3. Comply with Utility Company requirements for electrical service.
4. Utility Metering Provisions: Provide separate barriered compartment complying with Utility Company requirements where indicated or where required by Utility Company. Include hinged sealable door and provisions for Utility Company current transformers (CTs), potential transformers (PTs), or potential taps as required.

F. Service Conditions:
1. Provide switchboards and associated components suitable for operation under the following service conditions without derating:
   a. Altitude: Less than 6,600 feet.
   b. Ambient Temperature:
      1) Switchboards Containing Molded Case or Insulated Case Circuit Breakers: Between 23 degrees F and 104 degrees F.
      2) Switchboards Containing Fusible Switches: Between -22 degrees F and 104 degrees F.
2. Provide switchboards and associated components suitable for operation at indicated ratings under the service conditions at the installed location.
   a. Altitude: Less than 2000 feet.
   b. Ambient Temperature: Between 50 degrees F and 95 degrees F.

G. Short Circuit Current Rating:
1. Provide switchboards with listed short circuit current rating not less than the available fault current at the installed location as determined by short circuit study performed in accordance with Section 260573.

H. Selectivity: Where the requirement for selectivity is indicated, furnish products as required to achieve selective coordination.

I. Main Devices: Configure for top or bottom incoming feed as indicated or as required for the installation. Provide separate pull section and/or top-mounted pullbox as indicated or as required to facilitate installation of incoming feed.

J. Bussing: Sized in accordance with UL 891 temperature rise requirements.
1. Through bus (horizontal cross bus) to be fully rated through full length of switchboard (non-tapered). Tapered bus is not permitted.
2. Provide fully rated neutral bus unless otherwise indicated, with a suitable lug for each feeder or branch circuit requiring a neutral connection.
3. Provide solidly bonded equipment ground bus through full length of switchboard, with a suitable lug for each feeder and branch circuit equipment grounding conductor.
4. Phase and Neutral Bus Material: Silver Plated Copper.
5. Ground Bus Material: Silver Plated Copper.

K. Conductor Terminations: Suitable for use with the conductors to be installed.
1. Line Conductor Terminations:
   a. Main and Neutral Lug Material: Silver Plated Copper, suitable for terminating aluminum or copper conductors.
   b. Main and Neutral Lug Type: Mechanical.

2. Load Conductor Terminations:
   a. Lug Material: Silver Plated Copper, suitable for terminating aluminum or copper conductors.
   b. Lug Type:
      1) Provide mechanical lugs unless otherwise indicated.
      2) Provide compression lugs where indicated.

L. Enclosures:
1. Environment Type per NEMA 250: Unless otherwise indicated, as specified for the following installation locations:
   a. Indoor Clean, Dry Locations: Type 1.
   b. Outdoor Locations: Type 3R.
2. Finish: Manufacturer's standard unless otherwise indicated.
3. Enclosure Space Heaters:
   a. Provide in each switchboard section installed outdoors and in unconditioned indoor spaces.
   b. Size according to manufacturer's recommendations for worst case ambient temperature to prevent condensation.
   c. Heater Control: Thermostat.
   d. Heater Power Source: Provide connection to transformer factory-installed in switchboard or suitable external branch circuit as indicated or as required.
4. Outdoor Enclosures:
   a. Enclosure Type: Non-walk-in type unless otherwise indicated.
   b. Color: Manufacturer's standard.
   c. Access Doors: Lockable, with all locks keyed alike.

M. Future Provisions:
1. Prepare designated spaces for future installation of devices including bussing, connectors, mounting hardware and all other required provisions.
2. Equip distribution sections with full height vertical bussing to accommodate maximum utilization of space for devices.
3. Where designated spaces for future device provisions are not indicated, include provisions for minimum of six device(s) rated at ten percent of rating of switchboard main or incoming feed.
4. Arrange and equip through bus and ground bus to accommodate future installation of additional switchboard sections.

N. Surge Protective Device:
1. Product Description: IEEE C62.41, factory-mounted surge protective device, selected to meet requirements for high exposure (200,000A) and to coordinate with system circuit voltage. integral type 1 surge protection at [480v]Y 3 phase with L-N=1200 L-G=1200 N-G=1200 and L-L 2000
2. Minimum surge current rating per phase: 320 kA.
3. Surge Protective device module shall be integral to switchboard and shall be fused.

O. Ground Fault Protection: Where ground-fault protection is indicated, provide system listed and labeled as complying with UL 1053.
   1. Where overcurrent protective devices equipped with integral ground fault protection are used, provide separate neutral current sensor where applicable.
   2. Where accessory ground fault sensing and relaying equipment is used, equip companion overcurrent protective devices with ground-fault shunt trips.
      a. Use zero sequence or residual ground fault detection method unless otherwise indicated.
      b. Provide test panel and field-adjustable ground fault pick-up and delay settings.
      c. Provide zone selective interlocking capability where indicated, capable of communicating with other electronic trip circuit breakers and external ground fault sensing systems to control ground fault delay functions for system coordination purposes.
   3. Furnish monitor panel with lamp to indicate relay operation, TEST and RESET control switches.

P. All circuit breakers rated 1200 amps and above shall have energy reduction maintenance setting (ERMS) system. Provide the following:
   1. Energy Reduction Maintenance Setting Switch (ERMS).
      a. Provide a maintenance OFF ON selector switch on the compartment door to switch the circuit breaker instantaneous tripping characteristics to an alternate setting temporarily during maintenance activity.
      b. Provide a lock feature for the ERMS switch so that it may be locked in either the OFF or ON maintenance mode position.
      c. Provide a blue LED indicating light to indicate trip unit is in the ERMS mode.

Q. Phase Failure Relay:
   1. Provide integral phase failure relays within switchboard.

R. Customer Meter - Instrumentation:
   1. Provide power metering equal to a Square D Class 3020 PM8244 PowerLogic Power Meter with display. Device shall be panel mounted in the switchboard. Devices by others will be considered providing all the following specifications are met.
   2. The Power Meter shall be equipped with a two (2)-line by sixteen (16)-character LCD display for electrical circuit information.
   3. The information displayed by the Power Meter shall include the following quantities:
      a. Current, per-phase
      b. Volts, phase-to-phase & phase-neutral
      c. Real Power (kW), three-phase total
      d. Reactive Power (kVAR), three phase total
      e. Apparent Power (kVA), three phase total
      f. Power Factor, true, per-phase & three-phase total
      g. Frequency
      h. Current Demand, per phase and neutral, present and peak
      i. Real Power Demand (kWd), three phase total, present and peak

j. Reactive Power Demand (kVARd), three phase total, present and peak
k. Apparent Power Demand (kVAd), three phase total, present and peak
l. Real Energy (kWh), three phase total
m. Reactive Energy (kVARh), three phase total
n. Apparent Energy (kVAh), three phase total
o. Energy Accumulation Modes, signed, absolute, energy in, energy out
p. Watt-hour KYZ Pulse Initiator Output
q. Total Harmonic Distortion, Voltage
r. Total Harmonic Distortion, Current
s. Date/Time Stamping.

4. Communications port for Power Monitoring Systems communications and Modbus RTU communications.
5. The Power Meter shall be accurate to .25% for voltage and current sensing, .50% for power, energy, & demand sensing, and 1% for power factor sensing.
6. All information stored in the Power Meter shall be remotely accessible through data communications.
7. The Power Meter shall be UL Listed, rated for an operating temperature range of 0C to 55C and have an overcurrent withstand rating of 500 amps for 1 second.
8. The Power Meter metering inputs shall utilize industry standard current transformers (5A secondary CT's), have VT inputs for direct connection of VT leads to up to 600V, and adhere to UL standard 508 for dielectric voltage-withstand.
9. Each Circuit Monitor shall have built-in data communications to allow multipoint communication to multiple computer workstations, programmable controllers, and other host devices, at a minimum data rate of 9600 baud.
10. The data communications shall be optically isolated to provide reliable operation.
11. Power meter shall include a communications interconnection interface with the Building Management System (BMS). Coordinate interconnection requirements with the BMS provider. Available protocols:
    a. Modbus.
    b. Ion.
    c. DNP3.
    d. IEC 61850.
    e. HTTP.
    f. FTP.
    g. SNMP.
    h. DPWS.
    i. RSTP.
    j. NTP.
    k. SNTP.
    l. GPS.

S. Instrument Transformers:
1. Comply with IEEE C57.13.
2. Select suitable ratio, burden, and accuracy as required for connected devices.
3. Current Transformers: Connect secondaries to shorting terminal blocks.
4. Potential Transformers: Include primary and secondary fuses with disconnecting means.

2.3 OVERCURRENT PROTECTIVE DEVICES

A. Circuit Breakers:
1. Interrupting Capacity:
a. Provide circuit breakers with interrupting capacity as required to provide the short circuit current rating indicated, but not less than specified minimum requirements.
b. Fully Rated Systems: Provide circuit breakers with interrupting capacity not less than the short circuit current rating indicated. Series rating not allowed.
2. Main circuit breakers in all switchboards shall have Long time, Short time, Instantaneous and ground fault protection (LSIG) functions. These functions shall similar to those functions found on a Square D PowerPact circuit breaker. Circuit breaker shall have energy reduction maintenance setting (ERMS) system. Provide the following;
a. Energy Reduction Maintenance Setting Switch (ERMS)
1) For the Main circuit breaker above 1200 amps, provide a maintenance OFF ON selector switch on the compartment door to switch the circuit breaker instantaneous tripping characteristics to an alternate setting temporarily during maintenance activity.
2) Provide a lock feature for the ERMS switch so that it may be locked in either the OFF or ON maintenance mode position.
3) Provide a blue LED indicating light to indicate trip unit is in the ERMS mode.
3. Molded Case Circuit Breakers:
a. Description: Quick-make, quick-break, over center toggle, trip-free, trip-indicating circuit breakers; listed and labeled as complying with UL 489, and complying with FS W-C-375 where applicable; ratings, configurations, and features as indicated on the drawings.
1) Provide thermal magnetic circuit breakers unless otherwise indicated.
2) Provide electronic trip circuit breakers where indicated.
b. Thermal Magnetic Circuit Breakers: For each pole, furnish thermal inverse time tripping element for overload protection and magnetic instantaneous tripping element for short circuit protection.
1) Provide field-adjustable magnetic instantaneous trip setting for circuit breaker frame sizes 225 amperes and larger.
2) Provide interchangeable trip units for circuit breaker frame sizes 125A and above.

2.4 EXTERNAL ENERGY METERING

A. Manufacturer:
1. Satec BFM 136 (Basis of Design)
2. Schneider Electric
3. E-Mon D-Mon
4. Eaton
5. Substitutions: Refer to Division 01 – Product Requirements

B. Product Description: Provide multi-metering units capable of connecting to up to 18 three-phase circuits) using high-accuracy current sensors (HACS), for the purpose of monitoring specific loads and for energy reporting purposes. Quantity of multi-metering units and feeders being metered are indicated on the drawings.

C. Mounting: Multi-metering unit shall be mounted in an enclosure located in the same room as the electrical equipment being metered.

D. Multi-metering unit shall meet or exceed the following specifications:
1. Four line LED display
2. Monitoring/Display capabilities for KWH, power factor per phase, amps per phase, KW demand, real time load (KW), volts per phase, date & time and identification codes for communication.
3. Built-in RS485 communications capability.

E. Provide split core HACS current sensors for each feeder being metered. Provide one current sensor per phase. Provide final connections between current sensors and multi-metering units.

F. Provide BACNET-over-IP converter for each multi-metering unit. Provide quantity of converters such that each feeder being metered can have data independently reported through BACNET to the building management system. Connections to the building management system shall be made by Division 23/ ATC contractor.

2.5 SOURCE QUALITY CONTROL

A. See Division 01 – General Requirements.

B. Factory test switchboards according to NEMA PB 2, including the following production tests on each switchboard assembly or component:
1. Dielectric tests.
2. Mechanical operation tests.
3. Grounding of instrument transformer cases test.
4. Electrical operation and control wiring tests, including polarity and sequence tests.
5. Ground-fault sensing equipment test.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as shown on the drawings.

B. Verify that the ratings and configurations of the switchboards and associated components are consistent with the indicated requirements.

C. Verify that mounting surfaces are ready to receive switchboards.

D. Verify that conditions are satisfactory for installation prior to starting work.

3.2 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Install switchboards in accordance with NECA 1 (general workmanship), NECA 400, and NEMA PB 2.1.

C. Arrange equipment to provide required clearances and maintenance access, including accommodations for any drawout devices.

D. Where switchboard is indicated to be mounted with inaccessible side against wall, provide minimum clearance of 6 inches between switchboard and wall.

E. Provide required support and attachment components in accordance with Section 260529.

F. Install switchboards plumb and level.

G. Unless otherwise indicated, mount switchboards on properly sized 4 inch high concrete pad constructed in accordance with Division 03 - Concrete.

H. Provide grounding and bonding in accordance with Section 260526.

I. Install all field-installed devices, components, and accessories.

J. Provide fuses complying with Section 262813 for fusible switches as indicated.

K. Install identification in accordance with Section 260553.
   1. Labeling & Identification:
      a. Indicate the maximum available fault current at the equipment, including the date the fault current calculation was performed. Label shall include warning for “Arc Flash Hazard” and requirement for “PPE Protection”.
      b. Indicate locations of sources and feeders for all services to the building (generator and fire pump).

L. Installation of ERMS maintenance lockable selector switch and blue indicating light onto compartment door of the main circuit breaker. Installation of the IO module and the IFE module in accordance with manufactures recommendations.
   1. Set point for the ERMS instantaneous is based on manufactures recommendations. For Square D Power Pact circuit breaker (Basis of design) the default programmed setting to the instantaneous (li) set point is 2xIn.

M. Install breaker circuit directory.

N. Where accessories are not self-powered, provide control power source as indicated or as required to complete installation.

O. Set field-adjustable circuit breaker tripping function settings as determined by overcurrent protective device coordination study performed in accordance with Section 260573.

P. Provide filler plates to cover unused spaces in switchboards.

3.3 FIELD QUALITY CONTROL

A. See Division 01 - General Requirements.

B. Provide services of a manufacturer's authorized representative to observe installation and assist in inspection and testing. Include manufacturer's reports with submittals.

C. Disconnect surge protective devices (SPDs) prior to performing any high potential testing. Replace SPDs damaged by performing high potential testing with SPDs connected.

D. Before energizing switchboard, perform insulation resistance testing in accordance with NECA 400 and NEMA PB 2.1.

E. Inspect and test in accordance with NETA ATS, except Section 4.

F. Perform inspections and tests listed in NETA ATS, Section 7.1.

G. Fusible Switches: Perform inspections and tests listed in NETA ATS, Section 7.5.1.1.

H. Molded Case and Insulated Case Circuit Breakers: Perform inspections and tests listed in NETA ATS, Section 7.6.1.1 for all main circuit breakers and circuit breakers larger than 225 amperes. Tests listed as optional are not required.
   1. Perform insulation-resistance tests on all control wiring with respect to ground.
   2. Test functions of the trip unit by means of secondary injection.

I. Ground Fault Protection Systems: Test in accordance with manufacturer's instructions as required by NFPA 70.
   1. Perform inspections and tests listed in NETA ATS, Section 7.14. The insulation-resistance test on control wiring listed as optional is not required.

J. Meters: Perform inspections and tests listed in NETA ATS, Section 7.11.2.

K. Instrument Transformers: Perform inspections and tests listed in NETA ATS, Section 7.10.

L. Test shunt trips to verify proper operation.

M. Correct deficiencies and replace damaged or defective switchboards or associated components.

N. Submit detailed reports indicating inspection and testing results and corrective actions taken.

3.4 ADJUSTING

A. Adjust tightness of mechanical and electrical connections to manufacturer's recommended torque settings.

B. Adjust alignment of switchboard covers and doors.

3.5 CLEANING

A. See Division 01 – General Requirements.

B. Clean dirt and debris from switchboard enclosures and components according to manufacturer's instructions.

C. Repair scratched or marred surfaces to match original factory finish.

3.6 CLOSEOUT ACTIVITIES

A. See Division 01 – General Requirements.

B. Training: Train Owner's personnel on operation, adjustment, and maintenance of switchboard and associated devices.
   1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
   2. Provide minimum of two hours of training.
   3. Instructor: Manufacturer's authorized representative.
   4. Location: At project site.

3.7 PROTECTION

A. Protect installed switchboards from subsequent construction operations.

END OF SECTION

FOR REFERENCE: THIS SECTION WAS ISSUED FOR PHASE 1 AND PHASE 2

SECTION 262416 - PANELBOARDS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Power distribution panelboards.

B. Lighting and appliance panelboards.

C. Fusible Coordination Panelboards for Life Safety.

D. Overcurrent protective devices for panelboards.

1.2 RELATED REQUIREMENTS

A. Division 01 – General Requirements.

B. Division 03 - Cast-in-Place Concrete: Concrete equipment pads.

C. Section 260526 - Grounding and Bonding for Electrical Systems.

D. Section 260529 - Hangers and Supports for Electrical Systems.

E. Section 260553 - Identification for Electrical Systems: Identification products and requirements.

F. Section 260573 - Overcurrent Protective Device Coordination Study: Additional criteria for the selection and adjustment of equipment and associated protective devices specified in this section.

G. Section 262200 - Low-Voltage Transformers: Small power centers with integral primary breaker, transformer, and panelboard.

H. Section 262813 - Fuses: Fuses for fusible switches and spare fuse cabinets.

1.3 REFERENCE STANDARDS

A. FS W-C-375 - Circuit Breakers, Molded Case; Branch Circuit and Service..

B. IEEE C62.41 - Recommended Practice on Surge Voltages in Low-Voltage AC Power Circuits.

C. NECA 1 - Standard for Good Workmanship in Electrical Construction.

D. NEMA FU 1 – Low Voltage Cartridge Fuses.

E. NECA 407 - Standard for Installing and Maintaining Panelboards.

F. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).

G. NEMA ICS 2 - Industrial Control and Systems Controllers, Contactors and Overload Relays Rated 600 Volts.

H. NEMA KS 1 - Heavy Duty Enclosed and Dead-Front Switches (600 Volts Maximum).

I. NEMA PB 1 - Panelboards.

J. NEMA PB 1.1 - General Instructions for Proper Installation, Operation and Maintenance of Panelboards Rated 600 Volts or Less.

K. NETA ATS - Acceptance Testing Specifications for Electrical Power Equipment and Systems

L. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

M. UL 50 - Enclosures for Electrical Equipment, Non-Environmental Considerations; Current Edition, Including All Revisions.

N. UL 50E - Enclosures for Electrical Equipment, Environmental Considerations; Current Edition, Including All Revisions.

O. UL 67 - Panelboards; Current Edition, Including All Revisions.

P. UL 98 - Enclosed and Dead-Front Switches; Current Edition, Including All Revisions.

Q. UL 489 - Molded-Case Circuit Breakers, Molded-Case Switches and Circuit Breaker Enclosures; Current Edition, Including All Revisions.

R. UL 869A - Reference Standard for Service Equipment; Current Edition, Including All Revisions.

S. UL 943 - Ground-Fault Circuit-Interrupters; Current Edition, Including All Revisions.

T. UL 1053 - Ground-Fault Sensing and Relaying Equipment; Current Edition, Including All Revisions.

U. UL 1699 - Arc-Fault Circuit-Interrupters; Current Edition, Including All Revisions.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate the work with other trades to avoid placement of ductwork, piping, equipment, or other potential obstructions within the dedicated equipment spaces and working clearances for electrical equipment required by NFPA 70.
   2. Coordinate arrangement of electrical equipment with the dimensions and clearance requirements of the actual equipment to be installed.

3. Coordinate the work with other trades to provide walls suitable for installation of flush-mounted panelboards where indicated.
4. Verify with manufacturer that conductor terminations are suitable for use with the conductors to be installed.
5. Notify Architect of any conflicts with or deviations from the contract documents. Obtain direction before proceeding with work.

1.5 SUBMITTALS

A. See Division 01 – General Requirements.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for panelboards, enclosures, overcurrent protective devices, and other installed components and accessories.
1. Include characteristic trip curves for each type and rating of overcurrent protective device upon request.

C. Shop Drawings: Indicate outline and support point dimensions, voltage, main bus ampacity, overcurrent protective device arrangement and sizes, short circuit current ratings, conduit entry locations, conductor terminal information, and installed features and accessories.
1. Include dimensioned plan and elevation views of panelboards and adjacent equipment with all required clearances indicated.
2. Include wiring diagrams showing all factory and field connections.
3. Clearly indicate whether proposed short circuit current ratings are fully rated or, where acceptable, series rated systems.
4. Include documentation of listed series ratings upon request.

D. Source Quality Control Test Reports: Include reports for tests designated in NEMA PB 1 as routine tests.

E. Field Quality Control Test Reports.

F. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

G. Project Record Documents: Record actual installed locations of panelboards and actual installed circuiting arrangements.

H. Maintenance Data: Include information on replacement parts and recommended maintenance procedures and intervals.

I. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
1. See Division 01 - Product Requirements, for additional provisions.
2. Panelboard Keys: Two of each different key.
3. See Section 262813 for requirements for spare fuses and spare fuse cabinets.

1.6 QUALITY ASSURANCE

A. Conform to requirements of NFPA 70.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

C. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store panelboards in accordance with manufacturer's instructions and NECA 407.

B. Store in a clean, dry space. Maintain factory wrapping or provide an additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic.

C. Handle carefully in accordance with manufacturer's written instructions to avoid damage to panelboard internal components, enclosure, and finish.

1.8 FIELD CONDITIONS

A. Maintain ambient temperature within the following limits during and after installation of panelboards:
   1. Panelboards Containing Circuit Breakers: Between 23 degrees F and 104 degrees F.
   2. Panelboards Containing Fusible Switches: Between -22 degrees F and 104 degrees F.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Schneider Electric; Square D Products.

B. ABB/GE.

C. Eaton Corporation.

D. Siemens Industry, Inc.

E. Substitutions: See Division 01 - Product Requirements.

F. Source Limitations: Furnish panelboards and associated components produced by the same manufacturer as the other electrical distribution equipment used for this project and obtained from a single supplier.

2.2 PANELBOARDS - GENERAL REQUIREMENTS

A. Provide products listed, classified, and labeled as suitable for the purpose intended.

B. Unless otherwise indicated, provide products suitable for continuous operation under the following service conditions:
   1. Altitude: Less than 6,600 feet.
   2. Ambient Temperature:
      a. Panelboards Containing Circuit Breakers: Between 23 degrees F and 104 degrees F.
      b. Panelboards Containing Fusible Switches: Between -22 degrees F and 104 degrees F

C. Short Circuit Current Rating:
   1. Provide panelboards with listed short circuit current rating not less than the available fault current at the installed location as indicated on the drawings.
   2. Provide panelboards with listed short circuit current rating not less than the available fault current at the installed location as determined by short circuit study performed in accordance with Section 260573.
   3. ccontribution according to NFPA 70.
   4. Label equipment utilizing series ratings as required by NFPA 70.

D. Mains: Configure for top or bottom incoming feed as indicated or as required for the installation.

E. Branch Overcurrent Protective Devices: Replaceable without disturbing adjacent devices.

F. Bussing: Sized in accordance with UL 67 temperature rise requirements.
   1. Provide fully rated neutral bus unless otherwise indicated, with a suitable lug for each feeder or branch circuit requiring a neutral connection.
   2. Provide 200 percent rated neutral bus and lugs where indicated, where oversized neutral conductors are provided, or where panelboards are fed from K-rated transformers.
   3. Provide solidly bonded equipment ground bus in each panelboard, with a suitable lug for each feeder and branch circuit equipment grounding conductor.
   4. Provide separate isolated/insulated ground bus where indicated or where isolated grounding conductors are provided.

G. Conductor Terminations: Suitable for use with the conductors to be installed.

H. Enclosures: Comply with NEMA 250, and list and label as complying with UL 50 and UL 50E.
   1. Environment Type per NEMA 250: Unless otherwise indicated, as specified for the following installation locations:
      a. Indoor Clean, Dry Locations: Type 1.
   2. Outdoor Locations: Type 3R.
      a. Furnish thermostatically controlled electric heaters sized to prevent condensation under expected weather conditions at Project site. Furnish

control power transformer and terminals for separate connection of heater power circuit.

3. Boxes: Galvanized steel unless otherwise indicated.
   a. Provide wiring gutters sized to accommodate the conductors to be installed.
   b. Increase gutter space as required where sub-feed lugs, feed-through lugs, gutter taps, or oversized lugs are provided.
   c. Provide removable end walls for NEMA Type 1 enclosures.
   d. Provide painted steel boxes for surface-mounted panelboards where indicated, finish to match fronts.
4. Fronts:
   a. Fronts for Surface-Mounted Enclosures: Same dimensions as boxes.
   b. Fronts for Flush-Mounted Enclosures: Overlap boxes on all sides to conceal rough opening.
   c. Finish for Painted Steel Fronts: Manufacturer's standard grey unless otherwise indicated.
5. Lockable Doors: All locks keyed alike unless otherwise indicated.

I. Future Provisions: Prepare all unused spaces for future installation of devices including bussing, connectors, mounting hardware and all other required provisions.

J. Surge Protective Devices: Where factory-installed, internally mounted surge protective devices are provided, list and label panelboards as a complete assembly including surge protective device.

K. Panelboard Contactors: Where panelboard contactors are indicated, provide electrically operated, mechanically held magnetic contactor complying with NEMA ICS 2.
   1. Ampere Rating: Not less than ampere rating of panelboard bus.
   2. Short Circuit Current Rating: Not less than the panelboard short circuit current rating.
   3. Coil Voltage: As required for connection to control system indicated.

L. Ground Fault Protection: Where ground-fault protection is indicated, provide system listed and labeled as complying with UL 1053.
   1. Where electronic circuit breakers equipped with integral ground fault protection are used, provide separate neutral current sensor where applicable.
   2. Where accessory ground fault sensing and relaying equipment is used, equip companion overcurrent protective devices with ground-fault shunt trips.
      a. Use zero sequence ground fault detection method unless otherwise indicated.
      b. Provide test panel and field-adjustable ground fault pick-up and delay settings.
      c. Provide zone selective interlocking capability where indicated, capable of communicating with other electronic trip circuit breakers and external ground fault sensing systems to control ground fault delay functions for system coordination purposes.

M. Selectivity: Where the requirement for selectivity is indicated, furnish products as required to achieve selective coordination.

N. Selective Coordination:
   1. Fusible branch circuit panelboards overcurrent protective devices shall be selectively coordinated with all supply side (fed from both the normal and emergency source) overcurrent protective devices. Provide recommended fuses from a single manufacturer to maintain published minimum ampere coordination ratios.

O. Multi-Section Panelboards: Provide enclosures of the same height, with feed-through lugs or sub-feed lugs and feeders as indicated or as required to interconnect sections.

P. Load centers are not acceptable.

Q. Provide the following features and accessories where indicated or where required to complete installation:
   1. Feed-through lugs.
   2. Sub-feed lugs.

2.3 POWER DISTRIBUTION PANELBOARDS

A. Description: Panelboards complying with NEMA PB 1, power and feeder distribution type, circuit breaker type, and listed and labeled as complying with UL 67; ratings, configurations and features as indicated on the drawings.

B. Conductor Terminations:
   1. Main and Neutral Lug Material: Aluminum, suitable for terminating aluminum or copper conductors.
   2. Main and Neutral Lug Type: Mechanical.

C. Bussing:
   1. Phase and Neutral Bus Material: Tin plated copper.
   2. Ground Bus Material: Copper.

D. Circuit Breakers:
   1. Provide bolt-on type. .
   2. Provide thermal magnetic circuit breakers unless otherwise indicated.
   3. Provide electronic trip circuit breakers where indicated.

E. Circuit breakers rated 1000 amps or more on solidly grounded 480V systems shall include ground fault protection.

F. Circuit breakers rated 1200 amps and above shall have Long time, Short time, Instantaneous and Ground fault protection (LSI) functions. These functions shall similar to those functions found on a Square D PowerPact circuit breaker. Circuit breaker shall have energy reduction maintenance setting (ERMS) system. Provide the following;
   1. Energy Reduction Maintenance Setting Switch (ERMS)
      a. For the circuit breakers above 1200 amps, provide a maintenance OFF ON selector switch on the compartment door to switch the circuit breaker instantaneous tripping characteristics to an alternate setting temporarily during maintenance activity.

b. Provide a lock feature for the ERMS switch so that it may be locked in either the OFF or ON maintenance mode position.
c. Provide a blue LED indicating light to indicate trip unit is in the ERMS mode.

G. Enclosures:
1. Provide surface-mounted enclosures unless otherwise indicated.
2. Fronts: Provide trims to cover access to load terminals, wiring gutters, and other live parts, with exposed access to overcurrent protective device handles.
3. Fronts: Provide lockable hinged door with concealed hinges for access to overcurrent protective device handles without exposing live parts.
4. Fronts: Provide door-in-door trim with hinged cover for access to load terminals and wiring gutters, and separate lockable hinged door with concealed hinges for access to overcurrent protective device handles without exposing live parts.
5. Provide clear plastic circuit directory holder mounted on inside of door.

2.4 LIGHTING AND APPLIANCE PANELBOARDS

A. Description: Panelboards complying with NEMA PB 1, lighting and appliance branch circuit type, circuit breaker type, and listed and labeled as complying with UL 67; ratings, configurations and features as indicated on the drawings.

B. Conductor Terminations:
1. Main and Neutral Lug Material: Aluminum, suitable for terminating aluminum or copper conductors.
2. Main and Neutral Lug Type: Mechanical.

C. Bussing:
1. Phase Bus Connections: Arranged for sequential phasing of overcurrent protective devices.
2. Phase and Neutral Bus Material: Tin plated copper.
3. Ground Bus Material: Copper.

D. Circuit Breakers: Thermal magnetic bolt-on type unless otherwise indicated.

E. Enclosures:
1. Provide surface-mounted or flush-mounted enclosures as indicated.
2. Fronts: Provide lockable hinged door with concealed hinges for access to overcurrent protective device handles without exposing live parts.
3. Fronts: Provide door-in-door trim with hinged cover for access to load terminals and wiring gutters, and separate lockable hinged door with concealed hinges for access to overcurrent protective device handles without exposing live parts.
4. Provide clear plastic circuit directory holder mounted on inside of door.

F. Provide column-width panelboards with accessory column-width cable trough and pullbox where indicated.

2.5 FUSIBLE BRANCH CIRCUIT PANELBOARDS

A. Manufacturers:
1. Fusible Panelboards shall be Cooper Bussmann™ Quik-Spec™ Coordination Panelboards type QSCP.
2. Substitutions will be accepted only if the below requirements are met and written approval is provided from the engineer:
   a. The electrical contractor supplies a written request to the engineer three weeks prior to the project bid date
   b. The electrical contractor provides product documentation to prove complete compliance with specification and all pertinent codes and standards requirements as specified in this section.

B. Panelboard overcurrent protective device interrupting ratings shall be fully rated for the maximum available fault current and have a UL Listed interrupting rating of 300kA and CSA Certified interrupting rating of 200kA with SPD. SPD protection for 480V, 3-phase shall have L-N=600, L-G=600, N-G=600, L-L =1000 and for 480Y L-N=1200, L-G=1200, N-G=1200, L-L=2000.

C. Construction:
1. Panelboard circuits 100A and less shall incorporate overcurrent protection and branch-circuit rated disconnecting means into a single integrated component.
2. Interiors shall be factory assembled.
3. Panelboard shall be equipped with a six-space spare fuse compartment for storing replacement branch circuit fuses. Spare fuse compartment shall be located behind locking panel door.
4. Bus bars shall be tin-plated copper with sufficient cross sectional area to meet UL 67 temperature rise requirements.
5. 200A/400A rated neutrals shall be standard.
6. Main lug conductor terminations:
   a. MLO terminations shall be rated for 60/75°C, Cu-Al
   b. Main disconnect terminations shall be rated for 75°C, Cu Only
7. NEMA 1 panelboards shall be field convertible for top or bottom incoming feed.

D. Main Disconnect:
1. Permanently installed lockout means shall be provided on the main disconnect for lockout tagout procedures.
2. Main disconnect shall be quick-make, quick-break type.

E. Branch Fused Disconnects:
1. Device shall have visible circuit ON/OFF indication with colored and international symbol markings.
2. Device shall provide open fuse indication via permanently installed neon indicating light.
3. Device shall be UL and cUL Listed 600Vac/200kA or 125Vdc/100kA voltage/short-circuit current rating, load-break disconnect with amp ratings and number of poles as indicated on the panelboard schedule.
4. Fuse and disconnect assembly shall be a finger-safe component with trim installed.

5. Fuse and disconnect shall be mechanically interlocked so as not to allow fuse removal while fuse terminals are energized.
6. No special tools shall be required for fuse removal.
7. Devices shall have bolt-on style bus connectors.
8. Device housing shall be clearly marked with device amperage.
9. Permanently installed lockout means shall be provided on the device for lockout tagout procedures. Permanently installed means for locking device in the ON position shall also be provided.
10. Device shall provide fuse amp rating rejection at the following ampacities to ensure continued circuit protection at the specified circuit rating: 15A, 20A, 30A, 40A, 50A, 60A, 70A, 90A & 100A.

F. Main and Branch Circuit Overcurrent Protection
1. All overcurrent protective devices shall have a minimum UL Listed interrupting rating of 300kA and CSA Certified interrupting rating of 200kA.
2. Branch circuit overcurrent protection shall be 600Vac UL Listed minimum 300kA IR and CSA Certified minimum 200kA IR finger-safe fuse with Class J* performance characteristics.
3. Main overcurrent protective devices shall be 600Vac UL Listed minimum 300kA IR and CSA Certified minimum 200kA IR Class J time-delay fuses or Class J performance fuses.
4. Where panelboard main fuses are installed, fuses in panelboard branch circuits shall selectively coordinate with main fuses for all overcurrent ratings up to 200kA.

G. Panelboard Bus: Copper current carrying components, ratings as indicated on Drawings. Furnish copper ground bus in each panelboard.

H. Minimum Integrated Short Circuit Rating: Calculated based on primary transformer available SCR and as indicated on plans.

I. Enclosure:
1. NEMA 1 enclosures shall be surface or flush mount as indicated in associated schedules or drawings.
2. Boxes shall be a nominal 20 inches wide and 5-¾ inches deep with wire bending space per the National Electrical Code.
3. Panelboard trim shall be supplied with lockable door covering all disconnect handles.
4. Panelboard trim shall be dead-front construction covering all energized parts.
5. Door-in-door type trim shall be provided for NEMA 1 enclosures where it is specified in the associated schedules or drawings.
6. Front trim shall be lockable. All lock assemblies shall be keyed alike with like NEMA rated enclosures.

2.6 OVERCURRENT PROTECTIVE DEVICES

A. Fusible Switches:
   1. Description: Quick-make, quick-break, dead-front fusible switch units complying with NEMA KS 1, and listed and labeled as complying with UL 98; ratings, configurations, and features as indicated on the drawings.
   2. Fuse Clips: As required to accept indicated fuses.
      a. Where NEMA Class R fuses are installed, provide rejection feature to prevent installation of fuses other than Class R.
   3. Provide externally operable handle with means for locking in the OFF position. Provide means for locking switch cover in the closed position. Provide safety interlock to prevent opening the cover with the switch in the ON position with capability of overriding interlock for testing purposes.
   4. Conductor Terminations:
      a. Provide mechanical lugs unless otherwise indicated.
      b. Provide compression lugs where indicated.
      c. Lug Material: Aluminum, suitable for terminating aluminum or copper conductors.

B. Molded Case Circuit Breakers:
   1. Description: Quick-make, quick-break, over center toggle, trip-free, trip-indicating circuit breakers listed and labeled as complying with UL 489, and complying with FS W-C-375 where applicable; ratings, configurations, and features as indicated on the drawings.
   2. Interrupting Capacity:
      a. Provide circuit breakers with interrupting capacity as required to provide the short circuit current rating indicated, but not less than:
         1) 10,000 rms symmetrical amperes at 240 VAC or 208 VAC.
         2) 14,000 rms symmetrical amperes at 480 VAC.
      b. Fully Rated Systems: Provide circuit breakers with interrupting capacity not less than the short circuit current rating indicated.
      c. Series Rated Systems: Provide circuit breakers listed in combination with upstream devices to provide interrupting rating not less than the short circuit current rating indicated.
   3. Conductor Terminations:
      a. Provide mechanical lugs unless otherwise indicated.
      b. Provide compression lugs where indicated.
      c. Lug Material: Aluminum, suitable for terminating aluminum or copper conductors.
   4. Thermal Magnetic Circuit Breakers: For each pole, furnish thermal inverse time tripping element for overload protection and magnetic instantaneous tripping element for short circuit protection.
      a. Provide field-adjustable magnetic instantaneous trip setting for circuit breaker frame sizes 225 amperes and larger.
      b. Provide interchangeable trip units where indicated.
   5. Multi-Pole Circuit Breakers: Furnish with common trip for all poles.

6. Provide the following circuit breaker types where indicated:
   a. Ground Fault Circuit Interrupter (GFCI) Circuit Breakers: Listed as complying with UL 943, class A for protection of personnel.
   b. Ground Fault Equipment Protection Circuit Breakers: Designed to trip at 30 mA for protection of equipment.
   c. Arc-Fault Circuit Interrupter (AFCI) Circuit Breakers: Combination type listed as complying with UL 1699.
   d. 100 Percent Rated Circuit Breakers: Listed for application within the panelboard where installed at 100 percent of the continuous current rating.
   e. Current Limiting Circuit Breakers: Without using fusible elements, designed to limit the let-through energy to a value less than the energy of a one-half cycle wave of the symmetrical prospective current when operating within its current limiting range.
7. Provide listed switching duty rated circuit breakers with SWD marking for all branch circuits serving fluorescent lighting.
8. Provide listed high intensity discharge lighting rated circuit breakers with HID marking for all branch circuits serving HID lighting.
9. Do not use tandem circuit breakers.
10. Do not use handle ties in lieu of multi-pole circuit breakers.
11. Provide multi-pole circuit breakers for multi-wire branch circuits as required by NFPA 70.
12. Provide the following features and accessories where indicated or where required to complete installation:
   a. Shunt Trip: Provide coil voltage as required for connection to indicated trip actuator.
   b. Handle Pad-Lock Provision: For locking circuit breaker handle in OFF position.
   c. Auxiliary Switch: SPDT switch suitable for connection to system indicated for indicating when circuit breaker has tripped or been turned off.
   d. Under-voltage Release: For tripping circuit breaker upon predetermined drop in coil voltage with field-adjustable time delay to prevent nuisance tripping.
   e. Alarm Switch: SPDT switch suitable for connection to system indicated for indicating when circuit breaker has tripped.

2.7 SOURCE QUALITY CONTROL

A. See Division 01 – General Requirements.

B. Factory test panelboards according to NEMA PB 1.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that the ratings and configurations of the panelboards and associated components are consistent with the indicated requirements.

C. Verify that mounting surfaces are ready to receive panelboards.

D. Verify that conditions are satisfactory for installation prior to starting work.

3.2 INSTALLATION

A. Perform work in accordance with NECA 1 (general workmanship).

B. Install products in accordance with manufacturer's instructions.

C. Install panelboards in accordance with NECA 407 and NEMA PB 1.1.

D. Arrange equipment to provide minimum clearances in accordance with manufacturer's instructions and NFPA 70.

E. Provide required supports in accordance with Section 260529.

F. Install panelboards plumb.

G. Install flush-mounted panelboards so that trims fit completely flush to wall with no gaps and rough opening completely covered.

H. Mount panelboards such that the highest position of any operating handle for circuit breakers or switches does not exceed 79 inches above the floor or working platform.

I. Mount floor-mounted power distribution panelboards on properly sized 3 inch high concrete pad constructed in accordance with Division 03.

J. Provide minimum of six spare 1 inch trade size conduits out of each flush-mounted panelboard stubbed into accessible space above ceiling and below floor.

K. Provide grounding and bonding in accordance with Section 260526.
   1. Terminate branch circuit equipment grounding conductors on solidly bonded equipment ground bus only. Do not terminate on isolated/insulated ground bus.
   2. Terminate branch circuit isolated grounding conductors on isolated/insulated ground bus only. Do not terminate on solidly bonded equipment ground bus.

L. Install all field-installed branch devices, components, and accessories.

M. Provide fuses complying with Section 262813 for fusible switches as indicated.

N. Energy Reduction Maintenance Switch:
1. Installation of ERMS maintenance lockable selector switch and blue indicating light onto compartment door of the circuit breaker. Installation of the IO module and the IFE module in accordance with manufactures recommendations.
   a. Set point for the ERMS instantaneous is based on manufactures recommendations. For Square D Power Pact circuit breaker (Basis of design) the default programmed setting to the instantaneous (li) set point is 2xIn.

O. Install a permanent label indicating the panelboard or transformer where the power supply to the panel originates.

P. Where accessories are not self-powered, provide control power source as indicated or as required to complete installation.

Q. Multi-Wire Branch Circuits: Group grounded and ungrounded conductors together in the panelboard as required by NFPA 70.

R. Set field-adjustable circuit breaker tripping function settings as indicated.

S. Set field-adjustable circuit breaker tripping function settings as determined by overcurrent protective device coordination study performed according to Section 260573.

T. Set field-adjustable ground fault protection pickup and time delay settings as indicated.

U. Provide filler plates to cover unused spaces in panelboards.

V. Provide circuit breaker lock-on devices to prevent unauthorized personnel from de-energizing essential loads where indicated. Also provide for the following:
1. Emergency and night lighting circuits.
2. Fire detection and alarm circuits.
3. Communications equipment circuits.
4. Intrusion detection and access control system circuits.
5. Video surveillance system circuits.

W. Identify panelboards in accordance with Section 260553.

3.3 FIELD QUALITY CONTROL

A. See Division 01 - General Requirements.

B. Inspect and test in accordance with NETA ATS, except Section 4.

C. Fusible Switches: Perform inspections and tests listed in NETA ATS, Section 7.5.1.1.

D. Molded Case Circuit Breakers: Perform inspections and tests listed in NETA ATS, Section 7.6.1.1 for all main circuit breakers and circuit breakers larger than 800 amperes. Tests listed as optional are not required.
   1. Perform insulation-resistance tests on all control wiring with respect to ground.
   2. Test functions of the trip unit by means of secondary injection.

E. Ground Fault Protection Systems: Test in accordance with manufacturer's instructions as required by NFPA 70.
   1. Perform inspections and tests listed in NETA ATS, Section 7.14. The insulation-resistance test on control wiring listed as optional is not required.

F. Test GFCI circuit breakers to verify proper operation.

G. Test AFCI circuit breakers to verify proper operation.

H. Test shunt trips to verify proper operation.

I. Procure services of a qualified manufacturer's representative to observe installation and assist in inspection, testing, and adjusting. Include manufacturer's reports with field quality control submittals.

J. Correct deficiencies and replace damaged or defective panelboards or associated components.

3.4 ADJUSTING

A. See Division 01 – General Requirements.

B. Adjust tightness of mechanical and electrical connections to manufacturer's recommended torque settings.

C. Adjust alignment of panelboard fronts.

D. Load Balancing: For each panelboard, rearrange circuits such that the difference between each measured steady state phase load does not exceed 20 percent and adjust circuit directories accordingly. Maintain proper phasing for multi-wire branch circuits.

3.5 CLEANING

A. See Division 01 – General Requirements.

B. Clean dirt and debris from panelboard enclosures and components according to manufacturer's instructions.

C. Repair scratched or marred exterior surfaces to match original factory finish.

3.6 PROTECTION

A. Protect installed panelboards from subsequent construction operations.

END OF SECTION

FOR REFERENCE: THIS SECTION WAS ISSUED FOR PHASE 1 AND PHASE 2

SECTION 26 2653 - ELECTRIC VEHICLE CHARGING EQUIPMENT

PART 1 GENERAL

1.1 GENERAL PROVISIONS

A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections with DIVISION 1 - GENERAL REQUIREMENTS, which are hereby made a part of this Section of the Specifications.

B. Attention is directed Section 260400 – GENERAL CONDITIONS FOR ELECTRICAL TRADES, which is hereby made a part of this Section of the Specifications.

1.2 SUMMARY

A. Section includes EV charging equipment that provides Level 2 EV charging.

1.3 REFERENCES

A. National Fire Protection Association:
   1. NFPA 70 - National Electrical Code.

B. Definitions
   1. EV: Electric vehicle.
   2. EV Cable: The off-board cable containing the conductor(s) to connect the EV power controller to the EV that provides both power and communications during energy transfer.
   3. EV Capable: Parking spaces that include nearby termination of raceway (conduit) to a power source with sufficient electrical panel capacity designed for simultaneous charging of electric vehicles in all planned EV parking spaces. Electrical wiring need not be pulled through raceway (conduit) until charging station is installed.
   4. EV Charger or EV Charging Equipment: See "EVSE".
   5. EV Connector: A conductive device that, when electrically coupled to an EV inlet, establishes an electrical connection to the EV for the purpose of power transfer and information exchange. This device is part of the EV coupler.
   6. EV Coupler: A mating EV inlet and connector set.
   7. EV Inlet: The device in the vehicle into which the EV connector is inserted, and a conductive connection is made for the transfer of power and communication. This device is part of the EV coupler.
   8. EV Make Ready: Parking spaces that include nearby termination of raceway (conduit) and electrical wiring pulled to a power source with sufficient electrical panel capacity for simultaneous charging of electric vehicles in all EV parking spaces.
   9. EVSE: Electric Vehicle Supply Equipment. It includes the EV charging equipment and conductors, including the ungrounded, grounded, and equipment grounding conductors and EV cables, attachment plugs, and all other fittings,

devices, power outlets, or apparatus installed specifically for transferring energy between the premise wiring and the EV.

1.4 SYSTEM DESCRIPTION

A. Furnish and install electric vehicle charging equipment capable of supporting the following functions:
   1. Level 2 EV charging
   2. Be networked or internet addressable and capable of participating in a demand response program or time-of-use pricing to encourage off-peak charging.

B. Ensure that all locations of EV charging equipment is capable of receiving a CDMA or GSM cellular signal. The electrical contractor is responsible for this verification prior to purchasing or installing equipment. This does not apply if the installation uses Ethernet connectivity rather than cellular.

C. Provide the services of a manufacturer's technician to start and verify proper installation of all equipment.

1.5 SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for EV charging equipment.
   2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. Shop Drawings: For EV charging equipment.
   1. Include plans, elevations, sections, and mounting details.
   2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   3. Detail fabrication and assembly of mounting assemblies for EV charging equipment.
   4. Include diagrams for power, signal, and control wiring.

C. Coordination Drawings: Area plans and details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
   1. Structural members to which equipment will be attached.
   2. Electrical service.
   3. Communications service, including wireless communications equipment.

D. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

A. See Division 01 – General requirements.

B. Operation and Maintenance Data: For EV charging equipment to include in operation and maintenance manuals.
   1. Programming data on installed system set-up.
   2. Third party payment system contracts.

C. Software and Firmware Operational Documentation:
   1. Online training and help documentation.
   2. Station activation sticker where required for network activation.

1.7 QUALIFICATIONS

A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.

C. Comply with UL 2231-1. UL 2231-2, UL 2594, and NEC Article 625.

D. Comply with SAE J1772.

E. Comply with FCC Part 15 Class A.

1.8 PRE-INSTALLATION MEETINGS

A. See Division 01 – General requirements.

B. Convene minimum one week prior to commencing work of this section.

1.9 DELIVERY, STORAGE, AND HANDLING

A. See Division 01 – General requirements.

B. Accept materials on site in original factory packaging, labeled with manufacturer's identification.

C. Protect from weather and construction traffic, dirt, water, chemical, and mechanical damage, by storing in original packaging.

D. Do not deliver items to project before time of installation. Limit shipment of bulk and multiple-use materials to quantities needed for immediate installation.

1.10 COORDINATION

A. See Division 01 – General requirements.

B. Coordinate exact location of charging equipment on site with concrete bases provided by Division 03.

C. Coordinate bolt pattern of bollard/pole mounted charging stations with supports provided by Division 03.

D. Wireless Survey: Complete wireless survey to determine if wireless provider signals meet or exceed manufacturer's recommended minimum values.

1.11 WARRANTY

A. See Division 01 warranty requirements.

B. Manufacturer's Warranty: Manufacturer and Installer agree to repair or replace components of EV charging units that fail(s) in materials or workmanship within specified warranty period.
   1. Standard Warranty Period: One year from date of Substantial Completion for the installer and three years from the date of shipment for the manufacturer.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design: EVSE LLC

B. Acceptable Alternates: Chargepoint, Eaton.

C. Substitutions – See Division 01 – General Requirements.

D. Source Limitations: Obtain EV charging equipment from single manufacturer.

2.2 EV CHARGING EQUIPMENT DESCRIPTION

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.

B. Comply with NFPA 70.

C. ADA compliant.

D. Metering: +/- 2 percent from 2 percent to full scale of output.

E. EV Charging Equipment Mounting: Bollard, pole or wall mount – see drawings for mounting type.

F. Enclosures:
   1. Rated for environmental conditions at installed location.
      a. Outdoor Locations: NEMA 250, Type 3R.
      b. Aluminum and UV-resistant plastic.
      c. Paint and Anodized or powder coated aluminum.
      d. Charging components protected by security screws.
      e. Charging connectors in locking holsters or using motorized, retractable cable system which does not require holsters.
      f. Meter, modem, and CPU, tamper resistant.

G. EV Cable and Connectors:
   1. SAE J1772 connector.
   2. Locking holster or using a motorized, retractable cable system which does not require holsters.
   3. 18-foot cable with cable management system (mechanical or motorized retractable).

H. Status Indicators:
   1. LEDs to indicate power, vehicle charging, charging complete, system status, faults, and service, as well as authorization.

I. Display Screen/LEDs:
   1. Daylight-viewable LCD screen with UV protection. Daylight readable and fingerprint resistant. The screen may be integral or detached in a separate kiosk-like module.
   2. Displays/indicates power, charging, charging complete, remote control, system status, faults, payment and pricing details, and service.

J. Networking:
   1. WAN Communications: Cellular GSM/GPRS and CDMA or Ethernet.
   2. LAN Communications: 2.4 GHz Wi-Fi 802.11b/g/n, ZigBee wireless or Ethernet Bridge.
   3. Capable of remote configuration, diagnostics and reporting.
   4. Capable of remote software updates.

K. Payment System:
   1. RFID (ISO 15693, ISO 14443), NFC, Contactless or insertion style credit card reader.
   2. PCI (Payment Card Industry) compliant.
   3. Capable of remote control and authorization including mobile phone application or toll free phone number.
   4. Capable of allowing free charging.
   5. Include all required network and port license fees.

L. Charging Network: Compatible with the Open Charge Point Protocol (OCPP) charging network.
   1. Multiple units shall independently connect to charging network.

2. Multiple units shall have one unit designated as a master unit that is configured as a gateway unit between the EV charging equipment (or a kiosk-like module serving the same function) and the charging network.
3. Individual units shall be capable of indicating station status and availability providing or connecting user to customer support and remote control, if networked, and via QR code or smartphone app.

2.3 PERFORMANCE REQUIREMENTS

A. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.

B. Surge Withstand: 6 kV at 3000A.

C. Integral GFCI.

D. Auto-GFCI fault retry.

E. Input Power:
1. As specified on drawings.
2. Dual circuits do not need to be interlocked.

F. EV Charging Levels:
1. Single vehicle: AC Level 2 maximum charging rate between 7.2 kW and 9.6 kW.
2. Dual vehicles, AC Level 2 maximum charging rate between 7.2 kW and 9.6 kW.

G. Multiple vehicles simultaneously charging at a site using Automatic Power Load Management may be charged up to 9.6 kW. Using Power Sharing of dual chargers, two vehicles charging simultaneously will allow each 4.8 kW per hour of charge, reverting to 9.6 kW per hour if one of two vehicles is no longer charging. Multiple pairs of vehicles can follow this pattern.

2.4 GENERAL FINISH REQUIREMENTS

A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping or otherwise protecting exposed finishes.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 EXECUTION

3.1 EXAMINATION

A. See Division 01 – General requirements.

B. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

C. Examine roughing-in for EV charging equipment electrical conduit to verify actual locations of conduit connections before equipment installation.

D. Examine walls, floors, and pavement for suitable conditions where EV charging equipment will be installed.

E. Notify the Architect or Engineer of any unsuitable conditions. Do not proceed with installation until unsuitable conditions have been corrected.

3.2 INSTALLATION

A. Comply with NECA 1 and NECA 413.

B. Concrete Base Mounting:
   1. Install EV charging equipment on a concrete base per manufacturers installation requirements or as indicated on drawings. Comply with requirements for concrete base specified in Division 03.
      a. Install dowel rods to connect concrete base to concrete floor or sidewalk where applicable. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.
      b. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
      c. Install anchor bolts to elevations required for proper attachment to supported equipment.
      d. Secure EV charging equipment to concrete base according to manufacturer's written instructions.

C. Wiring Method: Install cables in raceways and cable trays. Conceal raceway and cables except in unfinished spaces.
   1. Comply with requirements for raceways and boxes specified in Section 260533 "Raceways and Boxes for Electrical Systems."

D. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors.

E. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

F. Circuit Breakers: Comply with Section 262816 "Enclosed Switches and Circuit Breakers."

G. Secure covers to enclosure.

3.3 CONNECTIONS

A. Connect wiring according to Section 260519 “Electrical Power Conductors and Cable.”

B. Comply with grounding requirements in Section 260526 "Grounding and Bonding for Electrical Systems."

C. Comply with requirements for installation of conduit in Section 260533 "Raceways and Boxes for Electrical Systems." Drawings indicate general arrangement of conduit, fittings, and specialties.

D. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.

3.4 IDENTIFICATION

A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.5 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

B. Perform tests and inspections with the assistance of a factory-authorized service representative.

C. Tests and Inspections:
   1. For each unit of EV charging equipment, perform the following tests and inspections:
      a. Unit self-test.
      b. Operation test with load bank.
      c. Operation test with EV.
      d. Network communications test.

D. EV charging equipment will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

3.6 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform startup service.

3.7 SOFTWARE SERVICE AGREEMENT

A. Technical Support: Beginning at Substantial Completion, service agreement shall include software support for the duration of an active Network Service Plan.

B. Upgrade Service: At Substantial Completion, remotely update software to latest version. Install and program software upgrades that become available while an active Network Service Plan is maintained. Upgrading software shall include operating system and new or revised licenses for using software.

3.8 TRAINING:

A. The Owner may assign personnel to participate with the contractor during installation. Without delaying the work, familiarize the Owner's personnel with the installation, equipment, and maintenance.

B. Provide training to personnel selected by the Owner on operation and basic maintenance of all systems and equipment.

C. Include 4 hours of training Owner’s staff.

A. National Electrical Manufacturers Association:

1. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).

2. NEMA ICS 4 - Industrial Control and Systems: Terminal Blocks.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit manufacturer's standard data for enclosures, cabinets, and terminal blocks.

C. Manufacturer's Installation Instructions: Submit application conditions and limitations of use stipulated by product testing agency specified under Regulatory Requirements. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

1.4 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing Products specified in this section with minimum 3 years experience.

