including but not limited to Type S3 and Type S2. This scope of work includes metal composite panel, cold form metal hat channels, insulation, fluid applied membrane air and vapor barrier, and cladding support system. Gypsum sheathing and cold form metal framing hung from structure by BP #21 (Drywall and General Trades).
27. This Subcontractor shall exclude wood blocking at gym overhang, for example as shown on 4C/A521, by #21 (Drywall & General Trades).
28. This Subcontractor shall design, furnish and install metal panels at front signage as shown on documents, for example as shown on 5C/A924.

Spec. 08 4313 & 08 4413 Aluminum-Framed Storefronts & Glazed Aluminum Curtain Walls

29. This Subcontractor shall furnish and install all exterior and interior aluminum doors, door hardware, glazing and frames as indicated on the contract drawings for a complete operating system
30. This Subcontractor shall include coordination and make provisions to accommodate all raceways internal to the storefront and curtainwall system as required for others including but not limited to electrical, tele/data and security.
31. This Subcontractor shall furnish and install all security glazing and Bullet Resistant (BWSR) scope within storefronts and curtainwalls, including doors with corresponding hardware, glazing, and frame as shown on documents.
32. This Subcontractor shall design, furnish and install complete exterior and interior aluminum storefront & curtainwall systems. This Subcontractor shall include the engineering and performance criteria associated with the aluminum storefront & curtain wall systems as required by project specifications. All connections and reinforcement shall be indicated on the shop drawings. The scope of work shall include, but is not limited to, supports, angles, blocking, fasteners, cover pieces, anchorage & internal reinforcement as well as shadow boxes. For example, this Subcontractor shall provide anchorage at curtain wall header, as shown on 6C/A640.
33. This Subcontractor shall tie-in AVB into glazing pocket at required locations, for example, details as shown on drawing A641. Include stripping in AVB within all storefront and curtainwall pockets and minimum 1 foot overlap or per manufacturer minimum requirements on vertical face with adjacent work.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#19 – Glass, Glazing, & Metal Panels
Dated: 07.08.2024
Revised: 09.30.2024

34. This Subcontractor shall furnish and install all extruded sunshade louvers per contract documents, including but not limited to finish, mounting brackets/sunshade clips, trims and sills, for example as shown on 1D/A640.

Spec. 08 6300 Metal-Framed Skylights

33. This Subcontractor shall design, furnish and install scheduled skylight system, including but not limited to support bracket, loose fill mineral wool, perimeter flashing, foam seal, and steel plate attachment, for a complete system per contract documents, for example as shown on 3B/A522. This Subcontractor shall coordinate skylight size, and design requirements with Roofer (BP #15) and Drywall (BP #21). Include AVB at perimeter of skylight per details.

Spec. 08 8000 Glazing

34. This Subcontractor shall furnish and install all glazing per contract documents. The scope of work includes, but is not limited to, windows, aluminum doors, glazed curtain walls, glazed entrances, interior borrowed lites, storefronts, security glazing, fire protection rated glazing, laminated glass interlayers and accessories, HM sidelites and transoms.
35. This Subcontractor shall furnish and install schoolguard glazing at required locations per contract documents. For example, as shown and noted on Aluminum Frame Elevations A630 – A632.
36. This Subcontractor shall furnish and install friction fit mineral wool insulation at all spandrel glazing for insulated coated spandrel glazing (ICS) per Glazing Graphic Legend A630 – A632.

Spec. 08 8300 Mirrors

35. This Subcontractor shall provide and install all glass mirror, for example as shown in Fitness Room. The scope of work shall include, but not limited to, blocking drawing, trim, edge sealer, mastic, fasteners, anchors and inserts.
36. This Subcontractor shall exclude toilet accessory mirror units, to be provided by BP#21 Drywall and General Trades.

Spec. 08 9100 Louvers

36. This Subcontractor shall furnish and install all interior and exterior louvers, for example as shown on roof plans and schedule on A610.
37. This Subcontractor shall exclude the louvered air return and doors.

Spec. 08 9200 Louvered Equipment Enclosures

38. This Subcontractor shall design, furnish and install all louvered equipment enclosures/louver screen wall as a complete system with specified finishes & color. This subcontractor shall provide louver screen panel, post, and post base plate, for example as shown on 1A/A531. This subcontractor shall exclude structural support post below post base for louver screen wall, by BP #12 (Structural Steel).
39. This Subcontractor shall furnish and install access gates, for example 3E/A516 and 4E/A516.
40. This Subcontractor shall provide delegated design submittals with Professional Engineer stamp as specified in 1.4-D & 1.4-C-1.

State Project No. 057-0114 N
Greenwich, CT
BP#19 – Glass, Glazing, & Metal Panels
Dated: 07.08.2024
Revised: 09.30.2024

Spec. 07 2100 Thermal Insulation

41. This Subcontractor shall furnish and install thermal insulation between the work of this bid package both similar and dissimilar materials including but not limited to metal panels, insulated coated spandrel glazing, and skylights.

Spec. 07 2726 Fluid-Applied Membrane Air Barriers

42. This Subcontractor shall furnish and install fluid-applied where AVB terminates into scope furnished and installed by this subcontractor. Include stripping in AVB within all work provided by this subcontractor including but not limited to storefront and curtainwall pockets, louvers, skylight with a minimum of 1 foot overlap or per manufacturer minimum requirements with adjacent work.

Spec. 07 6200 Sheet Metal Flashing and Trim

43. This Subcontractor shall furnish and install sheet metal flashing and trim at perimeter, head, sill, and integral withing the work of this bid package both similar and dissimilar materials.
44. This Subcontractor shall include flashing at 3E/A522, similar to typical curtain wall at sill slab-on grade 3A/A641.

Spec. 07 9200 Joint Sealants

45. This Subcontractor shall provide and install all joint sealants, including but not limited to backer rod and sealant, within this subcontractors systems and between the work of this bid package both similar and dissimilar materials.
46. This Subcontractor shall be responsible for providing all compatibility tests for sealants to adjoining materials.

Spec. 08 7100 & 08 0671 Door Hardware & Door Hardware Schedule

47. This Subcontractor shall furnish and install all hardware associated with the aluminum (interior & exterior) doors as indicated on the contract documents. This Subcontractor shall provide construction cylinders for all doors. Furnishing of final cylinders & keying is by D/F/H Subcontractor; installation of final cylinders is by Drywall & General Trades Subcontractor. This Subcontractor shall coordinate with the Electrical Subcontractor for installation and power and security requirements.
48. This Subcontractor shall furnish and install the automatic door operators and the remote activation paddles, mag locks, etc. specified for the aluminum doors including but not limited to wiring, start up by manufacturers authorized vendor of all electrical hardware devices, testing, troubleshooting with security and fire alarm. This Subcontractor is responsible for all the low voltage wiring between the operator and the remote paddles. Coordinate with the Electrical Subcontractor for the line voltage connection to this system.
49. This Subcontractor shall exclude the furnish of electronic security hardware (card readers) as it will be supplied and installed by the Security Subcontractor. This Subcontractor shall coordinate required cutouts and installation with Security Subcontractor.

Add'l Items

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#19 – Glass, Glazing, & Metal Panels
Dated: 07.08.2024
Revised: 09.30.2024

50. This Subcontractor shall furnish a blocking schedule indicating the exact locations of all in wall blocking required for the installation of this subcontractors work including but not limited to , metal panels, storefront, curtainwall, pass through, mirrors and other items furnished and installed by this Subcontractor. Any blocking not indicated on this blocking schedule will be the responsibility of this Subcontractor. The blocking schedule & associated submittals must be approved by the design team prior to the start of exterior wall framing.
51. This Subcontractor shall furnish and install the bullet resistant aluminum pass thru window and the 2-pane sliding window(nurse's office).

D. Safety

52. This Subcontractor shall provide a site-specific plan on how they will comply with Turner's Ladder's Last Program.
53. This subcontractor shall ensure that any Lulls used on site are equipped with hydraulic fork positioners.
54. This subcontractor shall engage a 3rd Party to complete a GPR Survey to mark out existing utilities under and in the general area of any proposed Mobile Crane locations.
55. This Subcontractor is responsible to ensure that the perimeter protection of each floor that is affected by their work be maintained on a daily basis. Temporary perimeter guard railing systems that are required to be removed to allow for the installation of the exterior wall, will be replaced by this subcontractor who will provide a separate standard guardrail system, such as a Guardian or Garlock system, to protect the floor edge while the exterior wall is being installed. There shall not be any unprotected slab edges at any time.
56. During the installation this Subcontractor shall provide a secondary redundant means of material support in case the primary means of support fails.
57. This Subcontractor is to have all glass and glazing bulk materials labeled with the weight and is to coordinate with Turner the safe storage of materials to mitigate overload to any part of the structure.
58. This Subcontractor is to utilize Leading Edge fall protection in all circumstances where installation is done from the inside of the building.
59. This Subcontractor shall install a Controlled Access Zone below elevated work areas.
60. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible to remove snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.

E. Exclusions

1. This Subcontractor shall exclude furnish and installing glazing at HM and wood Doors (By BP #20 Doors, Frames, & Hardware).
2. This Subcontractor shall exclude metal copings and fascia (By BP #15 Roofing).

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Doors, Frames, and Hardware Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detailed references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***Doors, Frames, and Hardware Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
None	

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Bid Package Specific Scope

2. This Vendor shall coordinate the delivery of all frames, doors, and finish hardware with the Drywall Subcontractor. Which will include just-in-time shipments that are coordinated with the project schedule and Turner Superintendent. Orders and deliveries of doors will be based on specific zones of the building. This subcontractor is to include Seven (7) delivery each of frames, doors and hardware (Total 21 deliveries).
3. This Vendor shall coordinate with the Glass & Glazing subcontractor for all doors installed in aluminum frames.
4. This Vendor shall furnish all Wood and Hollow Metal Doors, Hollow Metal Frames and specified hardware as indicated on the Door Schedule and Contract Documents, including door frames and Hollow metal framing associated with sidelites and transoms. Sidelight and transom glazing to be furnished and installed by BP#19 Glass & Glazing, HM Frame and Hardware to be install by BP#21 – Drywall and General Trades
5. This Vendor shall include all glass and glazing within all Hollow metal and wood doors.
6. This Vendor shall furnish all hollow metal door frames and borrowed lite materials in quantities and sizes as indicated on the Contract Documents with the necessary reinforcement / stiffeners for panic devices, operators, locksets, closers, etc. as may be necessary and / or specified.
7. This Vendor shall provide protective cups/grout guards on the frames to keep mortar from penetrating the installation of hinges, strikes, dead bolts, etc., for all frames installed in masonry partitions.
8. This Vendor shall furnish doors and door frames which meet the fire ratings of the contiguous walls, if not already specified. This Vendor shall provide all coordination necessary between Door and Frame Schedule, Code Drawings and Architectural Drawings.
9. This Vendor shall furnish temporary construction cores for all new doors provided including Aluminum doors provided by others.
10. This Vendor is responsible for coordinating all damage or missing portions of a shipment with the Drywall subcontractor until all such matters are resolved. Any missing or damaged product will be ordered and shipped to the job within one (1) week time of notification of damage.
11. This Vendor shall provide final cylinders that are tied into the Master keying system. This shall include all keys required per specification. This Subcontractor shall furnish final cylinders and keys for ALL doors, including interior and exterior doors supplied by others.
12. This Vendor shall return to the project three (3) months after the date of Substantial Completion to examine, re-adjust, consult, replace hardware items, and prepare written report with the Owner and the Hardware Installer.
13. This Vendor shall be responsible for field verifying all openings as required per the contract documents. This shall include the coordination of all throat sizes for all new frames with the new and existing wall construction.
14. This Vendor shall coordinate the undercuts of the doors as required per the flooring conditions and required thresholds as identified on the contract documents drawings.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#20 – Door, Frames, and Hardware
Dated: 07.08.2024
Revised: 09.30.2024

15. This Vendor shall coordinate with the Security Subcontractor for all required security system integration with the door hardware.
16. This Vendor will provide all coordination necessary to ensure COMPLETE coordination between Finish Hardware and Door / Frame suppliers for on-time delivery and fabrication. Should it be necessary for this Vendor to order item early, all off-site storage costs shall be the responsibility of this Vendor. This Vendor shall also include verifying his materials when delivered to the project site with the respective Vendors to ensure the order is complete and in good condition.
17. This Vendor shall include all freight and trucking to the jobsite. This Vendor shall have a Project Manager on-site during all deliveries to confirm and aid in the inventory process. Both the Drywall Subcontractor and Vendor Project Manager will need to sign delivery tickets. All materials will be offloaded and brought into the project space by the Drywall Subcontractor. Submit confirmation of items delivered to Turner with any missing or damaged items noted.
18. In the event that doors or frames are incorrectly fabricated and/or damaged during shipping, Turner shall notify this Vendor in writing and give this Vendor three days to either man the job for the purpose of repairing the door or frame or arrange to replace the door or frame within 10 calendar days. This Vendor shall be back-charged accordingly, if no response is received within the designated timeframe and others perform any work in order to repair/ fix doors or frames, or if any work is performed by others in order to return and/or re-receive frames or doors incorrectly fabricated.
19. This Vendor shall perform multiple deliveries per above for Doors, Frames, and Hardware to accommodate the most current Project Schedule. All hardware to be sorted then shipped in an individual box per door number and labeled with corresponding door number.
20. This Vendor shall attend preinstallation meetings with the Drywall Subcontractor prior to the first delivery of doors and onsite for the first installation of doors. This Vendor will also attend kick off meetings and weekly coordination meetings with the Owner, Architect, and Turner, and go through door by door to indicate any discrepancies.
21. This Vendor shall coordinate all doors and frames with wall types receiving doors and frames. All rated walls shall receive rated frames and doors regardless of door schedule. Any discrepancy shall be brought to the Turner Engineer immediately for clarification/confirmation by the Architect.
22. This Vendor shall coordinate and prep doors and frames for installation of wiring for security and life safety, smoke detector closures, card readers, electric hinges, automatic door operators, etc. in accordance with the Contract Documents. Include preinstalled wire harness within door as well as required pathway for security and power to hardware devices.
23. This Vendor shall furnish all power supplies as required per the door hardware schedule. This Vendor shall coordinate electrical requirements with BP #38 and BP#39.
24. This Subcontractor shall furnish and Install all automatic operators at all hollow metal/wood doors and hollow metal frames including but not limited to wiring, start up of all electrical hardware devices, testing, troubleshooting with security and fire alarm. This includes but is not limited to auto operators, mag locks etc.
25. This Vendor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
26. This Vendor shall include multiple mobilizations as required by the latest issuance of the project schedule.

Bid Package Specific Scope

2. This Subcontractor shall include Daily Cleanup to Dumpster & daily trash recycling dumpsters.
3. This Subcontractor shall include all Sustainability requirements, including but not limited to CTHB Documentation.
4. This Subcontractor shall furnish all the standard, special, finish, etc. warranties identified in the specifications.
5. This Subcontractor shall provide a complete operating system for their scope of work.
6. This Subcontractor shall furnish and install all work associated with this Bid Package required for the mock-ups depicted on Drawing A-315.
7. This Subcontractor shall be responsible for providing out of sequence work at no additional costs when required in coordination with other trades.
8. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
9. This Subcontractor's Project Manager/Foreman shall participate in Pull Planning Sessions which affect their scope of work. This Project Manager/Foreman shall provide input to further develop the accurate sequence and timing for completion of the work.
10. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing

any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.

11. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
12. This Subcontractor shall organize and neatly place all materials, tools, etc. This Subcontractor shall remove all debris resulting from their work on a daily basis to trash Rubbermaid tilt trucks provided by this Subcontractor, these buggies will be separate from the 24 provided for other trades. This Subcontractor shall be responsible to bring all their trash to a dumpster provided by others. No trash or debris will remain in the work areas at the end of the shift. If debris is left in the work areas, it will be removed to the dumpster by others, and the labor expense back charged to the responsible Subcontractor. Large sections of debris shall be disposed of to a dumpster provided by others by this Subcontractor.
13. This Subcontractor shall be required to store all onsite material on racks, carts or pallets capable of being easily moved and shall coordinate the delivery of and location of stored material with the Turner Superintendent. If material is stored on pallets, this Subcontractor is responsible to have a pallet jack onsite at all times. This Subcontractor shall include relocation and consolidation of materials as directed by Turner. This pallet jack must be accessible to Turner at all times. If it is to be chained and locked at the end of the shift, Turner must be provided with a key.
14. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
15. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.
16. This Subcontractor shall review, conform to, and furnish and install all requirements included in the Safety Additional Provisions included in this Agreement. This Subcontractor understands that this document is project specific, and all provisions must be included in this Subcontractors' bid.
17. This Subcontractor shall provide their own means of access for their scope of work. Any lifts used on interior slabs or elevated areas shall be approved by EOR or Third-Party Engineer.
18. All material cutting areas will be supplied with a portable waste container by this Subcontractor. Scrap will not be allowed to be thrown on the floor. All scrap must be put in this rubbish container.
19. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
20. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

Temporary Requirements

21. This Subcontractor has reviewed the Logistics & Phasing Plans and the Construction Schedule and has included all associated costs as relevant to this scope of work. It is extremely important to coordinate your work with the other adjacent contractors during the various phases and perform the work as required by these documents. No come back costs will be entertained.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#21 – Drywall & General Trades
Dated: 07.08.24
Revised: 09.30.2024

22. This Subcontractor shall furnish, install and maintain temporary weather protection at all exterior wall openings, including but not limited to windows, doors, curtain wall, storefronts, etc.

    - At all window and other openings, this Subcontractor shall furnish, install and maintain provisions to provide for a watertight condition of the rough openings. The Glass and Glazing Subcontractor shall remove the temporary protection at window and storefront/curtain wall openings prior to installation of their work. Denseglass over openings will be removed by this Subcontractor. Other protection shall be removed by this Subcontractor as required for installation of new work.
    - At all storefront/curtainwall entrances, this Subcontractor shall furnish, install and maintain temporary partitions with temporary hollow metal frames, doors and hardware. Temporary walls to be watertight and constructed with metal studs, insulation and sheathing. Hollow metal doors and frames to be minimum 8-0 x 7-0, be equipped with heavy duty closers, and shall be lockable (keyed alike). Provide keys to Turner. Coordinate with the Glass & Glazing Subcontractor to locate temporary walls and doors at exterior storefront/curtainwall locations to allow installation without conflict with temporary provisions. This protection will remain in place until permanent systems are installed or as directed by Turner and removed by this Subcontractor. Include at **least 1 complete removal and replacement of the same.**
    - At all weathertight wall locations, this Subcontractor shall furnish and install all temporary partitions at discretion of Turner Superintendent. Temporary walls to be watertight and constructed with metal studs, insulation and sheathing. In addition to the Temporary Protection Plan requirements, an additional 100 LF of temporary partitions, approximately 15’ high and two (2) temporary HM doors and frames (7’0”x6’0”), hardware, including closers, shall be included to be used at the discretion of Turner. This Subcontractor shall include dismantling and removing as needed for new work or as directed by Turner.

23. This Subcontractor shall furnish, install, maintain, and/or remove temporary protection in accordance with Turner Safety Additional Provisions.
24. This Subcontractor shall furnish and build (15) temp power stands to support (2) quad outlets (by electrician), as well as (2) shelves for each stand, to support battery chargers. Locations to be determined by Tuner Superintendent.
25. This Subcontractor shall furnish and install a 4 sided- 10’ x 10’ x 8’ tall exterior plywood enclosure for the housing of exterior temp power and transformer for Phase 1 and Phase 2 of the project. This should include a lockable plywood door.
26. This Subcontractor shall build a 4’x8’ Information Board for display of Project Information, for example Building Permits. This board shall be on posts and moveable, as well as have a roof to keep the information board dry.
27. This Subcontractor shall build two (2) 4’x8’ plan tables at the direction of Turner Superintendent. Plan tables to be constructed of wood. Tables to be dismantled and removed and disposed of, when directed by Turner
28. This Subcontractor shall furnish and deliver Four (2) walk behind floor sweepers. Cleaning should consist of the entire building footprint, and these sweepers should become available once exterior CFMF begins and be onsite until finished flooring is complete. These floor sweepers shall be (2)Bissell Commercial Mfr. Model # BG477 or equal and (2) Advance Terra 28B walk-behind sweepers – Include 10 filters for each unit.

Dated: 07.08.24
Revised: 09.30.2024

29. This Subcontractor shall furnish and install temporary HM doors for use in permanent frames, hardware and locks for all electrical and data rooms.
30. This Subcontractor shall furnish and install temporary removable railing and net system(s) at all elevator shaft door openings per Turner Safety Standards.
31. This subcontractor shall furnish (24) Rubbermaid tilt trucks (60") for garbage and deliver to locations as directed by the Turner Superintendent for use by other trades. These shall be continuously monitored and be emptied by this subcontractor. These are not to be used for work or drawing tables on site. This subcontractor shall provide their own buggies/trucks for removal of their own drywall and stud debris.
32. This Subcontractor shall furnish and install plywood infills at newly installed metal stair pans to allow for use during construction. Along with any additional railings for temporary use at metal stairs. Removal by BP# 10 Concrete.
33. This Subcontractor shall furnish and install at the direction of Turner (200) - 3-foot-long cord holding Sky hooks similar or equal to the kind provided by Colony to be used by all trades on the project.

General

34. This Subcontractor shall include all requirements for "delegated design" items including, but not limited to, calculations, Professional Engineer Stamp, Errors and Omissions Insurance.
35. This Subcontractor shall provide all warranties per specifications.
36. This Subcontractor shall allow sufficient time to inspect and accept the work of the previous Subcontractor. Should any discrepancies be discovered, Turner shall be notified sufficiently in advance so that corrective action can be accomplished without effecting the progress of any other Subcontractor.
37. This Subcontractor shall provide all surveying and layout for the work of this package. The survey will be by Total Station or a Licensed Surveyor.
38. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
39. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to clean up general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)

GWB Partitions, Ceilings and Soffits

40. This Subcontractor shall be responsible for distributing all gypsum board to the rooms in which it is to be installed, upon delivery. It will NOT be stockpiled in one area.
41. This Subcontractor shall furnish and install the partition top tracks and clips, prior to SOFP. Top track shall be deep enough to include required SOFP thickness and deflection. Refer to CODE Drawings.
42. This Subcontractor shall furnish and install ALL components for a drywall fire rated assembly, both horizontal and/or vertical portions. Scope of work includes but is not limited to, shaftliner, insulation, drywall, firestopping (shaftwall locations only), track, and doghouse/lids.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#21 – Drywall & General Trades
Dated: 07.08.24
Revised: 09.30.2024

43. This Subcontractor is required to provide Fire Rating Identification of Drywall and Masonry Partitions. For example, stenciling of Partition(s) with verbiage provided in the Contract Documents and/or required by the local AHJ.
44. This Subcontractor shall furnish and install ALL interior partitions including but not limited to: partitions to the underside of decking, pre-manufactured drywall ceiling suspension system, low wall partitions with required support and stiffener posts, drywall ceilings, beam encasements, soffits as shown and specified. Sealants – acoustical at top and bottom of walls, or penetrations created by this subcontractor, in-wall insulation, flat stock strapping/bridging, in-wall blocking, continuous sheet metal filler for deck flutes, sound isolation clips off of steel, metal trim and accessories of exposed areas (for example Details 2A and 4A on A600), controls joints, all stud and/or track associated to the partition, gypsum board – including but not limited to abuse, cement, fire rated, sound, and fiberglass ballistic panel.
45. This Subcontractor shall furnish and install taping joint treatments for GWB Assemblies as indicated on the contract documents and specifications.
46. This Subcontractor shall furnish and install cement board for base support as indicated on Contract Documents. For example, Detail 4E on A806
47. This Subcontractor shall furnish and install all components for a complete Fiberglass Ballistic Panel Partition. For example, partition type B1, B1A, and B1B are shown on drawing A600.
48. This Subcontractor shall coordinate with all other trades and identify critical walls and sequences. This subcontractor will provide header openings in framing and drywall as needed for MEPF trades following MEPF coordination. Coordinate with all the MEPF subcontractors for sleeves and penetrations and perform the necessary framing as required. Include separate mobilizations as required. This Subcontractor shall coordinate and install critical walls to facilitate the installation of Ductwork and MEP systems where top of wall access will be restricted following MEP FP Rough in prior to being watertight. Where critical walls are required, this Subcontractor shall provide paperless/ dens shield drywall equivalent to required type per partition schedule to protect potential moisture and damage from this early installation. Assume critical walls are where ductwork is within 2 feet of walls and runs parallel to the wall inhibiting access post ductwork installation, for example ductwork at Corridor 1115, Choral Room 1122, Waiting 1010, etc.
49. This Subcontractor shall vacuum out clean all bottom tracks and chases prior to installing drywall.
50. This Subcontractor shall furnish and install all in-wall insulation as identified on the wall type drawings. Additionally, this must be coordinated with other trades performing in wall work.
51. This Subcontractor shall coordinate, furnish and install all in-wall blocking including but not limited to millwork/millwork sills, signage, railings, base, chair rails toilet accessories, curtainwalls, windows, window treatment, storefronts, doors, wall-mounted items, food service equipment, owner furnished items, televisions or similar AV items, etc. The blocking around window / storefront and curtainwall openings, at the jambs, heads and sills. For example, blocking shown on details on Drawing A-641. This blocking shall be installed before exterior AVB. Include separate mobilizations as required.
52. This Subcontractor shall coordinate their work with other trade Subcontractors and allow for additional studding or framing to accommodate the work of others (i.e. electrical boxes, equipment, mechanical fixtures, mechanical and electrical cabinets and piping, etc.).
53. This Subcontractor shall coordinate and install any in-wall brackets or supports required by the millworker prior to closing walls. Furnished by millworker.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#21 – Drywall & General Trades
Dated: 07.08.24
Revised: 09.30.2024

54. This Subcontractor shall furnish and install all GWB ceilings and soffits, including but not limited to, GWB board, metal framing, insulation, expansion joint systems channel molding and trim pieces (for example 1E/A210).
55. This Subcontractor shall coordinate and design their suspended ceiling system attachments with the new structure and decking capacities for fastening. Refer to Note 12 on A200 series drawings. This Subcontractor shall provide delegated design and include shop drawings and calculations indicating, but not limited to, load carrying capacities, point loads, etc
56. This Subcontractor shall furnish and install the framing and GBW associated to the Clouds located in the Auditorium. For example, Detail 1A/A111.8.
57. This Subcontractor shall design, furnish & install an independent support system for all hung equipment, fixtures, ceiling and piping system that are directly below the metal roof deck. This support system must attach to structural steel framing members as the metal roof deck cannot be utilized for support. Refer to A200 series drawings General Note #12 for criteria. This Subcontractor shall provide delegated design and include shop drawings and calculations indicating, but not limited to, load carrying capacities, point loads, etc. This Subcontractor shall include adding miscellaneous metal supports into the 3D model for coordination with all MEP trades.

Access Doors and Frames

58. This Subcontractor shall be responsible for the receipt, distribution, storage and installation of all access doors/panels being provided by Food Service, Elevator, and MEPF subcontractors (including all related blocking required for same). The Food Service, Elevator and MEPF Subcontractors have been instructed to arrange their work in such a manner so as to minimize the quantity of access doors required. All required access doors or panels shall be furnished from one (1) manufacturer with their ratings consistent with the respective partition/ceiling/floor ratings.

Expansion Control

59. This Subcontractor shall furnish and install expansion joint assemblies/covers at all interior drywall to drywall, drywall to ceiling, and masonry to drywall expansion joints, including associated blocking per the documents.
60. This Subcontractor shall furnish and install any GWB ceiling and/or wall transitions and reveals associated to their work. For example, Detail 5F/A210

Joint Sealants

61. This Subcontractor shall furnish and install joint sealants within this work and where materials furnished and/or installed by this Subcontractor; including but not limited to control and expansion joints, adjacent to other building materials; exclude joint sealants for trades who follow your work (i.e. casework, plumbing fixtures).

Cold Formed Metal Framing

62. This Subcontractor shall design, furnish and install metal stud or light gage framing as indicated in the contract documents including attachments to structural steel framing.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#21 – Drywall & General Trades
Dated: 07.08.24
Revised: 09.30.2024

63. This Subcontractor shall design, furnish and install all slip connections as indicated in the contract documents at cold formed metal framing or metal studs.
64. This Subcontractor shall furnish and install the CFMF tracks and clips, prior to SOFP. Top track and clips shall be deep enough to include required SOFP thickness and deflection. Refer to CODE Drawings.
65. This Subcontractor shall furnish and install engineered posts for pony walls as indicated on the Contract Documents. For example, detail 7/S210 or 5E/A602.

Exterior Framing

66. This Subcontractor is responsible for providing its own means to access the exterior wall construction.
67. This Subcontractor shall furnish and install the exterior cold formed metal framing as shown and specified. Scope of work includes, but not limited to, metal framing, deflection track, gypsum board, fiberglass faced gypsum board sheathing, and interior cavity insulation (spray and other). This Subcontractor shall coordinate stud spacing with other trades as required
68. This subcontractor shall keep sheathing in place over window openings for weather protection, to be cut out at a later date by this Subcontractor per direction of Turner Superintendent.
69. This Subcontractor is responsible for ensuring that the perimeter protection of each floor that is affected by their work be maintained on a daily basis. If guardrail systems need to be modified or removed to install the work this Subcontractor must ensure that they protect the floor edge by replacing the guardrails or installing a separate standard guardrail system. Open sided floors cannot be unprotected at any time. If this subcontractor's work replaces the guardrail edge protection this contractor will be responsible for removing and coordinating the return of the reusable guardrail/fall protection system (posts, cables, turnbuckles, clips) to the concrete or structural steel subcontractors. Material should be palletized and returned in an orderly fashion.
70. This Subcontractor shall provide the metal stud framing and insulation for the roof parapets and the metal stud framing for the roof expansion joints.
71. This Subcontractor shall furnish and install all framing, wood blocking and plywood including but not limited to all parapets and overflow scuppers, wood and framing for curbs associated to Roof Equipment (i.e. Condenser Units, Exhaust Fans, etc.), Expansion Joint blocking and wood curb (for example detail 3E/A531) and wood blocking and framing for roof hatches, skylights and perimeter fascias throughout (For example, Detail 1A/A521). This Subcontractor shall also furnish, install, and coordinate with the roofer, plywood and wood blocking and CFMF for blocking support associated to the roofing system and its buildup (For example, Detail 1C/A521).
72. This Subcontractor shall furnish and install CFMF, mineral wool insulation, and blocking/plywood associated to the Roof Louver Boxes similar to that of 1B/A531.
73. This Subcontractor shall furnish and install CFMF, sheathing, blocking, plywood and spray foam within stud cavity for Exterior wall assemblies. This Subcontractor shall also furnish and install top of wall CFMF Galvanized Plate as shown on Contract Documents. For Example, Top of Wall Plate shown on 3E/A501.
74. This Subcontractor shall furnish and install the FCP (Fiber Cement Panel) Rainscreen System throughout including but not limited to framing, sheathing, fasteners, AVB, insulation and trim for

penetrations. Coordinate with Mason for FCP to be installed on Masonry backup, include patching of AVB as required for attachments.

75. This Subcontractor shall furnish, install, and coordinate the installation of framing, blocking and plywood for the MCM (Metal Composite Material) Wall Panels as indicated on the Contract Documents.

Miscellaneous Work

76. This Subcontractor shall furnish and install all overhead coiling grilles/doors and required support steel and blocking whether shown or not. This Subcontractor is responsible for all control wiring to make grilles operational per the documents and shall coordinate the electrical requirements with the Electrical Subcontractor prior to completing installation. This subcontractor is responsible for any engineering for support and/or function of the overhead door system.
77. This Subcontractor shall furnish and install the CFMF 12GA Clips and Sheetmetal shown at top of wall(s) for all Masonry Partitions. For example, Details 1C and 1B on A-605. As well as the diagonal CFMF bracing/bent plate and clips. For example, 1A and 2A on A-605.
78. This Subcontractor shall furnish and install framing studs and track shown to support all display cases, example shown on 1E-3E A805. Along with GWB, blocking and fry reglet shown.
79. This Subcontractor shall furnish and install all Spray Foamed Insulation as identified on the Contract Documents and Specifications. This work shall be performed a second shift, as not to affect other trades.
80. This Subcontractor shall furnish and install a complete EIFS (Exterior Insulation Finish System) as indicated on the Contract Documents and Specifications.
81. This Subcontractor shall coordinate, furnish and install all Specialty Equipment identified on drawing A912 (Specialty Equipment –Product Information Schedule) with a "Purchase – C" to be furnished and installed by this Subcontractor, and items identified with a "Purchase – O" will be by Owner, but installed by this Subcontractor if it states "Install – C". This subcontractor will be responsible for coordinating and installing equipment by the Owner identified in the Schedule. Provide necessary blocking as needed for equipment. Electrical and Plumbing will be by others. Scope shall include all necessary supports and blocking for all wall mounted display items specified.
82. This Subcontractor shall furnish and install all Fire Extinguishers, Fire Extinguisher Cabinets, and wall mounted brackets and blocking as indicated on the drawings.
83. This Subcontractor shall furnish and install all FRP / fiber-reinforced plastic sanitary wall panels as indicated on the contract documents.
84. This Subcontractor shall furnish and install all Cubicle Curtains and track as indicated on the contract documents and any supporting framing and blocking associated for install.
85. This Subcontractor shall furnish and install fire rated plywood backer boards at locations including but not limited to electrical panels, communications, and A/V equipment.
86. This Subcontractor shall coordinate, furnish and install the framing, blocking, and plywood for Locker installation. For example, detail 2B/A805. Lockers by others.
87. This Subcontractor shall coordinate, furnish, and install metal framing and drywall for Built-in Benches as indicated on Contract Documents. For Example, detail 5E/A805

Additional Provisions/Scope of Work

State Project No. 057-0114 N
Greenwich, CT
BP#21 – Drywall & General Trades
Dated: 07.08.24
Revised: 09.30.2024

88. This Subcontractor shall furnish and install the toilet partition enclosures, entrance screens and urinal screens including all anchorage, in-wall blocking, bracing support, overhead supports, etc. required to meet contract document requirements.
89. This Subcontractor shall furnish and install all Gym Equipment and Interior Scoreboard Equipment as identified on the Contract Documents and Specifications. Including but not limited to furnishing wall padding, basketball system, controls for gym equipment, floor mounted equipment etc. for a full functioning system. This Subcontractor shall coordinate with other adjacent trades for installation and function of their work. The power wiring of electronics will be by the Electrician, any required interconnected wiring to be by this subcontractor. This subcontractor shall include supports as required for equipment supplied by this subcontractor.
90. This Subcontractor shall furnish and install all Patient Care Equipment as indicated on the Contract Documents.
91. This Subcontractor shall furnish and install all Toilets Accessories and associated blocking as indicated on the Contract Documents and Specifications.
92. This Subcontractor shall furnish and install any drywall partition end caps or trim caps that abut up to adjacent constructions. For Example: Detail 1B/A541
93. This Subcontractor shall include the following **Trade Allowance:** 200 hours for a Laborer and material for use as directed by Turner for 5S, cleaning and additional safety provisions and logistics. Laborer Time to be included as journeyman rate including any required supervision. This will be billed based on the final agreed contractual wage rates and may only be expended by written authorization of Turner Construction and any unspent portion of this unused scope hours will be credited at the end of your contract based on approved labor rate.
94. This Subcontractor shall include the following **Trade Allowance:** 200 hours for a Carpenter and material for use as directed by Turner for additional safety provisions and logistics. Laborer Time to be included as Foreman rate including any required supervision. This will be billed based on the final agreed contractual wage rates and may only be expended by written authorization of Turner Construction and any unspent portion of this unused scope hours will be credited at the end of your contract based on approved labor rate.
95. This Subcontractor shall furnish and install all firestopping at all shaftwall assembly locations.

Doors, Frames and Hardware

96. This Subcontractor shall receive, and install all doors, frames, and hardware for this project. Upon delivery this subcontractor will review and accept doors as delivered. Written approval must be submitted to Turner Construction upon request.
97. This Subcontractor will take possession of doors frames and hardware and securely, and properly store until installation. This subcontractor shall inventory all deliveries upon receipt and notify Turner of any discrepancies or missing items. This subcontractor shall turn over all hardware not to be to be installed by this subcontractor to Turner Construction (i.e. power supplies). This Subcontractor will provide their own lockable room(s) for the storage of hardware, at a location agreed upon with Turner Superintendent.
98. This Subcontractor shall be responsible to receive, offload and install all hollow metal frames and doors, including at all new and masonry wall partitions. This Subcontractor shall be responsible to securely brace all door frames, check and adjust as masonry walls are being erected. This subcontractor is ultimately responsible for all frames being true and plumb. Grouting of frames in

existing masonry partitions shall be by the Masonry Subcontractor. This subcontractor shall coordinate and provide a list of HM frames needed for installation at least 6 weeks prior to the start of drywall/sheathing of partitions.

99. This Subcontractor shall furnish, install and perform all control wiring necessary to make operational all overhead coiling doors, per the documents and shall coordinate the electrical and security requirements with the Electrical and Security Subcontractors prior to completing installation. Line voltage wiring by Electrical subcontractor.
100. This Subcontractor shall install final keyed cores at all doors, including the aluminum and glass doors and STC doors.
101. This Subcontractor shall install all door accessories and hardware provided by Door Vendor (BP#20), including but not limited to Door Closers, Locksets, Weatherstripping, Thresholds, Hinges, etc.
102. This Subcontractor shall Include the following **Trade Allowance:** 60 hours for door frame adjustments including materials as required (i.e. Bondo). Mechanic Time to be included as Foreman rate including any required supervision. This will be billed based on the final agreed contractual wage rates and may only be expended by written authorization of Turner Construction and any unspent portion of this unused scope hours will be credited at the end of your contract based on approved labor rate.
103. This Subcontractor shall furnish and install insulation and blocking for HM Door frames as indicated on the Contract Documents.

Add'l Items.

D. Exclusions

1. This Subcontractor shall exclude Room Signage (By BP#28).
2. This Subcontractor shall exclude Food Service Equipment (By BP#30).
3. This Subcontractor shall exclude top of Wall Firestopping at top of walls (By BP#17) except at shaftwall locations (Shaftwall firestop by this subcontractor).
4. This Subcontractor shall exclude Bathroom vanity support Brackets (By BP#13 Misc. Metal)
5. This Subcontractor shall exclude Metal Composite Material (By BP#19 Glass & Glazing)

E. Safety

2. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible for removing snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.
3. This Subcontractor shall provide a site-specific plan on how they will comply with Turner's Ladder's Last Program.
4. This subcontractor shall ensure that any Lulls used on site are equipped with hydraulic fork positioners.

Additional Provisions/Scope of Work

State Project No. 057-0114 N
Greenwich, CT
BP#21 – Drywall & General Trades
Dated: 07.08.24
Revised: 09.30.2024

5. This subcontractor shall engage a 3rd Party to complete a GPR Survey to mark out existing utilities under and in the general area of any proposed Mobile Crane locations.
6. This Subcontractor to investigate and review floor capacity prior to loading floor with sheetrock and provide a loading plan. The loading plan must be reviewed and approved by the structural engineer prior to delivery. Post drywall loading specs on each floor and at locations of a critical nature.
7. This subcontractor shall provide an engineered scaffolding plan for all work in shafts and stairwells. Compatibility between systems must be demonstrated to ensure stability of stairwell scaffold structures.
8. This subcontractor shall remove anchorage points installed by others, including "Safe T Straps" during ceiling installation.
9. This Subcontractor is responsible for ensuring that the perimeter protection of each floor that is affected by their work be maintained on a daily basis. If Guardrail systems need to be modified or removed to install the work this Subcontractor must ensure that they protect the floor edge by replacing the guardrails or installing a separate standard guardrail system. Open sided floors cannot be unprotected at any time. If this subcontractor's work replaces the guardrail edge protection this contractor will be responsible for removing and coordinating the return of the reusable guardrail/fall protection system (posts, cables, turnbuckles, clips,) to the concrete or structural steel subcontractors. Material should be palletized and returned in an orderly fashion.
10. This Subcontractor shall utilize fasteners when drywall is stored in a vertical/leaning manner to prevent accidental displacement equal or similar to RockSteady clips.
11. If scissor lifts are used to install drywall the lifts shall be equipped with a drywall package from the manufacturer.
12. This Subcontractor to ensure that drywall is stored flat and not leaning vertically against any surface. It is expected that the drywall stacks will be stored on dollies or in another fashion to allow for portability. PORTABLE A FRAME DOLLIES ARE TO HAVE LOCKABLE CASTER WHEELS.
13. This contractor shall not construct temporary guardrails using metal studs or track.
14. This subcontractor shall ensure that when securing wood guardrails to concrete or masonry, Tapcon screws
    or an equivalent fastener are to be used (a wire and nail is not an acceptable method). When securing wood components together proper wood screws are required, sheetrock screws are not acceptable.
15. This subcontractor shall adequately secure doorframes to prevent tipping over.
16. This Subcontractor to also ensure all guards are maintained on equipment at all times. All material cutting areas will be supplied with a portable waste container by this Subcontractor. Scrap will not be allowed to be thrown on the floor. All scraps must be put in this rubbish container.
17. This Subcontractor shall use self-retractable knives to score drywall.
18. This Subcontractor shall establish an unloading and loading zone. If this subcontractor is loading the building on an upper level a fall protection system must be installed with leading edge capability.
19. This subcontractor shall provide and maintain 20 lb. ABC fire extinguishers and stands to be placed every 3000 SF around the entire site and building at all levels. Stands to be Fire-Mate Extinguisher Stand P14-1137 or equal. This subcontractor shall provide annual inspections of all fire extinguishers by a licensed 3rd party inspection company.
20. This subcontractor shall install portable eye wash stations on each floor. Locations to be coordinated with Turner. The eye was stations must be capable of delivering flushing fluid to the eyes at not less

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT

Dated: 07.08.24
Revised: 09.30.2024

than 0.4 gallons per minute for 15 minutes. This subcontractor should furnish and install these as soon as the space is turned over to Turner.

21. This subcontractor is to furnish, install, maintain and remove 4 jobsite posting boards. Each shall be 4' high x 8' wide and shall be mounted on 4" x 4" posts 42" above the adjacent walking surface. Each posting board shall have a 2' wide roof water atop to help keep elements off the postings. All boards shall be made of pressure treated 4" x 4"s and 3/4" PT plywood. Boards to be located by Turner.
22. TEMPORARY STAIR PROTECTION: a.) This Subcontractor is to furnish, install, maintain and remove temporary handrails at all metal stairway locations along all stair stringers and landing areas. The railing system to be used is the Stringer Shield Stair Rail Clamping System by Safety Maker, Inc.as shown, including all the lumber for the handrail and midrail. B.) This Subcontractor to furnish, install, maintain and remove Eagle Industries Flame Retardant Safety Debris Netting ¼" knitted mesh over the entire railing system to prevent loose materials from falling through the handrails. C.) This Subcontractor shall furnish, install, maintain and remove temporary wood infills at all metal stair tread and landing locations. Infills must be full width without any voids or gaps between the infill and the metal framing of the stairways.
23. This Subcontractor is to provide daily documented inspections and perform maintenance of all perimeter guardrail systems at all floor and shaft edges upon the Structural Steel Contractor's demobilization from site. Documented training must be provided for all employees who will be maintaining the cables. The proper tools (i.e. come along) will be provided, by this subcontractor, to adequately tighten cables.
24. This subcontractor shall furnish and install at the direction of Turner 200 - 3-foot-long cord holding Sky hooks similar or equal to the kind provided by Colony to be used by all trades on the project.
25. This subcontractor shall furnish, install, maintain and remove temporary removable wooden guardrails with scrim at the front of all elevator shaft locations at each level to allow elevator installers entry into the shaft-way. Rails shall be in a three-sided configuration with the side parallel to the shaft opening 2' from the opening. A removable scrim shall be hung from above the elevator opening and extend down to the guardrail to prevent material from entering the shaft.

F. Logistics & Schedule

1. This Subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

G. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for a complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

State Project No. 057-0114 N
Greenwich, CT
BP#22 – Acoustical Ceilings
Dated: 07.08.2024
Revised: 09.30.2024

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Acoustical Ceilings Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detailed references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all the ***Acoustical Ceilings Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail /symbol /illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
09 5100	Acoustical Ceilings

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/ symbol/ illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Bid Package Specific Scope

General-

1. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to cleanup general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)
2. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
3. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
4. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
5. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

Acoustical Ceiling Panels-

6. This Subcontractor shall provide all surveying and layout for the work of this package.
7. This Subcontractor shall furnish & install all acoustical ceiling panel types eg: metal and ACT with associated suspension systems as shown in the contract drawings and as listed in the room finish schedule.
8. This Subcontractor shall follow the reflected ceiling plan notes carefully as to locations where rooms get new ceilings and note the various types of ceilings. This Subcontractor shall coordinate with the MEP contractors for exact locations where duct and pipe run in order to facilitate the least amount of impact to installation of grid.
9. This Subcontractor shall furnish and install all ACT ceiling trim, perfricated prefinished metal trim, etc. For example, as shown on ceiling details on sheets A210 and A211.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#22 – Acoustical Ceilings
Dated: 07.08.2024
Revised: 09.30.2024

10. This Subcontractor shall coordinate with the Painting Subcontractor to ensure the walls and soffits are taped and prime painted prior to the installation of the edge molding.

11. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.

12. This Subcontractor shall install the "Cut" tiles such that other trades can install their devices in preparation for an above ceiling inspection by the Building Official. The "full" ceiling tiles shall not be installed until the CM has received written signoffs from all Mechanical, Electrical, Plumbing, Fire Alarm, Low Voltage, Security, etc. Subcontractors that their scope is complete, and Turner Construction directs this subcontractor to proceed with this work.

13. This Subcontractor shall review the Mechanical, Fire Protection, Electrical, Fire Alarm, Security, Low Voltage, etc. drawings to confirm the count of the fixtures and devices that will be penetrating the ceiling systems installed by this Subcontractor. The Architectural RCP may not accurately represent the scope of work.

14. This Subcontractor shall include all trim and accessories at the acoustical ceiling system.

15. This Subcontractor shall include installing ceiling hangers for the suspension systems or any supports required prior to the spray fireproofing being applied to the deck above.

16. This Subcontractor shall furnish and install all prefabricated, prefinished metal edge trim. For example, as shown on detail 1D A210.

17. This subcontractor shall properly seal all gaps and penetrations at the ceiling system that is to be installed in the food service areas. This shall include but is not limited to ceiling to wall gaps, MEP penetrations, etc. This shall comply with the local Department of Health requirements.

18. This subcontractor shall furnish and install all sound absorbing ceiling panels. Refer to spec section-09 8416 all SAC1 locations. For example, as shown on A201E and detail 1E A211. This subcontractor shall include the entire system including but not limited to panels, CFMF clips, supports etc.

19. This subcontractor shall furnish and install all CFMF clips and supports required for their system. These clips and supports are to be installed prior to spray on fireproofing.

20. This subcontractor shall coordinate with the electrical subcontractor where their ceiling system integrates with various light fixtures. For example, as shown on 3C A210.

21. This subcontractor shall coordinate their ceiling system with BP37 HVAC & Controls for the radiant ceiling panels and chilled beams. BP37 HVAC & Controls is to furnish and install the radiant ceiling panels and chilled beams.

22. This Subcontractor shall design, furnish & install an independent support system for all hung equipment, fixtures, ceiling and piping system that are directly below the metal roof deck. This support system must attach to structural steel framing members as the metal roof deck cannot be utilized for support. Refer to A200 series drawings General Note #12 for criteria. This Subcontractor shall provide delegated design and include shop drawings and calculations indicating, but not limited to, load carrying capacities, point loads, etc. This Subcontractor shall include adding miscellaneous metal supports into the 3D model for coordination with all MEP trades.

23. This subcontractor shall paint and finish any cut exposed edges to all ceiling tiles and/ or ceiling systems.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#22 – Acoustical Ceilings
Dated: 07.08.2024
Revised: 09.30.2024

Joint Sealants

24. This Subcontractor shall provide acoustic joint sealants as specified in Specification 07 9200 and where indicated between the ceiling wall angle and the adjoining wall.

Expansion Control

25. This Subcontractor shall furnish & install the expansion joint system at acoustical ceiling locations as well as between acoustical ceiling panels and walls where indicated. Note: the expansion joint system between gypsum board ceilings is by the General Trades subcontractor.

D. Exclusions

1. This Subcontractor shall exclude expansion joint systems within gypsum board ceilings to walls or gypsum board ceilings to each other. (By BP#21)
2. This Subcontractor shall exclude sound absorbing wall panels, AWP12- (By BP#18)
3. This subcontractor shall exclude furnishing and installing the radiant ceiling panels. By BP37 HVAC & Controls.

E. Safety

1. This subcontractor shall provide an engineered scaffolding plan for all work in shafts and stairwells. Compatibility between systems must be demonstrated to ensure stability of stairwell scaffold structures.
2. This subcontractor shall remove anchorage points installed by others, including “Safe T Straps” during ceiling installation.
3. If scissor lifts are used to install ceiling grid the lifts shall be equipped with a drywall package from the manufacturer.
4. It is expected that the ceiling stacks will be stored on dollies or in another fashion to allow for portability. PORTABLE A FRAME DOLLIES ARE TO HAVE LOCKABLE CASTER WHEELS.
5. This contractor shall not construct temporary guardrails using metal studs or track.
6. "This Subcontractor to also ensure all guards are maintained on equipment at all time. All material cutting areas will be supplied with a portable waste container by this subcontractor. Scrap will not be allowed to be thrown on the floor. All scrap must be put in this rubbish container.
7. This Subcontractor shall use self-retractable knives to cut ceiling tiles if additional means is not presented.
8. This Subcontractor shall establish an unloading and loading zone. If this subcontractor is loading the building on an upper level a fall protection system must be installed with leading edge capability.
9. This Subcontractor shall establish a comprehensive scaffold plan including live load ratings and loading plan.

F. Logistics & Schedule

1. This Subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

G. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for a complete installation. Unit prices which do not affect the work of this bid package have been filled in “not applicable (n/a)”. ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Ceramic Tile Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***Ceramic Tile Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
09 3000	Tiling

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Bid Package Specific Scope

General

1. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to cleanup general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)
2. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
3. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
4. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
5. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

Specific Scope

6. This Subcontractor shall include the costs to provide smooth transitions at all flooring and wall intersections.
7. This Subcontractor shall coordinate with the Concrete Subcontractor for all areas requiring a recessed slab.
8. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
9. This Subcontractor shall provide, install and maintain floor and wall protection at the following locations where flooring is installed by this Subcontractor:
    (a) Ceramic Tile: 100% coverage of tear and water-resistant covering (Cover guard or approved equal)

    All floor and wall protection is to be secured to prevent slips and trips as well as in such manner to not damage or impair flooring and flooring warranties. This subcontractor shall maintain floor protection until building turnover.
10. This Subcontractor shall furnish and install all transition and edge strips at all wall tile installations.
11. This Subcontractor shall furnish and install all transition and edge strips at all floor tile installations.
12. This Subcontractor shall seal and bridge cracks and control joints in concrete floors and walls in accordance with the manufacturer’s recommendations.

13. This Subcontractor shall slope finished floor to achieve proper drainage. This Subcontractor shall include all necessary preparation and mud set required to infill at recessed slab areas.
14. This Subcontractor shall furnish and install all waterproofing, crack suppression membrane, etc. at flooring and walls installed by this subcontractor. Coordinate with Plumbing Subcontractor at drain locations.
15. This Subcontractor shall furnish and install all flooring transitions and thresholds that occur at flooring installed by this Subcontractor.
16. This subcontractor shall furnish and install all porcelain stair treads and metal nosing trim. This subcontractor shall coordinate with the steel subcontractor for requirements and provide any required shimming, backerrod, and caulking etc. For example, as shown on detail 5E A125. Provide protection at wire mesh stair risers to prevent water and grout from penetrating into the mesh product. Submit protection plan to Turner prior to installation at stairs.
17. This subcontractor shall provide the metal trim and metal corner beads where required, for example as shown on detail 4E and 5E A806.
18. This subcontractor shall provide all waterproofing at tiled areas where required.
19. This subcontractor shall provide all applicable testing requirements per spec section 09 0561 for all products installed by this subcontractor.

D. Exclusions: N/A

E. Safety

1. This Subcontractor shall repair and patch the floor at all of the locations of the removed fall protection posts installed by the steel subcontractor.
2. This Subcontractor shall ensure proper disposal and removal of all flammable or combustible materials including but not limited to rags, brushes, etc. immediately after they have been used. These materials are to be removed from the job daily.
3. This Subcontractor will be required to use carpet dollies and other mobile means of transporting flooring materials.
4. This subcontractor shall provide air monitoring, personnel sampling or adequate historical data to determine if PEL/Action levels are being reached (chemical adhesives/Silica).

F. Logistics & Schedule

1. This Subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

G. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for a complete installation. Bid Package Specific Scope

General-

1. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to cleanup general debris not necessarily associated with subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)
2. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
3. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
4. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
5. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

Specific Scope-

6. This Subcontractor shall furnish and install all resinous flooring. This subcontractor shall coordinate all flooring with the kitchen equipment & plumbing subcontractor for any required floor drains, depressions, etc.
7. This subcontractor shall furnish and install all resilient stair treads. This subcontractor shall coordinate with the steel subcontractor for requirements.
8. This subcontractor shall coordinate with the tile subcontractor for floor and base transitions at tiled walls.
9. This subcontractor shall coordinate with the plumbing subcontractor for elevations on plumbing drains etc.
10. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
11. This Subcontractor shall include the costs to provide smooth transitions at all new-to-new flooring intersections. Include floor patching and fill as required for any differential in floor thicknesses.
12. This Subcontractor shall furnish and install all rubber and integral RF cove base as scheduled on the contract drawings. This includes, but is not limited to, rooms scheduled to receive sealed concrete floor, and rooms where flooring is furnished and installed by this Subcontractor.
13. This subcontractor shall furnish and install all flooring in all elevator cabs. This Subcontractor shall coordinate with the Elevator Subcontractor for installation.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#24 – Resilient Flooring
Dated: 07.08.2024
Revised: 09.30.2024

14. This subcontractor shall coordinate the floor grounding for static-control resilient flooring with the electrical contractor.
15. This Subcontractor shall coordinate with the Concrete Subcontractor for all areas requiring a recessed slab.
16. This Subcontractor shall include all required flash patching and floor preparation. This Subcontractor shall include all surface preparation, including but not limited to cleaning, crack-filling or other required preparation prior to flooring installation.
17. This Subcontractor shall, in addition to the floor leveling required for their own work, provide an additional 2000sf of ¼" thick floor leveling to be completed at the direction of the Turner Superintendent.
18. This subcontractor shall provide, install and maintain floor protection at the following locations where flooring is installed by this Subcontractor:
    a. Bathrooms, Food Service areas, locker rooms: 100% coverage of tear and water-resistant protection (Coverguard or approved equal); tape all seams.
    b. Hallways, lobbies, entrances: 100% craft paper plus 6' wide tear and water-resistant runner full length (Coverguard or approved equal); tape all seams
    c. Classrooms: 100% craft paper plus 4' wide runner of corrugated plastic to reach from entrance door full length of classrooms; tape all seams.
    d. Craft paper covering 100% of remaining flooring; tape all seams.

    All floor protection is to be secured to prevent slips and trips as well as in such manner to not damage or impair flooring and flooring warranties. This subcontractor shall maintain floor protection until building turnover.
19. This subcontractor shall seal and bridge cracks and control joints in concrete floors in accordance with the manufacturer's recommendations.
20. This Subcontractor shall attend coordination meetings with Turner and Concrete Subcontractors to coordinate and confirm the curing procedures 3 months in advance of the first slab pour. This Subcontractors flooring material vendors will be required to attend these meetings to confirm the use of their products with the curing compounds and sealers specified. This Subcontractor shall also present their plan for measuring and mitigating slab moisture and humidity for the products that they will be installing.
21. This Subcontractor shall coordinate the installation of base with the Millwork, Casework and Locker Subcontractors and installation. The base in these locations shall be applied to the base cabinets, millwork, metal lockers, etc. as shown on the drawings after installation.
22. This Subcontractor shall furnish and install all flooring transitions that occur at flooring installed by this Subcontractor. This subcontractor shall include ALL marble thresholds indicated on the documents.
23. This subcontractor shall provide all applicable testing requirements per spec section 09 0561 for all products installed by this subcontractor.
24. This Subcontractor shall furnish and install ALL resilient base as scheduled at all locations on the contract documents.

4. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
5. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

Specific Scope-

6. This Subcontractor shall include the costs to provide smooth transitions at all new-to-new flooring intersections. Include floor patching and fill as required for any differential in floor thicknesses.
7. This Subcontractor shall coordinate with the Concrete Subcontractor for all areas requiring a recessed slab.
8. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
9. This Subcontractor shall seal and bridge cracks and control joints in concrete floors in accordance with the manufacturer's recommendations.
10. This subcontractor shall provide, install, maintain, and remove floor protection at the following locations where flooring is installed by this Subcontractor:
    a. Carpet mask covering 100% of flooring.

    All floor protection is to be secured to prevent slips and trips as well as in such manner to not damage or impair flooring and flooring warranties. This subcontractor shall maintain floor protection until building turnover.
11. This Subcontractor shall furnish and install all flooring transitions between carpet and dissimilar materials. For example, as shown on flooring details on sheet A806.
12. This Subcontractor shall include all surface preparation, including but not limited to cleaning, crack-filling or other required preparation prior to carpet installation.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#25 - Carpet
Dated: 07.08.2024
Revised: 09.30.2024

13. On a floor-by-floor basis & in time to meet door delivery schedules, the Drywall Subcontractor shall field measure all rated doors once frames are installed. This will be to confirm that the undercuts will meet all code requirements given current conditions & final flooring thicknesses. This Subcontractor shall review field measurements with the Drywall Subcontractor, Doors, Frames & Hardware Subcontractor and Turner Superintendent prior to releasing these doors for fabrication.
14. This Subcontractor shall provide temp carpet runners. Assume temp carpet 4' wide and 600' long, include require cutting and install of runners at locations to be determined by Turner Superintendent. This protection will not take the place of protection owned by this subcontractor to protect their own work.
15. This subcontractor shall provide all applicable testing requirements per spec section 09 0561 for all products installed by this subcontractor.
16. This Subcontractor shall, in addition to the floor leveling required for their own work, provide an additional 1000sf of ¼" floor leveling to be completed at the direction of the Turner Superintendent.

D. Exclusions

E. Safety

1. This Subcontractor shall repair and patch the floor at all of the locations of the removed fall protection posts installed by the steel subcontractor.
2. This Subcontractor shall ensure proper disposal and removal of all flammable or combustible materials including but not limited to rags, brushes, etc. immediately after they have been used. These materials are to be removed from the job daily.
3. This Subcontractor will be required to use carpet dollies and other mobile means of transporting flooring materials.
4. This subcontractor shall provide air monitoring, personnel sampling or adequate historical data to determine if PEL/Action levels are being reached (chemical adhesives/Silica).

F. Logistics and Schedule

1. This subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

G. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for a complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Wood Flooring Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***Wood Flooring Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
09 6429	Wood Strip and Plank Flooring
09 6466	Wood Athletic Flooring

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Bid Package Specific Scope

General-

1. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to clean up general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)
2. On a floor-by-floor basis & in time to meet door delivery schedules, the Drywall Subcontractor shall field measure all rated doors once frames are installed. This will be to confirm that the undercuts will meet all code requirements given current conditions & final flooring thicknesses. This Subcontractor shall review field measurements with the Drywall Subcontractor, Doors, Frames & Hardware Subcontractor and Turner Superintendent prior to releasing these doors for fabrication.
3. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
4. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
5. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
6. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

Specific Scope-

7. This Subcontractor shall include the costs to provide smooth transitions at all new to existing or new to new flooring intersections.
8. This Subcontractor shall coordinate with the Concrete Subcontractor for all areas requiring a recessed slab.
9. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
10. This Subcontractor shall seal and bridge cracks and control joints in concrete floors in accordance with the manufacturer’s recommendations.
11. This subcontractor shall provide, install, maintain, and remove floor protection at flooring installed by this Subcontractor:

    All floor protection is to be secured to prevent slips and trips as well as in such manner to not damage or impair flooring and flooring warranties. This subcontractor shall maintain floor protection until building turnover. This floor protection should consist of coverguard or similar throughout and 1/8” thick Masonite walkways (4’ wide at perimeter of all areas) with joints taped with no gaps, reinforced with tape to prevent boards from moving to avoid trip hazards.

State Project No. 057-0114 N
Greenwich, CT
BP#26 – Wood Flooring
Dated: 07.08.2024
Revised: 09.30.2024

12. This Subcontractor shall furnish and install all the custom painting required on the wood flooring included but not limited to the court logo, game lines, etc.
13. This Subcontractor shall coordinate the locations of all required sleeves as indicated on the plans with the Concrete and Drywall Subcontractors.
14. This subcontractor shall furnish and install all accessories associated with the wood flooring including but not limited to, pipe sleeves, game insert devices, thresholds, ventilating base etc.
15. This Subcontractor shall furnish and install all flooring transitions between wood flooring and dissimilar materials. Include new transitions at all new doors, including at existing floor locations.
16. This subcontractor shall furnish and install all the components related to the wood flooring systems. For example, as shown on details 1E, 1D, 2D, and 3D on A806. This subcontractor shall furnish and install all components including but not limited to, hardwood flooring, wood trim, vapor barrier, insulation, neoprene pads, subfloor, sleepers, vented base, etc.
17. This subcontractor shall furnish and install the aluminum base, filler, aluminum plate, threshold, joint sealant etc. as shown on detail 2D A806.
18. This subcontractor shall provide all applicable testing requirements per spec section 09 0561 for all products installed by this subcontractor.

D. Exclusions

E. Safety

1. This Subcontractor shall repair and patch the floor at all of the locations of the removed fall protection posts installed by the steel subcontractor.
2. This Subcontractor shall ensure proper disposal and removal of all flammable or combustible materials including but not limited to rags, brushes, etc. immediately after they have been used. These materials are to be removed from the job daily.
3. This Subcontractor will be required to use carpet dollies and other mobile means of transporting flooring materials.
4. This subcontractor shall provide air monitoring, personnel sampling or adequate historical data to determine if PEL/Action levels are being reached (chemical adhesives/Silica).

F. Logistics and Schedule

1. This subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

G. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for a complete installation. C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Painting and Wallcovering Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***Painting and Wallcovering Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name

Bid Package Specific Scope

2. This Subcontractor shall keep all flammable liquids (i.e. thinners, etc.) in a locked vented Gang box accompanied by a 20 lb. ABC fire extinguisher. All flammable liquids are to be labeled accordingly.
3. This Subcontractor is not only to include the information shown on the Architectural Drawings; but you must coordinate these documents with the applicable Structural, MEP and Civil drawings to ensure full coordination of all drawings and to include full scope as designed. Should there be discrepancies between these documents, you must bring these to Turner's attention immediately for resolution so as not to impede job progress. Coordination with all other trades, especially MEP, Drywall and Masonry will be required.
4. This Subcontractor shall include the following **Trade Allowance:** 320-man hours including material and labor for painting required due to phasing and logistics. This is to be used at the direction of Turner. Laborer Time to be included as journeyman rate including any required supervision. This will be billed based on the final agreed contractual wage rates and may only be expended by written authorization of Turner Construction and any unspent portion of this unused scope hours will be credited at the end of your contract based on approved labor rate.
5. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
6. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to clean up general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)
7. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
8. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
9. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
10. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

Painting

11. This Subcontractor shall clean and prepare all surfaces that receive paint.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#27 – Painting and Wallcovering
Dated: 07.08.2024
Revised: 09.30.2024

12. This Subcontractor shall furnish, install, and maintain temporary protection for hardware, hardware accessories, machined surfaces, lighting fixtures, UL, FM or other Code related Labels, and similar items installed prior to their work. This Subcontractor shall remove temporary protection after completion of their work and will be responsible for cleanup of, or replacement in kind of any damaged installed works.
13. This Subcontractor shall be responsible for daily cleanup associated with overspray or paint splatter. Make all efforts to protect adjacent installations from overspray.
14. This Subcontractor, on a room-by-room basis, shall request approval from the Turner Superintendent prior to the application of the final coat of paint.
15. This Subcontractor shall furnish and install all paints and coatings per Specification 09 7800 and the contract drawings including but not limited to the elevations, room finish legend and the finish floor plans.
16. This Subcontractor shall paint all exterior exposed metal as shown in the contract documents. This includes but is not limited to handrails, guardrails, utility railings, steel bollards, lintels, etc. Review all drawings for scope of work. All lintels that are exposed should be finish painted.
17. This Subcontractor shall paint surfaces behind movable equipment and furniture the same as similar exposed surfaces. Before final installation of equipment, paint surfaces behind permanently fixed equipment or furniture with prime coat and first coat only.
18. This Subcontractor shall include all sanding and surface preparation necessary for an acceptable finish. This includes but is not limited to all Hollow Metal frames, access panels, structural steel, concrete, masonry, and all miscellaneous metals to receive paint.
19. This Subcontractor shall paint the interior surfaces of ducts with a flat, non-specular black paint visible through registers, diffusers or grilles.
20. This Subcontractor shall paint all wall mounted plywood backer boards for electrical panel boards and wall mount communication racks with fire retardant paint. Refer to the Main Electrical Room 1069, Electrical Closet 1092, Electrical and communication drawings for locations of these rooms and details. Assume a plywood backboard behind each panel.
21. This Subcontractor shall furnish and install painting of all gypsum board ceilings and soffits. Reference the reflected ceiling plans, ceiling details and interior elevation drawings for extent of scope.
22. This Subcontractor shall furnish and install painting of exposed structure eg: metal deck, beams and columns where indicated. Refer to Architectural and Structural plans to determine the scope of work. Coordinate with the steel subcontractor for the marking pens to be used during fabrication of exposed steel so as to avoid bleed through into the finish product. Do not prime paint deck areas that are to receive spray applied fireproofing. Coordinate locations of deck that are to be painted with the contract documents.
23. This Subcontractor shall furnish and install painting in the auditorium and above eg: catwalks & stage rigging where indicated.
24. This Subcontractor shall include a final touch up painting of each door scheduled to receive a painted finish. The doors will be prime painted by the Doors, Frames and Hardware Vendor and delivered to the site with hardware installed. Final touch up will occur after door and remaining hardware is installed.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#27 – Painting and Wallcovering
Dated: 07.08.2024
Revised: 09.30.2024

25. Structural steel that is located in exterior unheated spaces and not directly exposed to weather, shall be power tool cleaned and painted with three coats of oil base paint in accordance with steel structures painting council painting system specification No. 1.09 or hot dipped galvanized, at the contractor's option. See Structural Steel spec on drawing S001 ItemI.1.j.
26. This subcontractor shall paint the Dryer Vent in room 1117 as indicated on drawing A101C.
27. This subcontractor shall field paint the roof mounted equipment including, but not limited to:
    a. Roof hatch cover
    b. Smoke / heat vent cover
    c. Metal ladder-access to the Auditorium Roof
    d. Roof mounted mechanical units
    e. Steel dunnage
    f. Guard rails
    g. Safety lifeline tie offs
    h. Roof screen structure/framing
28. This subcontractor shall paint the exposed ceiling, structure, and all components per elevations on drawing A111.1.
29. This subcontractor shall paint the wood display railing as indicated on elevation 1E on drawing A111.1.
30. This subcontractor shall paint the Acoustical Wood Baffle per details on drawing A111.7.
31. This subcontractor shall paint all components in the stairwells as indicated on Drawings A120-A124.
32. This subcontractor shall paint the exposed areas as typically indicated on detail 3C and 5C on drawing A500.
33. This subcontractor shall paint the L-Girt as typically indicated on detail 3C on drawing A500.
34. This subcontractor shall provide labelling of all Fire and Smoke Partitions as typically indicated in Framed Partition Note 2 on drawing A 600 and Masonry Partition Note 2 on drawing A605.
35. This subcontractor shall paint the Wood flooring WF2 as indicated on the Finish Products List drawing A910.
36. This subcontractor shall provide the painting of Wall Panel AWP12 and Ceiling Panel SAC1 as indicated on drawing A910.
37. This subcontractor shall provide Epoxy Painting as indicated on Finish Notes on drawing A911.
38. This subcontractor shall provide the Specialty Paint of Fireproof Sprayed Ceilings per finish type HPC1.
39. This subcontractor shall paint the Fire Protection Riser piping at the corner of the Gymnasium.
40. This subcontractor shall provide all access for the elevated work throughout the project (i.e. lifts, scaffolding, etc.).

Wallcovering

41. This Subcontractor shall furnish and install all vinyl wall coverings per Specification 097200 and the room finish legend on drawing FI-901, the finish floor plans series FI and the interior elevations A800 drawing series for additional information.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#27 – Painting and Wallcovering

42. This Subcontractor shall furnish and install any and all wallcovering trim, base and termination pieces as typically indicated in detail 1B on drawing A805.
43. This Subcontractor shall furnish and install the Wallcovering (WWC) at the Auditorium Cloud ceiling detail.
44. This Subcontractor shall furnish and install the Vinyl Custom Graphics (VCG) at all locations indicated on the contract documents.

Acoustic Finishes

45. This Subcontractor shall furnish and install Finish Type HPC2 in rooms indicated on the Finish Products List.

Sealed Concrete

46. This subcontractor shall provide the Sealed Concrete Finishes as typically indicated on drawing A910.
47. This Subcontractor shall furnish and install concrete sealers at all areas designated on the finish schedule, finish drawings and as called out in the specification. This Subcontractor shall at a minimum remove any items, sweep and HEPA vacuum these areas prior to installation.

Joint Sealants

48. This Subcontractor shall furnish and install caulking at all interior dissimilar materials, including but not limited to hollow metal frames, windows, fire extinguisher cabinets, fire alarm cabinets, access doors, etc.

D. Safety

1. This Subcontractor shall provide air monitoring, personnel sampling or adequate historical data to determine if PEL/Action levels are being reached.
2. This Subcontractor shall ensure proper disposal and removal of all paints, chemicals, flammable or combustible materials including but not limited to rags, brushes, etc. immediately after they have been used. Reference Storm water Pollution Prevention Plan for more detail.
3. This Subcontractor shall comply with all requirements set forth in OSHA 1926.152 Flammable and combustible liquids. Proper storage of paints or any strippers/thinners shall be followed. Refer to standard for specific quantities and storage requirements.

E. Exclusions

1. This Subcontractor shall exclude the painted steel foul poles (By BP#9-Sitework)
2. This Subcontractor shall exclude painting of the Vehicular Double Swing Gate as shown in detail 3B on drawing L502. (By BP#9-Sitework)
3. This Subcontractor shall exclude painting of fire extinguisher cabinets as these are pre-finished. (By BP#27-Painting)
4. This Subcontractor shall exclude painting of Lockers as these are pre-finished. (By BP#29-Lockers)
5. This Subcontractor shall exclude painting of Basketball court and logo. (By BP#26-Wood Flooring)
6. This Subcontractor shall exclude painting of Steel column bases with 2 coats of bituminous paint per 4/S200. (By BP#12- Structural Steel)

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#28 – Signage
Dated: 07.08.2024
Revised: 09.30.2024

2. This subcontractor shall furnish and install all signage as shown on the project documents and specifications unless specifically excluded in this scope.
3. This Subcontractor shall coordinate all electrical requirements with the electrical subcontractor.
4. This Subcontractor shall furnish a blocking schedule indicating the exact locations of all in wall blocking required for the installation of signage. Any blocking not indicated on this blocking schedule will be the responsibility of this Subcontractor. The blocking schedule & associated submittals must be approved by the design team prior to the start of exterior wall framing.
5. This Subcontractor shall furnish, install, and remove all temporary signage required for Certificate of Occupancy where permanent signage cannot be installed prior to inspections.
6. This Subcontractor shall include all rigging/hoisting/lifts, etc. required to install exterior signage. This subcontractor shall furnish and install all signage as shown on the project documents and specifications unless specifically excluded in this scope.
7. This subcontractor shall field measure all areas prior to fabrication of any exterior or interior signage. This subcontractor shall notify Turner immediately if locations shown on contract documents differ in the field.
8. This subcontractor shall provide all necessary mounting hardware as required for the installation of the signage owned by this subcontractor.
9. This subcontractor shall provide all structural design including seismic restraint and stamped by a professional engineer licensed in the state of Connecticut.
10. It is understood that the signage contractor will be responsible for any and all quantities for various types of signage that are required for this project as identified within the contract documents. If there is conflicting information seen between the location drawings, signage schedules and quantities listed this subcontractor shall assume the higher quantity.
11. This subcontractor shall furnish and install the aluminum lettering as indicated in detail 3D on drawing A310.
12. This subcontractor shall provide signage per the Signage Schedule and the Signage Schedule Notes typically indicated on drawing A920.
13. This subcontractor shall furnish and install the aluminum lettering as typically indicated on details 3A, 4A and 4E on drawing A923.
14. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
15. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
16. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
17. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

079200	Joint Sealants

Bid Package Specific Scope

General

2. This Subcontractor shall furnish and install all equipment shown on the Food service equipment drawings series FS drawings and as specified in 114000 unless stated otherwise.
3. This Subcontractor shall ensure all work is performed in accordance with Local, State & Health codes as well as regulatory agencies having jurisdiction.
4. This Subcontractor shall provide all permits and fees required for Food Service Equipment work. This Subcontractor shall take the lead responsibility in arranging a kickoff meeting with the Health Department and all inspections and meetings through final Health Department approval. This includes ensuring all Food Service Equipment is in clean and working order prior to the Health Department review. Check all water temperatures at the sinks and Dishwasher to ensure they meet with the Health Department acceptance prior to final walk through and if not, coordinate with the plumbing Subcontractor to resolve any issues. Include the reference made in note#2 on 2E-101.EK regarding coordination of cleanable surface requirements for health inspection with food service equipment.
5. This Subcontractor shall include coordinating the work shown on the Food Service Equipment FS series drawings with the corresponding MEP drawings and structural drawings to insure full coordinated installation of work. Included in this is participating in the MEP coordination meetings as it relates to the kitchen areas and including your work within the 3D coordination so that your work will not be in conflict with the other trades. Also included as part of this Subcontractors bid is the coordination of floor recesses with the concrete subcontractor as well as the coordination of your rooftop unit locations with the MEP contractors so that there are no conflicts in the field. This Subcontractor shall distribute material and be responsible for its protection from damage during delivery, handling, storage and installation. Protection is to be maintained by this Subcontractor as long as they are on site. Protection shall generally consist of Masonite and or homosote on exposed edges and faces to protect them from damage while on site. Should any damage occur due to the negligence of this contract's field personnel, all costs to repair and or restore same shall be the sole responsibility of this Subcontractor. This Subcontractor shall also protect the finish flooring during the installation of your work.
6. This Subcontractor shall provide all coring as required for this scope of work.
7. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
8. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. The composite crew is intended to clean up general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)

Additional Provisions/Scope of Work

BP#30 – Food Service Equipment
Dated: 07.08.2024
Revised: 09.30.2024

9. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
10. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
11. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
12. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

Food Service Equipment Specific:

13. This Subcontractor shall furnish and install the Ansul fire extinguishing systems for the Food Service Equipment and shall meet all applicable codes. Identify on shop drawings all connection points for hook-up to base building services. This Subcontractor is NOT responsible for the final electrical, fire protection and control connections related to this system as detailed on the Contract Documents. This Subcontractor shall coordinate with the Electrical, Fire Alarm, Controls and Pluming Contractors for tie in of the Ansul system other trades.
14. This Subcontractor shall include interlocking the Ansul system with the base building fire alarm system. The Electrical Subcontractor is responsible for the tie-in to the base building fire alarm system.
15. This Subcontractor shall furnish only all gas solenoid valves for the food service equipment. The valves will be installed by the Plumbing Subcontractor. This Subcontractor shall be present for any inspections.
16. This Subcontractor shall furnish only all access doors required for food service equipment. The access doors will be turned over by this subcontractor to be installed by Drywall Subcontractors.
17. This Subcontractor shall provide all wiring, with necessary switches, fuses, shunt trip breakers, terminal boxes, controls, cords, flexible connectors, starters, VFD's disconnects and plugs. All of the equipment which is to be connected to the building electrical services shall be shown on the KEC shop drawings and tagged with voltage, phasing/load, grounding requirements, and NEMA plug type. All terminations of power required between a piece of equipment and its power source will be by the Electrician. All control and power wiring responsibilities between food service equipment and pieces will be wired according to the plans and specifications. Any "Extra" connections as the result of items that are installed in more pieces than shown on the plans and specifications are the responsibility of the Food Service Equipment Contractor.
18. This Subcontractor shall provide all caulking and sealants between countertops/backsplashes and adjoining walls as required to pass all inspections.
19. This Subcontractor shall include all layout and field measuring for this scope of work in accordance with the specifications.
20. This Subcontractor shall furnish and install the exhaust hoods for the Food Service Equipment in strict conformance with all applicable codes. Coordinate the height of the hood with the ceiling heights in the room and MEP coordination layout.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#30 – Food Service Equipment
Dated: 07.08.2024
Revised: 09.30.2024

21. The Subcontractor shall furnish and install the Freezer/cooler walk in's complete including all free-standing equipment and flooring. Coordinate the slab depression for them with the concrete subcontractor.
22. This Subcontractor shall furnish and install the Freezer and Cooler roof top condensers where located on the roof. This Subcontractor shall coordinate with the MEP contractors for services to the condensers. This Subcontractor shall coordinate with the roofer for any and all roof top blocking/flashing required. Curbs for the condensers are by this Subcontractor.
23. This Subcontractor shall furnish & install all refrigeration piping for all equipment including condenser and evaporator units. Follow the requirements in the contract documents for the location of the roof top units and the distance from the Freezer and Cooler they serve.
24. This Subcontractor shall provide all floor troughs w/gratings if and where detailed in the contract documents required for Food Service. Coordinate with the concrete subcontractor for all embedded Food Service items including these floor troughs. Include delivering all embedded items to the site prior to the pouring of the slab.
25. This Subcontractor shall include being involved in the start-up and commissioning process associated with the turnover of the kitchen equipment. If it is found that a piece of equipment(s) isn't performing as specified, it is incumbent upon this Subcontractor to remain engaged in the problem solving until the matter is resolved. For example, circuit breakers or GFI outlets tripping when equipment is running or dishwasher not achieving the appropriate temperatures. These problems need to be addressed and corrected at no Cost to the Owner unless it is found to be a design flaw that is creating the problem.
26. This Subcontractor shall provide coordination of all connections for the equipment that is provided within this scope of work. This includes, but is not limited to all electrical, water, waste and gas lines and mechanical, final connections will be by the MEP Subcontractors.
27. This Subcontractor shall provide layout and coordinate all MEP penetrations in the slab with the MEP Subcontractors and Concrete Subcontractor. Note: provide approved submittals 12 weeks prior to underground MEP work installation so everything gets roughed in properly as you need it.
28. This Subcontractor shall provide a specific in-wall and below slab rough in plan for all MEP requirements and in wall blocking requirements. This subcontractor shall include two field visits to conform all rough locations installed by others prior to wall closure, assume this will take two separate 8 hours days.
29. This Subcontractor shall provide to the Electrical and HVAC Subcontractors: power and control wiring diagrams for the inter-wiring within the exhaust hoods, light fixtures, the Ansul fire protection systems and all other items requiring work by these Subcontractors.
30. This Subcontractor shall provide all required hangers, supports, straps, clips, angle iron, etc. for a complete installation of all food service equipment including support of exhaust hoods.
31. This Subcontractor shall provide all hand sinks, associated faucets, brackets and accessories including but not limited to splash guards for each sink listed in the specifications. These items are to be installed by the plumbing contractor.
32. This Subcontractor shall provide all glass integral with the food service equipment shown on the FS drawings.
33. This Subcontractor shall provide any and all plastic laminate surfaces, solid surface counters, stainless steel counters, etc. if and where shown on the FS series drawings.

Additional Provisions/Scope of Work

34. This Subcontractor shall provide all custom fabricated items shown on the FS series drawings such as stainless-steel counters, sneeze guards, etc. per drawing details, specifications and or manufacturer's standard details.
35. This Subcontractor shall include all closeout documentation and training of the Owners staff as required per the contract documents. In addition, your scope shall include the scheduling of all training for each piece of Food service equipment required to be trained on and your firm shall be in attendance for all training. In no circumstance shall the Owner and or Turner Construction Company be left to coordinate this training and meet directly with the vendor of the piece of equipment. Your firm must take ownership of proper closeout and training and problem solving. Include an additional 16 hours of owner training in addition to the specification requirements to be used as directed by Turner Construction.
36. All Subcontractors are responsible for incorporating all work described in Bidder Questions relative to their Bid Package scope of work. Referenced Bid Packages on the Bidders Question Log do not necessarily list all impacted Subcontractors.

D. Exclusions

1. This Subcontractor shall exclude the installation of hand sinks as this work will be performed by the plumbing Subcontractor.
2. This Subcontractor shall exclude the installation of dry heads in the freezer/cooler walk in's as this work will be by the Fire Protection Subcontractor.
3. This Subcontractor shall exclude the furnishing and installing of the supply and exhaust fans. This work will be by the HVAC Subcontractor.
4. This Subcontractor shall exclude all final HVAC, Plumbing and Electrical connections to the Food Service Equipment. This work to be by the applicable MEP contractor.

E. Safety

1. This subcontractor shall perform a negative exposure assessment if any Stainless-Steel Welding takes place per OSHA Standard 1926.1126 - Chromium and all other standards that apply.
2. This subcontractor shall use sleeves and cut 4 gloves when handling sharp metal or Sheetmetal.
3. This subcontractor shall complete a site-specific lock out tag out plan 4 weeks prior to mobilization.

F. Logistics and Schedule

1. This subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

G. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for a complete installation. C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Theater Equipment Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***Theater Equipment Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
11 0610	Stage Rigging and Curtains

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

4. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
5. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

Stage Draperies

6. This Subcontractor shall have care, custody, and control of any shoring required to do their work and shall be responsible for maintaining this shoring until the structural integrity is re-established by the General Trades and/or Steel Subcontractors. All shoring required shall be designed and stamped by a CT professional Engineer who carries $3mm Professional Liability Insurance.
7. This Subcontractor shall furnish and install the Theater Equipment assemblies as indicated on the Theatrical Rigging Drawings TR1 and TR2.
8. This Subcontractor shall design, furnish and install the stage curtains and its complete supporting track/rigging including but not limited to, the cyclorama, traveler curtains, masking legs, masking borders, side masking panels, valance, curtain & track & hardware, etc.
9. This Subcontractor shall include all required attachments, accessories, hardware and supporting material required to perform the work. No additional structure other than the building superstructure will be provided. It is this Contractor's responsibility to furnish and install all other required steel, uni-strut, chain, wire, etc. type hanging / supporting systems necessary for their work. This includes furnishing and installing all miscellaneous metals not otherwise sized on the drawings and any other support means required for the complete engineered system installation.
10. This Subcontractor shall provide engineered shop drawings and calculations for review and approval by the Theater consultant through the architect.
11. This Subcontractor must provide documentation of the flame spread of the material used as required by the specifications.
12. This Subcontractor shall furnish, install, protect, and clean as required all fabric installations including but not limited to draperies, scrims, borders, etc. prior to final turnover.
13. This Subcontractor shall include all testing and adjustments.
14. This Subcontractor shall include painting and touchup as specified.
15. This Contractor shall furnish one storage bag per curtain.

Stage Rigging

16. This Subcontractor shall design, furnish, and install all theater rigging items over the stage as specified and as shown in the contract documents or as required for a complete and safe assembly upon completion. No additional structure other than the building superstructure will be provided. It is this Contractor's responsibility to furnish and install all other required steel, uni-strut, chain, wire, etc. type hanging / supporting systems necessary for his work. This includes furnishing and installing all miscellaneous metals not otherwise sized on the drawings and any other support means required for the complete engineered system installation.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#31 – Theater Equipment
Dated: 07.08.2024
Revised: 09.30.2024

17. This Subcontractor shall furnish and install the motorized rigging system, integrated lighting connector strips, dead-hung pipes, stage traveler track assemblies, pipe battens, electric batten cable management, stage curtains and accessories for a complete installation.
18. This Subcontractor shall furnish and install all electric motors associated with the operation of these rigging systems and shall coordinate with the Electrical Subcontractor for the final power connections to the same. This Subcontractor shall furnish and install all controls for these same systems as required to complete all installations, including all programming and adjustments.
19. This Subcontractor shall furnish and install all required miscellaneous steel required for support of rigging and lighting.
20. This Subcontractor shall note the performance requirements included in the Specifications and shall meet the specifications in all aspects.
21. This Subcontractor shall also furnish and install all provisions, including but not limited to, wall angles, brackets, rail stanchions, floor blocks, counterweights with all associated assemblies, rope locks, headblocks, loft blocks as part of the rigging system, etc.
22. This Subcontractor shall coordinate the installation of this scope of work with the installation of the theatrical lighting to be furnished and installed by the Electrical Subcontractor as required.
23. This Subcontractor shall coordinate with all other trades whose work requires them to mount equipment to the rigging system like lights, microphones, speakers, etc. This Subcontractor shall raise and lower the rigging components for the other trades requiring access to said components.
24. This Subcontractor shall include Painting and touchup as specified.
25. This Subcontractor shall provide a two-year written parts and labor warranty against defects in materials or workmanship.
26. This Subcontractor shall provide all follow up inspections and services per specification section 11 0610.
27. This Subcontractor shall provide a site-specific height access and fall protection plan for all work 4 weeks prior to mobilization.

D. Exclusions

28. This Subcontractor shall exclude Power feeds and terminations (By BP#38-Electrical)
29. This Subcontractor shall exclude Theatrical lighting (By BP#38-Electrical)
30. This Subcontractor shall exclude Support structural steel which is sized in the drawings (By BP#12-Steel)

E. ***Safety***

1. This Subcontractor shall provide a site-specific height access and fall protection plan for all work 4 weeks prior to mobilization.

F. ***Logistics and Schedule***

1. This subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

G. ***Unit Prices***

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Fixed Seating Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***Fixed Seating Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
126100	Fixed Audience Seating
126613	Telescoping Bleachers

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Bid Package Specific Scope

1. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
2. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
3. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
4. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.
5. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope of Fixed Auditorium and Telescoping Bleacher seating.
6. This Subcontractor shall be responsible to provide out of sequence work at no additional costs when required in coordination with other trades.
7. This Subcontractor shall assign a Project Manager who will attend weekly project meetings to coordinate and schedule your work with other trades. Remote management of the project will not be permitted.
8. This Subcontractor's Project Manager/Foreman shall participate in Pull Planning Sessions which affect their scope of work. This Project Manager/Foreman shall provide input to further develop the accurate sequence and timing for completion of the work.
9. This Subcontractor shall include all accessories and provisions, whether included in the contract documents or not, required for the complete installation of all fixed and loose Auditorium Seating.
10. This Subcontractor shall include multiple site inspections at appropriate intervals, as determined at the weekly meetings, to allow for timely field measurement and fabrication of seating. This Subcontractor shall supply written site inspection reports to Turner which details fabrication status and areas of concern related to site readiness.
11. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the fixed auditorium seating to avoid any delay in starting work as scheduled.
12. This Subcontractor shall furnish any required embeds required by this subcontractor for attachment of seating to cast in place concrete. Install of embeds to be by concrete Subcontractors at these locations. Or blocking layout?
13. This Subcontractor shall furnish and install all accessories (ex. Cup holders, numbering, row lettering, etc.).
14. As the exclusive designer and engineer of the fixed seating, this Subcontractor, in addition to the specified Shop Drawing requirements, shall provide to Turner a fully dimensioned layout drawings in Revit file format. These drawings must indicate the location of all electrical floor boxes in coordination

with seat standards. This Subcontractor shall participate, cooperate and make any necessary changes required for the complete coordination of all adjacent work and under-slab requirements. This Subcontractor shall provide a fully coordinated drawing to the Electrical Subcontractor no less than 12-weeks prior to the start of slab on grade preparation.

15. This Subcontractor shall coordinate with the Electrical Subcontractor for end-panel lighting. This Subcontractor shall furnish all required transformers required for installation by the Electrical Subcontractor.
16. This Subcontractor shall layout all seating by utilizing a total station for accurate and complete layout using the layout points and dimensions included in the Model. All layout marks shall be non-staining and removed by this Subcontractor prior to demobilization.
17. This Subcontractor shall furnish sufficient fabric from the same dye lot for all seating to insure a uniform fabric dye lot on all chairs.
18. This Subcontractor shall carefully coordinate the seat numbering and row lettering and furnish and install all seat numbering and row lettering as specified.
19. This Subcontractor shall release the fixed seating into fabrication immediately upon field dimension verification and shall include all storage costs until the site is ready for installation.
20. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
21. This Subcontractor shall survey the concrete SOG and tiers immediately prior to the installation of the fixed seating and shall report and review with Turner all observations of previous damage. This Subcontractor shall implement all appropriate measures to protect concrete nosing from damage and to avoid spalling of concrete during the installation of fixed seating. This Subcontractor shall be responsible for repairs to any damaged concrete not previously documented.
22. This Subcontractor shall organize and neatly place all materials, tools, etc. This Subcontractor shall remove all debris/boxes resulting from their work on a daily basis to a trash Rubbermaid tilt truck provided by Drywall Contractor. No trash or debris will remain in the work areas at the end of the shift. If debris is left in the work areas, it will be removed to the dumpster by others, and the labor expense back-charged to the responsible Subcontractor. Large sections of debris shall be disposed of to a dumpster provided by others by this Subcontractor.
23. This Subcontractor shall be required to store all onsite material on racks, carts or pallets capable of being easily moved and shall coordinate the delivery of and location of stored material with the Turner Superintendent. If material is stored on pallets, this Subcontractor is responsible to have a pallet jack onsite at all times. This Subcontractor shall include relocation and consolidation of materials as directed by Turner.
24. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage and use of all seating. Protection must be approved by Turner and include methods such as reinforced poly covering each individual row of seating, zip tied together under chairs to avoid removal, or approved equivalent method of protection. This protection shall remain until final cleaning and will be removed by the Final Cleaner.
25. This Subcontractor shall include 1 laborer per 10 person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to cleanup general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)

Bid Package Specific Scope

2. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
3. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
4. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
5. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.
6. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
7. This Subcontractor shall receive, distribute, and install any concrete embedded items supplied by others, including but not limited to anchor bolts, bearing pads, embedded angles, pad sleeves, etc.
8. This Subcontractor shall provide all surveying and layout required for the work included with this package.
9. This Subcontractor shall coordinate all deliveries and storage locations with Turner personnel. Any on-site storage must be coordinated at least 48 hours in advance with the authorization of a Turner Superintendent. It is also understood that this Subcontractor shall store all materials on mobile rolling racks and or palletized so that materials can be relocated immediately by the subcontractor upon request if deemed necessary by Turner's Superintendent. (Assume there will be multiple moves), if pallets are used there must be a pallet jack on floor at all times provided by this Subcontractor.
10. This Subcontractor shall coordinate "Just in Time" delivery of Elevator Equipment with Turner. Turner will not be responsible for offsite storage and any required storage costs shall be included by this Subcontractor.
11. This Subcontractor shall maintain access for other trades to Corridor 1050 at all times. Turner will provide a location within a reasonable distance from the shaft for storage once Elevator Installation has begun. All material must be mobile per the "Nothing Hits the Ground" Policy
12. This Subcontractor shall include 1 set of Wall Protection Blankets for protection during construction. Protection blankets shall be installed within the elevator to allow for use and prevention of damage.
13. This Subcontractor shall furnish to and Coordinate with Mason and Concrete Subcontractors for shaft inserts and wall boxes for fixtures and in the shaft. This shall be included in the Elevator Shop Drawings. Any inserts not provided in time for installation by the Concrete or Masonry Subcontractors will be installed by this Subcontractor. This subcontractor shall not turn over material without formal transfer of care and custody paperwork. This subcontractor shall provide copies to Turner upon request.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#41 – Elevators
Dated: 07.08.2024
Revised: 09.30.2024

14. This Subcontractor shall coordinate with Concrete Subcontractor for proper installation of sill detail at new and existing slab. This shall be included in the Elevator Shop Drawings.
15. This Subcontractor shall show on their Shop Drawings dimensioned locations for all items in the Elevator pit and shaft that are provided by other Trades, including but not limited to Electrical devices, ladders, sump pit covers, sprinkler heads, Fire alarm devices, penetrations, access doors and Hoist beams.
16. This Subcontractor shall coordinate with Flooring Contractor and include time for Elevator Installer to set car and lock open doors for flooring installation. This Subcontractor shall also provide and confirm compatibility of sub floor
17. This Subcontractor shall inspect the Elevator Pit, Shaft and Lobbies and submit a Punchlist to Turner of other trades items to complete prior to scheduling the final inspection. This Subcontractor shall inspect the work of other trades as it is put in place. This Subcontractor shall schedule a meeting on site to review punchlist with the affected trades and schedule completion of items. No additional time above the contract Allowance in Item 30 will be permitted for Punchlist Items. This must be included in the Elevator Bid.
18. This Subcontractor is responsible to furnish and install their own Fall Protection including anchorage points.
19. This Subcontractor shall furnish and install all provisions needed for Security at the Elevator including but not limited provisions for cameras and card access. Coordinate with the Security Contractor. This should be addressed in the Elevator Shop Drawings.
20. This Subcontractor shall coordinate with the Fire Alarm contractor for installation and testing of all Fire Alarm devices related to the elevator. This Subcontractor shall be present at the time of the Fire Marshal FA testing.
21. This Subcontractor shall coordinate with the proper AHJ for witnessing of testing. This subcontractor shall coordinate with the AHJ as required per the plans, specifications, Local and State requirements. This subcontractor shall provide Turner seventy two (72) hour advance notice for all required.
22. This subcontractor shall pull the required permits from the municipality for the elevator and any other associated required permits related to the elevator. This subcontractor shall be present along with a TCCO representative for all inspections that involve the elevator.
23. This Subcontractor shall include the following **Trade Allowance:** 48 hours for operation of the car for other trades work in the Elevator Shaft as coordinated, scheduled and directed by Turner. Operator Time to be included as Foreman rate including any required supervision. This will be billed based on the final agreed contractual wage rates and may only be expended by written authorization of Turner Construction and any unspent portion of this unused scope hours will be credited at the end of your contract based on approved labor rate.
24. This Subcontractor shall include 1 laborer per 10 person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m while the subcontractor is performing work on site. Composite crew is intended to cleanup general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)

Utilities and Rough-in Coordination

25. Thru wall and thru slab fire stopping will be by the Fire Stopping Subcontractor. This Subcontractor shall include the “putty-packs” needed to achieve ratings at push button back boxes.

26. This Subcontractor shall participate in the preparation of MEP 3D Coordination drawings. This Subcontractor shall be required to label and show their work on these Drawings and participate in Coordination meetings to resolve conflicts.

Quality Assurance / Quality Control

27. This Subcontractor has confirmed that all hoistway pit depths as designed are adequate for this Subcontractors equipment and conform to all applicable codes. This Subcontractor shall coordinate all "clear hoistway" dimensions at each pit and shaft as it relates to the work of others.
28. This Subcontractor shall include all work required to satisfy the State Elevator Inspector and obtain final acceptance of the elevators. This Subcontractor shall provide a written list to TCCo of all discrepancies that must be corrected by other trades. This Subcontractor shall pay all fees associated with State of Connecticut elevator inspections.
29. This Subcontractor has verified that all the structural steel as designed is adequate to support the installation of the new elevators. This Subcontractor shall be responsible for the installation of any additional support steel required but not shown for their work.
30. This Subcontractor is responsible for all surveying and layout required for this scope of work, control lines will be provided by others.
31. This Subcontractor has verified that the power shown on the Electrical drawings for the Elevators are compatible with the new elevator system.

D. Safety & Logistics

32. This Subcontractor has reviewed the Logistics Plans and the Construction Schedule and shall include all associated costs as relevant to achieve this scope of work within the Project Schedule. No come back costs will be entertained.
33. This Subcontractor shall review, conform to, and furnish and install all requirements included in the Safety Additional Provisions included in this Agreement. This Subcontractor understands that this document is project specific and all provisions must be included in this Subcontractors' bid.
34. This Subcontractor shall maintain and remove full height (floor to underside of deck) fire rated mesh, scrim or similar product in front of the hoist way opening prior to the installation of the elevator doors at all levels.
35. This Subcontractor shall ensure that all hoist-ways are secured and protected with a standard guardrail at all times to prevent fall hazards.
36. This Subcontractor shall ensure all temporary cars are fully guard-railed.
37. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible to remove snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.
38. This Subcontractor shall provide a site specific plan on how they will comply with Turner's Ladder's Last Program.
39. This subcontractor shall ensure that any Lulls used on site are equiped with hydraulic fork positioners.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#41 – Elevators
Dated: 07.08.2024
Revised: 09.30.2024

E. Exclusions

1. This Subcontractor shall exclude furnishing and installing flooring inside of the elevator cab (By BP #25 Flooring).
2. This Subcontractor shall exclude furnish and installing the hoist beam (By BP #13 Misc Metal).
3. This Subcontractor shall exclude furnishing and installing the interior wilsonart plam wall coverings (By BP #18 Millwork).
4. This Subcontractor shall exclude the Sump pit ladder (By BP#13 Misc. Metal)

F. Logistics and Schedule

1. This subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.
2. Logistics plans are provided conceptually and for bidding purposes. Successful bidder will be required to further refine logistics plans with the Turner superintendent prior to the start of work and during the project.
3. The Project Site must remain accessible to all Emergency Response Units at all times.
4. Overall schedule duration for installation of the work shall be per the Project Schedule. This Subcontractor understands that multiple shifts and/or extended hours may be required to meet the project schedule durations. Costs associated with multiple shifts are included as part of the bid.
5. This Subcontractor shall include all costs for out of sequence work, all phased work and all come back work. No additional compensation will be considered for comeback work.
6. This subcontractor shall be responsible for all hoisting and rigging of any and all equipment, materials, etc. required for the completion of the scope of work. This Subcontractor has included all crane rental fees and material hoist fees.
7. This Subcontractor understands that the elevator must be installed complete and ready for construction use as shown on the Construction Schedule without exception. This Subcontractor has included any and all premium time for installation and / or costs premiums for material procurement associated with meeting this date.

G. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for a complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Fire Protection Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***Fire Protection Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
21 0400	General Conditions for Fire Protection Trades
21 0516	Expansion Fittings and Loops for Fire Suppression Piping
21 0548	Vibration and Seismic Controls for Fire Suppression Piping and Equipment
21 1313	Wet Pipe Sprinkler Systems
21 3000	Fire Pumps

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Additional Provisions/Scope of Work

State Project No. 057-0114 N
Greenwich, CT
BP#35 – Fire Protection
Dated: 07.08.2024
Revised: 09.30.2024

Spec. #	Specification Name
DIV 00	Division 00 - Procurement and Contracting Requirements
DIV 01	Division 01 - General Requirements
079200	Joint Sealants

Bid Package Specific Scope

2. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
3. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
4. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
5. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.
6. This Subcontractor shall design, furnish and install a complete system including all sprinkler heads, valves and / or other devices as required to provide a complete and functional system. This Subcontractor is responsible for a complete design of the Fire Protection system including hydraulic calculations reviewed and stamped by a licensed Professional Engineer registered in the State of Connecticut. Furthermore, it is mutually agreed upon that this design will be based on the satisfactory review and acceptance of the design submitted by this Subcontractor from the local Building Official(s), Fire Marshal, Fire Protection designing engineer, and Owner's Insurance Underwriter. Note that this subcontract is not based on the head count on the current Contract Documents; it is based on an acceptable design conforming to the Contract Drawings and approval by the above parties.
7. This Subcontractor shall include all engineering, detailing, shop drawings, calculations, samples and certificates as required by the Contract Documents. Shop drawings shall show all dimensions and clearances in coordination with other trades. All attachments must be designed and detailed on said shop drawings.
8. This Subcontractor shall include all Work related to seismic isolation and restraints and sway bracing as required for new work only. Provide seismic shop drawings prepared and stamped by a PE licensed in the State of Connecticut all work must be in accordance with NFPA requirements. Provide final certifications that all seismic work was installed per the Engineer's design.
9. This Subcontractor shall include furnishing and installing all Fire Protection related signage as detailed on the Contract Documents and/or required by local authorities.
10. This Subcontractor shall closely coordinate with the respective Electrical / Fire Alarm Subcontractors for interconnect for switches and controls as required for the Fire Protection Work.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#35 – Fire Protection
Dated: 07.08.2024
Revised: 09.30.2024

11. This Subcontractor shall furnish and install all Fire Alarm Devices associated with the Fire Protection System including but not limited to tamper, flow, supervisor switches and Fire Protection Bell as required for the fire protection system whether indicated or not. Wiring of these items is to be by BP #38.
12. This Subcontractor shall furnish and install Fire Pump ATS and Fire Pump Controller as shown on E700. All exterior wiring of these items shall be by BP#38.
13. This subcontractor shall furnish and install additional sprinkler heads as required to meet code.
14. This Subcontractor shall be required to continuously record the progress of the Fire Protection Work on a record set of Drawings, to be maintained on the jobsite at all times. The Architect, Engineer and Turner will review these Documents on a monthly basis in conjunction with their monthly payment application review; this shall be a condition of approval of each progress payment.
15. This Subcontractor shall provide all surveying and layout for the work of this package. Survey will be by Total Station or a Licensed Surveyor.
16. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to clean up general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)

Submittals and Coordination

17. Provide penetration drawings for interior, exterior, foundation and floor penetrations. This should include dimensions off columns, elevations above finish floor, and required opening size. Layout as required for proper field coordination is included under this scope.
18. This Subcontractor shall furnish, F.O.B. jobsite, all access doors for all valves and other equipment requiring access and which may become inaccessible at a later date in the drywall and masonry assemblies. This Subcontractor shall arrange their work in such a manner to minimize the quantity of access doors required. All items requiring accessibility shall be located in already accessible areas, such as above lay-in ceilings, etc. if at all possible. It is the responsibility of the Fire Protection Subcontractor to coordinate and provide information regarding the location, sizes and quantities of access doors, panels, etc. required for their Work as well as furnish same. Failure to furnish the access doors and / or coordinated locations such that other Subcontractors (e.g., masonry, drywall, etc.) must go back to complete work, shall result in a back-charge to this Subcontractor for out of sequence Work accordingly. Also note that all required access doors and / or panels shall be furnished from one (1) manufacturer with their ratings consistent with the respective partition / ceiling / floor ratings and must be keyed alike. Access door type will be per the architect's direction in each location. This Subcontractor shall provide access door shop drawings indicating locations, types and sizes in architectural ceilings and partitions for design team review and approval.
19. This Subcontractor shall fully coordinate his work with other trades for construction sequence and methods. This Subcontractor shall be prepared to participate in extensive coordination meetings with other subcontractors to accomplish this. Changes to details as a result of this coordination and out-of-sequence work necessitated by this coordination shall be included.
20. This Subcontractor will provide the necessary written documentation for meeting the CT high performance requirements as outlined in the specifications.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#35 – Fire Protection
Dated: 07.08.2024
Revised: 09.30.2024

21. This Subcontractor shall coordinate all installations with ceiling heights as per shown in the Contract Documents. All conflicts must be made in writing to Turner Construction immediately so that a corrective action can take place without delaying the work of any other Trade Subcontractor.
22. This subcontractor shall fully participate in all 3-D coordination. Each Subcontractor, in addition to this effort, shall coordinate and provide a coordinated Reflective Ceiling Plan for review by the design team for all ceiling mounted devices.
23. This subcontractor shall coordinate all installations to meet accessibility requirements as noted in the contract documents.
24. This Subcontractor will be required to relocate any piping, supports, or other part of the Fire Protection system installed by this subcontractor that deviates from the coordinated drawings that prohibits access to any equipment, valve, damper, junction box or anything else requiring access in the future. Acceptable access shall be deemed by Turner, Owner, Engineer, or Cx agent.
25. This Subcontractor shall design, furnish & install an independent support system for all hung equipment, fixtures and piping system that are directly below the metal roof deck. This support system must attach to structural steel framing members as the metal roof deck cannot be utilized for support. Refer to A200 series drawings General Note #12 for criteria. This Subcontractor shall provide delegated design and include shop drawings and calculations indicating, but not limited to, load carrying capacities, point loads, etc. This Subcontractor shall include adding miscellaneous metal supports into the 3D model for coordination with all MEP trades.
26. This Subcontractor shall include all labor and material to coordinate locations of pipe runs so as not to interfere with egress passages, Electrical Rooms and stairwells. Fire Protection systems shall not run in or pass through stairways.
27. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
28. This Subcontractor shall be responsible to core all penetrations required with this scope of work, this includes where sleeves were not installed prior to placing of concrete.
29. This Subcontractor shall participate in rough-in inspection coordination with other trades and Turner Construction utilizing color-coded framing identification to illustrate completion and inspection ready areas. Color-code key and inspection sequencing will be identified by Turner Superintendent.

Demolition

30. This subcontractor shall make safe all Fire Protection piping, equipment and accessories scheduled to be demolished. This subcontractor shall cut and leave an air gap at the location of the start of the demo this shall be at the upstream location at the source (i.e. equipment, valve, distribution point, etc.). All material to be removed shall be painted green by this subcontractor, green markings must be no more than 5’ apart. Any material to remain will be painted red with markings no more than 5’ apart. The Demolition subcontractor will remove and dispose all piping, accessories and materials.

Piping Systems

31. This Subcontractor shall Furnish and install all Fire Protection piping, hangers, equipment, valves, accessories, valve tags and signage as shown in the contract documents.
32. This Subcontractor will not be allowed to lay out pipe or any other material on the floor prior to installation. All pipes and fittings shall be stored on mobile pipe racks or carts with wheels.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#35 – Fire Protection
Dated: 07.08.2024
Revised: 09.30.2024

33. This Subcontractor shall install UG Piping from 5' outside the building into the Fire Pump Room. This Subcontractor shall provide testing and coordination to meet NFPA and specification requirements.
34. This Subcontractor shall include under slab MEP coordination in the model.
35. This Subcontractor shall furnish and install all hangers installed prior to fireproofing. Any patching of fireproofing due to missing hangers will be at this Subcontractor's cost.
36. This Subcontractor shall furnish and install all Labeling and identification (stenciling) of all systems.
37. This Subcontractor shall furnish and install sleeves for all penetrations for this scope of work. Coordinate with the Concrete, General Trades, Masonry and Firestopping Subcontractors. Any sleeves not installed at the time of wall construction will be installed later at this Subcontractors cost.
38. This subcontractor shall furnish and install all required drain piping as shown on the Contract Documents.
39. This Subcontractor shall coordinate all cutouts for installation of Sprinkler Heads with the Finish Trade Subcontractors prior to installation. All heads shall be centered in acoustic tile where installed in an acoustical ceiling, or as approved by the design team.
40. This Subcontractor shall furnish and install all acoustical sealant of all wall and floor penetrations per specification section 079200. Firestopping will be by BP #17.
41. This Subcontractor shall furnish and install siamese Fire Department Connection per the contract documents. Exterior piping for connection will be furnished and installed by Site Contractor up to 5' outside the building.
42. This Subcontractor shall furnish the heat trace for the exterior piping to the dust collector including but not limited to the controller and insulation (reference note on FP18 on drawing FP101E). Electrical subcontractor to receive and install heat trace.
43. This intent is for no mechanical systems to be installed over electrical equipment, however, this Subcontractor shall furnish and install drain pans that are properly slopped and piped to nearest drain as indicated on the contract documents for Fire Protection equipment and/or for any piping which is coordinated over electrical components. This Subcontractor shall ensure proper code clearances are maintained for installations over and around MEP equipment, this includes but is not limited to NEC Clear access requirements. In addition, if a drip pan is being utilized, this subcontractor shall furnish and install a full leak detection system including but not limited to, power, control wiring, BMS monitoring etc. All costs for such leak detection systems shall be burdened by this subcontractor.

Commissioning

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#35 – Fire Protection
Dated: 07.08.2024
Revised: 09.30.2024

44. This Subcontractor shall perform all required equipment testing and hydrostatic testing in accordance with the Building Design Guidelines, Construction Specifications, Drawings, and Building Management Guidelines. Testing is to be performed in a manner so as to complement the schedule and procedure of construction, phasing, and the Work of others. Partial Tests of systems may be needed to meet the schedule, ie Schedule Breakdown and Shafts. Any and all manpower, temporary connections, etc. required to accomplish this work in this manner are included. Correct all defective work as a result of the hydrostatic testing in accordance with the Contract Documents. This Subcontractor shall include in their bid all necessary overtime and / or off-hour shift work for testing so as not to delay other trade subcontractors. This shall include but not be limited to testing in conjunction with any other trade's work those ties into this Subcontractor's work. NOTE: This Subcontractor will test every piece of piping/equipment in the presence of Turner and / or the Engineer and provide a full report to Turner and the Engineer accordingly.
45. This Subcontractor shall coordinate with the proper AHJ for witnessing of testing. This subcontractor shall coordinate with the AHJ as required per the plans, specifications, Local and NFPA requirements. This subcontractor shall provide Turner seventy-two (72) hour advance notice for all required inspections.
46. This Subcontractor shall test all systems with air prior to filling with water. This Subcontractor shall provide documentation of air pre-test of all wet systems via completed flow permit for all systems
47. This subcontractor will include multiple tests per floor based on the requirements of the schedule.

D. Safety

1. This Subcontractor is to control water used in pressure testing at all times. Water will not be allowed to be dumped out onto the building floors.
2. This subcontractor shall provide a containment method for cutting oils and shavings that consists of a pan and absorbent material or equivalent (cardboard is not sufficient). A plan on how cutting oil will be handled and disposed of shall be provided. Plan should not allow for any oil to stain or penetrate the concrete slab or finished surfaces, this subcontractor shall be responsible for any damage to installed material.
3. This Subcontractor shall utilize a threaded rod cutter in lieu of a porta band or grinder to cut all threaded rod.
4. This Subcontractor shall protect all downward protruding threaded rod with rubber caps to prevent injury to employees while working around rods.
5. This Subcontractor shall submit on and use only rounded edged saddle for all pipe support in lieu of saddles with 90-degree corners equal or similar to the Buckaroo Saddle.
6. This Subcontractor shall provide a stamped engineered rigging plan for any prefabricated vertical risers to be picked with a crane.

E. Exclusions

1. This subcontractor shall exclude exterior Siamese piping and scope from 5' outside of the building (By Sitework BP#09).

F. Logistics and Schedule

1. This subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

G. Unit Prices

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Plumbing Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***Plumbing Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
22 0400	General Conditions for Plumbing Trades
22 0516	Expansion Fittings and Loops for Plumbing Piping
22 0517	Sleeves and Sleeve Seals for Plumbing Piping
22 0519	Meters and Gauges for Plumbing Piping
22 0523	General Duty Valves for Plumbing Piping
22 0529	Hangers and Supports for Plumbing Piping and Equipment
22 0548	Vibration and Seismic Controls for Plumbing Piping and Equipment
22 0553	Identification for Plumbing Piping and Equipment
22 0700	Plumbing Insulation
22 1005	Plumbing Piping
22 1123	Fuel Gas Piping
22 1124	Domestic Water Pumps
22 3000	Plumbing Equipment [Water Heaters]
22 4000	Plumbing Fixtures and Specialties
22 1500	General Compressed Air Systems

Bid Package Specific Scope

Submittals & Coordination

2. This subcontractor shall submit dimenstioned shop drawings and coordinate the layout in the field all equipment pads with concrete subcontractor.
3. Provide penetration drawings for interior, exterior, foundation and floor penetrations. This should include dimensions off columns, elevations above finish floor, and required opening size. Layout as required for proper field coordination is included under this scope.
4. This Subcontractor shall furnish, F.O.B. jobsite, all access doors for all valves and other equipment requiring access and which may become inaccessible at a later date in the drywall and masonry assemblies. This Subcontractor shall arrange their work in such a manner to minimize the quantity of access doors required. All items requiring accessibility shall be located in already accessible areas, such as above lay-in ceilings, etc. if at all possible. It is the responsibility of the Plumbing Subcontractor to coordinate and provide information regarding the location, sizes and quantities of access doors, panels, etc. required for their Work as well as furnish same. Failure to furnish the access doors and / or coordinated locations such that other Subcontractors (e.g., masonry, drywall, etc.) must go back to complete work, shall result in a back-charge to this Subcontractor for out of sequence Work accordingly. Also note that all required access doors and / or panels shall be furnished from one (1) manufacturer with their ratings consistent with the respective partition / ceiling / floor ratings and must be keyed alike. Access door type will be per the architect's direction in each location. This Subcontractor shall provide access door shop drawings indicating locations, types and sizes in architectural ceilings and partitions for design team review and approval.
5. This Subcontractor shall fully coordinate his work with other trades for construction sequence and methods. This Subcontractor shall be prepared to participate in extensive coordination meetings with other subcontractors to accomplish this. Changes to details as a result of this coordination and out-of-sequence work necessitated by this coordination shall be included.

This Subcontractor shall provide delegated design and include shop drawings and calculations indicating, but not limited to, load carrying capacities, point loads, etc. This Subcontractor shall include adding miscellaneous metal supports into the 3D model for coordination with all MEP trades.
12. This Subcontractor shall include all labor and material to coordinate locations of pipe runs so as not to interfere with egress passages, Electrical Rooms and stairwells. Plumbing systems shall not run in or pass through stairways.
13. Utilize Total Station system to layout and set hanger supports and layout risers/ boxes/ penetrations/ underslab infrastructure.
14. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
15. This Subcontractor shall be responsible to core all penetrations required with this scope of work, this includes in the existing foundations, walls and slabs as well as where sleeves where not installed prior to placing of concrete.
16. This Subcontractor shall participate in rough-in inspection coordination with other trades and Turner Construction utilizing color-coded framing identification to illustrate completion and inspection ready areas. Color-code key and inspection sequencing will be identified by Turner Superintendent.

Demolition

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#36 - Plumbing
Dated: 07.08.2024
Revised: 09.30.2024

17. This subcontractor shall make safe all Plumbing piping, equipment and accessories scheduled to be demolished, refer to MEPD000 and MEPD001. This subcontractor shall cut and leave an air gap at the location of the start of the demo this shall be at the upstream location at the source (i.e. equipment, valve, distribution point, etc. All material to be removed shall be painted green by this subcontractor, green markings must be no more than 5' apart. Any material to remain will be painted red with markings no more than 5' apart. The Demolition subcontractor will remove and dispose all piping, accessories and materials
18. This Subcontractor shall furnish, install and maintain 4 hose bid locations per Turner superintendant for use during the demolition and abatement of the existing building.

Plumbing

19. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
20. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
21. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
22. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.
23. This Subcontractor shall furnish and install all under slab plumbing systems in coordination with the Site Subcontractor, Demolition and Concrete Subcontractor. Excavation and backfill for under slab plumbing systems shall be performed by others.
24. This Subcontractor shall furnish and install the storm, sanitary and water services from 5' outside of the foundation footprint to the point of use. This includes the sleeves and link seals for each penetration of the foundation wall and connections to the piping outside the foundation wall installed by others.
25. This Subcontractor shall furnish and install caulking of all plumbing fixtures to walls and floors with a pre-approved colored caulk this includes but not limited to lavatories, water closets, shower enclosures, etc. Colors may vary by location/application.
26. This Subcontractor shall layout, furnish and install all sleeves and inserts required for their work.
27. This Subcontractor shall store roof drain baskets and install after roof installation. Provide 5% spare roof drain baskets. Additionally, clean out roof baskets every 3 months while on the project until substantial completion.
28. This Subcontractor shall furnish all heat trace and controllers as indicated on the plumbing drawings by the Contract Documents for installation by the Electrical Subcontractor. Include heat trace to the grease trap on site. This Subcontractor shall coordinate with the Electrical Subcontractor for power requirements and locations. Installation, circuiting, and terminations shall be provided by the Electrical Subcontractor. This Subcontractor shall furnish and install any insulation that is required per the manufacturer. This Subcontractor will obtain heat trace manufacturer inspection and sign-off certificate prior to the installation of insulation on all pipes with heat trace.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#36 - Plumbing
Dated: 07.08.2024
Revised: 09.30.2024

29. This intent is for no mechanical systems to be installed over electrical equipment, however, this Subcontractor shall furnish and install drain pans that are properly slopped and piped to nearest drain as indicated on the contract documents for Plumbing equipment and/or for any piping which is coordinated over electrical components. This Subcontractor shall ensure proper code clearances are maintained for installations over and around MEP equipment, this includes but is not limited to NEC Clear access requirements. In addition, if a drip pan is being utilized, this subcontractor shall furnish and install a full leak detection system including but not limited to, power, control wiring, BMS monitoring etc. All costs for such leak detection systems shall be burdened by this subcontractor.
30. This Subcontractor shall coordinate trap primer headers in an accessible location for the end user facilities.
31. This Subcontractor install all indirect drain lines at floor drains in a manner which minimizes splashing and overflow opportunity of water to the area floor area.
32. This Subcontractor shall coordinate and provide proper rough to millwork an casework. This subcontractor shall furnish and install all lavatories and sinks within millwork and casework locations. For millwork islands, ensure proper venting and operation per code.
33. This Subcontractor shall coordinate and provide proper rough and drain locations for Kitchen Equipment. This Subcontractor shall Furnish and install all piping and equipment connections, per plumbing and Food Service Documents, greater quantity and scope to prevail. Include all branch sanitary, grease waste, gas, hot water, cold water, hangers, valves, caulking, sealants, etc.
34. This Subcontractor shall provide final connections to all Food Service Equipment including but not limited to all domestic water, gas, sanitary and waste. Furnish and install all mixing valves associated with the Kitchen Equipment, assume this subcontractor shall have representative in attendance at Department of Health and AHJ inspection of Food Service Equipment. This subcontractor shall coordinate and set required temperature settings per local DOH for all sinks within the Food Service area.
35. This Subcontractor shall Furnish and install all floor drains, trench drains, floor sinks as indicated on the floor plans, and at locations indicated on the enlarged plans on the Food Service Drawings.
36. This Subcontractor shall coordinate with the Ansul system furnished by the Food Service subcontractor. This subcontractor shall furnish and install all components of the emergency gas shut off station enclosure.
37. This Subcontractor shall provide installation of all mockups identified in the project documents as well as materials for each type of wall/ slab penetration to complete a firestopping mockup for review and approval by AHJ and Design Team. Assume exterior wall penetration mockup will be required for wall hydrant and coordatied with A315. Include requirement for first install mockup of science classroom prior to start of remaining areas.
38. This Subcontractor shall coordinate all exterior wall penetration and hose bid installations with exterior wall contractors. All flashing requirements, cavity depth and freeze protection coordination must be performed to ensure the exterior wall thermal and moisture specifications are maintained with these penetrations.
39. This Subcontractor shall coordinate equipment voltages with the Electrical Design. Identify accessories requiring power in addition to those indicated on the documents at the submittal phase for design team confirmation and coordination.
40. This Subcontractor shall provide all final gas and plumbing connections to equipment provided by others including but not limited to Food Service and HVAC Equipment.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#36 - Plumbing
Dated: 07.08.2024
Revised: 09.30.2024

41. The Structural Steel Subcontractor shall deck over all framed openings and the MEP Subcontractors shall cut and remove the deck for their installations and penetrations. Cutting of deck will not be permitted prior to installation of scope of work.
42. This Subcontractor shall coordinate with all toilet accessory installations. Pay attention to locations of flushometers in coordination with grab bars and water supply rough in elevations.
43. This Subcontractor shall ensure proper support of plumbing connections to devices and fixtures and should not utilize the fixture as a support to avoid loosening of connection over time due to fixture movement.
44. This Subcontractor shall provide adequate support for all in-wall plumbing to ensure restraint of movement within the wall cavity. This includes but is not limited to supports at slab penetrations as well as on vertical lengths of piping to prevent movement within stud cavity.
45. This Subcontractor shall furnish, install and maintain 3 Mop sinks locations, 5 hose bid locations and 4 hand washing stations with hot water and sanitary hook up, to be located within the building per the direction of the Turner Superintendent. All temporary sanitary lines shall have a strainer included and cleaned buy this subcontractor once a week. Any Temporary water lines shall be insulated.
46. All above ceiling seismic and required sway bracing shall be installed and inspected minimum 4 weeks prior to any scheduled ceiling grid installation.
47. This Subcontractor shall furnish and install all components of the air compressor system as shown on the contract documents.
48. This Subcontractor shall furnish and install all acoustical sealant of all wall and floor penetrations by this subcontractor per specification section 079200. Firestopping will be by BP #17.