1.5 EXTRA MATERIALS

A. Section 01 70 00 - Execution and Closeout Requirements: Spare parts and maintenance products.

B. Furnish two of each key.

PART 2 PRODUCTS

2.1 HINGED COVER ENCLOSURES

A. Manufacturers:

1. Hoffman
2. Carlon Electrical Products.
3. Hubbell Wiring Devices.
4. Substitutions: Section 01 60 00 - Product Requirements

B. Construction: NEMA 250, Type 1 steel enclosure with gray enamel finish.

C. Covers: Continuous hinge, held closed by screwdriver with flat steel cover.

D. Furnish interior metal panel for mounting terminal blocks and electrical components; finish with white enamel.

E. Enclosure Finish: Manufacturer's standard enamel.

2.2 CABINETS

A. Manufacturers:

1. Hoffman
2. Carlon Electrical Products.
3. Hubbell Wiring Devices.
4. Substitutions: Section 01 60 00 - Product Requirements

B. Boxes: Galvanized steel with removable end walls.

C. Box Size: 24 inches wide x 6 inches x 4 inches deep.

D. Backboard: Furnish 3/4 inch thick plywood backboard for mounting terminal blocks. Paint matte white.

E. Fronts: Steel, type with screw cover front door with concealed hinge and flush lock keyed to match branch circuit panelboard. Finish with gray baked enamel.

F. Furnish metal barriers to form separate compartments wiring of different systems and voltages.

G. Furnish accessory feet for free-standing equipment.

2.3 TERMINAL BLOCKS

A. Manufacturers:
   1. Carlon Electrical Products
   2. Hubbell Wiring Devices
   3. Reliance Electric

   4. Substitutions: [Section 01 60 00 - Product Requirements] [Not Permitted.]

B. Terminal Blocks: NEMA ICS 4.

C. Power Terminals: Unit construction type with closed back and tubular pressure screw connectors, rated 600 volts.

D. Signal and Control Terminals: Modular construction type, suitable for channel mounting, with tubular pressure screw connectors, rated 300 volts.

E. Furnish ground bus terminal block, with each connector bonded to enclosure.

2.4 PLASTIC RACEWAY

A. Manufacturers:

   1. Panduit.

   2. Hubbell Wiring Devices.

   3. Carlon Electrical Products.

   4. Substitutions: Section 01 60 00 - Product Requirements

B. Product Description: Plastic channel with hinged or snap-on cover.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install enclosures and boxes plumb. Anchor securely to wall and structural supports at each corner in accordance with Section 26 05 29.

B. Install cabinet fronts plumb.

3.2 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Clean electrical parts to remove conductive and harmful materials.

C. Remove dirt and debris from enclosure.

D. Clean finishes and touch up damage.

END OF SECTION

SECTION 26 2726 - WIRING DEVICES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Wall switches.

B. Receptacles.

C. Wall plates.

1.2 RELATED REQUIREMENTS

A. Division 01 – General Requirements

B. Division 09 - Finishes

C. Section 260400 – General Conditions for Electrical Trades

D. Section 260519 - Electrical Power Conductors and Cables.

E. Section 260526 - Grounding and Bonding for Electrical Systems.

F. Section 260503 – Equipment Wiring Connections.

G. Section 260533 – Raceways and Boxes for Electrical Systems.

H. Section 260553 - Identification for Electrical Systems.

I. Section 260943 - Networked Lighting Controls.

J. Section 262913 - Enclosed Controllers.

1.3 REFERENCE STANDARDS

A. FS W-C-596 - Connector, Electrical, Power, General Specification for; Revision H.

B. FS W-S-896 - Switches, Toggle (Toggle and Lock), Flush-mounted (General Specification); Revision G.

C. NECA 1 - Standard for Good Workmanship in Electrical Construction.

D. NECA 130 - Standard for Installing and Maintaining Wiring Devices.

E. NEMA WD 1 - General Color Requirements for Wiring Devices.

F. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

G. UL 20 - General-Use Snap Switches; Current Edition, Including All Revisions.

H. UL 498 - Attachment Plugs and Receptacles; Current Edition, Including All Revisions.

I. UL 514D - Cover Plates for Flush-Mounted Wiring Devices; Current Edition, Including All Revisions.

J. UL 943 - Ground-Fault Circuit-Interrupters; Current Edition, Including All Revisions.

K. UL 1310 - Class 2 Power Units; Current Edition, Including All Revisions.

L. UL 1449 - Standard for Surge Protective Devices; Current Edition, Including All Revisions.

M. UL 1472 - Solid-State Dimming Controls; Current Edition, Including All Revisions.

N. UL 1917 - Solid-State Fan Speed Controls; Current Edition, Including All Revisions.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
1. Coordinate the placement of outlet boxes with millwork, furniture, equipment, etc. installed under other sections or by others.
2. Coordinate wiring device ratings and configurations with the electrical requirements of actual equipment to be installed.
3. Coordinate the placement of outlet boxes for wall switches with actual installed door swings.
4. Coordinate the installation and preparation of uneven surfaces, such as split face block, to provide suitable surface for installation of wiring devices.
5. Notify Architect of any conflicts or deviations from the contract documents to obtain direction prior to proceeding with work.

B. Sequencing:
1. Do not install wiring devices until final surface finishes and painting are complete.

1.5 SUBMITTALS

A. See Division 01 - General Requirements.

B. Product Data: Provide manufacturer's catalog information showing dimensions, colors, and configurations.
1. Wall Dimmers: Include derating information for ganged multiple devices.
2. Surge Protection Receptacles: Include surge current rating, voltage protection rating (VPR) for each protection mode, and diagnostics information.

C. Samples: One for each type and color of device and wall plate specified.

D. Certificates for Surge Protection Receptacles: Manufacturer's documentation of listing for compliance with UL 1449.

E. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

F. Operation and Maintenance Data:
1. Wall Dimmers: Include information on operation and setting of presets.
2. GFCI Receptacles: Include information on status indicators.
3. Surge Protection Receptacles: Include information on status indicators.

G. Project Record Documents: Record actual installed locations of wiring devices.

H. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
1. See Division 01 - General Requirements, for additional provisions.
2. Screwdrivers for Tamper-Resistant Screws: Two for each type of screw.
3. Extra Keys for Locking Switches: Two of each type.
4. Extra Surge Protection Receptacles: Two of each type.
5. Extra Wall Plates: One of each style, size, and finish.

1.6 QUALITY ASSURANCE

A. Conform to requirements of NFPA 70.

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

D. Products: Listed, classified, and labeled as suitable for the purpose intended.

E. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.7 DELIVERY, STORAGE, AND PROTECTION

A. Store in a clean, dry space in original manufacturer's packaging until ready for installation.

PART 2 PRODUCTS

2.1 WIRING DEVICE APPLICATIONS

A. Provide wiring devices suitable for intended use and with ratings adequate for load served.

B. For single receptacles installed on an individual branch circuit, provide receptacle with ampere rating not less than that of the branch circuit.

C. Provide weather resistant GFCI receptacles with specified weatherproof covers for receptacles installed outdoors or in damp or wet locations.

D. Provide tamper resistant receptacles for receptacles where indicated on the drawings.

E. Provide GFCI protection for receptacles installed within 6 feet of water source.

F. Provide GFCI protection for receptacles installed in dwelling unit kitchens.

G. Provide GFCI protection in other than dwelling units for all single-phase receptacles rated 150 volts to ground or less and all three-phase receptacles rated 150 volts to ground or less, 100 amperes of less in: Bathrooms, Kitchens and on Rooftops

H. Provide GFCI protection for receptacles serving electric drinking fountains.

I. Unless noted otherwise, do not use combination switch/receptacle devices.

2.2 WALL SWITCHES:

A. See Section 260943 – Networked Lighting Controls for specifications.

2.3 RECEPTACLES

A. Manufacturers:
   1. Hubbell Incorporated
   2. Leviton Manufacturing Company, Inc.
   3. Pass & Seymour, a brand of Legrand North America, Inc.
   4. Substitutions: See Division 01 - General Requirements.
   5. Source Limitations: Where wall controls are furnished as part of lighting control system, provide accessory matching receptacles and wallplates by the same manufacturer in locations indicated.

B. Receptacles - General Requirements: Self-grounding, complying with NEMA WD 1 and NEMA WD 6, and listed as complying with UL 498, and where applicable, FS W-C-596; types as indicated on the drawings.
   1. Wiring Provisions: Terminal screws for side wiring or screw actuated binding clamp for back wiring with separate ground terminal screw.
   2. NEMA configurations specified are according to NEMA WD 6.

3. Hospital Grade Receptacles: Listed as complying with UL 498 Supplement SD, with green dot hospital grade mark on device face.
4. Body color:
   a. General Purpose Receptacles: color by Architect.
   b. Emergency, [Critical Branch], [Equipment Branch] receptacles: Red.

C. Convenience Receptacles:
1. Standard Convenience Receptacles: Industrial specification grade, 20A, 125V, NEMA 5-20R; single or duplex as indicated on the drawings.
2. Automatically Controlled Convenience Receptacles: Industrial specification grade, 20A, 125V, NEMA 5-20R; controlled receptacle marking on device face per NFPA 70; single or duplex as indicated on the drawings.
3. Isolated Ground Convenience Receptacles: Industrial specification grade, 20A, 125V, NEMA 5-20R, with ground contacts isolated from mounting strap; isolated ground triangle mark on device face; single or duplex as indicated on the drawings.
4. Weather Resistant Convenience Receptacles: Industrial specification grade, 20A, 125V, NEMA 5-20R, listed and labeled as weather resistant type complying with UL 498 Supplement SE suitable for installation in damp or wet locations; single or duplex as indicated on the drawings.
5. Tamper Resistant Convenience Receptacles: Industrial specification grade, 20A, 125V, NEMA 5-20R, listed and labeled as tamper resistant type; single or duplex as indicated on the drawings.
6. Tamper Resistant and Weather Resistant Convenience Receptacles: Industrial specification grade, 20A, 125V, NEMA 5-20R, listed and labeled as tamper resistant type and as weather resistant type complying with UL 498 Supplement SE suitable for installation in damp or wet locations; single or duplex as indicated on the drawings.
7. Illuminated Convenience Receptacles: Hospital grade, 20A, 125V, NEMA 5-20R; illuminated face or indicator light to indicate power is being supplied to receptacle; single or duplex as indicated on the drawings.

D. GFCI Receptacles:
1. GFCI Receptacles - General Requirements: Self-testing, with feed-through protection and light to indicate ground fault tripped condition and loss of protection; listed as complying with UL 943, class A.
   a. Provide test and reset buttons of same color as device.
2. Standard GFCI Receptacles: Industrial specification grade, duplex, 20A, 125V, NEMA 5-20R, rectangular decorator style.
3. Weather Resistant GFCI Receptacles: Industrial specification grade, duplex, 20A, 125V, NEMA 5-20R, rectangular decorator style, listed and labeled as weather resistant type complying with UL 498 Supplement SE suitable for installation in damp or wet locations.
4. Tamper Resistant GFCI Receptacles: Industrial specification grade, duplex, 20A, 125V, NEMA 5-20R, rectangular decorator style, listed and labeled as tamper resistant type.
5. Tamper Resistant and Weather Resistant GFCI Receptacles: Industrial specification grade, duplex, 20A, 125V, NEMA 5-20R, rectangular decorator style, listed and labeled as tamper resistant type and as weather resistant type

complying with UL 498 Supplement SE suitable for installation in damp or wet locations.

E. USB Charging Devices:
1. USB Charging Devices - General Requirements: Listed as complying with UL 1310.
   a. Charging Capacity - Two-Port Devices: 2.1 A, minimum.
   b. Charging Capacity - Four-Port Devices: 4.2 A, minimum.
2. USB Charging/Tamper Resistant Receptacle Combination Devices: Two-port USB charging device and receptacle, commercial specification grade, duplex, 20A, 125V, NEMA 5-20R, listed and labeled as tamper resistant type; rectangular decorator style.
3. USB Charging Noncombination Devices: Four-port; rectangular decorator style.

F. Surge Protection Receptacles:
1. Surge Protection Receptacles - General Requirements: Listed and labeled as complying with UL 1449, Type 2 or 3.
   a. Energy Dissipation: Not less than 240 J per mode.
   b. Protected Modes: L-N, L-G, N-G.
   c. UL 1449 Voltage Protection Rating (VPR): Not more than 700 V for L-N, L-G modes and 1200 V for N-G mode.
   d. Diagnostics:
      1) Visual Notification: Provide indicator light to report functional status of surge protection.
      2) Audible Notification: Provide switchable audible alarm to report that surge protection is not functional.
2. Standard Surge Protection Receptacles: Industrial specification grade, duplex, 20A, 125V, NEMA 5-20R, rectangular decorator style.

G. Locking Receptacles: Industrial specification grade, configuration as indicated on the drawings.
1. Standard Locking Convenience Receptacles: Single, 20A, 125V, NEMA L5-20R.
2. Special Purpose Locking Receptacles: refer to drawings and schedules for NEMA locking configuration.

H. Special Purpose Receptacles: Industrial specification grade, straight blade grounding devices.
1. Refer to drawings and schedules for NEMA configuration.

I. Clock Hanger Receptacles: Single, 15A, 125V, NEMA 5-15R.

2.4 WALL PLATES

A. Manufacturers:
1. Hubbell Incorporated
2. Leviton Manufacturing Company, Inc.
3. Pass & Seymour, a brand of Legrand North America, Inc.
4. Substitutions: See Division 01 - General Requirements.

5. Source Limitations: Where wall controls are furnished as part of lighting control system, provide accessory matching receptacles and wallplates by the same manufacturer in locations indicated.

B. Wall Plates: Comply with UL 514D.
   1. Configuration: One piece cover as required for quantity and types of corresponding wiring devices.
   2. Screws: Metal with slotted heads finished to match wall plate finish.
   3. Provide screwless wallplates with concealed mounting hardware where indicated.

C. Nylon Wall Plates: Smooth finish, high-impact thermoplastic.

D. Stainless Steel Wall Plates: Brushed satin finish, Type 302 stainless steel.

E. Brass Wall Plates: Brushed satin finish, factory-coated to inhibit oxidation.

F. Aluminum Wall Plates: Smooth satin finish, clear anodized, factory-coated to inhibit oxidation.

G. Chrome Wall Plates: Smooth finish, chrome plated steel.

H. Galvanized Steel Wall Plates: Rounded corners and edges, with corrosion resistant screws.

I. Premarked Wall Plates: Factory labeled as indicated; hot stamped for nylon wall plates and engraved for metal wall plates.

J. Weatherproof Covers for Damp Locations: Gasketed, cast aluminum, with self-closing hinged cover and corrosion-resistant screws; listed as suitable for use in wet locations with cover closed.

K. Weatherproof Covers for Wet Locations: Gasketed, cast aluminum, with hinged lockable cover and corrosion-resistant screws; listed as suitable for use in wet locations while in use with attachment plugs connected and identified as extra-duty type.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as shown on the drawings.

B. Verify that outlet boxes are installed in proper locations and at proper mounting heights and are properly sized to accommodate devices and conductors in accordance with NFPA 70.

C. Verify that wall openings are neatly cut and will be completely covered by wall plates.

D. Verify that final surface finishes are complete, including painting.

E. Verify that floor boxes are adjusted properly.

F. Verify that branch circuit wiring installation is completed, tested, and ready for connection to wiring devices.

G. Verify that conditions are satisfactory for installation prior to starting work.

3.2 PREPARATION

A. Provide extension rings to bring outlet boxes flush with finished surface.

B. Clean dirt, debris, plaster, and other foreign materials from outlet boxes.

3.3 INSTALLATION

A. Perform work in accordance with NECA 1 (general workmanship) and, where applicable, NECA 130, including mounting heights specified in those standards unless otherwise indicated.

B. Coordinate locations of outlet boxes provided under Section 260533 as required for installation of wiring devices provided under this section.
   1. Mounting Heights: Unless otherwise indicated, as follows:
      a. Wall Switches: 48 inches above finished floor.
      b. Wall Dimmers: 48 inches above finished floor.
      c. Fan Speed Controllers: 48 inches above finished floor.
      d. Receptacles: 18 inches above finished floor or 6 inches above counter.
         1) Install convenience GFCI type receptacles 36 to 48 inches above roof deck. Or at designated heights as indicated on drawings.
   2. Orient outlet boxes for vertical installation of wiring devices unless otherwise indicated.
   3. Where multiple receptacles, wall switches, or wall dimmers are installed at the same location and at the same mounting height, gang devices together under a common wall plate.
   4. Locate wall switches on strike side of door with edge of wall plate 3 inches from edge of door frame. Where locations are indicated otherwise, notify Architect to obtain direction prior to proceeding with work.
   5. Locate receptacles for electric drinking fountains concealed behind drinking fountain according to manufacturer's instructions.

C. Install wiring devices in special application enclosures per manufacturer’s instructions, provide stainless steel cover plates.

D. Install wiring devices in accordance with manufacturer's instructions.

E. Install permanent barrier between ganged wiring devices when voltage between adjacent devices exceeds 300 V.

F. Where required, connect wiring devices using pigtails not less than 6 inches long. Do not connect more than one conductor to wiring device terminals.

G. Connect wiring devices by wrapping conductor clockwise 3/4 turn around screw terminal and tightening to proper torque specified by the manufacturer. Where present, do not use push-in pressure terminals that do not rely on screw-actuated binding.

H. Unless otherwise indicated, connect wiring device grounding terminal to branch circuit equipment grounding conductor and to outlet box with bonding jumper. When stranded conductors are used in lieu of solid, use insulated crimp on fork terminals for device terminations. Do not place bare stranded conductors directly under screw terminals.

I. For isolated ground receptacles, connect wiring device grounding terminal only to identified branch circuit isolated equipment grounding conductor. Do not connect grounding terminal to outlet box or normal branch circuit equipment grounding conductor.

J. Provide GFCI receptacles with integral GFCI protection at each location indicated. Do not use feed-through wiring to protect downstream devices.

K. Where split-wired duplex receptacles are indicated, remove tabs connecting top and bottom receptacles.

L. Install wiring devices plumb and level with mounting yoke held rigidly in place.

M. Install wall switches with OFF position down.

N. Install wall dimmers to achieve full rating specified and indicated after derating for ganging as instructed by manufacturer.

O. Do not share neutral conductor on branch circuits utilizing wall dimmers.

P. Install vertically mounted receptacles with grounding pole on top and horizontally mounted receptacles with grounding pole on left.

Q. Install wall plates to fit completely flush to wall with no gaps and rough opening completely covered without strain on wall plate. Repair or reinstall improperly installed outlet boxes or improperly sized rough openings. Do not use oversized wall plates in lieu of meeting this requirement.

R. Install blank wall plates on junction boxes and on outlet boxes with no wiring devices installed or designated for future use.

S. Identify wiring devices in accordance with Section 260553.

3.4 FIELD QUALITY CONTROL

A. See Division 01 - General Requirements.

B. Inspect each wiring device for damage and defects.

C. Operate each wall switch, wall dimmer, and fan speed controller with circuit energized to verify proper operation.

D. Test each receptacle to verify operation and proper polarity.

E. Test each GFCI protected receptacle for proper tripping operation according to manufacturer's instructions.

F. Inspect each surge protection receptacle to verify surge protection is active.

G. Correct wiring deficiencies and replace damaged or defective wiring devices.

3.5 ADJUSTING

A. Adjust devices and wall plates to be flush and level.

B. Adjust presets for wall dimmers according to manufacturer's instructions as directed by Architect.

3.6 CLEANING

A. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

END OF SECTION

SECTION 26 2813 - FUSES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Fuses.

B. Spare fuse cabinet.

1.2 RELATED REQUIREMENTS

A. See Division 01 – General Requirements

B. Section 260400 – General Conditions for Electrical Trades

C. Section 260553 - Identification for Electrical Systems: Identification products and requirements.

D. Section 260573 – Overcurrent Protective Device Coordination Study: Additional criteria for the selection of protective devices specified in this section.

E. Section 262413 - Switchboards: Fusible switches.

F. Section 262416 - Panelboards: Fusible switches.

G. Section 262500 – Enclosed Bus Assemblies: Fusible switches.

H. Section 262819 - Enclosed Switches: Fusible switches.

I. Section 262913 - Enclosed Controllers: Fusible switches.

J. Section 264500 - Photovoltaic System: Additional requirements for photovoltaic fuses.

1.3 REFERENCE STANDARDS

A. NEMA FU 1 - Low Voltage Cartridge Fuses; 2012.

B. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

C. UL 248-1 - Low-Voltage Fuses - Part 1: General Requirements; Current Edition, Including All Revisions.

D. UL 248-4 - Low-Voltage Fuses - Part 4: Class CC Fuses; Current Edition, Including All Revisions.

E. UL 248-8 - Low-Voltage Fuses - Part 8: Class J Fuses; Current Edition, Including All Revisions.

F. UL 248-10 - Low-Voltage Fuses - Part 10: Class L Fuses; Current Edition, Including All Revisions.

G. UL 248-12 - Low-Voltage Fuses - Part 12: Class R Fuses; Current Edition, Including All Revisions.

H. UL 248-15 - Low-Voltage Fuses - Part 15: Class T Fuses; Current Edition, Including All Revisions.

1.4 ADMINISTRATIVE REQUIREMENTS

A. See Division 01: General Requirements

B. Coordination:
1. Coordinate fuse clips furnished in equipment provided under other sections for compatibility with indicated fuses.
   a. Fusible Switches for Switchboards: See Section 262413.
   b. Fusible Switches for Panelboards: See Section 262416.
   c. Fusible Switches for Busway: See Section 262500.
   d. Fusible Enclosed Switches: See Section 262819.
   e. Fusible Switches for Enclosed Motor Controllers: See Section 262913.
2. Coordinate fuse requirements according to manufacturer's recommendations and nameplate data for actual equipment to be installed.
3. Notify Engineer of any conflicts with or deviations from the contract documents. Obtain written direction before proceeding with work.

1.5 SUBMITTALS

A. See Division 01 – General Requirements.

B. Product Data: Provide manufacturer's standard data sheets including voltage and current ratings, interrupting ratings, time-current curves, and current limitation curves.
1. Spare Fuse Cabinet: Include dimensions.

C. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
1. See Division 01 - Product Requirements, for additional provisions.
2. Extra Fuses: One set(s) of three for each type and size installed.
3. Fuse Pullers: One set(s) compatible with each type and size installed.
4. Spare Fuse Cabinet Keys: Two.

1.6 QUALITY ASSURANCE

A. Conform to requirements of NFPA 70.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

C. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Bussmann

B. Littelfuse, Inc.

C. Ferraz Shawmut

D. Substitutions: See Division 01- General Requirements.

2.2 APPLICATIONS

A. Service Entrance:
1. Fusible Switches up to 600 Amperes: Class RK1, time-delay.
2. Fusible Switches Larger than 600 Amperes: Class L, time-delay.

B. Feeders:
1. Fusible Switches up to 600 Amperes: Class RK1, time-delay.
2. Fusible Switches Larger than 600 Amperes: Class L, time-delay.

C. General Purpose Branch Circuits: Class RK1, time-delay.

D. Individual Motor Branch Circuits: Class RK1, time-delay.

E. In-Line Protection for Pole-Mounted Luminaires: Class CC, time-delay.

F. Primary Protection for Control Transformers: Class CC, time-delay.

2.3 FUSES

A. Provide products listed, classified, and labeled as suitable for the purpose intended.

B. Unless specifically indicated to be excluded, provide fuses for all fusible equipment as required for a complete operating system.

C. Provide fuses of the same type, rating, and manufacturer within the same switch.

D. Comply with UL 248-1.

E. Unless otherwise indicated, provide cartridge type fuses complying with NEMA FU 1, Class and ratings as indicated.

F. Voltage Rating: Suitable for circuit voltage.

G. Class R Fuses: Comply with UL 248-12.

H. Class J Fuses: Comply with UL 248-8.

I. Class L Fuses: Comply with UL 248-10.

J. Class T Fuses: Comply with UL 248-15.

K. Selectivity: Where the requirement for selectivity is indicated, furnish products as required to achieve selective coordination.

L. Provide the following accessories where indicated or where required to complete installation:
1. Fuseholders: Compatible with indicated fuses.
2. Fuse Reducers: For adapting indicated fuses to permit installation in switch designed for fuses with larger ampere ratings.

2.4 SPARE FUSE CABINET

A. Description: Wall-mounted sheet metal cabinet with shelves and hinged door with cylinder lock, suitably sized to store spare fuses and fuse pullers specified.

B. Finish: Manufacturer's standard, factory applied grey finish unless otherwise indicated.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that fuse ratings are consistent with circuit voltage and manufacturer's recommendations and nameplate data for equipment.

B. Verify that mounting surfaces are ready to receive spare fuse cabinet.

C. Verify that conditions are satisfactory for installation prior to starting work.

3.2 INSTALLATION

A. Do not install fuses until circuits are ready to be energized.

B. Install fuses with label oriented such that manufacturer, type, and size are easily read.

C. Install spare fuse cabinet where indicated.

D. Identify spare fuse cabinet in accordance with Section 260553.

END OF SECTION

SECTION 262819 - ENCLOSED SWITCHES

PART 1 GENERAL

1.1 SUMMARY

A. Section includes fusible and nonfusible switches.

B. Related Sections:
1. Section 26 28 13 - Fuses.

1.2 REFERENCES

A. National Electrical Manufacturers Association:

1. NEMA FU 1 - Low Voltage Cartridge Fuses.

2. NEMA KS 1 - Enclosed and Miscellaneous Distribution Equipment Switches (600 Volts Maximum).

B. International Electrical Testing Association:

1. NETA ATS - Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit switch ratings and enclosure dimensions.

1.4 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Project Record Documents: Record actual locations of enclosed switches and ratings of installed fuses.

1.5 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years [documented] experience.

PART 2 PRODUCTS

2.1 FUSIBLE SWITCH ASSEMBLIES

A. Manufacturers:
1. General Electric.
2. Square D.
3. Siemens.
4. Eaton/Cutler Hammer.
5. Substitutions: Section 01 60 00 - Product Requirements.

B. Product Description: NEMA KS 1, with externally operable handle interlocked to prevent opening front cover with switch in ON position, enclosed load interrupter knife switch. Handle lockable in OFF position. Provide lockable in the closed position for elevator cab light disconnect or similar applications.

C. Fuse clips: Designed to accommodate NEMA FU 1, Class R fuses.

D. Enclosure: NEMA KS 1, to meet conditions. Fabricate enclosure with manufacturer's standard gray painted steel.
1. Interior Dry Locations: Type 1.
2. Exterior Locations: Type 3R.
3. Kitchen Locations: Type 4X Stainless Steel.

E. Furnish switches with entirely copper current carrying parts.

2.2 NONFUSIBLE SWITCH ASSEMBLIES

A. Manufacturers:
1. General Electric.
2. Square D.
3. Siemens.
4. Eaton/Cutler Hammer.
5. Substitutions: Section 01 60 00 - Product Requirements.

B. Product Description: NEMA KS 1, Type with externally operable handle interlocked to prevent opening front cover with switch in ON position enclosed load interrupter knife switch. Handle lockable in OFF position.

C. Product Description: NEMA KS 1, with externally operable handle interlocked to prevent opening front cover with switch in ON position, enclosed load interrupter knife switch. Handle lockable in OFF position. Provide lockable in the closed position for elevator cab light disconnect or similar applications.

D. Enclosure: NEMA KS 1, to meet conditions. Fabricate enclosure with manufacturer's standard gray painted steel.
   1. Interior Dry Locations: Type 1.
   2. Exterior Locations: Type 3R.

E. Furnish switches with entirely copper current carrying parts.

2.3 SWITCH RATINGS

A. Switch Rating: Horsepower rated for AC or DC as indicated on Drawings.

B. Short Circuit Current Rating: UL listed for 200,000 rms symmetrical amperes when used with or protected by Class R or Class J fuses (30-600 ampere switches employing appropriate fuse rejection schemes and when used with or protected by Class L fuses (800-1200 ampere).

PART 3 EXECUTION

3.1 EXISTING WORK

A. Disconnect and remove abandoned enclosed switches.

B. Maintain access to existing enclosed switches and other installations remaining active and requiring access. Modify installation or provide access panel.

C. Clean and repair existing enclosed switches to remain or to be reinstalled.

3.2 INSTALLATION

A. Install enclosed switches plumb. Provide supports in accordance with Section 26 05 29.

B. Height:5 feet to operating handle.

C. Install fuses for fusible disconnect switches. Refer to Section 26 28 13 for product requirements.

D. Install engraved plastic nameplates in accordance with Section 26 05 53.

E. Apply adhesive tag on inside door of each fused switch indicating NEMA fuse class and size installed.

3.3 FIELD QUALITY CONTROL

A. Section [01 40 00 - Quality Requirements] [01 70 00 - Execution and Closeout Requirements]: Field inspecting, testing, adjusting, and balancing.

B. Inspect and test in accordance with NETA ATS, except Section 4.

C. Perform inspections and tests listed in NETA ATS, Section 7.5.

END OF SECTION

FOR REFERENCE: THIS SECTION WAS ISSUED FOR PHASE 1 AND PHASE 2

SECTION 262823 - ENCLOSED CIRCUIT BREAKERS

PART 1 GENERAL

1.1 SUMMARY

A. Section includes molded-case circuit breakers in individual enclosures.

1.2 REFERENCES

A. National Electrical Manufacturers Association:
   1. NEMA AB 1 - Molded Case Circuit Breakers and Molded Case Switches.

B. International Electrical Testing Association:
   1. NETA ATS - Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit catalog sheets showing ratings, trip units, time current curves, dimensions, and enclosure details.

1.4 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Project Record Documents: Record actual locations and continuous current ratings of enclosed circuit breakers.

1.5 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years experience.

PART 2 PRODUCTS

2.1 MOLDED CASE CIRCUIT BREAKER

A. Manufacturers:
   1. ABB / GE
   2. Schneider Electric / Square D Co.
   3. Siemens
   4. Eaton
   5. Substitutions: Section 01 60 00 - Product Requirements.

B. Product Description: Enclosed, molded-case circuit breaker conforming to NEMA AB 1.

C. Field-Adjustable Trip Circuit Breaker: Circuit breakers with frame sizes 200 amperes and larger have mechanism for adjusting long time, short time, continuous current, short time, long time pickup current.

D. Field-Changeable Ampere Rating Circuit Breaker: Circuit breakers with frame sizes 200 amperes and larger have changeable trip units.

E. Accessories: As indicated on Drawings. Conform to NEMA AB 1.

F. Enclosure: NEMA AB 1, to meet conditions. Fabricate enclosure from steel finished with manufacturer's standard gray enamel or stainless steeel as identified below.
1. Interior Dry Locations: Type 1.
2. Exterior Locations: Type 3R.
3. Kitchen Locations: Type 4X Stainless Steel.

PART 3 EXECUTION

3.1 EXISTING WORK

A. Disconnect and remove abandoned enclosed circuit breakers.

B. Maintain access to existing enclosed circuit breakers and other installations remaining active and requiring access. Modify installation or provide access panel.

C. Clean and repair existing enclosed circuit breakers to remain or to be reinstalled.

3.2 INSTALLATION

A. Install enclosed circuit breakers plumb. Provide supports in accordance with Section 26 05 29.

B. Height: 5 feet to operating handle.

C. Locate and install engraved plastic nameplates in accordance with Section 26 05 53.

3.3 FIELD QUALITY CONTROL

A. Section [01 40 00 - Quality Requirements] [01 70 00 - Execution and Closeout Requirements]:Field inspecting, testing, adjusting, and balancing.

B. Perform inspections and tests listed in NETA ATS, Section 7.6.1.1.

3.4 ADJUSTING

A. Section 01 70 00 - Execution and Closeout Requirements: Testing, adjusting, and balancing.

B. Adjust trip settings to coordinate circuit breakers with other overcurrent protective devices in circuit.

C. Adjust trip settings to provide adequate protection from overcurrent and fault currents.

END OF SECTION

FOR REFERENCE: THIS SECTION WAS ISSUED FOR PHASE 1 AND PHASE 2

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 262826 - ENCLOSED TRANSFER SWITCHES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Transfer switches for low-voltage (600 V and less) applications and associated accessories:
   1. Automatic transfer switches.

1.2 RELATED REQUIREMENTS

A. Division 01 – General Requirements

B. Division 03 - Cast-in-Place Concrete: Concrete equipment pads.

C. Division 14 – Elevators: For interface with transfer switch.

D. Section 260400 - General Conditions for Electrical Trades.

E. Section 260526 - Grounding and Bonding for Electrical Systems.

F. Section 260529 - Hangers and Supports for Electrical Systems.

G. Section 260553 - Identification for Electrical Systems: Identification products and requirements.

H. Section 260573 – Overcurrent Protective Device Coordination Study: Additional criteria for the selection of equipment specified in this section.

I. Section 262819 - Enclosed Switches: Safety switches not listed for use as transfer switch equipment.

J. Section 263213 - Engine Generators: For interface with transfer switches.
   1. Includes code requirements applicable to work of this section.
   2. Includes additional testing requirements.
   3. Includes related demonstration and training requirements.

1.3 REFERENCE STANDARDS

A. NECA 1 - Standard for Good Workmanship in Electrical Construction.

B. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).

C. NEMA ICS 10 Part 1 - Industrial Control and Systems Part 1: Electromechanical AC Transfer Switch Equipment.

D. NETA ATS - Acceptance Testing Specifications for Electrical Power Equipment and Systems.

E. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

F. NFPA 99 - Health Care Facilities Code.

G. NFPA 110 - Standard for Emergency and Standby Power Systems.

H. UL 869A - Reference Standard for Service Equipment; Current Edition, Including All Revisions.

I. UL 1008 - Transfer Switch Equipment; Current Edition, Including All Revisions.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate compatibility of transfer switches to be installed with work provided under other sections or by others.
      a. Engine Generators: See Section 263213.
      b. Elevators.
   2. Coordinate the work with other trades to avoid placement of ductwork, piping, equipment, or other potential obstructions within the dedicated equipment spaces and working clearances required by NFPA 70.
   3. Coordinate arrangement of equipment with the dimensions and clearance requirements of the actual equipment to be installed.
   4. Coordinate the work with placement of supports, anchors, etc. required for mounting.

1.5 SUBMITTALS

A. See Division 01 - General Requirements.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for each product, including ratings, configurations, dimensions, finishes, weights, service condition requirements, and installed features.
   1. Where applicable, include characteristic trip curves for overcurrent protective devices upon request.

C. Shop Drawings: Include dimensioned plan views and sections indicating locations of system components, required clearances, and field connection locations. Include system interconnection schematic diagrams showing all factory and field connections.

D. Warranty: Submit sample of manufacturer's warranty.

E. Evidence of qualifications for installer.

F. Evidence of qualifications for maintenance contractor (if different entity from installer).

G. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, installation, and operation of product.

H. Manufacturer's certification that products meet or exceed specified requirements.

I. Source quality control test reports.

J. Manufacturer’s detailed field-testing procedures.

K. Field quality control test reports.

L. Operation and Maintenance Data: Include detailed information on system operation, equipment programming and setup, replacement parts, and recommended maintenance procedures and intervals.
   1. Include contact information for entity that will be providing contract maintenance and trouble call-back service.

M. Executed Warranty: Submit documentation of final executed warranty completed in Owner's name and registered with manufacturer.

N. Maintenance contracts.

O. Project Record Documents: Record actual locations of system components, installed circuiting arrangements and routing, and final equipment settings.

P. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
   1. See Division 01 - General Requirements.
   2. Bypass/Isolation Transfer Switches: Provide accessories (ramps, dollies, etc.) necessary for removal of draw-out components.

1.6 QUALITY ASSURANCE

A. Comply with the following:
   1. NFPA 70 (National Electrical Code).
   2. NFPA 110 (Standard for Emergency and Standby Power Systems); meet requirements for system Level specified in Section 263213.
   3. NFPA 110 (Standard for Emergency and Standby Power Systems); meet requirements for Level 2 system.

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.
   1. Authorized service facilities located within 50 miles of project site.

D. Installer Qualifications: Company specializing in performing the work of this section with minimum three years documented experience with power transfer systems of similar size, type, and complexity; manufacturer's authorized installer.

E. Maintenance Contractor Qualifications: Same entity as installer or different entity with specified qualifications.
   1. Contract maintenance office located within 100 miles of project site.

F. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store transfer switches in accordance with manufacturer's instructions.

B. Store in a clean, dry space. Maintain factory wrapping or provide an additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic.

C. Handle carefully in accordance with manufacturer's instructions to avoid damage to transfer switch components, enclosure, and finish.

1.8 FIELD CONDITIONS

A. Maintain field conditions within manufacturers required service conditions during and after installation.

1.9 WARRANTY

A. See Division 01 – General Requirements.

B. Provide minimum one-year manufacturer warranty covering repair or replacement due to defective materials or workmanship commencing from the Date of Substantial Completion.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Transfer Switches - Basis of Design: ASCO Power Technologies as described below.

B. Transfer Switches - Other Acceptable Manufacturers:
   1. ABB.
   2. ESL Power Systems (Manual Transfer Switches only)
   3. Russelectric.
   4. Same as manufacturer of engine generator(s) used for this project.

C. Substitutions: See Division 01 - General Requirements.

D. Products other than basis of design are subject to compliance with specified requirements and prior approval of Engineer. By using products other than basis of design, Contractor accepts responsibility for costs associated with any necessary modifications to related work, including any design fees.

E. Source Limitations: Furnish transfer switches and accessories produced by a single manufacturer and obtained from a single supplier.

2.2 TRANSFER SWITCHES

A. Provide complete power transfer system consisting of all required equipment, conduit, boxes, wiring, supports, accessories, system programming, etc. as necessary for a complete operating system that provides the functional intent indicated.

B. Provide products listed, classified, and labeled as suitable for the purpose intended.

C. Applications:
1. Utilize open transition transfer unless otherwise indicated or required.
2. For transfer of highly inductive loads (e.g. large motors and transformers), utilize open transition transfer with in-phase monitor or delayed transition transfer.
3. Neutral Switching (Single Phase, Three Wire and Three Phase, Four Wire Systems):
    a. Unless otherwise indicated or required, provide neutral switching:
        1) For systems with ground fault protection.
        2) Where the alternate/emergency source is a separately derived system.
4. Provide signal before transfer contacts for transfer switches serving elevators.

D. Construction Type: Either "contactor type" (open contact) or "breaker type" (enclosed contact) transfer switches complying with specified requirements are acceptable.

E. Automatic Transfer Switch:
1. Transfer Switch Type NEMA ICS 10, automatic transfer switch.
2. Transition Configuration: Open Transition. Electrically operated, mechanically held.
3. Voltage: As indicated on the drawings.
4. Ampere Rating: As indicated on the drawings.
5. Neutral Configuration4 pole switched neutral.
6. Load Served: As indicated on the drawings.
7. Primary Source: As indicated on the drawings.
8. Alternate Source: As indicated on the drawings.

F. Switching Methods:
   1. Open Transition:
      a. Provide break-before-make transfer without a neutral position that is not connected to either source, and with interlocks to prevent simultaneous connection of the load to both sources.
      b. Where in-phase transfer is indicated, utilize in-phase monitor to initiate transfer when phase angle difference between sources is near zero to limit in-rush currents.

G. Service Conditions: Provide transfer switches suitable for continuous operation at indicated ratings under the service conditions at the installed location.

H. Enclosures:
   1. Environment Type per NEMA 250: Unless otherwise indicated, as specified for the following installation locations:
      a. Indoor Clean, Dry Locations: Type 1 or Type 12.
      b. Outdoor Locations: Type 3R or Type 4.
   2. Provide lockable door(s) for outdoor locations.
   3. Finish: Manufacturer's standard unless otherwise indicated.

Short Circuit Current Rating:
   4. Withstand and Closing Rating: Provide transfer switches, when protected by the supply side overcurrent protective devices to be installed, with listed withstand and closing rating not less than the available fault current at the installed location as determined by short circuit study performed in accordance with Section 26 0573.
   5. Short Time Rating: Where the requirement for selectivity is indicated, provide transfer switches with short time ratings suitable for the maximum short time delay setting of the supply side overcurrent protective device.

I. Automatic Transfer Switches:
   1. Description: Transfer switches with automatically initiated transfer between sources; electrically operated and mechanically held.
   2. Control Functions:
      a. Automatic mode.
      b. Test Mode: Simulates failure of primary/normal source.
         1) Mount control in cover of enclosure to simulate failure of normal source.
      c. Voltage and Frequency Sensing:
         1) Undervoltage sensing for each phase of primary/normal source; adjustable dropout/pickup settings.
         2) Undervoltage sensing for alternate/emergency source; adjustable dropout/pickup settings.
         3) Underfrequency sensing for alternate/emergency source; adjustable dropout/pickup settings.

d. Outputs:
   1) Contacts for engine start/shutdown.
   2) Auxiliary contacts; one set of normally open/normally closed contacts) for each switch position.
   3) Signal before transfer (load disconnect) contacts; for selective load disconnection prior to transfer.

e. Adjustable Time Delays:
   1) Engine generator start time delay; delays engine start signal to override momentary primary/normal source failures.
   2) Transfer to alternate/emergency source time delay.
   3) Retransfer to primary/normal source time delay.
   4) Signal before transfer (load disconnect) contact time delay.
   5) Engine generator cooldown time delay; delays engine shutdown following retransfer to primary/normal source to permit generator to run unloaded for cooldown period.

f. In-Phase Monitor (Open Transition Transfer Switches): Monitors phase angle difference between sources for initiating in-phase transfer.

g. Synchronization/In-Phase Monitor (Closed Transition Transfer Switches): Monitors voltage and phase angle difference between sources for initiating synchronized transfer.

h. Engine Exerciser: Provides programmable scheduled exercising of engine generator selectable with or without transfer to load; provides memory retention during power outage.

i. Retransfer to Normal Switch: Bypasses time delays for retransfer to primary/normal source.

3. Status Indications – Enclosure cover mounted:
   a. Connected to alternate/emergency source.
   b. Connected to primary/normal source.
   c. Alternate/emergency source available.
   d. Primary/normal source available.

4. Alarm Indications for Closed Transition Transfer Switches:
   a. Failure to synchronize.
   b. Extended source interconnection/transfer switch locked out.

5. Other Features:
   a. Event log.
   b. Communications Capability: Compatible with system indicated. Provide all accessories necessary for proper interface.
   c. Remote monitoring capability via PC.

6. Automatic Sequence of Operations:
   a. Upon failure of primary/normal source for a programmable time period (engine generator start time delay), initiate starting of engine generator.
   b. Where applicable, initiate signal before transfer (load disconnect) contacts at programmable time before transfer.
   c. When alternate/emergency source is available, transfer load to alternate/emergency source after programmable time delay.
   d. When primary/normal source has been restored, retransfer to primary/normal source after a programmable time delay. Bypass time delay if alternate/emergency source fails and primary/normal source is available.

e. Where applicable, initiate shutdown of engine generator after programmable engine cooldown time delay.

f. Required emergency systems transfer switch and generator shall be configured in accordance with NFPA 70 to ensure emergency power is available within 10 seconds of failure of the normal supply. The Contractor shall coordinate starting and stabilization time with the generator supplier and set all time delays to ensure the required 10 second maximum time period is met.

J. Interface with Other Work:
1. Interface with engine generators as specified in Section 263213.
2. Interface with elevators as specified in Division 14.
   a. Utilize signal before transfer contacts to disconnect elevator(s) served prior to transfer.
3. Interface with building automation system as specified in Section 230923.

2.3 ENGINE START MONITORING SYSTEM

A. Provide an engine start monitoring system to monitor the engine start circuits from the transfer switches; start the generator; and signal an alarm condition to the building fire alarm system and generator remote annunciator.

B. Basis of design: ASCO 5101 engine start circuit monitor.

C. The system shall include the following:
1. ATS Engine start modules (one for each transfer switch). Din rail mounted, coordinate mounting in transfer switches with transfer switch manufacturers.
2. Generator start module, locate at generator.
3. 24 VDC power supply for generator start module (battery backed up or from generator batteries).
4. UL listed DPDT relay at generator start module for separate dry contact signaling of generator remote annunciator and fire alarm system.

D. Specifications:
1. DDC Power: Generator Module - 9-27V; ATS module (power from circuit).
2. Internal ride through: 3 seconds maximum.
3. Operating Temperature: -4 to 158º F.
4. Maximum wiring distance: 1,000 ft. one way.
5. Maximum wire loop resistance: <100 ohms.
6. Generator start contacts: 1A @ 30 VDC (Form C).
7. Generator alarm contacts: 1A @ 30 VDC (Form C).

2.4 SOURCE QUALITY CONTROL

A. See Division 01 - General Requirements.

B. Perform production tests on transfer switches at factory to verify operation and performance characteristics prior to shipment. Include certified test report with submittals.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as shown on the drawings.

B. Verify that the ratings and configurations of transfer switches are consistent with the indicated requirements.

C. Verify that rough-ins for field connections are in the proper locations.

D. Verify that mounting surfaces are ready to receive transfer switches.

E. Verify that conditions are satisfactory for installation prior to starting work.

3.2 INSTALLATION

A. Perform work in accordance with NECA 1 (general workmanship).

B. Install products in accordance with manufacturer's instructions.

C. Arrange equipment to provide minimum clearances and required maintenance access.

D. Provide required support and attachment in accordance with Section 260529.

E. Install transfer switches plumb and level.

F. Unless otherwise indicated, mount floor-mounted transfer switches on properly sized 3 inch high concrete pad constructed in accordance with Division 03.

G. Provide grounding and bonding in accordance with Section 260526.

H. Install engraved plastic nameplates in accordance with Section 260553 and the following:
   1. For Emergency Sources: A sign shall be placed at the service-entrance equipment, at the meter location, and on any equipment up to the service entrance-equipment indicating type and location of on-site emergency power sources.
   2. For Mandated Standby Sources: A sign shall be placed at the service entrance, at the meter location, and on any equipment up to the service entrance-equipment indicating type and location of on-site legally required standby power sources.
   3. For Standby Sources: A sign shall be placed at the service-entrance equipment, at the meter location, and on any equipment up to the service-entrance equipment, that indicates the type and location of on-site optional standby power sources.

3.3 FIELD QUALITY CONTROL

A. See Division 01 – General Requirements.

B. Provide services of a manufacturer's authorized representative to observe installation and assist in inspection and testing. Include manufacturer's detailed testing procedures and field reports with submittals.

C. Prepare and start system in accordance with manufacturer's instructions.

D. Automatic Transfer Switches:
   1. Inspect and test in accordance with NETA ATS, except Section 4.
   2. Perform inspections and tests listed in NETA ATS, Section 7.22.3. The control wiring insulation-resistance tests listed as optional are not required.
      a. Disconnect surge protective devices (SPDs) prior to performing any high potential testing. Replace SPDs damaged by performing high potential testing with SPDs connected.

E. Provide additional inspection and testing as required for completion of associated engine generator testing as specified in Section 263213.

F. Test the following for the Engine Start Monitoring System:
   1. Generator module receiving 24 VDC power.
   2. Signals from all ATS modules to the Generator module.
   3. Alarm signals to external devices.
   4. Engine start signal to generator.
   5. DIP switch settings.
   6. LED status signals.

G. Adjust control and sensing devices to achieve specified sequence of operation.

H. Correct defective work, adjust for proper operation, and retest until entire system complies with contract documents.

I. Submit detailed reports indicating inspection and testing results and corrective actions taken.

3.4 CLEANING

A. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

3.5 CLOSEOUT ACTIVITIES

A. See Division 01 – General Requirements.

B. Demonstration: Demonstrate proper operation of transfer switches to Owner, and correct deficiencies or make adjustments as directed.

C. Training: Train Owner's personnel on operation, adjustment, and maintenance of transfer switches.
   1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
   2. Provide minimum of four hours of training.
   3. Instructor: Manufacturer's authorized representative.
   4. Location: At project site.

D. Coordinate with related generator demonstration and training as specified in Section 263213.

3.6 PROTECTION

A. Protect installed transfer switches from subsequent construction operations.

3.7 MAINTENANCE

A. See Division 01 – General Requirements.

B. Provide to Owner a proposal as an alternate to the base bid, a separate maintenance contract for the service and maintenance of transfer switches for two years from date of Substantial Completion; Include a complete description of preventive maintenance, systematic examination, adjustment, inspection, and testing, with a detailed schedule.

C. Conduct site visit at least once every three months to perform inspection, testing, and preventive maintenance. Submit report to Owner indicating maintenance performed along with evaluations and recommendations.

D. Provide trouble call-back service upon notification by Owner:
   1. Provide on-site response within 4 hours of notification.
   2. Include allowance for call-back service during normal working hours at no extra cost to Owner.
   3. Owner will pay for call-back service outside of normal working hours on an hourly basis, based on actual time spent at site and not including travel time; include hourly rate and definition of normal working hours in maintenance contract.

E. Maintain an on-site log listing the date and time of each inspection and call-back visit, the condition of the system, nature of the trouble, correction performed, and parts replaced.

END OF SECTION

FOR REFERENCE: THIS SECTION WAS ISSUED FOR PHASE 1 AND PHASE 2

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 263213 - ENGINE GENERATORS

PART 1 GENERAL

1.1 SUMMARY

A. Packaged engine generator system and associated components and accessories:
   1. Engine and engine accessory equipment.
   2. Alternator (generator).
   3. Generator set control system.
   4. Generator set enclosure.
   5. The generator system shall be natural gas fired.

B. Required emergency systems transfer switch and generator shall be configured in accordance with NFPA 70 to ensure emergency power is available within 10 seconds of failure of the normal supply. The contractor shall coordinate transfer switch time delays with the enclosed transfer switch supplier based on generator starting and stabilization time to ensure the required 10 second maximum time period is met.

C. Related Sections:
   1. Division 03 – Concrete
   2. Section 220548 - Vibration and Seismic Controls for Plumbing Piping and Equipment.
   3. Section 221123 - Fuel Gas Piping: Product and execution requirements for gas piping, regulator and meter service to the generator.
   4. Section 230700 - HVAC Insulation.
   5. Section 232123 - Hydronic Pumps.
   6. Section 232416 - Internal-Combustion Engine Exhaust Piping.
   7. Section 233100 - HVAC Ducts and Casings.
   8. Section 260526 - Grounding and Bonding for Electrical Systems.
   9. Section 260529 – Hangers and Supports for Electrical Systems.
   10. Section 260553 - Identification for Electrical Systems.
   11. Section 262826 - Enclosed Transfer Switches.
   12. Division 33 - Utilities

1.2 REFERENCES

A. NECA 1 - Standard for Good Workmanship in Electrical Construction.

B. NECA/EGSA 404 - Standard for Installing Generator Sets.

C. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).

F. NEMA MG 1 - Motors and Generators.

G. NETA ATS - Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems.

H. NFPA 30 - Flammable and Combustible Liquids Code.

I. NFPA 37 - Standard for the Installation and Use of Stationary Combustion Engines and Gas Turbines

J. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements

K. NFPA 99 - Standard for Health Care Facilities.

L. NFPA 110 - Standard for Emergency and Standby Power Systems.

M. UL 142 - Steel Aboveground Tanks for Flammable and Combustible Liquids; Current Edition, Including All Revisions.

N. UL 1236 - Battery Chargers for Charging Engine-Starter Batteries; Current Edition, Including All Revisions.

O. UL 2085 - Protected Aboveground Tanks for Flammable and Combustible Liquids; Current Edition, Including All Revisions.

P. UL 2200 - Stationary Engine Generator Assemblies; Current Edition, Including All Revisions.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate compatibility of generator sets to be installed with work provided under other sections or by others.
      a. Transfer Switches: See Section 262826.
      b. Switchboards: See Section 262413.
   2. Coordinate the work with other trades to avoid placement of ductwork, piping, equipment or other potential obstructions within the spaces dedicated for engine generator system.
   3. Coordinate arrangement of equipment with the dimensions and clearance requirements of the actual equipment to be installed.
   4. Coordinate the work to provide electrical circuits suitable for the power requirements of the actual auxiliary equipment and accessories to be installed.
   5. Notify Architect of any conflicts with or deviations from the contract documents. Obtain direction before proceeding with work.

B. Pre-installation Meeting: Convene two weeks before starting work of this section; require attendance of all affected installers.

1.4 SUBMITTALS

A. Division 01 – General Requirements.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for each product, including ratings, configurations, dimensions, finishes, weights, service condition requirements, and installed features. Include alternator starting capabilities, engine fuel consumption rates, and cooling, combustion air, and exhaust requirements.
1. Include generator set sound level test data.
2. Include characteristic trip curves for overcurrent protective devices.
3. Include alternator thermal damage curve.

C. Shop Drawings: Include dimensioned plan views and sections indicating locations of system components, required clearances, and field connection locations. Include system interconnection schematic diagrams showing all factory and field connections.

D. Derating Calculations: Indicate ratings adjusted for applicable service conditions.

E. Specimen Warranty: Submit sample of manufacturer's warranty.

F. Evidence of qualifications for installer.

G. Evidence of qualifications for maintenance contractor (if different entity from installer).

H. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, installation, and operation of product.

I. Manufacturer's factory emissions certification.

J. Manufacturer's certification that products meet or exceed specified requirements.

K. Source quality control test reports.

L. Provide NFPA 110 required documentation from manufacturer where requested by authorities having jurisdiction, including but not limited to:
1. Certified prototype tests.
2. Torsional vibration compatibility certification.
3. NFPA 110 compliance certification.
4. Certified rated load test at rated power factor.

M. Manufacturer’s detailed field testing procedures.

N. Field quality control test reports.

O. Operation and Maintenance Data: Include detailed information on system operation, equipment programming and setup, replacement parts, and recommended maintenance procedures and intervals.

1. Include contact information for entity that will be providing contract maintenance and trouble call-back service.

P. Executed Warranty: Submit documentation of final executed warranty completed in Owner's name and registered with manufacturer.

Q. Sample maintenance contract, submitted to owner for review and approval.

R. Project Record Documents: Record actual locations of system components, installed circuiting arrangements and routing, and final equipment settings.

S. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
1. Division 01 – General Requirements.
2. Extra Fuses: One of each type and size.
3. Extra Filter Elements: One of each type, including oil and air.
4. Furnish one set of tools required for preventative maintenance of engine generator system. Package tools in adequately sized metal tool box.

1.5 QUALITY ASSURANCE

A. Comply with the following:
1. NFPA 70 (National Electrical Code).
2. NFPA 110 (Standard for Emergency and Standby Power Systems); meet requirements for Level 1 system.
3. NFPA 99 (Health Care Facilities Code).
4. NFPA 37 (Standard for the Installation and Use of Stationary Combustion Engines and Gas Turbines).
5. NFPA 30 (Flammable and Combustible Liquids Code).

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.
1. Authorized service facilities located within 100 miles of project site.

D. Installer Qualifications: Company specializing in performing the work of this section with minimum three years documented experience with engine generator systems of similar size, type, and complexity; manufacturer's authorized installer.

E. Maintenance Contractor Qualifications: Same entity as installer or different entity with specified qualifications.
1. Contract maintenance office located within 100 miles of project site.

F. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.6 DELIVERY, STORAGE AND HANDLING

A. Receive, inspect, handle, and store generator sets in accordance with manufacturer's instructions and NECA/EGSA 404.

B. Store in a clean, dry space. Maintain factory wrapping or provide an additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic.

C. Handle carefully in accordance with manufacturer's instructions to avoid damage to generator set components, enclosure, and finish.

1.7 WARRANTY

A. Division 01 – General Requirements

B. Furnish service and maintenance of engine generator and transfer switch for one year from Date of Substantial Completion.

C. For products noted in this section, provide manufacturer’s standard warranty, minimum of one year.

1.8 MAINTENANCE SERVICE

A. Division 01 – General Requirements

B. Provide to Owner a proposal for a separate maintenance contract for the service and maintenance of engine generator system for one year from date of Substantial Completion; Include a complete description of preventive maintenance, systematic examination, adjustment, inspection, and testing, with a detailed schedule.