Commisioning

49. This Subcontractor shall fully cooperate with the Owner's Commissioning Agent for commissioning of systems furnished and/or installed by this Subcontractor.
50. This Subcontractor will provide a dedicated engineer / staff person on site dedicated to the contractor commissioning of all systems prior to occupancy. This includes documenting, organizing and submitting to the owner all startup reports, pre-functional checklists and any performance reports that may be required for each piece of equipment.
51. This Subcontractor's Project Manager and Commissioning engineer shall attend a weekly Commissioning/MEP coordination meeting for the duration of the project.
52. This subcontractor shall include sufficient time to fully commission all systems. Adequate man power shall be available to fully meet the commissioning requirements.
53. Start-up reports shall be submitted to Turner within (3) days of startup.
54. This Subcontractor shall submit fully filled out Pre-Functional and Functional test reports to TCCo.
55. This Subcontractor shall provide testing and balancing as it applies to this scope of work.
56. This Subcontractor shall provide documentation of air pre-test of all wet systems via completed flow permit for all systems.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#36 - Plumbing
Dated: 07.08.2024
Revised: 09.30.2024

57. This Subcontractor shall perform all required testing in accordance with the specifications. Testing is to be performed in a manner so as to complement the schedule and procedure of construction, and the Work of others. Test reports shall identify the system, infrastructure and area testing with specified test requirements. Any and all manpower, temporary connections, etc. required to accomplish this work in this manner are included. NOTE: This Subcontractor will test every piece of equipment in the presence of Turner and / or the Engineer and provide a full report to Turner and the Engineer accordingly.
58. This subcontractor shall coordinate with the Authority Having Jurisdiction as required per the plans and specifications including those referenced in The Statement of Special Inspections. This subcontractor shall provide Turner seventy two (72) hour advance notice for all required inspections.
59. This Subcontractor shall include all necessary shutdowns and / or tie-ins for your specific systems. This subcontractor shall assume all shutdowns and tie-ins are to be performed premium time; provide proper notification and coordination with all affected parties (Owner, Turner, local agencies, utilities, etc.).
60. This Subcontractor shall complete all identification, labeling and tagging prior to the installation of the ceiling grid by others so as to allow for proper inspections as to thoroughness of these items. Coordinate end user requirements per Specification 220553.
61. This Subcontractor shall include in their Bid all necessary overtime and / or off-hour work for testing so as not to delay the Work of other Trade Subcontractors. This includes testing in conjunction with any other Trade that tie-in to this Subcontractor's scope of Work.
62. This subcontractor shall include necessary piping, valves, fittings, and terminations as required for partial testing of systems as required by the needs of the project. Temporary isolations of phased or multi-level, area systems shall be included.
63. This subcontractor will be responsible for all costs associated with the reopening and patching of ceilings or walls required for corrective work. All required testing of piping must be scheduled and completed before ceilings are installed. This subcontract includes any out of sequence work and testing required to complete the work before ceiling work starts.
64. This Subcontractor shall participate in rough-in inspection coordination with other trades and Turner utilizing color coded framing identification to illustrate completion and inspection ready areas. Color code key and inspection sequencing will be identified by Turner Superintendent.

Miscellaneous

65. Maintain and operate all systems installed under this package from start-up thru substantial completion and turn-over to Owner. Perform maintenance per manufacturer's recommendations.
66. This Subcontractor shall maintain utmost care so as not to damage Spray-on Insulating materials. Any and all damages and / or over-scraped areas, which may require repair, shall be back-charged to the Subcontractor that causes the damage. Hangers and supports shall be installed prior to SOFP operations to minimize scraping after the fact.
67. This subcontractor shall receive, install all Owner plumbing equipment and appliances including connections as identified on the equipment contract documents.
68. This Subcontractor shall provide training as specified for all of the equipment and systems furnished by this Subcontractor by phases. This Subcontractor shall include two (2) man-days of additional training be used at Turner Construction Company's discretion.
69. This Subcontractor shall submit a fully detailed MOP (Method of Procedure) to TCCo two (2) Weeks prior to start up and/or testing of any piece of equipment.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#36 - Plumbing
Dated: 07.08.2024
Revised: 09.30.2024

70. This Subcontractor has included all additional fittings as required for a complete system. The drawings may NOT fully dictate the number of fittings/ valves required for a complete system.
71. This Subcontractor shall be responsible to protect all plumbing equipment. Any damage as a result to equipment not being protected will be at this subcontractor's expense.
72. This subcontractor shall grout with non-shrink grout all base plates that are used to support piping and/or equipment.
73. This subcontractor shall be responsible for all cost associated with rigging their equipment into the building.
74. This Subcontractor shall secure covers over waterclosets to prevent use during construction.
75. Through wall and floor to floor fire stopping is included in a separate bid package. This subcontractor must coordinate all penetrations with the fire stopping subcontractor.
76. This Subcontractor shall furnish and install the higher quantity of fixtures if a discrepancy occurs between the architectural and plumbing drawings.
77. This Subcontractor shall include 1 laborer per 10 person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m while the subcontractor is performing work on site. Composite crew is intended to cleanup general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)

D. Safety

1. This Subcontractor to air test all wet systems prior to filling with water.
2. This Subcontractor is to control water used in pressure testing at all times. Water will not be allowed to be dumped out onto the building floors.
3. Subcontractor shall provide a containment method for cutting oils and shavings that consists of a pan and absorbent material or equivalent (cardboard is not sufficient). A plan on how cutting oil will be handled and disposed of shall be provided.
4. This subcontractor shall ensure all stub ups extend a minimum of 3' above the slab or walking surface. If this is not possible, a 3' or higher cone must be placed over the stub up. Impalement protection is required on all stub up, when a hazard exists.
5. This subcontractor shall utilize a threaded rod cutter in lieu of a porta band or grinder to cut all threaded rod.
6. This Subcontractor shall protect all downward protruding threaded rod with rubber caps to prevent injury to employees while working around rods.
7. This Subcontractor shall submit on and use only rounded edged saddle for all pipe support in lieu of saddles with 90 degree corners equal or similar to the Buckaroo Saddle
8. This subcontractor shall provide a stamped engineered rigging plan for any pre-fabricated vertical risers to be picked with a crane.
9. This Subcontractor shall supply at a minimum one spill kit per floor for interior demolition adjacent to active space, containing the following: 3 Kibosh 3/4" pipe menders, 3 Kibosh 1" pipe menders, 1 shut gun, 2 (3/4" & 1") shark bite fitting with ball valve, portable electric submersible pump with 3/4" threaded hose nipple, 50 feet of 3/4" hose, Rubbermaid with castors labeled with cover, a water diversion tarp and water barriers, and a shop vacuum.

E. Exclusions

1. This Subcontractor shall exclude Firestopping

F. Logistics and Schedule

1. This subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

G. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for a complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

Unit Prices:	Amount
Refer to Form of Proposal	

H. Alternate Prices

The following Alternate Prices reflect the work of this bid package under which the bid proposal was ***submitted, and these alternate shall remain valid for the life of the project and include all costs for a*** complete installation.

Alternates:	Amount
Refer to Form of Proposal	

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#37 – HVAC & Controls
Dated: 07.08.2024
Revised: 09.30.2024

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***BP#37 – HVAC & Controls Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***BP#37 – HVAC & Controls Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
230400	General Conditions for Mechanical Trades
230516	Expansion Fittings and Loops for HVAC Piping
230517	Sleeves and Sleeve Seals for HVAC Piping
230523	General-Duty Valves for HVAC Piping
230529	Hangers and Supports for HVAC Piping, Ductwork and Equipment
230548	Vibration and Seismic Controls for HVAC Piping and Equipment
230553	Identification for HVAC Piping and Equipment
230593	Testing, Adjusting, and Balancing for HVAC
230900	Instrumentation and Controls for HVAC
230993	Sequence of Operations
232113	Hydronic Piping
232114	Hydronic Specialties
232123	Hydronic Pumps
232500	HVAC Water Treatment
233100	HVAC Ducts and Casings
233300	Air Duct Accessories
233400	HVAC Fans
233600	Air Terminal Units
233700	Air Outlets and Inlets

235700	Heat Exchangers for HVAC
238126	Split-System Air-Conditioners
238200	Convection Heating and Cooling Units

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
DIV 00	Division 00 – Procurement and Contracting Requirements
DIV 01	Division 01 – General Requirements
019113	General Commissioning Requirements
079200	Joint Sealant
230700	HVAC Insulation
236411	Packaged Water Chillers – Scroll
237413	Modular Central Station Air-Handling Units

Bid Package Specific Scope

2. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
3. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
4. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
5. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#37 – HVAC & Controls
Dated: 07.08.2024
Revised: 09.30.2024

6. This Subcontractor shall furnish and install all mechanical systems, including but not limited to, associated piping, fittings, ductwork, fire/smoke dampers, hangers, supports, insulation, valves, actuators, identification, controls, and specialties as shown on the Contract Documents and in the Specifications. This Subcontractor is to include items not specifically shown but required for the operation of systems shown within this bid package.
7. This Subcontractor shall coordinate and provide all final Mechanical connections to equipment provided by others, including but not limited to, Food Service Equipment, Pre-Purchased Equipment, etc.
8. This Subcontractor shall file and pull all permits required for their Scope of Work. Utility connection coordination and cost shall also be included by this Subcontractor.
9. This Subcontractor shall provide rigging plans for all equipment and/or installations requiring the use of a crane at a minimum of one (1) month prior to the rigging operation. This Subcontractor shall include, but not limited to, all road plans, signage, traffic controls, etc. This Subcontractor shall coordinate crane pad locations with the BP#09 Sitework Subcontractor.
10. This Subcontractor shall include all costs for escalation on materials, labor, equipment, etc. for the durations indicated on the project schedule.
11. This Subcontractor shall provide all necessary layout including benchmarks, extending of control lines, etc. to properly perform their Work.
12. This Subcontractor shall provide a full-time competent Project Manager for the duration of the project. This individual must have the authority to make all decisions for this Subcontractor, attend all weekly meetings, and be responsible for all lower tier subcontractors and vendors.
13. This Subcontractor shall be required to continuously record the progress of the HVAC and Controls Work on a record set of Drawings, to be maintained on the jobsite at all times. The Architect, Engineer and Turner will review these Documents on a monthly basis in conjunction with their monthly payment application review; this shall be a condition of approval of each progress payment.
14. This Subcontractor understands the specific warrantee/guarantee period will start when the equipment/system is accepted by the Owner for their operation/use at the time of Substantial Completion. This Subcontractor shall include, but not limited to, ownership, preventative maintenance, protection, care, operation, cleaning, etc. for all HVAC equipment/systems, whether furnished by this Subcontractor or others, any gap duration between the scheduled start up of such equipment and owner acceptance of the equipment/system. This Subcontractor shall perform maintenance per equipment manufacturer's recommendations.
15. This Subcontractor shall be responsible for protecting all Mechanical equipment, whether furnished by this Subcontractor or by others. Any damage as a result to equipment not being properly protected will be repaired at this Subcontractor's expense.
16. This Subcontractor shall furnish and install all supports and support systems for mechanical equipment and piping if not indicated on the structural or mechanical drawings. Systems shall meet the requirements of seismic and sway parameters per the local building code and project specifications.
17. This Subcontractor shall provide their own lifts and access for construction. No scaffolding will be provided.
18. This Subcontractor shall submit shop drawings as well as layout and mark housekeeping pads for equipment provided and/or installed under this scope of work. Installation of housekeeping pads will be by BP#10 – Concrete.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#37 – HVAC & Controls
Dated: 07.08.2024
Revised: 09.30.2024

19. This Subcontractor shall be responsible for coring all penetrations required with this scope of work. This includes, but not limited to, foundations, walls, slabs, etc. as well as where sleeves were not installed prior to placing of concrete.

20. This Subcontractor shall coordinate, layout, furnish and install all sleeves and inserts required for their work. Sound sealing shall be by this Subcontractor. Firestopping will be by the BP#17 Firestopping Subcontractor. Throughout the entirety of the construction progress/schedule, this Subcontractor shall review all sleeve locations installed within, but not limited to, gypsum partitions, masonry partitions, concrete foundation walls, steel decking, etc. and confirm the sleeves are located and installed where needed as progress continues for the other associated Subcontractors (i.e. confirm sleeve locations prior to the Masonry Subcontractor setting masonry blocks and/or grout). Commencement of this Subcontractor's work will constitute this Subcontractor's acceptance of the existing conditions.

21. This Subcontractor shall provide locations of all HVAC pipe sleeves and penetrations to the BP#17 Firestopping Subcontractor so they can properly seal/stop the HVAC pipe sleeves, penetrations. This Subcontractor shall coordinate duct and pipe insulation with firestopping, sleeves, and penetrations.

22. This Subcontractor shall furnish and install all expansion fittings and expansion loop material, size and spacing. Reference specification table, 23 0516 page – 9.

23. This Subcontractor shall furnish, F.O.B. jobsite, all access doors for all valves and other equipment requiring access and which may become inaccessible at a later date in the drywall and masonry assemblies. This Subcontractor shall arrange their work in such a manner to minimize the quantity of access doors required. All items requiring accessibility shall be located in already accessible areas, such as above lay-in ceilings, etc. if at all possible. It is the responsibility of the Mechanical Subcontractor to coordinate and provide information regarding the location, sizes and quantities of access doors, panels, etc. required for their Work as well as furnish same. Failure to furnish the access doors and / or coordinated locations such that other Subcontractors (e.g., masonry, drywall, etc.) must go back to complete work, shall result in a back-charge to this Subcontractor for out of sequence Work accordingly. Also note that all required access doors and / or panels shall be furnished from one (1) manufacturer with their ratings consistent with the respective partition / ceiling / floor ratings and must be keyed alike. Access door type will be per the architect's direction in each location. This Subcontractor shall provide access door shop drawings indicating locations, types and sizes in architectural ceilings and partitions for design team review and approval.

24. This Subcontractor shall furnish and install all HVAC and Controls equipment along with, but not limited to, all associated piping, insulation, conduit, wire, terminations, start-up, commissioning, etc. indicated in the Contract Documents **not** being furnished by SourceBlue.

25. This Subcontractor shall furnish and install Boilers B-1 and B-2. This Subcontractor shall include all costs for, but not limited to, rigging, protection, connections, startup, commissioning, controls, etc. This Subcontractor shall refer to all Contract Drawings and specifications to furnish and install a complete operating system including, but not limited to, pressure relief valves, solenoid valves, electronic spark ignitions, low water cut-off switches, temperature sensors, manufacturer accessories, etc. Associated EPO's to be furnished and installed by the BP#38 Electrical Subcontractor.

26. The BP#12 Structural Steel Subcontractor shall deck over all framed openings and this Subcontractor shall cut and remove the deck for their installations and penetrations.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#37 – HVAC & Controls
Dated: 07.08.2024
Revised: 09.30.2024

27. Open ends of ductwork are NOT acceptable. ALL ductwork (whether or not installed or stored) are required to be covered at all times (especially its openings) even during transport by this Subcontractor. This Subcontractor shall inspect and protect the open ends of all installed ductwork daily. All duct work must be stored on movable carts and protected. This Subcontractor shall issue reports of investigations and corrective action of open ends of ductwork to Turner Construction on a weekly basis.
28. This Subcontractor shall furnish and install all Hydronic Radiant Ceiling Panels and Active Chilled Beam units per the associated schedules on Drawings M601 and M602. This shall include all, but limited to, associated pipes, valves, fittings, control valves, etc. per Details 7, 8, 9, and 10 on Drawing M502 as an example. This Subcontractor shall coordinate mounting of these units with the scheduled ceilings as well as furnish and install all components required to support, hang and finish these units including, but not limited to, hangers, rods, finish trim, t-bars, Coanda wing trims, etc. This Subcontractor shall coordinate installation and support of these units with the BP#22 Acoustical Ceilings Subcontractor.
29. This Subcontractor shall utilize a Total Station system for surveying and layout as well as setting hanger supports and layout risers/ boxes/ penetrations/ under slab infrastructure, etc. This Subcontractor shall include utilizing the Total Station system by downloading the MEP Coordination and/or Design model and using such model to layout the points. The Total Station system shall not be utilized solely as a transit.
30. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
31. This Subcontractor shall provide Turner Construction with twenty-five (25) USB Data Loggers to record temperature and humidity. These Data Loggers are to be Bluetooth compatible and interface with a cell phone application provided by the manufacturer.
32. This Subcontractor shall furnish and install all identification, labeling and tagging defined in the Contract Documents prior to the installation of the ceiling grid by others so as to allow for proper inspections as to thoroughness of these items.
33. This Subcontractor shall furnish and install all fire, smoke and combination dampers with actuators. Required quantity of dampers to be fully coordinated and included by this Subcontractor with the Architectural Partition and slab rating plans.
34. This Subcontractor shall paint the interior of metal ducts that are visible through registers and grilles and that do not have duct liner. Apply one coat of flat, black, latex paint over a compatible galvanized-steel primer.
35. This Subcontractor shall include all necessary shutdowns and / or tie-ins for your specific systems. This includes all required premium time, proper notification and coordination with all affected parties (Owner, Turner, local agencies, utilities, etc.).
36. This Subcontractor shall furnish and install all specialty ductwork including kitchen hood exhaust ductwork, and fabric ductwork.
37. This Subcontractor shall furnish and install all breeching, chimneys, and vents for equipment including but not limited to, boilers, water heater, generator, etc.
38. This Subcontractor shall grout with non-shrink grout all base plates that are used to support piping and/or equipment.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#37 – HVAC & Controls
Dated: 07.08.2024
Revised: 09.30.2024

39. This Subcontractor shall include all costs to provide delegated design criteria and submittals per the following, but not limited to, Delegated Design Table on Drawing GC0A. This Subcontractor has thoroughly read all Specification Sections regardless of what is indicated on the Delegated Design Table on Drawing GC0A and included all costs for delegated design scope of work.
40. This Subcontractor shall design, furnish & install an independent support system for all hung equipment, fixtures, ceiling and piping system that are directly below the metal roof deck. This support system must attach to structural steel framing members as the metal roof deck cannot be utilized for support. Refer to A200 series drawings General Note #12 for criteria. This Subcontractor shall provide delegated design and include shop drawings and calculations indicating, but not limited to, load carrying capacities, point loads, etc. This Subcontractor shall include adding miscellaneous metal supports into the 3D model for coordination with all MEP trades.
41. This Subcontractor shall design and install all, but not limited to, channel support systems, heavy duty steel trapezes, seismic restraint hangers, etc. required for all Mechanical systems as indicated in the Contract Documents. All above ceiling seismic and required sway bracing shall be installed and inspected 4 weeks prior to any scheduled ceiling grid installation.
42. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to cleanup general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)
43. This Subcontractor shall furnish and install all acoustical sealant of all wall and floor penetrations by this subcontractor per specification section 079200. Firestopping will be by BP #17.
44. This subcontractor shall furnish and install all aluminum fabricated duct plenum boxes & louvers on all associated roofs. For example, reference 1B/ A531 & M103A.
45. This Subcontractor shall include 2 complete cleanings of equipment and systems provided under this scope. Cleanings shall be performed prior to initial energizing equipment and again prior to turnover to the Owner. Cleanings shall include complete debris, dust removal and wiping of all internal and external components and shall be in accordance with manufacturers approved methods.
46. This subcontractor shall provide video recording of owner demonstrations and trainings for all installed equipment.

Early Equipment Use

47. This subcontractor shall provide all labor and material for early start-up and use of HVAC systems for early heating & cooling. Provide extended warranties & cleaning of all systems for like-new turn-over conditions at time of Substantial Completion. Please include the following in your bid:
    A. Include labor and materials for filter changes at VRF, HR and roof top units. One (1) at final cleaning and one (1) final set of filters in each piece of equipment used for early cooling / dehumidification as needed. This is in addition to what is specified.
    B. Include time to assist in additional start up by manufacturer if required for equipment used for early cooling / dehumidification.
    C. Include any routine maintenance required per the O & M manuals.
    D. Include furnishing, installing and maintaining filter media on RGD's and before VRF, HR and RTU Unit pre-filters.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#37 – HVAC & Controls
Dated: 07.08.2024
Revised: 09.30.2024

Logistics

48. Temporary power will be provided in accordance with Turner's Temporary Light and Power Additional Provisions. This Subcontractor shall be responsible for any additional power requirements not provided in this document for the work of your trade.

49. This Subcontractor is required to provide neat rack storage of materials on the working floors. Space is limited, therefore, a neat and organized work area is required to be maintained by all trades.

50. This Subcontractor shall coordinate and plan all large deliveries, whether equipment, materials or any other items, with Turner Construction to determine impact of the Project's logistics and identify any obstacles such as, but not limited to, requiring larger gates, larger exterior wall leave-outs, etc. to ensure the delivery is successful and does not impact the overall Project Schedule.

51. This Subcontractor shall review all areas of high roofs and confirm access can be achieved with the lift and/or crane they intend to utilize at a minimum of two (2) weeks prior to the installation date. This review shall include, but not limited to, all types of obstructions, site grading, already installed materials/systems, etc.

52. This Subcontractor shall provide temporary heating for the winter of 2025-2026 (Beginning October 2025 to the end of March 2026) for the interior construction of the new school. Assume fifteen (15) 480V electric units, similar to Heat Wagon P6000, located per Turner's Temporary Heating Additional Provisions. This Subcontractor shall size accordingly to provide a minimum of 50-degree ambient air temperature. Coordinate quantity of units required and include distribution to each floor level. Coordinate Electrical requirements and points of connection with the BP#38 Electrical Subcontractor accordingly.

Submittals & Coordination

53. This Subcontractor shall provide penetration drawings for, but not limited to, interior, exterior, foundation, partition and floor penetrations. This shall include dimensions off columns, elevations above finish floor, and required opening size. Layout as required for proper field coordination is included under this scope.

54. This Subcontractor shall coordinate all Mechanical and Controls equipment voltages with the Electrical Design. Identify accessories requiring power in addition to those indicated on the documents during the submittal phase for design team confirmation and coordination.

55. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing, one (1) week in advance, any discrepancies that may prevent the proper execution, installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled. This notice should provide sufficient time to repair conditions without impacting the overall Project Schedule. Commencement of this Subcontractor's work will constitute this Subcontractor's acceptance of the existing conditions.

56. This Subcontractor shall coordinate installation height and dimensions of all, but not limited to, roof top equipment, curbs, supports, ducts, pipes, insulation, conduit, etc. with the BP#15 Roofing contractor to ensure minimum clearances for flashings, pitch pockets, etc. are maintained.

57. This Subcontractor shall furnish and install a complete insulated piping system through all roof penetrations. This includes, but not limited to, all required Counter Flashing, Rigid insulation, link seals, Anchor/Stop plates, Pipe sleeves, Pipe guides, etc. Start and stop point locations of counter flashing shall be coordinated with Turner Construction and the BP#15 Roofing Subcontractor.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#37 – HVAC & Controls
Dated: 07.08.2024
Revised: 09.30.2024

58. This Subcontractor shall furnish and install all roof supports for their work, including but not limited to, all roofing pads and other necessary materials. This Subcontractor shall coordinate with the BP#15 Roofing Subcontractor all details and installations to comply with the roofing warranty.
59. This Subcontractor shall coordinate and perform all roof penetrations when the BP#15 Roofing Subcontractor is on-site and present so the penetrations can be flashed/closed properly and in accordance with the roofing warranty requirements.
60. This Subcontractor shall maintain utmost care so as not to damage the Spray-on Insulating materials. Any and all damages and / or over-scraped areas, which may require repair, shall be back charged to the Subcontractor that causes the damage. Hangers and supports shall be installed prior to SOFP operations to minimize scraping after the fact.
61. This Subcontractor shall coordinate all domestic water tie-ins with the Plumbing Subcontractor.
62. This Subcontractor shall coordinate all exterior wall penetration installations with the exterior wall contractors. All, but not limited to, details, flashing requirements, cavity depth and freeze protection coordination(s) must be performed to ensure the exterior wall thermal and moisture specifications are maintained with these penetrations.
63. This Subcontractor will be required to relocate any piping, supports, or other parts of the Mechanical system installed by this Subcontractor that deviates from the coordinated drawings that prohibits access to any equipment, valve, damper, junction box or anything else requiring access in the future. Acceptable access shall be deemed by Turner, Owner, Engineer, or Commissioning Agent.
64. This Subcontractor shall participate in rough-in inspection coordination with other trades and Turner Construction utilizing color-coded framing identification to illustrate completion and inspection ready areas. Color-code key and inspection sequencing will be identified by Turner Superintendent.
65. Duct-mounted smoke detectors shall be furnished by the BP#38 Electrical and Fire Alarm Subcontractor. This Subcontractor shall coordinate locations, sizes, orientation and layout of all Duct-mounted smoke detectors with the BP#38 Electrical and Fire Alarm Subcontractor. This Subcontractor shall install all Duct-mounted smoke detectors. This Subcontractor shall reseal all associated penetrations and ensure sealing and insulation are adequate. Power wiring of Duct Smoke & Fire/Smoke dampers will be by the BP#38 Electrical and Fire Alarm Subcontractor. This Subcontractor shall furnish and install all interconnecting control wiring between the duct-mounted smoke detector and fire/smoke damper including but not limited to alarm points, status/position, shut down of Mechanical equipment, notification by BMS subcontractor, etc.
66. This intent is for no mechanical systems to be installed over electrical equipment, however, this Subcontractor shall furnish and install drain pans that are properly slopped and piped to nearest drain as indicated on the contract documents for Mechanical equipment and/or for any piping which is coordinated over electrical components. This Subcontractor shall ensure proper code clearances are maintained for installations over and around MEP equipment, this includes but is not limited to NEC Clear access requirements. In addition, if a drip pan is being utilized, this subcontractor shall furnish and install a full leak detection system including but not limited to, power, control wiring, BMS monitoring etc. All costs for such leak detection systems shall be burdened by this subcontractor.
67. This Subcontractor shall coordinate installations with the BP#21 Drywall & General Trades and BP#22 Acoustical Ceiling Subcontractors of all equipment and systems, including but not limited to, registers, diffusers, grilles, hydronic radiant ceiling panels, active chilled beams, fan coil units, etc. to ensure proper fit and finish at all ceilings and walls.

Additional Provisions/Scope of Work

State Project No. 057-0114 N
Greenwich, CT
BP#37 – HVAC & Controls
Dated: 07.08.2024
Revised: 09.30.2024

68. This Subcontractor shall review and confirm all, but not limited to, Mechanical, Controls, Electrical, Fire Alarm, etc., necessary penetrations and connections are installed within the curb prior to the installation of any rooftop equipment. This Subcontractor shall provide sign-off sheets to Turner Construction.
69. This Subcontractor shall provide access within all equipment curbs to allow for any under-unit connections (i.e. duct, gas, electric, condensate, etc.) so these services don't need to be connected while the unit(s) are suspended during the rigging/installation process.
70. This Subcontractor shall include all labor and material to coordinate locations of pipe runs so as not to interfere with egress passages, Electrical Rooms and stairwells. Piping systems shall not run in or pass through Electrical Rooms or stairways.
71. This Subcontractor shall furnish and install all roof curbs, stands, duct/pipe supports, counter flashing, etc. required for their work. This Subcontractor shall coordinate roofing depths and blocking requirements furnished and installed by the BP#15 Roofing Subcontractor.
72. This subcontractor shall coordinate with the BP#38 electrical and BP#30 food service subcontractors to provide the required sequence of operations for the ansul system. This subcontractor shall include all but not limited to wiring, conduit, devices, testing, etc. for a complete operational system. For example, refer to 1/E502, E701 & 5/P501.

Coordination with SourceBlue

73. This Subcontractor understands SourceBlue will be furnishing the following HVAC equipment: Dedicated Outdoor Air Units DOA-1, DOA-2, DOA-3, DOA-4 and DOA-5; Rooftop Units RTU-1, RTU-2 and RTU-3; Heat Recovery Ventilator HRV-1; Air Cooled Chillers CH-1 and CH-2. This Subcontractor has received, reviewed, included costs and understands the scope of work to be performed in the Equipment Coordination Matrix(ces). This Subcontractor is responsible for all work to be performed under the Trade Partner – MECH, Trade Partner – BMS, and where applicable, Trade Partner – OTHER roles and responsibilities.
74. This Subcontractor shall review the submittals for all equipment furnished by SourceBlue and shall furnish and install any HVAC and/or Controls components not provided by SourceBlue to provide a complete and operational system.
75. This Subcontractor shall include receiving and storing the above-referenced SourceBlue-furnished equipment in an insured and suitable location as per the associated equipment manufacturer's directions for up to a year's time. This Subcontractor shall include all costs to transport this equipment to the jobsite.
76. Upon arrival to the jobsite, all, but not limited to, marshaling, hoisting, rigging, setting and associated costs shall be provided by this Subcontractor for the pre-purchased HVAC equipment. All costs to protect and ensure no damage occurs during the storage, transportation, rigging and installation phases shall be included.
77. This Subcontractor understands SourceBlue will be furnishing seismic curbs for the following, but not limited to, HVAC equipment: Dedicated Outdoor Air Units DOA-1, DOA-2, DOA-3, DOA-4 and DOA-5; Rooftop Units RTU-1, RTU-2 and RTU-3; Heat Recovery Ventilator HRV-1. This Subcontractor shall contract a third-party engineer licensed in the State the work is being performed to design curb attachment to building structure. This Subcontractor shall include all costs associated with coordinating, installing and attaching these curbs. This engineer shall review installed field conditions and issue a report confirming all attachment of rooftop equipment and/or curbs to the structure are adequate prior to setting the unit(s).

Additional Provisions/Scope of Work

State Project No. 057-0114 N
Greenwich, CT
BP#37 – HVAC & Controls
Dated: 07.08.2024
Revised: 09.30.2024

Demolition

78. This Subcontractor has included all Mechanical Demolition notes and scope of work identified on the Contract Documents including, but not limited to, Drawings MEPD000 and MEPD001.

79. This Subcontractor shall make safe all HVAC and Controls piping, equipment and accessories scheduled to be demolished. This subcontractor shall cut and leave an air gap at the location of the start of the demolition at the upstream source/location (i.e. equipment, valve, distribution point, etc.). All material to be removed shall be painted green by this Subcontractor, green markings must be no more than 5' apart. Any material to remain will be painted red with markings no more than 5' apart. Removal and disposal of all piping, accessories and materials will be provided by the BP#08 Demolition & Abatement Subcontractor.

80. The BP#08 Demolition & Abatement Subcontractor will perform all MEP mass demolition and removals (piping, conduits, wire, equipment, etc.) for all phases of the work after the services have been cut, capped and made safe by the MEP trades. This Subcontractor will be responsible for capturing and properly disposing of the refrigerant of all Mechanical equipment from the existing Building.

81. This Subcontractor has received, reviewed and included all costs for phased demolition of the existing Building and associated HVAC and Controls per the Phasing & Logistics Plans. This Subcontractor acknowledges and understands portions of the existing Building will be abated and demolished prior to the entire Building. This Subcontractor shall coordinate with the BP#08 Demolition and Abatement Subcontractor with respect to the sequencing of the work relative to the zoning and shutdown or continued operation of the existing HVAC and Controls systems.

Controls

82. This Subcontractor shall furnish and install, but not limited to, all labor, materials, services, equipment and transportation necessary for a complete and operational system of automatic temperature control and BMS (Building Management System) along with required control wiring in accordance with provisions of the contract documents. This Subcontractor shall include all, but not limited to, computer hardware/software, input/output devices, controllers, local area networks, sensors, control devices, actuators, control units, etc. required for a complete operating system.

83. This Subcontractor is required to furnish and install, but not limited to, all conduit, boxes, devices, wiring, terminations, etc., for a complete and operational low voltage Controls system as well as equipment interlocks between fans, dampers, detection devices, actuators, etc. This Subcontractor shall verify voltages are compatible between components, whether furnished under this scope of work or by others (i.e. SourceBlue pre-purchased equipment).

84. This Subcontractor will be responsible for all costs associated with the reopening and patching of ceilings and/or walls required for corrective work. All required testing must be scheduled and completed before ceilings are installed or walls are closed.

85. This Subcontractor shall coordinate, furnish, install, wire, test, startup and commission all sensors such as but not limited to temperature, humidity, carbon dioxide, combination temperature/humidity/CO2, etc. required for a complete operating system. This Subcontractor shall produce and submit shop drawings indicating exact locations of sensors which will be reviewed and approved by the Design Team prior to any wall rough-in.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#37 – HVAC & Controls
Dated: 07.08.2024
Revised: 09.30.2024

86. This Subcontractor shall generate, test and confirm functioning BMS graphics and all equipment Sequence of Operations prior to the start of Commissioning, Owner Training and Owner acceptance/occupancy.
87. The BP#38 Electrical & Fire Alarm Subcontractor will provide power to all Controls DDC Panels. This Subcontractor shall provide power to all control devices downstream of the DDC Panels per the plans and specifications.
88. This Subcontractor shall include all, but not limited to, cabling, terminations, patch panels, etc. to provide network connections to their BMS/Controls system required for a complete operating system. This Subcontractor shall include both temporary and permanent installations to comply with the Project Schedule.
89. This Subcontractor shall review all contract drawings and specifications to furnish and install all required BMS integrations, programming, etc. For example, reference Keynote FP18 on Drawing FP101E, 2/P500, 1/E500, 1/E501, 1/E701, etc.

Commissioning and Testing

90. This Subcontractor shall include, but not limited to, all necessary piping, valves, fittings, and terminations as required for partial testing of systems as required by the needs of the project. Temporary isolations of phased or multi-level, area systems shall be included.
91. This Subcontractor shall fully cooperate with the Owner's Commissioning Agent for commissioning of systems furnished and/or installed by this Subcontractor. This Subcontractor's Project Manager and Commissioning Engineer shall attend a weekly Commissioning/MEP Coordination meeting for the duration of the project. This Subcontractor shall include sufficient time to fully commission all systems. This Subcontractor shall be responsible for Controls commissioning until each system is fully operational and accepted by the independent Commissioning Agent and/or Owner.
92. This Subcontractor will provide a dedicated engineer / staff person on site dedicated to the commissioning of all systems prior to occupancy. This includes, but is not limited to, documenting, organizing and submitting startup reports, pre-functional checklists, functional checklists and any performance reports that may be required for each piece of equipment within three (3) days of startup. This Subcontractor shall provide adequate manpower to fully meet the commissioning requirements.
93. This Subcontractor shall perform all required testing in accordance with the specifications. Testing is to be performed in a manner to complement the Project Schedule and procedure of construction, and the Work of others. Test reports shall identify the system, infrastructure and area testing with specified test requirements. Any and all manpower, temporary connections, etc. required to accomplish this work in this manner are included. NOTE: This Subcontractor will test every piece of equipment in the presence of Turner and / or the Engineer and provide a full report to Turner and the Engineer accordingly.
94. This Subcontractor will be responsible for all costs associated with the reopening and patching of ceilings or walls required for corrective work. All required testing of HVAC and Controls systems must be scheduled and completed before ceilings are installed. This subcontract includes any out of sequence work and testing required to complete the work before ceiling work starts.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#37 – HVAC & Controls
Dated: 07.08.2024
Revised: 09.30.2024

95. This Subcontractor shall include in their scope of Work, the proper starting, testing, and water / air balancing of the HVAC system. This is to include all costs associated with working with the Controls Subcontractor for starting, stopping, adjusting, and modifying all equipment with the Balancing Subcontractor (i.e., the Balancing and Control Subcontractors are to work together simultaneously full-time during the balancing phase). Any repair and / or replacement costs for ceiling tiles damaged during this phase shall be this Subcontractor's responsibility.
96. This Subcontractor will be responsible for all sheave changes for any HVAC equipment on the project that does not meet the design CFM.
97. This Subcontractor shall coordinate the Mechanical installation sequence, provide and execute a building flush-out schedule/procedure to meet the CT High Performance Building Requirements identified in Specification Section 230500. This Subcontractor shall provide the necessary written documentation including, but not limited to, confirmation of balancing completion, flush-out procedure, hourly trend logs, etc. as well as furnish and install new filtration media on all associated HVAC equipment.
98. This Subcontractor shall perform and document all pressure tests for all ductwork, piping and equipment as required by the contract documents, commissioning and QA/QC requirements. This Subcontractor shall visually mark all tested sections of ductwork. Testing is to be scheduled according to the needs of the project. This Subcontractor shall coordinate with the associated trades and pressure test all ductwork and/or piping scheduled to be concealed in a chase or behind partitions prior to being permanently concealed.
99. This Subcontractor shall include in their Bid all necessary overtime and / or off-hour work for testing so as not to delay the Work of other Trade Subcontractors. This includes testing in conjunction with any other Trade that tie-in to this Subcontractor’s scope of Work.

D. Exclusions

1. This Subcontractor shall exclude Division 22 Plumbing Scope of work (By BP#36 – Plumbing).
2. This Subcontractor shall exclude furnish and installation of concrete housekeeping pads beneath equipment (By BP#10 – Concrete).
3. This Subcontractor shall exclude trenching, excavation and backfilling of any exterior below-grade scope of work (By BP#09 – Sitework).
4. This Subcontractor shall exclude Penetration Firestopping (By BP#17 – Firestopping).

E. Safety

1. This Subcontractor to air test all wet systems prior to filling with water.
2. This Subcontractor is to control water used in pressure testing at all times. Water will not be allowed to be dumped out onto the building floors.
3. This Subcontractor shall provide a containment method for cutting oils and shavings that consists of a pan and absorbent material or equivalent (cardboard is not sufficient). A plan on how cutting oil will be handled and disposed of shall be provided. Plan should not allow for any oil to stain or penetrate the concrete slab or finished surfaces, this subcontractor shall be responsible for any damage to installed material.
4. This subcontractor shall ensure all stub ups extend a minimum of 3’ above the slab or walking surface. If this is not possible, a 3’ or higher cone must be placed over the stub up. Impalement protection is required on all stub up, when a hazard exists.

Additional Provisions/Scope of Work

Revised: 09.30.2024

5. This subcontractor shall utilize a threaded rod cutter in lieu of a porta band or grinder to cut all threaded rod.
6. This Subcontractor shall protect all downward protruding threaded rod with rubber caps to prevent injury to employees while working around rods.
7. This Subcontractor shall submit on and use only rounded edged saddle for all pipe support in lieu of saddles with 90-degree corners equal or similar to the Buckaroo Saddle.
8. This subcontractor shall provide a stamped engineered rigging plan for any prefabricated vertical risers to be picked with a crane.
9. This Subcontractor shall supply at a minimum one spill kit per floor for interior demolition adjacent to active space, containing the following: 3 Kibosh 3/4" pipe menders, 3 Kibosh 1" pipe menders, 1 shut gun, 2 (3/4" & 1") shark bite fitting with ball valve, portable electric submersible pump with 3/4" threaded hose nipple, 50 feet of 3/4" hose, Rubbermaid with castors labeled with cover, a water diversion tarp and water barriers, and a shop vacuum.
10. This Subcontractor shall review, conform to, and furnish and install all requirements included in the Safety Additional Provisions included in this Agreement. This Subcontractor understands this document is project specific and all provisions must be included in this Subcontractors' bid.

F. Logistics and Schedule

1. This subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

G. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

Unit Prices:	**Amount**
Refer to Form of Proposal	

H. Alternate Prices

The following Alternate Prices reflect the work of this bid package under which the bid proposal was ***submitted, and these alternates shall remain valid for the life of the project and include all costs for a*** complete installation.

Alternates:	**Amount**
Refer to Form of Proposal

BP #38 – Electrical & Fire Alarm
Dated: 07.08.2024
Revised: 09.30.2024

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***BP #38 Electrical & Fire Alarm Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***BP #38 Electrical & Fire Alarm Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
260400	General Conditions for Electrical Trades
260503	Equipment Wiring Connections
260519	Electrical Power Conductors and Cables
260526	Grounding and Bonding for Electrical Systems
260529	Hangers and Supports for Electrical Systems
260533	Raceway and Boxes for Electrical Systems
260534	Floor Boxes for Electrical Systems
260536	Cable Trays for Electrical Systems
260553	Identification for Electrical Systems

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name

Bid Package Specific Scope

General / Phasing & Logistics

2. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
3. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
4. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
5. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP #38 – Electrical & Fire Alarm
Dated: 07.08.2024
Revised: 09.30.2024

6. The drawings are diagrammatic and may not be complete in every detail. They reflect the intent of the Arch/Engineer to provide a complete working system in compliance with all codes as shown by the documents. This contractor shall include any other equipment or devices necessary to provide a complete functioning system. This Trade Contractor shall include, as part of his work, the cost of relocating his work, due to the coordination procedure as part of his trade agreement price.
7. This Subcontractor shall provide a full-time competent Project Manager for the duration of the project. This individual must have the authority to make all decisions for this subcontractor, attend all weekly meetings, and be responsible for all lower tier subcontractors and vendors. This Subcontractor shall submit a complete organization chart indicating the title and names of the people that will staff the project. Submit resumes of each person on the organization chart for Turner's approval. This shall include Project Managers, Commissioning Manager, Foreman, Superintendents and other key personnel as required by Turner Construction.
8. This Subcontractor shall be required to continuously record the progress of the Electrical Work on a record set of Drawings, to be maintained on the jobsite at all times. The Architect, Engineer and Turner will review these Documents on a monthly basis in conjunction with their monthly payment application review; this shall be a condition of approval of each progress payment.
9. This Subcontractor shall examine the work of others, which will affect this subcontractor work and notify Turner well in advance of any condition, which will prevent the proper execution of this subcontractor's work. This shall include but not be limited to this subcontractor reviewing the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled. Any notice must provide sufficient time to repair conditions without impacting the overall schedule. Commencement of this subcontractor's work will constitute this subcontractor's acceptance of the existing conditions.
10. This Subcontractor is aware that this is a High-Performance Building and submittals should be submitted according to these standards. This Subcontractor has included all costs associated with meeting these requirements as set forth in the Division 1 Specifications.
11. This Subcontractor will provide the necessary written documentation for meeting the CT High Performance requirements as outlined in the Division 1 Specifications.
12. This Subcontractor shall provide all necessary layout including benchmarks, extending of control lines, etc. in order to properly perform the Work.
13. This Subcontractor shall be responsible for providing out of sequence work at no additional costs when required in coordination with other trades.
14. Utilize Total Station system to layout all electrical distribution including but not limited to set hanger supports and layout risers/ boxes/ penetrations etc. for under slab and within slab on deck, cast in slab locations required for electrical infrastructure.
15. This subcontractor shall furnish and install all supports and support systems for Electrical equipment and piping including if not indicated on the structural drawings. Systems shall meet the requirements of seismic and sway parameters per the local building code and project specifications.
16. Each Subcontractor understands that Quality Control and Quality Assurance is a specific commitment and attitude, which is required during the implementation of the work. The focus required to establish a quality level, by developing in-place mock-ups, by providing skilled supervision and by monitoring daily production quality are all expected to be carried out during the execution on this Contract.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP #38 – Electrical & Fire Alarm
Dated: 07.08.2024
Revised: 09.30.2024

17. It is understood that the specific warrantee/guarantee period will start when the equipment/system is accepted by the Owner for their operation/use at this time of Substantial Completion. Any gap between the scheduled start up of equipment and owner acceptance of the system shall be included.
18. This Subcontractor has reviewed the On-Site Phasing & Logistics Plans and the Construction Schedule and has included all associated costs as relevant to this scope of work. It is extremely important to coordinate your work with the other adjacent Subcontractors during the various phases and perform the work as required by these documents. No come back costs will be entertained.
19. This subcontractor shall provide and maintain all temporary light and power as per OSHA standards, Turner safety Manual and the Temporary Light and Power Additional Provisions for Construction purposes issued within the Procurement manual. This is in addition to temporary scope indicated on the Contract Documents and phasing requirements. This Subcontractor shall provide relocation and cut over of this temporary system to the permanent power source as soon as source is available in each area and removal all temporary devices and wiring.
20. This subcontractor shall furnish & install complete metering system for all temporary electric panels provided under their scope of work, including but not limited to all metering devices, wiring, etc., reference the Jobsite Metering Components & Fuel Tracking Log for additional information.
21. This subcontractor shall furnish & install temporary solar powered lighting along the temporary sidewalk per the On-Site Phasing & Logistics Plans.
22. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
23. No truck parking/idling is allowed on streets adjacent to the project site while waiting to unload. This Subcontractor shall include accommodations as required to adhere to “just in time” deliveries. Refer to Turner’s “Logistic Plans – Scope of Work” for delivery restrictions.
24. All Change Order quotes shall include labor per NECA Column 1 and Full breakdown of all pricing is required and should be broken out separately for each drawing. Pricing shall be provided in accordance with the expected project conditions, breaking out any premium installations required at the time of the installation i.e.: closed ceiling, furniture, additional cleaning etc. No additional compensation will be considered for logistics, staging, inefficiencies and/or coordination with other contractors if not clearly broken out in the Change Order Proposal.
25. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
26. This Subcontractor’s Project Manager/Foreman shall participate in Pull Planning Sessions which affect their scope of work. This Project Manager/Foreman shall provide input to further develop the accurate sequence and timing for completion of the work.
27. This Subcontractor shall provide their own lifts and access for construction. No scaffolding will be provided.
28. This Subcontractor shall be responsible to core all penetrations required with this scope of work, this includes but is not limited to foundations, walls and slabs as well as where sleeves where not installed prior to placing of concrete.
29. This subcontractor is responsible to pull all permits as required for their scope of work. Any filing of permits associated with this scope to be performed by this subcontractor including associated filing fees to be paid by this subcontractor, building permit fees by others. This subcontractor to include special permits such as Generator Permits, EV chargers, etc.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP #38 – Electrical & Fire Alarm
Dated: 07.08.2024
Revised: 09.30.2024

30. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to clean up general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)

Demolition

31. This subcontractor is responsible for all tracing of existing circuits prior to disconnect. Any circuits found to feed areas of the building or other other buildings that are to remain active shall be rerouted to ensure occupied spaces remain active. This subcontractor understands that the demolition will be performed in multiple phases and will perform the demolition work according to these phases.
32. This subcontractor shall cut, cap, and make safe all Electrical, equipment and accessories scheduled to be demolished, including but not limited to the exterior electrical service. Coordinate with the utility company as required. For an example see sheet notes on MEPD000 & MEPD001. This subcontractor shall cut and leave an air gap at the location of the start of the demo; this shall be at the upstream location at the source (i.e. equipment, valve, distribution point, etc.). All material to be removed shall be painted green by this subcontractor, green markings must be no more than 5’ apart. Any material to remain will be painted red with markings no more than 5’ apart. The Demolition subcontractor (BP #08) will remove and dispose of all materials.
33. The Demolition Subcontractor (BP #08) will perform all MEP mass demolition and removals (piping, conduits, wire, equipment, etc.) for all phases of the work after the services have been cut, capped and made safe by the MEP trades. The Demolition Subcontractor (BP #08) will remove and dispose of all the demolished material and equipment from the basement.

Power Distribution

34. This Subcontractor shall furnish and install a complete and fully functional power distribution system including but not limited to all raceways, supports, backboxes, receptacles, outlets, junction boxes, busway, disconnects, wire mold, floor boxes, etc. This Subcontractor shall furnish & install all electrical devices as it relates to your work on all Drawings, including but not limited to all receptacles, switches, overhead power reels, etc. Greater quantities and quality prevails.
35. This subcontractor shall furnish & install all site electrical infrastructure, including but not limited to handholes, conduit pathways / ductbanks, site lighting, emergency blue light communication stations, EV charging stations, receptacles, low voltage pathways & handholes / manholes, etc., reference SU100 for example of these electrical scope items. This subcontractor shall exclude excavation and backfill which will be performed by the Sitework Subcontractor.
36. This subcontractor shall furnish & install all Emergency Blue Light Communication Stations. For example, conduit pathways, pole, and fixtures provided by this Subcontractor. This subcontractor must coordinate requirements with the Low Voltage Subcontractor. The Low Voltage subcontractor shall perform all low voltage cabling, terminations, and low voltage testing as required.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP #38 – Electrical & Fire Alarm
Dated: 07.08.2024
Revised: 09.30.2024

37. This Subcontractor shall provide Site lighting templates for anchor bolts and conduit layout to sitework contractor. This subcontractor shall furnish site lighting anchor bolts & conduit for the sitework contractor to install within the concrete bases. Concrete bases will be furnished and installed by the sitework contractor.
38. This subcontractor shall furnish and install power for all equipment on the equipment schedules and shown on the Contract Documents.
39. This Subcontractor shall furnish and install all necessary mounting hardware, hangers, brackets, seismic supports, pull boxes, etc. for a complete electrical distribution and lighting system.
40. This subcontractor shall provide PE stamped drawings, calculations, & all delegated design as indicated in the contract documents.
41. This Subcontractor shall provide and Coordinate equipment voltages with Plumbing/mechanical equipment and identify accessories requiring power in the submittal phase for design team confirmation.
42. This Subcontractor shall coordinate and provide power for leak detection equipment as required per the Contract Documents.
43. This subcontractor shall furnish & install all final electrical power connections as required to items furnished by others, including but not limited to security doors, fire doors/gates, automatic door entrances and gates, mechanical blinds/ shades, screens, kitchen equipment, seating, theater equipment, signage etc. Regardless if circuitry is identified on plans.
44. This Subcontractor shall provide wiring of all Plumbing and HVAC Equipment, including but not limited to circulator pumps, aquastats, motors, electronic valves, meters, emergency control valves, monitoring stations, shunt trip interconnect requirements for gas shut off, etc. This subcontractor shall furnish & install dedicated circuits for equipment as needed.
45. This Subcontractor shall coordinate and install all final connections for power to Food Service Equipment. This subcontractor shall include all interconnections for food service equipment in the field. This subcontractor must be present and participate in all DOH and AHJ inspections.
46. This subcontractor shall furnish, install, and wire all EPO and emergency shutoff systems. This subcontractor shall wire, terminate, and test all valves and equipment furnished by others, including but not limited to solenoid valves. This subcontractor shall review and coordinate with all drawing & specification disciplines for EPO requirements, including but not limited to the mechanical, food service, & plumbing disciplines.
47. This subcontractor must notify all trades and Turner a minimum of (10) days in advance, and receive approval to proceed, before performing any shutdowns.
48. This subcontractor shall install all heat tracing and control panels to be furnished by others. This subcontractor shall furnish and install final connections, terminations, and circuiting for heat tracing. This subcontractor shall be responsible for testing all heat traces prior to concealing and/or burying the system.
49. This Subcontractor shall Coordinate any phased existing to remain lighting requirements indicated on the documents and associated temporary infrastructure required by the phase construction.
50. This Subcontractor shall coordinate all requirements of the new electrical service and UTILITY METER with the local power company, Turner and Owner.
51. This Subcontractor shall coordinate and provide required power for Division 8 Hardware requirements per the hardware schedule and Contract Documents.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP #38 – Electrical & Fire Alarm
Dated: 07.08.2024
Revised: 09.30.2024

52. This subcontractor shall provide panel schedules for any existing or new panels modified or installed by this subcontractor.
53. This Subcontractor shall coordinate with the Controls Subcontractor (BP #37) and provide source and breakers for 120V power to controls devices and all BMS / DDC panels. 120V raceway and circuit shall be provided complete by this Subcontractor. This subcontractor shall include 6 (120V) dedicated circuits for controls power in addition to the power shown on the documents. This subcontractor shall reference the Mechanical series of drawings for BMS control panel locations.
54. This subcontractor shall furnish & install all wiring associated with the fire pump ATS and fire pump controller. The Fire Protection subcontractor (BP #35) will furnish and set this equipment in place.
55. This subcontractor shall furnish & install the fire pump disconnect switch shown on E700, including but not limited to all associated wiring.
56. SourceBlue shall provide the Power Studies as described and required in spec section 260573. This subcontractor shall provide all required feeder sizing, feeder lengths and any other information based on this subcontractor's work required to complete these studies. Within two weeks of award, this subcontractor must provide anticipated feeder sizes and lengths for use with initial study. Final sizes and lengths to be provided when MEP coordination is complete.
57. This subcontractor shall furnish & install all ARC Flash Hazard Labeling of electrical equipment.
58. This Subcontractor shall design, furnish & install an independent support system for all hung equipment, fixtures, ceiling and piping system that are directly below the metal roof deck. This support system must attach to structural steel framing members as the metal roof deck cannot be utilized for support. Refer to A200 series drawings General Note #12 for criteria. This Subcontractor shall provide delegated design and include shop drawings and calculations indicating, but not limited to, load carrying capacities, point loads, etc. This Subcontractor shall include adding miscellaneous metal supports into the 3D model for coordination with all MEP trades.
59. This Subcontractor shall design, furnish, and install all, but not limited to, hangers, supports, channel support systems, heavy duty steel trapezes, seismic restraint hangers, etc. required for all Electrical systems as indicated in the Contract Documents. All above ceiling scope shall be installed and inspected 4 weeks prior to any scheduled ceiling grid installation.
60. This subcontractor shall furnish & install overhead cord reels.
61. This subcontractor shall coordinate, furnish, & install a typical exterior conduit penetration and exterior back box at each different exterior wall material type, as part of the exterior wall mock-up process for Design Team review. Reference A315 for the intended exterior wall mock-up.
62. This subcontractor shall prioritize and maximize the under slab 3D BIM modeling for utilization of below slab conduit raceways prior to concrete placement.
63. This Subcontractor shall Utilize Total Station layout of all seating boxes at the auditorium, all boxes located within concrete slabs, and conduit stub ups within walls.

Lightning Protection & Grounding

64. This Subcontractor shall furnish and install a complete grounding and bonding system as indicated on the contract documents from grounding source (ground loop, building steel, rebar, etc.) up to and including main grounding bus bars and connection any equipment requiring ground connection. This subcontractor shall furnish & install all grounding bars in telecommunications rooms.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP #38 – Electrical & Fire Alarm
Dated: 07.08.2024
Revised: 09.30.2024

65. This Subcontractor shall design, furnish and install a complete lightning protection system in conformance with the contract documents and applicable codes, including but not limited to conduit pathways, conductors, grounding rods, air terminals, etc. This subcontractor is responsible for providing a lighting protection system, UL Master Label. Note this system is delegated design for the lighting protection systems as indicated in the contract documents by this subcontractor.

Lighting

66. This subcontractor shall furnish & install all lighting as called for on the Contract Documents, including but not limited to all exterior lighting, signage lighting, athletic field lighting, landscape lighting, etc. Lighting may be shown on several drawings including but not limited to RCPs and Electrical Lighting plans. This Subcontractor shall provide lighting with the understanding that when documents indicate differences the greater quantity and quality prevails. This includes but is not limited to specialty lighting such as theatrical and aisle lighting.
67. This subcontractor shall furnish & install a complete and fully functioning theatrical lighting system for the auditorium, including but not limited to all rigging equipment, pipe & clamp support system, etc. This subcontractor must coordinate and fully integrate the AV & all other stage / auditorium system components for a complete system.
68. This subcontractor must identify all light fixtures that are installed in sheetrock ceilings and submit them for early release to ensure they are available prior to the start of sheetrock ceilings per the project schedule.
69. This subcontractor shall include coordination with general trades (BP #21) for modeling of all lighting fixtures and associated manufacturer clearances. Coordinate ceiling types, materials, soffits, architectural features, detailed locations, FFE and equipment. This subcontractor must model all light fixtures, as well as all electrical equipment provided by others and installed by this subcontractor, to ensure a fully coordinated electrical system with all other trades.
70. This Subcontractor shall provide shop drawing for all exit lighting & exit signs (low level and typical overhead) for approval by AHJ.
71. This subcontractor shall furnish and install a complete and fully functioning lighting control system, including but not limited to all modules, switches, sensors, panels, time clocks, photocells, conduit, wiring, connectors, circuitry, etc., as required to complete the system whether or not shown on the drawings. Reference for examples E500 & E501. This subcontractor shall furnish & install all wiring and infrastructure necessary to provide network connectivity to lighting controls devices and components, including but not limited to network cabling, terminations, patch panels, etc.
72. This Subcontractor shall coordinate directly with all other trades providing auditorium & stage equipment for all lighting and power requirements, for example theatrical seating & motorized curtain rigging vendors.
73. This Subcontractor shall coordinate under slab electrical infrastructure with all Subcontractors to ensure proper rough in requirements are installed for approved equipment, fixtures, devices, etc.
74. This Subcontractor shall coordinate and store lighting materials off site in an appropriate facility. It should not be assumed the building will be secure nor large enough to store lighting materials.

Low Voltage and Security System Rough-in & Coordination

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP #38 – Electrical & Fire Alarm
Dated: 07.08.2024
Revised: 09.30.2024

75. This Subcontractor shall provide all in-wall conduit raceways and back boxes for all low voltage, telecom, security and AV systems as indicated on the contract documents. Any specialty AV or Telecom backboxes shall be furnished by the Telecom and/or AV subcontractor respectively and installed by this Subcontractor (i.e. Chief PAC boxes). This subcontractor shall provide all standard back boxes, NEMA rated boxes, and conduit pathways to an accessible location. This subcontractor shall furnish & install all grounding of LV pathways installed per the scope of work herein.
76. This subcontractor shall furnish & install all low voltage and security site underground raceways & ductbank required, including but not limited to ductbank for new telecom service, underground raceways / conduit for site cameras, all handholes, etc. For a reference see sheet SU100.
77. This subcontractor must expedite their 3D BIM model and shop drawings of low voltage and AV rough in order to ensure this is reviewed and fully coordinated with the low voltage and AV subcontractor.
78. Where low voltage, tele/data, AV & Security jacks share a common floor box with 120vac power, this contractor is required to furnish and install the back box, cover plate, and appropriate sized conduit with a pull string (coordinated with the respective Tel/data sub-contractor) which will be routed to the nearest accessible ceiling in accordance with typical installations throughout the project. The tel/data, Security & AV subcontractor (BP #39) will pull the data lines and terminate the jacks.
79. This subcontractor shall furnish & install all in-wall raceways & junction boxes required for access controlled & secured doors, including but not limited to junction boxes, back boxes, conduit for power, conduit for low voltage cabling, pull strings, etc. This includes conduit raceway through the door frame up to an accessible location in the ceiling. For example, reference drawing TY302. Please note that references of electrical components being installed by "General Contractor" will be by this subcontractor. Raceways within the door slab shall be provided by the Doors/Hardware Subcontractor (BP #20).
80. This subcontractor shall furnish & install all line side power (i.e. 120V) from electrical panels to power supplies / transformers & equipment required for any access controlled & secured doors, and/or auto-opening doors. Power supplies and transformers shall by furnished and installed by the Door Hardware Subcontractor and/or Low Voltage Subcontractor for their respective systems.
81. This subcontractor must coordinate and integrate with the BDA / DAS / ERRCS system(s), including but not limited to fire alarm integration. This subcontractor is solely responsible for furnishing & installing all fire alarm infrastructure. Rough-in for DAS / BDA / ERRCS systems will be furnished and installed by the Low Voltage Contractor (BP #39), since this is a delegated design and the drawings do not indicate the system requirements and device count.

BMS / ATC Coordination

82. This Subcontractor shall provide power to HVAC ATC Subcontractors Control Panels. Any and all other electrical power connections beyond ATC/DDC Control Panel devices shall be furnished and wired by the ATC Contractor, at no additional cost to the project. This requirement includes the furnishing and installing of 120V, circuit breakers in electric panelboards, wire, conduit junction boxes, etc.

Fire Alarm

83. This subcontractor shall furnish and install a complete and fully functioning, code-compliant fire alarm system per the documents.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP #38 – Electrical & Fire Alarm
Dated: 07.08.2024
Revised: 09.30.2024

84. This subcontractor shall furnish and install paging speakers associated with the fire alarm system as shown in the fire alarm drawings and specifications.
85. This subcontractor shall furnish and install conduit and raceway for the fire alarm system.
86. This subcontractor shall coordinate, furnish and install and terminate all fire alarm requirements associated with the Building Temperature Controls (BAS / BMS) Vendor (BP #37) including but not limited to the sequence of operations.
87. This subcontractor shall coordinate, furnish, install and terminate all fire alarm components necessary for fire smoke dampers that are provided by others.
88. Coordinate locations of all Fire Alarm devices, including but not limited to pull stations, horn strobes, etc. shown on the contract documents with the Architect/Engineer and with Turner to resolve any conflicts with the Work of other trades and to confirm exact locations.
89. This subcontractor shall furnish & install all the power required to operate a complete Fire Alarm system. For example, if multiple control panels need individual power circuits, and only one is shown, any additional circuits for this equipment will be this subcontractor's responsibility. Any additional circuits will be detailed, quantified, and reported to the Design Team.
90. This Subcontractor will furnish and wire all duct smoke detectors consistent with the Fire Alarm Specifications and per Contract Documents. This subcontractor will coordinate locations, orientations, layout & size of duct smoke detectors in conjunction with the HVAC contractor (BP #37). HVAC Subcontractor (BP #37) will install the duct smoke detectors. This subcontractor will furnish and install any necessary transformers and low voltage wiring. All fire alarm terminations will be by this subcontractor.
91. This Subcontractor shall wire smoke detectors that are factory installed and integral to HVAC units (and furnish and install fire alarm modules as required). This subcontractor shall wire all smoke/fire dampers furnished and installed by others. This subcontractor shall wire and make final connections to all the duct mounted smoke detectors & FSD's for a fully functioning and complete system. This subcontractor shall review and include any devices shown on Mechanical Drawings in addition to the Electrical/Fire Alarm drawings.
92. This Subcontractor shall furnish and install wiring and connection of sprinkler system equipment & components to the Fire Alarm system, including but not limited to water flow and supervisory switches. The Fire Alarm drawings may not show all devices, this subcontractor shall review and include any devices shown on Fire Protection Drawings in addition to the Electrical drawings. Fire Protection / Sprinkler subcontractor (BP #35) shall furnish and install the switches.
93. This Subcontractor shall coordinate with the Security (BP #39) & Door Hardware Subcontractor (BP #20) to furnish & install all power and fire alarm integration for access controlled & secure doors, including but not limited to all fire alarm cabling, relays, control modules, terminations, etc. This Subcontractor shall coordinate Door holders or closers withhold-open provided as part of door hardware and security specifications.
94. This Subcontractor shall coordinate with the Low Voltage subcontractor (BP #39) for integration of the BDA / Emergency Responder Radio Communication System (ERRCS) as it pertains to providing a complete, fully functioning, and compliant fire alarm system.
95. This Subcontractor shall Coordinate FA device depth requirements with architectural finishes, depths and clearances and notify the Design team of any conflicts via the RFI process.
96. This Subcontractor shall coordinate, furnish and install all FA devices required in the elevator hoist ways to meet the design documents, NFPA and Authority Having Jurisdiction.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP #38 – Electrical & Fire Alarm
Dated: 07.08.2024
Revised: 09.30.2024

97. This Subcontractor shall coordinate and provide all required components and interconnect wiring for the operation and monitoring of the Food Service Equipment Ansul System. (Reference drawing E400 for location)
98. This subcontractor shall coordinate and provide all required components for the operation and monitoring of the natural gas detection systems.
99. This subcontractor shall coordinate, furnish, & install all wiring and components necessary for the operation and monitoring of roof smoke / heat vents, for an example see A103D.
100. This subcontractor shall coordinate, furnish, & install all wiring and components necessary to mute all AV, sound systems, and theatrical systems, for an example see the sequence of operations on E701.
101. This Subcontractor shall include pretesting 100% of the fire alarm devices PRIOR to performing acceptance testing with Turner and the AHJ. The pretesting shall be performed during off hours.
102. This Subcontractor shall coordinate elevator recall and elevator shunt trip Systems with Elevator Contractor indicated on Electrical Drawings.

Commissioning and Testing

103. This Subcontractor shall fully cooperate with the Owner's Commissioning Agent for commissioning of systems furnished and/or installed by this Subcontractor.
104. This Subcontractor will provide a dedicated engineer / staff person on site dedicated to the contractor commissioning of all systems prior to occupancy. This includes documenting, organizing and submitting to the owner all startup reports, pre-functional checklists and any performance reports that may be required for each piece of equipment.
105. This Subcontractor's Project Manager and Commissioning engineer shall attend a weekly Commissioning/MEP coordination meeting for the duration of the project.
106. This subcontractor shall include sufficient time to fully commission all systems. Adequate manpower shall be available to fully meet the commissioning requirements.
107. Start-up reports shall be submitted to Turner within (3) days of startup.
108. This Subcontractor shall submit fully filled out Pre-Functional and Functional test reports to TCCo.
109. This Subcontractor shall perform all required testing in accordance with the specifications. Testing is to be performed in a manner so as to complement the schedule and procedure of construction, and the Work of others. Test reports shall identify the system, infrastructure and area testing with specified test requirements. Any and all manpower, temporary connections, etc. required to accomplish this work in this manner are included. NOTE: This Subcontractor will test every piece of equipment in the presence of Turner and / or the Engineer and provide a full report to Turner and the Engineer accordingly.
110. This subcontractor shall coordinate with the Authority Having Jurisdiction as required per the plans and specifications including those referenced in The Statement of Special Inspections. This subcontractor shall provide Turner a minimum of seventy-two (72) hour advance notice for all required inspections.
111. This Subcontractor shall include all necessary shutdowns and / or tie-ins for your specific systems. This subcontractor shall assume all shutdowns and tie-ins are to be performed premium time; provide proper notification and coordination with all affected parties (Owner, Turner, local agencies, utilities, etc.).

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP #38 – Electrical & Fire Alarm
Dated: 07.08.2024
Revised: 09.30.2024

112. This Subcontractor shall complete all identification, labeling and tagging prior to the installation of the ceiling grid by others so as to allow for proper inspections as to thoroughness of these items.

113. This Subcontractor shall include in their Bid all necessary overtime and / or off-hour work for testing so as not to delay the Work of other Trade Subcontractors. This includes testing in conjunction with any other Trade that tie-in to this Subcontractor's scope of Work.

114. This subcontractor will be responsible for all costs associated with the reopening and patching of ceilings or walls required for corrective work. All required testing of piping must be scheduled and completed before ceilings are installed. This subcontract includes any out of sequence work and testing required to complete the work before ceiling work starts

115. This Subcontractor shall participate in rough-in inspection coordination with other trades and Turner utilizing color coded framing identification to illustrate completion and inspection ready areas. Color code key and inspection sequencing will be identified by Turner Superintendent.

116. This Subcontractor shall provide fuel for the Generator testing and Commissioning as well as ensure a full tank of fuel is present at time of substantial completion acceptance by the Owner. This subcontractor must provide all components necessary to fully test the generator, including but not limited to temporary load bank as needed.

117. This Subcontractor shall provide training as specified for all of the equipment and systems furnished by this Subcontractor by phases. This Subcontractor shall include two (2) man-days of additional training be used at Turner Construction Company's discretion.

118. This subcontractor shall include all training required for systems installed by this subcontractor, including but not limited to videotaping the training sessions for turnover to the Owner.

SourceBlue Coordination

119. This subcontractor has received and understands the SourceBlue Equipment List and Coordination Matrices. This subcontractor accepts and agrees to perform the scope identified as this subcontractors responsibility in these matrices.

120. This Subcontractor shall coordinate, receive, offload, hoist, protect, store, set in place, install, wire, & test all electrical distribution equipment being furnished by SourceBlue or others. This shall include start up requirements and commissioning. Once this subcontractor receives and accepts delivery of equipment provided by others, it is in their sole care & custody. This subcontractor is responsible to inspect and identify any damages or deficiencies prior to accepting delivery & taking custody. If any equipment or component is damaged or lost after taking custody, it will be the responsibility of this subcontractor to repair or replace it at their expense.

121. This subcontractor shall provide off-site storage for electrical equipment furnished by SourceBlue. Materials shall be brought on site per "Just In Time Delivery" provisions. This subcontractor shall include **6 months** of offsite storage for all equipment supplied by SourceBlue.

122. This subcontractor shall furnish & install all electrical distribution equipment and components **not** identified as being furnished by SourceBlue.

123. This subcontractor is responsible for the means & methods of rigging and fitting electrical distribution equipment through existing & new conditions (i.e. doorways). This subcontractor shall assume the generator and main electrical switchgear will be rigged and installed in place on premium time.

Coordination & Miscellaneous

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP #38 – Electrical & Fire Alarm
Dated: 07.08.2024
Revised: 09.30.2024

124. The intent of the project Lean initiative is that all items that are to be installed are to prefabricated, arranged and shipped to project for ease of installation. Devices installed with partitions will be prefabricated with conduits/ piping as coordinated in the BIM model. These devices are to be packaged and labeled by room for ease of installation (kit-of-parts).

125. This subcontractor shall fully participate in all 3-D coordination, this Contractor stall take the lead on modeling the ceilings and developing with the other Subcontractors a comprehensive coordinated Reflective Ceiling Plan for all ceiling devices, light fixtures, soffit conditions and special framing support systems.

126. This subcontractor shall provide shop drawings and models showing blocking requirements for their systems and scope of work. Blocking will be furnished & installed by the General Trades Subcontractor. This subcontractor is responsible for coordination in order to ensure the correct type & size of blocking is provided in the correct locations.

127. This subcontractor shall coordinate all installations to meet accessibility requirements as noted in the contract documents and all NEC clearance required for maintenance and code.

128. This Subcontractor will be required to relocate any conduit, wire, or other part of the Electrical system installed by this subcontractor that deviates from the coordinated drawings that prohibits access to any equipment, valve, damper, junction box or anything else requiring access in the future. Acceptable access shall be deemed by Turner, Owner, Engineer, or Cx agent.

129. This Subcontractor will coordinate, furnish and install their work within millwork & casework in accordance with the contract documents and building code. This subcontractor shall include pathways, wiring, devices and cover plates within finished walls, millwork panels, desks, etc.

130. This subcontractor shall receive, rig, install, and power all motor starters and VFD's for equipment furnished by owner and other subcontractors.

131. This subcontractor shall receive, rig, install, and power all owner furnished equipment as indicated in the contract documents.

132. This Subcontractor shall coordinate, furnish and install all electrical power & controls to motorized shades and shade controllers, including but not limited to interconnecting low voltage wiring, wall switches, all wiring associated with integrating motorized shades and the lighting control system, etc... The shades, motors, and motor controllers will be furnished & mounted by the Shade Subcontractor (BP #33). This subcontractor shall be responsible for assisting the Shade Subcontractor (BP #33) with testing the motorized shade systems upon completion.

133. This subcontractor shall make all internal connections between shipping splits needed for mechanical equipment.

134. This Subcontractor shall maintain utmost care so as not to damage Spray-on Insulating materials. Any and all damages and / or over-scraped areas, which may require repair, shall be back charged to the Subcontractor that causes the damage. Hangers and supports shall be installed prior to SOFP operations to minimize scraping after the fact.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP #38 – Electrical & Fire Alarm
Dated: 07.08.2024
Revised: 09.30.2024

135. This Subcontractor shall furnish, F.O.B. jobsite, all access doors for all valves and other equipment requiring access and which may become inaccessible at a later date in the drywall and masonry assemblies. This Subcontractor shall arrange their work in such a manner to minimize the quantity of access doors required. All items requiring accessibility shall be located in already accessible areas, such as above lay-in ceilings, etc. if at all possible. It is the responsibility of the Mechanical Subcontractor to coordinate and provide information regarding the location, sizes and quantities of access doors, panels, etc. required for their Work as well as furnish same. Failure to furnish the access doors and / or coordinated locations such that other Subcontractors (e.g., masonry, drywall, etc.) must go back to complete work, shall result in a back-charge to this Subcontractor for out of sequence Work accordingly. Also note that all required access doors and / or panels shall be furnished from one (1) manufacturer with their ratings consistent with the respective partition / ceiling / floor ratings and must be keyed alike. Access door type will be per the architect's direction in each location. This Subcontractor shall provide access door shop drawings indicating locations, types and sizes in architectural ceilings and partitions for design team review and approval.

136. This Subcontractor shall provide installation of all mockups identified in the project documents as well as materials for each type of wall/ slab penetration to complete a firestopping mockup for review and approval by AHJ and Design Team.

137. This subcontractor shall provide a concrete housekeeping pad layout to the concrete subcontractor for all required locations of concrete equipment pads.

138. This Subcontractor is required to cut ceiling pads for ceiling mounted devices installed under this scope of work. Ceiling pads shall be furnished by the Ceiling Subcontractor (BP #22).

139. The subcontractor shall include 2 complete cleanings of equipment and systems provided under this scope. Cleanings shall be performed prior to initial energizing equipment and again prior to turnover to the Owner. Cleanings shall include complete debris, dust removal and wiping of all internal and external components and shall be in accordance with manufacturers approved methods.

140. Additional drawings required during the coordination process are as follows:

    a) Space allocations and equipment paths for future equipment shall be planned for and included within all coordination drawings presented during the construction phases. This area shall not be utilized for any other means when equipment is installed.

    b) Provide penetration drawings for interior, exterior, foundation and floor penetrations. This should include dimensions off columns, elevations above the finish floor, and required opening size. Layout as required for proper field coordination is included under this scope.

    c) Provide equipment loading drawing showing loading paths of all equipment and required access. This includes any equipment purchased by others but received under this scope. This does not replace any Turner scheduling or logistics plan.

    d) Provide rigging plan for all equipment requiring the use of a crane. Plan does not replace any Turner Logistics plan.

141. This Subcontractor shall be responsible for complete coordination of all generator, UPS, ATS and Switchgear Controls. This shall include all coordination and wiring required between manufacturers and interconnection requirements.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP #38 – Electrical & Fire Alarm
Dated: 07.08.2024
Revised: 09.30.2024

142. In addition to all other protection requirements listed elsewhere in the project documents, this Subcontractor is responsible for complete protection of equipment installed under this scope. This shall include protection from external dust, debris, and adjacent construction activities. Additionally, all sensitive exposed components such as controls, meters, displays, etc. shall be individually covered with protective material to avoid damage and/or scratching. The protection plan shall be reviewed with Turner prior to implementation and all resulting damage from improper protection shall be the responsibility of this subcontractor.

143. This Subcontractor will be required to develop a Method of Procedure (MOP) for various specific operations occurring during construction, testing and commissioning of this project. The MOP must itemize in step-by-step, detailed fashion, each work task and time frame for a complete and safe procedure for execution of specific work activities. Examples of work activities requiring a written MOP may include, but not limited to, operations that present heightened safety concern, tie-in or shutdown of live/energized equipment, equipment/system testing, etc. The MOP must be prepared by This Subcontractor and submitted to Turner Construction for review and approval prior to the start of associated work.

144. This Subcontractor shall provide all permanent identification/labels for equipment, systems and components provided under this scope of work and per the specification requirements. Provide complete submittal of all identification components such as nameplates, tags, special signage, type, size, material, fastening/mounting methods, text, font and color for review and coordination prior to release. The submittal shall also include a table of all identification items clearly indicating the above characteristics for each and referencing associated cut-sheets/product literature.

145. This Subcontractor shall be responsible for the review of equipment submittals provided by other trades requiring external power connection and/or controls as part of this scope of work. Provide comments for coordination of adequate cable entrance space, method of connection, and conformance with required electrical installation and the project documents.

146. This Subcontractor shall coordinate all locations of equipment power supplies and disconnects with equipment locations installed by the other MEP Subcontractors

147. This Subcontractor shall provide equipment grounding infrastructure requirements. This will include but not limited to lighting, cable tray, SDT Flooring, IT/ AV/ Telecomm/ Plumbing/ Mechanical equipment per manufacturer, LV racks, all grounding bus bars, and devices and all other ground requirements weather indicated or not on the contract documents.

148. This Subcontractor shall coordinate with Roof Subcontractor to ensure penetrations meet specifications and layout requirements to maintain the required roofing manufacturer's warranty.

149. This Subcontractor shall layout, furnish and install all sleeves and inserts required for their work. This includes coordinating with Firestopping Subcontractor (BP #17) for receipt and install of pre-manufactured firestopped sleeves. Sound sealing shall be by this Subcontractor, including but not limited to acoustical putty pads. Firestopping will be by Fire Stopping Subcontractor.

150. Through wall and floor to floor fire stopping is included in a separate bid package. This subcontractor must coordinate all penetrations with the fire stopping subcontractor. This subcontractor will receive and install any in slab/cast in place sleeves or assemblies required for this subcontractor's scope of work.

151. This subcontractor shall ensure that the nothing hits the ground policy is followed during underground electrical infrastructure installation, as well as above grade.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP #38 – Electrical & Fire Alarm
Dated: 07.08.2024
Revised: 09.30.2024

D. Safety

1. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible for removing snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.
2. This Subcontractor shall provide a site-specific plan on how they will comply with Turner's Ladder's Last Program.
3. This subcontractor shall ensure that any Lulls used on site are equipped with hydraulic fork positioners.
4. This subcontractor shall engage a 3rd Party to complete a GPR Survey to mark out existing utilities under and in the general area of any proposed Mobile Crane locations.
5. This Subcontractor to eliminate slip/trip/fall hazards to surrounding trades or ensure all stub ups extend a minimum of 3' above the slab or walking surface. If this is not possible, a 3' or higher cone must be placed over the stub up. Impalement protection is required on all stub up, when a hazard exists.
6. This Subcontractor is to mark with labels all Temporary Electrical Power Panels and circuit breakers. All electrical panels (temporary or otherwise) shall be governed by an external main disconnect switch at the panel.
7. All temporary power receptacles shall be protected by Ground Fault Circuit Interrupters (GFCI).
8. The electrical contractor must perform and document monthly testing and inspection of all temporary power installations.
9. This subcontractor to provide a minimum of Battery Charging Stations with 8 outlets in 2 locations per each floor of new construction and each shall be designated only for charging tool batteries. Battery charging stations shall be constructed as a shelf or rack.
10. All temporary lighting shall be completely protected on all sides to eliminate the potential of the bulb coming in contact with anything.
11. All temporary lighting shall be run with sheathed multi-conduction wire. No single strand wiring is allowed. Temporary lighting must never be put on the same circuit as temporary or permanent receptacles; temporary lights must be on a dedicated circuit and cannot be used for power.
12. Temporary lighting must be at least 8 feet AFF, LED and generate a minimum of 8-foot candles in all construction work areas. There shall be at least one bulb per room throughout the building.
13. This Subcontractor, prior to concrete slab on deck placements shall install temporary lighting from the deck above by pulling temporary lights up through the deck.
14. All temporary power connections must be either 8 feet AFF or installed in a junction box. Monkey fists are not allowed below 8 feet.
15. This Subcontractor must have all energized switches and outlets covered with wall plates prior to energizing these circuits.
16. This subcontractor shall provide a written plan showing the temporary lighting and power receptacles.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP #38 – Electrical & Fire Alarm
Dated: 07.08.2024
Revised: 09.30.2024

17. This subcontractor shall hardwire an evacuation horn and strobe at Three locations per floor with two pull stations on the ground level. Locations shall be reviewed by the Turner Superintendent.
18. This subcontractor shall install emergency lighting in stairwells, lamps shall remain lit for 1 hour in the event of a loss of power to the building.
19. This subcontractor shall utilize a threaded rod cutter in lieu of a porta band or grinder to cut all threaded rods.
20. This Subcontractor shall protect all downward protruding threaded rods with rubber caps to prevent injury to employees while working around rods.

E. Logistics and Schedule

1. This subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

F. Exclusions

1. This Subcontractor shall EXCLUDE Trenching, excavation & backfill (by Sitework Subcontractor (BP #09))
2. This Subcontractor shall EXCLUDE concrete bases for site light fixtures (by Sitework Subcontractor (BP #09))
3. This Subcontractor shall EXCLUDE wood backer boards in Electrical rooms (By General Trades (BP #21))
4. This Subcontractor shall EXCLUDE Penetration Firestopping as it will be performed by Firestopping Subcontractor (BP #17). This Subcontractor shall provide an add alternate on the Bid Form of Proposal to perform penetration firestopping related to this scope of work.

G. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

Unit Prices:	**Amount**
Refer to Form of Proposal	

H. Alternate Prices

The following Alternate Prices reflect the work of this bid package under which the bid proposal was ***submitted, and these alternates shall remain valid for the life of the project and include all costs for a*** complete installation.

Alternates:	**Amount**
Refer to Form of Proposal	

Additional Provisions/Scope of Work

State Project No. 057-0114 N
Greenwich, CT
BP39 – Low Voltage & AV
Dated: 07.08.2024
Revised: 09.30.2024

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***BP #39 Low Voltage & AV Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***BP #39 Low Voltage & AV Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
270536	Cable Trays For Communication Systems
271000	Structured Cabling
274100	Audio Video Systems
275116	Public Address System
275313	Clock System
276010	Emergency Responder Radio Coverage System
280500	Security Conductor Cables
280528	Pathways for Security Systems
281300	Access Control System
281600	Intrusion Detection
282300	Video Surveillance System

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
Div 00	Division 00 – Procurement and Contracting Requirements
Div 01	Division 01 – General Requirements
019113	General Commissioning Requirements

Bid Package Specific Scope

2. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
3. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
4. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
5. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.
6. The drawings are diagrammatic and may not be complete in every detail. They reflect the intent of the Arch/Engineer to provide for a complete working system in compliance with all codes as shown by the documents. This contractor shall include any other equipment or devices necessary to provide a complete functioning system. This Trade Contractor shall include, as part of his work, the cost of relocating his work, due to the coordination procedure as part of his trade agreement price.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP39 – Low Voltage & AV
Dated: 07.08.2024
Revised: 09.30.2024

7. This Subcontractor shall provide a full-time competent Project Manager for the duration of the project. This individual must have the authority to make all decisions for this subcontractor, attend all weekly meetings, and be responsible for all lower tier subcontractors and vendors. This Subcontractor shall submit a complete organization chart indicating the title and names of the people that will staff the project. Submit resumes of each person on the organization chart for Turner's approval. This shall include Project Managers, Commissioning Manager, Foreman, Superintendents and other key personnel as required by Turner Construction.
8. This Subcontractor shall be required to continuously record the progress of the Electrical Work on a record set of Drawings, to be maintained on the jobsite at all times. The Architect, Engineer and Turner will review these Documents on a monthly basis in conjunction with their monthly payment application review; this shall be a condition of approval of each progress payment.
9. This Subcontractor shall examine the work of others, which will affect this subcontractor's work and notify Turner well in advance of any condition which will prevent the proper execution of this subcontractor's work. This shall include but not be limited to this subcontractor reviewing the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled. Any notice provides sufficient time to repair conditions without impacting overall schedule. Commencement of this subcontractor's work will constitute this subcontractor's acceptance of the existing conditions.
10. This Subcontractor is aware that this is a High-Performance Building and submittals should be submitted according to these standards. This Subcontractor has included all costs associated with meeting these requirements as set forth in the Division 1 Specifications.
11. This Subcontractor will provide the necessary written documentation for meeting the CT High Performance requirements as outlined in the Division 1 specifications.
12. This Subcontractor shall provide all necessary layout including benchmarks, extending of control lines, etc. in order to properly perform the Work.
13. This Subcontractor shall be responsible for providing out of sequence work at no additional costs when required in coordination with other trades.
14. Utilize total station system to layout and set hanger supports and layout risers/ boxes/ penetrations/ underslab infrastructure.
15. This subcontractor will provide all supports and support systems for Electrical equipment and piping if not indicated on the structural drawings. Systems shall meet the requirements of seismic and sway parameters per the local building code and project specifications.
16. This subcontractor shall include all costs for escalation on materials, labor, equipment, etc. for the durations indicated on the project schedule.
17. Each Subcontractor understands that Quality Control and Quality Assurance is a specific commitment and attitude, which is required during the implementation of the work. The focus required to establish a quality level, by developing in-place mock-ups, by providing skilled supervision and by monitoring daily production quality are all expected to be carried out during the execution on this Contract.
18. It is understood that the specific warrantee/guarantee period will start when the equipment/system is accepted by the Owner for their operation/use at this time of Substantial Completion. Any gap between the scheduled start up of equipment and owner acceptance of the system shall be included.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP39 – Low Voltage & AV
Dated: 07.08.2024
Revised: 09.30.2024

19. This Subcontractor shall review, conform to, and furnish and install all requirements included in the Safety Additional Provisions included in this Agreement. This Subcontractor understands that this document is project specific, and all provisions must be included in this Subcontractors' bid.
20. This Subcontractor has reviewed the Logistics & Phasing Plans and the Construction Schedule and has included all associated costs as relevant to this scope of work. It is extremely important to coordinate your work with the other adjacent Subcontractors during the various phases and perform the work as required by these documents. No come back costs will be entertained.
21. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
22. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
23. This Subcontractor will provide all pricing for changes within five (5) calendar days of notice of change (without exception). If the subcontractor does not submit pricing within these terms, it will be assumed a ZERO cost change. The change orders shall include man-hours, material costs, tax and mark-ups as separate line items broken out separately. This subcontractor will utilize Turner's standard change order cover sheet for all change orders.
24. All Change Order quotes shall be price labor per NECA Column 1 Full breakdown of all pricing is required and should be broken out separately for each drawing. Pricing shall be provided in accordance with the expected project conditions, breaking out any premium installations required at the time of the installation ie: closed ceiling, furniture, additional cleaning etc. No additional compensation will be considered for logistics, staging, inefficiencies and/or coordination with other contractors in not clearly broken out in the Change Order Proposal.
25. This Subcontractor shall organize and neatly place all materials, tools, etc. This Subcontractor shall remove all debris resulting from their work on a daily basis to a dumpster provided by others. No trash or debris will remain in the work areas at the end of the shift. If debris is left in the work areas, it will be removed to the dumpster by others, and the labor expense back charged to the responsible Subcontractor. Large sections of debris shall be disposed of to a dumpster provided by others by this Subcontractor.
26. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
27. No truck parking/idling is allowed on streets adjacent to the project site while waiting to unload. This Subcontractor shall include accommodations as required to adhere to "just in time" deliveries. Refer to Turner's "Logistic Plans – Scope of Work" for delivery restrictions.
28. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
29. This Subcontractor's Project Manager/Foreman shall participate in Pull Planning Sessions which affect their scope of work. This Project Manager/Foreman shall provide input to further develop the accurate sequence and timing for completion of the work.
30. This Subcontractor shall provide their own lifts and access for construction. No scaffolding will be provided.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP39 – Low Voltage & AV
Dated: 07.08.2024
Revised: 09.30.2024

31. This Subcontractor shall be responsible to core all penetrations required with this scope of work, this includes but is not limited to foundations, walls and slabs as well as where sleeves where not installed prior to placing of concrete.
32. This subcontractor is responsible for pulling all permits required for their scope of work.
33. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. The composite crew is intended to clean up general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)

Low Voltage & AV

34. This Subcontractor shall furnish and install complete Low Voltage & Security Systems, including but not limited to head end equipment, pullboxes, devices & cover plates, cameras, WAPs, device boxes, hangers, J-hooks, low voltage cabling, conduit, cable tray, racks, cabinets, panels, uninterruptible power supplies, switches, patch panels, cameras, card readers, door contacts, lock down, etc. for all low voltage systems, including but not limited to telecommunications, telephone, data, optical fiber, security, AV, DAS / ERRCS / BDA system(s), etc. as shown on Contract Documents.
35. All data cabling & terminations required to connect all building systems to the network / internet shall be furnished, installed, and terminated by this subcontractor, including but not limited to network connections for Fire Alarm, Lighting Controls, Elevator, BMS / ATC controls, electrical metering, etc.
36. This subcontractor shall furnish & install all infrastructure for the DAS / ERRCS / BDA, including but not limited to all fire rated cabling, conduit pathways, in-wall rough, hangers & supports, backboxes, devices, etc. for a complete and fully functioning system. For an example, see detail 4 on E502. The Fire Alarm subcontractor will be responsible for all fire alarm integration.
37. The Electrical Subcontractor (BP#38) shall furnish & install in-wall rough, including standard electrical boxes with conduit raceways to accessible ceilings, for use by this Subcontractor except as indicated herein. This subcontractor shall furnish & install any additional pathways required above ceilings. Non-standard boxes shall be furnished by this subcontractor and installed by the Electrical Subcontractor. This subcontractor shall furnish & install any in-wall pathways required at low voltage system cabinets, including but not limited to installing the low voltage cabinet(s).
38. This subcontractor shall furnish and install their own conduit & cable tray pathways as needed for low voltage systems above ceiling. The Electrical Subcontractor (BP#38) will only be providing in-wall rough for use by this subcontractor.
39. This Subcontractor shall coordinate all in wall rough-in requirements with the Electrical Contractor (BP #38) and shall assume infrastructure will be installed concurrently with Electrical infrastructure. It is the Low Voltage Subcontractor's responsibility to ensure timely and correct information is provided to the Electrical Contractor to facilitate this installation. Any cost associated with delays and or incorrect information will be the responsibility of this Low Voltage Subcontractor. This Subcontractor shall provide the Electrical Contractor with detailed shop drawings electronically via Revit, CAD, and PDF to properly coordinate this effort.
40. The Electrical Contractor (BP #38) shall furnish & install all low voltage a security site underground raceways & ductbank required, including but not limited to ductbank for new telecom service, underground raceways / conduit for site cameras, all handholes, etc. For a reference see sheet SU100.

Dated: 07.08.2024
Revised: 09.30.2024

41. This subcontractor shall coordinate, review, confirm, & sign off on all low voltage in-wall rough & site pathways being provided by the Electrical Subcontractor (BP#38). If any additional pathways (i.e. conduit, cable tray, etc.) are required after coordination & sign-off, then this subcontractor shall furnish & install them at their own expense.
42. This subcontractor shall furnish & install all ladder rack, conduit, & cable tray assemblies / pathways within data rooms (IDF/MDF). J-Hooks and other support of free air / plenum rated cabling for low voltage systems shall also be furnished & installed by this Subcontractor.
43. This subcontractor shall furnish & install all low voltage wiring and devices required for auto opening doors and access controlled / secured doors, including but not limited to cabling, terminations, access control panel(s) & board(s), door contacts, REX devices, card readers, alarms, power supplies / transformers, etc. Electric strikes to be furnished by others but installed & wired by this subcontractor. This subcontractor shall furnish & install all power supplies per the hardware schedule hardware specifications. This subcontractor shall furnish & install all 12V/24V wiring from power supplies to equipment. Raceways through doors frames will be furnished & installed by the Electrical Subcontractor. This subcontractor shall furnish & install all wiring through pathways for a complete and fully functioning door.
44. This subcontractor shall furnish & install all power supplies and transformers required for Low Voltage & Security system components. The Low Voltage Subcontractor shall be required to bring 120v power from the nearest junction box to any Low Voltage or Security power supply, panels, or subpanels that are not quantified on the Electrical series of drawings. If power is shown on the Electrical series of drawings, then the Electrical Subcontractor (BP#38) will furnish, install and terminate 120V power. This subcontractor shall furnish, install, & terminate all 12V/24V wiring from these power supplies, panels, etc.
45. This Subcontractor shall coordinate with the Electrical subcontractor for all shared floor box and poke-thru requirements. Shared floor boxes and poke thrus shall be furnished & installed by the Electrical subcontractor (BP #38). This subcontractor is responsible for installing and terminating all low voltage cabling within the floor box for the low voltage system. This subcontractor shall furnish & install all floor boxes that are dedicated solely to low voltage systems.
46. This Subcontractor shall furnish, install and test all cabling, terminations and devices associated with the Low Voltage scope of work.
47. This subcontractor shall provide PE stamped drawings, calculations, & all delegated design as indicated in the contract documents.
48. This Subcontractor shall furnish and install all site & exterior low voltage electrical as indicated on the contract documents, including not limited to security cameras, emergency call stations, gate card readers and all communications / control wiring, etc. Also reference Civil, Landscape, & Architectural drawings for system details. Irrigation control wiring and pathways for control wiring shall be furnished and installed by the Irrigation contractor.
49. This subcontractor shall furnish & install all low voltage required for Emergency Blue Light Call Stations. Conduit pathways, pole, and fixtures provided by the Electrical Subcontractor. This subcontractor must coordinate requirements with the Electrical Subcontractor. This subcontractor shall perform all low voltage cabling, terminations, and testing as required.
50. This Subcontractor shall coordinate all requirements of the new telecommunications service(s) with the Owner and local power company.
51. This subcontractor shall furnish & install a complete and fully functioning public address system as indicated in the contract documents.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP39 – Low Voltage & AV
Dated: 07.08.2024
Revised: 09.30.2024

52. This subcontractor shall furnish & install a complete and fully functioning building clock system as indicated in the contract documents.
53. This subcontractor shall furnish & install all grounding required for their own scope of work, including but not limited to equipment furnished by others but installed by this subcontractor. The Electrical Subcontractor (BP #38) shall furnish & install grounding bus bars indicated in the contract documents.
54. This Subcontractor shall coordinate, receive, offload, hoist, protect, store, set in place, install, wire, & test all Low Voltage & AV equipment being furnished by the Owner. This shall include start up requirements and commissioning. Once this subcontractor receives and accepts delivery of equipment provided by others, it is in their sole care & custody. This subcontractor is responsible for inspecting and identifying any damage or deficiencies prior to accepting delivery & taking custody. If any equipment or component is damaged or lost after taking custody, it will be the responsibility of this subcontractor to repair or replace it at their expense.
55. This Subcontractor shall design, furnish & install an independent support system for all hung equipment, fixtures, ceiling and piping system that are directly below the metal roof deck. This support system must attach to structural steel framing members as the metal roof deck cannot be utilized for support. Refer to A200 series drawings General Note #12 for criteria. This Subcontractor shall provide delegated design and include shop drawings and calculations indicating, but not limited to, load carrying capacities, point loads, etc. This Subcontractor shall include adding miscellaneous metal supports into the 3D model for coordination with all MEP trades.
56. This Subcontractor shall design and install all, but not limited to, channel support systems, heavy duty steel trapezes, seismic restraint hangers, etc. required for all Low Voltage & AV systems as indicated in the Contract Documents. All above ceiling scope shall be installed and inspected 4 weeks prior to any scheduled ceiling grid installation.
57. This subcontractor shall coordinate with the BP#38 electrical and BP#30 food service subcontractors to provide the required sequence of operations for the ansul & fire alarm systems. This subcontractor shall include all, but not limited to, wiring, conduit, devices, testing, etc. for complete operational systems. For example, muting of all sound systems and theatrical systems, refer to 1/E502, E701 & 5/P501.

Demolition

58. This subcontractor is responsible for all tracing of existing circuits prior to disconnect. Any circuits found to feed areas of the building or other buildings that are to remain active shall be rerouted to ensure occupied spaces remain active. This subcontractor understands that the demolition will be performed in multiple phases and will perform the demolition work according to these phases.
59. This subcontractor shall cut, cap, & make safe all Low Voltage & Security equipment and accessories scheduled to be demolished. For an example see sheet MEPD000 & MEPD001. This subcontractor shall cut and leave an air gap at the location of the start of the demo, this shall be at the upstream location at the source (i.e. equipment, valve, distribution point, etc.) All material to be removed shall be painted green by this subcontractor, green markings must be no more than 5’ apart. Any material to remain will be painted red with markings no more than 5’ apart. The Demolition subcontractor (BP #08) will remove and dispose of all materials.
60. The low voltage and security shall be cut, capped and made safe prior to the start of the demo/abatement.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP39 – Low Voltage & AV
Dated: 07.08.2024
Revised: 09.30.2024

61. The Demolition Subcontractor (BP #08) will perform all MEP mass demolition and removals (piping, conduits, wire, equipment, etc.) for all phases of the work after the services have been cut, capped and made safe by the MEP trades. The Demolition Subcontractor (BP #08) will remove and dispose of all the demolished material and equipment from the basement.
62. This subcontractor shall coordinate, furnish, & install a typical exterior conduit penetration and exterior back box at each different exterior wall material type, as part of the exterior wall mock-up process for Design Team review. Reference A315 for the intended exterior wall mock-up.

Commissioning and Testing

63. This Subcontractor shall fully cooperate with the Owner's Commissioning Agent for commissioning of systems furnished and/or installed by this Subcontractor.
64. This Subcontractor will provide a dedicated engineer / staff person on site dedicated to the contractor commissioning of all systems prior to occupancy. This includes documenting, organizing and submitting to the owner all startup reports, pre-functional checklists and any performance reports that may be required for each piece of equipment.
65. This Subcontractor's Project Manager and Commissioning engineer shall attend a weekly Commissioning/MEP coordination meeting for the duration of the project.
66. This subcontractor shall include sufficient time to fully commission all systems. Adequate manpower shall be available to fully meet the commissioning requirements.
67. Start-up reports shall be submitted to Turner within (3) days of startup.
68. This Subcontractor shall submit fully filled out Pre-Functional and Functional test reports to TCCo.
69. This Subcontractor shall perform all required testing in accordance with the specifications. Testing is to be performed in a manner so as to complement the schedule and procedure of construction, and the Work of others. Test reports shall identify the system, infrastructure and area testing with specified test requirements. Any and all manpower, temporary connections, etc. required to accomplish this work in this manner are included. NOTE: This Subcontractor will test every piece of equipment in the presence of Turner and / or the Engineer and provide a full report to Turner and the Engineer accordingly.
70. This subcontractor shall coordinate with the Authority Having Jurisdiction as required per the plans and specifications including those referenced in The Statement of Special Inspections. This subcontractor shall provide Turner a minimum of seventy-two (72) hours in advance notice for all required inspections.
71. This Subcontractor shall include all necessary shutdowns and / or tie-ins for your specific systems. This includes all required premium time, proper notification and coordination with all affected parties (Owner, Turner, local agencies, utilities, etc.).
72. This Subcontractor shall complete all identification, labeling and tagging prior to the installation of the ceiling grid by others so as to allow for proper inspections as to thoroughness of these items.
73. This Subcontractor shall include in their Bid all necessary overtime and / or off-hour work for testing so as not to delay the Work of other Trade Subcontractors. This includes testing in conjunction with any other Trade that tie-in to this Subcontractor's scope of Work.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP39 – Low Voltage & AV
Dated: 07.08.2024
Revised: 09.30.2024

74. This subcontractor will be responsible for all costs associated with the reopening and patching of ceilings or walls required for corrective work. All required testing of piping must be scheduled and completed before ceilings are installed. This subcontract includes any out of sequence work and testing required to complete the work before ceiling work starts.
75. This Subcontractor shall participate in rough-in inspection coordination with other trades and Turner utilizing color coded framing identification to illustrate completion and inspection ready areas. Color code key and inspection sequencing will be identified by Turner Superintendent.
76. This Subcontractor shall provide training as specified for all of the equipment and systems furnished by this Subcontractor by phases. This Subcontractor shall include two (2) man-days of additional training be used at Turner Construction Company's discretion.
77. This subcontractor shall include all training required for systems installed by this subcontractor, including but not limited to videotaping the training sessions for turnover to the Owner.

Coordination & Miscellaneous

78. This subcontractor shall fully participate in all 3-D coordination - All work per 3-D MEP Coordination Additional Provisions. This Subcontractor shall be responsible for all coordination activities and requirements identified for the Electrical Subcontractor in the BIM additional Provisions as pertinent to Low Voltage & AV systems scope of work. Ceiling modeling lead will remain by the Electrical Subcontractor however this Subcontractor shall coordinate Low Voltage with the Electrician as required.
79. This subcontractor must include 3D modeling of all cable bundles on J-hooks & IDF/MDF room raceways & equipment to ensure a fully coordinated installation, as well as for turnover of accurate 3D as-builts. This subcontractor must also coordinate locations of all hangers & embeds.
80. This subcontractor shall provide shop drawings and models showing blocking requirements for their systems and scope of work. Blocking will be furnished & installed by the General Trades Subcontractor. This subcontractor is responsible for coordination in order to ensure the correct type & size of blocking is provided in the correct locations.
81. The intent of the project Lean initiative is that all items that are to be installed are to prefabricated, arranged and shipped to project for ease of installation. Devices installed with partitions will be prefabricated with conduits/ piping as coordinated in the BIM model. These devices are to be packaged and labeled by room for ease of installation (kit-of-parts).
82. This subcontractor shall coordinate all installations to meet accessibility requirements as noted in the contract documents and all NEC clearance required for maintenance and code.
83. This Subcontractor will be required to relocate any conduit, wire, or other part of the Electrical system installed by this subcontractor that deviates from the coordinated drawings that prohibits access to any equipment, valve, damper, junction box or anything else requiring access in the future. Acceptable access shall be deemed by Turner, Owner, Engineer, or Cx agent

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP39 – Low Voltage & AV
Dated: 07.08.2024
Revised: 09.30.2024

84. This Subcontractor shall furnish, F.O.B. jobsite, all access doors for all valves and other equipment requiring access and which may become inaccessible at a later date in the drywall and masonry assemblies. This Subcontractor shall arrange their work in such a manner to minimize the quantity of access doors required. All items requiring accessibility shall be located in already accessible areas, such as above lay-in ceilings, etc. if at all possible. It is the responsibility of the Mechanical Subcontractor to coordinate and provide information regarding the location, sizes and quantities of access doors, panels, etc. required for their Work as well as furnish same. Failure to furnish the access doors and / or coordinated locations such that other Subcontractors (e.g., masonry, drywall, etc.) must go back to complete work, shall result in a back-charge to this Subcontractor for out of sequence Work accordingly. Also note that all required access doors and / or panels shall be furnished from one (1) manufacturer with their ratings consistent with the respective partition / ceiling / floor ratings and must be keyed alike. Access door type will be per the architect's direction in each location. This Subcontractor shall provide access door shop drawings indicating locations, types and sizes in architectural ceilings and partitions for design team review and approval.
85. This Subcontractor shall provide installation of all mockups identified in the project documents as well as materials for each type of wall/ slab penetration to complete a firestopping mockup for review and approval by AHJ and Design Team.
86. This Subcontractor is required to cut ceiling pads for ceiling mounted devices installed under this scope of work. Ceiling pads shall be furnished by the Ceiling Subcontractor (BP #22).
87. This Subcontractor shall maintain utmost care so as not to damage Spray-on Insulating materials. Any and all damages and / or over-scraped areas, which may require repair, shall be back charged to the Subcontractor that causes the damage. Hangers and supports shall be installed prior to SOFP operations to minimize scraping after the fact.
88. This Subcontractor will provide all pricing for changes within five (5) calendar days of notice of change (without exception). If subcontractor does not submit pricing within these terms, it will be assumed a ZERO cost change. The change orders shall include man-hours, material costs, tax and mark-ups as separate line items broken out separately. This subcontractor will utilize Turner's standard change order cover sheet for all change orders.
89. This subcontractor shall include 2 complete cleanings of equipment and systems provided under this scope. Cleanings shall be performed prior to initial energizing equipment and again prior to turnover to the Owner. Cleanings shall include complete debris, dust removal and wiping of all internal and external components and shall be in accordance with manufacturers approved methods.
90. Additional drawings required during the coordination process are as follows:
    a) Space allocations and equipment paths for future equipment shall be planned for and included within all coordination drawings presented during the construction phases. This area shall not be utilized for any other means when equipment is installed.
    b) Provide penetration drawings for interior, exterior, foundation and floor penetrations. This should include dimensions off columns, elevations above finish floor, and required opening size. Layout as required for proper field coordination is included under this scope.
91. In addition to all other protection requirements listed elsewhere in the project documents, this Subcontractor is responsible for complete protection of equipment provided under this scope. This shall include protection from external dust, debris, and adjacent construction activities. Additionally, all sensitive exposed components such as controls, meters, displays, etc. shall be individually covered with protective material to avoid damage and/or scratching. The protection plan shall be reviewed with Turner prior to implementation and all resulting damage from improper protection shall be the responsibility of this subcontractor.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP39 – Low Voltage & AV
Dated: 07.08.2024
Revised: 09.30.2024

92. This Subcontractor will be required to develop a Method of Procedure (MOP) for various specific operations occurring during construction, testing and commissioning of this project. The MOP must itemize in step-by-step, detailed fashion, each work task and time frame for a complete and safe procedure for execution of specific work activities. Examples of work activities requiring a written MOP may include, but not limited to, operations that present heightened safety concern, tie-in or shutdown of live/energized equipment, equipment/system testing, etc. The MOP must be prepared by This Subcontractor and submitted to Turner Construction for review and approval prior to the start of associated work.
93. This subcontractor shall include sufficient time to fully commission all systems. Adequate man power shall be available to fully meet the commissioning requirements.
94. This Subcontractor shall provide all permanent identification/labels for equipment, systems and components provided under this scope of work and per the specification requirements. Provide complete submittal of all identification components such as nameplates, tags, special signage, type, size, material, fastening/mounting methods, text, font and color for review and coordination prior to release. The submittal shall also include a table of all identification items clearly indicating the above characteristics for each and referencing associated cut-sheets/product literature.
95. Through wall and floor to floor fire stopping is included in a separate bid package. This subcontractor must coordinate all penetrations with the fire stopping subcontractor. This subcontractor will receive and install any in slab/cast in place sleeves or assemblies required for this subcontractor's scope of work. The coordination of wall and floor sleeves will be critical to the success of this project.
96. This Subcontractor shall layout, furnish and install all sleeves and inserts required for their work. This includes coordinating with Firestopping Subcontractor (BP #17) for receipt and install of pre-manufactured firestopped sleeves. Sound sealing shall be by this Subcontractor, including but not limited to acoustical putty pads. Firestopping will be by Fire Stopping Subcontractor.
97. This Subcontractor will furnish and install the electrical power circuits for the Automatic Door Operators and Electric Overhead Doors. This includes terminations of wiring, furnishing and installing of the relays/control modules for the interface with the fire alarm system, wiring electric hinges, crash bars, I.R. sensors, raceways for card readers and push plates (Includes running wires inside of metal frames). Wiring of the Fire Alarm system to the control modules will be by this subcontractor. Power supplies furnished by the Security Subcontractor shall be installed and connected to power circuits by this Subcontractor above an accessible ceiling. The Door Hardware shall be furnished by others.
98. This Subcontractor will furnish and install the electrical power circuits for Electric Overhead Doors. This includes terminations of wiring, furnishing and installing of the relays/control modules for the interface with the fire alarm system (if required), wiring electric sensors, raceways for card readers and key switches (Includes running wires inside of metal frames). Include coordination with Overhead Door installer for specific electrical requirements. Wiring of the Fire Alarm system to the control modules will be by this subcontractor (if required).

D. Safety

1. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible for removing snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP39 – Low Voltage & AV
Dated: 07.08.2024
Revised: 09.30.2024

2. This Subcontractor shall provide a site-specific plan on how they will comply with Turner's Ladder's Last Program.
3. This subcontractor shall ensure that any Lulls used on site are equipped with hydraulic fork positioners.
4. This subcontractor shall engage a 3rd Party to complete a GPR Survey to mark out existing utilities under and in the general area of any proposed Mobile Crane locations.
5. This subcontractor shall utilize a threaded rod cutter in lieu of a porta band or grinder to cut all threaded rods.
6. This Subcontractor shall protect all downward protruding threaded rods with rubber caps to prevent injury to employees while working around rods.
7. This Subcontractor shall eliminate slip/trip/fall hazards to surrounding trades and ensure all stub ups extend a minimum of 3' above the slab or walking surface. If this is not possible, a 3' or higher cone must be placed over the stub up. Impalement protection is required on all stub ups, when a hazard exists.

E. Logistics and Schedule

1. This subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

F. Exclusions

2. This Subcontractor shall EXCLUDE wood backer boards in Electrical rooms (By General Trades BP #21)
3. This Subcontractor shall EXCLUDE Penetration Firestopping as it will be performed by Firestopping Subcontractor (BP #17). This Subcontractor shall provide an add alternate on the Bid Form of Proposal to perform penetration firestopping related to this scope of work.
4. Exterior bollards (by Sitework Subcontractor (BP#9)

G. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

Unit Prices:	**Amount**
Refer to Form of Proposal	

H. Alternate Prices

The following Alternate Prices reflect the work of this bid package under which the bid proposal was ***submitted, and these alternates shall remain valid for the life of the project and include all costs for a*** complete installation.

Alternates:	**Amount**
Refer to Form of Proposal	

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#40 – Concrete Flatwork
Dated: 07.08.2024
Revised: 09.30.2024

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Concrete Flat Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***Concrete Flat Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
32 1313	Concrete Paving
32 1373	Concrete Paving and Joint Sealants

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
DIV 00	Procurement and Contracting Requirements

BP#40 – Concrete Flatwork
Dated: 07.08.2024
Revised: 09.30.2024

03 1000	Concrete Forming and Accessories
03 2000	Concrete Reinforcing
03 3000	Cast-in-Place Concrete
32 1726	Tactile Warning Surfaces

General Items

2. This Subcontractor will make every effort possible to ensure that their waste is properly sorted and disposed of to divert as much waste as possible from disposal in a landfill. This Subcontractor will track this recycling effort using the Online Waste Tracking System established by Turner Construction Company. Each dumpster ticket is to be logged into this system and its recycled content reported as a means of tracking the total percentage of construction and demolition debris diverted from landfills. There is a $50 per month fee for use of this website and this Subcontractor shall include all costs in his bid for use of this service. Refer to the attached User's Manual for more information about this system. Refer to the Turner Tracker Manual in the referenced "Forms and Policies," dated January 2015, in Turner's Project Manual.
3. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
4. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
5. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
6. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

Bid Package Specific Scope

7. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.

8. This Subcontractor shall include all measures needed for winter concrete installation as required based on the construction schedule timing of this work, including but not limited to tarps, blankets, heaters, enclosures, etc. This Subcontractor shall protect all concrete from freezing temperatures per the specifications. Upon finishing grading and turnover from the Sitework Subcontractor, this Subcontractor shall include any snow removal and protect the subbase from winter weather.

9. This Subcontractor shall provide a lined dumpster for the purposes of wash out to be available for cleaning trucks. Any concrete truck not using this for clean-out will be noted and the clean-up back-charge from the Site Subcontractor will be the Concrete Subcontractor's responsibility. Any excess concrete due to over placement shall be the responsibility of this Subcontractor to remove to this lined dumpster.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#40 – Concrete Flatwork
Dated: 07.08.2024
Revised: 09.30.2024

10. This Subcontractor shall repair, clean or restore any areas that are disturbed by concrete operations to the satisfaction of the Owner and Construction Manager. This includes immediately cleaning all concrete splatter and spills due to concrete placement by this Subcontractor on all finish surfaces or landscaped areas.

11. This Subcontractor shall attend a pre-installation meeting 30 working days prior to any concrete being placed. The meeting will be organized by Turner and the following people should be in attendance; the building official, Testing Agency, Special Inspector, Structural Engineer, Architect, Concrete Supplier and this Subcontractor. The purpose of the meeting is to review proposed concrete mix designs as well as project specific requirements and how they are to be achieved.

12. This Subcontractor shall submit cold weather and hot weather concrete placement plans in accordance with ACI and include all costs to implement these plans.

13. This Subcontractor shall furnish and install all layout, concrete formwork, concrete reinforcement and cast-in- place concrete placement per the documents for the following items. This shall include all accessories and means and methods required to provide a completed product per the documents.

    a. Concrete Sidewalk Pavement
    b. Concrete Footing for Bleachers
    c. Heavy Duty Concrete Pavement
    d. Concrete Utility Pads
    e. Concrete Curbs
    f. Concrete Edge at Synthetic Track Trench Drain
    g. Concrete Edge at Synthetic Sports Field
    h. ADA detectable warning tiles

14. This Subcontractor shall furnish and install all type “2A” pedestrian concrete pavement as shown on but not limited to the Landscape and Civil drawings both within the project fenceline and along abutting roads (see 2A/L501 for details). This Subcontractor is to include tactile warning strips, transitions, ramps and ensuring that all sidewalks meet ADA and local requirements.

15. This Subcontractor shall furnish and install all type “2B” heavy duty concrete pavement as shown on but not limited to the Landscape and Civil drawings (see 2B/L501 for details).

16. This Subcontractor shall furnish and install all exterior concrete utility pads, including but not limited to transformer pads, dumpster enclosure pads, gas meter pads, dust collection system pads and generator pad(s).

17. This Subcontractor shall furnish and install any structural grade rigid filler material at applicable locations.

18. This Subcontractor shall furnish and install any exterior cast in place concrete curbing.

19. This Subcontractor shall layout, form and place concrete and reinforcement for all stepped concrete where indicated.

20. This Subcontractor shall monitor the formwork during and after concrete placement to ensure the plumbness of edges and make adjustments as necessary.

21. This Subcontractor shall receive, distribute, and install any concrete embedded items supplied by others, including but not limited to anchor bolts, bearing pads, embedded angles, pad sleeves, etc.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#40 – Concrete Flatwork
Dated: 07.08.2024
Revised: 09.30.2024

22. This Subcontractor shall remove all snap ties, cut concrete fins and fill voids in the concrete surfaces within two weeks of concrete placement at exposed surfaces.
23. This Subcontractor shall provide all surveying and layout required for the work included with this package.
24. Immediately prior to the placement of concrete slabs, this Subcontractor shall thoroughly clean all areas to receive concrete. Compressed air shall not be used. This Subcontractor shall use vacuums or other methods that minimize dust.
25. This Subcontractor shall furnish and install haunched slabs where required. Reference details in the Structural drawings.
26. This Subcontractor shall furnish and install all outdoor concrete pads required for mechanical, electrical, and plumbing equipment including but not limited to those shown on the Civil and Landscape drawings. See list of exclusions at end of this document.

Coordination with Other Trades

27. This Subcontractor shall coordinate all requirements for Testing and Inspection in accordance with Field Quality Control section found in the Division 1 specifications and Concrete Specifications. This Subcontractor shall furnish any required cure box (or boxes) of sufficient capacity for concrete placement schedule. Inspections will be scheduled through the Construction Manager.
28. This Subcontractor shall be responsible for ordering, scheduling and sequencing of concrete deliveries required for the work. This shall include any premium time and standby labor required for continuous work (including the concrete supplier if required).
29. This Subcontractor will work closely with the Sitework Subcontractor to coordinate the scheduling of excavation for concrete flatwork areas as shown.
30. This Subcontractor shall coordinate all concrete work with all other subcontractors having work adjacent to or embedded within the concrete.
31. This Subcontractor shall coordinate and provide all openings in formwork for other trades as required. This includes box-outs and/or sleeves in slabs for MEP trades or other work that penetrates the concrete. Layout and sleeves shall be furnished by others and installed by this Subcontractor.
32. This Subcontractor shall coordinate with the Sitework Subcontractor for any drains, cleanouts, hand holes or valve caps within hardscaped areas to be maintained during the concrete pour.

Joint Sealants:

33. This Subcontractor will furnish and install all Joint Sealants within and at perimeter of work abutting adjacent work where required per the contract documents.

Expansion Control:

34. This Subcontractor will furnish and install Expansion Control where required within the concrete flatwork.

D. Exclusions

1. This Subcontractor shall exclude concrete lightpole bases or concrete fill for bollards (By BP #9 Sitework)

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#40 – Concrete Flatwork
Dated: 07.08.2024
Revised: 09.30.2024

2. This Subcontractor shall exclude foundation walls, strip footings, interior spread footings, piers, frost pads, recessed frost pads, interior slabs on grade, slabs on decks, elevator pits, sump pits, radon pits, interior housekeeping pads and any other interior structural concrete items (By BP #10 Concrete).
3. This Subcontractor shall exclude fence footings, gate footings, furniture footings, bench footings, athletic field equipment footings, signage footings, light pole bases, thrust blocks, encasement of ductbanks and bituminous concrete (By BP #9 Sitework).
4. This Subcontractor shall exclude type "2C" concrete pedestrian pavers (By BP #9 Sitework).
5. This Subcontractor shall exclude excavation, surface preparation and backfill (By BP #9 Sitework).
6. This Subcontractor shall exclude the frost walls beneath the exterior Chiller pads (By BP #10 Concrete).