C. Conduct site visit at least once every three months to perform inspection, testing, and preventive maintenance. Submit report to Owner indicating maintenance performed along with evaluations and recommendations.

D. Provide trouble call-back service upon notification by Owner:
1. Provide on-site response within 4 hours of notification.
2. Include allowance for call-back service during normal working hours at no extra cost to Owner.
3. Owner will pay for call-back service outside of normal working hours on an hourly basis, based on actual time spent at site and not including travel time; include hourly rate and definition of normal working hours in maintenance contract.

E. Maintain an on-site log listing the date and time of each inspection and call-back visit, the condition of the system, nature of the trouble, correction performed, and parts replaced.

PART 2 PRODUCTS

2.1 SERVICE CONDITIONS

A. Provide engine generator system and associated components suitable for operation under the service conditions at the installed location, including but not limited to:
   1. Altitude
   2. Ambient Temperature
   3. Available Natural Gas Pressure

2.2 MANUFACTURERS

A. Packaged Engine Generator Set:
   1. Kohler Co
   2. Cummins Power Generation Inc
   3. Generac Power Systems
   4. Substitutions: Division 01 – General Requirements

B. Products other than basis of design are subject to compliance with specified requirements and prior approval of Engineer. By using products other than basis of design, Contractor accepts responsibility for costs associated with any necessary modifications to related work, including any design fees.

C. Source Limitations: Furnish engine generator sets and associated components and accessories produced by a single manufacturer and obtained from a single supplier.

2.3 PACKAGED ENGINE GENERATOR SYSTEM

A. Provide new engine generator system consisting of all required equipment, sensors, conduit, boxes, wiring, piping, supports, accessories, system programming, etc. as necessary for a complete operating system that provides the functional intent indicated.

B. Provide products listed, classified, and labeled as suitable for the purpose intended.

C. System Description:
   1. Application: Emergency, Legally Required Standby (Fire Pump) and Optional Standby.
   2. Configuration: Single packaged engine generator set operated independently.

D. Packaged Engine Generator Set:
   1. Type: Natural Gas Fired
   2. Power Rating: 250 kW / 312.50 kVA.
   3. Voltage: 480/277 volt 3 phase 4 wire configured as a separately derived system.
   4. Line Side Circuit Breaker(s):
      a. Type: Solid State.
      b. Trip Rating: As indicated on drawings for Life Safety, Fire Pump and Optional Standby branches.
         1) For 480/277V, 3PH System, circuit breakers rated 1000A or greater:

a) Provide LSI type circuit breaker fir Life Safety and Fire Pump branches.
b) Provide LSIG for the Optional Standby branch.

c. Features:
1) All circuit breakers shall incorporate shunt trip.
2) Auxiliary contacts.
3) 100% Rated

d. Refer to sizes indicated on drawings.

E. Generator Set General Requirements:
1. Prototype tested in accordance with NFPA 110 for Level 1 systems.
2. Factory-assembled, with components mounted on suitable base.
3. List and label engine generator assembly as complying with UL 2200.
4. Power Factor: Unless otherwise indicated, specified power ratings are at 0.8 power factor for three phase voltages and 1.0 power factor for single phase voltages.
5. Provide suitable guards to protect personnel from accidental contact with rotating parts, hot piping, and other potential sources of injury.
6. Main Line Circuit Breakers: Provide factory-installed line side connections with suitable lugs for load side connections.

F. Starting and Load Acceptance Requirements:
1. Cranking Method: Cycle cranking complying with NFPA 110 (15 second crank period, followed by 15 second rest period, with cranking limiter time-out after 3 cycles), unless otherwise required.
2. Cranking Limiter Time-Out: If generator set fails to start after specified cranking period, indicate overcrank alarm condition and lock-out generator set from further cranking until manually reset.
3. Start Time: Capable of starting and achieving conditions necessary for load acceptance within 10 seconds (NFPA 110, Type 10).
4. Maximum Load Step: Supports 100 percent of rated load in one step.
a. Maximum Voltage Deviation with Load Step: 15% percent.
b. Maximum Frequency Deviation with Load Step: 15% percent.
5. Motor Starting Capability: Supports starting of motor load indicated with a maximum voltage dip of 15% percent.

G. Exhaust Emissions Requirements:
1. Comply with federal (EPA), state, and local regulations applicable at the time of commissioning; include factory emissions certification with submittals.
2. Do not make modifications affecting generator set factory emissions certification without approval of manufacturer and Engineer. Where such modifications are made, provide field emissions testing as necessary for certification.

H. Sound Level Requirements:
1. Comply with applicable noise level regulations.
2. Do not exceed 75 dBA at a distance of 3 Meters from the unit.
3. Sound attenuation shall strive to limit sound levels at the property line to satisfy zoning regulations of 55 dbA for a residential abutter.

I. Interface with building automation system as specified in Section 230993.

J. Mounting: Furnish unit with suitable spring-type vibration isolators and mount on structural steel base.

2.4 ENGINE AND ENGINE ACCESSORY EQUIPMENT

A. Provide engine with adequate horsepower to achieve specified power output at rated speed, accounting for alternator efficiency and parasitic loads.

B. Engine Fuel System - Gaseous (Spark Ignition):
   1. Fuel Source: Natural gas.
      a. Provide with self- adjusting fuel regulator based on manufacturer's full load operating pressure of 7" to 11" H2O.
   2. Engine Fuel Connections: Provide suitable, approved flexible fuel lines for coupling engine to fuel source.
   3. Provide components/features indicated and as necessary for operation and/or required by applicable codes, including but not limited to:
      a. Carburetor.
      b. Gas pressure regulators.
      c. Fuel shutoff control valves.
      d. Low gas pressure switches.

C. Engine Starting System:
   1. System Type: Electric, with DC solenoid-activated starting motor(s).
   2. Battery(s):
      a. Battery Type: Lead-acid.
      b. Battery Capacity: Size according to manufacturer's recommendations for achieving starting and load acceptance requirements under worst case ambient temperature; capable of providing cranking through two complete periods of cranking limiter time-outs without recharging.
      c. Provide battery rack, cables, and connectors suitable for the supplied battery(s); size battery cables according to manufacturer's recommendations for cable length to be installed.
   3. Battery-Charging Alternator: Engine-driven, with integral solid-state voltage regulation.
   4. Battery Charger:
      a. Provide dual rate battery charger with automatic float and equalize charging modes and minimum rating of 10 amps; suitable for maintaining the supplied battery(s) at full charge without manual intervention.
      b. Capable of returning supplied battery(s) from fully discharged to fully charged condition within 24 hours, as required by NFPA 110 for Level 1 applications while carrying normal loads.
      c. Recognized as complying with UL 1236.
      d. Furnished with integral overcurrent protection; current limited to protect charger during engine cranking; reverse polarity protection.
      e. Provide integral DC output ammeter and voltmeter with five percent accuracy.

f. Provide alarm output contacts as necessary for alarm indications.

5. Battery Heater: Provide thermostatically controlled battery heater to improve starting under cold ambient conditions.

D. Engine Speed Control System (Governor):
1. Single Engine Generator Sets (Not Operated in Parallel): Provide electronic isochronous governor for controlling engine speed/alternator frequency.
2. Multiple Engine Generator Sets Operated in Parallel: Provide electronic isochronous governors with automatic load sharing controls.
3. Generator Sets Used with Closed Transition Transfer Switches: Provide electronic isochronous governor with frequency regulation suitable for transfer.
4. Frequency Regulation, Electronic Isochronous Governors: No change in frequency from no load to full load; plus/minus 0.25 percent at steady state.

E. Engine Lubrication System:
1. System Type: Full pressure, with engine-driven, positive displacement lubrication oil pump, replaceable full-flow oil filter(s), and dip-stick for oil level indication. Provide oil cooler where recommended by manufacturer.
2. Oil Heater: Provide thermostatically controlled oil heater to improve starting under cold ambient conditions.

F. Engine Cooling System:
1. System Type: Closed-loop, liquid-cooled, with unit-mounted radiator/fan and engine-driven coolant pump; suitable for providing adequate cooling while operating at full load under worst case ambient temperature.
2. Fan Guard: Provide suitable guard to protect personnel from accidental contact with fan.
3. Ducted Radiators: Where ducted radiator air discharge is to be field-installed, provide suitable radiator duct flange/adapter.
4. Coolant Heater: Provide thermostatically controlled coolant heater to improve starting under cold ambient conditions; size according to manufacturer's recommendations for achieving starting and load acceptance requirements under worst case ambient temperature.

G. Engine Air Intake and Exhaust System:
1. Air Intake Filtration: Provide engine-mounted, replaceable, dry element filter.
2. Engine Exhaust Connection: Provide suitable, approved flexible connector for coupling engine to exhaust system.
3. Exhaust Silencer: Provide critical grade or better exhaust silencer with sound attenuation not less than basis of design; select according to manufacturer's recommendations to meet sound performance requirements.

H. Exhaust Silencer: Critical type silencer, with muffler companion flanges and flexible stainless steel exhaust fitting, sized in accordance with engine manufacturer's instructions.

I. Batteries: Heavy duty starting type lead-acid storage batteries. Match battery voltage to starting system. Furnish cables and clamps.

J. Battery Tray: Treated for electrolyte resistance, constructed to contain spillage.

K. Battery Charger: Current limiting type designed to float at 2.17 volts for each cell and equalize at 2.33 volts for each cell. Furnish overload protection, full wave rectifier, DC voltmeter and ammeter, and 120 volts AC fused input. Furnish wall mounted enclosure to meet NEMA 250, Type 1 requirements.

L. Load Bank: Complete load bank for placing resistive load on generator. 480 volts 3 phase 100 KW Complete with transfer switches, disconnect, ventilation fans and enclosure.

M. Generator mounted single point power feed load center for providing power to unit mounted loads for supporting battery charging, block heater, enclosure heater, alternator heater as specified within this section.

2.5 ALTERNATOR (GENERATOR)

A. Alternator: 4-pole, 1800 rpm (60 Hz output) revolving field, synchronous generator complying with NEMA MG 1; connected to engine with flexible coupling; voltage output configuration as indicated, with re-connectable leads for 3 phase alternators.

B. Exciter:
1. Exciter Type: Brushless; provide permanent magnet generator (PMG) excitation system; self-excited (shunt) systems are not permitted.
2. PMG Excitation Short-Circuit Current Support: Capable of sustaining 300% of rated output current for 10 seconds.
3. Voltage Regulation (with PMG excitation): Plus/minus 0.5 percent for any constant load from no load to full load.
4. Voltage Regulation (with shunt or PMG excitation): Plus/minus two percent for any constant load from no load to full load.
5. Alternator must be suitably rated for starting a 25 horsepower fire pump across the line while maintaining less than a 15% voltage dip. Manufacturer shall supply an alternator selection that can meet the above performance criteria.

C. Temperature Rise: Comply with UL 2200.

D. Insulation System: NEMA MG 1, Class H; suitable for alternator temperature rise.

E. Enclosure: NEMA MG 1, drip-proof.

F. Total Harmonic Distortion: Not greater than five percent.

G. Alternator Heater: Provide strip heater to prevent moisture condensation on alternator windings.

H. Voltage Regulation: Furnish generator mounted volts per hertz exciter-regulator to match engine and generator characteristics, with voltage regulation plus or minus 1 percent from no load to full load. Furnish manual controls to adjust voltage droop, voltage level (plus or minus 5 percent) and voltage gain.

I. Product Description: NEMA MG1, reconnectable brushless synchronous generator with brushless exciter.

J. Insulation Class: F.

K. Temperature Rise: 130 degrees C Standby.

L. Enclosure: NEMA MG1, open drip proof.

2.6 GENERATOR SET CONTROL SYSTEM

A. Provide microprocessor-based control system for automatic control, monitoring, and protection of generator set. Include sensors, wiring, and connections necessary for functions/indications specified.

B. Control Panel:
   1. Control Panel Mounting: Unit-mounted unless otherwise indicated; vibration isolated.
   2. Generator Set Control Functions:
      a. Automatic Mode: Initiates generator set start/shutdown upon receiving corresponding signal from remote device (e.g. automatic transfer switch).
      b. Manual Mode: Initiates generator set start/shutdown upon direction from operator.
      c. Reset Mode: Clears all faults, allowing generator set restart after a shutdown.
      d. Emergency Stop: Immediately shuts down generator set (without time delay) and prevents automatic restarting until manually reset.
      e. Cycle Cranking: Programmable crank time, rest time, and number of cycles.
      f. Time Delay: Programmable for shutdown (engine cooldown) and start (engine warmup).
      g. Voltage Adjustment: Adjustable through range of plus/minus 5 percent.
   3. Generator Set Status Indications:
      a. Voltage (Volts AC): Line-to-line, line-to-neutral for each phase.
      b. Current (Amps): For each phase.
      c. Frequency (Hz).
      d. Real power (W/kW).
      e. Reactive power (VAR/kVAR).
      f. Apparent power (VA/kVA).
      g. Power factor.
      h. Duty Level: Actual load as percentage of rated power.
      i. Engine speed (RPM).
      j. Battery voltage (Volts DC).
      k. Engine oil pressure.
      l. Engine coolant temperature.
      m. Engine run time.
      n. Generator powering load (position signal from transfer switch).
   4. Generator alarm indicators and gauges:
      a. Frequency Meter: 45-65 Hz. range, 3.5 inch dial.

b. AC Output Voltmeter: 3.5 inch dial, 2 percent accuracy, with phase selector switch.
c. AC Output Ammeter: 3.5 inch dial, 2 percent accuracy, with phase selector switch.
d. Engine running time meter.
e. Oil pressure gauge.
f. Water temperature gauge.
g. Push-to-test indicator lamps, one each for:
1) Low oil pressure.
2) Low water temperature.
3) Overspeed.
4) Overcrank.
5) High engine temperature.
6) High engine temperature pre-alarm.
7) Low coolant level.
8) EPS supplying load.
9) Control switch not in automatic position.
10) High battery voltage.
11) Low battery voltage.
12) Low cranking voltage.
13) Battery charger AC failure.
14) Lamp test.
15) Low starting air pressure.
16) Low starting hydraulic pressure.
17) Air shut-down damper (when used).

5. Additional features:
a. Engine start/stop selector switch.
b. Auxiliary Relay: 3PDT, operates when engine runs, with contact terminals prewired to terminal strip.
c. Additional visual indicators and alarms in accordance with by NFPA 110.
d. Remote Alarm Contacts: Factory wire DPDT contacts to terminal strip for remote alarm functions in accordance with NFPA 110.

C. Remote Annunciator Panel: Flush mounted panel with brushed stainless steel. Furnish alarm horn, and indicators and alarms as follows:
1. Low oil pressure.
2. Low water temperature.
3. Overspeed.
4. Overcrank.
5. High engine temperature.
6. High engine temperature pre-alarm.
7. Low coolant level.
8. Control switch not in automatic position.
9. Low cranking voltage.
10. Air shut-down damper (when used).
11. System ready.
12. Line power available.
13. Generator power available.

14. Lamp test and horn silence switch.

D. Remote Emergency Stop: Provide approved red, mushroom style remote emergency stop button where indicated or required by authorities having jurisdiction.

2.7 GENERATOR SET ENCLOSURE

A. Enclosure Type: Sound attenuating Level 2 and weather protective.

B. Enclosure Material: Steel or aluminum.

C. Hardware Material: Stainless steel.

D. Color: Manufacturer's standard.

E. Access Doors: Lockable, with all locks keyed alike.

F. Openings: Designed to prevent bird/rodent entry.

G. External Drains: Extend oil and coolant drain lines to exterior of enclosure for maintenance service.

H. Sound Attenuating Enclosures: Line enclosure with non-hydroscopic, self-extinguishing sound-attenuating material.

I. Utilize an upward discharging radiator hood to enhance sound attenuation.

J. Exhaust Silencers: Where exhaust silencers are mounted within enclosure in main engine compartment, insulate silencer to minimize heat dissipation as necessary for operation at rated load under worst case ambient temperature.

K. Enclosure Space Heater: Provide thermostatically controlled enclosure space heater to prevent condensation and improve starting under cold ambient conditions; size according to manufacturer's recommendations for achieving starting and load acceptance requirements under worst case ambient temperature.

L. Extreme Duty Sound Attenuating Protective Enclosure: Reinforced steel housing allowing access to control panel and service points, with lockable doors and panels. Furnish with fixed louvers, battery rack, silencer, stainless steel hardware, and emergency power off button. The enclosure shall be Level II, extreme duty. The generator enclosure shall attenuate sound to 68 to 70 d(B)A at a distance of 27 feet from the assembly.

M. Enclosure shall be wind rated to 120 mph.

2.8 SOURCE QUALITY CONTROL

A. Division 01 – General Requirements.

B. Perform production tests on generator sets at factory to verify operation and performance characteristics prior to shipment. Include certified test report with submittals.

C. Generator Set production testing to include, at a minimum:
   1. Operation at rated load and rated power factor.
   2. Single step load pick-up.
   3. Transient and steady state voltage and frequency performance.
   4. Operation of safety shutdowns.

D. Provide shop inspection and testing of completed assembly.

E. Make completed engine-generator assembly available for inspection at manufacturer's factory prior to packaging for shipment. Notify Architect/Engineer at least seven days before inspection is allowed.

F. Allow witnessing of factory inspections and tests at manufacturer's test facility. Notify Architect/Engineer at least seven days before inspections and tests are scheduled.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that the ratings and configurations of generator sets and auxiliary equipment are consistent with the indicated requirements.

B. Verify that rough-ins for field connections are in the proper locations.

C. Verify that mounting surfaces are ready to receive equipment.

D. Verify that conditions are satisfactory for installation prior to starting work.

3.2 INSTALLATION

A. Perform work in accordance with NECA 1 (general workmanship).

B. Install products in accordance with manufacturer's instructions.

C. Install generator sets and associated accessories in accordance with NECA/EGSA 404.

D. Arrange equipment to provide minimum clearances and required maintenance access.

E. Unless otherwise indicated, mount generator set on properly sized concrete pad, minimum of 6 inches above grade, constructed in accordance with Division 03. Provide suitable vibration isolators, where not factory installed.

F. Provide required support and attachment in accordance with Section 260529.

G. Use manufacturer's recommended oil and coolant, suitable for the worst case ambient temperatures.

H. Provide grounding and bonding in accordance with Section 260526.

I. Provide natural gas piping in accordance with Division 23.

J. Identify system wiring and components in accordance with Section 260553.

K. Install engraved plastic nameplates in accordance with Section 260553
   1. For Emergency Sources: A sign shall be placed at the service-entrance equipment, at the meter location, and on any equipment up to the service entrance-equipment indicating type and location of on-site emergency power sources.
   2. For Mandated Standby Sources: A sign shall be placed at the service entrance, at the meter location, and on any equipment up to the service entrance-equipment indicating type and location of on-site legally required standby power sources.
   3. For Standby Sources: A sign shall be placed at the service-entrance equipment, at the meter location, and on any equipment up to the service-entrance equipment that indicates the type and location of on-site optional standby power sources.

L. Ground and bond generator and other electrical system components in accordance with Section 260526.

3.3 FIELD QUALITY CONTROL

A. Division 01 – General Requirements.

B. Provide services of a manufacturer's authorized representative to prepare and start systems and perform inspection and testing. Include manufacturer's detailed testing procedures and field reports with submittals.

C. Notify Owner and Architect at least two weeks prior to scheduled inspections and tests.

D. Notify authorities having jurisdiction and comply with their requirements for scheduling inspections and tests and for observation by their personnel.

E. Provide all equipment, tools, and supplies required to accomplish inspection and testing.

F. Preliminary inspection and testing to include, at a minimum:
   1. Inspect each system component for damage and defects.
   2. Verify tightness of mechanical and electrical connections are according to manufacturer's recommended torque settings.
   3. Check for proper oil and coolant levels.

G. Prepare and start system in accordance with manufacturer's instructions.

H. Perform acceptance test in accordance with NFPA 110, Paragraph 7.13: Installation Acceptance.
   1. Inspection and testing to include, at a minimum:
      a. Verify compliance with starting and load acceptance requirements.
      b. Verify voltage and frequency; make required adjustments as necessary.
      c. Verify phase sequence.
      d. Verify control system operation, including safety shutdowns.
      e. Verify operation of auxiliary equipment and accessories (e.g. battery charger, heaters, etc.).

f. Perform load tests in accordance with NFPA 110 (1.5 hour building load test followed by 2 hour full load test). Contractor shall provide load bank to simulate building load as required.

I. Provide field emissions testing where necessary for certification.

J. Sound Level Tests: Measure sound levels for compliance with specified requirements. Identify and report ambient noise conditions.

K. Correct defective work, adjust for proper operation, and retest until entire system complies with contract documents.

L. Submit detailed reports indicating inspection and testing results and corrective actions taken.

M. Perform inspections and tests listed in NETA ATS, Section 7.22.

N. Above testing shall be documented in writing and furnished as a part of the O&M manuals, and provided to engineer prior to closeout.

3.4 ADJUSTING

A. Division 01 – General Requirements.

B. Adjust generator output voltage and engine speed to meet specified ratings.

3.5 CLEANING

A. Division 01 – General Requirements.

B. Clean engine and generator surfaces. Replace oil and air filters with new.

C. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

3.6 CLOSEOUT ACTIVITIES

A. Division 01 – General Requirements

B. Demonstration: Demonstrate proper operation of system to Owner, and correct deficiencies or make adjustments as directed.

C. Training: Train Owner's personnel on operation, adjustment, and maintenance of system.
1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
2. Provide minimum of four hours of training.
3. Instructor: Manufacturer's authorized representative.
4. Location: At project site.
5. Describe loads connected to emergency and standby system and restrictions for future load additions.

6. Simulate power outage by interrupting normal source, and demonstrate system operates to provide emergency and standby power.

D. After successful acceptance test and just prior to Substantial Completion, replace air and oil filters prior to turnover.

3.7 PROTECTION

A. Protect installed engine generator system from subsequent construction operations.

END OF SECTION

FOR REFERENCE: THIS SECTION WAS ISSUED FOR PHASE 1 AND PHASE 2

SECTION 26 4113 - LIGHTNING PROTECTION FOR STRUCTURES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Strike (air) terminals and interconnecting conductors.

B. Grounding and bonding for lightning protection.

C. Description: Conductor system protecting the entire building and having a UL Master Label.

1.2 RELATED REQUIREMENTS

A. Division 01 – General Requirements

B. Section 260400 – General Conditions for Electrical Trades

C. Section 260526 - Grounding and Bonding for Electrical Systems: Electrical system grounds.

D. Surge Protection for Wiring Systems: Specified in individual system requirements.

1.3 REFERENCE STANDARDS

A. NFPA 780 - Standard for the Installation of Lightning Protection Systems;

B. UL 96 - Lightning Protection Components; Current Edition, Including All Revisions.

C. UL 96A - Installation Requirements for Lightning Protection Systems.

D. Perform Work in accordance with UL 96A and furnish Master Label.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination with Concrete Work: Coordinate the embedding of lightning protection components in concrete.

B. Coordination with Roofing Installation:
   1. Ensure adequate attachment of strike terminals and conductors without damage to roofing.
   2. Sealing and flashing of all lightning protection roof penetrations with roofing contractor.

C. Coordinate with all trades to ensure a correct, neat and unobtrusive installation.

D. Pre-installation Meeting: Convene a meeting at least two weeks prior to commencement of any work affected by lightning protection system requirements to discuss prerequisites

and coordination required by other installers; require attendance by representatives of installers whose work will be affected.

1.5 SUBMITTALS

A. See Division 01 – General Requirements.

B. Shop Drawings: Indicate location and layout of air terminals, grounding electrodes, and bonding connections to structure and other metal objects. Include terminal, electrode, and conductor sizes, and connection and termination details.
   1. Where conductors or grounds are to be embedded or concealed in other construction, submit shop drawings at least 30 days prior to start of construction.
   2. If concrete-encased grounds are to be used and are not shown in the contract documents, provide sufficient data to determine concrete encasement dimensions and location.
   3. Include data on actual ground resistance determined by field measurement in accordance with NFPA 780.
   4. Include engineering analysis of equalization of potential to metal bodies within the structure.
   5. Include access panels, test holes, and disconnecting means for maintenance.

C. Product Data: Provide dimensions and materials of each component, indication of testing agency listing, and installation instructions.

D. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

E. Installation Certification: Submit copy of the UL Master Label.

F. Operation and Maintenance Data: Provide recommended inspection and testing plan, including recommended intervals, to achieve periodic maintenance as recommended in NFPA 780; provide customized plan reflecting actual installation configuration with specific installed components identified.

G. Project Record Documents: Record actual locations of air terminals, grounding electrodes, bonding connections, and routing of system conductors in project record documents.

1.6 QUALITY ASSURANCE

A. Maintain one copy of each referenced system design standard on site.

B. Manufacturer Qualifications: Company specializing in lightning protection equipment with minimum three years documented experience.

C. Designer Qualifications: Person or entity, employed by installer, who specializes in lightning protection system design with minimum three years documented experience.

D. Installer Qualifications: Capable of providing the specified certification of the installed system.

E. Installer Qualifications: Company specializing in lightning protection system design with minimum three years documented experience.

F. Field Quality Control Testing Agency Qualifications: Firm capable of and experienced in grounding and bonding testing with documented experience and minimum of three project references.

G. Products: Listed, classified, and labeled as suitable for the purpose intended.

H. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

I. Design lightning protection system under direct supervision of NFPA 780 Certified Designer or Professional Engineer experienced in design of this Work and licensed in State where work is performed.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Lightning Protection Components:
   1. Advanced Lightning Technology (ALT)
   2. Harger Lightning and Grounding
   3. thermOweld Grounding, a subsidiary of Continental Industries; division of Burndy LLC;
   4. Substitutions: See Division 01- General Requirements.

2.2 LIGHTNING PROTECTION SYSTEM

A. Lightning Protection System: Provide complete system complying with NFPA 780, including air terminals, bonding, interconnecting conductors and grounding electrodes.
   1. Provide system that protects:
      a. The entire structure.
      b. Open air areas within 100 feet of exterior walls at grade level.
      c. Open air areas within building footprint.
      d. Metal fences identified on site plan.
      e. Aboveground metal water tank (grounding only).
      f. Aboveground concrete water tank.
      g. Metal communications towers (grounding only).
   2. Coordinate with other grounding and bonding systems specified.
   3. Treat isolated non-grounded protruding metal items as specified by NFPA 780 for heavy-duty stacks.
   4. Determine ground resistance by field measurement.
   5. Provide copper components, as specified in following sections..
   6. Provide disconnecting means and access panels or similar devices to allow complete periodic inspection and testing as described by NFPA 780 Annex D.

7. Provide materials that are galvanically compatible with the structure and system components.
8. Provide system certified by Underwriters Laboratories or the Lightning Protection Institute.
9. Conceal all downleads within structure.

B. Strike Terminals: Provide strike (air) terminals where indicated on the drawings, or as required by the delegated design.

C. Strike Terminals: Provide strike (air) terminals on the following:
1. Roofs.
2. Penthouse roofs.
3. Parapets.
4. Roof mounted equipment.
5. Stacks.
6. Chimneys.

2.3 COMPONENTS

A. All Components: Complying with applicable requirements of UL 96.

B. Strike (Air) Terminals: Copper, solid, with adhesive bases for single-ply roof installations.

C. Strike Terminal for Chimney: Lead-coated copper.

D. Grounding Rods: Solid copper.

E. Ground Plate: Copper.

F. Conductors: Copper cable.

G. Connectors and Splicers: Bronze.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as indicated on shop drawings.

B. Coordinate work with installation of roofing and exterior and interior finishes.

3.2 INSTALLATION

A. Install in accordance with referenced system standards and as required for specified certification.

B. Connect conductors using mechanical connectors or exothermic welding process; protect adjacent construction elements and finishes from damage.

C. Connect conductors using mechanical connectors.

D. Connect conductors using exothermic welding process; protect adjacent construction elements and finishes from damage.

E. Downleads from roof to grade shall be routed within the building envelope. Exposed downleads are not acceptable.
   1. Route downleads concealed within wall cavities.
   2. Coordinate roof penetrations with roofing installation to ensure a watertight seal.
   3. It is acceptable to use building columns as downleads providing all design criteria is coordinated with this application within the delegated design.
   4. Confirm with the project structural engineer that building vertical steel can be used as a down-conductor prior to incorporating that element into any delegated design.

3.3 FIELD QUALITY CONTROL

A. See Division 01, for additional requirements.

B. Perform visual inspection as specified in NFPA 780 as if this were a periodic follow-up inspection.

C. Perform continuity testing as specified in NFPA 780 as if this were testing for periodic maintenance.

D. Obtain the services of the specified certification agency to provide inspection and certification of the lightning protection system, including performance of any other testing required by that agency.

E. Perform inspection and testing in accordance with UL 96A.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 5100 - LIGHTING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Interior luminaires.

B. Exterior luminaires.

C. Exit signs.

D. Ballasts and drivers.

E. LED Driver emergency power supply units.

F. Luminaire accessories.

1.2 RELATED REQUIREMENTS

A. Section 26 0533 – Raceways and Boxes for Electrical Systems.

B. Section 26 0553 - Identification for Electrical Systems: Identification products and requirements.

C. Section 26 0923 – Lighting Control Devices: Automatic controls for lighting including occupancy sensors, time switches, outdoor photo controls, and daylight harvesting controls.

D. Section 26 2726 - Wiring Devices: Manual wall switches and wall dimmers.

E. Section 26 0961 - Theatrical Lighting: Stage lighting units and associated controls.

1.3 REFERENCE STANDARDS

A. 47 CFR 15 - Radio Frequency Devices; current edition.

B. ANSI C82.4 - American National Standard for Ballasts for High-Intensity-Discharge and Low-Pressure Sodium Lamps (Multiple-Supply Type); 2002.

C. IESNA LM-63 - ANSI Approved Standard File Format for Electronic Transfer of Photometric Data and Related Information; 2002 (Reaffirmed 2008).

D. IES LM-79 - Approved Method: Electrical and Photometric Measurements of Solid-State Lighting Products; 2008.

E. IES LM-80 - Approved Method: Measuring Luminous Flux and Color Maintenance of LED Packages, Arrays, and Modules; 2015.

F. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2015.

G. NECA/IESNA 500 - Standard for Installing Indoor Commercial Lighting Systems; 2006.

H. NECA/IESNA 502 - Standard for Installing Industrial Lighting Systems; 2006.

I. NEMA 410 - Performance Testing for Lighting Controls and Switching Devices with Electronic Drivers and Discharge Ballasts; 2015.

J. NEMA LE 4 - Recessed Luminaires, Ceiling Compatibility; 2012.

K. UL 844 - Luminaires for Use in Hazardous (Classified) Locations; Current Edition, Including All Revisions.

L. UL 924 Emergency Lighting and Power Equipment; Current Edition, Including All Revisions.

M. UL 1029 - High-Intensity-Discharge Lamp Ballasts; Current Edition, Including All Revisions.

N. UL 1598 - Luminaires; Current Edition, Including All Revisions.

O. UL 8750 - Light Emitting Diode (LED) Equipment for Use in Lighting Products; Current Edition, Including All Revisions.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
1. Coordinate the installation of luminaires with mounting surfaces installed under other sections or by others. Coordinate the work with placement of supports, anchors, etc. required for mounting. Coordinate compatibility of luminaires and associated trims with mounting surfaces at installed locations.
2. Coordinate the placement of luminaires with structural members, ductwork, piping, equipment, diffusers, fire suppression system components, and other potential conflicts installed under other sections or by others.
3. Coordinate placement of exit signs with furniture, equipment, signage or other potential obstructions to visibility, installed by other sections or others.
4. Notify Architect of any conflicts or deviations from the contract documents to obtain direction prior to proceeding with work.

1.5 SUBMITTALS

A. See Division 01 – General Requirements.

B. Shop Drawings:
1. Indicate dimensions and components for each luminaire of the manufacturer.
2. Provide photometric calculations where luminaires are proposed for substitution upon request.

C. Shop Drawings: For nonstandard or custom luminaires.
   1. Include plans, elevations, sections, and mounting and attachment details.
   2. Include details of luminaire assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   3. Include diagrams for power, signal, and control wiring.

D. Product Data: Provide manufacturer's standard catalog pages and data sheets including detailed information on luminaire construction, dimensions, ratings, finishes, mounting requirements, listings, service conditions, photometric performance, installed accessories, and ceiling compatibility; include model number nomenclature clearly marked with all proposed features.
   1. Arrange in order of luminaire designation.
   2. Include data on features, accessories, and finishes.
   3. Include physical description and dimensions of luminaires.
   4. Include life, output (lumens, CCT, and CRI), and energy efficiency data.
   5. Photometric data and adjustment factors based on laboratory tests, complying with IESNA LM-79 and IESNA LM-80.
      a. Manufacturers' Certified Data: Photometric data certified by manufacturer's laboratory with a current accreditation under the National Voluntary Laboratory Accreditation Program for Energy Efficient Lighting Products.
      b. Testing Agency Certified Data: Photometric data certified by a qualified independent testing agency. Photometric data for remaining luminaires shall be certified by manufacturer.
      c. TM-21 report for L70 rating at color temperature specified.
   6. Ballasts/drivers: Include wiring diagrams and list of compatible lamp configurations.
   7. Lamps/LED arrays: Include rated life, color temperature, color rendering index (CRI), and initial and mean lumen output.

E. Samples:
   1. Provide one sample(s) of each specified luminaire upon request.
   2. Provide one sample(s) of each custom luminaire.
   3. Provide one sample(s) of each luminaire proposed for substitution upon request.
   4. Provide one sample(s) of each product finish illustrating color and texture upon request.
   5. Provide a mockup of selected luminaires upon request.
   6. Submit two color chips 3 x 3 inch in size illustrating luminaire finish color where indicated in luminaire schedule.

F. Certificates for Dimming Ballasts/Drivers: Manufacturer's documentation of compatibility with dimming controls to be installed.

G. Field quality control reports.

H. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

I. Operation and Maintenance Data: Instructions for each product including information on replacement parts.

1.6 EXTRA PRODUCTS

A. Provide 6 universal exit signs complete with all labor and materials required for installation and 100 feet of installed wiring as directed by the Local Authority Having Jurisdiction.

B. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
1. See Division 01 – General Requirements.
2. Extra Lenses and Louvers: Two percent of total quantity installed for each type, but not less than one of each type.
3. Extra LED circuit board modules: Ten percent of total quantity installed for each type, but not less than two of each type.
4. LED Drivers: Furnish two of each driver type
5. Furnish one replacement battery for each battery type and size.

C. Project Record Documents: Record actual connections and locations of luminaires and any associated remote components.

1.7 QUALITY ASSURANCE

A. Conform to requirements of NFPA 70.

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

D. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.8 QUALIFICATION DATA:

A. Seismic Qualification Certificates: For luminaires, accessories, and components, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.

B. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

C. Product Test Reports: For each luminaire, for tests performed by a qualified testing agency.

1.9 DELIVERY, STORAGE, AND PROTECTION

A. Receive, handle, and store products according to NECA/IESNA 500 (commercial lighting), NECA/IESNA 502 (industrial lighting), and manufacturer's written instructions.

B. Keep products in original manufacturer's packaging and protect from damage until ready for installation.

1.10 FIELD CONDITIONS

A. Maintain field conditions within the manufacturers required service conditions during and after installation.

1.11 WARRANTY

A. See Division 01 – General Requirements.

B. Section 26 0400 – General Requirements for Electrical Trades.

C. For lighting fixture products noted in this section provide a manufacturer’s standard warranty, minimum of one year.

D. Provide manufacturer’s standard warranty, minimum of one year.for batteries for emergency lighting units.

E. Provide manufacturer’s standard warranty, minimum of one year.for batteries for self-powered exit signs.

F. Provide manufacturer’s standard warranty, minimum of one year.for LED Driver emergency power supply units.

PART 2 PRODUCTS

2.1 LUMINAIRE TYPES

A. Furnish products as indicated in Lighting Fixture Schedule included on the drawings.

B. Substitutions: See Division 01- General Requirements, except where individual luminaire types are designated with substitutions not permitted and the following:
   1. Section 26 04 00 – Product Requirements and as follows:
      a. Approved equals to the basis of design fixture as listed in the Lighting Fixture Schedule shall be accepted for review with the proposed substitute fixture meeting the following minimum requirements:
         1) Be of the same general size, style and shape, including but not limited to lens construction and shading.
         2) Be of equal or better quality and construction.

3) Be supplied with all required accessories to match the specified fixture.
4) Be supplied with all remote drivers, power supplies and cabling lengths to meet specified performance and control.
5) Provide the same or better distribution, efficiency, source lumen output, and L70 lumen depreciation metric.

b. Provide point by point photometric calculations at the request of the Engineer for evaluation.

c. The basis of design fixture listed in the Lighting Fixture Schedule lists part numbers, specifications, options, accessories and source output available at the time of design. Substitutions shall meet these requirements as scheduled.

d. The evaluation of an approved equal shall be at the sole discretion of the Architect and Engineer.

2.2 INTERIOR LUMINAIRES

A. Manufacturers:
1. Manufacturers represented by Apex Lighting.
2. Manufacturers represented by Lighting Affiliates.
3. Manufacturers represented by Illuminate Lighting.
4. Manufacturers represented by Reflex Lighting.
5. Substitutions: See paragraph 2.1, B.

B. Provide products that comply with requirements of NFPA 70.

C. Provide products that are listed and labeled as complying with UL 1598, where applicable.

D. Provide products listed, classified, and labeled as suitable for the purpose intended.

E. Provide products complying with Federal Energy Management Program (FEMP) requirements.

F. Unless otherwise indicated, provide complete luminaires including lamp(s) and all sockets, ballasts, drivers, reflectors, lenses, housings and other components required to position, energize and protect the lamp and distribute the light.

G. Unless specifically indicated to be excluded, provide all required conduit, boxes, wiring, connectors, hardware, supports, trims, accessories, etc. as necessary for a complete operating system.

H. Provide products suitable to withstand normal handling, installation, and service without any damage, distortion, corrosion, fading, discoloring, etc.

I. Recessed Luminaires:
1. Ceiling Compatibility: Comply with NEMA LE 4.
2. Luminaires Recessed in Insulated Ceilings: Listed and labeled as IC-rated, suitable for direct contact with insulation and combustible materials.

3. Luminaires Recessed in Sloped Ceilings: Provide suitable sloped ceiling adapters.

J. LED Luminaires:
1. Components: UL 8750 recognized or listed as applicable.
2. Tested in accordance with IES LM-79 and IES LM-80.
3. LED Estimated Useful Life: Minimum of 50,000 hours at 70 percent lumen maintenance, calculated based on IES LM-80 test data.

K. Track Lighting Systems: Provide track compatible with specified track heads, with all connectors, power feed fittings, dead ends, hangers and canopies as necessary to complete installation.

L. Luminaires Mounted in Continuous Rows: Provide quantity of units required for length indicated, with all accessories required for joining and aligning.

M. Luminaires in Special Environments:
1. Showers: Provide with non-conductive trim.
2. Wet Locations: Provide with sealed and gasketed lens.
3. Infectious Environments: Provide with sealed and gasketed lens and anti-microbial finish.
4. Clean Rooms: Provide with sealed and gasketed lens, IP65 Rating and clean room rating as indicated.
5. MRI/Imaging Suites: Provide with non-ferrous construction; DC power supply; wiring through RF-filter.

2.3 EMERGENCY LIGHTING UNITS

A. Manufacturers:
1. Manufacturers represented by Apex Lighting.
2. Manufacturers represented by Lighting Affiliates.
3. Manufacturers represented by Illuminate/Vanguard Lighting.
4. Manufacturers represented by Reflex Lighting.
5. Substitutions: See paragraph 2.1, B.

B. Emergency lighting units complying with NFPA 101 and all applicable state and local codes, and listed and labeled as complying with UL 924.

C. Operation: Upon interruption of normal power source or brownout condition exceeding 20 percent voltage drop from nominal, solid-state control automatically switches connected lamps/LED arrays to integral battery power for minimum of 90 minutes of rated emergency illumination, and automatically recharges battery upon restoration of normal power source.

D. Battery:
1. Sealed maintenance free lead calcium unless otherwise indicated.
2. Size battery to supply all connected lamps/LED arrays, including emergency remote heads where indicated.

E. Diagnostics: Provide power status indicator light and accessible integral test switch to manually activate emergency operation.

F. Provide low voltage disconnect to prevent battery damage from deep discharge.

G. Self-Diagnostics: Provide units that self-monitor functionality and automatically perform testing required by NFPA 101 where indicated; provide indicator light(s) to report test and diagnostic status.

2.4 EXIT SIGNS

A. Manufacturers:
1. Manufacturers represented by Apex Lighting.
2. Manufacturers represented by Lighting Affiliates.
3. Manufacturers represented by Illuminate Lighting.
4. Manufacturers represented by Reflex Lighting.
5. Substitutions: See paragraph 2.1, B.

B. Description: Internally illuminated exit signs with LEDs unless otherwise indicated; complying with NFPA 101 and all applicable state and local codes, and listed and labeled as complying with UL 924.
1. Number of Faces: Single or double as indicated or as required for the installed location.
2. Directional Arrows: Universal type for field adjustment sized so that they are clearly visible at a distance of 40 feet as required by local codes.
3. Mounting: Wall, ceiling or pendant as indicated. Provide universal mount exit signs where indicated.
4. Housing: Varies, refer to Lighting Fixture Schedule.
5. Face: Varies, refer to Lighting Fixture Schedule.

C. Self-Powered Exit Signs:
1. Product Description: UL 924 self-contained emergency lighting unit.
2. Operation: Upon interruption of normal power source or brownout condition exceeding 20 percent voltage drop from nominal, solid-state control automatically switches connected lamps to integral battery power for minimum of 90 minutes of rated emergency illumination, and automatically recharges battery upon restoration of normal power source.
3. Battery: Sealed maintenance-free nickel cadmium unless otherwise indicated.
4. Diagnostics: Provide power status indicator light and accessible integral test switch to manually activate emergency operation.
5. Provide low-voltage disconnect to prevent battery damage from deep discharge.
6. Self-Diagnostics: Provide units that self-monitor functionality and automatically perform testing required by NFPA 101 where indicated; provide indicator light(s) to report test and diagnostic status.

D. Self-Luminous Exit Signs: Internally illuminated by tritium gas sealed inside phosphor lined gas tubes, requiring no electrical power to operate, with a service life of 20 years unless otherwise indicated.

E. Photoluminescent Exit Signs: Powder-coated sheet aluminum with photoluminescent pigmented material.

F. Special Wording Signs: Provide with special wording as indicated.
   1. Where indicated, provide with international symbol of accessibility complying with state and local codes.
   2. Provide combination exit/special wording signs where indicated.

G. Accessories:
   1. Provide compatible accessory high impact polycarbonate vandal shields where indicated.
   2. Provide compatible accessory wire guards where indicated.

2.5 EXTERIOR LUMINAIRES (Building Mounted)

A. Manufacturers:
   1. Manufacturers represented by Apex Lighting.
   2. Manufacturers represented by Lighting Affiliates.
   3. Manufacturers represented by Illuminate/Vanguard Lighting.
   4. Manufacturers represented by Reflex Lighting.
   5. Substitutions: See paragraph 2.1, B.

B. Provide products that comply with requirements of NFPA 70.

C. Provide products that are listed and labeled as complying with UL 1598, where applicable.

D. Provide products listed, classified, and labeled as suitable for the purpose intended.

E. Provide products complying with Federal Energy Management Program (FEMP) requirements.

F. Unless otherwise indicated, provide complete luminaires including lamp(s) and all sockets, ballasts, drivers, reflectors, lenses, housings, poles, brackets, bases, vibration dampers, isolation pads and other components required to position, energize and protect the lamp and distribute the light.

G. Unless specifically indicated to be excluded, provide all required conduit, boxes, wiring, connectors, hardware, supports, trims, accessories, etc. as necessary for a complete operating system.

H. Provide products suitable to withstand normal handling, installation, and service without any damage, distortion, corrosion, fading, discoloring, etc.

I. Provide IESNA full cut-off classified products unless otherwise indicated or provide products with backlight, uplight and glare (BUG) ratings as indicated.

J. Provide products with IESNA light distribution as indicated.

K. Provide products with internal/external house-side shields as indicated.

L. LED Luminaires:
1. Components: UL 8750 recognized or listed as applicable.
2. Tested in accordance with IES LM-79 and IES LM-80.
3. LED Estimated Useful Life: Minimum of 50,000 hours at 70 percent lumen maintenance, calculated based on IES LM-80 test data or as indicated.

2.6 MATERIALS

A. Parts:
1. Free of burrs and sharp corners and edges.
2. Sheet metal components shall be steel unless otherwise indicated.
3. Form and support to prevent warping and sagging.
4. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit relamping without use of tools. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during relamping and when secured in operating position.
5. Diffusers and Globes:
   a. Refer to Interior Lighting Fixture Schedule for types.
   b. Acrylic Diffusers: One hundred percent virgin acrylic plastic, with high resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.
   c. Glass: Annealed crystal glass unless otherwise indicated.
   d. Lens Thickness: At least 0.125 inch minimum unless otherwise indicated.
6. Housings:
   a. Extruded-aluminum housing and heat sink unless otherwise indicated.
   b. Powder-coat finish unless otherwise indicated, color selection by Architect.
7. Factory-Applied Labels: Comply with UL 1598. Include recommended lamps. Locate labels where they will be readily visible to service personnel, but not seen from normal viewing angles when lamps are in place.
   a. Label shall include the following lamp characteristics:
      1) “USE ONLY” and include specific lamp type.
      2) Lamp diameter, shape, size, wattage, and coating.
      3) CCT and CRI for all luminaires.

B. METAL FINISHES
1. Variations in finishes are unacceptable in the same piece. Variations in finishes of adjoining components are acceptable if they are within the range of approved Samples and if they can be and are assembled or installed to minimize contrast.

2.7 BALLASTS AND DRIVERS

A. Manufacturers:
1. eldoLED.
2. General Electric Company.
3. Lutron Electronics Company.

4. Osram Sylvania.
5. Philips Lighting Electronics/Advance.
6. Substitutions: See Division 01- General Requirements, Product Requirements.
7. Manufacturer Limitations: Where possible, for each type of luminaire provide ballasts produced by a single manufacturer.
8. Where a specific manufacturer or model is indicated elsewhere in the luminaire schedule or on the drawings, substitutions are not permitted unless explicitly indicated.
9. Provide ballasts/drivers compatible with the approved lighting control systems.

B. Ballasts/Drivers - General Requirements:
1. Provide ballasts containing no polychlorinated biphenyls (PCBs).
2. Minimum Efficiency/Efficacy: Provide ballasts complying with all current applicable federal and state ballast efficiency/efficacy standards.
3. Electronic Ballasts/Drivers: Inrush currents not exceeding peak currents specified in NEMA 410.

C. LED Drivers:
1. Product Description: LED dimming driver.
   a. 4-Wire (0-10V DC Voltage Controlled) Dimming Drivers
   b. Digital (DALI Low Voltage Controlled) Dimming Drivers
   c. Digital Multiplex (DMX Low Voltage Controlled) Dimming Drivers
2. General:
   a. LED dimming shall be equal in range and quality to a commercial grade incandescent dimmer. Quality of dimming to be defined by dimming range, freedom from perceived flicker or visible stroboscopic flicker, smooth and continuous change in level (no visible steps in transitions), natural square law response to control input, and stable when input voltage conditions fluctuate over what is typically experience in a commercial environment. Demonstration of this compliance to dimming performance will be necessary for substitutions or prior approval.
   b. Ten-year expected life while operating at maximum case temperature and 90 percent non-condensing relative humidity.
   c. Driver must limit inrush current.
      1) Base specification: Meet or exceed NEMA 410 driver inrush standard of 430 Amps per 10 Amps load with a maximum of 370 Amps (^2) – seconds.
      2) Preferred Specification: Meet or exceed 30mA(^2)s at 277VAC for up to 50 watts of load and 75A at 240us at 277VAC for 100 watts of load.
   d. Withstand up to a 1,000 volt surge without impairment of performance as defined by ANSI C62.41 Category A.
   e. No visible change in light output with a variation of plus/minus 10 percent line voltage input.
   f. Total Harmonic Distortion less than 20% percent and meet ANSI C82.11 maximum allowable THD requirements at full output. THD shall at no point in the dimming curve allow imbalance current to exceed full output THD.

g. Driver must support automatic adaptation, allowing for future luminaire upgrades and enhancements and deliver improved performance:
   1) Adjustment of forward LED voltage, supporting 3V through 55V.
   2) Adjustment of LED current from 200mA to 1.05A at the 100 percent control input point in increments of 1mA
   3) Adjustment for operating hours to maintain constant lumens (within 5 percent) over the 50,000 hour design life of the system, and deliver up to 20 percent energy savings early in the life cycle.

h. Driver must be able to operate for a (+/- 10%) supply voltage of 120V through 277VAC at 60Hz.

i. Driver should be UL Recognized under the component program and shall be modular for simple field replacement. Drivers that are not UL Recognized or not suited for field replacement will not be considered.

j. Driver shall include ability to provide no light output when the analog control signal drops below 0.5 V, or the DALI/DMX digital signal calls for light to be extinguished and shall consume 0.5 watts or less in this standby. Control deadband between 0.5V and 0.65V shall be included to allow for voltage variation of incoming signal without causing noticeable variation in fixture to fixture output.

3. Light Quality
   a. Over the entire range of available drive currents, driver shall provide step-free, continuous dimming to black from 100 percent to 1 percent and 10% relative light output where indicated, or 100 – 10% light standard. Driver shall respond similarly when raising from 1% to 100%
   b. 1) Driver must be capable of configuring a linear or logarithmic dimming curve, allowing fine grained resolution at low light levels
   c. Drivers to track evenly across multiple fixtures at all light levels, and shall have an input signal to output light level that allows smooth adjustment over the entire dimming range.
   d. Driver and luminaire electronics shall deliver illumination that is free from objectionable flicker as measured by flicker index (ANSI/IES RP-16-10). At all points within the dimming range from 100-1 percent luminaire shall have:
      1) LED dimming driver shall provide continuous step-free, flicker free dimming similar to incandescent source.
      2) Base specification: Flicker index shall less that 5% at all frequencies below
      3) 1000 Hz.
      4) Preferred specification: Flicker index shall be equal to incandescent, less that 1% at all frequencies below 1000 Hz.

4. Control Input
   a. 4-Wire (0-10V DC Voltage Controlled) Dimming Drivers
      1) Must meet IEC 60929 Annex E for General White Lighting LED drivers
      2) Connect to devices compatible with 0 to 10V Analog Control Protocol, Class 2, capable of sinking 0.6 ma per driver at a low

end of 0.3V. Limit the number of drivers on each 0-10V control output based on voltage drop and control capacity.

3) Must meet ESTA E1.3 for RGBW LED drivers

b. Digital (DALI Low Voltage Controlled) Dimming Drivers

1) Must meet IEC 62386

c. Digital Multiplex (DMX Low Voltage Controlled) Dimming Drivers

1) Must meet DMX / RDM: USITT DMX512A and ANSI E1.20 (Explore & Address)

2) Capable of signal interpolation and smoothing of color and intensity transitions

5. Driver: Approved by dimming system manufacturer as suitable for operation with control unit and suitable for LED source type and quantity specified for luminaire.

2.8 LUMINAIRE FIXTURE SUPPORT COMPONENTS

A. Comply with requirements in Section 260529 “Hangers and Supports for Electrical Systems” for channel and angle iron supports and nonmetallic channel and angle supports.

B. Single-Stem Hangers: 1/2-inch steel tubing with heavy duty swivel ball fittings and ceiling canopy. Finish same as luminaire.

C. Wires: ASTM A 641/A 641 M, Class 3, soft temper, zinc-coated steel, 12 gage minimum.

D. Rod Hangers: 3/16-inch minimum diameter, cadmium-plated, threaded steel rod.

E. Hook Hangers: Integrated assembly matched to luminaire, line voltage, and equipment with threaded attachment, cord, and locking-type plug.

F. Provide accessory plaster frames for luminaires recessed in plaster ceilings.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as shown on the drawings.

B. Verify that outlet boxes are installed in proper locations and at proper mounting heights and are properly sized to accommodate conductors in accordance with NFPA 70.

C. Verify that suitable support frames are installed where required.

D. Verify that branch circuit wiring installation is completed, tested, and ready for connection to luminaires.

E. Verify that conditions are satisfactory for installation prior to starting work.

3.2 PREPARATION

A. Provide extension rings to bring outlet boxes flush with finished surface.

B. Clean dirt, debris, plaster, and other foreign materials from outlet boxes.

3.3 INSTALLATION

A. Coordinate locations of outlet boxes provided under Section 26 0533 as required for installation of luminaires, emergency lighting units and exit signs provided under this section.

B. Perform work in accordance with NECA 1 (general workmanship).

C. Install products in accordance with manufacturer's instructions.

D. Install luminaires securely, in a neat and workmanlike manner, as specified in NECA 500 (commercial lighting) and NECA 502 (industrial lighting).

E. Install luminaires plumb and square and aligned with building lines and with adjacent luminaires.

F. Suspended Ceiling Mounted Luminaires:
   1. Do not use ceiling tiles to bear weight of luminaires.
   2. Do not use ceiling support system to bear weight of luminaires unless ceiling support system is certified as suitable to do so.
   3. Secure surface-mounted and recessed luminaires to ceiling support channels or framing members or to building structure.
   4. Secure pendant-mounted luminaires to building structure.
      a. Pendants and Rods: Where longer than 48 inches, brace to limit swinging.
   5. Stem-Mounted, Single-Unit Luminaires: Suspend with twin-stem hangers. Support with approved outlet box, heavy-duty swivel hangers and accessories that hold stem and provide damping of luminaire oscillations. Support outlet box vertically to building structure using approved devices.
   6. Continuous Rows of Luminaires: Use tubing or stem for wiring at one point and wire support for suspension for each unit length of luminaire chassis, including one at each end.
   7. In addition to ceiling support wires, provide two galvanized steel safety wire(s), minimum 12 gage, connected from opposing corners of each recessed luminaire to building structure.
   8. See Division 09 - Finishes where suspended grid ceiling is specified for additional requirements.

G. Recessed Luminaires:
   1. Install trims tight to mounting surface with no visible light leakage.
   2. Secure lay-in luminaires to ceiling support channels using listed safety clips at four corners.

3. Non-IC Rated Luminaires: Maintain required separation from insulation and combustible materials according to listing.
4. Luminaires Recessed in Fire-Rated Ceilings: Install using accessories and firestopping materials to meet regulatory requirements for fire rating.
5. Install recessed luminaires to permit removal from below.

H. Suspended Luminaires:
1. Unless otherwise indicated, specified mounting heights are to bottom of luminaire.
2. Install using the suspension method indicated, with support lengths and accessories as required for specified mounting height.
3. Provide minimum of two supports for each luminaire equal to or exceeding 4 feet nominal length, with no more than 4 feet (1.2 m) between supports.
4. Install canopies tight to mounting surface.
5. Secure pendant-mounted luminaires to building structure.
   a. Pendants and Rods: Where longer than 48 inches, brace to limit swinging.
6. Stem-Mounted, Single-Unit Luminaires: Suspend with twin-stem hangers. Support with approved outlet box, heavy-duty swivel hangers and accessories that hold stem and provide damping of luminaire oscillations. Support outlet box vertically to building structure using approved devices.
7. Continuous Rows of Luminaires: Use tubing or stem for wiring at one point and wire support for suspension for each unit length of luminaire chassis, including one at each end.
8. Unless otherwise indicated, support pendants from swivel hangers.
9. .