E. **Safety**

1. This Subcontractor and its Contractors (rod busters) shall eliminate impalement and puncture hazards attributable to exposed rebar and anchor bolts. This Subcontractor is to utilize rebar that is candy caned (or bent to 180 degrees) to eliminate impalement hazards when approved by the Engineer of Record. If this is not possible, this Subcontractor is responsible for any rebar protection that may pose an impalement or laceration hazard to workers. This Subcontractor shall provide, maintain and remove all necessary rebar impalement protection. This Subcontractor, at the request of Turner, from time to time may be asked to bend steel bars over to eliminate impalement hazards. It will be this Subcontractors responsibility to comply with and complete these requests.

2. This Subcontractor shall provide daily clean up and removal of surplus concrete spoils from within the building and jobsite immediately following concrete operations and placed in dumpster that is approved for concrete disposal.

3. This Subcontractor shall ensure safe access/egress in and around all their work areas. If trenches are to be traversed ensure that walkways are at least 18 inches wide and are secured together when using to planks to make up the required width. If the travel height of the walkway exceeds 4 feet vertically this Contractor will install guardrails to prevent falls from same walkway. FORMWORK is not to be used for any type of walkway, ladder, scaffolding or any other type of support platform other than the intended use for which it was manufactured. Concrete formed and decked areas must have a continuous access corridor running through the work area to prevent employees from stepping over material.

4. This Subcontractor shall provide temporary portable generators or other power supply sources for their use until such time the temporary power has been brought to the site by others. Temporary portable power sources being used must be GFCI protected.

5. This Subcontractor to provide, install and maintains a safe, secured transition strip with beveled edges around the entire perimeter between all elevated and depressed slabs. This Subcontractor shall remove and dispose of the transition strip as directed by Turner.

6. Winter weather tarps are not allowed to be hung from the perimeter guardrail cables. This Subcontractor to furnish an independent means to secure the tarps. All tarps must be fire rated.

7. This Subcontractor shall utilize a rebar shear in lieu of a chop saw or grinder to cut rebar.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#40 – Concrete Flatwork
Dated: 07.08.2024
Revised: 09.30.2024

8. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible for removing snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.

9. This Subcontractor shall provide a site-specific plan on how they will comply with Turner's Ladder's Last Program.

10. This subcontractor shall ensure that any Lulls used on site are equipped with hydraulic fork positioners.

11. This subcontractor shall engage a 3rd Party to complete a GPR Survery to mark out existing utilities under and in the general area of any proposed Mobile Crane locations.

F. Logistics and Schedule

1. This subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

G. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

Unit Prices:	Amount
Refer to Form of Proposal	

H. Alternate Prices

The following Alternate Prices reflect the work of this bid package under which the bid proposal was ***submitted, and these alternates shall remain valid for the life of the project and include all costs for a*** complete installation.

Alternates:	Amount
Refer to Form of Proposal	

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#41 – Landscaping
Dated: 07.08.2024
Revised Date: 9.30.24

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Landscaping*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***Landscaping*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
11 6833	Athletic Field Equipment
32 8423	Irrigation Systems
32 9113	Soil Preparation
32 9913.29	Athletic Field Root Zone
32 9200	Turf and Grasses
32 9219.22	Athletic Field Seeding and Sodding
32 9300	Plants

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

BP#41 – Landscaping
Dated: 07.08.2024
Revised Date: 9.30.24

Spec. #	Specification Name
DIV 00	Procurement and Contracting Requirements
DIV 01	General Requirements

General Items

2. This Subcontractor will make every effort possible to ensure that their waste is properly sorted and disposed of to divert as much waste as possible from disposal in a landfill. This Subcontractor will track this recycling effort using the Online Waste Tracking System established by Turner Construction Company. Each dumpster ticket is to be logged into this system and its recycled content reported as a means of tracking the total percentage of construction and demolition debris diverted from landfills. There is a $50 per month fee for use of this website and this Subcontractor shall include all costs in his bid for use of this service. Refer to the attached User's Manual for more information about this system. Refer to the Turner Tracker Manual in the referenced "Forms and Policies," dated January 2015, in Turner's Project Manual.

Bid Package Specific Scope

3. This Subcontractor shall examine the layout and site conditions at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.

4. This Subcontractor shall furnish and install all the plantings as defined in the contract documents, including but not limited to trees, shrubs, grasses, ground cover and perennials as listed on the Plant Material List on drawing L402.

5. This Subcontractor shall include furnishing and installing all of the topsoil required for this scope of work in accordance with the contract documents. This Subcontractor is to assume that there will be no topsoil salvaged or stockpiled by the sitework contractor. See "Soil Preparation" specification 32 9113 for further clarifications.

6. This Subcontractor shall coordinate with the sitework contractor and flatwork concrete subcontractors regarding the timing of the installation of the hardscape included within their scopes of work. This Subcontractor is to coordinate their activities to minimize impacts to finish hardscape work. If this Subcontractor has to work around or travel over finished hardscape areas, this Subcontractor is to furnish and install any protective measures to avoid damaging the hardscape. Include plywood sheeting or wood planks for any locations where small equipment needs to pass over hardscape. Repair costs for any damage to finish hardscape will be incurred by this Subcontractor if it is determined to be at fault.

7. This Subcontractor shall furnish and install all mulches at planting bed areas as required by the contract documents. Include type "2D" Fiber Mulch as shown on but not limited to the L200 drawing series.

8. This Subcontractor shall provide the maintenance, watering, pruning, replacements, mowing and all warranty requirements defined in the contract documents for 1 year following substantial completion.

9. This Subcontractor shall furnish and install the irrigation system as required by the contract documents. This Subcontractor shall furnish and install any subgrade sleeving required beneath hardscape. Connection to water supply to be made 5' outside of foundation wall, piping up to that point fed from inside of the building is to be provided by the Plumbing Subcontractor.

10. This Subcontractor shall include furnishing and installing all mulch and plantings shown at Rain Gardens and Swales. See Exclusions for Rain Garden components that are to be provided by Others.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#41 – Landscaping
Dated: 07.08.2024
Revised Date: 9.30.24

11. This Subcontractor shall include 1 laborer per 10 person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m while the subcontractor is performing work on site. Composite crew is intended to cleanup general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)

Coordination with Other Trades

12. This Subcontractor shall coordinate all requirements for Testing and Inspection in accordance with Field Quality Control section found in the Division 1 specifications and Landscaping specifications.
13. This Subcontractor shall be responsible for ordering, scheduling and sequencing of deliveries required for the work. This shall include any premium time and standby labor required for receiving a delivery.
14. This Subcontractor will work closely with the Sitework Subcontractor to coordinate the scheduling of excavation, backfilling, utility and any subgrade work around the site so that it is not to impact or delay landscaping activities.

Safety/Logistics

15. This Subcontractor has reviewed the Logistics Plans and the Construction Schedule and shall include all associated costs as relevant to achieve this scope of work within the Project Schedule. No come back costs will be entertained. This Subcontractor shall include premium time for the scope of work in the following Areas: Maria's Garden, Courtyard 1116 & 1117, and Turn around area at main entrance vestibule between grid lines AF & EG including center circle.
16. This Subcontractor shall review, conform to, and furnish and install all requirements included in the Safety Additional Provisions included in this Agreement. This Subcontractor understands that this document is project specific, and all provisions must be included in this Subcontractors' bid.
17. This Subcontractor shall be required to store all onsite material on racks, carts or pallets capable of being easily moved and shall coordinate the delivery of and location of stored material with the Turner Superintendent. If material is stored on pallets, this Subcontractor is responsible to have a pallet jack onsite at all times. This Subcontractor shall include relocation and consolidation of materials as directed by Turner.
18. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible to remove snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.
19. This Subcontractor shall provide a site specific plan on how they will comply with Turner's Ladder's Last Program.
20. This subcontractor shall ensure that any Lulls used on site are equipped with hydraulic fork positioners.
21. This subcontractor shall engage a 3rd Party to complete a GPR Survey to mark out existing utilities under and in the general area of any proposed Mobile Crane locations.

Greenwich, CT
BP#41 – Landscaping
Dated: 07.08.2024
Revised Date: 9.30.24

22. This Subcontractor is to include the following **Trade Allowance:** 320 hours good for the life of the project for use as directed by Turner Construction. This is to cover labor and material costs for additional 5S site cleanup, restoration of abutting landscaping above and beyond what is shown on the contract documents or called for in this scope of work per the direction of the Turner Superintendent. Laborer Time to be included as journeyman rate including any required supervision. This will be billed based on the final agreed contractual wage rates and may only be expended by written authorization of Turner Construction and any unspent portion of this unused scope hours will be credited at the end of your contract based on approved labor rate.

D. Exclusions

1. This Subcontractor shall exclude concrete light pole bases, concrete planters or concrete fill for bollards (By BP #9 Sitework)
2. This Subcontractor shall exclude structural concrete, concrete sidewalk pavement, heavy duty concrete pavement, concrete utility pads, concrete curbs, concrete edge at synthetic track and ADA detectable warning tiles. (By BP #40 Flatwork Concrete).
3. This Subcontractor shall exclude dumpster enclosure pads, gas meter pads, generator pad(s), fence and gate footings, furniture footings, sign footings, light pole bases, thrust blocks, encasement of ductbanks and bituminous concrete (By BP #9 Sitework).
4. This Subcontractor shall exclude type “2C” concrete pedestrian unit pavers (By BP #9 Sitework).
5. This Subcontractor shall exclude exterior concrete pads for Air Cooling Chiller – 1 and 2 as indicated on the contract documents (By BP #9 Sitework).
6. This Subcontractor shall exclude all Rain Gardens and Swales including but not limited to filter fabric, pipe, crushed stone, bedding materials, subgrade, grading, Greenwich soil mix and scarifying and tilling soil beneath gardens. Refer to Rain Garden Typical Cross Section and 5’ Wide Stone Swale With 6” Underdrain details on drawing C504 (By BP #9 Sitework).
7. This Subcontractor shall exclude all below grade under drainage piping, roof leader drain piping and the above grade downspout boots between roof leaders and drain piping (By BP #9 Sitework).
8. This Subcontractor shall exclude fill materials as required by the contract documents to fill excavation at demolished building(s) (By BP #9 Sitework). Coordinate final grades with Sitework Contractor.
9. This Subcontractor shall exclude all site furnishings and fixtures, including but not limited to signage, bollards, concrete planters, site benches, bicycle racks, stepping stones, stone mulch and metal edging, seating and tables, live edge wood benches, boulders, vehicular gates, chain link fencing, metal screen fencing, baseball/softball field shade enclosures, athletic fencing, and dumpster enclosures as indicated on the contract documents (By BP #9 Sitework).
10. This subcontractor shall exclude the segmental block retaining walls indicated in the contract documents (By BP #9 Sitework).
11. This Subcontractor shall exclude the raised planters as indicated on the contract documents including but not limited to raised concrete planters per detail 3E on drawing L501. (By BP #9 Sitework).
12. This Subcontractor shall furnish and install all pitching rubber(s), home plate(s), and bases including but not limited to stanchions, ground anchors, and concrete blocks as indicated on the contract documents. Reference details 2B and 2C on drawing L601.

Greenwich Central Middle School Project
TEMPORARY LIGHT AND POWER ADDITIONAL PROVISIONS FOR CONSTRUCTION PURPOSES
July 8th, 2024

1. CODE REQUIREMENTS

a. The electrical work for construction purposes shall conform to all Federal, State and Municipal requirements and must comply with the National Electrical Code and the Occupational Safety and Health Standards of the Occupational Safety and Health Act of 1970. The Electrical Subcontractor shall obtain and pay for any required applications, permits and inspections pertaining to this work.

2. GENERAL

a. Temporary power (transformer, panels and NEMA 3R Enclosure) is to be on-line and fully functional within 8 weeks from the start of Phase 1 and 2 weeks from the start of Phase 2. Temporary work shall be installed in such a manner so as not to interfere with the permanent construction. If such interference does occur, it will be the responsibility of the Electrical Subcontractor to make such changes as may be required to overcome the interference. The cost of these changes are included as part of the contract price.

b. Power to the Turner Field Trailer and Jobsite Bathroom Trailer should be made available immediately upon Project commencement.

c. Local power centers shall be constantly maintained to prevent the accumulation of "rat's nest circuitry". All temporary wiring shall be suspended and maintained at least eight feet above finished floors and pass through permanent walls and partitions above the permanent ceiling level. No open conductor wiring is acceptable.

3. MATERIAL REQUIREMENTS

a. As the life of this installation is limited and as this installation will not form a part of the finished building, minimum cost is the basic requirement consistent with material and workmanship, which will satisfactorily, meet job conditions and regulations of all governing authorities.

b. The Electrical Subcontractor is to submit to Turner Construction for approval shop drawings indicating the temporary electrical distribution. The shop drawings shall include the typical floor plan with the location of the load centers and the schematic riser distribution indicating feeder sizes, distribution panels, branch sub panels and outlets for review.

4. MAINTENANCE

a. All temporary facilities are to be maintained and kept in good operating condition. Maintenance necessary to perform this work shall be provided so that other trades are not delayed.

b. The Electrical Subcontractor shall be responsible for installing and maintaining a reasonably balanced system and shall take current readings on the feeders at regular intervals as required by Turner. Temporary wiring is to be laid out, balanced and wire sized so as to produce a voltage drop of no greater than 5% at the extreme end of the line when operating at full load.

5. TRANSFER TO PERMANENT SERVICE

a. The permanent power service shall be activated as soon as possible, shutdowns and/or cut-overs shall not interrupt construction systems, and shall be coordinated with Turner.

Greenwich Central Middle School Project
TEMPORARY LIGHT AND POWER ADDITIONAL PROVISIONS FOR CONSTRUCTION PURPOSES
July 8th, 2024

6. REMOVALS AND SALVAGE

a. The Electrical Subcontractor shall disassemble and remove from the property all temporary electrical wiring, lights, equipment, etc. when its use is no longer required. Surplus material will be salvaged and the salvage value reflected in the lump sum price. This is to include the removal of the temporary power currently installed at the Turner trailer including all outside wiring supports etc. not removed by the utility company.

7. PROTECTION

a. The Electrical Subcontractor will protect his installation against weather damage and the normal operations of other trades. This includes all plywood/watertight enclosures.

8. SCOPE OF WORK

a. Provide labor, material, equipment, and power company fees and costs for the installation and maintenance of temporary light and power as may be required during the period of construction. Power will be derived from the following:

i. **Phase 1a – New Construction**: This subcontractor shall furnish & install all infrastructure required to bring temporary power to the jobsite from Orchard Street or Stanwich Road. This subcontractor must coordinate with the utility company. This subcontractor shall furnish & install temporary power poles as needed to run temporary power overhead. This subcontractor shall remove all temporary service components and poles once permanent power is established and temp. no longer needed.

1. **Service Size** – (2) 800Amp 480V 3-Phase Panels to be located adjacent to New Electrical Room 1069 – as not to inhibit installations of new services or work.
    a. Provide the necessary Sub-Panels as needed to support Temp Power and Lighting Provisions within the Building.
2. **Turner Trailer** – Provide and disconnect power to Turner Field Trailer
3. **Jobsite Bathroom Trailer** - Provide and disconnect power to a standard issue, self-contained Bathroom Trailer.

ii. **Phase 1b – Abatement Summer of '25:** This Subcontractor shall coordinate, install and disconnect (upon abatement completion) (2) 100amp panels (panels provided by Demo Contractor) within the existing school at locations shown to be abated on the Logistics Plan, Summer of '25.

1. Existing School Power should be coordinated and used – if not available, utilize Phase 1 temp power.

iii. **Phase 2a – Demo of Existing School:**

1. The Electrical Subcontractor shall utilize the existing school power source at the exterior transformer for Phase 2 Power, if feasible and does not inhibit other's work. If not deemed feasible, this Subcontractor shall coordinate and install a new service feed off the adjacent street(s) coordinating with the Utility company. The Electrical Contractor shall remove any temporary power upon completion of the Project.
2. Service Size – (1) 800 Amp 480v 3-Phase Panel
    a. This should be located near Turner Field Trailer and weather rated.
    b. Provide necessary transformers and pathways into Existing School to facilitate Selective Demolition
    c. This installation of temporary service shall be expedited to help facilitate demolition and take existing Electrical Service of the School offline. To assist in the Cut, Cap, Make Safe Process.

3. This Subcontractor shall coordinate, install and disconnect (upon demo completion) (3) 100amp panels provided Demo Contractor for Abatement within Existing School. This power shall be feed off of the existing school power, until temporary power of Phase 2 is ready, then a cross over to temporary power shall be provided to serve this panels.

9. **SPECIFIC SCOPE OF WORK**

a. Without the intent of limiting the scope of work, this section contains additional scope clarifications that compliment the contract drawings, contract specifications and other contract documents. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

b. The Electrical Subcontractor will install the temporary electrical service, including step down transformers required to provide sufficient distribution of the temporary electrical service for lighting and power to all points of the Project. The Electrical Subcontractor is to coordinate installation with Turner. The Electrical Subcontractor shall provide all temporary enclosures required. The Electrical Subcontractor will coordinate final switch sizing. Provide all breakers and disconnects as required for a safe, functional, code compliant system.

c. The Electrical Subcontractor shall design, engineer, furnish and install a complete temporary electrical system including Switchboards, breakers, transformers, panels, conduit, feeders, connectors, supports etc. to fully support the projected distribution loads. The design shall meet all applicable local and state codes and governing regulations.

d. The Electrical Subcontractor shall install a temporary disconnect at each temp power service that will cut off power to all temporary outlets.

e. The Electrical Subcontractor will furnish and install the temporary grounding system for the temporary service in accordance with the engineer and local codes.

f. The Electrical Subcontractor shall furnish, install and maintain temporary GFCI exterior rated outlets for use each temp. outlet location/power stand.

g. Temporary power requirements will largely be 120v small tool loads and temporary lighting (refer to temporary lighting section). Directly outside of each stairwell shall be a minimum of two GFCI protected quad outlets on two 20a circuits. Outlets shall be mounted to secure power stands off the floor and not attached to wall construction. (15) Temp power stands to be provided by Drywall Contractor. Additional quad power outlets shall be supplemented along corridors such that no temporary outlet is ever further than the reach of a 50 foot extension cord. Branch wiring/cords shall be routed overhead and in such to minimize running through new work. Route wiring/cords through corridors wherever possible.

h. On the exterior of the Building GFCI protected quad outlets will be installed at the base of the building perimeter. One Quad outlet per exterior elevation. (2) Quad outlets at all roof levels. Outlets should be protected from weather by means of temporary enclosures and weather rated boxes.

i. No temporary electric risers are to be run in elevator, mechanical shafts, or stairwells. Risers are to be sleeved and run up along an interior column, location to be determined by Turner's Project Superintendent. (Any electrical risers located within walls will be relocated at the expense of this Subcontractor to facilitate in wall inspections and not delay closing up the walls)

j. Battery Charging Stations (2 per floor) with 8 outlets each designated only for charging tool batteries and a rack for battery chargers shall be installed, maintained and removed at the direction of Turner

k. There are to be no interruptions of service for erection operations during normal working hours and any costs for shut downs required on off hours is included within the scope for the temporary electric service.

l. This Subcontractor shall provide temporary hoist way lighting for the elevator installation.

m. Furnish and install a temporary power service for the installation of the new Elevator. Coordinate with Elevator Subcontractor for switchover to permanent power once available.

n. This Subcontractor shall provide (26) temporary power hook-ups for other trades, for example welding operations and spray on fireproofing.

o. This Subcontractor shall provide temporary power feeds to all BAS/BMS Panels until final power is available. This subcontractor shall disconnect and remove all temp. power feeds once permanent power is connected.

p. This Subcontractor shall furnish and install Liveview Technologies, or similar as approved by Turner, solar powered site lighting and security camera systems with telephone poles, as laid out in the Logistics and Phasing Plans, including all hardware and software for a fully functioning temporary site lighting and security system. This subcontractor shall include all rental costs/fees, relocations and removal. This subcontractor shall furnish and install an additional camera setup at the toilet trailer; this is in addition to what is shown on the logistics and phasing plans.

q. This Subcontractor shall furnish & install temporary power to the temporary heating and cooling units, quantity and type per the Temporary Heating and Cooling Additional Provisions. This Subcontractor shall provide relocation and cut over of this temporary system to the permanent power source as soon as source is available in each area. This subcontractor will disconnect the units once no longer needed on site, as directed by Turner.

r. Subcontractor is required to inspect temporary power GFCI stations on a monthly basis and submit documentation of inspections to the Turner upon request.

10. <u>Temporary Lighting</u>

a. The Electrical Subcontractor shall include all labor and materials to install, maintain, relamp, and remove an OSHA approved temporary lighting system with pigtails and protective shields using 150-watt rough service bulbs. Temporary wiring will be of a moveable nature suspended from the structure above in such a manner so as not to do damage to the spray-on fireproofing when being installed, maintained, relocated, or removed.

b. All temporary lighting shall be circuited and controlled via a time-clock with an override switch. The intent is for the general building areas to go dark during non-working hours. (Stairways shall be lit 24/7). Include the use of CFL lighting or Low voltage LED. Power supply(s) shall be located and available in the event of an emergency for manual operation.

c. Immediately following the completion of structural steel and the establishment of access to the slab areas, a temporary lighting feed will be run down the center of what will be the main corridors to support concrete pour and finish operations. Care shall be taken to follow the layout of the new partitions such to limit crossings of new walls. A center light string utilizing basketed CFL lamps will be run following this path. Lamps shall be placed of adequate spacing to illuminate all areas to a minimum of 5 foot candles.

d. Immediately following the installation of interior wall framing and door frames, individual room stringers will be attached to the center corridor feed and looped through the doorways. Wiring shall not be run through framing or cross through partitions. Minimize lighting in each room to prevent “bird nesting” of lights. Larger rooms may require additional lamps to meet the 5 foot candle requirement.

e. Following the completion of Drywall and Taping and the establishment of available permanent power, light baskets shall be transferred to utilize the available permanent ceiling electrical box and the temporary wiring removed. Doors could now be installed within the frames. Permanent fixtures would then be later installed as construction progress dictates.

f. Include a dedicated circuit for lighting for stairways within the building. These circuits shall be lighted at all times. Include emergency exit lights at each stair with battery backup.

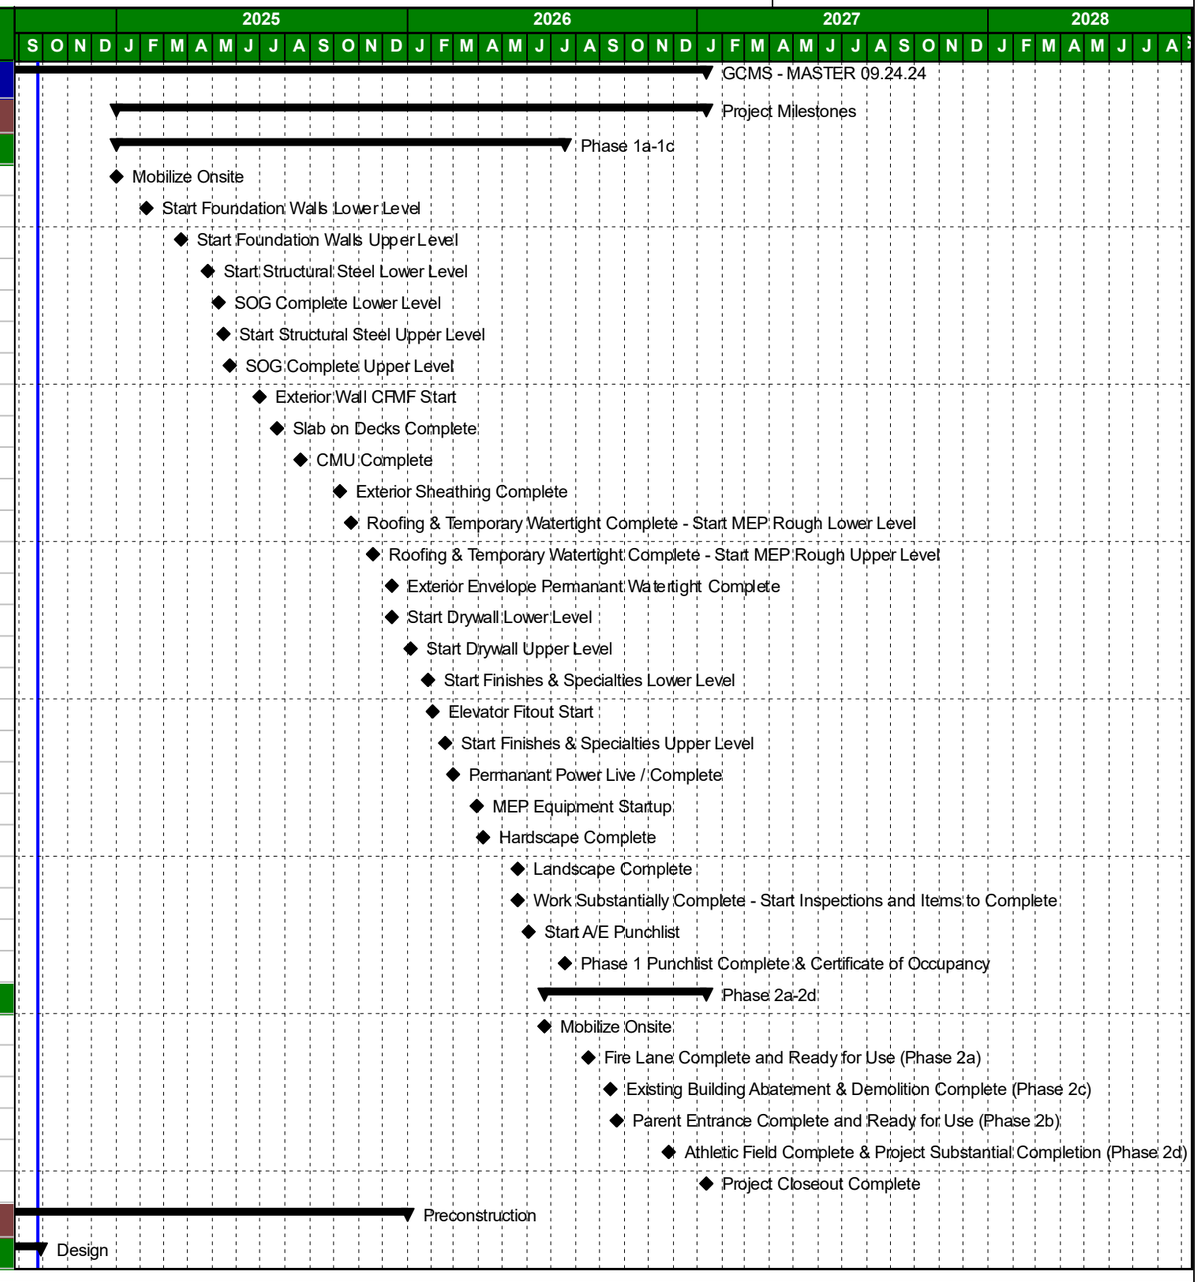
g. Some areas of the project do allow for high intensity lighting to provide illumination such as the gym, auditorium and other two story spaces. Hang fixtures in such a manner to avoid marring or defacing finishes and in such a manner as to not impede overhead work. In open areas high intensity lighting shall not be utilized unless the fixtures can be hung above 12’ due to light flash and burn exposure hazards.

h. The Electrical Subcontractor is required to manage the replacement of all bulbs and temporary wiring which shall be included as part of this scope of work. At least on a weekly basis, the entire job shall be inspected and re-lamped as required. Documented inspections shall be submitted to Turner upon request. At no time shall more than 5 percent of the temporary lighting be non operational. For lighting in stairwells, this subcontractor will check daily so as not to impair access to & from the upper floors.

i. The Electrical Subcontractor shall remove/reinstall/relocate any temporary lighting that is interfering with the installation of any permanent work.

j. The Electrical Subcontractor will ensure that after wall closure 5 foot candles will be maintained in every room. These lights shall remain operational until the permanent fixtures are operational. Turner's Superintendent shall determine if sufficient lighting is being provided for the finish operations.

k. The Electrical Subcontractor shall relocate any temporary light fixtures and wires below ceilings to allow for Above-Ceiling Inspections and/or In-Wall Inspections.



l. Provide and maintain twenty-five (25) temporary LED light stands for use by other trades such as concrete finishing and spray on fireproofing operations. These are to be checked prior to each operation and maintained in good working condition. The Electrical Subcontractor is required to store and secure these lights when not in use

m. Provide (10) Exterior Grade Spot lights to be installed around the building per the discretion of Turner, to illuminate pathways into the building. These shall be on a time clock.

TURNER

CORPORATE ENVIRONMENTAL, HEALTH AND SAFETY POLICY

Letter of Introduction

Environmental, Health & Safety Policy

We think of our workplace as “our house.” In our house, we foster a caring environment. We want every person at Turner and every person who steps onto a Turner site to truly believe that they are contributing to, and have a sense of belonging to, something extraordinary. We are focused on maintaining and sustaining the Right Environment where people feel included, engaged, empowered, and connected.

Turner’s safety culture is reflected in the principle of Building L.I.F.E.® (Living Injury Free Every Day) with an expectation that all projects provide the safest workplace possible for our employees, trade partners, clients, and members of the communities in which we work.

Turner’s Building L.I.F.E.® safety program is a continuous improvement process with a focus on upstream risk avoidance and the activities which produce risk. The Building L.I.F.E.® process seeks to increase frontline worker engagement in the safety and planning processes through engaging those closest to the risk in the decision-making process. Building L.I.F.E.® is anchored by a focus on positive reinforcement and feedback on safe behaviors by everyone involved in the delivery of the project.

Building L.I.F.E.® Vision
Create and sustain a culture which promotes an incident-free environment and provides the safest workplace possible to live injury free every day.

Building L.I.F.E.® Guiding Principles

- Injuries are preventable.
- We will coach and practice safe behavior to live injury free every day.
- We will engage and look out for each other to properly plan work.
- We will perform a task only if it is safe.
- We will speak up and stop work if there is an unsafe condition, action, or safer way to perform a task.

Let’s be relentless and keep each other accountable by making sure we pre-plan and discuss risk every day and that we continue to actively care. Thank you for your support and help maintaining a workplace that promotes the Building L.I.F.E.® culture. Together, we will continue to improve our performance and make our projects the safest possible.

Peter J. Davoren
President and Chief Executive Officer
Turner Construction Company

TURNER

CORPORATE ENVIRONMENTAL,

HEALTH & SAFETY POLICY

Administration & Programs

Building L.I.F.E.®

Building L.I.F.E.® is a collection of tools designed to enhance operational staff's ability to engage with trades to improve safety outcomes and measure performance. This program is designed to:

- Enhance the recognition of and reduce risk through better operational planning while increasing safety acumen resulting in fewer incidents and near-misses.
- Encourage all Turner employees, trade partners, clients, and design team to make safety a personal value.

The Building L.I.F.E.® program is a continuous-improvement program aimed at reducing process discrepancies and risks that in turn lead to unplanned events or loss. This program also aims to create a more positive working climate by frequently involving our project teams and subcontractors (including the frontline worker) in many aspects of our safety processes.

Note: Refer to the Turner Building L.I.F.E.® instruction manual for detailed guidance on each aspect of the program.

Program Goals & Objectives

- Implement a more comprehensive continuous improvement model for safety & risk management that supports Lean Construction, Human and Organizational Performance, and ISO 14001 by building continuous improvement cycles into each of our key risk-reduction processes.
- Embed an upstream "systems focus" into our planning and problem-solving tools focusing on risk and the systems that are driving risk.
- Increase the engagement and participation of frontline workers in our processes to increase ownership, change culture and improve results.
- Utilize Human and Organizational Performance principles to provide a more holistic approach to safety management and culture change.

Program Elements

All elements of the Building L.I.F.E.® program are based on engagement and feedback at all stages and levels of the construction process. Key elements of the program are:

- Pre-planning process
- Assessments
- Coaching activities
- Feedback processes

Notes:
Pre-Planning Process: This element is detailed in the "Job Hazard Analysis / Pre-Task Planning" section of this Policy Manual
Assessments: This element is detailed in the "SafetyNet Operational Guidelines" section of this Policy Manual.

I Coaching Activities

CSB Coaching Process

The critical safe behavior coaching process is intended to close a gap in our Safety Management System and bring balance to the "systems-approach." Critical safe behavior coaching is focused on positive and delivering actionable

feedback. We strive for CSB coaching to be a welcome event that draws on workers skills and actions in the construction environment.

These are conducted with the engagement of the those directly performing a task, the supervisor and foreman of the workers, and the Turner Staff Coach.

There are five primary categories considered during this process:

- Visual Focus
- Body Position
- Manual Material Handling
- Organization and Housekeeping
- Elevated Work

The intended outcome of this collaborative activity is process improvement, improving efficiencies and risk reduction.

Staff engagement expectations with CSB Coaching are defined in the “SafetyNet Operational Guidelines” section of this Policy Manual.

Rapid Improvement Events

A rapid improvement event is a continuous improvement process meant to accomplish the following:

- Ensure every major task of work has been optimized for safety, efficiency, and quality, thus reducing all forms of waste.
- Improve the quality of our work plans, such as JHAs and PTPs.
- Taking a systems-based approach
- Engaging the workforce
- Continuous improvement

Unlike a Critical Safe Behavior coaching activity which is task focused, the Rapid Improvement Event takes a much broader look at the overall operation and the context in which the tasks are taking place. These are conducted with the engagement of the those directly performing a task, the supervisor and foreman of the workers, and the Turner Staff Coach.

The intended outcome of this collaborative activity is process and efficiency improvement and risk reduction.

Engagement expectations are to be established at a project level based on scope, size and complexity.

II Feedback Processes

Five Worker Lunches

This feedback-based process supports continual improvement and worker engagement. Turner selects 5 workers from various contractors to have an informal free lunch with Turner site management team and available BU Managers. The Turner facilitator explains to them over lunch that “we need their input so we can continue to assess and improve the effectiveness of our safety program and leadership. Although we will keep notes during the meeting so we can follow up on their feedback and ideas, no names will be attached, and their comments are confidential for the staff in the room only.”

How to select the five workers

Each worker should be from a different subcontractor. Preference should be given to companies that meet the following:

- Program and policy non-conformance issues have been noted.
- New subcontractor to Turner Construction.
- High-risk activities.
- High EMR Risk Management Waiver was executed.

This is a monthly process, at a minimum. 5 workers is a guideline. The feedback received from this meeting should be tracked in meeting minutes. Select items requiring Turner action should be addressed and resolution shared verbally at all-hands safety meetings and noted on “You Said / We Did” boards.

Safety Observation and Recognition Cards (S.O.A.R.)

Safety Observation and Recognition Cards, or SOAR Cards for short, serve two purposes in supporting Building L.I.F.E.®.

- SOAR Cards provide a good avenue for workforce engagement which creates further ownership in our safety program and supports the desired culture shift.

- SOAR is another feedback mechanism supporting continuous improvement - this mechanism focuses on providing feedback to Turner Construction. It allows workers the opportunity to anonymously become extra eyes and ears in the field.

The SOAR Card signs with drop-boxes should be prominently displayed at the entrance to the project. Turner staff should check the drop-box daily.

Observations and recognition submitted should be shared during morning safety meetings to discuss actions taken and to close the loop with the workers, shared verbally at all-hands safety meetings and noted on “You Said / We Did” boards.

III Training Requirements

To ensure the consistent and effective program implementation and integration, training will be completed as defined below:

Turner Field Operations Staff: Attend and actively participate in the Building L.I.F.E.® 5 training module series and complete the learning application activities as delivered and facilitated by a designated program trainer.

Turner Staff (non-field operations): Attend the Building L.I.F.E.® program overview training module delivered by a designated program trainer. (1 hour in duration)

Trade Partner Staff and Craft: A Building L.I.F.E.® overview is presented in the Turner site orientation video.

General Rules

I. This section captures general rules that are not discussed elsewhere in this program.
   i. Where discrepancies exist between this Environmental Health & Safety Program, and other regulations, standards, safety plans and contract documents, the more protective requirement will apply.
   ii. The possession or use of alcohol, marijuana, or any controlled substance by any Turner staff, trade, or any subcontractor on any Turner jobsite is prohibited at any time including non-working hours. Turner sponsored or approved meeting/functions, not located at a Turner Jobsite, may serve alcohol with approval by the BU General Manager or HQ Department Head. However, this does not relieve Turner Employees or Other Workers from possessing or using alcohol responsibly and safely in such situations.
   iii. No one under the age of 18 is allowed to work on the Project property / construction site.
   iv. Turner offices and projects are tobacco-free zones. This includes e-cigs and all forms of tobacco.
   v. No animals are allowed on Turner property. Please contact Headquarters EHS and Human Resources if you are requesting to bring a service animal on Turner property.
   vi. No walking or driving on projects while talking or texting on phone or walkie-talkie.
   vii. All personnel are empowered and encouraged to stop unsafe acts, identify unsafe conditions, and to escort non-construction personnel out of the work areas. Please care for your project teammates.
   viii. No headphones, iPods, radios, etc. are permitted on the job. No streaming of music from the internet. No walking or driving on projects while talking or texting on phone or walkie-talkie.
   ix. A fluent interpreter must be provided and on site for any crew that has one or more non-English speaking workers.
   x. The list of behaviors below, while not inclusive, provides examples of conduct that is prohibited:
      1. Causing physical injury to another person.
      2. Making threatening remarks, verbal abuse, derogatory remarks, racial or bias motivated statements (verbal or in writing).
      3. Aggressive or hostile behavior that creates a reasonable fear of injury to another person or subjects another individual to emotional distress.
      4. Intentionally damaging employer property or property of another

employee.

xi. To the maximum extent permitted by applicable law, the possession on Company premises or while on duty of firearms, clubs, explosives, or other weapons that could be used to cause harm to personnel or property, other than that used to perform specific construction activities, is not permitted. This would include Turner projects and client-owned buildings and facilities we work in, project-provided parking areas, and while in the execution of work duties.

i. Employees must:

1. Perform their work to prevent accidents to themselves, fellow workers, and property.
2. Use Personnel Protection Equipment as required, to meet all Turner, federal, state, and local requirements.
3. Alert supervisors to dangerous situations.
4. Cooperate with principles of the Project Site Specific Safety Program.
5. Utilize all tools and equipment in a safe manner and in accordance with manufacturer's recommendations.
6. Complete project safety orientation before starting work on the jobsite.
7. Acknowledge and abide by the project enforcement rules.

ii. All visitors must sign a visitor release at the project site office or into the visitor logbook when visiting an office. All visitors must be escorted while on site and must adhere to Turner Project Safety Program and be 18 years of age or older.

iii. All trade partner vehicles within the project site fence (including, but not limited to, transportation and construction equipment, delivery trucks and personal or company trucks) shall not idle. The only allowable exceptions to the standard are as follows:

1. Ambient air temperature exceeds 85°F or falls below 32°F (or as defined by local or regional temperature limits, whichever is stricter)
2. Engine idling is required for the function of auxiliary equipment (i.e., cranes, concrete pumps, etc.)

iv. A List of General Hazards by Trade and Region can be found on the reference tool on TKN EH&S Website

Crisis Management Plan

I. Policy Statement

Turner's Crisis Management Plan provides an outline of actions that must be taken to prepare for a crisis and response plan in the event of a crisis. The plan defines the action steps necessary, and the responsibility assigned for such actions. A crisis is any event that has been created and/or may still pose an immediate threat to life, property, or business as usual. This may occur at a jobsite, a Business Unit office or other locations related to our business. The full Crisis Management Plan is available on the Safety SharePoint site.

Such situations may include, but are not limited to:

- Incidents involving serious bodily harm and/or deaths, or property damages,
- Bomb threats, terrorist attacks,
- Collapse of a building or portion of a building,
- Natural disasters and severe weather events
- Fire/explosion, water events,
- Equipment failure such as the collapse of a crane,
- Workplace violence,
- Environmental incidents,
- Extreme business interruption,
- Pandemic Illness,
- Active shooter events
- Bias Motivated Events
- Labor events, protests, immigration.

II. Procedures

1. The following are highlights of the Crisis Management Plan and may be found and viewed in detail in the Safety Section of the SharePoint Document Management System.

    a) Section 1 – General
        - The severity of the event will dictate the appropriate response. Your Business Unit Environmental, Health, and Safety Director (BUEHSD) and Operations Manager must be contacted before reporting a crisis by submitting a New Notification using the AlertMedia! application on your mobile device or go to turner.alertmedia.com OR call 1-866-3-TURNER (1-866-388-7637) or 201-903-4127.

    b) Section 2 – Preparing for a Crisis
        - The key to success in handling a crisis situation is preplanning, prior preparation, organization, and rehearsal / practice drills.
        - Each project and office must have pre-determined Action Plans

and Teams that are ready to react to any crisis situation.

c) Section 3 – Event Response Plans
   - Several immediate and simultaneous actions must take place during a crisis regardless of the type of event.
   - These actions should be directed by the Project Superintendent or, in his/her absence, the Project Safety Manager. Again, it is important to notify your BUEHSD and Operations Manager before submitting a New Notification using the AlertMedia! application on your mobile device or go to turner.alertmedia.com OR call 1-866-3-TURNER (1- 866-388-7637) or 201-903-4127. The Site-Specific Crisis Plan will detail the actions needed.

d) Section 4 – Media Management
   - All inquiries by the media should be referred to the General Manager or Operations Manager.
   - Turner's Corporate Public Relations Group must also be contacted immediately by the Operations Manager or General Manger of the Business Unit.

e) Section 5 – Crisis Preparedness Checklist
   - Turner's level of preparedness for a crisis prior to its occurrence will determine the success of effectively managing such an event.
   - Crisis practice drills must be conducted semi-annually for project sites and offices. These also should occur at the start of every project.
   - Checklists provided on SharePoint will assist in drill preparation.
   - During a pandemic, refer to specific programs for cleaning and disinfecting, PPE, and general guidance documents.
   - Projects should utilize posters, applications, etc. to maintain a level of awareness and preparedness for any crisis that may develop. They are available on the Turner Homepage at the Turner store.

Incident and Near–Miss Investigation and Reporting

I. Incident Reporting

For any incident involving personal injury, the subcontractor will complete their own incident investigation report form and submit it to Turner as soon as reasonably possible (same work shift) but no later than 24 hours after the incident occurred.

The Project Safety Manager and/or Superintendent will notify the Business Unit Claims Coordinator and BU EH&S Director (BUEHSD) as soon as practical after the incident, but no longer than 1 hour. In addition, a Turner Incident Investigation Report will also be completed in Origami by the Turner Project Superintendent and/or Project Safety Manager (if assigned) based on the information collected from witnesses and contractors. All matters pertaining to medical records and reports will be kept strictly confidential by the responsible party.

II. Responsibilities

All incidents resulting in injury or property damage are to be reported at the time of occurrence to the Turner Project Superintendent and/or Project Safety Manager. The Turner Superintendent and/or Project Safety Manager will speak with the worker involved in the incident as well as the subcontractor in charge of the person(s) involved or witnesses to the event. The contractor will complete their own incident investigation report form and will require each craft person involved to complete a written statement whenever such events take place. Turner and or the Owner may require a more detailed investigation and the Subcontractor will comply with theirdirections.

The BUEHSD will notify the Turner Helpline when appropriate. See Turner Incident and Near-Miss Reporting Matrix for reference of when to submit a New Notification using the AlertMedia! application on your mobile device or go to turner.alertmedia.com OR call 1(866) 3-TURNER / 1 (866) 388-7637 OR 201-903- 4127 OSHA's Recordkeeping rule requires employers to report all work-related fatalities within 8 hours and all in-patient hospitalizations, amputations, and losses of an eye within 24 hours of finding out about the incident.

III. Incident Reporting Procedures

1. Near-Miss Event

A Near-Miss is an unplanned event that did not result in injury, illness, or damage – but had the potential to do so. Only a fortunate break in the chain of events prevented an injury, fatality, or damage; in other words, a miss that was nonetheless very near. A faulty process or management system invariably is the root cause for the increased risk that leads to the near miss and should be the focus of improvement. Other familiar terms for these events are a "close call," or "near hit."

It is the responsibility of the Turner Project Superintendent or Project Safety Manager to complete the investigation using the Turner Construction Company Incident investigation report in Origami. This report will include recommendations/ implementation of corrective actions. The report will be submitted as soon as reasonably possible (same work shift) but no later than 8 hours. If the near miss could have resulted in a severe injury or fatality a call must be set up within 4 hours with the EVP, SVP, HQEHSO, GM, OM, BUEHSD, and the project team to review. A gathering of all involved parties will take place within 24 hours of the incident to review the case and determine if the steps taken to remediate the incident were appropriate.

2. First Aid Event

Any first aid event will result in a full incident investigation. TCCO feels that no injury is minor but an opportunity to learn and eliminate like occurrences. Daily records of all first-aid treatments not otherwise reportable will be maintained in Origami for record purposes only. Refer to the Turner Incident and Near-Miss Reporting Matrix for reporting requirements.

3. Medical Treatment Event

It is the responsibility of each subcontractor to immediately notify the Turner Project Superintendent of an injury requiring medical treatment. If the injury is considered an emergency call 911. The Turner Safety Manager or senior TCCO project representative will oversee the completion of required Turner reporting forms in Origami. The Turner Business Unit Environmental, Health, and Safety Director and Claims Manager shall be notified as soon as possible. The Turner Business Unit Environmental, Health, and Safety Director will contact OSHA when required, regardless of the subcontractor's requirement to notify.

The BUEHSD will notify the Turner Helpline when appropriate. See Turner Incident and Near-Miss Reporting Matrix for reporting requirements and when to notify the Turner Helpline.

4. Recordable Injury Event

It is the responsibility of each subcontractor to immediately notify the Turner Project Superintendent of an injury requiring medical treatment. If the injury is considered an emergency call 911. The Turner Safety Manager or senior TCCO project representative will oversee the completion of required Turner reporting forms in Origami. The Turner Business Unit Environmental, Health, and Safety Director and Claims Manager shall be notified as soon as possible. The Turner Business Unit Environmental, Health, and Safety Director will contact OSHA when required, regardless of the subcontractor's requirement to notify. The BUEHSD will notify the Turner Helpline when appropriate. The BUEHSD will set up a call within 24 hours to review the incident/injury with HQ EHSO, SVP, GM, OM, BUEHSD and project team. If the Recordable is considered a SIF or SIFP, a call must be set up within 4 hours of the incident and include HQ EHSO, EVP, SVP, GM, OM, BUEHSD, SHRD, and project team. See Turner Incident and Near-Miss Reporting Matrix for reporting requirements and when to notify the Turner Helpline.

5. Fatality

It is the responsibility of the subcontractor to immediately notify the Turner Project Superintendent or the Turner Safety Manager of an event resulting in a fatality. The Turner Project Superintendent will then implement the Turner Crisis Management Plan. All notifications must follow in accordance with the Turner Crisis Management Plan notifications flowchart. The BUEHSD, BU Claims Manager, General Manager, and Operations Manager must be notified immediately. A call must be set up within 4 hours with the EVP, SVP, HQ EHSO, GM, OM, BUEHSD, and the project team to review the incident. All media inquiries are to be referred to the Owner or as the Site-Specific Crisis Plan dictates. A notification must be made by the employer to OSHA within 8 hours. The BUEHSD will notify the Turner Helpline.

6. Property/Environmental Damage

It is the responsibility of the Turner Project Superintendent to notify the Turner Project Manager and Owner of the incident and assist in the assessment of damages. The Business Unit Environmental, Health, and Safety Director and Claims Manager shall be notified in all cases. The Claims Manager will be responsible for notifying applicable insurance carriers in accordance with policy provisions. Turner Project Superintendent or Safety manager shall input a report into Origami for record purposes only. The BUEHSD will notify the Turner Helpline when appropriate. See Turner Incident and Near-Miss Reporting Matrix for reference of when to notify the Turner Helpline.

7. General Liability Accident

It is the responsibility of the subcontractor to immediately notify the Turner Project

Superintendent of an event involving third parties or the general public. The Turner Project Manager will immediately notify the Owner, BUEHSD and Claims Manager. The subcontractor involved will complete an incident report and submit it to the Turner Superintendent or his/her designee. Turner Project Superintendent or Safety manager shall input a report into Origami for record purposes only. The BUEHSD and Claims Manager will determine if a Third-Party Investigator will be needed. The BUEHSD will notify the Turner Helpline when appropriate. See Turner Incident and Near-Miss Reporting Matrix for reference of when to notify the Turner Helpline. In all cases, including a near-miss, a full investigation will be conducted by TCCO and the contractors to determine potential contributors to the incident in hopes of eliminating the conditions reoccurrence on this or any project. The intent of the investigation is not to affix blame but to learn from the event.

IV. Return to Work Provision

1. Trade partners and tiered contractors must provide a modified return to work program for any of their employees returning from an occupational injury for a minimum of 90 days after the injury date.

2. Failure to provide accommodations to an injured employee may result in a penalty assessment, at Turner Construction's discretion, to the trade partner of $2500 per week until such time as the injured employee is returned to work.

Turner Incident and Near-Miss Reporting Matrix

Serious Injury Fatality (SIF) or Serious Injury Fatality Potential (SIFP)	
Work-related incidents, injuries, illnesses or near misses that caused, or could have caused, a serious injury or fatality. SIF and SIFP Examples: • Any fall or fall exposure 6' or greater (Including fall-catch) • Severe fire or explosion • Active shooter • Loss of a suspended load • Object falling from a building • Collapse of a structure or portion of a structure • Equipment collapse (cranes, scaffolds, etc.) • Bomb threat or terrorist threats/attacks • Trench/Excavation Collapse • Inadequate hole protection • Any in-patient hospitalization of a worker related to a workplace incident • Significant third-degree burns • Amputations (all, including fingertip) • Loss/impairment of body organ function • Loss of an eye • Utility line strike (Gas/Electric) • Loss of hearing • Severe visual impairment to total blindness • Broken bone • Missing or faulty guarding • Deficient or faulty temporary elevated working platforms 6' or above • Other SIF or SIFP incident identified by BUEHSD, OM, GM	BUEHSD Enter into Alert Media/Turner Help Line Immediately BUEHSD sets up a call within 4 hours with EVP, HQ EHSO, SVP, GM, OM, BUEHSD, SHRD, and the Project Team members closest to the incident Enter into Origami.
Recordable Injury (Non-SIF/SIFP)	
Work-related recordable injury or illness that did not cause, or could not have caused, a serious injury or fatality (SIF/SIFP).	Project Team sets up a call within 24 hours of incident with HQ EHSO, SVP, GM, OM, BUEHSD & the project team members closest to the incident Enter into Origami
Other Alert Media Reportable Events	
Events that would not be considered SIF or SIFP and may or may not have resulted in a recordable injury but are required to be reported through Alert Media for Risk Management tracking and support purposes. Examples: • Union or labor issues (i.e., picket) • Utility line strike (sewer, water, phone/data) • Worker is transported to a medical facility via ambulance (workplace related or personal medical) • Environmental crisis, regulatory visit or inquiry (OSHA, EPA, etc.) • Building shutdown due to emergency • Jobsite shutdown due to safety (by owner or Turner) • Workplace violence • Property damage greater than $10,000	BUEHSD or designee enter into Alert Media/Turner Helpline Immediately GM, OM, BUEHSD, or HQ EHSO to determine if a follow up call is needed. BU sets up call if required. Enter into Origami
Minor Injuries	
Minor Injuries that were not a SIFP or a recordable Injury Minor Injury examples: • Mild eye (corneal) abrasions • Minor sprains and strains • Minor lacerations/penetrations • Minor chipping or cracking of a tooth/teeth • Property damage less than 10K • Minor Skin rashes/burns (blistering)	Notify PM/PX, BUEHSD, Claims & Insurance, and OM/GM. Enter into Origami

V. Return to Work Provision

1. Trade partners and tiered contractors must provide a modified return to program for any of their employees returning from an occupational injury for a minimum of 90 days after the injury date.
2. Failure to provide accommodations to an injured employee may result in a penalty assessment, at Turner Construction's discretion, to the trade partner of $2500 per week until such time as the injured employee is returned to work.

VI. Documentation for all Work-Related Incidents, Illnesses and Near-Misses

The following forms must be completed and delivered to the Project EH&S Manager when there is one or to the Superintendent. These will be made available on the site.

- Turner Construction Company Incident Report form in Origami.
- Complete a root-cause investigation.
- Employee Incident Statement(s) (speak with all employees and workers that may have information regarding the incident)
- Subcontractor's Incident Report

All incidents, near-misses, injuries, illnesses, and unusual events that have occurred will be investigated thoroughly.

Projects are responsible for having onsite equipment to document the accident scene. Photos, sketches, schematics, and related evidence/equipment should be collected for report and preservation as soon as practicably possible after an incident. Photos should be taken of the site of loss as soon as practicably possible. Do not take photos of the injured, if at all possible.

Except for rescue and emergency measures, the accident scene shall not be disturbed and should be barricaded until it has been released by the investigating official. The Subcontractor is responsible for obtaining appropriate medical and emergency assistance and to ensure timely response to injured worker orevent.

It is required that the investigation team inspect any equipment involved in the incident and secure it for future use as evidence, if practicable, i.e., ladders, tools, PPE involved in the incident, etc. If the incident involves a ladder, the permit must be collected along with any inspection forms for the ladder.

Incident reports are to be completed in Origami, within 8 hours even though supplementary information may be necessary but not available for a period of time.

"Subcontractor" is intended to mean any contractor working under Turner's inspection, supervision and/or direction whether under contract to Turner or the Owner as on Construction Management. This policy will be used on all projects at all times.

In all cases, the Site-Specific Crisis Management Plan and the Site-Specific Health

and Safety Plan will be the guiding document.

If applicable, a Lessons Learned document will be developed and approved by TCCO to relay any information gathered that may assist in the elimination of a future similar occurrence.

EMR Policy

I. Policy Statement

In our ongoing efforts as the leader in construction safety, Turner has adopted the following policy to ensure that Subcontractors with the best safety performance are contracted to work with us. Subcontractors who have an Experience Modification Rate (EMR) greater than 1.0 will not be allowed to bid or be awarded work for Turner. This policy applies to all secondary tier subs as well. For projects where Turner doesn't hold the agreements, we should recommend the same policy to the Owner, but the final decision is obviously the Owner's. Please refer to TKN/Procurement/Procurement Manual/EMR policy for the specific policy requirements that must be adhered to.

II. Procedures

1. In rare occasions, Turner may issue a waiver to this policy. A one-page waiver request is available from Business Unit Procurement Managers or Business Unit Environmental, Health, and Safety Directors.

2. Every EMR waiver request must be submitted to the Business Unit Environmental, Health, and Safety Director and Business Procurement Manager prior to submittal to the HQ, Chief EHS Officer for approval.

3. Every EMR waiver request must contain a specific Risk Mitigation Action Plan to ensure the subcontractor can perform the scope of work without incident. The Business Unit Environmental, Health, and Safety Director and the Procurement Manager are responsible for developing the plan.

4. If a Subcontractor has been given a waiver based on his current published EMR and the BU wants to award another subcontract to the Subcontractor in the same EMR year, no additional waiver is required as long as the Business Unit Environmental, Health, and Safety Director and Procurement Manager agree that the Subcontractor's safety performance is meeting their expectations. The scope of work must be similar, and the value of the project must be within 50% of the original Subcontractor Approval Request (SAR) value.

5. The Subcontractor Approval Request (S.A.R.) will indicate "see attached previously approved EMR waiver in place" and the previous waiver will be attached to the S.A.R. The same safety measures from the initial waiver will be incorporated in future awards.

6. Once the Subcontractor's new EMR is promulgated, if it increases from the previous year, the waiver process starts over. If it decreases, the old EMR waiver may be used providing that the Procurement Agent and Safety Director review the updated OSHA 300 and 300A's to confirm that the EMR Waiver Risk Mitigation Plan is still valid and does not need to be adjusted based on trending information from the OSHA 300 Logs. If no adjustment is needed, no further approval is required outside of the Business Unit.

7. Each new waiver request must be accompanied with the S.A.R., the OSHA 300 and 300A Forms for the previous 3 years, a Risk Mitigation Action Plan for the Subcontractor on this project and letter(s) from their insurance broker confirming the past three years EMR's and incidence rates and what they are doing to help the subcontractor improve their performance.

8. The subcontractor must clearly submit in writing what they will be doing to lower their EMR to acceptable levels.

9. If the Subcontractor is not going to be onsite, except for supervisory oversight and the onsite installer has an EMR of less than 1.00, then no waiver is necessary.

III. Roles and Responsibilities

1. Turner Procurement Manager & BUEHSD:
   a) Must ensure EMR policy is adhered to by all Turner employees and all processes for waivers are followed prior to subcontractor selection.
   b) Must develop a risk mitigation plan, ensure it is in the subcontract, and conduct pre-planning meetings. They must require the use of Job Hazard Analysis (JHA) and daily Pre-Task Planning (PTP) meetings.

2. Subcontractor Management:
   a) Must comply with and furnish materials necessary to comply with Turnerpolicy.
   b) Must attend and participate in project orientations.
   c) Must participate in any and all required pre-planning meetings, JHA's and PTP meetings.

Recognition/Award Programs and Criteria

I. Policy Statement

Recognition/award programs can be an important tool to promote workplace safety, health, and safe working environments and should serve to encourage and motivate workers to go above and beyond to enhance the current safety culture.

Given OSHA's scrutiny of "incentive" programs that reward workers based on no one getting hurt, all programs should assure they meet certain criteria to ensure its compliance with OSHA's rules. Additionally, there are certain tax and legal implications that must be considered.

II. Guidelines to make the recognition/award program OSHA compliant and more effective:

1. The program should be behavior-based rather than injury-rate-based. Provide recognition/awards to workers practicing safe operating procedures and best practices instead of incentivizing plans based solely on number of incidents.
2. Encourage reporting of near misses, hazardous conditions or behavior, and situations which will prevent future accidents and injuries. (Leading vs. Lagging Indicators)
3. Recognize employees through top management, in a timely manner, and in front of others to acknowledge their safe behavior and encourage others to act in the same manner.
4. Pure monetary (cash) awards should not be utilized. Non-monetary awards are acceptable if they are not based on "reporting an incident". Other best practices include utilizing other awards such as points or an award, safety bucks, certificates, days off, safety pins or challenge coins, lunches, and recognition boards.
5. Recognize workers for a wide variety of safety activities such as providing safety suggestions to daily operating procedures, guiding a co-worker or new hire to perform a task safely, identifying a hazard or participating in safety committees.
6. Programs cannot be vague or limited to the actual reporting of an incident. "No injuries reported" or "hours worked with no lost time incidents" or "Act Safely" (which is too vague) should not be the basis for the recognition/award program, as these metrics give clear motivation for employees not to report injuries, or they are vague and unclear as to what needs to be done to qualify.
7. Direct awards based on worker behavior, and the qualifying metrics/procedures should be documented clearly. A basic example would be "workers must participate and engage in the daily pre task safety huddle, follow all company outlined safety

procedures and day to day tasks as outlined in the pre-task plan to qualify for the recognition/award program."

8. Make sure the program is robust and clear, outlining how employees will conduct themselves and how you want them to perform the key elements of their job (3 points of contact if using a ladder, using all required PPE, observing, and following all posted road/traffic signs, walking only in required and designated walkways, observing Turner project rules, etc.).
9. It is vital to recognize workers equally and fairly. What we want to do is applaud/appreciate the behavior/action evenly across the workforce. This also requires management/supervisors to be engaged and actively observing all the time and then comparing results prior to an award/recognition.
10. Allow workers a voice in setting safety goals and expectations for themselves. This will motivate them to ensure their own buy-in and commitment to safety and work towards achieving it.

III. Tax Implications and recordkeeping:

- Monetary recognition/award to a subcontracting entity
  - The amount required to be reported is $600 or more within the calendar year.
  - Subcontractor employees – once the award is valued over $600, the amount will be required to be reported to the individual on Form 1099 as nonemployee compensation. This would be reportable as other income by the recipient subcontracting entity.
  - If it is not over $600.00 is there any tracking of information required?
    - The $600 is within the calendar year. It would be advisable to track all to ensure no one person receives $600 or greater in awards within a year.
    - The value of the item awarded must be calculated as fair market value.
- What information is required: name, contractor, address, phone number and the Individual's Social Security Number
- Turner employee –the fair market value of the item is expected to be required to be included in taxable wages and is subject to employment taxes (including social security & Medicare tax)
  - The IRS would view this recognition/award as compensation attached to their employment and require it be included in the employee's taxable compensation (Form W-2). The threshold is lower than the $600 for an employee (general rule = $100).
- The recognition/award should be for demonstrating safe behavior and going above and beyond for safety while performing their services on a Turner construction project.
  - For tax purposes, the focus is that the award is attached to their employment and will need to be tracked and, when applicable, report the award to the IRS.

- If the program is legally permissible, it is recommended that an independent group of members, the majority of which will not be officers of Turner would be the decision makers on who receives the recognition/award. Generally, independent is defined as most of the members of a committee consisting of persons who are not able to exercise substantial influence over the relationship with the party receiving the recognition/award.

IV. Legal considerations:

- Do we plan to have the Owner pay for the reward program, or will it be a non-reimbursable expense? If we plan to bill the program to the Owner as a job cost, we should review the relevant contracts to see if that is permitted. Even if it is, it would be a best practice to get the Owner's pre-approval of the expense. If Turner plans to absorb the costs as a non-reimbursable expense, there is no reason to consult the Owner.
- Private jobs. Our compliance policy would not prevent us from providing these rewards to our trade partners.
- Public jobs. We must be mindful of appearances when we give anything of value to an employee of a trade partner, so we should have further discussion about how we manage that before rolling the program out for public jobs.
- Some trade partners might have compliance policies that would prevent their employees from accepting the rewards. We should become familiar with and respect any such prohibitions in our trade partners' policies.

V. OSHA Considerations:

Incentives can be based on injury rates with the right provisions. Rate-based programs that reward employees (or managers) with a prize or bonus for low/no injury rates are permissible as long they "are not implemented in a manner that discourages reporting." If an employer withholds a prize or bonus because of a reported injury, OSHA will not cite the employer under § 1904.35(b)(1)(iv) as long as the employer has implemented adequate precautions to ensure that employees feel free to report an injury or illness.

It may not be sufficient to simply make a statement encouraging reporting or prohibiting retaliation. To stay on the right side of the law, OSHA says that employers using a rate-based incentive program may also want to implement:

- Recognition for workers identifying unsafe conditions,
- Recognition for workers proactive safety performance,

- Training to reinforce reporting rights and responsibilities and non-retaliation policies, and
- A mechanism for accurately evaluating employees' willingness to report injuries and illnesses.

Safety recognition and award programs that judge workplace safety just by the number of accidents can lead to un- and under-reported injuries, especially when teams are rewarded. The peer pressure adds up, meaning employees reluctantly report injuries. No one wants the blame for an entire team losing a reward. Done right and with proper planning and forethought, these programs can have a positive influence on safety and preventing injuries.

If you have questions about how to set up a recognition/award program or these guidelines reach out to: Steve Spaulding II (EH&S) or Regina Fogarty (Finance).

Handheld Unit Use Policy

Mobile Handheld Units are handheld devices, including cell phones, iPhones, Androids, Blackberries, pagers, MP3 players (or equivalent), radios, and other communication devices.

Turner Construction Company and all subcontracted employees are prohibited from using mobile handheld units without a hands-free device (defined as vehicle mounted or headset ear clip) while driving on company time or while conducting Turner business. This Policy includes all calls made from the following types of vehicles on or off all Turner jobsites.

1. Vehicles provided by Turner Construction Company including:
    - Leased vehicles.
    - Golf carts and similar vehicles used for jobsite transportation.
    - Construction equipment to include cranes, scissor and aerial lifts, earthmoving, hauling, and excavating equipment, except for radios, when radios are the primary means of controlling the operation of the equipment.
2. Turner employee personal vehicles if the employee is receiving a vehicle allowance and/or the employee has been issued a company telephone.

Procedures/Expectations:

A driver's first responsibility while on company time or while conducting Turner business, on or off a jobsite, is the safe operation of the vehicle. The Policy should be followed accordingly.

Hands-Free Devices

Hands-free operation does not guarantee 100% safety but will provide drivers with less distraction.

1. Always use the appropriate hands-free device for your Mobile Handheld Unit. For telephones issued by the company, an appropriate hands-free device will also be issued at company expense, or the individual reimbursed for its purchase.
2. Use the Mobile Handheld Unit's speed dial and voice activated functions.
3. Turner employees should keep all calls while driving brief and should end any call that distracts them from the road.
4. Inform regular callers of the best time to reach you based upon your driving schedule.
5. If a hands-free device is not available:
    - Do not use the Mobile Handheld Unit; send calls to voicemail, forward them to another number or turn off the unit.
    - Pull off the road to a safe location to make or receive a call or ask a passenger to make or take the call.
6. Never take notes, type, refer to maps, input information into a global positioning system (GPS), or any materials while operating a vehicle.
7. No walking or driving on projects while talking or texting on phone or walkie-talkie.
8. Check state requirements and follow the law. Example: In California, if you are punching a button, and therefore taking your eyes off the road, you are in violation of the law.

This mobile handheld device use policy is intended to reduce the likelihood of motor vehicle accidents. It may not prevent all motor vehicle accidents from occurring. It does

not address potential compliance issues with Federal, State, local OSHA, or any other regulatory agency standards. Nor is it meant to be exhaustive or construed as legal advice.

Hazard Communication Policy

I. Policy Statement

OSHA's Hazard Communication Standard, also known as HAZCOM, is now aligned with the Globally Harmonized System (GHS) of Classification and Labeling of Chemicals and requires each employer to establish a hazard communication program. GHS is based on major existing systems around the world, including OSHA's Hazard Communication Standard and the chemical classification and labeling systems of other international and US agencies. The result of the collaboration is a document called "The Purple Book." OSHA has modified the Hazard Communication Standard (HCS) to adopt the GHS to improve safety and health of workers through more effective communications on chemical hazards. This program must provide a means to inform employees about the hazards associated with chemicals that they may be exposed to in the workplace. Turner's Hazard Communication Program (HCP) has been established to comply with this standard by ensuring that hazards associated with chemicals in the workplace are communicated to all employees who may be exposed to them. The Turner HCP applies to all employees (Turner and Subcontractor employees) who perform work on projects managed by Turner. The communication of potential hazards associated with chemicals and hazardous materials in the workplace shall be accomplished by means of implementing the following practices on each job site:

1. A written hazard communication program,
2. Use of container labeling,
3. Availability of Safety Data Sheets (SDS),
4. Maintenance of an on-site Chemical Inventory,
5. Employee training.

II. Procedures

A. Written Hazard Communication Program - Each Business Unit shall include the Turner HCP in its safety program and ensure that a site - specific HCP is provided for each job. The jobsite program document must describe the manner in which labeling, SDSs and employee training requirements will be satisfied. The BUEHSD shall assist the Project Staff with development of this program.

B. Chemical Inventory List - A list of chemicals known to be present on the jobsite will be compiled by the Turner Project Staff. This list will be maintained in the Turner project office and will be updated on a monthly basis. The list of the hazardous chemicals must be assigned a unique product identifier (i.e., number scheme) that can be cross-referenced on each corresponding SDS. Each subcontractor will submit an updated Chemical Inventory List to the Turner Project Staff.

C. Safety Data Sheets (SDS) – The Hazard Communication Standard (HCS) requires chemical manufacturers, distributors, or importers to provide Safety Data Sheets (SDSs) to communicate the hazards of hazardous chemical products. As of June 1, 2015, the HCS will require new SDSs to be in a uniform format. The Turner Project

Staff will be responsible for obtaining and maintaining the on-site file of all SDS's supplied by each Subcontractor. Turner project staff should coordinate the exchange of SDSs between the subcontractors when requested. SDS information should be for materials specific to the site. SDSs shall be accessible to all employees on-site. Chemical manufacturers, importers, distributors, or employers who become newly aware of any significant information regarding the hazards of a chemical shall revise the labels for the chemical within six months of becoming aware of the new information and shall ensure that labels on containers of hazardous chemicals shipped after that time contain the new information. As part of the GHS, all SDS's will be uniform in appearance.

D. Container Labeling – A hazard classification will be completed by the manufacturer and the following information is to be provided for each hazard class and category. Labels will require the following elements:

a) Product Identifier (Ingredient Disclosure),
b) Signal words,
c) Hazard Statement,
d) Pictograms,
e) Precautionary Statements,
f) Supplier Identification,
g) Supplemental Information.

Secondary Container Labeling - Employers may choose to label workplace containers either with the same label that would be on shipped containers for the chemical under the revised rule, or with label alternatives that meet the requirements for the standard. However, the information supplied on these labels must be consistent with the revised HCS, e.g., no conflicting hazard warnings or pictograms.

E. Employee Training and Education – Turner Construction Company is responsible for training all Turner employees with regards to the HCP and the GHS label elements (i.e., pictograms, hazard statements, precautionary statements, and signal words) and SDS format. An on-line training module on Turner University titled OSHA Global Harmonizing System Introduction will be required to be taken by all new and experienced Turner Construction hires. The list below contains the minimum required topics for the OSHA Global Harmonizing System Introduction training that must be completed.

1. Label elements
    a. Type of information the employee would expect to see on the new labels, including the product identifier, signal word, pictogram, hazard statement, and precautionary statement.
    b. Name, address and phone number of the chemical manufacturer, distributor, or importer.
    c. How an employee might use the labels in the workplace.
    d. General understanding of how the elements work together on a label.

2. SDS
    a. Standardized 16-section format, including the type of information found in the various sections.
    b. How the information on the label is related to the SDS.
    c. How to read and understand the information provided on the SDS.

3. An overview of the OSHA Hazard Communication Standard (29 CFR 1926.59).

4. The inclusion of welding or burning gases, cement, solvents, glues, wood dust, and soldering fumes as examples of common items to most jobsites, which present hazardous exposures to employees.
5. All employees attending a training class will sign an attendance form to verify that they have been properly trained in the Hazard Communication Program.

F. Hazardous non-routine tasks - Periodically, employees are required to perform hazardous non-routine tasks. An example of hazardous non-routine tasks is confined space entry to check the bottom of caisson. Prior to starting work on such projects, each affected employee will be given information by their supervisor about hazardous chemicals to which they may be exposed during such activity.
    1. This information will include, but not be limited to:
        a. Specific chemical hazards.
        b. Measures that employees will take to prevent exposures.
        c. Measures the company has taken to lessen the hazard, including ventilation, respirators, presence of another employee, and emergency procedures.

G. Demolition / Renovation - When doing renovations or demolition at a jobsite, it is important to know the contents of all unmarked pipes, vessels, tanks, or other type of containers as well as the location of lead, asbestos or other potentially hazardous materials that may be encountered. This information should be obtained from the Phase 1 (and 2 when applicable) Environmental Assessment, Pre-Demolition Hazardous Materials Survey, and/or similar reports provided by the building owner or Environmental Consultant. Once such information is identified, all of the above Hazard Communication program requirements must be enforced in order to communicate appropriate information to employees.

H. Chemical Storage
    1. Turner reserves the right to approve all chemicals and quantities brought on site.
    2. The user of the chemical must provide Turner Construction a Safety Data Sheet prior to bringing the substance on site.
    3. All chemicals and equipment containing chemicals must be stored in approved areas. (i.e., chemical cabinet, bunker)

4. Contractors are responsible for removing all unused chemicals from the Turner Project site at the completion of their contract.
5. All chemical containers must be properly labeled.
6. Chemical/gas cylinders (welding, purging, leak detection cylinders, etc.) must always be secured.
7. All dedicated chemical storage areas must have safety data sheets (SDS) available at the storage location.
8. If you are unsure of appropriate storage areas, contact Turner for directions.

I. Material/Waste Disposal

1. All hazardous waste must be disposed of in accordance with Federal, State, and Local regulations and shall comply with applicable Turner hazardous waste programs.
2. All hazardous waste must be properly labeled.
3. Hazardous waste materials must be discarded into proper disposal containers.
4. Non-hazardous waste must be disposed of into appropriate recycling or disposal containers.
5. Waste separation, recycling and reduction methods are encouraged on all projects and are to be made a part of the project logistics plan.

III. Employee Training Requirements

In compliance with the OSHA Hazard Communication Standard (HCS), Turner Construction Company has developed a Hazard Communication Program. This program is intended to inform employees of the potential hazards of chemical products that they may be exposed to while on the jobsite. By providing this information, our goal is to ensure that proper precautions are taken to minimize the health risks associated with the use of materials used in the construction of any building by Turner.

In accordance with Turner policy, a written Hazard Communication Program (HCP) is prepared and maintained on the job by the Turner Project Staff. Included are specific guidelines concerning requirements of the Federal Law, such as safety data sheets, labeling and personal protection. The following areas must be covered during each training session:

A. Safety Data Sheets - These are information sheets developed by the manufacturer of products (i.e., glues, solvents, paints, insulation), which contain hazardous materials are required to have the standardized 16 sections. SDS's are obtained by Turner for all material brought on the site by Turner or any subcontractor.

B. Labeling - Labels are an appropriate group of written, printed, or graphic information elements concerning a hazardous chemical (i.e., paint, caulk, thinner, glue, or other material) that is affixed to, printed on, or attached to the

immediate container of a hazardous chemical, or to the outside packaging. Labels from the containers should never be removed. Labels must include the product identifier, signal word, pictogram, hazard statement, and precautionary statement.

C. Personal Protective Equipment - If personal protection is required, it will be provided for you by Turner or by subcontractors. In most cases, you will need nothing more complicated than safety glasses or goggles, gloves, or a respirator. The equipment you will need will be determined by the information on the SDS provided by the product's manufacturer.

HCS Pictograms and Hazards

Health Hazard	Flame	Exclamation Mark
		
▪ Carcinogen ▪ Mutagenicity ▪ Reproductive Toxicity ▪ Respiratory Sensitizer ▪ Target Organ Toxicity ▪ Aspiration Toxicity	▪ Flammables ▪ Pyrophorics ▪ Self-Heating ▪ Emits Flammable Gas ▪ Self-Reactives ▪ Organic Peroxides	▪ Irritant (skin and eye) ▪ Skin Sensitizer ▪ Acute Toxicity ▪ Narcotic Effects ▪ Respiratory Tract Irritant ▪ Hazardous to Ozone Layer(Non-Mandatory)
Gas Cylinder	**Corrosion**	**Exploding Bomb**
		
▪ Gases Under Pressure	▪ Skin Corrosion/Burns ▪ Eye Damage	▪ Explosives ▪ Self-Reactives
	▪ Corrosive to Metals	▪ Organic Peroxides
Flame Over Circle	**Environment**	**Skull and Crossbones**
	**(Non-Mandatory)** 	
▪ Oxidizers	▪ Aquatic Toxicity	▪ Acute Toxicity (fatal or toxic)

IV. Roles and Responsibilities

A. Turner Management:
   a) Must conduct inspections of the workplace for compliance with this policy.
   b) Must discuss policy applications during project orientation with subcontractors.

B. Subcontractor Management:
   a) Must comply with and furnish materials necessary to comply with Turner policy.
   b) Must conduct mandatory GHS Training for their employees as required by the revised hazard communication standard.
   c) Must provide their company's Hazard Communication Program with SDS's and chemical inventory list prior to arrival to project.

C. Subcontractor Employees:
   a) Must attend and participate in HCP Training and project orientations.
   b) Must comply with this policy.

Housekeeping Policy

I. Policy Statement

This policy will apply to all work performed by Turner Project employees, contractors and tool vendors including, but not limited to, the following activities: construction, installation, demolition, remodeling, relocation, refurbishment, testing, and servicing or maintenance of equipment or machines. In addition, each contractor working on a Turner project will comply with 29 CFR 1926, Construction Industry Regulations, Subpart C – General Safety and Health Provisions.

II. Procedures

1. Work areas must be kept clear and free of obstructions by material/debris as follows:

   a) Clean-as-you-go practices are required. Do not wait until all work has been completed before cleaning up. Instead, break the work down into smaller tasks and clean the area after each task is completed.

   b) Materials will not be stored in a manner that will block, restrict, impede, or prevent access to an egress path or emergency equipment, such as fire extinguishers, emergency eyewash or shower, emergency shutoff buttons or emergency disconnect devices.

   c) Stairways shall not be used as storage areas.

   d) Work that may temporarily block emergency exits, safety showers, elevators, corridors, and hallways will require prior Turner approval.

   e) Project will enforce Turner's "Nothing Hits the Ground" requirements. All trash, debris, and scrap materials are to be placed into contractor-provided rolling trash hoppers, forklift-mounted hoppers, or other trash collection receptacles (that do not require workers to lift and carry) immediately upon creation. Upon filling any such receptacle, Contractors must remove all its trash/debris and recyclables from the building to the agreed upon roll-off or dumpster. Provide an ample number of trash receptacles to allow each crew/team that generates waste or recyclables to have one. No "piling" will be allowed on the floors. Construction materials, job-boxes and tools must be stored/staged in approved areas, and never in walkways or stairways. Cords, hoses, and welding leads must be kept off the floor at least 8 feet high in walkways, aisles, and stairs and access points.

   f) Housekeeping methods will be specified within your Job Hazard Analysis (JHA) and Pre-Task Plan (PTP).

2. Power Cord and other Utility or Hose Management:

   a) All cords must be inspected before use.

   b) At no time shall cords be strung across exits or in front of emergency equipment.

   c) Run cords overhead in a supported fashion, when feasible.

   d) Run cords around perimeters, when feasible.

   e) Tape cords down or use cord covers if they present a tripping hazard.

   f) Support all cords that run through floors or ceilings with appropriate means.

   g) All cords must be stored and put away after use. (I.e., not coiled up on floor).

   h) All extension cords must be equipped with GFCI protection or be plugged into the wall GFCI outlet.

   i) Provide non-conductive hanger mechanisms or cord/hose pole-stands. Must be anchored to prevent accidental displacement.

   j) If the above-listed safety requirements cannot be met, temporary wiring must be installed to facilitate proper cord management.

3. Material Storage:
   a) Lay-down and storage areas are extremely limited on site. Contractors are not to bring more materials onto site than they will install during a week. All Materials stored in the building must be staged on wheels to allow for quick and easy relocation.

   b) Materials stored in the vicinity of the area where work is performed should be limited to only those materials that will be used in the same shift.

   c) Materials not to be stored in egress paths, stairways or within 10 feet of any opening edge, shaft or side which material could fall to next level.

   d) Any material stored in a work area for longer than 24 hours must be approved by Turner.

   e) Materials should be stacked in a safe and orderly manner. Materials to be secure to prevent accidental displacement.

   f) Material must be stored to promote mobility of material. Pipes, conduits, metal fabrications and steel framing are to be stored on rolling racks or similar conveyance. Bulk material should be palletized to allow for easy mobility using a pallet jack. Store all items neatly on carts, in cabinets or on shelves. Storage

containers to have casters or other mechanism for easy movement of containers.

g) Materials stored should be designed and staged to incorporate ergonomic and mechanical advantage. Material movement and storage methods will be specified within your Job Hazard Analysis (JHA) and Pre-Task Plan (PTP).

h) Gang boxes and toolboxes should not have materials stored on top ofthem.

i) Small tools and materials should be kept on Industrial Carts or the equivalent when not being used. No tools or materials should be left on the ground that could present a trip and fall hazard.

j) If more storage area is needed, contact Turner.

Personal Protective Equipment

I. Policy Statement

All employees of Turner will be provided with the personal protective equipment necessary to complete their jobs safely. A competent person onsite will determine necessary equipment. Each subcontractor working on a Turner project will comply with 29 CFR 1926, Construction Industry Regulations, Subpart E – Personal Protective and Lifesaving Equipment in addition to the following guidelines.

II. Procedures

1. All Turner employees, subcontractor employees and visitors to project sites are required to wear safety glasses that comply with ANSI Z87.1. Dark lenses are not to be worn inside of buildings, in enclosed areas or at night. Prescription eyeglasses and sunglasses that do not comply with ANSI Z87.1 are **prohibited**.

2. High visual, safety vests, shirts or jackets shall be worn as the outermost apparel by all employees, 100% of the time. ANSI Class 2 (0-44 MPH) and Class 3 (45 MPH or more) outerwear must be worn whenever working on or near (within 10 feet) of a roadway.

3. All Turner employees, subcontractor employees and visitors to project sites are required to wear, at a minimum, sturdy work boots. Metatarsal guards must be worn when using jackhammers, tampers or similar equipment which could be dropped or landed on a worker's toes / feet. ANSI-approved safety-toed boots must also be worn by masons, drillers, pile driving, steel erectors, and riggers due to the hazards inherent with their work.

4. Where employees are performing work that could potentially cause materials to become flying objects such as, but not limited to, chipping, welding, grinding, cutting, drilling, and chiseling, they shall utilize a face shield in addition to safety glasses. A face shield shall be worn while using powder-actuated tools and drilling overhead. For above shoulder activities in which dust, metal shaving, fasteners or other similar hazards could fall onto your face, enhanced eye protection such as face shield, spoggles or helmet visor are to be used.

5. Where employees are performing work that could potentially expose them to harmful chemicals or micro airborne particles, they may be required to utilize safety goggles and or a face shield. Please refer to manufacturer SDS for specific requirements. Goggles are required for abrasive actions in which dust can enter the eye.

6. Where necessary, each employee shall use equipment with filter lenses that have a shade number appropriate for the work being performed for protection from injurious light radiation.

7. Anyone entering a Turner Construction Project is required to wear at a minimum cut resistant level 4 protective gloves 100% of the time, unless the competent person can demonstrate to Turner that wearing gloves for a particular task creates a greater hazard. If agreed upon with Turner, this deviation to not wear gloves must be identified on the PTP, reviewed, and acknowledged. Refer to ANSI cut levels for determining the correct glove. Additional hand protection may be required depending on the hazard assessment.

8. Appropriate arm protection is required during operations where the arms are exposed to cut hazards (i.e., Kevlar, Dyneema sleeves, etc.). Examples of these activities are working around metal studs and pull boxes, tight confines such as between wall studs or above ceiling, and all demo activities.

9. Contractors exposed to dust, fumes, and/or gases shall be provided with proper respiratory protection designed to protect against the substance encountered. The Contractor is solely responsible for the proper testing and training per OSHA standards, and to provide the appropriate equipment. Reference Respiratory Protection Program herein.

10. Workers exposed to roofing tar must wear long sleeved shirts and gloves. Workers who are directly exposed to hot tar must also wear a full apron and face shield.

11. Where an employee could be exposed to noise in excess of 85 dBA, their employer will provide hearing protection, which will reduce the noise to an acceptable level. If the noise levels are determined to cause and 8-hour TWA exposure greater than 85 dBA, the subcontractor shall be required to submit a detailed hearing conservation program to Turner. This program shall be approved prior to beginning work.

12. All Turner employees, subcontractor employees and visitors to project sites are required to wear hardhats that comply with ANSI Z89.1. Employees exposed to electrical voltages of 600 V or greater shall wear hardhats that meet the requirements of ANSI Z89.2 Type Hardhats. Turner employees are required to wear one of the currently approved ANSI Type II or EN12492 safety helmet models with an integrated four-point chin strap attached and secured under the chin.

    Trade partner employees, vendors and visitors are required to wear an ANSI Type II or an EN12492 safety helmet (i.e., a safety helmet that meets the requirements of testing against vertical, front, back, and side impacts and penetration) with the four-point chin strap tightly attached and secured under the chin. The chin strap shall be secured with no more than a 2-finger gap between strap and chin.

    No other type of hard hat will be permitted on any Turner Construction Site.

Turner Staff and Hourly Employees Safety Helmet Guidance

Turner staff, Turner employed hourly workers, Trade partner employees, vendors and visitors are required to wear one of the Turner approved safety helmets that meet the requirements of an ANSI Type II or an EN12492 approved safety helmet (i.e., a safety helmet that meets the requirements of testing against vertical, front, back, and side impacts and penetration) with an integrated four-point chin strap tightly attached and secured under the chin with no more than a 2-finger gap between strap and chin.

Turner Construction moved to the use of Type II or EN12492 Safety Helmets for all individuals at our project sites in lieu of Hard Hats or Type I helmets.

Construction workers sustain more traumatic brain injuries than employees at any other type of workplace in the United States, according to a recent report from NIOSH. Traumatic brain injuries represented one-quarter of all construction fatalities during the eight-year study period. According to the report, workers 65 and older were nearly 4 times more likely to sustain a fatal traumatic brain injury than workers 25 to 34 years old. More than half of fatal work-related traumatic injuries are a result of falls – particularly from roofs, ladders, and scaffolds.

Armed with the above data and our commitment to the safety of all individuals, Turner raised the standard for head protection. For years, the traditional Type I hardhat was the first line of defense in preventing the types of head injuries stated above. With new technology and innovation comes added protection and the latest Type II (and EN12492) four-point chin strap safety helmets offer the highest protection standards, while still being comfortable and versatile.

What is the benefit of Safety Helmets that are Type II or EN12492 certified?
These helmets are **designed to reduce impact force as a result of a blow to the top or sides of the head**.

The performance requirements include:

(Type 1 and 2)	**(Type 2/ EN12492)**
Flammability	**Impact Energy Attenuation**
Force Transmission	**Off-Center Penetration**
Apex Penetration	**Chinstrap Retention**
Electrical Classification	**Front, Side, and Rear Impact Protection**

Some additional benefits of the Type II or EN12492 Safety Helmets:

- Four-point, adjustable chin strap - provides a secure fit; easilyremoved/replaced
- Ratchet suspension - easily adjustable, to comfortably fit different headsizes which ensures a precise and comfortable fit around the back of the head.
- Vented, Non-Vented and Short Brim Options
- Universal accessory slots for adding an integrated visor, glasses, or faceshield
- Electric shock protection - Protection against electrical hazards (Check electricalclassification)

FAQS:

Has Turner piloted the new Safety Helmets?
Yes, Turner has spent significant resources in the development and piloting of several Safety Helmets along with providing funding research in conjunction with NIOSH (National Institute for Occupational Safety and Health). Turner will continue to invest in products that provide additional levels of protection for those on our projects. Injuries to the head, either from heights, a simple slip and fall, or dropped

objects, can be irreversible or even fatal. Because of these life threatening/altering consequences, Turner is taking steps to require additional protection for those on our sites.

Why not expect just those working at heights to use these new helmets? Although those working at heights are at greater risk of injuries from falls, certain other activities including material handling and falling objects or simply slipping and tripping can cause the traditional helmet to come off which can lead to serious injuries. In addition, a 4-point strap will assure that the helmet stays in place regardless of the type of task being performed.

Does the chin strap always need to be engaged? Yes, the chinstrap should always be attached and secured under the chin, with no more than a 2-finger gap between the strap and chin.

What is the difference between Type II and EN12492?

See attached fact sheet.

What should I do with my old Hard Hat?

There are several of us who are nostalgic and would like to keep our hard hats and that is great. Adding a chinstrap to your old hard hat will not make it compliant with this new PPE standard.

If you would like to turn it in so that we can recycle your personal hard hat and support our sustainability efforts, we will be providing a location at each of our projects to collect them. The standard hard hat has a stamped expiration date and many of our “favorite” hats have expired.

In Conclusion
Thank you for your dedication in continuing to grow and nurture our Building L.I.F.E. culture. If you have any questions, please reach out to your Turner BUEHSD for any further clarification or questions.

Turner approved Type II or EN12492 Safety Helmets for Turner staff and employed trade workers:

When purchasing Type II or EN 12492 safety helmets for Turner Staff or Trade workers you must purchase the approved helmets below from the approved listed vendor.

Type II or EN12492 Safety Helmets

EN12492 certified: Centurion Height Master – Turner Store
EN12492 certified: Kask Zenith X – Colony Hardware
EN 12492 certified: KASK Zenith X2 Air (Vented)
Type II: Wavecel T2+ Pro (Non-Vented)
Type II: Wavecel T2+Max (Vented)
Type II: Studson SHK-1 Full Brim (Vented)
Type II: Studson SHK-1 Full Brim (Non-Vented)
Type II certified: Milwaukee - Colony Hardware or Turner Store

Turner employees must wear one of these Turner standard white safety helmets:

Centurion—EN 12492
Nexus HeightMaster

Kask—EN 12492
Zenith X HiVis

Milwaukee—Type 2
Front Brim (unvented)

Chinstraps on all types must be “two finger” snug.

Safety Helmet Fact Sheet

NORM COMPARISION			
	EN 12492	ANSI Z89.14 Type1	ANSI Z89.14 Type2
TOP IMPACT	Hemispheric anvil 5 Kg Fall height: 2 mt. Transferred force < 10 KN	Hemispheric anvil 3,6 Kg Fall height: 5,5 m/s (1,6 mt.) Transferred force <4450 N Average transferred force <3780 N	Same as type 1
SIDE IMPACT	Flat position: Front side and rear Fall height: 0,5 mt. Transferred force < 10 KN	Not required	The helmet falls on the hemispherical anvil above the DTL line.5 Kg. Fall height: 3,5 m/s (62 cm.) Max acceleration: 150 g.
TOP PENETRATION	Area: top within a radius of 55 mm. Anvil: cone 3 Kg. Fall height: mt. 1,0.	Cone of 1 Kg. Top in a radius of 75 mm. Cone Fall height: 2.5 (speed 7 m/s)	Same as type 1
RETENTION SYSTEM STRENGTH	Force: from 30 N. (3 kg) to 500 N. (50 kg) Requirement: max. elongation 25 mm.	Not required	Weight: 10 kg. Fall height:10 cm. Max extension: 25 mm.
FRONT AND REAR RETENTION SYSTEM	Weight: 10 kg. Fall height: 175 mm. Requirement: The helmet must not come off the test head.	Not required	Not required
CHINSTRAP WIDTH	> 15 mm	Not required	> 12.7 mm
VENTILATION	Mandatory holes, total area ≥ 4 cm2	Not required	Not required

Job Hazard Analysis / Pre-Task Planning

I. Policy Statement

This policy identifies the method of Job Hazard Analysis and Pre-Task Planning that are required for each work operation not only by Turner but also for each subcontractor, regardless of tier. The Job Hazard Analysis (JHA) will be submitted to the project team for review and comment **prior to starting the work in the field**. Sample forms are available in the forms section of the manual, the Subcontractor Safety Requirements section and in the Safety Section of the TKN Document Management System.

II. Procedures

1. Job Hazard Analysis – JHA
   a) Every subcontractor will prepare a JHA for each phase of work to identify the following:
      - Safety and Health Considerations
      - Description of Steps to be Performed.
      - Hazards Associated with Each Step
      - Required Action to Eliminate or Control the Hazard
      - Supervision Sign-off

   b) Work shall not begin until the JHA for the work activity has been reviewed by Turner Construction and discussed with all engaged in the activity, including the Contractor, subcontractor(s), and other affected on-site representatives at safety pre-construction meetings.

2. Pre-Task Planning – PTP

   The PTP is a formal daily work plan. Each supervisor should meet with their crew, preferably at the place of the work or task, to discuss the tasks to be accomplished and the steps that need to take place to work safely. All workers should review and sign the relevant PTP for their assigned work before beginning the tasks. When the scope of work or conditions change, the PTP should be revised and resubmitted. The main components of the Pre-Task Plan will include the following:

   a) For each task of work a PTP will be completed to identify thefollowing:
      - Evaluating the Work Area
      - What permits and proof of training may be required.
      - Potential Hazard Checklist
      - Description of steps to be performed.
      - Hazards Associated with each step.

- Required Actions to Eliminate or Control the Hazard(s)
- All PPE requirements for the activity, keep in mind that PPE is the last resort.
- Crew Sign-off
- In accordance with Building L.I.F.E., plan out steps and controls to minimize risk using the Hierarchy of Controls, as well as by reducing frequency, likelihood, and severity.

Work shall not begin until the PTP for the work activity has been discussed with all engaged in the activity, including the Contractor, subcontractor(s), and other affected on-site representatives at a safety pre-construction meeting or daily huddle. A copy of the PTP shall be kept near the work location.

The information the supervisors are relaying to the workers is the same that was developed in the JHA however, the PTP will more greatly define the plan for the phase of work that is occurring that day.

Pre-Task Planning is also accomplished on a daily and pre-shift basis through the pre-shift safety huddles. Each crew leader is responsible for ensuring the crew holds a safety huddle prior to the beginning of the shift, and as necessary during the shift, to develop and revise a pre task plan for that day's work. The huddle should be collaborative with input from multiple members of the crew. The hazard analysis is typically captured on a dry-erase board laid out like a JHA/PTP (steps, hazards, controls). Workers sign an attendance record showing they participated.

A copy of the PTP and/or a photo of each huddle board shall be kept near the work location and **will be submitted to Turner daily.** Some states and local municipalities have requirements pertaining to pre-task planning, whichever is more stringent must be followed.

III. Roles and Responsibilities

1. The Subcontractor representative is responsible for submitting JHA's to the Turner Project Superintendent 7 days prior to the start of work. The JHA shall be utilized during the safety pre-planning meetings with subcontractors.

2. The Subcontractor representative is responsible for completion of PTPs and daily hurdles, communications with trade workers, and archiving of the documents. The frontline workers shall be engaged during the creation of the PTP's.

3. The Project Superintendent will ensure that all JHA's and PTP's are completed for all phases of construction activities for Turner, subcontractors, and all tiers. Turner Staff will attend PTP/Daily Huddle

every morning, focus should be placed on the subcontractors with High-Risk Activities.

4. Pre-construction meetings should always be held by the project team and attended by direct supervisory personnel of the subcontractors who will perform the work.

Project Safety Staffing Policy

I. Turner EH&S Staffing Requirements

Full-time Turner project safety staff are required on all projects with an initial contract value of $25 million dollars or greater. It is recommended that the safety staff be assigned prior to the beginning of work, as with other site staff. Additional safety staff may be required when project size is greater, or risk management plan dictates a need. Refer to current job description and CDQ's for requirements, education, and certifications when assigning a full time EHS professional to a project. Consult with the BU EHSD and VP, Chief EHS Officer as needed to assure right staffing requirements are met based on project size and risk.

II. Turner Craft Workforce (SPO/GR) EHS Staffing Requirements

Full time Area EHS Manager (level 4 or higher): Each Business Unit with a sustained SPO crew size of 50 or over shall establish a full time Area EHS Manager SPO. The duties of the Area EHS Manager SPO are the following:

- Help to establish and maintain safe working practices and methods for SPO work.
- Launch and plan upcoming SPO work including pre-construction meetings.
- Perform day 1 onboarding training and full day training for new SPO members.
- Manage and direct activities of any FT project SPO Safety Managers
- Perform Audits of SPO work on each project in the Business Unit to measure compliance against Turner's program.
- Train SPO staff on Building LIFE and perform Process Assessments
- Work with outside stakeholder (Liberty Mutual) assess and improve EHS processes.
- Identify current state, ideal state and perform gap analysis for improvement.
- Participate in Foreman meeting.
- Provide and/or organize training for SPO crew to maintain needed certification/ qualifications, competencies or other OSHA required training.
- Assist in writing and/or reviewing JHA's for SPO work.
- Complete SafetyNet Inspection equal to SafetyNet Inspection Goals for Project EHS Managers.
- Assist in SPO related incident/injury investigation and facilitate co-learning process according to the Incident response matrix.
- Perform case management and work with claims for SPO related injuries.
- Designated Responsible Person Development

Full Time Project Safety Manager: SPO will provide a full time Safety Manager when the field workforce equals or exceeds 25 persons for 5 consecutive days, OR if a particular scope of work is considered "High Risk" (e.g. vertical form work and concrete, high bay work on scaffold of boom lifts etc.)

- The full-time Safety Manager shall not be assigned any other collateral duties and will coordinate all SPO safety efforts. The full- time Safety Manager shall meet the following qualifications detailed in Turner EHS Policy.
- Additional safety manager required at 100 onsite workers engaged in construction activities after the initial requirement at 25 workers.

Full time dedicated Safety Managers required	When Onsite Workers reaches:
1	25
2	100

III. Subcontractor Safety Requirements

All subcontractors must have completed an OSHA 30-hour class. One person must be certified for all contracts under $5M, and two people must be certified for contracts over $5M. The 30-hour certified person(s) must be on-site 100% of the time. This OSHA 30-hour certification must be updated through Turner's Safety Update Training every two years through Turner University.

If the subcontractor will exceed 25 employees or more on site, including sub tiers, for more than two weeks, they must provide a full-time Safety Manager for the duration of the project when the workforce exceeds threshold above, who:

a. Is qualified to recognize safety hazards; and
b. Has the authority to take corrective action; and
c. Possesses current certifications in first aid, CPR and AED; and
d. Possesses a recent OSHA 30-hour card (if not within the last three years Turner's 2-year Safety Update Training has been completed and is up to date through Turner University); and
e. Has an academic degree in safety, CSP, ASP, or CHST designation, OR has a minimum three (3) years of prior work history as a designated construction safety manager.

Turner reserves the right to approve or deny the subcontractor's fulltime safety representatives for the project.

f. At a minimum, the Subcontractor Foreman or Safety Manager will be requested to:
    1. Ensure their employees attend jobsite orientation before the start of work on the project.
    2. Take the lead in recognition and abatement of hazardous situations.
    3. Conduct a daily "Safety Huddle" prior to the start of each shift and submit a Daily Pre-Task Plan (PTP). Report each morning prior to the start of work.
    4. Perform and document weekly safety inspections (1 per week at minimum).
    5. Conduct at least one monthly safety tour with their Safety Director and submit findings to Turner.
    6. Ensure that Competent Persons submit, at a minimum, the below listed safety inspections at the designated frequency to the Turner's Project Superintendent or Safety Manager.

Inspection	Frequency
Fall Protection	Before Each Shift
Excavations	Before Each Shift
Scaffold	Before Each Shift
Crane Inspections	Before Each Shift
Confined Space	Before Each Shift
Hot Work	Before Each Shift
Heavy Equipment	Before Each Shift
GFCI	Weekly
Personnel Hoist	Per OSHA Reqs.
Dig Permit	Before Each Shift
Tools Box Talks & Report	Weekly

7. Conduct and document toolbox meetings on a weekly basis.
8. Issue minutes of the weekly toolbox meeting to Turner.
9. Effectively utilize and train employees in pre-planning, recognition, and remediation of hazards.

g. Each subcontractor, regardless of tier, is to submit in writing toolbox meeting minutes containing the following:
    1) Name of subcontractor and date.
    2) Name of Subcontractor Safety Manager.
    3) Name of employees attending.
    4) Name of employees onsite not attending.
    5) Number of employees on their payroll that day.
    6) Subjects discussed.
    7) Safety observations of employees.
    8) Attend project safety meetings.
    9) Enforce disciplinary measures when need arises for their employees.
    10) Each subcontractor is responsible for all of their subcontractors and suppliers, regardless of tier, compliance with the Project Safety Program.

Safety Enforcement Penalty Guidelines

I. Policy Statement

To assist in Turner's efforts to provide a safe workplace, the following three-strike policy is to be enforced on all projects. The Penalty Schedule listed below is to be used at the discretion of the local Business Unit. Once a fine is assessed it must be collected. Money collected is intended to be used for safety recognition or training programs only.

Turner Construction will employ a three-strike policy related to violations of this policy.

1. For first-time non-repeat violations, a verbal warning may be issued.
2. On the second violation, a written warning shall be issued to the employer and a record of the action taken documented in a violation log.
3. On the third violation, the employee will be removed from the project and the removal shall be documented in the violation log.

Turner reserves the right to remove any employee of any company for serious, repeat, willful or egregious violations, skipping the three-strike process listed above. Turner may also require outside third-party training relative to the safety infraction for any employee to be able to return to the site.

Superintendents/Foremen may be held accountable for the actions of their employees, as well.

Penalty Schedule	
Non-serious violations (examples: basic PPE, missing PTP or ladder permit, etc.)	**$500**
Serious safety violations (including but not limited: to fall protection violations, unauthorized energized work, failure to follow Confined Space Procedures, etc.)	**$2,000**
Failure to provide modified duty when authorized by physician.	**$2,500/week**

SafetyNet Operational Guidelines

I. Procedures

It is the responsibility of the Business Unit Environmental, Health, and Safety Director and the Operations Manager to ensure SafetyNet (Predictive Solutions) is fully implemented and used within their Business Unit/Region. The SafetyNet link and new user request link can be found on TKN/Safety/SafetyNet at Turner Resources / Safety. Specific requirements can be detailed in the Business Unit Annual Action Plan. Below is a recommended protocol. In addition, the OM's and PX's are required to review all related inspection information at each ORM or other project-based meeting. Information shall be shared with the entire team and specific action plans shall be developed and implemented as appropriate.

1. Minimum auditing requirements are as follows:

    a) Project and Construction Executives – 1 inspection per month per project
    b) Project Managers – 1 Safety inspection, Building LIFE Process Assessment or CSB Observation per project per month.
    c) Business Unit Environmental, Health, and Safety Directors – Three per week minimum (Safety Inspection or CSB Observation)
    d) Superintendents – 1 Safety inspection per week and 1 CSB Observation per week. May substitute a monthly Building LIFE Process Assessment or Worker Perception Survey for one of the Safety or CSBs.
    e) Project Safety and EHS Managers – minimum of 3 inspections per week (a combination of Safety Inspections, CSB Observations, and at least one Building LIFE Process Assessment.
    f) There may be additional periodic inspections required such as "Quarterly Fall Protection and Rigging" or inspections specific to temporary focus items such as COVID-19 that are not covered in this program, but are required, nonetheless.

Note: the above are minimum requirements and at the Operations Manager's and BUEHSD's discretion, the frequency of inspections will be *increased* if incidents on a given project are trending in a less than favorable direction.

The intent is for every project, regardless of size, to have weekly "Safety Inspections", as well as periodic Critical Safe Behavior Observations (input into SafetyNet). Each project should also perform a Building LIFE Process Assessment at least once a month. On a periodic basis (every one or two months), projects lasting longer than 6 months should perform a Worker Perception Survey and document the findings in SafetyNet.

Utilizing the Data to Drive Continuous Improvement

At least monthly, staff at each project, and at the BU-level, should review data gathered in SafetyNet at a staff meeting to identify trends by observation type, by contractor against incident type; successes and challenges for the purposes of identifying opportunities for improvement. The easiest method to perform this analysis is to use the real-time "Analyze" dashboards in SafetyNet. Reports may be run as well. Some datapoints that may provide opportunities for improvement include, but are not limited to:

- Review most frequent and most severe hazards.
- Review worst-performing contractors.
- Review the Building LIFE Process Assessment
- Review Worker Perception Survey results.
- Review which projects are underperforming the benchmark.
- Review "red flag" matrix.

Document these meetings and develop action plans around your findings.

SafetyNet Inspection Goals

	"Safety" Checklist (Long form)	**"Critical Safe Behaviors"** (short form) w/coaching	**B.L. Process Assessment**
BUEHSD	2/wk.	1/wk.	1/month
Project EH&S	2/wk.	1/wk.	1/month
PM, PX, CX	1/month/project	Weekly if on-site full-time	1/month or delegate
General Super	1/wk.	1/wk. (except the week doing "Safety" checklist)	
Asst. Super(s)	1/wk.	1/wk.	
Engineer (s)	2/month (every other week)	2/month (every other week)	

Other goals:

Each project: conduct a focused quarterly fall protection and rigging inspection using the sections in the "Safety" checklist.

Add new subcontractors to the drop-down menu as they are issued contracts.

Use the new Disciplinary Action Form to document written infractions.

Use the "insert picture" button for each unsafe condition.

Insert comments for each "unsafe." Record location info and worker name if possible.

Close out (correct and document) uncorrected observations promptly.

Give feedback (both appreciative and constructive) to workers after observations.

Designated Responsible Person for Turner Hourly Employees

I. Policy Statement:

Turner cares about the health and wellness of our employees and Safety is our number one value. It is imperative to have a leader to be fully engaged with front line craft to create a safe environment. This policy is to set an expectation for our **D**esignated **R**esponsible **P**erson that is accountable and responsible for leading our Turner craft employees to have safe work production. Each project will work with the SPO Manager to identify the Designated Responsible Person for Turner craft employees.

II. Roles and Responsibilities:

The Designated Responsible Person is accountable for the overall Health and Welfare of any Craft employees under their direct guidance. This will include the following elements:

- Understand the full scope of the work.
- Ensure the development of a Job Hazard Analysis with engagement of the craft employees.
- Identify competent person(s) for specific scope of work.
- Identify training that is needed and coordinate the training.
- Ensure a project specific safety orientation has been completed.
- Ensure that proper tools and equipment have been identified and procured.
- Ensure a Pre-Task Plan is completed and reviewed with craft employee engagement.
- Ensure work is stopped and re-planned if conditions, work, or task changes.
- Ensure that all work has been planned (PDCA) throughout the day.
- Ensure that a daily safety huddle is being attended by craft employees.
    - Periodically review the quality of the engagement
    - Ensure any required permit is completed and followed.
        - To include but not limited to Ladder Permits, Surface Penetration, Hot Work
- Ensure that documented Safety Inspections have been completed for the scope of work in SafetyNet.
- Understand EH&S Policies and provide guidance for any questions or concerns (if applicable)
- Coach and Mentor craft employees; Recognize safe performance and apply disciplinary action policy as appropriate.
- Ensure that all craft employees understand their rights of “Stop Work Authority.”
- Identify and ensure that a translator is available (if applicable) for all of the above

III. Prerequisites to be a Designated Responsible Person:

To positively impact and lead craft employees the following are minimum requirements for the Designated Responsible Person.

- OSHA 30 Hour
- First Aid / CPR

- Turner - Building L.I.F.E.
- Reasonable Suspicion
- Qualified to recognize hazards and has authority to take corrective action.

Safety Training and Education Policy

I. Policy Statement

Turner believes a key component in driving an injury free environment is to develop and maintain a well-trained work force that understands basic safety and health principles. The following are minimal requirements that must be met by all Turner employees.

II. Procedure

1. Required Course Work:

a) Attend Building L.I.F.E. Training – coordinate with the BUEHSD to schedule in the first 30 days of employment.

b) New Employee Orientation – On day one, the employee's supervisor shall provide critical safety and health training for all new or re-hired employees. Information provided shall include:

i. Hazards associated with their job and proper ways to perform the task safely.
ii. Chemical Management & Hazard Communication Program.
iii. Emergency Response Procedures.
iv. PPE Requirements

c) OSHA 30 - All Turner employees in safety sensitive positions are required to have a 30-hour card. It is preferred that Turner's web-based course is utilized to fulfill these requirements. Individuals who already have a 30-hour card must take the Turner Web based Safety Refresher (2-Year Safety Refresher) course within the first six months of placement.

i. The Turner CN and Safety family, due to their interface with subcontractors and clients, is required to take the refresher course, as appropriate, every two years: Logistics, Estimating, Procurement, and Business Development. Also, all new CN family recruits should receive OSHA 30 training regardless of their initial assignment and this training should be completed within the first 90 days of start date. Close coordination with HR for tracking of required training of each person.
ii. The following Turner families are exempt for the OSHA 30 Hour and refresher courses: Cost/accounting, BIM/VDC, Scheduling, Human Resources, Community Affairs, and Administrative. If any of the above staff are assigned to a project and are working from the project site, then they need to follow the policy requirement with respect to the OSHA 30 and Refresher.

d) Subcontractor Substance Abuse Testing & Reasonable Suspicion Training - All Turner employees that interact with subcontractor workforce are required to attend training and adhere to the corporate policy regarding prescreening, random, post incident, and reasonable suspicion drug abuse testing.

e) First Aid/CPR – A minimum of one Turner employee shall be on site per project and office location with an active CPR/FA/BBP/AED certification.

f) OSHA Specific Training - When needed, individuals will be required to attend specific training that will enable Turner to be fully competent and compliant with all applicable regulations. Scaffolds, Traffic Safety, Fall Protection, Hoists/Cranes, are a few examples of specific technical training required to build safety acumen.

g) Storm Water Training – The Business Unit Storm Water Coordinator will assign necessary personnel to attend the Turner University Storm Water Training class. Local or state governments may have additional requirements for stormwater certification. Following Stormwater Training, the Business Unit Storm Water Coordinator will ensure these employees are trained to use EVOCO when required.

h) Pre-Task Plan and Job Hazard Analysis Training – All Turner site staff, and trade foreman trained in how to properly develop a quality pre task plan and execute a daily huddle.

i) All Turner staff shall be trained in the expectations of Turner's EH&S policies, programs, and processes.

i. Ensure enhanced focus on Proper Safety Preplanning, risk management, and worker engagement from the launch of the project through turnover.

Section

3

TURNER

CORPORATE ENVIRONMENTAL, HEALTH AND SAFETY POLICY

Engineering & Technology

Vertical Wall Penetration "Cut Outs"

The following relates to any vertical wall "Cut Outs" that weighs more than 50 lbs. to allow for utilities or other material to pass through. This applies to all Turner projects.

The high risk associated with these "cut outs" necessitates additional proactive management as well as the establishment of procedural elements to reduce the risks involved with these tasks.

Note: These requirements will apply to cuts where vertical wall saw cutting is required (*Reference CSO Alert 1002).*

- It does not apply to core drilling roro openings that weigh less than 50 lbs.
- If opening is less than 50 lbs. a Job Hazard Analysis and Pre-Task Plan (PTP) should address how to safely remove the "cut out."
- For masonry walls, a lintel engineering plan and PTP must be in place.

I. Procedures (to be taken in this order)

1. The following sequence must be followed. These requirements must be taken in the order listed below.
    a) A plan must be discussed with the designer and client that assures block outs for openings will be made at the time of casting.
    b) If block outs cannot be made at the time of casting and must be done in the field, the panel that requires a cut out will be lowered to the ground and placed on dunnage so the sawcut can be made on the ground.
    c) If the block out for the opening cannot be made at the time of casting or the panel cannot be lowered to the ground:
        i. The contractor making the "cut out" will provide an engineered Method of Procedure (MOP) with means and methods that is signed and sealed by a licensed 3rd party engineer.
        ii. The MOP will be submitted to the Engineer of Record for their review and approval.
        iii. The plan will be reviewed by Turner with assistance from TEG as needed. Final comments from this plan review will be incorporated into the plan.

Example of Engineered Solution MOP (Method of Procedure) if "cut outs" were not done at the time of casting and panel cannot be lowered for saw cuts to be made on the ground.

Prior to the cuts being made in the field from a vertical position, the developed MOP which has been reviewed and approved by a 3rd party engineer for the contractor will be reviewed by the Engineer of Record and then reviewed by Turner and any final comments incorporated into the plan. The plan should include (not all inclusive):

a. The JHA and Pre-task plan submitted by the contractor performing the work.
b. Identification of team members, their role and responsibility and qualifications/certifications of those doing the work
c. Description of the item(s) to be cut, how many, location, weight, etc.
d. Cutting equipment that will be used
e. Bracing required
f. Crane or hoisting equipment that will be used (including certifications of operators) to remove "cut outs"
g. Calculations of weight of "cut outs" and crane or hoist equipment limits
h. Weather conditions
i. Location of Controlled Access Zones
j. Rigging procedures
    a. Manufacturers' rigging specifications must be reviewed and followed, if applicable
    b. Worker training and PPE requirements
k. Procedures for removing the "cut out" from the rigging once the load is landed
    a. If blind picking or landing follow the Blind Landing Procedure CSO Alert that was issued in January 2021
        i. Document blind landing procedures and include in High-Risk Activity Pre-Task Planning and communications
        ii. Coordinate a communication meeting between the crane or hoisting operator and signal person
        iii. Facilitate training with all trade workers and partners involved to assure comprehension of the specific procedures for the entire procedure including rigging removal in conjunction with an awareness barrier separating the load and workers

Final approval and review of the engineered plan will be made by the Business Unit Safety Director and Operations Manager.

Concrete and Masonry

I. Policy Statement

Each contractor working on a Turner project will comply with 29 CFR 1926, Construction Industry Regulations, Subpart Q – Concrete and Masonry Construction, in addition to the following guidelines.

II. Procedures

1. General Requirements

    a) Unless otherwise stated in their contract, the concrete or masonry contractor must provide at least two covered entrances into each building or structure during perimeter work. They must also cordon off other means of access/egress.

    b) No load may be placed on a concrete structure unless a qualified person, knowledgeable in structural design, determines that the structure is capable of supporting the load.

    c) Protruding reinforced steel, onto which employees could fall or fall into, must be protected to eliminate the hazard of impalement. The use of mushroom caps is not permitted for impalement hazards.

    d) No worker, except those involved in post tensioning operations, shall be permitted to be behind the jack during tensioning operations. Signs and barricades shall be erected to limit access to the area.

    e) No worker shall be permitted to walk under concrete buckets while it is being elevated or lowered into position.

    f) No worker shall be permitted to apply cement, sand, and water mixture through a pneumatic hose unless the employee is wearing the proper PPE including face protection.

    g) This subcontractor shall provide an eye wash station with at least 15 minutes of eye wash solution within 75 feet of any concrete, painting, or masonry work.

2. Equipment and Tool Requirements

    a) Powered and rotating concrete troweling machines must have a switch that automatically shuts off power whenever the hands of the operator are removed from the machine.

3. Cast-In-Place Concrete Requirements

    a) Formwork must be designed, fabricated, erected, supported, braced, and maintained so it is capable of supporting all lateral and vertical loads anticipated to be applied to it.

b) All shoring equipment must be inspected prior to erection to determine if it meets the requirements specified in the formwork drawings.

c) Erected shoring equipment must be inspected immediately prior to, during and after concrete placement.

    a. An inspection of the shoring prior to, during, and after the concrete pour is an OSHA requirement. The concrete contractor is to determine their means and methods for inspection without placing any person directly under a live concrete pour. A Controlled Access Zone must be established around the live pour so no one can enter. If an individual is assigned to inspect the shoring, they will be positioned outside of the controlled access zone of the concrete being placed and the previous bay where concrete was placed. This type of inspection of a live pour can also be completed with the use of technology. How the inspection is to be completed will be determined in the preconstruction meeting and will be detailed in the JHA and reviewed with all workers prior to the concrete pour. The location of the person inspecting shoring and performing tasks during concrete placement will be detailed on the project-specific Job Hazard Analysis (JHA) and daily Pre- Task Plan. The placement sequence will also be noted in the JHA.

d) A qualified designer must prepare the design of the shoring and re-shoring. A third-party engineer qualified (certified, registered engineer) in structural design shall review the design of the shoring.

e) The designer of the shoring must inspect the (initial) erected shoring to ensure it is installed per design prior to concrete pour. Assignment and training of a minimum of one competent person that must be on site at all times to inspect shoring prior to any concrete pour by the installing contractor. Any change of formwork should be inspected by the designer.

f) Forms and shores must not be removed until the employer determines that the concrete has gained sufficient strength.

g) 100% Fall protection will always be required while accessing or working on temporary outrigger platform systems. Any anchors for outrigger platforms must be cast in place.

h) At building perimeters where the decking steps down to allow for a beam pour, the height of the rails shall be increased accordingly.

i) Areas where form stripping is to be performed must be properly barricaded with tape or fence and signage must be posted on all sides. This should include areas below stripping.

j) Protruding nails should be removed or bent immediately.

k) Where employees must walk across rebar, temporary walkways must be installed to prevent trip hazards.

l) Outrigger platforms used for material movement in and out of the building via a crane or forklift must be designed by an engineer and incorporate 100% fall protection systems.

4. Authorization to Strip Formwork:

a) When given Authorization that the concrete has reached strength in accordance with project specifications by the Structural Engineer of the Project, the written notification from said engineer (third party that does break strength testing) will be forwarded to the structural concrete trade and Turner. Stripping activities regarding formwork and work platforms will not proceed prior to receiving the authorization.
b) If any change in conditions occurs while stripping a work platform or shoring, all work must be stopped. A written notification must be sent by the Structural Concrete subcontractor to Turner Management staff and a review meeting held to assess the change. A revised risk mitigation plan will be established and reviewed with all workers prior to work restarting.

5. Use of Proper Barricades and Signage on the formwork:

a) The use of fixed, physical barricades in lieu of Caution / Danger Tape, where appropriate, to further inform and protect employees from changes in elevation must be utilized.
b) The use of fixed, physical barricades to further inform and protect employees whenever there is a fall hazard must be utilized. Caution / Danger Tape can never be used to barricade for a fall hazard.
c) Additional warning signage that contains the appropriate contact information for the contractor which has installed the barricade must be installed on the barricade.

6. Concrete Core Formwork Systems
a) The business unit must schedule a Teams conference call prior to erecting any concrete core formwork at the project. Ideally this call will be scheduled post concrete interviews but pre award so that the business unit and this team have an understanding of what formwork systems and methodologies will be utilized for the concrete formwork system.

a. This meeting should include Andrew Leone aleone@tcco.com, Jack Dawson jdawson@tcco.com, John Grafrath jgrafrath@tcco.com, Karl Kinsella kkinsella@tcco.com, Steve Garrett srgarrett@tcco.com, and Doug LaPlante dlaplante@tcco.com.

b. The goal of this meeting is to have a peer review done to include new policy elements in the Turner EHS Program in relation to concrete core formwork systems that are above OSHA and industry standards.

c. Please include in the invite to the call.
    - Concrete Core Formwork System Questionnaire
    - Concrete Core Formwork drawing
    - Engineered anchor detail drawing
    - Erection / Dismantle Plan
    - Fall Protection Plan
    - Access Plan

7. Masonry Requirements

a) A limited access zone (LAZ) must be established prior to the start of any masonry work.

b) The zone must be equal to the height of the wall, plus four feet for the entire length of the wall.

c) All masonry walls over 8 feet in height shall be adequately braced and remain in place until the permanent supporting elements of the structure are in place.

d) A top guard rail is required to be installed on the working side of the masonry scaffold unless the height of the installed block is 39” or other suitable fall protective systems used.

Confined Spaces in Construction

I. Policy Statement

This program has been developed to comply, at a minimum, with 29 CFR 1926 Subpart AA Permit-Required Confined Spaces. This program sets forth requirements for practices and procedures to protect employees engaged in construction activities at a worksite with one or more confined spaces. Entering or knowledge of entry into a confined space without all appropriate planning and permits is a zero-tolerance issue for Turner Construction and will be dealt with appropriately.