I. Wall-Mounted Luminaires:
1. Unless otherwise indicated, specified mounting heights are to center of luminaire.
2. Install accessories furnished with each luminaire.
3. Bond products and metal accessories to branch circuit equipment grounding conductor.
4. Air Handling Luminaires: Interface with air handling accessories furnished and installed under Section 23 3600.

J. Emergency Lighting Units:
1. Unless otherwise indicated, connect unit to unswitched power from same circuit feeding normal lighting in same room or area. Bypass local switches, contactors, or other lighting controls.
2. Install lock-on device on branch circuit breaker serving units.
3. Install plumb and adjust to align with building lines and with each other. Secure to prevent movement.

K. Exit Signs:
1. Unless otherwise indicated, connect unit to unswitched power from same circuit feeding normal lighting in same room or area. Bypass local switches, contactors, or other lighting controls.
2. Install lock-on device on branch circuit breaker serving units.

3. Install plumb and adjust to align with building lines and with each other. Secure to prevent movement.
4. Install suspended exit signs using pendants from swivel hangers. Install pendant lengths required to suspend sign at height indicated or as instructed by the Authority Having Jurisdiction.

L. Remote drivers: Install in accessible location as indicated or as required to complete installation, using conductors per manufacturer's recommendations not exceeding manufacturer's recommended maximum conductor length to luminaire.

M. Identify luminaires connected to emergency power system in accordance with Section 26 0553.

N. Install specified lamps in each luminaire.

O. Install accessories furnished with each luminaire.

P. Connect luminaires to branch circuit using flexible conduit, except for emergency lighting which shall be in conduit completely.

Q. Make wiring connections to branch circuit using building wire with insulation suitable for temperature conditions within luminaire.

R. Ground and bond interior luminaires in accordance with Section 26 05 26.

3.4 FIELD QUALITY CONTROL

A. See Division 01 – General Requirements.

B. Inspect each product for damage and defects.

C. Operate each luminaire after installation and connection to verify proper operation.

D. Test self-powered exit signs, emergency lighting units, and emergency power supply units to verify proper operation upon loss of normal power supply.

E. Correct wiring deficiencies and repair or replace damaged or defective products. Repair or replace excessively noisy ballasts as determined by Architect.

3.5 ADJUSTING

A. Aim and position adjustable luminaires to achieve desired illumination as indicated or as directed by Architect. Secure locking fittings in place.

B. Aim and position adjustable emergency lighting unit lamps to achieve optimum illumination of egress path as required or as directed by Architect or authority having jurisdiction.

C. Air-Handling Luminaires with Air Control Blades or Heat Removal Dampers: Adjust as indicated or as required for proper airflow as directed by Architect.

D. Exit Signs with Field-Selectable Directional Arrows: Set as indicated or as required to properly designate egress path as directed by Architect or authority having jurisdiction.

3.6 CLEANING

A. Clean surfaces according to NECA 500 (commercial lighting), NECA 502 (industrial lighting), and manufacturer's instructions to remove dirt, fingerprints, paint, or other foreign material and restore finishes to match original factory finish.

B. Clean photometric surfaces as recommended by the manufacturer.

3.7 CLOSEOUT ACTIVITIES

A. See Division 01- General Requirements

B. Demonstration: Demonstrate proper operation of luminaires to Architect, and correct deficiencies or make adjustments as directed.

C. Just prior to Substantial Completion, replace all lamps that have failed.

3.8 PROTECTION

A. Protect installed luminaires from subsequent construction operations.

END OF SECTION

SECTION 26 5561 - THEATRICAL LIGHTING

PART 1 GENERAL

1.1 SUMMARY

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 Specification sections, apply to work of this section.

1.2 GOVERNING CLAUSE

A. For the sake of brevity, these specifications shall omit phrases such as "Contractor shall furnish and install", "unless otherwise indicated or specified", etc., but these phrases are nevertheless implied. Mention of materials and operations requires the Contractor to furnish and install such materials and perform such operations completely to the satisfaction of the owner's representative.

1.3 SCOPE OF WORK

A. Work under this Section shall include furnishing all labor, materials, tools, and transportation services; removal of waste, packaging and demolished materials; supervision and coordination with other trades, as necessary to complete installation of the stage lighting control equipment as well as any other items as herein listed, all as described in these specifications, as illustrated on the accompanying drawings, or as directed by the Owner's Representative. Any building structural material required to be modified or added to permit the proper and safe installation of the products of this section is included in the work of this section and the full cost of such work and the supervision of any subcontracted labor shall be incorporated in the base bid

1.4 SYSTEM DESCRIPTION

A. The intent of this specification is to define parameters for furnishing and installing a complete working system to the Owner. The System Integrator, Electrical Contractor and Stage Control Equipment Supplier shall provide coordination with all associated trades to insure a proper and correct installation. The system is designed to meet specific operational requirements. Performance deviations will not be accepted.

B. This specification makes reference to the products of ETC Inc to establish a level of quality and product support. Supply the specified product or approved equal. The project electrical engineer shall be the final authority for purposes of establishing product and service equivalence. Proposed substitutions should be submitted for approval in advance of bid. If not pre-submitted and approved, proposed substitutions are subject to rejection at time of submittal. If proposed substitutions are rejected, the contractor shall submit drawings and supply the specified product without further delay.

1.5 SUBMITTALS

A. Full system submittals in the format specified by the general conditions of the specifications shall be furnished for approval within 60 days of award of Contract. Prior to fabrication of equipment, submittals shall be returned in the same format appropriately marked as the approval document.

B. Manufacturer shall provide any additional information, including equipment demonstration, as required by the engineer or specifier to verify compliance with specifications.

1.6 QUALITY ASSURANCE

A. Manufacturer shall be one who has been continuously engaged in the manufacturer of theatrical lighting and control equipment for a minimum of ten years. All control equipment and cabinet fabrication must take place in a U.S. manufacturing plant.

B. The manufacturer shall have a factory authorized stocking service center with at least one full-time service technician on staff located within 100 miles of the job site. In addition, the manufacturer shall have a toll free 24-hour hotline with a maximum response time of 20 minutes, 24 hours a day and 365 days a year. This level of support is integral to this specification and to the owner's needs and shall not be waived.

C. All equipment, where applicable standards have been established, shall be built to the standards of Underwriters Laboratories, Inc., the National Electric Code and the United States Institute for Theater Technology. Approved equipment shall be so labeled on delivery to the job site.

1.7 SYSTEM INTEGRATION

A. To ensure proper system installation, coordination of trades, and initial setup and programming, the equipment shall be furnished by an approved stage Systems Integrator.

B. An approved Systems Integrator shall meet the following requirements:
   1. Be a factory authorized service center for the manufacturer of the stage lighting control equipment
   2. Have a full-time factory-trained technician who is currently certified for all products in this specification and in particular for DMX and Network configuration.
   3. Have a factory-trained project manager who will coordinate all project documentation and scheduling of deliveries and system energization.

C. At the time of bid submission, the Electrical Contractor of this section shall indicate:
   1. The company name of the Systems Integration firm
   2. Three installations of comparable scope installed by the systems integration firm within the past 5 years.

PART 2 PRODUCT

2.1 MANUFACTURERS

A. The following manufactured systems for theatrical lighting and controls are allowed:
   1. Electronic Theatre Controls (ETC)
   2. Strand Lighting
   3. Substitutions: Division 01 – General Requirements.

2.2 INTELLIGENT CONTROLLABLE BREAKER POWER CONTROL SYSTEM

A. General
   1. Intelligent breaker system shall be Sensor IQ as manufactured by ETC, Inc., or approved equal.
   2. Breaker Panels shall be UL508, UL67, and UL924 Listed.
   3. Breakers shall be UL489 listed.
   4. Breaker Panels shall consist of a main enclosure with 12, 24, or 48 pole breaker subpanels, integral control electronics for low voltage terminations and provision for accessory cards.

B. Mechanical
   1. The panel shall be constructed of 16-gauge steel. All panel components shall be properly treated and finished in fine-textured, scratch resistant paint.
   2. 120/208V breaker panels shall be capable of being surface or recessed mounted.
   3. Choice of panel covers shall be available for surface or recess mount applications. This outer panel shall ship complete with a locking door to limit access to electronics and breakers.
   4. The unit shall provide interior cover over breaker panel to allow access only to class 2 wiring and prevent direct access to class 1 line-voltage components.
      a. Branch circuits shall range from 15A to 30A capable of holding full rated load for minimum of three hours continuously.
      b. Two and three-pole circuits shall be supported at decreased density where each pole constitutes one of the available single-pole circuits. Mixing of circuits in any combination shall be supported.
   5. Breakers shall provide manual switching control such that critical lighting can be set to an on state without the need for power to the panel.
   6. Breaker output lugs shall accept 10-14 AWG dual conductor.
   7. Breaker output lug shall support solid or stranded 6-14 AWG class B, C, or K copper wire.
   8. Control wiring for DMX, station bus, and Emergency input terminations shall land on removable headers for contractor installation.

C. User Interface
   1. The user interface shall contain a graphical display with button pad to include 0-9 number entry, up, down back arrow navigation and enter.
   2. Test shortcut button shall be available for local activation of preset, sequence and set level overrides.

3. The user interface shall have a power status LED indicator (Blue), a DMX status LED indicator (Green), a network status LED indicator (Green) and an LED indicator (red) for errors.
4. Interface shall allow the backlight to timeout and shall provide user editable options to shut off backlight completely as well as adjust screen contrast.
5. Ethernet interface (when installed) shall default to automatic IP through link local and DHCP. Upon receiving IP address, the address of the Network Interface Card (NIC) shall display in the about menu. Static address and settings shall also be possible.
6. The control interface shall support a USB memory stick interface for uploads of configurations and software updates.

D. Functional
1. Panel setup shall be user programmable.
2. Breaker panels shall support discrete addressing of each breaker. Panels that are restricted to use of start address with sequential addressing, and cannot assign each 0-10V output control to any internal circuit shall not be acceptable.
3. The panel shall be capable of switching 6 poles on or off at once, or in a user-selectable delay per breaker using a period of 0.1 to 60 seconds, in 0.1 second increments.
4. Control electronics shall report the following information per branch circuit:
   a. Breaker state (On/ Off)
   b. Breaker state (Open/ Closed)
   c. Current draw (Amps)
   d. Voltage
   e. Energy usage
5. Built in Control shall include:
   a. Ability to record up to 16 presets in each space from the control panel, connected control stations, or timed events.
   b. Presets shall be programmable by recording current levels (as set by DMX or connected control stations), by entering levels on the control panel directly, manually selecting breaker state on each breaker, or a combination of these methods. From the control panel, stations, or timed events it shall be possible to record values for up to 16 zones per space.
   c. Indication of an active preset shall be visible on the control panel display.
   d. One 16-step sequence per space for power up and power down routines
   e. The panel shall have a UL924-listed contact input for use in Emergency Lighting systems. The panel shall respond to the contact input by setting included breakers to "on", while setting non-emergency breakers "off". Each breaker can be selected for activation upon contact input.
   f. Upon Data loss the system shall provide options to hold last look infinitely or hold for a configured time period set by the installing technician then fade/switch to the input of the next available priority.
   g. After power loss, electronics shall be capable of holding the system in its previous state until new level data (DMX, architectural presets, sequences and zones, or local overrides) is received to make each breaker change state.
6. The control of lighting via timed and Astronomical clock controls.

E. Electrical
   1. Conduit Entry:
      a. Feeders:
         1) Top or top-side (upper 6" of either side)
         2) Bottom or bottom-side 6" of either side
         3) Feeder entry shall be nearest to the location of the feeder lugs or main breaker.
      b. Load:
         1) Load wiring shall enter through the top or bottom of the enclosure.
         2) Load wiring shall enter through the surface nearest to the breaker sub panel.
         3) Load wiring may also enter through left and/or right side provided a low voltage chase is not required through the same area. If class 2 chase is required, a field installable barrier panel shall be provided upon request. When installed, the left or right side of the panel, where the barrier has been installed, shall not permit load wiring.
      c. Low Voltage:
         1) Top or top-side (upper 6" of either side)
         2) Bottom or bottom-side 6" of either side
         3) For low voltage conduit entry at the breaker end of the cabinet, conduits shall be located at the outer 3" of the top/bottom panel.
   2. Breaker
      a. Bus connection type: Stab on
      b. 1, 2, or three poles
      c. UL489 listed
      d. 15 amp, 20 amp, or 30 amp
      e. 22,000 SCCR; 65,000A series rated w main breaker
      f. High inrush trip curve (matches all Sensor breakers)
      g. Maintains trip curve through entire thermal range
      h. Guaranteed not to trip at full load
      i. Load lugs accept 6-18awg load wiring
      j. Multi-conductor rated output terminal
      k. Integral mechanically held air gap relay
      l. Manual control of relay state using breaker handle w/o power
      m. Integral current sensing
      n. Integral position and trip sensing
      o. Control and status provided by contact pads directly at bottom of the breaker case. No external wires or connections required for control or feedback.
   3. The breaker panel shall support a maximum feed size 100 Amps at 12 circuits.
   4. Breaker panels shall support main circuit breaker options.

2.3 TOUCHSCREEN CONTROL STATIONS

A. The Touchscreen Control Stations shall be the Unison Echo EchoTouch Controller as manufactured by ETC, Inc., or equal.

B. General
1. The Touchscreen protocols station shall provide control of up to 512 networked addresses or up to 512 local DMX addresses on a maximum of forty (40) control zones. Addresses may be distributed using DMX512-A or via sACN or Art-Net Ethernet-based lighting.
2. The Touchscreen station shall operate using graphic buttons, faders and other images on at least 7 user programmable control pages.
3. Touchscreen stations shall support default and fully graphical control pages.
4. The Touchscreen shall integrate with ETC Unison Echo Controls.

C. Mechanical
1. Touchscreen stations shall consist of a seven inch, backlit liquid crystal display (LCD) with a minimum resolution of 800 by 400 pixels with a capacitive multi-touch interface.
2. Touchscreen bezels shall be constructed of cast zinc finished in a fine texture powder coat.
3. Touchscreen shall be available in four standard colors.
   a. Cream (RAL 9001)
   b. Gray (RAL 7001)
   c. Black (RAL 9004)
   d. Signal White (RAL 9003)
4. The bezel shall have no visible means of attachment.
5. Touchscreen stations shall support surface, flush and rack mounting options.
   a. Flush-mount to industry standard 3-gang back box
   b. Surface back box dimensions shall be 7.3” wide x 4.8” high x 3.5” deep and available from the manufacturer.
   c. Rack mounting options shall fit in standard 19” racks an shall be no taller than 3 EIA rack units

D. Electrical
1. The Touchscreen shall have an RJ45 Ethernet port for connection to a lighting system and for Power over Ethernet (PoE).
2. The Touchscreen shall have EchoConnect connection terminals.
3. Control wiring utilizing low-voltage, Class II unshielded twisted pair, type Belden 8471 or equivalent, and one #14 ESD drain wire
4. Control wiring shall be topology free. It may be point-to-point, bus, loop, home run or any combination of these.
5. The Touchscreen shall use (2) #16 AWG stranded wires for 24vDC operating power when not utilizing Power over Ethernet (PoE).
6. The Touchscreen shall have typical power draw of 400mA.
7. The Touchscreen shall have a USB type A connector for firmware maintenance.
8. The Touchscreen shall be UL/ cUL LISTED and CE marked.
9. The Touchscreen shall be FCC Compliant.

E. Network
1. Communications physical layer shall comply with IEEE 802.3i for 10BASE-T, 802.3u for 100BASE-TX and 802.3af for Power over Ethernet specifications.
2. All network cabling shall be Category 5 (or better), conforming to TIA-568A/B, and shall be installed by a qualified network installer.
3. Switches shall comply with power-over-Ethernet IEEE802.3af, unless a separate in-line power supply is provided.

F. Functional
1. A maximum of 64 presets shall be contained in non-volatile electronic memory.
2. A maximum of 4 internal sequences. Sequences shall record user-selected zone levels.
3. The Touchscreen shall be equipped with an on-board help system.
4. The Touchscreen software upgrades shall be made by the user via USB drive. Changing internal components shall not be required.
5. The Touchscreen shall provide a USB port allowing show data to be saved for archival or transfer to other consoles or a personal computer.
6. Systems that do not provide the above capabilities shall not be acceptable.

G. Patching
1. The Touchscreen shall provide patching facilities for dimmers and multi-parameter devices via a built in library of fixture definitions. The fixture library shall be updated via software based updates. It shall be possible to create custom fixture definitions using an offline application.
2. The Touchscreen shall support patching, address setting, and mode changes using Remote Device Management (RDM) on the local DMX/RDM port.
3. Customizable zone display using Zone Map. It shall be possible to rearrange the graphical representations for control channels to closely mimic the positions of fixtures in the installation.
4. Seven user customizable interactive pages.
5. Forty (40) programmable color chips and color or white pickers.
6. Touch-based parameter controls.
7. Virtual level wheel.

2.4 DATA PLUG-IN STATIONS

A. The Plug-in Stations shall consist of the appropriate connectors required for functional intent of the system as shown on the project drawings including DMX and RJ-45 Network. Custom combinations and control connectors shall be available.

B. Station faceplates shall be .80” aluminum, finished in fine texture, scratch-resistant black powder coat. Silk-screened graphics shall be white. The station panel shall mount into an industry standard back box, depending on size and quantity of connectors. A terminal block shall be supplied for contractor terminations.

2.5 PERFORMANCE LIGHTING CONTROL CONSOLE

A. General
1. The lighting control console shall be a microprocessor-based system specifically designed to provide complete control of stage, studio, and entertainment lighting systems. The console shall be the ION-XE-20 as manufactured by ETC, Inc.
2. The system shall provide control of up to 2,560 networked addresses or up to 1024 local DMX addresses. Addresses may be distributed using DMX512-A (two ports) or via sACN or Art-Net Ethernet-based lighting protocols.
3. A maximum of 999 cues may be contained in non-volatile electronic memory.
4. Twenty (20) faders shall provide access to individual intensity channels, intensity for devices as well as playbacks.

2.6 MOUNTING HARDWARE

A. All supporting pipe battens that are independent of motorized rigging shall be connected to the building structure in a secure and approved manner using rated beam clamps. The suspensions shall be connected to the roof structural beams or suitable rated material bridging structure such as UniStrut, B-Line, or Kindorf. The Systems Integrator shall coordinate between the work of this section and of the steel section.

B. All pipes and suspension materials are to be new. Do not use cable clip/Crosby fittings on any wire ropes. Only Nicopress/swaged terminations are allowed.

C. Install pipes plumb, straight and level. Suspend empty pipes as noted above. Mount connector strips under pipe using double brackets supplied with connector strip. Mount a second pipe below the connector strip. Mount fixtures under the pipe using supplied C-clamps.

D. All receptacles and lighting fixtures shown on project drawings shall be supported from 1.5” ID (nominal) schedule 40 black iron pipe using sleeve splices and bolts for lengths longer than 21ft. Screw coupling is not acceptable. All connector strips and pipe battens that are dead-hung shall be suspended using one of three approved methods:
1. All-Thread rod drilled-through the pipe and securely bolted with locking nuts top and bottom.
2. Rated welded-link chain fully wrapped around pipe and secured with locking bolts or rated shackles or attached to pipe with suitable rated sandwich pipe clamp.
3. Rated aircraft cable with thimble and swaged eye secured by rated forged shackle to sandwich pipe clamps.

2.7 POWER DISTRIBUTION – CONNECTOR STRIPS

A. The connector strips shall be the ColorSource Raceway by ETC, Inc., or approved equal.

B. General
1. Connector strips shall provide distributed power form incoming circuits to plugs along a raceway

2. Internal wiring shall be sized to circuit ampacity and shall be rated at 125°C
3. Connector strips shall support a combination of line voltage power and low voltage data distribution within a single raceway.
4. Connector strips shall be listed by a nationally recognized test lab (NRTL). Connector strips that are not listed shall not be acceptable.

C. Physical
1. Connector strips shall be 127mm H x 45mm D and fabricated from 1.6mm aluminum finished in black, white, or silver fine-texture powder coat paint.
2. Connector strips shall be available in any length up to 72ft / 2195cm in specified increments of 1ft / 30.5cm and shipped fully wired with all splicing hardware.
3. Connector strips shall weigh no more than 2.5lbs/ft. Connector Strips that weigh more than 2.5lbs/ft shall not be acceptable.
4. Two connector panels supporting power and data outlets shall be supported for each 1ft / 30.5cm section of strip and shall be mounted on individual 125mm panels.
5. Frames and connector panels shall be fabricated from 3mm die cast aluminum finished in black, white, or silver fine-textured powder coat paint.
6. Circuits shall be labeled above each connector on the front of the strip using 15mm reverse silk screened Lexan labels. All labels match connector strip finish with contrasting color circuit designations. Optional write-on labels shall be available upon request, connector strips that do not support write-on labels shall not be acceptable.
7. Connector strips shall be supplied with appropriate brackets and hardware for mounting.
8. Connector strips shall utilize junction brackets on 6ft / 152cm centers and support spans up to 12ft / 305cm between hanger brackets.
9. Mounting brackets shall be 45mm x 3mm and 45mm x 1.9mm ASTM A5008 steel. All mounting hardware shall conform to ISO 898-1 class 8.8.

D. Electrical
1. Connector strip shall support 120V/60Hz power input per branch circuit with support for multiple outlets wired to each circuit.
2. The connector strip wiring terminal box shall support a maximum of eight 20A inputs utilized for:
    a. Up to six circuits for power distribution along the length of the connector strip
    b. One circuit dedicated for work lights.
    c. One circuit for DMX Active Pass-thru connectors when required.
3. The connector strip terminal box shall support hardwired or pluggable connector power and data input.
4. Pluggable power and data inputs shall be fed by a single multi-conductor cable or flexible conduit (as determined by site conditions) and a single DMX or Ethernet cable. The LKS data connector by Link USA, Inc shall be supported, connector strips that do not support the LKS data connector shall not be accepted.
5. Power output connectors shall be available as 20A grounded stage pin, 20A Twist-Lock, 20A “U” ground (dual rated “T-slot”), and 20A Neutrik powerCON TRUE1. Connector strips that utilize connectors that are not rated for plugging hot loads shall not be accepted.

6. Terminations shall be consolidated at one end and utilize feed-through terminals individually labeled with corresponding circuit numbers.
   a. Performance lighting circuits shall utilize tension clamp terminals listed for AWG 20 – 8 / 0.5mm^2 – 6mm^2 gauge wire.
   b. Work light and DMX Active Pass-thru circuits shall use tension clamp terminals listed for AWG 20 – 12 / 0.5mm^2 – 4mm^2 gauge wire.
   c. Terminals that place a screw directly on the wire are not acceptable.
7. A low voltage data distribution system shall be supported to incorporate DMX/ RDM (ANSI E1.11-2008 USITT DMX512-A and ANSI E1.20 Remote Device Management) or Ethernet (IEEE 802.3).
   a. Ethernet connections shall utilize standard RJ-45 connection.
   b. DMX output ports shall utilize 5-pin XLR style connectors.
   c. Connector strips shall utilize a voltage barrier to accommodate class 2 wiring in the same strip as class one circuits.
   d. Low voltage signals shall enter the connector strip via a strain relief or connector mounted at the specified end of the connector strip. One low voltage cable shall be supported for each connector strip.
   e. Connector strips with multiple DMX outputs shall use active DMX/RDM pass through assemblies. Each strip shall support up to 24 active DMX/RDM pass through assemblies.
   f. DMX outputs without active splitting of the DMX/ RDM signal or that do not support RDM shall not be acceptable.

E. Theatrical Lighting Fixtures

Refer to the Theatrical Lighting Fixture Schedule indicated on the drawings.

PART 3 EXECUTION

3.1 INSTALLATION

A. It shall be the responsibility of the Electrical Contractor to receive and store the necessary materials and equipment for installation of the control system. It is the intent of these specifications and plans to include everything required for proper and complete installation and operation of the system, even though every item may not be specifically mentioned. The Electrical Contractor shall deliver on a timely basis to other trades any equipment that must be installed during construction.

B. The Systems Integrator shall be responsible for field measurements and coordinating physical size of all equipment with the architectural requirements of the spaces into which it is to be installed.

C. The Electrical Contractor shall install all lighting control and dimming equipment in accordance with manufacturer's approved shop drawings.

D. All branch load circuits shall be live tested before connecting the loads to the system load terminals.

E. If installation of fixtures before dirty work is completed is necessary due to coordination of trades, all fixtures shall be bagged in plastic and securely sealed to prevent particulate intrusion.

F. Any fixtures found to be damaged at the time of final review by the owner's representative shall be immediately repaired or replaced at no cost to the owner.

G. At time of system energization, or immediately following, all fixtures shall be tested and aimed under the supervision of the Systems Integrator as directed by the owner or their designated representative. The Electrical Contractor shall ensure the provision of safe means of access to the fixtures in their operational positions such as a certified personnel lift including personal fall-protection equipment.

3.2 MANUFACTURER'S SERVICES

A. Upon completion of the installation, including testing of load circuits, the Systems Integrator shall notify the system manufacturer that the system is available for formal checkout.

B. Notification shall be provided in writing, two weeks prior to the time factory-trained personnel are needed on the job site.

C. The Systems Integrator shall be liable for any return visits by the factory engineer as a result of incomplete or incorrect wiring.

D. Upon completion of the formal check-out, the factory engineer shall demonstrate operation and maintenance of the system to the owner's representatives. Training shall not exceed four working hours.

E. The Systems Integrator shall provide an additional 4-hour session of end-user training on specific programming and operation of the control system. This training shall be provided at a date after final completion of the site work and after the factory commissioning at a time to be arranged with the owner within the first six months of occupancy.

3.3 WARRANTY

A. The Electrical Contractor shall guarantee all of the work that is performed under this contract, including all materials, and workmanship, for a period of two (2) years from the date of full acceptance of the work in accordance with the following conditions.

B. Warranty by the manufacturer shall be in effect on materials and equipment for two years from the date of system commissioning under the following conditions:
   1. The System Integrator shall INCLUDE the cost of providing a thorough inspection at the end of the first year of service in the base bid. The System Integrator shall be responsible for making arrangements for the inspection with the facility management. Inspection shall be scheduled during normal weekday business hours. Inspection shall include recommended routine cleaning of any equipment air filters and enclosures.

2. The inspection report shall be sent to the factory by the inspecting contractor within 10 days of completing the inspection.
3. Nothing in this guarantee shall cause repair or replacement by the Electrical Contractor or the Systems Integrator where negligence, neglect or improper operation by the Owner has caused the failure of any equipment installed under this contract.

END OF SECTION 00 0110

SECTION 27 0536 CABLE TRAYS FOR COMMUNICATION SYSTEMS

PART 1 - GENERAL

1.01 Related Documents

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Related Drawings
   1. "T" Drawings – Technology Plans

1.02 SUMMARY

A. Section Includes:
   1. Ladder cable trays.
   2. Wire-basket cable trays.
   3. Single-rail cable trays.

1.03 Related Requirements:

A. Section 271100 "Communication Equipment Room Fittings" for cable trays and accessories serving electrical systems.

1.04 ACTION SUBMITTALS

A. Product Data: For each type of cable tray.
   1. Include data indicating dimensions and finishes for each type of cable tray indicated.

B. Shop Drawings: For each type of cable tray.
   1. Show fabrication and installation details of cable trays, including plans, elevations, and sections of components and attachments to other construction elements. Designate components and accessories, including clamps, brackets, hanger rods, splice-plate connectors, expansion-joint assemblies, straight lengths, and fittings.

C. Delegated-Design Submittal: For seismic restraints.
   1. Seismic-Restraint Details: Signed and sealed by a qualified professional engineer, licensed in the state where Project is located, who is responsible for their preparation.
   2. Design Calculations: Calculate requirements for selecting seismic restraints.
   3. Detail fabrication, including anchorages and attachments to structure and to supported cable trays.

1.05 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans and sections, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
   1. Include scaled cable tray layout and relationships between components and adjacent structural, electrical, and mechanical elements.
   2. Vertical and horizontal offsets and transitions.
   3. Clearances for access above and to side of cable trays.
   4. Vertical elevation of cable trays above the floor or below bottom of ceiling structure.

B. Seismic Qualification Certificates: For cable trays, accessories, and components, from manufacturer.
   1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
   2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
   3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

C. Field quality-control reports.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design cable tray supports and seismic bracing.

B. Seismic Performance: Cable trays and supports shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
   1. The term "withstand" means "the cable trays will remain in place without separation of any parts when subjected to the seismic forces specified."
   2. Component Importance Factor: 1.5.

C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes in cable tray installed outdoors.
   1. Temperature Change: 120 deg F

2.02 GENERAL REQUIREMENTS FOR CABLE TRAYS

A. Cable Trays and Accessories: Identified as defined in NFPA 70 and marked for intended location, application, and grounding.
   1. Source Limitations: Obtain cable trays and components from single manufacturer.

B. Sizes and Configurations: See the Cable Tray Schedule on Drawings for specific requirements for types, materials, sizes, and configurations.

C. Structural Performance: See articles for individual cable tray types for specific values for the following parameters:

1. Uniform Load Distribution: Capable of supporting a uniformly distributed load on the indicated support span when supported as a simple span and tested according to NEMA VE 1.
2. Concentrated Load: A load applied at midpoint of span and centerline of tray.
3. Load and Safety Factors: Applicable to both side rails and rung capacities.

2.03 LADDER CABLE TRAYS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

B. Basis-of-Design Product: Subject to compliance with requirements, provide [product indicated on Drawings] or comparable product by one of the following:
1. Cooper B-Line, Inc.
2. Chatsworth
3. Wiremaid Products Division; Vutec Corporation.

C. Description:
1. Configuration: Two I-beam side rails with transverse rungs welded to side rails.
2. Rung Spacing: 12 inches o.c.
3. Radius-Fitting Rung Spacing: 9 inches at center of tray's width.
4. Minimum Cable-Bearing Surface for Rungs: 7/8-inch width with radius edges.
5. No portion of the rungs shall protrude below the bottom plane of side rails.
6. Structural Performance of Each Rung: Capable of supporting a maximum cable load, with a safety factor of 1.5, plus a 200-lb concentrated load, when tested according to NEMA VE 1.
7. Minimum Usable Load Depth: 6 inches.
8. Straight Section Lengths: 10 feet except where shorter lengths are required to facilitate tray assembly.
9. Width: 12 inches unless otherwise indicated on Drawings.
10. Fitting Minimum Radius: 12 inches.
11. Class Designation: Comply with NEMA VE 1.
12. Splicing Assemblies: Bolted type using serrated flange locknuts.
13. Hardware and Fasteners: Steel, zinc plated according to ASTM B 633.
14. Splice Plate Capacity: Splices located within support span shall not diminish rated loading capacity of cable tray.

2.04 WIRE-BASKET CABLE TRAYS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

B. Basis-of-Design Product: Subject to compliance with requirements, provide comparable product of one of the following:
1. Cooper B-Line, Inc.
2. Chatsworth
3. Snaketray.

4. Wiremaid Products Division; Vutec Corporation.

C. Description:
1. Configuration: Wires are formed into a standard 2-by-4-inch wire mesh pattern with intersecting wires welded together. Mesh sections must have at least one bottom longitudinal wire along entire length of section.
2. Materials: High-strength-steel longitudinal wires with no bends.
3. Safety Provisions: Wire ends along wire-basket sides (flanges) rounded during manufacturing to maintain integrity of cables and installer safety.
4. Sizes:
   a. Straight sections shall be furnished in standard 118-inch lengths.
   b. Wire-Basket Depth: 12 inches wide.
   c. Wire-Basket Depth: 4 wide or as required.
5. Connector Assemblies: Bolt welded to plate shaped to fit around adjoining tray wires and mating plate. Mechanically joins adjacent tray wires to splice sections together or to create horizontal fittings.
6. Connector Assembly Capacity: Splices located within support span shall not diminish rated loading capacity of cable tray.

D. Hardware and Fasteners: Steel, zinc plated according to ASTM B 633.

2.05 SINGLE-RAIL CABLE TRAYS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following

B. Basis-of-Design Product: Subject to compliance with requirements, provide product by one of the following:
1. Cooper B-Line, Inc.
2. Chatsworth
3. Wiremaid Products Division; Vutec Corporation.

C. Description:
1. Configuration: Center rail with extruded-aluminum rungs arranged symmetrically about the center rail.
2. Construction: Aluminum rungs mechanically connected to aluminum center rail in at least two places, with ends finished to protect installers and cables.
3. Rung Spacing: 12 inches o.c.
4. Radius-Fitting Rung Spacing: 9 inches at center of tray's width.
5. Straight Section Lengths: 10 feet except where shorter lengths are required to facilitate tray assembly.
6. Width: 12 inches unless otherwise indicated on Drawings.
7. Support Point: Splice fittings shall be hanger support point.
8. Support Spacing: Support each section at midpoint. Support wall-mounted sections a maximum of one-sixth of the section length from each end.
9. Loading Depth: 4 inches
10. Maximum Loads: 50 lb/ft.

11. Unbalanced Loads: Maintain cable tray rungs within six degrees of horizontal under all loading conditions.
12. Splicing Assemblies: Bolted type using serrated flange locknuts.
13. Splicing Assembly Capacity: Splices located within support span shall not diminish rated loading capacity of cable tray.
14. Hardware and Fasteners: Steel, zinc plated according to ASTM B 633.
15. Splices and Connectors: Protect cables from edges of center rail and do not intrude into cable fill area.

2.06 MATERIALS AND FINISHES

A. Steel:
1. Straight Section and Fitting Side Rails and Rungs: Steel complies with the minimum mechanical properties of ASTM A 1008/A 1008M, Grade 33, Type 2.
2. Steel Tray Splice Plates: ASTM A 1011/A 1011M, HSLAS, Grade 50, Class 1.
3. Fasteners: Steel complies with the minimum mechanical properties of ASTM A 510/A 510M, Grade 1008.
4. Finish: Electrogalvanized before fabrication.
   a. Standard: Comply with ASTM B 633.
   b. Hardware: Galvanized, ASTM B 633.
5. Finish: [poxy-resin or Powder-coat enamel paint.
   a. Powder-Coat Enamel: Cable tray manufacturer's recommended primer and corrosion-inhibiting treatment, with factory-applied powder-coat paint.
   b. Epoxy-Resin Prime Coat: Cold-curing epoxy primer, MPI# 101.
   c. Epoxy-Resin Topcoat: Epoxy, cold-cured, gloss, MPI# 77.
   d. Hardware: Chromium-zinc plated, ASTM F 1136.
6. Finish: Black oxide finish for support accessories and miscellaneous hardware according to ASTM D 769.

B. Aluminum:
1. Materials: Alloy 6063-T6 according to ANSI H 35.1/H 35.1M for extruded components and Alloy 5052-H32] or Alloy 6061-T6 according to ANSI H 35.1/H 35.1M for fabricated parts.
2. Hardware: Chromium-zinc-plated steel, ASTM F 1136.
3. Hardware for Aluminum Cable Tray Used Outdoors: Stainless steel, Type 316, ASTM F 593 and ASTM F 594.

C. Stainless Steel:
1. Materials: Low-carbon, passivated, stainless steel, Type 304L or Type 316L, ASTM F 593 and ASTM F 594.
2. Hardware for Stainless-Steel Cable Tray Used Outdoors: Stainless steel, Type 316, ASTM F 593 and ASTM F 594.

2.07 CABLE TRAY ACCESSORIES

A. Fittings: Tees, crosses, risers, elbows, and other fittings as indicated, of same materials and finishes as cable tray.

B. Covers: Ventilated-hat type made of same materials and with same finishes as cable tray.

C. Barrier Strips: Same materials and finishes as for cable tray.

D. Cable tray supports and connectors, including bonding jumpers, as recommended by cable tray manufacturer.

2.08 WARNING SIGNS

A. Lettering: 1-1/2-inch high, black letters on yellow background with legend "Warning! Not To Be Used as Walkway, Ladder, or Support for Ladders or Personnel."

B. Comply with requirements for fasteners in Section 260553 "Identification for Electrical Systems."

2.09 SOURCE QUALITY CONTROL

A. Testing: Test and inspect cable trays according to NEMA FG 1.

PART 3 EXECUTION

3.01 CABLE TRAY INSTALLATION

A. Install cable trays according to NEMA FG 1.

B. Install cable trays as a complete system, including fasteners, hold-down clips, support systems, barrier strips, adjustable horizontal and vertical splice plates, elbows, reducers, tees, crosses, cable dropouts, adapters, covers, and bonding.

C. Install cable trays so that the tray is accessible for cable installation and all splices are accessible for inspection and adjustment.

D. Remove burrs and sharp edges from cable trays.

E. Join aluminum cable tray with splice plates; use four square neck-carriage bolts and locknuts.

F. Fasten cable tray supports to building structure.

G. Design fasteners and supports to carry cable tray, the cables, and a concentrated load of 200 lb. Comply with requirements in Section 260529 "Hangers and Supports for Electrical Systems."

H. Place supports so that spans do not exceed maximum spans on schedules and provide clearances shown on Drawings. Install intermediate supports when cable weight exceeds the load-carrying capacity of the tray rungs.

I. Construct supports from channel members, threaded rods, and other appurtenances furnished by cable tray manufacturer. Arrange supports in trapeze or wall-bracket form as required by application.

J. Support bus assembly to prevent twisting from eccentric loading.

K. Install center-hung supports for single-rail trays designed for 60 versus 40 percent eccentric loading condition, with a safety factor of 3.

L. Locate and install supports according to NEMA FG 1. Do not install more than one cable tray splice between supports.

M. Support wire-basket cable trays with center support hangers or trapeze hangers or wall brackets.

N. Support center support hangers or trapeze hangers for wire-basket trays with 1/4-inch diameter rods.

O. Make connections to equipment with flanged fittings fastened to cable trays and to equipment. Support cable trays independent of fittings. Do not carry weight of cable trays on equipment enclosure.

P. Install expansion connectors where cable trays cross building expansion joints and in cable tray runs that exceed dimensions recommended in NEMA FG 1. Space connectors and set gaps according to applicable standard.

Q. Make changes in direction and elevation using manufacturer's recommended fittings.

R. Make cable tray connections using manufacturer's recommended fittings.

S. Seal penetrations through fire and smoke barriers. Comply with requirements in Section 078413 "Penetration Firestopping."

T. Install capped metal sleeves for future cables through firestop-sealed cable tray penetrations of fire and smoke barriers.

U. Install cable trays with enough workspace to permit access for installing cables.

V. Install barriers to separate cables of different systems, such as power, communications, and data processing; or of different insulation levels, such as 600, 5000, and 15 000 V.

W. Install permanent covers, if used, after installing cable. Install cover clamps according to NEMA VE 2.

X. Clamp covers on cable trays installed outdoors with heavy-duty clamps.

Y. Install warning signs in visible locations on or near cable trays after cable tray installation.

3.02 CABLE TRAY GROUNDING

A. Ground cable trays according to NFPA 70 unless additional grounding is specified. Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."

B. Cable trays with communications cable shall be bonded together with splice plates listed for grounding purposes or with listed bonding jumpers.

3.03 Cable trays with control conductors shall be bonded together with splice plates listed for grounding purposes or with listed bonding jumpers.

A. When using epoxy- or powder-coat painted cable trays as a grounding conductor, completely remove coating at all splice contact points or ground connector attachment. After completing splice-to-grounding bolt attachment, repair the coated surfaces with coating materials recommended by cable tray manufacturer.

B. Bond cable trays to power source for cables contained within with bonding conductors sized according to NFPA 70, Article 250.122, "Size of Equipment Grounding Conductors."

3.04 CABLE INSTALLATION

A. Install cables only when each cable tray run has been completed and inspected.

B. Fasten cables on horizontal runs with cable clamps or cable ties according to NEMA VE 2. Tighten clamps only enough to secure the cable, without indenting the cable jacket. Install cable ties with a tool that includes an automatic pressure-limiting device.

C. Fasten cables on vertical runs to cable trays every 18 inches.

D. Fasten and support cables that pass from one cable tray to another or drop from cable trays to equipment enclosures. Fasten cables to the cable tray at the point of exit and support cables independent of the enclosure. The cable length between cable trays or between cable tray and enclosure shall be no more than 72 inches.

E. Tie MI cables down every 36 inches where required to provide a 2-hour fire rating and every 72 inches elsewhere.

F. In existing construction, remove inactive or dead cables from cable trays.

3.05 CONNECTIONS

A. Remove paint from all connection points before making connections. Repair paint after the connections are completed.

B. Connect pathways to cable trays according to requirements in NEMA VE 2 and NEMA FG 1.

3.06 FIELD QUALITY CONTROL

A. Perform the following tests and inspections:
   1. After installing cable trays and after electrical circuitry has been energized, survey for compliance with requirements.
   2. Visually inspect cable insulation for damage. Correct sharp corners, protuberances in cable trays, vibrations, and thermal expansion and contraction conditions, which may cause or have caused damage.
   3. Verify that the number, size, and voltage of cables in cable trays do not exceed that permitted by NFPA 70. Verify that communications or data-processing circuits are separated from power circuits by barriers or are installed in separate cable trays.
   4. Verify that there are no intruding items such as pipes, hangers, or other equipment in the cable tray.

5. Remove dust deposits, industrial process materials, trash of any description, and any blockage of tray ventilation.
6. Visually inspect each cable tray joint and each ground connection for mechanical continuity. Check bolted connections between sections for corrosion. Clean and retorque in suspect areas.
7. Check for improperly sized or installed bonding jumpers.
8. Check for missing, incorrect, or damaged bolts, bolt heads, or nuts. When found, replace with specified hardware.
9. Perform visual and mechanical checks for adequacy of cable tray grounding; verify that all takeoff raceways are bonded to cable trays. Test entire cable tray system for continuity. Maximum allowable resistance is 1 ohm.

B. Prepare test and inspection reports.

3.07 PROTECTION

A. Protect installed cable trays and cables.
1. Install temporary protection for cables in open trays to safeguard exposed cables against falling objects or debris during construction. Temporary protection for cables and cable tray can be constructed of wood or metal materials and shall remain in place until the risk of damage is over.
2. Repair damage to galvanized finishes with zinc-rich paint recommended by cable tray manufacturer.
3. Repair damage to paint finishes with matching touchup coating recommended by cable tray manufacturer.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 27 1000 - STRUCTURED CABLING

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Communications system design requirements.

B. Communications pathways.

C. Copper cable and terminations.

D. Fiber optic cable, terminations, and interconnecting devices.

E. Communications equipment room fittings.

F. Communications outlets.

G. Communications grounding and bonding.

H. Communications identification.

I. Cabling testing procedures.

1.02 RELATED REQUIREMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Division 07 - Firestopping.

C. Division 26 - Grounding and Bonding for Electrical Systems.
   1. Includes intersystem bonding termination.
   2. Includes bonding jumpers for bonding of communications systems and electrical system grounding.

D. Division 26 - Conduit for Electrical Systems.

E. Division 26 - Cable Trays for Electrical Systems.

F. Division 26 - Boxes for Electrical Systems.

G. Division 26 - Underfloor Raceways for Electrical Systems.

H. Division 26 - Identification for Electrical Systems: Identification products.

I. Division 26 - Wiring Devices.

J. Division 33 - Electrical Underground Ducts, Ductbanks, and Manholes.

1.03 Definitions

A. BICSI: Building Industry Consulting Services International

B. EIA: Electronic Industries Association

C. TIA: Telecommunications Industries Association

D. UL: Underwriters Laboratory

E. NFPA: National Fire Protection Association

1.04 REFERENCE STANDARDS

A. ANSI/TIA-1152-A - Requirements for Field Test Instruments and Measurements for Balanced Twisted-Pair Cabling.

B. ANSI/TIA-568-0.D - Generic Telecommunications Cabling for Customer Premises.

C. BICSI N1 - Installation Practices for Telecommunications and ICT Cabling and Related Cabling Infrastructure, 1st Edition 2019.

D. EIA/ECA-310 - Cabinets, Racks, Panels, and Associated Equipment Revision E, 2005.

E. FM (AG) - FM Approval Guide current edition.

F. ICEA S-83-596 - Indoor Optical Fiber Cables 2016.

G. ICEA S-90-661 - Category 3, 5, & 5e Individually Unshielded Twisted Pair Indoor Cables (With or Without An Overall Shield) For Use in General Purpose and LAN Communications Wiring Systems Technical Requirements 2012.

H. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

I. TIA-455-21 - FOTP-21 - Mating Durability of Fiber Optic Interconnecting Devices 1988a (Reaffirmed 2012).

J. TIA-492AAAA - Detail Specification for 62.5-um Core Diameter/125-um Cladding Diameter Class Ia Graded-Index Multimode Optical Fibers 2009b.

K. TIA-492AAAB - Detail Specification for 50-um Core Diameter/125-um Cladding Diameter Class Ia Graded-Index Multimode Optical Fibers 2009a.

L. TIA-492AAAC - Detail Specification for 850-nm Laser-Optimized, 50-um Core Diameter/125-um Cladding Diameter Class Ia Graded-Index Multimode Optical Fibers 2009b.

M. TIA-492AAAD - Detail Specification for 850-nm Laser-Optimized, 50-um Core Diameter/125-um Cladding Diameter Class Ia Graded-Index Multimode Optical Fibers 2009.

N. TIA-492CAAA - Detail Specification for Class IVa Dispersion-Unshifted Single-Mode Optical Fibers 1998 (Reaffirmed 2002).

O. TIA-492CAAB - Detail Specification for Class IVa Dispersion-Unshifted Single-Mode Optical Fibers with Low Water Peak 2000 (Reaffirmed 2005).

P. TIA-526-7 - Measurement of Optical Power Loss of Installed Single-Mode Fiber Cable Plant 2015a.

Q. TIA-526-14 - Optical Power Loss Measurement of Installed Multimode Fiber Cable Plant 2015c.

R. TIA-568 (SET) - Commercial Building Telecommunications Cabling Standard Set 2019.

S. TIA-568.2 - Balanced Twisted-Pair Telecommunications Cabling and Components Standard 2018d.

Z. UL 444 - Communications Cables Current Edition, Including All Revisions, and Edition 5, 2017.

AA. UL 514C - Nonmetallic Outlet Boxes, Flush-Device Boxes, and Covers Current Edition, Including All Revisions.

BB. UL 1651 - Fiber Optic Cable Current Edition, Including All Revisions.

CC. UL 1863 - Communications-Circuit Accessories Current Edition, Including All Revisions.

1.05 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate requirements for service entrance and entrance facilities with Communications Service Provider.
   2. Coordinate the work with other trades to avoid placement of other utilities or obstructions within the spaces dedicated for communications equipment.
   3. Coordinate arrangement of communications equipment with the dimensions and clearance requirements of the actual equipment to be installed.
   4. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Arrange for Communications Service Provider to provide service.

C. Preinstallation Meeting: Convene prior to commencing work of this section, as requested of the GC or Owner, to review service requirements and details with Communications Service Provider representative.

1.06 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for each product.

C. Sustainable Design Documentation: Submit manufacturer's product data on cable and cable insulation showing compliance with specified lead content requirements.

D. Shop Drawings: Show compliance with requirements on isometric schematic diagram of network layout, showing cable routings, telecommunication closets, rack and enclosure layouts and locations, service entrance, and grounding, prepared and approved by BICSI Registered Communications Distribution Designer (RCDD).

E. Evidence of qualifications for installer.

F. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, installation, and operation of product.

G. Test Plan: Complete and detailed plan, with list of test equipment, procedures for inspection and testing, and intended test date; submit at least 60 days prior to intended test date.

H. Field Test Reports.

I. Copper and Fiber Test reports. Document data for each measurement. Data for submittals shall be printed in a summary report that is formatted similar to Table 10.1 in BICSI TDMM, or transferred from the instrument to the computer, saved as text files, and printed and submitted.

J. Installation contractor shall register all copper and fiber test results with the manufacturer(s) to attain the manufacturers extended warranty on labor an material. The manufacturer's approved documentation shall be delivered to the Owner.

K. Project Record Documents: Prepared and approved by BICSI Registered Communications Distribution Designer (RCDD).
   1. Record actual locations of outlet boxes and Data Rooms.
   2. Show as-installed color coding, pair assignment, polarization, and cross-connect layout.
   3. Identify Data Rooms and equipment rooms by room number on drawings.

L. Operation and Maintenance Data: List of all components with part numbers, sources of supply, and operation and maintenance instructions; include copy of project record documents

1.07 QUALITY ASSURANCE

A. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

B. Manufacturer Qualifications: At least 3 years experience manufacturing products of the type specified. experience in the installation and testing of the type of system specified, and:

C. Installer Qualifications: A company having at least 3 years experience in the installation and testing of the type of system specified, and:
   1. Employing a BICSI Registered Communications Distribution Designer (RCDD).
   2. Supervisors and installers factory certified by manufacturers of products to be installed.
   3. Employing BICSI Registered Cabling Installation Technicians (RCIT) for supervision of all work.

D. Products: Listed, classified, and labeled as suitable for the purpose intended.

E. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

F. Telecommunications Pathways and Spaces: Comply with TIA/EIA-569-A.

G. Grounding: Comply with ANSI-J-STD-607-A.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Keep stored products clean, dry and in a temperature permitted by the manufacturer.

C. Test cables upon receipt at Project site.
   1. Test optical fiber cable to determine the continuity of the strand end to end. Use optical loss test set.
   2. Test optical fiber cable while on reels. Use an optical time domain reflectometer to verify the cable length and locate cable defects, splices, and connector, including the loss value of each. Retain test data and include the record in maintenance data.
   3. Test each pair of UTP cable for open and short circuits.

1.09 WARRANTY

A. See Section 017800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective Work within a 2 year period after Date of Substantial Completion.

PART 2 PRODUCTS

2.01 SYSTEM DESIGN

A. Provide a complete permanent system of cabling and pathways for voice, data, audio visual, and security communications, including cables, conduits and wireways, pull wires, support structures, enclosures and cabinets, and outlets.
   1. Comply with TIA-568 (SET) (cabling) and TIA-569 (pathways) (commercial standards).
   2. Comply with Communications Service Provider requirements.

3. Provide fixed cables and pathways that comply with NFPA 70 and TIA-607 and are UL listed or third party independent testing laboratory certified.
4. Provide connection devices that are rated for operation under conditions of 32 to 140 degrees F (0 to 60 degrees C) at relative humidity of 0 to 95 percent, noncondensing.
5. In this project, the term plenum is defined as return air spaces above ceilings, inside ducts, under raised floors, and other air-handling spaces.

B. System Description:
1. Building Entrance / Service Provider Cable: By others.
2. Backbones - Within Buildings: Copper, Category 3, 25 Pair
3. Backbones - Within Building: OM4 Multimode Fiber, 12 Strand
4. Horizontal - Provide Category 6A plenum voice and data cabling, termination devices, and outlets per drawings.
5. Provide additional outlets where indicated on drawings.

C. Equipment Room (ER)/ Main Distribution Frame (MDF): Centrally located support structure for terminating horizontal cables that extend to telecommunications outlets, functioning as point of presence to external service provider.

D. Telecommunication Rooms (TRs)/ Intermediate Distribution Frame (IDF): Support structures for terminating horizontal cables that extend to telecommunications outlets.

E. Backbone Cabling: Cabling, pathways, and terminal hardware connecting Telecommunication Rooms (TRs/IDFs) with Equipment Room (ER/MDF), wired in star topology with Equipment Room (ER) at center hub of star.

F. Cabling to Outlets: Specified horizontal cabling, wired in star topology to Equipment Room or Telecommunication Room located at center hub of star; also referred to as "links".

2.02 PATHWAYS

A. General Requirements: Comply with TIA/EIA-569-C.

B. Cable Support: NRTL labeled for support of Category 5E and above cabling, designed to prevent degradation of cable performance and pinch points that could damage cable.
1. Support brackets with cable tie slots for fastening cable ties to brackets.
2. Lacing bars, spools, J-hooks, and D-rings.
3. Straps and other devices.

C. Conduit: As specified in Division 260533.13; provide pull cords in all conduit.

D. Cable Trays: As specified in Division 260536.

E. Underfloor Ducts: As specified in Division 260539.

F. Overhead Service Entrance: Weatherhead or service entrance fitting located on outside of building with galvanized rigid steel or intermediate metallic conduit running to entrance facility.

G. Underground Service Entrance: Rigid polyvinyl chloride (PVC) conduit, Schedule 40.

H. Firestop Sleeves: Listed; provide as required to preserve fire resistance rating of building elements.
   1. Products:
      a. Hilti Fire Stopping Products; www.hilti.com
      b. STI Fire Stopping Products; www.stifirestop.com
      c. HoldRite, a brand of Reliance Worldwide Corporation; HydroFlame Pro Series/HydroFlame Custom Built: www.holdrite.com/#sle.
      d. Approved Equivalents
      e. Substitutions: See Section 016000 - Product Requirements.

2.03 Firestopping

A. Comply with requirements in Division 07 Section "Penetration Firestopping."

B. Comply with TIA/EIA-569-C.

C. Comply with BICSI TDMM, "Firestopping System" Article.

2.04 Copper Cable and terminations

A. Manufacturers:
   1. Berk-Tek
   2. Superior Essex
   3. Belden
   4. Leviton
   5. Hubbell Premise Wiring
   6. Panduit
   7. Siemon
   8. Substitutions: See Section 016000 - Product Requirements.

B. Copper Horizontal Cable:
   1. Description: 100 ohm, balanced twisted pair cable complying with TIA-568.2 and listed and labeled as complying with UL 444.
   2. Cable Type: Voice and Data: TIA-568.2 Category 6A UTP; 23 AWG.
   3. Cable Type - Voice: TIA-568.2 Category 5e UTP (unshielded twisted pair); 24 AWG.
   4. Cable Capacity: 4-pair.

C. Cable Applications: Use listed NFPA 70 Type CMP plenum cable unless otherwise indicated.
   1. Cable Applications:
      a. Plenum Applications: Use listed NFPA 70 Type CMP plenum cable.
      b. Cable Jacket Color - Voice and Data Cable: Blue.

D. Copper Cable Terminations: Insulation displacement connection (IDC) type using appropriate tool; use screw connections only where specifically indicated.

E. Jacks and Connectors: Modular 8P8C (RJ-45), non-keyed, terminated with 110-style insulation displacement connectors (IDC); high impact thermoplastic housing; suitable for and complying with same standard as specified horizontal cable; UL 1863 listed.
   1. Performance: 500 mating cycles.

2. Voice and Data Jacks: 8-position modular jack, color-coded for both T568A and T568B wiring configurations.

F. Copper Patch Cords:
1. Description: Factory-fabricated 4-pair cable assemblies with 8-position modular connectors terminated at each end.

2.05 FIBER OPTIC CABLE AND INTERCONNECTING DEVICES

A. Manufacturers:
1. Berk-Tek
2. Superior Essex
3. Belden
4. Panduit
5. Hubbell Premise Wiring
6. Corning
7. Substitutions: See Section 016000 - Product Requirements.

B. Fiber Optic Backbone Cable:
1. Description: Tight buffered, non-conductive fiber optic cable complying with TIA-568.3, TIA-598, ICEA S-83-596 and listed as complying with UL 444 and UL 1651.
2. Cable Type: Multimode, laser-optimized 50/125 um (OM4) complying with TIA-492AAAD.
3. Cable Capacity: Quantity of fibers as indicated on drawings; 24-fiber.
4. Cable Applications:
   a. Plenum Applications: Use listed NFPA 70 Type OFNP plenum cable.
5. Cable Jacket Color:
   a. Laser-Optimized Multimode Fiber (OM3/OM4): Aqua.
   b. Multimode Fiber (OM1/OM2): Orange.
   c. Single-Mode Fiber (OS1/OS2): Yellow.