As a reminder you may be required to also follow the 29 CFR 1910.146 General Industry Confined Spaces Program, but the more stringent of the two will always apply.

II. Definitions

1. Confined space means a space that:
   a) Is large enough and so configured that an employee can bodily enter it.
   b) Has limited or restricted means for entry and exit (definition below); and
   c) Is not designed for *continuous employee occupancy*.

   Confined spaces may include, but are not limited to, the following: Bins; boilers; pits (such as elevator, escalator, pump, valve or other equipment); manholes (such as sewer, storm drain, electrical, communication, or other utility); tanks (such as fuel, chemical, water, or other liquid, solid or gas); incinerators; scrubbers; concrete pier columns; sewers; transformer vaults; heating, ventilation, and air-conditioning (HVAC) ducts; storm drains; water mains; precast concrete and other pre-formed manhole units; drilled shafts; enclosed beams; attics; interstitial spaces; vessels; digesters; lift stations; cesspools; silos; air receivers; sludge gates; air preheaters; step up transformers; turbines; chillers; bag houses; and/or mixers/reactors.
2. *Permit-required confined space* (permit space) means a confined space that has one or more of the following characteristics: (a) Contains or has a potential to contain a hazardous atmosphere; (b) Contains a material that has the potential for engulfing an entrant; (c) Has an internal configuration such that an entrant could be trapped or asphyxiated by inwardly converging walls or by a floor which slopes downward and tapers to a smaller cross-section; or (d) Contains any other recognized serious safety or health hazard.
3. *Non-permit required confined space means a confined space that meets the definition of a confined space but does not meet the requirements for a permit-required confined space, as defined in this subpart.*
4. Limited or restricted means for entry or exit means a condition that has the potential to impede an employee's movement into or out of a confined space. Such conditions include, but are not limited to, trip hazards, poor illumination, slippery floors, inclining surfaces, and ladders.
5. Controlling Contractor is the employer that has overall responsibility for construction at the worksite.

6. Attendant means an individual stationed outside one or more permit spaces who assesses the status of authorized entrants and who must perform the duties specified in §1926.1209. Note: the attendant must have knowledge of existing and potential hazards, including signs/symptoms of exposure. Must maintain accurate head count/communication with entrants, is aware of possible behavioral effects of hazard exposure in authorized attendants and assesses activities and conditions inside and outside the space to determine if it is safe for entrants to remain in the space and orders the authorized entrants to evacuate the permit space immediately as required by the standard.
7. Authorized entrant: means an employee who is authorized by the entry supervisor to enter a permit space and must perform the duties found in section VIII.
8. Entry Supervisor means the qualified person (such as the employer, foreman, or crew chief) responsible for determining if acceptable entry conditions are present at a permit space where entry is planned, for authorizing entry and overseeing entry operations, and for terminating entry as required by this standard.

III. General Requirements

Before beginning work at a project site, each contractor must ensure that a competent person identifies all confined spaces in which one or more of the employees it directs may work and identifies each space through consideration and evaluation of the elements of that space, including continuous testing as necessary. All confined spaces that an employee will enter must be classified as either a “permit-required space,” a “non-permit space,” or an “alternate-entry space.” Classification of each type of space must be accomplished using the Turner Confined Space Entry Permit, regardless of classification. If the workplace contains one or more permit-required spaces, the employer who identifies, or who receives notice of, a permit space must:

1. Inform exposed employees of the existence and location of danger posed at each permit space by posting danger signs or any other equally effective means. Post signs in English plus any additional languages spoken by non-English speaking workers.

2. Inform, in a timely manner and in a manner other than posting, its employees' authorized representatives and the controlling contractor of the existence and location of, and the danger posed by, each permit space.
3. Each employer who identifies, or receives notice of, a permit space and has not authorized employees it directs to work in that space must take effective measures to prevent those employees from entering that permit space.
4. If any employer decides that employees it directs will enter a permit space, that employer must have a **written permit confined space program** implemented at the construction site. The written program must be made available prior to and during entry operations for inspection by employees and their authorized representatives.
5. If there is a potential for an atmospheric hazard, then the contractor desiring to perform entry must monitor the atmosphere in the confined space prior to breaking the plane of the entry portal. If you are unsure if monitoring must be done, contact the BU Environmental, Health, and Safety Director. Some examples of situations where an atmospheric hazard might exist would include, but not be limited to, the use of fossil-fuel powered engines and tools in the area; chemicals or paints being used in the area, compressed gases stored or used in the area, etc.

Alternate Entry Procedure

An employer whose employees enter a permit space need not comply with 1926.1204 through 1206 and 1926.1208 through 1211, provided that all of the following conditions are met:

The employer can demonstrate that all physical hazards in the space are eliminated or isolated through engineering controls so that the only hazard posed by the permit space is an actual or potential hazardous atmosphere.

The employer can demonstrate that continuous forced air ventilation alone is sufficient to maintain that permit space safe for entry, and that, in the event the ventilation system stops working, entrants can exit the space safely.

The employer develops monitoring and inspection data that supports the demonstrations required by paragraphs (e)(1)(i) and (ii) of this section.

If an initial entry of the permit space is necessary to obtain the data required by this paragraph the entry is performed in compliance with §§ 1926.1204 through 1926.1211.

The determinations and supporting data required by paragraphs (e)(1)(i), (ii), and (iii) of this section are documented by the employer and are made available to each employee who enters the permit space under the terms of paragraph (e) of this section or to that employee's authorized representative; and

Entry into the permit space under the terms of paragraph (e)(1) of this section is performed in accordance with the requirements of the following section:

The following requirements apply to entry into permit required spaces that meet the Alternate Entry Requirements above:

- Any conditions making it unsafe to remove an entrance cover must be eliminated before the cover is removed.
- When entrance covers are removed, the opening must be immediately guarded by a railing, temporary cover, or other temporary barrier that will prevent an accidental fall through the opening and that will protect each employee working in the space from foreign objects entering the space.
- Before an employee enters the space, the internal atmosphere must be tested, with a calibrated (annual-factory calibration and daily site calibration) direct-reading instrument, for oxygen content, for flammable gases and vapors, and for potential toxic air contaminants, in that order. Any employee who enters the space, or that employee's authorized representative, must be provided an opportunity to observe the pre-entry testing. Only a competent and qualified person may use the air monitor. Submit air monitoring results and calibration records to Turner upon request.
- No hazardous atmosphere is permitted within the space whenever any employee is inside the space.
- Continuous forced air ventilation must be used, as follows:
    - An employee must not enter the space until the forced air ventilation has eliminated any hazardous atmosphere.
    - The forced air ventilation must be so directed as to ventilate the immediate areas where an employee is or will be present within the space and must continue until all employees have left the space.
    - The air supply for the forced air ventilation must be from a clean source and must not increase the hazards in the space.
- The atmosphere within the space must be continuously monitored unless the entry employer can demonstrate that equipment for continuous monitoring is not commercially available or periodic monitoring is sufficient... If continuous monitoring is used, the employer must ensure that the monitoring equipment has an alarm that will notify all entrants if a specified atmospheric threshold is achieved, or that an employee will check the monitor with sufficient frequency to ensure that entrants have adequate time to escape. If continuous monitoring is not used, periodic monitoring is required. All monitoring must ensure that the continuous forced air ventilation is preventing the accumulation of a hazardous atmosphere. Any employee who enters the space, or that employee's authorized representative, must be provided with an opportunity to observe the testing.
- If a hazard is detected during entry:
    - Each employee must leave the space immediately.
    - The space must be evaluated to determine how the hazard developed.
    - The employer must implement measures to protect employees from the hazard before any subsequent entry takes place.

- The employer must ensure a safe method of entering and exiting the space. If a hoisting system is used, it must be designed and manufactured for personnel hoisting; however, a job-made hoisting system is permissible if it is approved for personnel hoisting by a registered professional engineer, in writing, prior to use.
- The employer must verify that the space is safe for entry and that the pre-entry measures have been taken through a written certification that contains the date, location of the space and signature of persons providing the certification. The certification must be made before entry and must be made available to each employee entering the space or to that employee's authorized representative. A copy must be provided to Turner Construction before entry begins.

Reclassifying a Permit Space to a Non-Permit Confined Spaces

A space classified by an employer as a permit-required confined space may only be reclassified as a non-permit confined space when a competent person determines that all of the applicable requirements in paragraphs of this section have been met:

- If the permit space poses no actual or potential atmospheric hazards and if all hazards within the space are eliminated or isolated without entry into the space (unless the employer can demonstrate that doing so without entry is infeasible), the permit space may be reclassified as a non-permit confined space for as long as the non-atmospheric hazards remain eliminated orisolated.
- The entry employer must eliminate or isolate the hazards without entering the space, unless it can demonstrate that this is infeasible. If it is necessary to enter the permit space to eliminate or isolate hazards, such entry must be performed under §§ 1926.1204 through 1926.1211. If testing and inspection during that entry demonstrate that the hazards within the permit space have been eliminated or isolated, the permit space may be reclassified as a non-permit confined space for as long as the hazards remain eliminated or isolated.
    - Note: Control of atmospheric hazards through forced air ventilation does not constitute elimination or isolation of the hazards. Paragraph (e) of this section covers permit space entry where the employer can demonstrate that forced air ventilation alone will control all hazards in the space.
- The entry employer must document the basis for determining that all hazards in a permit space have been eliminated or isolated, through a certification that contains the date, the location of the space, and the signature of the person making the determination. The certification must be made available to each employee entering the space or to that employee's authorized representative.
- If hazards arise within a permit space that has been reclassified as a non-permit space under paragraph (g) of this section, each employee in the space must exit the space. The entry employer must then reevaluate the space and reclassify it as a permit space as appropriate in accordance with all other applicable provisions of this standard.

IV. Permit Space Entry Communication and Coordination

Before entry operations begin, the controlling contractor must obtain the host employer's information about the permit space hazards and previous entry operations and provide the following information to each entity entering a permit space and any other entity at the worksite whose activities could foreseeably result in a hazard in the permit space:

a. The information received from the host employer.
b. Any additional information the controlling contractor has about the space.
c. The precautions that the host employer, controlling contractor, or other entry employers implemented for the protection of employees in the permit spaces.

A boilerplate letter is attached to this program to send to host employers to obtain the necessary information.

The controlling contractor and entry employer(s) must coordinate entry operations when:

a. More than one entity performs permit space entry at the same time:or
b. Permit space entry is performed at the same time that any activities that could foreseeably result in a hazard in the permit space are performed.

After entry operations:

The controlling contractor must debrief each entity that entered a permit space regarding the permit space program followed and any hazards confronted or created in the permit space(s) during entry operations. This debrief needs to happen with the crew performing the entry immediately, or as soon as possible after entry. Document this meeting on the cancelled permit and submit the permit to the BU Environmental, Health, and Safety Director.

The entry employer must inform the controlling contractor in a timely manner of the permit space program followed and of any hazards confronted or created in the permit space(s) during entry operations; and the controlling contractor must apprise the host employer of the information exchanged with the entry entities pursuant to this subparagraph. Submit copies of each cancelled permit and any lessons learned to the Host Employer. Document this was done on the cancelled permit that goes to the BUEHSD.

Unless the controlling contractor has or will have employees in a confined space, it is not required to enter any confined space to collect the information.

V. Permit Required Confined Spaces

1. Permit Required Spaces – If permit spaces are identified, the following program elements must be addressed by the entry contractor's competent person in a **Written Project Specific Confined Space Procedure**. This procedure must be submitted in advance to the Turner project manager.

    a) Job Specific Safety Analysis – Include a review of site-specific hazards and details on how to the control these hazards such as ventilation, protective clothing, respiratory equipment, air testing and monitoring, fire prevention, training, rescue plan, documentation, and access.

    b) Atmospheric Testing – Specify how the space will be tested for oxygen content, combustible gases and vapors, toxic gases, and vapors to ensure that acceptable entry conditions exist. Permit Confined spaces will be continuously monitored while entrants are in the confined space.

    c) Assigned Duties – Provide training for all personnel entering a confined space, attendants and entry supervisors on their duties, the nature of existing and potential hazards in and around the space, precautions to avoid any incidents and the use of personal protective equipment and emergency rescue equipment.

    d) Unauthorized Entry – Procedures they will implement that are necessary to prevent unauthorized entry

    e) Rescue Equipment and Emergency Services

        1. A rescue procedure shall be developed by the subcontractor responsible for entering the space and submitted to Turner prior to commencing a confined space entry. If subcontractor decides to use a rescue service vendor that service must be on site at the beginning of and during the permit space work. Fire and emergency rescue services are not a substitute for a qualified and trained rescue team or vendor service. At a minimum 29 CFR Appendix F to Subpart AA Rescue Team and Rescue Service Evaluation Criteria must be utilized when assessing rescue operations.
        2. A pre-planned rescue procedure shall be developed for the attendant who is stationed outside the space to observe and communicate with the entrant(s). The procedure should discuss how to:
            a. summon the on-site rescue and emergency services.
            b. procedures for rescuing entrants from permit spaces
            c. provide necessary emergency services to rescue employees.
            d. and prevent unauthorized personnel from attempting a rescue.

3. All persons entering a permit-required confined space shall wear a full-body harness with a retrieval system attached. Wristlets may be used in lieu of the chest or full body harness if it can be demonstrated the use of a chest or full body harness is infeasible or creates a greater hazard and that the use of wristlets is the safest and most effective alternative.
4. All retrieval and rescue equipment to meet applicable ANSI or OSHA requirements and be designed for intended operations.
5. A trained attendant with a pre-planned rescue procedure shall be stationed outside to observe (if possible) and/or communicate with the entrant at all times and be capable of putting rescue operations into effect. At a minimum 29 CFR Appendix F to Subpart AA Rescue Team and Rescue Service Evaluation Criteria must be utilized when assessing rescue operations. If a subcontractor decides to use a rescue service vendor, that service must be on-site during the full duration of the permit space work. Fire and emergency rescue services are not a substitute for a qualified and trained rescue team or vendor service, on-site.

f) An **Entry Permit** must be used to record critical data and serve as official Final entry authorization to enter the permit required space and must be implemented prior to entering the space. Develop and implement the means, procedures, and practices necessary for safe permit space entry operations. Identify and evaluate the hazards of permit spaces before employees enter them.

g) Training – documentation of employees expected to enter permit spaces must be provided and reviewed by the Project Superintendent and Project Safety Manager (if assigned) to ensure that they have been trained per the requirements of 29 CFR 1926.1207. Training documentation must be verified for all rescue personnel or rescue service that will be used. Training should also include respirators where they might be used for rescue.

h) If respiratory protection is required, the subcontractor responsible for making entry into the space will submit their Respiratory Protection Plan to Turner Construction for review. The plan shall include identified hazards associated with the space and their concentrations, what respiratory protection is needed, medical screening/fit testing, signs, and symptoms of exposure, what are the cartridge/canister change-out procedures, respiratory training, etc.

Note: any contractor that will self-perform rescue into a confined space that could potentially have a hazardous atmosphere must have the appropriate level of respiratory protection on hand for the number of rescuers assigned. Potentially IDLH atmospheres will necessitate either SCBAs or SARs be provided.

2. Atmospheric Air Monitoring shall occur before entering a confined space. Continuous monitoring, using a four-gas meter, is required. Testing the Atmosphere in the confined space is required by a qualified Entry Supervisor prior to entry. Take samples at all accessible areas of the confined.

space. The qualified person must note the results of the sampling. The atmosphere must meet the following conditions:

a) Oxygen: 19.5 percent minimum, 23.5 percent maximum,

b) Flammable gases and vapors: less than 10 percent,

c) Toxic gases: persons monitoring the atmosphere of permit spaces will adhere to the lowest published exposure limit among OSHA, NIOSH and ACGIH to determine when evacuation from a permit space is necessary. Alarm settings on instruments must never exceed these limits. Additionally, when any toxic gas or vapor reading is above background, but below published exposure limits, the entry supervisor will evaluate.

d) IF the above atmospheric conditions are not attainable, the area is a Permit Required Confined Space. A plan must be developed, and the permit submitted to Turner Construction for review and comments.

e) If the work performed inside the space could generate flammable vapors or produce an oxygen-deficient atmosphere, this space is a Permit Required Confined Space and continuous air monitor is required by the construction standard. Non-sparking tools and intrinsically safe tools and equipment such as lights, radios, and monitors may be necessary when flammability is an issue.

f) Maintain a log of all readings.

3. Welding and Burning: Prior to any spark and/or heat producing activities in a confined space, the subcontractor must obtain a Hot Work Permit and determine there is no danger of flammable atmosphere.
4. Burning / Welding Procedures: When burning or welding inside a confined space, all cylinders and welding machines shall be located outside the confined space. Check hose connections or welding leads prior to entry. Remove all hoses from the confined space at the end of the work shift.
5. All potential confined spaces, both existing and new, shall be marked, labeled, or appropriately identified. The controlling contractor, rather than the host employer, is the primary point of contact for information about permit spaces at the worksite. The host employer must provide information it has about permit spaces at the work site to the controlling contractor, who then passes it on to the employers whose employees will enter the spaces (entry employers). In addition, entry employers must give the controlling contractor information about their entry program and hazards or improvement opportunities they encounter in the space. The controlling contractor will provide the new information on to other entry employers and back to the host. The controlling contractor

will make sure employers outside a space know not to create hazards in the space, and that entry employers in a space at the same time do not create hazards for one another's workers.

VI. Permitting Process

All confined space entries requiring a permit will utilize the Turner Confined Space Entry Permit. Before the entry begins, the Entry Supervisor identified on the permit must sign the entry permit to authorize entry. The completed permit must be made available at the time of entry.

The Entry Supervisor must terminate entry and take the following action when:

- Cancel the permit when the operations associated with the permit are complete.
- Suspend or cancel the permit and fully reassess the permit space before allowing reentry when a condition arises in or near the space that is not allowed under the entry permit.

The Entry Employer must retain each canceled entry permit for at least one year to facilitate the review of the permit-required confined space program. Any problems encountered during an entry operation must be noted on the permit so that the appropriate revisions to the permit space program can be made.

Entry Permit (See Forms Section for Confined Space Permit)

The entry permit document that authorizes entry into a permit space must:

- Identify the permit to be entered,
- Purpose of the entry,
- Date and authorized duration of the entry permit,
- Authorized entrants by name in the permit space,
- Identify the means of detecting an increase of atmospheric hazard levels,
- The person, by name, currently serving as the attendant,
- The individual, by name, currently serving as the Entry Supervisor and the signature or initials of each Entry Supervisor who authorizes entry,
- The hazards of the permit space to be entered,
- The measures used to isolate the permit space and to eliminate or control permit space hazards before entry,
- Identify the acceptable entry conditions,
- The results of tests with the names of the testers and the time the test was performed,
- Identify the rescue and emergency services to be contacted and the means of contacting those services (equipment to use and the numbers to call).
- Identify the communication procedures used by authorized entrants and attendants.

- Identify the PPE that will be utilized, the testing equipment, communication devices, alarm systems and the rescue equipment that will be provided.
- List any additional information necessary for the particular confined space to ensure employee safety.
- List any additional permits required, such as hot work permits, etc. that have been issued to authorize work in the permit space.
- Conduct a meeting with the appropriate parties, including the owner, to review the written site-specific confined space plan and make necessary adjustments before activity begins.

VII. Training

The employer must provide training to each employee and ensure that the employee possesses the understanding, knowledge, and the skills necessary for the safe performance of their assigned duties. The training must result in the understanding of the hazards in the permit space and the methods used to isolate, control or in other ways protect employees from the hazards, and for those employees not authorized to perform entry rescues, in the dangers of attempting rescues.

- The training must be in the language and vocabulary that the employee can understand.
- Training is required before the employee is first assigned duties before there is a change in assigned duties or when there is a change in the permit space entry where an employee has not previously been trained.
- Training is required when there is evidence of a deviation from the permit space entry procedures or there are inadequacies in the employee's knowledge or use of the procedures.
- The employer must maintain training records that training was accomplished. The training records must contain the employee's name, the name of the trainers and the dates of training.

Supervisor's Training (Individual authorizing or in charge of entry):

A. Entry Permit – content and completeness,
B. Procedures, practices, and equipment,
C. Entry operations monitoring,
D. Entry cancellation,
E. Closing procedures after completion,
F. Dealing with unauthorized personnel.

Entrants and Attendants Training:

A. Hazard Recognition:
    a. Type of Hazard,
    b. Signs and symptoms,
    c. Consequence of exposure.
B. Communication

a. Maintain contact between entrant and attendant.
b. Entrant should notify the attendant prior to attempting self-evacuation.
c. Notification of entrants by attendant if:
    - Behavioral changes are observed.
    - Dangerous situations occur in or around the space.
    - Conditions exist that are not consistent with the permit.
    - The attendant must leave the workstation.

C. Protective Equipment:
    a. Appropriate equipment- respirators, clothing, retrieval lines, etc.
    b. Proper use of protective equipment
    c. External protective barriers to prevent unauthorized entries.

D. Self- rescue:
    a. When ordered by attendant to evacuate
    b. If the entrant's monitor alarm sounds
    c. If the entrant perceives danger

E. Rescue:
    a. Attendant will not enter the space to attempt save.
    b. Attendant should be trained in rescue procedures and the proper use of rescue equipment.

Rescue Team Training:

a. Hazard Recognition
b. Proper use of protective equipment including respirator and rescue equipment
c. Rescue Procedures
d. Emergency first aid, CPR and AED
e. Simulated rescue operation drills

VIII. Duties of Authorized Entrants

The entry employer must ensure that all authorized entrants:

- Are familiar with and understand the hazards that they may face during entry.
- Properly use the equipment provided.
- Communicate with the attendant as necessary on their status.
- Alert the attendant if there is a warning sign or symptom of exposure to a dangerous situation or detects a prohibited condition.
- Exit the space when an order to evacuate is given by the attendant or entry supervisor, there is a warning sign or symptom to a dangerous situation, the entrant detects a prohibited condition, or an evacuation alarm is activated.

IX. Duties of Attendants

The entry employer must ensure that each attendant:

- Is familiar with and understands the hazards that may be faced during entry.
- Is aware of possible behavioral effects of hazard exposure of the entrants.
- Continuously maintain an accurate count of entrants in the permit space.
- Remains outside the permit space during entry until relieved by another attendant
- Communicates with entrants as necessary to access the status of the entrant and to alert entrants of the need to evacuate the space.
- Assesses activities and conditions inside and outside the space to determine if it is safe for the entrants to remain in the space. Orders entrants to evacuate the space if there is a prohibited condition, if there are behavioral effects of an apparent hazard exposure, if there is a situation outside the space that could endanger the entrant or if the attendant cannot effectively or safely perform all the duties required.
- Summon rescue or other emergency services if the entrants need assistance.
- Warns all unauthorized persons that they must stay away from the permit space.
- Advises the unauthorized persons that they must exit immediately if they entered the permit space
- Informs the authorized entrants and the entry supervisor if unauthorized person has entered the permit space
- Performs no duties that might interfere with the attendant's primary duty to access and protect the authorized entrants.

X. Duties of the Entry Supervisor

The entry employer must ensure that each entry supervisor:

- Is familiar with and understands the hazards that may be faced during entry.
- Verifies by checking that all the appropriate entries have been made on the permit, that all tests specified by the permit have been conducted and that all procedures and equipment specified by the permit are in place before endorsing the permit and allowing the entry to begin.
- Terminates the entry and cancels or suspends the permit as required by 1926.1205 (e)
- Verifies the rescue services are available and the means of contacting them are operable and the employer will be notified as soon as the services are unavailable.
- Removes unauthorized individuals who enter or attempt to enter the permit space.

XI. Rescue and Emergency Services

- Rescuers must be on-site during the entry.
- If an employer brings in a third party to perform rescue services, the employer shall evaluate the prospective rescuer service's ability, in terms of proficiency with rescue related tasks and equipment, to function properly while rescuing entrants.

- The rescue team or service must be stationed close by the space, on the project, in order to reach the victim promptly and is equipped for and proficient in performing rescue services.
- The employer shall inform each rescue team or service of the hazards that they may confront when called upon to perform a rescue at the site.
- Provide the rescue team or service selected with access to all permit spaces so they can develop an appropriate rescue plan and to practice rescue operations.
- The employer shall train affected employees to perform assigned rescue duties and ensure that such employees successfully complete the training required and establish proficiency as authorized entrants.
- Train each affected employee in the basic first aid/CPR and ensure one member of the rescue team or service has a current first aid/CPR certification available.
- The employer shall ensure that affected employees practice making permit space rescues before attempting an actual rescue at least once every 12 months. This can be done by a simulated rescue operation in which they remove dummies, etc. from an actual permit space.
- Planning and providing for non-entry rescue is required unless the retrieval equipment would increase the overall risk or not contribute to the rescue of the entrant. The employer must still have an on-site rescue team. Each authorized entrant must wear a full body harness with the retrieval line attached to the back. The other end of the retrieval device must be attached to a mechanical device or a fixed point outside the permit space in a manner that a rescue can begin when necessary. Equipment that is unsuitable for retrieval must not be used. The SDS's must be made available to the treating medical facility where the worker is being treated.

XII. Annual Program Review

Each business unit will review cancelled permits and incident reports involving confined spaces from each project's confined space entries to assess the effectiveness of this program, lessons-learned and make appropriate changes to this program if necessary. This review must happen annually.

Sample Letter to "Host Employer" regarding confined space information:

Turner Construction Company [Date]
[Office Street Address]
[City, State, ZIP]

[Recipient Name]
[Recipient Address]
[Recipient City, State, Zip Code]

Dear [Recipient Name]:

I'm writing as a courtesy to make sure you're aware of the new OSHA regulations regarding Confined Spaces in Construction – Subpart AA, and how it may now create obligations for your organization. While the majority of the standard applies directly to the contractors that will perform confined space entry on your site, there are brand new requirements that apply to you, the "host employer." OSHA defines host employer as "the employer that *owns or manages the property* where the construction work is taking place." As required by Subpart AA, the host employer must now provide the "controlling contractor," Turner Construction, with the following information, if it has it:

- The location of each known *permit-required confined space*.
- The hazards or potential hazards in each space or the reason it is a permit space; and
- Any precautions that the host employer, any previous controlling contractor or entry employer implemented for the protection of employees in the permit space.

OSHA defines a Permit-required confined space (permit space) as a confined space that has one or more of the following characteristics:

1. Contains or has a potential to contain a hazardous atmosphere.
2. Contains a material that has the potential for engulfing an entrant.
3. Has an internal configuration such that an entrant could be trapped or asphyxiated by inwardly converging walls or by a floor which slopes downward and tapers to a smaller cross-section; or
4. Contains any other recognized serious safety or health hazard.

If you have any of the information requested above, please forward to me at your earliest convenience and we will, in turn, provide the information to any subcontractors that will be performing confined space entry. Thanks for your assistance in this matter.

Sincerely,

[Your Name]

[Title]

Cranes and Derricks in Construction

I. Policy Statement

Each contractor working on a Turner project will comply with 29 CFR 1926, Construction Industry Regulations, Subpart CC – Cranes and Derricks in Construction, in addition to the following guidelines.

II. Procedures

1) General Requirements
   a) An annual third-party inspection is required for all cranes(s). Documentation of the annual third-party inspection and report must be submitted to Turner prior to use. Third party inspectors are required to possess local and federal credentials to which type of crane they are inspecting.
   b) An additional project specific third-party inspection is required for any crane that will be assembled, erected and/or modified on site that requires more than adding counterweights or a seeing on jib. An additional third-party inspection will be required for each modification made to the crane while on site.
   c) Re-inspection may be required if repairs or modifications are required after the initial inspection.
   d) A daily crane inspection, performed by a competent person, is to be documented and those are reports are to be given to Turner when requested.
   e) If the manufacturer's inspection criterion does not exist, a qualified person, familiar with crane design and dynamics, may develop inspection criteria.
   f) Turner requires that all crane operators be certified by an accredited testing organization. Currently there are four organizations offering crane operator certifications. The four are the National Commission for the Certification of Crane Operators (NCCCO); the Operating Engineers Certification Program (OECP); and the National Center for Construction Education and Research (NCCER). Copies of their certifications must be submitted to Turner. In addition, a resume indicating the specific type of crane must be submitted to TCCO supervision prior to operation. Additional certifications for operators by other accredited testing organizations must be vetted by Turner BUEHSD before acceptance.
   g) All operators are required to verify the weight of each load prior to hoisting.
   h) Any lift exceeding 75% of the cranes rated capacity or lifts involving two or more cranes shall be considered a critical lift. In addition, the following factors should be considered when determining whether or not a critical lift plan should be developed:
      - Potential hazards to personnel and the public
      - Hazards in proximity to the work area (i.e., power lines)
      - Complexity of the load (i.e., shifting loads)
      - Adverse impact from environmental conditions (i.e., winds)
      - Adverse commercial impact (i.e., job shutdown and cost to replace)
      - Site requirements / owner requirements

A critical lift plan must be submitted to TCCO supervision for review prior to the lift. A sample plan and checklist has been linked to this document.

i) A pre-planning meeting to discuss the critical lift will be held in the field with the appropriate parties to discuss the lift. At a minimum, the following shall be reviewed:

- The critical lift plan.
- The contingency plan if something goes wrong during the lift.
- The emergency response.

j) Mobile crane movement on site must be in accordance with manufacturer's recommendations.
k) At 20 mph, crane operations need to be evaluated by the competent person regarding the safe operation of the crane & the task associated with the crane. The crane shall not operate outside its wind limitations as stated in the operator's manual.
l) The swing radius of cranes must be properly barricaded at all times while working on site. Tape is not an acceptable barrier.
m) Outrigger pads should be at least 3 times the dimensions of the crane floats. The outrigger pads are to be pre-manufactured. The weight must be determined prior to lifting the load.
n) Wire rope, its attachments, fittings, sheaves, and safety devices must be inspected according to the manufacturer's recommendations. Copies of the inspections must be submitted to Turner.
o) Wedge sockets and fittings must be the proper size to match the wire rope and must move to hold the wire rope under load. The dead end must be terminated according to ANSI B30.5.
p) An anti-two-block or warning device is required on all cranes as specified in ANSI B30.5 for each hoist line. This requirement may be waived by the BUEHSD for certain cycle duty crane operations such as pile driving and drilling rigs.
q) A qualified rigger must inspect the rigging prior to each use.
r) All windows in cabs must be safety glass that produces no visible distortion that will interfere with the safe operation of the machine.
s) Cranes, hoists, boom trucks and derricks shall not be installed or operated within 20' of a power line unless they follow 1926.1408 (a) (2).
t) Assembly/disassembly must be directed by a person who meets the criteria for both a competent person and a qualified person, or by a competent person who is assisted by one or more qualified persons ("A/D director"). See 1926.1404
u) Before commencing assembly/disassembly operations, the A/D director must ensure that the crew members understand all of the following
    1. Their tasks,
    2. The hazards associated with their tasks.
    3. The hazardous positions/locations that they need to avoid.

2) Ground Conditions
    a. Ensure that ground preparations necessary to meet the requirements. The equipment must not be assembled or used unless ground conditions are firm, drained, and graded to a sufficient extent so that, in conjunction (if necessary) with the use of supporting materials, the equipment manufacturer's specifications for adequate support and

degree of level of the equipment are met. The requirement for the ground to be drained does not apply to marshes/wetlands. "Ground conditions" means the ability of the ground to support the equipment (including slope, compaction, and firmness).

b. Inform the user of the equipment and the operator of the location of hazards beneath the equipment set-up area (such as voids, tanks, utilities) if those hazards are identified in documents (such as site drawings, as-built drawings, and soil analyses) that are in the possession of the controlling entity (whether at the site or off-site) or the hazards are otherwise known to that controlling entity.

c. If the A/D director or the operator determines that ground conditions do not meet the requirements in paragraph (a) of this section, that person's employer must have a discussion with the controlling entity regarding the ground preparations that are needed so that, with the use of suitable supporting materials/devices (if necessary), the requirements in paragraph (a) of this section can be met.

3) Signal Person Qualifications
   a. Know and understand the type of signals used. If hand signals are used, the signal person must know and understand the Standard Method for hand signals.

   b. The employer must make the documentation for whichever option is used available (Third party qualified evaluator or Employer's qualified evaluator) at the site while the signal person is employed by the employer. The documentation must specify each type of signaling (*e.g.*, hand signals, radio signals, *etc.*) for which the signal person meets the requirements.

   c. Please refer to 1926.1428 for reference.

Material Handling and Rigging

I. Policy Statement

Material handling and rigging incidents account for a large number of workers compensation claims annually. Each contractor working on a Turner project must comply with 29 CFR 1926, Construction Industry Regulations, Subpart H – Materials Handling, Storage, Use and Disposal, in addition to the following guidelines.

II. Procedures

1. General Material Storage
    a) Aisles and passageways must be kept clear at all times for the safe movement of material handling equipment and employees. Storage areas must be kept free of accumulating materials that contribute to hazards of tripping, fire & pest harborage.

    b) Do not store material within 6’ of any hoist way or interior floor opening.

    c) Do not store material within 10’ of an exterior wall which does not extend above the material.

    d) Subcontractors must ensure each employee is trained in proper lifting techniques. Employees shall not lift more than 50 pounds per person. Mechanical means should be used as much as possible.

2. Rigging
    a) General Requirements
        - A maximum of (3) three members (only beams and similar structural members) may be hoisted per lift. Materials other than structural steel members may not be multiple lift rigged and lifted.
        - Ensure the weight of the load and approximate center of gravity has been obtained.
        - Rig the load in a manner to ensure balance and stability during lifting activities
        - Individuals who rig loads must be qualified by their employer. An employer may not permit an individual to rig loads to be lifted by a crane unless the individual has received training and also has the experience appropriate to their level of work. All riggers must be documented as a qualified person.
        - A competent rigging supervisor must be onsite and engaged in all critical lifts.
        - Subcontractors must provide and maintain a current list of all qualified riggers to the Turner Project Staff.
        - A qualified rigger must inspect all rigging to be used prior to each use. Routes for suspended loads must be pre-planned to ensure that no employee is required to work directly below a load unless they are engaged in the connection of the steel.

- Inspections must also be conducted during use and where additional service conditions warrant.
- Defective or damaged slings must be removed from service immediately. Follow manufacturer's removal criteria.
- Taglines shall be utilized to control the load to minimize worker exposure to swinging loads.
- Review proper rigging requirements when lifting palletized materials.
- Slings in contact with sharp edges or corners should be protected with softeners or materials designed to prevent damage to the sling.

b) Lifting Chains
- Alloy steel lifting chains must have a permanently affixed, durable identification tag stating size, grade, rated capacity and sling manufacturer. Only Grade 8 or better is permitted.
- Job made shop hooks or links, makeshift fasteners formed from rebar or bolts, or other such attachments are not allowed on Turner projects.
- Lifting chain inspection criteria is based upon the frequency of use, the severity of the service conditions, the nature of the lifts being made, and the experience gained on the service life of slings used in similar circumstances. Such inspections shall in no event be at intervals greater than once every 12 months. A written record must be provided to Turner upon request.
- Lifting chains must be visually inspected, prior to each use.

c) Wire Rope Slings
- The manufacturer's safe working loads must be followed at all times. Wire rope slings shall be removed from service if missing sling identification.
- Wire rope must not be used if, in any length of eight diameters, the total number of visible broken wires exceeds 10% of the total number of wires. Follow manufacturer's removal criteria.
- Wire rope must not be used if it shows signs of excessive wear, corrosion, or defects.
- Slings must not be shortened with knots, bolts, or other makeshift devices.
- Slings must be protected from sharp edges with padding, softeners, or similar devices.
- Shock loading of a sling is prohibited, and slings must not be pulled from under a load when the load is resting on the sling.

d) Synthetic Slings
- Each synthetic sling must be identified with the name of the manufacturer, rated capacities and type of material.
- Synthetic slings must be immediately removed from service if any of the following conditions are present; acid or caustic burns, melting or charring of any of the sling surface, snag, puncture, tear or cut, broken, or worn stitches or distorted fittings. Follow manufacturer's removal criteria.

e) Shackles & Eye bolts

- Attachments, including, but not limited to hooks, rings, shackles, oblong links, pear-shaped links or other welded or mechanical links, must have a rated capacity sufficient for the lift.
- Eyebolts not shouldered to the load shall only be used for in-line loads.
- If the shackle is side loaded the rated load should be reduced according to the recommendations from the manufacturer. Each shackle body shall show the name or trademark of the manufacturer rated load and size.

f) Chain-falls / Manual Chain Hoist: Inspected before each use. The hoist chain shall not be wrapped around the load. The load shall be attached to the load hook by suitable means. The load shall not be applied to the point of the hook.

g) Winches: Attachments and anchorages for the winch base shall be capable of withstanding the loads imposed by the hoist during operating conditions.

Hoists and Elevators

1) Crane Suspended Personnel Platforms
   a) The use of a crane suspended personnel platform is prohibited on Turner projects unless the employer can demonstrate that conventional methods to do the work are more hazardous. The BUEHSD shall be notified of each request and must review and approve any deviations to this requirement.

   b) Specific crane operational criteria, listed in 29 CFR 1926, Subpart N, must be followed if it is determined that a suspended personnel platform will be used. The criteria include, but is not limited to, the following:
      - Crane configuration requirements and inspections,
      - Additional crane instrumentation and/or components,
      - Specific platform design, construction and loading requirements,
      - Specific rigging and trial lift guidelines.

2) Material and Personnel Hoists
   a) Material Hoists
      - All entrances to hoists must be protected by substantial gates or bars, which guard the full width of the landing entrance.
      - Operating rules must be posted at the operator's station along with the notice "No Riders Allowed".

   b) Personnel Hoists
      - Hoist way doors or gates shall be at least 6'6" high and shall have a mechanical lock, which cannot be operated from the landing side.
      - All entrances to hoists must be protected by substantial gates or bars, which guard the full width of the landing entrance.
      - Hoists shall be inspected on a weekly basis.
      - All hoists shall be inspected and tested at not more than three-month intervals.
      - All hoists shall have a "No Smoking" sign posted in the car and a fully charged fire extinguisher available for use.
      - No hoist shall be placed into service on a Turner project until inspected and tested and the supplemental reports are submitted to Turner.

Demolition

I. Policy Statement

Each contractor working on a Turner project will comply with 29 CFR 1926, Construction Industry Regulations, Subpart T – Demolition, in addition to the following guidelines.

Prior to mobilizing, all projects must follow the Turner Environmental Operations Program and obtain a hazardous materials pre-demolition survey from the owner. This Survey must be prepared by a qualified third-party environmental firm and shall identify all hazardous materials associated with the affected area.

II. Procedures

1. Preparatory Operations
    a) Prior to initiating demolition activities, an engineering survey of the building must be made by a competent person to determine the condition of the structure and identify areas subject to unplanned collapse. A copy of this inspection must remain onsite.

    b) In select demolition, if the utilities cannot be capped, shut off or locked out, a system must be in place to identify what utilities are active or de-energized. All utilities must be shut off, capped, or locked out of service beyond the building line before demolition work is initiated. A Hazard Assessment must be performed prior to the start of work to identify any hazardous chemicals, gases, explosives, flammable materials, or similarly dangerous substances that may have been used on the property.

    c) Where employees are exposed to fall hazards, guardrail and personal fall arrest systems must be used. Holes and openings must be identified, covered, and secured against accidental displacement, with appropriate “Danger - Hole” markings.

    d) Any openings cut in a floor for the disposal of materials can be no larger than 25% of the aggregate of the total floor area, unless the lateral supports of the removed flooring remain in place.

    e) Employee entrances to multi-story structures being demolished shall be completely protected by installing a canopy or sidewalk shed that is at least 8 feet out from the building with the walkway at least 2 feet wider than the building entrance/exit.

    f) Turner must ensure that the subcontractor has verified that all local ordinances and permitting issues have been addressed as they relate to demolition.

2. Stairs, Passageways and Ladders
    a) Access to a structure being demolished will be restricted to designated means of access and egress. Other access points will be closed at all times.

3. Chutes

a) All openings into the chute must be a minimum of 42" (+ or – 3") above floor elevation or fall prevention/protection must be provided.

b) No material may be dropped to a point outside the building unless a protective barricade is established. The material being dropped cannot be deflected or bounced any closer than 20' to the protective barricade.

c) All chutes must be entirely enclosed except for openings at or slightly above the floor level for the insertion of materials.

d) A substantial gate must be installed in each chute at or near the discharge end. A competent person must be assigned to control the operation of the gate and the backing and loading of trucks.

e) Chutes must be designed and constructed of such strength as to eliminate failure due to the impact of material and debris loaded into them.

f) When machinery will be near a chute opening, floor bumpers 4 inches thick & 6 inches wide are to be utilized, to prevent equipment from getting too close to the edge.

4. Removal of Walls, Floors & Steel
   a) Masonry walls, including sections of walls, will not be permitted to fall onto the floor of the building under demolition unless an engineer has determined that the floor can withstand the imposed load.

   b) No wall section, more than one story in height, will be permitted to stand alone without lateral bracing unless it was designed to stand alone.

   c) Structural or load-supporting members of any floor will not be cut or removed until all stories above such a floor have been demolished or removed.

5. Removal of Walls, Floors and Material with Equipment
   a) Mechanical equipment will not be used on floors unless the floors are of sufficient strength to safely support the equipment.

   b) Mechanical equipment will only be used for its intended purpose according to the manufacturer's recommendations.

6. Mechanical Demolition
   a) No employees will be permitted in an area where "ball" or "clam" work is being performed. Only employees necessary for the performance of the operation may be permitted in this area. The area must be identified with warning barricades and signs.

   b) During this operation continuous observations, by the competent person, must be made to identifying potential areas of failure.

Electrical Hazards Prevention

I. Policy Statement

Use of electricity on the jobsite poses serious hazards, with employees potentially becoming exposed to such dangers as electric shock, electrocution, fires, and explosions. All Turner employees and subcontractors working on a Turner project will comply with NFPA 70E Electrical Safety Practices and 29 CFR 1926, Construction Industry Regulations, Subpart K – Electrical in addition to the following guidelines.

II. Procedures

1. Working On or Near Exposed Energized Parts
   a) It is Turner policy that no one works on live electrical circuits. If a situation arises where it is impossible to perform a task with the circuit de-energized, the Turner Superintendent or Safety Manager shall contact the Business Unit Environmental, Health, and Safety Director prior to performing the work. A formal pre-construction meeting shall occur prior to any such work occurring. All energized electrical work shall comply with NFPA 70E Requirements. This includes exposures related to start-up, testing and commissioning.

   b) Only qualified persons may work on electric circuit parts that have not been de-energized under the procedures of 1910.333.

   c) Such persons must be capable of working safely on energized circuits and shall be familiar with the proper use of special precautionary techniques, personal protective equipment, insulating and shielding materials and insulated tools.

   d) All work must be completed with strict compliance to NFPA 70-E requirements and guidelines.

   e) The subcontractor shall provide proof of training for their workers.

   f) Light switches and receptacles must be protected by permanent or temporary cover plates prior to energizing the circuit.

   g) All boxes containing energized circuits must have a cover in place, regardless of elevation above floor.

   h) Electrical room doors shall be secured prior to energization.

   i) Even when all conducting parts are 100% insulated, entry into all junction and pull boxes will be treated as energized work until made safe by the steps below.
   j) Always de-energize if possible, following the lock-out/tag-out procedure discussed in this plan.

   k) When removing a cover from a junction box, before working, inspect all energized current-carrying parts. Check insulation and splices for damage. This inspection

should be done by journeyman electricians as "energized work," adhering to NFPA 70E practices and using arc-flash gear. Use infrared testing if necessary (for instance, if there is observed damage that appears to be due to excessive heat at a splice or a loose mechanical connection).

l) After inspection, while still adhering to NFPA 70E and wearing appropriate arc flash gear, protect all conductors with blankets or barriers to prevent shock or damage during cable pulling.

m) Care should be taken during the installation/removal of sheaves to prevent contact and damage to energized conductors.

n) If the above steps cannot be taken to control the potential for electrical hazards, then work in the box will require appropriate arc-flash protection.

2. Ground Fault Circuit Interrupters
   a) All 120-volt, single-phase 15 and 20 ampere receptacle outlets which are not part of the permanent wiring of the structure, and which are in use by employees shall have approved GFCI's.

   b) Turner requires that all projects be 100% GFCI compliant.

   c) The installing subcontractor, i.e., the electrical subcontractor, shall test each power receptacle for proper installation including polarity, grounding, etc. The electrical subcontractor will conduct and document monthly tests after the initial installation.

3. Electric Tools
   a) All portable electric tools such as saws, hammers, drills, vibrators, and float machines must bear the label of a Certified Testing Agency, such as Underwriters Laboratories, CSA, ETL, or the like.

4. Extension Cords
   a) Only round, heavy-duty, minimum AWG 12-gauge cords are acceptable for use on site. Extension cords must include, at a minimum, the following designations on the cord jacket: W for outdoor use (or S if indoors), and O when the cord is present in an oily environment.

   b) Cords must be maintained in their original design configuration.

   c) Any cord which is damaged or has the grounding pin removed shall be removed from service.

   d) Plug ends can only be repaired by a qualified electrician.

   e) Whenever a power tool or cord is used where the circuit is not GFCI-protected, a portable GFCI is required at the receptacle.

   f) Extension cords cannot be connected in series. The manufacturer's recommendations must be followed.

g) Extension cords cannot exceed 100’ or run through doorways. The electrical contractor is to install temporary receptacles within 100’ of where any employee might be standing inside the structure.

h) All electrical cords shall be elevated to a minimum 8’ in the air in hallways, corridors, aisles, stairways, doorways, and exit areas where a tripping hazard may occur.

i) If the cords cannot be elevated, they shall be protected from damage by equipment, carts, trucks, and other rolling objects.

j) Extension cords shall not be fastened with staples, hung from nails, or suspended with non-insulated wire.

5. Temporary Wiring
   a) All temporary wiring and lighting must meet current NEC codes. Flat cords (Romex) are not to be used as a flexible cord and are to be hardwired.

   b) Temporary lighting must never be put on the same circuit as temporary receptacles.

6. Temporary Lighting
   a) The minimum illumination level is 5 foot-candles in general areas and 15 in electrical or mechanical rooms, special areas where additional lighting might be needed, or where contractors are placing temporary offices. The electrical contractor is to provide LED lights in every room.

   b) When installing temporary lights and choosing the elevation to hang them, anticipate the future placement of ductwork, piping, etc., that may block and reduce light.

   c) Installation of temporary lighting must be per manufacturer’s specifications and in compliance with OSHA, NFPA, NEC and local codes.

7. Pulling Cable

   a) When blowing line into a conduit to pull wire or cable, follow the manufacturer’s instruction for the tools being used. When pressurizing the conduit, do not exceed the allowed pressure. The assembly must have a pressure release valve set for the maximum pressure not to be exceeded, as well as a pressure gauge. No one should be located where they could be struck by components used to pressurize the conduit or by the plug pulling the line shooting out the other end.

   b) When using a “tugger” (puller motor assembly) to pull cable or wire, first document that all applicable employees have received training on the equipment and then follow the manufacturer’s instructions. The force gauge must be operable and calibrated, and the anti-reversing pawl must be functional. Do not use in a wet environment. Use the correct size rope with the diagramed configuration. Keep the rope away from the operator’s feet and keep body parts

out of pinch points. Never wrap rope around wrists or body parts. Never exceed the load rating.

Turner

Control of Hazardous Energy – LockOut/TagOut (LO/TO) Program

I. Policy Statement

1. This program applies to all Turner Construction personnel and contracted trade partners or vendors and complies with all applicable OSHA regulations, codes, NFPA 70E standards, or other requirements during all project phases.

2. The purpose of this program is to eliminate the potential release of energy that could threaten the safety and health of people or damage equipment. Energy includes, but is not limited to, electrical, mechanical, hydraulic, pneumatic, chemical, thermal, medical gases, gravitational, potential, kinetic and other energy.

3. The intent of this program is to provide practical safe work conditions for employees relative to the hazards and hazardous energy around them. These hazards may arise from different phases including construction, start-up and commissioning, maintenance, operations, troubleshooting, testing, inspections, or another phase of a project.

II. Scope and Requirements

1. Turner Construction personnel and all contracted trade partners, vendors, and other contractors are required to have a written Lockout/Tagout procedure if there is potential for employees to be exposed to a hazardous energy. The LO/TO procedure shall identify the minimum procedural steps necessary to verify a “zero energy state” before any work is started.

2. Turner Construction project staff has the responsibility to ensure a written site-specific LO/TO program is established by its respective contractors who will have personnel potentially exposed to hazardous energy. They will review it for effectiveness and will verify that it addresses all forms of hazardous energy. This includes fixed, permanently installed equipment, temporarily installed equipment, portable equipment, temporary and permanent power.

3. Each contractor working around a potentially hazardous energy will administer their own LO/TO program. Each contractor will designate one or more competent persons who will be responsible for their entire program and will also ensure proper coordination with affected contractors.

4. Appendix E contains Turner Construction’s LO/TO procedure and is the minimum required for a project. As outlined in the regulation, each employer shall implement and document an overall hazardous energy safety program that directs activities appropriate to the risk associated with the hazardous energy.

5. Site specific Environmental Health and Safety Plans may have a more complex LO/TO procedure.

6. All personnel involved in LO/TO shall be trained according to OSHA and NFPA 70E and it shall be documented.

7. All personnel involved in LO/TO shall address employee exposure to hazardous energy with a Pre-Task Plan (PTP) or Method of Operating Procedure (MOP) that incorporates the following:

    7.1. Identify hazards.

    7.2. Assess risks.

    7.3. Implement risk control according to the hierarchy of risk control methods. These include Elimination, Substitution, Engineering Controls, Awareness, Administrative Controls, and PPE.

    7.4. Shall address the potential for human error and its negative consequences on people, processes, the work environment, and equipment.

III. Communication and Responsibility

1. Each employer shall be responsible for the following:

    1.1. Providing the equipment necessary to execute LO/TO procedures.

    1.2. Providing LO/TO training to workers in accordance with OSHA and NFPA70E

        A. The initial LO/TO training shall encompass the LO/TO procedures and.

        B. The employee's responsibility in the execution of the procedures

2. Auditing the LO/TO program in accordance with OSHA and NFPA 70E.

3. Auditing execution of the LO/TO program in accordance with OSHA and NFPA

4. Employee responsibility:

    4.1. The employee shall comply with the safety-related work practices and procedures provided by the employer.

    4.2. Be responsible and have the knowledge and understanding required if directing work, to stop work, identify hazards, read and mark-up applicable drawings for isolation points, review for potential back-feed, walk the system down, LO/TO, or MOP for safe application and use of LO/TO, and removal of all energy controls and isolation devices.

4.3. Shall ensure procedural compliance with the LO/TO procedure for all personnel.

4.4. Ensure coordination with others who are affected.

IV. Training and Documentation

1. Each employee affected by the LO/TO procedure shall be trained in the procedure. Records of training will be kept on site and be made available to Turner Construction upon request.

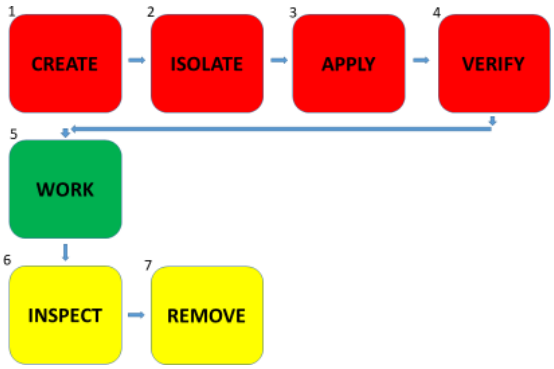
2. Each employer utilizing LO/TO must establish a program and utilize procedures for affixing appropriate lockout or tagout devices to energy isolating devices, and to otherwise disable machines, piping, or equipment to prevent unexpected release of stored or residual energy in order to prevent injury to employees.

3. Each employee shall be trained in the identification of the lockout / tagout device.

4. A log shall be maintained on site that identifies the following:

    - Date of usage,
    - Number of locks and tags used,
    - Contractors involved,
    - Time of LO/TO initiation,
    - Time of LO/TO removal,
    - Designated competent persons.

5. In the event a lock is left on the lockout device and all of the subcontractors have verified with Turner that the lock should be removed, and the system is safe to energize, a Turner Senior Manager must be notified. After consultation between the BUEHSD and the Turner Senior Manager, the subcontractor owning the lock may remove it.



6. This process must be documented to show you have followed all the steps to keep the workforce safe and have used “all reasonable means” to contact the employee who was responsible for the lock.

7. In the event an employee is discovered tampering with or violating the LO/TO procedure, the employee will be removed from the project.

Appendix E: Lockout/Tagout (LO/TO) Procedure

Table of Contents:

1. LO/TO Operations and Log
2. Definitions
3. Competent Person and List
4. Locks, tags, and energy isolating devices (EID)
5. Simple LO/TO and Complex LO/TO Operations
6. Emergency Release
7. Zero Energy State Verification
8. LO/TO Process
9. Discipline and Enforcement

RED / Danger – Perform these steps in order and verify ZERO energy state BEFORE work can begin

GREEN / GO – WORK can begin once a ZERO energy state has been reached for the given work scope AND personnel apply their lock

YELLOW / Caution – Verify work is complete and Inspect equipment is free from hazards before removing LO/TO

2

Turner

1. LO/TO Operations and Log

1.1. Lockout/Tagout is required per NFPA 70E and OSHA and it is required when an employee is required to place any part of his or her body into an area on a machine or piece of equipment where work is actually performed upon the material being processed (point of operation) or where an associated danger zone exists during a machine operating cycle.

1.2. Personnel who are working around hazardous energy shall use Lockout/Tagout (LO/TO) procedures. Personnel shall affix their personal lock and tag to an energy isolating device (EID) such that the component is isolated and can't be operated or the machine can't be started. The component(s) will be de-energized, isolated, and locked out to obtain a "Zero energy state" before work may start.

1.3. Affected employees shall be notified by the employer or authorized employee of the application and removal of lockout devices. Notification shall be given before the locks are applied, and after they are removed from the machine or equipment.

1.4. The LO/TO Log is used to track the placement and removal of energy isolating devices (EID). Whenever there is a need for an EID or a LO/TO, this log will be used.

1.5. Personnel who are using LO/TO shall sign on to the LO/TO Log when they place their personal lock and tag on an isolation device. They will sign off the LO/TO Log when they remove their personal lock and tag.

1.6. The foreman, first line supervisor, or person directing the work will leave their personal lock(s) and tag(s) on until work is complete.

- Exception, there is a transfer of responsibility of that work scope to another responsible foreman or supervisor. After having a turn-over, walking the work scope and LO/TO down, the new foreman/supervisor may place their personal lock(s) and tag(s) on the identical EIDs of the foreman/supervisor being relieved. Next, the new foreman/supervisor may now sign on to the LO/TO Log and the previous foreman/supervisor may now sign off the LO/TO Log. The responsibility of care and custody of the work scope, the zero-energy state, and the LO/TO has now been transferred.

1.7. The LO/TO Log contains the following information:

- Project Name / Site
- Location: Name of the electrical/mechanical room, floor, level, elevation, building
- Today's Date
- Scope of work – describe the work scope in detail.
- List the Energy Isolating Devices (EIDs) that need to be isolated to obtain a Zero Energy State (Use electrical single one-line diagrams, P&IDs, drawings, and attach to this LO/TO Log).
- Competent person requesting the LO/TO – Did you perform a walk down to verify? Yes or No
- Competent Person Isolating the EIDs and/or verifying Isolation – Did you perform a walk down to verify? Yes or No
- (Print Name/Company): Foreman / Supervisor sign on after they place their lock(s) on. Their lock(s) stay on the EID(s) / isolation point(s) or group LO/TO box until the work is complete.

  - The only exception is a transfer of responsibility to another Foreman / Supervisor who will place their lock on and sign on to the LO/TO Log first.

- Affected Employees sign on and place their lock(s) on before they start work and sign off and remove their lock(s) at the end of their shift, using a time stamp.

1.8. See an example of the LO/TO Log at the end of this procedure.

2. Definitions

2.1. Affected employee: An employee whose job requires him/her to operate or use a machine or equipment on which servicing, or maintenance is being performed under lockout, or whose job requires him/her to work in an area in which such servicing or maintenance is being performed.

2.2. Authorized employee: A person who locks out or tags out machines or equipment in order to perform servicing or maintenance on that machine or equipment. An affected employee becomes an authorized employee when that employee's duties include performing servicing or maintenance covered under this section.

2.3. Capable of being locked out: An energy isolating device (EID) is capable of being locked out if it has a hasp or other means of attachment to which, or through which, a lock can be affixed, or it has a locking mechanism built into it. Other energy isolating devices are capable of being locked out, if lockout can be achieved without the need to dismantle, rebuild, or replace the energy isolating device or permanently alter its energy control capability.

2.4. Complex LO/TO: All complex LO/TO procedures shall require a written plan of execution that identifies the person in charge. It shall vest primary responsibility in an authorized employee for employees working under the protection of a group LO/TO box or device. The person in charge shall be held accountable for safe execution of the complex LO/TO. All complex LO/TO plans shall identify the method to account for all persons who might be exposed to hazardous energy. A complex LO/TO procedure shall be permitted where one or more of the following exists:

- 1) Multiple energy source
- 2) Multiple crews
- 3) Multiple crafts
- 4) Multiple locations
- 5) Multiple employers
- 6) Multiple disconnecting means
- 7) Particular sequences
- 8) Job or task that continues for more than one work period or shift

2.5. Control lock: A padlock used to secure a group LO/TO box or device and ensure the established LO/TO work boundary can't be modified until authorized by the person in charge of the LO/TO procedure. The person in charge of LO/TO maintains control of the control lock keys.

2.6. Energized: Connected to an energy source containing residual or stored energy.

2.7. Energy isolating device (EID): A mechanical device that physically prevents the transmission or release of energy, including but not limited to the following: A manually operated electrical circuit breaker; a disconnect switch; a manually operated switch by which the conductors of a circuit can be disconnected from all ungrounded supply conductors, and, in addition, no pole can be operated independently; a line valve; a block; and any similar device used to block or isolate energy. Push buttons, selector switches and other control circuit type devices are not energy isolating devices.

2.8. Energy source: Any source of energy includes, but is not limited to, electrical, mechanical, hydraulic, pneumatic, chemical, thermal, medical gases, gravitational, potential, kinetic and other energy.

2.9. Hot tap: A procedure used in the repair, maintenance and services activities which involves welding on a piece of equipment (pipelines, vessels, or tanks) under pressure, in order to install connections or appurtenances. It is commonly used to replace or add sections of pipeline without the interruption of service for air, gas, water, steam, and petrochemical distribution systems.

2.10. Lockout: The placement of a lockout device on an energy isolating device, in accordance with an established procedure, ensuring that the energy isolating device and the equipment being controlled cannot be operated until the lockout device is removed.

2.11. Lockout device: A device that utilizes a positive means such as a lock, either key or combination type, to hold an energy isolating device in the safe position and prevent the energizing of a machine or equipment. Included are blank flanges and bolted slip blinds. Lockout devices shall be substantial enough to prevent removal without the use of excessive force or unusual techniques, such as with the use of bolt cutters or other metal cutting tools.

2.12. Normal production operations: The utilization of a machine or equipment to perform its intended production function.

2.13. Servicing and/or maintenance: Workplace activities such as constructing, installing, setting up, adjusting, inspecting, modifying, and maintaining and/or servicing machines or equipment. These activities include lubrication, cleaning or unjamming of machines or equipment and making adjustments or tool changes, where the employee may be exposed to the unexpected energization or startup of the equipment or release of hazardous energy.

2.14. Setting up: Any work performed to prepare a machine or equipment to perform its normal production operation.

2.15. Simple LO/TO: All LO/TO procedures that involve only a qualified person(s) de-energizing one set of conductors, circuit part source, or EIDs for the sole purpose of safeguarding employees from exposure to hazards shall be considered to be a simple LO/TO. Simple LO/TO procedures shall not be required to be written for each application. Each worker shall be responsible for his or her own LO/TO.

- Exception: LO/TO is not required for work on cord and plug connected equipment for which exposure to the hazards of unexpected energization of the equipment is controlled by the unplugging of the equipment from the energy source, provided that the plug is under the exclusive control of the employee performing the servicing and maintenance for the duration of the work.

2.16. Standardized: Lockout devices shall be standardized within the facility in at least one of the following criteria: Color; shape; or size.

3. Competent person and list

3.1. “Competent person” means one who is capable of identifying existing and predictable hazards in the surroundings or working conditions which are unsanitary, hazardous, or dangerous to employees, and who has authorization to take prompt corrective measures to eliminate them.

Turner

3.2. Every trade partner, vendor, contractor, or other company that will have personnel potentially exposed to hazardous energy shall designate at least one person as a competent person relating to LO/TO.

3.3. The LO/TO competent person or designee(s), shall be responsible to control all aspects of the LO/TO procedure per NFPA 70E and OSHA. This includes ensuring training and documentation for the appropriate personnel. The LO/TO competent person will also ensure coordination with other contractors, vendors, and tradesmen.

3.4. Each company's leadership team (Site Manager, Project Manager, etc.) shall list their competent person(s) name(s) and contact information on company letterhead which Turner Construction will procure.

3.5. Turner Construction will compile these contacts in the competent person list which will be conspicuously posted around the jobsite/project (Ex: near hazardous energy, in electrical rooms, in meeting rooms, in offices).

3.6. The purpose of the competent person list is to identify and promote communication amongst personnel which have been deemed competent relating to LO/TO. It also acts as a tool for everyone to use when there is a question pertaining to hazardous energy, LO/TO, or to call and ask for help.

3.7. See an example of the competent person list at the end of this procedure.

4. Locks, tags, and energy isolating devices (EID)

4.1. Lockout devices shall be standardized within the facility in at least one of the following criteria: Color; shape; or size.

4.2. Lockout devices shall be substantial enough to prevent removal without the use of excessive force or unusual techniques, such as with the use of bolt cutters or other metal cutting tools.

4.3. All employee locks are keyed differently.

4.4. A DANGER, "DO NOT OPERATE" (DNO) Tag shall be affixed to employee personal locks at all times (See an example of a "DNO" tag at the end of this procedure).

4.5. All DANGER, (DNO) tags will have the following information on them at a minimum:

- Employee Name
- Contact Number
- Company Name

4.6. Personal locks and tags shall only be used in accordance with the LO/TO procedure.

4.7. All component locks will be the same color but a different color than control locks. They will all be keyed differently.

4.8. All control locks will be the same color but a different color than component locks. They will all be keyed differently.

4.9. An energy isolating device is a mechanical device that physically prevents the transmission or release of energy, including but not limited to the following: A manually operated electrical circuit breaker; a disconnect switch; a manually operated switch by which the conductors of a circuit can be disconnected from all ungrounded supply conductors, and, in addition, no pole can be operated independently; a line valve; a block; and any similar device used to block or isolate energy.

Turner

4.10. Push buttons, selector switches and other control circuit type devices are not energy isolating devices. The use of software or programming controls, interlocks, or other non-physical disconnecting devices are prohibited from being used to isolate energy.

4.11. See an example of a pictures of the tags at the end of this procedure.

5. Simple LO/TO and Complex LO/TO Operations

5.1. Simple LO/TO Operations

- When work involves all of the following a simple LO/TO may be used.
  - A single employee, and a single EID will remove all hazardous energy, and work will not exceed the employee's shift, a simple LO/TO may be used.
- A simple LO/TO operation is one in which the employee applies their personal lock and tag either to an EID or to a LO/TO device such as a LO/TO hasp that is attached to an EID such that it can't change position or be operated.
- Simple LO/TO does not require completion of a LO/TO Log.
- If the simple LO/TO extends past the work shift when it was applied, has more than one EID, or requires additional people, it shall be made into a group LO/TO.

5.2. Complex LO/TO Operations

- When work involves any of the following a group LO/TO operation shall be used.
  - More than one employee, a vendor, or another contractor, more than one EID to isolate the hazardous energy, or exceeds one shift.
- A complex LO/TO operation is one in which a group LO/TO box and control lock will be used to maintain control of the work boundary and allow employees to attach their personal locks and tags.
- Control lock keys are maintained by the person in charge of the LO/TO procedure.
- All of the component lock keys shall be placed inside the lock box before the control lock is placed on the lock box.
- Before work can begin, all employees who potentially could be entering or crossing the work boundary shall attach their personal lock and tag to the group LO/TO box and sign on to the LO/TO Log. They must all verify the EIDs. Also, they must perform or directly observe verification of zero energy.

6. Emergency Release

6.1. Under extraordinary circumstances, it may be necessary to remove a lock that has been affixed by someone else or without the proper signoff.

6.2. Only the Site Manager/Project Manager or designee (Owner) may authorize the removal of a lock and only in accordance with the following stipulations:

6.2..1. The worker who is responsible for the lock is not present at the facility/project, and all reasonable efforts have been taken to contact the responsible worker and their supervisor.
6.2..2. All measures are taken to notify the worker prior to them resuming work.
6.2..3. In addition, if the lock is on a component, EID, or lock box relating to work or an inspection that is in the construction or startup and commissioning phase, the authorization of the energy marshal and commissioning manager will also be required, respectively. An Emergency Release Authorization form will be kept documenting these authorizations.

7. Zero Energy State Verification

7.1. All machines, equipment, and components shall be treated as energized.
7.2. Never assume that because an electrical disconnect is open / off or a valve handle is in a closed position that the EID is operating properly or verification of zero energy is not needed.
7.3. Each authorized employee will perform these verifications of zero energy or directly observe them in their entirety prior to starting work and will document the verification.
7.4. If a worker is isolating equipment where look-alike equipment is energized in the immediate area, refer to the Electrical Safety Standard.

7.5. Electrical Verification (Live-Dead-Live)

7.6. In the case of isolations above 1,000 volts AC, residual energy shall be discharged, and all conductors must be grounded.
7.7. A tag will be affixed to the ground cluster, and it will be added to the LO/TO Log. The intent is such that after the work is complete and the locks are being removed from the EIDs to close out the LO/TO, these grounds will be un-installed before the locks are removed from the EIDs isolating them.
7.8. When testing for voltage or doing electrical fault finding, all appropriate personal protective equipment (PPE) and insulated hand tools rated for the voltage under test shall be used.
7.9. When testing for the absence of voltage, an appropriate calibrated multi-meter shall be used.
7.10. Live-dead-live checks will be completed using a meter by first testing a known source, then the component within the work boundary, and finally, against the same known energized source to ensure its proper operation (i.e., using a voltage providing unit or equivalent).

7.11. Be sure to check neutral to ground voltage as part of live-dead-live verification. For more information on this process, see the Electrical Safety Standard.

7.12. Mechanical Verification

7.13. These energy sources may be either the primary energy source or can be a residual, or stored energy source. Stored or potential energy still exists when a valve is closed on a pneumatic, or

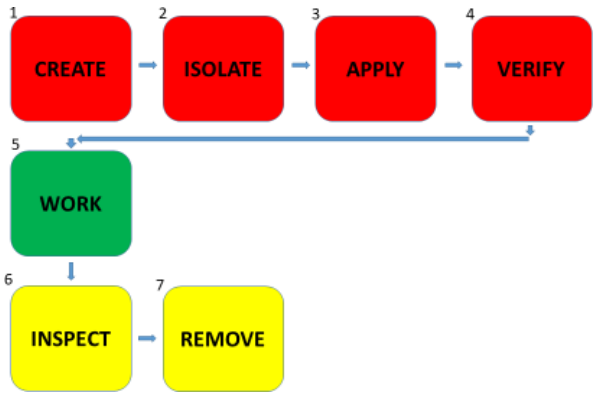
hydraulic system and must be dissipated properly through the use of vents and/or drains, as applicable. These vents or drains may need to be locked open to prevent system pressure from rising unexpectedly.

7.14. Water storage tanks, even though vented to the atmosphere, could be under pressure at their low points. The amount of pressure is dependent on the height of the water since one foot of water creates .433 PSI / 2.985 kPa of pressure.

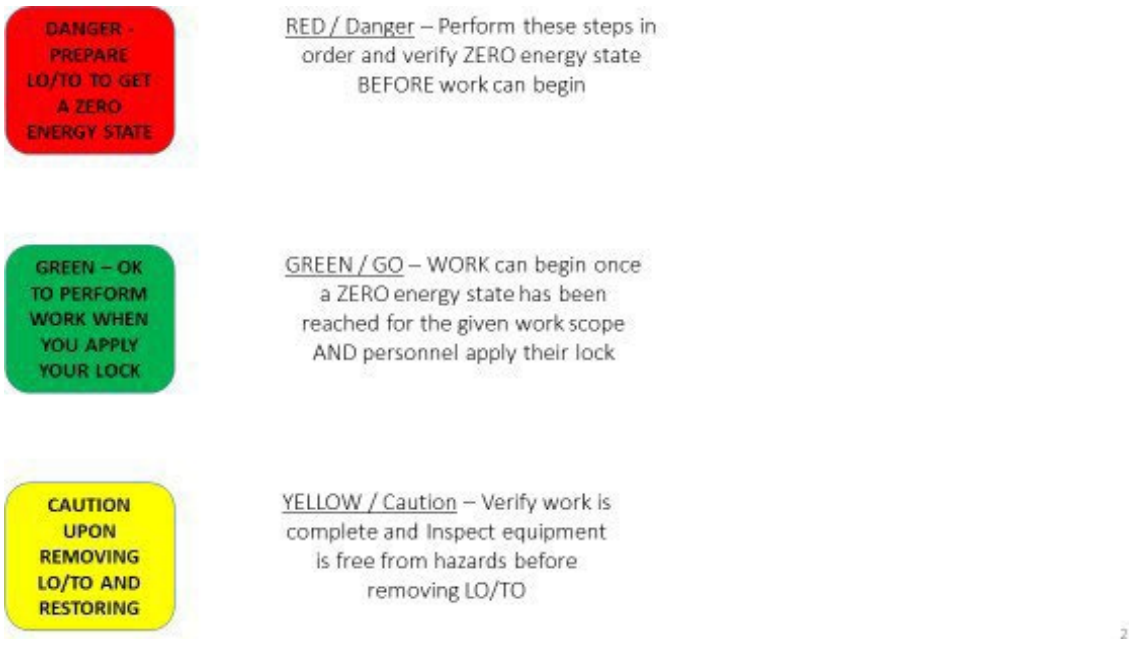
7.15. Take caution when working on fan systems such as fan arrays or relief fans to ensure that kinetic, or rotational energy has been mitigated properly. Fans that are not operational can rotate freely and should be blocked by appropriate means.

7.16. Primary or stored energy must be removed, bled down, dissipated, and/or blocked as applicable. Proper means to determine zero energy on mechanical systems may include, but are not limited to, live dead live verification, attempt to start, observing existing and/or applied temperature instruments, or pressure gauges as applicable to the mechanical equipment and the condition of the equipment.

7.17. For mechanical systems, where feasible, high point vents shall be used to verify a system is depressurized and low point drains shall be used to ensure the system is properly drained.



7.18. Drains shall be left in the open position to ensure isolations are holding.



7.19. Check temperature gauges to confirm that thermal energy has been discharged.

7.20. Check pressure gauges to confirm that hydraulic pressures have been discharged.

8. LO/TO Process

LO/TO PROCESS FLOW DIAGRAM

8.1. Create - In this phase it is imperative to:

8.1..1. Understand the point of operation, location, and type of hazardous energy
8.1..2. Understand the work scope and work boundaries
8.1..3. Identify the proper isolation points

8.1..4. Use the correct updated revision of electrical single one-line diagrams, P&IDs, drawings, as-built and other documentation
8.1..5. Physically walking down, the system and components
8.1..6. Competent people communicate and have a LO/TO safety discussion and shall identify and notify all affected parties.
8.1..7. Use the LO/TO Log to document this process, and the documentation used to identify the EIDs shall be attached to the LO/TO Log

8.2. Isolate

8.2..1. Once the LO/TO Log has been created the competent person or an authorized employee shall operate EIDs as needed so they are in the correct position before applying LO/TO.
8.2..2. A competent LO/TO or authorized employee physically installs and attaches the component locks to the EIDs.

Turner

8.2..3. This step can be performed after the entire work boundary is established or after each EID is placed and checked in the correct position.

8.2..4. After the component lock is placed on the EID, the component key is placed into a group LO/TO box.

8.2..5. The component lock is checked to make sure it is locked, and the EID is checked so it can't be operated without removing the component lock.

8.2..6. When all of the component locks are applied, and all of the keys are in a group LO/TO box, then a control lock is placed on the group LO/TO box.

8.2..7. A competent person (Typically the LO/TO Manager, Electrical Superintendent, or coordinator) will maintain care and custody of the control lock.

8.3. Apply

8.3..1. A competent LO/TO or authorized employee physically walks down all of the EIDs and ensures they are in the correct positions and locked out.

8.3..2. The affected employee(s) directing the work scope will attend this walk through and witness the position of the EIDs being checked in the correct position/direction.

8.3..3. The affected employee(s) apply their personal lock to the group LO/TO box, sign on to the LO/TO Log and maintain exclusive control of their personal key.

8.3..4. All personnel applying a lock to either a group LO/TO box or to a LO/TO hasp or device will maintain care and custody of the key(s) to their personal lock(s).

8.3..5. All affected personnel who will be performing work near a point of operation, potentially near hazardous energy, or where an associated danger zone exists, shall place their personal lock and tag on the group LO/TO box and sign on to the LO/TO Log before work begins.

8.4. Verify

8.4..1. Verify adequate isolation of work area prior to releasing and verifying zero energy (e.g., comparison of drawing to established boundaries).

8.4..2. In accordance with approved procedure, release stored hazardous energies still present after LOTO is applied.

8.4..3. Install necessary controls (e.g., blocks) to prevent uncontrolled rotating/moving energy release during work.

8.4..4. Verify absence of hazardous energy (e.g., live-dead-live, open drains, witness pressure drops, etc.).

8.4..5. Each authorized employee entering the work boundary shall perform a walk down to verify EIDs or isolation points prior to commencing work.

8.4..6. Each authorized employee entering the work boundary shall perform or directly observe verification of zero energy tests.

8.5. Work

Turner

8.5..1. Personnel who have their personal locks and tags on the group LO/TO box that has the component keys in it per the LO/TO Log and they are signed on to the LO/TO Log may now begin work.

8.5..2. If the work is not complete when the worker is ready to leave (due to end of their shift, injury/illness, re-assigned to a different foreman or crew or another reason), the worker removes their personal lock(s) and tag(s) from the group LO/TO box and signs off the LO/TO Log

8.5..3. The Foreman/Supervisor directing the work will maintain their personal lock on the group LO/TO box until the work is complete.

8.5..3.1. Exception, there is a transfer of responsibility of that work scope to another responsible foreman or supervisor. After having a turn-over, walking the work scope and LO/TO down, the new foreman/supervisor may place their personal lock(s) and tag(s) on the identical EIDs of the foreman/supervisor being relieved. Next, the new foreman/supervisor may now sign on to the LO/TO Log and the previous foreman/supervisor may now sign off the LO/TO Log. The responsibility of care and custody of the work scope, the zero-energy state, and the LO/TO has now been transferred.

8.5..4. The competent LO/TO or authorized employee may then unlock the control lock with the control key, obtain the component keys, and unlock the component locks clearing the LO/TO

8.6. Inspect

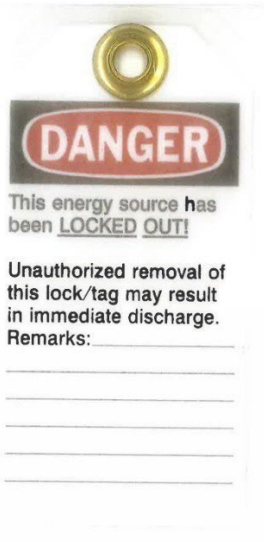
8.6..1. Once the work scope is complete, the Foreman/Supervisor verifies the work is complete and the work area is free of hazards, then they may inspect the work boundary area.

8.7. Remove

8.7..1. When the inspection is satisfactory, the work is complete and there are no hazards the Foreman/Supervisor may remove their personal lock and sign off of the LO/TO Log.

8.7..2. The competent LO/TO or authorized employee may now unlock the control lock on the applicable group LO/TO box.

8.7..3. The competent LO/TO or authorized employee may now unlock the component locks on the EIDs using the LO/TO Log to close the LO/TO.



9. Discipline and Enforcement

9.1. Failure to comply with the LO/TO Procedure shall be considered just cause for discharge or removal of the person(s) involved from the job site.

9.2. Examples of failure to comply include the following:

- Operating or working on a component, EID, system, or piece of equipment that is energized or the potential of hazardous energy is present, without obtaining a proper LO/TO. This includes verifying a Zero Energy State for the work area.

- Operating or working on a component, EID, system, or piece of equipment in violation of the lock(s) in place.
- Removing a lock from an EID, component, system, or piece of equipment without proper authorization.

Excavations

I. Policy Statement

The intent and purpose of this policy is to limit and/or eliminate the dangers associated with excavation and trenching operations that could expose workers to the possibility of serious injury or death. Each contractor working on a Turner project will comply with 29 CFR 1926, Construction Industry Regulations, and Subpart P – Excavations in addition to the following guidelines.

II. Procedures

1. Specific Excavation Requirements
    a) A comprehensive training program in the recognition, identification, evaluation, and control of excavation hazards must be provided to all workers prior to working in an excavation or trenching operation.

    b) Underground utility installations must be identified and marked prior to beginning any excavation. The Contractor's proposed method for identifying known utilities must be identified as required by Turner Construction's Surface Penetration Request Permit. The Project Superintendent will ensure that JHA's are completed and reviewed for all excavation activities for Turner, subcontractors and all their tiers.

    c) A competent person must be identified and submitted to Turner prior to the start of work.

    d) The competent person will be on-site during all excavation work to determine the soil type and its stability by performing one visual and one manual test in accordance with 29 CFR 1926, Subpart P Appendix A.

    e) Inspections must be conducted daily and after every rainstorm or other hazard-increasing occurrence. Daily inspection reports must be submitted to Turner upon request.

    f) All excavations, regardless of depth, shall be protected by safety fence or guardrails.

    g) Any excavation greater than 4' in depth must have access/egress provided. The maximum travel distance to a means of egress cannot exceed 25'.

    h) A Surface Penetration Permit must be utilized when a sub plans to penetrate the ground at any depth. This should be filled out and utilized for cutting into slabs and coring walls as well.
        - All utilities identified to be located within 6' of excavation must be daylighted by hydro excavating or hand digging.
        - All utilities must be potholed at the start of excavation and every 15' by hydro excavation or hand digging. No machinery is allowed to be used until

known utilities are located.

- In all cases, interior or exterior, surface must be evaluated for appropriate type of scan (GPR, X-Ray, Utility Locator, wand, etc..) in the area of intended excavation.

Condition	Action	Example
Known utility is within excavated/disturbed area and being uncovered as work progresses	• Pothole location at the start of the of the known utility in excavation • Utility must be potholed every 15'. • Note: Utilize non- intrusive methods (hand digging or hydro-excavate) when within 24" of a known utility	
Utility runs parallel and within 6 feet of the edge of excavated/disturbed area. 	• All utilities identified to be located within 6' of excavation must be daylighted by hydro excavating or hand digging. • Pothole at the start location of the excavated/disturbed area and every 15' along the parallel length of the excavated area. • The intent is to verify that the utility does not veer into path of excavated/disturbed area.	
Utility intersects excavated/disturbed area	• Pothole the approximate center of the intended excavated/disturbed area. Follow condition 1 if utility will remain visible while excavating along width of excavated/disturbed area. • Note: Utilize non- intrusive methods (hand digging or hydro-excavate) when within 24" of a known utility.	

2. Requirements for Protective Systems
    a) Excavations greater than 4 feet in depth must be protected by one or more of the following systems:
        - Sloping / benching of sides to allowable configurations and slopes.
        - Cannot bench C type soil.
        - Using tabulated data.
        - Utilizing a trench box or shield.
        - Using a slope or shield system designed by a registered professional engineer. Refer to 29 CFR Subpart P, Appendix B.
            - Shield within 2 feet of the bottom of trench,
            - Employees are not permitted in the trench when the shield is moved,
            - Shield sticks up 18” above the top of slope.

    b) Spoil piles must be kept back no less than two feet from the leading edge of an excavation.

    c) A registered professional engineer must design sloping or benching systems for excavations greater than 20 feet in depth.

    d) Persons walking or working adjacent to an excavation greater than 6 feet in depth. must be protected from fall hazards in accordance with Turner’s 100% Fall Protection Policy.

3. Training Requirements
    a) Each employee affected by the excavation and trenching systems must be trained in the procedures specific to the project, i.e., access / egress points, location of utilities, etc.

    b) Each affected employee must be trained in all sloping, benching, and shoring procedures prior to entering the excavation or trench.

    c) A competent person must be on-site throughout the excavation and/or trenching operation to determine soil type through visual and manual testing, hazard identification, effectiveness of sloping, benching, or shoring procedures, etc.

    d) Atmospheric monitoring, if deemed necessary by the Competent Person or other competent party, must be documented, and conducted by someone trained in the use of atmospheric monitoring equipment.

Fall Prevention

I. Policy Statement

Turner has a Zero Tolerance Policy in effect for violations of our 6' fall prevention policy. Anyone found violating this policy may be permanently removed from the project. Each contractor must designate a competent person trained in fall prevention techniques and submit their qualifications to Turner upon request. Each contractor working on a Turner project will comply with 29 CFR 1926, Construction Industry Regulations, Subpart M - Fall Protection, in addition to the following guidelines.

II. Procedures

1) General Fall Prevention Requirements
   a. Each contractor, with employees exposed to a fall greater than 6', must submit a written fall prevention plan to Turner prior to beginning work on site. The subcontractor and Turner staff will conduct a weekly inspection of their system.

   b. All conditions that will require personal fall protection shall be discussed and documented in the daily Pre-Task Plan and reviewed in the field by the crew leader.

   c. At no time shall a Safety Monitor system be used as a means of fall protection.

   d. With regard to fall of materials, Turner operates with a strict "No Gaps" policy. All working platforms or edge protection must be constructed to ensure there are no gaps which material could fall through. Employees must be protected from falling objects by the installation of toe boards, barricades, safety nets or canopy structures.

      Where a risk of materials falling or being dropped, including during a lifting operation, an exclusion zone must be established. The exclusion zone should be constructed with physical barriers such as wood or metal guardrail systems, cable wire rope or chain or flagging. Danger and Caution tape will not be accepted for use in exclusion zone construction. The exclusion zone must be secured from tipping and signed. The size of the exclusion zone must consider deflection or arc of the falling material.

   e. All tools, materials or equipment which have the potential to breach the perimeter protection must be positively secured back to the worker or structure through the use of tool lanyards or synthetic rope of line (natural fiber rope is not permitted). Lanyards or ropes must be appropriately sized for the weight of the tool, material, or equipment. Anchorages must be snap-hook, carabineer, shackle, or similar device that provides positive locking. The use of knots to secure lanyards is not permitted. Subcontractors must evaluate the size and weight of any object which will be secured to a worker's wrist, belt, etc. to ensure it will not cause injury in the event it is dropped. Tethering also applies when there is falling object exposure for employees in the vicinity of elevated work, even when "exclusion zones" are used.

f. A Personal Fall Arrest System (PFAS) comprised of a full body harness, Leading Edge Retractable (Exception being in scissor lifts), a guardrail and / or safety net system must be in place to protect all employees working above 6 feet.

g. Covers for roof and floor openings shall be capable of supporting, without failure, twice the weight of the employees, equipment and materials that may be imposed on the cover at any one time. All covers shall be secured when installed to prevent accidental displacement by the wind, equipment, or employees. All covers shall be marked with the word "HOLE" or "COVER" to provide warning of the hazard. Turner recommends that holes greater than 18”x 18” be protected by a guardrail system. Protection systems must be sufficient to avoid harm or hazard.

h. Any floor opening 2” or larger must be protected by a cover of sufficient protection to avoid any harm or hazard.

2) Fall Prevention Systems

a. Guardrail Systems

- The top rail height of a guardrail system must be 42”, + or – 3”. Midrails heights must be half of that distance. If stilts are used in the vicinity, the rail must be increased by the height of the stilts used.
- Perimeter cable may be ½” steel cable, but in no situation may they be less than 3/8” steel cable.
- The cable must be flagged at 6’ intervals and must be terminated with three wire rope clips, “Crosby clips” on each end & deflect no more than 3”. The cable rail cannot deflect below 39”.
- The U-bolt clips must have the U-bolt section on the dead or short end of the rope and the saddle on the live or long end of the rope.
- When using cables for perimeter guarding closed turnbuckles are to be used for every 3 bays or 100 feet, whichever is less.
- A Personal Fall Arrest System (PFAS) must not be attached to a guardrail system unless the system is designed by a Professional Engineer to accommodate the PFAS.
- Guardrail systems must be able to withstand a force of 200 lbs. in all directions, without failure, and be smooth surfaced to prevent hand injuries. The use of metal studs or similar is prohibited.
- The sub-contractor installing the perimeter cable guardrail system shall submit a design with details on how the system will be installed and maintained.

b. Fall Protection Net Systems

- Safety netting systems (as a primary means of fall protection for humans) must not be used in lieu of other fall prevention or protection means unless no other means is feasible.
- Safety net systems must be installed as close as practical below the working deck, not to exceed a distance of 30’.

- Safety net systems must be drop tested after initial installation and before being used as a fall prevention system.
- Additional drop tests are required after any repair, whenever the nets are relocated and at 6-month intervals if the nets are left in place.

c. Personal Fall Arrest Systems
   - A PFAS must be used when working from suspended scaffolds, articulating boom lifts or when working above the protective system over floor openings and unprotected floor openings and unprotected perimeter edges.
   - A competent person must ensure that fall distance calculations have been evaluated in each circumstance where a PFAS is used. The competent person must ensure that the intended uses of all PFAS assemblies are reviewed for each application on the project to ensure they are truly fit for the purpose for which they are intended.
   - A PFAS is not required when climbing up or down a ladder. However, if employees are working from a ladder, fall protection is required.
   - Employees must use positive fall prevention devices when working in proximity to any leading-edge work.
   - All leading-edge construction requires the use of a Controlled Access Zone (CAS) or Controlled Decking Zone (CDZ)
   - Exterior plywood, or equivalent, shall be installed around columns where planks or metal decking do not fit tightly. The materials used must be of sufficient strength to provide fall protection for personnel and prevent objects from falling through.
   - All anchorage points must be capable of supporting a load of no less than 5000 lbs. Engineered (PE Stamp) anchorage point and fall protection systems are also authorized.
   - Steel erectors, connectors, and metal decking installers must utilize 100% fall prevention devices at all times when working over 6'.
   - The type of PFAS shall be reviewed prior to beginning work. Lanyard style, nylon, PFAS shall not be used when there is a potential for abrasion.
   - Horizontal lifelines must be designed by an engineer & installed under the supervision of a qualified person. A safety factor of 2 must be maintained. Leading Edge Retractable must be used with HLL.
   - Turner does not allow the use of Safety Monitor Systems.
   - Adequate fall prevention devices must be used at all loading platforms prior to removing existing perimeter protection

d. Warning Line Systems
   - If a warning line is utilized, it must be 15 feet or more back from the edge.
   - If a worker is required to work or enter between the warning line & the edge, 100% fall protection is required.
   - The warning line height must be between 34" & 39" from the walking/working surface.
   - The rope, wire or chain must have a breaking strength of 500 pounds and must be flagged every 6 feet.
   - After erected, the stanchions must be secured from tipping due to wind, etc.

e. Controlled Decking Zone (CDZ)

- Leading-edge workers in a CDZ are required to be protected from fall hazards (personal fall arrest system at a minimum).
- Have completed CDZ training in accordance with 29 CFR 1926.761.
- Employees who are not engaged in leading-edge work and properly trained in the hazards involved are prohibited from entering the CDZ.
- The CDZ is required to:
    1. Be no more than 90 feet wide and 90 feet deep from any leading edge. It may not exceed 3,000 square feet of unsecured decking.
    2. Have designated and clearly marked boundaries with control lines or the equivalent. NOTE: Control lines are commonly used as a marker because they create a highly visible boundary. See requirements below.
    3. Have safety deck attachments placed from the leading edge back to the control line.
    4. Have at least two safety deck attachments for each metal decking panel.
- Final deck attachments and the installation of shear connectors are prohibited from being done in the CDZ.
- Perimeter safety cables must be installed at the final interior and exterior perimeters of multi-story structures as soon as the decking has been installed. This means there should be no unprotected openings or edges on the non-leading-edge side of the "control line."
- A control line for a CDZ must be erected not less than 15 feet nor more than 90 feet from the leading edge. Control Lines must be a physical barrier. This will primarily be a rigid guardrail, tight cable, or flagging. The rope, wire or chain must have a breaking strength of 500 pounds and must be flagged every 6 feet. Caution and Danger tape, and spray-painted lines cannot be used.
- Each line is constructed in such a way that its lowest point (including sag) is not less than 39 inches from the walking/working surface and its highest point is not more than 45 inches from the walking/working surface.

3) Training Requirements
    a. Each employee exposed to a fall hazard must be trained by a competent person in the recognition and avoidance of such a hazard. Proof of training shall be made available to Turner Construction upon request.

    b. Specific training includes, but is not limited to the following:
        - The type of fall exposures expected.
        - The correct procedures for erecting, maintaining, dismantling, and inspecting of any fall prevention system used by the employee.
        - The inspection and use of personal fall arrest systems and anchorage points.

Fire Protection and Prevention

I. Policy Statement

Each subcontractor working on a Turner project must comply with 29 CFR 1926, Construction Industry Regulations, Subpart F – Fire Protection and Prevention, in addition to the following guidelines.

II. Procedures

1. General Requirements
    a) A site-specific fire prevention program shall be developed for each project. The site safety logistics plan and map should include locations of hydrants/FDCs, designated flammable storage locations, designated routes for emergency response vehicles to be maintained, emergency muster points, etc. The plan should discuss site evacuation signals and drills.

    b) Hot work permit procedures, fire watches, shields and blankets must be considered when developing site-specific fire prevention programs. All areas and equipment where hot work is anticipated are to be reviewed in detail by the subcontractor with the Turner Superintendent and/or Safety Manager.

    c) All firefighting equipment must be clearly visible and access to the equipment must be maintained at all times.

    d) A 20 lb. ABC dry chemical fire extinguisher or equivalent must be mounted or on a stand for each 3,000 square feet of protected building area. It is also required that an extinguisher be placed at every stairwell on each level. Travel distance to a fire extinguisher must not exceed 100 feet.

    e) For areas where liquid fuel is stored outside in a tank, at least one 20 lb. ABC dry chemical fire extinguisher must be mounted no closer than 25’ and no farther than 75’ from the tank.

    f) Portable fire extinguishers must be inspected.
        a. Monthly
        b. Annually
        c. Hydrostatic every five years

    In addition, the fire extinguisher must have the pin secured by a safety pull tab to be considered serviceable.

2. Fire Prevention
    a) Temporary offices or trailers, when located inside of a building under construction, must be constructed of fire-retardant materials.

    b) Combustible materials, such as cardboard, wooden pallets, etc., must be removed from the work area as it is created.

3. Flammable and Combustible Liquids
    a) Flammable and combustible liquids must be stored in approved metal safety cans. An approved safety can is a closed container, not more than 5 gallons, with a flash-arresting screen and a spring closing lid. Plastic cans are not permitted onsite.

    b) Store flammable liquids must be in approved flammable storage lockers, outside of the building under construction, unless otherwise permitted by Turner.

    c) Onsite fuel tanks must be double walled, be protected from construction vehicle traffic & have a spill containment system capable of holding all contents of the tank in the event of a leak. Dirt berms & dikes are not permitted.

4. Liquefied Petroleum Gas (LPG)
    a) LPG must never be stored inside buildings. LPG gas must not be used in any building unless authorized by Turner Construction.

    b) When damage to LPG systems from vehicular traffic is possible, precautions must be taken to eliminate the hazard.

5. Temporary Heating Devices
    a) Fresh air must be supplied in quantities sufficient to maintain the health and safety of all employees. If a competent person deems natural airflow inadequate, then mechanical ventilation must be provided.

    b) Solid fuel may not be burned anywhere on a Turner project for heating.

    c) Heaters used in the vicinity of tarpaulins, canvas or similar coverings must be located at least 10’ from the covering and be secured so as to prevent ignition due to wind.

    d) Open fires are not allowed on Turner projects.

    e) Hot Work permits are required for temporary heating devices.

6. Housekeeping is the best defense against fires. Place all trash and debris in proper containers. Place oily and/or paint-soaked rags in a covered metal container.

7. Hot Work Permits
    a. A Turner Construction Hot Work Permit will be filled out by the permit applicant after surveying the area. The applicant must review the area and permit with a Turner Superintendent and/or Safety Manager. One copy will be turned into the Turner Project Superintendent/Safety office and one copy posted in the area where the hot work is being performed prior to beginning any hot work. These activities include any spark or heat producing activity that could be considered an ignition source.
    b. The subcontractor shall provide a fire watch person on duty at all times (i.e., including breaks, lunch, etc.) during hot work operations. A 30-minute minimum fire watch is required after hot work is completed. The fire watch time requirement may need to be increased in sensitive areas (such as

historic buildings, healthcare facilities, etc.) as determined by need and or contract. Each subcontractor is responsible for notifying Turner when the fire watch is complete.

7. The fire watch person is required to be trained as to their duties and responsibilities and has no other duties. Fire watch procedures are to be reviewed with the subcontractor by the Turner Superintendent and/or Safety Manager. In some cases, two or more fire watches may be required.
8. Smoke exhaust equipment (smoke eaters) shall be provided by the subcontractor in occupied buildings or where otherwise required. The exhaust duct should be coordinated through Turner.
9. The disconnecting or disengaging of fire zones or smoke sectors/detectors shall be coordinated with the building owner or manager.
10. Subcontractors installing tarps that may be exposed to sparks are required to use fire retardant material.

Hand and Power Tools

I. Policy Statement

All Turner Employees and Subcontractors working on a Turner project must comply with 29 CFR 1926, Construction Industry Regulations, Subpart I – Tools – Hand and Power, in addition to the following guidelines.

II. Procedures

1. General Requirements
    a) Employees must be trained on each hand and power tools to be used.

    b) All hand and power tools and similar equipment, whether furnished by the employer or the employee, shall be maintained in a safe condition, per the manufacturer's guidelines.

    c) If the tool is designed to accommodate a guard or handlebar, the guard or handlebar must be in place while the tool is being used.

    d) Additional personal protective equipment (PPE), such as a face shield, goggles and/or hearing protection, may be required while operating a tool.

    e) Cutters and knives with automatic self-closing blade-guards, or blades that retract into the handle when the blade loses contact with the cutting surface are the preferred tool of choice for making cuts. If these cannot be used for a certain task or activity it must be outlined in the PTP and reviewed with a Turner Superintendent.

2. Electric Powered Tools
    a) All power tools must be double insulated or provided with a three wire, grounded connection.

    b) All cords are to be inspected prior to their use. Cords having the outer jacket damaged shall be removed from service or must be replaced or repaired per the manufacturer's instructions.

    c) Only a qualified electrician may replace a cord and/or cord end.

    d) All hammer-drills and rotary hammers must have integrated technology, such as a "safety clutch," that will stop drill-bit rotation should the bit bind up in the hole. An example of this is Hilti's Anti-torque control (ATC) technology.

    e) All bandsaws must be equipped with a dual trigger design with triggers located on both the back and front handles to be engaged for safe cutting. Single hand bandsaws must be used according to the

manufacturer's requirements.

3. Pneumatic Power Tools
   a) Each connection on a pneumatic tool and air hose must be secured with a "whip-check" or similar device.
   b) All air hoses, with an inside diameter exceeding ½ inch, must have a flow reduction device at the supply source to reduce pressure in case of hosefailure.
   c) Compressed air must not be used for cleaning unless the pressure is reduced to less than 30 p.s.i. and appropriate guarding and PPE are in place (PPE should include goggles and a face-shield for anyone in the area). Means and methods for using compressed air for cleaning formwork must adhere to the OSHA Silica standard and may not expose employees of other contractors. Use HEPA vacuuming or water in lieu of compressed air, to the extent feasible.
   d) The 30 p.s.i. requirement does not apply to "blowing down" concrete decks or forms; however, a spring loaded "dead man" control must be attached to the blowpipe.
4. Fuel Powered Tools
   a) Fuel powered tools must be stopped and turned off while being refueled, serviced, or maintained.
   b) Combustion powered tools/equipment must not be utilized inside structures unless an evaluation has been conducted to ensure fumes will not affect personnel. The subcontractor who is utilizing the equipment is responsible for testing and monitoring the indoor air quality. Scrubbers and/or mufflers may be required as dictated by the testing.
5. Powder-Actuated Tools
   a) The manufacturer, or their representative, must train employees in the safe use of powder-actuated tools.
   b) The tool must be tested each day, according to the manufacturer's recommendations, before loading to see that safety devices are in proper working condition.
   c) Tools must not be loaded until just prior to the intended firingtime.
   d) Loaded tools must not be left unattended.
   e) All tools must be used with the correct shield, guard or attachment recommended by the manufacturer.
   f) No cartridges are to be used that contain toxic heavy metals such aslead.
   g) Follow the manufacturer's guidelines for storage, disposal and handling of cartridges and tools.
6. Abrasive Wheels and Tools

a) The RPM rating on all grinding machine motors must not exceed the speed rating of the grinding wheel attachment.

b) All abrasive wheels must be closely inspected by the competent person and ring tested before mounting to ensure they are free from cracks or defects.

7. Woodworking Tools

a) All fixed, power-driven woodworking tools must be equipped with a disconnect switch that can be locked out in the off position.
b) All portable, power-driven circular saws must be equipped with guards above and below the base plate or shoe.
c) When the tool is withdrawn from the wood, the lower guard must automatically and instantly return to the covering position.

Motor Vehicles, Mechanized Equipment and Marine Operations

I. Policy Statement

Each contractor working on a Turner project will comply with 29 CFR 1926, Construction Industry Regulations, Subpart O – Motor Vehicles, Mechanized Equipment, and Marine Operations. In addition, the Turner specific requirements as it relates to trucks driven onto Turner projects, the method used to load and unload equipment and materials from trucks on Turner projects and the preplanning needed to establish controlled access zones around trucks to protect workers and the general public, and the use of spotters, must be followed.

II. General Procedures

1. All trade partner vehicles within the project site fence (including, but not limited to, transportation and construction equipment, delivery trucks and personal or company trucks) shall not idle. The only allowable exceptions to the standard are as follows:
   i. Ambient air temperature exceeds 85°F or falls below 32°F (or as defined by local or regional temperature limits, whichever is stricter)
   ii. Engine idling is required for the function of auxiliary equipment (i.e., cranes, concrete pumps, etc.)

2. All operations requiring the use of heavy equipment will require a pre-planning meeting to coordinate and prevent injuries to workers and the public.

3. All subcontractors delivering material and equipment to projects will be required to complete a risk assessment and pre task plan that must be performed prior to any loading/unloading activities to establish safe work procedures for working around trucks and to protect workers and the general public. This includes:

   a) The subcontractor ensures a risk assessment and preplan is conducted.

   b) The risk assessment is completed prior to any work being conducted on the site with Turner safety or superintendent, and if high risk activities are identified, then no work should be completed until measures are taken to reduce or eliminate the risk.

   c) All personnel involved with a loading or unloading operation should assess the potential hazards before the operation begins. A clear understanding of the procedures and communication between workers must be established.

   d) Each project shall maintain a current site logistics plan clearly identifying controlled access or restricted access zones for truck loading and unloading, required traffic controls, and best practices for unloading or loading materials. Logistics plans must be updated regularly to reflect evolving conditions. Controlled access zones or restricted access zones must be flagged /

barricaded on site and kept clean and clear of non-essential materials and personnel.

- Accessing the site
- Parking trucks safely; chock wheels and fully engage the parking brake during loading and unloading.
- Lighting is adequate for the work.
- Unloading procedures are clear and defined.
- The right equipment is chosen for the job.
- Damage reporting procedures are available for reporting incidents and near misses.
- Ensuring documentation is shared with Turner supervision.
- How the driver will be briefed on loading/unloading procedures and understand their responsibilities
- Overhead power lines

4. **High Visibility Vests must be worn by all personnel associated with the loading/unloading operation**.
    a) Truck drivers should wear a high visibility vest whenever they exit theirvehicle.
    b) All personnel working around moving vehicles and mechanized equipment during loading and unloading operations should wear a high visibility vest.
5. Provide drivers a place to wait during the loading/unloading operation.
    a) The driver must be in full view to a forklift operator at all times. All loading or unloading activity must stop if the driver cannot be seen or needs to enter the exclusion zone to inspect a load.
    b) Alternatively, if it is safe to do so, the operation can allow the driver to stay in the truck cab during loading and unloading.
6. Establish a restricted access zone around the truck to prohibit entry into the load/unload area. High visibility “do not enter” tape should be used. “Do not enter” tape is intended to prohibit access and should only be used as a substitute for physicalbarricades.
    a) No worker, except those involved in the load/unload operations shall be permitted to be behind the “Do not enter” area. Signs and barricades shall be erected to restrict access to the area.
    b) The zone must be equal to the area needed to load/unload plus ten feet around the entire truck area.
    c) All designated personnel within the zone must be clear of the load during all loading or unloading operations by at least 30 feet.
    d) A qualified “spotter”, wearing an ANSI approved high visibility traffic vest, must be utilized during the loading/unloading operation. Vehicles must never back “blind” on a Turner project.
    e) Workers on the ground within the zone should never be on the opposite side of a truck from a forklift while it is loading or unloading material.
    f) A rigging plan must be in place if lifting using a crane.
    g) Do not allow workers on top of the truck while any equipment is being used in loading/unloading operations unless the operation requires then a competent person is the only person allowed as described in the pre-task plan.
    h) An all-clear signal (different from an evacuation signal) must be used before the load/unloading operations begin.

i) All workers in the loading zones should be trained in these safe work practices and given refresher training periodically.

7. Truck parking when loading/unloading materials should be:
   a) Safely surfaced.
   b) Clearly marked.
   c) Adequately lit.
   d) Unobstructed

8. Ensure appropriate forklift or equipment selection, and operator training.
   a) Forklift and equipment operators are responsible for the safety of ground personnel at the site as well as themselves. Operators must be trained in safe operation of the equipment, load limits, loading procedures, and communication with other personnel.
   b) All motor vehicles and material handling equipment, with an obstructed view to the rear, must have a reverse signal alarm audible above the surrounding noise.
   c) Forklift operator training records must be submitted to Turner prior to site use. The forks cannot be used for free rigging (straps or slings over forks).
   d) Loads must never be swung over workers or the general public.

9. All motor vehicles and material handling equipment, with an obstructed view to the rear, must have a reverse signal alarm audible above the surrounding noise.

10. Machinery with rubber tires that are capable of driving down a low-speed road (<30 mph) must be equipped with an orange triangle on the back or a vehicle with their blinkers on.

11. A “spotter”, wearing an ANSI approved high visibility traffic vest, may be used in lieu of an alarm, but only if such devices are not routinely supplied on such a vehicle. Vehicle must never back “blind” on a Turner project.

12. Drivers should visually inspect the area around the vehicle/equipment before moving it to ensure all workers are clear prior to movement.
    a) The spotter must be used when backing any vehicle or equipment with a blind spot.
    b) When reversing, the vehicle must be equipped with a functioning audible alarm.

13. Forklift operator training records must be submitted to Turner prior to site use. The forks cannot be used for free rigging (straps or slings over forks). Forklifts with a hook or a winch attached are considered “cranes” per the crane standard.

14. A seatbelt must be provided and used when operating equipment on a Turner project.

15. All windows must be in full working condition. Any equipment with broken glass of any size, including mirrors, will be taken out of service.

16. Each employee working near or crossing a site where equipment is in use must wear High Visibility Clothing.

17. Equipment without a rollover protective structure (ROPS) or seatbelt is not allowed on any Turner project.

18. The use cell phones (talking/texting) shall not be used while operating machinery/equipment or vehicles.

19. No one may work within 20' of motorized equipment like an excavator, backhoe, loader etc. unless that person's presence is fundamental to the operation underway, and the operator can observe the person at all times.

20. All vehicles in use shall be checked at the beginning of each shift to assure that the following parts, equipment, and accessories are in safe operating condition and free of apparent damage that could cause failure while in use: service brakes, including trailer brake connections; parking system (hand brake); emergency stopping system (brakes); tires; horn; steering mechanism; coupling devices; seat belts; operating controls; and safety devices. All defects shall be corrected before the vehicle is placed in service. These requirements also apply to equipment such as lights, reflectors, windshield wipers, defrosters, fire extinguishers, etc., where such equipment is necessary.

21. Cannot operate a machine/equipment within 20 feet of any overhead energized line, unless specifically outlined in the JHA/PTP and reviewed by the Turner Project Superintendent & Project Safety Manager if assigned.

22. Whenever visibility conditions warrant additional light, all vehicles, or combinations of vehicles, in use shall be equipped with at least two headlights and two taillights in operable condition.

23. Pickup trucks driven on site must never have riders in the bed of the truck.

24. Pickup trucks used for hauling material must be inspected by a competent person to ensure the load is secured properly prior to entering, exiting, or moving on site.

25. Third party haulers like concrete trucks and dump trucks must inspect their vehicle prior to leaving the site to ensure there is no debris that can be thrown from the vehicle and that the dump bed is lowered prior to leaving the site. Refer to local regulatory requirements for covering loads.

III. Site Clearing

1. Workers engaged in site clearing shall be protected from hazards, irritant and toxic plants (poison ivy, sumac, etc.)

2. Each worker is to be instructed in the first aid treatment available onsite in regard to irritant and toxic plants.

3. All equipment shall be equipped with rollover protection and shall have overhead protection.

4. The overhead protection on the canopy structure shall not be less than 1/8" steel plate or ¼" woven mesh with no openings greater than 1" or equivalent.

IV. Pile Driving

1. Overhead protection shall not obscure the vision of the operator. The protection shall be equivalent to 2” planking or other solid material of equivalent strength.

2. Stop blocks shall be provided for the leads to prevent the hammer from being raised against the head block.

3. A blocking device, capable of supporting the weight of the hammer, shall be provided for placement in the leads under the hammer at all times when workers are working under the hammer.

4. Guards shall be provided across the top of the head block to prevent the cable from jumping out of the sheaves.

5. When leads must be inclined in the driving of batter piles, provisions shall be made to stabilize the leads.

6. Safety chains or equivalent shall be provided for each hose connection to prevent the line from thrashing around in case the coupling becomes disconnected.

7. Engineers and winchmen shall accept signals only from the designated signal person.

8. All workers shall be kept clear when piling is being hoisted into the leads.

9. When piles are being driven in an excavated pit, the walls of the pit shall be sloped to the angle of repose (type C soil), or sheet piled and braced.

10. An Anti-two block device is not required when using leads in pile driving.

Industrial Vehicles

I. Introduction

The Company has determined that certain powered industrial vehicles are utilized at its projects and has developed this policy to establish the procedures that must be followed for the use of such vehicles at the Company's projects.

II. Purpose

Provide for proper equipment selection, inspection, and operation of certain powered industrial vehicles, including but not limited to All Terrain Vehicles (ATV) or Quads, Three-Wheeler, Four-Wheeler, Gators, Mules, and all other similar vehicles. Only vehicles that have previously been approved by the Operations Manager and BU Environmental, Health, and Safety Director for use at its projects may be utilized at the Company projects and must be in compliance with the policy. This policy also applies to vehicles owned and operated by Subcontractors and Subcontractor employees.

III. Insurance

All vehicles covered under this policy are to be scheduled to Turner's property plant and equipment (contractor's) policy. It is the responsibility of the jobsite project manager & accountants to properly report all equipment under this policy.

IV. Prohibited Vehicles

1. All vehicles with the following features (in combination) are prohibited from all Turner projects:

    1) Typically carry one rider.

    2) Have no rollover protection or seat belts; and

    3) Have a handlebar similar to a motorcycle for navigation.

    These vehicles may be commonly referred to as All-Terrain Vehicles (ATV), Quads, Three Wheelers, or Four Wheelers (or other similar equipment). This prohibition includes vehicles owned by subcontractors as well.

2. All personal (owned by an individual) All-Terrain Vehicles (ATV's), Quads, Three Wheelers, Four Wheelers, Mules, Gators, or other similar equipment are prohibited on all Turner Projects.

V. Regulatory References

OSHA 29 CFR 1910.178, Powered Industrial Trucks, as applicable.

VI. Procedures

1. All powered industrial vehicles must be equipped as follows:

    a. Each vehicle must have legible nameplates and markings that indicate its load limits.

b. Any modifications and additions, which affect capacity and safe operation, must not be performed without the manufacturer's prior written approval. Where modifications and additions are made, the capacity, operation, and maintenance instruction plates, tags or decals must be marked accordingly.

2. Where liquid fuels, such as gasoline, diesel fuel or LPG, are used for powered industrial vehicles the following precautions must be followed:

   a. Appropriate handling and storage safeguards followed.

   b. Fuel tanks must not be filled while the engine is running.

   c. The spillage of oil or fuel must be carefully cleaned up or completely evaporated and the fuel tank cap replaced before restarting engine.

   d. No vehicle may operate with a leak in the fuel system until the leak has been corrected.

   e. No smoking or open flame while refueling; and

   f. Appropriate PPE must be worn while refueling.

   g. Refer to Section IV of the Carbon Monoxide Exposure Prevention program for information regarding requirements for use of equipment with internal combustion engines.

3. Where electric powered industrial vehicles are used, the following precautions must be followed:

   a. Battery charging installations must be located in areas designated for that purpose.

   b. Facilities must be provided for flushing and neutralizing spilled electrolyte.

   c. Facilities must be provided for fire protection.

   d. Facilities must be provided for protecting charging apparatus from damage by trucks.

   e. Facilities must be provided for adequate ventilation for the dispersal of fumes from gassing batteries.

   f. Material handling equipment must be provided for handling batteries.

   g. Reinstalled batteries must be properly positioned and secured in all electric powered trucks.

   h. A carboy tilter or siphon must be provided for handling electrolyte.

   i. When batteries are charged, acid must be poured into water and water is not poured into acid.

   j. Appropriate PPE must be worn when adding acid.

   k. Vehicles must be properly positioned with the brakes applied before their batteries are changed or charged.

l. When batteries are charging, their vent caps must be clear and functioning and the battery (or compartment) cover(s) must be left open to dissipate heat; and

m. Precautions must be taken to prevent smoking and other sources of ignition from coming out of the charging area.

4. Adequate lighting must be provided for all powered industrial vehicle operations.

5. Carbon monoxide concentrations as a result of powered industrial vehicle operations must not exceed the Permissible Exposure Limit of 50 ppm.

6. Powered industrial vehicle drivers must follow appropriate safe operating practices as contained in the manufacturer's manual. Non-authorized associates must never operate powered industrial trucks.

7. Powered industrial trucks must be inspected and repaired as follows:

a. Drivers must conduct pre- and post-operation safety inspections at least at the start of each shift on which the vehicle is used;

b. Any power-operated industrial vehicle not in safe operating condition must be removed from service.

c. All repairs must be made by authorized personnel.

d. Repairs must be made only in a location designated for such repairs.

e. Vehicles in need of repairs to the electrical system must have the battery disconnected prior to such repairs.

f. All replacement parts used on industrial vehicles must be equivalent to the safety features as used in the original design.

g Industrial vehicles must not be altered so that they have different configurations, extra parts, or additional counterweighting, unless approved by the vehicle manufacturer.

h. Any vehicle that emits hazardous sparks or flames from the exhaust system must be immediately removed from service, and not returned to service until the cause for the emission of such sparks and flames has been eliminated.

i. When the temperature of any part of any vehicle is found to be in excess of its normal operating temperature, thus creating a hazardous condition, the vehicle must be removed from service and not returned to service until the cause for such overheating has been eliminated; and

j. Industrial vehicles must be kept in a clean serviceable condition.

VII. Training

1. All authorized drivers must complete training as follows:

   a. Manufacturer requirements (as coordinated through the dealership of the equipment) for the safe operation of the vehicle including use of personal protective equipment, authorized surfaces for operation of the vehicle, weight restrictions, and other operational conditions.

   b. OSHA 29 CFR 1910.178 Powered Industrial Trucks.

   c. This training shall be written formally into the Project Specific Safety Plan by the project team, approved by the BU Environmental, Health, and Safety Director.

   d. A documented sign-off for the authorized driver must be a part of the training manual provided with the training.

2. All non-authorized associates who work in areas where powered industrial vehicles are in operation will be instructed to never operate any powered industrial vehicle and will be instructed in work practices for pedestrians working in those areas.

3. Retraining must be repeated at least every three years and as necessary to maintain the required driver skills and when:

   a. The operator has been observed to operate the vehicle in an unsafe manner.

   b. The operator has been involved in an accident or near-miss incident.

   c. The operator has received an evaluation that reveals that the operator is not operating the vehicle safely.

   d. The operator is assigned to drive a different type of vehicle; or

   e. Conditions in the workplace changes in a manner that could affect safe operation of the vehicle.

Unmanned Aircraft Systems/Drones Policy

I. Policy Statement

In our ongoing efforts as the leader in construction safety, Turner has adopted the following policy to ensure that Unmanned Aircraft Systems (UAS)/Drones are operated in a manner that meets or exceeds all known federal, state & local municipality, Drone Safety Council, Unmanned Safety Institute, FAA & DOT standards & regulations (as of the 3/4/2015 version these are being proposed by congress). The most restrictive guidelines take precedence over our limits. Operators must strictly adhere to all manufacturer operational requirements. Modifications can only be made according to the manufacturer's instructions and approvals. The operator, by federal guidelines, cannot operate a drone for hire without meeting at a minimum FAA regulation Title 14 part 107, and must provide Turner with this documentation.

It is our policy that all drones utilized in Turner Construction must be from a third party, licensed/approved by the FAA to operate in a commercial setting and insured per Turner Limits. TURNER CONSTRUCTION EMPLOYEES WILL NOT OPERATE DRONES. Also, ONLY ONE DRONE CAN BE FLOWN ON A PROJECT AT ANY GIVEN TIME.

A coordination meeting must be held to discuss/plan out use of a drone. Discussions must include other drones that might be in the same area being operated by other entities, FAA rules governing use of the drone under this particular scenario, city or state requirements, privacy issues, insurance requirements, flight plans, safety issues and mitigation plan, operating times, date the drone will be in use, protection of the public and workers, neighborhood concerns, type of drone being used, and overall compliance with this policy's rules and regulations. Meeting minutes and a flight plan will be published. A call will be held with the EH&S Director and Operations Manager to review the plan prior to moving forward. All data obtained during the drone flight should be downloaded securely and not erased or duplicated without written approval.

UAS's/Drones can be hazardous if operated incorrectly and irresponsibly or without following specific safety guidelines and are operated by the young or inexperienced.

II. Procedures

1. A pre-flight Job Hazard Analysis must be developed by the operator at least 7 days prior to flight. The Job Hazard Analysis meeting and job walk must be held with the operator prior to actual operation. Look for sources that may cause RF interference (radio towers, transmitters, etc.). If it's reasonable to anticipate that these sources may cause RF interference, then they must be de-energized during the flight, or no flight may take place.

2. The pilot of the UAS/Drone must do a test flight in a clear area to show they have control of the drone. This must include a roll, yaw, back and forth, and a figure 8. If the pilot cannot maintain control, they cannot not be allowed to operate on site.

3. Only UAS's/Drones powered by battery are permitted. Fuel operated UAS's/Drones are prohibited.

4. UAS's/Drones can only be operated when a remote pilot visual line of sight is maintained throughout the flight. The use of monitoring, corrective lenses like binoculars, and first-person view goggles cannot be used by the operator as they are prohibited by the FAA.

5. UAS's/Drones must be operated between sunrise and sunset. No operating in the dark is permitted. Each drone has temperature requirements for flight. Most require at above 104 degrees Fahrenheit and below 0 degrees Fahrenheit the drones cannot be flown. The manufacturer paperwork detailing these requirements must be submitted to Turner and reviewed at the preplan meeting. All manufacturer recommendations must be followed.

6. UAS's/Drones cannot be flown over 400-foot altitude, unless the small, unmanned aircraft:

    a) Is flown within a 400-foot radius of a structure; and
    b) Does not fly higher than 400 feet above the structure's immediate uppermost limit.

7. **UAS's/Drones will be operated during off hours such as weekends when the pedestrians, employees, vehicles, etc. are absent or minimal. It is NEVER permitted to operate a UAS/Drone over any person. The area below the flight path MUST be completely free of people.**

8. Maintain at least 100 feet between the UAS/Drone and people, vehicles, roadways (unless closed), buildings and electrical lines and power stations. This helps protect these in the event of an unplanned landing. In some areas, such as with a tower crane, 100 feet vertical clearance is not feasible to comply with keeping the drone under a 400-foot altitude. In these areas maintain 100 feet horizontally from the structure and a minimum of 30 feet vertically.

9. During set up and testing of the drone double check the measurement to the top of the highest point of adjacent buildings, cranes, etc. and verify the height. Measure to the top of crane first so flight heights and distances can be evaluated and maintained.

10. AS's/Drones shall not be flown over areas occupied by employees, subs, or pedestrians. Areas where UAS/Drone are to be operated must be closed off with an exclusion zone large enough to anticipate where a UAS could drift/drop, accounting for elevation, wind, and other factors.

11. Automobiles and other moveable pieces of property shall be removed from the flight area prior to launch when feasible. Exclusion zones shall include visible barriers and warning signs. Area monitors shall be assigned to keep people out of the exclusion zone. Take steps to protect non-moveable property and equipment where feasible.

12. Do not operate a UAS/Drone within 5 miles of an airport or where manned aircraft are operated (hospital helipad).

13. UAS's/Drones shall not be permitted to be operated when winds exceed the 10 miles per hour.

14. UAS's/Drones shall not be permitted to be operated when lightning is detected within 10 miles. The only acceptable UAS's/Drones to be operated on a Turner Construction project are those with:

    a) GPS, Radio Controlled (RC) transmitter and low battery fail safe are absolutely required. These must return the unit to its launching point if the GPS or RC Transmitter fail, or the battery reaches 30% charge.

15. The operator must be at least 21 years of age.

16. Only UAS's/Drones that are less than or equal to 10 pounds can be operated on a Turner Construction project.

17. Immediately prior to launch, the operator must verify with a Turner Construction representative that the remaining battery charger is greater than 95%.

III. Roles and Responsibilities

1. Permission to utilize UAS's/Drones by a third party on a Turner Construction project must be granted by the Operations Manager and BUEHSD in the Business Unit.

2. The entire Turner Construction project staff must complete a course of UAS/Drone safety overview.

3. At least 48 hours prior to UAS/Drone use, Turner will notify *in writing* the property owner, architects/engineers, and any other stakeholders of the intended plan for UAS/Drone use and safety precautions to be taken. Stakeholders may include residents in neighboring buildings that may have privacy concerns of a camera-mounted on a UAS/Drone.

4. Within 24 hours prior to flying a UAS, Turner will hold an all-hands safety meeting to discuss the operation with everyone on site. Discuss timing and location of UAS/Drone use, safety measures and precautions.

5. The operator must meet at a minimum FAA regulation Title 14 part 107 *and* have operated in a commercial capacity for at least 1 year. FAA regulations require that all commercial drone operators have a Remote Pilot Certification issued by the FAA. Documentation must be submitted to Turner.

6. Appropriate types and limits of insurance must be obtained and approved by Susan Hughes.

7. Any incidents using drones that the operator has been involved in must be reported.

III. Employee Safety

Superintendent/Safety Manager:

1. Hazards at the site are mitigated:

    a. Wires/cables/utility lines/cranes identified and flagged or identified on flightplan.

    b. Worker areas identified and flight plan adjusted to stay away from workers or workers reassigned to another area.

    c. If you have information that would be helpful to the drone operator, please share that information. They will be coming into your project, and it is up to you to ensure safety in the area.

    d. Turner safety program for drones shared with the operator/company who operates the drone.

    e. Turner visitor agreements signed by operator and orientation held.

    f. Turner safety program reiterated to the operator, all PPE to be worn discussed, work rules discussed and signed off on.

    g. Property in the vicinity that might be impacted is identified and communicated to the drone operator.

    h. Buffer zones were established between aircraft and personnel.

    i. Investigate potential alternative landing sites away from workers in case take-off/landing site is obstructed or compromised.

2. Weather considerations at the project must be taken into consideration: Project staff must verify:

    i. Temperature
    ii. Visibility
    iii. Precipitation
    iv. Wind Speed

3. Notify any workers or nearby property owners of your intentions (permission) – Superintendent… but what is the communication plan.

4. Discuss flight plan with subcontractors at superintendent meeting and workers the day of the flight.

5. Emergency plan:

    a. Crisis management plan in place
    b. First aid kit ready
    c. Communication plan in place

6. Workers

   a. Situational Awareness:
      - At all times stay a minimum of 100’ away from any unmanned aircraft (drone)
      - Act professionally when a drone is flying around. You are a representative of your company, and your actions will be captured on the drone.
      - Know at all times the location of the drone if you are in close proximity to the flight path.

   b. If at any time you feel that continuing to work is unsafe contact your superintendent and you will be reassigned to another area.

   c. If a drone lands in or around your work area contact the superintendent who will notify the operator as to the location. Please note that at no time will the drone be out of site of the operator.

   d. If a drone is flying on your project during your shift, identify safety measures on your pre task plan and discuss at your daily huddle.

   e. Assure you understand emergency procedures and what to do if an emergency arises. Listen for signals (pre identified) and act according to the safety plan discussed in your daily huddle.

   f. Assure you have been debriefed by your superintendent and foreman of drone activity, the flight plan, times of flight, path of travel, and how it will affect your work area and activities.

   g. If you have information that would be helpful to the drone operator, please share that information. They will be coming into your work area, and it is up to you to ensure safety in the area.

Scaffolds

I. Policy Statement

Each Contractor working on a Turner project will comply with 29 CFR 1926, Construction Industry Regulations, Subpart L- Scaffolds, in addition to the following guidelines.

II. Procedures

1. General Requirements
   a) Capacity
      - Scaffolds must be erected under the supervision of a competent person. The competent person shall be designated and submitted to Turner prior to the start of work.
      - Scaffolds and their components must be able to support at least four times the maximum intended load.

   b) Access and Egress
      - Frame and system type scaffolds, including but not limited to masonry and tube & coupler, must be accessed via scaffold stair attachments. Where space does not permit the use of a stair, alternate means of access/egress may be utilized including ladder systems when a Turner Ladder Permit is issued. When ladders are used to access scaffolds, the competent person shall work with Turner to explore the use of personal fall protection systems while ascending/descending the ladder (such as retractable lanyards attached above the scaffold ladder to an OSHA compliant anchor point.

   c) Platform Construction
      - Each working platform on a scaffold must be fully decked or planked. Planking must be sufficient to comply with any statutes or regulatory provisions in the applicable jurisdiction.
      - Any gap in a working platform cannot exceed 1".
      - All planks or platforms must be cleated or overlap a minimum of 6", but no more than 12".
      - Wooden scaffold planks must not be painted.

   d) Supported Scaffolds
      - Supported scaffolds with a height to base width ratio exceeding 4:1 must be stabilized from tipping by a solid connection such as guy wires, bracing, tying or other equivalent means.
      - When scaffolds are erected adjacent to structures, they must be secured to the structure every 26' vertically and 30' horizontally.
      - Scaffold poles, legs, posts, frames, and uprights must be placed on base plates, mudsills, or other adequate firm foundations.
      - "X" or cross bracing is not considered to be a guard rail system. Guard rails

(horizontal top and mid-rails) must be installed when the platform reaches four feet in height.

e) Suspension Scaffolds
- Each suspension rope, including connecting hardware, used on adjustable or non-adjustable suspension scaffolds shall be capable of supporting, without failure, at least 6 times the maximum intended load applied or transmitted to that rope with the scaffold operating at the rated load of the hoist.
- Counterweights must be made of non-flowable material. Sand, gravel, water, or similar material may not be used.
- Counterweights must be secured to the outrigger beams by mechanical means to prevent accidental displacement.
- Outrigger beams that are not bolted to the structure must be secured by tiebacks. The tiebacks must be attached to a structural member of the building. Standpipes, vents, conduit, and other piping systems are not adequate structural members.
- Tiebacks shall be equivalent in strength to the suspension ropes.
- Direct connections to roofs and floors, and counterweights used to balance adjustable suspension scaffolds, shall be capable of resisting at least 4 times the tipping moment imposed by the scaffold operating at the rated load of the hoist.

f) Scaffold Access
- Cross bracing must never be used as a means of access.
- Stair rail and handrail systems must be smooth surfaced to prevent lacerations or puncture wounds.
- A competent person must evaluate safe means of access during erection and dismantlement of the scaffold. Proper access shall be provided to each worker that is working on/off a scaffold.

g) Scaffold Use
- Scaffolds and scaffold components must never be loaded in excess of their maximum intended loads.
- Scaffolds and scaffold components shall not be left loaded with material overnight unless the materials are secured. Materials shall not be left on suspended scaffolds overnight unless the scaffold is grounded.
- A competent person must inspect each scaffold before every shift and after any occurrence that may affect its structural integrity.
- The competent person will “tag” the scaffold “in service” or “out of service” prior to employee use.
- Scaffolds cannot be erected, moved, dismantled, or altered except under the supervision of a competent person.
- Snow, ice, and other slippery conditions must be eliminated before employees are allowed access to a scaffold.

h) Fall Prevention
- A Personal Fall Arrest System or a guardrail system must be in place on all scaffolds exceeding 6’ in height. Mobile scaffolds require guardrails at 4 foot in height. When rails cannot be installed, utilize a Personal Fall Arrest System

(PFAS) anchored overhead.
- Each employee on a single-point or two-point suspension scaffold must be protected by a PFAS and guardrail system, except boatswains' chair which requires PFAS.
- The use of fall prevention devices is required during the erection or dismantling of a scaffold.
- When vertical lifelines are used, they must be protected from surface abrasion.
- When guardrails are used, they must be 42", + or – 3" in height. Mid-rails must be half the distance from the top-rail height to the platform deck. Toe boards should be constructed from 2"x4" material or equivalent and must meet existing state or client requirements.
- "X" or cross bracing is not considered to be a guard rail system. Guard rails (horizontal top and mid-rails) must be installed when the platform reaches four feet in height.

i) Falling Object Protection
- The area below a working scaffold must be barricaded to protect employees from a falling object hazard.

2. Requirements for Specific Scaffold Types
   a) Tube and Coupler Scaffolds
      - Tube and coupler scaffolds, in excess of 125', must be designed by a registered professional engineer (RPE).

   b) Fabricated Frame Scaffolds
      - Frames and panels must be braced by cross, horizontal, or diagonal braces.
      - Frames and panels must be joined together vertically by stacking pins or equivalent couplings.
      - Frame scaffolds, in excess of 125", must be designed by an RPE.

   c) Pump Jack Scaffolds
      - Cannot be used on Turner projects unless approved by the BUEHSD.

   d) Mobile Scaffolds
      - Mobile scaffolds require guardrails at 4 feet in height, unless required at a lower height by the manufacturer.
      - Mobile scaffolds must be braced by cross, horizontal, or diagonal braces based on manufacture's requirements to prevent racking during movement.
      - Wheels must be locked when in use.
      - Workers are not permitted to be on scaffold when it is being moved.
      - Caster and wheel stems must be pinned to the scaffold legs or adjustment screws.
      - The height to base width ratio on a mobile scaffold cannot exceed 2:1 unless it is braced with outrigger frames.

   e) Mast Climber Systems
      - 100% personal fall arrest systems (PFAs) are required when working on a mast climber system.
      - PFAS Anchors shall be located on the building above the work platform

unless it creates a hazard or when performing an activity where there is no structure above.

- PFAS Connectors, ropes or other systems must not interfere with the safe operation of the mast climber. A vertical rope anchor system must be collected into a receptable on the platform so not to “catch” on the platform or cause a hazard to those on the platform.
- In the event the PFAS anchor cannot be connected to the building or structure; a platform integrated PFAS anchor system must be engineered by the mast climber manufacturer and used according to the manufacturer direction and limitations.
- Access to the Mast climber platform must be by stair or established, pre-determined access points at floor levels.

f) Cantilevered and Suspended Work Platforms: Personal Fall Arrest System (PFAS) Policy

- 100% Personal Fall Arrest Systems (PFAS) is required on Cantilevered and Suspended Work Platforms.
- The Cantilevered and Suspended Work Platforms covered under this policy are as follows (but may not be limited to):
  - Jump/climbing formwork systems (all types)
  - Stacker bracket, wall bracket, hanging bracket, bridge bracket and other similar cantilevered systems
  - Wall or waler bracket scaffold platform (typically attached and supported by vertical formwork)
  - Outrigger scaffold platforms
  - Cantilevered loading platforms (retractable and stationary)
  - Suspended scaffold, swing stage, bosun’s chair and other similar suspended systems

General Requirements:

- Guard rail systems must be constructed in accordance with OSHA Regulation and Manufacture’s specifications.
- A PFAS shall be installed and used on all cantilevered and suspended work platforms.
- The complete cantilevered or suspended platform system shall be engineered detailing each component (fastening devices, brackets, working platform, guard rails, PFAS etc) and include guidelines for safe installation/use and limitations of that system.
- Any additional engineering required to adequately assess the compatibility and performance of a PFAS is the performing/installing contractors' responsibility. The performing/installing contractor shall coordinate with all other contractors who will need to access and/or perform work on that system.
- Each trade partner planning on using any of the above systems must give Turner a fall prevention and PFAS plan before installation. At a minimum the plan must include the following:
  - The cantilevered or suspended system intended to be installed
  - Maximum intended deck height of cantilevered or suspended system
  - Maximum number of workers allowed on each cantilevered or suspended system
  - Engineering and/or manufacture’s specification detailing PFAS compatibility and performance criteria/limitations

- Access to cantilevered or suspended system
- Rescue plan in the event of a fall-catch
- Locations with no guard rail and or sequences where guard rail will be removed and/or modified
- PFAS system(s) to be used (including anchor point(s), connecting device(s), harness)
- Training program implementation plan
- For jump/climbing system, the number of “plus” and/or “minus” decks in the system

3. Scaffold Training Requirements
    a) Each employee that works on a scaffold must be trained by a qualified person in the recognition and avoidance of hazards associated with the type of scaffold they will be required to work from.

    b) Each employee that is involved in the erection, dismantling, moving, operating, repairing, maintaining, or inspecting of a scaffold must be trained by a qualified person in the recognition and avoidance of hazards associated with these operations.

4. Temporary work platform access system inspection
    - In addition to manufacturer, OSHA and local jurisdiction inspection requirements; all temporary work platforms and access systems shall be inspected, at a minimum, after initial installation and quarterly by a qualified third party or manufacturer representative.

Mobile Elevated Work Platforms and Safety Procedures for High-Lift Work

I. Purpose and Background

This policy directive is intended to mitigate risks related to elevated work. It reflects current evidence – and experience-based safety enhancements for the use of lifts and requires control guards for all lifts brought onto Turner sites, timely retrofitting of lifts already on site to add control guards, and enhanced procedures for work at 30' or above in lifts.

The Policy directive addresses the following hazards and risks:

A. Inadequate guards over controls which can lead to inadvertent operation of the lift.
B. Risk of crush injuries or entrapment in the ceiling
C. Risk of accidental over-extension and lift tip-over
D. Inability to rescue.

The enhancements to our lift safety policy grew out of a collaboration between Turner and the industry's top scissor lift manufacturers (JLG, Skyjack, and Genie) and purveyors (United, Herc, and Sunbelt). They reflect our unwavering commitment to continuously evaluating and improving our safety program to provide the safest possible work environment for our people.

We know that no safety device can prevent an accident in all circumstances. But, with enhancements and modifications to lift controls, Turner is taking an important step to protect workers against known and preventable hazards.

II. The Policy

All scissor lifts and boom lifts shall have an approved shroud or guard over the joystick/controls, or a timeout feature on the lift/lower and drive selector, which disables the lift/lower and drive functions after several seconds of inactivity *(Reference CSO Alert #1001).* Moreover, boom lifts must be delivered with anti-crush or secondary- guard technology.

Note: Along with the scissor lift and boom lifts policy change, enhanced safety procedures for Mobile Elevated Work Platforms used in High Lift Situations have been developed and incorporated into the policy.

III. Implementing the Policy: Who is Responsible?

Procurement

All Bare Rental Agreements shall reflect Turner's updated policy regarding additional control guards for the safe use of scissor lifts, mobile elevated work platforms, and boom lifts**.**

Safety and Operations Leaders

Ensure that our people are aware of the policy and that they understand their responsibilities as outlined therein.

Site Safety and Field Staff

Conduct a thorough review of all active lifts to determine which must be retrofitted and work with subcontractors and rental companies to complete the necessary modifications as soon as possible. Verify that all lifts brought on site meet the safety requirements of the policy.

1. Mobile Elevated Work Platform (MEWP)

a) All scissor-lifts and aerial-lifts shall have an approved (see below) shroud or guard over the joystick/controls, or a timeout feature on the lift/lower and drive selector, which disables the lift/lower and drive functions after several seconds of inactivity. Moreover, aerial- lifts must be delivered with anti-crush or secondary-guard technology.

b) All Bare Rental Agreements shall reflect Turner's updated policy regarding additional control guards for the safe use of scissor-lifts, mobile elevated work platforms, and aerial-lifts.

c) Prior to mobilizing, all Mobile Elevated Work Platforms (MEWP) must be inspected to ensure compliance with Turner requirements. MEWP's (scissor-lifts, aerial-lifts, and knuckle-booms) must have dual action controls to be approved for use.

d) Dual action controls require that there be two separate actions to activate the lift. If a MEWP arrives on site and does not have dual action controls, then it must remain inoperable until a Dual action control is installed. The dual action control may consist of a button that must be depressed in order for the controls to operate, or a toggle switch that must be activated prior to operating the MEWP controls (The toggle switch must automatically return to the center when released).

e) The contractor is required to complete a daily inspection sheet for all powered lift trucks and mobile elevated work platforms. The inspection includes operational and physical parameters for operation of the equipment being inspected. The inspection form must be posted in a visible location during operations and a copy made available to Turner upon request. An inspection form is available from Turner. Field modifications are not allowed on aerial lifts.

f) Only authorized and trained individuals may operate aerial lifts.

g) When a lift is delivered to the project, the rental company or the owner of the lift shall inspect the lift & provide documentation that the lift is safe to operate onsite. The lift shall be free from any physical defects in new or like new condition with all the safety placards present. The operator's manual and inspection documentation shall be included.

h) Employees must use personal fall arrest systems (PFAS) when working from boom platforms. Employees shall follow the manufacturer's recommendations for the type of (PFAS) when working from an aerial lift.

i) At a minimum, employees shall follow the manufacturer's recommendations for the type of fall arrest/restraint when working from a scissors lift. If scissor lifts are equipped with an attachment point provided by the manufacturer for a restraint system, they are to be used. The intent of this protection is to keep workers within the confines of the passive protective system (rails) so the shortest length of lanyard that allows the task to be completed and keep the worker confined to the walking/working surface is required. Never climb above the work platform. A dedicated spotter is required any time a scissor lift must be moved in an elevated state. The lift shall be inspected daily & documentation provided to Turner upon request. Each worker operating the lift shall have a training card or documented training.

j) Employees must keep both feet on the floor of the basket and not stand on the railing or toe board during operation.

k) If it has been determined by the subcontractor's competent person that there are no feasible means to access an area without leaving the basket of a scissor lift, a modified Pre-Task

Plan must be completed as well as a Fall Protection Plan. This plan must be completed by the competent person with details of the anchorage point outside the scissor lift and above the employee's head. Any worker engaged in the activity should be active in the preplanning of the modified plan. All workers involved must review and sign off on the plan. This must be reviewed with Turner's Superintendent. Each work activity and area will require their own PTP and Fall Protection Plan.

l) If operating in congested areas, MEWP's will require spotters. The spotters will be responsible for ensuring that the area around the MEWP and the travel path are free of obstruction and clear of equipment and personnel.
m) Man baskets such as those utilized from fork truck type vehicles are not allowed on Turner projects.

2. Mobile Elevated Work Platform Use in High Lift Situations (applies to boom lifts with an operating platform height of 30' and above) A dedicated JHA shall be developed for each activity operating a MEWP above 30'.

a) MEWPs often operate in close proximity to each other, and workers may walk through or work close to their operation. A system for managing the affected area below the basket and movement of the MEWP's is necessary to decrease the risk of struck-by hazards.
b) If any of the workers in the Aerial Boom Lifts are incapacitated and incapable of descending, a rescue may be required. Due to the nature of this type of work, it is prudent to establish an emergency response plan which has redundancy built into it.
c) Boom lifts cannot be operated by the basket controls without first depressing a covered, protected foot switch. This causes the operator to be intentional about basket movement and reduces the risk of incidental operations.
d) The lifts should have a pressure actuated auto shut-off across the controls which shuts down the equipment to prevent entrapment.
e) A dedicated ground spotter (with no other collateral duties) shall be in place whose duties are as follows:
    i. Visually verify and communicate via two-way radio that all obstructions are clear of the path of travel at the ground level.
    ii. Visually verify that all obstructions are clear while basket is moving.
    iii. The ground spotter shall be responsible for no more than 1 Controlled Access Zone (CAZ). Additional spotters will be required if MEWP's need to be operated/relocated simultaneously within 1 CAZ (Approximate size and dimension of CAZ is below).
    iv. Spotter Logistics:
        a. If 2 or more lifts are required to operate simultaneously, each operator/spotter team will utilize their own dedicated radio channel or communication method.
        b. The Spotter shall not use a cell phone, headphones or other devices which may distract them from their duties.
        c. The Spotter shall have stop work authority. The spotter shall wear, at a minimum, a Class II High Visibility Vest.
        d. The Spotter/operator team shall perform a "radio" check prior to the commencement of the activity and every 30 minutes thereafter if no communications occur during that time frame.
        e. Operation of MEWP from the basket is prohibited without prior communication with the spotter and an "All Clear" is given.

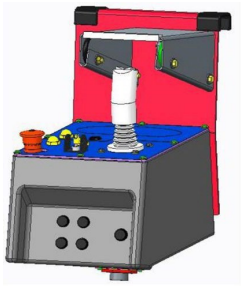
f) Other Traffic at base of operating MEWP
   a. A Controlled Access Zone will be established in the affected areas of the MEWP operation to include the base and working zone beneath the platform. The CAZ should be constructed with physical barriers such cable, wire rope or chain, or flagging. Danger tape and Caution tape should be the last choice and spray-painted lines will not be accepted. The CAZ must be secured from tipping and signed every 30'. The size of the CAZ must consider deflection or arc of the falling material. Each CAZ will be adequately sized to have a 15- foot buffer zone on each side of the MEWP to include under the platform. Each CAZ will hold no more than 3 boom lifts.
   b. No other equipment or vehicle will be allowed to operate within a dedicated CAZ.
   c. A 30' Wide dedicated path of travel for vehicles and other equipment shall be established using rope, traffic cones, delineators or other clear markings which safely guide other equipment and vehicles around the MEWP CAZ. Any changes in the path of travel must be approved by the Turner Superintendent. Boom lifts shall not operate within or over the traffic zone.
   d. The Spotter shall monitor vehicle traffic and shall have authority to stop work and or vehicle traffic.

g) Emergency Response
   a. There shall be, at a minimum, (2) two MEWPs on site when working in excess of 85 vertical feet. This is to ensure that one could assist another which has the capability to reach the basket in the event of an emergency. (A typical FD ladder truck can reach 85'-90' vertical feet)
      i. Exceptions
         1. There is a means of safely reaching the platform via catwalk or another elevated surface.
         2. There is a means to reach the platform from above via rope, slings, or other climbing type equipment. This equipment is only to be used by trained professionals.
   b. The Spotter shall be trained in how to safely use the ground controls. The ground controls shall be tested prior to work occurring each day and/or shift.
   c. The Local Fire Department Shall be invited to the project site to review conditions and site activities which may have the potential for a "Vertical Rescue" in the event of an emergency.
   d. The emergency response number shall be conspicuously posted.
   e. Turner, the Fire Department and Dispatch shall determine a key phrase or word which indicates that a "Vertical Rescue Team" is required. (These teams have specialized training and equipment to respond to high rescue conditions.)
   f. Pre-lift inspections are to include the review of available fall protection equipment and access to and the condition of anchor points.
   g. Workers on the ground shall stay out of the CAZ and communicate with the spotter if entrance is needed.
   h. A Stop Work must immediately be called when any deviations are observed with fall protection.

h) Address line of fire hazards by following these work practices:

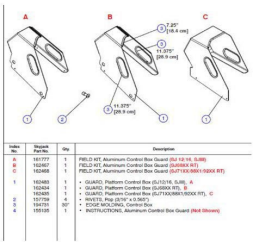
a. Identify and discuss tasks which have the potential for falling tools, materials and/or debris.
b. Workers should avoid positioning themselves, and their equipment, in a line of fire where they could be struck by falling, flying, or moving objects from the overhead platform.
c. Utilize tag lines to maintain positive control of objects being removed or hoisted to ensure the object does not come in contact with the lift.

IV. Approved Guards and Shrouds for Lift Controls

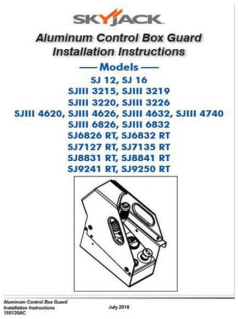


Please see below for examples of approved guards and shrouds for lift controls on Turner projects.

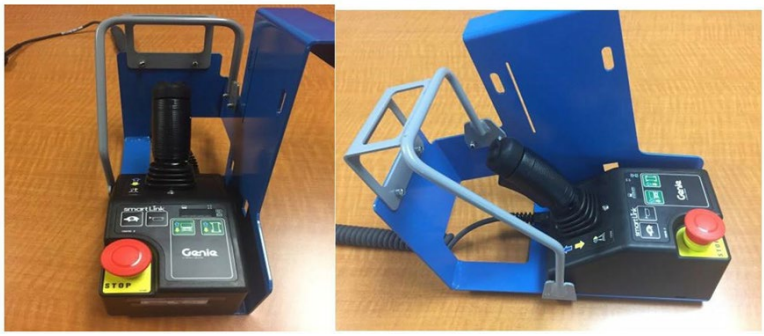
Note: In addition to joystick guard/shrouds, clear messages, proportional lift and drive controls, and symbol-based function selection buttons are required for easy training and operation of lifts.



JLG Scissor Lift Guard



JLG All-Terrain



- **Skyjack Scissor Lift**

- **Genie Scissor Lifts**
  The Genie Smart Link control scissor for slab scissors must include a platform control, ground control, and joystick cover as shown below.

3. Aerial Lift Training Requirements
   Only trained and authorized persons are allowed to operate an aerial lift. Training should include:
   a) Explanations of electrical, fall and falling object hazards.
   b) Procedures for dealing with hazards.
   c) Recognizing and avoiding unsafe conditions in the work setting.
   d) Instructions for correct operation of the lift (including maximum intended load and load capacity).
   e) Demonstrations of the skills and knowledge needed to operate an aerial lift before operating it on the job.
   f) When and how to perform inspections; and
   g) Manufacturer's requirements

V. MEWP Safe Operation and "Walking the MEWP"

When operating a mobile elevated work platform (MEWP) operators are required to stay inside the confines of the basket on the platform. Site-specific conditions should be discussed and documented in the Pre-Task Plan or PTP Huddle Board. Prior to driving or walking the MEWP through any entry, doorway, or corridor, the operator must take a mandatory pause to re-evaluate potential hazards such as door heights, overhead hazards, etc.

Ensure Risk Assessments on Pre-Task Plan includes using mobile equipment, and that potential hazards and mitigations are identified. For example:

- Travel path and travel restrictions including doorways, semi-permanent structures, overhead hazards, pinch points, and obstructions.
- Drop-offs/holes and floor/ground obstructions
- Energized power lines
- Pedestrian and vehicle traffic
- Concurrent work (e.g. drop zones)
- Situations that may require additional spotters.

Implement the below controls if it is determined that walking the MEWP provides a safer alternative:

Definition of "WALKING THE MEWP": The term is used when maneuvering or travelling a MEWP using the platform controls from the ground by walking alongside or in the rear of the MEWP. This includes those that use an 'umbilical cord', radio/remote control or fixed point of control at the chassis.

“Walking the MEWP” will be allowed when it is determined by the competent person that there is insufficient/restricted space above the platform to operate safely from the platform, such as through doorways, corridors, or when any other hazard is recognized by the competent person and operator. Hazards should be identified and discussed in the Pre-Task Plan and mitigating factors such as walking the MEWP should be identified. The following precautions shall be taken when the decision to walk a MEWP has been determined:

- Follow manufacturer’s safety recommendations and training.
- Define alternative MEWP equipment and features such as manual push behind lifts & other alternative means of equipment, especially for accessing through doorways and other low clearance openings.
- Prior to driving or walking the MEWP through any entry, doorway, or corridor, the operator must take a mandatory pause to re-evaluate potential hazards such as door heights, overhead hazards, etc.
- Review process of “Walking the MEWP” and site-specific conditions should be discussed and documented in the Pre-Task Plan or PTP Huddle Board. Ensure Risk Assessments on Pre-Task Plan includes using mobile equipment, and that potential hazards and mitigations are identified.
- A spotter is required when walking a MEWP and should be positioned away from the lift in a manner that gives the operator another set of eyes on the side of the MEWP that is difficult for the operator to see.
- The operator should be trained for the MEWP category and familiarized with the MEWP being moved.
- The operator and spotter must walk the path of travel for the MEWP and remove any obstacles and debris from the route.
- The path of travel should be barricaded off or overseen by spotters during this activity.
- The operator and spotter should maximize their stand-off distance from the MEWP during this activity and out of the direction of travel while walking with the controls in hand from behind the MEWP. The activity should not proceed if the MEWP controller does not allow the operator to walk from behind.
- Hold the control box in your hands while operating the MEWP. Do not operate the MEWP while the control box is secured to the machine.
- Select the lowest speed when operating outside of the guardrails.
- Maintain a clear view of the support surface and path of travel.
- Stop the work if additional personnel are needed to perform the MEWP task safely

Signs, Signals and Barricades

I. Policy Statement

All employees of the Turner Construction Company and its subcontractors will comply with 29 CFR 1926, Construction Industry Regulations, Subpart G, Signs, Signals and Barricades, at a minimum, in addition to the following.

II. Procedures

1. Required signs will comply with the OSHA standards described in1926.200.

2. Where areas may require additional awareness or present unique danger, the use of warning tape may be necessary.
   a) The warning tape should have a sign with the nature of the hazard, the contractor who installed the tape with a contact number, and the duration the tape will be in place.
   b) The intent of the warning tape is to notify of hazards that may arise during construction activities. Every effort should be made to correct these situations with permanent solutions in a timely fashion.

3. All flagmen shall be trained on appropriate procedures before controlling traffic, as required by the Manual on Uniform Traffic Control Devices (MUTCD) and any Municipal or State guidelines.

4. All flagmen shall utilize sign paddles and shall be outfitted with high visibility garments, as required by current ANSI standards. All PPE and traffic control equipment shall be outfitted with reflectorized material for night work as required by current ANSI standards.

5. All crane and hoist signals shall comply with applicable ANSI standards.

6. All traffic control devices shall comply with the MUTCD and any applicable Municipal or State guidelines.

7. Emergency communication signage / egress route signage should be posted on floors that include the locations of exits, stairs, fire extinguishers, gates, etc.

Stairways and Ladders

I. Policy Statement

Each contractor working on a Turner project will comply with 29 CFR 1926, Construction Industry Regulations, Subpart X – Stairways and Ladders, in addition to the following guidelines.

II. Procedures

1. General Requirements

a) A stairway must be provided at all personnel points of access where there is a break in elevation of 19" or more.

2. Stairways

a) When doors from an office or storage trailer open directly onto a stairway, a platform must be provided, and the swing of the door must allow an additional 20" to prevent the door from striking an employee.

b) Employees are not allowed to use metal pan stairs unless they have been fitted with wooden filler blocks or poured with concrete.

c) Stairways with four or more risers or rising more than 30", whichever is less, must have a stair rail or handrail along each unprotected side or edge.

d) Handrails that will not be a permanent part of the structure being built shall have a minimum clearance of 3 inches between the handrail and walls, stair rail systems, and other objects. 2x4 blocks are acceptable for spacers.

e) The stair rails are to be free of nails & hazardous projections.

III. Ladders Last Policy Statement

1. Ladder use on Turner Construction projects will be allowed only when it has been determined that it is unfeasible to use all other options to complete the task.

2. If it is determined that a ladder is the only means of performing the job at elevated height, a ladder permit must be submitted prior to starting work. At no time will a ladder be on site without a current permit and safety checklist.

3. For repetitive work, allow for the use of a "multi-day" permit to be issued in lieu of a daily permit. Daily inspections would still occur, but the permit/tag would be modified.

4. Use of job-built ladders is prohibited on Turner Construction Projects. Temporary stair towers or prefabricated stairs shall be used to access different building levels.

IV. Procedures for identifying and responding to all tasks that require the use of a device that allows work from height:

1. Prior to beginning work, the subcontractor or superintendent (for self-perform work) shall evaluate all tasks that require individuals to work at elevated heights. It is the expectation that these tasks will be performed using methods other than a ladder. Use of lifts and portable scaffold devices shall be the preferred method to perform this type of work.

2. If it is determined that a ladder must be used:

   a. The subcontractor shall complete the Turner Construction Ladder Use Permit and have it reviewed and approved by the Turner Superintendent.

   b. When working at a height greater than four (4) feet, 100% fall protection is required. A retractable is the only option in this case.

   c. Prior to starting work each shift, The **Turner Construction Ladder Safety Inspection Checklist** shall be completed affixed to all ladders.

   d. Prior to using a ladder, the Turner Superintendent will review the Job Hazard Analysis, Pre-Task Plan, and Ladder Use Permit.

   e. Only fiberglass ladders are to be utilized. Metal and wood ladders will not be used on Turner projects. Platform ladders shall be the ladder of choice on Turner Construction projects.

   f. At a minimum, only Type IA Heavy Duty (300 lb. limit) ladders (red and orange) may be used on Turner projects.

   g. When employees ascend or descend a ladder, they must maintain a three-point contact and not carry anything that could cause them to lose their balance.

   h. When extension ladders are used to access upper landings, the side rails must extend at least 3 feet above the landing and secure at the top. Install overhead fall protection anchor point where feasible to allow for the use of PFASs while ascending/descending.

   i. Pull ropes should be placed at all access ladders so employees can safely lift tools or equipment to upper levels.

   j. Stepladders must be opened fully and set level when in use.

   k. All ladders must be used for the purpose for which they were designed.

   l. The base of an extension and or straight ladder is to be placed 1 foot horizontal from the face of the surface for every 4 feet vertical.

   m. The area around all ladders must be checked to ensure there are no slippery or uneven conditions or debris in the area before placing the ladder for use. All weight limits must be checked to avoid exceeding the manufacturer's limits.

   n. Weight limits must also be checked to avoid exceedances.

4. Training
    a) Each employee involved in ladder use must be trained by a competent person in the recognition and avoidance of ladder hazards.

Steel Erection

I. Policy Statement

Each contractor working on a Turner project will comply with 29 CFR 1926, Construction Industry Regulations, Subpart R – Steel Erection, in addition to the following.

II. Procedures

1. General Site, Erection and Construction Sequence Requirements
    a) Before authorizing the commencement of steel erection, the controlling contractor shall ensure that the steel erector is provided with the following written notification: the concrete in the footings, piers and walls and the mortar in masonry piers and walls has attained, on the basis of an appropriate ASTM standard test method of field-cured samples, either 75 percent of the intended minimum compressive design strength or sufficient strength to support the loads imposed during steel erection.

    b) The controlling contractor must ensure that site access roads and storage areas are adequate for the safe delivery and movement of cranes, trucks, and other equipment necessary to erect steel. The equipment must not be assembled or used unless ground conditions are firm, drained, and graded to a sufficient extent so that, in conjunction (if necessary) with the use of supporting materials, the equipment manufacturer's specifications for adequate support and degree of level of the equipment are met.

    c) A site-specific erection plan must be developed by a qualified person and submitted to Turner prior to the start of work.

    d) A site-specific fall prevention plan must be developed, submitted to Turner, and administered by a competent person prior to the start of work. The plan must include Job Hazard Analysis' (JHA's) and Pre-Task Planning (PTP) meetings.

    e) The controlling contractor must ensure that state and municipal permitting issues are addressed when off-loading steel and /or materials on public roads.

    f) Steel erection activities such as connecting, bolting, and welding are to be accomplished from aerial or scissor-lifts to the extent feasible.

    g) Structural steel erection is not to be done using forklifts. Small miscellaneous pieces may be lifted if a lift plan is prepared and Turner's Safety Manager (or superintendent if a Safety Manager is not present) allows the lift, the piece does not exceed 70% of the forklift's capacity as configured and is allowed by the load chart. The lift must be made with an attachment designed and/or approved by the forklift's manufacturer. "BUEHSD must review all plans if a contractor intends to use a forklift for steel."

2. Hoisting and Rigging

a) Cranes being used in steel erection must be visually inspected by a competent person prior to each shift.

b) Individuals who rig loads must be qualified. An employer may not permit an individual to rig loads to be lifted by a crane unless the individual has received training and also has the experience appropriate to their level of work.

c) Outrigger pads should be at least 3 times the dimension of the crane float. The outrigger pads are to be pre-manufactured.

d) A qualified rigger must inspect all rigging prior to each use. The qualification of the qualified person must be submitted to Turner for review prior to the start of work.

e) Routes for suspended loads must be pre-planned to ensure that no employee is required to work directly below a load unless they are engaged in the connection of the steel.

f) Multiple lift rigging may be performed when the following conditions are met:
- A multiple lift rigging assembly is used.
- A maximum of **(3) three members** are hoisted per lift.
- Only beams or similar structural members are lifted.
- All employees engaged in the activity have been trained in the specific procedures identified in OSHA Subpart R, 1926.761.

g) See the Cranes and Derricks in Construction and the Material Handling and Rigging section for additional information.

3. Structural Steel Assembly
   a) There should never be more than four floors or 48', whichever is less, of unfinished bolting or welding above the foundation or permanently secured floor. An exception would be if the structural integrity were maintained as a result of the design.

   b) A fully planked or decked floor or nets must be maintained within two stories or 30', whichever is less, directly below where erection work is being performed.

   c) Shear connectors, also known as "Nelson studs", must not be attached to the top of the beam until after the decking has been installed.

   d) Metal decking shall be laid tightly and immediately secured upon placement to prevent accidental movement or displacement.

   e) At the end of each shift, unbundled metal decking shall be secured in place.

4. Beams and Column Anchorage
   a) All columns must be anchored by a minimum of 4 anchor bolts.

   b) All columns must be evaluated by a competent person to determine whether guying or bracing is necessary.

c) During the placing of structural beams, the load must not be released until a minimum of two bolts, per connection, are secured in place.

d) Employees connecting horizontal members shall not use the members as an anchorage point unless they have been secured at two points independent of an active hoist line. (i.e., they shall not walk out onto a member that is only connected on one side and is still attached to the crane).

e) Anchor bolts shall not be repaired, replaced or field modified without the approval of the project structural engineer of record.

f) Prior to the erection of a column, the controlling contractor shall provide written notification to the steel erector if there has been any repair, replacement, or modification of the anchor bolts of that column.

5. Personal Fall and Falling Object Prevention
   a) All material, equipment and tools must be secured against accidental displacement while aloft.

   b) Each employee engaged in a steel erection activity that is on a walking or working surface with an unprotected side or edge 6’ or more above a lower level, must be protected from fall hazards by safety net systems, guardrail systems or personal fall arrest systems. Turner Construction has a 100% Fall Protection ZERO TOLERANCE POLICY. AT NO TIME SHALL ANYONE BE AT A HEIGHT > 6’ WITH OUT BEING PROTECTED. This includes connectors and any employee installing metal decking.

   c) During metal decking installations, only self-retracting lanyards approved by the manufacturer for leading edge work shall be used.

6. Training
   a) All training must be provided by a qualified person, knowledgeable in the recognition and avoidance of hazards associated with steel erection.

   b) Training includes, but is not limited to; fall hazards, multiple lift rigging and steel connection.

Underground Construction, Caissons, Cofferdams and Compressed Air

I. Policy Statement

Each contractor working on a Turner project will comply with 29 CFR 1926, Construction Industry Regulations, Subpart S – Underground Construction, Caissons, Cofferdams and Compressed Air, in addition to the following guidelines.

II. Procedures

1. The employer must control access to all openings to prevent unauthorized entry underground. Unused chutes, man ways, or other openings must be tightly covered, bulk headed, or fenced off and must be posted with warning signs stating, “Keep Out”, or similar in the appropriate languages.

2. The employer must designate in writing the competent person responsible for monitoring the air quality during underground construction.

3. The atmosphere in all underground work must be tested as often as necessary to assure that the atmosphere contains at least 19.5% oxygen, but no more than 23.5% oxygen. Continuous monitoring is recommended. These tests must be conducted before testing for air contaminants.

4. The atmosphere in all underground work must also be tested quantitatively for hazardous materials such as carbon monoxide, nitrogen dioxide, hydrogen sulfide, and other toxic gases, dusts, vapors, mists, and fumes.

5. If an actual or potentially hazardous atmosphere is present, the caisson then becomes a permit required confined space and Turner’s Confined Space Entry Procedure is implemented.

6. The competent person must keep a daily record of all air quality test results and submit those results to Turner, on a weekly basis and/or upon request.

7. The full depth of the shaft must be supported by casing or bracing.

8. The casing or bracing must extend 42” + or – 3” above ground level.

9. This height may be reduced to 12”, provided a standard railing is installed, the ground surrounding the shaft is sloped away from the shaft and effective barriers are in place to prevent mobile equipment from jumping over the 12” barrier.

Welding and Cutting

I. Policy Statement

Each contractor working on a Turner project must comply with 29 CFR 1926, Construction Industry Regulations, Subpart J – Welding and Cutting, in addition to the following guidelines.

II. Procedure

1. Welding, Brazing and Cutting
    a) Transporting, Moving and Storing Compressed Gas Cylinders and bottles
        - Valve protection caps must be in place and secured.
        - Cylinders must be moved by gently tilting and rolling them on their bottom edges.
        - When cylinders are hoisted by cranes, or other mechanical means, magnets or choker slings must not be used.
        - When cylinders are moved by powered vehicles, they must be secured in a vertical position to the vehicles by a metal bracket designed for this purpose.
        - A suitable steadying device must be in place to keep cylinders in a vertical position when in use.
        - Damaged or defective cylinders must be taken out of service immediately.
        - Oxygen cylinders in storage must be separated from fuel gas cylinders by a minimum distance of 20'. A secondary option is to separate the cylinders using a non-combustible barrier at least 5' high that has a fire rating of 30 minutes. All torch carts are required to have a fire rated barrier between the cylinders.
        - There shall be no "soft top welding". The use of head protection is required, at all times.

    b) Placing Cylinders
        - Cylinders must be kept far enough away from the actual welding or cutting operation so that slag, sparks, or flame will not reach them.
        - Cylinders containing oxygen, acetylene or other fuel gas must not be taken into confined spaces.

    d) Use of Fuel Gas
        - The employer must instruct the employee in the safe use of fuel gas.
        - Before a regulator is connected to a cylinder valve, the valve must be opened slightly and closed immediately. This "cracking" of the valve must be done each time before a regulator is connected.
        - Flashback arrestors must be installed at the torch head and at the regulators and used according to manufacturer's recommendations. Under these circumstances, the arrestors are designed to stop the backflow (reverse flow) of unwanted gas and/or flashback into the upstream equipment.

- Flashback arrestors must be routinely inspected, per manufacturer's recommendations.
- All hoses must be routinely inspected, per manufacturer's recommendations. Specific issues include cracking and dry rot.

e) Regulators and Gauges
- Oxygen and fuel gas pressure regulators must be in proper working order, per manufacturer's recommendations, while in use.
- The regulators & gauges must be removed from the cylinders at the end of each shift.

2. Arc Welding and Cutting
   a) Manual Electrode Holders
      - Only manual electrode holders designed for arc welding and cutting, and are capable of handling the maximum current, can be used.
      - Any and all current carrying parts of the holder must be fully insulated.
      - When welding is not taking place, the rod cannot be left in the stinger.

   b) Welding Cables and Connectors
      - All arc welding and cutting cables must be completely insulated, flexible and capable of handling the maximum current necessary to complete the work.
      - The cables must be free from splices or repair, a minimum distance of 10', from the cable end to the electrode holder.
      - Cables in need of repair, beyond the distance noted above, can be repaired using friction or rubber tape, per manufacturer's recommendations.

   c) Machine Grounding
      - The ground return cable must have a current carrying capacity equal to or greater than the maximum specified output of the arc welding or cutting unit.
      - When a single ground is used to service several machines, the current carrying capacity must be equal to or greater than the total maximum specified output of all the machines which it services.

   d) Shielding
      - All arc welding and cutting operations must be shielded by non-combustible or flameproof screens, which protect employees and other persons working in the area from the direct rays of the arc.

3. Fire Prevention
   a) When practical, the object to be welded, cut, or heated should be moved to a designated safe location, away from flammable liquids and other combustibles.

   b) If the object cannot be moved, positive means must be taken to confine the heat, sparks, and slag.

   c) A 20 lb., ABC dry chemical extinguisher or equivalent must be immediately available in the work area and must be maintained in a state of readiness for instant use.

   d) Drums, containers, or hollow structures, which contain toxic or flammable substances, must be filled with water and thoroughly cleaned, ventilated and tested

before welding or cutting them.

e) Hot Work Permits must be used and are valid for one shift only.

f) A fire watch must be maintained during and at least 30 minutes (60 minutes depending on client expectations) after the hot work completion.

Temporary and Permanent Tent Structures

The following alert relates to all tent or similar structures on all Turner Construction Company and Turner Construction JV projects.

Based on the high risks and potential hazards associated with the use of tents including structural failure and/or compromised structural integrity due to weather events, prolonged usage, and fire hazards, additional proactive management as well as the establishment of procedural elements to reduce the risks involved with these tents is necessary.

Definitions:

- **Pop Up Tent:** Any structure that can be assembled and disassembled with minimal effort. Typically, 10x10 or 15x15 and used for shade protection.
- **Temporary Tent:** Structures larger than a pop up, typically required to be secured to the ground with guy wires or ropes and used for worker break areas, cooling structures, and not constructed to be taken down every day, but can be disassembled in severe weather conditions.
- **Permanent Tent:** Large extruded aluminum or steel frame structures that are to be engineered and designed. Erected by 3rd party and used for mass gatherings and erected for most of the project.

The following are applicable to all tents:

1. Tent fabric must be made of fire-resistant material that meets the requirements of NFPA 701. Tents shall be labeled per International Fire Code (IFC) requirements.
2. All Tent Structures shall be inspected daily and documented by the contractor who is responsible for the tent structure.
3. For inclement/severe weather:
    a. Ensure a plan is in place to take down any pop-up tent.
    b. For temporary tents ensure they are fully secured from being displaced. If not, they should be disassembled.
    c. For permanent tents ensure they are fully engineered to prevent displacement.
4. Portable fire extinguishers (min 20 lbs. ABC) need to be provided within 25 ft of the tent premises. Ensure proper quantity based on OSHA CFR 1925.150 regulations.
5. If any electrical equipment or wiring is provided or installed, it needs to comply with **NFPA 70**. Equipment and wiring need to be listed and labeled for outdoor use.
6. Access and egress (pop-up not included) should be provided per IFC tent standards.
7. All tent structures need to comply with your local governing code, if applicable. Local BUs are responsible for knowing this and complying.

Temporary Tents:

1. Follow all manufacturer's instructions for installation and maintenance.
2. Tents should be located on firm soil, gravel base, or concrete pad. Ensure water is not retained on the floor.
3. Fully assembled tents, including their anchorage to the ground, should be rated to resist a **minimum** wind speed of 35 mph.
    a. When snow, sleet, or freezing rain is forecasted, tents should be disassembled, unless the tent is specifically rated for such loading.
4. Lighting, speakers, banners, etc., should not be hung from the tent structure unless specifically permitted by the manufacturer.

Permanent Tents: Additional requirements for Permanent Tents are as follows:

Note: In addition to the below, the above requirements for temporary tents apply to permanent tents.

a. Permit and approval from the city fire code official is typically required. Check with local officials for any permits or requirements such as weather stability, specific fire-resistant fabric, etc.

b. A 3rd party licensed structural engineer is required to be engaged in the design of this type of tent, including how the tent is secured to the ground (blocks, pins, etc.). *See attached example from Big Top Tent engineering.*

c. Permanent tent installations shall be submitted to TEG to review, comment, and make recommendations based on the 3rd party licensed structural engineers' design and drawings. (Geoffrey Morrisey, gmorrissey@tcco.com; Robert Barbera, rbarbera@tcco.com)

d. Bi-annual inspections by third party/manufacturer/installer are required.

Turner

4

TURNER

CORPORATE ENVIRONMENTAL, HEALTH AND SAFETY POLICY

Occupational Health

Blood-borne Pathogen Prevention Policy

I. Policy Statement

This program will apply to all Turner employees who could be "reasonably anticipated", as a result of performing their job duties, to come in contact with blood and other potentially infectious bodily fluids. Turner employees trained and certified in first aid and CPR who might be "reasonably anticipated" to come in contact with bodily fluids also must follow the rules and regulations set forth in this program.

II. Procedures

1. When dealing with blood or other bodily fluids, Turner employees are required to follow Universal Precautions. Accordingly, all human blood and other human body fluids are treated as if known to be infectious for HIV, Hepatitis B, and other blood-borne pathogens.

2. All jobsite and business unit offices are required to provide employees with disposable latex gloves and one-way resuscitation masks.

3. All certified first aid providers are required to wear disposable non-latex gloves and eye protection while performing first aid on an injured individual. If rescue breathing or CPR is performed, a one-way resuscitation mask shall be provided for the protection of the injured and the provider.

4. All blood spills shall be immediately contained and cleaned with an anti-viral solution, or by a solution of 5:1 water to bleach. In the event of a serious accident, Turner should consider contracting with an outside Hazmat firm.

5. Any material saturated with blood must be considered a regulated waste. This means liquid or semi-liquid blood or other potentially infectious materials; contaminated items that would release blood or other potentially infectious materials in a liquid or semi-liquid state if compressed; and items that are caked with dried blood or other potentially infectious materials. Discarded Band-Aids and gauze containing small amounts of blood products are not considered regulated waste. Disposal of all regulated waste shall be the responsibility of emergency medical personnel.

At least one Turner jobsite person shall be trained in First Aid, CPR, AED procedures and shall be trained in the decontamination of blood spills (Universal Precautions). All individuals are encouraged to attend training in emergency first aid procedures at each jobsite. At all times every project will have on site a FA/CPR/AED trained representative from Turner Construction and each subcontractor. Best Practice for each Turner representative to be trained in First Aid, CPR, AED procedures and shall be trained in the decontamination of blood spills (Universal Precautions).

Carbon Monoxide Exposure Prevention

I. Policy Statement

The purpose of this policy is to educate Turner employees and their subcontractors on the hazards associated with carbon monoxide exposure. Carbon monoxide is a highly toxic, flammable, non-irritating, tasteless, colorless, odorless gas that is slightly lighter than air. Carbon Monoxide (CO) interferes with the oxygen-carrying capacity of blood. CO is non-irritating and can overcome people without warning. Many people die from CO poisoning, usually while using gasoline powered tools and generators in buildings or semi-enclosed spaces without adequate ventilation. Some of the common symptoms of carbon monoxide poisoning are shortness of breath, headache, dizziness, muscular weakness, and nausea. ALL fossil fuel (gasoline, diesel, propane, acetylene, etc.) burning equipment, when used where people are working in confined areas, produces carbon monoxide poisoning exposures.

II. Procedures

1. Testing Requirements - Use of any device that discharges the products of combustion into a work area where an employee exposure is possible, requires testing as defined below:

   a) Monitor the work area to determine the concentration of carbon monoxide at least three times during each 8-hour period. Monitoring shall be conducted with a UL approved monitoring device, such as a LEL/0_2/H_2S/CO 4-gas monitor.
   b) Monitor several different points within the area at the working/breathing heights of an employee.

   c) Maintain a record of these tests noting the date, time, and result of each test. Provide the monitoring results to all affected employees within the work area, if requested. Once the project is complete, these records must be archived with the Business Unit Environmental, Health, and Safety Director.

   d) Remove the employees from the area when the concentration of carbon monoxide reaches 20 PPM. Supplemental ventilation and reduction or elimination of the source shall be provided to reduce the concentration below 20 PPM before the employees are allowed to resume work in the area.

   e) Continuous monitoring is required when the concentration of carbon monoxide reaches a steady concentration of greater than 20 PPM in ambient air.

2. Use of Solid Fuel (wood, coal, paper, etc.) for heating is prohibited.

IV. Internal Combustion Engine Equipment

Prevent CO exposure by using tools or vehicles powered by electricity or compressed air. Utilize engineering controls including exhaust scrubbers on equipment and the use of non-CO type equipment. Never use equipment, vehicles, or machinery with internal combustion engines such as generators, cars, trucks, etc. indoors or in enclosed or partially enclosed spaces such as garages, crawl spaces, tunnels and basements without proper controls, ventilation, or air cleaners. Make sure all internal

combustion engine equipment has adequate clear space on all sides and above it to ensure adequate ventilation. Provide air blowers or other types of air exchangers. Do not use internal combustion engines outdoors if placed near doors, windows, vents, air handlers etc. which could allow CO to enter and build up in occupied spaces.

Where any tool or equipment must be used that produces CO in a partially enclosed area, then air quality monitoring must be provided by a qualified person. Readings must be taken at regular intervals and logged.

Hearing Conservation Program

I. Policy Statement

Turner Construction Company recognizes that excessive noise can cause permanent hearing loss if appropriate administrative or engineering controls or personal protective equipment is not used. Limiting exposure to excessive noise through engineering controls is Turner's preferred method of control. The purpose of this policy is to prevent employee exposure to excessive noise exposure during construction activities. Each contractor working on a Turner project must comply with 29 CFR 1910.95 and 1926, Construction Industry Regulations, in addition to the following guidelines.

II. Procedures

Permissible Noise Exposures

Duration per day, hours	Sound level dBA, slow response
8	90
6	92
4	95
3	97
2	100
1 ½	102
1	105
½	110
¼ or less	115

1. Protection against the effects of noise exposure must be provided when the sound levels exceed those shown in the table above. The measurement must be observed on the A-scale of a sound level meter at slow response.

2. When employees are subjected to sound levels exceeding those shown above, feasible administrative or engineering controls must be utilized.

3. If such controls fail to reduce sound levels within the levels shown above, personal protective equipment must be provided and used to reduce noise exposure.

4. In all cases where the sound levels exceed the values shown in the table above, a continuing, effective hearing conservation program must be administered.

5. All subcontractors must provide, when requested by Turner Construction, a comprehensive hearing conservation program prior to beginning work. At a minimum this program shall include:
    i. Noise survey data for typical work they perform.
    ii. Noise dosimetry data for typical exposures from the work they perform.
    iii. Training records for employees working on the Turner Project.

6. Contractors should pre-plan for noisy activities that potentially expose other trades to noise in excess of this policy. These tasks can be done off-hours, outside of structures, or in areas that have added sound attenuation to limit exposure to noise.

Hexavalent Chromium

I. Policy Statement

Hexavalent chromium (Cr(VI)) compounds are widely used in the chemical industry as ingredients and catalysts in pigments, metal plating and chemical synthesis. Hexa-chrom can also be found in the construction industry through welding or other abrasive methods, such as grinding or when the compound is heated on stainless steel or on hexa-chrom painted surfaces. Industrial uses of hexavalent chromium compounds include chromate pigments in dyes, paints, inks, and plastics; chromates added as anticorrosive agents to paints, primers, and other surface coatings; and chromic acid electroplated onto metal parts to provide a decorative or protective coating. The major health effects include lung cancer, nasal septum and skin ulcerations and contact dermatitis. The purpose of this policy is to prevent employee exposure to hexavalent chromium compounds during construction activity. Each contractor working on a Turner project must comply with 29 CFR 1926, Construction Industry Regulations, Subpart Z – Section 1126, Chromium (VI), Subpart D (Occupational health and environmental controls) 1910 Subpart I (PPE and respiratory protection) and Subpart J (Welding and cutting) in addition to the following guidelines.

II. Procedures

1. Permissible Exposure Limit (PEL)
   a) Since this construction activity is limited to specialty work, Turner will direct the Subcontractor to provide specific Job Hazard Analysis (JHA's) and Pre-Task Planning (PTP) meetings to address potential exposure.

   b) The Employer must ensure that no employee is exposed to an airborne concentration Cr(VI) in excess of 5 micrograms per cubic meter of air (5 ug/m3) calculated as an 8-hour time-weighted average (TWA).

   c) Engineering controls will be the preferred method to achieve the Permissible Exposure Limit (PEL).

2. Exposure Determination
   a) The subcontractor must determine the 8-hour TWA exposure for each employee exposed to Cr(VI). This may be accomplished using two options; scheduled or performance-oriented monitoring.

   b) Scheduled Monitoring
      - The subcontractor must perform initial monitoring to determine the 8-hour TWA for each employee on the basis of a sufficient number of personal breathing zone samples.
      - If the subcontractor does representative sampling, it must be conducted on the employee(s) expected to receive the highest exposure.
      - If the monitoring indicates that employee exposures are below the action level (1/2 the PEL or 2.5 ug/m3), the employee may discontinue monitoring.
      - If the monitoring indicates that employee exposures are at or above the action level, the subcontractor must perform periodic monitoring at least every six months.

c) Performance-Oriented Monitoring
- If this option is chosen, the subcontractor must determine the 8-hour TWA for each employee on the basis of any combination of air monitoring, historical data or objective data sufficient to accurately characterize employee exposure to Cr(VI).

3. Methods of Compliance
- As stated previously, engineering and work practice controls must be used to reduce and maintain employee exposure to Cr(VI) to or below the PEL.
- If feasible engineering and work practice controls are insufficient to reduce exposure below the PEL, then respiratory protection must be used.
- The subcontractor will not be allowed to rotate employees to different jobs to achieve compliance with the PEL.

4. Respiratory Protection
a) All Turner employees must comply with the Business Unit Specific Respiratory Protection Program.

b) When needed, the subcontractor must provide a formal respiratory protection program. Examples include:
- Periods necessary to install or implement feasible engineering or work practice controls.
- Work operations where an employer has implemented all feasible engineering and work practice controls and such controls are not sufficient to reduce the PEL.
- Emergencies

5. Protective Work Clothing and Equipment
- Where there may be a hazard to the skin or eyes from exposure to Cr(VI) the subcontractor must provide, at no cost, protective clothing, or equipment for the employee.
- The subcontractor must ensure that the employees remove all clothing and equipment that may be contaminated with Cr(VI) when the work is complete or at the end of the shift.
- The subcontractor must ensure that chromium-contaminated clothing is not removed from the workplace.
- When contaminated protective clothing or equipment is removed for laundering or cleaning, the subcontractor must ensure that it is stored and transported in impermeable bags or containers.
- The subcontractor must inform any person who launders or cleans clothing or equipment of the potential effects of exposure to Cr (VI) and that the clothing or equipment should be laundered or cleaned in a manner that minimizes skin or eye contact.

6. Hygiene Areas and Practices
- Where protective clothing and equipment is required, the subcontractor must provide change rooms that comply with 29 CFR 1926.51.

- Where skin contact may occur, the subcontractor must provide hand-washing facilities that comply with the previously noted standard.

7. Medical Surveillance
   a) The subcontractor must make medical surveillance available, at no cost, to employees who meet the following criteria:
      - Those who are or may be occupationally exposed to Cr (VI) at or above the action level for 30 or more days a year.
      - Those who are experiencing signs or symptoms of adverse health effects associated with Cr (VI) exposure.
      - Those exposed in an emergency.

8. Communication of Chromium
      - Must follow the same communication of hazardous chemicals highlighted in Turner's Hazard Communication Program.

9. Recordkeeping
   a) The subcontractor must maintain the following data records.
      - Air monitoring,
      - Historical monitoring,
      - Objective data,
      - Medical surveillance.

III. Roles and Responsibilities

1. Turner Management:
   a) Conduct inspections of the workplace for compliance with this policy.

   b) Discuss policy applications during project orientations and pre-plan meetings with subcontractors.

   c) Conduct pre-planning meetings and require the use of Job Hazard Analysis (JHA) and Pre-Task Planning (PTP) meetings.

2. Subcontractor Management:
   a) Comply with and furnish materials necessary to meet the requirements of Turner policy.

   b) Attend and participate in any and all project orientations, pre-plan meetings, JHA discussions and PTP meetings.

3. Subcontractor Employees:
   a) Attend and participate in any and all project orientations, pre-plan meetings, JHA discussions and PTP meetings.

   b) Will comply with this policy.

Lead

I. Policy Statement

Turner is not in the business of performing lead abatement work.

It is the policy of Turner to refrain from engaging in the removal or abatement of lead containing materials when performing renovation or building activities. Turner will request that owners have an inspection made by a certified testing company, industrial hygienist, or lead removal contractor prior to the start of work. Where lead is found, the owner must contract for its removal. Turner must obtain certification that the lead has been removed and the area is safe to work.

II. Procedures

1. Prior to the start of work, Turner will request the building owner to provide a pre-demolition survey for lead based materials, prepared by a qualified consultant.

2. All individuals must receive Lead Hazard Awareness Training prior to beginning work in areas that have materials containing lead.

3. If the assessment identifies lead containing material, Turner will request that the owner remove or abate the area of concern and provide written certification (e.g., clean letter) that the ambient condition of the area is below OSHA's action level for lead (<30ug/m3).

4. If lead is encountered during construction activity, Turner will stop work and request that the owner remove or abate the material.

5. Before resuming work, The Turner Superintendent will request a written certification (e.g., clean letter) that the ambient condition of the remediated area is below OSHA's action level for lead (<30ug/m3).

6. If the owner requests that Turner perform the abate work, a contract of convenience must be entered into with Turner and only qualified remediation contractors, who satisfy company pollution liability requirements, will be retained.

7. The Turner Superintendent must notify the Business Unit Environmental, Health, and Safety Director (BUEHSD) and the BU Claims Coordinator. They will then notify the appropriate Turner Risk Management Regional Claims Manager.

8. The BUEHSD will complete the Turner Environmental Risk Investigation Report and submit it to the Business Unit Operations Manager, VP National EH&S Director, and the Risk Management Department Claim Director.

9. If Turner is contractually obligated to manage the remediation the Business Unit must secure written approval from the VP, National EH&S Director and the Risk Management Claim Director as required by the Environmental Operational Policy.

10. A Lead Compliance Plan that includes negative exposure assessments by work activities will be required if Turner or their subcontractors are required to disturb lead based painted surfaces during demolition or renovation activities. This plan includes the requirements for engineering controls, work practice controls, personal protective equipment, HEPA vacuums, respirators, air monitoring and dust controls for protection from exposure to lead. The Plan will provide guidance for complying with the regulatory requirements of 29 CFR 1926.62 Lead.

III. Roles and Responsibilities

1. Turner Management:
   a) Must ensure compliance with this policy.

   b) Must discuss policy applications during project orientation with subcontractors.

   c) Must provide Lead Hazard Awareness Training to all employees working in or around material containing lead.

2. Subcontractor Management:
   a) Must comply with and furnish materials necessary to comply with Turner policy.

   b) Must attend and participate in the Lead Hazard Awareness Training.

3. Subcontractor Employees:
   a) Must attend and participate in project orientations and Lead Hazard Awareness Training.

   b) Must report immediately anytime lead containing material is discovered or disturbed.

A comprehensive sample of Written Lead and heavy metal Program is available in Appendix F of this manual.

Infection Control Policy

I. Policy Statement

During the planning process of the construction project, it is important to remember that a hospital is an occupied critical care facility, whose primary function is that of patient care. A construction project can be intrusive to medically fragile patients. All construction projects have the potential to impact infection control in patient areas.

The purpose of this policy is to minimize the potential acquisition of nosocomial infection in patients during hospital construction activities.

II. Procedures

The following are highlights of Turner's Infection Control Construction Policy. These guidelines are provided as a foundation for developing a site-specific control policy that may mirror or compliment an Owners program. An example may be found in the Engineering and Technology Safety section of the TKN2 document management system and in Appendix G of this manual.

1. Planning Phase
    a) Number and placement of isolation rooms,
    b) All air vents must be blocked off and sealed to prevent contamination of duct system before construction begins,
    c) Air handling systems,
    d) Ventilation shall be a high priority item,
    e) Dust mats must be used at the entrances to all work areas,
    f) Number and placement of hand washing facilities,
    g) Staff and patient traffic patterns for the duration of the project,
    h) Relocation decisions regarding patient care areas, storage areas, etc.
    i) Water supply and plumbing,
    j) Waste containment, transport, and disposal,
    k) Selection of finishes and surfaces that can be effectively cleaned in clinical areas,
    l) Accommodation of personal protective equipment,
    m) Storage of moveable modular equipment.

2. Operational Phase
    a) Medical waste removal,
    b) Integrity of barrier walls,
    c) Environmental control,
    d) Traffic control,
    e) Cleaning,
    f) Contractor personnel requirements,
    g) Environmental monitoring,
    h) Policy implementation.

3. Completion Phase
    a) Ventilation specifications,
    b) Disinfection procedures,
    c) Water line flushing,

d) Water line disinfection.

4. Compliance Monitoring
    a) Air handling,
    b) Integrity of barrier walls,
    c) Dress code,
    d) Environmental control,
    e) Noise,
    f) Traffic control,
    g) Water supply.

III. Roles and Responsibilities

1. Turner management:
    a) Shall hold an infection control specific pre-planning meeting with the owner and affected subcontractors prior to all work that requires an infection control plan.

    b) Shall conduct inspections of the workplace for compliance with policy.

    c) Shall cover policy applications during project orientation with subcontractors.

2. Subcontractor management:
    a) Shall comply with and furnish materials necessary to comply with Turner policy.

    b) Shall attend relevant pre-planning meetings, project orientation, and fully participate in the Job Hazard Analysis program.

A comprehensive sample of the Infection Control Plan 2013 is available in Appendix G of this manual.

Heat & Cold Stress Prevention

I. Policy Statement

Turner Construction expects all subcontractors to provide their employees' areas of relief from the element exposure. The expectation is to utilize the best method of controlling the employee from exposure. Examples are to provide overhead tarps to shield from the sun, misters, heaters, scheduling work activities, job rotation etc. to reduce the exposure. Subcontractors shall ensure that all employees are trained in the warning signs / symptoms of early heat or cold related disorders and instructed on the clothing and work methods best suited to avoid heat and / or cold stress.

II. Procedures

1. Turner and subcontractors must make sure workers exposed to safety and health risks because of hot or cold conditions at the workplace are provided with information, instruction, and training on recognizing and avoiding injury or illness from thermal stress.

2. Turner and subcontractors must make sure all supervisors know about heat and cold related illnesses, symptoms, prevention, and treatment. Supervisors must be able to recognize unsafe conditions and take corrective action immediately. It is the responsibility of the subcontractor to provide engineered prevention to minimize weather hazards.

3. The risk of heat related illnesses can be reduced by preventive and control measures, including engineering controls to provide a cooler workplace; administrative controls to reduce exposure and recognize symptoms of heat related illness; and personal protective equipment, when necessary, to further limit exposure.

4. The risk of cold related injury can be reduced by preventive and control measures, including: using a buddy system or supervision of workers; limit the amount of heavy work; wearing appropriate clothing for cold weather including layering; encourage continuous body movement (minimize sitting and standing still) in cold environments, and protect workers from drafts; educate employees on the symptoms of cold related stress including heavy shivering, uncomfortable coldness, severe fatigue, drowsiness and / or euphoria; and engineering controls can be effective such as using heaters in areas, where practical, shielding work areas from winds and drafts.

A comprehensive Heat & Cold Stress Prevention Plan is available in Appendix H of this manual.

Tobacco Policy

I. Purpose

Use of tobacco products and secondary tobacco smoke is a documented significant health hazard. Smoking activities also provide ignition sources for fires associated with flammable and combustible materials and smokeless tobacco creates sanitation hazards on floors and in working areas. In addition, these activities create a housekeeping problem in the workplace when improper disposal of smoking or smokeless material occurs. With e-cigarettes (with or without nicotine) gaining popularity it is necessary to address those as well and while they may be safer than smoking tobacco the long-term risks and effects of secondhand exposure are still not known. This policy will reduce employee exposure to secondary tobacco smoke, assist in the prevention of fires in the workplace, and help keep the workplace clean.

II. Scope

1. This policy covers the use of smoking tobacco products (i.e., cigarettes, pipe embers, cigars, etc.), smokeless tobacco products (i.e., dip, snuff, chew, etc.) and all forms of electronic cigarettes or e-cigarettes, etc.

2. This policy is to be adhered to by all Turner employees, contractors, and visitors. This policy applies to all offices (Business Unit or project), warehouses, and projects.

III. Policy Statement

1. All tobacco products, smokeless tobacco products, and e-cigarettes as described above are prohibited in all Turner offices, project offices, warehouses, and on projects. The project or office can designate smoking areas that must comply with all ADA, state, and municipal regulations.

2. Certain owners may also have non-smoking policies and Turner employees, subcontractors, and visitors will comply with those policies fully.

3. In order to ensure compliance with the above provisions please do thefollowing:
   a) Prominently display no-smoking signs in offices and on projects,
   b) Inform individuals about this policy and let them know they may be subjectto removal, fines, and penalties (certain state or local fire departmentregulations),
   c) Instruct individuals found using tobacco or e-cigs to immediately stop.

Turner Construction Company recognizes that our employees and workers are our most valuable assets and the most important contributors to our continued growth and success. We are not only concerned about your welfare as a Turner employee, but also the welfare of others who could be put in harm's way by secondary exposure. We are therefore firmly committed to providing a safe work environment for all workers and set forth this policy for the elimination of tobacco and related products in the workplace.

Sanitation Policy

I. Policy Statement

Each contractor working on a Turner project will comply with 29 CFR 1926, Construction Industry Regulations. Employers shall establish and maintain basic sanitation Provisions for all employees in all places of employment as Specified in the following paragraphs.

II. Procedures

1. Drinking water supply
   a) An adequate supply of drinking water shall be provided in all places of employment. Cool water shall be provided during hot weather.
   b) Drinking water shall be provided according to the requirements of the Safe Drinking Water Act, as amended, and all applicable Federal, state, and local regulations. Refer to the most current Version of 40 CFR 141 and 40 CFR 143, for updates to the national drinking water regulations. Refer to individual state and local regulations, as applicable, for updates to those Regulations.
   c) Only approved potable water systems shall be used for the distribution of drinking water.
   d) Drinking water shall be dispensed by means that prevent contamination between the consumer and the source.

2. Portable drinking water dispensers shall be designed, Constructed, and serviced to ensure sanitary conditions; shall be Capable of being closed; and shall have a tap. Containers shall be clearly marked as **"drinking water"** and shall not be used for other purposes. Water shall not be dipped from containers.
   a) Fountain dispensers shall have a guarded orifice.
   b) Use of a common cup (a cup shared by more than one Worker) is prohibited without the cup being sanitized between uses.
   c) Employees shall use cups when drinking from portable water Coolers/containers. Unused disposable cups shall be kept in sanitary containers and a waste receptacle shall be provided for used cups.

3. Non-potable water.

a) Outlets dispensing non-potable water will be conspicuously posted:
"Caution - water unsafe for drinking, washing, or cooking."

   b) Cross-connection - open or potential - between a system
   c) Furnishing potable water and a system furnishing non-potable water is prohibited.

4. Toilets
   a) When sanitary sewers are not available, one of the Following facilities, unless prohibited by local codes, shall be provided: chemical toilets, recirculating toilets, combustion toilets, or other toilet systems as approved by state/local governments.
   b) Each toilet facility shall be equipped with a toilet seat and toilet seat cover. Each toilet facility - except those specifically designed and designated for females - shall be equipped with a metal, plastic, or porcelain urinal trough. All shall be provided with an adequate supply of toilet paper and a holder for each seat.
   c) Toilet facilities shall be so constructed that the occupants shall be protected against weather and falling objects; all cracks shall be sealed, and the door shall be tight-fitting,

self-closing, and capable of being latched.

d) Adequate ventilation shall be provided, and all windows and vents screened; seat boxes shall be vented to the outside (minimum vent size 4 inches (10.1 centimeters) inside diameter with vent intake located 1 in (2.5 cm) below the seat.
e) Toilet facilities shall be constructed so that the interior is lighted.
f) Toilets at construction job sites.
   - At a minimum, toilets shall be provided according to table 2-1. Where toilet rooms may be occupied by no more than one person at a time, can be locked from the inside, and contain at least one toilet seat.
   - Under temporary field conditions, provisions shall be made to assure that at least one toilet facility is available.
   - Toilets should be kept inside the project fence.
g) No Half High / High Rise portable toilets are allowed on Turner projects unless protected by a partition to assure privacy.
h) No graffiti is allowed in permanent or temporary restrooms or anywhere else onsite.

Table 2-1
Minimum toilet facilities (construction sites)

Number of employees	Minimum facilities (per sex)
20 or less	One (unless manufacturer specs for fewer employees)
21 to 199	One toilet seat and one urinal for every 40 workers
200 or more	One toilet seat and one urinal for every 50 workers

h) Each water closet shall occupy a separate compartment with a door that can lock from the inside and walls or partitions, between fixtures, of sufficient height to assure privacy.

i) Provisions for routinely servicing and cleaning all toilets and disposing of the sewage shall be established before placing Toilet facilities into operation. The method of sewage disposal and location selected shall be in accordance with federal, state, and local health regulations.

5. Washing Facilities
   a) Washing facilities shall be provided at toilet facilities and as needed to maintain healthy and sanitary conditions. Washing facilities for persons engaged in the application of paints, coatings, herbicides, insecticides, or other operations where contaminants may be harmful shall be at or near the work site and shall be adequate for removal of the harmful substance.
   b) Each washing facility shall be maintained in a sanitary condition and provided with water (either hot and cold running water or tepid running water), soap, and individual means of drying. However, where it is not practical to provide running water, hand sanitizers may be used as a substitute.
   c) Whenever employees are required by a particular standard to shower, showers shall be provided in accordance with the following:
      - One shower shall be provided for every ten employees (or fraction thereof) of each sex who are required to shower during the same shift.
      - Body soap or other appropriate cleansing agent convenient

- to the shower shall be provided.
- Showers shall have hot and cold running water feeding a common discharge line; and
- Employees using showers shall be provided with individual clean towels.

d) Whenever employees are required by a particular Standard to wear protective clothing, change rooms with storage facilities for street clothes and separate storage facilities for protective clothing shall be provided.
e) Whenever working clothes are provided by an employer and become wet or are washed between shifts, provision shall be made to ensure such clothing is dry before reuse.

6. Food Service

a) All cafeterias, restaurants, mess facilities, and related facilities on areas, projects, or installations shall be established, operated, and maintained in compliance with the health and sanitation recommendations of the United States public health service and applicable state and local regulations.
b) All food service operations shall be carried out in a sound manner. Food shall be free from spoilage and kept uncontaminated throughout the storage, preparation, and serving process.
c) No food or beverage shall be consumed or stored in a toilet room or in any area exposed to toxic material.
d) An adequate number of waste receptacles shall be provided in the food service area receptacles shall be constructed of corrosion resistant or disposable material, provided with solid tight-fitting covers (covers may be omitted where sanitary conditions can be maintained without the use of a cover), emptied at least daily, and maintained in a sanitary condition.

7. Waste Disposal

a) Receptacles used for putrescible or liquid waste material shall be constructed to prevent leakage and to allow thorough cleaning and sanitary maintenance. These receptacles shall be equipped with a solid tight-fitting cover unless it can be maintained in sanitary condition without a cover.
b) Solid and liquid waste shall be removed in a way that avoids creating a menace to health and as often as necessary to maintain a sanitary environment.

8. Vermin Control

Enclosed workplaces shall be constructed and maintained, as far as practical, to prevent the entrance or harborage of rodents, insects, and other vermin. An effective extermination program shall be instituted where the presence of such vermin is detected.

Health and Wellness Program

Wellness *Guidelines* or *Policy*:

At Turner Construction Company, we are committed to promoting the Health and Well-being of our employees through a comprehensive health and wellness program. Administering a scalable wellness program for team members will improve employee health, prevent injuries, manage chronic diseases, proactively address muscle strain and sprain issues, and support behavioral health success.

Mission:

The Wellness Program aims to improve the quality of life of our staff and all workers on our projects, employed by Turner and our trade partners by building a culture of health and wellness through education, motivation, and engagement of all to participate in maintaining healthy and safe employees. Integral to the commitment to a worker's wellness is ensuring injured workers receive prompt and quality injury care.

Goals:

- Make Health and Wellness programs accessible for every project and all site workers and staff.
- Encourage team members to adopt habits and behaviors that promote better health, a safe worksite, and an improved quality of life.
- Provide awareness and understanding of the impact of mental ill health and substance use disorder and signpost workers to national and local resources.
- Create a culture of readiness for medical or behavioral health emergencies.
- Provide prompt, quality medical care for injured workers.

Scope of Services

All Projects:

1. Provide basic first aid treatment and injury triage services for on-site work-related injuries or medical emergencies. Scope includes contacting and coordination with pre-determined off-site treatment and emergency response facilities operated by others (i.e. hospital and/or clinic, 988, 911.)
2. Provide on call (roving) AT/ EMT or telephonic injury response.
3. Contribute to the growth of Turner's Wellness Culture by providing wellness toolbox talks and wellness meetings on various topics.
4. Provide health promotion information stations on site linking workers to wellness activities, Employee Assistance Programs (EAP's), National Hotlines and resources.
5. Participate in stretch and flex to reduce the likelihood of musculoskeletal injuries.
6. Provide a room or space where first aid treatment can be rendered with privacy.

Dedicated On-Site Health and Wellness Professionals

The wellness coach will work closely with employees to provide guidance on injury management, chronic disease prevention, and proactive measures for muscle strain and sprain prevention. Additionally, the wellness coach will have specialized training to support mental health, substance use, and suicide prevention. The program shall have a broad scope offering lifestyle management tools; including health coaching, health education, wellness activities, and information (tips, recipes, news), and allows for comprehensive engagement in health risk assessment, coaching, and incentive achievement outcomes. Employees are encouraged to

utilize the services of the wellness coach to improve their overall health and well-being.

Guidelines for dedicated Health & Wellness Staffing:

- $80M or greater- Full-time on-site AT (Athletic Trainer) or EMT (Emergency Medical Technician)
- $20M up to $80M. Either Full time AT/ EMT or On Call AT/ EMT (roving)
- Under $20M. On Call (roving) AT/ EMT or telephonic incident response
- Regardless of project volume, consideration of the hazardousness or risk involved.
  Note that wellness candidate acceptable credentials may include RN, LPN, PT, OT,

General Health and Wellness Vendor Requirements

1. Maintain compliance with HIPAA, GINA, ADA, ERISA, PDA, COBRA and all other pertinent laws, rules, and regulations.
2. Provide medical treatment under the care of a medical director. Include ability to consult Physician Assistant or Medical Doctor from the wellness trailer (i.e.: tele-medicine or teams, etc.)
3. Participate in the safety orientation process. This **includes** performing brief wellness orientations.
4. Support workers by providing educational materials, toolbox talks and wellness meetings on various topics. A wellness coach is expected to coordinate with trade partners for “wellness talk” times and location (*meet them where they’re at*).
5. Provide basic first aid treatment and injury triage services for on-site work-related injuries or medical emergencies. Include Naloxone (or equivalent) in response plan.
6. In the event of an injury work with the injured employee to develop a customized injury management plan that includes rehabilitation exercises, ergonomic adjustments, and any necessary accommodations to support the employee's recovery. Coordinate with off-site treatment facilities operated by others (i.e. hospital and/or clinic) as required.
7. Include all costs for medical and wellness equipment to provide for the wellness trailer.
8. The on-site Wellness Coach will be certified in MHFA (Mental Health First Aid) or equivalent and assist with creating a safe space for the workforce and promote proactive Behavioral Health (Mental, Substance, and Physical). Be trained to provide mental health support, coaching, and contact information with stakeholder EAP’s and National Crisis Lines.
9. Provide monthly KPI’s to showcase wellness coaching, health risk appraisals, and injury trends.
10. Incentive Design and Administration
    a. Provide customized Wellness Incentive design, offering industry best-practices where appropriate.
    b. Provide administrative tools needed for Wellness Incentive promotion and communication.
11. Provide and maintain emergency contact information for all workers.
12. Offer, Coordinate and Conduct a Health Wellness Assessment (HWA) for workers designed to identify existing and emerging health issues and to provide a baseline for establishing a health improvement maintenance plan.
13. Provide a Health Wellness Report outlining overall health risk score and customized health risk education in both electronic and paper formats to frontline workers.
    a. Include guidance to help prevent and manage chronic diseases such as hypertension, heart disease, and diabetes. Include various nutrition, exercise / strength training, and other biometric tracking logs and plans for participants.
    b. Ensure content privacy, quality, and accuracy.
14. Manage program administration and marketing.
15. Provide countermeasures and support to prevent musculoskeletal and strain / sprain injuries.
    a. Provide workshops, training, and exercise programs to employees on proper lifting techniques, ergonomic practices, and how to reduce the risk of muscle strain and sprain injuries.

b. Lead a daily global exercises/stretching warm up (stretch & flex) program.
c. Provide training designed to educate and prepare Trade partner and Turner representatives to lead "exercises/stretching" warm up (stretch & flex) program.

16. Include implementation / presentation of a program to aid workers in the quitting of tobacco products.
17. Biometrics Screening Management
    a. Conduct biometric screenings in conjunction with administration of a Health Wellness Assessment (HWA) with various methods available (finger stick, venipuncture, etc.)
    b. Blood pressure, height, weight, BMI, waist circumference capabilities.

Medical Malpractice / Medical Liability Insurance

1. For on-site paramedic or other medical professionals, the providers shall provide a medical malpractice insurance that covers liability arising from disputed services or allegations of medical negligence and malpractice that result in patient's injury or death with the minimum required limits of $1,000,000 per each occurrence and $3,000,000 per general Aggregate.

Value added benefits of dedicated on-site health and wellness include:

- Support Return to Work efforts which results in more favorable outcomes.
- Follow up with workers to ensure proper care has been provided.
- Assist in understanding how losses occur and preventing them.
- Provide critical documentation on the cause of loss and exact injury type in the event of litigation or governmental inquiry.
- Provide incident data to support risk mitigation.
- Support site safety efforts.
- Conduct drug and alcohol testing.
- Provide vaccinations (e.g., Flu, Tetanus, etc.)
- Provide potentially lifesaving care.
- Stabilizing severely injured workers
- Reducing the number of potential lost time matters
- Decrease costs arising from larger WC Claims.
- Enhanced productivity by treating minor injuries on site and enabling workers to immediately return to work.

We have partnered with who we perceive as "best in class" on-site medical care vendors. They are Atlético/Pivot, ATS, Wellness Workdays, Amphibious, Banda and On-site Health and Safety.

Engagement Options

The method of engagement for these vendors will be done through a Professional Service Agreement (PSA). Depending on the need and capacity to engage an on-site Wellness Coach AT/EMT for a project, there are options which enable the project team to decide which options are more suitable.

1. Full time onsite AT/ EMT for the duration of the project-start to finish.
2. Full time onsite AT/ EMT during certain periods of time where the risk of injury is greater. The full-time onsite AT/ EMT cost is based on a flat fee for the time period of the contract.

3. Roving or “On Call” AT/ EMT. The roving EMT can respond to a site promptly following an injury. They provide the same level of experience but are not on-site full-time and are deployed on an as needed basis. Roving AT/ EMTs charge on a per visit basis.
4. Telephonic incident response. Site safety person or the responsible Turner personnel contacts an immediately available medical professional upon notice of an injury for guidance / direction.

Respiratory Protection

I. Policy Statement

Turner Construction Company is committed to maintaining an injury and illness free workplace and will make every effort to protect employees from harmful airborne substances. This will be accomplished through engineering controls such as ventilation or substitution with a less harmful substance or through administrative controls limiting the duration of exposure. When these methods are not adequate, Turner will provide training, fit-testing, medical surveillance, and proper respirators to allow Turner employees to breathe safely in potentially hazardous environments.

Turner recognizes that respirators have limitations, and their successful use is dependent on an effective respiratory protection program. Our full Respiratory Protection Program is designed to identify, evaluate, and control exposure to respiratory hazards and to provide for the proper use, care, and maintenance of respiratory equipment. Each Business Unit affected must oversee a written respiratory program. Prior to implementation the Business Unit Environmental, Health, and Safety Director shall approve program elements.

This program is designed for Turner Construction Employees. Subcontractors are required to submit and have accepted by Turner their company's respiratory protection program prior to start of work. Compliance with this policy applies to filtering face-piece respirators (dust masks) as well. All programs shall meet or exceed Federal, State, and Local regulatory requirements.

II. Program Elements

1. Highlights of a Business Unit Specific Program are to include the following:
   a) Program Administration
      - A formal annual audit of the Respiratory program is required for all companies who actively use respirators. A Respirator Program Evaluation Worksheet should be used to document the evaluation and to record recommended changes.

   b) Workplace Exposure Assessment & Ongoing Surveillance
      - Exposure assessment is critical in identifying harmful airborne contaminants, their extent and magnitude and how to control them.
      - Turner Project Staff (TPS) must make every effort through evaluations and training to ensure that employee exposure does not exceed permissible concentrations.
      - Results of these evaluations will be summarized, and a record maintained in the jobsite project files. Additional evaluations are necessary if exposures change due to new materials, process changes or other conditions increasing the degree of employee exposure. Copies of all results shall be sent to the Business Unit Human Resource Manager who shall maintain an archive for 30 years for all Turner employees evaluated.
      - Subcontractors shall provide proof of exposure assessments, training, and medical surveillance for their employees prior to performing work with any material that may require respiratory protection.
      - Subcontractors may not perform any work with chemicals or materials that may cause a respiratory hazard or nuisance odor for Turner Employees, other Subcontractors, or the general public without scheduling the work with Turner. Examples of such activities include

applying hazardous paints or coatings; saw-cutting or grinding concrete, applying spray on fireproofing.

c) Respirator Selection
- In those instances where engineering and administrative means do not achieve the desired control, respirators must be worn. Different types of respirators are available for a variety of applications. Turner must ensure that the proper NIOSH/MSHA approved respirator is selected and used for the kind of work being performed and the hazards involved. Respirator selection information must be completed to document the selection process.

d) Evaluating Respirator Wearer Health Status
- Even with appropriate equipment and adequate training provided, an employee's health status must be considered before allowing respirator use. The wearer's physical and medical condition, duration and difficulty of the tasks, toxicity of the contaminant and type of respirator all affect an employee's ability to wear a respirator while working. Therefore, Turner must ensure that each employee's physical ability to wear a respirator is evaluated.
- Each respirator wearer will be given a medical evaluation. The project will make appropriate arrangements with a proper medical organization to perform the evaluation. The Medical Evaluation and Work Restriction report must be completed for each individual.

e) Respirator Fit Testing & Assignment
- After selection of the appropriate type of respirator and verifying the employee's ability to work while wearing a respirator, Turner will ensure that a qualitative fit test is conducted to choose the best fitting face piece and determine the specific brand, model, and size for each employee. The Qualitative Fit Test Record form will be completed. The form will record test results and document respirator assignment.
- Quantitative fit is the preferred alternative to qualitative fitting. Although it requires specialized equipment and trained personnel, some exposures require a quantitative fit test.

f) Training
- Once the employee is fitted with the correct respirator for the task, that employee must be thoroughly trained in the need, use, limitations, inspection, fit checks, maintenance, and storage of the equipment. This training may be initiated during the fit test.
- The manufacturer of the equipment provides detailed instructions for use and care of the respirator, and this information is to be used in the training. The Respirator User Training and Education Form is to be used as a guide and record of training received.

g) Recordkeeping
- Turner must document each major component of the program to verify that each activity has occurred and evaluate the success of the program to satisfy regulatory requirements.
- These records include the written program, exposure determination, respirator selection, physical status evaluation, fit testing and respirator assignment, training form and program assessment.

- All records that involve Turner employees must be sent to the Business Unit Environmental, Health, and Safety Director and archived for a minimum of 30 years.

A comprehensive sample of the Turner, Asbestos, Lead, Silica and Respirator Management Program is available in Appendix H of this manual.

Crystalline Silica Exposure Prevention

I. Policy Statement

This policy is designed to protect employees who may come into contact with silica during the course of their work. This applies to all occupational exposures to respirable crystalline silica in construction work, except where employee exposure will remain below 25 micrograms per cubic meter of air (25 µg/m3) as an 8-hour time-weighted average (TWA), under any foreseeable conditions.

II. Silica Exposure Prevention & Control: Responsibilities

Due to the risk posed by respirable silica, it is critical that all personnel involved in activities that could potentially create silica dust take specific actions to ensure that, as much as practicable, a hazard is not created. In recognition of this, the following (Silica related) responsibilities have been established and must be adhered to:

The BU EH&S Director is responsible for:

- Ensuring project and/or task specific Exposure Control Plans (SECPs) are developed communicated and effectively implemented as appropriate.
- Ensuring that all employees *(i.e., Managers, Supervisors and Workers)* receive the necessary education and training related to this Policy, as well as project/task specific SECPs.
- Implementing a suitable respirable silica exposure monitoring program, or otherwise ensuring representative exposure monitoring results are available. The purpose of the program will ensure that (over time) Turner has quantifiable silica exposure data available for all regularly occurring, as well as reasonably foreseeable, work activities.
- Regularly evaluating new equipment and technologies that become available, as able/appropriate, purchasing the "best available" equipment/technologies. Equipment/technologies with (silica) dust suppression and/or capture technologies will generally be given preference over equipment/technologies that lack such.
- Maintaining applicable long-term records *(i.e., exposure sampling, inspections, respirator fit tests, training records, etc.)*.
- Conducting a review of this Policy, as well as: (1) project/task specific SECP's, (2) available exposure monitoring data, (3) Industry/Regulatory information, and (4) new/emerging equipment/technologies on a regular *(i.e., annual)* basis.

Safety Managers/Superintendents/Foreman are responsible for:

- Developing or obtaining a copy of the project/task specific Silica Exposure Control Plans (SECPs) and ensuring such are made available at each work site.
- Ensuring that all workers *(under the supervisor's direction and control)* have received the necessary education and training. As appropriate, each supervisor must ensure that workers are available to "demonstrate competency" for identified tasks.
- Coordinating work activities of multiple contractors/crews as required, and/or otherwise implementing the controls necessary to protect others *(i.e., erecting of barricades and signage)* who could be adversely affected.
- Using control measures described in the Risk Control section of this program below, maintain employee exposure to crystalline silica to concentrations as low as possible, and in no event exceed the OSHA Permissible Exposure Limit of 50 micrograms per cubic meter of air (50 µg/m3) as an 8-hour time-weighted average (TWA).

- Ensuring that all the tools, equipment, PPE, and materials *(including water)* necessary to implement the SECP are available *(and in good working order)* prior to allowing work activities to commence.
- Maintaining applicable records (i.e., exposure sampling, inspections, respirator fit tests, training records, etc.) in accordance with [Insert Company Name Here]'s record retention procedures/practices.

III. Silica Exposure Prevention & Control: Risk Identification and Assessment

Turner has conducted extensive employee exposure sampling and obtained "objective data" from other sources and used this information to prepare a "Table 1 Silica Exposure Controls" to help us identify each task or exposure related to silica that our own employees may be subject to, and to specify controls, tools, and PPE to control exposure. Please reference that document at the TKN Safety webpage and use the applicable data to prepare all site-specific Exposure Control Plans for Silica, related to Turner employee exposures.

Each employer that has employees exposed to crystalline silica must prepare and implement a written site-specific Exposure Control Plan (ECP) that identifies tasks that involve exposure and the methods used to protect workers, to include procedures to restrict access to work areas with high exposures. A competent person from each exposing employer, as well as Turner, shall be designated to implement the exposure control plan. A copy of the designation by the employer will be provided to Turner.

Each exposing employer must notify Turner in writing of any activities to be undertaken that could lead to silica exposure above the action limit. Turner will coordinate the activities of all contractors to minimize exposure from one employer to another. These activities should be discussed and planned for in weekly coordination meetings, safety meetings, and huddles. Each employer must utilize control methods that mitigate exposure to the lowest achievable level so as not to expose other employees or subcontractors. Each employer must control access to their area through the use of control zones, DANGER signs, spotters, etc. Certain tasks may have to be done off-hours so as not to expose additional employees.

Risk Identification: Silica is contained in many of the materials and products used/encountered on our projects (i.e., the Lafarge Safety Data Sheets (SDS) for concrete reveals the potential for up to 90% crystalline silica, while the SDS from Aggregate supplier (Mainland Sand & Gravel Ltd.) identifies the potential for between 50-77% Silica in aggregate). Silica dust can be readily released through the various tasks performed by Turner and its contractors. Each contractor must identify sources of exposure for its employees and plan accordingly. Reference safety data sheets and other reference sources to determine silica content. If these sources are not available, samples can be sent to a laboratory or air samples can quantify airborne exposure. Contractors may use a variety of additional methods to assist with the assessment of (possible and actual) silica exposures. These methods will include, but may not necessarily be limited to:

- Reviewing data/reports available in the public domain (i.e. OSHA, NIOSH) and industry associations (including the ABC, AGC).
- Regularly consulting with the Safety Resources/Safety Managers from firms who perform similar work (i.e., through ATAC (Asphalt Technical Advisory Committee).
- Implementing a suitable respirable silica exposure monitoring program. This program will ensure that (over time) Turner has quantifiable silica exposure data available that is representative of all regularly occurring, as well as reasonably foreseeable work activities. Exposure monitoring will

generally, be conducted “in-house”, although assistance (i.e., actual monitoring and/or interpretation of results) may be obtained through outside consultants/hygienists. All data captured, and corresponding reports and findings, must be sent to the Corporate EH&S Department.

Turner will not allow the use of any compound for abrasive cleaning that contains more than 1% silica. Employee sampling must be conducted to verify that concentrations released from the media being finished does not exceed allowable OSHA PEL’s, TLVs, etc. For abrasive blasting, replace silica sand with less toxic materials. The National Institute for Occupational Safety and Health highly discourages the use of sand or any abrasive with more that 1% crystalline silica in it. As an alternative, garnet, slag, and steel grit and shot may be suitable substitutes.

IV. Silica Exposure Prevention & Control: Risk Control

Control Methods: When determining measures to reduce or eliminate worker exposure to silica dust, contractors must select controls in this order of preference:

1. Elimination and Substitution
2. Engineering
3. Administrative
4. Personnel Protection Equipment (PPE)

Substitution and Elimination: Whenever possible, the exposing contractor will substitute products containing silica with products that do not contain (or contain a lower percentage of) crystalline silica. While there have historically been few “substitution” options available, each contractor must recognize the importance of planning work in order to minimize the amount of silica dust generated. During the planning phases of a project, advocate for the use of methods that reduce the need for cutting, grinding, or drilling of concrete surfaces.

Engineering Controls: Engineering controls are those controls which aim to control or otherwise minimize the release of crystalline silica. Two “common” engineering control options are available to in many circumstances. These include the Local Exhaust Ventilation (LEV) and Wet Dust Suppression (WDS) systems. Another could be “Isolation” of the silica creating activity or machine/tool.

Local Exhaust Ventilation Systems: Tools/equipment specific LEV systems are available on some tools and equipment. Such LEV systems are generally comprised of a shroud assembly, a hose attachment, and a vacuum system. Dust-laden air is collected within the shroud, drawn into the hose attachment, and conveyed to the vacuum, where it is filtered and discharged. “Large scale” LEV systems, such those available on some Vacuum Trucks and Mobile Sweepers, may also be employed (at times) on Turner projects.

When/if LEV systems are used, the contractor will employ the following systems and safe work practices:

- Vacuum attachment systems that capture and control dust at its source whenever possible.
- Dust control systems will be maintained in optimal working conditions.
- Grinding wheels will be operated at the manufacturer’s recommended RPM (operating in excess of this can generate significantly higher airborne dust levels).

- HEPA or good quality, multi-stage vacuum units (approved for use with silica dust) will be used in accordance with the manufacturer's instructions. Vacuums with back-pulse filter cleaning cycles are effective at avoiding clogging and maintaining dust capture velocity.
- Whenever possible, concrete grinding will be completed when the concrete is wet (*thus dust release will be significantly reduced*).

Regular fans (such as box-fans, area-fans, etc. do not qualify as an engineering control, by themselves, and may actually increase silica exposures by re-entraining settled particles into the air.

Wet Dust Suppression Systems: Many tools and equipment types are equipped with Wet Dust Suppression (WDS) systems (i.e., on the Milling equipment, sweeper equipped Bobcats, as well as attachments on various handheld/portable, abrasive/cutting equipment). When WDS Systems are not available, (as a standard or retrofitted part of a tool/appliance), similar effects can also be achieved by manually wetting the surface (i.e., with a mister or with a hose).

When WDS systems are used, the contractor will employ the following systems and safe work practices:

- If water is not readily available on the project, the project supervisor will arrange to have a water tank delivered to the site for use.
- Pneumatic or fuel (i.e., gasoline) powered equipment will generally be used instead of electrically powered equipment if water is the method of dust control, unless the electrical equipment is specifically designed to be used in such circumstances.
- Pressure and flow rate will be controlled in accordance with the tool manufacturer's specifications.
- When sawing concrete, tools that provide water directly to the blade will be used if possible.
- Wet slurry will be cleaned from work surfaces when the work is complete, if/when necessary.
- If dust suppression water is recirculated, micron filtration and sanitation must be considered.

Administrative Controls: Administrative controls are those that aim to control or otherwise minimize the release of silica through the use of work procedure and work methods, rather than by affecting the actual physical work. Common examples of administrative controls include, but are not limited to:

- Posting warning signs, similar to the one shown at right, when respirators are required as exposure control.
- Rescheduling of work to avoid the activities of others.
- Relocating unprotected workers away from dusty areas.

When administrative controls are used, the contractor will employ the following systems and safe work practices:

- Suitable exposure control strategies will be discussed and determined. As necessary and appropriate, supplemental (to this policy/procedure) project and task specific Exposure Control Plans will be developed.
- Suitable housekeeping, restricted work area, hygiene practices, training and supervision procedures/standards will be determined and implemented on Turner projects.
- As appropriate, barriers will be erected around known silica dust generating activities, and/or warning signs will be posted.

- As able, work activities will be scheduled to minimize the silica related effect on, and from, others.

Personal Protective Equipment Controls: When used in conjunction with the other *(i.e., Engineering and Administrative)* controls elsewhere identified, personal protective equipment and clothing can help further reduce employee exposure to silica dust. Our first line of defense is to select higher order controls that would eliminate the need for PPE.

An air purifying respirator fitted with HEPA cartridges is the most common piece of PPE that would be used to minimize exposure to silica dust. In some cases, a dust-mask (which is also a respirator) with a NIOSH "N" rating may be acceptable.

Prior to a respirator being used, the employee must be medically cleared to wear a respirator (including dust masks) and fir-tested in accordance with 29 CFR 1910.134 and Turner Construction's Respiratory Protection Program. Employees must have documented training for respiratory protection. In addition to the medical clearance above, for any employee who is required to wear a respirator for silica exposure 30 or more days a year, the employee must have an initial medical exam including x-ray, Pulmonary Function Test, and other requirements, along with ongoing periodic medical surveillance (typically every 3 years). Records of the medical exams and any exposure monitoring records of operations are to be kept by the employer. Respirators are "seal dependent", and thus the users must be "fit tested" annually and clean shaven where the respirator seals to the face.

In addition to respiratory PPE, protective clothing *(i.e., disposable/washable coveralls)* may be used and/or required to help prevent the contamination of the worker's personnel clothing.

General Requirements

Employer shall not allow dry sweeping or dry brushing where such activity could contribute to employee exposure to respirable crystalline silica unless wet sweeping, HEPA-filtered vacuuming or other methods that minimize the likelihood of exposure are not feasible.

Employers who use "Table 1: Specified Exposure Control Methods When Working with Materials Containing Crystalline Silica" (found in the OSHA Silica standard for construction) correctly do not have to provide exposure monitoring of employees and are not subject to the listed PEL. The table spells out the need for respiratory protection (along with minimum assigned protection factors) for certain operations.

If exposure control methods listed in Table 1 are not used, then the employer:

a. must perform an exposure assessment to assess the exposure of each employee who is or may reasonably be expected to be exposed at or above the action level.
b. protects workers from exposures above the permissible exposure limit (PEL) of 50 micrograms per cubic meter of air averaged over an eight-hour day.
c. Dust control measures must be used to protect workers from exposures above the PEL; and

d. Provide respirators to workers when dust controls cannot limit exposures.

For tasks performed indoors or in enclosed areas, provide a means of exhaust as needed to minimize the accumulation of visible airborne dust.

Using wet methods, apply water at flow rates sufficient to minimize release of visible dust.

If performing multiple tasks from Table 1 that in whole exceed 4 hours, use the respiratory protection for each task that's designated for >4 hours' work.

After working with products that contain crystalline silica, each individual will be required to thoroughly wash their hands before eating, drinking, or smoking. Eating, drinking, or smoking near silica or in silica-regulated areas is strictly prohibited.

V. Silica Exposure Prevention & Control: Education and Training

Education and Training: Prior to performing activities or working on project sites where personnel could be exposed to silica dust, ensure that applicable personnel receive suitable education and training. While not necessarily an exhaustive list, education and training may include:

- The hazards and risks associated with exposure to silica dust.
- The signs and symptoms of silica related diseases.
- General and specific silica exposure reduction methods/strategies *(i.e., as detailed in the general/specific exposure control plans)*.
- The use of specific pieces of equipment and control systems *(i.e., LEV and WDS systems)*.
- The use and care of respiratory (and other) personal protective equipment.
- How to seek first aid *(i.e., for respiratory related concerns, including those that may be caused/associated with silica dust exposure)*, and
- How to report items of concern *(i.e., those related to silica dust)*.
- Be sure to reference "Table 1 Silica Exposure Controls".

The education and training detailed will be delivered through a variety of forums, including but not necessarily limited to:

- New Employee Orientations
- Project/Site Orientations
- Equipment/task specific training*, all personnel must be trained to a level of "demonstrated competency" prior to using required tools, equipment, and appliances)*
- Safety huddles and toolbox talks
- Notifications and Bulletins

STANDARD FORMS

1) Project Safe and Sustainable Onsite Orientation
2) Hazardous Chemical Inventory List
3) Site Specific Chemical Inventory List
4) Ladder Safety Inspection Checklist
5) Ladder Permit
6) Mobile Elevated Working Platform Checklist
7) Initial Equipment Safety Inspection: Off-Road Heavy Equipment
8) Initial Equipment Safety Inspection: (Cranes)
9) Critical Crane Lift
10) Energized Electric Work Permit
11) Emergency Release Authorization
12) Confined Space Entry Permit
13) Fall Protection Checklist
14) Surface Penetration Procedure Permit
15) Hot Work Permit
16) Drone Use Approval Request Form
17) Drone Vendor
18) Incident Investigation Report
19) Co-Learning Investigation Form
20) Job Hazard Analysis
21) Pre-Task Planning
22) Concrete Core Formwork System Questionnaire

Turner

Project Safe and Sustainable Onsite Orientation

1. General Information	
NOTE: The signature below documents that the appropriate elements have been discussed to the satisfaction of parties, and that both supervisor and employee accept responsibility for maintaining a safe and healthy work environment. **By signing, I am verifying that I have participated in the COVID-19 orientation and understand and will comply with all additional requirements.**	
Hardhat Sticker #:	**Badge #:**
Print Name:	**Sign Name:**
Company Name:	**Date:**
Supervisor Acknowledgement:	
Emergency Contact Name and Number:	

2. The Message of "Building L.I.F.E ®"

At Turner, we call our safety program and culture "**Building L.I.F.E. ®"** L.I.F.E. is an acronym for *Living Injury Free Every Day*. Our goal here is to create a workplace *free from any level of harm* to our workforce, our clients, and the community we work in. Only with your help and commitment can we all achieve this goal. We are asking that you take an active role in making this the safest project we can, for all of us. If you see a hazard, bring it to our attention if you cannot correct it. If you see a coworker at risk, stop and say something. If someone approaches you because *you* are at risk, accept their help graciously, without attitude, and thank them. If you know a smarter or safer way to accomplish a task, raise it up.

You will be given ample opportunities to play an active role with safety on this project. This includes daily safety hurdles where each team prepares their safe plan of work; it also includes safety committees, safety meetings, and 5-Worker Lunches where we ask for your feedback on how safety is doing on this project. We want to hear about near-misses and incidents, not so we can find someone to blame, but so we can learn from the problems that lead to the event – to prevent recurrence. Like any safety program, we have some policies you need to be familiar with, and many of them are stricter than OSHA, or any other General Contractor/Construction Manager you have worked for. If you have any questions about our expectations or any of the policies you're about to see, please bring them up as we go along.

General	1. No one under the age of 18 is allowed to work on the Project property / construction site. 2. No pets or animals are allowed on site. 3. All trade partner vehicles within the project site fence (including, but not limited to, transportation and construction equipment, delivery trucks and personal or company trucks) shall not idle. The only allowable exceptions to the standard are as follows: A. Ambient air temperature exceeds 85°F or falls below 32°F (or as defined by local or regional temperature limits, whichever is stricter) B. Engine idling is required for the function of auxiliary equipment (i.e., cranes, concrete pumps, etc.)
Initials	4. A minimum 9-panel drug testing is mandatory. A. Your employer must provide the results to Turner in order to attend orientation. B. Pre-employment/prior to receiving a hardhat sticker or ID badge. C. Additional testing may be required post-Incident, for cause or suspicion. D. If tested positive or refuse to test, you will not be allowed on site. 5. Badging / orientation sticker All employees on site must attend orientation after the drug screen and receive an orientation sticker. Many projects require a photo-ID badge per terms of subcontract agreement. 6. Every crew member must participate in a morning safety huddle to develop a safe plan of work for the shift. Throughout the day (or night) if any new tasks or changes come up that weren't planned for at the beginning of the shift, work must stop, and the plan must be revised. 7. All personnel are empowered and encouraged to stop unsafe acts, identify unsafe conditions, and to escort non-construction personnel out of the work areas. Please care for your project teammates. 8. No headphones, iPods, radios, etc. are permitted on the job. No streaming of music from the internet. No walking or driving while talking on phone or walkie-talkie.

	9. Zero use of tobacco policy. Zero tolerance policy for smoking in buildings during construction. No e-cigarettes or smokeless tobacco are allowed either. Turner may elect to establish a "tobacco zone" outside of the project. 10. Eating is allowed only in approved areas. No glass containers are permitted on site. 11. A fluent interpreter must be provided and on site for any crew that has one or more non-English speaking workers. 12. The confined spaces on this project include: _____ 13. I will not enter a confined space unless trained and authorized by my employer. Proof of training must be provided to Turner Construction. 14. The employer entering a permit-required confined space must arrange for an on-site rescue team to be present and provide for continuous air monitoring, and if applicable, monitoring of other hazards (i.e., engulfment). The list of behaviors below, while not inclusive, provides examples of conduct that is prohibited: 15. Causing physical injury to another person. 16. Making threatening remarks. 17. Aggressive or hostile behavior that creates a reasonable fear of injury to another person or subjects another individual to emotional distress. 18. Intentionally damaging employer property or property of another employee. 19. To the maximum extent permitted by applicable law, the possession on Company premises or while on duty of firearms, clubs, explosives, or other weapons that could be used to cause harm to personnel or property, other than that used to perform specific construction activities. This would include Turner. projects and client-owned buildings and facilities we work in, project-provided parking areas, and while in the execution of work duties.
EEO Policy **Initials**	*1.* Turner provides equal employment opportunity (EEO) to all persons based on qualifications and merit, without regard to race, sex, gender identity, sexual orientation, pregnancy, childbirth and other pregnancy-related conditions, color, national origin, ancestry, age, creed, religion, citizenship, marital status (including registered domestic partners), parental status, disabilities, genetic information, status as a recently-separated veteran, Armed Forces service medal veteran, disabled veteran, active duty wartime or campaign badge veteran, or any other protected characteristic or status.
Policy Statement Against Harassment **Initials**	1. Turner will not tolerate unlawful harassment, including sexual harassment or harassment on the basis of race, sex, gender identity, sexual orientation, pregnancy, childbirth and other pregnancy-related conditions, color, national origin, ancestry, age, creed, religion, citizenship, marital status (including registered domestic partners), parental status, disabilities, genetic information, status as a recently-separated veteran, Armed Forces service medal veteran, disabled veteran, active duty wartime or campaign badge veteran, or any other protected characteristic or status. 2. It is our collective responsibility to reject bias-motivated and disrespectful behavior. I agree that I am obligated to uphold Turner's **Zero Tolerance** of bias and hate, including any form of vandalism, physical destruction of property, defacement in the form of any graffiti (e.g., images drawn, sprayed, or etched, stickers, non-work-related posters, etc.) on temporary facilities or in the general workplace. Graffiti that exhibits harassment, hate or intolerance that is motivated by bias against a person's race, religion, disability, sexual orientation, ethnicity, gender, or gender identity will be investigated and will report to the authorities for legal action. ***I acknowledge*** that if found in violation of these rules I will be immediately removed from the work site and will no longer be permitted to work on this project and that it may result in permanent ban from all Turner projects.
Incident Reporting **Initials**	1. Any injuries / illnesses / near misses must be reported to your supervisor immediately after the event, if physically possible. Those supervisors are to verbally report the incident to Turner immediately after stabilizing any injury or making safe any unsafe conditions. 2. An incident investigation report must be filed with Turner within eight (8) hours after an accident. 3. If sent to a doctor for treatment all, follow-up appointments must be kept. 4. A Temporary Modified Duty policy is in place. 5. The worker must strictly follow any and all work restrictions issued by doctor.
100 % 6-Foot Fall Protection **(Regardless of Trade)** **Initials**	1. 100% FALL PROTECTION required where a 6-foot fall exposure exists (includes all trades). See additional ladder rules below. 2. ZERO TOLERANCE – For Fall Violations 3. Snap-hooks on lanyards must be double locking. Self-Retracting Lanyards (SRLs or yo-yos) or fall limiting devices are typically required. Whichever connecting device is used, two connecting devices are required on each harness (twin-leg). Short lanyards may be required in some types of scissor and aerial lifts. The competent person from each trade must specifically identify fall protection methods and equipment on JHAs and PTPs. 4. Gear to be inspected prior to every use. Contact your supervisor immediately if gear is damaged. DO NOT USE DAMAGED GEAR. 5. Warning lines are to be a min. of 15 feet back from the edge. (See criteria in Turner Safety Manual)

	6. Tie-off point must hold 5,000 LBS per person. 7. 100% tie-off when working from extensible / articulating boom aerial lift. 8. Employees must be trained in the use of fall protection. Provide proof of training to Turner. 9. Vertical or horizontal rebar or other impalement hazards shall be protected. 10. Any hole 2" or larger must be covered, secured, labeled (supporting 2X max the intended load) 11. Scaffolds A. Must be built under supervision of competent person who has necessary certifications (w/ 100% Fall Protection while erecting) B. Cross-bracing cannot be used as a ladder, or instead of either a top or mid-rail. You must have both a top and mid-rail. C. Scaffold must be inspected before each shift by the Subcontractors competent person and tagged/dated as safe. If you climb onto a scaffold not tagged and dated as safe, you may be removed from the jobsite. All non-compliant scaffolds must be "red-tagged" out of service. D. 100% tie off when working from all types of lifts that have a manufactured tie off point. Dual action controls require that there be two separate actions to activate the lift. If it arrives on site and does not have dual action controls, then it must remain inoperable until a Dual action control is installed. E. Mobile scaffolds must have the wheels locked when in use and require guardrails at 4 foot in height. F. Scaffold stairs shall be installed instead of a ladder to access frame and system scaffolds. If a ladder is required for some reason, ladder access points must only be at "swing-gates" on the ends of the frames, or through spring-loaded deck-hatches. 12. Standard Railing A. Top edge height of top rail must be 42" above the walking/working level and all systems must include a toe board and midrail. Cable rails must not deflect more than 3" with 200 lbs. applied. B. Guardrails will not be used as a horizontal anchorage for personal fall arrest equipment. Do not tie off to guardrails. C. Guardrails must be provided at floor openings and open sides, or personal fall protection must be used. D. Wood rail stanchions (or posts) shall not be more than 8 feet on center. E. Wire rope guardrails – min 3/8-inch cable, flagged every 6 feet, cannot have more than 3 inches of deflection, 3 clips are required at each termination, no open turnbuckles. 13. Ladders A. Turner's Ladders Last Policy states that ladders are not to be used on this project unless no other means of accessing elevated work is feasible. The tool of choice for elevated work is a mobile elevated work platform (MEWP) such as a scissor of aerial lift. Where MEWPs cannot be used, scaffolds can be used. B. Where ladders must be used, a Ladders Last Permit must be completed by the contractor and approved by Turner. The permit must be hung on the ladder and the ladder inspected daily. C. No aluminum or wood ladders are permitted on the site. D. Never use a stepladder while it's still folded up. E. Never use the top two (2) steps or the top of the ladder. F. Never store material or tools on the ladder G. Use the 3-point rule: 2 hands and a foot or vice versa to be in contact with the ladder at all times. Keep the belt buckle between the side rails. H. Fall protection is also required when above 4' on a ladder, even if three points are maintained. Turner will approve perimeter access points for material handling. Personal fall protection must be installed and used before cables or rails are taken down, or holes uncovered. Barricade the area, place signs, and leave a spotter.
Safety Enforcement **Initials**	1. All personnel are encouraged to ask questions and report actual and perceived hazardous conditions to site supervision. Perceived hazardous conditions may need further clarification and hazard assessment. If you have any questions or concerns, please ask for assistance. 2. There is a "Safety Enforcement" Fine System in place on this project. A. You are accountable for your actions on this project. B. Monetary fines imposed upon your employer for worker safety violations or complacency w/ regard to "minimum" safety rules. C. $250.00 - $5,000.00 – depending upon severity of violation. 3. All OSHA regulations will be strictly enforced. Turner has many policies stricter than OSHA and you need to be familiar with these. 4. Disciplinary Procedures – 3 strikes policy *1.* Verbal =Orientation *2.* Written *3.* Termination *4.* Turner retains the right to have anyone removed from site, based on the nature of the violation, without the 3 strikes

Emergency Procedures **Initials**	1. In the event of an emergency A. Notify job foreman immediately. B. Give the exact nature of the emergency (i.e., broken leg, fire, etc.) C. Give the exact location by area, column number or other easily recognizable terms. D. Stay on the phone until Safety has confirmed that you have provided accurate information. E. If an evacuation is not required, stay on the scene to brief emergency personnel upon their arrival. 2. Evacuation Procedures A. **Our project evacuation signals are:** (example: 3 horn blasts will indicate site is to be evacuated) B. Proceed in a calm, orderly manner to the designated safety zone. ***1.*** **Evacuation Gathering Points are located...** ***2.*** Report to your designated foreman/superintendent in designated area for head count. C. Do not leave the emergency gathering point until instructed to do so by your supervisor. D. All dangerous and/or emergency situations must be reported to Turner staff immediately, if feasible. E. Call 911 for ambulance or fire departments when necessary. F. Where is the location of your first aid kit and fire extinguishers? G. For confined space entry, trained emergency rescuers must be on site during the entry.
Personal Protective Equipment **Initials**	1. 100% Hardhat Protection, Non-Metallic, REQUIRED AT ALL TIMES. ANSI approved. (ANSI Type II or EN12492 with 4-point chin strap) 2. 100% Eye Protection (ANSI Z87.1) REQUIRED AT ALL TIMES. 3. Hard sole safety shoes or boots are required, no sneakers or soft shoes are allowed, ANSI Z41.1. Safety-toed boots and/or metatarsal protectors must be worn as dictated by the hazard assessment. Safety-toed boots required for erection, demolition, masonry and rigging, at a minimum. 4. Long pants in good condition, no shorts allowed. 5. Shirts must have sleeves at least 4" long. 6. ANSI Cut Level 4 Gloves are required at all times unless the Job Hazard Analysis specifically states they are not required because they create a greater hazard (using rotating parts, etc.). Cut-resistant gloves are required when using knives or handling sharp material/objects. Additional hand protection may be required depending on the hazard assessment. Appropriate arm protection is required during operations where the arms are exposed to cut hazards (i.e., Kevlar, Dyneema sleeves, etc.). Examples of these activities are working around metal studs and pull boxes, tight confines as between wall studs or above ceiling and all demo activities. These operations shall be identified on the JHA/PTP. 7. Ear protection as required when exposed to noise above 85 DBA or when noise levels require you to raise your voice when talking to someone 3 feet from you. 8. Face-shields required when cutting / grinding / chipping or working above your shoulders; or when the hazard exists of projectile particles. Goggles are required when there is a splash or dust hazard such as working with chemicals, sawing lumber, and grinding. Both may be required if both hazards exist. 9. No loose clothing or jewelry 10. High visual, safety vests, shirts or jackets shall be worn as the outermost apparel by all employees, 100% of the time. ANSI Class 2 (0-44 MPH) and Class 3 (45 MPH or more) outerwear must be worn whenever working on or near (within 10 feet) of a roadway. 11. Any contractors requiring the use of dust masks and/or respirators must submit a written respiratory protection program Turner. This program must address medical surveillance, fit testing, etc. Voluntary usage of dust mask type respirators used by employees must also be included in the respiratory protection program and shall meet or exceed OSHA standards. 12. Regular utility-cutters (like box-knives) are not allowed. All utility cutters should be equipped with self-closing blade guards or self-retracting blades that engage when the blade loses contact with the cutting surface.
Electrical/LOTO **Initials**	1. Only round, heavy-duty, minimum AWG 12-gauge cords are acceptable. 2. 100% Ground Fault Circuit Interrupter (GFCI) Protection. 3. Inspect all cords and welding leads before each use. 4. All electrical and mechanical systems are to be considered energized. When pressurizing any pipe, vessel, or system, refer to Turner's procedures. 5. All panels, boxes, switches, and receptacles containing live wires must have a cover. 6. NEVER work on live electrical panels or parts without prior approval from Turner. Complete the Turner Energized Work Permit and submit prior to the work taking place. 7. LO/TO – Single-key locks required (cannot have multiple keys for a lock). Each worker must apply a lock when exposed. 8. NFPA 70E compliance is required for energized work. This includes testing and commissioning activities, as well.
Equipment	1. Proper training and certification are required prior to operating any 2. equipment. Speed limit on site is 5 mph.