C. Fiber Optic Horizontal Cable:
1. Description: Tight buffered, non-conductive fiber optic cable complying with TIA-568.3, ICEA S-83-596 and listed as complying with UL 444 and UL 1651.
2. Cable Type: Multimode, laser-optimized 50/125 um (OM4) complying with TIA-492AAAD
3. Cable Capacity: 2-fiber; Quantity of fibers as indicated on drawings.
4. Cable Applications: Use listed NFPA 70 Type OFNP plenum cable unless otherwise indicated.
5. Cable Jacket Color:
   a. Laser-Optimized Multimode Fiber (OM3/OM4): Aqua.
   b. Multimode Fiber (OM1/OM2): Orange.
   c. Single-Mode Fiber (OS1/OS2): Yellow.

D. Fiber Optic Interconnecting Devices:
1. Connector Type: Type LC.
2. Connector Performance: 500 mating cycles, when tested in accordance with TIA-455-21.
3. Maximum Attenuation/Insertion Loss: 0.3dB.

2.06 COMMUNICATIONS EQUIPMENT ROOM FITTINGS

A. Copper Cross-Connection Equipment:
   1. Manufacturers:
      a. Belden
      b. Leviton
      c. Hubbell Premise Wiring
      d. Panduit
      e. Siemon
      f. Substitutions: See Section 016000 - Product Requirements.
   2. Connector Blocks for Category 3 Cabling: Type 66 insulation displacement connectors; capacity sufficient for cables to be terminated plus 25 percent spare.
   3. Patch Panels for Copper Cabling: Sized to fit EIA/ECA-310 standard 19 inch (482.6 mm) wide equipment racks; 0.09 inch (2.2 mm) thick aluminum; cabling terminated on Type 110 insulation displacement connectors; printed circuit board interface.
      a. Jacks: Non-keyed 8P8C (RJ-45), suitable for and complying with same standard as cable to be terminated; maximum 48 ports per standard width panel.
      b. Capacity: Provide ports sufficient for cables to be terminated plus 25 percent spare.
      c. Labels: Factory installed laminated plastic nameplates above each port, numbered consecutively; comply with TIA-606.
      d. Provide incoming cable strain relief and routing guides on back of panel.

B. Fiber Optic Cross-Connection Equipment:
   1. Manufacturers:
      a. Belden
      b. Leviton
      c. Hubbell Premise Wiring
      d. Panduit
      e. Siemon
      f. Substitutions: See Section 016000 - Product Requirements.
   2. Patch Panels for Fiber Optic Cabling: Sized to fit EIA/ECA-310 standard 19 inch (482.6 mm) wide equipment racks; 0.09 inch (2.2 mm) thick aluminum.
      a. Adapters: As specified above under FIBER OPTIC CABLE AND INTERCONNECTING DEVICES; maximum of 24 duplex adaptors per standard panel width.
      b. Labels: Factory installed laminated plastic nameplates above each port, numbered consecutively; comply with TIA-606.
      c. Provide incoming cable strain relief and routing guides on back of panel.
      d. Provide rear cable management tray at least 8 inches (203 mm) deep with removable cover.
      e. Provide dust covers for unused adapters.

C. Backboards: Interior grade plywood without voids, 3/4 inch (19 mm) thick; UL-labeled fire-retardant.
   1. Size: As indicated on drawings.
   2. Do not paint over UL label.

D. Equipment Frames, Racks and Cabinets:

1. Manufacturers:
   a. Chatsworth
   b. Great Lakes
   c. Hubbell Premise Wiring
   d. Panduit
   e. Siemon
   f. Substitutions: See Section 016000 - Product Requirements.
2. Component Racks: EIA/ECA-310 standard 19 inch (482.6 mm) wide.
3. Wall Mounted Racks: Steel construction, hinged to allow access to back of installed components.
   a. Load Rating: 300 pounds.
4. Floor Mounted Racks: Aluminum or steel construction with corrosion resistant finish; vertical and horizontal cable management channels, top and bottom cable troughs, and grounding lug.
   a. Load rating: pounds (kg).
5. Freestanding Cabinets: Front and rear doors with locks; removable side panels with locks; vented top and rear door; adjustable leveling feet; cable access in roof and base; grounding bar.
   a. Load rating: 1,500 pounds.
   b. Roof mounted fan, capacity: 4.
6. Wall Mounted Cabinets: Front doors with locks, louvered side panels, top and bottom cable access, and ground lug.
   a. Cover inside of cabinet back with plywood backboard as specified.
   b. Load rating: 300 pounds.
   c. Roof mounted fan, capacity: 2.
   d. Duplex AC power outlet inside cabinet.
7. Cabinets: Steel construction with corrosion resistant finish.
8. Locks: Keyed alike.

E. Cable Management:
1. Manufacturers:
   a. Chatsworth
   b. Great Lakes
   c. Hubbell Premise Wiring
   d. Panduit
   e. Siemon
   f. Substitutions: See Section 016000 - Product Requirements.

2.07 COMMUNICATIONS OUTLETS

A. Manufacturers:
1. Belden
2. Leviton
3. Hubbell Premise Wiring
4. Panduit
5. Siemon
6. Substitutions: See Section 016000 - Product Requirements.

B. Outlet Boxes: Comply with Section 26 0533.16.
   1. Provide depth as required to accommodate cable manufacturer's recommended minimum conductor bend radius.
   2. Minimum Size, Unless Otherwise Indicated:
      a. Wall Phone Only Outlets: 4 inch by 2 inch by 2-1/8 inch deep (100 by 50 by 54 mm) trade size.
      b. Data or Combination Voice/Data Outlets: 4 inch square by 2-1/8 inch deep (100 by 54 mm) trade size.
      c. Fiber Optic Outlets: 4-11/16 inch square by 2-1/8 inch deep (119 by 54 mm) trade size.

C. Wall Plates:
   1. Comply with system design standards and UL 514C.
   2. Accepts modular jacks/inserts.
   3. Capacity:
      a. Wall Phone Only Outlets: 1 port.
      b. Data or Combination Voice/Data Outlets: 4 ports.

D. Wall Plate Material/Finish - Flush-Mounted Outlets: High impact thermoplastic, color to be selected by Architect during product submissions.

E. GROUNDING AND BONDING COMPONENTS
   1. Comply with TIA-607.
   2. Comply with Section 260526.

F. IDENTIFICATION PRODUCTS
   1. Comply with TIA-606.
   2. Comply with Section 260553.

G. SOURCE QUALITY CONTROL
   1. See Section 014000 - Quality Requirements, for additional requirements.
   2. Factory test cables according to TIA-568 (SET).

PART 3 EXECUTION

3.01 INSTALLATION - GENERAL

A. Comply with latest editions and addenda of TIA-568 (SET) (cabling), TIA-569 (pathways), TIA-607 (grounding and bonding), BICSI N1, NFPA 70, and SYSTEM DESIGN as specified in PART 2.

B. Coordinate backbone cabling with required protectors and demarcation point provided by the communications service provider.

C. Comply with Communication Service Provider requirements.

D. Grounding and Bonding: Perform in accordance with TIA-607 and NFPA 70.

E. Install firestopping to preserve fire resistance rating of partitions and other elements, using materials and methods specified in Section 07 8400.

3.02 INSTALLATION OF PATHWAYS

A. Install pathways with the following minimum clearances:
   1. 48 inches (1220 mm) from motors, generators, frequency converters, transformers, x-ray equipment, and uninterruptible power systems.
   2. 12 inches (300 mm) from power conduits and cables and panelboards.
   3. 5 inches (125 mm) from fluorescent and high frequency lighting fixtures.
   4. 6 inches (150mm) from flues, hot water pipes, and steam pipes.

B. Conduit, in Addition to Requirements of Section 26 0533.13:
   1. Arrange conduit to provide no more than the equivalent of two 90 degree bend(s) between pull points.
   2. Conduit Bends: Inside radius not less than 10 times conduit internal diameter.
   3. Arrange conduit to provide no more than 100 feet (30 m) between pull points.
   4. Do not use conduit bodies.
   5. Minimum Cover - Underground Service Entrance: Comply with NFPA 70 and Communications Service Provider requirements.

C. Pathway Installation in Communications Equipment Rooms:
   1. Position conduit ends adjacent to a corner on backboard where a single piece of plywood is installed, or in the corner of room where multiple sheets of plywood are installed around perimeter walls of room.
   2. Install cable trays to route cables if conduits cannot be located in these positions.
   3. Secure conduits to backboard when entering room from overhead.
   4. Extend conduits 3 inches above finished floor.
   5. Install metal conduits with grounding bushings and connect with grounding conductor to grounding system.

D. Outlet Boxes:
   1. Coordinate locations of outlet boxes provided under Section 26 0533.16 as required for installation of telecommunications outlets provided under this section.
      a. Mounting Heights: Unless otherwise indicated, as follows:
         1) Telephone and Data Outlets: 18 inches (450 mm) above finished floor.
         2) Wall mounted Telephone Outlets: 48 inches (1.2 m) above finished floor to top of telephone.
      b. Orient outlet boxes for vertical installation of wiring devices unless otherwise indicated.
      c. Provide minimum of 24 inches (600 mm) horizontal separation between flush mounted outlet boxes installed on opposite sides of fire rated walls.
      d. Unless otherwise indicated, provide separate outlet boxes for line voltage and low voltage devices.
      e. Locate outlet boxes so that wall plate does not span different building finishes.
      f. Locate outlet boxes so that wall plate does not cross masonry joints.

3.03 INSTALLATION OF EQUIPMENT AND CABLING

A. Cabling:

1. Do not bend cable at radius less than manufacturer's recommended bend radius; for unshielded twisted pair use bend radius of not less than 4 times cable diameter.
2. Do not over-cinch or crush cables.
3. Do not exceed manufacturer's recommended cable pull tension.
4. When installing in conduit, use only lubricants approved by cable manufacturer and do not chafe or damage outer jacket.

B. Wiring Method: Install cables in raceways and J-hooks except where cable trays are required in Drawings. Conceal raceway and cables except in unfinished spaces.
   1. 1. Install plenum cable in environmental air spaces, including plenum and non-plenum ceilings.

C. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.

D. All exposed cabling shall be installed within conduit. Conduit in exposed areas shall match the color of the wall or ceiling it is attached to. Only exceptions are in data rooms, mechanical spaces, and above concealed ceilings.
   1. Exposes Areas include but are not limited to:
      a. Gymnasiums.
      b. All open ceiling spaces.
      c. Cabling that is visible above specially designed ceilings.

E. Pre-terminated fiber optic cabling will be accepted. All devices mandated within this specification shall be used to make up this pre-terminated cable.

F. Cabling Installation:
   1. Install 110-style IDC termination hardware unless otherwise indicated.
   2. MUTOA shall not be used as a cross-connect point.
   3. Consolidation points may be used only for making a direct connection to telecommunications outlet/connectors.
   4. Do not use consolidation point as a cross-connect point, as a patch connection, or for direct connection to workstation equipment.
   5. Locate consolidation points for UTP at least 49 feet from communications equipment room.
   6. Terminate all conductors; no cable shall contain unterminated elements. Make terminations only at indicated outlets, terminals, cross-connects, and patch panels.
   7. Cables may not be spliced. Secure and support cables at intervals not exceeding 30 inches and not more than 6 inches from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
   8. Install lacing bars to restrain cables, to prevent straining connections, and to prevent bending cables to smaller radii than minimums recommended by manufacturer.
   9. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIM, "Cabling Termination Practices" Chapter. Install lacing bars and distribution spools.
   10. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.

11. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamps shall not be used for heating.

G. Service Loops (Slack or Excess Length): Provide the following minimum extra length of cable, looped neatly:
   1. At Distribution Frames: 120 inches (3000 mm).
   2. At Outlets - Copper: 12 inches (305 mm).
   3. At Outlets - Optical Fiber: 39 inches (1000 mm).

H. Copper Cabling:
   1. Category 5e and Above: Maintain cable geometry; do not untwist more than 1/2 inch (12 mm) from point of termination.
   2. For 4-pair cables in conduit, do not exceed 25 pounds (110 N) pull tension.
   3. Use T568B wiring configuration.

I. Fiber Optic Cabling:
   1. Prepare for pulling by cutting outer jacket for 10 inches (250 mm) from end, leaving strength members exposed. Twist strength members together and attach to pulling eye.
   2. Support vertical cable at intervals as recommended by manufacturer.

J. Wall-Mounted Racks and Enclosures:
   1. Install to plywood backboards only, unless otherwise indicated.
   2. Mount so height of topmost panel does not exceed 78 inches (1980 mm) above floor.

K. Floor-Mounted Racks and Enclosures: Permanently anchor to floor in accordance with manufacturer's recommendations.

L. Floor-Mounted Enclosures: Connect adjacent cabinets together and remove interior side panels.

M. Identification:
   1. Use wire and cable markers to identify cables at each end.
   2. Use manufacturer-furnished label inserts, identification labels, or engraved wallplate to identify each jack at communications outlets with unique identifier.
   3. Use identification nameplate to identify cross-connection equipment, equipment racks, and cabinets.
   4. Labels shall meet the legibility, defacement, exposure, and adhesion requirements of UL 969.
   5. Labels shall be preprinted using a mechanical means of printing (e.g. laser printer)
   6. Where used for cable marking, provide vinyl substrate with a white printing area and a clear "tail" that self laminates the printed area when wrapped around the cable. If cable jacket is white, provide cable label with printing area that is any other color than white, preferable orange or yellow - so that labels are easily distinguishable.
   7. Where insert type labels are used provide clear plastic cover over label.
   8. Provide plastic warning tape 6 inches wide continuously printed and bright colored 18" above all direct buried services, underground conduits, and duct-banks.

3.04 FIELD QUALITY CONTROL

A. See Section 014000 - Quality Requirements, for additional requirements.

B. Comply with inspection and testing requirements of specified installation standards.

C. Provide all labor, materials, tools, field-test instruments and equipment required for the complete testing, identification, and administration of the work called for in the Contract Documents.

D. Only test results with a PASS will be accepted. Field-test results with a *PASS will be rejected.

E. Testing shall be performed on each cabling link. (100% Testing)

F. All Tests shall be documented.

G. Trained technicians who have successfully attended an appropriate training program and have obtained a certificate as proof thereof shall execute the tests. These certificates may have been issued by any of the following organizations or an equivalent organization:
   1. Manufacturer of the connectors or cable.
   2. Manufacturer of the test equipment used for the field certification.
   3. Training Organizations (BICSI, Equivalent)

H. The Owner or the Owner's representative may select a random sample of five percent of the installed service links. The Owner or the Owner's representative shall test these randomly selected links. The results obtained shall be compared to the data provided by the installation contractor. If more than two percent of the sample results differ in terms of the pass/fail determination, the installation contractor under supervision of the representative shall repeat 100 percent testing at no cost to the Owner.

I. Engage a qualified testing agency to evaluate cables.

J. Cable will be considered defective if it does not pass tests and inspections.

K. Visual Inspection:
   1. Inspect cable jackets for certification markings.
   2. Inspect cable terminations for color coded labels of proper type.
   3. Inspect outlet plates and patch panels for complete labels.
   4. Inspect patch cords for complete labels.
   5. Inspect cable placement, cable termination, grounding and bonding, equipment, and patch cords, and labeling of all components.

L. Category 6A Modular Plug Termination Link Testing Requirements:
   1. Each cabling link shall be tested for:
      a. Wire Map
      b. Length
      c. Propagation Delay
      d. Delay Skew
      e. DC Loop Resistance
      f. Insertion Loss
      g. NEXT (Near-End Cross Talk)
      h. PS NEXT (Power Sum Near-End Cross Talk)
      i. ACR-N (Power Sum Attenuation to Crosstalk Ratio Near-End)
      j. ACR-F (Attenuation to Crosstalk Ratio Far-End)

k. PS ACR-F (Power Sum Attenuation to Crosstalk Ratio Far-End)
l. Return Loss

2. All installed cabling Modular Plug Terminated Links shall be field-tested and pass the test requirements and analysis as dictated by the Manufacturer to achieve the extended warranty. Any Modular Plug Terminated Link that fails these requirements shall be diagnosed and corrected until the Modular Plug Terminated Links meets the performance requirements. The final and passing results of the tests for all Modular Plug Terminated Links shall be provided in the test results documentation.
3. Modular Plug Terminated Links shall comply with the Permanent Link transmission requirements of the ANSI/TIA-568-2.D standard.
   a. The MPTL shall be tested with a Permanent Link Adapter on the Main Unit and a Patch Cord Adapter suitable for Category 6A testing on the Far End or Remote Test Equipment
4. Acceptance of the test results shall be given in writing after the project is fully completed and tested in accordance with the Contract Documents and to the satisfaction of the Owner.

M. Category 5e and Above Permanent Link Testing Requirements:
1. Each Cabling Link shall be tested for:
   a. Wire Map
   b. Length
   c. Propagation Delay
   d. Delay Skew
   e. DC Loop Resistance
   f. DC Resistance Unbalance within a pair
   g. DC Resistance Unbalance between pairs
   h. Insertion Loss
   i. NEXT (Near-End Cross Talk)
   j. PS NEXT (Power Sum Near-End Crosstalk)
   k. ACR-N (Attenuation to Crosstalk Ratio Near-End)
   l. PS ACR-N (Power Sum Attenuation to Crosstalk Ratio Near-End)
   m. ACR-F (Attenuation to Crosstalk Ratio Far-End)
   n. Return Loss
   o. TCL (Transverse Conversion Loss)
   p. ELTCTL (Equal Level Transverse Conversion Transfer Loss)
2. All installed cabling Permanent Links shall be field-tested and pass the test requirements and analysis as dictated by the Manufacturer for the extended warranty. Any Permanent Link that fails these requirements shall be diagnosed and corrected. Any corrective action that must take place shall be documented and followed with a new test to prove that the corrected Permanent Link meets performance requirements. The final and passing result of the tests for all Permanent Links shall be provided in the test results documentation.
3. Acceptance of the test results shall be given in writing after the project is fully completed and tested in accordance with the Contract Documents and to the satisfaction of the Owner.

N. Fiber Optic Cabling Test Requirements:
1. All tests performed on optical fiber cabling that uses a laser or LED in a test set shall be carried out with safety precautions in accordance with ANSI Z136.2.

2. The tests must be carried out by trained technicians who have successfully attended an appropriate training program, which includes testing with an OLTS and an OTDR and have obtained a certificate as proof thereof. These certificates may have been issued by any of the following organizations or an equivalent organization:
    a. Manufacturer of the fiber optic cable and/or fiber optic connectors.
    b. Manufacturer of the test equipment used for the field certification.
    c. Training Organizations (e.g. BICSI).
3. Link and channel test results from the OLTS and OTDR shall be recorded in the test instrument upon completion of each test for subsequent uploading to a PC in which the administrative documentation (reports) may be generated.
4. Fiber end faces shall be inspected at 200X and 400X magnification. 200X magnification is suitable for inspecting multimode and singlemode fibers. 400X magnification may be used for detailed examination of singlemode fibers. Scratched, pitted, or dirty connectors shall be diagnosed and corrected.
5. Testing shall be performed on each cabling segment (connector to connector)Testing shall be performed on each cabling channel (equipment to equipment) that is planned for use per the owner's instructions.
6. Testing of the cabling shall be performed using high-quality test cords of the same fiber type as the cabling under test. The test cords for OLTS testing shall be between 1m and 4m in length. The test cords for OTDR testing shall be approximately 100 m for the launch cable and at least 25 m for the receive cable.
7. Optical Loss Testing:
    a. Horizontal/Backbone Link:
        1) Multimode links shall be tested at 850 nm and 1300 nm in accordance with ANSI/TIA-526-14-B, one-cord reference method.
        2) Singlemode backbone links shall be tested at 1310 nm and 1550 nm in accordance with ANSI/TIA/EIA-526-7, Method A.1, One Reference Jumper equivalent method.
        3) Link attenuation does not include any active devices or passive devices other than cable, connectors, and splices, i.e. link attenuation does not include such devices as optical bypass switches, couplers, repeaters, or optical amplifiers.
    b. ODTR Testing:
        1) Fiber links shall be tested at the appropriate operating wavelengths for anomalies and to ensure uniformity of cable attenuation and connector insertion loss.
            a) Multimode: 850 nm and 1300 nm
            b) Singlemode: 1310 and 1550 nm
        2) Each fiber link and channel shall be tested in both directions.
        3) A launch cable shall be installed between the OTDR and the first link connection.
        4) A receive cable shall be installed after the last link connection
    c. Magnified End Face Inspection:
        1) Fibers shall be inspected at 250X or 400X magnification.
    d. Length Measurement:
        1) The length of each fiber shall be recorded.
        2) The optical length shall be measured using an OLTS or OTDR.

e. Polarity Testing
   1) Paired duplex fibers in multi-fiber cables shall be tested to verify polarity in accordance with Clause E.5.3 of ANSI/TIA-568-C.0. The polarity of the paired duplex fibers shall be verified using an OLTS.

8. Each cabling link shall be tested in compliance with the following Test Limits
9. Multimode Backbone: Perform tests in accordance with TIA-526-14.
10. Single Mode Backbone: Perform tests in accordance with TIA-526-7.
11. Links: Perform optical fiber end-to-end attenuation tests and field reel tests.

O. Cable Testers:
1. The field-test instrument shall be within the calibration period recommended by the manufacturer. Minimum calibration is 12 months prior to testing.
2. The tester shall have Level IIIe accuracy in accordance with ANSI/TIA-1152-A
3. The tester must be capable of storing > 10,000 results for all measurements listed above.
4. Acceptable Manufacturers:
   a. Fluke Networks
   b. Prior approved manufacturer.

P. Final Verification Tests: Perform verification tests for UTP systems after the complete communications cabling and workstation outlet/connectors are installed.
1. Voice Tests: These tests assume that dial tone service has been installed. Connect to the network interface device at the demarcation point. Go off-hook and listen and receive a dial tone. If a test number is available, make and receive a local, long distance, and digital subscription line telephone call.
2. Data Tests: These tests assume the Information Technology Staff has a network installed and is available to assist with testing. Connect to the network interface device at the demarcation point. Log onto the network to ensure proper connection to the network.

END OF SECTION

SECTION 27 4100 - AUDIO VIDEO SYSTEMS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Related Drawings:
   1. Audio Video (AV) Drawings
   2. Theatrical Drawings
   3. Electrical Drawings
   4. Architectural Drawings
   5. Technology Drawings
   6. Theatrical Rigging Drawings

C. Coordinate work with other trades to properly execute the work within this specification.

D. System features mentioned in this specification, or shown on the AV drawings, are required, whether they are listed in both places. Where there is conflict between this specification or the AV drawings, the more stringent requirement shall apply.

1.02 BIDDER RESPONSIBILITY

A. This specification and the AV drawings are detailed only to the extent necessary to show design intent and signal flow. The bidder shall examine and be thoroughly familiar with all contract drawings, design intent, systems specified, their installation, configuration, and industry best practices. The contractor is responsible for all devices and configuration required to produce a fully functional system, including devices that may not be documented on either this specification or the AV drawings. Equipment required to meet this stipulation shall be provided without claim for additional payment. Specific products to meet the required functionality are listed within this specification and notated within the AV drawing package.

1.03 SUMMAY

A. furnish and install sound, video, and communication systems as shown on drawings and as specified herein, complete with all apparatus, equipment, power supplies, wiring, labor, and services necessary to ensure a complete working system. Verify completeness of equipment listed and correctness of type numbers. Furnish and install supplementary equipment needed to meet system requirements, without claim for added payment. Labor furnished shall be specialized and experienced in systems installation.

B. Furnish any engineering services to provide a complete and professionally installed systems.

C. All areas shall receive new cabling as specified.

D. This work includes, but is not limited to the following:
   1. Furnish all back boxes and enclosures.
   2. Deliver to the job site all back boxes which are to be installed by others.
   3. Furnish and install all wire and cable.
   4. Furnish any additional items, not specifically mentioned herein, to meet system requirements as specified, without claim for additional payment. Such items may include hardware, transformers, line/distribution amplifiers, and other devices for proper installation, interface, isolation or gain structure.
   5. Programming and documenting of all software-controlled devices. Provide DSP and control system programming prior to final testing, if requested by the Consultant.
   6. Refer to Submittals section of this specification for all submittal requirements.
   7. Provide frequency scanning and coordination for all AV system wireless transmitters and receivers. Account for local frequencies used by others within the surrounding area.
   8. Setup and adjustment of signal processing, system tests and adjustments, written report, demonstration for approval, participation in acceptance tests and final adjustments where required.
   9. Submission of shop drawings prior to fabrication.
   10. Verification of dimensions and conditions at the job site.
   11. Installation in accordance with these specifications, manufacturer's recommendations, and all applicable code requirements.
   12. Setup and adjustment of signal processing, system tests and adjustments, written report, demonstration for approval, participation in acceptance tests, and final adjustments as required.
   13. Coordination with the Electrical Contractor is required to assure correct Systems conduit routing, Systems backbox locations, and clean power circuit locations as specified in Division 26 – Electrical.
   14. Coordination with the Lighting Contractor
   15. Coordination with the Fire Alarm Systems Contractor
   16. Coordination with the Tel/Data Contractor and other Low Voltage Contractors
   17. Coordination with the Owner's IT department and installers
   18. Performance standards, without claim for additional payment
   19. System Documentation
   20. Instruction of owner's operating personnel
   21. Maintenance and services for one year
   22. Guarantee all equipment and components for the specified period from the date of acceptance.

E. All work described within this section must be coordinated with other trades to ensure a successful installation.

1.04 SUBMITTALS

A. Provide Submittals in accordance with requirements of Division 01 – General Requirements and as described within this specification.

B. Bidder Qualifications (Pre-Bid Submittal):

1. Perspective bidders must be thoroughly experienced in installing, engineering, configuring and testing systems of the scope and size specified. Bidders must be a system integrator, normally engaged in the business of audiovisual and sound reinforcement system installation. Bidder shall provide a list of systems their company has furnished and installed of similar size and scope within the last (5) years. Indicate project name, address, and reference.
2. Bidder shall have qualified CTS, CTS-D, and CTS-I engineers, technicians, and project managers who will be assigned to this project. A CTS-D and CTS-I shall be employed on this project for the entirety of the installation and close-out.
3. The bidder shall have a qualified and certified system programmer who will program the system. Submit any and all manufacturer certifications related to system programming, DSP programming, and control programming.

C. Bid Submittals:
1. In conjunction with the bidding requirements set forth in the Division 01 documents, the bidder shall submit itemized unit prices for all devices, or their equivalents, listed within this specification or documented on the AV drawings.
2. The bid price shall include any Add-Alternates described.

D. Product Data: Submit manufacturer's technical data, product specifications, installation instructions, and other pertinent information as applicable for each product or material specified or required. Do not procure material or begin work until product data and shop drawing submittals have been approved. All product data shall be submitted in one submission, in PDF format, with manufacturer provided specifications and cutsheets.

E. Shop Drawings: Shop drawings shall be created in ACAD or equivalent and submitted electronically in DWG and PDF.
1. Include plan view locations, elevations, installation details, and accessories.
2. Functional Block Diagram: Show single-line interconnections between components for signal transmission and control. Show cable types and sizes. Show all transformers, switches, relays, and control circuits.
3. Drawings of loudspeaker mounting arrangements, equipment rack layouts, and receptacle and control plates and boxes.
4. Plate and panel schedule listing all plates individually with size, mounting condition, backbox size, and plate finish color.
5. Drawings of projector mounting arrangement and line of sight studies showing proper alignment and dimensions with the projection screen and projection equipment.
6. Complete list of wire run numbers and termination locations of each end.
7. Schematic diagrams of patch bays.
8. Drawings of final assemblies of loudspeaker, screen, and projector suspension equipment stamped by a certified structural engineer. Each system solution must be separately engineered, verified, and stamped.
9. Provide IP address table and addressing protocol in coordination with Owner's IT department.
10. Provide mockup of all system graphical user interface screens. Supply narrative and demonstration of all touch panel programming. Supply panel layouts and button functions listed.

11. Submit equipment rack layouts.
12. Submit samples of lettering/label size and typeface for custom plates, panels, or other equipment where required.
13. Provide EDID and HDCP management plan for all video signals.
14. Consultant and Architect shall approve all panel and furniture finishes. The Consultant and Architect may request samples of finishes which the Contractor shall provide at no additional cost to the project.
15. Provide conduit riser documented in plan and elevation view.

F. Closeout Submittals:
1. Create user manuals for all devices within the system, including instructions for how to use the device.
2. Create and mount a simplified line diagram protected in a plastic sheath and mount behind each AV cabinet.
3. Create floor plans showing locations of all faceplates, interconnections, speakers, projectors, and their cable paths, including cable identification on 11x17 drawings. Deliver to owner upon completion of the installation.
4. Create record drawings on 30x42 drawings of as-built conditions in ACAD or equivalent and deliver electronically and in PDF format.
5. Operating and Maintenance instructions for each product. O&Ms shall be complete for each device.
6. Contractor's written warranty for all parts and labor for a period of one year from project acceptance.
7. Manufacturer's standard product warranty. Extend all special warranties to project where available.
8. Equipment List: Include every piece of equipment by model number, manufacturer, serial number, location, and date of original installation.
9. List of spare and replacement parts recommended to be stored at the site for ready access.

1.05 QUALITY ASSURANCE

A. Single Source Responsibility: Obtain all materials from one source from a single approved manufacturer for each different product required.

B. All materials shall be new and shall conform to applicable provisions of Underwriters Laboratories and the American Standards Association.

C. The contractor awarded this project is responsible for all permits, licenses, and inspections unless otherwise noted.

D. Follow latest federal, state, and local electrical and safety codes. Where conflicts exist, apply the most stringent requirement.

E. Certification: CE, FCC Class A

F. Contributing Organizations – The Organizations listed below have published standards used to establish the technical references to be followed under this scope of work.
1. Acoustical Society of America (ASA) (ASC S1)

2. Alliance for Telecommunications Industry (ATIS) (ASC T1)
3. American Society of Safety Engineers (ASSE) (ASC A1264)
4. Audio Engineering Society (AES) (ASC S4)
5. Electronics Industry Alliance (EIA) (CEMA)
6. Entertainment Services and Technology Association (ESTA) (ASC E1)
7. Institute of Electrical and Electronics Engineers (IEEE) (ASC C136) (802.1)
8. International Cable Engineers Association (ICEA) Formerly IPCEA
9. International Standards Organization (ISO)
10. National Electrical Manufacturer's Association (NEMA) (ASC C119)
11. National Fire Protection Associations (NFPA)
12. National Safety Council (NSC) (ASC A10)
13. Photographic and Imaging Manufacturer's Association (PIMA)
14. Society of Motion Picture and Television Engineers (SMPTE)
15. Telecommunications Industry Association (TIA)
16. Underwriters Laboratories (UL) (ASC C101) (CE)
17. NTSC
18. National Association of Broadcasters (NAB) – System technical standards for video and RF compliance are listed in the most recent edition of the NAB Handbook

G. Applicable Performance Standards – Execute all Division work in accordance with the following standards:
   1. ANSI S4.48-1992 (R1998): Recommended Practice for the Application of Connectors, Part 1, XLR-Type polarity, and gender
   2. ANSI S4.55-1997: Recommended Practice for conservation of the Polarity of Audio Signals
   3. ANSI S4.56-1997: Recommended Practice for the subjective evaluation of Loudspeakers
   4. ANSI S12.2-1995 (R1999): Criteria for Evaluating Room Noise
   5. ANSI T1.217-1991 (R1998): Integrated Services Digital Network (ISDN) Management – Primary Rate Physical Layer
   6. ANSI T1.522-2000: Quality of Service (QOS) for Business Multimedia Conferencing. Specifies classes of Service for conferencing on IP Networks
   7. AES15: ANSI S4.49: AES Recommended practice for Sound Reinforcement Systems – Communications Interface PA-422.
   8. AES-R1-1997 AES project report for professional audio: Specifications for audio on high capacity media
   9. AES14-1992 (r1998) AES standard for professional audio equipment --Application of connectors, part 1, XLR-type polarity and gender
   10. AES24-1-1999, (Revision of AES24-1-1995) AES standard for sound system control - Application protocol for controlling and monitoring audio devices via digital data networks
   11. AES26-2001 (Revision of AES26-1995) AES recommended practice for professional audio -- Conservation of the polarity of audio signals
   12. ANSI/TIA/EIA 606-1993: Standard for the Telecommunications Infrastructure of Commercial Buildings
   13. ANSI/TIA/EIA 607-1994: Commercial Building Grounding and Bonding Requirements for Telecommunications

14. IEEE 149-1979 (R1990): Test Procedure for Antennas
15. IEEE 1100-1999: Powering and Grounding Sensitive Electronic Equipment
16. NEMA 250-2001: Enclosures for Electrical Equipment
17. SMPTE 292M: SMPTE 292M defines the base 1.485Gbps HD-SDI. Note: This standard can handle all HD formats except 1920*1080 @ 50P and 60P.
18. SMPTE 372M: Uncompressed Dual-Link HD-SDI for 50P & 60P
19. SMPTE 424M: 2.97 Gbps HD-SDI for 50P & 60P
20. TIA/EIA-568-B: Digital audio over Cat5 audio cable
21. UL 1047-1999: Isolated Power Systems Equipment
22. UL 1581-1998: Reference Standard for Electrical Wires, Cables, and Flexible Cords
23. UL 1682-1998: Standard for Safety for Plugs, Receptacles, and Cable Connectors, of the Pin and Sleeve Type up to 800 Amperes and up to 600 volts ac or dc.
24. UL 467-1998: Grounding and Bonding Equipment
25. UL 813-1999: Commercial Audio Equipment and accessories for use in commercial enterprises… this standard was originally listed for public review in the October 13, 1995 issue of Standards Action. It is being resubmitted owing to substantive changes in the text.
26. ANSI/TIA/EIA-568-A: Commercial Building Telecommunications Cabling
27. ANSI/TIA/EIA-569-A: Commercial Building Standard for Telecommunications Pathways and Spaces
28. ANSI/TIA/EIA-607: Commercial Building Grounding and Bonding Requirements for Telecommunications
29. ANSI/TIA/EIA TSB-72: Centralized Optical Fiber Cabling Guidelines
30. ANSI/TIA/EIA-526-14A: Optical Power Loss Measurements of Installed Multimode Fiber Cable Plant
31. ANSI/TIA/EIA-526-7 Measurement of Optical Power Loss of Installed Single mode Fiber Cable Plant
32. ANSI/IEEE C-2 National Electrical Safety Code how to install cabling in accordance with the most recent edition of BICSI® publications:
33. BICSI Telecommunications Distribution Methods Manual
34. BICSI Cabling Installation Manual

1.06 DELIVERY, STORAGE AND HANDLING

A. Take care in handling products in accordance with manufacturer's instructions.

B. Store indoors in original undamaged packaging, in a well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity. Store products upright in secure, protected area. Do not stack! Verify with manufacturer that site conditions are acceptable before receiving material.

C. Environmental Conditions: Capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:
   1. Interior, Controlled Environment: System components installed in temperature-controlled interior environments shall be rated for continuous operation in ambient temperatures of 36 to 122 deg F (2 to 50 deg C) dry bulb and 20 to 90 percent relative humidity.
   2. Drop shipping of equipment to the Owner's site is not allowed.

1.07 WARRANTY and Guarantee

A. All systems and components shall be guaranteed free of defects in materials and workmanship for a period of one (1) year (or to the length of the Manufacturer's warranty if longer) from the date of acceptance and shall be repaired or replaced within forty-eight (48) hours following report of such defects by the owner.

B. The Contractor shall be available on call and on eight (8) hour notice during the first month following acceptance of the system, to assist the Owner's representatives in any problems which may arise during the initial period of operation. If corrective measures on-site are required, they will be performed within 12 hours of the determination of a need for a site visit.

C. If, during the Guarantee period, any component is out of service for more than seven (7) days due to unavailability of parts or service, Contractor shall supply and install an identical new component. If an identical component is not available, Contractor will substitute equivalent equipment, with the approval of the Owner.

D. During the course of the Guarantee period, the Systems Contractor will provide the Owner with a 24 hour service phone number for emergency calls. A service engineer will respond to all emergency calls within one (1) hour. The personnel answering this call must be fully qualified to troubleshoot problems and propose solutions. A qualifying emergency event is defined as an event that may cause severe hardship or cause the systems to be inoperable or unusable for a scheduled class or event.

E. During the course of the Guarantee period, the Contractor shall provide a minimum of three (3) service visits to the site for inspection and adjustment of equipment. Contractor shall submit proposed schedule for these visits and shall notify Owner and Systems Designer in writing at least one month in advance of each visit.

F. During the course of the guarantee period, the Systems Contractor will supply the Owner with any published updates of manufacturer provided operating programs for any and all software-controlled equipment that are issued to correct "bugs". During the Guarantee period, the Owner will rely on the Systems Contractor to determine when to update the software, unless it is needed to correct a situation that renders the systems unstable, non-functional, or otherwise affects operations.

G. Repeated device failures, defined as the failure of a device or a single type of device three or more times over three contiguous months, will be considered as a failure of a manufactured system and all items of this type shall be replaced at no charge to the Owner.

H. At least one representative of the Systems Contractor, well versed in the installation and the operation of the systems, shall be on site in support of the Owner for the first significant public event in each space (as determined by the Owner) where the system will be used. The Contractor representative(s) for this event shall also be competent in show operations.

I. Contractor is to coordinate ongoing remote access to AV Systems Networks for support and troubleshooting. Owner to provide the access at their discretion.

PART 2 - PRODUCTS

2.01 SUBSTITUTIONS

A. Certain items of equipment specified by the manufacturer's type numbers to indicate an acceptable standard of quality and performance. Substitutions of equal equipment beyond the alternatives listed will be permitted only if such equipment is listed in an addendum to this specification. Address requests for listing substitutions to the Architect. With any request for substitution, include measured data providing the equivalence of the proposed substitution in quality and performance. The consultant shall be the final judge of the validity of the data submitted.

B. The submitted request shall include the following:
   1. List of advantages to the system
   2. Cost savings
   3. Printed specifications
   4. Previous field experience using the substitution.

C. Major Equipment approved manufacturer equivalents:
   1. AVoIP Video Distribution:
      a. AVPro Edge
      b. Crestron
   2. Digital Signal Processing and Control:
      a. Symmetrix
      b. Biamp
   3. Loudspeakers:
      a. Community
      b. D&B Audio
   4. Wireless Microphone Systems:
      a. Sennheiser
   5. Digital Mixing and Digital Snake:
      a. Yamaha
   6. Electric Screen:
      a. DA-LITE
   7. Large Format Projector:
      a. Panasonic
      b. Christie
   8. AV Cabinets & Racks:
      a. Hubbell
      b. Equivalent
   9. Assisted Listening Systems:
      a. Williams AV
   10. Digital Audio Distribution:
      a. Biamp
      b. RDL

2.02 MAJOR EQUIPMENT

GREENWICH CENTRAL MIDDLE SCHOOL MAJOR EQUIPMENT - SPECIALTY AV

1. Contractor shall confirm all quantities against drawings and specifications.
2. Where discrepancies between drawings and specifications are present, the stronger and more stringent requirement shall be furnished.
3. This list shall not be considered a complete list of required material. Contractor shall furnish all required material for a fully functional system.
4. Finish color of all facilities panels and equipment in public view (touch panels, loudspeakers, custom panels, faceplates, etc. must be confirmed with the architect.

2.03 GENERAL EQUIPMENT

A. Whenever any equipment is specified by manufacturer and model number, it is for purposes of establishing a standard of quality, performance, construction and function.

B. All materials and equipment shall be new and of the latest design or model offered for sale by the manufacturer.

C. Equipment models provided shall operate at the required AC line voltage and frequency.

D. Contractor shall provide quantities as indicated in the equipment list, detail drawings, location drawings, schedule of terminations, and as required for a complete installation.

2.04 AUDIO & VIDEO WIRE AND CABLE

A. All wire numbers listed in the drawings are Belden unless otherwise noted.

B. THHN wire is not an allowable substitute for twisted pair stranded loudspeaker wiring.

C. Approved manufacturers: Belden, Canare, Gepco, West Penn, Whirlwind

D. Where conflict exists with any codes or ordinances, such codes and ordinances shall take precedence.

E. Where conflict exists with electrical specifications, the higher standard or more stringent requirement shall apply.

2.05 SPECIFICATIONS – RACK MOUNT PANELS

A. Material: 11 gauge steel or 1/8" Aluminum, minimum thickness Finish: Black or to match adjacent equipment

B. Size: 19" wide, standard EIA mounting hole spacing, height as specified

2.06 SPECIFICATIONS – BACK BOX ENCLOSURES

A. Material: Code grade steel

B. Finish: Black or galvanized Size: As specified

2.07 SPECIFICATIONS – PLUG BOX AND TERMINATION PANELS

A. Material: 11 gauge steel or 1/8" Aluminum, minimum thickness Finish: Black (unless instructed otherwise by Architect)

B. Size: As specified

C. Approved Manufacturers: Steel City, Raco, Hoffman, Whirlwind, Pro Co, Wireworks

2.08 AUDIO TRANSFORMERS

A. All transformers shall be selected for proper interface and loading in the circuits as required by as-built conditions and per manufacturer's recommendations.

2.09 LOUDSPEAKER RIGGING EQUIPMENT:

A. Provide rigging for loudspeakers and suspended loudspeakers. Provide with sufficient number of suspension points for field adjustment of loudspeaker aiming. Color to determine color. Verify that adequate clearance from all other hanging components and adequate clearance from structural steel is provided. Provide all required hardware necessary for the safe and proper installation of loudspeakers.

B. Available manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated in the Work, include but are not limited to:
   1. APE Rigging
   2. Polar Focus

2.10 DETAIL DRAWINGS

A. Furnish all materials and labor to provide complete and finished work even though not specifically shown on the drawings.

B. Detail drawings are located in large format AV drawings.

PART 3 EXECUTION

3.01 AUDIO SYSTEM REQUIREMENTS

A. Requirements herein refer to materials and work which are related to or part of the Systems. Where conflict exists with other specifications concerning such work or materials, this specification takes precedence unless otherwise approved in writing by the Owner.

3.02 INSTALLATION OF SYSTEMS

A. Locate all apparatus requiring adjustments, cleaning or similar attention so that it will be accessible for such attention. Equipment racks shall be positioned to permit full access for operation and service.

B. Furnish and install brackets, braces and supports. All mounting hardware shall be included.

C. All bolts and fasteners must be Grade 5 or better.

D. All bolted attachments to have lock washers or other self-locking fasteners.

E. Provide all required mounting brackets and framing, hardware and components, safety systems and rigging systems using the following minimum design factors (given as ratio of working load limit (WWL) : rated breaking load):
   1. 5:1 – Minimum design factor for all mounting components regardless of mounting condition.

2. 5:1-8:1 – Minimum design factor for manufacturer provided mounts & assemblies where engineered stamped documentation and destructive testing data is provided by manufacturer.
3. 10:1 – For all hardware and connecting assemblies between manufacturer rated assemblies when equipment is hung above the general public. This includes but is not limited to wire rope, bolts, shackles, turnbuckles, beam clamps, supplemental steel provided by Systems contractor and other connecting hardware.
4. Design factor calculations to be provided with all equipment mounting details.
5. Systems Contractor shall coordinate required additional blocking, supplemental steel or channel strut supports with Main Contractor & specific trade contractors.
6. All mounting systems not provided as a complete package from a single manufacturer must be engineered, approved, and have drawings stamped by a professional rigging engineer or licensed structural engineer, as approved by the Main Contractor. The engineer shall verify that the design meets or exceeds design criteria for this particular use case. Each mounting system solution must be separately engineered, verified, and stamped.

F. All supporting structures and enclosures supplied by the Contractor not having a standard factory paint finish shall be painted. Paint specifications will be supplied by the Architect or indicated herein.

G. Provide custom color or finish for any equipment or materials supplied which are exposed to public view. Color and finish of all such equipment or materials shall be approved in writing by the Architect. This does not exclude equipment or materials where standard colors and finishes may be specified herein.

H. Finish of blank panels and custom assembly panels shall match adjacent equipment panels. Verify all panel colors with Architect. All color choices should be clearly indicated on panel drawing submittals, and on the panel schedule.

I. Switches, connectors, jacks, receptacles, outlets, cables and cable terminations shall be logically and permanently marked. Custom panel nomenclature shall be engraved, etched or screened. Markings for these items are detailed in the drawings to ensure consistency and clarity. Verify any changes in working type size and/or placement with the Systems Designer prior to marking.

J. Protect equipment and related wiring where construction conditions may cause damage or environmental conditions exceed manufacturer’s specifications.

K. The standard reference for the layout and construction of the system shall be:
   1. Giddings, Philip. Audio Systems Design and Installation.

L. All cables, connectors and peripheral equipment’s required to attain a fully functional system shall be furnished, installed and performed by the contractor awarded this project.

M. Locate all apparatus requiring adjustments, cleaning or similar attention so that it will be accessible for such attention.

N. Provide custom color or finish for any equipment or materials supplied which are exposed to public view. Color and finish of all such equipment or materials shall be approved in writing by

the Architect. This does not exclude equipment or materials where standard colors and finishes may be specified herein.

O. Switches, connectors, jacks, receptacles, outlets, cables and cable terminations shall be logically and permanently marked. Custom panel nomenclature shall be engraved, etched or screened. Markings for these items are detailed in the drawings to ensure consistency and clarity. Verify any changes in working type size and/or placement with the Systems Designer prior to marking.

P. The equipment specified herein is designed to operate in environments of normal humidity, dust and temperature. Protect equipment and related wiring where extreme environmental conditions can occur.

Q. Secure equipment firmly in place, including control panels, loudspeakers, conduit, amplifiers, racks, and cables. Make fasteners and supports to support their loads with a safety factor of at least three.

R. Take precautions to prevent electromagnetic and electrostatic hum. Install equipment to provide safe operation.

S. Clearly, consistently, logically, and permanently mark connectors, jacks, relays, receptacles, cables, and cable terminations.

T. All wall mounted devices shall be mounted, secured and installed in accordance with SEI/ASCE 7 and shall additionally withstand the effects of any motions within the building as determined by SEI/ASCE 7.

U. The term “WITHSTAND” means “THE UNITS WILL REMAIN IN PLACE WITHOUT SEPARATION OF ANY PARTS FROM THE DEVICE WHEN SUBJECTED TO THE SEISMIC FORCES SPECIFIED AND THE UNIT WILL BE FULLY OPERATIONAL AFTER THE SEISMIC EVENT.”

V. SECURE ATTACHMENT OF AUDIO VISUAL ITEMS

1. To ensure proper attachment of Fixtures, Furnishings & Equipment items, including and Technology items, where “items” are attached to wall, ceiling, overhead structure, and/or floor, Contractor shall provide information adequate for architect to verify items, attached to wall, ceiling, and/or floor are attached securely and per manufacturer’s recommendations. Architect’s review may be implemented during submittal process.
2. Contractor shall provide struts, hangers, fasteners, safety harnesses, channels, bolts, screws, rods, etc. to securely attach items to existing structure as required to meet field conditions and meet applicable codes.

W. CONDUIT

X. Review and coordinate Systems conduit installation with the electrical contractor to ensure proper operation of the Systems.

Y. All wiring shall be in conduit unless authorized by the Architect, approved by the Systems Designer, and permitted by code. Exceptions are short runs at rack terminations where there is no means of connecting conduit to the equipment.

Z. Where installed exposed, conduits shall be parallel with or at right angles to walls or ceilings and shall be supported from walls or ceilings by means of approved galvanized iron clamps or hangers. Conduit connections to equipment racks shall be insulated.

AA. Minimum size conduit shall be 3/4 inch. All conduit shall be sized for maximum 40% fill or less if required by code.

BB. No conduit run between pull boxes/termination boxes may exceed 100 feet in length.

CC. No conduit run shall have more than 180 degrees of combined turns between pull boxes/termination boxes, and no single turn may exceed 90 degrees.

DD. Conduit containing STP, UTP, and COAX wire types must be installed so that the final length of the cable runs does not exceed maximum allowable cable lengths.

3.03 CONDUIT SEPARATION

A. Systems wiring is divided into wiring groups according to their nominal voltage levels (refer to Schedule of Terminations):

	Wiring Type
Group A	Microphones and other sensitive wiring (0 mV to 100 mV)
Group B	Line level wiring (100 mV to 10 V)
Group C	Loudspeaker and control wiring (10 V to 70 V)
Group D	Telephone, video, control and digital circuits
Group E	Fiber optic cable
Group F	Spare Conduit

1. Note: These wiring groups must never be intermixed within a given conduit run or junction box.

B. Minimum conduit separation between conduits carrying wiring of different groups is:

	Group A	Group B	Group C	Group D	Group E
Group A	adjacent	6"	12"	12"	adjacent
Group B	-	adjacent	12"	6"	adjacent
Group C	-	-	adjacent	6"	adjacent
Group D	-	-	-	adjacent	adjacent
Group E	-	-	-	-	adjacent
Group F	12”	12”	12”	12”	adjacent

1. Note: Ninety degree crossings in close proximity are acceptable. Separations must be maintained until within six feet of box or gutter entry.

C. Minimum conduit separation between conduits carrying Systems wiring and other electrical service conduit is:

	Group A	Group B	Group C	Group D	Group E	Group F
Dimmer controlled	24"	12"	6"	12"	adjacent	24”

lighting						
SCR controlled services	24"	12"	6"	12"	adjacent	24”
220/440V circuits	6"	6"	adjacent	adjacent	adjacent	24”
All other services	6"	6"	adjacent	adjacent	adjacent	24”

1. Note: Heavy current demands in or long parallel runs with the above services may dictate greater separations to avoid interference in the Systems. Separations must be maintained until within six feet of box or gutter entry.

D. Contractor must have written authorization from the Systems Designer for any conduit installation which does not conform to these requirements. The conduit separations above are based on the use of EMT conduit for all AV and other signals. Separations where Rigid conduit is utilized for AV systems and/or other adjacent systems may be halved. Separations where PVC conduit is utilized for AV systems and/or other adjacent systems must be doubled. The Contractor must request information on separation adjustments for each instance where a different type of conduit than what is listed above is used.
   1. ELECTRICAL POWER

E. Review and coordinate electrical power system installation including grounding with the electrical contractor to ensure proper operation of the Systems.

F. Verify that all AC power circuits designated for Systems equipment are wired with correct polarity and isolated ground. Report in writing any discrepancies found to the Architect for corrective action.

G. Provide distribution of electrical power within the equipment racks with a minimum of one spare AC receptacle for each four in use per branch circuit.

3.04 STEEL SUPPORTS

A. Fabricate and install any supports so that the installation does not weaken or overload the building structure. Do not impose the weight of equipment or fixtures on supports provided for other trades or systems. No drilling or cutting of concrete beams, joists, or structural steel, nor welding to structural steel, will be permitted except as authorized, in writing, by the Architect.

3.05 BOXES

A. With the exception of portable equipment, all boxes, conduits, cabinets, equipment and related wiring shall be held in place and the mounting shall be plumb and square.

B. All boxes shall be securely mounted to building structure. All boxes shall be installed so that wiring contained in them is accessible. Install blanking devices or threaded plugs in all unused holes.

C. Wiring groups and circuits shall be isolated as indicated herein. Common pull or junction boxes are not permitted except as authorized, in writing, by the Systems Designer.

D. Clean all box interiors before installing plates, panels or covers.

E. Using permanent marker on the box or on wire tags, indicate the lengths of installed cable for all COAX and Category wiring inside the box.

F. Using permanent marker, inside the box, indicate the box name, for example “AA”.

3.06 WIRING METHODS AND PRACTICES

A. Provide installation of all Systems wire and cable, ensuring proper:

B. Pulling Tensions

C. Quantities

D. Types

E. Lengths
   1. Routing

F. Wire Group Separation
   1. Identification

G. The interconnection of equipment in a rack shall use the same wire by type as specified for runs external to racks unless otherwise indicated on AV single line drawings. All wiring within racks shall be direct between devices without splices.

H. Connector polarity shall be maintained except for terminations at equipment manufactured to other standards. In the event that manufactured equipment can be ordered with, or internally set to, various standards, the equipment shall be configured as follows:
   1. Polarity for XLR style connector shall be: pin 2-high, pin 3-low, and pin 1-shield.

I. Polarity for TRS style connector shall be: tip-high, ring-low, and sleeve-shield.

J. Spare wire runs of each group and type shall be pulled to each termination location. The number of spares shall be ten percent of those in actual use or one, whichever is greater.

K. Splicing of cables is not permitted between terminations of specified equipment.

L. Do not pull wire or cable through any box fitting or enclosure where change of raceway alignment or direction occurs without written approval from the Systems Designer; do not bend conductors to less than recommended radius. Employ temporary guides, sheaves, and rollers to protect cables from excess tension, abrasion or damaging bending during installation.

M. Provide wire pulling lubricants and pulling tensions in accordance with the wire and cable manufacturer's recommendations.

N. All wires shall be permanently identified at each wire end by marking with self-laminating adhesive labels fully covered with clear heat shrink tubing, and a chart kept of each wire's function. This applies to wire within a rack assembly as well as wire running in conduit.

O. Wire ends should be wrapped with heat shrink tubing. Each shield or drain wire should be covered with heat shrink to avoid unintentional connections.

P. Use Wago or Entrelec DIN rail mounted terminal blocks for all terminal block wiring connections. Do not exceed one wire per terminal connection point. Do not cut strands from conductors to fit lugs or terminals. Spare terminal blocks, equivalent to 10% of those in actual use, shall be provided.

Q. Form, in an orderly manner, all conductors in enclosures and boxes, wire ways and wiring troughs, providing circuit and conductor identification. Tie using wraps of appropriate size and type. Limit spacing between ties to six (6) inches and provide circuit and conductor identification at least once in each enclosure.

R. Provide service loops, minimum 6', at each termination so that plates, panels, patch bays, and equipment can be dismounted and placed on an adjacent horizontal work surface allowing for safe service and inspection without disconnection.

S. Maximum installed length of Category cables is 200'

T. Maximum installed length of Coaxial cable for HD-SDI, 3G-SDI, 6G-SDI, and 12G-SDI is 200'

U. Provide lengths of installed cables marked inside each termination back box using legible and permanent markings.

3.07 GROUNDING

A. Audio system wiring shall conform to the following procedures:
   1. Audio equipment AC ground pins shall connect to AC isolated ground.
   2. Audio equipment chassis shall connect to AC isolated ground or rack frames.
   3. Audio rack frames shall connect to AC isolated ground bus in panelboard by means of #2 gauge (minimum) conductor.
   4. Audio shields between AC powered pieces of equipment, where signal shield is tied to chassis ground, shall be directly connected to ground at the initiating end only. Capacitively terminate the receiving end with a 0.1µF capacitor.
   5. Audio signal paths between AC powered pieces of equipment shall be connected using balanced lines and/or transformer isolation as required. No unbalanced signal paths may be connected to the patch bay.
   6. Isolate all Systems wiring from racks, back boxes and conduit.
   7. Isolate all Systems racks from conduit and other conductive surfaces. Use insulated bushings for conduit connections and a dielectric plinth between racks and conductive flooring materials.
   8. AC isolated ground system shall be isolated from all other facility grounds except at the single point of connection at the AV isolation Transformer.
   9. All metallic conduit, boxes and enclosures shall be grounded in accordance with the current National Electrical Code.