Equipment **Initials**	3. A spotter is mandatory when a vehicle or equipment has restricted view. A spotter is necessary when backing up any vehicle or equipment on site. 4. Backup alarms must be present on all required vehicles. 5. Horns and lights are recommended for all equipment. 6. Always follow the manufacturer's operating instructions for all equipment and tools used on this project. 7. Seatbelts must be worn at all times. 8. The use of cell phones is prohibited while the machine or vehicle is in motion. 9. The forks of a forklift cannot be used for free rigging. **10.** When off-loading trucks with forks or cranes, no person should be on the truck bed or around the truck after rigging. Set up a safe zone around the truck with tape or barricades. Use a spotter to keep people out
Cranes **Initials**	1. Awareness of overhead loads – listen for horns. Never stand or walk under an elevated load. 2. Awareness of crane swing radius (should be flagged off). 3. Cannot operate a crane within 20' of any power line. 4. Rigging must be inspected before each use by a qualified rigger. Damaged rigging must be removed from service. 5. Crane operator must submit operator certifications (NCCCO or NCCER) 6. Employees cannot signal a crane unless trained and certified, and authorized to do so. **7.** Each rigger & signal person must be qualified & proof of training given to Turner Construction
Barricade Tape **Initials**	1. Barricaded areas must have posted signage on each side of the area. Signage should identify the hazard, the controlling contractor for the area, a point of contact and his or her phone number. 2. Types of Tape A. **Red Danger** – ***Imminent Danger*** exists. Only authorized personnel performing actual work are to be allowed in this barricade tape area. The only exception for entry into a red area is with prior permission of those authorized to work within the area. B. **Yellow Caution** – a hazard exists that would warrant ***Caution***. A yellow area can be accessed by anyone who is authorized to be on the job site, and who stops to observe the existing hazard and takes the proper precautions prior to entering the tape barricade area.
Training Requirements **Initials**	1. Must be trained / certified to operate forklifts, aerial lifts, cranes, and use scaffolding, etc. 2. Contractors are required to provide workers that are trained as required by OSHA standards and site policies. 3. All workers are to be trained by their employer for the task and/or tool/equip being used – ladders, scaffolds, excavations, etc. 4. No worker may lift more than 50 pounds, unassisted. Use mechanical means first.
Hand & Power Tools **Initials**	1. All drills, grinders, etc. that are designed with guards and/or control bars must have them in place when the tool is in use. The grinding wheels must be rated to meet or exceed the RPM specifications of the grinder. 2. Workstations are to be elevated. This includes saws, pipe benders and threaders & other work activities. 3. Powder Actuated Tools - No lead-based shot is permitted onsite. 4. Tools are to be used the way the manufacturer intended. Do not modify any tool. 5. For tools that would normally create dust, Turner requires them to have integrated protective measures to capture or minimize the dust, such as HEPA vacuums or water-spray, etc.
Hot Work **Initials**	1. The contractor performing hot work will be required to have a charged and inspected 20-pound ABC dry chemical fire extinguisher present in the work area. 2. Appropriate permit procedures, shields, and blankets shall be used when developing site specific fire prevention programs. 3. The subcontractor is required to implement a fire-watch during all burning operations and for a minimum of 30 minutes following completion. 4. Hard Hats are required while welding. 5. Safety glasses are required under the shield when chipping or grinding. 6. Cylinder Storage must be stored upright and properly secured. When not in use, disconnect hose/gauge assemblies and cap the cylinder. Stored cylinders must have a ½ hour fire rated barrier 5 feet tall or be stored 20 feet apart. Propane tanks cannot be stored in any building. (Turner must be notified prior to propane being used onsite) All torch carts are to have a fire rated barrier between the cylinders. 7. Anti-flashback devices are to be located at the torch head & at the cylinders. **8.** Hot Work activities must be pre-approved by Turner (Permit to be issued). A fire watch must be present where sparks could fall (multiple levels if necessary).
Excavations **Initials**	1. Any excavation greater than 4' must be sloped, shielded, or benched properly. 2. The bottom of the trench box must be within 2 feet of the bottom of the trench. The top of the trench box must stick up 18 inches above the slope or the bench. The box cannot be moved while workers are inside. 3. Access must be provided by a ramp or stairs. Travel distance to that means of access/egress must not exceed 25 feet. 4. Any excavation (includes trenches) must be barricaded off with orange fence or equivalent, regardless of depth.

	5. You cannot bench Type C soil. 6. Before you dig or drill, complete a Turner "Ground Penetration Request Form." Your utility locator service must be notified days in advance, as well. 7. Fall protection is required at the top of excavations greater than 6 feet deep when the slope is less than 45 degrees.
Hazard Communication / GHS **Initials**	1. This employee, by his initials in this section acknowledges that he/she has been trained by their employer, on hazard communication and, 2. **Turner has reviewed the location of Chemical Inventory Lists and Safety Data Sheets** with me. 3. You must provide Turner with a Safety Data Sheet for any chemical you bring onto the project. 4. Turner will coordinate the sharing of Safety Data Sheets (SDS) between contractors. 5. If you transfer chemicals from one container to another, you must provide a proper chemical label complying with OSHA. **6.** Renovation projects often have health hazards in the form of asbestos, lead, PCBs, Mercury, etc. **The known health hazards on this project include: _____** 7. If this project contains known health hazards, I certify that I was given training on those hazards including their identity, location, hazards of exposure, and control methods used to protect me. If I discover any "suspected" hazardous material, I'll immediately stop work and bring it to the attention of my employer.
Construction Waste Management **Initials**	1. All waste leaving this project is tracked on Turner's Online Waste Tracking (OWT) system. Strict compliance with the project Construction Waste Management Plan (CWMP) is required. The recycling goal is %. The construction and demolition dumpsters on this project are (co-mingled) (site-sorted). Materials recycled include, at a minimum: A. Wood: pallets, wood-framed boxes, temporary lumber, etc. B. Concrete: concrete, block, brick, asphalt C. Metal: scrap metal, metal studs, metal pipe, etc. D. Cardboard, paper E. Drywall: drywall, mold board, (NO Dens-Glass) F. Construction Trash: food waste, sweepings, non-recyclable waste, etc. 2. Collect and sort your construction waste throughout the workday and transport the waste to the appropriate dumpster at the time established by your Foreman or Project Manager. 3. All Subcontractors are required to recycle to the maximum extent possible as a part of their Contracts using Turner's OWT tool. In cases of non-compliance, only the Subcontractor(s) responsible for contaminating dumpsters (placing waste in the wrong dumpster) will be responsible for fines, additional tipping fees, or other penalties as may apply.
Indoor Air Quality **Initials**	1. Strict compliance with the project Indoor Air Quality (IAQ) Management Plan is required. 2. Safety Data Sheets (SDS), along with VOC content, of all adhesives, sealants, coatings, paints, carpets, composite woods, etc. must be submitted for review and approval prior to these products being brought on site. 3. Stored material shall be covered, stored off of the deck, and kept in a dry environment. Quantities should be limited to what can be installed in a reasonable time (e.g., two weeks or less). 4. Changes in finished areas should be treated as renovations. 5. For large changes, install temporary dust protection to separate the work area from the finished space. The work area should be kept negative, and an HEPA filter should be used to filter the air prior to it leaving the space. The temporary protection and filter system should be approved by a Turner superintendent before beginning work. Once the work is complete, the area should be thoroughly cleaned, and the temporary protection should be removed. 6. For small changes, a vacuum with an HEPA filter should be used to collect any dust that is generated, and the areas should be thoroughly cleaned after the work is complete. 7. All subcontractors will be required to use sweeping compounds. 8. All cleaning products used on the project must comply with Green Seal Standard GS - 37 for Industrial and Institutional Cleaners. 9. Mold and moisture control is a key to proper indoor air quality. If possible, drywall activities should not begin until the building is watertight. If drywall must start before the building is watertight, moisture resistant board should be used. 10. Notify Turner if you see any wet building materials (before mold grows).
Stormwater Management	1. The SWPPP requirements including Best Management Practices (BMP's) were reviewed and will be followed as required by the SWPPP. 2. The SWPPP drawings, project sequence and how sequencing will affect BMP locations were reviewed. 3. Notify Turner of any disturbances of the Best Management Practices (BMP's) including silt fences, vehicle mud removal areas, vegetative cover, other sediment, and erosion controls.

Initials	4. Ensure all concrete/cement washout is performed at designated locations and into designated containers, notify Turner personnel immediately if washout is not adequately containing wash water and stop washout activity. 5. All site dewatering must be performed in a manner compliant with the SWPPP and all pump discharge locations must be previously approved by Turner. 6. Inspect all equipment and chemical storage containers for leaks as well as excess grease/grim/oil/fuel, if any of the above are discovered ensure that mechanics are notified (if necessary) and equipment/containers are wiped clean, and containments disposed of properly. 7. Ensure parked equipment and chemical storage containers are parked/stored in locations previously approved by Turner and are identified on the SWPPP map. 8. Use only designated areas for equipment maintenance and washing down. 9. Minimize the generation of dust and the tracking of sediment to off-site paved areas.
Nothing Hits the Ground **Initials**	FABRICATION: 1. All material fabrication shall be performed at a workstation between 30 and 39 inches, off the floor. 2. Workstation shall be mobile and include a fire stop directly behind all chop saws. 3. Rubbish containers shall be mobile and located directly adjacent to the workstation. 4. Mobile rubbish containers must be made available for subcontractors' work. HOUSEKEEPING: 1. All rubbish shall be disposed of as it is generated and be immediately placed in a mobile rubbish container provided by the subcontractor. No trash/scraps to touch the floor. 2. Cordless power tools are required unless the subcontractor can demonstrate a hardship or need to use tools with power cords. 3. The subcontractor is required to elevate off the ground all power cords, hoses, and welding leads in order to minimize tripping hazards on walking/working surfaces. They must be elevated at least 8 feet. Any sub using these is responsible for purchasing/installing their own means of support. 4. Debris is not allowed to be consolidated on the floor. 5. Maintain clear paths to move materials and facilitate emergency egress. 6. When stilts are allowed on a project, the floor must be broom swept with no trip hazards. (Cords, material, screws, and trash). Turner will provide a stilt-use permit where they are allowed. MATERIAL HANDLING/ STORAGE: 1. Material may not be stored within 10 feet of the building perimeter or adjacent to shafts or stairwells. 2. All material laydown areas must be coordinated and designated by Turner. 3. Material must be stored to promote mobility of material. All materials including pipes, conduits, metal fabrications and steel framing are to be stored on rolling racks or similar means of conveyance. Bulk material should be palletized to allow for easy mobility using a pallet jack. 4. Just in Time" delivery required to minimize clutter. Nothing should be stored on a floor that cannot be installed within one week. 5. Heavy material such as glass and drywall must be loaded so as not to overload the structure. The subcontractor is required to do a floor loading analysis for submission to Turner for review and approval. 6. Any contractor creating floor holes must cover those holes with covers capable of supporting 2x the intended load. Covers shall be installed flush to allow easy movement of rolling materials and trash hoppers. There are manufacturers that make these covers for smaller diameter holes ("Paragon" and "Hole Solution" are two). Turner does not endorse any manufacturer or product. 7. The biggest contributor to construction injuries is when we manually handle material (carrying, pushing, and pulling). Our goal is to identify and use mechanical means of moving material and tools whenever possible. This might include cranes, forklifts, dollies, carts, etc. It means never carrying materials up and down stairs. It definitely means right-sizing the loads we *are* handling – such as not lifting more than 50lbs or not overfilling tool buckets or trash cans with heavier materials. Buy smaller bags of grout and mortar instead of the big 80lb bags. Find ways to work smarter. Not harder.
ISO 45001 Safety Management System **Initials**	1. ISO 45001 is an internationally recognized health and safety management system to improve safety performance of a company and control the risks associated with their operations. 2. Turner has received registration in ISO 45001 by the third-party auditor NSF International as of October 2021. 3. Achieving registration through ISO 45001 demonstrates Turner's commitment to elevate the company's already mature and advanced safety standards and programs. ISO 45001 registration also confirms Turner's dedication to improving Occupational Safety and Health performance through control and management of associated risks and hazards in the workplace. 4. Turner truly cares about your well-being while working on this project. 5. Turner wants to see you go home the same way you came to work.

	6. Your opinion matters on this project! If you have a question or concern related to safety and health, please ask a Turner representative.

Ladder Safety Inspection Checklist

1. General Information	
Inspector:	Date:
Site Location:	Time:

2. Checklist

Instructions:

1) Complete Permit on flipside first
2) Affix completed inspection tag on all ladders passing inspection.
3) Tag defective ladders 'Out of Service' and discard if beyond repair.
4) Note deficiencies/corrective actions in Comment section.
5) Return checklist to Turner Superintendent

☐ YES ☐ NO	1. Broken, bent or missing steps, rungs, cleats, or rails?
☐ YES ☐ NO	2. Steps and rungs free of water, grease, oil, or other slippery substance?
☐ YES ☐ NO	3. Free of splits, cracks, rust, corrosion, and dry rot?
☐ YES ☐ NO	4. Free of sharp edges, cuts, burns, etc.?
☐ YES ☐ NO	5. Loose or bent hinges that can't be fully opened or locked in place?
☐ YES ☐ NO	6. Stable and completely balanced (not shaking or swaying) with all legs resting firmly on the floor?
☐ YES ☐ NO	7. Loose, broken, or missing extension locks to ensure safe overlap of extension ladder sections?
☐ YES ☐ NO	8. Damaged or worn non-slip bases, safety feet, wheels, or casters?
☐ YES ☐ NO	9. Cross-over ladders have railings and non-slip steps?
☐ YES ☐ NO	10. Weight capacity label attached? Type1A?
☐ YES ☐ problems? NO	11. Other structural defects or operating

Turner

Date: **Ladder Permit**

1. General Information	
Consider how work may be accomplished at or from the ground-level to minimize elevated work. Ladders are to only be used where no safer means is feasible to access the work. **M**obile **E**levated **W**ork **P**latforms (scissor and aerial lifts, etc.) are the preferred method. You can alternately consider the use of scaffolds, rolling stairs, etc. **Note: 100% fall protection is required when using ladders when working above 4'.**	
Contractor Company	**Project Number/Name:**
Area(s) Ladder to be used:	
Ladder Competent Person:	**Competent Person Contact #:**

2. Reason Ladder is Only Option
NOTE: Must be approved by the Turner Superintendent and/or Safety Manager.

3. Activity/Task(s) to be Performed from Ladder

4. Ladder Information		
Type of ladder (check one): ☐ **Platform-ladder** ☐ **Fixed**	☐ **Stepladder** ☐ **Trestle**	☐ **Extension** ☐ **Other:**
Ladder weight capacity (300lbs min):	**Ladder Height:**	
Will you be 4' or more above a working surface?	☐ **YES** ☐ **NO**	
If YES, what specific Fall-Arrest System will you use and what will be your anchor point? (Retractable Device is the only appropriate method of fall protection):

Mobile Elevated Working Platform (MEWP) Checklist

1. General Information	
Name/Type of MEWP:	**Contractor Name:**
Model or Equip No.:	**Contact Number:**
Operator or Inspectors Name (person performing the inspections):	

2. Inspection								
Date:		/	/	/	/	/	/	/
Shift:								
Is the operator trained to operate this MEWP and does the operator have a valid operator's license/card?		☐ **YES** ☐ **NO**	☐ **YES** ☐ **NO**	☐ **YES** ☐ **NO**	☐ **YES** ☐ **NO**	☐ **YES** ☐ **NO**	☐ **YES** ☐ **NO**	☐ **YES** ☐ **NO**
Inspection Item & Description Pass Fail Status		**P/F**	**P/F**	**P/F**	**P/F**	**P/F**	**P/F**	**P/F**
1	Operating and emergency controls are in proper working condition, EMO button or Emergency Stop Device							
2	Upper drive controls interlock mechanism is functional (i.e., foot pedal, spring lock, or two hand controls)							
3	Emergency Lowering function operates, properly							
4	Lower operating controls successfully override the upper controls							
5	Both upper and lower controls are adequately protected from inadvertent operation.							
6	Control panel is clean & all buttons/switches are clearly visible (no paint over spray, etc.)							
7	All switch & mechanical guards are in good condition and properly installed							

8	All Safety Indicator lights work							
9	Drive controls function properly & accurately labeled(up, down, right, left, forward, back)							
10	Motion alarms are functional							
11	Safety decals are in place and readable							
12	All guard rails are sound and in place, including basket chains							
13	Work platform & extension slides are clean, dry, & clear of debris							
14	Work platform extension slides in and out freely with safety locking pins in place to lock setting on models with extension platforms.							
15	Inspect for defects such as cracked welds, fuel leaks, hydraulic leaks, damaged control cables or wire harness, etc.							
16	Tires and wheels are in good condition, with adequate air pressure if pneumatic							
17	Braking devices are operating properly							
18	The manufacturer's operations manual is stored on MEWP (in all languages of the operators)							
19	Crush protection devise, time out switches and/or control covers installed

Critical Crane Lift Plan

1. General Information		
This plan is to be followed if any of the following apply: ☐ **Load capacity is equal to, or exceeds 75% of load chart rating** ☐ **2 or more cranes will be used during lift** ☐ **Any unusual circumstances (Specify):**		
Employer Name:	**Project Name/Number:**	
Lift Supervisor and Contact Number:	**Assembly/Disassembly Director:** (If Applicable)	**3rd Party Inspector** (Company / Name)
Certified Crane Operator: (Company / Name(s))	**Qualified Rigger(s):** (Company / Name(s))	**Qualified Signal Person(s):** (Company / Name)
Note: All Insurance Certificates, Inspections, Certifications, and Training must be submitted prior to Acceptance and Approval of Critical Lift Plan		
Schedule of Operations		
NOTE: Include time for rigging and equipment inspection:		
	Permit Start Date and Time:	**Permit End Date and Time:**

2. Crane/Lift Information	
Make and Model of Crane/Hoist:	
Serial Number:	**Length of Boom:**
Maximum Operating Radius:	**Planned Operating Radius:**
Boom Angle:	**Height of Lift:**
Description of Item to be Lifted: (Attach Submittal/Specification)	
Load Weight:	**Specify how the load weight was determined and by whom:**
Allowable Load (from load chart):	**Ratio of Lift to Allowable Load:**
Weight of rigging and attachments:	
Description of rigging and attachments:	
Specify how the rigging/attachment weight was determined and by whom:	
Total Weight of Load/Rigging/Attachments/Load Chart Deductions:	

What are the identified lifting points (Factory or Field Installed)?
Is a Spreader Bar required (Y or N), if Yes, what is the size and capacity?

3. Clearance
Clearance between boom and lift: (if Applicable)
Clearance to surrounding objects:
Clearance for Load Movement Sufficient:

4. Stability of Ground	
☐ **Is the ground compact & stable?**	☐ **Are crane mats required?**
☐ **Outriggers in place and cribbing / blocking used?**	☐ **Are there any hazards beneath the equipment set up area? If Yes, What?**

6. Further Information
☐ **Is a lift drawing required for this lift (if so, attach)**
What type of communication will be used by the operator and signal person (Two Way Radios / Hand Signals)
What are the wind and weather conditions? **Temperature:** **Weather Condition(s):** ☐ **If wind speed is over 25mph, do not proceed with lift** ☐ **If wind speed is over 20mph, consider postponing**
Is additional lighting required (Y or N), If Yes, What type of lighting will be required?
Is there a traffic control plan needed for this lift? (If so, attach)
What device(s) will be used to barricade of the counterweight swing radius of the crane?
How will area be kept clear of pedestrian traffic:

5. Description of the Safe Work Practices to be Employed:

6. Results of the Arc Flash Study / Analysis:

7. Determination of Arc Flash Protection Boundaries:

8. Necessary Personal Protective Equipment to Safely Perform the Assigned Task:

Note: All equipment must have current test and/or certification.

☐ **Safety Glasses and/or Face Shield** ☐ **Non-Conductive Hardhats**

☐	Certified Rubber Gloves and Leather Protective	☐	Insulating Sleeves and Aprons
☐	Dielectric Blanket and Insulated Mats	☐	Hearing Protection
☐	Respiratory Equipment	☐	Insulated Tools
☐	Other (Cal rated clothing etc.):		

9. Means Employed to Restrict the Access of Unqualified Persons from the Work Area:

10. Safety Checklist for Live Electrical Work

- ☐ Specific work areas must be cordoned to prevent unauthorized access to the liver work area
- ☐ A minimum of two equally qualified workers must be present when the live work is accomplished
- ☐ An individual certified in First Aid and CPR shall be immediately available to the area
- ☐ All persons in the work areas should remove all jewelry
- ☐ If ladder access if required, only fiberglass ladders are authorized. Although wood ladders are non-conductive, the wood ladders become conductive when water is absorbed into them
- ☐ If access to the live work is in a wet area, place wood planking or its equivalence on the floor
- ☐ Work boots for persons performing the live work should be ANSI approved for electrical work
- ☐ Insulated gloves worn by workers performing the live work must have current dielectric test date
- ☐ All work must comply with OSHA 1926 (Subpart K, NEC, NFPA 70E standards and applicable NIOSH Policies)

11. Do You Agree the Above-Described Work Can Be Done Safely?

☐ YES
☐ NO

If no, return to requester.

Fall Protection Checklist

1. General Information		
Project Name:		**Project #:**
Trade Partner Name:	**Performed By:**	**Date:**

2. Checklist

Fall Protection Options for Hazardous Exposures	**Look At:**	**Satisfactory**	**Unsatisfactory**	**Non-Applicable**	**Comments**
Working Over Dangers Equipment: Guard rail	**Guard Rails:** Top Rail @ 42" …. Max 3" deflection…. Mid Rail @ 21"…Will withstand 200lbs of force in any direction… Toe boards required… Wire rope flagged every 6' with high visible tape.				
Safety net – personal fall arrest system					
Excavations: Guard rails – fences - barricades					
Floor/Roof Openings: Hole covers – guard rails - Personal fall arrest – fall restraint.	**Vertical Lifelines:** Free from knots…. Anchor to support 5000lbs. Independently secured to structure…Line and rope grab inspected daily for wear &deformities…Breaking strength of 6000lbs…One worker per lifeline				
Formwork & vertical Rebar: Personal fall arrest system –positioning system					
Hoist Areas: Guard rails Personal fall arrest system – fall restraint system	**Tie Off:** Mandatory Tie off at 6' or above, no one ties off to wire rope or wood. Harness (ABC) Anchorage, body-wear. Connection used under the direction of qualified person. Employees must wear approved and inspected equipment. 'D' ring located between shoulder blades. Leg straps intact. No exposure to fall greater than 6' when including lanyard, tie off point expansion, body				
Leading Edge: Guard rails Personal fall arrest system – fall restraint system					

Over-head Work: Guard rails, safety net, Personal fall arrest system, controlled access zone used only to protect worker below from 'struck- by' incidents	height, deployment of shock absorber and/or length of retractable grab point. Lanyard with double locking snap hook, readable mfg.'s tag, no wear and tear no ripped stitching. Is a plan in place for recovering an individual who falls? Self-Retracting Lanyards; inspected daily. After fall or misuse, must be inspected by manufacturer and reset with applicable paperwork supplied.				
Pre-Cast Concrete Erection: Guard rails – safety net Personal fall arrest system					
Roof Work: Guard rails – safety net Personal fall arrest system – fall restraint system -					
Unprotected Sides and Edges: Guard rails – safety net Personal fall arrest system – fall restraint system	**Holes/Openings:** Coverings secured both vertically and horizontally, required for all openings including: Skylights and roof openings capable of supporting 2x intended weight (workers, lifts, vehicles, etc.) Must be ¾ "plywood minimum or guardrail				
Ramps, Runways, Walkways: Guard rails Personal fall arrest system, safety net					
Wall Openings: Guard rails, safety net Personal fall arrest system, fall restraint system.	**Ladders:** Base level and free from debris, no one stands on the top 2 steps. To be provided at points of access 19", inspected by competent person. Non-conductive, slip resistant, job made (cleats 10" to 14" apart and uniform 4 to 1 lean. Work facing ladder.				
Scaffolds: Guard rails – personal fall arrest system (if above guardrail system) 100% PFAS on any suspended or cantilevered scaffold. 100% PFAS on any mast-climber type work platform.					

Steel Erection: Guard rails – safety net	**Scaffolding:** Set-up: Bases, cross bracing, guard rails, toe				

Personal fall arrest system – fall restraint system	boards, mid rails, level, fully planked with scaffold grade planks, protected from tipping, fall protection required for erection, fall protection required at 6' or above, debris removed daily, Access is provided by 'hook- on' ladder, stair tower, ramps, walkway scaffold star. Never overloaded, inspected and tag signed off daily by competent person. Material secure and falling object protection with toe boards, catch platforms, canopy structures, front edge of platform no more than 14" from face. Training required on each type of scaffold worked on.				
Metal Decking: Guard rails – safety net Personal fall arrest system – fall restraint system					
Siding Erection: Guard rails – safety net – personal arrest system					
Glazing & Curtain wall: Guard rails – safety net – personal fall arrest system – fall restraint					
Swing Stages: Guard rails – safety net – personal fall restraint 100% PFAS					
Bosun's chair: Personal fall arrest – fall restraint	**Safety Nets:** Designed by a Registered Professional engineer (RPE) for each application, inspected weekly or after an occurrence. Inspection documented, material removed ASAP, installed not more than 30' from work area. Mesh size no bigger than 6"x6"				
Snorkel Lift: Guard rails – personal fall arrest					
General Questions: Are workers empowered to identify hazards and stop work? Are competent persons designated and on site? Is Turner taking disciplinary action on fall protection offenses? Are bi-lingual provisions in place and being used?					
	Safety Monitor System: Turner does NOT allow a Safety Monitor System under any conditions or circumstances				
	Suspended Scaffold: Independent lifelines. A competent person checks connections, anchorage points and inspects scaffold. Counterweights secured by mechanical means (no				

Have all workers completed orientation? Have Vendors provided Fall Protection Training?	sandbags, masonry units, gravel, rolls of roof felt) Suspension ropes inspected by competent person prior to each shift. **Aerial Lifts:** Tie off required inside boom lift platform per OSHA & Manufacturer's instructions. Stand firmly in basket. Inspected by competent person prior to each shift. **Concrete Work:** 100% tie off at 6' or above, approval using positioning systems on formwork, impalement hazards covered.				
	Steel Erection, Welding, Bolting, Metal Decking: 100% tie off at 6' or above, erection to minimize connectors coming into contact with swinging members. Use lifts to connect, use tags lines. Protection system in place when lifting deck.

Surface Penetration Procedure Permit

1. General Information

NOTE: This request form must be completed and authorized prior to penetrating the ground or penetrating walls and slabs during renovation or demolition (at any depth). The contractor disturbing soil is required to contact the locator and review as-builts. A J.H.A. must be submitted prior to commencing all surface-penetrating activities on site. Prior to the start of the work in the field, the supervisor will conduct a Pre-Task Planning meeting with the crew performing the work.

Employer Name:	**Project Number/Name:**	**Date of Permit Request:**
Site Superintendent Name:	**Date of Safety Pre-Plan Meeting:**	
Permit Start Date:	**Permit Start Time:**	**Permit End Time:**
Name of Supervisor Overseeing Work:		**Contact Number:**
Location of Surface Penetration:		
Purpose of Surface Penetration:		

2. Hazard Assessment – Utilities This is to identify utilities, GPR/scanning or daylighting per policy still required for known utilities in intended area of excavation AND potholing every 15' still required)

NOTE: Method(s) used to Identify potential utility hazards

Proposed method of identifying utilities:

- Public Locates (811) ☐
- Private Locates ☐
- Hand Excavation ☐
- As Builts ☐ _____
- Vacuum Excavating ☐
- Radar/Scanning /X-Ray ☐
- Other (explain) ☐

Utility Locate Organizations

NOTE: All locates expire after 30 days. Valid locates must be present at ALL times.

Utility Locate Organization	Date Locates Completed

Utilities Gas ☐ Data/Comms ☐ Sewer/ ☐ Electrical/ ☐ ☐ ☐

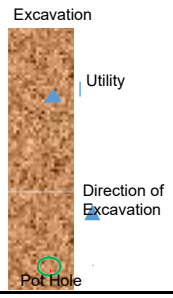
Have ALL utility locates been obtained?	YES NA	Have located utilities been clearly marked?	YES NA

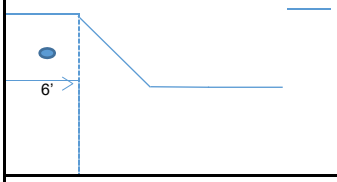
3. Surface Penetration Layout (physically identify the limits of the proposed excavation, "white lining" or other means

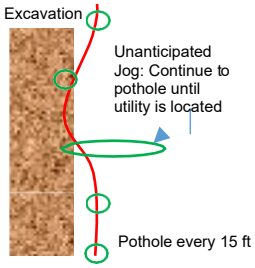
NOTE: Attach drawing of work area

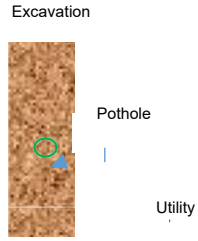
*** Pot Holing Requirements**

Surface Penetration Procedure Permit









4. Excavation Hazard Assessment (All items below must be completed prior to activity. NA should only be chosen if they do not exist)

Method of excavation:	

Access and egress points will be stablished within 25 feet of each worker (stairs, ramps, or ladders).	**YES NA**	Sources that may cause an accumulation of water inside an excavation or trench have been identified and controlled.	**YES NA**
Perimeter protection will be put in place for open excavations	**YES NA**	Equipment areas and travel paths have been delineated and signed to prevent foot traffic from entering.	**YES NA**
Material and equipment storage areas will be positioned at least 4ft away from perimeter of excavation.	**YES NA**	A spotter with no other assigned duties will be appointed when operating equipment is in the immediate vicinity of workers.	**YES NA**
Sources that may contaminate the atmosphere inside an excavation or trench have been identified and will be continuously controlled and monitored	**YES NA**	A top person has been appointed (Trench work only).	**YES NA**
A Traffic controller is in place when work involves a roadway or pedestrian path.	**YES NA**	Fall Prevention/Protection Plan in place for excavations deeper than 6 feet	**YES NA**
Depth of excavation:			

Turner

Surface Penetration Procedure Permit

Condition	Action	Example
Known utility is within excavated/disturbed area and being uncovered as work progresses	• Pothole location at the start of the known utility in excavation • Utility must be potholed at a minimum of every 15'. • Note: Utilize non- intrusive methods (hand digging or hydro excavate) when within 24" of a known utility	
Utility runs parallel and within 6 feet of the edge of excavated/disturbed area. 	• All utilities identified to be located within 6' of excavation must be daylighted by hydro excavating or hand digging. • Pothole at the start location of the excavated/disturbed area and every 15' along the parallel length of the excavated area. • The intent is to verify that the utility does not veer into path of excavated/disturbed area.	
Utility intersects excavated/disturbed area	• Pothole the approximate center of the intended excavated/disturbed area. Follow condition 1 if utility will remain visible while excavating along width of excavated/disturbed area. • Note: Utilize non- intrusive methods (hand digging or hydro excavate) when within 24" of a known utility.	

5. Interior/Concrete Penetrations Hazard Assessment (All items below must be completed prior to activity. NA should only be chosen if they do not exist)

Method of Surface Penetration: *Select all that apply*	Chipping	Drilling	Cutting	Coring	Pneumatic	Other

Areas beneath the concrete slabs MUST BE X-rayed, GPRd, or scanned prior to penetration (locates known).	**YES NA**	Slab marked accordingly with locations of embedded utilities (and PT Cables if applicable).	**YES NA**
Can sprinkler system be isolated, valved-off or drained?	**YES NA**	Can sprinkler heads be protected with temporary cage covers?	**YES NA**
Valve shut-off map posted in work area.	**YES NA**	Can utilities be temporarily disconnected during work?	**YES NA**
Active utilities are visually flagged (including sprinkler heads).	**YES NA**	Spill response kit present.	**YES NA**
Area beneath or above work location barricaded and signage present.	**YES NA**	Spotter beneath or above work location with means of communication with work crew.	**YES NA**
Thickness of slab:		Max length of shots to be used:	

6. Permit Review

NOTE: Prior to commencing work, all parties identified must sign to approve this document. By signing this document, I certify that all records of existing utilities in the described area, including but not limited to As-Builts, Marks-Outs, and Utility Coordination Reports have been examined and all known utilities have been marked, identified, and protected from damage. The employer responsible for the work outlined in this permit will be held responsible for any damages resulting from negligence and failure to protect known utilities. This permit may also require a supporting safe work procedure/method of procedure if deemed to be high risk work.

Drone Use Approval Request Form

1. General Information	
Business Unit:	**Project Number/Name:**
Date:	**Requested By:**
What is the duration of the project?	

2. Where is the project located? (List any adjacent structures and their use, FAA flight path areas in close proximity to the project, location of the nearest airport, and location of the nearest helipad and a general overview of the neighborhood):

3. Provide an overhead map view of the project and surrounding structures (example: Google Maps):

4. What is the reason your project wants to utilize a drone?

5. Is there any other way to achieve the desired results without using a drone?
6. What is the purpose and scope of the request?
7. How often will the drone fly? And what is the frequency of each flight?
8. How long will this drone use activity continue? (Also provide dates from start to finish)
9. What will they be capturing?
10. Have the local rules, guidelines and laws been researched? And if so, what are their restrictions?
11. What company (from the approved vendor list) will be employed?
12. What is the project plan for controlling and eliminating the risk (including privacy concerns)?

Turner

Drone Vendor

1. General Information		
NOTE: Please respond completely to the questions below (attach supporting documentation if requested or to support your response)		
Legal Name of Company:	Year Company Started:	
Address:		
City:	State:	Zip:
2. Person Filling Out This Questionnaire		
Name:	Title:	
Email Address:	Work Phone:	Cell Phone:
3. Are all operators at least 21 years of age and have obtained a Remote Pilot Certification issues by the FAA.		
4. Do all operators meet the qualifications from an experienced training organization/agency?		
NOTE: All commercial drone operators must meet at a minimum FAA regulation Title 14 part 107, have a valid and current Remote Pilot Certification issued by the FAA and have operated in a commercial capacity for at least one year with a minimum of 100 hours of flight time. There is no exception to this, and documentation must be submitted to Turner.		
5. Please provide copies of insurance certificates to show the Turner required limits have been obtained:		
Drone/UAV Liability: a. Minimum Required Limits: $5,000,000 General Aggregate $5,000,000 Each Occurrence for Bodily Injury/Property Damage. b. Required Terms and Conditions: Turner Construction Company will be included as an additional insured.		
6. Have you flown on a large construction site before? (Provide a list of projects, dates, and scope of work): a. What challenges did you have? b. How did you overcome them?		

7. What companies have you worked with in the past? (Provide any references) a. What is your larges project to date?
8. What equipment do you expect to use on this project and why? a. Please supply the last year of maintenance records. b. Has this drone ever been involved in an accident or incident? If so, please explain the circumstances and what did you change about your safety program to assure it does not happen again.
9. Has your company ever been cited or fined for a violation associated with drone use?
☐ YES ☐ NO — If yes, please list circumstances, fine and outcome:
10. Provide a site checklist you follow before each flight.
11. What software does your company utilize and how familiar are the pilots with the software? (PIX4D, Drone Deploy, other)
12. Provide information to verify and assure Turner that the control connection between the pilot and the drone are done over a secure link to ensure someone else cannot take control of the drone.
13. Provide information to verify and assure Turner that the link that streams video and/or still photos is done over a secure link?

c. Does Turner own the data?

14. Submit a copy of your safety manual.

As a minimum it must include:

a. Federal regulations pertaining to worker safety.
b. Identification of pilot duties and responsibilities for planning, public protection, safety operation and maintenance of the UAS.
c. Requirements for the PIC, visual observed and crewmember (including pilot) qualifications, certifications, and training.
d. Processes and tasks that should be completed before, during and after UAS operations.
e. Pilot responsibilities for inspection, maintenance, and safe uses. In addition, what requirements are in place for pilot to review manufacturers operation, safety, and maintenance manual?
f. General public and worker protection methods during UAS operations.
g. Privacy considerations and guidelines.
h. Flight path considerations.
i. Prohibitions that address non- business use of the UAS.
j. Other requirements that affect the safe use of the UAS, such as the physical and mental conditions of the pilot.
k. Substance abuse testing program and when pilots and crewmembers are tested.
l. Expectations for conducting a preplanning and risk assessment meeting to review the risks and mitigation methods needed for safe use of the UAS. Note preplanning should include at a minimum:
    - Responsibilities of the pilot and observers
    - Pilot and observer qualifications
    - UAS equipment specifications, software, and operating limitations
    - UAS preflight inspection and maintenance requirements
    - Clearance requirements for safety and privacy protection
    - Potential hazards to personnel involved in the UAS activities.
    - Boundaries of the work zone and how to keep workers and the public safe and out of the work area.
    - Training for workers who are not involved in the operations.
    - Work area hazards such as power lines, other UAS, other aircraft, structures or communication devices that could disrupt communication with the UAS flight path and if it necessitates the use of an observer(s), communication methods that will be use between the pilot and observer(s) and other backup methods when needed, weather requirements, anticipated weather, and when to suspend operations.
    - How to protect the public and surrounding structures from loss of control or power to the UAS
    - Notification to all surrounding property owners
    - Emergency landing procedures and how to recover the UAS.
    - Current federal, state, and local regulations on the UAS use.
    - Post flight review meeting to review UAS operation, lessons learned

Turner

Incident Investigation Report

1. General Information		
NOTE: To be completed within 24 hours by supervisor. If incident may be COVID-19 related, complete General and Involved Part information sections and jump to COVID-19 Supplement on last 2 pages and complete that information.		
Date:	**Contract Number:**	
BU Name:	**Project Name:**	
Project Address:		
Program: ☐ **CCIP** ☐ **CORP** ☐ **OCIP** ☐ **Other (Explain):**		
Site Contact Name:	**Phone:**	**Cell:**

NOTE: All incidents need to be immediately reported to you BU Safety Director & Claim Coordinator. Copy to be submitted to BUEHSD and Claim Coordinator for filing. Original to be kept with job files.

Date:	**Prepared By:**

Co-Learning Investigation Form

Step 1: Author

The author is the person taking responsibility for completing the Co-Learning form and can be a Project Manager, Superintendent or EHS Manager. This person should be experienced in Incident investigation and can take lead in the analysis. Suggested Training/Skill Set: Incident Investigation, Fishbone Causal Analysis, 5-Why Root Cause Analysis

Date:		Investigator Name (Superintendent, EH&S, PM):	

Step 2: Incident Injury or Near Miss

This can be a "cut and paste" from box 3 of the standard incident investigation form. This is intended to be a statement on the direct cause of the incident or injury and physical effect is had. Example: "On Tuesday, April 5th at approximately 10:00 A.M.., a steel erection bolt fell from the third floor and struck a welder below in the back. The welder experienced a deep contusion requiring treatment beyond First Aid. The welder was provided prescription medication and restrictive duty work by the Occupational Doctor."

Step 3: Project Status

Describe background of project -

- Overall sq. ft. of project
- Number of stories
- Current phase (schedule – ahead/behind)
- Trades involved
- Total Number of Trades on project

Provide project context to the incident or near miss which communicates the overall project description, current phase of construction, number of workers on the project, scope of work involved and percent complete for that scope. Example: "Ground up construction of a 3 story, approximately 91,000 Sqft academic University building on an active campus. The Project is currently in the structural steel phase of construction with areas opened up to MEP trades and first floor underground installations. Structural steel is approximately 60% complete with metal decking 40% complete. There are currently 82 workers on site."

Step 4: Current Condition

- Timeline
- Witness Confirmed Facts
- Factual PTP/JHA Efforts
- Turner Policy (Compliance)
- Manufacturer Specs/Details
- Staff Perspective of Incident
- Trade Perspective of Incident
- Weather Conditions

Only include the factual details which "tell the story" of the event. Include relevant pictures, timelines, policy description, planning facts, product data and observations etc. germane to the event.

Note: Copy/paste or screenshot photos and drawings below

Step 5: Target

What do you want to prevent? – (e.g. Prevent objects from falling off building)

Keep this simple. Define what it is we would like to prevent in the future as a result of the learning from the analysis. This can be revisited and refined based on the learning process as the analysis develops. Example: "We want to prevent MEP trades from being under the steel erection crew."

Step 6: Root Cause Analysis

If inexperienced, it is recommended that the team pull in the regional Lean Manager and/or the Business Unit EHS Director to help lead this discussion. It is intended that this is a collaborative process. The Project Project manager, Superintendent, EHS manager and the trade(s) involved are to participate, but need an experienced leader to help guide the conversation.

Fishbone & 5-Why Resources/Templates: Problem-Solving (sharepoint.com)

Identify Causal Factors – Fishbone: Video Tutorial for Fishbone Diagram Approach

Identify Root Cause(s) – 5 Why: 5 Why Funnel Exercise

Step 7: Corrective Actions - Countermeasures

These action items are intended to target the root cause(s) identified in the RCA section. They should be specific, impactful and measurable.

Root Cause	Countermeasures

Step 8: Results

The intention of this section is to ensure that there is an actionable plan to the countermeasures identified. Remember that what gets measured gets done and the effectiveness of the countermeasures should be assessed. The trade/contractor involved will be the main partner in this effort. Consider completing Rapid Improvement Events, Critical Safe Behavior Coaching or similar observation and feedback exercises to evaluate if the countermeasures are meeting their intended purpose.

Countermeasure	Person Responsible to Do	Start / Finish (i.e. 1/30 - 8/05)	Result (Measurable Effect)

Step 9: Follow-Up

- Lateral Learning
- New Standard

This section allows the Author and team to capture any additional notes based on the learning generated from the Co-Learning Process. This is where the need to additional policy considerations or if an A3 is needed to further evaluate a root cause can be captured.

Building L.I.F.E.® JHA (Job Hazard Analysis)

Project: **Date:** **Contractor:** **Page** **of**

Description of Work: **JHA#**

Prepared By:

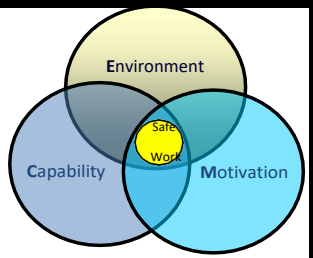
Permits: - **Hot Work** **-Energized Work** **-Ladders Last Permit** **-Ground Penetration** **-Confined Space**

__ **Roof Access** **-Scaffold**

Risk Reduction Considerations

Hierarchy of Controls

1. Elimination
2. Substitution
3. Engineering
4. Isolation
5. Administration
6. Personal Protective Equip.



Scan the QR Code for more info.

Systems Approach

E = What we have

C = Our capabilities

M = What we do

Risk Factors

Risk = Frequency x Likelihood x Severity

Consider ways to:

Reduce the Frequency of exposure to a hazard

Reduce the Likelihood of injury

Reduce the potential Severity if the incident happens

Sequence of Basic Job Steps	Hazards Associated with Each Step	E,C,M	Eliminate or Control the Hazard
Step 1: (Example) Cross the street on foot.	Struck by Car	M	Look both ways before crossing.
		M	Wear reflective vest.
		E	Designate crosswalks
	Slip/Trip on walking surface	M	Look for slip/trip hazards
		C	Receive Training on traffic Awareness
Step 2: (example) Load Groceries into car	Strain or sprain lifting the groceries from the cart to the trunk.	M	Lift one or two lower weight bags at a time.
		M	Try not to over-reach or overextend
	Struck by passing car in parking lot	E/M	Pay attention to surroundings and know where to get
			out of the way.
		C	Complete "Lifting Training"
Erase all examples to complete your JHA.

Hot Work Permit

1. General Information			
NOTE: DO NOT CONDUCT HOT WORK if fire protection is not available. This Hot work Permit is required for any operation involving open flames or producing heat and/or sparks. This includes but is not limited to brazing, cutting, grinding, soldering, thawing pipes, torch applied roofing and welding. Foreman for hot work operation shall complete this form prior to commencement of the hot work. Employees performing hot work shall review this form and display in the area where work is being done. Return form to Turner at the end of shift.			
Permit Holder/Contractor:			**Date:**
Foreman (Name):		**Location (building, floor, room):**	
Devices Disabled:		**Type of Job:**	
Time Started: ☐ AM ☐ PM		**Time Finished:** ☐ AM ☐ PM	
Permit Expires: (1 Shift)	**Date:**	**Time:**	☐ AM ☐ PM

2. Checklist			
NOTE: Prior to beginning any hot work, all potential hazards must be addressed including:			
YES	**NO**	**N/A**	
☐	☐	☐	Life Safety Department has been contacted for any work that will or may impair life safety systems. What will be impaired (circle): Sprinkler heads, detectors, other _____
☐	☐	☐	Available sprinklers, hoses and extinguishers are in service and in good repair.
☐	☐	☐	Fire extinguishers are available at the point of hot work. (Supplied by the Permit Holder)
☐	☐	☐	Work equipment is in good repair.
☐	☐	☐	Worker has all appropriate safety equipment for the hot work (e.g., gloves, shield, respirator etc.) and not defective.
☐	☐	☐	All movable fire hazards in the vicinity have been relocated at a safe distance (at least 35 ft.) from the point of operation or covered with fire resistive barriers if unable to move.
			All wall and floor openings have been covered.
			When working on or near walls, move combustibles away from both sides of walls.
			When working with suspended ceilings, be sure to protect concealed spaces.
			Floors have been swept clean of combustibles.
			Flammable liquids, dust, lint, and oily deposits have been removed.
		☐	The area has been examined to determine if flammable or combustible liquids or vapors could potentially be present. If present, the atmosphere shall be tested using an explosive meter. If quantities are 10% of the lower explosive limit or greater, hot work shall not be performed.
☐	☐	☐	A fire watch is equipped with an appropriate fully charged fire extinguisher and present during hot work operations.
☐	☐	☐	A fire watch will be provided for 30 minutes following the completion of work, including breaks.

3. Final Work Area Check		
Work area monitored following Hot Work and 30-minute fire watch and found safe:	**YES** **NO**	
Name of Fire Watch (Please Print):	**Time Started:**	**AM** **PM**

Concrete Core Formwork System Questionnaire:

Date:_____

Business Unit	
Project Name	
Type of Insurance	
Project Executive	
Project Manager	
General Superintendent	

1) What formwork system will be utilized? (Include explanation and methodology of system selected).

2) What will be utilized to access the core formwork? What will be utilized to access the different levels of the core once on the formwork?

3) What is the anticipated cycle/schedule of jumps?

4) When are the interior slabs going to be placed? How will they be constructed?

5) Will there be any partial jumps due to floor height changes?

6) Will there be any over pours do to door layout versus anchor layout?

7) Will modification by required to support work or jump sequencing? (i.e. rolling formwork, opening corners, guardrail modifications

8) Are there any specific weather conditions or limitations? (i.e. wind stoppage limit, temporary out of use wind bracing engineering for screen wall if applicable).

9) Is the tower crane being supported by the core?

10) List the specific fall protection plan to achieve 100% tie off all levels other than the interior 0 and +1 levels)?

11) How will the concrete core formwork system be inspected after initial erection/completion and after each jump?

12) How will the concrete core system be dismantled? How will fall exposure be engineered out?

Meeting Agenda:

Item	Lead	Time
Open Meeting • Team Effort • Continual Improvement • Review new policy	All	5 Minutes
Explanation of Concrete Core Climbing System: • Design • Concrete Formwork Manufacturer • Erection / Dismantle Plan • Schedule • Resume of Concrete Contractor • Inspection Criteria • Access • Fall Protection	Project Team / BU	15 Minutes
Operational Peer Review Comments	Jack Dawson / John Grafrath / Steve Garrett	15 Minutes
Review Corporate Policy Changes	All	10 Minutes
Review Safety Items: • Access • Inspections • Fall Protection • Screen Wall	Karl Kinsella / Andrew Leone / Doug LaPlante	15 Minutes

Definitions

- **Adulterated Specimen** – A specimen that contains a substance that is not expected to be present in human urine, or contains a substance expected to be present, but which is at a concentration so high that it is not consistent with human urine, which will obstruct the testing process or results. This type of specimen with a Verified Test Result shall be considered as a Refusal to Test, which is treated the same way as a Positive Test Result.

- **Accident/Incident** – A work-related event which results in personal injury to a Turner Employee or Other Worker or to any other person, damage to property or the workplace, or which could have resulted in personal injury or damage to property or the workplace. An Accident/Incident includes, but is not limited to, any Accident/Incident on Turner Property or at a Turner Facility which results in:
    a) A fatality.
    b) Bodily injury requiring a visit to any medical provider.
    c) Vehicular and/or equipment damage in apparent excess of $1,000.
    d) Non-vehicle property damage in apparent excess 1,000; or
    e) Any work-related event that could have resulted in any of the above.

- **Alterative Program-** An Alternative Program is a substance abuse program administered by an entity other than Turner under procedures equal to or more stringent than this Policy and which has been approved and accepted by Turner, in Turner's sole discretion, as an alternative or reciprocal substance abuse testing program.

- **Alternative Program Administrator –** The individual responsible for drug and alcohol testing and related procedures for all Turner Employees and/or Other Workers covered under an Alternative Program.

- **Annual Screen** – A drug screen which Turner may require of any Turner Employee or Other Worker on a yearly basis in addition to any other screen that was given in the previous twelve-month period, subject to requirements and limitations of a collective bargaining agreement, when applicable, but only to the extent of a conflict therein with performing an Annual Screen.

- **Chain of Custody –** The protocol followed when submitting specimens for drug and alcohol testing. This protocol assures that there is no opportunity for contamination or switching of samples. Elements include signed and witnessed forms, sealed, and initialed containers, and couriers requiring a receipt.

- **Collection Site** – A place where individuals provide specimens to be analyzed for the presence of alcohol or drugs. This site may or may not be owned and/or operated by the laboratory that actually analyzes the specimen.

- **Confirmatory Test** – When testing for drugs, this is the second analytical procedure performed to confirm the presence of a specific drug/metabolite in a urine specimen. This procedure uses a more sophisticated technique (e.g., Gas Chromatography / Mass Spectrometry, EBT) to ensure reliability and accuracy. With breath testing for alcohol, the Confirmatory Test is conducted on an EBT which has the capability to print out the results, date and time, a sequential test number, and the name and serial number of the testing device.

- **Consent** – Written consent for testing is required for all tests. A Donor will be asked to give written consent immediately prior to submitting a drug or alcohol test.

- **Covered Site** – A particular Turner Project or Turner Facility selected for random testing by a Third-Party Provider.

- **Cut-off Level** - A pre-determined amount of drug metabolite, measured in nanograms (ng) per milliliter (ml) of urine, which dictates whether a tested specimen is negative or positive. As to alcohol, a pre-determined amount of blood

alcohol content, which dictates whether a tested specimen is negative or positive. For example, a test would be declared positive if the amount of drug/metabolite or blood alcohol content were equal to or above the Cut-Off Level.

- **Designated Jobsite Turner Representative** – A Turner designated employee and/or his or her designees on a particular Turner Project or at a Turner Facility responsible for coordinating drug and alcohol testing and related procedures.

- **Diluted Sample** – A specimen with creatine and specific gravity values that is lower than expected for human urine. This type of test will always be sent with MRO comments stating, “Recollection suggested no fluids three (3) hours prior to test.” A Donor providing a Diluted Sample will be retested within twenty-four (24) hours and in no case more than forty-eight hours after the Diluted Sample was obtained.

- **Donor** – a Turner Employee or Other Worker giving a urine, breath, blood, or saliva (which is only used for alcohol testing) sample for drug or alcohol testing.

- **Medical Review Officer (MRO)** - A licensed physician responsible for receiving laboratory results generated by a substance abuse screening program who has knowledge of substance abuse disorders and who received appropriate medical training to interpret and evaluate a worker's medical history and other relevant biomedical information. The MRO is certified by either the American Association of Medical Review Officers (AAMRO) or the American College of Occupational and Environmental Medicine (ACOEM).

- **Medical Examination** – An examination conducted by a duly licensed medical provider.

- **Negative Test Result** - A negative screening is obtained if: (1) the screen test indicated the absence of legal or Prohibited Substances below the screen limit, or (2) the screen test indicates the presence of legal or Prohibited Substances, in excess of the screen limit, but the confirming test indicates the absence of legal or Prohibited Substances below the confirming limits.

- **Non-Negative Test Result** - An initial drug or alcohol test result that indicates the presence of legal or Prohibited Substances in excess of the screen limit and is subject to a Confirmatory Test.

- **Other Workers** – All other person, not directly employed by Turner, working on a Turner Project, at a Turner Facility, or working on or otherwise engaged in Turner business. This includes all contractors, subcontractors, consultants, construction managers, and their respective employees or agents working on a Turner Project, at a Turner Facility, or while working on or otherwise engaged in Turner business. The term “Other Worker” includes, but is not limited to, craft personnel, management personnel, temporary personnel and/or consultants.

- **Positive Test Result (Alcohol)**- A Positive Test Result (Alcohol) is obtained if a Confirmatory Test indicates the presence of alcohol at or in excess of the Cut-Off Level of 0.04% blood alcohol content.

- **Positive Test Result (Drugs)** - A Positive Test Result (Drugs) is obtained if the MRO has verified that the test results contain a Prohibited Substance(s) at or above the standard Cut-Off Levels of any of the substances tested and for which there is no valid medical or other explanation.

- **Post-Accident/Incident Testing** – A drug or alcohol test which may be conducted following the occurrence of an Accident/Incident.

- **Pre-Employment Drug Testing** – For Turner Employees, a drug and/or alcohol test which may be conducted prior to employment by Turner or prior to admission to a Turner Project. For Other Workers that do not have, in Turner’s sole discretion, an acceptable substance abuse testing cards, badges, or proof of Negative Testing Results from the last twelve (12) months provided by the respective Other Worker’s employer or trade union, a drug and/or

alcohol test which may be conducted prior to beginning any work on a Turner Project, at a Turner Facility, or working on or otherwise engaging in Turner business.

- **Prohibited Substance -** A substance whose use or possession is controlled by federal law but that is not being used or possessed under the supervision of a licensed health care professional in a manner that is consistent with applicable federal, state, and local law.

- **Quick / Instant Test** – A test that is a qualitative one-step immunochromatographic test panel for the detection of Opiates, Amphetamines, Cocaine, Phencyclidine (PCP), Barbiturates, Benzodiazepines, Propoxyphene, and Methamphetamines 3, 4-Methylenedioxymethamphetamine drugs and/or their metabolites in human urine. This test provides only a preliminary analytical result. A more specific alternate chemical method must be used in order to obtain a confirmed analytical result. The device used for this Quick / Instant Test includes a Lateral Flow (LATFLO) Adulterant Strip (LFAS) for the visual determination of Specific Gravity, Nitrite, Oxidants, and pH to evaluate human urine specimens for adulteration prior to urine testing for drugs.

- **Random**- A system of drug testing imposed without individualized suspicion that a particular individual is using prohibited substances. Random drug testing consists of unannounced substance abuse screens of groups or individuals selected through a neutral randomizing system, subject to requirements and limitations of a collective bargaining agreement, when applicable, but only to the extent of a conflict therein with performing a random test.

- **Refusal to Test** – When a Donor refuses to provide a urine, breath, saliva or (on occasion) blood sample upon reasonable request from Turner or from the Other Worker's employer, based on any circumstances in the "Types of Testing" Section.

- **Reasonable Suspicion**- Reasonable Suspicion of drug or alcohol abuse is based on objective evidence about the Turner Employee's or Other Worker's conduct in the workplace that would cause a reasonable person to believe that the individual is demonstrating signs of impairment. In most cases, the objective evidence giving rise to Reasonable Suspicion will be observed by at least two (2) Turner Employees or Other Workers but recognizing that in certain circumstances the observation may be made by only one (1) such person. Examples of objective evidence include, but are not limited to, odors, difficulty in maintaining balance, slurred speech, erratic or atypical behavior.

- **Screen or Screening** – The initial drug or alcohol test given to screen out potential substance abusers. After the initial screen, a Confirmatory Test will be performed on any Non-Negative Test Result to verify the initial Screen.

- **Screening For Cause** – Drug or alcohol screen which may be ordered when a Turner Employee's or other Worker's Fitness for Duty is in question or following treatment in a drug or alcohol treatment program.

- **Split Specimen Testing** – When a urine sample is taken for drug screen testing, the specimen is split, and one part is used for initial testing and the remainder of the specimen is reserved for additional retesting.

- **Substance Abuse and Mental Health Services Administration (SAMHSA)** - A federal government agency, which certifies substance abuse laboratories.

- **Substance Abuse Administrator** – A Turner designated employee and/or his or her designees responsible for the coordination, implementation, and administration of this Policy.

- **Substituted Test** – A Substituted Test is a urine sample with creatine and specific gravity values that are so diminished that they are not consistent with human urine. This could indicate evidence of a substance other than the Donor's urine being substituted for the urine screen. This type of sample with a Verified Test Result shall be considered as a Refusal to Test, which is treated the same way as a Positive Test Result.

- **Third Party Provider** – A neutral third-party company engaged by Turner or an approved Alternative Program Administrator to manage drug and alcohol testing and to design and/or implement random selection procedures and systems.

- **Turner Employee** – All persons employed directly by Turner, whether staff, corporate, or trade. This includes employees of Turner at any and all Turner Facilities, including business centers, offices, and construction worksites.

- **Turner Project or Turner Facility** – A project or facility which Turner owns, operates, manages, or over which Turner exercises control, including state, federal or other contracts held by Turner, and to which this Policy applies.

- **Turner Property** – Includes, but not is not limited to, all Turner owned or leased buildings, parking lots, recreation areas, vehicles, equipment, desks, lockers, furnishings, and equipment wherever located. It may also include state property at construction projects over which Turner exercises control.

- **Termination**- In the case of a Turner Employee, Termination shall mean termination of employment by Turner. In the case of Other Workers, Termination shall mean the immediate removal of the Other Worker from the Turner Project or Turner Facility by his or her employer and a ban from working at or on a Turner Project or Turner Facility in any capacity to which this Policy applies until the Other Worker has successfully completed Rehabilitation as describe on Page 18.

- **Verified Positive Test Result** – A test result that was positive on an initial immunoassay test or alcohol test, confirmed by a Confirmatory Test using a Gas Chromatography/Mass Spectrum assay for drugs or EBT device for alcohol, and reviewed and verified by the MRO in accordance with this Policy.

- **Verified Test Result** – A test result that is confirmed by a Confirmatory Test using a Gas Chromatography/Mass Spectrum assay for drugs or EBT device for alcohol and reviewed and verified by the MRO in accordance with this Policy.

- **Voluntary Assistance** – Any Turner Employee who feels that he or she has a drug, alcohol, or related issue is encouraged to seek professional help. Turner can refer such Turner Employee to seek voluntary professional assistance. Assistance given to the Turner Employee shall be kept strictly confidential.

The Turner Corporation Drug Free Workplace Program

Importance of Policy to Turner Core Values

To help insure a safe, healthy, and productive work environment for the employees of The Turner Corporation, Turner Construction Company and all Turner subsidiaries (collectively known as “Company” or “Turner”), and other persons on Turner projects or at Turner Facilities, and to protect Company property and ensure efficient operations, Turner has adopted a policy of maintaining a workplace free of drugs and alcohol.

Policy Summary

All Turner Employees and Other Workers are prohibited from using, possessing, distributing, dispensing, manufacturing, or being under the influence of Prohibited Substances and from abusing chemicals, controlled substances, or alcohol while working on a Turner Project, at a Turner Facility, or while working on or otherwise engaged in Turner business. Turner is committed to this Policy on substance abuse to maintain a safe environment for all Turner Employees and Other Workers. This Policy establishes guidelines for acceptable and unacceptable behavior in connection with working on behalf of Turner. Turner will not tolerate substance abuse in violation of this Policy.

Turner reserves the right in its sole discretion to modify, update, and/or replace the Policy’s provisions. Furthermore, at all times, Turner remains solely responsible for the interpretation of the Policy’s provisions and their applications. **All violations may be reviewed, and reasonable accommodation can be made at the discretion of Turner Headquarters EHS and Human Resources.**

The Policy is intended to comply and be construed in a manner so as not to conflict with applicable laws and regulations governing workplace drug testing and substance abuse policies. If any provision of the Policy or the application thereof to any person or circumstance is held invalid or unenforceable to any extent, the remainder of the Policy and the application of that provision shall remain in full force and effect to the maximum extent permitted by law.

Persons to Whom Policy Applies

This Policy specifically applies to all Turner Employees, Other Workers, and any and all employers of Other Workers working on a Turner Project, at a Turner Facility, or while working on or otherwise engaged in Turner business.

This Policy is non-discriminatory and applies equally to all Turner Employees, Other Workers, and their respective employers, as defined above, working on a Turner Project, at a Turner Facility, or while working on or otherwise engaged in Turner business.

Scope and Application

All persons or entities covered by this policy understand and agree that Alternative Programs may be utilized as required by law, contract, or insurance agreement and they will comply with such other Alternative Programs where applicable.

In Turner’s sole discretion, Turner may accept substance abuse testing cards, badges, or proof of Negative Test Results for an Other Worker within the last twelve (12) months that is provided by the respective Other Worker’s employer or trade union. All Other Workers reporting to work on a Turner Project, at a Turner Facility, or while working on or otherwise engaged in Turner business, without substance abuse testing cards, badges, or proof of a Negative Test Results (and ID), will not be permitted to work unless and until such proof is demonstrated or such Other Worker has submitted and successfully passed a Pre-Employment Drug Test.

Additionally, Turner will work with any union representing Turner Employees or Other Workers covered by this Policy. Where any issues in this Policy are otherwise covered by a collective bargaining agreement, the collective bargaining agreement takes legal precedence and must be followed.

This Policy includes pre-employment, post-Accident/Incident, reasonable suspicion, re-employment, medical examination,

annual and random testing, to the extent permissible by law.

Strict Adherence to Policy Required of Turner Employees, Other Workers, and Their Respective Employers

Every Turner Employee and Other Worker is responsible for reviewing and understanding this, Policy. As a condition of employment, all Turner Employees must abide by this Policy. With respect to Other Workers, continued work and engagement on Turner Projects is conditioned on strict adherence to this Policy or an acceptable Alternative Program.

Any and all employers of Other Workers must ensure full compliance with any and all aspects of this Policy or an acceptable Alternative Program, including the compliance of their respective employees.

Designation and Responsibilities of the Substance Abuse Administrator

Turner will designate a Substance Abuse Administrator to be responsible for the administration and implementation of this Policy. Among other things, the Substance Abuse Administrator will:

- Have primary responsibility for the coordination, implementation, and administration of this Policy.
- Coordinate all testing with any appropriate Third-Party Provider(s);
- Receive the test results from the MRO and notify the Designated Jobsite Turner Representative and Turner's safety personnel of the drug results, and notify the tested Turner Employee or Other Worker and the Other Worker's employer of the results; and
- Assure the reliability and confidentiality of testing processes and procedures.

General Substance Abuse Rules

1. Using, possessing, distributing, dispensing, manufacturing, or being under the influence of Prohibited Substances, and/or abusing chemicals or controlled substances while working on a Turner Project at a Turner Facility, or while working on or otherwise engaged in Turner business, is strictly prohibited.
2. Legally prescribed drugs may be permitted, provided that the drugs are prescribed to the Turner Employee or Other Worker by an authorized medical practitioner for current use by the Turner Employee or Other Worker and provided that such legally prescribed drugs do not prevent the safe performance of such person's essential job functions. Please see "Prescription Drugs" on page 11 for further information.
3. The possession or use of alcohol, marijuana, or any controlled substance by any Turner staff, trade, or any subcontractor on any Turner jobsite is prohibited at any time including non-working hours. Turner sponsored or approved meeting/functions, not located at a Turner Jobsite, may serve alcohol with approval by the BU General Manager or HQ Department Head. However, this does not relieve Turner Employees or Other Workers from possessing or using alcohol responsibly and safely in such situations.
4. Refusing to report for or submit consent to drug or alcohol testing is prohibited and may be treated as if a Positive Test Result had been obtained.
5. Adulteration or Substitution of a test is prohibited and may be treated as if a Positive Test Result had been obtained.

Confidentiality

All substance abuse testing will be performed with concern for each Turner Employee's or Other Worker's personal privacy, dignity, and confidentiality. Each Turner Employee and Other Worker will be required to sign a consent and chain of custody form, assuring proper documentation and accuracy. Turner Employee testing records shall not be maintained in personnel files. Records may be kept in a separate confidential file at Turner's office or at the project level for that particular project. Turner Employees shall have the right to a copy of their drug testing results within a reasonable amount of time following a request. Other Workers shall contact the Substance Abuse Administrator if they wish to have a copy of their drug testing results. All actions taken under this Policy will be confidential and disclosed only to those with a need to know.

Protections Related to Drug Screen Testing

- A formal Chain of Custody will be established for every drug test.
- Initial samples (or a split portion thereof) that test non-negative will be retested for verification with a Confirmatory Test, using the Gas Chromatography/Mass Spectrometry ("GC/MS") test,
- GC/MS Positive Test Results will be communicated to the MRO,
- The MRO will receive the GC/MS Positive Test Results and convey the fact of a Verified Positive Test Result to the Substance Abuse Administrator and to the Donor tested and his or her employer.
- Turner Employees or Other Workers who test positive may, within twenty-four (24) hours of being advised of the results, request a retest of the original split-specimen sample by a different SAMHSA certified laboratory, at the Turner Employee's or Other Worker's expense.
- No drug or alcohol test will be conducted without the Turner Employee's or Other Worker's consent. The Donor shall be required to sign a consent form. Refusal to give consent shall be cause for removal/barring from the Turner Project or Turner Facility and may be treated as if a Positive Test Result had been obtained.

Testing Procedures

Procedures for Drug Screen Testing

Urine specimens will be analyzed for the presence of all or some of the following[1]:

- Cocaine
- Opiates/Expanded opiates for Heroin.
- Amphetamines/Methamphetamines
- Phencyclidine
- Barbiturates
- Benzodiazepines
- Propoxyphene
- Methadone
- Ecstasy/MDMA

Turner reserves the right to add additional drugs to this list upon notice of the Turner Employee or Other Worker being tested, including for those situations where it is required by Department of Transportation regulations, on federally funded projects, and/or where federal/state law requirements/contracts to test for cannabinoids (marijuana/THC).

The following chart illustrates the Cut-Off Levels for some of the drugs tested:

Drug	EMIT Screen (ng/ml)	GC/MS Confirmation (ng/ml)
Amphetamines	1,000	500
Cocaine	300	150
Opiates	2,000	2,000
Phencyclidine (PCP)	25	25

Appropriate Cut-Off Levels for all other drugs tested will be determined by the SAMHSA approved laboratory conducting the testing and the Medical Review Officer.

1. Urine drug screen specimens may be collected on-site by a SAMHSA approved laboratory or at an offsite medical facility or clinic. In general, Donors will be permitted to give a urine specimen in privacy and without being observed by collection site personnel. However, a Donor forfeits this right whenever there is a reason to believe that he/she may alter or substitute a specimen.

2. If the Donor does not provide a sufficient amount of urine for a drug test, he/she must drink up to forty (40) ounces of fluid, distributed reasonably through a period of up to three (3) hours, or until the Donor has provided a sufficient urine specimen. If the Donor refuses to make the attempt to provide a new urine specimen or leaves the area where the collections are being done this will be considered a Refusal to Test. If the Donor has not provided a sufficient specimen within three (3) hours of the first attempt. The collector will discontinue the collection and notify

The Substance Abuse Administrator and/or Designated Jobsite Turner Representative or Alternative Program Administrator. After consulting with the MRO, the Donor will be directed to obtain within five (5) business days, an evaluation from a licensed physician. If the Donor proves that he or she has a medical condition that has, or with a high degree of probability could have precluded the Donor from providing a sufficient amount of urine, the MRO will mark the test as "Cancelled" and no further action will be taken. A medical condition includes an ascertainable physiological condition (e.g., a urinary system dysfunction) or a medically documented pre-existing psychological disorder but does not include unsupported assertions of "situational anxiety" or dehydration. If there is not an adequate basis for determining that a medical condition has, or with a high degree of probability could have, precluded the Donor from providing a sufficient amount of urine, the MRO will mark the test as Refusal to Test.

3. Turner Employees and Other Workers will be preliminarily tested using the Quick/Instant Test Drug Test. This system provides results in five (5) minutes.

4. A SAMHSA approved laboratory will confirm screens that test non-negative. All urine samples will be split-specimen tests, ensuring that any required or requested retests can be done using the original sample. A Confirmatory Test will use GC/MS to ensure reliability and accuracy.

5. Before a Donor's test result will be confirmed positive for drugs, the Donor will be given the opportunity to speak with Turner MRO and bear the burden of proof that there was a legitimate medical explanation for the Positive Test Result. If the MRO determines that a legitimate medical reason does exist, the test result will be reported as a Negative Test Result. If the MRO determines that a legitimate medical reason does exist, the test result will be reported as a Negative Test Result. If the MRO determines that a legitimate medical reason does not exist, the test result will be reported as a Verified Positive Test Result. A Positive Test Result will not be reported to Turner until the Confirmatory Test has been completed and the MRO has consulted with the Turner Employee or Other Worker regarding any legitimate medical explanations. Since the Policy is first and foremost concerned with safety, the Donor whose results are pending will not be allowed to work at a Turner Project or Turner Facility until this process is complete.

6. Diluted Samples occur when a Donor drinks large amounts of fluids before the drug test or adds water to the specimen so that it is harder to detect drug abuse. Donors may innocently drink too many fluids before the drug test in order to be able to give a sample. This can be avoided by the Donor not drinking more than twenty-four (24) ounces within three (3) hours of the drug test. It is the responsibility of the Donor to provide Turner with an undiluted sample that can be tested. Turner's Policy regarding Diluted Samples is to retest the Donor one (1) additional time. Ideally, the Turner Employee or Other Worker should be retested within twenty-four (24) hours of receiving the results from the MRO, and in no case more than forty-eight (48) hours after the Diluted Sample was obtained, if the Donor provides a second Diluted Sample, the MRO will conduct a medical interview with the Donor. During the interview process, if it is determined that there is no legitimate medical reason, the Donor's test will be treated as a Positive Test Result.

7. A Verified Positive Test Result shall mean that the verified results are above standard Cut-Off Levels and that there is not a medically valid reason for the result. Any Turner Employee or Other Worker who tests positive for drugs, and who believes the test results are incorrect, may request a test of the original specimen at his/her own cost within twenty-four (24) hours. An equally qualified laboratory shall perform the retest. If the retest is negative and it is determined by the MRO that the initial confirmation screen was incorrect, the Turner Employee or Other Worker shall be allowed to resume work.

8. If the Confirmatory Test or retest for drugs is negative, Turner shall pay the Turner Employee for any lost time that may have occurred and reimburse the Turner Employee for the cost of a negative retest that was borne by the Turner Employee. The employer of an Other Worker whose Confirmatory Test or retest for drugs is negative shall be responsible for paying the Other Worker for any lost time that may have occurred and/or for reimbursing the Other Worker for the cost of a negative retest that was borne by the Other Worker.

9. Turner Employees who are removed from working on a Turner project, at a Turner Facility, or from working on or otherwise engaging in Turner business following a Verified Positive Test Result, may only be returned to work if certain criteria are met (as outlined below in the "Possible Re-Employment with Turner" Section). In all cases, there is no guarantee of re-employment.

Procedures for Alcohol Testing

1. A Department of Transportation (DOT) approved saliva testing device or "collect-only" device will be used for the initial alcohol screen. In cases where a saliva testing device is used for initial alcohol screen, a "handheld" Breathalyzer unit or equivalent device, similar to those used by law enforcement for field sobriety tests must be used for the Confirmatory Test. If a "collect-only" device is used, the sample will be collected and delivered to a SAMHSA approved laboratory for testing. A Confirmatory Test is not required if a "collect-only" device is used. Saliva or alcohol screen collections by breath or their equivalent may be performed on-site. When using a saliva testing device, any initial screens at or in excess of 0.02% blood alcohol content will be tested with a Confirmatory Test performed after a waiting period of at least fifteen (15) minutes, but not more than thirty (30) minutes. A SAMHSA approved laboratory will confirm on-site screens that test non-negative with a Confirmatory Test using an EBT that has the ability to print out the results, date and time, a sequential test number, and the name and serial number of the testing device. Any laboratory test from a "collect-only" device sample or Confirmatory Tests at or in excess of 0.04% blood alcohol content will be considered a Positive Test Result (Alcohol). A laboratory test from a "collect-only" device sample or Confirmatory Test at or above 0.02% but below 0.04% will not be considered either a Negative Test Result nor a Positive Test Result (Alcohol), however, the Donor will be suspended from safety-sensitive functions for at least twenty-four (24) hours following administration of the test.

2. Before a Donor's test result will be confirmed as a Positive Test Result (Alcohol), the Donor will be given the opportunity to speak with Turner's MRO and bear the burden of proof that there was a legitimate medical explanation for the Positive Test Result (Alcohol). If the MRO determines that a legitimate medical reason does exist, the test result will be reported as a Negative Test Result. If the MRO determines that a legitimate medical reason does not exist, the test result will be reported as a Verified Positive Test Result. A Positive Test Result (Alcohol) will not be reported to Turner until the laboratory test from a "collect-only" device sample or Confirmatory Test has been completed and the MRO has consulted with the Donor regarding any legitimate medical explanations. Since the Policy is first and foremost concerned with safety, the Donor whose results are pending will not be allowed on-site until this process is complete.

3. A Positive Test Result (Alcohol) shall mean alcohol levels are recognized as demonstrating alcohol intoxication at or in excess of 0.04% blood alcohol content. Any Turner Employee or Other Worker who tests positive for alcohol, and who believes the test results are incorrect, may request a retest of the original specimen of saliva at his/her own cost within twenty-four (24) hours. An equally qualified laboratory shall perform the retest. If the retest is negative, the MRO will review all data for a final determination. If it is determined that the initial confirmation screen was incorrect, the Donor shall be allowed to resume work.

4. If the Confirmatory Test or retest for alcohol is negative, Turner shall pay Turner Employee for any lost time that may have occurred and reimburse the Turner Employee for the cost of a negative retest that was borne by the Turner Employee. The employer of an Other Worker whose Confirmatory Test or retest is negative shall be responsible for paying the Other Worker for any lost time that may have occurred and/or for reimbursing the Other Worker for the cost of a negative retest that was borne by the Other Worker.

5. Turner Employees or Other Workers who are removed from working on a Turner project, at a Turner Facility, or from working on or otherwise engaging in Turner business following a Verified Positive Test Result, may only be returned to work if certain criteria are met **(as outlined below in the "Possible Re-Employment with Turner" Section)**. In all cases, there is no guarantee of re-employment.

Cost of Testing

Turner will pay the cost of the initial screen and Confirmatory Test for testing Tuner Employees under this Policy. The employers of Other Workers are responsible for the cost of screening and confirmation required under this Policy.

Refusal to Consent or Submit to/Report for Test When Directed

Any Turner Employee who refuses to sign a consent form and/or to submit to or report to a drug or alcohol screening test will be immediately removed from the Turner Project or Turner Facility and will be terminated, with no possibility of reemployment. Other Workers who refuse to sign a consent form and/or to submit to or report to a drug or alcohol screening test will be immediately removed by their employer from the Turner Project or Turner Facility and will further be barred from any subsequent work on Turner Projects or at Turner Facilities.

Prescription Drugs

Reporting to and being at work under the influence of prescribed or over-the-counter drugs, where such use prevents a Turner Employee or Other Worker from performing his or her essential job functions or poses a safety risk to him or her and/or other Turner Employees or Other Workers property, or which has the potential to cause an Accident/Incident, is prohibited. Turner Employees or Other Workers taking a prescription or over-the-counter drug are personally responsible for confirming with their physicians that they may safely perform any job duties while taking such items. Turner Employees or Other Workers taking a legal substance that could impair their safe work must advise their immediate supervisor.

Types of Testing

To the extent consistent with applicable federal, state and local laws and applicable collective bargaining agreements, a Turner Employee or Other Worker may be required to undergo a screening test for the use of Prohibited Substances and non-prescription drugs, or alcohol under any of the following (or other) circumstances which may be determined by Turner management in its sole discretion under this Policy:

1. Pre-employment – After a conditional offer of employment or prior to admission to a Turner Project. All potential Turner Employees will be tested after a conditional offer of employment but prior to the employment commencing. Potential Turner Employees who obtain a Positive Test Result will not be permitted to work on Turner Projects, at Turner Facilities, or otherwise engage in Turner business and the conditional offer of employment will be rescinded and such potential Turner Employees will not subsequently be considered for any other Turner employment opportunities. If a former Turner Employee returns to employment with Turner following an absence longer than one (1) year, Turner will retest such Turner Employee with pre-employment testing prior to the re-employment commencing (former Turner Employees who are re-employed following a violation of this Policy and rehabilitation, however, will be tested as outlined on page 12 in “Re-Employment” Testing). All Other Workers will be tested at their employer(s) expense prior to beginning any work on a Turner Project, at a Turner Facility, or working on or otherwise engaging in Turner business. However, during orientation/training, Turner may accept, from Other Workers, substance abuse testing cards, badges, or proof of Negative Testing Results from the last twelve (12) months provided by the respective Other Worker’s employer or trade union.
2. Post-Accident/Incident – When a Turner Employee or Other Worker is involved in an Accident/Incident (as defined above in “Definitions”). If the Turner Employee or Other Worker is treated in a medical facility which fails to collect a specimen for testing, Turner may require the Turner Employee or Other Worker to be tested within thirty-two (32) hours of the event. A Positive Test Result may result in the denial of Workers’ Compensation for an injury resulting from the Accident/Incident.
3. Reasonable Suspicion – When there is reasonable suspicion, satisfactory to Turner, to believe that a Turner Employee or Other Worker is using, possessing, distributing, dispensing, manufacturing, or is under the influence of Prohibited Substances or abusing chemicals, controlled substances, or alcohol while working on a Turner Project, at a Turner facility, or while working on or otherwise engaged in Turner business, or when there is reasonable suspicion satisfactory to Turner to believe that the Turner Employee or Other Worker has reported to work under the influence of Prohibited Substances, unauthorized controlled substances, alcohol or other intoxicants which could affect the safety of others or of property.

4. Medical Examination – As part of any medical examination or fitness for duty examination provided or required by Turner.

5. Re-Employment – Upon re-employment or re-instatement to a Turner Project, at a Turner Facility, or to work on Turner business following a violation of this Policy and rehabilitation as outlined on page 17 in “Possible Re-Employment with Turner.” Further testing will occur without prior notice for a period of eighteen (18) months following re-employment or re-instatement.

6. Annual – When Turner requires screening on a yearly basis.

7. As needed – As required by Turner/Owner Agreements, other applicable agreements, contractual obligation, or government regulation.

8. Random – Turner will conduct Random Testing as follows:

   - All random selections and test processing will be administered by the Third-Party Provider(s) selected by Turner.
   - Random Testing will be conducted at a predetermined frequency, to be reasonably spaced throughout the calendar year. At least five percent (5%) of Turner Employee will undergo Random Testing on an annual basis.
   - Except to the extent a Turner Project or Turner Facility is otherwise subject to an acceptable or negotiated Alternative Program, all Turner Projects and/or Turner Facilities will be eligible for Random Testing each time Random Testing occurs, regardless of having been selected previously. However, when applicable, the terms of a state, federal, or owner contract regarding frequency of testing and percentage to be tested will control.
   - All eligible Turner Projects and Turner Facilities will be assigned to testing pools distinguished by job-type criteria agreed upon by Turner. Subject to applicable terms of a state, federal, or owner contract regarding frequency of testing and percentage to be tested, the Third-Party Provider’s computerized program will randomly select five percent (5%) of the eligible Turner Projects and Turner Facilities in each group or pool to be Covered Sites. When a selection occurs, the Turner Projects or Turner Facilities that are available for selection will be put on a run list. At the time of selection, the Third-Party Provider shall notify the applicable Substance Abuse Administrator(s) and Turner safety director(s) of the selected Covered Sites.
   - Included in the testing pools will be all Turner Employees and Other Workers on any Covered Site. Subject to applicable terms of a state, federal, or owner contract regarding frequency of testing and percentage to be tested, the Third-Party Provider’s computerized program will randomly select ten percent (10%) of all Turner Employees and Other Workers currently working on each of the Covered Sites as “Primary Random Selections”. Subject to applicable terms of a state, federal, or owner contract regarding frequency of testing and percentage to be tested, the Third-Party Provider’s computerized program will randomly select and assign a random number to an additional ten percent (10%) of all Turner Employees and Other Workers currently working on each of the Covered Sites as “Secondary Random Selections”. The selected lists will be managed by the Third-Party Provider and the Substance Abuse Administrator.
   - The Third-Party Provider will schedule an on-site collector to be dispatched to the selected Covered Site on the arranged date and time, unannounced to the personnel at each of the Covered Site selected. All available Primary Random Selections at the Covered Site are subject to testing at the date and time of the scheduled random testing. Each Turner Employee or Other Worker that is a Primary Random Selection but is not present at the selected Covered Site for any legitimate business reason (e.g., vacation, illness, business travel, etc.) will be considered unavailable for testing and will be replaced, for Random Testing purposes, with a Secondary Random Selection having the lowest randomly generated number.

Company Provided Education and Training

General Provisions

In conjunction with its commitment to a drug-free workplace, Turner will provide education to all Turner Employees. This education will cover substance abuse issues and is intended to help reduce the risk of Accidents/Incidents caused by drugs and/or alcohol. Turner's supervisors will receive additional training which will help them identify and help employees who show signs of alcohol or drug use. Employers of Other Workers shall provide such education and training for their employees as may be required by applicable laws, ordinances or statutes mandated by the local, state, or federal government.

Penalties

Violation of any of the rules associated with this Policy may result in disciplinary action up to and including termination of employment for Turner Employees or the future inability to work on Turner Projects or Turner Business for Other Workers. The following penalties exist for violation of this Policy:

Violation	First Offense	Second Offense
Possession	Turner Employees- Immediate removal from Turner Project or Turner Facility and termination, with no possibility or re-employment.	N/A.
	Other Workers-Immediate removal from Turner Project or Turner Facility by the Other Worker's employer. Barred from any subsequent work on Turner Projects of at Turner Facilities.	N/A.
Distribution of drugs/paraphernalia	Turner Employees-Immediate removal from Turner Project or Turner Facility and termination, with no possibility or re-employment.	N/A.
	Other Workers – Immediate removal from Turner Project or Turner Facility by the Other Worker's employer. Barred from any subsequent work on Turner Projects or at Turner Facilities.	N/A.
Use of Prohibited Substances or Alcohol Abuse (Upon discovery via actions or testing)	Turner Employee - Immediate removal from Turner Project or Turner Facility and termination. Possible re-employment upon proof of successful rehabilitation and re-employment testing. Clean screen required prior to re-employment and continued testing over the eighteen (18) months following re-instatement.	Termination, with no possibility of re-employment.
	Other Workers - Immediate removal from Turner Project or Tuner Facility by the Other Worker's employer. Barred from any subsequent work on Turner Projects or at Turner Facilities until Turner is provided proof of successful rehabilitation and pre-employment testing. Turner does not provide Employee Assistance to Other Workers. Other Workers must approach their respective employers.	N/A.

Violation	First Offense	Second Offense
Use of Prohibited Substances or Alcohol Abuse (Per voluntary request by Turner Employee for help)	Turner Employee - Immediate removal from Turner Project or Turner Facility. Re-instatement upon proof of successful rehabilitation and re-employment testing. Clean screen required prior to returning to work and continued testing over the eighteen. (18) months following the return to work.	Termination with no possibility of re-employment.
	Other Workers - N/A	N/A.
Under the Influence of Prohibited Substances or Alcohol at Work	Turner Employee - Immediate removal from Turner Project or Tuner Facility and termination. Possible re-employment upon proof of successful rehabilitation and re-employment testing. Clean screen required prior to reinstatement and continued testing over the eighteen (18) months following re-instatement.	Termination, with no possibility of re-employment.
	Other Workers - Immediate removal from Turner Project or Turner Facility by the Other Worker's employer, barred from any subsequent work on Turner Projects or at Turner Facilities until Turner is provided proof of successful rehabilitation and pre-employment testing. Turner does not provide Employee Assistance to Other Workers must approach their respective employers.	N/A.
Failure to Report Use of Over-the-Counter Prescription Drugs Which Affect Performance	Turner Employees-Discipline, up to and including termination, with or without the possibility of re-employment.	Termination, with no possibility of re-employment.
	Other Workers - Immediate removal from Turner Project or Turner Facility by the Other Worker's employer. In Turner's sole discretion, Other Worker may be required to provide proof of successful rehabilitation and pre-employment testing prior to any subsequent work on Turner Projects or at Turner Facilities. Turner does not provide Employee Assistance to Other Workers must approach their respective employers.	N/A

Violation	First Offense	Second Offense
Positive Test Following Accident/Incident	Turner Employee - Immediate removal from Tuner Project or Turner Facility and termination. Possible re-employment upon proof of successful rehabilitation and re-employment testing. Clean screen required prior to reinstatement and continued testing over the eighteen (18) months following re-instatement. **May be ineligible for Worker's Compensation.**	Termination with no possibility of re-employment.
	Other Workers - Immediate removal from Turner Project or Turner Facility by the Other Worker's employer, barred from any subsequent work on Turner Projects or at Turner Facilities until Turner is provided proof of successful rehabilitation and pre-employment testing. Turner does not provide Employee Assistance to Other Workers; they must approach their respective employers.	N/A.
Refusal to Consent or Submit to/Report for Test When Directed	Turner Employee - Immediate removal from Turner Project or Turner Facility and termination, with no possibility of re-employment.	N/A.
	Other Workers - Immediate removal from Turner Project or Turner Facility by Another Worker's employer. Barred from any subsequent work on Turner Projects or at a Turner Facility.	N/A.

Notwithstanding the stated penalties, Turner reserves the right to discipline, up to and including termination, any Turner Employee and/or to ban Other Workers from any Turner Project and/or Turner Facility. Nothing herein in any way grants or confers any implied contractual right to any individual with respect to employment with Turner or alters any employment at-will status of a Turner Employee.

Notification of Authorities

In addition to all other remedies or penalties, Turner may report information concerning possession or distribution of any Prohibited Substance or unauthorized controlled substances to law enforcement officials will cooperate fully in the prosecution and/or conviction of any violators of the law.

Employees Convicted of Drug Offenses

Turner Employees or Other Workers must, as a condition of continued employment, notify their "Operations Manager" or employer, respectively, of any conviction of a criminal drug offense within five (5) days after said conviction. IF an employer is notified, then that employer shall notify the Turner Operations Manager immediately. If the Turner Employee or Other Worker convicted of the criminal drug offense is working on federal contract or grant, Turner will notify the Federal Contracting Agency of criminal drug convictions within thirty (30) days after Turner has received notice. Any Turner Employee or Other Worker so convicted must satisfactorily complete a Turner approved drug rehabilitation program and agree to periodic testing any time thereafter, before Re-Employment or a lift on a ban from working the federal contract will

be considered. *Failure to report such a conviction and/or participate in a drug rehabilitation program may result in disciplinary action, up to and including, suspension, barring, and/or termination*.

Employee Assistance Program: Rehabilitation and Treatment

Turner is committed to helping Turner Employees who seek help from Turner for substance or alcohol abuse problems prior to any drug/alcohol testing or Accidents/Incidents.

Any Turner Employee who feels that he or she has a drug or alcohol related problem is encouraged to seek professional help. If a Turner Employee voluntarily notifies a supervisor or manager before testing that he or she may have a drug or alcohol problem, Turner will counsel the Turner Employee voluntarily seeking such help. Such a person will be provided with a list of employee assistance vendors. Any such action by a Turner Employee shall be kept strictly confidential.

In certain circumstances, Turner Employees who have violated this Policy may also be referred to Turner's Employee Assistance Program ("EAP") and be eligible for a leave of absence and re-instatement (for those Turner Employees who have voluntary requested help from Turner for the use of Prohibited Substances or alcohol abuse). Further details regarding the EAP may be found in Turner's Summary Plan Description ("SPD") or by visiting www.turnerbenefits.com and clicking on "Plan Details." In addition, a Turner Employee may contact the EAP directly by dialing 1-877-887-6266 and following the instructions.

Please refer to the Penalties Chart on pages 14-16 for the consequences and re-instatement and re-employment rights for various drug and alcohol violations.

If treatment necessitates a leave of absence, accrued vacation, sick leave time, and/or an unpaid leave of absence may be used, pursuant to the limitations of those respective policies.

Other Workers are not eligible for Turner's EAP. Such a benefit may be provided by Other Worker's respective employers.

Possible Re-Employment with Turner

Employment with Turner is an at-will employment relationship. There is never a guarantee of re-employment with Turner.

Turner Employees who are terminated from working on a Turner Project or at Turner Facility following certain Violations, including Use of Prohibited Substances or Alcohol (Upon discovery via actions or testing), Use of Prohibited Substances or Alcohol (Per voluntary request by Turner for help), Under the Influence of Prohibited Substances or Alcohol at Work, and Positive Test Following Accident/Incident may be returned to work only if following criteria are met:

- The Turner Employee works with an EAP counselor as detailed above and/or successfully completes and provides proof of completing a Turner Certified/Recognized Substance Abuse Rehabilitation Program at their own expense or at the expense of an Alternative Program Administrator if such Alternative program has an accepted program in place.
- The Turner Employee submits a written request to the Business Unit EH&S Director and Loss Control for approval prior to his/her return to work. A copy of the certificate of completion of the program must be attached.
- The Turner Employee submits to a re-employment drug test which has a Negative Test Result; and
- The Turner Employee consents and submits to additional testing without prior notice for a period of eighteen (18) months following re-employment or re-instatement, with all tests having a Negative Test Result.

Rehabilitation of Other Workers

Other Workers who are removed from Turner Project or Turner Facility by the Other Worker's employer and barred from any subsequent work on Turner Projects of at Turner Facilities pursuant to the "Penalties" section of this Policy may work in the future on a Turner Project or Turner Facility only if the following criteria are met(This option for rehabilitation does not apply to an Other Worker with an offense for Possession and/or Distribution of drugs/paraphernalia or Refusal to Consent or Submit to/Report for Test When Directed) :

- The Other Worker successfully completes a Substance Abuse Rehabilitation Program at their own expense or at the expense of their employer if such employer has an accepted program in place and proof of completion of such program is provided to Turner's **Medical Review Officer** and;

- The employer submits a written request to Turner's Director of Safety and Loss Control for approval prior to Other Worker's return to work. A copy of the certificates of completion must be attached and;

- The Other Worker tests negatively for drugs and/or alcohol before returning to the work site.

Section 1

CCIP Overview

Welcome to the Turner Contractor Controlled Insurance Program (CCIP). Turner Construction Company (Turner) has purchased the coverage and is therefore the Sponsor of the CCIP. A CCIP is a coordinated insurance program where Turner provides specified coverage for enrolled contractors performing work at the project site. Turner Surety and Insurance Brokerage (TSIB) is the administrator for the CCIP.

Bid Instructions

You are required to prepare your bid to exclude the cost of your insurance for onsite Workers' Compensation, Employer's Liability, and Primary & Excess General Liability. You must calculate the cost of insurance to be removed from your bid based on your current insurance rates at the time of bid. Turner may modify bidding and insurance cost identification procedures as necessary based on the specific project requirements.

Conflicts

In the event of a conflict, the provisions of the Subcontract Agreement and any other related Subcontract Agreements shall supersede the provisions of this Manual. Likewise, in cases of conflict regarding CCIP Coverage, the provisions of the policies supersede the provisions of this Manual.

Project Definitions

The following list includes key CCIP definitions:

CCIP

Contractor Controlled Insurance Program.

CCIP Coverage

Workers' Compensation and Employer's Liability Insurance, General Liability Insurance, and Excess Liability Insurance as detailed in the CCIP Insurance policies for the benefit of Turner and Enrolled Parties performing work at the Project Site.

CCIP Administrator

The party that provides Administration Services for the CCIP. Turner Surety & Insurance Brokerage, Inc. (TSIB) is the CCIP Administrator for this project.

CCIP Insurer

The insurance company(s) named on a policy or Certificate of Insurance (COI).

Copyright © 2021 | TSIB | All rights reserved.

CCIP Sponsor

The party that purchases the CCIP. On this project, Turner Construction Company (Turner or Turner Construction) is the Sponsor of the CCIP.

California Affirmation Audit

The California Workers' Compensation Insurance Rating Bureau (WCIRB) routinely audits insurers use of limiting and restricting endorsements to ensure compliance with CA regulations. Title 10 of the California Code of Regulations requires insurers to obtain written documentation from the policyholder confirming that other coverage is in place (or is lawfully uninsured/self-insured) for the employees, operations, and locations excluded by a limiting and restricting endorsement. The California WCIRB completes affirmation audits to ensure compliance with Title 10.

California Limiting & Restricting Endorsements

A limiting and restricting endorsement is defined under the California Code as "an endorsement that excludes from coverage some portion of Workers' Compensation Liability for which the Employer is required to secure payment pursuant to the Labor Code." They include officer, operations, and location exclusions. For Enrolled Contractors, this applies to offsite operations.

Contract Agreement

A written agreement between Contractors of any tier.

Contractor

General Contractor and Subcontractor of any tier.

Eligible Parties

Contractors performing labor or services at the CCIP Project Site. Sponsor reserves the right to enroll or exclude any party at its sole discretion.

Enrolled Parties

Those Eligible Parties who have submitted all necessary enrollment information, have been accepted and enrolled into the CCIP, and who have received a Welcome Letter and Certificate of Insurance as evidence of enrollment.

Copyright © 2021 | TSIB | All rights reserved.

Excluded Parties

At the discretion of Turner, or subject to state regulations, the following parties are excluded (not eligible) from enrollment in the CCIP:

1. Hazardous materials remediation, removal and/or transport companies and their consultants;
2. Any Subcontractor performing structural demolition which is the moving or relocating of load bearing beams, columns, or walls;
3. Architects, engineers, soil testing engineers, surveyors, and their consultants;
4. Vendors, suppliers, fabricators, material dealers, truckers, haulers, drivers and others who merely transport, pickup, deliver, or carry materials, personnel, parts or equipment or any other items or persons to or from the Project Site;
5. Subcontractors, and any of their respective Sub-subcontractors, who do not perform any actual labor on the Project Site;
6. Building implosion Subcontractors of any tier, or Subcontractors of any tier involved with blasting or the use of explosives;
7. Window washing systems (davit type systems or equivalent).
8. Any Subcontractor of any tier involved with Exterior Insulation Finishing Systems (EIFS)
9. Any other Subcontractor of any tier which Turner, at its sole discretion (and as permitted by law), chooses to exclude from enrollment.

Project Site

The project location designated by the “Sponsor” and on file with the Insurer and as defined as the “Project” in your Contract. Any adjacent or nearby areas as defined in the project documents where incidental operations are performed, excluding permanent locations of any insured party.

Work Description

133,500 SF New Central Middle School Project. The project consists of the construction of a new building including gym, auditorium, cafeteria and classroom spaces.

Wrapworks

The RMIS system used by all Contractors to manage their requirements for the CCIP. wrapup.vuewrapup.com/contractorportal

CCIP Insurance Coverage Summary

This Section provides a brief description of coverage provided by the CCIP. Participants should refer to the actual CCIP insurance policies for details about coverage, exclusions, and limitations.

Disclaimer
Neither Turner nor TSIB assumes any obligation to provide insurance other than what is specified in this Manual and the CCIP insurance policies. Turner's arranging of CCIP coverages shall in no way relieve or limit, or be construed to relieve or limit, Subcontractor or any of its Sub-subcontractors of any responsibility, liability, or obligation imposed by the Contract Agreement or by law, including without limitation any indemnification obligations which Subcontractor or any of its Sub-subcontractors to Turner or any other designated entity thereunder. Turner reserves the right at its option, without obligation to do so, to arrange other insurance coverage of various types and limits provided that such coverage is not less than that specified in the Contract Agreement.

Overview

As the CCIP Sponsor, Turner has arranged with TSIB for this Project to be insured under Turner's CCIP. Eligible Parties performing labor or services at the Project Site are eligible to enroll in the CCIP unless they are an Excluded Party. The CCIP provides Workers' Compensation and Employer's Liability, General Liability, and Excess Liability insurance for the benefit of Enrolled Parties, as summarily described below, in connection with the performance of the Work. CCIP Coverage shall cover only Enrolled Parties. Enrolled Parties are:

- Turner
- Eligible Contractors of any tier
- Any persons or entities that Turner at its sole discretion may designate to enroll in the CCIP

Each Enrolled Party is provided a Welcome Letter and Certificate of Insurance (COI) as evidence of enrollment.

Excluded Parties

Excluded Parties are not granted any insurance coverage under the CCIP. Excluded Parties must meet the insurance requirements in their Contract Agreement and provide evidence of their insurance coverage to both Turner and TSIB.

Excluded Parties shall require each of its Sub-Subcontractors to obtain and maintain the insurance coverage specified in the Contract Agreement. Excluded Contractors are to confirm there **are no Wrap-Up Exclusions on their policies**. Should there be a Wrap-Up Exclusion, a copy must be provided for review.

Copyright © 2021 | TSIB | All rights reserved.

Evidence of CCIP Coverage

The Wrap Administrator will provide a COI evidencing CCIP Coverage to include Workers' Compensation, General Liability, and Excess Liability insurance to each Enrolled Party. Each Enrolled Party will be included as a Named Insured to the CCIP General Liability and Excess Liability policies. A copy of the primary General Liability policy can be obtained upon a Contractor's written request to the Wrap Administrator.

Description of CCIP Coverage

The summary descriptions of the CCIP Coverage in this Manual are not intended to alter or amend the actual CCIP Coverage. Rather, the CCIP Coverage and Exclusions summarized in this Manual are set forth in full detail in their respective insurance policy forms. In the event any provision of this Manual conflicts with the CCIP insurance policies, the provisions of the actual CCIP insurance policies shall govern.

CCIP Coverage shall apply only to Enrolled Parties and only for those operations or activities performed at the Project Site in connection with the Work.

CCIP Coverage Summary

Turner will provide the following CCIP Coverage to Enrolled Parties performing Work at the Project Site.

Workers' Compensation & Employer's Liability

A separate Workers' Compensation policy or an endorsement will be issued to each Enrolled Party.

Coverage	Limits
Part One	
Workers' Compensation	Statutory Limit
	Annual Limits
Part Two *(per Enrolled Party)*	
Employer's Liability	
Bodily injury by Accident, each accident	$2,000,000
Bodily injury by disease, each employee	$2,000,000
Bodily injury by disease, policy limit	$2,000,000

Notes:

- This does not cover the offsite operations of any Enrolled Party.
- Primary insurance for all covered occurrences at the Project Site.

Copyright © 2021 | TSIB | All rights reserved.

General Liability

A single General Liability policy will be issued for all Enrolled Parties. Each Enrolled Party will be a Named Insured on the CCIP General Liability policy.

Coverage: Third Party Bodily Injury, Property Damage Liability, and Personal & Advertising Liability per the policy terms, conditions, and exclusions.

Primary Policy	Limits
General Aggregate Per Project	$10,000,000
Completed Operations Aggregate Per Project	$10,000,000
Each Occurrence Limit	$5,000,000
Fire Damage Legal Liability (any one fire)	$100,000
Medical Expense Limit (any one person)	$5,000

Terms:

- The General Liability limits are shared amongst all Enrolled Parties.
- General Liability insurance should be issued on an Insurance Services Office (ISO) form or its equivalent.
- Provides primary coverage for all covered occurrences at the Project Site.
- Does not provide coverage to any Insured Party, Vendor, Supplier, offsite Fabricator, Material Dealer, or other party, for any product manufactured, assembled, or otherwise worked on away from the Project Site.
- Does not cover offsite operations or activities of any Enrolled Party.
- Completed Operations coverage is extended with a single non-reinstated aggregate limit for the period beginning from the earliest occurrence of:
    i. when the Project is put to its intended use
    ii. project completion, or
    iii. CCIP policy termination, and ending after the earlier occurrence of
        a. Ten (10) years or
        b. The expiration of the applicable statute of repose established per the civil code or statute of the state where the Project is located. Consult your Insurance Broker and/or legal counsel for additional information regarding the statute of repose for the state where the Project is located.

Copyright © 2021 | TSIB | All rights reserved.

Excess Liability

A tower of Excess Liability coverage will be issued, covering all Enrolled Parties.

Coverage	Limits
Each Occurrence Limit (Combined Single Limit)	$100,000,000
Completed Operations Aggregate Per Project	$100,000,000
Annual General Aggregate Limit Per Project	$100,000,000

Coverage NOT provided by the CCIP

The CCIP does not provide Enrolled Parties all of the required coverage that may be needed for their Work at the Project Site. Notably, the CCIP does not provide Automobile Liability, Professional Liability, Pollution Liability, or coverage for any Enrolled Party's rented, owned, leased or borrowed equipment, or materials not included for inclusion in the project. Enrolled Parties should consult with their Broker/Agent to arrange any coverage that may be needed in addition to the CCIP.

Copyright © 2021 | TSIB | All rights reserved.

Contractor Obligations & Insurance Requirements

Contractors of any tier are required to provide and maintain coverage to protect against losses that occur away from the Project Site or that are otherwise not covered under the CCIP. All COI's must be submitted to the Wrap Administrator prior to start of Work at the Project Site.

The required coverage must protect the Project Owner, Turner, the Subcontractor, and all others as required by the Contract Agreement. Liability may arise from the Subcontractor of any tier's operations performed away from the Project Site, performed by Excluded Parties, or activities not covered by the CCIP. Insurance coverage must be maintained for the duration defined in the Contract Agreement.

Contractor's CCIP Obligations

Subcontractor shall:

1. Incorporate the terms of this Manual in all Contract Agreements.
2. Within five (5) days of execution of the Contract Agreement, or no less than thirty (30) days before Mobilization onsite:
    - Enroll in the CCIP
    - Maintain enrollment in the CCIP
    - Ensure that Subcontractor's eligible Sub-Subcontractors enroll in the CCIP
3. Comply with all of the administrative, safety, claims management, insurance, and other requirements contained in this Manual, the CCIP insurance policies, and the Contract Agreement.
4. Provide each of its Sub-Subcontractors with a copy of this Manual and ensure Sub-Subcontractor compliance with the provisions of this Manual, the CCIP insurance policies, and the Contract Agreement. The failure of
    - Turner to include this Manual in the bid documents, or
    - Subcontractor to provide each of its eligible Sub-Subcontractors with a copy of it,

    Shall not relieve the Subcontractor or any of its Sub-Subcontractors from any of the obligations contained therein.
5. Provide evidence of required insurance to Turner and the Wrap Administrator at the time of enrollment and/or within 5 business days from the requested notification.
6. Subcontractor shall access Wrapworks and upload copies of their Rate Pages/Declaration Pages for:
    - Workers' Compensation
    - General Liability
    - Excess or Umbrella
    - Deductible Endorsement (if applicable)
    - Other requirements set forth in Section 6 to verify the Insurance Cost calculation.

Copyright © 2021 | TSIB | All rights reserved.

7. Be solely responsible for the recovery of any Sub-Subcontractor Insurance Cost attributable to such Sub-Subcontractors' eligibility for participation in the CCIP. If unit pricing is the basis for the Subcontract price, Turner may, at its option, apply a "per unit" Subcontractor Insurance Cost where appropriate.
8. Notify the Wrap Administrator and Turner's Designated Person of all Sub-subcontracts awarded (first tier and subsequent tiers). Accordingly, the Subcontractor shall require all Sub-Subcontractors to submit an online Application for Enrollment and all documents required to verify their Insurance Cost.
9. Provide the estimated onsite payroll amount for their Work and their enrolled Sub-Subcontractors for its Work. Subsequently identify estimated onsite payroll for each Change Order request.
10. Require all of its Sub-Subcontractors to acknowledge in writing, that Turner and TSIB are not the CCIP Insurer nor are they Agents, Partners, or Guarantors of the insurance companies providing coverage under the CCIP and that Turner and TSIB are not responsible for any claims or disputes between or among Subcontractor, its Sub-Subcontractors, and any CCIP Insurer(s). Any type of insurance coverage or limits of liability in addition to the CCIP coverages that Subcontractor or any Sub-Subcontractor requires for its or their own protection, or that is required by applicable laws or regulations, shall be the Subcontractor's or its Sub-Subcontractor's sole responsibility and expense and shall not be billed to Turner, TSIB or the Owner.
11. Cooperate fully with the TSIB and the CCIP Insurers, as applicable, in their administration of the CCIP.
12. Notify the Wrap Administrator immediately of any insurance cancellation or non-renewal of Subcontractor's and Sub-Subcontractor's required insurance and any subsequent reinstatement of coverage.
13. At Turner's discretion**,** Subcontractors may be required to pay a sum of up to $5,000 of each occurrence, including court costs, attorney's fees and costs of defense for Bodily Injury or Property Damage to the extent losses payable under the CCIP General Liability Policy are attributable to Subcontractor's Work, acts or omissions, or the Work, acts or omissions of any of any other entity or party for whom Subcontractor may be contractually or legally responsible.
14. Acknowledge that Turner shall pay the costs of premiums for the CCIP coverages on behalf of all Enrolled Parties and will receive or pay, as the case may be, all adjustments to such costs, whether by way of dividends, retroactive adjustments, return premiums, other moneys due, audits or otherwise. Accordingly, each Subcontractor and each of its Sub-Subcontractors agrees to assign to Turner the right to receive all such adjustments.
15. Subcontractors are required within 24 hours to report a claim or incident to the Turner Site Designated Person; failure to do so may result in a $5,000 penalty.

Enrollment Procedures

The application for Enrollment is required to be completed online via Wrapworks. Section 2 of this Manual provides the Project's Wrap Administrator's contact information should you require or need assistance. It's important to note that **Enrollment is NOT automatic.**

Each Subcontractor and Sub-Subcontractor shall provide details about its Sub-Subcontractors as necessary during the CCIP enrollment. The information requested on the online application for Enrollment is mandatory for Enrollment. The online application must be completed through Wrapworks and CCIP coverage subsequently confirmed by the Wrap Administrator, prior to mobilization or the start of Work to obtain CCIP Coverage.

A separate online application for Enrollment is required for each eligible Sub-Subcontractor of any tier that performs Work at the Project Site.

The Wrap Administrator will issue each Enrolled Party a Welcome Letter and a CCIP Certificate of Insurance acknowledging acceptance of the applicant into the CCIP.

Late Enrollments/Late Reports

Should the insurance carrier(s) or any regulatory agency assess a fine or penalty for late enrollment and/or late reporting, Turner reserves the right to assess these fines to the Subcontractor. This reservation of rights applies whether fines and/or penalties are due to a Subcontractor or any of its Sub-Subcontractors. If a fine or penalty is assessed to a Sub-Subcontractor, the Prime Tier Subcontractor is solely responsible for recovering the fine or penalty amount from its Sub-Subcontractor(s).

Identifying and Verifying Insurance Costs

Under the CCIP, Turner provides certain insurance (CCIP Coverage) for Enrolled Parties for Work performed at the Project Site and pays the premium for the CCIP Coverage. Accordingly each Enrolled Party will be required to identify their amount of insurance costs that were removed from their bid and submit copies of their policy documents to the Wrap Administrator for verification. The Wrap Administrator will provide the Enrolled Party with the insurance cost calculation once all documents have been provided. This is done by uploading all the required documents to Wrapworks.

Copyright © 2021 | TSIB | All rights reserved.

As part of the enrollment process eligible Subcontractors of any tier are required to upload insurance policy pages that document their coverage and insurance rates using Wrapworks. Required documentation includes the following pages from the Workers' Compensation, General Liability, and Excess or Umbrella policies:

- Declaration or Information Page
- Rate Page(s)
- Experience Modification Verification (Workers' Compensation only)

If the Subcontractor is "Self-Insured," and carries a deductible or declares a dividend credit for its Workers' Compensation and/or General Liability program, then the following must also be provided:

- Deductible Page(s)
- Summary- Five (5) Years of loss history for entities that retain losses
- Summary- Five (5) Years of audited payroll by annual total

Until each Subcontractor or Sub-Subcontractor submits all required documentation to enable verification and calculation of the Subcontractor of any tier's Insurance Cost, an Insurance Cost of up to but not greater than 10% of the contract value may be assigned by Turner. Failure to submit the required documentation may result in a higher Final Insurance Cost Adjustment (if applicable).

Payroll Reports

Each Enrolled Party is required to submit payroll and work hour information each month using Wrapworks. Enrolled Parties must report payroll expended at the Project Site for each applicable Workers' Compensation classification that was included in the Subcontractor's application for Enrollment.

A monthly payroll report must be submitted for each month, including months where there was zero payroll or work hours, until completion of the Work under each Subcontract. For those Subcontractors performing Work under multiple Contract Agreements, a separate monthly payroll report is required for each Subcontract.

The monthly payroll report should include reportable payroll for all CCIP qualified employees, including onsite supervisors and onsite clerical personnel. Please follow the required Statutory Guidelines in the state the project is located as to what is reportable.

This is in addition to any Federal, State or Local requirements for the project (i.e. LCP Tracker, Certified Payroll Reports, etc.).

Copyright © 2021 | TSIB | All rights reserved.

All payrolls submitted for this project should be excluded from the payroll submitted to your corporate insurance carrier(s) to avoid paying premiums for exposures covered by the Turner CCIP. The COI issued to you for coverage can be used to provide evidence of your enrollment in the Turner CCIP to your corporate insurance carriers.

Insurance Company Payroll Audit

Each Enrolled Party is required to maintain payroll records for each Subcontract. Such records must allocate payroll by Workers' Compensation classification(s). Please follow the required Statutory Guidelines in which the project is located. It is important that you properly classify payrolls, as these are reported to the Rating Bureau for promulgation of future experience modifiers for your firm.

All Enrolled Parties shall make available their:

- Books
- Vouchers
- Contracts
- Documents
- Payroll Records
- Prior Loss History Information
- Safety Records or History
- Certified Copies of Insurance Coverages
- Declaration Pages of Coverages
- Certificates of Insurance
- Underwriting Data
- Insurance Cost Information
- OSHA Citations

Or any other data/information as Turner, TSIB, CCIP Insurers including the CCIP Insurer Auditors, or other Turner Representatives may request in the administration or payroll audit of the CCIP, or as required by this Manual. Availability of records must be for a reasonable time during the policy period, any extension, or during a final audit period as required by the insurance policies.

Withholding of Payments

In the event a Turner audit of a Subcontractor's (of any tier) records reveal a discrepancy in the insurance, payroll, safety, or any other information required by the Contract Agreement, or reveals the inclusion of any Insurance Cost in any payment for the Work, Turner shall have the right to withhold or deduct from the Subcontract price all such Insurance Cost amounts. If the Subcontractor or its Sub-Subcontractor fail to timely comply with the provisions of this Manual, Turner may withhold any payments due Subcontractor and its Sub-Subcontractors until such time as they have met the requirements of the CCIP as outlined this Manual.

Failure to submit any information required by the CCIP may result in the withholding of payments by Turner until required documentation is received.

Copyright © 2021 | TSIB | All rights reserved.

Insurance Requirements

A sample COI that includes the requirements for Waiver of Subrogation, Primary and Non-Contributory language, and Additional Insured status is provided at the end of this section of this CCIP Insurance Manual.

The additional insured endorsement utilized for the General Liability policy must provide coverage as broad as that available under the ISO CG 20 10 and CG 20 37 or their equivalent endorsement(s). The insurance obtained by the Subcontractors of all tiers shall not contain any Wrap-Up Exclusion or Wrap-Up Excess Endorsement that would bar or limit available coverage where the Subcontractor is not enrolled in the CCIP, or in instances where liability arises out of Work performed by an Enrolled Subcontractor away from the CCIP jobsite (i.e. offsite activities).

In the event that the law of the state in which the project is located (or another applicable law) limits the indemnity obligations of the Subcontractor, then the indemnity obligations of the Subcontractor shall be enforced to the fullest extent permitted by applicable law, and this Manual shall be read to conform to such law.

Insurance Requirements for Activities/Operations Not Insured Under the CCIP

Refer to your Contract Agreement for limits and coverages.

Workers' Compensation & Employer's Liability

Enrolled Parties will provide evidence of Workers' Compensation insurance coverage for all activities away from the Project Site.

Excluded Parties will provide evidence of Workers' Compensation insurance coverage for all activities at and away from the Project Site.

Coverage	Limits
Part One	
Workers' Compensation	Statutory Limit
Part Two	
Employer's Liability	Annual Limits
Bodily injury by Accident, each accident	$1,000,000
Bodily injury by disease, each employee	$1,000,000
Bodily injury by disease, policy limit	$1,000,000

Copyright © 2021 | TSIB | All rights reserved.

California Projects

The California Workers' Compensation Insurance Rating Bureau (WCIRB) routinely audits the insurers' use of limiting and restricting endorsements to ensure compliance with CA regulations. Title 10 of the California Code of Regulations requires insurers to obtain written documentation from the policyholder confirming that other coverage is in place (or is lawfully Uninsured/Self-Insured) for the employees, operations, and locations excluded by a limiting and restricting endorsement. The California WCIRB completes affirmation audits to ensure compliance with Title 10.

A limiting and restricting endorsement is defined under the California Code as *"an endorsement that excludes from coverage some portion of Workers' Compensation Liability for which the employer is required to secure payment pursuant to the Labor Code."* They include officer, operations, and location exclusions. For Enrolled Contractors, this is coverage away from the project site.

In order to comply with Title 10 of the California Code, if Enrolled, you must confirm existence of Workers' Compensation away from the Project Site by entering your current Workers' Compensation coverage information and checking the affirmation box in Wrapworks. If exempt, you must also check the affirmation box to verify you are lawfully Uninsured/Self-Insured.

General Liability/Umbrella or Excess Liability

Enrolled Parties shall provide evidence of General Liability insurance for offsite activities with Turner and other required parties named as Additional Insured (ISO CG 20 10 and CG 20 37 or their equivalent) to the policy. Coverage will apply away from the Project Site.

Excluded Parties shall provide evidence of General Liability insurance applicable to this Project Site and must name Turner and other required parties named as Additional Insured (ISO CG 20 10 and CG 20 37 or their equivalent) to their policy. Coverage will apply both onsite and offsite.

The required General Liability insurance shall include:

- Completed operations,
- Contractual liability insuring against the liability assumed herein
- Personal injury liability
- Broad form property damage (including completed operations), and explosion
- Collapse and underground hazards

Copyright © 2021 | TSIB | All rights reserved.

With the following minimum limits:

Primary Policy	Limits
Combined Single Limit	As stipulated in Article XXIV of the Contract Agreement, in the Invitation to Bid, or as otherwise instructed by Turner or your hiring Contractor.

Automobile Liability

Any Auto $1,000,000 Combined Single Limit (CSL).

Property Insurance

The CCIP does not provide coverage for Subcontractor's or Sub-Subcontractor's personal property. Subcontractors of any tier must provide their own insurance for owned, leased, rented and borrowed equipment, whether such equipment is located at a Project Site or in transit. Subcontractors of any tier are solely responsible for any loss or damage to their personal property including, without limitation, property or materials created or provided under the Contract Agreement or Sub-Contract Agreement until installed at the Project Site, Subcontractor tools and equipment, scaffolding and temporary structures.

Other Insurance

Refer to your Contract Agreement for any other project-specific insurance, such as, but not limited to:

- Watercraft and Aircraft Liability
- Professional Liability
- Pollution Liability

Copyright © 2021 | TSIB | All rights reserved.

Claims Procedures

Please direct all claims related questions to the Turner Claims Coordinator/Claims Manager or Program Manager listed in Section 2.

General Procedures

Subcontractors and Sub-Subcontractors (of any tier) must immediately report, within 24 hours, all accidents and occurrences of any type, including near misses, to the Site Designated Person.
While all injuries and property damage must be reported immediately, the following list identifies losses which could represent substantial exposure. It is essential that the Site Designated Person be notified immediately of the following events so that a comprehensive investigation can be initiated at once:

- Any injury for which an ambulance is called
- Injury to head or neck
- Possible injury to back or spinal cord
- Unconscious employee
- Possible blindness
- Amputation of limbs
- Fatality
- Heart attack or stroke
- Hospitalization
- Property damage estimated over $1,000
- Near Misses

Subcontractors may be assessed a $5,000 penalty for any claim not reported immediately or within 24 hours of occurrence.

Any involved party should not voluntarily admit liability or responsibility and should cooperate with Turner and the CCIP Insurer Representatives in the accident investigation. The accident should not be discussed with anyone other than Turner Personnel, CCIP Insurer Representatives, or Legal Counsel retained on Turner's and/or the Enrolled Party's behalf.

Turner's Return to Work Program

For information regarding Turner's Return to Work Program, specific claim forms, accident investigation forms, and the Authorization for the Release of Protected Health Information, please refer to the Project's Site Specific Safety Manual for further details.

CCIP Workflow Steps

Enrollment into the CCIP Program is NOT automatic.

1
- General Contractor (GC) distributes the CCIP Manual to the Prime Contractor (Prime Tier) as a Contract Document.
- GC enters Prime Tier's Notice of Award (NOA) information into Wrapworks.

2
- Prime Tier logs into Wrapworks & completes the online Enrollment. Excluded Contractors skip to upload Non-CCIP COI with endosements.
- Enrolled Prime Tiers need to upload all required documents (including Rate Pages & Non-CCIP COI).
- Going forward, Prime Tiers submits monthly payroll reports.

3
- Prime Tiers then enter all of their Subcontractors' (Lower Tier) contract information into Wrapworks, including correct FEIN and contact information.
- Lower Tier completes Enrollment, uploads required documents (including Rate Pages).
- Going forward, Lower Tier submits monthly payroll reports.

4
- All Lower Tiers (of any tier) follow the same procedures as the Prime Tier.

5
- Once TSIB confirms the Enrollment, a Welcome Letter & COI providing Proof of Coverage under the CCIP is sent to the Enrolled Party.
- Enrolled Parties shold advise their Broker/Agent of the coverages that are being provided by the CCIP.
- TSIB will verify the Insurance Costs and Non CCIP COI (if applicable).
- TSIB will monitor each Enrolled Party's CCIP contract for compliance and notify the Enrolled Contractor of any missing information.

6
- Once your work is complete, please submit the close out data & sign via Wrapworks.

This Agreement, made as of the SDS day of SDS in the year SDS by and between CONTRACTOR and SDS (See Subcontract Data Sheet for this Item and all other Items marked SDS) (hereinafter called the Subcontractor).