B. Metallic enclosures containing active equipment shall be grounded with due regard for the minimization of electrical noise. This may include the provision of grounding conductors separate from the AC ground.

3.08 EQUIPMENT RACKS

A. The equipment racks shall be considered as custom assemblies and shall be assembled, wired and tested in the Contractor's shop. Assembly of racks on-site will not be permitted, without written approval from the Systems Designer (except for system wiring which must terminate directly to the patch bays via soldering, punch-down or other non-connectorized termination process).

B. Placement of equipment in equipment racks, as shown in the drawings, is for maximum operator convenience. Verify any changes in placement of the equipment with the Systems Designer before assembly.

C. Racks shall be installed plumb and square without twists in the frames or variations in level between adjacent racks.

D. All wire, cable, terminal blocks, rack mounted equipment, and active slots of card frame systems shall be clearly and logically labeled as to their function, circuit, or system. Labeling on manufactured equipment shall be by engraved plastic laminate or by thermal printer on adhesive tape, with white lettering on black background or dark background that is similar to panel finish.

E. Provide stiffeners to custom panels to prevent panel deformation during normal plugging or switching operations.

F. All wires and cables used in assembling custom panels and equipment racks shall be formed into harnesses which are tied and supported in accordance with accepted engineering practice.

G. Harnessed cables shall be combed straight, wrapped every six (6) to ten (10) inches, and attached to the structure as necessary. Each cable that breaks out from a harness for termination shall be provided with an ample service loop so that panels, patch bays, and equipment can be dismounted and placed on an adjacent horizontal work surface allowing for safe service and inspection without disconnecting.

H. Harnessed cables shall be formed in either a vertical or a horizontal relationship to equipment, controls, components or terminations.

I. Cable shields shall be connected to the isolated ground system with due regard for ground loops. (See Giddings reference book, Chapter 10)

J. All system components and related wiring shall be located with due regard for the minimization of induced electro-magnetic and electrostatic noise, for the minimization of wiring length, for proper ventilation, and to provide reasonable safety and convenience for the operator.

K. All rack mounted equipment, with front panel controls, shall be provided with security covers to avoid tampering with preset levels. If specific security covers are not included in the equipment

list, the Contractor will provide the manufacturer's security cover for each specified device or a suitable alternate.

L. Every device shall be installed with regard for proper polarity. Absolute polarity shall be maintained through the entire Systems signal chain.

M. Any permanently mounted electronic device must be balanced. Contractor will provide balancing transformers for unbalanced equipment connections where necessary.

N. System Power Control
1. Provide a relay-controlled power switching system with a master power switch and power-on indicator for the system. Connect the master power switch to control each receptacle in the rack except for one of the spare receptacles. Label unswitched receptacles "UNSWITCHED".
2. Middle Atlantic USC-6R
3. Atlas Sound SACR-191
4. Juice Goose CQ1520
    1) Quantity: A/R

O. Remote Power ON/OFF Switch:

P. Provide a single-Rackspace mounted remote power key switch with LED status indicators.
    a. Middle Atlantic K-DEC in rack panel
    b. Juice Goose Equal
    c. Equal
        1) Quantity: A/R
2. VERIFICATION TESTS

Q. Test each point to point wire segment individually, and test any linkage of multiple point to point cables that form an end to end link.

R. Contractor must document all verification test requirements and results for submission (see 3.13.A below).

S. Confirm that each individual wire and cable run (whether in a rack or in conduit) is identified with a unique number. These numbers are affixed to both ends of each cable and are clearly visible. Provide a complete list of these numbers along with the termination location of each end of the wire run.

T. Verify all circuits and extensions for correct connection, continuity and polarity. Absolute polarity must be maintained between all points in the system.

U. Identify installed length of all copper and fiber cabling.

V. Confirm that all system outputs are free of spurious signals including oscillations and radio frequency signals. A wide band oscilloscope shall be used to verify this condition.
1. Confirm that the system is free of audible clicks, pops, and other noises when any operating control is activated, with or without input signal.

W. For all microphone lines, tie lines, return lines and effect loudspeaker lines, confirm:

1. Proper circuits appearing at each termination location
2. Proper circuits appearing at each jack bay position
3. Continuity of all conductors
4. Proper polarity is maintained
5. Absence of shorts between conductors within each circuit
6. Absence of shorts between circuit conductors and conduit

X. Perform a sweep test to 0.5MHz

Y. For RF Coaxial cabling confirm:
1. Receptacles output does not exceed +15dBmv (50-400MHz - +6 dBmv minimum, above 400MHz - +3dBmv minimum)
2. For each modulated video output, tap to meet +9dBmv (+/- 3dBmv)
3. Verify that all TV channels are visible and free of any interference or signal distortion
4. Frequency sweep test from 5MHz to 1000MHz.

Z. For all other Coaxial cabling confirm:
1. Verify that the installed cable meets, at a minimum, the requirements set forth in SMPTE ST 2081 for 6G-SDI single-link and 12G-SDI dual-link.
2. Verify that TDR impedance is 75 +/-3 ohms
3. Frequency sweep test from 5MHz to 6GHz.

AA. For Category Cabling:
1. Use Category 6A cable pair tester to verify compliance with TIA/EIA standards referenced above (including all current addendums)
2. Test each cable using the permanent link procedure for opens, shorts, reversals, cross twists and mis-wiring. Check NEXT, ELFEXT, Delay Skew, Return Loss, and Alien Crosstalk.

BB. Report all mis-wiring or failures found and report retests as needed.

CC. If any conductors report open or short, replace the entire wire and re-test.

DD. For Fiber cabling:
1. Using appropriate test devices and proper factory terminated jumpers, measure all fiber optic line attenuations, end to end, as required by TIA/EIA-526-14A.
2. Optical budget may not exceed the cable performance by length plus splice and connector losses (0.03 dB for each fusion splice, 0.3dB for each mechanical splice, and/or 0.4 dB for each connector).
3. Overall attenuation must meet TIA/EIA-568B standards. Perform attenuation tests at 850nm and 1300nm.

EE. Confirm that loudspeakers and mountings are free of buzzes and rattles when the loudspeaker is swept with sine wave tones over its rated bandwidth at one-half (1/2) its maximum rated power.

FF. For all permanently mounted loudspeaker terminations, provide impedance measurement of each pair of loudspeaker lines with all loudspeakers connected and all amplifiers disconnected. These measurements shall be documented as editable tabular data listing impedance for each 1/3 octave band from 20 Hz to 20 kHz and shall be accurate to the nearest tenth of an Ohm.

GG. For all intercom terminations, confirm proper operation by initiating and receiving audio communication and call light. For single lines connected to a matrix, test each line with each channel in the matrix. Verify that all channels are quiet and without spurious noise.

HH. For all electronic devices mounted in racks and connected to patch bays, confirm:
1. Every input and output is balanced.
2. Proper polarity is maintained throughout the entire audio path.
3. Tip connection of each TRS jack is connected to the positive terminal of each corresponding input or output.

II. For all devices requiring IP addressing:
1. IP addressing scheme must make use of subnets such that all devices, regardless on which network (Audio, Video, Control, or House) they reside, have a unique IP address to eliminate the possibility of duplicate IP addresses if networks are inadvertently cross-patched.
2. All devices must have static IP addresses.
3. Create a spreadsheet of all devices and their IP addresses, Subnet Masks, MAC Addresses, and other pertinent IP configuration information.
4. Coordinate all IP addressing schemes with the Owner.

JJ. If the Audio, Video, and Control network switches are dedicated to these systems and the systems do not rely on Owner furnished and configured network switches:
1. Configure network switches to operate properly and provide the proper network configurations to support the network devices and protocols used by those devices.
2. Configure, as needed, VLANS, IGMP, QOS, and other protocols requiring configuration to provide a fully functioning and robust network system.
3. With all networks configured and operating, and all network devices configured and operating, confirm that the networks are behaving as expected and as required.

KK. Electrical Contractor, coordinating with the Systems Contractor must confirm that there are no shorts between the Neutral and Isolated Ground conductors, and between the isolated ground conductor and building ground for each AV Technical Power circuit. Electrical Contractor, coordinating with the Systems Contractor must confirm there are no Bootleg Grounds or Neutral-Ground Reversals on each AV Technical Power circuit.

LL. The Contractor is responsible for the programming and configuration of all DSP systems and control systems necessary as specified in this project specification and AV large format drawings.
1. Programming and configuration must be complete and ready prior to System Designer’s arrival for verification of functionality and acceptance testing.
2. Programming for the DSP systems must contain control pages to support normal operations, and to support Acceptance Testing and System Tuning operations, as described in this specification and the large format AV drawings.
3. Programming for the Control Systems must include all master controller code and touch panel code and graphics, working together to provide the function as described in this specification and the large format AV drawings.

MM. Test all Audio, Video, and Control system controls, including but not limited to mixing consoles, switchers, routers, touch panels, paging stations, volume controls, and source selectors for proper operation.

NN. Test proper operation of any portable controls at each designated control location (Stage Manager's rack, for example).

3.09 INITIAL ADJUSTMENT

A. All initial adjustments must be documented and submitted as part of the Verification Test Reports (see 3.13).

B. Make all adjustments and modifications so that the system is operational and fully functional including but not limited to:

C. Update all device software and firmware to the latest manufacturer's recommended release that allows for proper operation with ALL OTHER DEVICES in the systems.

1. Make all adjustments and modifications for system gain structure per recommendations of major component manufacturers.
2. Properly configure all EDID and HDCP settings to allow for proper function of all video systems.
3. Install all programming for digital mixing consoles, DSP, Control and any other software based devices in the systems, and verify that audio and video signal passes as designed through these systems. Verify that control systems function as specified. Contractor to provide initial DSP and control system programming prior to acceptance testing, one full set of programming changes and adjustments, prior to handover to the Owner, and one additional set of changes and adjustments during the initial warranty period, as part of the base scope of work.
4. Properly balance all 70 Volt loudspeaker zones to be consistent from zone to zone using amplifier settings and loudspeaker taps to adjust for differing loudspeakers or installation height. All 70 Volt loudspeakers within a given zone must not have a broadband SPL variation of greater than +/- 2dB.
5. Properly adjust delay and equalization for all loudspeaker systems using SIM, SMAART or other similar dual FFT type measurement devices. All testing and adjustment shall be in accordance with all manufacturer recommendations and industry standard practice. Contact the Systems Designer for further system delay and equalization requirements.
6. Capture traces showing magnitude and phase response for each loudspeaker or loudspeaker cluster before and after equalization and delay adjustments.
7. Capture traces showing magnitude and phase response for the systems operating as a whole from 3 locations in each major seating area. One of these areas should be the House Mix Position, if applicable.
8. Equalization and timing of the loudspeaker systems shall be further adjusted as required by the Systems Designer and Owner during Acceptance Testing.

3.10 VERIFICATION TEST REPORT

A. Submit written report detailing the results of Initial Adjustments and Verification Tests. Report to include, at minimum, the following:

1. Copies of all relevant drawings, charts, test instrument data, and photographs.
    a. PDF copies of all available manufacturers' operation and service literature for each major system component.
    b. Copy of all programming files including, but not limited to, Audio DSP programming and Graphic User Interface (GUI) files, Control system Touch Panel GUI files and control system control programming files including un-compiled source codes.
    c. All other documentation and results of testing and initial settings as referenced in 3.11, and 3.12 above.
    d. Written certification that the installation conforms to the requirements stated herein, is complete in all respects, and is ready for inspection, Acceptance Testing, and tuning.
2. Prepare and submit an InfoComm standard Commissioning Checklist for each system in this specification.
3. Prepare and submit a training syllabus for Owner training (see section 3.15).

B. This report shall be completed and submitted to the Systems Designer for review a minimum of five (5) days prior to Acceptance Testing and final tuning.

3.11 ACCEPTANCE TESTING

A. Acceptance Testing shall be performed by the Systems Designer and Contractor during a period designated by the Architect. Contractor shall furnish a minimum of two (2) technicians or one technician per Systems Designer commissioning team, for the acceptance testing period, and one or more engineers fully capable of programming DSP and Control systems and making any other engineering adjustments to equipment in the systems. Contact Systems Designer for number of commissioning teams that will be deployed. For Bid purposes assume there will be 1 commissioning team.

B. The minimum time required for Acceptance Testing is 2 working days, including 1 days of dedicated quiet time. Coordinate this time so that free access, work lighting, and electrical power are available on the site.

C. Ensure that Systems areas are in a clean and orderly condition ready for acceptance testing.

D. Be prepared to verify the performance of any portion of the system by demonstration, listening tests and instrumented measurements.

E. Be prepared to facilitate the visual inspection of system components and wiring, including removal of termination panels for inspection of wiring termination and wire management practices.

F. Be prepared to demonstrate all software and control systems.

G. Be prepared to go through the commissioning checklist and verify all items as complete.

H. Make additional mechanical and electrical adjustments within the scope of the work and which are deemed necessary by the Systems Designer as a result of the Acceptance Tests. This may

include realigning of loudspeaker systems, changes in system gain structures, grounding, filtering or interfaces.

I. Final acceptance will be contingent upon issuance by the Systems Designer of a letter of acceptance stating that the work has been completed and is in accordance with the contract documents.

J. Contractor will bear any costs incurred for additional Systems Designer's time and expenses due to failure to have the system functioning in accordance with specification requirements at the times scheduled for Systems Designer's Acceptance Testing.

K. Confirm that each individual wire and cable run is identified with a unique number. These numbers are affixed to both ends of each cable and are clearly visible. Provide a complete list of these numbers along with the termination location of each end of the wire run.

L. Confirm that all system outputs are free of spurious signals including oscillations and radio frequency signals. A wide band oscilloscope shall be used to verify this condition.

M. Confirm that the system is free of audible clicks, pops, and other noises when any operating control is activated, with or without input signal.

N. For all microphone lines, tie lines, return lines and effect loudspeaker lines, confirm:
1. Proper circuits appearing at each termination location.
2. Proper circuits appearing at each jack bay position.
3. Continuity of all conductors.
4. Proper polarity is maintained.
5. Absence of shorts between conductors within each circuit.
6. Absence of shorts between circuit conductors and conduit.

O. Confirm that speakers and mountings are free of buzzes and rattles when the speaker is swept with sine wave tones over its rated bandwidth at one-half its maximum rated power.

P. For each installed data network cable or fiber optic cable confirm conformance to the specified TIA/EIA performance standards

3.12 USER TRAINING

A. Contractor will provide in-depth training in operation and regular maintenance of all systems and on all equipment included in the scope of work contained in this specification and the AV large format drawings.

B. Training to include (but is not limited to):
1. Detailed operation of mixing consoles, video switchers and routers, computer control systems and other essential system elements as relevant to their installation in this project.
2. Maintenance and repair of system equipment, including replacement procedures for user-replaceable parts.
3. Review of Operation and Maintenance Manual (See 3.16)

C. Contractor will provide a minimum of (2) training sessions of four hours each with times and dates to be approved by the Owner.

D. The first session shall take place in the presence of the Systems Designer and shall occur directly after the completion of Acceptance Testing. If the Systems Designer, Owner, and/or Architect judge any work to be deficient and/or not substantially complete at the time scheduled for training, the training will be postponed until the Systems Designer, Owner, and Architect judge the entire AV system conforms to this specification and the AV large format drawings.

E. Contractor will bear any costs incurred for additional Systems Designer's time and expenses due to failure to have the system functioning in accordance with specification requirements at the times scheduled for User Training.

3.13 SYSTEM DOCUMENTATION

A. Within thirty (30) days of the Acceptance Testing, prepare and submit a CD-ROM of the preliminary Operation and Maintenance manual for approval by the Systems Designer. Manual to include, at minimum, the following documents in PDF format:
   1. Table of contents
   2. Written Guarantee and service policy
   3. Basic power on/off and operational procedure
   4. Copies of all shop drawings which have been updated to include any changes made during the installation process
   5. All available manufacturers' operation and service literature for each major system component
   6. One line signal flow diagram with all cable runs and patch points identified by alpha-numeric character
   7. Copy of the Verification Test report
   8. Copy of conduit riser diagram
   9. Copy of the final tuning settings as provided by the Systems Designer
   10. Copy of the IP Addressing table
   11. Copy of all uncompiled source codes and configuration files which have been updated to include any changes made during the installation process.

B. Systems Designer will review the above system documentation. Upon approval, Contractor shall prepare and submit to the Owner:
   1. Five (5) copies of the final Operation and Maintenance manual on CD-ROM or DVD.
   2. Two (2) hard copies of the final Operation and Maintenance manual printed and neatly bound

C. Provide framed or laminated copy of the as-built signal flow diagram for each theater to be mounted in each control room. This diagram shall have all cable runs and patch points identified by alpha-numeric character.

END OF SECTION

SECTION 27 5116 - PUBLIC ADDRESS SYSTEM

PART 1 – GENERAL

1.01 SECTION INCLUDES

A. Central Control sound system

B. Volume limiter/compressors

C. Speakers

D. Preamplifiers

E. Power amplifiers

F. Equipment cabinet

G. Equipment rack

H. Telephone paging adapters

I. Noise-operated gain controllers

J. Battery backup power unit

K. Conductors and cables

1.02 RELATED DOCUMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section "Summary", Paragraph 1.1A, entitled "Related Documents."

B. Related Drawings

C. "T" Drawings – Technology Plans

D. Related Sections:

E. Section 271000 – "Structured Cabling"

F. Section 275313 – "Clock Systems"

G. Section 274100 – "Audio Visual Systems"

1.03 GENERAL REQUIREMENTS

A. The conditions of the General Contract (General, Supplementary, and other Conditions) and the General Requirements are hereby made a part of this Section.

B. All bids shall be based on the equipment as specified herein. The catalog numbers and model designations are that of the basis-of-design: Bogen Nyquist E7000 Series IP-Based Communications System.
   1. Approved Alternates:
   2. Telecor Equivalent
   3. Valcom Equivalent

C. Contractors who wish to submit alternative equipment shall provide the specifying authority with the appropriate documentation at least 10 business days prior to bid opening. The submitted documentation must provide a feature-by-feature comparison identifying how the proposed equipment meets the operation and functionality of the system described in this specification. Prior to bid date, the contractor shall provide adequate and complete submittal information, which shall include but not be limited to specification sheets, working drawings, shop drawings, and system demonstration. The alternative supplier-contractor must also provide a list to include six installations identical to the proposed system.

D. The contractor shall provide the FCC registration number of the proposed system, where applicable.

E. Final approval of the alternative system shall be determined at the time of job completion. Failure to provide the "precise functional equivalent" shall result in the removal of the alternative system at the contractor’s expense.

F. The contractor for this work shall have read all the bidding requirements, the general requirements of division xx, and the contract proposal forms, and shall be held to the execution of this work. The contractor shall be bound by all the conditions and requirements therein.

G. The contractor shall be responsible for providing a complete functional system, including all necessary components whether included in this specification or not.

H. In preparing the bid, the contractor should consider that no claim will be made against the owner for any costs incurred by the contractor for any equipment demonstrations requested by the owner.

1.04 REFERENCE STANDARDS

A. NFPA 70 – National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

1.05 SCOPE OF WORK

A. The contractor shall supply and install all equipment, accessories, and materials in accordance with these specifications and drawings to provide a complete and operating IP-Based Communications System including but not limited to:

1. The platform shall provide complete Nyquist E7000 intercom and employ state of the art IP Technology including the minimum functions listed.
    a. Intercom call between staff locations and classrooms with Unlimited Station capacity
    b. Interactive Facility Maps
    c. User customizable Announcements with priority
    d. Text-to-Speech Announcements
    e. Emergency Classroom Check-In can be used to enhances campus security
    f. Emergency or Normal Announcements are capable of being recorded and activated by a speed dial on an administrative console, DTMF, wireless panic button, mobile app, web browser or external IP networked system using HTTPS URL-based Application Programming Interface (API)
    g. Internal clock is synchronized with NTP network time server whether on the LAN, WAN or Internet keeping the Scheduled events (Bells) and Announcements accurate within milliseconds.
    h. Audio distribution allow for scheduled or manually activated audio to be activated from the Admin Web UI, contact closure, Admin phone and/or by use of Routines
    i. Unlimited Schedules
    j. Unlimited Time, Paging, and Audio Zones
    k. Unlimited Page Stacking/Queueing
    l. Unlimited Scheduled events
    m. Unlimited Scheduled Audio events
    n. Integrated Internet Radio Source
    o. Email Notifications and Alerts the system can send an email with a system event, contact closure, or when a Routine has been activated to name a few
    p. Supervised Station Status system can be setup to send an email when a Nyquist device goes offline.
    q. Clock / Messaging Display capability improves school communications
    r. Alert Filters – Allow facilities to monitor for such as weather events, earthquakes, tornados, tsunami, volcanoes, public health, power outages, and many other National Weather Alerts emergencies and warnings.
    s. Multi-Site All Call paging allows authorized users to make normal district wide pages
    t. Multi-Facility Emergency All-Call paging allows authorized users to make emergency district wide pages
    u. Administrative Graphical User Interface or GUI that can be used by technicians or Administrative: CoS and Roles define who has access to what parts of the GUI
    v. Push-to-Talk Microphone
    w. Ambient Noise Sensing

B. The system shall have a Routines feature that allows staff to activate via Admin Web UI, dial string, panic button, mobile app, API or with an Admin phone touch interface. Routines can automatically launch a procedure, or sequence of actions, that the E7000 system executes as a result of an input trigger. Routines are designed with school security plans and can support crisis plans for situations such as school lockdown, weather events, or emergency evacuation.

1. Direct Inward Station Access or DISA allows administrator or first responder or emergency personnel with proper login codes to call into the system from outside the school into any classroom, zone, or entire facility with customer supplied SIP enabled Telephone Network. DISA is designed to allow remote monitoring, Facility All-Call or Zone Paging, and two-way conversation from outside the facility.
2. Authorized staff can use the Admin Web UI to configure the Clock/Messaging Display function. They can use it to create messages that will display on monitors connected to the 10-Watt plenum-rated Intercom Modules with HDMI 1.3 (max. 1920 x 1080 @ 24/30 Hz) output or the NQ-GA10PV devices in a selected zone, multiple zones, or to specific stations. When creating the message, you can set several options, including when and how long the messages are displayed, priority of messages, and the appearance of the messages. The schedule programming allows the event names to be displayed analog or digital clock along with day and date on an NQ-GA10PV Display. You can also remove messages from the message queue either manually or via a Routine.
3. The ADA requires that title II entities (State and local governments) and title III entities (businesses and nonprofit organizations that serve the public) communicate effectively with people who have communication disabilities. The goal is to ensure that communication with people with these disabilities is equally effective as communication with people without disabilities. With this in mind the Bogen Nyquist E7000 helps people who have vision disabilities with clear audio paging, messaging and hearing disabilities with visual messaging to any display to assist in communicating.
4. Interactive Facility Maps that are intuitive to use. Simply click on a classroom or area of the GUI and it can initiate an intercom, page or drill to another map level. I addition when the system is in Check-In mode the classroom has a pop up of a room's video feed via the Maps view if equipped. The system shall allow authorized staff to use the Map-based Audio/Video room monitoring during emergency check-in. Systems that don't have provisions for this are not considered equal.
5. In the event of wide area network or WAN outage every facility must be capable of operating standalone and allow for all features listed within this specification to work. Systems that rely on the WAN to operate shall not be considered for comparison in this bid.
6. Manage Check-In functionality that allows staff to quickly verify that they are aware that a check-in event is underway and are reporting classroom status for their assigned classrooms or areas. For staff to check-in all they have to do is press their Call Switch after they have completed their required check-in procedure. Examples of check-in events include but are not limited to weather related shelter-in-place, safety related lockdown, fire evacuation, room occupancy.
7. The E7000 has a Disable Audio feature that can be activated via contact closure from fire alarm or security system, Admin Web UI, dial string, panic button, mobile app., API or with an Admin phone touch interface. When the E7000 has its Audio Disabled the follow features are disabled: programmed or manually activated audio distribution, Zone Paging, normal announcement files, All-Call Paging, manual normal tones and scheduled event tones.
8. Optional password protection for multi-site emergency all-Call, multi-site all-call, facility page. Emergency all-call page, all-call page, emergency announcement, announcement, zone page, alarm, and tone are used to prevent unauthorized use of the system.

9. Text-to-Speech option allows Admin Web UI users to add custom announcements into the system by simply typing the text that you want converted to speech for this announcement. The system will then generate a .wav file that can be used by the E7000 system. Systems that don't offer Text-to-Speech options shall not be equivalent.
10. Installation Wizards are available for installers to reduce the setup time on major components in the system programming. Included wizards are as follows: Customer Information, Dialing Length, Station, User, Time Zone, Network Time Server, and Zones as a minimum.
11. The public address system shall integrate with the PBX/VoIP within the school for complete access to this system from any handset part of the PBX/VoIP.
12. The public address system shall integrate with the access control system. Upon activation of threat levels in the access control system, the public address system shall broadcast emergency announcements pre-recorded by the Owner. The contractor shall coordinate the pre-recorded messages, testing with the access control system, and configuration of what threat level activates what announcement. Configure these messages with the security consultant, public address designer, and Owner.
13. The public address system shall integrate with the Fire Alarm annunciation system to announce emergencies from the fire-alarm system through the public address system.

1.06 SUBMITTALS

A. Product Data: Provide data showing electrical characteristics and connection requirements. Indicate layout of equipment mounted in racks and cabinets, component interconnecting wiring, and wiring diagrams of field wiring to speakers and remote input devices.

B. Test Results: Indicate satisfactory completion of each recommended by the manufacturer.

C. Manufacturer's installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, installation, and starting of product.

D. Manufacturer's Certificate: Certify that products meet or exceed the specified requirements.

E. Manufacturer's Field Reports: Indicate that installation is complete and system performs according to specified requirements.

F. Project Record Documents: Record actual locations of speakers, control equipment, and outlets for input/outlet connectors.

G. Operation Data: Include instructions for adjusting, operating, and extending the system.

H. Maintenance Data: Include repair procedures and spare parts documentation.

I. Specification sheets on all items including cable types

J. Outline drawing of system control cabinet showing relative position of all major components

K. Shop drawings, detailing integrated electronic communications network system including, but not limited to, the following:

1. Station wiring arrangement
2. Equipment cabinet detail drawing

L. Wiring diagrams showing typical connections for all equipment

M. Numbered Certificate of Completion for installation, programming, and service training, which identifies the installing technician(s) as having successfully completed the Nyquist E7000 technical training course provided by the Bogen Communications, Inc.

1.07 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70 and Federal Communications Commission.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience with field service facilities within 100 miles of the project.

C. Supplier Qualifications: Authorized distributor of specified manufacturer with minimum three years documented experience.

D. Installer Qualifications: Authorized installer of specified manufacturer with service facilities within 100 miles of the project.

E. Products: Listed, classified, and labeled as suitable for the purpose intended.

F. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

G. All items of equipment shall be designed by the manufacturer to function as a complete system and shall be accompanied by the manufacturer's complete service notes and drawings detailing all interconnections.

H. The contractor shall be an established communications and electronics contractor that maintains a locally run and operated business and has done so for at least 10 years. The contractor shall be a duly authorized distributor of the equipment supplied with full manufacturer's warranty privileges.

I. The contractor shall show satisfactory evidence, upon request, that he or she maintains a fully equipped service organization capable of furnishing adequate inspection and service to the system. The contractor shall maintain at his or her facility the necessary spare parts in the proper proportion as recommended by the manufacturer to maintain and service the equipment being supplied.

1.08 SINGLE SOURCE RESPONSIBILITY

A. Except where specifically noted otherwise, all equipment supplied shall be the standard product of a single manufacturer of known reputation and a minimum of 30 years of experience in the industry. The supplying contractor shall have attended the manufacturer's installation and

service training classes. A certificate of this training shall be provided with the contractor's submittal.

1.09 SAFETY / COMPLIANCE TESTING

A. The communications system and its components shall, where applicable, bear the label of a Nationally Recognized Testing Laboratory (NRTL), such as Environmental Technology Laboratory (ETL), and shall be listed by their re-examination service. All work must be completed in strict accordance with all applicable electrical codes, under direction of a qualified and factory-approved contractor, and to the approval of the owner.

B. Bogen's Nyquist E7000 solution is consistent with those NEMA SB 40-2015 requirements that specifically apply to school paging and intercom systems only as outlined within the ANSI/NEMA SB 40-2015 standards publication.

1.10 IN-SERVICE TRAINING

A. The contractor shall provide a minimum of eight hours of in-service training with this system. These sessions shall be broken into segments, which will facilitate the training of individuals in the operation of this system including Admin Web UI Dashboard operation, Scheduling, and Audio Distribution as a minimum. Operation manuals shall be provided at the time of this training.

1.11 WIRING

A. System wiring and equipment installation shall be in accordance with generally accepted engineering best practices as established by the EIA and the NEC. Wiring shall meet all state and local electrical codes. All wiring shall be tested to be free from grounds and shorts.

B. All system wiring shall be labeled at both ends of the cable. All labeling shall be based on the room 1numbers as indicated in the architectural graphics package.

C. Wiring shall be done per manufacturer's recommendation (Cat 5 or West Penn #357) depending on speaker type. All terminal connections are to be on barrier strips.

1.12 PROTECTION

A. The contractor shall provide all necessary transient protection on the AC power feed and on all station lines leaving or entering the building.

B. The contractor shall note on their system drawings, the type and location of these protection devices and all wiring information. Such devices are not to be installed above the ceiling.

1.13 SERVICE AND MAINTENANCE

A. The contractor shall, at the owner's request, make available a service contract offering continuing factory authorized service of this system after the initial hardware and software warranty periods.

B. System shall include software maintenance that includes bug fixes and new feature releases for a period of five years. In addition, the contractor shall provide at the owner's request additional maintenance contracts that are available as one-year, three-year, and five-year extensions. The contractor shall provide a 24-hour response time from call by customer.

C. The system manufacturer shall maintain engineering and service departments capable of rendering advice regarding installation and final adjustment of the system.

PART 2 - SYSTEM SPECIFICATION

2.01 MANUFACTURERS

A. The Equipment specified herein shall be considered basis of design. Public address system headend equipment shall be from one manufacturer.
   1. Approved Public Address System Manufacturers:
      a. Bogen Nyquist E7000 IP-based paging and intercom solution manufactured by Bogen Communications, Inc. – Basis of Design
      b. Telecor IP/Analog Hybrid System
      c. Valcom IP/Analog Hybrid System

B. The intent is to establish a standard of quality, function, and features. It is the responsibility of the contractor to ensure that the proposed product meets or exceeds every standard set forth in these specifications.

C. The functions and features specified are vital to the operation of this facility; therefore, inclusion in the list of acceptable manufacturers does not release the contractor from strict compliance with the requirements of this specification.

2.02 EQUIPMENT

A. Install and configure the equipment below as required by the Contract Drawings and functionality of the system in order to furnish a complete, fully-functional Public Address system.
   1. Nyquist NQ-SYSCTRL System Controller
      a. Configuration and management via a Web-based Graphical User Interface (GUI)
      b. Wizard based setup for quick installation
      c. Remote access from virtually any PC/MAC, tablet, or mobile device
      d. Continuous monitoring of stations and appliances to ensure system operation
      e. Dual network adapters to allow the System Controller to operate on two separate networks
      f. Music automatically added to music library and playlist from USB port

g. Network-based audio that can be sourced (input) from any number of Nyquist appliances (NQ-P0100, NQ-A2xxx, NQ-A4xxx, etc.)
h. Ample storage for music files, recorded announcements, and call recordings
i. G722 and OPUS audio codec support to deliver superior HD audio quality
j. Convection air cooled; fan-less design for quiet, maintenance-free operation
k. Wall, rack, or shelf mountable

2. Nyquist NQ-E7030 Analog Station Bridge (ASB)
   a. 24 station interface supporting analog speakers and call switches
   b. 120-Watts of available power at 25-Volts
   c. Two dynamic talk paths/amplification channels
   d. Support Category G wiring or better
   e. 25/70-volt speaker(s), ceiling-mounted, wall-mounted, and paging horns
   f. CAN Bus 2.0 interface designed for support of Nyquist Digital Call Switch (DCS) NQ-E7020 that can initiate Normal, Urgent, or Emergency priority calls, all with options for Privacy Mode
   g. Analog/Mechanical Call Switches capable of placing Normal, Urgent, or Emergency priority calls, Bogen CA15C rocker style momentary call button
   h. Wall, rack, or shelf mountable
3. Nyquist NQ-P0100 Matrix Mixer Pre-Amplifier (MMPA)
   a. No less than four Mic/Line inputs used for analog audio input like AM/FM Tuner or CD Player
   b. Channel 4 configurable for Push-to-Talk MIC application
   c. Line Level output to drive external amplifier
   d. Software programmable configuration and operation
      1) Push-to-Talk Channel
      2) Push-to-Talk Type
      3) Push-to-Talk Zone
      4) Mixer Channels
   e. Configurable built-in DSP
      1) Noise Gate
      2) Compressor/Limiter functions, etc.
      3) Tone Controls: Low Shelving, Mid Bandpass and Hi Shelving
      4) Multi-band Parametric EQ
      5) Variable Low-Cut/High-Pass filters
      6) CH1 can be configured as a digital AES/EBU (AES3) input
   f. USB 2.0 host port, Type-A connector (future use)
   g. Powered by 100V – 240V Universal AC Mains
   h. Wall, rack, or shelf mountable
4. The Nyquist two and four channel amplifiers available in the following number of channels and watts
   a. NQ-A2060 two channel with 60 watts per channel
   b. NQ-A2120 two channel with 120 watts per channel
   c. NQ-A2300 two channel with 300 watts per channel
   d. NQ-A4060 four channel with 60 watts per channel
   e. NQ-A4120 four channel with 120 watts per channel

f. NQ-A4300 four channel with 300 watts per channel
g. These amplifiers shall include GUI based DSP controls; 16-band Graphic Equalizer; Signal Present and Clip Monitor; Adjustable High Pass, Low Pass, and Bandpass Filters; Noise Gate; Compressor/Limiter; and 7-band Parametric Equalizer. Outputs shall be provided for 4-, 8-ohm, 25V, and 70V distributed systems.
h. Bridged or Mono Mode
i. Integrated Digital Signal Processor
    1) Noise Gate
    2) Compressor/Limiter functions, etc.
    3) Tone Controls: Low Shelving, Mid Bandpass and Hi Shelving
    4) Multi-band Parametric EQ
    5) Variable Low-Cut/High-Pass filters
j. One Line-Level Input on two channel amplifiers
k. Two Line-Level Inputs on the four channel amplifiers
l. 100/1000 GB ethernet connection
m. USB 2.0 host port, Type-A connector (future use)
n. 100V – 240V Universal AC Mains
o. Wall, rack, or shelf mountable
p. The amplifiers shall carry the necessary safety agency listings for both the US and Canada. The amplifier shall employ convection air cooling. Amplifiers that require fans for cooling shall not be considered equal.

5. Nyquist NQ-E7010 Input/Output Controller
    a. Power over Ethernet 802.3af compliant
    b. 8 x Dry Contact Closure Inputs
    c. 8 x Relay Driver Outputs (Open-Collector)
    d. USB 2.0 host port, Type-A connector (future use)
    e. Software programmable configuration and operation including; Contact Type, Extension, Name, Close Interval, Actions (911, Audio, Alarm, Announcement, All-Call, Multi-Site-Emergency-All-Call, Emergency-Call, Emergency-All-Call, Hourly, Audio-Disabled, No Action, Page, Tone, Enable-Audio and Manual), Action ID, Zones, Close Extension, Dashboard Type, Dashboard Title, Dashboard Scope, Dashboard Text, Dashboard Style, Email and Routines
    f. Wall, rack, or shelf mountable
6. Nyquist NQ-GA10P 10-Watt Intercom Module
    a. Power over Ethernet 802.3af compliant
    b. Low-impedance (8-ohm) speaker output. Designed for use with Drop-In Ceiling Speaker CSD2X2L/U
    c. Network-based audio output (paging, intercom, audio distribution)
    d. Talkback support
    e. Push-to-Talk Microphone that can be routed anywhere over Bogen’s Nyquist network
    f. Ambient Noise Sensor connection for Amplifier volume output control
    g. DSP-based noise rejection and voice bandwidth optimization
    h. Web-based configuration

i. Analog Call Switch support (Bogen CA15C, or equivalent)
j. Digital Call Switch support (Bogen NQ-E7020)
k. Audio Active Control SPDT Relay Output Rated at 2A
l. In-wall, in-ceiling, shelf, or device mountable UL 2043 plenum-rated package
m. Integrated slotted mounting flanges
n. Available PS4815W 48VDC External Power Supply when PoE isn't available

7. Nyquist NQ-GA10PV 10-Watt Intercom Module with HDMI Clock/Messaging Display.
   a. HDMI 1.3 (max. 1920 x 1080 @ 24/30 Hz) output that can be configured many ways:
      1) Analog Clock with Messaging
      2) Digital Clock with Messaging
      3) Single Column Messaging
      4) Two Column Messaging
      5) Three Column Messaging
      6) Priority Fullscreen Messaging
   b. Power over Ethernet 802.3af compliant
   c. Low-impedance (8-ohm) speaker output. Designed for use with Drop-In Ceiling Speaker CSD2X2L/U
   d. Network-based audio output (paging, intercom, audio distribution)
   e. Talkback support
   f. Push-to-Talk Microphone that can be routed anywhere over Bogen's Nyquist network
   g. Ambient Noise Sensor connection for Amplifier volume output control
   h. DSP-based noise rejection and voice bandwidth optimization
   i. Web-based configuration
   j. Analog Call Switch support (Bogen CA15C, or equivalent)
   k. Digital Call Switch support (Bogen NQ-E7020)
   l. Audio Active Control SPDT Relay Output Rated at 2A
   m. In-wall, in-ceiling, shelf, or device mountable UL 2043 plenum-rated package
   n. Integrated slotted mounting flanges
   o. Available PS4815W 48VDC External Power Supply when PoE isn't available
8. Nyquist NQ-GA20P2 Plenum-Rated 20-Watt Integrated Amplifier
   a. Single 20-watt, 8-ohm speaker output
   b. Single Balanced Line Output
   c. Power over Ethernet Plus (PoE+) 802.3at compliant
   d. Nyquist network-based audio output (paging, intercom, audio distribution)
   e. Web-based configuration
   f. Front panel Power and Status LEDs
   g. In-wall, in-ceiling, shelf, or device mountable UL 2043 plenum-rated package
   h. Integrated slotted mounting flanges
   i. Available PS4830W 48VDC External Power Supply when PoE+ isn't available
   j. NQ-T1100 VoIP Admin Phone Color Touch Display (aka Admin Station)
   k. 7" 800 x 480-pixel color display with backlight
   l. Touch screen display for one touch operation
   m. Full-duplex hands-free speakerphone with AEC

n. Call hold
o. Mute
p. Redial, call return, auto answer
q. PoE (802.3af) Class-3 support
r. Headset with EHS support
s. Dual Gigabit Ethernet ports
t. Desk Mountable
u. Optional Wall mount available

9. NQ-T1000 VoIP Staff Phone LCD Display (aka Staff Station)
   a. 132 x 64-pixel graphical LCD with backlight
   b. Two-port 10/100M Ethernet Switch
   c. Full-duplex hands-free speakerphone with AEC
   d. Call hold
   e. Mute
   f. Redial, call return, auto answer
   g. PoE (802.3af) Class-3 support
   h. Dual-color (red or green) illuminated LEDs for line status information
   i. Two 10/100M Ethernet ports
   j. Wall or desk mountable
10. Optional third-party equipment support
   a. Telephony interface device(s) for FXO/FXS analog port connectivity
   b. Third-party hardware FXS gateway support includes:
      1) Two port FXS gateway Cisco SPA-112 typically used for analog interface to existing PBX CO port support
      2) 24 port FXS gateway Yeastar TA-2400 typically used for analog staff phone support

2.03 COMPONENTS AND DESCRIPTIONS

A. The Nyquist E7000 Series Educational System is a software-based VoIP paging and intercom system.

B. The System must be capable of supporting existing Bogen Multicom 2000 and Bogen Quantum Multicom IP wiring, 25-Volt speakers and analog call-switches, and equivalent competitive systems utilizing the existing architectural numbering scheme. The VoIP capabilities of the Nyquist system will enable the support of the features across the Nyquist appliances within the facility. The following sections define how the system handles each of the features in the system. Systems that do not allow the reuse of existing wiring or numbering scheme shall not be deemed acceptable. Systems that do not allow appliances to be seamlessly integrated via the existing customers LAN are not considered equal.

C. Nyquist E7000 Software
   1. The Nyquist E7000 software is pre-installed on a Nyquist NQ-SYSCTRL System Controller or can be optionally installed on a dedicated dealer or customer supplied server. An unlimited number of facilities can be networked into a Nyquist-based District.

2. Audio shall be transmitted between the System Controller and the Nyquist appliances using the customer supplied LAN/WAN using both G.722 and Opus 48k audio encoding and streaming technology to deliver High Definition DVD quality audio. Systems that do not use G.722 and Opus for audio encoding and streaming shall not be deemed equivalent.
3. Installers have the ability to verify that the Nyquist System Controller can access Internet-based URLs required for the system to run properly by clicking on the "Check Internet Site Access" on the license activation wizard. If the installer made mistakes in configuring the network the install has the ability to go back and make changes to the network by clicking on the “Network Wizard” button.
4. The Nyquist software and Nyquist appliances firmware shall be upgradeable via the Nyquist Web UI System Update page that contains a list of available Nyquist software updates. When automatic software check and download are enabled, new software updates will automatically be downloaded and appear in the System Update list, and a dashboard message will be displayed to announce newly available software. Release notes can be viewed for each available update. System updates can be started via the System Update list. The System Update page includes a "Check for System Updates" button that can be used to manually check for and download available Nyquist software updates.
5. Prior to preforming Nyquist updates the technician shall have the ability to verify if the default gateway, Network Time Protocol, and Domain Name Servers are configured and available, to obtain network interface and routing tables status, and to display the Nyquist E7000’s public IP address. See "Check Internet Site Access" under "System Parameters”. The E7000 system can be setup to automatic check for new Nyquist System software and automatic download of new Nyquist System Software
6. It shall be possible for a Nyquist facility to make “station-to-station” calls and “remote facility” All-Call pages to a single facility or to all Nyquist facilities in a district via the Nyquist Web UI or an Admin Station. Systems that require remote viewing software or other application software to be installed/loaded on to additional servers or PCs to make station-to-station calls and remote facility All-Call or district paging shall not be considered equivalent.
7. The Nyquist software is designed to handle all facility and district-wide communications, including but not limited to, inter-facility intercom calling and paging, district-wide Emergency All-Call and local facility point-to-point calls. Via the Nyquist Web UI, every facility shall be configured with the IP addresses of all the other remote facilities within the district. To ensure that these communications are operating correctly at all times the Nyquist appliances are supervised and remote facilities are monitored, if a device or facility has a fault the system can send and/or email and also display a message if a device changes state. System that don’t provide Station Supervision and remote Facility Monitoring shall not be considered.
8. Nyquist can support an unlimited number of facilities; however, the maximum number of simultaneous remote facility intercom calls supported is based on the actual performance of the WAN and the Nyquist System Controller CPU load.
9. The voice quality of the facility calls may vary based on the WAN conditions. The maximum network bandwidth that All-Call and Zone Paging uses is average of 0.086 Mbps (Multicast G.722), and intercom calls average of 0.171 Mbps (unicast, G.722).

10. The system shall facilitate the repetitive playing of Normal or Emergency audio tones or announcements directed to an All-Call or a Paging Zone until stopped by the Nyquist user via the Web UI, an Admin Station, or a dry contact closure connected to the Nyquist I/O Controller NQ-E7010.
11. Through the use of Routines, a trained individual can create a routine that can perform a sequence of events that can include the repetitive playing of normal or emergency audio files, make or break contact closure(s), display different messages in different areas, send email(s), and place a phone call (if equipped) offsite and play a pre-recorded message. Routines can be triggered/started by Application Programming Interface (API) or the playing of normal or emergency audio files, make or break contact closure(s) or almost any feature or function in the E7000 system. The system must also be capable of executing multi-site Routines (e.g., supports District-wide lockdown). Systems that don't provide Routines are not equal.
12. A built-in Master Clock shall be included to automatically control class change bells or other time-based events. The Master Clock shall have an unlimited number of Events that may be programmed into any of the unlimited number of Facilities, unlimited number of Schedules, and unlimited number of Holiday events. The schedules shall be nameable for easy selection when assigning schedules to days or overriding a schedule. Schedules can be overridden via the Admin Web UI or Admin phone.
13. Network Time Synchronization. The system shall be capable of periodically updating/synchronizing the processor's time with a Network Time Server running Network Time Protocol (NTP) via the school's LAN network. Systems that do not provide Network Time Synchronization will not be deemed equivalent. The Nyquist server can be the NTP server for other devices on the LAN such as IP clocks and other IP devices.

D. Nyquist E7000 System Software Application
1. The Nyquist software is pre-installed on the Nyquist System Controller, and upon boot-up, users can log in to the Nyquist application via a web browser that supports WebRTC. Systems that require Com Port redirect software, client PC application, software or serial-to-Ethernet adapters for user access are not deemed equal. Communications between the System Controller and the Web UI(s) shall be via secure Hyper Text Transfer Protocol (HTTPS) connections (i.e., https://).
2. The Nyquist Web UI shall be configured with four different default user access levels, based on four unique user roles. Systems that do not provide unlimited access levels and unlimited number of user roles are not considered equal.
3. The four default roles shall be: admin, optech, operator, and user. These roles provide a starting point/example for administrators to create additional roles
4. Only a user assigned the admin role shall be able to provide access to users, giving them the ability to create, delete, edit, and view system parameters.
5. Only an Administrator shall have the ability to adjust roles and Class of Service (CoS) of users. The roles determine if users can view the definable data objects that can include configuration, alarms, and performance data and if users can perform certain operations based on the user's role and station's CoS. All changes to roles and CoS are effective immediately, without the need to restart the browser or reboot the System controller or server.

6. The Nyquist Web UI Dashboard shall provide full administrative capabilities to manage/operate the following system features:
    a. Calling/Paging – Used to access directory, dial pad, Page Exclusion, Call Forwarding, Zone Page, Record Page, Prepending Page, All-Call, Emergency All-Call, Manage Check-in and operate Routines.
    b. Multi-Site Calling/Paging – Used for Facility Page, Multi-Site All Call, and Multi-Site Emergency All Call.
    c. Tones/Announcements – Used for Tones, Announcements, Alarms, Stop Announcement, Display Message, and Remove Message.
    d. View Weekly Schedule – Used to show the current active Bell Schedules.
    e. Audio Distribution – Used to distribute audio sources to Stations, Audio Zones or entire facility. Operators can create an unlimited number Audio Distributions as needed by the facility
    f. Enable or Disable Audio – Used to place the Nyquist system into Page Exclusion mode (i.e., “mute” the system) when a contact closure is supplied from the fire alarm panel. Systems that do not provide this capability are deemed not equal.
7. Systems that require application software to be installed on a PC to manage the above features shall not be considered.
8. To facilitate installation and configuration of the system, additional Web UI menus are required. The menus shall only be visible to users with the correct roles and CoS. The navigation menus found on the Web UI shall be as follows:
    a. System Parameters – Allow installers to adjust core system parameters including Product License, Restart Server, Station Supervision, Email Configuration, System Update, Shut Down Server, Check Internet Site Access, Check Server Status, Edit system tools and adjust all the System Parameters.
    b. Zones and Queues – Allow installers to create and modify Paging, Time, and Audio Zones. Installers can also setup Queues that can be used to eliminate feedback.
    c. Schedules – Allow installers and administrators to create bell schedules for multiple Schools, predefine alternative schedules to run, prevent the bells from ringing on a holiday, and schedule an announcement to play. The system shall allow an unlimited number of schedules to operate simultaneously within a facility.
    d. CoS Configuration – Allow the installer to create, modify, and delete CoS groups that control station access to the following features: Call-in Level, Zone Paging, All-Call Paging, Emergency All-Call, Inter-Facility Call/Page, Audio Distribution, Remote Pickup, Join Conversation, Call Forwarding, Walking Class of Service, External Call Routing, Call Transfer/3-way Calling, Manually Activate Tone Signals, Call Any Station, Manage Recording, Monitor Calls, Monitor Locations, Conference Admin, Conference User, Voicemail, Record Calls, Activate Alarm Signals, Disable Audio, Enable Audio, Allow Callee Auto-answer, District Paging, Inter-Facility Features, Manage Output Contacts, and Execute Routines.
    e. Admin Groups – Allow the installer to create, modify, and delete software groupings of admin phones, staff phones, and Admin Web UIs that can ring when a station calls in with a call switch.
    f. Stations – Allow the installer to set up, modify, and delete stations; set up Page Exclusion; view Station Status; and add New Stations.

g. Bridge Devices – Allow the installer to configure the Nyquist ASBs.
h. Amplifier Devices – Allow the installer to configure Nyquist Two and Four and PA Amplifiers
i. Audio – Allow the installer to upload and manage Announcements, Playlists, Recordings, Songs, Tones, and Internet Radio Services. The system must support the uploading of both MP3 and WAV files and make Audio file management simple for users. Systems that limit the size of Audio files shall not be considered equal.
j. Users – Allow the installer to manage users by giving them the proper roles and assign extensions if needed.
k. Roles – Allow the installer to grant users rights to Create, Delete, Edit, Restart System, Sort Menu, Systems Update, Manage, Import/Export, Restore, Settings, or View.
l. Facilities – Allow the installer to set up the district wide facilities for remote paging and calling.
m. Outside Lines – Allow the installer to set up FXS and FXO ports for inbound and outbound system calling.
n. SIP Trunks – Allow the installer to set up SIP trunks into the facility for inbound or outbound calling.
o. Call Details – Allow the installer to review the historical system activities that can be used for incident investigation or system troubleshooting.
p. System Backup/Restore – Allow the installer to preform system backups or restores and allow the backups to be scheduled to run automatically.
q. System Logs – Allow the installer to view and export log files, Nyquist-Intercom, and Web Server logs that can be used for troubleshooting and technical assistance.
r. Paging Exclusions – Allow the installer to view and edit stations that are excluded from paging.
s. Firmware – Update firmware for Nyquist speakers and appliances.
t. Routines – Allow installers to create routines that are a sequence of actions, that the Nyquist system executes as a result of an input trigger. Routines can support crisis plans for situations such as school lockdowns, weather events, or emergency evacuations.
u. Alert Filters – Allow installers to select the National Weather Alerts that the facility needs to monitor for such as weather events, earthquakes, tsunami, volcanoes, public health, power outages, and many other emergencies.
v. Systems that do not provide these options as a minimum shall not be considered equal.

E. Nyquist NQ-E7030 Analog Station Bridge
1. The Nyquist NQ-E7030 ASB allows facilities with existing Multicom or Quantum or compatible intercom systems to upgrade to Nyquist. Each ASB supports up to 24 speakers and call switches with 120-Watts of embedded 25 Volt power. The ASB is designed to drive almost any combination of 25 Volt speakers and horns.
2. The Nyquist ASB contains two 120-Watt amplifiers that are used dynamically by the system and allows two simultaneous amplified audio paths through the ASB. Either

amplifier can be used for an intercom call and/or program (Paging, Time Tones and Audio) distribution.

3. Each of the 24 station interface ports - Support connections to as many as 24 individual 25 Volt speakers with one 25 Volt speaker connection per interface used for direct communication between the admin area and the classroom via Half-duplex talkback using the speaker as pickup and the 24 dry contact closure-type analog Call Switch connections allow for support of legacy Call-Switches like the CA15C.
4. On the back of the ASB is a CAN Bus 2.0 Interface designed to support the connection of 24 or more Nyquist NQ-E7020 Digital Call Switches DCS that can be associated with the programmed stations. Systems that don't support Digital Call Switches shall not be considered equal.
5. On the front of the ASB are two (2) x RGB full spectrum LED's. The POWER LED appears as solid red during initial power up, flashes green during a boot sequence, and appears solid green when fully booted. The STATUS LED uses the following indicators to provide information about the appliance:
    1) Flashing red – No network connection found
    2) Solid blue – The ASB is in an uninitialized state and is not associated to a server. (The server may be in a discovery mode.)
    3) Solid green – The ASB is registered to a Nyquist server and is in normal operation
    4) Flashing green – The ASB has an IP address but is not registered with the Nyquist server
    5) Solid red – The ASB needs to be rebooted or reset so that the Nyquist application can resume
    6) Flashing Blue – The ASB is updating.
6. USB 2.0 host port, type A connector designed for future applications.
7. On the front of the ASB you will also find the 10/100 Ethernet network connection. The ASB can be configured with a static IP address or use DHCP for connection to the customers network as required by the Network Administrator
8. The ASB gets its power from a universal mains power supply (100VAC – 240VAC)
9. The Nyquist NQ-E7030 ASB shall be rack, wall, or shelf mountable and shall include the required mounting bracket hardware.

F. Nyquist NQ-P0100 Matrix Mixer Pre-Amplifier (MMPA)
1. The Nyquist NQ-P0100 MMPA is designed to bring external audio into the Nyquist system. The MMPA interfaces with a local sound system by accepting one or more analog audio sources, mixing them, and outputting them to either, a) the network for Audio Distribution, or b) the MMPA's line level output that can then be inserted into an external amplifier to drive local sound system in gyms, cafeterias, auditoriums, etc. The MMPA supports the following:
    a. Four software selectable Line/MIC Input channels via three XLR connectors and four sets of screw-terminals. Input channel four (4) shall be capable of being configured to support a Push-to-Talk microphone Bogen model DDU-250. Channel-1 can be configured as a digital AES/EBU (AES3) input. Line/Monitor output – The MMPA becomes a station on the Nyquist system, allowing users to

call it directly or to include it in any of the Page, Time, or Audio Zones and can be direct one-way page by calling it extension.

b. The MMPA shall support the following features: Line-Level output to drive input on a local amplifier or self-amplified speaker; One USB 2.0 host port (Type-A connector) for future use; two (2) x RGB full spectrum LED status indicators.

c. Configurable built-in Digital Signal Processing for Noise Gate, Compressor/Limiter functions, etc., Tone Controls: Low Shelving, Mid Bandpass and Hi Shelving, Multi-band Parametric EQ, and Variable Low-Cut/High-Pass filters.

d. The MMPA is powered by Universal mains supply (100VAC – 240VAC).

e. The MMPA shall be wall or shelf mountable and shall include the required mounting bracket hardware.

2. The system shall be equipped a minimum of one (1) Nyquist MMPA that allows for up to four user-configurable audio inputs. The MMPA shall support Line, MIC, and digital AES/EBU (AES3) input sources. The system supports an unlimited number of MMPAs.

G. Nyquist NQ-E7010 Input/Output Controller

1. The Nyquist NQ-E7010 I/O Controller is designed to accept contact closure inputs and activate open-collector outputs to drive relay coils. These inputs and outputs are used to trigger events or to be triggered by an event or Routine within the Nyquist system.

a. PoE Class-1; IEEE 802.3af compliant with Optional 48VDC 15W power supply

b. Eight Dry Contact Closure Inputs that can be used with Fire Alarm Override Relays, external event triggers (for example, Lockdown Buttons, etc.)

c. Eight Relay Driver Outputs (Open-Collector) for use with Clock Correction (Sync Pulse), response to contact closure inputs, etc.

d. USB 2.0 host port, Type-A connector (future use)

e. Two (2) x RGB full spectrum LED Power and Status indicators

2. The Nyquist NQ-E7010 I/O Controller shall support wall or shelf-mounting options and shall include the required mounting bracket hardware.