Witnesseth, that the Subcontractor and Contractor agree as follows:

Description of Work

ARTICLE I. The Subcontractor shall perform and furnish all the work, labor, services, materials, plant, equipment, tools, scaffolds, appliances and other things necessary for SDS (hereinafter called the Work) for and at the SDS (hereinafter called the Project), located on premises at SDS (hereinafter called the Premises), as shown and described in and in strict accordance with the Plans, Specifications, General Conditions, Special Conditions and Addenda thereto prepared by SDS (hereinafter called the Architect) and with the terms and provisions of the General Contract (hereinafter called the General Contract) between Contractor and SDS (hereinafter called the Owner) dated SDS and in strict accordance with the Additional Provisions, page(s) SDS annexed hereto and made a part hereof.

Plans & Specifications

ARTICLE II. The Plans, Specifications, General Conditions, Special Conditions, Addenda and General Contract hereinabove mentioned, are available for examination by the Subcontractor at all reasonable times at the office of Contractor; all of the aforesaid, including this Agreement, being hereinafter sometimes referred to as the Contract Documents. The Subcontractor represents and agrees that it has carefully examined and understands this Agreement and the other Contract Documents, has investigated the nature, locality and site of the Work and the conditions and difficulties under which it is to be performed and that it enters into this Agreement on the basis of its own examination, investigation and evaluation of all such matters and not in reliance upon any opinions or representations of Contractor, or of the Owner, or of any of their respective officers, agents, servants, or employees.

Contract Documents

With respect to the Work to be performed and furnished by the Subcontractor hereunder, the Subcontractor agrees to be bound to Contractor by each and all of the terms and provisions of the General Contract and the other Contract Documents, and to assume toward Contractor all of the duties, obligations and responsibilities that Contractor by those Contract Documents assumes toward the Owner, and the Subcontractor agrees further that Contractor shall have the same rights and remedies as against the Subcontractor as the Owner under the terms and provisions of the General Contract and the other Contract Documents has against Contractor with the same force and effect as though every such duty, obligation, responsibility, right or remedy were set forth herein in full. The terms and provisions of this Agreement with respect to the Work to be performed and furnished by the Subcontractor hereunder are intended to be and shall be in addition to and not in substitution for any of the terms and provisions of the General Contract and the other Contract Documents.

This Subcontract Agreement, the provisions of the General Contract and the other Contract Documents are intended to supplement and complement each other and shall, where possible, be thus interpreted. If, however, any provision of this Subcontract Agreement irreconcilably conflicts with a provision of the General Contract and the other Contract Documents, the provision imposing the greater duty or obligation on the Subcontractor shall govern.

Contractor hereby advises, and the Subcontractor hereby acknowledges, that Contractor in administering this subcontract will be utilizing an information systems infrastructure to process, deliver, and share and/or, at times, to apply electronic signatures to execute certain project documentation through electronic means. As part of the implementation of this infrastructure, the Subcontractor will be given individual, secure log on codes to access the Contractor systems presenting this electronic information. The Subcontractor hereby agrees that such electronic access and the ability of the subcontractor to print out such electronic documents will be in lieu of requiring the delivery of the contents of such electronic documents on printed or paper based media directly to Subcontractor by Contractor or through means of outside third-party services. Delivery of such electronic documents to Subcontractor will be deemed to have occurred when access to the document is made available to Subcontractor in the infrastructure.

At times, Contractor may, through this electronic infrastructure system, initiate Subcontract Change Order documents that will require that the Subcontractor review and approve or reject each such document applying its electronic signature to the approved document on the Contractor software and thereafter, Contractor will apply the electronic signature of its authorized personnel to execute the approved document and electronically deliver the fully executed document to the Subcontractor. The Subcontractor agrees and acknowledges that granting its on-line approval and electronically executing a Subcontract Change Order also affixes the Subcontractor's electronic signature to such document and in so doing it is agreeing that each such document, when electronically countersigned by Contractor, are valid and authentic and enforceable obligations of both parties and to honor and be bound by such documents as if they had been prepared on hard copy and contained the manually applied autograph signatures of the Subcontractor's and Contractor's authorized personnel. Subcontractor hereby agrees to establish, continuously use and maintain a robust and effective Security System/ID and Passwords to protect its identity when addressing and/or signing any electronic contract related documentation issued or exchanged pursuant to this Article.

Optionally, Contractor may use paper documents, where the Subcontractor reviews the proposed paper document and, if it approves, it manually affixes its autograph signature to the paper document and physically returns the signed paper document to Contractor who completes the execution by applying either its autograph or electronic signature to the Subcontract Change Order and a copy of the executed Subcontract Change Order showing the presence of both signatures is physically delivered to the Subcontractor and such Subcontract Change Order shall likewise be deemed by both parties to be valid and authentic and enforceable obligations of both parties.

Contractor may from time to time issue policies or directives applicable to electronic communications, electronic infrastructure and electronic data and Subcontractor shall comply with such policies and directives whether issued as part of this Subcontract or hereafter, and the cost and expense of such compliance shall be borne by the Subcontractor.

Time of Performance & Completion

ARTICLE III. The Subcontractor shall commence the Work when notified to do so by Contractor and shall diligently and continuously prosecute and complete the Work and coordinate the Work with the other work being performed on the Project, in accordance with those project schedules as may be issued from time to time during the performance of the Work and any other scheduling requirements listed in this Agreement, so as not to delay, impede, obstruct, hinder or interfere with the commencement, progress or completion of the whole or any part of the Work or other work on the Project, and in such a manner as necessary or requested by Contractor from time to time to ensure that Contractor satisfies its obligations in a timely manner under the General Contract.

Planning & Scheduling

The Subcontractor shall participate and cooperate in the development of schedules and other efforts to achieve timely completion of the Work providing information for the scheduling of the times and sequence of operations required for its Work to meet Contractor's overall schedule requirements, shall continuously monitor the project schedule so as to be fully familiar with the timing, phasing and sequence of operations of the Work and of other work on the Project, and shall execute the Work in accordance with the requirements of the project schedule including any revisions thereto. Subcontractor shall abide by all requirements of the General Contract relating to the submission of schedule and other information related to the performance of Subcontractor's Work not less than 14 days prior to the time when Contractor is required to provide such materials to Owner under the General Contract, except where Contractor directs otherwise. Subcontractor shall, at no additional cost, provide updates, additional or further detailed schedules and other information as frequently and in whatever form Contractor may request, including but not limited to (1) manpower and cost loaded schedules; (2) information related to its operations as a whole, including but not limited to identifying lower tier subcontractors and suppliers and the status of payments to such subcontractors and suppliers; (3) unions and related benefit funds associated with labor used in the performance of the Work; (4) credit sources and banks providing financing or loans in connection with the performance of the Work or Subcontractor's operations as a whole and any covenants and requirements imposed upon Subcontractor in connection therewith and the status of Subcontractor's compliance with such covenants and requirements; and (5) the status of orders, fabrication and delivery of materials and arrangements for the provision of labor. The foregoing information shall include names and contact information, and Subcontractor acknowledges and agrees that Contractor may contact any persons or entities as it deems necessary to verify or obtain such information.

Subcontractor shall establish and maintain a reasonable accounting system by which records are kept that enable Contractor to readily identify all of Subcontractor's expenses, costs, payments (including to its workers, subcontractors and suppliers, unions, and benefit funds), obligations, budgets, and other financial information related to the Work or this Subcontract. Such records shall include, but not be limited to, all accounting records, written policies and procedures, subcontract files for all tiers, payment vouchers, ledgers, cancelled checks, contract amendments, change order information, insurance documents, and other similar information. Contractor shall have the right to audit, examine, and make copies of all such records (whether written, electronic or another format) as Contractor may determine, and Subcontractor shall facilitate and cooperate with Contractors efforts in this regard. Subcontractor shall impose similar obligations on its subcontractors and vendors to ensure that comparable records kept and Contractor has the right to audit, examine and copy those records.

Delays by Subcontractor

Should the progress of the Work or of the Project be delayed, disrupted, hindered, obstructed, or interfered with by any fault or neglect or act or failure to act of the Subcontractor or any of its officers, agents, servants, employees, subcontractors or suppliers so as to cause any additional cost, expense, liability or damage to Contractor including legal fees and disbursements incurred by Contractor (whether incurred in defending claims arising from such delay or in seeking reimbursement and indemnity from the Subcontractor and its surety hereunder or otherwise) or to the Owner or any damages or additional costs or expenses for which Contractor or the Owner may or shall become liable, the Subcontractor and its surety shall and does hereby agree to compensate Contractor and the Owner for and indemnify them against all such costs, expenses, damages and liability.

Overtime

If the progress of the Work or of the Project be delayed by any fault or neglect or act or failure to act of the Subcontractor or any of its officers, agents, servants, employees, subcontractors or suppliers, then the Subcontractor shall, in addition to all of the other obligations imposed by this Agreement upon the Subcontractor in such case, and at its own cost and expense, work such overtime as may be necessary to make up for all time lost in the completion of the Work and of the Project due to such delay. Should the Subcontractor fail to make up for the time lost by reason of such delay, Contractor shall have the right to cause other Subcontractors to work overtime and to take whatever other action it deems necessary to avoid delay in the completion of the Work and of the Project, and the cost and expense of such overtime and/or such other action shall be borne by the Subcontractor.

Contractor, if it deems necessary, may direct the Subcontractor to work overtime and, if so directed, the Subcontractor shall work said overtime and, provided that the Subcontractor is not in default under any of the terms or provisions of this Agreement or of any of the other Contract Documents and the direction to work overtime was not due in whole or in part to any fault or failure of Subcontractor, Contractor will pay the Subcontractor only for such actual additional wages paid, if any, at rates which have been approved by Contractor plus taxes imposed by law on such additional wages, plus workers' compensation insurance, liability insurance and levies on such additional wages if required to be paid by the Subcontractor to comply with Subcontractor's obligations under this Agreement. Subcontractor acknowledges that in the event that it may intend to pursue a claim of inefficiency, loss of productivity or other similar or related request for additional compensation, Subcontractor may rely only on evidence indicating the actual inefficiency, loss of productivity or other similar consequence as it occurred on the Project and agrees that no reports, analyses, data, industry or academic studies or any other evidence that do not exclusively rely on and pertain to the Work performed at the Project shall be used or in any way considered, in whole or in part, in connection with the resolution of such a claim, whether by Contractor or any forum for dispute resolution.

Price

ARTICLE IV. The sum to be paid by Contractor, out of funds received from the owner, to the Subcontractor for the satisfactory performance and completion of the Work and of all of the duties, obligations and responsibilities of the Subcontractor under this Agreement and the other Contract Documents shall be **SDS** (Hereinafter called the Price) subject to additions and deductions as herein provided.

The Price includes all Federal, State, County, Municipal and other taxes imposed by law and based upon labor, services, materials, equipment or other items acquired, performed, furnished or used for and in connection with the Work, including but not limited to sales, use and personal property taxes payable by or levied or assessed against the Owner, Contractor or the Subcontractor. Where the law requires any such taxes to be stated and charged separately, the total price of all items included in the Work plus the amount of such taxes shall not exceed the Price.

Progress Payments

On or before the last day of each month the Subcontractor shall submit to Contractor, in the form required by Contractor, a written requisition for payment showing the proportionate value of the Work installed to that date, from which shall be deducted: a reserve of **SDS** ; all previous payments; all amounts and claims against Subcontractor, by Contractor or any third party, for which Subcontractor is responsible hereunder; and all charges for services, materials, equipment and other items furnished by Contractor to or chargeable to the Subcontractor; and the balance of the amount of such requisition, as approved by Contractor and the Architect and for which payment has been received by Contractor from the Owner, shall be due and paid to the Subcontractor on or about the fifteenth (15th) day of the succeeding month or in accordance with the Contract Documents. Contractor shall have the right, at its sole discretion, to issue payments to Subcontractor by way of joint checks to Subcontractor and suppliers and/or vendors of Subcontractor, and Subcontractor agrees to cooperate fully in facilitating the making of such joint payments.

Payments in General

The obligation of Contractor to make a payment under this Agreement, whether a progress or final payment, or for extras or change orders or delays to the Work, is subject to the express condition precedent of payment therefor by the Owner. If Contractor has provided payment or performance bonds or a combination payment and performance bond, the obligation of Contractor and its Surety under any of those bonds to make any payment (whether a progress payment or final payment) to a claimant on that bond is similarly subject to the express condition precedent of payment therefor by the Owner.

The Subcontractor shall submit with its first requisition for payment a detailed schedule showing the breakdown of the Price into its various parts for use only as a basis of checking the Subcontractor's monthly requisitions.

Contractor reserves the right to advance the date of any payment (including the final payment) under this Agreement if, in its sole judgment, it becomes desirable to do so.

The Subcontractor agrees that, if and when requested to do so by Contractor, it shall furnish such information, evidence and substantiation as Contractor may require with respect to the nature and extent of all obligations incurred by the Subcontractor for or in connection with the Work, all payments made by the Subcontractor thereon, and the amounts remaining unpaid, to whom and the reasons therefor.

Final Payment

Final payment to the Subcontractor shall be made only with funds received by Contractor from the Owner, the Construction Lender or the Owner's Agent as final payment for Work under the General Contract. Final payment to Contractor by the Owner shall be an express condition precedent that must occur before Contractor shall be obligated to make final payment to the Subcontractor. In addition, final payment by Contractor to the Subcontractor shall not become due and payable until the following other express conditions precedent have been met: (1) the completion and acceptance of the Work by Contractor and the Architect; (2) provision by the Subcontractor of evidence satisfactory to Contractor that there are no claims, obligations or liens outstanding or unsatisfied for labor, services, materials, equipment, taxes or other items performed, furnished, or incurred for or in connection with the Work; (3) execution and delivery by the Subcontractor, in a form satisfactory to Contractor of a general release running to and in favor of Contractor and the Owner; and (4) complete and full satisfaction of all claims, demands and disputes, and all obligations and responsibilities of Subcontractor, arising out of or related to the Subcontract, including those as between Contractor and Subcontractor as well as those between Subcontractor and any third party. Should there be any such claim, obligation or lien or unsatisfied obligation or responsibility whether before or after final payment is made, the Subcontractor shall pay, refund or deliver to Contractor (1) all monies that Contractor and/or the Owner shall pay in satisfying, discharging or defending against any such claim, obligation or lien or any action brought or judgment recovered thereon and all costs and expenses, including legal fees and disbursements, incurred in connection therewith; and (2) such amounts as Contractor or Owner shall, in their sole discretion, determine to be an amount sufficient to protect Contractor and Owner therefrom (in lieu of payment of such amounts, Subcontractor may, at Owner's and Contractor's sole discretion, deliver a bond satisfactory to Contractor and Owner). Such refund and payment shall be made within ten (10) days of request by Contractor to Subcontractor for same. The final payment shall be due within forty (40) days after all of these express conditions precedent have been met.

Liens by Others

If any claim or lien is made or filed with or against Contractor, the Owner, the Project, the Premises or the Project funds by any person claiming that the Subcontractor or any subcontractor or other person under subcontract to Subcontractor, or any person or entity employed or engaged by or through Subcontractor at any tier, has failed to make payment for any labor, services, materials, equipment, taxes or other items or obligations furnished or incurred for or in connection with the Work, or if any such claim or lien is filed or presented, or if Contractor, in good faith, believes that such a claim or lien may be filed or brought, or if at any time there shall be evidence of such nonpayment or of any claim or lien for which, if established, Contractor or the Owner might become liable and which is chargeable to the Subcontractor, or if the Subcontractor or any subcontractor or other person under subcontract to Subcontractor, or any person or entity employed or engaged by or through Subcontractor at any tier causes damage to the Work or to any other work on the Project, or if the Subcontractor fails to perform or is otherwise in default under any of the terms or provisions of this Agreement, Contractor shall have the right (A) to retain from any payment then due or thereafter to become due an amount which it deems sufficient to (1) satisfy, discharge and/or defend against any such claim or lien or any action which may be brought or judgment which may be recovered thereon, (2) make good any such nonpayment, damage, failure or default, and (3) compensate Contractor and the Owner for and indemnify and hold them harmless against any and all losses, liability, damages, costs and expenses, including legal fees and disbursements, which may be sustained or incurred by either or both of them in connection therewith ; and (B) to demand that Subcontractor provide, within ten (10) days of Contractor's request therefore, proof to the satisfaction of Contractor and Owner that such non-payment, claim or lien has been fully satisfied, dismissed and discharged. Upon the failure of Subcontractor to fulfill the requirements of a demand issued by Contractor pursuant to subsection (B) above, Contractor may, in such manner as Contractor may in its sole discretion determine, secure the satisfaction, dismissal and discharge of such claim, by payment or otherwise, and Subcontractor shall within ten (10) days of demand therefore, be liable for and pay to Contractor all amounts (including legal fees and disbursements) incurred or suffered by Contractor or Owner arising out of or related thereto. Contractor shall, in addition, have the right to apply and charge against the Subcontractor so much of the amount retained as may be required for the foregoing purposes. Subcontractor further agrees to indemnify, hold harmless and defend Contractor and Owner, upon demand, for any and all such claims, liens, and the costs, expenses (including legal fees and disbursements), damages and liabilities arising out of or related thereto. Subcontractor acknowledges (1) that discharge of such liens or claims by bond imposes liability upon a surety and Contractor, and (2) that Contractor is not required to discharge such lien or claims by bond when exercising its rights hereunder. Subcontractor agrees that should there be any amounts due or which may become due to Subcontractor in connection with any other subcontracts between Contractor and Subcontractor or other obligations that Contractor may have to Subcontractor, Contractor shall be entitled to withhold payment under such other subcontract or obligations to the extent that Contractor believes that the unpaid balance of this Subcontract may not be adequate to satisfy Subcontractor’s obligations to Contractor hereunder.

Effect of Payment

No payment (final or otherwise) made under or in connection with this Agreement shall be conclusive evidence of the performance of the Work or of this Agreement, in whole or in part, and no such payment shall be construed to be an acceptance of defective, faulty or improper work or materials nor shall it release the Subcontractor from any of its obligations under this Agreement; nor shall entrance and use by the Owner constitute acceptance of the Work or any part thereof. The failure of Subcontractor to fully perform and satisfy any or all obligations set forth in this Article IV shall constitute a default, entitling Contractor to take action as described in Article XI.

Subcontractor acknowledges and agrees that to the extent that payments received by Subcontractor include amounts for Work performed by subcontractors to Subcontractor or services or materials provided to Subcontractor by suppliers, vendors, workers employed by or through Subcontractor, all such payments received by Subcontractor shall be deemed to have been received by Subcontractor as trustee with those entitled to receive payment from Subcontractor as beneficiaries of such amounts, and Subcontractor shall hold such funds separately and utilize such amounts only for the purpose of making payment to these beneficiaries. In the event that Subcontractor subsequently determines that a beneficiary is not entitled to receipt of payment, Subcontractor shall return such unpaid funds to Contractor.

Extension of Time & Delays

ARTICLE V. Should the Subcontractor be delayed, obstructed, hindered or interfered with in the commencement, prosecution or completion of the Work by any cause including but not limited to any act, omission, neglect, negligence or default of Contractor or of anyone employed by Contractor or by any other contractor or subcontractor on the Project, or by the Architect, the Owner or their contractors, subcontractors, agents or consultants, or by damage caused by fire or other casualty or by the combined action of workers or by governmental directive or order in no way chargeable to the Subcontractor, or by any extraordinary conditions arising out of war or government regulations, or by any other cause beyond the control of and not due to any fault, neglect, act or omission of the Subcontractor, its officers, agents, employees, subcontractors or suppliers, then except where the General Contract has specific requirements at variance with the foregoing, in which case the requirements of the General Contract shall govern, the Subcontractor shall be entitled to an extension of time for a period equivalent to the time lost by reason of any and all of the aforesaid causes; provided, however, that the Subcontractor shall not be entitled to any such extension of time unless the Subcontractor (1) notifies Contractor in writing of the cause or causes of such delay, obstruction, hindrance or interference within forty eight (48) hours of the commencement thereof and (2) demonstrates that it could not have anticipated or avoided such delay, obstruction, hindrance or interference and has used all available means to minimize the consequences thereof. Subcontractor acknowledges that provision of such notice is an essential condition precedent to Subcontractor's rights in connection with any such delays, obstructive hindrances or interferences to Contractor's ability to fully identify, and expeditiously, address and avoid such cause or causes, and, accordingly, Subcontractor expressly waives all rights with respect to any such cause or causes for which notice hereunder was not provided. Notwithstanding the foregoing, if the General Contract is at variance with granting such time extension, then the provisions of the General Contract shall control.

The Subcontractor agrees that it shall not be entitled to nor claim any cost reimbursement, compensation or damages for any delay, obstruction, hindrance or interference to the Work except to the limited extent that Contractor has actually recovered corresponding cost reimbursement, compensation or damages from the Owner under the Contract Documents for such delay, obstruction, hindrance or interference, and then only to the extent of the amount, if any, which Contractor on behalf of the Subcontractor, actually received from the Owner on account of such delay, obstruction, hindrance or interference. Notwithstanding any term or provision herein to the contrary, Subcontractor expressly waives and releases all claims or rights to recover lost profit (except for profit on work actually performed), recovery of overhead (including home office overhead), and any other indirect damages, costs or expenses in any way arising out of or related to the Agreement, including the breach thereof by Contractor, delays, charges, acceleration, loss of efficiency or productivity disruptions and interferences with the performance of the work.

It shall be an express condition precedent to any obligation on the part of Contractor to make payment of any such cost, reimbursement, compensation or damages to the Subcontractor hereunder that Contractor shall first be determined to be entitled to such compensation on behalf of the Subcontractor and then receive such payment from Owner, and Subcontractor expressly acknowledges that Contractor is not obligated or required to pursue Subcontractor claims as against Owner if Contractor, in its sole discretion, after review of Subcontractor's claim, has deemed the claim to lack merit in whole or in part.

The Subcontractor agrees that it shall contribute a fair and proportionate share of the costs of advancing the claims of the Subcontractor for delay, including but not limited to legal and other professional fees.

Freight Charges & Shipments

ARTICLE VI. The Subcontractor in making or ordering shipments shall not consign or have consigned materials, equipment or any other items in the name of Contractor. Contractor is under no obligation to make payment for charges on shipments made by or to the Subcontractor but may, at its option, pay such charges, in which case the Subcontractor shall reimburse Contractor for the amount of such payments plus a service charge of twenty-five percent (25%) of the amount so paid.

Dimensions

ARTICLE VII. Notwithstanding the dimensions on the Plans, Specifications and other Contract Documents it shall be the obligation and responsibility of the Subcontractor to take such measurements as will ensure the proper matching and fitting of the Work covered by this Agreement with contiguous work.

Shop Drawings

The Subcontractor shall prepare and submit to Contractor such shop drawings as may be necessary to describe completely the details and construction of the Work. Approval of such shop drawings by Contractor and/or the Architect shall not relieve the Subcontractor of its obligation to perform the Work in strict accordance with the Plans, Specifications, the Additional Provisions hereof and the other Contract Documents, nor of its responsibility for the proper matching and fitting of the Work with contiguous work and the coordination of the Work with other work being performed on the site, which obligation and responsibility shall continue until completion of the Work.

The Subcontractor’s submission of a shop drawing to Contractor shall constitute the Subcontractor’s representation, upon which Contractor may rely, that the Subcontractor has reviewed the submission for accuracy and compliance with all Contract Documents and that wherever engineering is required to be performed, same has been performed by a qualified and licensed engineer. Furthermore, the review of the Shop Drawing by Contractor shall not constitute an undertaking by Contractor to identify deficiencies in the submission, that being an undertaking within the sole responsibility of the Subcontractor.

Contiguous Work

Should the proper and accurate performance of the Work hereunder depend upon the proper and accurate performance of other work not covered by this Agreement, the Subcontractor shall carefully examine such other work, determine whether it is in fit, ready and suitable condition for the proper and accurate performance of the Work hereunder, use all means necessary to discover any defects in such other work, and before proceeding with the Work hereunder, report promptly any such improper conditions and defects to Contractor in writing and allow Contractor a reasonable time to have such improper conditions and defects remedied. Should Subcontractor fail to comply with the requirements of this Article, Subcontractor shall bear all costs incurred by Contractor, Owner and other subcontractors, and shall not be entitled to extensions of time and adjustments in Price, that could have been avoided by Subcontractor's compliance with the requirements of this Article.

Interpretation of Plans & Specifications

ARTICLE VIII. The Work hereunder is to be performed and furnished under the direction and to the satisfaction of both the Architect and Contractor. The decision of the Architect as to the true construction, meaning and intent of the Plans and Specifications shall be final and binding upon the parties hereto. Contractor will furnish to the Subcontractor such additional information and Plans as may be prepared by the Architect to further describe the Work to be performed and furnished by the Subcontractor and the Subcontractor shall conform to and abide by the same.

The Subcontractor shall not make any changes, additions and/or omissions in the Work except upon written order of Contractor as provided in Article IX hereof.

Change Orders, Additions & Deductions

ARTICLE IX. Contractor reserves the right, from time to time, whether the Work or any part thereof shall or shall not have been completed, to make changes, additions and/or omissions in the Work as it may deem necessary, upon written order to the Subcontractor. The value of the work to be changed, added or omitted shall be stated in said written order and shall be added to or deducted from the Price.

The value of the work to be changed, added or omitted shall be determined by the lump sum or unit prices, if any, stipulated herein for such work. If no such prices are stipulated, such value shall be determined by whichever of the following methods or combination thereof Contractor may elect:

(a) By adding or deducting a lump sum or an amount determined by a unit price agreed upon between the parties hereto.

(b) By adding (1) the actual net cost to the Subcontractor of labor in accordance with the established rates, including required union benefits, premiums the Subcontractor is required to pay for workmen's compensation and liability insurance, and payroll taxes on such labor, (2) the actual cost to the Subcontractor of materials and equipment and such other direct costs as may be approved by Contractor less all savings, discounts, rebates and credits, (3) an allowance of **SDS** for overhead on items (1) and (2) above, and (4) an allowance of **SDS** for profit on items (1), (2) and (3) above.

Should the parties hereto be unable to agree as to the value of the work to be changed, added or omitted, the Subcontractor shall proceed with the work promptly under the written order of Contractor from which order the stated value of the work shall be omitted, and the determination of the value of the work, if not resolved in the normal course, shall be addressed pursuant to the dispute resolution procedures in accordance with Article XIX.

In the case of omitted work Contractor shall have the right to withhold from payments due or to become due to the Subcontractor an amount which, in Contractor's opinion, is equal to the value of such work until such time as the value thereof is determined by agreement or by the Architect as hereinabove provided.

All changes, additions or omissions in the Work ordered in writing by Contractor shall be deemed to be a part of the Work hereunder and shall be performed and furnished in strict accordance with all of the terms and provisions of this Agreement and the other Contract Documents. Subcontractor accepts the responsibility to keep its surety informed of all such modifications to its contract. The obligations of Subcontractor and Subcontractor's Surety shall not be reduced, waived or adversely affected by the issuance of such change orders, additions or deductions even if Subcontractor fails to inform Surety of same and Contractor shall not be required to obtain consent of the Surety to such modifications.

Subcontractor shall provide Contractor with written notice of any circumstance or direction given by Contractor which Subcontractor may regard as a change, addition and/or omission or which may otherwise serve as the basis for a request for an increase in Price or extension of time within 5 days of the receipt of the direction or the occurrence of the event giving rise to such a request. Such written notice shall provide a full explanation of the circumstances or direction and the extent of the increase and extension sought, including a detailed breakdown and analysis supporting such request. Failure of the Subcontractor to provide such written notice shall constitute a waiver of Subcontractor's right to any such increase or extension.

Subcontractor acknowledges that the General Contract may include provisions whereby Contractor is required to provide notice, information, reports and analyses in the event that Contractor intends to pursues or which may affect Contractor's right's to an extension of time or increase in Contractor's price to the Owner, whether by way of change order or otherwise, and that the failure to provide such notice, information, reports and analyses may result in a waiver or forfeiture of the right to such an extension or increase. Accordingly, Subcontractor agrees that Subcontractor shall provide all such notices, information, reports and analyses to Contractor, in the same form, content and manner as Contractor is required to provide to Owner under the General Contract in the event that Subcontractor intends to pursue an extension of time or increase in Price. Subcontractor shall provide all such notices, information, reports and analyses to Contractor not later than 3 business days prior to the time by which Contractor must submit corresponding notice, information, reports and analyses to Owner so that Contractor can pursue like extensions and /or increases in Contractor's price from the Owner. Subcontractor acknowledges that its failure to comply with the terms of this paragraph may result in the loss of or prejudice to Contractor's ability to receive adjustments and extensions time from Owner. Subcontractor therefore agrees that it shall be deemed to have waived and forfeited all such rights in the event that it fails to provide notice, information, reports and analyses to Contractor as required by this Article. The terms and provisions of the paragraph are neither intended to relieve Subcontractor of the obligation to provide timely notices, information, reports and analyses, nor to extend shorter durations, required by the Contract Documents.

Notwithstanding the forgoing, the Subcontractor agrees that it shall not be entitled to nor claim any cost reimbursement, compensation, damages or extensions of time attributable to any changes, additions and/or omissions directed by Contractor except to the limited extent that Contractor has actually recovered corresponding cost reimbursement, compensation, damages or extensions of time from the Owner under the Contract Documents for such changes, additions and/or omissions and then only to the extent of the amount, if any, which Contractor on behalf of the Subcontractor, actually received from the Owner on account of such delay, obstruction, hindrance or interference. The preceding sentence shall not apply in a situation in which Contractor directed the performance of changes, additions and/or omissions by Subcontractor notwithstanding express language in the General Contract clearly indicating that Contractor is not entitled to recover a corresponding cost reimbursement, compensation, damages or extensions of time from the Owner.

Inspection & Defective Work

ARTICLE X. The Subcontractor shall at all times provide sufficient, safe and proper facilities for the inspection of the Work by Contractor, the Architect, and their authorized representatives in the field, at shops or at any other place where materials or equipment for the Work are in the course of preparation, manufacture, treatment or storage. The Subcontractor shall, within twenty-four (24) hours after receiving written notice from Contractor to that effect, proceed to take down all portions of the Work and remove from the premises all materials whether worked or unworked, which the Architect, Contractor, Owner or any of its design consultants shall condemn as unsound, defective or improper or as in any way failing to conform to this Agreement or the Plans, Specifications or other Contract Documents, and the Subcontractor, at its own cost and expense, shall replace the same with proper and satisfactory work and materials and make good all work damaged or destroyed by or as a result of such unsound, defective, improper or nonconforming work or materials or by the taking down, removal or replacement thereof.

Failure to Prosecute, etc.

ARTICLE XI. Should the Subcontractor at any time, whether before or after final payment or completion of the Work, refuse or neglect to supply a sufficiency of skilled workers or materials of the proper quality and quantity, or fail in any respect to prosecute the Work with promptness and diligence, or cause by any act or omission the stoppage, impede, obstruct, hinder or delay of or interference with or damage to the work of Contractor or of any other contractors or subcontractors on the Project, or fail in the performance of any of the terms and provisions of this Agreement or of the other Contract Documents, or should the Architect, Contractor, Owner or any of its design consultants, determine that the Work or any portion thereof is not being performed in accordance with the Contract Documents, or should there be filed by or against the Subcontractor a petition in bankruptcy or for an arrangement or reorganization, or should the Subcontractor become insolvent or be adjudicated a bankrupt or go into liquidation or dissolution, either voluntarily or involuntarily or under a court order, or make a general assignment for the benefit of creditors, or otherwise acknowledge insolvency, then in any of such events, each of which shall constitute a default hereunder on the Subcontractor's part, Contractor shall have the right, in addition to any other rights and remedies provided by this Agreement and the other Contract Documents or by law, at one time or in phases at Contractor's discretion, after three (3) days written notice to the Subcontractor mailed or delivered to the last known address of the latter, (a) to perform and furnish through itself or through others any such labor or materials for all or any portion of the Work and to deduct the cost thereof from any monies due or to become due to the Subcontractor under this Agreement, (b) to terminate the employment of the Subcontractor for all or any portion of the Work, and/or (c) enter upon the premises and take possession, for the purpose of completing all or any portion of the Work,, of all materials, equipment, scaffolds, tools, appliances and other items thereon as Contractor may select, all of which the Subcontractor hereby authorizes Contractor to employ and/or communicate with any person or persons in connection with the completion of the Work and/or to provide all the labor, services, materials, equipment and other items required therefor. In case of Contractor taking action under this Article, including termination of the employment of the Subcontractor, the Subcontractor shall not be entitled to receive any further payment under this Agreement until the Work shall be wholly completed to the satisfaction of Contractor, Owner and the Architect and shall have been accepted by them, at which time, if the unpaid balance of the amount to be paid under this Agreement shall exceed the cost and expense incurred by Contractor in completing the Work, such excess shall be paid by Contractor to the Subcontractor; but if such cost and expense shall exceed such unpaid balance, then the Subcontractor and its surety, if any, shall pay the difference to Contractor. Such cost and expense shall include, not only the cost of completing the Work to the satisfaction of Contractor and the Architect and of performing and furnishing all labor, services, materials, equipment, and other items required therefore, but also all losses, damages, costs and expenses, (including legal fees and disbursements incurred in connection with reprocurement, in defending claims arising from such default and in seeking recovery of all such cost and expense from the Subcontractor and/or its surety), and disbursements sustained, incurred or suffered by reason of or resulting from the Subcontractor's default. Should Contractor take action by effectuating the provisions of this paragraph, and should it subsequently be determined that such action, including a termination effectuated by the terms of this Article, was improper, such termination shall be treated as a termination for convenience pursuant to Article XXI below. Subcontractor hereby transfers and assigns to Contractor the all rights under agreements that Subcontractor may have with subcontractors to Subcontractor, suppliers and vendors in connection with the Work or the Project, which transfers and assignments may be accepted at Contractor's sole discretion in the event that Contractor has taken action under this Article. Subcontractor agrees to fully cooperate with Contractor in pursuing Contractor's rights hereunder and that Contractor shall not be required to defer or delay action taken pursuant to this Article during the pendency of any review, investigation, evaluation or assessment by Subcontractor or its surety.

It is recognized that if the Subcontractor institutes or has instituted against it a case under Title 11 of the United States Code (Bankruptcy Code), such event could impair or frustrate the Subcontractor's performance of this Agreement. Accordingly, it is agreed that upon the occurrence of any such event, Contractor shall be entitled to request of Subcontractor or its trustee or other successor adequate assurances of future performance. Failure to comply with such request within ten (10) days of delivery of the request shall entitle Contractor, in addition to any other rights and remedies provided by this Agreement or by law, to terminate this Agreement. Pending receipt of adequate assurances of performance and actual performance in accordance herewith, Contractor shall be entitled to perform and furnish through itself or through others any such labor, materials or equipment for the Work as may be necessary to maintain the progress of the Work and to deduct the cost thereof from any monies due or to become due to the Subcontractor under this Agreement. In the event of such bankruptcy proceedings, this Agreement shall terminate if the Subcontractor rejects this Agreement or if there has been a default and the Subcontractor is unable to give adequate assurance that it will perform as provided in this Agreement or otherwise is unable to comply with the requirements for assuming this Agreement under the applicable provisions of the Bankruptcy Code.

Subcontractor, in addition to any other rights available to Contractor hereunder, agrees to indemnify, hold harmless and defend Contractor from and against any and all claims, demands, suits, damages, judgments, liabilities, costs and expenses (including legal fees and disbursements) arising out of or related to Subcontractor's breach of any term of the Agreement.

Loss or Damage to Work

ARTICLE XII. Contractor shall not be responsible for any loss or damage to the Work to be performed and furnished under this Agreement, however caused, until after final acceptance thereof by Contractor and the Architect, nor shall Contractor be responsible for loss of or damage to materials, tools, equipment, appliances or other personal property owned, rented or used by the Subcontractor or anyone employed by it in the performance of the Work, however caused.

Builder's Risk Insurance

Contractor or Owner shall effect and maintain All-Risk Builder's Risk insurance in accordance with the Contract Documents upon all Work, materials and equipment incorporated in the Project and all materials and equipment on or about the Premises intended for permanent use or incorporation in the Project or incident to the construction thereof, the capital value of which is included in the cost of the Work, but not including any contractors' machinery, tools, equipment or other personal property owned, rented or used by the Subcontractor or anyone employed by it in the performance of the Work.

A loss insured under Contractor or the Owner's All-Risk Builder's Risk insurance shall be adjusted by the Contractor or the Owner as fiduciary and made payable to Contractor or the Owner as fiduciary for the Insureds, as their interests may appear. Contractor or the Owner shall pay Subcontractors their just shares of insurance proceeds received by Contractor or the Owner, and by appropriate agreements, written where legally required for validity, and shall require Subcontractors to make payments to their subcontractors in a similar manner.

Cleaning Up

ARTICLE XIII. The Subcontractor shall, at its own cost and expense, (1) keep the Premises free at all times from all waste materials, packaging materials and other rubbish accumulated in connection with the execution of its Work by collecting and depositing said materials and rubbish in locations or containers as designated by Contractor from which it shall be removed by Contractor from the Premises without charge, (2) clean and remove from its own Work and from all contiguous work of others any soiling, staining, mortar, plaster, concrete or dirt caused by the execution of its Work and make good all defects resulting therefrom (3) at the completion of its Work in each area, perform such cleaning as may be required to leave the area "broom clean", and (4) at the entire completion of its Work, remove all of its tools, equipment, scaffolds, shanties and surplus materials. Should the Subcontractor fail to perform any of the foregoing to Contractor's satisfaction, Contractor shall have the right to perform and complete such work itself or through others and charge the cost thereof to the Subcontractor.

Ethics & Compliance

ARTICLE XIV. The Subcontractor shall obtain and pay for all necessary permits and licenses pertaining to the Work and shall comply with all Federal, State, Municipal and local laws, ordinances, codes, rules, regulations, standards, orders, notices and requirements, including but not limited to those relating to safety, storm water management, discrimination in employment, fair employment practices, immigration laws or equal employment opportunity, and whether or not provided for by the Plans, Specifications, General Conditions, or other Contract Documents, without additional charge or expense to Contractor and shall also be responsible for and correct, at its own cost and expense, any violations thereof resulting from or in connection with the performance of its Work. Each requisition for payment shall constitute a representation and warranty that Subcontractor is in compliance with applicable law.

The Subcontractor shall at any time upon demand furnish such proof as Contractor may require showing such compliance and the correction of such violations. The Subcontractor agrees to save harmless and indemnify Contractor from and against any and all loss, injury, claims, actions, proceedings, liability, damages, fines, penalties, costs and expenses, including legal fees and disbursements, caused or occasioned directly or indirectly by the Subcontractor's failure to comply with any of said laws, ordinances, rules, regulations, standards, orders, notices or requirements or to correct such violations therefore resulting from or in connection with the performance of Work.

The Immigration and Nationality Act as amended by the Immigration Reform and Control Act of 1986 (IRCA) makes it illegal for employers to knowingly hire persons who are not authorized to work in the United States. For all employees, employers are required to complete an Employment Eligibility Verification form I-9 which requires the prospective employee to produce documentation that establishes identity and employment eligibility. For more information visit www.uscis.gov, or speak to your attorney. Each subcontractor is solely responsible for properly completing Employment Eligibility Verifications for their own employees.

Subcontractor acknowledges represents and warrants that Subcontractor is aware of and understands IRCA, that Subcontractor is in compliance with IRCA, and that Subcontractor is not knowingly employing workers who are not authorized to work in the United States. Subcontractor agrees that Subcontractor will not employ any worker under this subcontract for whom Subcontractor has not completed and maintained I-9 verification. Subcontractor agrees that if Subcontractor acquires knowledge (constructive or otherwise, including receipt of a "no match" letter from Social Security Administration) indicating that one of Subcontractor's workers on this project may not be authorized to work in the United States, despite Subcontractor having conducted a facially valid I-9 verification, that Subcontractor will exercise due diligence as required by law to confirm authorization status and take appropriate action which may include termination of employment. Subcontractor represents and warrants that they will not subcontract to or utilize labor sources that it knows or has reason to know violate IRCA.

Contractor has a longstanding reputation for honesty and integrity in its business dealings and for its corporate policies promoting lawful and ethical behavior. Contractor is committed to upholding that reputation and has adopted a Standard of Business Conduct Policy Statement which governs the actions of all of its employees. Pursuant to that Policy Statement, Contractor employees are prohibited from accepting bribes or kickbacks in any form and, further, are prohibited from accepting goods or services provided by a subcontractor, supplier or vendor for the personal benefit of the employee, his or her relatives, or any entity in which the employee or his or her relatives has a personal interest. This prohibition includes, but is not limited to; work performed on an employee's residence and applies regardless of whether the beneficiary of the goods or services pays for them. Therefore, if the Subcontractor offers or provides a bribe or kickback to any employee, or offers or provides goods or services to any employee, his or her relatives, or any entity in which the employee or his or her relatives has a financial interest, the Subcontractor will be considered to be in material breach of this Subcontract. Subcontractor undertakes the commitment to advise Contractor of any action by any entity or person associated with the project that Subcontractor believes violates any applicable law, rule or regulation. Subcontractor's violation of any of the foregoing shall be considered as Subcontractor's failure to perform its obligations under the terms and conditions of this Agreement. Such failure shall be considered adequate and justifiable grounds for Contractor to effectuate its rights and remedies under the provisions of Article XI of this Agreement.

The provisions of this Article must be incorporated into any subcontract Subcontractor enters into in connection with the performance of the Work.

Harassment

ARTICLE XV. It is the goal of Contractor to promote a work environment at the Project that is free from harassment of any kind. Contractor has ZERO TOLERANCE for harassment, including harassment on the basis of race, sex, gender, gender identity, gender expression, transgender status, sexual orientation, pregnancy, childbirth and other pregnancy-related conditions, color, national origin, ancestry, age, religious creed, citizenship, marital status (including registered domestic partners), parental status, physical disability, mental disability, medical condition, genetic information, military or veteran status (including protected veteran status), or any other characteristic or status protected by law. Subcontractor agrees to be bound by the Policy Statement on Harassment referenced in Article XXIII below, and any violation or suspected violation of such policy by Subcontractor or any of its officers, agents, servants, employees, subcontractors or suppliers shall be considered as Subcontractor's failure to perform its obligations under the terms and conditions of this Agreement. Such failure shall be considered adequate and justifiable grounds for Contractor to effectuate its rights and remedies under the provisions of Article XI of this Agreement. Subcontractor shall actively promote a harassment-free work environment among its officers, agents, servants, employees, subcontractors, and suppliers.

Labor to be Employed

ARTICLE XVI. The Subcontractor shall not employ workers, means, materials or equipment or assign work in any manner which may cause strikes, work stoppages or any disturbances by workers employed by the Subcontractor, Contractor or other contractors or subcontractors on or in connection with the Work or the Project or the location thereof. The Subcontractor agrees that all disputes as to jurisdiction of trades shall be adjusted in the manner or by a process that Contractor may require, including, if Contractor so requires, in accordance with any plan for the settlement of jurisdictional disputes to which Contractor may be bound in connection with the Project which may be in effect either nationally or in the locality in which the Work is being done. Subcontractor agrees that it shall assign work consistent with any such plan and shall be bound and abide by all such adjustments and settlements of jurisdictional disputes, provided that the provisions of this Article shall not be in violation of or in conflict with any provisions of law applicable to the settlement of such disputes. Should the Subcontractor fail to carry out or comply with any of the foregoing provisions, Contractor shall have the right, in addition to any other rights and remedies provided by this Agreement or the other Contract Documents or by law, after three (3) days written notice mailed or delivered to the last known address of the Subcontractor, to terminate this Agreement or any part thereof or the employment of the Subcontractor for all or any portion of the Work, and, for the purpose of completing the Work, to enter upon the Premises and take possession, in the same manner, to the same extent and upon the same terms and conditions as set forth in Article XI of this Agreement.

The Project or General Contract may be subject to Federal prevailing wage requirements, such as the Davis-Bacon Act or the Walsh-Healy Act, or other similar laws, statutes or requirements at a state or local level. Subcontractor shall strictly comply with all applicable prevailing wage laws, statutes or requirements and shall maintain such records as necessary to establish the amount of wages and other compensation paid to workers in connection with the Project and shall submit to Turner, as a condition for payment, certified payrolls in the form prescribed by any such laws, regulations or requirements. Subcontractor expressly agrees that the indemnification obligations set forth in this Agreement shall apply to any violations by Subcontractor of any such laws, statutes or regulations and the failure to maintain records as required herein.

Taxes & Contributions

ARTICLE XVII. The Subcontractor for the Price herein provided, hereby accepts and assumes exclusive liability for and shall indemnify, protect and save harmless Contractor and the Owner from and against the payment of:

1. All contributions, taxes or premiums (including interest and penalties thereon) which may be payable under the Unemployment Insurance Law of any State, Federal Social Security Act, Federal, State, County and/or Municipal Tax Withholding Laws, or any other law, measured upon the payroll of or required to be withheld from employees, by whomsoever employed, engaged in the Work to be performed and furnished under this Agreement.
2. All sales, use, personal property and other taxes (including interest and penalties thereon) required by any Federal, State, County, Municipal or other law to be paid or collected by the Subcontractor or any of its subcontractors or vendors or any other person or persons acting for, through or under it or any of them, by reason of the performance of the Work or the acquisition, ownership, furnishing or use of any materials, equipment, supplies, labor, services or other items for or in connection with the Work.
3. All pension, welfare, vacation, annuity and other union benefit contributions payable under or in connection with labor agreements with respect to all persons, by whomsoever employed, engaged in the Work to be performed and furnished under this Agreement.

In furtherance of, and in addition to the agreements, duties obligations and responsibilities of the Subcontractor with respect to the payment of sales, use, personal property and other taxes set forth in Articles IV and XVII of this Agreement, the Subcontractor agrees to reimburse and otherwise indemnify Contractor and the Owner for any expenses, including legal fees and litigation arising from, or related to the Subcontractor's failure to pay any sales, use, personal property or other taxes based upon labor, services, materials, equipment or other items acquired, performed, furnished or used for or in connection with the Work.

Patents

ARTICLE XVIII. The Subcontractor hereby agrees to indemnify, protect and save harmless Contractor and the Owner from and against any and all liability, loss or damage and to reimburse Contractor and the Owner for any expenses, including legal fees and disbursements, to which Contractor and the Owner may be put because of claims or litigation on account of infringement or alleged infringement of any letters patent or patent rights by reason of the Work or materials, equipment or other items used by the Subcontractor in its performance.

Disputes

ARTICLE XIX. The parties recognize that problems and disputes between them may occur and that it is preferable for them to reach an amicable resolution of same without the need to resort to formal dispute resolution procedures. In that regard, they each pledge to participate in good faith in voluntary and non-binding Alternate Dispute Resolution (ADR) procedures in the form of a mediation conducted by a neutral mediator, or such other form as the parties otherwise agree, as a condition precedent to addressing the dispute in any other forum unless Contractor agrees in writing to waive this condition precedent. The procedure for requesting such an ADR shall begin with a written notice of request for ADR delivered by one party hereto to the other. Within 14 days following the receipt of such notice, lead representatives of Subcontractor and Contractor shall meet in an effort to resolve the dispute. In the event that the dispute remains unresolved after the lead representatives meeting, a meeting shall take place between the President of Subcontractor and the General Manager or Operations Manager of Contractor within 20 days thereafter. In the event that the dispute remains unresolved after the President/Manager meeting, the parties shall proceed with ADR procedures described in the Article. However, in the event that such disputes are not resolved by mediation or another ADR procedure as Contractor and the Subcontractor may agree then such disputes shall be resolved any of following forums selected at Contractor's sole discretion either (1) the forum pursuant to which disputes between the Owner and Contractor are to be

resolved under the terms of the General Contract, (2) arbitration administered by the American Arbitration Association under the rules pertinent to construction disputes then applicable or (3) in litigation. Furthermore, the Subcontractor agrees that Contractor shall have the exclusive right to join the Subcontractor as a party in any dispute resolution procedure (including without limitation ADR procedures, binding arbitration or other judicial or non-judicial proceeding) in which Contractor may be involved arising out of or in connection with the Project, together with such other subcontractors or parties as may be appropriate, where in the judgment of Contractor the issues in dispute are related to the work or performance of the Subcontractor. In the event that relevant law limits or precludes Contractor's sole discretion in selecting the forum, then the dispute shall be resolved in litigation, unless the Subcontractor is to be joined by Contractor in a proceeding with Owner, in which case the forum shall be as stated in the General Contract. Furthermore, the Subcontractor expressly agrees to waive its right to trial by jury in any dispute involving Contractor and or Contractor's surety. Subcontractor further agrees that in the event that it suffers damages, cost or expenses or otherwise intends to pursue a recovery that arises out of or relates to the performance of work by another subcontractor to or under Contractor, Subcontractor's sole remedy shall be as against that responsible subcontractor and Subcontractor shall not pursue a remedy from Contractor.

Subcontractor shall continue with the diligent performance of Work pursuant to this Subcontract and follow and abide by directions and instructions issued by Contractor during the pendency of any dispute, including dispute resolution procedures, ADR procedures, arbitration or litigation.

All claims, suit or demands by Subcontractor as against Contractor or Owner shall be brought within the earlier of one year following Subcontractor's achieving substantial completion for the Subcontractor's Work or within one year of Contractor's notice of default in the event that Contractor has taken any action in accordance with Article XI, and Subcontractor hereby agrees that all relevant statutes of limitations shall be deemed reduced to such time period, to the fullest extent permitted by law.

Mechanics' Liens & Claims

To the fullest extent permitted by law, Subcontractor for itself and for its subcontractors, laborers and materialmen and suppliers and all others directly or indirectly acting for, through or under it or any of them covenants and agrees that no liens or claims, whether a mechanics' lien or an attested account or otherwise, will be filed or maintained against the Project or Premises or any part thereof or any interests therein or any improvements thereon, or against any monies due or to become due from the Owner to Contractor or from Contractor to the Subcontractor, for or on account of any work, labor, services, materials, supplies, equipment, or other items performed or furnished for or in connection with the Work, and the Subcontractor for itself and its Subcontractors, laborers, and materialmen and suppliers and all others above mentioned does hereby expressly waive, release and relinquish all rights to file or maintain such liens and claims and agrees further that this waiver of the right to file or maintain such liens and claims shall be an independent covenant and shall apply as well to work, labor and services performed and materials, supplies, equipment and other items furnished under any change order or supplemental agreement for extra or additional work in connection with the Project as to the Original Work covered by this Agreement.

If any subcontractor, laborer, materialman or supplier of the Subcontractor or any other person directly or indirectly acting for, through or under it or any of them files or maintains a lien or claim, whether a mechanics' lien or an attested account or otherwise, a mechanic's lien or claim against the Project or Premises or any part thereof or any interests therein or any improvements thereon or against any monies due or to become due from the Owner to Contractor or from Contractor to the Subcontractor, for or on account of any work, labor, services, materials, supplies, equipment or other items performed or furnished for or in connection with the Work or under any change order or supplemental agreement for extra or additional work in connection with the Project, the Subcontractor agrees to cause such liens and claims to be satisfied, removed or discharged at its own expense by bond, payment or otherwise within ten (10) days from the date of the filing thereof, and upon its failure to do so Contractor shall have the right, in addition to all other rights and remedies provided under this Agreement and the other Contract Documents or by law, to cause such liens or claims to be satisfied, removed or discharged by whatever means Contractor chooses, at the entire cost and expense of the Subcontractor (such cost and expense to include legal fees and disbursements). The Subcontractor agrees to indemnify, protect and save harmless Contractor and the Owner from and against any and all such liens and claims and actions brought or judgments rendered thereon, and from and against any and all loss, damages, liability, costs and expenses, including legal fees and disbursements, which Contractor and/or the Owner may sustain or incur in connection therewith.

Assignment & Subletting

ARTICLE XX. To the fullest extent permitted by law, Subcontractor agrees that it shall not assign, sell, transfer, delegate or encumber any rights, duties or obligations arising under this Agreement including, but not limited to, any right to receive payments hereunder, without the prior written consent of Contractor in its sole discretion and the giving of any such consent to a particular assignment shall not dispense with the necessity of such consent to any further or other assignments. In the event Subcontractor assigns, sells, encumbers or otherwise transfers its right to any monies due or to become due under this Agreement as security for any loan, financing or other indebtedness (hereafter "Assignment"), notification to Contractor of such Assignment must be sent by certified mail, return receipt requested, to the Procurement Manager in charge of the business unit responsible for the construction of the Project and the Assignment shall not be effective as against Contractor until Contractor provides its written consent to such Assignment. Subcontractor agrees that any such Assignment shall not relieve the Subcontractor of any of its agreements, duties, responsibilities or obligations under this Agreement and the other Contract Documents and shall not create a contractual relationship or a third party beneficiary relationship of any kind between Contractor and such assignee or transferee. Subcontractor further agrees that all of Contractor's defenses and claims arising out of this Agreement with respect to such Assignment are reserved unless expressly waived in writing by a duly authorized corporate officer. Subcontractor hereby agrees to indemnify and hold harmless Contractor from and against any and all loss, cost, expense or damages Contractor or Owner has or may sustain or incur in connection with such Assignment.

Termination for Convenience

ARTICLE XXI. Contractor shall have the right at any time and for any reason, by written notice to the Subcontractor, to terminate this Agreement without cause and require the Subcontractor to cease work hereunder. In the event of such a termination for convenience, the Subcontractor shall be entitled to payment pursuant to the terms of the Agreement only for all Work performed as of the date of termination, together with reasonable costs of demobilization and such other reasonable costs as may be encountered by the Subcontractor and directly attributable to such termination provided that such amount shall be reduced by all amounts for which Subcontractor is liable or responsible hereunder. However, the Subcontractor shall only be entitled to profit on that portion of the Work actually performed and approved for payment to the date of termination together with retainages held upon payments made prior thereto. Subcontractor waives any claim for loss of anticipated profits or other damages in the event Contractor exercises this clause.

Guarantees

ARTICLE XXII. The Subcontractor hereby guarantees the Work to the full extent provided in the Plans, Specifications, General Conditions, Special Conditions and other Contract Documents.

The Subcontractor shall expeditiously remove, replace and/or repair at its own expense and at the convenience of the Owner any faulty, defective or improper Work, materials or equipment existing or discovered within one (1) year from the date of the acceptance of the Project as a whole by the Architect and the Owner or for such longer period as may be provided in the Plans, Specifications, General Conditions, Special Conditions or other Contract Documents.

Without limiting the generality of the foregoing, the Subcontractor warrants to the Owner, the Architect and Contractor, and each of them, that all materials and equipment furnished under this Agreement will be of first class quality and new, unless otherwise required or permitted by the other Contract Documents, that the Work performed pursuant to this Agreement will be free from defects and that the Work will strictly conform with the requirements of the Contract Documents. Work not conforming to such requirements, including substitutions not properly approved and authorized, shall be considered defective. All warranties contained in this Agreement and in the Contract Documents shall be in addition to and not in limitation of all other warranties or remedies required and/or arising pursuant to applicable law. Failure of Subcontractor to honor and satisfy the foregoing and any other warranties or guarantees required of the Subcontractor under the Contract Documents, shall constitute a default by Subcontractor.

Accident Prevention & Other Policies

ARTICLE XXIII. The Subcontractor agrees that the prevention of accidents to workmen and property engaged upon or in the vicinity of the Work is its responsibility. The Subcontractor agrees to comply with all Federal, State, Municipal and local laws, ordinances, rules, regulations, codes, standards, orders, notices and requirements concerning safety as shall be applicable to the Work, including, among others, the Federal Occupational Safety and Health Act of 1970 and the Clean Water Act, as amended, and all standards, rules, regulations and orders which have been or shall be adopted or issued thereunder, and with the safety standards established or imposed during the progress of the Work by Contractor. When so ordered, the Subcontractor shall stop any part of the Work which Contractor deems potentially unsafe, noncompliant or in violation until corrective measures satisfactory to Contractor have been taken, and the Subcontractor agrees that it shall not have nor make any claim for damages growing out of such stoppages. Should the Subcontractor neglect to take such corrective measures, Contractor may do so at the cost and expense of the Subcontractor and may deduct the cost thereof from any payments due or to become due to the Subcontractor. Failure on the part of Contractor to stop unsafe practices shall in no way relieve the Subcontractor of its responsibility therefor.

This Subcontractor acknowledges the receipt of Contractor's "Corporate Safety, Health and Environmental Policy", “Substance Abuse Policy”, "Equal Employment Opportunity" policy and “Policy Statement on Harassment.” Subject to applicable law this Subcontractor further agrees to be bound to these policies as a part of the supplemental and special conditions to the contract for construction of the project, including any amendments or modifications of such policies that Contractor may issue at any time. Subcontractor further acknowledges that Contractor endeavors to employ on its projects robust programs with respect to safety and storm water management, as well as compliance with relevant laws and regulations, including, without limitation, OSHA and the Clean Water Act. Such programs may include aggressive measures and requirements, such as reporting, training of personnel and inspections that may be considerably above and beyond minimum standards. Subcontractor agrees to comply with any and all requirements Contractor may impose in connection with such programs and policies, whether as part of this Subcontract or hereafter, and the cost and expense of such compliance shall be borne by the Subcontractor.

In the event that hazardous substances of a type of which an employer is required by law to notify its employees are being used or stored on the site by the Subcontractor, the Subcontractor’s subcontractors and anyone directly or indirectly employed or otherwise retained by them or either of them, the Subcontractor shall immediately provide written notice of the chemical composition thereof (including, without limitation, a copy of the applicable Material Safety Data Sheet) to Contractor in sufficient time to permit compliance with such laws by Contractor, other subcontractors and other employers on the site. In the event that the Subcontractor encounters on the site material reasonably believed to be hazardous substances (including, without limitation, asbestos or polychlorinated biphenyl) which has not been rendered harmless, the Subcontractor shall immediately stop Work in the area affected and immediately report the condition to Contractor in writing. Work in the affected area shall resume when such hazardous substances have been rendered harmless or removed as determined by Contractor in its sole and absolute discretion. To the extent of Subcontractor’s responsibilities hereunder, Subcontractor does indemnify and save harmless Contractor from and against any and all loss, injury, claims, actions, proceedings, liability, damages, fines, penalties, cost and expenses, including legal fees and disbursements, caused or occasioned directly or indirectly by the Subcontractor in regard to such hazardous substances.

Assumption of Liability & Indemnity

ARTICLE XXIV. Throughout this Agreement, the “Indemnified Party (ies)” means Contractor, the Owner, any party required to be indemnified pursuant to the General Contract, and any of their respective officers, agents, servants, or employees, and affiliates, parents and subsidiaries. The Subcontractor hereby assumes the entire responsibility and liability for any and all actual or potential damage or injury of any kind or nature whatsoever (including death, business interruption or loss of use resulting therefrom) to all persons and entities, whether employees of the Subcontractor or any tier of the Subcontractor, or otherwise; or to all property; or as a result of a perceived risk of such damage or injury (including actions taken to avoid or contain such actual or potential damage or injury, whether required or incurred by a public authority or otherwise); caused by, resulting from, arising out of or occurring in connection with the execution of the Work, or in preparation for the Work, or any extension, modification, or amendment to the Work by change order or otherwise. Should any claims for such actual or potential damage or injury (including death resulting therefrom) be made or asserted, whether or not such claims are based upon an Indemnified Party’s alleged active or passive negligence or participation in the wrong or upon any alleged breach of any statutory duty or obligation on the part of an Indemnified Party, the Subcontractor agrees to indemnify and save harmless the Indemnified Party from and against any and all such claims and further from and against any and all loss, cost, expense, liability, damage, penalties, fines or injury, including legal fees and disbursements, that the Indemnified Party may directly or indirectly sustain, suffer or incur as a result thereof and the Subcontractor agrees to and does hereby assume, on behalf of the Indemnified Party, the defense of any action at law or in equity which may be brought against the Indemnified Party upon or by reason of such claims and to pay on behalf of the Indemnified Party, upon demand, the amount of any judgment that may be entered against the Indemnified Party in any such action. In the event that any such claims, loss, cost, expense, liability, damage, penalties, fines or injury arise or are made, asserted or threatened against the Indemnified Party, Contractor shall have the right to withhold from any payments due or to become due to the Subcontractor an amount sufficient in its judgment to protect and indemnify the Indemnified Party from and against any and all such claims, loss, cost, expense, liability, damage, penalties, fines or injury, including legal fees and disbursements, or Contractor in its discretion may require the Subcontractor to furnish a surety bond satisfactory to Contractor guaranteeing such protection, which bond shall be furnished by the Subcontractor within five (5) days after written demand has been made therefor.

In furtherance to but not in limitation of the indemnity provisions in this Agreement, Subcontractor hereby expressly and specifically agrees that its obligation to indemnify, defend and save harmless as provided in this Agreement shall not in any way be affected or diminished by any statutory or constitutional immunity it enjoys from suits by its own employees or from limitations of liability or recovery under worker's compensation laws.

IN THE EVENT THAT THE LAW OF THE STATE IN WHICH THE PROJECT IS LOCATED (OR OTHER APPLICABLE LAW) LIMITS THE INDEMNITY OBLIGATIONS OF THE SUBCONTRACTOR, THEN THE INDEMNITY OBLIGATIONS OF THE SUBCONTRACTOR SHALL BE ENFORCED TO THE FULLEST EXTENT PERMITTED BY APPLICABLE LAW, AND THIS ARTICLE SHALL BE CONSTRUED TO CONFORM TO SUCH LAW.

Insurance

ARTICLE XXV. Insurance.

A. Required Insurance

Before commencing the Work, the following insurance coverages from insurance companies satisfactory to Contractor shall be in place and maintained until completion and final acceptance of the Work:

1. WORKERS' COMPENSATION in accordance with laws of the State in which the Work is situated, and EMPLOYERS' LIABILITY INSURANCE in the amount of $1,000,000.

2. COMMERCIAL GENERAL LIABILITY INSURANCE INCLUDING COMPLETED OPERATIONS, CONTRACTUAL LIABILITY INSURANCE AGAINST THE LIABILITY ASSUMED HEREINABOVE, and including INDEPENDENT CONTRACTOR'S LIABILITY INSURANCE if the Subcontractor sublets to another all or any portion of the Work, Personal Injury Liability, Broad Form Property Damage (including completed operations), and Explosion, Collapse and Underground Hazards, with the following minimum limits:(Coverage shall be equivalent to current ISO Occurrence Form). No exclusions or restrictions for Crane usage will be permitted.

   $ **SDS** /Occurrence

   $ **SDS** General Aggregate

Subcontractor has elected to obtain the above insurance coverages set forth in paragraphs 1 and 2 above in the manner set forth in the Subcontractor Election A, B or C (with Subcontractor Election B having a further coverage option that is stated in, and may be elected by checking, Sub-Part B-1) that is checked below (Note: only one of Subcontractor Election A, B or C is to be selected, however Subpart B-1 may also be selected but only if Subcontractor Election B is selected):

SDS Subcontractor Election A). The above insurance coverages shall be provided by insurance companies selected by the Subcontractor. Contractor shall have the right, without limitation, to reject any insurance company selected by Subcontractor that has an A.M. Best rating of less than A or Standard and Poor's rating of less than AA or a Moody's rating of less than Aa. This insurance coverage shall include Products and Completed Operations coverage which Subcontractor agrees to maintain for a period equal to the statute of repose in the state in which the project is located. Subcontractor further agrees that it shall require each of its sub-subcontractors to provide the above insurance coverages subject to the terms and conditions set forth below. All costs are included in the Price and are to be paid by the Subcontractor.

or

SDS Subcontractor Election B). The above insurance coverages shall be provided through a consolidated insurance program that insures Subcontractor and its eligible lower tier subcontractors, which program has been made available to Subcontractor by Contractor, as described and with limits of liability, terms and conditions set forth in the Contract Documents, including, but not limited to, the CCIP Manual, and Subcontractor agrees to all terms and conditions therein, and makes all representations and warranties, associated therewith. Subcontractor acknowledges and agrees i) that insurance costs will be incurred to provide the above insurance coverages under the consolidated program; ii) that as opposed to Subcontractor including such insurance costs in the Price and paying such costs directly, the Price does not include insurance costs for the above insurance coverages, iii) that it is more convenient and efficient for Contractor to pay such insurance costs on Subcontractor's and Subcontractor's eligible lower tier subcontractor's behalf, and iv) that Contractor is authorized by Subcontractor to pay such insurance premiums on Subcontractor's behalf and Subcontractor's eligible lower tier subcontractor's behalf.

SDS Sub-Part B-1 to Subcontractor Election B. By checking this further election, Subcontractor agrees that it has selected Subcontractor Election B with respect to providing the above insurance coverages for eligible lower tier subcontractors engaged by or through Subcontractor to the extent permitted by the Contract Documents (including the CCIP Manual), however, Subcontractor agrees that as to Subcontractor itself, the above insurances will be provided by Subcontractor in accordance with the terms and conditions of Subcontractor Election A above. Accordingly, Subcontractor itself shall be deemed an "Excluded Party" with respect to the consolidated insurance program as described in the Contract Documents (including the CCIP Manual). Any other "Excluded Party" lower tier subcontractors (if applicable) with respect to the consolidated insurance program arranged by Contractor shall be required to procure their own insurance coverages at their expense. For Subcontractor's lower tier subcontractors that are not an "Excluded Party", the above insurance coverages shall be provided through the consolidated insurance program as described in Subcontractor Election B to the extent permitted by the Contract Documents (including the CCIP Manual).

Subcontractor represents and warrants that all amounts, information and data that Subcontractor and its lower tier subcontractors has provided or will provide in connection with CCIP applications and other related forms and documents, including estimated payroll and insurance costs, are, or shall be when submitted, true and accurate. Subcontractor represents and warrants that the amount of estimated unburdened payroll (payroll without benefits or overtime, unless the overtime portion is included as required by the regulations of the State in which the project is located) actually used by Subcontractor and its eligible lower tier subcontractors in calculating the Price is $ **SDS** ("Initial Payroll Estimate" or "Estimated On-Site Payroll") (if Sub-Part B-1 is elected, this amount only pertains to Subcontractor's eligible lower tier subcontractors). Subcontractor further agrees that all such amounts, data and information, including the estimated unburdened payroll amount used to calculate the Price, shall be to subject to audit and verification if Contractor or the CCIP Administrator elects to do so and Subcontractor agrees to cooperate fully and provide documents and other records requested in connection with such audit and verification and to cause its lower tier subcontractors to do the same. Subcontractor acknowledges that such amounts, information and data or such other amounts as verified in accordance with the CCIP Manual or through audit may be used to calculate final and interim cost adjustments to the Price and/or payments to Subcontractor (at Contractor's discretion) as described in the CCIP Manual. Contractor and the CCIP Administrator shall not be required to use any amount greater than the foregoing "Estimated On-Site Payroll" as the unburdened payroll amount when calculating such adjustments for Subcontractor and its lower tier subcontractors as described in the CCIP Manual.

or

SDS Subcontractor Election C). The above insurance coverages shall be provided through an Owner Controlled Insurance Program (OCIP) as described and with limits of liability set forth in the Contract Documents and Subcontractor agrees to all terms, and makes all representations and warranties, associated therewith.

Subcontractor acknowledges that if any of the above insurance coverages are provided through a consolidated program arranged pursuant to Subcontractor Election B, Subcontractor Election B-1 or Subcontractor Election C, such coverage will not apply to any operations off of the premises (as defined in the CCIP Policy or Manual or OCIP Policy or Manual) and Subcontractor shall provide and maintain the above insurance coverages with respect to off-premises operations. Subcontractor further agrees that in the event that the insurance coverage provided by a consolidated insurance program (Subcontractor Election B or C) is cancelled prior to the completion of the Work, subcontractor shall provide the insurance coverage (set forth in paragraphs 1 and 2). Subcontractor further acknowledges and represents i) that it was not required to select any particular election provided for above and was free to choose Subcontractor Election A if it preferred to apply for and obtain insurance itself, ii) that Subcontractor has reviewed the other Subcontractor Elections available for this Project and has chosen the election selected above, and iii) that Subcontractor has satisfied itself that the Subcontractor Election checked above is preferable to Subcontractor for reasons of convenience, economics and/or coverage afforded.

3. COMMERCIAL AUTOMOBILE LIABILITY INSURANCE covering all owned, non-owned and hired automobiles used in connection with the Work, with the following minimum limits:

   Combined Single Limit $ **SDS** /accident

4. ALL RISK CONTRACTOR'S EQUIPMENT INSURANCE COVERAGE shall be provided by all Subcontractors utilizing a crane or other equipment in connection with the performance of the Work and insured to the full value of equipment

B. Insurance Conditions

The following terms and conditions are applicable to all insurance:

Before commencing the Work, the Subcontractor shall furnish a certificate(s), satisfactory to Contractor from each insurance company showing that the above insurances (1, 2 Subcontractor Election A, 3 and CGL operations off of the premises under 2 Subcontractor Election B and C, and 4) are in force, stating policy numbers, dates of expiration, and limits of liability thereunder, and further providing that should any of the described policies be cancelled before the expiration date thereof, notice will be delivered in accordance with the policy provisions. Subcontractor shall advise Contractor of the amount of any Deductible or Self-Insured Retention that exists on any policies of insurance on the face of the certificates provided. Subcontractor shall be responsible for and agrees to pay and/or reimburse Contractor for any such Deductible or Self-Insured Retention.

The Subcontractor shall name the Indemnified Parties and such other entities as may be reasonably requested as additional insureds under the policies of insurance listed in paragraph A maintained by the Subcontractor (with the exception of Workers Compensation insurance), whether during the performance of the Work or any time thereafter. The coverage to be provided to the additional insureds shall be for all liability arising out of the Work. Subcontractor will submit a certificate of insurance and a copy of endorsements to the insurance policies listing all parties required to be named by Subcontractor as additional insureds. Subcontractor hereby waives all rights of recovery from Contractor and the Indemnified Parties, including but not limited to rights of subrogation, with respect to any matter, claim or suit that is required to be covered by insurance to be maintained by Subcontractor pursuant to the Contract Documents.

It is expressly agreed by and between Subcontractor and Contractor that all insurance, whether issued on a primary or excess basis, afforded the additional insureds shall be primary insurance to any other insurance available to the additional insureds and that any other insurance carried by the additional insureds shall be excess of all other insurance carried by the Subcontractor and shall not contribute with the Subcontractor's insurance. Subcontractor further agrees that the amount of insurance available to Contractor and the additional insureds shall be for the full amount of the loss up to policy limits of liability and shall not be limited to the minimum requirements of this Subcontract. Subcontractor further agrees to provide endorsements on its insurance policies that shall state the foregoing; however, Subcontractor's failure to provide such endorsement shall not affect Subcontractor's agreement hereunder.

If the Subcontractor fails to procure and maintain such insurance, if required, Contractor shall have the right, but not the obligation, to procure and maintain said insurance for and in the name of the Subcontractor and the Subcontractor shall pay the cost thereof and shall furnish all necessary information to make effective and maintain such insurance or at Contractor's option, Contractor may offset the cost incurred by Contractor against amounts otherwise payable to Subcontractor hereunder. Subcontractor further agrees that in the event of such failure to procure and maintain such insurance, Subcontractor shall be liable for all amounts which would have been payable pursuant to the insurance required by this Subcontract. If, in Contractor's discretion, Contractor is concerned that any insurance company selected by Subcontractor has, at any time, faced diminished financial strength or that the insurance company may no longer provide the same level of financial strength (such as a decline in an A. M. Best, Standard and Poor's or Moody's rating), Contractor may require that Subcontractor provide replacement insurance coverage through an insurance company satisfactory to Contractor.

IN THE EVENT THAT THE LAW OF THE STATE IN WHICH THE PROJECT IS LOCATED (OR OTHER APPLICABLE LAW) LIMITS THE ADDITIONAL INSURED COVERAGE THAT CONTRACTOR MAY REQUIRE FROM SUBCONTRACTOR, THEN SUBCONTRACTOR SHALL BE REQUIRED TO OBTAIN ADDITIONAL INSURED COVERAGE TO THE FULLEST EXTENT OF COVERAGE AND LIMITS ALLOWED BY APPLICABLE LAW AND THIS CONTRACT SHALL BE READ TO CONFORM TO SUCH LAW.

Bonds

ARTICLE XXVI. The Subcontractor shall furnish to Contractor a performance bond in the amount of $ **SDS** and a separate payment bond in the amount of $ **SDS** the form and contents of such bonds and the Surety or Sureties thereon to be satisfactory to Contractor. Such bonds shall be furnished to Contractor within ten (10) calendar days after Subcontractor has executed this Agreement or within such other time period agreed to by Contractor in writing. In the event Subcontractor fails to furnish such bonds to Contractor within the time period as hereinabove provided, such failure shall constitute a default under this Agreement in which event Contractor shall have all of the rights and remedies provided in Article XI hereof with respect to default on the part of Subcontractor including, without limitation, the right to terminate this Agreement.

Without limiting the responsibilities of Subcontractor and its Surety under the terms of this Agreement, Subcontractor and its Surety hereby agree to promptly pay all lawful claims of subcontractors, materialmen, laborers, persons, firms or corporations for labor or services performed or materials, supplies, machinery equipment, rentals, fuels, oils, tools, appliances, insurance and other items furnished, used or consumed in connection with the prosecution of the Work provided for in said Subcontract and any and all modifications thereof, and shall indemnify and save harmless Contractor of and from all liability loss, damage and expense, including interest, costs and attorney fees, which Contractor and/or its Surety may sustain by reason of Subcontractor's or its Surety's failure to do so.

Subcontractor and its Surety hereby agree to execute and deliver to Contractor when requested in connection with the issuance of change orders under this Agreement, Rider "A" amendments (or other documents as Contractor may require) increasing the amount (Penal Sum) of the Payment and Performance Bonds furnished by the Subcontractor. The reasonable premiums or other charges paid by the Subcontractor for the procurement of the Rider "A" amendments will be paid as a change to this Agreement.

Severability

ARTICLE XXVII. In the event that any provision or any part of a provision of this Agreement shall be finally determined to be superseded, invalid, illegal or otherwise unenforceable pursuant to applicable laws by an authority having jurisdiction, such determination shall not impair or otherwise affect the validity, legality, or enforceability of the remaining provisions or parts of provisions of this Agreement, which shall remain in full force and effect as if the unenforceable provision or part were deleted.

Business Enterprise Compliance

ARTICLE XXVIII. In the event that the Project or General Contract is subject to any federal, state, or local program(s) requiring Contractor or its subcontractors to meet certain goals or commitments with regard to the award of subcontracts or supply contracts to small and/or disadvantaged businesses, including but not limited to minority owned, woman owned, veteran owned and local businesses, then the provisions of this Article shall apply. Subcontractor acknowledges that: a) the Federal Small Business Program applies if the General Contract is a direct federal government contracts (*i.e.*, contracts awarded by a federal executive agency); b) the Disadvantaged Business Enterprise Program applies to projects that are funded in whole or in part with federal funds, including those funded through a grant awarded to the Owner; c) there are state and local programs that may apply to public projects that are funded by a state or local government; and d) these programs have different eligibility requirements as well as different methods of counting small business, minority, and other designated categories of participation at all subcontracting levels. Subcontractor agrees that it shall fully understand and comply with the rules and regulations of all such programs to the fullest extent applicable to the General Contract, Subcontract-or this Agreement.

A. If Subcontractor is or otherwise satisfies the qualifications or requirements of any of the following, or if Subcontractor has in any way represented or given Contractor reason to believe that such is the case: (a) a small business under the Federal Small Business Program (*i.e.*, a small business, a small disadvantaged business (SDB), a HUBZone small business, a service-disabled veteran-owned small business (SDVOSB), a veteran-owned small business (VOSB), or a women-owned small business (WOSB)) (hereinafter collectively referred to as an "SBE"); (b) a Disadvantaged Business Enterprise (DBE), Minority Owned Business Enterprise (MBE), or Woman Owned Business Enterprise (WBE), or the functional equivalent under federal, state, or local law (hereinafter collectively referred to as a "DBE"); or (c) a category or status designated by state or local authorities which otherwise classifies or designates certain business entities, collectively referred to as Local Business Enterprises (LBEs); then Subcontractor acknowledges, represents, agrees and warrants that: (i)Subcontractor in fact has such status and has obtained all required federal, state, or local certifications of such status; (ii) Contractor is relying upon such representation and status to fulfill any and all SBE, DBE or LBE goals or commitments Contractor has made to the Owner and/or a government agency or as otherwise required of Contractor; (iii) Subcontractor shall maintain its status as an SBE, DBE or LBE throughout the performance of the subcontract or purchase order; (iv) Subcontractor immediately shall notify Contractor if there is a change in Subcontractor's status as an SBE, DBE or LBE; (v) Contractor has engaged Subcontractor based on Subcontractor's representation that Subcontractor shall perform in such a manner that 100% of Subcontractor's Work and 100% of the Subcontract value shall be eligible for credit towards Contractor's goals and commitments with regard to the award of subcontracts to SBEs, DBEs and/or LBEs; (vi) Subcontractor shall perform in such a manner that Contractor shall be eligible to receive credit towards Contractor's goals and commitments regarding the award of subcontracts to SBEs, DBEs, and/or LBEs for 100% of the Subcontract value; (vii) Subcontractor will not engage in any effort or take any action that would prevent Contractor from receiving 100% credit; (viii) Subcontractor shall engage in a genuine commercially useful function as defined by law and shall not act as a pass-through to sub-subcontractors, suppliers, or vendors who are not SBEs, DBEs or LBEs; (ix) Subcontractor will not engage in

any effort to create the appearance of SBE, DBE or LBE legitimacy or participation when in fact it does not exist; and (x) if Subcontractor awards any of its work through sub-subcontract, purchase order, or otherwise, to an SBE, DBE or LBE, then Subcontractor will do so only in a manner that does not affect the ability to receive credit as described above for 100% of the Subcontract value, including awarding same only to SBE, DBE or LBE sub-subcontractors, suppliers, or vendors if and to the extent necessary to achieve this result.

B. If Subpart A. of this Article is not applicable to Subcontractor, then Subcontractor acknowledges and agrees that the obligations and commitments assumed by Contractor with regard to the award of subcontracts to SBEs, DBEs and/or LBEs, have likewise been assumed by Subcontractor pursuant to this Agreement, including but not limited to meeting or exceeding the same percentage or other requirements or goals for each separate category of SBE, DBE and/or LBE employment in connection with the performance of the Work and satisfying all obligations and responsibilities with respect to reporting and documenting same.

C. The provisions of this Subparagraph C. shall be applicable to all Subcontractors. If or when Subcontractor awards any of its work through sub-subcontract, purchase order, or otherwise, to an SBE, DBE or LBE, to the extent permitted or required by this Agreement, then Subcontractor further acknowledges, represents, agrees and warrants that Subcontractor shall: (i) verify that such SBE, DBE or LBE has such status and has obtained all required federal, state, or local certification of such status; (ii) require its SBE, DBE or LBE sub-subcontractors, suppliers, or vendors to maintain their status as an SBE, DBE or LBE throughout the performance of their sub-subcontract, purchase order, or other agreement; (iii) immediately notify Contractor if there is a change in a sub-subcontractor's, supplier's, or vendor's status as an SBE, DBE or LBE; (iv) require all SBE, DBE or LBE sub-subcontractors, suppliers, or vendors to engage in a genuine commercially useful function as defined by law; (v) ensure that all SBE, DBE or LBE sub-subcontractors, suppliers, or vendors are not acting as a pass-through to another sub-subcontractor, supplier, or vendor who is not a SBE, DBE or LBE; and (vi) not permit a sub-subcontractor, supplier, or vendor to engage in any effort to create the appearance of SBE, DBE or LBE legitimacy or participation when in fact it does not exist.

Subcontractor agrees that: (i) Contractor, or its authorized representative, shall have access to and the right to examine and audit all of Subcontractor's records relating to Subcontractor's Work under this Agreement including, but not limited to, lower-tier subcontracts, equipment leases, purchase orders, and other agreements with third parties; (ii) Subcontractor and its sub-subcontractors, vendors and suppliers shall submit any forms, certifications or documents required by Contractor relating to participation on the Project, regardless of whether such forms or documents have been requested or required by the Owner; (iii) failure to honor and comply with any of the terms or conditions of this Article and/or its failure to comply with any applicable law relating to the award of subcontracts to SBEs, DBEs and/or LBEs shall constitute a material breach of this Agreement; (iv) submission by Subcontractor of a monthly requisition for payment or invoice shall constitute a certification by Subcontractor that each and every representation and warranty set forth in this Article is and remains truthful, accurate, and complete, and that Subcontractor is in full compliance with the terms and conditions of this Article, as of the date such requisition or invoice is submitted to Contractor; (v) Contractor may rely on these certifications in making payment to Subcontractor and in making like representations to others; (vi) Contractor shall have the right to withhold payment from Subcontractor if Contractor has reasonable grounds to believe that Subcontractor is not in full compliance with its obligations set forth in this Article; and (vii) that Subcontractor shall include a provision in all agreements with its sub-subcontractors, vendors and suppliers, whereby such sub-subcontractors, vendors and suppliers acknowledge and agree to conduct their operations and affairs in a manner that ensures that Subcontractor is not in violation of any provision in this Article and to provide forms, certifications and documents as required by Contractor or this Article.

U.S. Government Prime Contract

ARTICLE XXIX. In the event that the General Contract under which this Subcontract is being issued is a General Contract between Contractor and the United States Government or an agency thereof, additional Federal Acquisition Regulation ("FAR") and agency FAR supplemental provisions are applicable to this Agreement. Such FAR and agency FAR supplemental provisions are contained on the attached document entitled "Federal Supplement" and such provisions are hereby incorporated by reference herein as if set forth at length herein. Subcontractor hereby ratifies and re-affirms its Subcontractor Certifications and Disclosures that Subcontractor signed and submitted with its proposal submitted earlier to Contractor and such Certifications and Disclosures are hereby incorporated herein by reference as if set forth at length herein.

Entire Agreement

ARTICLE XXX. This Agreement constitutes the entire agreement between the parties hereto. No oral representations or other agreements have been made by Contractor except as stated in the Agreement. This Agreement may not be changed in any way except as herein provided, and no term or provision hereof may be waived by Contractor except in writing signed by its duly authorized officer or agent. Subcontractor acknowledges and represents that it has completed and submitted to Contractor a prequalification questionnaire, that all statements therein and in the attachments to such questionnaire were true, accurate and complete, and remain true, accurate and complete, and that Contractor has relied on truthfulness, accuracy and completeness of such statements and the contents of the attachments thereto in deciding to enter into this Agreement. The marginal descriptions of any term or provision of this Agreement are for convenience only and shall not be deemed to limit, restrict or alter the content, meaning or effect thereof.

The said parties, for themselves, their heirs, executors, administrators, successors and assigns, do hereby agree to the full performance of all of the terms and provisions herein contained.

In Witness Whereof the parties to these presents have hereunto set their hands as of the day and year first above written.

Public Work Rider

Notwithstanding anything in the other Contract Documents to the contrary, all provisions of this Rider shall supersede any conflicting provisions of the other Documents. All other provisions of the Agreement shall remain in full force and effect.

Statute of Limitations

To the fullest extent permitted by the law, the Subcontractor agrees that its liability and /or indemnification obligations set forth in the Contract Documents, including without limitation Article XXIV of the Agreement, shall be extended to the extent that the Contractor's liability and/or indemnification of the Owner is similarly extended for reasons attributable to the Subcontractor and/or its scope of work.

Turner

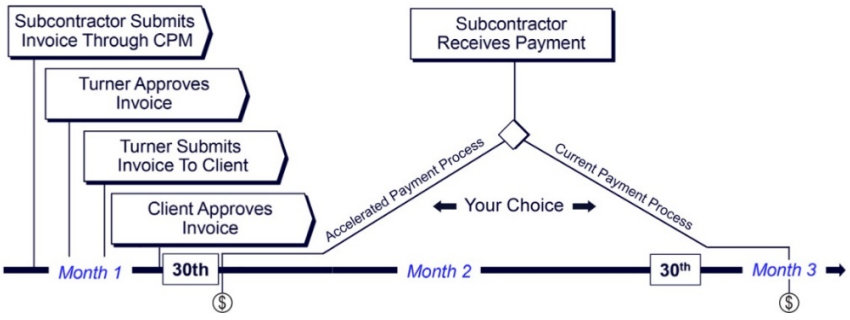
Turner Construction Company has worked closely with Textura Corporation and Greensill Capital to develop the Turner Accelerated Payment Program™, which provides subcontractors the opportunity to receive accelerated payments thereby improving their cash flow and strengthening their balance sheets.

Get Paid Sooner With The Turner Accelerated Payment Program™

- **Known payment timing** – within five days (usually two to three days) of owner approval of the payment application
- **Get paid before Turner** – you get paid by Greensill before the owner pays Turner, eliminating risk of late payment
- **Improved cash flow** – receiving your payment early strengthens your balance sheet and frees up your debt capacity
- **Convenience** – simply check the box below and click on the Accept button below to enroll
- **Flexibility** – enrollment is voluntary and you may opt out at any time

"The Turner Accelerated Payment Program is awesome! With quick and predictable payment, we don't have to take on the risk that comes with borrowing to fund our materials costs."

Bob Pollock
President, Continental Interiors



"The Turner Accelerated Payment Program has improved our cash flow tremendously! Receiving payment so quickly after submitting an invoice is very significant for our business, supporting our growth and continued success."

Leigh Ann Barga
Controller, Delaware Glass & Mirror Co.

How the Turner Accelerated Payment Program Works

Any company that has been prequalified to work on Turner projects is eligible to participate in the program and participation is voluntary. The program generally functions as follows:

1. A subcontractor enrolls (easy, one-click) in the Turner Accelerated Payment Program™ online via Textura CPM.
2. Turner reviews the subcontractor's monthly invoice and submits it to the client.
3. Upon client approval of the invoice, Turner authorizes the accelerated payment to the subcontractor prior to Turner receiving payment from the client. Retainage and other amounts, if any, can be withheld from an accelerated payment according to the subcontractor's agreement.
4. In consideration of the accelerated payment service, the subcontractor pays a nominal fee, which is disclosed and agreed upon at the time of enrollment. The fee covers the interest expense, the cost of operating the payment financing facility, and the risks of delayed payment to Turner.

Turner Accelerated Payment Program Benefits for Subcontractors

- Accelerated payments
- Known payment timing
- Improved cash flow
- Strengthened balance sheets
- Enhanced borrowing capacity
- Reasonable fee for service
- Ease of use
- Possibility for early pay discounts from lower-tier subcontractors

Turner

Turner Accelerated Payment Program Partners

Turner is a North America-based, international construction services company and is a leading builder in diverse and numerous market segments. http://www.turnerconstruction.com

Textura is a leading provider of collaboration and productivity tools for the construction industry. Textura will provide the systems platform for this program via its Construction Payment Management™ (CPM™) program. http://www.texturacorp.com

Greensill Capital is an independent financial services firm and principal investor group specializing in structured trade finance, working capital optimization, specialty financing and contract monetization. Greensill Capital provides the funding for the program. http://www.greensill.com

Frequently Asked Questions

Q: Why is Turner offering this program?
A: It expands our service offerings and it increases the financial strength of our subcontractors. Subcontractors can use the accelerated payment to fund work in progress and use their working capital to enhance their business.

Q: How quickly will I be paid?
A: It is our expectation that subcontractors will be paid within five days of pay application approval by the client.

Q: How does the program affect my existing asset-backed loans or other debt facilities?
A: The accelerated payment made to you in return for a fee is not a loan and is therefore not a debt.

Q: What fees will I be charged to receive my accelerated payment?
A: To preserve the non-debt accounting treatment for accelerated payments, Turner is not permitted to discuss the fee with its subcontractors. The fee will be presented to you through the Textura CPM application when you enroll in the program.

Q: How is the fee determined and can it change during the project?
A: The fee is determined by Greensill Capital and takes into account factors such as the market cost of borrowing, the repayment risk of Turner, and the number of days between the subcontractor payment and when Turner is paid by the client.

Scenarios in which the fee might change include:

- Base rates (LIBOR is the benchmark in the US) could move up or down, for example in response to changes by the Fed in its Target Federal Funds Rate, which would affect interest costs for all borrowers.
- Investors' view of Turner's credit risk could change. That said, Turner's credit rating has been stable for many years.
- Turner may revise the number of days used in the fee calculation to reflect the payment behavior of the client.

In the event that the fee for a particular subcontractor and/or project must be revised, the subcontractor will be notified via Textura CPM.

Turner

Q: Why might my fee be different from one Turner project to another?
A: A fee is unique to a project. Different projects may have different fees, which may change over time based on the market factors and scenarios outlined above.

Q: What happens if, after I have been paid early via the program, the Owner is late in remitting payment to Turner?
A: Turner is absorbing the late payment risk, so there is no impact on the subcontractors.

Q: Is the fee charged to enrolled subcontractors, regardless of whether or not they meet all requirements to receive an accelerated payment?
A: No, the fee will only be charged if an accelerated payment is made.

Q: Will lien waivers, releases, etc. be handled differently if we use the program?
A: Lien waivers and releases will still be required prior to payment just as they are today. Early payment will not be made if there is a failure to fulfill all such conditions precedent by the time the client approves the invoice (you will receive a non-accelerated payment per the normal contract terms and the accelerated payment program fee will not be charged).

Q: Will retention payments be accelerated?
A: Once the release of retention has been approved by the client, then the retention payments will be processed through the Turner Accelerated Payment Program in the same way as any other invoice. The Turner Accelerated Payment Program will not accelerate retention payments ahead of client approval.

Q: Do I have to always use the program once I start?
A: You can un-enroll and re-enroll at any time, or use the program for select projects. However, we have offered the program with the expectation that subcontractors will adopt and use it consistently on all their Turner projects.

Q: Do I have to sign an agreement with a financial institution?
A: No. You must simply accept the terms and conditions on the Textura platform when you enroll in the program.

Q: Do I have to install any software or use a new technology platform?
A: The program is offered via the same Textura CPM platform you use today.

Q: How will my day-to-day Textura CPM experience change?
A: The Textura CPM experience will be the same except for the addition of the program enrollment screen.

Q: How will I know if an accelerated payment has been made?
A: You will be notified through Textura CPM when a payment has been made. Textura CPM will also track and store your previous payments.

Q: Where can I find out more information?
A: Please visit www.turnerconstruction.com/turner-accelerated-payment-program for more information. You can also contact Textura at 1-866-TEXTURA or app@texturacorp.com or visit their website, www.texturacorp.com.

CONNECTICUT RIDER - ACCELERATED PAYMENT PROGRAM

This Rider is made part of the Agreement (whether a subcontract, purchase contract or purchase order, rental agreement, professional or non-professional service agreement, as the case may be) by and between Turner Construction Company ("Turner") and the subcontractor, vendor or supplier, as the case may be (hereinafter referred to as "Provider"). This Rider supplements the Agreement to describe an Accelerated Payment Program ("APP") that is available to Provider. The description herein is a summary description only and is not an offer nor, except as otherwise stated herein, does it create any obligations on the part of the parties to the Agreement with respect to the APP or any right of Provider to participate in the APP. The APP is voluntary and at Provider's sole discretion, subject to exclusion as provided herein. Except as otherwise provided herein, the terms and conditions and other requirements of the Agreement are not modified by this Rider, all such provisions of the Agreement remaining in force and effect. To the extent that this Rider conflicts with language in the Agreement that makes payment by the Owner a condition of payment to Provider, such condition is suspended so long as Provider is enrolled in the APP, is in full compliance with all policies, procedures, and requirements of the APP, and an accelerated payment is made.

As part of Turner's commitment to deliver the highest value of construction services to its clients, selected Providers may participate in an APP which will offer Providers the option to receive expedited payment on their invoices. Turner believes the APP will offer Providers substantial benefits including payment timing, a low cost of capital and an alternative source to meet working capital needs. Any Provider that has been pre-qualified by Turner Procurement to work on Turner projects will be eligible to participate in the APP, although Turner reserves the right, at its sole discretion based upon Turner's good faith belief that exclusion is appropriate, to exclude any Provider, at any time, whether before or after Provider's enrollment in the APP. For the avoidance of doubt, to the extent a Provider is no longer eligible to participate in the APP for any reason whatsoever, no modification, amendment or adjustment to the payment terms in the Agreement shall be made. The APP will generally function as follows:

- Provider will apply online to enroll in the APP via Textura CPM for each Turner project approved by Turner for inclusion in the APP.

- Provider will submit its payment application or invoice via CPM.

- When Owner approves Turner’s invoice, Turner will authorize the participating financial institution to pay Provider through the APP, rather than having to wait until Turner receives payment from the Owner, provided that all conditions in the Agreement relating to Turner's obligation to pay Provider remain unchanged. Retainage and other amounts, if any, will be withheld from payment to the extent provided in the Agreement. Turner does not waive any rights or remedies under the Agreement and reserves its rights to recover and/or adjust payments as necessary to conform to the terms of the Agreement.

- Payment to Provider will be made by a financing institution, which will be subsequently repaid from funds payable to Provider from the Owner's payment to Turner.

- In consideration of the accelerated payment service the Provider will pay a nominal fee, which will be disclosed to Provider and agreed upon at the time of enrollment. The fee is to cover the cost of interest, the cost of operating the payment financing facility and the risks of delayed payment to Turner. As such, this fee will be shared by the financing institution, Turner, and the operator of the underlying payments platform, Textura. The Provider will be notified via the CPM system if, during the course of a project, the fee is to be amended (for example, in the event that interest rates rise).

- Provider represents that all information it provides as part of the APP, whether to Turner, the financial institution, or on the SaaS web-based portal and connected systems as provided by Textura Corporation, is truthful, accurate, and up-to-date, including, but not limited to representations made regarding the Provider's identity, existence, and location. Provider acknowledges that Turner will rely on information provided by Provider as being correct, accurate, and up-to-date. To the extent Provider provides incorrect, inaccurate, or out-of-date information, Provider bears all responsibility for any resulting loss or damages and shall indemnify, defend and hold harmless Turner for any resulting loss or damages.

If any withholdings or deductions are required by the applicable law, Provider agrees and understands that Turner will comply with those obligations.

By participation in the APP, Provider hereby waives any claim, right or recourse against Turner, its affiliates, parent companies or subsidiaries, or any officers, directors, employees or representatives for any special, indirect, incidental, exemplary, or consequential damages, including, without limitation, losses of profits, financing and goodwill, resulting or arising from or in connection with the use, refusal or distribution of the APP and any damages whatsoever as they relate to the APP, or the cancellation and/or exclusion from the APP. Provider expressly agrees and understands that it has no right or recourse to any fee that has been paid to Turner or any participant in the APP, irrespective of whether the Provider completes the APP during the course of the project or is excluded before, during, or after the project. Notwithstanding the foregoing, in the event of any liability of Turner to Provider resulting or arising from or in connection with the APP, the sole and exclusive remedy available to Provider shall be recovery of actual direct damages, which in no event shall exceed Turner's share of the fee paid by Provider to participate in the APP.

Notwithstanding anything contained in the Agreement or under law to the contrary, Provider acknowledges: (i) that to the maximum degree possible under law, Provider waives any claim that it may have to contend that Turner owes Provider any trust or fiduciary obligations whatsoever with respect to payments to be made pursuant to this Agreement or otherwise; (ii) that payment to Provider by the financing institution as described herein and in the agreement upon enrollment in the APP, which will exclude the fee disclosed at the time of enrollment (as the fee may be amended from time to time as described herein and in the enrollment agreement), is payment in full of the Provider's applicable payment application; (iii) such payment constitutes payment in full of all amounts due Provider and represents the full amount of Provider's portion of the payment Turner received (or will receive) from the Project's Owner based on the service performed by the Provider.

Minimum Rates and Classifications
for Building Construction

ID#: 24-65489

Connecticut Department of Labor
Wage and Workplace Standards Division

By virtue of the authority vested in the Labor Commissioner under provisions of Section 31-53 of the General Statutes of Connecticut, as amended, the following are declared to be the prevailing rates and welfare payments and will apply only where the contract is advertised for bid within 20 days of the date on which the rates are established. Any contractor or subcontractor not obligated by agreement to pay to the welfare and pension fund shall pay this amount to each employee as part of his/her hourly wages.

Welders: Rate for craft to which welding is incidental.

Surveyors: Hazardous material removal: $3.00 per hour premium.

*Note: Hazardous waste removal work receives additional $1.25 per hour for truck drivers.

**Note: Hazardous waste premium $3.00 per hour over classified rate

Crane with 150 ft. boom (including jib) - $1.50 extra
Crane with 200 ft. boom (including jib) - $2.50 extra
Crane with 250 ft. boom (including jib) - $5.00 extra
Crane with 300 ft. boom (including jib) - $7.00 extra
Crane with 400 ft. boom (including jib) - $10.00 extra

All classifications that indicate a percentage of the fringe benefits must be calculated at the percentage rate times the "base hourly rate".

Apprentices duly registered under the Commissioner of Labor's regulations on "Work Training Standards for Apprenticeship and Training Programs" Section 31-51-d-1 to 12, are allowed to be paid the appropriate percentage of the prevailing journeymen hourly base and the full fringe benefit rate, providing the work site ratio shall not be less than one full-time journeyperson instructing and supervising the work of each apprentice in a specific trade.

The Prevailing wage rates applicable to this project are subject to annual adjustments each July 1st for the duration of the project.

Each contractor shall pay the annual adjusted prevailing wage rate that is in effect each July 1st, as posted by the Department of Labor.

It is the contractor's responsibility to obtain the annual adjusted prevailing wage rate increases directly from the Department of Labor's website.

The annual adjustments will be posted on the Department of Labor's Web page: www.ct.gov/dol. For those without internet access, please contact the division listed below.

The Department of Labor will continue to issue the initial prevailing wage rate schedule to the Contracting Agency for the project.

All subsequent annual adjustments will be posted on our Web Site for contractor access.

Contracting Agencies are under no obligation pursuant to State labor law to pay any increase due to the annual adjustment provision.

Effective October 1, 2005 - Public Act 05-50: any person performing the work of any mechanic, laborer, or worker shall be paid prevailing wage

All Person who perform work ON SITE must be paid prevailing wage for the appropriate mechanic, laborer, or worker classification.

All certified payrolls must list the hours worked and wages paid to All Persons who perform work ON SITE regardless of their ownership i.e.: (Owners, Corporate Officers, LLC Members, Independent Contractors, et. al)

Reporting and payment of wages is required regardless of any contractual relationship alleged to exist between the contractor and such person.

~~Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clause (29 CFR 5.5 (a) (1) (ii)).

Please direct any questions which you may have pertaining to classification of work and payment of prevailing wages to the Wage and Workplace Standards Division, telephone (860)263-6790.

Frequently Asked Questions

When is this fee change taking place?

- The fee change is effective January 19, 2023

Will current projects retain their existing fee structure?

- Yes. Any project created on-system prior to January 19, 2023 will be subject to their existing usage fee schedule

How often do you change your fees? Why are you changing fees now?

- TPM has only increased subcontractor usage fees three times in our 18-year history (2014, 2019 and 2023). We are responding to changing economic and labor market conditions and supporting continued functionality enhancements.

Has this fee change been finalized?

- We have carefully thought through our pricing structure and timing of changes, which are going into effect on January 19, 2023.

How much will a subcontractor pay on the January 19, 2023 rate compared to the current June 13, 2019 rate?

- Example $100,000 contract: $220 current rate, $220 new rate (no change)
- Example $1,500,000 contract: $3,300 current rate, $3,300 new rate (no change)
- Example $2,000,000 contract: $3,750 current rate, $4,400 new rate

Frequently Asked Questions

What is Oracle's communication plan around these new fees?

- We are communicating this change directly to our owner, general contractor and subcontractor clients through both conversations and TPM announcements.

Why is the new maximum fee $5,000?

- This change reflects increased labor costs, R&D, operating expenses, security services cost increases, and continued investment in ERP integration

MULTIPLE OBLIGEE
LABOR and MATERIAL PAYMENT BOND

Bond # _____

KNOW ALL MEN BY THESE PRESENTS; that _____
(Name of Subcontractor)

a _____ Corporation with principal offices located at _____
(Address)

as Principal (hereinafter "Principal"), and _____
(Name of Surety)

as Surety, a corporation with home offices located at _____
(Address)

(hereinafter "Surety"), are held and firmly bound unto TURNER CONSTRUCTION COMPANY, a New York corporation (hereinafter "Obligee") and _____

(hereinafter individually and collectively referred to as "Obligees") in the sum of _____ Dollars $ (_____)
(which amount, as it may increase as provided herein below, is hereinafter referred to as "Penal Sum") for the payment whereof the Principal and Surety bind themselves, and their respective heirs, administrators, executors, successors and assigns, jointly and severally, firmly by these presents.

WHEREAS, Principal has by written agreement dated _____ entered into a subcontract with Obligee for the performance of _____ (hereinafter the "Subcontract Work"), for and at the
(Subcontract Work)

_____
(Name of Project)
_____ (hereinafter the "Project) located at _____
(Address)

in accordance with Drawings and Specifications prepared by _____
(Architect/Engineer)

which subcontract is by reference made a part thereof, and is hereinafter referred to as the "Subcontract".

NOW THEREFORE, THE CONDITION OF THIS OBLIGATION is such that, if Principal shall promptly make payment to all Claimants as hereinafter defined for all labor and material used or reasonably required for use in the performance of the Subcontract then this obligation shall be void; otherwise it shall remain in full force and effect subject however to the following conditions:

1) A Claimant is defined as one having a direct contract with the Principal or with a subcontractor of the Principal for labor, material, or both, used or reasonably required for use in the performance of the Subcontract, labor and material being construed to include that part of water, gas, power, light, heat, oil, gasoline, telephone service or rental of equipment directly applicable to the Subcontract.

2) The above named Principal and Surety hereby jointly and severally agree with the Obligees that every Claimant as herein defined, who has not been paid in full before the expiration of a period of ninety (90) days after the date on which the last of such Claimant's work or labor was done or performed, or materials were furnished by such Claimant, may sue on this bond for the use of such Claimant, prosecute the suit to final judgment for such sum or sums as may be justly due Claimant, and have execution thereon. The Obligees shall not be liable for the payment of any costs or expenses of any such suit.

3) No suit or action shall be commenced hereunder by any Claimant:

a) Unless Claimant, other than one having a direct contract with the Principal, shall have given written notice to the surety

named above and one of the following: the Principal and at least one of the Obligees within ninety (90) days after such Claimant did or performed the last of the work or labor, or furnished the last of the materials for which said claim is made, stating with substantial accuracy the amount claimed and the name of the part to whom the materials were furnished, or for whom the work or labor was done or performed. Such notice shall be served by mailing the same by registered mail or certified mail, postage prepaid, in an envelope addressed to the Surety, Principal and one of the Obligees, at any place where an office is regularly maintained for the transaction of business, or served in any manner in which legal process may be served in the state in which the Project is located, save that such service need not be made by a public officer.

b) After the expiration of one (1) year following the date on which the Principal ceased performing Subcontract Work, it being understood, however, that if any limitation embodied in this Bond is prohibited by any law controlling the construction hereof such limitation shall be deemed to be amended so as to be equal to the minimum period of limitation permitted by such law.

c) Other than in a state court of competent jurisdiction in and for the county or other political subdivision of the state in which the Project, or any part thereof, is situated, or in the United States District Court for the district in which the Project, or any part hereof, is situated, and not elsewhere.

4) The initial amount of the Penal Sum set forth herein above corresponds with the Subcontract price as set forth in the Subcontract. In the event that the Subcontract price increases, the amount of the Penal Sum shall increase to correspond with the increased Subcontract price, automatically and without the consent, agreement or approval of Surety; provided, however, that the total increase of the Penal Sum shall not be greater than 25% of the initial amount without the written consent of Surety, which consent shall not be unreasonably withheld.

5) The amount of this Bond shall be reduced by and to the extent of any payment or payments made in good faith hereunder, inclusive of the payment by Surety of mechanics' liens which may be filed of record against said improvement, whether or not claim for the amount of such lien be presented under and against this Bond.

Principal and Surety shall not be liable hereunder to the Claimants in the aggregate in excess of the penal sum above stated.

IN WITNESS WHEREOF, the Principal and Surety have hereunto caused this Bond to be duly executed and acknowledged as set forth below this _____ day of _____ , _____ .

My Commission Expires:

MULTIPLE OBLIGEE PERFORMANCE BOND

BOND # ……

KNOW ALL MEN BY THESE PRESENTS; that …… a
(Name of Subcontractor)

…… corporation with principal offices located at …….
(Address)

as Principal (hereinafter "**Principal**"), and ……..
(Name of Surety)

as **Surety**, a ……..…… corporation with home offices located at ……..….
(Address)
(hereinafter "**Surety**"), are held and firmly bound unto [**Turner Construction Company**], a [**New York**] corporation

and …….. (hereinafter individually and/or collectively

referred to as "**Obligees**") in the sum of ……

Dollars ($.....), (which amount, as it may increase as provided herein below, is hereinafter referred to as "**Penal Sum**") for the payment whereof the **Principal** and **Surety** bind themselves, and their respective heirs, administrators, executors, successors and assigns, jointly and severally, firmly by these presents.

WHEREAS, **Principal** has by written agreement dated ……..... entered into a subcontract with **Obligees**

for the performance of …… (hereinafter the "**Subcontract Work**"), for and
(Subcontract Work)

at the ……. (hereinafter the "Project") located at
(Name of Project)

……..in accordance with Drawings and Specifications
(Address)
prepared by …….. which subcontract is by reference made a part thereof, and is
(Architect/Engineer)
hereinafter referred to as the "**Subcontract**".

NOW THEREFORE, THE CONDITION OF THIS OBLIGATION is such that, if **Principal** promptly and faithfully perform said **Subcontract**, then this obligation shall be null and void; otherwise it shall remain in full force and effect.

Surety hereby waives notice of any alteration or extension of time made by **Obligees.**

Whenever **Principal** shall be and declared by **Obligees** to be in default under the **Subcontract**, **Obligees** having performed its obligations thereunder, **Surety** shall within ten (10) days of written notice of default request information from **Obligee** in connection with the default. Within an additional thirty (30) days, **Surety** shall provide a response to **Obligees** with regard to how it intends to promptly cure **Principal's** default. **Surety** may, with **Obligees'** consent, proceed to promptly remedy the default, by the following options:

1) Complete the **Subcontract** in accordance with its terms and conditions; or

2) Obtain a bid or bids for completing the **Subcontract Work** in accordance with **Subcontract's** terms and conditions, and upon determination by **Surety** of the lowest responsible bidder, or if **Obligees** elects, upon determination by **Obligees** and **Surety** jointly of the lowest responsible bidder, arrange for a subcontract between such bidder and **Obligees**.

The subcontract between such bidder and **Obligees** shall include such bidder to provide Obligees with new Performance Bond (hereinafter "**New Bond**") containing the same terms and conditions as **Principals** original Bond to **Obligees**. The **Penal Sum** of the **New Bond** shall be the cost to complete **Project**, including any adjustments thereto. Upon arranging a subcontract between such bidder and **Obligees**, **Surety** shall within ten (10) days of the execution of the subcontract, immediately make available sufficient funds to pay **Obligees** the cost of completion, less the balance of the **Subcontract** price, including other costs and damages for which S**urety** may be liable hereunder. In no event shall the liability of the surety exceed the penal sum of the Bond.The term "**balance of the Subcontract price**," as used in this paragraph, shall mean the total amount payable by **Obligees** to **Principal** under **Subcontract** and any amendments thereto, less the amount properly paid by **Obligees** to **Principal**.

In the event the **Obligees** declare the Principal to be in default of its **Subcontract**, **Obligees**, after written notice to **Surety**, may in its sole and absolute discretion and without limiting its rights or defenses at law, in equity, under this Bond or **Subcontract**, immediately arrange for performance of any or all of **Principal's** obligations under **Subcontract in order to maintain the progress of the Principal's obligations during the Surety's forty (40) day investigatory period**. Failure by **Obligees** to exercise its rights, defenses, etc. under this Bond or **Subcontract** shall not be deemed a waiver of such rights, defenses, etc. Surety shall indemnify and save harmless **Obligees** of and from any and all reasonable and necessary costs, interest, expenses, losses, damages, including but not limited to, reasonable attorney's fees, professional consulting fees or other fees deemed necessary which **Obligees** sustained or incurred in connection with the performance of **Principal's** obligations under the **Subcontract**. Once the **Surety** advises the **Obligees**, in writing, with respect to how it intends to proceed under options 1 or 2 above and work commences thereunder, the **Obligees**, unless otherwise mutually agreed, or as soon as reasonably practicable, will cease from performing further work relating to the **Principal's** obligations under the **Subcontract**. In the event of any conflict between the terms and conditions of this Bond and the **Subcontract**, with respect to the **Obligees** progressing the **Principal's** obligations during the **Surety's** forty (40) day investigatory period, this Bond shall govern.

The initial amount of the **Penal Sum** set forth herein above corresponds with **Subcontract** price as set forth in **Subcontract**. In the event that **Subcontract** price increases, the amount of **Penal Sum** shall increase to correspond with the increased **Subcontract** price, automatically and without consent, agreement or approval of **Surety**; provided, however, that the total increase of the **Penal Sum** shall not be greater than Twenty Five Percent (25%) of the initial amount without the written consent of **Surety**, which consent shall not be unreasonably withheld.

No right of action shall accrue on this Bond to or for the use of any person or corporation other than **Obligees** or their respective heirs, executors, administrators or successors.

Principal and **Surety** shall not be liable to **Obligees** or any of them unless **Obligees** has performed the obligations to the **Principal** in accordance with the terms of the **Subcontract**.

As used in this Bond, the term "**Obligees**" is anyone performing **Obligees'** obligations under **Subcontract** in the event Obligees' failure to do so.

This Bond shall be for the sole benefit of **Obligees**, their respective heirs, executors, administrators or successors.

Notwithstanding anything set forth herein that is or may be construed to the contrary, in no event shall the liability of the Surety exceed the Penal Sum of the Bond.

IN WITNESS WHEREOF, the **Principal** and **Surety** have hereunto caused this Bond to be duly executed and acknowledged as set forth below this ……..day of ……., 20…..

Subcontractor Payment Request No.: _____
Period From: _____
To: _____ (hereinafter the "partial Completion Date")
Cross Reference Contractor Application for Payment No.: _____
Subcontractor Payment Request Amount: $ _____

1. **CERTIFICATIONS, AFFIRMATIONS AND WARRANTIES.** The undersigned Subcontractor (hereinafter "the Undersigned"), to support its entitlement to the requested payment, and for and in consideration of payments made by Contractor to the Undersigned, or to a subcontractor, materialman or supplier of the Undersigned, for work, services, materials or equipment provided or performed in the construction of the above-referenced Project, hereby affirms, certifies and warrants as follows:

(a) The Subcontractor Payment Request Amount set forth above represents the actual value of work performed for the above payment request period for which payment is due under the terms of the Subcontract (and all authorized changes thereto) between the Undersigned and the Contractor relating to the Project, including (i) all labor expended or furnished in the design or construction of the Project, (ii) all materials and equipment delivered to the site and either incorporated or to be incorporated in the Project; (iii) all materials, fixtures and equipment for the Project stored off-site to the extent authorized by Contractor and for which payment therefor is permitted by the Subcontract, (iv) all services

furnished or performed in the design or construction of the Project, and (v) all equipment used, or provided for use, in the construction of the Project. All of items (i) through (v) above are hereafter collectively referred to as "work performed in the construction of the Project."

(b) **Except for the Subcontractor Payment Request Amount set forth above, the Undersigned certifies that it has already received payment in full, less retainage, (i) for all prior Subcontractor Payment Requests and (ii) for all work performed in the construction of the Project through the date set forth above (the "Partial Completion Date");** and, except for retainage, the Undersigned has no claims, on its own behalf or on behalf of others, against Contractor, Owner or the Project, based upon or relating to work performed in the construction of the Project through the Partial Completion Date, except for outstanding written requests for change orders, outstanding written notices of possible change orders, or other claims previously submitted in writing by Subcontractor to Contractor.

(c) The Undersigned has not assigned to anyone any claim, any lien, or any right to file or perfect a lien, against Contractor, Owner, or the Project.

(d) Except for the Subcontractor Payment Request Amount set forth above, the Undersigned certifies that it has paid in full all laborers, and, subject to retainage no greater than the percentage retainage held by Contractor, all subcontractors, suppliers, materialman and others with respect to all work performed in the construction of the Project through the Partial Completion Date.

(e) The Undersigned has not given or executed any security interests for or in connection with any materials, equipment, appliances, machines, fixtures or furnishings which have been or are to be installed as part of the Project, and is conveying good title to the same to Contractor.

2. **WAIVER AND RELEASE.** Subject to receipt of payment for the Subcontractor Payment Request Amount set forth above, the Undersigned does hereby forever waive and release in favor of Contractor, Owner, the Project, and the title company or companies examining and/or insuring title to the Project, and any and all successors and assigns of the above, all rights that presently exist or hereafter may accrue to the Undersigned, by reason of work performed in the construction of the Project through the Partial Completion Date, (i) to assert a lien upon the land and/or improvements comprising the Project (whether under the lien statute of any jurisdiction or otherwise), and (ii) to assert or bring, subject to paragraph 1(b) above, any causes of actions, claims, suits and/or demands which the Undersigned ever had or now has against Contractor, Owner, or the Project. Subject to paragraph l(b) above, the Undersigned hereby releases, acquits and forever discharges Owner and Owner's lenders, and their representative partners, directors, officers, employees, agents, successors and assigns, from all claims, liabilities, obligations, causes of action and demands whatsoever, whether known or unknown, arising now or in the future, relating to or arising from the Project, based upon any cause, matter or thing whatsoever, from the beginning of the world through the date of this Release.

3. **INDEMNIFICATION.** The Undersigned hereby agrees to indemnify, defend and hold harmless Contractor, Owner, and their respective successors and assigns, from and against any and all damages, costs, judgments, liabilities, demands, suits and expenses (including reasonable attorney's fees) directly or indirectly relating to any cause of action, claim or lien filed by any person or entity with

respect to (i) any work performed in the construction of the Project through the Partial Completion Date, (ii) any rights waived or released herein, and (iii) any misrepresentation or breach of any certification, affirmation or warranty made by the Undersigned in this document. Upon the request of Contractor, the Undersigned will undertake to defend such causes of actions, claims or liens at its sole cost and expense.

UNCONDITIONAL WAIVER AND RELEASE UPON PROGRESS PAYMENT

The undersigned has been paid and has received a progress payment in the sum of _____ _____ for labor, services, equipment or material furnished to _____ on the job of _____ located at _____ , and does hereby waive and release any right to mechanic's lien, stop notice, or bond right the undersigned has on the above-referenced job to the following extent. This release covers a progress payment for labor, services, equipment or material furnished to ___ _____ through the _____ only and does not cover any retentions retained before or after the release date; extras furnished before the release date for which payment has not been received; extras or items furnished after the release date.

Rights based upon work performed or items furnished under a written change order which has been fully executed by the parties prior to the release date are covered by this release unless specifically reserved by the claimant in this release. This release of any mechanic's lien, stop notice, or bond right shall not otherwise affect the contract rights, including rights between parties to the contract based upon a rescission, abandonment, or breach of the contract, or the right of the undersigned to recover compensation for furnished labor, services, equipment, or material covered by this release if that furnished labor, services, equipment, or material was not compensated by the progress payment.

STATE OF CONNECTICUT
GIFT AND CAMPAIGN CONTRIBUTION CERTIFICATION

Written or electronic certification to accompany a State contract with a value of $50,000 or more, pursuant to C.G.S. §§ 4-250, 4-252(c) and 9-612(f)(2) and Governor Dannel P. Malloy's Executive Order 49.

INSTRUCTIONS:

Complete all sections of the form. Attach additional pages, if necessary, to provide full disclosure about any lawful campaign contributions made to campaigns of candidates for statewide public office or the General Assembly, as described herein. Sign and date the form, under oath, in the presence of a Commissioner of the Superior Court or Notary Public. Submit the completed form to the awarding State agency at the time of initial contract execution and if there is a change in the information contained in the most recently filed certification, such person shall submit an updated certification either (i) not later than thirty (30) days after the effective date of such change or (ii) upon the submittal of any new bid or proposal for a contract, whichever is earlier. Such person shall also submit an accurate, updated certification not later than fourteen days after the twelve-month anniversary of the most recently filed certification or updated certification.

CHECK ONE: ☐ Initial Certification ☐ 12 Month Anniversary Update (Multi-year contracts only.)

☐ Updated Certification because of change of information contained in the most recently filed certification or twelve-month anniversary update.

GIFT CERTIFICATION:

As used in this certification, the following terms have the meaning set forth below:

1) "Contract" means that contract between the State of Connecticut (and/or one or more of it agencies or instrumentalities) and the Contractor, attached hereto, or as otherwise described by the awarding State agency below;
2) If this is an Initial Certification, "Execution Date" means the date the Contract is fully executed by, and becomes effective between, the parties; if this is a twelve-month anniversary update, "Execution Date" means the date this certification is signed by the Contractor;
3) "Contractor" means the person, firm or corporation named as the contactor below;
4) "Applicable Public Official or State Employee" means any public official or state employee described in C.G.S. §4-252(c)(1)(i) or (ii);
5) **"Gift"** has the same meaning given that term in C.G.S. § 4-250(1);
6) "Principals or Key Personnel" means and refers to those principals and key personnel of the Contractor, and its or their agents, as described in C.G.S. §§ 4-250(5) and 4-252(c)(1)(B) and (C).

I, the undersigned, am a Principal or Key Personnel of the person, firm or corporation authorized to execute this certification on behalf of the Contractor. I hereby certify that, no gifts were made by (A) such person, firm, corporation, (B) any principals and key personnel of the person firm or corporation who participate substantially in preparing bids, proposals or negotiating state contracts or (C) any agent of such, firm, corporation, or principals or key personnel who participates substantially in preparing bids, proposals or negotiating state contracts, to (i) any public official or state employee of the state agency or quasi-public agency soliciting bids or proposals for state contracts who participates substantially in the preparation of bid solicitations or request for proposals for state contracts or the negotiation or award of state contracts or (ii) any public official or state employee of any other state agency, who has supervisory or appointing authority over such state agency or quasi-public agency.

I further certify that no Principals or Key Personnel know of any action by the Contractor to circumvent (or which would result in the circumvention of) the above certification regarding **Gifts** by providing for any other Principals, Key Personnel, officials, or employees of the Contractor, or its or their agents, to make a **Gift** to any Applicable Public Official or State Employee. I further certify that the Contractor made the bid or proposal for the Contract without fraud or collusion with any person.

CAMPAIGN CONTRIBUTION CERTIFICATION:

I further certify that, on or after January 1, 2011, neither the Contractor nor any of its principals, as defined in C.G.S. § 9-612(f)(1), has made any **campaign contributions** to, or solicited any contributions on behalf of, any exploratory committee, candidate committee, political committee, or party committee established by, or supporting or authorized to support, any candidate for statewide public office, in violation of C.G.S. § 9-612(f)(2)(A). I further certify that **all lawful campaign contributions** that have been made on or after January 1, 2011 by the Contractor or any of its principals, as defined in C.G.S. § 9-612(f)(1), to, or solicited on behalf of, any exploratory committee, candidate committee, political committee, or party committee established by, or supporting or authorized to support any candidates for statewide public office or the General Assembly, are listed below:

Lawful Campaign Contributions to Candidates for Statewide Public Office:

Contribution Date	Name of Contributor	Recipient	Value	Description

Lawful Campaign Contributions to Candidates for the General Assembly:

STATE OF CONNECTICUT
AFFIRMATION OF RECEIPT OF STATE ETHICS LAWS SUMMARY

Written or electronic affirmation to accompany a large State construction or procurement contract, having a cost of more than $500,000, pursuant to Connecticut General Statutes §§ 1-101mm and 1-101qq

---

INSTRUCTIONS:

Complete all sections of the form. Submit completed form to the awarding State agency or contractor, as directed below.

CHECK ONE:

☐ I am a person seeking a large State construction or procurement contract. I am submitting this affirmation to the awarding State agency with my bid or proposal. [Check this box if the contract will be awarded through a competitive process.]

☐ I am a contractor who has been awarded a large State construction or procurement contract. I am submitting this affirmation to the awarding State agency at the time of contract execution. [Check this box if the contract was a sole source award.]

☐ I am a subcontractor or consultant of a contractor who has been awarded a large State construction or procurement contract. I am submitting this affirmation to the contractor.

☐ I am a contractor who has already filed an affirmation, but I am updating such affirmation either (i) no later than thirty (30) days after the effective date of any such change or (ii) upon the submittal of any new bid or proposal, whichever is earlier.

IMPORTANT NOTE:

Within fifteen (15) days after the request of such agency, institution or quasi-public agency for such affirmation contractors shall submit the affirmations of their subcontractors and consultants to the awarding State agency. Failure to submit such affirmations in a timely manner shall be cause for termination of the large State construction or procurement contract.

AFFIRMATION:

I, the undersigned person, contractor, subcontractor, consultant, or the duly authorized representative thereof, affirm (1) receipt of the summary of State ethics laws* developed by the Office of State Ethics pursuant to Connecticut General Statutes § 1-81b and (2) that key employees of such person, contractor, subcontractor, or consultant have read and understand the summary and agree to comply with its provisions.

* The summary of State ethics laws is available on the State of Connecticut's Office of State Ethics website.

Substitute Senate Bill No. 999

Substitute Senate Bill No. 999

PUBLIC ACT NO. 89-255

AN ACT CONCERNING THE RECOMMENDATIONS OF THE GOVERNOR'S BUILDING CONSTRUCTION ADVISORY COMMITTEE.

Section 1. Section 29-252 of the general statutes is repealed and the following is substituted in lieu thereof:

(a) The state building inspector and the codes and standards committee shall, jointly, with the approval of the commissioner of public safety, adopt and administer a state building code for the purpose of regulating the design, construction and use of buildings or structures to be erected and the alteration of buildings or structures already erected and make such amendments thereto as they, from time to time, deem necessary or desirable. The code shall be revised not later than July 1, 1989, to incorporate such revisions adopted by the Building Officials and Code Administrators International in 1988 as they deem necessary, and not more than every four years thereafter to incorporate any necessary subsequent revisions to the code adopted by said organization. The purpose of said building code shall also include, but not be limited to, promoting and ensuring that such buildings and structures are designed and constructed in such a manner as to conserve energy and, wherever practicable, facilitate the use of renewable energy resources. Said building code includes any code, rule or regulation incorporated therein by reference.

(b) The state building inspector shall be appointed by the governor. He shall be an architect or professional engineer licensed by the state of Connecticut, shall have a thorough knowledge of building code administration and enforcement and shall have had not less than ten years practical experience in his profession.

(c) The state building inspector or his designee [, with the approval of the codes and standards committee,] may issue official interpretations of the state building code, including interpretations of the applicability of any provision of the code, upon the request of any person. The state building inspector shall compile and index each interpretation and shall publish such interpretations at periodic intervals not exceeding four months.

(d) The state building inspector or his designee shall review [the interpretation of the state building code] A DECISION by a local building official or a board of appeals appointed pursuant to section 29-266 when he has reason to believe that such official or board has misconstrued or misinterpreted any provision of

[said] THE STATE BUILDING code. If upon review and after consultation with such official or board he determines that a provision of the code has been misconstrued or misinterpreted, he shall issue an interpretation of said code and MAY ISSUE any order he deems appropriate. Any such determination or order shall be in writing and be sent to such local building official or board by registered mail, return receipt requested. Any person aggrieved by any determination or order by the state building inspector under this subsection may appeal to the codes and standards committee within fourteen days after mailing of the decision or order. Any person aggrieved by any ruling of the codes and standards committee may appeal in accordance with the provisions of subsection (d) of section 29-266.

Sec. 2. Section 29-252a of the general statutes is repealed and the following is substituted in lieu thereof:

(a) The state building code, including any amendment to said code adopted by the state building inspector and codes and standards committee, shall be the building code for all state agencies.

(b) On and after July 1, 1989, except as provided in subsection (c), no state building or structure shall be constructed or altered until an application has been filed by the commissioner of public works with the state building inspector and a building permit issued by the state building inspector. [A copy] TWO COPIES of the plans and specifications for the building or structure to be constructed or altered shall accompany the application. The commissioner of public works shall certify that such plans and specifications are in substantial compliance with the provisions of the state building code and, where applicable, with the provisions of the state fire safety code. The state building inspector shall review the plans and specifications for the building or structure to be constructed or altered to verify their compliance with the requirements of the state building code and, within thirty days of the date of application, issue or refuse to issue the building permit. The state building inspector may request that the state fire marshal review such plans to verify their compliance with the state fire safety code.

(c) All state agencies authorized to contract for the construction of buildings or the alteration of existing buildings under the provisions of section 4-126 or 4-131 shall be responsible for substantial compliance with the provisions of the state building code and the regulations lawfully adopted thereunder. SUCH AGENCIES SHALL GIVE WRITTEN NOTICE TO THE STATE

BUILDING INSPECTOR OF THEIR INTENT TO APPLY FOR A CERTIFICATE OF OCCUPANCY AT LEAST THIRTY DAYS PRIOR TO THE ADVERTISEMENT FOR A CONSTRUCTION CONTRACT. Such agencies shall apply to the state building inspector for a certificate of occupancy and shall certify compliance with the state building code to the state building inspector prior to occupancy or use of the facility.

(d) No state building or structure erected or altered on and after July 1, 1989, shall be occupied or used in whole or in part, until a certificate of occupancy has been issued by the state building inspector, certifying that such building or structure substantially conforms to the provisions of the state building code and the regulations lawfully adopted thereunder.

(e) The state building inspector OR HIS DESIGNEE shall inspect OR CAUSE TO BE INSPECTED any construction of buildings or alteration of existing buildings by state agencies. The state building inspector may order any state agency to comply with the state building code.

(f) Any person aggrieved by any refusal to issue a building permit or certificate of occupancy under the provisions of this section or by an order to comply with the state building code may appeal, de novo, to the codes and standards committee within seven days after the issuance of any such refusal or order.

(g) State agencies shall be exempt from the permit requirements of section 29-263 and the certificate of occupancy requirement under section 29-265.

Sec. 3. Section 29-262 of the general statutes is repealed and the following is substituted in lieu thereof:

(a) The state building inspector and the codes and standards committee acting jointly, with the approval of the commissioner of public safety, shall require passage of a written examination and successful completion of a suitable educational program of training as proof of qualification pursuant to section 29-261 to be eligible to be a building official. No person shall act as a building official for any municipality until the state building inspector, upon a determination of qualification, issues a license to such person except that a license shall not be required (1) in the case of a person certified prior to January 1, 1984, or (2) in the case of a provisional appointment, for a period not to exceed ninety days in order to complete such training program and licensure classes, made in accordance with standards established in regulations adopted by the STATE building inspector and the codes and standards committee in accordance with the provisions of chapter 54. The state building

inspector and the codes and standards committee, with the approval of the commissioner of public safety, shall establish classes of licensure that will recognize the varying complexities of code enforcement in the municipalities within the state.

(b) The state building inspector shall prepare and conduct OR APPROVE CONTINUING educational programs designed to train and assist building officials in carrying out the duties and responsibilities of their office. Such educational programs shall be in addition to the program specified under subsection (a) of this section and shall consist of not less than ninety hours of training over [a] CONSECUTIVE three-year [period] PERIODS. Each building official shall attend such training programs and present proof of successful completion to the state building inspector. The state building inspector may, after notice and opportunity for hearing, revoke any license issued under the provisions of subsection (a) of this section for failure on the part of a building official to present such proof.

(c) Each municipality shall be responsible for the full payment of the fees for the educational programs of training required in subsections (a) and (b) of this section and the cost of textbooks for such programs. Any person may participate in the educational programs specified under subsection (b) of this section at his own expense where space is available.

(d) THE CODES AND STANDARDS COMMITTEE MAY SUSPEND OR REVOKE THE LICENSE OF ANY BUILDING OFFICIAL WHO FAILS TO FAITHFULLY PERFORM THE DUTIES OF HIS OFFICE. NO SUCH BUILDING OFFICIAL MAY HAVE HIS LICENSE SUSPENDED OR REVOKED UNLESS HE HAS BEEN GIVEN NOTICE IN WRITING OF THE SPECIFIC GROUNDS FOR SUCH ACTION AND AN OPPORTUNITY TO BE HEARD IN HIS OWN DEFENSE, PERSONALLY OR BY COUNSEL, AT A HEARING BEFORE THE CODES AND STANDARDS COMMITTEE. SUCH HEARING SHALL BE HELD IN ACCORDANCE WITH THE PROVISIONS OF CHAPTER 54. ANY SUCH BUILDING OFFICIAL MAY APPEAL SUCH SUSPENSION OR REVOCATION TO THE SUPERIOR COURT IN ACCORDANCE WITH THE PROVISIONS OF SECTION 4-183. SAID COURT SHALL REVIEW THE RECORD OF SUCH HEARING AND, IF IT APPEARS UPON THE HEARING ON THE APPEAL THAT TESTIMONY IS NECESSARY FOR AN EQUITABLE DISPOSITION OF THE APPEAL, IT MAY TAKE EVIDENCE OR APPOINT A REFEREE OR A COMMITTEE TO TAKE SUCH EVIDENCE AS IT MAY DIRECT AND REPORT THE SAME TO THE COURT WITH HIS OR ITS FINDINGS OF FACT, WHICH REPORT SHALL CONSTITUTE A PART OF THE PROCEEDINGS UPON WHICH THE DETERMINATION OF THE COURT SHALL BE MADE. THE COURT MAY AFFIRM THE ACTION OF THE CODES AND STANDARDS COMMITTEE OR MAY SET THE SAME ASIDE IF IT FINDS THAT SUCH COMMITTEE

ACTED ILLEGALLY OR IN THE ABUSE OF ITS DISCRETION.

[(d)] (e) For purposes of indemnification of any building official against any losses, damages or liabilities arising out of the performance of his official duties, the building official shall be deemed to be acting for the municipality in which he was appointed.

Sec. 4. Section 29-276b of the general statutes is repealed and the following is substituted in lieu thereof:

(a) For the purposes of this section, THE TERM "threshold limit" [as it relates to a structure means] SHALL APPLY TO any [building] STRUCTURE OR ADDITION THERETO (1) having four stories, (2) sixty feet in height, (3) with a clear span of one hundred fifty feet in width, (4) containing one hundred fifty thousand square feet of total gross floor area, OR (5) with an occupancy of one thousand persons. [, or (6) designed to be occupied by more than one family and having one hundred dwelling units.]

(b) The following use groups shall have the following additional threshold limits:

Use Group		Threshold Limit
I - Institutional		
I-1	Residential care	
I-2	Incapacitated care	150 beds or persons
I-3	Restrained, jails and asylums	
R - Residential		
R-1	Residential - hotel/motel	Single structure with 200 rooms
R-2	Residential - multifamily	Single structure with 100 dwelling units
S - Storage		Parking structures with 1,000 cars
S-1	Moderate hazard	250,000 square feet
S-2	Low hazard	250,000 square feet

(c) If a proposed [building] STRUCTURE OR ADDITION will exceed the threshold limit as [defined in subsection (a) or as] provided in [subsection (b) of] this section, the [local] building official of the municipality in which the [building shall] STRUCTURE OR ADDITION WILL be located shall [hire] REQUIRE THAT an independent STRUCTURAL engineering consultant [to] review the STRUCTURAL plans and specifications of the [building] STRUCTURE OR ADDITION to be constructed to determine their compliance with the requirements of the state building code [and to conduct such field inspections as he deems necessary.] TO THE EXTENT NECESSARY TO ASSURE THE STABILITY AND INTEGRITY OF THE PRIMARY STRUCTURAL SUPPORT SYSTEMS OF SUCH STRUCTURE OR ADDITION. ANY MODIFICATIONS OF APPROVED STRUCTURAL PLANS OR DESIGN SPECIFICATIONS SHALL REQUIRE SHOP DRAWINGS

TO THE EXTENT NECESSARY TO DETERMINE COMPLIANCE WITH THE REQUIREMENTS OF THE STATE BUILDING CODE AND SHALL BE REVIEWED BY SUCH CONSULTANT. ANY FEES RELATIVE TO SUCH REVIEW REQUIREMENTS SHALL BE PAID BY THE OWNER OF THE PROPOSED BUILDING PROJECT. THE BUILDING OFFICIAL MAY PREQUALIFY INDEPENDENT STRUCTURAL ENGINEERING CONSULTANTS TO PERFORM THE REVIEWS REQUIRED UNDER THIS SUBSECTION. In the case of such a project, [(1) the local building official or independent engineering consultant may require independent laboratory tests for randomly selected, specially fabricated key structural components to ensure that such components, when delivered to the job site, conform to approved design specifications and drawings, and (2)] each general contractor and major subcontractor shall keep and maintain a daily construction log in a manner prescribed by the state building inspector. The [local] building official [and any architect or engineer of record] shall, upon request, have access at all reasonable times to such log. If a [building] STRUCTURE OR ADDITION exceeds the threshold limit, each architect, professional engineer and general contractor involved in such project shall sign a statement of professional opinion affirming that the completed construction is in substantial compliance with the approved plans and design specifications. If fabricated structural load bearing members and assemblies are used in such construction, the professional engineer licensed in accordance with chapter 391 responsible for the design of such members or assemblies shall sign a statement of professional opinion affirming that the completed fabrication is in substantial compliance with the approved design specifications.

(d) The [local] building official of the municipality in which the [building] STRUCTURE OR ADDITION will be located shall satisfy himself that each architect, professional engineer, general contractor and major subcontractor involved in the project holds a license to engage in the work or occupation for which the [person] APPROPRIATE BUILDING PERMIT has been issued. [a permit.] If fabricated structural load bearing members or assemblies will be used in such construction, the building official shall satisfy himself that each professional engineer responsible for the design of such members or assemblies holds a license issued in accordance with the provisions of chapter 391.

(e) ANY PERSON, FIRM OR CORPORATION PROPOSING TO CONSTRUCT A STRUCTURE OR ADDITION WHICH WILL EXCEED THE THRESHOLD LIMIT AS PROVIDED IN THIS SECTION SHALL GIVE WRITTEN NOTICE TO THE BUILDING OFFICIAL OF THE MUNICIPALITY IN WHICH THE STRUCTURE OR ADDITION IS TO BE LOCATED OF ITS

INTENT AT LEAST NINETY DAYS PRIOR TO ITS FILING AN APPLICATION FOR A BUILDING PERMIT.

[(e)] (f) (1) On and after January 1, [1989] 1990, no laboratory specializing in the testing of construction materials and structures shall be designated by the building official or engineering consultant to perform such testing unless it has been accredited by the National Voluntary Laboratory Accreditation Program of the National Bureau of Standards. [Each such]

(2) ON AND AFTER JANUARY 1, 1989, EACH laboratory SPECIALIZING IN THE TESTING OF CONSTRUCTION MATERIALS AND STRUCTURES shall have a licensed professional engineer certify tests and reports as required.

Sec. 5. Section 29-276c of the general statutes is repealed and the following is substituted in lieu thereof:

If THE PLANS FOR a proposed [building has four or more stories] STRUCTURE OR ADDITION ARE REQUIRED TO BE SEALED BY A LICENSED ARCHITECT OR PROFESSIONAL ENGINEER, [the] EACH architect [and] OR engineer of record shall be RETAINED AND BE responsible for the review of the implementation of its design, including the review of shop drawings [, daily construction logs] and the observation of construction. In the event such architect or engineer is unable to fulfill his review responsibilities, an additional architect or engineer shall be retained and the local building official shall be informed, in writing, of such retainer. If fabricated structural load bearing members or assemblies are used in such construction, the LICENSED professional engineer [licensed in accordance with chapter 391] responsible for the design of such members or assemblies shall be responsible for the implementation of his design by [viewing] REVIEWING the fabrication process to ensure conformance with his design specifications and parameters.

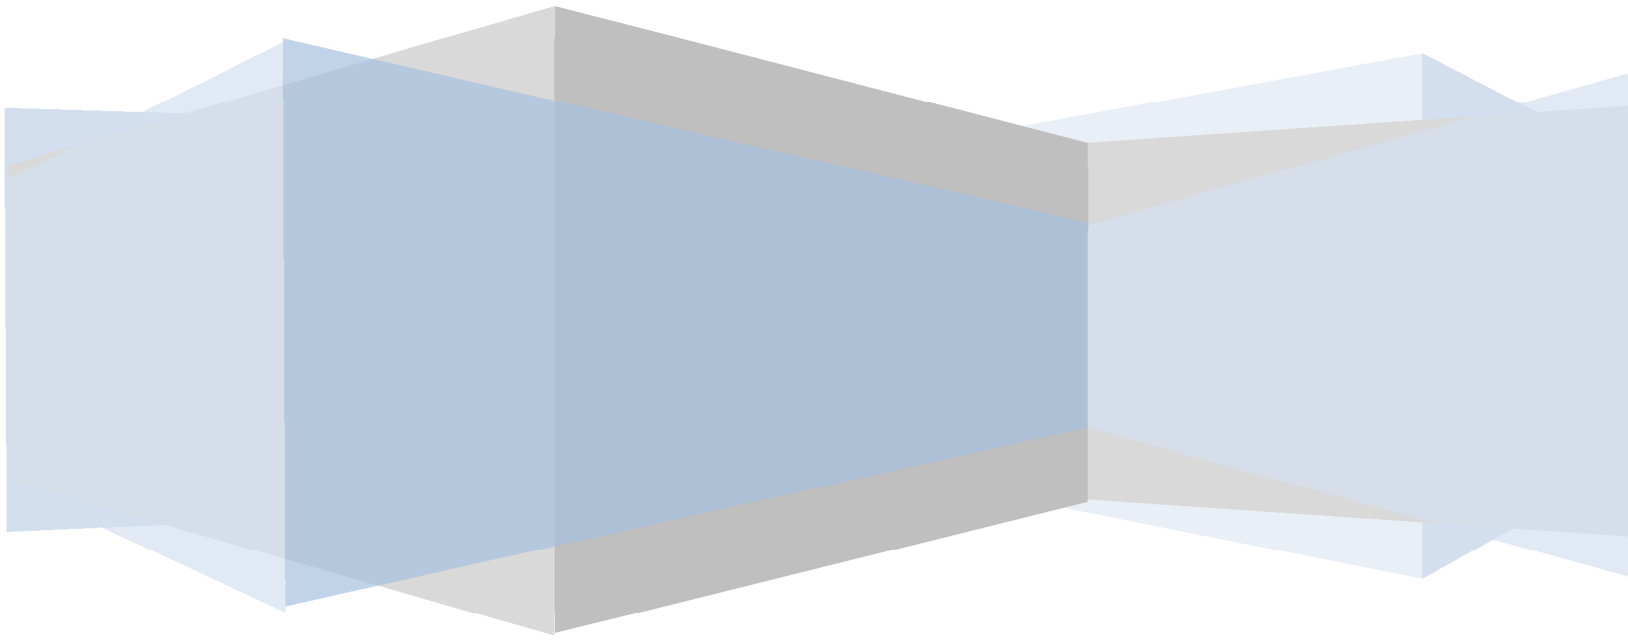
Sec. 6. Section 20-341gg of the general statutes is repealed and the following is substituted in lieu thereof:

(a) On and after July 1, [1989] 1990, no person shall engage in or offer to perform the work of any general contractor or major subcontractor in this state on any [building having four or more stories] STRUCTURE OR ADDITION FOR WHICH PLANS ARE REQUIRED TO BE SEALED BY A LICENSED ARCHITECT OR PROFESSIONAL ENGINEER unless he has first obtained a license as required under the provisions of chapter 393 or 539 or from the department of consumer protection in accordance with the provisions of this section. The department shall furnish to each qualified applicant a license certifying that the holder

thereof is entitled to engage in the work for which the person has been issued a license under this subsection, and the holder of such license shall carry it on his person while engaging in such work. Such license shall be shown to any properly interested person upon request. No such license shall be transferred to or used by any person other than the person to whom the license was issued. The department shall maintain rosters of licensees updated annually and may provide copies of rosters to the public for an appropriate fee. The department may suspend or revoke any license issued by it if the holder thereof is convicted of a felony, is grossly incompetent, engages in malpractice or unethical conduct or knowingly makes false, misleading or deceptive representations regarding his work or violates any regulation established under this section. Before any license is suspended or revoked, such holder shall be given notice and opportunity for hearing as provided in regulations established under subsection (b) of this section.

(b) Not later than January 1, [1989] 1990, the commissioner of consumer protection shall adopt regulations in accordance with the provisions of chapter 54 to implement the provisions of subsection (a) of this section. Such regulations shall (1) establish the licensing requirements for general contractors, structural frame subcontractors and mechanical subcontractors, (2) specify application and license fees, and (3) establish occupational standards for the preservation of the public safety.

Sec. 7. This act shall take effect from its passage.



Approved June 16, 1989

TurnerTracker User Guide for Vendors

Version 1: January 2015
Version 2: December 2023 (w/Earthwork Waste Information)

Connecticut BU

Table of Contents

Overview 3
Section 1 – Account Activation 4
Section 2 – Entering Waste Data 6
Section 3 – Rejected tickets 8
Section 4 – Reports 9
Section 5 – Frequent Asked Questions 10

Disclaimer: This reference guide has been developed to implement and manage the standard operation online waste tracking procedures for the Boston Business Unit. Some protocol listed may vary by Business Unit and should be updated to meet the needs of that Business Unit. However, the manner in which data is entered/updated TurnerTracker should remain consistent.

Keep in mind that we are all still learning how functions in TurnerTracker operate. As we learn the way, this reference guide will be revised to accommodate changes.

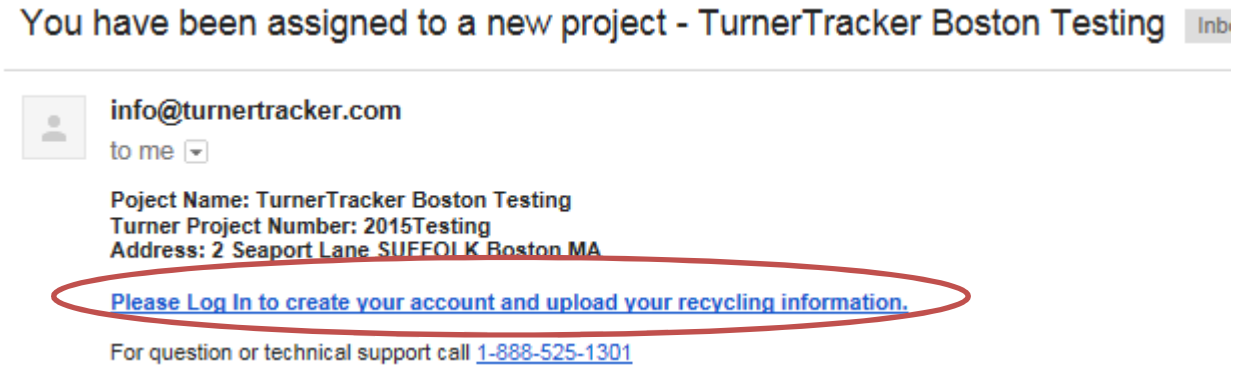
Overview

Construction and Demolition (C&D) waste accounts for 40% of annual solid waste globally. Turner is leading the construction industry to be more responsible by reporting all waste on every project, then by diverting as much waste as possible from landfills. Our goal is to report waste on every Turner project and recycle a minimum of 50% over all.

Overview
TurnerTracker integrates waste reporting into every project in construction and provides an easy interface between Project Waste Managers and Vendors.

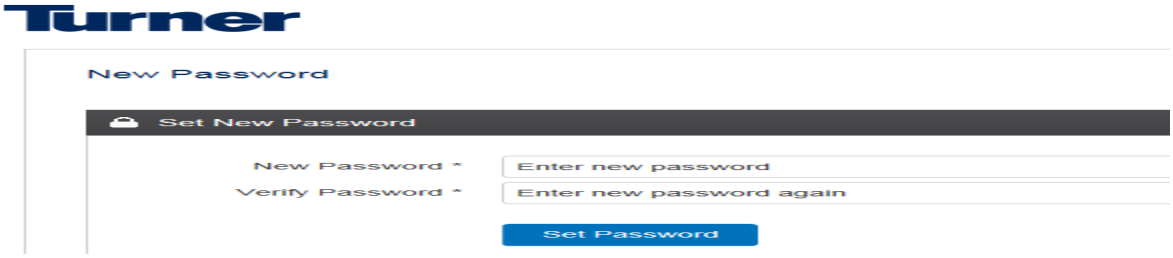
This system will provide efficiency and reduced Project Waste Managers/Vendors time plus many other features:

- Upload, store and organize waste tickets
- Streamlines approving ticket
- Mobile friendly
- LEED friendly
- Easily export Excel and other formats



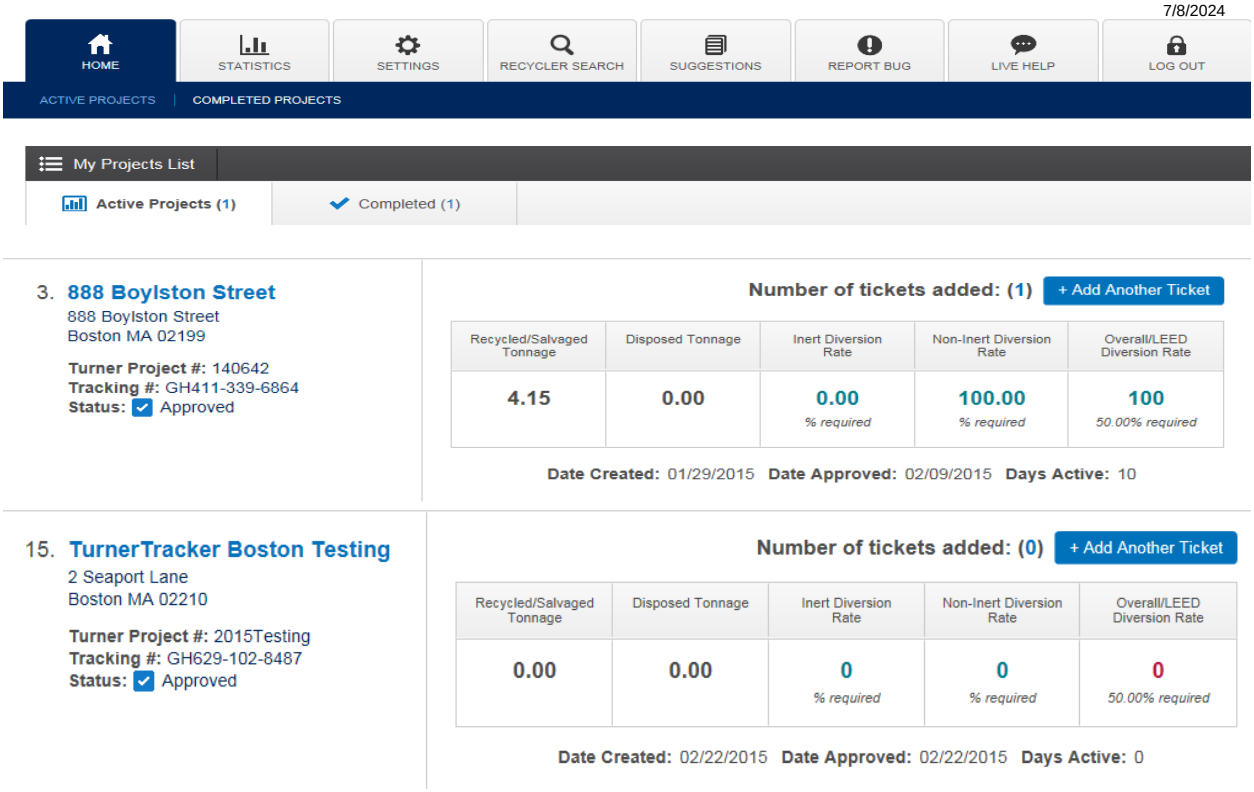
As Turner Project Waste Managers activate new projects, vendors will receive an activation email to activate the vendor's account, and begin entering hauling data and upload tickets. Vendors are required to report and submit a waste ticket for every waste container that leaves the jobsite. These tickets are then submitted to a Turner Project Waste Manager for review. Tickets that have accurate data are approved and submitted into our company-wide database. Tickets with mistakes and/or questionable data are rejected and sent back to the vendor for correction and resubmission.

Data must be entered into the TurnerTracker System by the fifth (5) day of the month following the invoice period. Vendor shall make every effort to maximize percentage of material recycled.



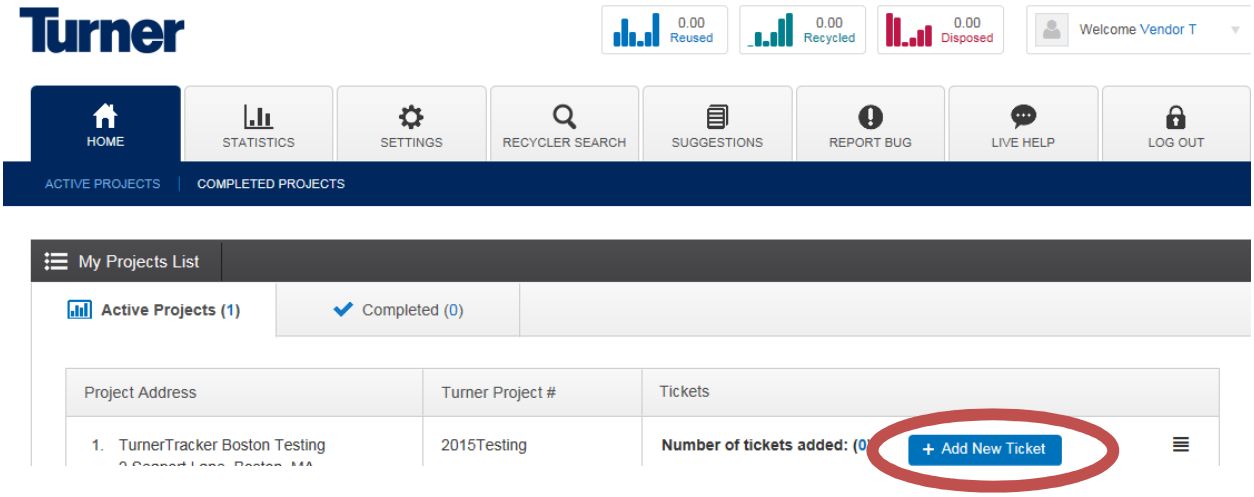
Failure to participate in the TurnerTracker System and submit waste data in a timely manner as required by contract will result in interruptions on progress payments.

Section 1 – Account Activation

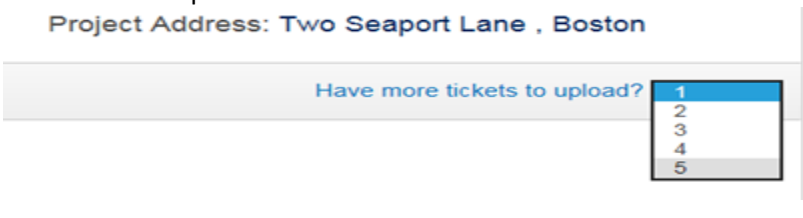


An activated project will initiate a system-generated email from TurnerTracker email address info@turnertracker.com. Click link in email to activate vendor account.

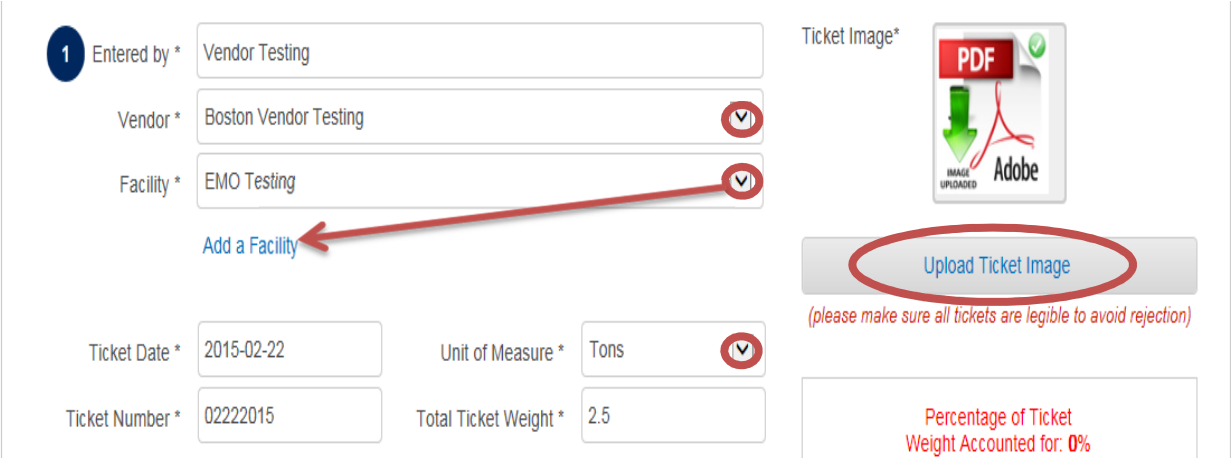
You will be prompt to setup a new password.



Next screen will appear with “Active” and “Completed” projects your company has been assigned to.

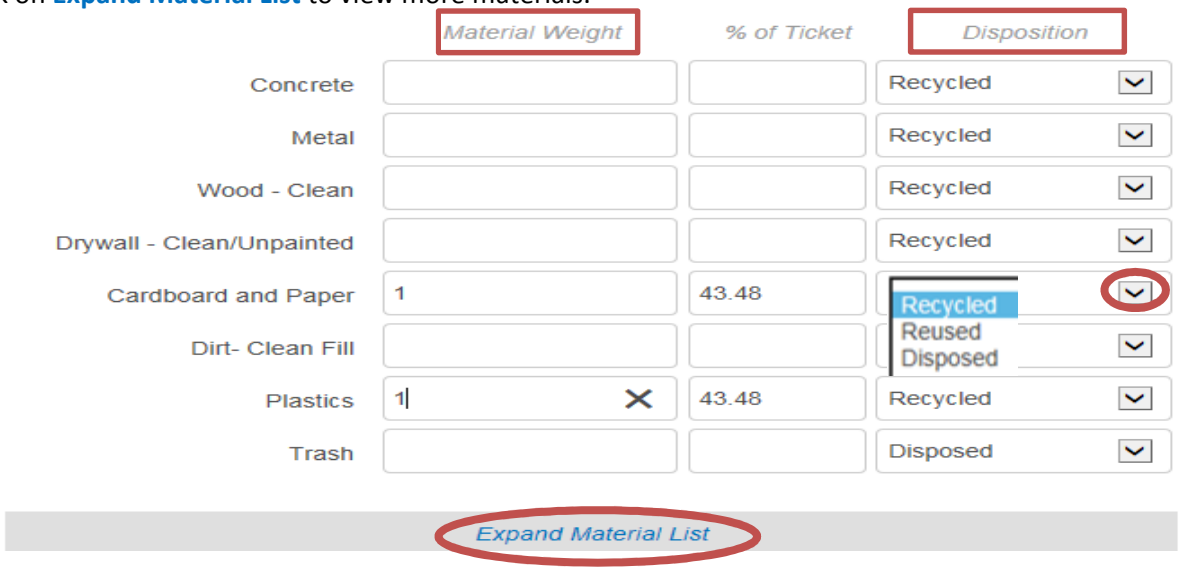


Section 2 – Entering Waste Data

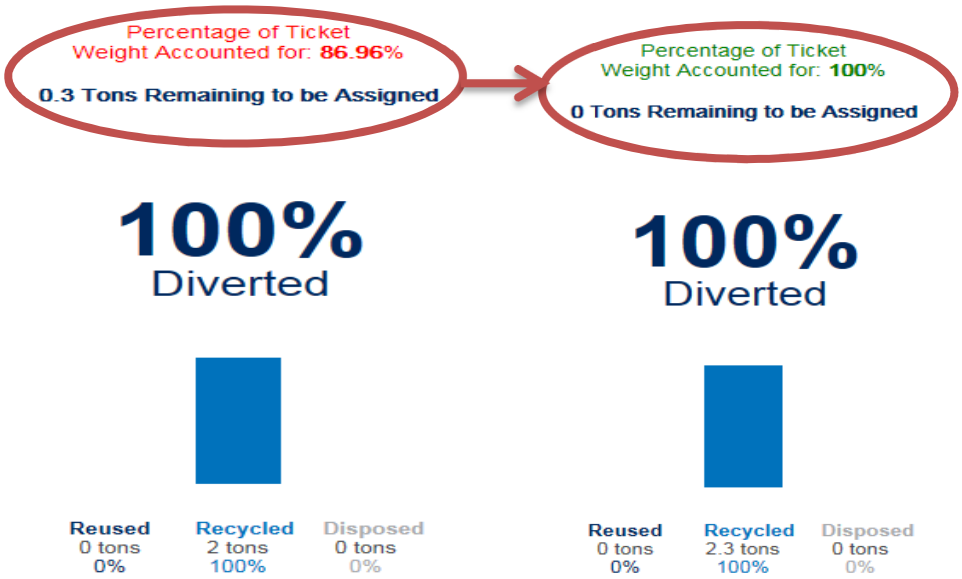


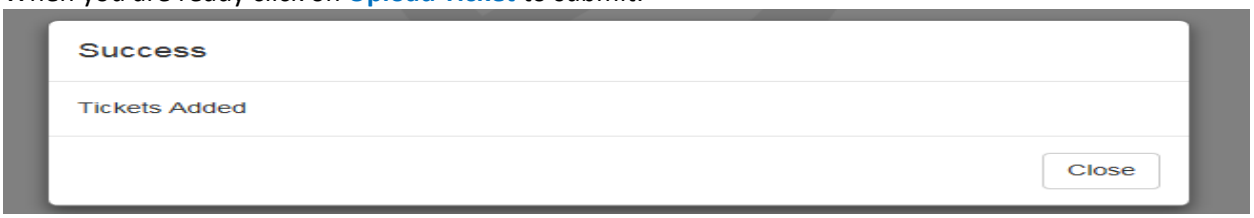
To begin entering waste data locate the project and click on **+Add New Ticket**.

You can enter up to five tickets at the same time.



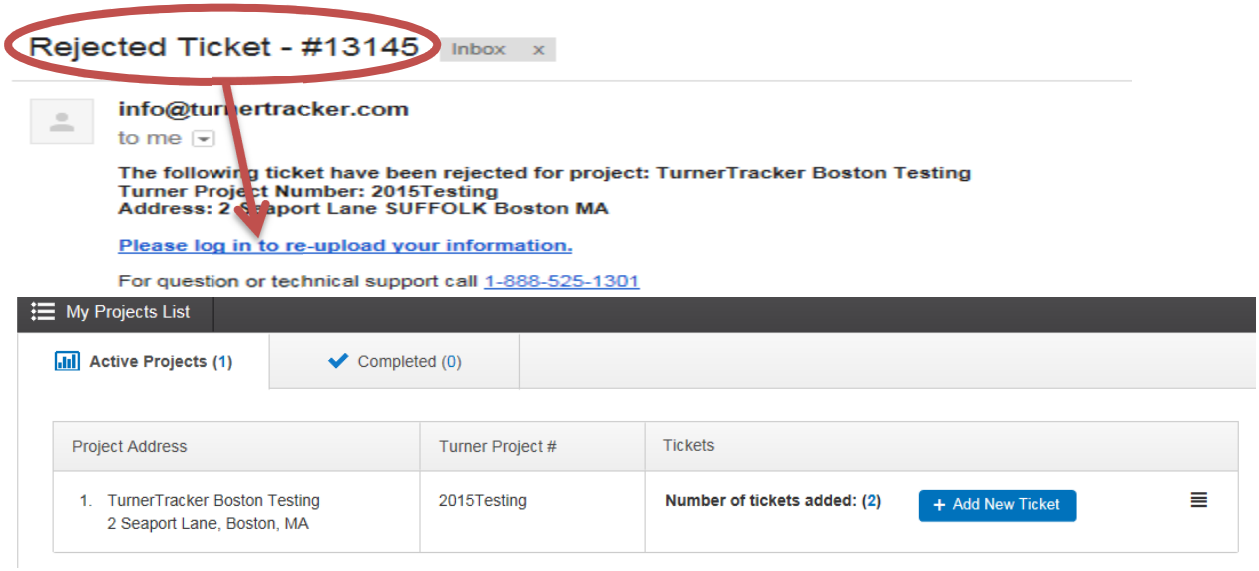
Enter all required (*) data, use drop down list where available to select applicable information. If the dumping facility is not available click on **Add a Facility** and enter applicable data. It is a requirement to upload a copy of the actually ticket being submitted.



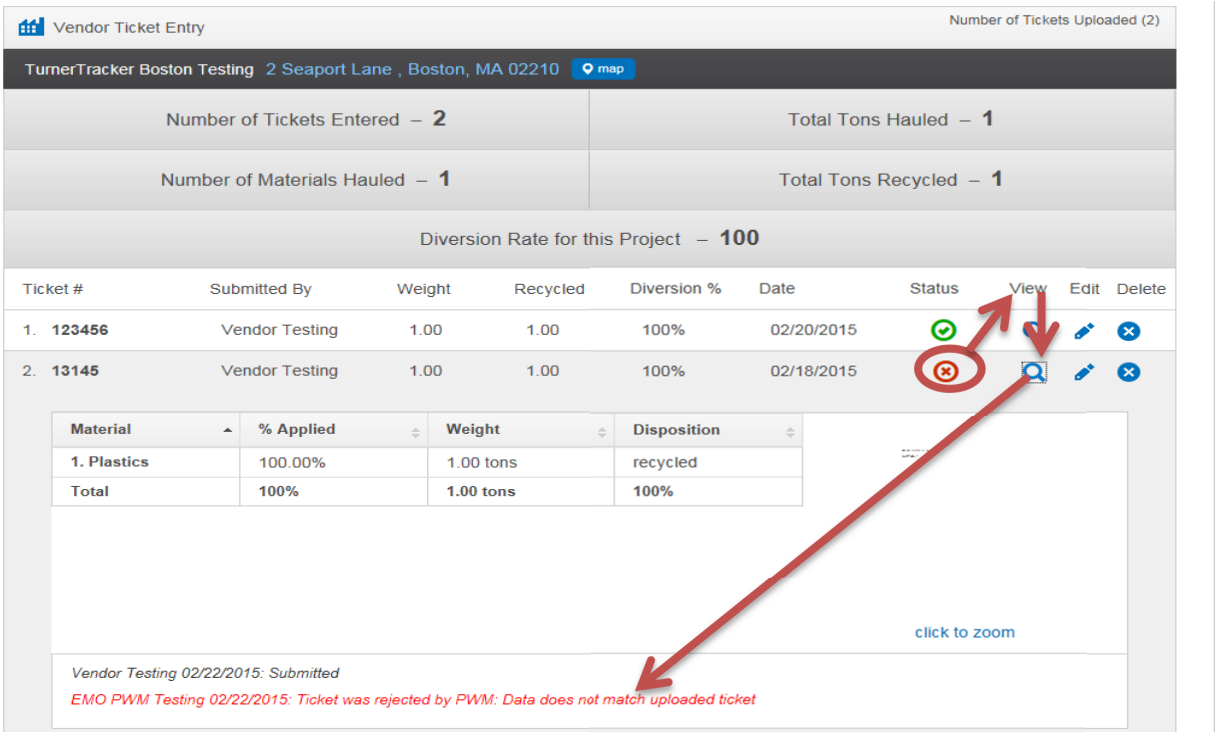


Enter material weight per the ticket information. Select the applicable Disposition from drop down list. Click on **Expand Material List** to view more materials.

You will notice to the right of the material list as you assign the weight the percentage of ticket weight calculates to the weight accounted for. **100%** of weight must be accounted for.



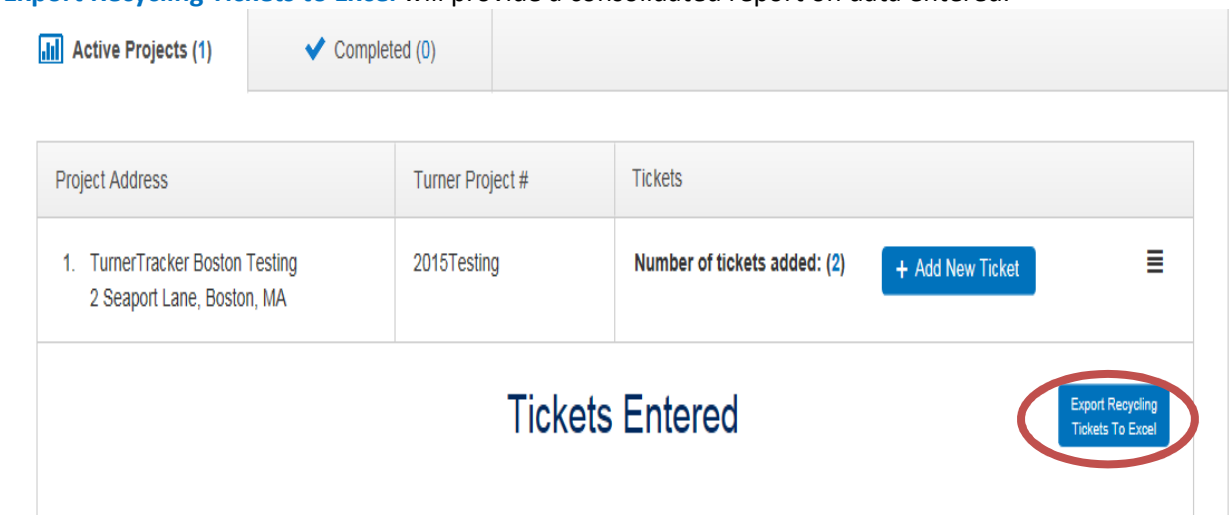
When you are ready click on **Upload Ticket** to submit.



Proceed to enter more tickets if any or if nothing further simple logout. Notification has been sent to the designated Turner Project Waste Manager for review and approval or rejection for further information.

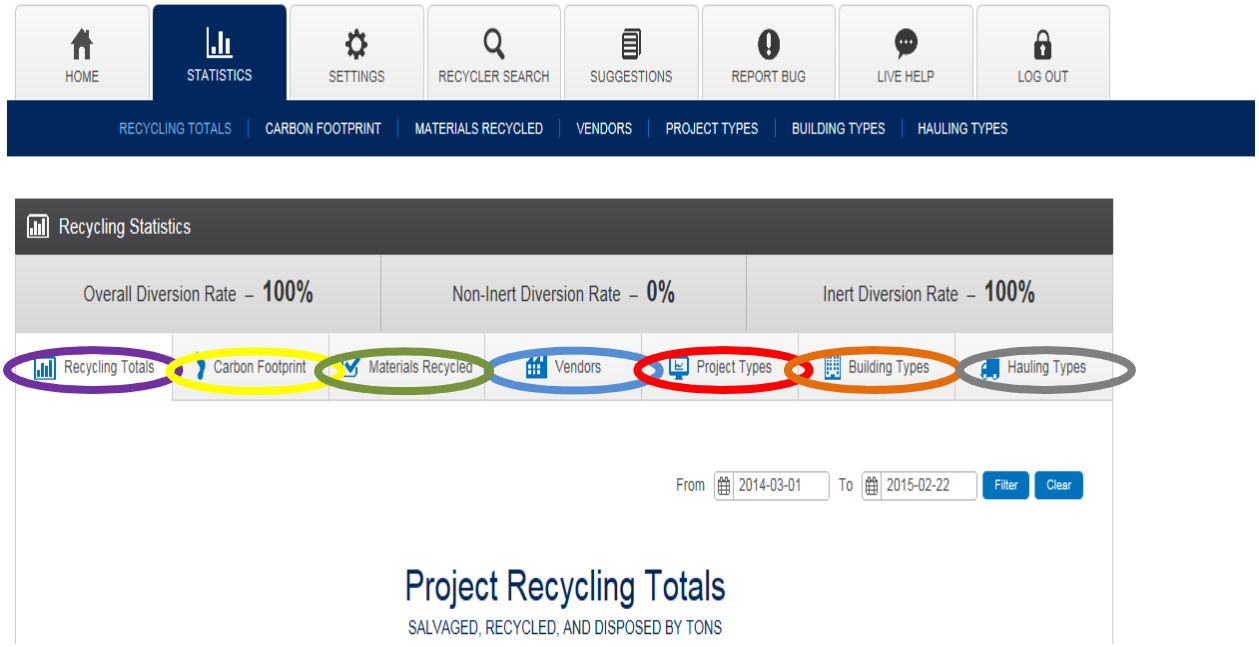
Section 3 – Rejected tickets

If a ticket is rejected a system-generated email notification will be sent. Click on the link within the email to access TurnerTracker.com and click on project name with the rejected ticket.



Scroll to the bottom of the page, locate rejected ticket, under **View** click on the **magnifying glass** icon and review comment in red for information on rejected ticket.

Click on the Edit **pencil** icon to update date and resubmit ticket for re-approval.



Section 4 – Reports

Export Recycling Tickets to Excel will provide a consolidated report on data entered.

	A	B	C	D	E	F	G	H

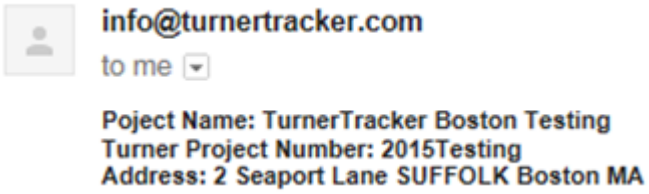
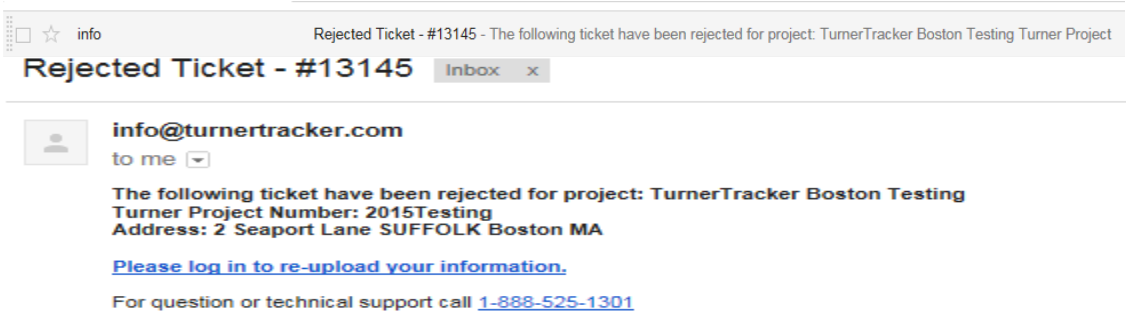
Section 5 – Frequent Asked Questions



Q: If I have any questions relating to a project or technical issues, whom should I contact?

A: Project specific questions – Contact your Project Waste Manager
Technical issues – Contact Green Halo Customer Service at (888) 525-1301 or click on Live Help for online assistance.



Q: I have multiple projects with Turner, will I be know what new project was awarded to me?

A: Every system-generated email will show the Project Name, Project Number and Project Address.

Q: I have more than one ticket pending with Turner for review. Will the system-generated email notification distinguish what ticket was rejected?

A: Yes. The subject line of email notification references ticket number and project name.

Q: Can I check the status of a ticket?

A: Yes. Log into TurnerTracker.com , select project and scroll down to the bottom of the page to view submitted ticket status.

Turner Tracker "How To": Supplemental Earthwork Waste Information

Contents

Earthwork: Definitions of Disposal Methods and Examples 1
Guidance for Supporting Documentation 2
Uploading Multiple Page Supporting Documentation 3
Reporting Materials 4
Add a Note when Reporting 5
High Tonnage Ticket Warning Email 6
Accessing Additional Turner Tracker "How To" Documents 7

Earthwork: Definitions of Disposal Methods and Examples

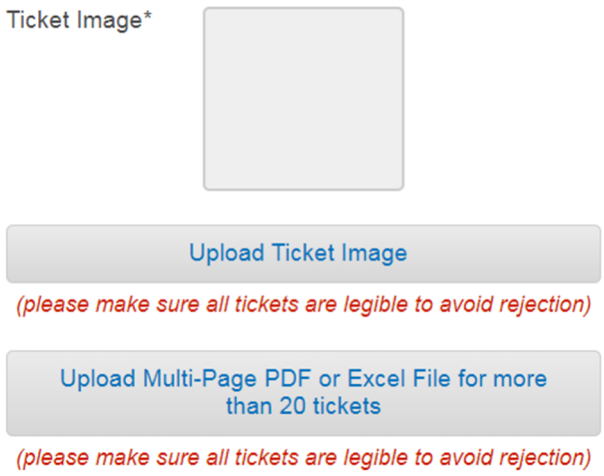
Disposal Method:	Reuse (on-site)	Recycle (reuse off-site)	Disposal at Landfill
Definition:	"Materials relocated within the project boundary, if modification is required it must occur on-site."	"Materials removed from site that can be reused elsewhere and not sent to landfill. Materials can remain in their current state or be modified prior to their next use."	"Materials deposited at landfill or utilized as Alternative Daily Cover (ADC)"
Examples:	Cut materials remaining on site to be utilized as fill	Material removed from site and used as fill beyond project boundaries	Soils unsuitable for further use disposed of at landfill
	Trees felled and mulched on site for use within project boundary	Excess earthwork materials stored/stockpiled offsite – capable for reuse elsewhere	Alternative Daily Cover – Material utilized to separate layers of landfill
	Stone extracted, broken up on site then installed as temporary roadway or subbase	Stone extracted, transported off-site, broken up and returned to site to be used as temporary roadway	
		Materials modified prior to being stockpiled off-site: asphalt batching, thermal plant treatment	
		Trees felled whose wood is used to make benches	

Guidance for Supporting Documentation

Turner Tracker requires supporting documentation to be uploaded with each reported haul. Turner project staff review each reported haul and verify the uploaded information matches the supporting documentation.

* If a reported upload represents multiple days of data, be sure to include all available supporting documentation. Material totals can be summarized for that period on a cover sheet and reported accordingly. *

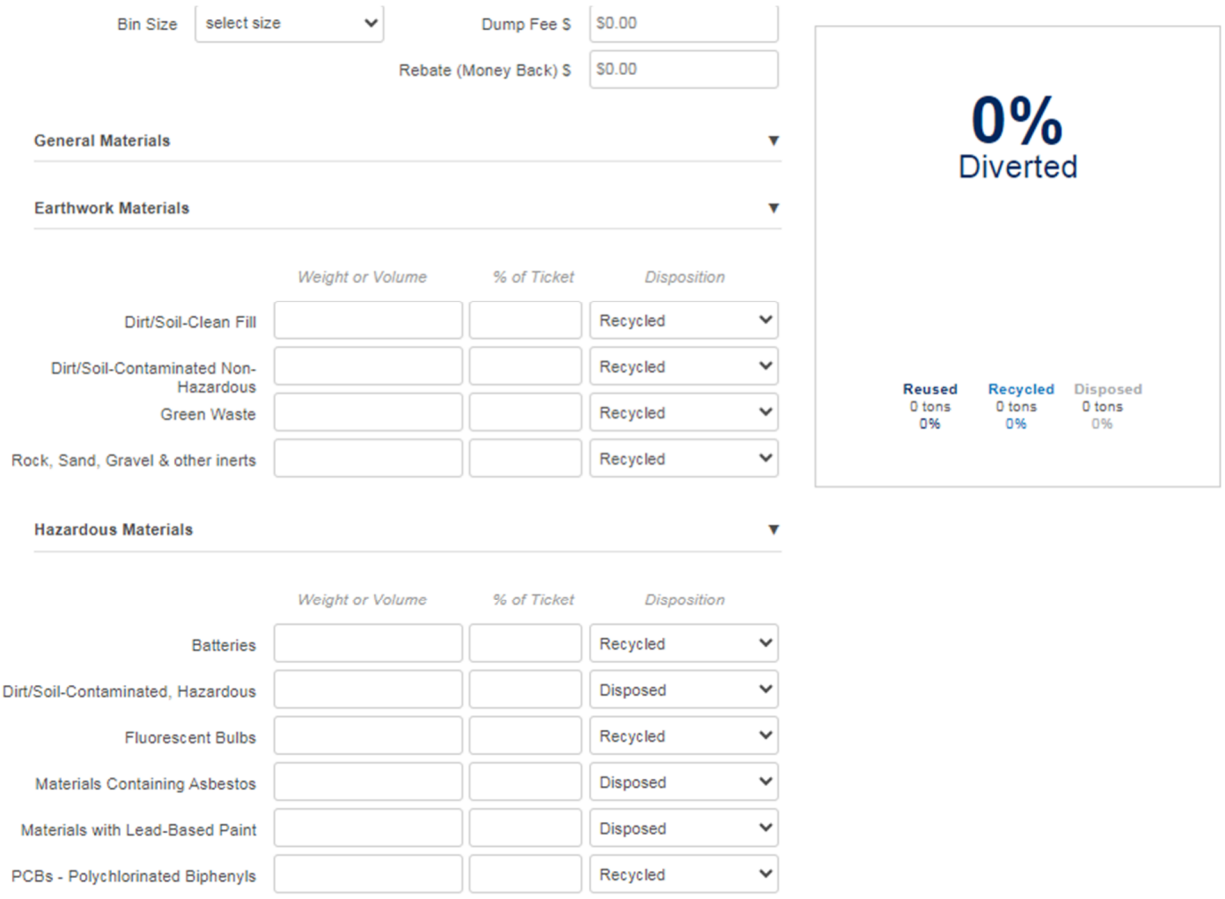
* If multiple hauls are reported in a single upload, limit the reported data to a single month. Do not report September and October haul data in the same upload. *



Information to include in supporting documentation:

- Company Name and Address
- Turner Project Name and Address
- Haul/Ticket Number
  - If upload represents multiple dates: reference week or month
    - Ex. Project Number-Oct23-W2
    - Ex. Project Number-Oct23
- Haul Date
  - If upload represents multiple dates: reference the date of last haul
- Material Destination or Processing Facility
  - 'Haul to' location of material(s)
- Haul Total Weight or Cubic Yards
- Haul Total Diversion Percentage from Landfill
  - Diversion: Reuse or Recycle
- Summary of Materials in Haul
  - Material(s)
    - Weight/Cubic Yard (per material)
    - Percentage of Total Haul (per material)
    - Diversion Method (per material)
- Notes or Additional Comments
  - Opportunity to provide additional information, description, or context
- Supplemental Documentation
  - Additional information to substantiate reported totals
    - Quantity Takeoff Exports for Cut/Fill
    - Soil or material testing information
    - Individual haul data if reporting a summary of multiple hauls

Uploading Multiple Page



When uploading multiple pages of supporting documentation, it's required to select the "Upload Multi-Page PDF" option shown below. If this option is not available, please ask your Turner project team to enable the feature.

If a multiple page document is uploaded using the "Upload Ticket Image" option, only the first page will display. There will not be way to retroactively view the additional pages without reuploading the document after the "Upload Multi-Page PDF" is enabled.

Reporting Materials

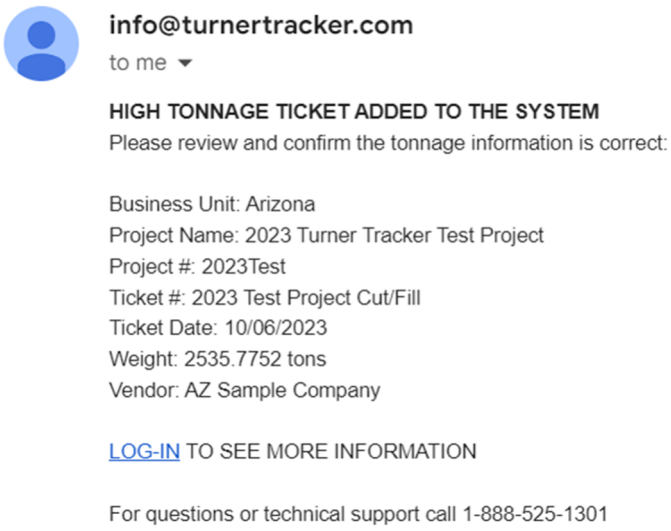
Turner Tracker's ticket entry form displays three (3) categories of materials; General, Earthwork, and Hazardous. Selecting the dropdown arrow at the right of each material group will display the included materials.

Other materials like concrete, asphalt, and metal can be found within the 'General Materials' category dropdown.

Add a Note

Turner Tracker allows you to enter written comments providing additional context to the reported data.

This is an opportunity to communicate with the project team that an upload represents:



- Cut/fill quantities generated with software
- Explaining specific reuse or recycling diversion strategies

Add a Note:

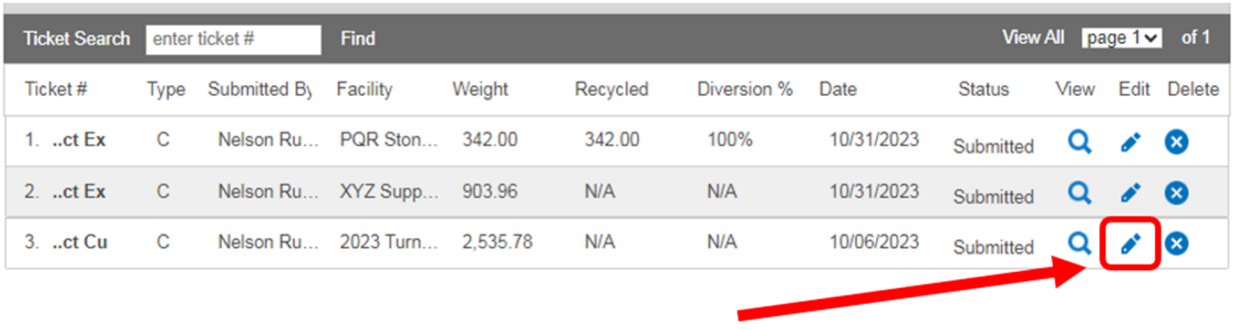
High Tonnage Ticket Warning Email

Turner Tracker generates an email any time an upload of 100 tons or more is entered to the system. This is an effort to capture potential data entry errors.

These emails are received by not only the individual who uploaded the information but also all Turner staff assigned as Project Waste Managers associated with that project.

info@turnertracker.com
to me

HIGH TONNAGE TICKET ADDED TO THE SYSTEM
Please review and confirm the tonnage information is correct:



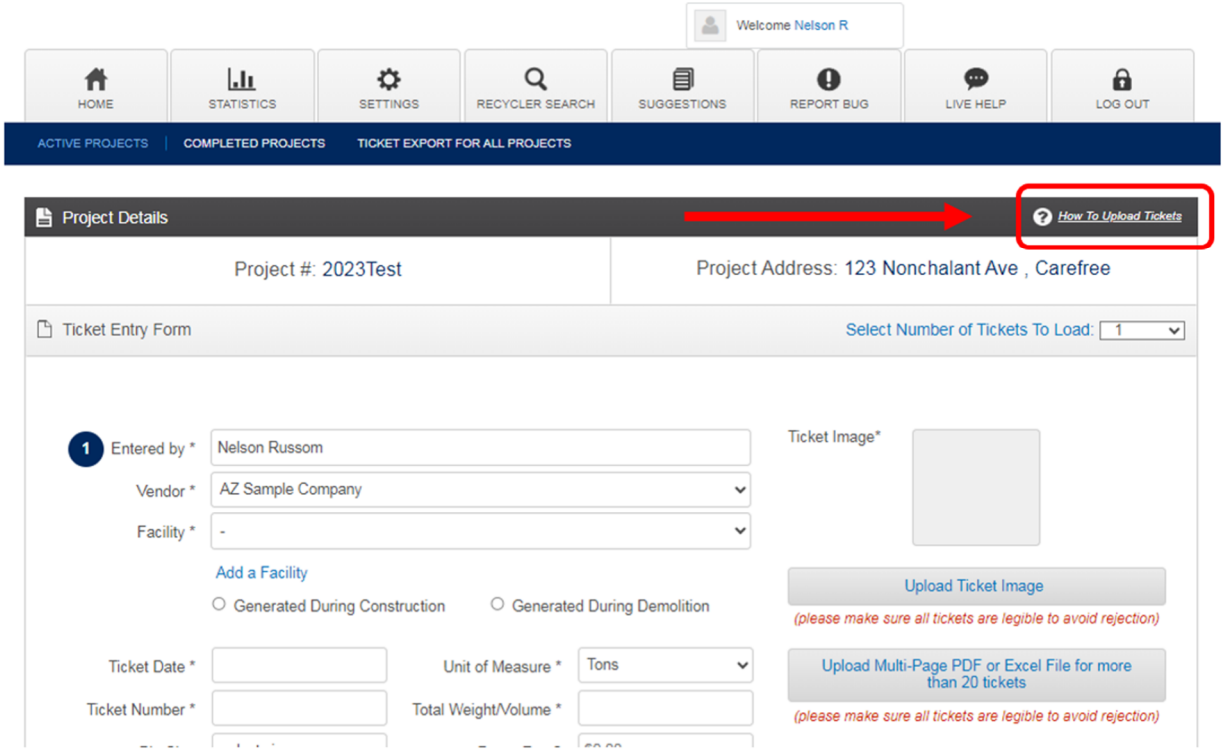
Business Unit: Arizona
Project Name: 2023 Turner Tracker Test Project
Project #: 2023Test
Ticket #: 2023 Test Project Cut/Fill
Ticket Date: 10/06/2023
Weight: 2535.7752 tons
Vendor: AZ Sample Company

LOG-IN TO SEE MORE INFORMATION

For questions or technical support call 1-888-525-1301

If the submitted tonnage is correct the email can be ignored. Otherwise, it is necessary to edit the uploaded tonnage and resubmit the entry.

To edit a submitted entry, select the pencil icon of the desired ticket to open the submission. Make the necessary modifications and reupload the ticket.



Ticket Search | enter ticket # | Find | View All | page 1 | of 1

Policy
July 2021

Code of Conduct for Business Partners (US and International)

Turner Construction Company and Turner International (collectively, "Turner") have a long-standing reputation for conducting business in accordance with ethical principles. This reputation is one of the pillars of Turner's success, and preserving it is one of our highest priorities.

This Code of Conduct, in conjunction with the applicable contractual agreement, reflects our standards and expectations of our subcontractors, suppliers and other vendors (collectively, "Business Partners"). These standards apply to all third parties (including their owners, officers, directors, employees, contractors, agents, and others working on their behalf) that provide goods or services to Turner.

Turner reserves the right to modify this Code of Conduct from time to time. Business Partners agree to observe the principles reflected in the Code of Conduct and ensure they are upheld as part of their management practices.

Acceptance of this Code of Conduct is a prerequisite for all contractual agreements between Turner and its Business Partners.

I. Business Integrity

General Principles

Business Partners shall comply with the laws and other legal requirements in effect in the countries and localities where they transact business. Furthermore, Business Partners are expected to demonstrate honesty and fairness and commit to being socially responsible with respect to all of their business activities.

Conflicts of Interest

A conflict of interest exists when personal interest(s) interferes in any way with the interests of Turner. Business Partners must avoid and disclose any actual or potential conflicts of interest in their dealings with Turner.

Anti-Corruption Laws

Business Partners must comply with anti-corruption laws and any other applicable legal requirements, including, without limitation, the Foreign Corrupt Practices Act ("FCPA"), that governs operations in the countries and localities where they transact business. The FCPA prohibits any U.S. person or company, acting anywhere in the world, from providing any item of value to foreign officials directly or indirectly for the purpose of obtaining or keeping business or securing an improper business advantage.

Illegal Payments and Gifts

Offering, promising, or authorizing any gift, meal, ticket, entertainment or other item of value by Business Partners and their employees to public officials as a means of influencing the actions of an individual holding a public or legal duty is not permitted. Business Partners and their employees shall not accept any gift, meal, ticket, entertainment or other item of value in exchange for the purpose of securing an improper business advantage.

Fair Competition

Business Partners are expected to uphold standards of fair business and competition. Business Partners shall not act in a way that is or could be interpreted as unfair, anti-competitive, or abusive. All activities must be in line with current laws that uphold and promote competition, in particular prevailing anti-trust laws as well as laws that regulate competition. In dealing with competitors, Business Partners shall not collude or engage in other activities aimed at influencing prices or conditions, dividing sales territories or customers, or inhibiting free and open competition.

Money Laundering

Business Partners agree to comply with all laws that prohibit money laundering or financing for illegal or illegitimate purposes. Business Partners should endeavor to work exclusively with reputable counterparties involved in legitimate business activities with funds derived from legitimate sources.

Intellectual Property and Protection of Assets

Business Partners must respect confidential information relating to Turner and Turner stakeholders. No information may be disclosed by a Business Partner to any person who does not have a right to that information. Business Partners commit their employees to safeguarding the confidential information of Turner and Turner stakeholders.

Business Partners must also respect the assets of Turner and Turner stakeholders. Business Partners' employees may only use assets belonging to Turner and others when appropriately authorized. Business Partners must not tolerate theft of assets.

Responsible Sourcing

Business Partners must implement measures to ensure the responsible procurement of goods and materials and compliance with related laws and regulations. The purchase and trade of regulated conflict minerals (in particular, tantalum, tin, tungsten, gold or their derivatives considered as conflictive) is not permitted. Specifically, Business Partners must ensure that no items are delivered to Turner that contain metals based on minerals that originate from a conflict region where the purchase directly or indirectly supports or finances armed groups.

II. Management System

Business Partners are required to ensure observance of this Code of Conduct by establishing an appropriate management system or by traceably documenting that all principles contained herein are an integral part of the Business Partner's business culture.

Business Partners are at liberty to adopt their own codes of conduct so long as they do not restrict the standards defined in this Code of Conduct. Business Partners commit to inform their employees of the provisions of this Code of Conduct and the associated obligations.

Turner reserves the right to audit adherence to this Code of Conduct at any time and without prior notification or to have adherence audited by independent third parties.

If Business Partners discover any violations of applicable law or this Code of Conduct, they must inform Turner of such discovery immediately. In the event of any violation of applicable law or this Code of Conduct, Turner reserves the right to terminate the contractual relationship with the respective Business Partner.

III. Labor and Human Rights

Turner requires Business Partners to uphold the human rights of all employees and to treat them with respect and dignity as understood by the International Labor Organization ("ILO"). Business Partners shall support the United Nations Human Rights Conventions and fair working conditions for all persons working on their workplaces and in their supply chain. Business Partners' employees are under an obligation to ensure that these universally recognized fundamental rights are observed.

Forced Labor

Business Partners are required to reject every form of forced labor. No employee may be obliged to work by the direct or indirect use of force and/or intimidation. Only people who voluntarily make themselves available for work may be employed. Turner does not tolerate any kind of slavery, human trafficking, debt bondage or involuntary prison labor in the supply chain.

Child Labor

Business Partners respect the standard of the United Nations on human rights, and in particular on children's rights. Turner requires all Business Partners to have zero tolerance for any kind of child labor in the company and in the supply chain. This refers to all stages of manufacturing. The minimum age for employment must not be below the age at which compulsory schooling ends, and in no case may it be below the age of 15 or below any higher minimum age specified by local law. In particular, Business Partners commit to complying with the ILO convention concerning the prohibition and immediate action for the elimination of the worst forms of child labor. If a national regulation concerning child labor provides for stricter measures, these shall have precedence.

Fair Working Conditions and Remuneration

Business Partners must ensure that wages and benefits of their employees and subcontractors are fair and comply with all national and local laws, applicable prevailing wage laws, statutes, or requirements. Business Partners shall maintain such records as necessary to establish the amount of wages and other compensation paid to workers in connection with all projects. Business Partners will ensure adherence to all applicable laws and regulations related to maximum working hours.

Anti-Harassment and Discrimination

Business Partners must comply with all federal, state, and local laws prohibiting discrimination in employment, including discrimination based on race, sex, gender, gender identity, gender expression, transgender status, sexual orientation, pregnancy, childbirth and other pregnancy-related conditions, color, national origin, ancestry, age, creed, religion, citizenship, marital status (including registered domestic partners), parental status, disabilities (mental or physical), medical condition, genetic information, military or veteran status (including protected veteran status), and any other protected characteristic or status. Turner expects the organizations with which it does business to share this commitment.

Turner has zero tolerance for sexual and other unlawful harassment by or against employees, applicants, interns, volunteers, clients, independent contractors, vendors or non-employees of Turner at a Turner work site. Sexual and other unlawful harassment of employees or other individuals occurring in the workplace or in other settings in connection with their employment or engagement is unlawful and prohibited. This policy applies to all incidents of alleged harassment, including those which occur off premises, or off-hours, whether the alleged offender is a co-worker or a third-party non-employee with whom you may be involved in any business or potential business relationship. This policy applies regardless of an individual's immigration status.

Turner forbids retaliation of any kind (including harassment, intimidation, threats, coercion or discrimination) against any individual who files a charge of discrimination, reports or otherwise objects to harassment or discrimination, assists, testifies, or participates in an equal employment proceeding, or otherwise exercises any other right protected under applicable equal opportunity employment laws.

Freedom of Association

Business Partners must respect their employees' right of association within the bounds of prevailing laws and statutes. Business Partners are required to maintain an open and constructive communication with their employees and employee representatives. In accordance with the National Labor Relations Act, Freedom of Association and local laws, Business Partners shall respect their employees' right to freely associate, nominate employee representatives, join trade unions, and engage in collective bargaining and form works councils. It must be ensured that all employees are able to openly communicate with the management regarding working conditions.

IV. Health and Safety

Business Partners shall continuously strive to develop a work environment that promotes health and safety, and comply with any legal requirements related to workplace and health protection.

Occupational Health and Safety

Turner requires that all Business Partners provide their employees with a safe and healthy environment. On an ongoing basis, Business Partners must identify safety risks and update prevention measures. They are responsible for strict compliance with the Turner Environmental Health and Safety (EH&S) policy and safety standards. Prior to start of work, all employees must receive adequate training and be provided with the proper equipment to safely carry out their work. Furthermore, all employees have the right and the obligation to immediately stop unsafe work.

Prevention and Emergency Preparedness

Turner requires Business Partners to ensure safe working processes, appropriate controls, and preventive maintenance in order to minimize health and safety risks at the workplace. In doing so, Business Partners are expected to evaluate production processes and machinery for health and safety hazards. The impact of identified hazards must be minimized by implementing emergency procedures. All health and safety incidents related to Turner projects, workplaces or construction sites must be reported to Turner immediately.

V. Environmental Protection

Turner believes in utilizing our technical expertise to create a healthy, prosperous, and sustainable future for our people, clients, and the environment. Laws and international standards, as well as customer requirements to protect the environment must be observed.

All required official permits, licenses, and registrations need to be present and maintained. Business Partners must support efforts to minimize adverse impacts on the environment and climate and improve environmental protection. Business Partners must identify environmental risks and set up appropriate prevention measures.

Pollution and Resource Saving

Turner expects Business Partners to save natural resources. Negative impacts on the climate, the environment and animals can be minimized or avoided by reusing and recycling materials, adjusting production processes, and using material substitutes. Business Partners are furthermore expected to engage in the use of climate-friendly products and working methods to support reduction of greenhouse gas emissions.

Hazardous Materials

Biological or chemical materials or any other materials that have the potential to cause harm to humans, animals, or the environment, either by themselves or by interacting with other materials, are to be identified and managed to ensure their safe handling. This applies to storing, moving, using, recycling and disposing of the materials. All information relevant to safety needs to be disclosed to Turner.

Waste Water and Solid Waste

Business Partners shall have systems in place to ensure the safe handling, transport, storage, reuse or recycling of wastewater and solid waste. They are expected to reduce or avoid waste of all types, including energy, for instance by modifications of production processes, maintenance, the use of material substitutes, recycling or reusing. All activities that may have a negative impact on the health of humans, animals or on the environment shall be handled in an appropriate way. Business Partners shall monitor and evaluate all kinds of wastewater and solid waste generated from works prior to discharge or disposal and treat the substances as required by local laws and regulations.

VI. Contractual Counterparties of the Business Partner

Business Partners are expected to communicate the basic principles of this Code of Conduct to their immediate contractual counterparties and to require and promote their compliance with this Code of Conduct.

DUTY TO REPORT

Business Partners are obliged to report to Turner any suspected or known misconduct. Information as to possible offenses, non-compliance with legal or company requirements, environmental, social or safety issues, or other problems within the company can be communicated through Turner's whistleblower hotline, by email, or Turner's web portal, all of which are set forth below. Reports can be made on an anonymous/confidential basis, if desired. Turner evaluates and investigates all reports.

Turner does not retaliate against anyone for submitting, in good faith, a report of suspected or known misconduct, nor do we tolerate others retaliating. Similarly, Business Partners must not retaliate or tolerate retaliation against anyone who, in good faith, reports suspected or known misconduct. "Good faith" means that to the best of a person's knowledge and belief, everything reported is true and that everything known is reported.

Turner

Policy

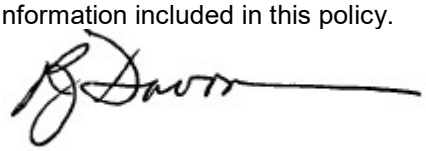
Equal Employment Opportunity Policy Statement

Turner has long recognized its responsibility to extend Equal Employment Opportunity to all individuals. The Company's Affirmative Action Program supports this policy with positive procedures and objectives to ensure fair employment practices.

The Turner Corporation and its subsidiaries demonstrate and administer strong diversity and affirmative action efforts throughout the organization. Our long-term commitment to provide equal and non-discriminatory employment opportunity to all persons based on qualifications and merit, without regard to race, sex, gender, gender identity, gender expression, transgender status, sexual orientation, pregnancy, childbirth and other pregnancy-related conditions, color, national origin, ancestry, age, creed, religion, citizenship, marital status (including registered domestic partners), parental status, disabilities (mental or physical), medical condition, genetic information, military or veteran status (including protected veteran status), or any other protected characteristic or status has not and will not waver. Non-discriminatory treatment at all levels of employment with regard to recruitment, hiring, training, promotions, benefits, compensation and all other employment-related factors is included in this Company-wide policy. Only the merit of the individual measured against objective and valid job requirements shall be considered.



All employees are expected to adhere to this Equal Employment Opportunity Policy. Turner employees must comply with all federal, state, and local laws prohibiting discrimination in employment, including discrimination based on race, sex, gender, gender identity, gender expression, transgender status, sexual orientation, pregnancy, childbirth and other pregnancy-related conditions, color, national origin, ancestry, age, creed, religion, citizenship, marital status (including registered domestic partners), parental status, disabilities (mental or physical), medical condition, genetic information, military or veteran status (including protected veteran status), and any other protected characteristic or status. The Company expects the organizations with which it does business to share this commitment.

Any employee or applicant for employment who feels that he or she has been the victim of discrimination should contact their Operations Manager, Project Executive, or Department Head; local Human Resources Director or Manager; or the Vice President of HR Operations.

The Company forbids retaliation of any kind (including harassment, intimidation, threats, coercion or discrimination) against any individual who files a charge of discrimination, reports or otherwise objects to harassment or discrimination, assists, testifies, or participates in an equal employment proceeding, or otherwise exercises any other right protected under applicable equal opportunity employment laws.

Turner recognizes that progress in diversity and affirmative action efforts requires more than policy statements alone. The Company, therefore, will make every effort to implement the letter and spirit of the law. To further the principle of equal and nondiscriminatory employment opportunity for all, Turner has developed affirmative action plans for minorities, women, individuals with disabilities, and protected veterans. These plans, or relevant portions of them, are available for your inspection upon request. In order to ensure proper implementation of these plans, I have selected Karen Sweeney, Senior Vice President of Diversity, Inclusion and Community, as the Equal Employment Opportunity (EEO) Officer for Turner. Please ask the HR department in your local Turner office for more information regarding these plans.

A copy of this EEO policy and the local EEO policy (where applicable) will be prominently posted at Turner facilities as required. Any applicant or employee may request assistance in reading or otherwise obtaining the information included in this policy.

Peter J. Davoren
President & CEO

Rev. January 2021

Wireless Metering Basics

Components:

- electric meter(s)
- water meters(s)
- Data Acquisition Hub, called the AcquiSuite
- ModHopper(s) (wireless communication tool which transmits data from the meters to the AcquiSuite)

The AcquiSuite will compile and log that water or energy meter data and send to the Lucid dashboard (BuildingOS) for your use.

ModHopper

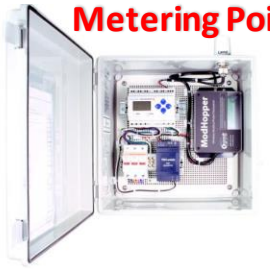
AcquiSuite

Electric Meter with CT

Dynasonic Wrap Around Water Meter

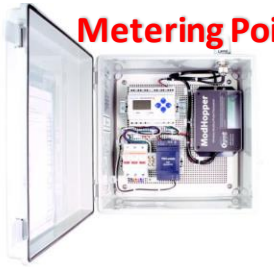
Inline Water Meter

Wireless Metering Architecture



CENTRAL MIDDLE SCHOOL
GREENWICH, CONNECTICUT
STATE PROJECT NO. 057-0114N
PHASE 2 OF 3 - CONSTRUCTION
7/8/2024

Water Metering Point



Electric Metering Point

Wireless communication between ModHoppers

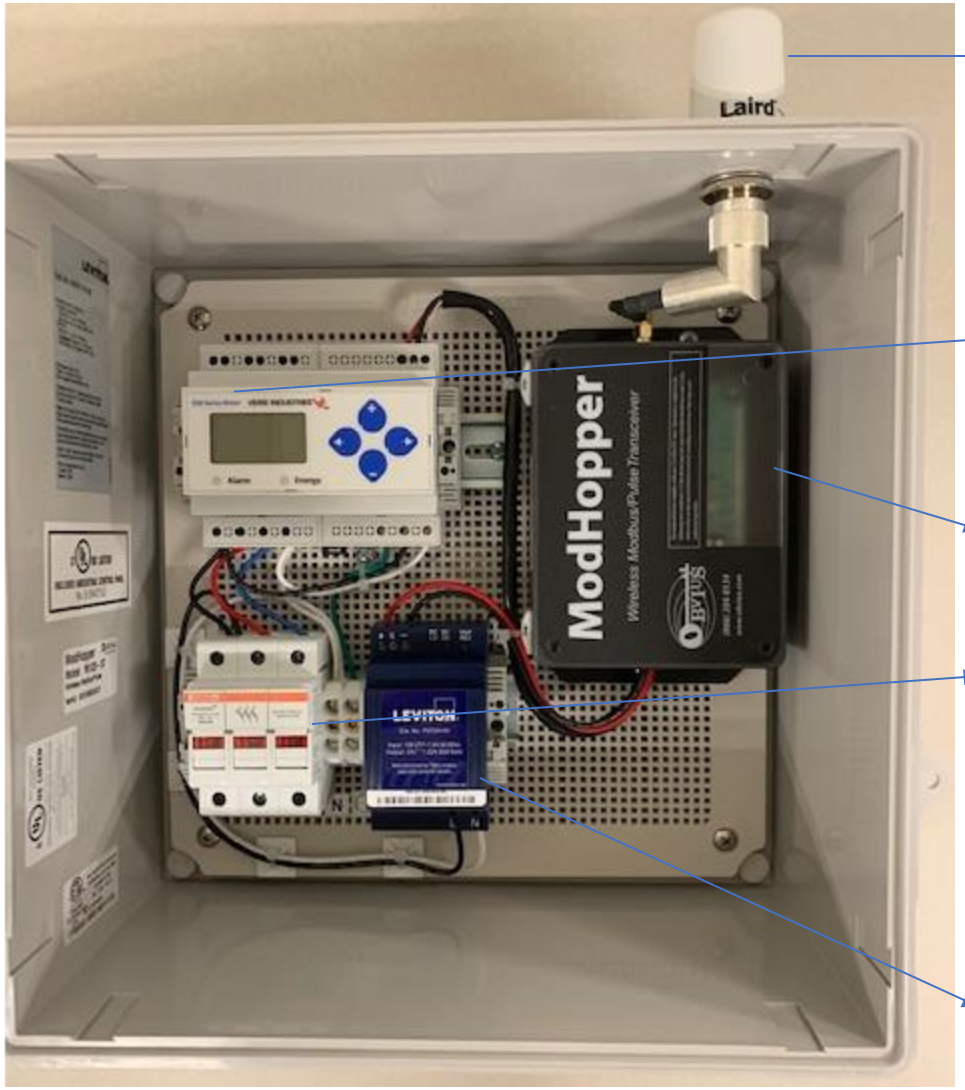
Electric Metering Point

Data from the meter is communicated to the ModHopper, which transmits back to the AcquiSuite*

Job Office/Trailer

At the Site Trailer, a ModHopper receives the wireless data from all the site metering points and communicates to the AcquiSuite via Modbus RS485.

The AcquiSuite sends the data to BuildingOS over the trailer's LAN.



BuildingOS Monitoring Platform

* Repeaters or antennae may be necessary for extended range transmission or signal obstructions

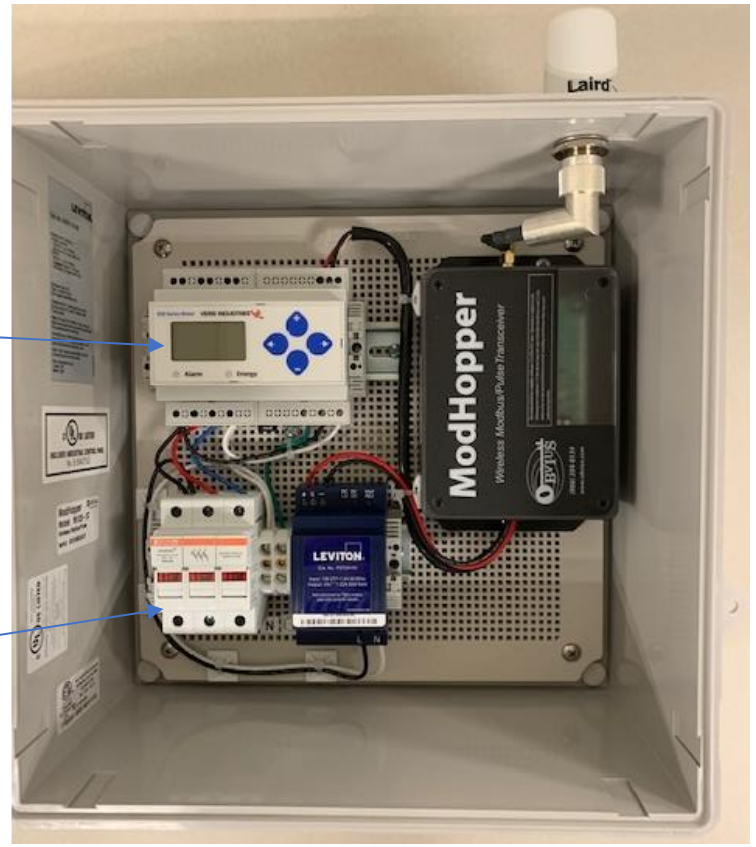
ModHopper Antenna

Veris E50C2 Power Meter

ModHopper

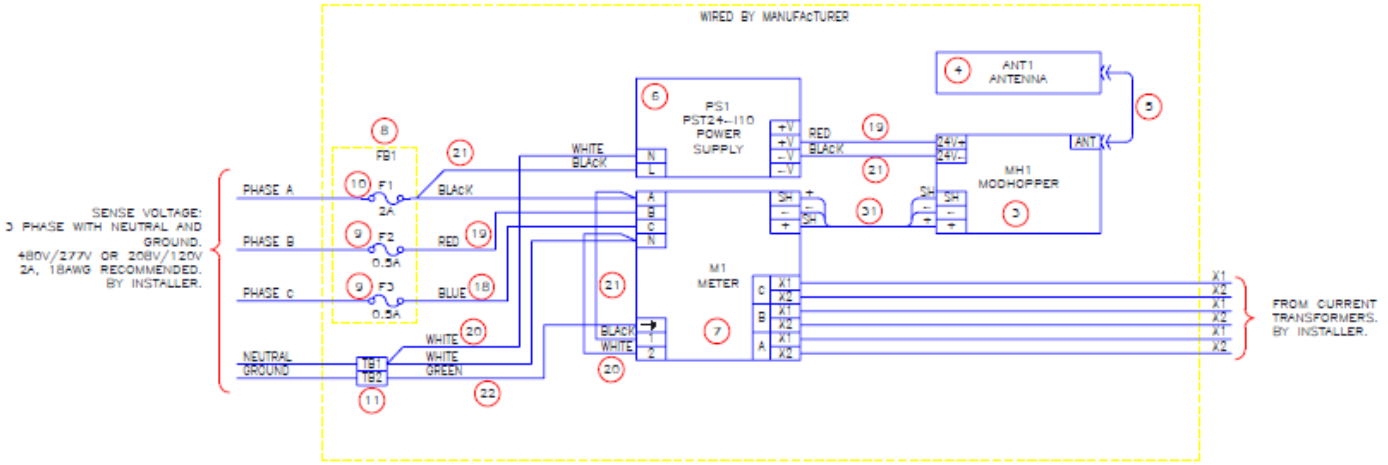
Fused Disconnect

ModHopper Power Supply



The wireless electric metering panel contains the Veris E51C2A power meter along with our Obvius ModHopper. The primary use case is for power metering in remote locations where a hardwired connection back to a logger/network is not possible or cost effective.

The ModHopper is a 900MHz radio and works via a Mesh Network.
Standard ModHopper Range is 3000 ft through standard building impedance or up to 14mi line of sight.

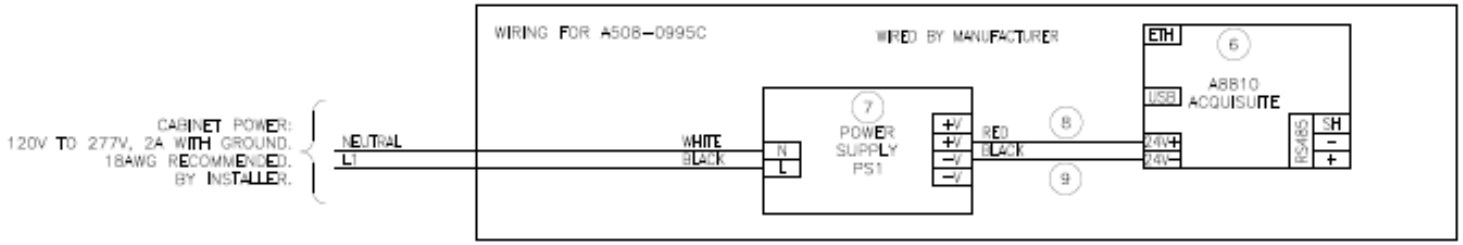


Electric Meter Wiring Cont.

The Veris E51C2A meter comes with 3 Rogowski CT, which connect here.

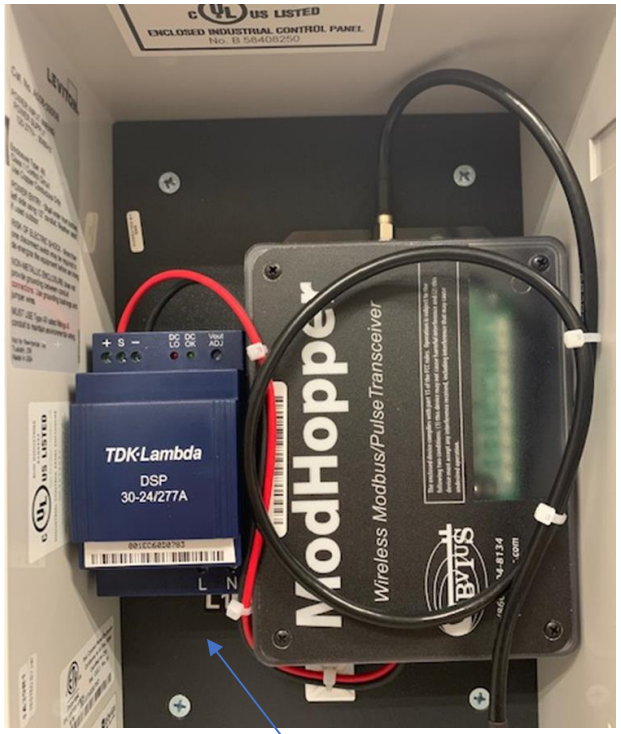
Voltage inputs to the meter are located at the fused disconnects here

Installation guide provided here
https://www.veris.com/Item/E51C2A.aspx



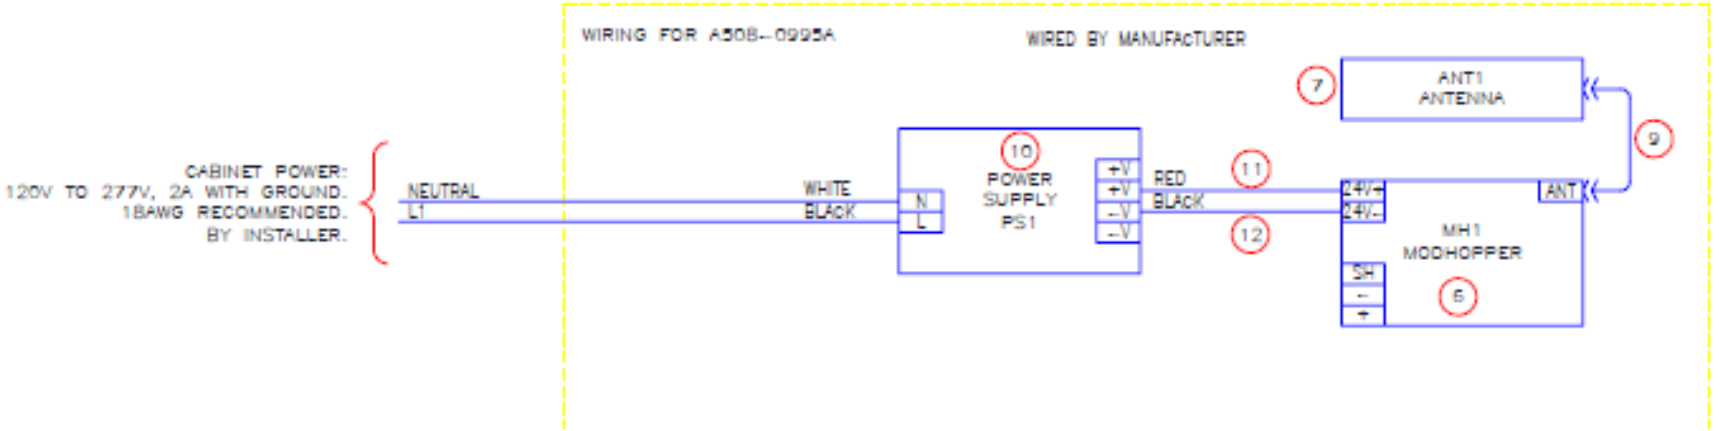
Wiring diagram of the panel
Meter + ModHopper Panel

AcquiSuite A8810 Panel

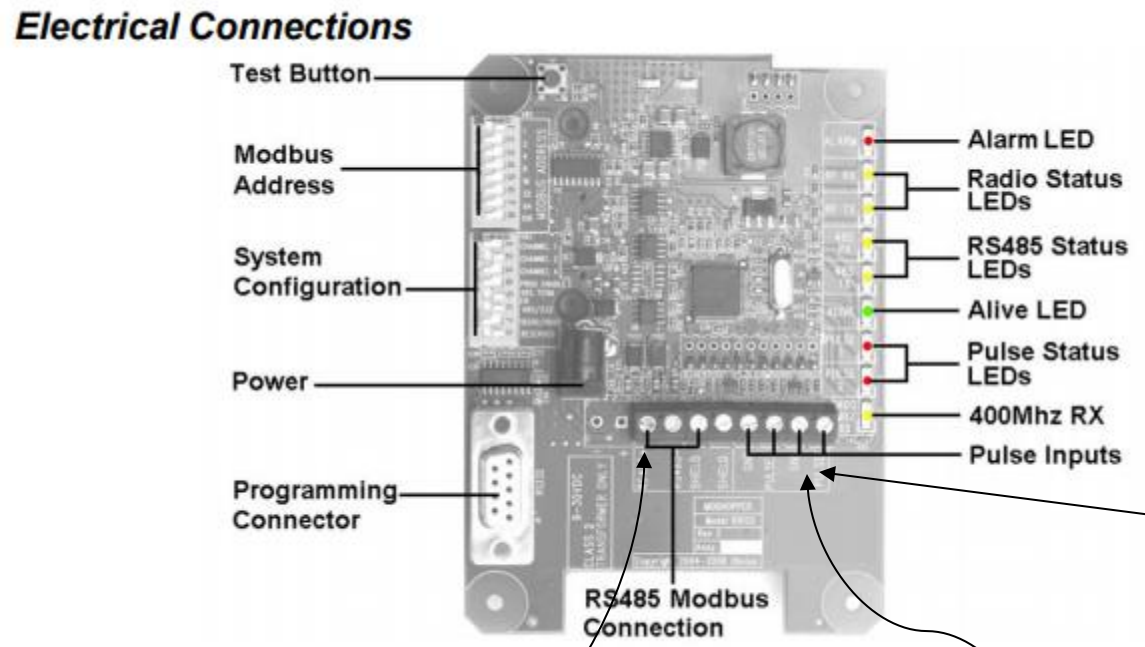


Provide 120-277VAC to embedded power supply.

The AcquiSuite Panel, part A508-0995C, will arrive prewired to an embedded DC power supply. You will need to provide 120-277VAC to the power supply. See below.

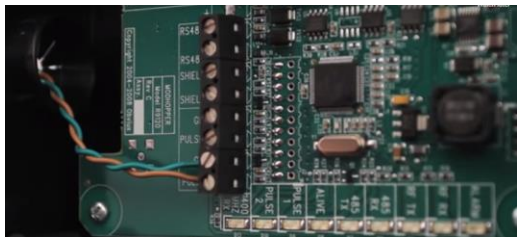


Powering the ModHopper Panel



Provide 120-277VAC to embedded power supply.

The ModHopper Panel, part A508-0995A, will come prewired to an embedded DC power supply. You will need to provide 120-277VAC to the power supply. See the wiring diagram below.



Connecting Meter Communication to the ModHopper

The ModHopper board can take a Modbus RS485 connection, as well as 2 Pulse Input connections.

For each pulse output utility meter, you should have a 2 wire connection as seen below.

The Dynasonic (wrap-around style) meter communicates over Modbus RS485, so it will connect to the ModHopper here

A pulse output water meter (used for inline meter applications) would connect to one of the ModHopper's pulse inputs here.

TFX Water Meter to ModHopper Wiring

RS485 Modbus Comms Wire

The TFX Dynasonic water meter will require a Modbus RTU communication wire from the meter to the ModHopper. The communication wire will be installed by Vitality Energy. What you will need to do is install the Water Meter, install the ModHopper panel, and provide power to both. They should be installed relatively close to each other (within 20' if possible).

When installed and powered, the ModHopper will wirelessly transmit the water meter data back to the AcquiSuite Data Acquisition Hub.

Pulse Output Water Meter

Some Turner sites will have an inline water meter for pipe sizes under 2” or for when power is not available at the water metering location. In these instances, you will have a Pulse Output meter. These also wire to the ModHopper.

Pulse Output Wire

Questions?

Should you have any questions please contact David Perkins at Obvius – David.perkins@obvius.com, or Obvius Technical Support support@obvius.com at (503) 601-2099.

Best practices are to use Vitality Energy for site commissioning. They would require that metering hardware is installed and powered by licensed professionals, but they can take care of the communications and configuration.

General Conditions of the Contract for Construction

for the following PROJECT:
(Name and location or address)

New Central Middle School Project
9 Indian Rock Lane
Greenwich, CT 06830

THE OWNER:
(Name, legal status and address)

Board of Education of the Town of Greenwich,
acting through the Central Middle School Building Committee
Havemeyer Building
290 Greenwich Avenue
Greenwich, CT 06830

THE ARCHITECT:
(Name, legal status and address)

The S/L/A/M Collaborative, Inc.
80 Glastonbury Blvd.
Glastonbury, CT 06033

ADDITIONS AND DELETIONS:
The author of this document has added information needed for its completion. The author may also have revised the text of the original AIA standard form. An *Additions and Deletions Report* that notes added information as well as revisions to the standard form text is available from the author and should be reviewed. A vertical line in the left margin of this document indicates where the author has added necessary information and where the author has added to or deleted from the original AIA text.

This document has important legal consequences. Consultation with an attorney is encouraged with respect to its completion or modification.

For guidance in modifying this document to include supplementary conditions, see AIA Document A503™, Guide for Supplementary Conditions.

ARTICLE 1 GENERAL PROVISIONS

§ 1.1 Basic Definitions

§ 1.1.1 The Contract Documents

The Contract Documents are enumerated in the Agreement between the Owner and Contractor (hereinafter the Agreement) and consist of the Agreement. Conditions of the Contract (General, Supplementary and other Conditions). Drawings. Specifications. Addenda issued prior to execution of the Contract, other documents listed in the Agreement. and Modifications issued after execution of the Contract. A Modification is (1) a written amendment to the Contract signed by both parties. (2) a Change Order. (3) a Construction Change Directive, or (4) a written order for a minor change in the Work issued by the Architect. Unless specifically enumerated in the Agreement, the Contract Documents do not include the advertisement or invitation to bid. Instructions to Bidders, sample forms. other information furnished by the Owner in anticipation of receiving bids or proposals. the Contractor's bid or proposal, or portions of Addenda relating to bidding or proposal requirements.

§ 1.1.2 The Contract

The Contract Documents form the Contract for Construction. The Contract represents the entire and integrated agreement between the parties hereto and supersedes prior negotiations. representations, or agreements. either written or oral. The Contract may be amended or modified only by a Modification. The Contract Documents shall not be construed to create a contractual relationship of any kind (1) between the Contractor and the Architect or the Architect's consultants, (2) between the Owner and a Subcontractor or a Sub-subcontractor. (3) between the Owner and the Architect or the Architect's consultants, or (4) between any persons or entities other than the Owner and the Contractor.

§ 1.1.3 The Work

The term "Work" means the construction and services required by. or reasonably inferable from, . the Contract Documents. whether performed on or off the site of the Project and whether completed or partially completed. and includes all other labor. materials, equipment, and services provided or to be provided by the Contractor. its Subcontractors, Sub-Subcontractors. material suppliers or any other entity for whom the Contractor is responsible. to fulfill the Contractor's obligations under or pursuant to the Contract Documents. The Work may constitute the whole or a part of the Project.

§ 1.1.4 The Project

The Project is the total construction of which the Work performed under the Contract Documents may be the whole or a part and which may include construction by the Owner and by Separate Contractors.

§ 1.1.5 The Drawings

The Drawings are the graphic and pictorial portions of the Contract Documents showing the design, location and dimensions of the Work, generally including plans. elevations. sections. details, schedules. and diagrams.

§ 1.1.6 The Specifications

The Specifications are that portion of the Contract Documents consisting of the written requirements for materials. equipment. systems. standards and workmanship for the Work. and performance of related services.

§ 1.1.7 Instruments of Service

Instruments of Service are representations. in any medium of expression now known or later developed. of the tangible and intangible creative work performed by the Architect and the Architect's consultants under their respective professional services agreements. Instruments of Service may include. without limitation. studies, surveys. models. sketches. drawings. specifications. and other similar materials.

§ 1.1.8 Initial Decision Maker

The Initial Decision Maker is the person identified in the Agreement to render initial decisions on Claims in accordance with Section 15.2. The Initial Decision Maker shall not show partiality to the Owner or Contractor and shall not be liable for results of interpretations or decisions rendered in good faith.

§1.1.9 CONTRACTOR

The term "Contractor" as used in these General Conditions shall mean the "Construction Manager" as defined in the Agreement.

§ 1.2 Correlation and Intent of the Contract Documents

§ 1.2.1 The intent of the Contract Documents is to include all items necessary for the proper execution and completion of the Work by the Contractor. The Contract Documents are complementary, and what is required by one shall be as binding as if required by all; performance by the Contractor shall be required only to the extent consistent with the Contract Documents and reasonably inferable from them. If the Contractor discovers any inconsistency within or between parts of the Contract Documents or between the Contract Documents and any of the Applicable Laws (as defined in Section 2.2.1.1 of the Agreement), the Contractor shall give notice to the Owner and the Architect of such inconsistency and shall, unless otherwise ordered in writing by the Architect or the Owner, provide work or materials of the better quality, greater quantity, or that otherwise complies with applicable standards, codes or ordinances, except as otherwise provided by the GMP Clarifications and Assumptions.

§ 1.2.1.1 The invalidity of any provision of the Contract Documents shall not invalidate the Contract or its remaining provisions. If it is determined that any provision of the Contract Documents violates any law, or is otherwise invalid or unenforceable, then that provision shall be revised to the extent necessary to make that provision legal and enforceable. In such case, the Contract Documents shall be construed, to the fullest extent permitted by law, to give effect to the parties' intentions and purposes in executing the Contract.

§ 1.2.2 Organization of the Specifications into divisions, sections and articles, and arrangement of Drawings shall not control the Contractor in dividing the Work among Subcontractors or in establishing the extent of Work to be performed by any trade.

§ 1.2.3 Unless otherwise stated in the Contract Documents, words that have well-known technical or construction industry meanings are used in the Contract Documents in accordance with such recognized meanings.

§ 1.2.4 Where no explicit quality or standards for materials or workmanship are established for any portion of the Work, the Contractor shall perform such Work in a good and workman like manner and in a manner of good quality for the intended use and consistent with the quality of the surrounding Work and of the construction of the Project generally.

§ 1.2.5 All manufactured articles, materials and equipment shall be applied, installed, connected, erected, used, cleaned and conditioned in accordance with the manufacturer's written or printed directions and instructions unless otherwise indicated in the Contract Documents. Directions, specifications and recommendations by manufacturers for installation, handling, storing, adjustment, and operation of their materials or equipment shall be complied with, but the Contractor shall nonetheless have the responsibility for determining whether such directions, specifications, and recommendations may safely and suitably be employed in the Work, and for notifying the Architect in advance in writing of any deviation or modification necessary for installation safety or proper operation of the item.

§ 1.2.6 In the event of any conflict, inconsistency or ambiguity among the Contract Documents, such Documents shall have the following priority: (1) Construction Manager's Assumptions and Clarifications; (2) Modifications as defined by Section 1.1.1 of AIA Document A201-2017, as modified herein; (3) this Agreement; (4) modified AIA Document A201-2017, as modified herein; (5) Drawings and (6) Specifications.

§ 1.3 Capitalization

Terms capitalized in these General Conditions include those that are (1) specifically defined, (2) the titles of numbered articles, or (3) the titles of other documents published by the American Institute of Architects.

§ 1.4 Interpretation

In the interest of brevity, the Contract Documents frequently omit modifying words such as "all" and "any" and articles such as "the" and "an," but the fact that a modifier or an article is absent from one statement and appears in another is not intended to affect the interpretation of either statement.

§ 1.5 Ownership and Use of Drawings, Specifications, and Other Instruments of Service

§ 1.5.1 The Architect and the Architect's consultants shall, except to the extent otherwise provided in the agreement between the Owner and the Architect, be deemed the authors and owners of their respective Instruments of Service, including the Drawings and Specifications, and retain all common law, statutory, and other reserved rights in their Instruments of Service, including copyrights. The Contractor, Subcontractors, Sub-subcontractors, and suppliers shall not own or claim a copyright in the Instruments of Service. Submittal or distribution to meet official regulatory

User Notes: (1363232823)

requirements or for other purposes in connection with the Project is not to be construed as publication in derogation of the reserved rights of the owner(s) of such Instruments of Service.

§ 1.5.2 The Contractor, Subcontractors, Sub-subcontractors, and suppliers are authorized to use and reproduce the Instruments of Service provided to them, subject to any protocols established pursuant to Sections 1.7 and 1.8, solely and exclusively for execution of the Work. All copies made under this authorization shall bear the copyright notice, if any, shown on the Instruments of Service. The Contractor, Subcontractors, Sub-subcontractors, and suppliers may not use the Instruments of Service on other projects or for additions to the Project outside the scope of the Work without the specific written consent of the Owner, Architect, and the Architect's consultants.

§ 1.6 Notice

§ 1.6.1 Except as otherwise provided in Section 1.6.2, where the Contract Documents require one party to notify or give notice to the other party, such notice shall be provided in writing to the designated representative of the party to whom the notice is addressed and shall be deemed to have been duly served if delivered in person, by mail, by courier, or by electronic transmission if a method for electronic transmission is set forth in the Agreement.

§ 1.6.2 Notice of Claims as provided in Section 15.1.3 shall be provided in writing and shall be deemed to have been duly served only if delivered to the designated representative of the party to whom the notice is addressed by certified or registered mail, or by courier providing proof of delivery.

§ 1.7 Digital Data Use and Transmission

The parties shall agree upon protocols governing the transmission and use of Instruments of Service or any other information or documentation in digital form. The parties may use AIA Document E203™–2013, Building Information Modeling and Digital Data Exhibit, to establish the protocols for the development, use, transmission, and exchange of digital data.

§ 1.8 Building Information Models Use and Reliance

Any use of, or reliance on, all or a portion of a building information model without agreement to protocols governing the use of, and reliance on, the information contained in the model and without having those protocols set forth in AIA Document E203™–2013, Building Information Modeling and Digital Data Exhibit, and the requisite AIA Document G202™–2013, Project Building Information Modeling Protocol Form, shall be at the using or relying party's sole risk and without liability to the other party and its contractors or consultants, the authors of, or contributors to, the building information model, and each of their agents and employees.

§1.8.1 The Owner will direct the Architect to promptly deliver to the Contractor a full operable copy of the Architect's building and building system model(s) in order to facilitate the placement of the features, systems and components that will be supplied by the Contractor's personnel, suppliers and subcontractors.

§ 1.9 CONTRACTOR'S STANDARD OF CARE

The Contractor shall exercise the Contractor's Standard of Care in performing all aspects of the Work and its obligations under the Contract Documents. All references in the Contract Documents to the knowledge, inference, reliance, awareness, determination, belief, observation, recognition or discovery of the Contractor or reference to any similar term shall include the knowledge, inference, reliance, awareness, determination, belief, observation, recognition the Contractor would have obtained or achieved upon the exercise of the Contractor's Standard of Care.

ARTICLE 2 OWNER

§ 2.1 General

§ 2.1.1 The Owner is the person or entity identified as such in the Agreement and is referred to throughout the Contract Documents as if singular in number. The Owner shall designate in writing a representative who shall have express authority to bind the Owner with respect to all matters requiring the Owner's approval or authorization. Except as otherwise provided in Section 4.2.1, the Architect does not have such authority.

§ 2.1.2 The Owner shall furnish to the Contractor, within fifteen days after receipt of a written request, information necessary and relevant for the Contractor to evaluate, give notice of, or enforce mechanic's lien rights. Such information shall include a correct statement of the record legal title to the property on which the Project is located, usually referred to as the site, and the Owner's interest therein.

§ 2.2 Evidence of the Owner's Financial Arrangements

§ 2.2.1 Intentionally Omitted.

§ 2.2.2 Intentionally Omitted.

§ 2.2.3 Intentionally Omitted.

§ 2.2.4 Intentionally Omitted.

§ 2.3 Information and Services Required of the Owner

§ 2.3.1 Except for permits and related fees and filings that are the responsibility of the Contractor under the Contract Documents, including those required under Section 3.7.1, the Owner shall secure, file and pay for necessary approvals, easements, assessments and charges required for construction, use or occupancy of permanent structures or for permanent changes in existing facilities.

§ 2.3.2 The Owner shall retain an architect lawfully licensed to practice architecture, or an entity lawfully practicing architecture, in the jurisdiction where the Project is located. That person or entity is identified as the Architect in the Agreement and is referred to throughout the Contract Documents as if singular in number.

§ 2.3.3 If the employment of the Architect terminates, the Owner may employ a successor and whose status under the Contract Documents shall be that of the Architect.

§ 2.3.4 The Owner shall furnish surveys describing physical characteristics, legal limitations and utility locations for the site of the Project, and a legal description of the site to the extent required by the Contract Documents. Unless otherwise instructed by the Owner, the Contractor shall be entitled to rely on the accuracy of information furnished by the Owner but shall exercise proper precautions relating to the safe performance of the Work.

§ 2.3.5 Intentionally Omitted.

§ 2.3.6 Unless otherwise provided in the Contract Documents, the Owner shall furnish to the Contractor one copy of the Contract Documents for purposes of making reproductions pursuant to Section 1.5.2.

§ 2.4 Owner's Right to Stop the Work

If the Contractor fails to correct Work that is not in accordance with the requirements of the Contract Documents as required by Section 12.2 or repeatedly fails to carry out Work in accordance with the Contract Documents, the Owner may issue a written order to the Contractor to stop the Work, or any portion thereof, until the cause for such order has been eliminated; however, the right of the Owner to stop the Work shall not give rise to a duty on the part of the Owner to exercise this right for the benefit of the Contractor, the Architect, or any other person or entity, except to the extent required by Section 6.1.3.

§ 2.5 Owner's Right to Carry Out the Work

If the Contractor defaults or neglects to carry out the Work in accordance with the Contract Documents and fails within a ten-day period after receipt of notice from the Owner to commence and continue correction of such default or neglect with diligence and promptness, the Owner may, without prejudice to other remedies the Owner may have, correct such default or neglect. The Architect may, pursuant to Section 9.5.1, withhold or nullify a Certificate for Payment in whole or in part, to the extent reasonably necessary to reimburse the Owner for the reasonable cost of correcting such deficiencies, including Owner's expenses and compensation for the Architect's additional services made necessary by such default, neglect, or failure. If current and future payments are not sufficient to cover such amounts, the Contractor shall pay the difference to the Owner at or prior to the date of Final Completion of the Work. The right of the Owner to so carry out such Work pursuant to this Section 2.5 shall not give rise to any duties on the part of the Owner to exercise this right for the benefit of the Contractor or any other person or entity. If the Contractor disagrees with the actions of the Owner or the Architect, or the amounts claimed as costs to the Owner, the Contractor may file a Claim pursuant to Article 15.

§ 2.6 ADDITIONAL RIGHTS

§ 2.6.1 The rights stated in this Article 2 shall be in addition to and not in limitation of any other rights of the Owner provided in the Contract Documents, or as may be available to the Owner at law or in equity.

§ 2.6.2 Any data provided by the Owner to the Contractor concerning the physical characteristics or measurements of the components that comprise the Project site: access to the Project site or staging and storing at the Project site: present obstructions and conditions of structures on or near the Project site; locations and depths of sewers, conduits, pipes, and gas lines on or near the Project site: positions of sidewalks, curbs and pavements on or near the Project site and other data concerning the conditions of the Project site and its surroundings, have been obtained from sources the Owner believes to be reliable. .

ARTICLE 3 CONTRACTOR

§ 3.1 General

§ 3.1.1 The Contractor is the person or entity identified as such in the Agreement and is referred to throughout the Contract Documents as if singular in number. The Contractor and Subcontractors of every tier shall be lawfully licensed, if required in the jurisdiction where the Project is located. The Contractor shall designate in writing a representative who shall have express authority to bind the Contractor with respect to all matters under this Contract. The term "Contractor" means the Contractor or the Contractor's authorized representative.

§ 3.1.2 The Contractor shall be responsible for performance of the Work in accordance with the Contract Documents. The Contractor shall be responsible to the Owner for the performance, and the acts or omissions, of the Subcontractors, Sub-subcontractors and material or equipment suppliers. Any reference in the Contract Documents to the Contractor's performance, act, or omission, or reference to a similar term, shall include the performance, act, or omission of the Subcontractors, Sub-subcontractors and material or equipment suppliers.

§ 3.1.3 The Contractor shall not be relieved of its obligations to perform the Work in accordance with the Contract Documents either by activities or duties of the Architect in the Architect's administration of the Contract, or by tests, inspections or approvals required or performed by persons or entities other than the Contractor.

§ 3.1.4 The Contractor shall comply with all Applicable Laws regarding its performance of the Work including, without limitation, those relating to equal opportunity, labor, wages and employment.

§ 3.1.5 The Contractor shall comply, and shall cause Subcontractors of every tier to comply, with all accounting procedures and record retention policies reasonably requested by the Owner.

§ 3.2 Review of Contract Documents and Field Conditions by Contractor