3. The Nyquist NQ-E7010 I/O Controller shall be designed for wall or shelf mounting.

H. Bogen Analog Call Switch CA-15C for use with the Nyquist ASB or NQ-GA10P(V)

1. The momentary Call Switch shall be capable of placing a combination of Normal/Urgent/Emergency Calls based on the software configuration of the Call Switch.

2. Normal/Emergency call configuration: Making a Normal call in this mode involves pressing the button on the Call Switch once. A call is then placed to the designated Admin Station. An Emergency call involves pressing the call switch at least four times. The Emergency call is then routed to the designated Admin Station. In both scenarios, the calling station number and call-in level (Normal or Emergency) are displayed on the Admin Station or on a group of Admin Stations. Additionally, Emergency calls can be routed to an alternative Admin Station or Emergency Link.

3. Urgent/Emergency call configuration: Making an Urgent call in this mode involves pressing the button on the Call Switch once. A call is then placed to the designated Admin Station. An Emergency call involves pressing the button on the Call Switch at least four times. The Emergency call is then routed to the designated Admin Station. In both scenarios, the calling station number and call-in level (Urgent or Emergency) are

displayed on the Admin Station or on a group of Admin Stations. Additionally, Emergency calls can be routed to an alternative Admin Station or Emergency Link.

4. Emergency Only call configuration: Making an Emergency call in this mode involves pressing the Emergency call switch with Call Level Emergency one time. The call is then switched to the Admin Station. This requires the display of the station number and call-in level on the Admin Station or on a group of Admin Stations. Additionally, Emergency calls can be routed to any Admin Station, including Emergency Link.
5. Emergency Link Transfer - If an Emergency call goes unanswered by the Admin Station and the Emergency link transfer is active, the Emergency call will be forwarded to the loudspeaker associated with the Emergency Link Station. Any station equipped with a loudspeaker can be programmed as the Emergency Link Transfer. Systems that do not provide Emergency Link Transfer shall not be considered equal.
6. In addition to the mechanical click of a Call Switch button press, a call confirmation audio file shall be played on the associated loudspeaker when a call is placed. The three call-in levels shall have distinct audio confirmation messages:
    a. Call Placed
    b. Urgent Call Placed
    c. Emergency Call Placed

I. The Nyquist plenum-rated amplifier shall be a model NQ-GA20P2 20-watt integrated amplifier and shall utilize UL 2043 plenum-rated packaging.
1. One 20 watt 8-ohm speaker output (with PoE+)
2. One Balanced Line Output
3. RJ-45 for Nyquist network connection
4. Power-over-Ethernet Plus (PoE+) 802.3at compliant
5. Nyquist network-based audio output Web-based configuration
6. Power and Status LEDs
7. In-wall, in-ceiling, shelf, or device mountable UL 2043 plenum-rated package
8. Optional 48VDC External Power Supply (PS4830W; sold separately)

J. The Nyquist plenum-rated amplifier shall be a model NQ-GA20P2 20-watt integrated amplifier and shall utilize UL 2043 plenum-rated packaging. The amplifier shall be capable of being powered with an 802.3at compliant Power-over-Ethernet Plus (PoE+) switch, PoE+ power injector, or 48VDC external power supply PS4830W. The amplifier shall provide a frequency response from 20-20 kHz +/- 0.25 dB at rated power. Distortion shall be less than 0.05% THD+N. The amplifier shall include GUI based configuration. Output shall be provided for both line level or 8-ohm speaker connections. Audio line level output shall be 2.2V RMS @10kΩ (+27 dB) electronically balanced.

K. The Nyquist based two channel amplifier shall be a model (A/R) rated at (A/R) watts RMS per channel (NQ-A2060/2x60 watts, NQ-A2120/2x120 watts, and NQ-A2300/2x300 watts) with switch selectable 2-Channel or 1-Channel bridged operation. The amplifier shall have one dedicated Balanced Line Input. The amplifier shall provide a frequency response from 20-20 kHz +/- 0.25 dB at rated power. Distortion shall be less than 0.03%. The amplifier shall include GUI based DSP controls; 16-band Graphic Equalize; Signal Present and Clip Monitor; Adjustable High Pass, Low Pass, and Bandpass Filters; Noise Gate; Compressor/Limiter; and 7-band Parametric Equalizer. Outputs shall be provided for 4-, 8-ohm, 25V, and 70V distributed

systems. The amplifier shall be rack mountable 1/2 Rack Width - Wall, Rack, or Shelf mountable 1RU and 2RU packages or by using a 19" Rack Mount Kit (NQ-RMK03; sold separately). It shall carry the necessary safety agency listings for both the US and Canada. The amplifier shall employ convection air cooling. Amplifiers that require fans for cooling shall not be considered equal.

L. The Nyquist based four channel amplifier shall be a model (A/R) , rated at (A/R) watts RMS per channel (NQ-A4060/4x60 watts, NQ-A4120/4x120 watts, and NQ-A4300/4x300 watts) with switch selectable 4-Channel or 2-Channel bridged operation. The amplifier shall have two dedicated Balanced Line Inputs with both Phoenix plug and XLR connections for each input. The amplifier shall provide a frequency response from 20-20 kHz +/- 0.25 dB at rated power. Distortion shall be less than 0.03%. The amplifier shall include GUI based DSP controls; 16-band Graphic Equalizer; Signal Present and Clip Monitor; Adjustable High Pass, Low Pass, and Bandpass Filters; Noise Gate; Compressor/Limiter; and 7-band

M. Nyquist NQ-T1100 VoIP Admin Phone – Color Touch Display (Admin Station)
   1. The Nyquist Admin Station shall have the following features:
      a. 7" 800 x 480-pixel color display with backlight
      b. Touch screen display for one touch operation
      c. Full-duplex hands-free speakerphone with AEC
      d. Call hold
      e. Mute
      f. Redial, call return, auto answer
      g. PoE (802.3af) Class-3 support
      h. Headset with EHS support
      i. Dual Gigabit Ethernet ports
      j. Desk Mountable
      k. Optional Wall mount capable
   2. The Nyquist Admin Station display panel shall show the time of day and day of week, the current bell schedule(s), and the station numbers and call-in priority of staff stations that are calling in. Depending upon the system programming, an Admin Station shall display menus to activate Zone Paging, All-Call Paging, Emergency All-Call Paging, District All-Call paging, alarm signals, and external functions.
   3. The Admin Station shall be capable of calling either the loudspeaker or Staff Station at each classroom location.
   4. The Admin Station shall display the classroom number of any station that calls 911. This allows front-office administrators to direct emergency personnel to the correct physical location in the building when they arrive. If a system is not connected to outside phone lines, then 911 calls can be routed to a designated station within the facility. The system shall automatically record all 911 calls made from any station. The 911 call recording shall begin as soon as 911 is dialed and continue unit the call is terminated. Recorded calls shall be maintained on the system for later playback review and/or retrieval by authorized personnel and/or authorities. Systems that do not provide this feature will not be deemed equal.

N. Nyquist NQ-T1000 Staff VoIP Phone – LCD Display (Staff Station)
   1. Nyquist Staff Station shall have the following features:

a. 132 x 64-pixel graphical LCD with backlight
b. Two-port 10/100M Ethernet Switch
c. Full-duplex hands-free speakerphone with AEC
d. Call hold
e. Mute
f. Redial, call return, auto answer
g. PoE (802.3af) Class-3 support
h. Dual-color (red or green) illuminated LEDs for line status information
i. Two 10/100M Ethernet ports
j. Wall or desk mountable

2. The classroom Staff Station shall be capable of the following features depending on how the station CoS is configured:
   a. Emergency intercom call – Staff Stations shall be capable of making an Emergency intercom call, which is then routed to the assigned Admin Station. This requires the display of the architectural number and call in level on the Admin Station. Systems that do not provide this feature are not equivalent.
   b. Speed dial
   c. Toggle audio distribution on and off
   d. Call Forward activation and deactivation for All-Calls/Busy/No Answer/Busy or No Answer
   e. Conference Calling
   f. Transfer Call
   g. Dial Administrative station– Staff Stations can allow the user to dial the station number to call to the Admin phone or its associated speaker. The call shall be routed to the Admin Station showing the architectural number that is calling.
   h. Emergency All-Call – An emergency page shall be broadcasted to all the stations in the facility.
   i. Place Outside Call
   j. Remote Answer
   k. Single-Zone/All-Station Page
   l. Call Waiting Tone for Outside Calls – It shall be possible to feed the call waiting tone to the Administrative Phone during a conversation.
   m. Transfer call from VoIP speaker in classroom down to an associated Staff Station
   n. Transfer call from analog speaker in classroom down to an associated Staff Station
   o. Transfer call from VoIP Staff Station in classroom up to an associated VoIP speaker
   p. Transfer call from Staff Station in classroom up to an associated analog speaker

O. Additional Loudspeakers for use with the Nyquist ASB
   1. 25-Volt Classroom Speakers shall be Bogen:
      a. Ceiling Mounted Speakers: CSD2X2U Drop-In Ceiling Speaker
      b. Wall Baffle Speakers: MB8TSQ/SL Metal Box Speaker
   2. 25-Volt Hallway Speakers shall be Bogen:
      a. Ceiling Mounted Speakers: S810T725PG8U Ceiling Speaker
      b. Wall Baffle Speakers: MB8TSQ/SL Metal Box Speaker

3. 25-Volt Outdoor/Gym/Locker Room Speakers shall be Bogen:
    a. FMH15T mounted in BBSM6 surface-mounted vandal-resistant enclosure/BBFM6 flush-mounted vandal-resistant enclosure with FMHAR8 adapter ring and SGHD8 heavy duty grille
    b. KFLDS30T Wide Dispersion Re-entrant Horn Loudspeakers
4. 25-Volt Pendant Speakers shall be Bogen:
    a. OCS1 Orbit Ceiling Speakers
    b. OPS1 Orbit Pendant Speakers

P. Wire guards shall be provided and installed for each speaker where indicated on the drawings.

Q. Public Address Strobe:
1. Each public address strobe location shall include the following:
2. QTY (1) RDL ACR-1 Audio Relay
3. QTY (1) Altronix RB5 Relay
4. QTY (1) Edwards 53X-G1 Rotating Beacon, 24V, CONFIRM COLOR PRIOR TO PROCUREMENT
5. QTY (1) Edwards WBR Wall Mounting Bracket
6. QTY (1) Altronix SMP-5 Power Supply
7. QTY (1) TA238175 Transformer
8. QTY (1) STI EM121204 Utility Box
9. All required cabling
10. The power supply for the public address strobes shall be located in the data closet / telecommunication room.
11. The strobe shall activate during an all call or direct room call to the room the strobe is located in.

R. Cabling:
1. All cabling shall be plenum rated.
2. The contractor shall provide wiring in raceway for the proper operation of the sound systems as called for in this specification, or as shown on the drawings. The types of cable required are as follows:
    a. Loudspeaker Cable: It shall contain three (3) 22 AWG stranded tinned copper conductors (two (2) aluminum-polyester shielded and one (1) unshielded), plus a #22 AWG copper drain wire in a chrome PVC jacket. Conductors shall be polyethylene insulated with 0.014 inch thickness. Jacket thickness shall be 0.028 inch and overall outer diameter 0.21 inch. Loudspeaker cable shall be Belden or approved equal.
    b. Microphone Cable: Cable shall consist of one (1) pair of 20 AWG stranded, tinned copper conductors, plus a #20 stranded drain wire in a chrome PVC jacket. Conductors shall be polyethylene insulated and aluminum-polyester shielded. Microphone cable shall be Belden or approved equal.
3. Raceways:
4. Conduit and Boxes: Comply with Section 260533 "Raceway and Boxes for Electrical Systems." Flexible metal conduit shall not be used.
5. Outlet boxes shall be not less than 2 inches wide, 3 inches high, and 2½ inches deep.

2.04 SYSTEM CAPABILITIES

A. The communication system shall be a Bogen Nyquist E7000 Series Educational System and shall provide a comprehensive communications network between administrative areas and staff locations throughout the facility.

B. The system shall provide no less than the following features and functions:
   1. Software-based, state-of-the-art, Voice over IP (VoIP) paging and intercom solution.
   2. The system shall provide a Web User Interface (Web UI) shall allow users to configure and control the system, in accordance with their assigned User Role, from any Web browser enabled PC, Mac, Android or iOS tablet or mobile device.
   3. Amplified-voice communication with analog loudspeakers shall use a shielded audio pair when connected to an ASB.
   4. The system shall support any combination of the following VoIP phone station types: NQ-T1100 Administrative VoIP Phone – Color Touch Display (Admin Station) or NQ-T1000 Staff VoIP Phone – LCD Display (Staff Station).
      a. All VoIP phone station types shall utilize the same type of field wiring.
      b. There shall be no limit to the number of Admin Stations that can be connected to a facility. Systems that require different head-end equipment to make Admin Stations function, or systems that limit the number of Admin or Staff Stations shall not be deemed acceptable.
   5. Future station alterations shall only require the Station Type to be changed in system programming. Alterations shall not require field wiring or system head-end alterations, unless an analog station device is being replaced by a VoIP station device or vice-versa.
   6. The system shall be a global non-blocking system. The system shall be capable of unlimited amplified intercom paths per facility. Two amplified intercom paths shall be provided with each ASB for its complement of 24 stations. All hardware, etc., required to achieve the necessary number of amplified-voice intercom channels for this system shall be included in this submittal. ASB amplified-voice intercom channels shall provide voice-activated switching. Systems requiring the use of a push-to-talk switch on administrative telephones shall not be acceptable. There shall be an automatic level control for return speech during amplified-voice communications. The intercom amplifier shall also provide control over the voice switching sensitivity and delay times of the VOX circuitry on the ASB.
   7. The system shall provide 911 Dial-Through via outside FXO/FXS lines or SIP trunks to ensure that one or more lines are always available for 911 calls. The 911 Dial-Through is available to any properly configured station (via CoS). When a station dials 911, the 911 call is processed as follows:
      a. Call routes to an Emergency Group where the call can be answered.
      b. The 911 CO lines can be pre-configured and reserved. If the 911 reserved lines are busy, the normal CO lines will be connected to route the 911 calls. If all the normal CO lines are busy, then one of the ongoing calls shall be disconnected and the 911 call shall be placed.
      c. When 911 is dialed from any station, its designated Admin Station or Admin Group will receive a message that the station has dialed 911.
      d. The system shall automatically record all 911 calls made from any station. The 911 call recording shall begin as soon as 911 is dialed and shall continue until the call

is terminated. Recorded calls shall be maintained on the system for later playback review and/or retrieval by authorized personnel and/or authorities.

8. It is of highest importance that Emergency calls from stations receive prompt attention. Therefore, it is important that there be an alternative destination in case the Emergency call does not get answered at the primary location. Details are as follows:
    a. Staff-generated Emergency calls shall be treated as the second highest system priority. Therefore, all Emergency calls shall annunciate at the top of the call queue of their respective Admin Station or Admin Group. Should that Emergency call go unanswered for 15 seconds, the call shall be re-routed to an alternative speaker station. Then, a tone will prompt the caller to make a verbal call for help and annunciates to the Emergency link station "Emergency." During the transfer, the original administrative telephone shall continue to ring the distinctive Emergency Ring. Should the Emergency Transfer-to-Station have an associated Admin Station, it will also ring for the Emergency call.
    b. The Emergency Transfer-to-Station shall be software configurable.
    c. Systems failing to transfer unanswered Emergency calls or failing to immediately connect to the designated Admin Station shall not be deemed as equal.
9. There shall be a Facility Wide Emergency All-Call feature. The Emergency All-Call shall be accessed from designated Admin Stations or the Nyquist Dashboard or by the activation of an external contact closure that shall give a microphone input Emergency status. The Emergency All-Call function shall have the highest system priority and shall override all other loudspeaker-related functions including Time Tones, Normal All-Call or Zone Pages, or Audio Distribution.
    a. Considering that Emergency calls are to be treated with the highest level of concern, systems that do not regard Emergency All-Call with the highest priority shall not be deemed as equal.
    b. Upon touching the Directory icon, a menu shall appear on the Admin Station display prompting the user to select the desired menu.
    c. The Emergency All-Call shall capture the highest-level system priority and shall be transmitted over all speakers in the facility. It shall also be capable of activating an external control output, which can be used to activate external relays to automatically override volume controls, local sound systems, or strobe circuits.
    d. This Emergency All-Call feature can have a four-digit pin number associated with it that would be required to use the feature or override someone that is already using this feature.
    e. Systems without Emergency All-Call or systems with All-Call that cannot be activated by external means or that do not capture complete system priority or activate an external relay, shall not be acceptable.
10. There shall be unlimited Alarm Tones (four by default). Each may be accessed by dialing *91 and the two-digit tone number from any Admin Station, SIP Trunk, or FXO/FXS system interface. These Alarm Tones are separate from the Time Tones. Users shall be able to add an unlimited number of Alarm Tones to the system by uploading MP3 or WAV files. Systems that do not allow the user to upload MP3 and WAV files to customize the Alarm Tones or need to use external alarm/tone generators or special software or have less than four Emergency Alarm Tones shall not be acceptable.

11. Upon touching the Directory icon on an Admin Station, a menu shall appear on the display prompting the user to select from the sub-menus. The Alarms sub-menu is the first available. This precludes the user from having to memorize complicated key sequences to access Alarm Tones.
12. There shall be unlimited I/O Controller relay driver outputs accessible and controllable by properly authorized users via an Administrative Web UI. These outputs remain set until accessed and reset. Users shall have the ability to review the status of each relay driver output. Users shall be prompted through fields via a plain English menu, precluding users from having to remember any dialing sequences to control this feature. The system shall support an unlimited number of I/O Controllers, and each I/O Controller shall be able to interact with any and all other I/O Controllers on the system (i.e., an input on one I/O Controller can trigger an output on one or more different I/O Controllers). Systems that require the user to remember complicated dialing schemes or prompt the user via cryptic commands shall not be acceptable.
13. The I/O Controller can create a contact closure when the following operations are performed in the system:
    a. 911 call placed
    b. Audio Distributed
    c. Alarm is played
    d. Announcement is played
    e. All-Call preformed
    f. Multi-Site All-Call performed
    g. Multi-Site Emergency-All-Call
    h. Emergency-Call
    i. Emergency-All-Call
    j. Audio-Disabled
    k. Page
14. The system shall provide software controlled and programmable control outputs for external relay activation for use with strobe lights, magnetic locks, card access systems, motion detectors, cameras, or any low-voltage, dry contact creating device. Systems using dedicated security stations for control of external functions shall not be acceptable.
15. The system shall be capable of interfacing to PSTN/PBX/iPBX via both FXO/FXS line and SIP trunk connectivity.
16. The system shall be capable of providing each facility (i.e., (i.e., Nyquist location) an unlimited number of incoming FXO/FXS or SIP trunk lines that can be designated by the user to ring the designated Day Admin or Night Admin. Where an Admin Station is designated to receive outside line calls, the incoming call's Caller ID information shall appear on the display. The system shall also provide the ability to make outside line calls from Admin Stations. This ability shall be programmable for each Admin Station and there shall be an unlimited number of CoS available to assign to any station.
17. The system shall be capable of supporting DID, DISA, and Security DISA functions.
    a. The system shall provide a password-protected Security DISA feature that shall only be accessible from authorized Police, Fire, Emergency personnel, or an off-premise security office that monitors the facility's security system. The Security DISA feature shall function as follows: Upon dialing the Security DISA phone number, the caller will receive a dial tone from the system, after which he or she

must enter the assigned Security DISA passcode on the dial pad. Upon confirmation, the system will present the dial tone again and will allow the authorized personnel to dial any station/classroom on the system and monitor the activity without any pre-announce tone or privacy beep. This will allow the authorized personnel to audibly assess the situation and determine what actions need to be taken.

b. All DISA and Security DISA calls shall be automatically recorded by the system for later playback review and/or retrieval by authorized personnel and/or authorities.

18. The system shall provide for field-programmable three-, four-, five-, or six-digit architectural station numbers.
19. There shall be an automatic level control for return speech during amplified-voice communications.
20. Each station loudspeaker shall be assignable to all or any combination of Paging, Time, and/or Audio Zones. Systems that do not provide unlimited Paging, Time, and/or Audio Zones shall not be acceptable.
21. There shall be unlimited schedules with unlimited programmable events per facility. Each event shall sound one user-selected tone or external audio source. It shall be possible to assign each schedule to a day of the week or to manually change schedules from an authorized user via a web-based UI. Systems that do not provide unlimited schedules, events, and tones, or that require software to be installed on a PC to perform these functions shall not be acceptable.
    a. The system shall provide multiple concurrent schedules per facility/location to accommodate split facilities (for example., combined Elementary and Middle School, combined Middle and High School, etc.).
    b. The system must be capable of providing Class Change Music to be played from an external audio source or audio files that are stored in playlists on the system during class change periods or whenever a facility wants music to be played in an area (i.e., (i.e., one or more Time Zones) on an automated schedule.
    c. Each event shall be able to be directed to any one or more of the unlimited Time Zones.
    d. Each of the unlimited Time Zones shall have a programmable, customizable Preannounce Tone and volume control that is unique unto itself.
    e. Each event shall play any of the Normal tones or external audio. Each event may utilize a different tone. For example, the system shall be capable of sending the gymnasium, shop classes, and pool a separate, unique time tone to indicate “clean up.” Minutes later, the entire facility can be sent a different time tone to indicate class change.
    f. Each of the unlimited Time Tones may be manually activated by selected VoIP Admin Phones or via an authorized user with access to the Web UI. These tones shall remain active as long as the telephone remains off-hook or until canceled from the keypad or the Nyquist Web UI.
    g. Systems that do not provide an unlimited number of schedules or do not provide automatic activation of schedules shall not be acceptable.

22. Internal Master Clock shall be included, allowing an unlimited number of events per facility. Systems that do not provide an internal master clock or that must supply an external master clock to meet these specifications shall not be acceptable.
23. The Nyquist E7000 is capable of synchronizing with an NTP server and automatically adjusting the Daylight Savings Time for any time zone in the world. The server that the Nyquist E7000 application is running on can also be used as an NTP server for other systems on the LAN (for example, IP Clocks and control systems).
24. There shall be a Zone Page/All-Call Page feature that is accessible by selected Admin Phones and FXO/FXS or SIP connection to the PSTN or PBX/iPBX.
25. There shall be an option to play a pre-announce tone at any loudspeaker selected for voice paging.
26. There shall be a voice-intercom feature that is accessible by CoS authorized staff phones, all Admin VoIP phones, and Admin Web UIs.
    a. There shall be a privacy beep played every 15 seconds at any selected loudspeaker to indicate that an intercom call is in progress.
    b. There shall be a pre-announce tone played at any selected loudspeaker for intercom call communication.
    c. For special applications, the privacy and pre-announce tone signals shall be capable of being disabled during system initialization.
    d. There shall be a switch over to private telephone communications should the person at the classroom loudspeaker pick up his or her Staff Station and dial *3 to transfer the call down to the associated classroom Staff Station.
27. There shall be various levels of telephonic communication accessible by all Admin Stations and Staff Stations.
    a. Staff Stations must be capable of being programmed to ring one Admin Station during day hours and a different Admin Station during night hours. Day and Night start hours shall be configurable. Staff Stations shall be capable of being assigned to any Admin station. Systems that limit the number and assignment of staff call-ins to an Admin Station shall not be acceptable.
28. Each VoIP speaker or ASB speaker equipped with a call switch (analog or digital) shall be configurable as one of three call-in types, as follows:
    a. Normal/Emergency
    b. Urgent/Emergency
    c. Emergency
29. Call buttons programmed for access Normal / Emergency or Urgent / Emergency shall be able to initiate an Emergency call by repeated flashing of the phone's hook switch, or repeated pressing of the DCS or the Call Switch. Systems that require additional switches and/or conductors to initiate an Emergency call, shall not be acceptable.
30. Normal and Urgent calls shall be placed into the queue for the designated Admin Station or Admin Web UI.
31. Each Admin Station call queue shall first be sorted per call priority (for example, Emergency, then Urgent, and then Normal). Calls are sorted within each priority level on a first-in, first-out basis. When a call is answered, it shall automatically be removed from the queue. Systems that do not sort calls per priority and order received shall not be acceptable.

a. The display shall simultaneously display a minimum of three intercom calls pending.
b. Additional calls beyond three shall be indicated by a scrolling option on the right-hand side of the screen thus prompting the user that additional calls are waiting.

32. It shall be possible to answer any incoming call by picking up the handset while it is ringing. It shall not be necessary to press any buttons to answer a call unless the call has dropped into the queue.
33. Staff Stations shall receive a dial tone upon going off-hook. Outgoing calls are made by dialing the desired station. Incoming calls can be directed to the telephone or to the associated loudspeaker for a hands-free reply. There shall be a switchover from loudspeaker to private telephone communication when a person picks up the handset, dials *3, and presses Enter/OK.
34. Staff Stations shall be programmable for any type of system access, provided by or restricted by the following CoS options:
    a. CoS Name
    b. Call-in Level
    c. Zone Paging
    d. All-Call Paging
    e. Emergency All-Call
    f. Inter-Facility Call/Page
    g. Audio Distribution
    h. Remote Pickup
    i. Join Conversation
    j. Call Forwarding
    k. Walking Class of Service
    l. External Call Routing
    m. Call Transfer/3-way Calling
    n. Manually Activate Tone Signals
    o. Call Any Station
    p. Manage Recordings
    q. Monitor Calls
    r. Monitor Locations
    s. Conference Admin
    t. Conference User
    u. Voicemail
    v. Record Calls
    w. Activate Alarm Signals
    x. Disable Audio
    y. Enable Audio
    z. Allow Callee Auto-answer
    aa. District Paging
    bb. Inter-Facility Features
    cc. Manage Output Contacts
    dd. Execute Routines

35. Each Station in a facility can have a unique CoS programmed with an unlimited number of CoS combinations.
36. Staff Stations shall be able to make a Normal call to any Admin Station by dialing the Admin Station's extension number. Staff Stations shall also be able to initiate an Emergency Intercom Call by dialing ****. Emergency Calls shall ring the Designated Day/Night Admin Station. The system shall provide for each station to have a Personal Identification Number (PIN). By dialing the PIN at any system telephone, the administrator shall have access to Emergency paging regardless of the restrictions on the phone being used.
37. Admin Stations shall receive a dial tone upon going off-hook. Outgoing calls are made by dialing the desired stations. Incoming calls can be directed to the telephone or to the associated loudspeaker for a hands-free reply. There shall be an automatic switchover from loudspeaker to private telephone communication should the person pick up his or her handset.
38. The display shall normally show the time of day and day of week, bell schedule name, and the numbers of a minimum of three stations calling-in, along with the call-in status of each station (Normal, Urgent, Emergency). The Admin Station's display shall indicate the station number being dialed from the Admin Station.
39. The display shall also provide user-friendly menu selections to assist the operator when using the Nyquist system. Displays shall be in English for maximum ease-of-use. Systems that require the operator to memorize long lists of operating symbols or control codes shall not be acceptable.
40. Admin Stations shall be programmable for any type of system access, providing or restricting the following CoS options:
    a. Call-in Level
    b. Zone Paging
    c. All-Call Paging
    d. Emergency All-Call
    e. Inter-Facility Call/Page
    f. Audio Distribution
    g. Remote Pickup
    h. Join Conversation
    i. Call Forwarding
    j. Walking Class of Service
    k. External Call Routing
    l. Call Transfer/3-way Calling
    m. Manually Activate Tone Signals
    n. Call Any Station
    o. Manage Recordings
    p. Monitor Calls
    q. Monitor Locations
    r. Conference Admin
    s. Conference User
    t. Voicemail
    u. Record Calls

v. Activate Alarm Signals
w. Disable Audio
x. Enable Audio
y. Allow Callee Auto-answer
z. District Paging
aa. Inter-Facility Features
bb. Manage Output Contacts
cc. Execute Routines

41. Program selection and its distribution or cancellation shall be accomplished from a designated Admin Station with the assistance of the menu display system. Distribution and cancellation shall be to any one or combination of speakers, any Audio Zone or Audio Zones, or All Zones. It shall be possible to provide an unlimited number of program channels for the user to pick from.
    a. It shall be possible via an Admin Station to manually initiate any of the unlimited Normal Tones or Emergency Tones. The Tones shall be separate and distinctly different from the Alarm Tones. The Tone selected shall be capable of being played one time, continuously until it is canceled, or until the administrative display phone is placed back on-hook.
    b. Each Admin Station shall maintain a unique queue of all stations calling that Admin VoIP phone.
42. VoIP Wall Baffle and VoIP Ceiling Speakers shall be configurable as either a VoIP Speaker Only or as a VoIP Speaker with DCS.
    a. The Bogen Nyquist VoIP speakers are powered via PoE. Use an 802.3af compliant PoE network switch port or PoE Injector to power these speakers. One PoE network switch port or PoE Injector is required per VoIP speaker.
    b. VoIP speakers can be equipped with a DCS that can be programmed as a Normal/Emergency, Urgent/Emergency, or Emergency Only and shall be able to initiate an Emergency call by touching the DCS one, two, or three times depending on the CoS and current call state of the DCS. If the station is authorized for Privacy Mode, the users can touch and hold for 4 seconds to enable Privacy Mode or hold for four seconds to disable Privacy Mode. Systems that require mechanical, membrane, or an additional number of switches to initiate an Emergency call, shall not be acceptable.
    c. Emergency Calls from VoIP Speaker with DCS shall have priority over the Normal and Urgent calls in the queue on the Admin Stations and will show up at the top of the list. Systems that do not provide priority for Emergency Call shall not be acceptable.
    d. Normal and Urgent calls shall be logged into queue for the designated Admin Stations.
        1) Admin Stations shall ring for when they receive a call, and then the call will be removed from the queue when the call is answered or when the Admin Queue times out (default is 30 minutes).
    e. Each queue call shall first be sorted by call priority (Emergency, then Urgent, and then Normal). Calls are sorted within each priority level on a first-in, first-out basis. When a call is answered, it shall automatically be removed from the queue. Systems that do not sort calls by priority and order received, shall not be

acceptable. The display shall simultaneously show a minimum of three staff calls pending. Additional staff calls beyond three shall be indicated by an arrow pointing down thus prompting the Admin user that additional calls are waiting.

f. It shall be possible to answer any incoming call simply by picking up the handset while it is ringing. It shall not be necessary to hit any buttons to answer a call unless the call has dropped into the queue.

43. System programming shall be from an authorized Nyquist Admin User via any web browser. A valid username and password shall be required to gain access to the following programmable functions:
    a. System Parameters – Allow installers to adjust core system parameters.
    b. Zones – Allow installers to create and modify Paging, Time, and Audio Zones.
    c. Schedules – Allow installers and administrators to create Bell Schedules for the facility, predefine alternative schedules to run. Holiday Events prevent the bells from ringing on a school holiday. The system shall allow an unlimited number of schedules to operate simultaneous within a facility.
    d. Admin Groups – Allow the installer to create, modify, and delete software groupings of admin phones that can ring when a station calls in with a call switch.
    e. CoS Configuration – Allow the installer to create, modify, and delete CoS groups that can have the following features defined: Call in Level, Zone Paging, All-Call Paging, Emergency All-Call, Inter-Facility Call/Page, Audio Distribution, Remote Pickup, Join Conversation, Call Forwarding, Walking Class of Service, External Call Routing, Call Transfer/3-way Calling, Manually Activate Tone Signals, Call any Station, Manage Recording, Monitor Calls, Monitor Locations, Conference Admin, Conference User, Voicemail, Record Calls, Activate Alarm Signals, Disable Audio, Enable Audio, Allow Callee Auto-answer, District Paging, Inter-Facility Features, and Execute Routines.
    f. Stations – Allow the installer to set up, modify, delete stations, set up Page Exclusion, view stations' status, and add a station.
    g. Bridge Devices – Allow the installer to install the Nyquist ASBs.
    h. Audio – Allow the installer to upload and manage Announcements, Playlists, Announcements, Songs, and Tones. The must support the uploading of both MP3 and WAV files making Audio file management simple for users. Systems that limit the size of Audio files shall not be considered equal.
    i. Users – Allow the installer to manage users by giving them the proper Role and assign an Extension if needed.
    j. Roles – Allow the installer to limit user to the following: create, delete, edit, restart server, sort menu, systems update, manage, import/export, restore, settings, or view.
    k. Facilities – Allow the installer to set up the district wide facilities for remote paging and calling.
    l. Outside Line – allow the installer to set up FXS and FXO ports for inbound and outbound system calling.
    m. SIP Trunks – allow the installer to set up SIP trunks into the facility for inbound or outbound calling.
    n. Call Details – allow the installer to review the historical system activities that can be used for incident investigation or system troubleshooting.

o. System Backup/Restore – allow the installer to preform system backup or restores and allow the backups to be scheduled to run automatically.
p. System Logs – allow the installer to view and export Server, Nyquist-Intercom, and Web Server logs that can be used for trouble shooting and technical assistance.
q. Paging Exclusions – allow the installer to view and edit station that are excluded from paging.
r. Firmware – is used to update Nyquist appliances.
s. Routines – Allow installers to create routines that are a sequence of actions, that the Nyquist system executes as a result of an input trigger. Routines can support crisis plans for situations such as school lockdowns, weather events, or emergency evacuations
t. Alert Filters – Allow installers to select the National Weather Alerts that the facility needs to monitor for such as weather events, earthquakes, tsunami, volcanoes, public health, power outages, and many other emergencies.
u. Help –Provides information about the system, online help topics, and System Administrator Manual.
v. Systems not capable of supporting web-based configuration and control, or require plugins or dedicated application software, shall not be deemed as equal.
w. Systems that require a Serial-to-Ethernet converter, or require additional application software on a PC for configuration and/or control shall not be deemed as equal.

44. Admin Groups
45. Admin Stations can be placed into Admin Groups, which are used if incoming calls are not answered by the assigned Admin Station or the Day or Night Admin associated with the Admin Station. Admin Groups act as an always answer feature by providing an alternate list of Admin Stations. If an incoming call is not answered by the assigned Admin Station within 30 seconds for normal calls or 15 seconds for emergency calls, all Admin Stations in the Admin Group will ring.
46. If Call Forwarding is enabled at the Admin Station, Nyquist tries the forwarded extension. If that station does not answer or is busy, the call timeout is reduced to 15 seconds. After 15 seconds, the call rolls over to the Admin Group.
47. If an Emergency level call receives no answer, the Admin Group will ring if the Day Admin or Night Admin does not answer.
48. Admin Stations can be assigned to multiple Admin Groups. A Day or Night Admin can also be assigned to one or more Admin Groups.
49. Call Detail Reporting
    a. The Call Details feature allows the viewing and/or printing of detail records of every call in a facility in a call log format. Calls include scheduled announcements, paging, and internally and externally made or received telephone calls.
50. System Backup/Restore
    a. The system backup feature allows users with access to back up the system database, voicemail, and recordings.
    b. The system restore allows users with access to perform a system restore of previously backed up database, voicemail, and/or recordings.
    c. The installer also can set up an automatic backup that can be performed daily, weekly, or monthly.

51. System Log Files
    a. A log file records either events or messages that occur when software runs and is used when troubleshooting the system. The following parts of the Nyquist system generate log files:
        1) Server (This provides access to the Debian Linux OS server log files.)
        2) Intercom (This provides access to the Intercom application server log files
        3) Web Server (This provides access to the web server log files.)
    b. From the web-based UI, system logs can be viewed directly or exported via download to a PC, Mac, or Android device and then copied to removable media or attached to an email to technical support.
52. Paging Exclusions
    a. For school testing and exams, the administrators shall be able to put stations into Page Exclusion mode. During this time, the stations will only receive Emergency All-Call pages – not music, tones, or All-Calls. Emergency pages will still be heard at the station even if that station is set to exclude paging.
53. Firmware
    a. Installers can manage the available firmware. Because the Nyquist E7000 is constantly evolving and changing new versions of firmware will become available and the Firmware section allow installers or authorized users the ability to upload, check for updates, or configure the system to automatically download new firmware for later installation. Systems that can't automatically check for new software are not considered equivalent.
54. Routines are designed to automatically launch a procedure, or sequence of actions, that the Nyquist system executes as a result of an input trigger.
55. Some of the events (triggered by dashboard, IP Phone, I/O Controller contact, or Routines API) that can be created are as follows:
    a. Lockdown Routines
    b. Emergency Evacuation Routines
    c. Fire Alarm Routines
    d. Weather Alert Routines
56. As you can see the power of Routines can support your facilities crisis plans for situations such as lockdown, lockout, weather events, or emergency evacuations.
57. Alert Filters Configuration - The Common Alerting Protocol (CAP) is an international standard format for emergency alerting and public warning. It is designed for all hazards related to weather events, earthquakes, tornado, tsunami, volcanoes, public health, power outages, and many other emergencies.
58. CAP elements and values are used when configuring alert filters for your Nyquist system. This part of the configuration allows installers to select or "Enable" or disable the filters needed for each facility. This filtered information can then be displayed on the NQ-GA10PV through the campus.
59. The growing list of information that can currently be displayed are as follows: 911 Telephone Outage, Administrative Message, Air Quality Alert, Air Stagnation Advisory, Arroyo And Small Stream Flood Advisory, Ashfall Advisory, Ashfall Warning, Avalanche Advisory, Avalanche Warning, Avalanche Watch, Beach Hazards Statement, Blizzard Warning, Blizzard Watch, Blowing Dust Advisory, Blowing Dust Warning, Brisk Wind Advisory, Child Abduction Emergency, Civil Danger Warning, Civil

Emergency Message, Coastal Flood Advisory, Coastal Flood Statement, Coastal Flood Warning, Coastal Flood Watch, Dense Fog Advisory, Dense Smoke Advisory, Dust Advisory, Dust Storm Warning, Earthquake Warning, Evacuation - Immediate, Excessive Heat Warning, Excessive Heat Watch, Extreme Cold Warning, Extreme Cold Watch, Extreme Fire Danger, Extreme Wind Warning, Fire Warning, Fire Weather Watch, Flash Flood Statement, Flash Flood Warning, Flash Flood Watch, Flood Advisory, Flood Statement, Flood Warning, Flood Watch, Freeze Warning, Freeze Watch, Freezing Fog Advisory, Freezing Rain Advisory, Freezing Spray Advisory, Frost Advisory, Gale Warning, Gale Watch, Hard Freeze Warning, Hard Freeze Watch, Hazardous Materials Warning, Hazardous Seas Warning, Hazardous Seas Watch, Hazardous Weather Outlook, Heat Advisory, Heavy Freezing Spray Warning, Heavy Freezing Spray Watch, High Surf Advisory, High Surf Warning, High Wind Warning, High Wind Watch, Hurricane Force Wind Warning, Hurricane Force Wind Watch, Hurricane Local Statement, Hurricane Warning, Hurricane Watch, Hydrologic Advisory, Hydrologic Outlook, Ice Storm Warning, Lake Effect Snow Advisory, Lake Effect Snow Warning, Lake Effect Snow Watch, Lake Wind Advisory, Lakeshore Flood Advisory, Lakeshore Flood Statement, Lakeshore Flood Warning, Lakeshore Flood Watch, Law Enforcement Warning, Local Area Emergency, Low Water Advisory, Marine Weather Statement, Nuclear Power Plant Warning, Radiological Hazard Warning, Red Flag Warning, Rip Current Statement, Severe Thunderstorm Warning, Severe Thunderstorm Watch, Severe Weather Statement, Shelter In Place Warning, Short Term Forecast, Small Craft Advisory, Small Craft Advisory For Hazardous Seas, Small Craft Advisory For Rough Bar, Small Craft Advisory For Winds, Small Stream Flood Advisory, Snow Squall Warning, Special Marine Warning, Special Weather Statement, Storm Surge Warning, Storm Surge Watch, Storm Warning, Storm Watch, Test, Tornado Warning, Tornado Watch, Tropical Depression Local Statement, Tropical Storm Local Statement, Tropical Storm Warning, Tropical Storm Watch, Tsunami Advisory, Tsunami Warning, Tsunami Watch, Typhoon Local Statement, Typhoon Warning, Typhoon Watch, Urban And Small Stream Flood Advisory, Volcano Warning, Wind Advisory, Wind Chill Advisory, Wind Chill Warning, Wind Chill Watch, Winter Storm Warning, Winter Storm Watch, and Winter Weather Advisory.

60. Systems that are not capable of displaying National Weather Service CAP information to give advanced warning to facilities shall not be considered equal.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine conditions, with the installer present, for compliance with requirements and other conditions affecting the performance of the Nyquist E7000 Series Educational System.

B. Do not proceed until unsatisfactory conditions have been corrected.

3.02 EQUIPMENT MANUFACTURER'S REPRESENTATIVE

A. All work described herein to be done by the manufacturer's authorized representative shall be provided by a documented factory authorized representative of the basic line of equipment to be utilized.

B. As further qualification for bidding and participating in the work under this specification, the manufacturer's representative shall hold a valid C-10 Contractor's License issued by the Contractor's State License Board of [your state]. The manufacturer's representative shall have completed at least 10 projects of equal scope, giving satisfactory performance, and shall have been in the business of furnishing and installing sound systems of this type for at least five years. The manufacturer's representative shall be capable of being bonded to ensure the owner of performance and satisfactory service during the guarantee period.

C. The manufacturer's representative shall provide a letter with submittals from the manufacturer of all major equipment stating that the manufacturer's representative is an authorized distributor. This letter shall also state that the manufacturer guarantees service performance for the life of the equipment and that there will always be an authorized distributor assigned to service the area in which the system has been installed.

D. The contractor shall furnish a letter from the manufacturer of the equipment. This letter shall certify that the equipment has been installed according to factory intended practices, that all the components used in the system are compatible, and that all new portions of the systems are operating satisfactorily. Further, the contractor shall furnish a written unconditional guarantee, guaranteeing all parts and all labor for a period of five years after final acceptance of the project by the owner.

3.03 INSTALLATION

A. The installation, adjustment, testing, and final connection of all conduit, wiring, boxes, cabinets, etc., shall conform to local electrical requirements and shall be sized and installed in accordance with the manufacturer’s approved shop drawings.

B. Low-voltage wiring may be run exposed above ceiling areas where they are easily accessible.

C. The contractor shall install the new system at the location shown on the plans.

D. All Staff Stations and Call Switches shall be wall-mounted:
   1. Mount at 54" AFF.
   2. All wiring should be concealed.
   3. Verify exact location with architect.
   4. Avoid mounting near doors to prevent students from activating and running out of the rooms.

E. Admin Stations can be desk or wall mounted.

F. Speaker and telephone lines run above ceiling and not in conduit shall be tie-wrapped to a ceiling joist with a maximum spacing of 8' between supports. No wires shall be laid on top of ceiling tile.

G. Connect field cable to each Analog Speaker transformer using UL butt splices for #22 AWG wire.

H. Contractor shall provide a minimum of eight hours of configuration and operational instruction to school personnel.

I. On the first school day following installation of the Nyquist System, the contractor shall provide a technician to stand by and assist in system operation.

J. Mark and label all demarcs IDF and MDF points with destination point numbers. Rooms with more than one outlet shall be marked XXX-1, XXX-2, XXX-3, etc. where XXX is the room number.

K. No graphic room number shall exceed the sequence from 000001 through 899999.
   1. All outside speakers shall be on a separate Page Zone and Time Zone.
   2. All zones shall be laid out not to exceed 40 Watts (@25V) maximum per zone.
   3. All hallway speakers shall be tapped at 1 Watt (@25V) maximum.
   4. All outside horns shall be tapped at 3.75 Watts (@25V) maximum.
   5. All classroom speakers shall be tapped at ½ Watt (@25V) maximum.
   6. Large rooms, such as cafeterias, shall be tapped at 2 Watts (@25V) maximum.

L. Plug disconnect: All major equipment components shall be fully pluggable by means of multi-pin receptacles and matching plugs to provide for ease of maintenance and service.

M. Protection of cables: Cables within terminal cabinets, equipment racks, etc., shall be grouped and bundled (harnessed) as to type and laced with No. 12 cord waxed linen lacing twine or T and B wire-ties, or hook and loop cable management. Edge protection material shall be installed on edges of holes, lips of ducts, or any other point where cables or harnesses cross a metallic edge.

N. Cable identification: Cable conductors shall be color-coded and individual cables shall be individually identified. Each cable identification shall have a unique number located approximately 1-1/2" from cable connection at both ends of cable. Numbers shall be approximately 1/4" in height. These unique numbers shall appear on the As-Built Drawings.

O. Shielding: Cable shielding shall be capable of being connected to common ground at point of lowest audio level and shall be free from ground at any other point. Cable shields shall be terminated in the same manner as conductors.

P. Provide complete “in service" instructions of system operation to school personnel. Assist in programming of telephone system.

3.04 GROUNDING

A. The contractor shall provide equipment grounding connections for Integrated Telecommunications/Time/Audio/Media System as indicated. Tighten connections to comply with tightening torques specified in UL Standard 486A to ensure permanent and effective grounds.

B. The contractor shall provide ground equipment, conductor, and cable shields to eliminate shock hazard and to minimize the greatest extent possible, ground loops, common mode returns, noise pickup, cross talk, and other impairments.

C. The contractor shall provide all necessary transient protection on the AC power feed and on all station lines leaving or entering the building.

D. The contractor shall note on their drawings the type and locations of these protection devices and all wiring information.

E. The contractor shall furnish and install a dedicated, isolated earth ground from the central equipment rack and bond to the incoming electrical service ground buss bar.

3.05 INSTALLATION OF SOUND SYSTEM WIRING

A. All installations shall comply with NECA 1.

B. Provide all conduits, conductors, boxes, receptacles, etc. indicated on the Drawings, herein specified, or required for the proper operation of the sound systems.

C. Installation of all sound system wiring and all equipment shall be performed under the direct supervision of a C-EST certified Field Engineer.

D. All Sound System conductors to and between the speakers and the Category 5E consolidation block shall be free from splices or other breaks.
   1. Interconnecting terminals as specified may be used only at terminals of loudspeakers, privacy switches, amplifiers, microphone receptacles, or where directed.

E. All loudspeaker cables shall be terminated in the following manner:
   1. The end connected to the loudspeaker transformer leads shall be neatly soldered and taped where such loudspeakers are not equipped with terminal strips. Where loudspeakers are equipped with terminal strips, the ends shall be equipped with U-type solderless lugs described above.
   2. Where two (2) or more loudspeakers are on the same circuit, shall be soldered neatly to terminals of the loudspeaker transformers to form a "loop" circuit.
   3. Unused leads or taps of loudspeaker matching transformers shall each be separately taped to insulate the conductors from each other and from grounded parts of the equipment.

F. All connections between/among components within the Central Control Rack shall be performed under the direct supervision of personnel authorized by the manufacturer of the Central Control Rack.

G. All connections of conductors entering the Central Control Rack and terminated at the terminal blocks shall be performed by the Contractor.

H. All connections shall be made under the direct supervision of the Manufacturer's Representative. Connections shall not be made until the Contractor and the Manufacturer's Representative have explained to the Owner's Representative the procedure to be followed.

I. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.

J. Wiring within Enclosures: Bundle, lace, and train cables to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools.

K. All cabling shall be plenum rated and properly gauged per the distances of the devices from the central control station.

L. Install 18" excess cable at each termination at microphone, attenuator, volume control, speaker, and other system outlet.

M. Install 6' excess cable at each termination at system cabinet.

N. Grounding
1. A dedicated #10 ground wire shall be installed in conduit from the main ground bus of the electrical service and/or adequate building ground and attached to the frame of all the sound racks/cabinets and all required devices. Conduit bonds shall be used only for rack to rack continuities.

3.06 PROTECTION

A. The Contractor shall provide all necessary transient protection on the AC power feed and on all station lines leaving or entering the building.

B. The Contractor shall note in his system drawings, the type and location of these protection devices as well as all wiring information. Such devices are not to be installed above the ceiling.

3.07 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Tests and Inspections:
1. Upon completion of the installation, contractor shall engage a factory-authorized service representative to perform overall performance test in the presence of the Owner's representative. Provide testing reports and certificate of completion of testing. The test shall include, but not be limited to the following:
   a. Loudspeaker Circuits Test
      1) Transmit audio signals at normal levels over each loudspeaker circuit for determination of proper loudspeaker volume and clarity.
      2) Adjust transformer taps for proper output, as necessary.
   b. Input Circuits Test
      1) Transmit audio signals at normal levels over each input circuit to determine proper operation of each input circuit. The test shall be performed using each of the two (2) input selector switches over each of the two (2) program channels. Each input source (tuner, CD/MP3 player, Mic., etc.) on the selector switch shall be tested.

c. Load Test
   1) Check for proper system operation when the entire system load (all speakers) is applied to either channel.

d. Communications Tests
   1) Initiate, by means of the central controls, two-way communications between classroom speaker and PA system.
   2) ALL-CALL via Central Controls: Check all speakers in the entire new building
   3) Zone paging via central controls.

e. Signal-to-Noise Ratio Test:
   1) Measure signal-to-noise ratio of complete system at normal gain settings as follows:
      a) Disconnect microphone at connector or jack closest to it and replace it in the circuit with a signal generator using a 1000-Hz signal. Replace all other microphones at corresponding connectors with dummy loads, each equal in impedance to microphone it replaces. Measure signal-to-noise ratio.
      b) Repeat test for each separately controlled zone of loudspeakers.
      c) Minimum acceptance ratio is 50 dB.

f. Distortion Test:
   1) Measure distortion at normal gain settings and rated power. Feed signals at frequencies of 50, 200, 400, 1000, 3000, 8000, and 12,000 Hz into each preamplifier channel. For each frequency, measure distortion in the paging and all-call amplifier outputs. Maximum acceptable distortion at any frequency is three percent (3%) total harmonics.

g. Acoustic Coverage Test:
   1) Feed pink noise into system using octaves centered at 500 and 4000 Hz. Use sound-level meter with octave-band filters to measure level at five (5) locations in each zone. For spaces with seated audiences, maximum permissible variation in level is plus or minus 2 dB. In addition, the levels between locations in same zone and between locations in adjacent zones must not vary more than plus or minus 3 dB.

h. Power Output Test:
   1) Measure electrical power output of each power amplifier at normal gain settings of 50, 1000, and 12,000 Hz. Maximum variation in power output at these frequencies must not exceed plus or minus 1 dB.

i. Signal Ground Test:
   1) Measure and report ground resistance at pubic address equipment signal ground. Comply with testing requirements specified in Section 260526 "Grounding and Bonding for Electrical Systems."

j. Inspection:
   1) Verify that units and controls are properly labeled and interconnecting wires and terminals are identified. Prepare a list of final tap settings of paging speaker-line matching transformers.

k. Public address and mass notification systems will be considered defective if they do not pass tests and inspections.

l. Prepare test and inspection reports.
m. Include a record of final speaker-line matching transformer-tap settings, and signal ground-resistance measurement certified by Installer.

3.08 SERVICE/MAINTENANCE/WARRANTY

A. The Contractor shall provide a one year warranty, or the manufacturers standard warranty, whichever is greater, of the installed system against defects in material and workmanship. All materials shall be provided at no expense to the Owner during normal working hours. The warranty period shall begin on the date of acceptance by the Owner/Engineer.

B. The Contractor shall, at the Owner's request, make available a service contract offering continuing factory authorized service of this system after the initial warranty period.

C. The system manufacturer shall maintain engineering and service departments capable of rendering advice regarding installation and final adjustment of the system.

D. The Contractor shall submit a written warranty from an authorized distributor of the sound system that the system installed is free from defects in materials and workmanship, for the period of one (1) year, or standard manufacturer's training, whichever is greater, from the date of acceptance by the Owner. This warranty shall include all parts and labor.

3.09 DEMONSTRATION – TRAINING

A. Bidding contractor shall engage a factory-authorized service representative to train the Owner's maintenance personnel to adjust, operate, and maintain the public address system.

B. The vendor shall provide various levels of training including Manufacturer provided training as mandated by the Owner.

C. Sixteen (16) hours of training shall be included as part of this specification. These training hours shall be partitioned as the Owner mandates and as required.

D. Train Owner's personnel on operation and maintenance of each component of system.
1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
2. Instructor shall be manufacturer's training personnel

3.10 GENERAL FIELD POLICY

A. When inspecting or supervising the installation of equipment, manufacturers' representative shall be accompanied at all times by the technology consultant. In order to make the necessary arrangements, the Owner shall be notified at least forty-eight (48) hours in advance of the manufacturer's representative visit to the School.

B. Any changes of equipment shall be made only with the written permission of the technology consultant.

C. Changes in location of equipment may be made only with the written permission of the technology consultant.

D. All changes of location of equipment (including pull boxes, conduit runs, wire sizes, etc.) shall be incorporated in the As-built Sound/System Intercom Riser Diagram installed in the School.

3.11 DOCUMENTATION

A. Provide the following directly to the Supervisor of Technology Services.
   1. One printed copy of all field programming for all components in system
   2. One copy of all diagnostic software with a copy of field programming data for each unit

B. One copy of all field wiring runs, location, and end designation of system

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 27 5313 - CLOCK SYSTEM

GENERAL

1.01 SUMMARY OF WORK

A. This Section specifies materials and accessories for a wireless clock system.

B. Section Includes:
   1. Transmission Systems
      a. System Controller with Ethernet Connection
      b. Primary Internal Transmitter
      c. Primary External Transmitter
      d. Magnetic mount or Campus transmitting antenna
   2. Wireless Synchronized Devices
      a. Analog Clock
      b. Master Clock Synchronizer Module
      c. Wireless Relay Module
      d. Signal Indicator

1.02 RELATED REQUIREMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections apply to this Section.

B. Section [27 05 00 - Common Work Results for Communications: conductors and cables].

C. Section [27 15 00 - Communications Horizontal Cabling].

D. Section [27 10 53 - Clock System Commissioning].

E. Section [27 51 16 – Public Address System].

F. Related Drawings: “T” Drawings – Technology Plans

1.03 REFERENCE STANDARDS

A. Federal Communications Division (FCC)
   1. Part 15 - Code of Federal Regulations.

B. National Fire Protection Association (NFPA).
   1. NFPA 70E-[2012], Standard for Electrical safety in the Workplace.

C. US Green Building Council (USGBC).

1. LEED® NC Version 2.2-[2009], LEED (Leadership in Energy and Environmental Design): Green Building Rating System Reference Package For New Construction and Major Renovations.

D. Underwriter's Laboratories (UL)

E. Institute of Electrical and Electronics Engineers (IEEE)
1. IEEE 802.3af-[1998], Standard for Information Technology – Telecommunications and Information Exchange Between Systems.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Co-ordination: Co-ordinate work of this Section with communications and electronics work and with work of other trades for proper time and sequence to avoid construction delays.

B. High Performance Building Submittal Requirements: The contractor or subcontractor must submit the following High Performance Building certification items:
1. A Connecticut High Performance Building Compliance letter shall be provided verifying agreement with relevant High Performance requirements. Information to be supplied includes, but is not limited to:
a. The percentage by weight of recycled content in the product(s). Identify post-consumer and/or pre-consumer recycled content.
b. The manufacturing location for the product(s); and the location (source) of the raw materials used to manufacture the product(s).
c. Provide material costs for the materials included in the contractor's or subcontractor's work. Material cost does not include costs associated with labor and equipment.
2. Letters of Certification, provided from the product manufacturer on the manufacturer's letterhead, to verify the amount of recycled content.
3. Product Cut Sheets for all materials that meet the High Building Performance Requirements this Section.
4. Material Safety Data Sheets (MSDS), for all applicable products. Applicable products include, but are not limited to adhesives, sealants, carpets, paints and coatings applied on the interior of the building. MSDS shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC content, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC content).

C. Pre-installation Meeting: Convene pre-installation meeting after Award of Contract and [one week] before starting work of this Section to verify project requirements, substrate conditions and coordination with other building sub-trades, and to review manufacturer's written installation instructions.
1. Comply with Section 01 31 19 - Project Meetings and co-ordinate with other similar pre-installation meetings.
2. Notify attendees 2 weeks prior to meeting and ensure meeting attendees include as minimum:
a. Owner;

b. Consultant;
c. Communications and Electronics Subcontractor;
d. Architect;
e. Manufacturer's Technical Representative

3. Ensure meeting agenda includes review of methods and procedures related to insulation installation including co-ordination with related work.
4. Record meeting proceedings including corrective measures and other actions required to ensure successful completion of work and distribute to each attendee within 1 week of meeting.

1.05 ACTION AND INFORMATIONAL SUBMITTALS

A. Make submittals in accordance with Contract Conditions and Section 01 33 00 - Submittal Procedures.

B. Product Data: Submit product data including manufacturer's literature for clock system materials and accessories, indicating compliance with specified requirements and material characteristics.
1. Submit list on clock system manufacturer's letterhead of materials and accessories to be incorporated into Work.
2. Include product name.
3. Include preparation instructions and recommendations, installation methods, and storage and handling requirements.
4. Include contact information for manufacturer and their representative for this Project.

C. Shop Drawings: Submit shop drawings with information as follows:
1. Diagram of proposed system showing system platform appliance, communication pathway, and schedule of individual device locations.
2. Indicate integration with the Owner's network and servers. Include line diagram of network relationships.
3. Show system power requirements.

D. Samples:
1. Submit one sample of each type of device used on project. Samples will be returned Contractor for incorporation into the Work after Consultant's review.

E. Test Reports:
1. Submit evaluation and test reports or other independent testing agency reports showing compliance with specified performance characteristics and physical properties.

F. Subcontractor Experience: Submit verification of communication and electronics subcontractor's experience.

G. Manufacturer's Authorization: Submit verification that of communication and electronics subcontractor's authorization from clock system manufacturer to perform Work of this section.

H. Sustainable Design (LEED).
1. LEED Submittals: In accordance with Section [01 35 21 – LEED Requirements]

1.06 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: Supply maintenance data for clock system for incorporation into manual specified in Section 01 78 00 - Closeout Submittals.

B. Sustainable Design Closeout Documentation (LEED).
   1. Provide calculations on end-of-project recycling rates, salvage rates, and landfill rates for work of this Section demonstrating percentage of construction wastes which were recycled.
   2. Submit verification from recycling facility showing receipt of materials.

C. Record Documentation: In accordance with Section 01 78 00 - Closeout Submittals.
   1. List materials used in clock system work.
   2. Warranty: Submit warranty documents specified.

1.07 QUALITY ASSURANCE

A. Communications and Electronics Subcontractor Quality Assurance:
   1. Work experience of [3] years minimum with work similar to work of this Section.
   2. Manufacturer’s authorization to perform work of this section.

B. Supplier’s Accreditation: Use only suppliers accredited by clock system manufacturer.

C. Supplier’s Maintenance Requirements:
   1. Ensure local supplier has adequate facility for storage of spare parts for clock system.

D. Sustainability Standards Certification (LEED).
   1. LEED submittals: In accordance with Section [01 35 21 - LEED Requirements].

1.08 DELIVERY STORAGE AND HANDLING

A. Delivery and Acceptance Requirements:
   1. Deliver material in accordance with Section 01 61 00 - Common Product Requirements.
   2. Deliver materials and accessories in clock system manufacture’s original packaging with identification labels intact and to suit project.
   3. Ensure clock system materials are not exposed to moisture during delivery.
   4. Replace damaged clock system materials.

B. Storage and Handling Requirements: Store materials off ground in dry location and protected from exposure to fumes and harmful weather conditions and at temperature conditions recommended by manufacturer.
   1. Store in original packaging until installed.

C. Packaging Waste Management:
   1. Separate and recycle waste packaging materials in accordance with Section [01 74 19 - Construction Waste Management and Disposal].
   2. Remove waste packaging materials from site and dispose of packaging materials at appropriate recycling facilities.

3. Collect and separate for disposal, paper, and plastic material in appropriate on-site storage containers for recycling [in accordance with Waste Management Plan].

1.09 WARRANTY

A. Project Warranty: Refer to Contract Conditions for project warranty provisions.

B. Manufacturer's warranty: Submit, for Owner's acceptance, manufacturer's standard warranty document executed by authorized company official. Manufacturer's warranty is in addition to and not intended to limit other rights Owner may have under Contract Conditions.

C. Warranty period: Shall commence for One (1) Year from substantial completion OR shall match the manufacturer's Standard Warranty. Provide whichever is greater.

1.10 SYSTEM DESCRIPTION

5 watt magnetic	10 watt magnetic	10 watt campus	30 watt campus
1-2 stories	3-5 stories	3-6 stories	6-8 stories
200k sq ft per floor	100k sq ft per floor	small campus	1 city block
5-10 acres	10-30 acres	30-100 acres	125 acre campus

A. SiteSync IQ Wireless timekeeping system shall be capable of synchronizing clocks, intercom, server, computers and other equipment throughout a facility.

B. The system shall synchronize all clocks to each other. The system shall utilize Ethernet technology to provide atomic time to all its components. The system shall not require any hard wiring for operation (besides AC power for specified components) except for an Ethernet patch cable for Ethernet connection. Analog clocks shall be battery operated for full portability. Clocks shall automatically adjust for Daylight Saving Time per the settings in the SiteSync IQ System Controller.

C. Clocks shall synchronize to ±1 second of the time displayed on the system controller.

D. The system shall include an internal real time clock reference so that failure of the GPS or Ethernet signal does not cause the clocks to fail to indicate the correct time.

E. The system shall incorporate a "fail-proof " design so that a temporary power interruption shall not cause failure of the system. Upon restoration of power, the system shall resume normal operation.

F. The system shall include a signal indicator to notify local supervisor or maintenance personnel when the SiteSync IQ System Controller transmits to verify signal reception.

G. Analog clocks to be battery operated for complete portability and relocation freedom, or AC powered for many years of maintenance free operation. Batteries included.

H. Site survey instruction manual and equipment to be available for building site transmitter signal reception diagnosis.

I. System Controller with 6 integrated signal relay circuits available for operating bells, tone generators, lighting circuits, intercom and other electrical equipment. This can be done via a direct wired connection or wirelessly via one or more wireless relay modules. System controller is capable of programming and storing 99 schedules with 9999 events. Events may be programmed for momentary 1-9 second activation or toggled on and off.

J. System Controller (with Ethernet option) capable of Remote Connect Web Interface which allows for event and circuit programming as well as manual circuit activation from a remote location via a web browser. No software required.

K. Wireless Relay Module: A remote relay that receives a wireless signal and supplies a contact closure based on the schedule in the system controller that is assigned to that circuit.

L. Optional: Wireless Controller – Part# SSQWCA-2C4T (Clock relays and 4 tones)
   1. The Wireless Controller receives the time and activation instructions via a wireless signal from the SiteSync IQ System Controller. The Wireless Controller is capable of running and correcting a wired clock system that is directly attached to the appropriate terminal strip inside it. The wired clock system attached to the Wireless Controller must use the eight second hour correction and 14 second 12-hour correction protocol.

1.11 REGULATORY REQUIREMENTS

A. Equipment and components furnished shall be of manufacturer's latest model.

B. System Controller, Transmitter and Receiver shall comply with Part 90 of FCC rules, as follows:
   1. This device may not cause harmful interference.
   2. Transmitter frequency shall be governed by FCC Part 90.35.
   3. Transmitter output power shall be governed by FCC Parts 90 and 74.

C. System shall be installed in compliance with local and state authorities having jurisdiction.

PRODUCTS

2.01 MANUFACTURER

A. SiteSync IQ timekeeoing system and its components shall be manufacturerd by:
   1. American Time, 140 3rd Street South, Dassel, MN, 55235 www.american-time.com

2.02 SYSTEM OPERATION AND STARTUP SEQUENCE

A. The SiteSync IQ system receives atomic time information from the Ethernet. The system controller is a powerful multitasking device that is capable of sending precise time information to synchronize all the system wireless clocks and accessories. The system can be monitored and programmed from the SiteSync IQ system controller keypad or via your PC web browser if you have the Remote Connect capability. It's important to follow steps in this order: Install system controller, confirm signal reception and then install clocks.

B. Wireless System Controller Operation:
   1. When power is first applied to the SiteSync IQ system controller, the user shall complete the Startup Wizard to initiate system operation and signal transmission. The SiteSync IQ system controller looks for the time signal every hour from the time source your system is designed to synchronize with. Once the system controller has received the time synchronization it sets its internal clock to that time. The system controller then starts to transmit the internal time. The system controller features an on-demand GPS or Ethernet sync capability which is initiated by the user/installer to sync the time.

C. Analog Clock Operation:
   1. For battery clocks, connect the barrel jack plug of the battery pack to the wireless receiver. For AC powered clocks, connect to AC power with cord kit or Molex kit and confirm green LED is lit. There is no need for any additional adjustment (the clock movement adjustment is fully automatic). The LED on the back of the clock will turn red for one second then briefly flash orange (1-15 flashes) indicating the receive frequency on power up. Within 30 seconds of power up the LED will flash red or green. Red indicates the receiver is looking for the signal and green indicates the signal has been received. On battery clocks, when the movement starts to correct, the LED will turn off. On electric clocks the LED will turn green. Correction will begin within 3-5 minutes after activation/power up. The clock will automatically look for valid time signals 4 times each day, and will adjust to the correct time if needed.

2.03 EQUIPMENT

A. General: A basic clock system shall include a system controller, internal or external transmitter, GPS time signal receiving antenna or Ethernet connection, analog and/or digital clocks. An expanded system can also include all accessories and options, (such as tone generator, anti-theft brackets, wireless sync relays, remote connect, wired synchronous clocks, bells, signal reception indicator, tone generators, etc.) as needed.

B. Wireless Master: The SiteSync IQ system controller shall incorporate a display and a keypad to provide the following features:
   1. Time zone selection via the keypad and display for all USA time zones as well as custom time zones. Includes all U.S. time zones: Eastern, Central, Mountain, Pacific, Alaska and Hawaii
   2. Automatic Daylight Saving Time: adjustment can be enabled or disabled from keypad
   3. Ethernet interface and real time status display mode
   4. Password protected Programming Menu to set the date, local time zone, DST and other system parameters as needed

5. The system controller shall contain an internal clock such that failure of reception from Ethernet will not disable the operation of the clocks
6. Time Synchronization Mode:
    a. Ethernet: Plug Cat 5 or higher patch cable into the appropriate receptacle on the back of the system controller. The controller must be linked with a TCP/IP Network with Internet access or connection to a Network Time Server.

C. Transmitter: American Time wireless transmitters may be internal at 5 or 10 watts, or external at 25 and 40 watts. The transmitter parameters shall be:
1. Frequency Range: 450-470 MHz
2. Transmitter output power: Internal 5 or 10 watts (built into the SiteSync IQ system controller) or External 30 watts in external metal case
3. Transmission Range: Up to 50 miles radius (transmitter dependent)
    a. Radio technology: Narrowband FM, 12.5 KHz bandwidth
    b. Transmission format: POCSAG, digital one-way communication
    c. Digital Data rate: 512 baud
    d. Operating range: 0 to 60˚ C / 32 to 140˚ F

D. Transmitting Antenna**:** Shall be American Time Part # H001263 or H002978 for indoor or outdoor applications. Antenna polarization shall be vertical.

E. Power supply: (included with system controller)
1. Input: 120vac 50/60 Hz
2. Output: 12vdc, 3 Amps

F. Surge Protector/Battery Backup: American Time Part # H006238.
1. Input: 120vac 60 Hz +/- 1 Hz.
2. Output: 120vac, 550VA, 300 watts
3. Surge Energy Rating: 700 joules with 10x1000uS pulse

G. Analog Clocks: American Time molded plastic analog clocks are round 13.375" or 17.25" outside diameter as noted. Analog clocks, whether round or square, shall be wall mounted and surface mount. Plastic clocks shall have polystyrene frame and polycarbonate lens. Face (dials) shall be white. Hour and minute hands shall be black and sweep (second) hand is red. Analog clocks are available as wall or ceiling mount double dial assemblies.

H. Other wireless clock features shall be:
1. Analog clocks with no user mechanical adjustments. Run time of a half hour after power loss without losing time for AC versions.
2. Time shall be automatically updated from the transmitter 4 times per day.
3. Use the battery booster pack with 6 AA lithium batteries or AC power adapter without battery.
4. The clock shall have an ultra-sensitive UHF receiver (better than -110dBm) and integrated internal antenna.
5. The clock will keep operating using its internal quartz clock in case of signal reception loss due to malfunction of the wireless system controller or transmitter.

I. Wire guards: Provide one for each analog clock in the gymnasium as follows:

1. Part # 1200, 15 by 15 inch size, for nominal 12" diameter analog clocks.
2. Part # 1500, 19 by 19-inch size, for nominal 15" diameter analog clocks.

J. Anti-theft Bracket:
1. 12" plastic - Part # H001141
2. 15" plastic - Part # H004734

K. Wireless Relay: (Part # H004296 = .5amps, Part #H004609 = 8amps): A remote relay receives a wireless signal and supplies a contact closure based on the schedule in the system controller that is assigned to that circuit. Multiple modules are available that operate specifically with 1 of 6 corresponding dry contact circuits in the system controller for wireless communication with multiple products. The wireless relay module is programmable via the system controller scheduling capability for a 1-9 second momentary signal or toggled on and off.

L. Remote Connect: The Remote Connect Web interface allows for SiteSync IQ System Controller event and circuit schedule programming, manual circuit activation, time/date settings and other system configuration from your PC.

M. Remote Connect capabilities include triggering wired and wireless events, assigning custom durations to signals, managing programming of up to six circuits, backing up and restoring schedules to and from PC's and activating circuits manually.

N. Ensure that you have the most current web browser (ie. Firefox, Internet Explorer, Chrome, Edge, Safari).

O. SiteSync IQ Signal Indicator: w/ 9v Battery Option (P/N H004292): American Time hand held signal indicator runs off one 9v battery or may be powered with an AC power adaptor. The signal indicator receives data transmission from the system controller and indicates signal reception via LED lights. The signal indicator LED shows red each time the unit receives signal if it is within range of the transmitter. Blinking green indicates unit has received signal within the past 5 minutes and blinking red indicates the unit has not received signal.

P. Include all required FCC licensing.

EXECUTION

3.01 INSTALLERS

A. Use only installers with [3] years minimum experience with work similar to work of this Section.

B. Ensure all clock system components are installed by single communications and electronics subcontractor.

3.02 EXAMINATION

A. Verification of Conditions: Verify that conditions of substrate previously installed under other Sections or Contracts are acceptable for clock system installation in accordance with manufacturer's written recommendations.
   1. Visually inspect substrate in presence of Consultant.
   2. Ensure surfaces are free of snow, ice, frost, grease and other deleterious materials.
   3. Proceed with installation only after unacceptable conditions have been remedied and after receipt of written approval to proceed from Consultant.

B. Start of clock system installation indicates installer's acceptance of substrate installation conditions.

3.03 SYSTEM INSTALLATION

A. Install clock system in accordance with manufacturer's written recommendations and in accordance with NFPA 70E.

B. Integrate clock system with Owner's electrical and communications network.

C. Install wiring in accordance with requirements of local Authority Having Jurisdiction.
   1. Do cabling in accordance with Section [27 15 00 - Communications Horizontal Cabling].

D. Conceal wiring except in unfinished spaces and as approved in writing by Consultant.

E. Install clocks only after painting and other finish work is completed in each room.

F. Install clocks and other devices square and plumb.

3.04 FIELD QUALITY CONTROL

A. Field Inspection: Coordinate field inspection in accordance with Section [01 45 00 - Quality Control].

3.05 SYSTEM STARTUP

A. At completion of installation and before final acceptance, turn on equipment and ensure equipment is operating properly, and clock system devices and components are functioning.

B. Evaluate and test each device in clock system on room-by-room basis using factory-trained technicians.
   1. Fix or replace devices which fail test or are functioning incorrectly.
   2. Submit evaluation and report showing results of room-by-room tests and overall system compliance within 3 days of testing being carried out.

3.06 CLEANING

A. Progress Cleaning: Perform cleanup as work progresses [in accordance with Section 01 74 00 - Cleaning and Waste Management].
   1. Leave work area clean at end of each day.

B. Final Cleaning: Upon completion, remove surplus materials, rubbish, tools, and equipment [in accordance with Section 01 74 00 – Cleaning and Waste Management].

C. Waste Management:
   1. Co-ordinate recycling of waste materials with [01 74 19 - Construction Waste Management and Disposal].
   2. Collect recyclable waste and dispose of or recycle field generated construction waste created during construction or final cleaning related to work of this Section.
   3. Remove recycling containers and bins from site and dispose of materials at appropriate facility.

3.07 DEMONSTRATION & TRAINING

A. Arrange system demonstration and training session for Owner's operation and maintenance personnel.
   1. Allow Owner and Consultant [7] days minimum advance notice before training session.

B. Break down system demonstration and training session into logical segments for Owner's operations and maintenance personnel.

C. Train Owner's maintenance personnel in procedures and schedules involved in operating, troubleshooting, servicing, and preventative maintenance of clock system.

D. Training shall consist of a minimum of two (2) 4-hour training sessions.

E. Deliver two (2) sets of operating instructions and programming manuals for the clock system to the Owner's Representative.

F. Deliver all programming codes and passwords for the system to the Owner's Representative.

3.08 SYSTEM COMMISSIONING

A. Do clock system commissioning in accordance with Manufacturer requirements.

3.09 PROTECTION

A. Protect installed products and accessories from damage during construction.

B. Repair damage to adjacent materials caused by clock system installation.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 27 6010 - EMERGENCY RESPONDER RADIO COVERAGE SYSTEM

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections with DIVISION 1 - GENERAL REQUIREMENTS, which are hereby made a part of this Section of the Specifications.

B. Attention is directed Section 26 0400 – GENERAL CONDITIONS FOR ELECTRICAL TRADES, which is hereby made a part of this Section of the Specifications.

1.2 SECTION INCLUDES

A. This specification describes the technical and performance criteria for deploying a Neutral-Host Basic Distributed Antenna System (DAS) capable of supporting Public Safety Networks (PSN)

B. The DAS components specified in this document include: Donor Antennas, Coverage Antennas, Coax Cable, Coax Connectors, Splitters, Combiners, Couplers, Fiber-Optic Cable, Fiber-Optic Connectors, and Fiber-Optic Jumpers, Bi-Directional Amplifiers (BDA), Fiber-Optic Master Unit and Fiber-Optic Remote Units, backup batteries, annunciators, and interfacing/connection to the Fire Alarm system.

1.3 RELATED SECTIONS

A. Carefully examine all of the Contract Documents for requirements that affect the work of this section. Other specification sections that directly relate to the work of this section include, but are not limited to the following:
   1. Section 27 0526 – Grounding and Bonding for Communication Systems
   2. Section 27 0529 – Hangers and Supports for Communication Systems
   3. Section 27 0533 – Conduits and Backboxes for Communication Systems

1.4 SYSTEM DESCRIPTION

A. Services: Upon commissioning, the DAS shall provide coverage for the PSNs frequencies provided and coordinated with the owner for the given market or location. Verification of frequencies to be monitored, extended, and covered shall take place prior to the ordering of any equipment.
   1. (Example) 800 MHz PSN coverage, city of Grapevine, TX Ordinance No. 109.2

   2. The frequencies to be handled by the DAS system shall be coordinated and provided by the owner and local public safety agencies. No equipment shall be purchased until frequencies have been verified by all parties involved.

B. Expansion: Without replacing the Passive DAS Infrastructure, the DAS shall have expansion capabilities to support the following PSN frequencies deployed in a SISO antenna environment. Any additional Components required for system expansion shall comply with all specifications of this Section.

SERVICE	UPLINK, MHZ	DOWNLINK, MHZ
PCS	1850 – 1915	1930 – 1995
Commercial 700 Band	698 – 716, 776 – 787	728 – 746
Narrow Band Public Safety 700 Band	799 – 805	769 – 775
800 Band	806 – 824	851 – 869
900 Band	896 – 902	935 – 941
BRS/EBS	2496 – 2690	

C. PSN Approval: The Contractor shall propose and deploy a DAS system capable of receiving approval of the PSN Authority Having Jurisdiction (AHJ).

D. Broadband Active Distribution: Single-mode fiber-optic cable will be used for Active distribution. In-line amplifiers are not allowed.

E. Network Management:
1. NMS: The DAS shall have a Network Management System (NMS) capable of alarm, monitor, configuration and control of all Active Components.
2. SNMP Integration: The DAS NMS shall be capable of integration with 3rd party SNMP based NMS products for alarm purposes and provide alarming information.

1.5 CODES, STANDARDS AND CERTIFICATIONS

A. All wire and components supplied and installed shall meet the requirements of the following and all sub-referenced documents:
1. American National Standard ANSI/TIA/EIA Telecommunications Building Wiring Standards.
2. Underwriters Laboratories (UL).

B. All work, including but not limited to: cabling, pathways, support structures, wiring, equipment, installation, workmanship, maintenance and testing shall comply with the latest editions of the National Electrical Code, National Electrical Safety Code, all applicable local rules and regulations, equipment manufacturer's instructions, and the National Electrical Contractors Association (NECA) Standard of Installation. In case of discrepancy or disagreement between the documents noted above, the contractor shall satisfy the most stringent requirements.

C. Requirements set forth by first-responder code, ordinance, or the PSN AHJ shall supersede the requirements described herein and shall be met in their entirety. It is the Contractor's responsibility to ensure that the DAS complies with local code, ordinances or requirements established by the PSN AHJ.

1.6 ABBREVIATIONS AND ACRONYMS

A. ACG: Automatic Gain Control

B. AHJ: Authority Having Jurisdiction

C. ATP: Acceptance Test Plan

D. BDA: Bi-Direction Amplifier

E. BOM: Bill-of-Material

F. BRS: Broadband Radio Service

G. BTS: Base Transceiver Station

H. CDMA: Code Division Multiple Access

I. C/N: Carrier-to-Noise Ratio

J. CWDM: Coarse Wave Division Multiplexing

K. DAS: Distributed Antenna System

L. DWDM: Dense Wave Division Multiplexing

M. EBS: Educational Broadband Service

N. ESMR: Enhanced Specialized Mobile Radio

O. FCC: Federal Communications Commission

P. GUI: Graphical User Interface

Q. iDEN: Integrated Enhanced Digital Network

R. LMR: Land Mobile Radio

S. LTE: Long Term Evolution

T. MTBF: Mean Time Between Failure

U. NFPA: National Fire Protection Association

V. NMS: Network Management System

W. PCS: Personal Communications System

X. PSN: Public Safety Network

Y. RoF: Radio-over-Fiber

Z. RoHS: Restriction of Hazardous Substances

AA. RSL: Received Signal Level

BB. SISO: Single-Input, Single-Output

CC. SMR: Specialized Mobile Radio

DD. SMS: Short Message Service

EE. SNIR: Signal-to-Noise Interference Ratio

FF. SNMP: Simple Network Management Protocol

GG. SOW: Statement of Work

HH. VSWR: Voltage Standing Wave Ratio

1.7 DEFINITIONS

A. Acceptance: Expressed approval by the customer

B. Active: DAS components that require AC/DC power for operation

C. Channel: A path for an RF transmission between two points

D. Component: A main system element of the DAS

E. Contractor: The prime contractor

F. Passive: DAS components that do not require AC/DC power for operation

1.8 PERFORMANCE REQUIREMENTS

A. PSN DAS:
   1. The PSN DAS shall comply with NFPA-1 2009 Edition.
   2. Where the in-building coverage requirements include 700 - 800 MHz public safety system and commercial wireless in-building coverage, the two systems shall operate over a unified Passive Cable and Coverage Antenna Infrastructure.
   3. Contractors shall state the assumed channel count for the PSN Frequency Bands identified above in Section 1.04 A.. Prior to installation, contractors shall confirm the channel count and frequencies with the AHJ, and shall guarantee coverage for these channels per the criteria stated above.

4. The DAS shall be capable of upgrade, without additional hardware or software, to allow for changes to system frequencies within the deployed frequency band in order to maintain radio system coverage as originally designed.
5. The contractor shall explain the method used to avoid downlink and uplink interference.

1.9 ADDITIONAL REQUIREMENTS

A. PSN Approval: When approval of the DAS deployment is required by code or ordinance, the Contractor shall be responsible for facilitating the AHJ approval(s) per the requirements of the code or ordinance.

1.10 SUBMITTALS

A. Section 01 3300 – Submittal Procedures: Submittal procedures.

B. Submittal Requirements (GENERAL):
1. Product Data: Submit manufacturer datasheets for the following components:
   a. Donor and Coverage Antennas
   b. Coaxial Cable and Connectors
   c. Splitters, Combiners and Couplers
   d. Bi-Directional Amplifiers (BDA)
   e. Fiber-Optic Master Unit
   f. Fiber-Optic Remote Units

2. Shop Drawings: Submit the following items:
   a. RF link budget
   b. Overlay of system Components on floor plans
   c. Drawings for Donor Antenna and grounding
   d. Bill-of-Material (BOM)
3. Statement of Work (SOW): Submit sample SOW
4. Acceptance Test Plan (ATP): Submit sample ATP
5. Recommended Spares
6. Warranty Documents:
   a. Submit for all manufactured Components specified in this Section.
   b. Submit Contractor’s System Warranty.
   c. Submit Manufacturer’s Extended Warranty.

C. Submittal Requirements Prior to Start of Construction
1. Final RF link budget
2. Overlay of system Components on floor plans
3. Drawings for Donor Antenna and grounding
4. RF propagation modeling
5. Signal to Noise Interference Ratio (SNIR) Map
6. Bill-of-Material (BOM)
7. Maintenance Service Contract
8. Statement of Work (SOW): The contractor shall submit a SOW that has been accepted by the customer or customer’s designated representative.

9. Acceptance Test Plan (ATP): The contractor shall submit an ATP that has been accepted by the customer or customer's designated representative.

D. Submittal Requirements at Close Out
   1. Drawings: Submit as-built drawings indicating:
      a. Donor antenna, grounding and lighting protection details
      b. Cable routing, splitters, couplers and coverage antenna locations
      c. Active component locations, layout and configuration
   2. Test Reports
      a. PSN: Submit Accepted ATP reports confirming the requirements of Section 1.07 B have been met.
   3. Field Reports: Submit sweep-testing results for all cable runs.
   4. Field Reports: Submit OTDR test results for all fiber runs.
   5. Operation and Maintenance Data: Submit hardware and software manuals for all Active Components.
   6. Warranty Documents:
      a. Submit for all manufactured components specified in this Section.
      b. Submit Contractor's System Warranty.
      c. Submit Manufacturer's Extended Warranty

1.11 QUALITY ASSURANCE

A. Qualifications: Contractor, and/or Sub-Contractors, shall have a minimum of 5-years full-time experience executing work of similar scope and complexity.

B. Certifications:
   1. Passive Components: Contractor or Sub-Contractor shall provide manufacturer certification that their personnel have been trained on the components being installed.
   2. Active Components: Contractor or Sub-Contractor shall provide manufacturer certification that their personnel have been trained on the components being installed.

1.12 WARRANTY

A. Manufacturer Warranty:
   1. Splitters, Couplers and Coverage Antennas: 5-year limited warranty from date of system acceptance.
   2. Coaxial Cable and Connectors: 10-year limited warranty from date of system acceptance.
   3. Fiber-Optic Cable: 20-year limited warranty from date of system acceptance.
   4. Active Components: The earliest of 1-year limited warranty from date of system installation or 15 months from date of shipment.

B. Contractor Warranty: Contractor shall warrant the system performance as specified in Section 1.10 for 1-year.

C. Manufacturers Extended Warranty:
   1. The DAS shall be covered by a two-part certification program provided by a single manufacturer and that manufacturer's certified contractor. The certification program covers a certified system defined as a DAS installation performed by a certified contractor using components conforming to section 2.01 following all the manufactures recommendations, installation instructions and best practices. Manufacturer shall administer a follow-on program through the contractor to provide support and service to the purchaser. The first part is an assurance program, which provides that the certified system will support current and future modulation formats in the frequency bands for which it is designed, during the 20-year warranty of the certified system.
   2. The second portion of the certification is a 20-year warranty provided by the manufacturer and the contractor on all cable products within the system (fiber-optic cable, coaxial riser cable, plenum coaxial cable and associated connectors, etc.). In conflict with 1.13 A 3 where we say the fiber has a 20 year warranty.
   3. In the event that the certified system ceases to support the certified application(s), whether at the time of ATP, during normal use or when upgrading to additional frequency bands, the manufacturer and Contractor shall commit to promptly implement corrective action.
   4. Manufacturer shall maintain ISO Quality Control registration for the facilities that manufacture the products used in the DAS.

1.13 MAINTENANCE

A. The Contractor shall provide an optional maintenance service contract, covering for a period of one-year: preventative maintenance, system monitoring, spares, fault mitigation, equipment repair, and response time.

PART 2 PRODUCTS

2.1 MANUFACTURER

A. Andrew Telecomm Solutions (basis of design).

B. Siemens

C. Honeywell

D. Radio Solutions Inc.

E. Substitutions: Section 01 60 00 - Product Requirements

2.2 COMPONENTS

A. Broadband Donor Antennas: Broadband Donor Antennas shall feature a multi-band design, accommodating PCS and LMR frequencies in a single small antenna.
   1. Electrical:
      a. Frequency bands, 806 - 960 MHz and 1710 - 2200 MHz
      b. VSWR ≤ 1.8
      c. Gain: 806-960 ≥ 10.5 dBi, 1710 - 2200 ≥ 12 dBi
      d. Maximum input power: 100 watts
      e. Polarization: Vertical
      f. Front-to-back ratio: 806 - 960 ≥ 18 dB, 1710 - 2200 ≥ 20 dB
      g. Impedance: 50 Ω
      h. Azimuth Pattern: As proposed by the manufacturer to meet the performance specifications in this Section.
   2. Mechanical:
      a. Radome material: UV-protected ABS
      b. Pigtail cable: RG58, plenum rated
      c. Connector: 50 Ω N Type Female
      d. Mounting: Pole
   3. Environmental
      a. Temperature: -40 °C to +60 °C
      b. Lighting protection: Direct ground
      c. Waterproof level: IP 66
      d. Wind Speed, maximum: 125 mph
   4. Approved Manufacturer: Andrew CELLMAX-EXT-CPU or equivalent, in accordance with Section 1.05.

B. 700 MHz LMR Yagi Donor Antennas:
   1. Electrical:
      a. Frequency band, 746 - 806 MHz
      b. VSWR ≤ 1.5:1
      c. Gain: ≥ 1 1.1 dBi
      d. Maximum input power: 100 watts
      e. Polarization: Vertical
      f. Front-to-back ratio: ≥ 15 dB
      g. Impedance: 50 Ω
      h. Beamwidth, Horizontal, degrees: 60
      i. Azimuth Pattern: As proposed by the manufacturer to meet the performance specifications in this Section.
   2. Mechanical:
      a. Connector: 50 Ω N Type Female
      b. Mounting: Pole
   3. 3. Environmental:
      a. Temperature: -40 °C to +60 °C
      b. Lighting protection: Direct ground
      c. Waterproof level: IP 66
      d. Wind Speed, maximum: 125 mph
   4. Approved Manufacturer: Andrew DB498-PS or equivalent in accordance with Section 1.05.

C. Omni-Directional Coverage: Omni-Directional Coverage antennas shall feature a multi-band design, accommodating multiple frequency bands in a single small antenna.
   1. Electrical Band 1:
      a. Frequency Band: 698 – 800 MHz
      b. VSWR: ≤ 1.8:1
      c. Gain: ≥ 1.5 dBi
      d. Maximum input power:
      e. Impedance: 50 Ω
      f. Beamwidth, Horizontal: 360° omnidirectional
      g. Beamwidth, Vertical: 80° nominal
      h. Return Loss: 10.9 dB
   2. Electrical Band 2:
      a. Frequency Band: 1710 – 2700 MHz and 800 – 960 MHz
      b. VSWR: ≤ 1.5:1
      c. Gain: ≥ 1.5 dBi @ 800–960 MHz and ≥ 5.0 dBi @ 1710 – 2700 MHz
      d. Maximum input power:
      e. Impedance: 50 Ω
      f. Beamwidth, Horizontal: 360° omnidirectional
      g. Beamwidth, Vertical: 65° nominal
      h. Return Loss: ≤ 13.9 dB
   3. Mechanical:
      a. Connector: 50 Ω N Type Female
      b. Mounting: Thru-hole ceiling mount
      c. Radome material: ABS, UV resistant
      d. Pigtail cable: KSR195, plenum rated
   4. Environmental:
      a. Application: Indoor
      b. Operating Temperature: 40 °C to +60 °C (40 °F to +140 °F)
      c. Relative Humidity: Up to 100%
   5. Regulatory Compliance/Certifications: RoHS 2002/95/EC
   6. Approved Manufacturer: Andrew CELLMAX-O-CPUSE or equivalent, in accordance with Section 1.05.

D. Directional Coverage Antennas: Directional coverage antennas shall feature a multi-band design, accommodating multiple frequency bands in a single small antenna.
   1. Electrical Band 1:
      a. Frequency Band: 698 – 800 MHz
      b. VSWR: ≤ 1.8:1
      c. Gain: ≥ 5.0 dBi @ 698 – 800 MHz
      d. Maximum input power: 50W
      e. Impedance: 50 Ω
      f. Beamwidth, Horizontal: 110° nominal
      g. Polarization: Vertical
      h. Return Loss: ≤ 10.9 dB
   2. Electrical Band 2:
      a. Frequency Band: 1710 – 2700 MHz and 800 – 960 MHz
      b. VSWR: ≤ 1.5:1
      c. Gain: ≥ 5.0 dBi @ 800 – 960 MHz and ≥ 6.0 dBi @ 2170 – 2700 MHz and ≥ 8.0 dBi @ 1710 – 2170 MHz

d. Maximum input power: 50W
e. Impedance: 50 Ω
f. Beamwidth, Horizontal: 90° nominal
g. Return Loss: ≤ 13.9 dB

3. Mechanical:
   a. Connector: 50 Ω N Type Female
   b. Mounting: 4-hole wall mounting plate
   c. Radome material: ABS, UV resistant
   d. Pigtail cable: RG58, plenum rated
4. 4. Environmental:
   a. Application: Indoor
   b. Operating Temperature: 40 °C to +60 °C (40 °F to +140 °F)
   c. Relative Humidity: Up to 100%
5. Regulatory Compliance/Certifications: RoHS 2002/95/EC
6. Approved Manufacturer: Andrew CELLMAX-D-CPUSE or equivalent, in accordance with Section 1.05.

E. Fiber-Optic Cable and Connectors:
   1. General Specifications:
      a. Cables shall be six-strand or greater, designed for point-to-point applications as well as mid-span access, and shall provide a high-level of protection for optical fiber installed in interior building environments.
      b. Higher optical fiber count cables shall utilize a sub-unitized design with color-coded subunits for easy identification.
      c. Single-mode optical fibers shall be 8.3 µm and use standard colored tight-buffered construction.
      d. The single-mode optical fiber shall be dispersion-unshifted optical fiber that meets ITU-T G.652c standards.
      e. Cable shall provide optimum performance over entire wavelength range from 1260 to 1625 nanometers.
      f. Cable shall support new and emerging applications that utilize extended E band, 1360 to 1460 nanometers.
      g. Cable shall also support existing and legacy single-mode applications that traditionally operate in 1310 and 1550 nanometer regions.
      h. Cable shall deliver a cost-effective upgrade path by expanding available wavelengths by 50 percent supporting 16 Channels of coarse wave division multiplexing (CWDM) on a single optical fiber and up to 400 Channels of dense wave division multiplexing (DWDM) on a single cable.
      i. Fire ratings: Riser, plenum, and/or LSZH
      j. Approved Manufacture: CommScope Fiber Optic Cable containing TerraSpeed Single Mode Optical Fiber. As an example, P-006-BO-8W-F25YL, 6-strand breakout cable single-mode Fiber or equal in accordance with Section 1.05.

F. Fiber-Optic Pigtails:
1. General Specifications:
a. To maintain channel integrity, optical fiber patch cords and pigtails shall be fabricated to meet the performance parameters corresponding to the optical fiber cable approved product type specified below. Patch cord and pigtail plug connectors shall be equipped with boots, and shall have same colors as related optical fiber backbone cables, unless specified or indicated otherwise. Optical fiber patch cords and pigtails shall be available with the following options as specified or indicated:
1) Termination types: SC-APC
2) Connector/cable configuration: Simplex and duplex
3) Fire ratings: Riser, plenum and/or LSZH
4) Patch cord outside diameters: 1.6 millimeters (0.063 inches) and 3.0 millimeters (0.118 inches)
5) Pigtails: Ruggedized and tight-buffered optical fiber—0.9 millimeters (0.035 inches) outside diameter
6) Lengths: As specified or indicated
7) Approved Manufacturer: CommScope RFT-01RF09-8W-SCA-XX, single reinforced buffered 900 µm, LightScope ZWP single-mode fiber, angled polished connector or equivalent, in accordance with Section 1.05.

G. Air Dielectric, Plenum Rated Cable:
1. Material Characteristics:
a. Jacket: Halogenated, Fire-Retardant
b. Outer Conductor Material: Corrugated Aluminum or Corrugated Copper
c. Inner Conductor Material: Copper-Clad Aluminum Wire
2. Electrical Characteristics:
a. Impedance: 50 ± 2.0 Ω
b. Frequency Band: 1 - 8800 MHz
c. Peak Power Rating: ≥ 40.0 kW
3. Mechanical Characteristics:
a. Diameter Over Jacket: ≤ .627 in
b. Minimum Bending Radius: ≤ 5 in
c. One Time Minimum Bending Radius: ≤ 3 in

4. Attenuation Characteristics:

Frequency (MHz)	Attenuation (dB/100ft)
150	< 0.848
450	< 1.530
800	< 2.105
2000	< 3.564

a. Standard Conditions: VSWR 1.0, ambient temperature 20 °C (68 °F)
5. Approved Manufacturer: Andrew HL4RP-50A, AL4RPV-50A or equivalent, in accordance with Section 1.05.

H. Foam Dielectric Cable:
1. Material Characteristics:
   a. Jacket: Non-halogenated, Fire-Retardant Ployolefin
   b. Outer Conductor Material: Corrugated Copper
   c. Inner Conductor Material: Copper-Clad Aluminum Wire or Copper Tube
2. Electrical Characteristics:
   a. Impedance: 50 ± 1.0 Ω
   b. Frequency Band: 1/2" Nominal: 1 - 8800 MHz, 7/8" Nominal: 1 - 5000 MHz
   c. Peak Power Rating: ≥ 40.0 kW
3. Mechanical Characteristics:
   a. Diameter Over Jacket: 1/2" Nominal: ≤ .630 in, 7/8" Nominal: ≤ 1.1 in
   b. Minimum Bending Radius: 1/2" Nominal: ≤ 5 in, 7/8" Nominal: ≤ 10 in
   c. One Time Minimum Bending Radius: 1/2" Nominal: ≤ 2 in, 7/8" Nominal: ≤ 5 in
4. Attenuation Characteristics: 1/2" Nominal

Frequency (MHz)	Attenuation (dB/100ft)
150	< 0.815
450	< 1.447
800	< 1.968
2000	< 3.251

   a. Standard Conditions: VSWR 1.0, ambient temperature 20 °C (68 °F)

5. Attenuation Characteristics: 7/8" Nominal

Frequency (MHz)	Attenuation (dB/100ft)
150	< 0.417
450	< 0.744
800	< 1.014
2000	< 1.683

   a. Standard Conditions: VSWR 1.0, ambient temperature 20 °C (68 °F)
6. Approved Manufacturer: Andrew LDF4-50A, FXL-540-NHR, FXL-780-NHR or equivalent, in accordance with Section 1.05.

I. Splitters, Combiners, Couplers, Coax Jumpers and Connectors:
1. Approved Manufacturer: Andrew or equivalent, in accordance with Section 1.05.

J. BDA: When the AHJ dictates a BDA drive the DAS, the BDA shall be of modular design and use digital filtering to mitigate interference and accommodate multiple services for PSNs.
1. Characteristics
   a. Operating Temperature Range: -33 °C to +50 °C
   b. Chassis: Shall be of modular design with ≥ 4 frequency bands per 19" chassis. Chassis shall not exceed four Rack Units (RUs) in height.
   c. Filtering: Digital

d. Separate Control: Each RF amplifier shall be capable of adjusting and controlling power levels for each WSP when multiple WSPs share a single amplifier.
e. FCC Part 90.219 Type Classification: Class A narrowband for LMR/SMR/ESMR frequency bands
f. Alarming: Shall support both SNMP and SMS using wireless modem
g. Mounting Options: shall support rack, wall and pole mounting
h. Frequency Bands Supported: 380 - 512 MHz LMR, 769 - 806 MHz LMR, 806 - 869 MHz LMR/SMR/ESMR, 896 - 941MHz LMR/SMR/ESMR, 1900 - 1950 MHz PCS

2. Compliance:
   a. NFPA: The BDA shall comply with NFPA-1 2009 edition Annex O In-Building Public Safety Radio Enhancement Systems.
   b. FCC: Shall be FCC type certified.
3. Approved Manufacturer: Andrew Node A or equivalent, in accordance with Section 1.05.

K. Fiber-Optic Master Unit: When building size dictates an Active fiber DAS, the Fiber-Optic Master Unit shall convert radio over coax to Radio-Over-Fiber (RoF) for distribution to Fiber-Optic Remote Units.
   1. Characteristics
      a. Transmission Media: Single-mode fiber at 1310 nm
      b. Operating Temperature Range: +5 °C to +40 °C
      c. Impendence: 50 Ω
      d. Chassis:
         1) Shall be of modular design capable of supporting ≥ 32 Remote Units per 19”, 4 RU chassis
         2) Shall support redundant power supplies
         3) Shall have the capability to remotely power the Remote Units via composite fiber-optic cable
      e. Automatic Gain Control (AGC): Shall provide AGC for optical loss compensation
      f. Optical Budget: Shall support ≤ 3 dB optical budget (~3 km or 2 miles)
      g. Auxiliary Channel: Shall provide an input to support 400 to 2700 MHz for future expandability
      h. Interlink: Shall support one fiber or two fibers bi-directional optical link for distances up to 20 km with a 10 dB optical budget
      i. Remote Supervision:
         1) Shall support the TCP/IP protocol, SNMPv2, FTP, HTTP, Telnet, and be fully compatible with general purpose SNMP managers
         2) Remote access shall be available via Point-to-Point Protocol (PPP), over circuit-switched/packet data and wired/wireless modems
         3) Each Active device shall be manageable via a Web GUI
         4) Auto Mapping: Each board position shall be automatically mapped during system turn-up

2. Frequency Bands Supported: 380 - 512 MHz LMR, 769 - 806 MHz LMR, 806 - 869 MHz LMR/SMR/ESMR, 896 - 941MHz LMR/SMR/ESMR, 1900 - 1950 MHz PCS and 2496 - 2690 MHz BRS/EBS.
3. Approved Manufacturer: Andrew ION-B, ION-M or equivalent, in accordance with Section 1.05.

L. Fiber-Optic Remote Units: The Fiber-Optic Remote Unit converts the RoF signal back to radio over coax, as well as provides filtering so that multiple frequency bands can reside over the same passive cable and antenna infrastructure.
1. Characteristics
   a. Operating Temperature Range: +5 °C to +40 °C
   b. Impendence: 50 Ω
   c. Power Consumption: ≤ 105 watts, maximum

M. Output Power per Carrier at Antenna Port:

Technology/Band (MHz)	Single carrier (dBm)
Analog 700	27
GSM 700	27
Analog 800 and 850	27
GSM 800 and 850	31
GSM 800 and 850 at band edges	29
iDEN 800 and 850	26
iDEN 800 and 850 at band edges	24
CDMA 800 and 850	29
CDMA 800 and 850 at band edges	27
Analog 900	29
iDEN 900	23
CDMA 1700	30
W-CDMA 1700	28
Analog 1900	31
GSM 1900	31
CDMA 1900	29
W-CDMA 1900	27

   a. MTBF (excluding external power supply): ≥ 160,000 hours
   b. Physical: The Remote Unit shall consist of the following:
      1) Ingress Protection: IP31 or equivalent
      2) Frequency Bands supported: 769 - 806 MHz LMR, 806 - 869 MHz LMR/SMR/ESMR, 896 - 941MHz LMR/SMR/ESMR, 1850 - 1995 MHz PCS
      3) Optical Port: 2xSC-APC connector (separated uplink/downlink)
      4) Antenna Port: Single 50 Ω N type female connector
      5) Auxiliary Ports: Two SMA female for future add-on modules
   c. Uplink Noise Figure:
      1) LMR 700, LMR 800, Cell850: ≤ 7.5 dB
      2) LMR 700, LMR 800, Cell850 at band edges: ≤ 9.5 dB
      3) LMR 900: ≤ 8.5 dB
      4) PCS 1900 extended: ≤ 7.5 dB

2. Approved Manufacturer: Andrew ION-B, ION-M Series or equivalent in accordance with Section 1.05.

PART 3 EXECUTION

3.1 INSTALLATION

A. The contractor shall design, install, commission and test the DAS in accordance with the manufacturer's instructions and recommendations.

B. The contractor shall install the DAS in accordance with the accepted SOW.

C. Wiring Method:
1. Install all required telecommunications conduits, sleeves, and back boxes. Conduits, sleeves and boxes shall be installed in accordance with Section 270533.
2. Install cables in raceways, conduits and interstitial spaces above suspended ceilings.
3. Conceal wiring except in unfinished spaces.
4. Wire shall not be subjected to pulling tensions greater the maximum specified by the manufacturer
5. Wire bend radius shall not be less than the manufacturer's minimum of one (1) inch.
6. Support cables that are not in raceway or conduit at intervals no greater than 60 inches with supports designed for high-speed twisted pair wire ("J " hooks)

3.2 ACCEPTANCE TESTING

A. Acceptance testing will be performed confirming the requirements of Section 1.09 have been met.

B. The contractor shall complete the acceptance testing as prescribed in the approved Acceptance Test Plan (ATP) submittal.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 28 0500 - SECURITY CONDUCTOR CABLES

PART 1 - GENERAL

1.01 Section Includes

A. System Requirements

B. Cabling

1.02 RELATED REQUIREMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section "Summary", Paragraph 1.1A, entitled "Related Documents." OR Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
   1. Division 07 - Firestopping.
   2. Division 08 - Door Hardware: Electrically operated door hardware, for interface with access control system. Includes door hardware with integral request to exit devices.
   3. Division 26 - Parking Control Equipment: Parking gates, for interface with access control system.
   4. Division 26 - Electric Traction Elevators: For interface with access control system.
   5. Division 26 - Hydraulic Elevators: For interface with access control system.
   6. Division 26 - Grounding and Bonding for Electrical Systems.
   7. Division 26 - Conduit for Electrical Systems.
   8. Division 26 - Identification for Electrical Systems: Identification products and requirements.
   9. Division 27 - Structured Cabling: Data cables for access control system IP network connections.
   10. Division 28 - Video Surveillance: For interface with access control system.
   11. Division 28 -Building Intrusion Detection: For interface with access control system.
   12. Division 28 - Fire Detection and Alarm: For interface with access control system.

B. Refer to the following construction documents for Data Room locations and device locations only.
   1. "TY" Drawings – Security Plans

C. Any apparatus, appliance, material, or work not shown on the Drawings but mentioned in the Specifications, or vice versa, and any incidental accessories necessary to make the work complete and perfect in all respects and ready for operation, even if not particularly specified, shall be provided without additional expense. Coordinate with each system manufacturer to ensure all hardware, firmware, relays, or other necessary components are provided prior to bid submission.

D. All work of this Section to comply with the requirements of the Conditions of Contract, with all Specification Sections of Division 01 – General Requirements, with the Security Drawings, and with all other Contract Documents.

E. Refer to Division 26 of the Contract Documents, Electrical, for all Specifications governing the installation of raceway (conduit, EMT, cable trays, wire trough, etc.), system junction and pull boxes, and device rough-in boxes, for all Security System work shown on the Security Drawings. Conduit, back box, and trough work to be provided by this Contractor.

F. Refer to Division 26 of the Contract Documents, Electrical, for all work related to the interconnection of Security System equipment to 120 VAC power sources.

G. Refer to Division 09 of the Contract Documents, Finishes, for details relating to acoustical ceilings and gypsum board systems, floor finishes, painting, etc., for information pertinent to device and back box selection and installation.

H. Refer to Division 08 of the Contract Documents, Openings, for details relating to doors, door frames, windows, and window frames, for information pertinent to the selection of magnetic contact devices and their associated placement and installation, including back box selection and installation.

I. Refer to Division 08 of the Contract Documents, Openings, for details relating to door and door frame hardware and preparation, electrified lock power supplies, required coordination to accommodate these components and/or systems, lock voltage and current draw coordination, coordination of fail-safe electrified locks, and any other related equipment or requirements

J. Refer to Division 06, Wood, Plastics, Composites, and coordinate all desk locations and installation details with the Millwork Contractor.

K. Review all other Specification Sections as required to achieve complete inter- trade coordination.

1.03 DEFINITIONS

A. “Project Manager” shall mean the Owner’s appointed representative.

B. “As Necessary” shall mean work which is required for completed construction, but is not necessarily shown or described in the Contract Documents.

C. “As Required” shall mean work which is required for completed construction and is shown on the drawings or described in the project specification.

D. “Install” shall mean to set in place complete with all mounting facilities and connections as required ready for normal use of service

E. “Substantial Completion” shall mean that the project is sufficiently complete to be utilized for its intended use as stated in the body of this written specification.

F. “Conduit” shall include all fittings, sleeves, connections, hangers and other accessories related to such conduit.

G. "Surface Metal Raceway" shall include all fittings, sleeves, connections, hangers and other accessories related to such raceway.

H. "Concealed" shall mean hidden from sight, as in chases, furred spaces, shafts, fixed ceiling or embedded in construction.

I. "Exposed", shall mean not "concealed" as defined above.

J. "Governmental" shall mean all municipal, state and federal government agencies.

K. The words "Furnish", "Supply" and "Provide" shall mean purchase, deliver to the job site, protect and provide interim storage and install in accordance with manufacturer's specifications.

L. Words "Approved Equal" shall mean any product which in the opinion of the Technology Consultant is equal in quality, arrangement, appearance, and performance to the product specified.

M. "Cabling" shall mean cable assembly, raceway, conductors, fittings and any other necessary accessories to make a complete wiring system.

N. "Product" shall mean any item of equipment, material, fixture, apparatus, appliance or accessory installed under this Division.

O. Words in the singular shall also mean and include the plural, wherever the context so indicates, and words in the plural shall mean the singular, wherever the context so indicates.

P. "Contractor" refers to the biding/installation Contractor responsible for furnishing and installation of all work indicated within this specification.

1.04 REFERENCE STANDARDS

A. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2015.

B. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

C. NFPA 101 - Life Safety Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

D. UL 294 - Access Control System Units; Current Edition, Including All Revisions.

E. UL 1076 - Proprietary Burglar Alarm Units and Systems; Current Edition, Including All Revisions.

F. System shall be RoHS (Restriction of Hazardous Substances) compliant and meet proposed amendments to the reduction of toxic substances in manufacturing in stated in the Environmental Design of Electrical Equipment Act (EDEE).

G. Installation shall comply with NECA 1-2010 "Standard Practice of Good Workmanship in Electrical Construction"

H. Installation shall comply with NEC/NFPA 70E "Standard for Electrical Safety in the Workplace"

I. Electronic data exchange between Video Surveillance System and the Access Control System shall comply with SIA TVAC

J. Installation shall comply with FCC CFR 47 Part 15 Class A "Telecommunications, Radio, Frequency, Digital Device Emission:

K. Installation shall comply with Federal, State, and Local Codes and Authority Having Jurisdiction (AHJ).

L. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.05 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate the work with other installers to provide suitable security wiring for all security systems.

1.06 SUBMITTALS

A. See Division 01 – Administrative Requirements for submittal procedures.

B. Evidence of Qualifications for Installer:
   1. The Contractor shall be a bona fide security systems contractor, licensed by the State of Connecticut for the installation of the low voltage security and signal communication systems, and engaged in security system maintenance, service and contracting for at least the last five years.
   2. The Contractor shall employ technicians who have been trained by the Manufacturer specified within this section to install the systems of this Manufacturer.
   3. The contractor shall be a factory authorized stocking distributor of the manufacturer of the equipment included in the system so that immediate replacement parts can be made from inventory and service provided as needed on an emergency basis.
   4. The Contractor shall submit with the bid a manufacturer's certificate of acceptance of the qualifications of the Installing Contractor to install, test, maintain and repair the manufacturer's equipment.
   5. In order for the Security Consultant to verify that they meet the competency requirements of this specification, Contractors must submit the following information if so requested:
      a. Proof that the Contractor has installed, services and maintained similar security systems for a minimum of ten (10) years.
      b. Proof that the Contractor is a firm which currently and regularly installs, services and maintains security systems as a full time business.
      c. The names and qualifications of security system technicians that shall perform and supervise the work and perform tests or adjustments on the systems and equipment. Qualifications shall include all schooling, training, and history of work experience.

d. A list of four prior systems comparable to the one specified under this contract which were installed, serviced, and maintained satisfactorily by the Contractor for a minimum of one (1) year. Each system listed shall include the firm or owner, location, person to contact (with telephone number), date of installation and service period, and a brief description of the system and work performed on the system.

6. The Contractor shall submit any other information required by the Security Consultant to determine the competency of the Contractor. If this information is not submitted as requested, it shall be submitted within the time specified by the Architect after the bid opening. If the Contractor fails to submit the information in accordance with the Security Consultant's request, the Contractor shall be declared non-responsive, and may be rejected to perform the work specified within this section.

C. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instruction for storage, handling, protection, examination, preparation, installation, and operation of product.

D. Manufacturer's detailed field-testing procedures.

E. Product Data: Provide details and technical specifications for each product indicated. Include physical dimensions, features, performance, electrical characteristics, ratings, software versions, and operating system details.

1. Equipment Submittals
   a. Provide a Title Page, with project name, Contractor's name and address, contact information, date of submission, and submission revision number.
   b. Provide a Parts List, for proposed equipment, materials, components and devices, listing the following information for each line item:
      1) The system type
      2) Model number
      3) Specification sheet page reference
   c. Provide Manufacturers Specification Sheet with descriptive information for equipment, materials, components and devices. Number each page, to correspond with the Parts List.
   d. Clearly delineate (with highlighter, arrow, or underline) on each specification sheet, specific model numbers, options and configurations being proposed for this project.
   e. Indicate kinds of materials and finishes for equipment where more than one option is presented.
2. Acceptance Testing Plan
   a. Submit a written document detailing the test procedures to be followed in evaluating and proving the installed system(s).
   b. Provide a sample of the test forms to be used for each system and for each component of each system.
   c. Include all tests required by the equipment manufacturer and by this Specification
3. Incomplete or unchecked submittals which do not contain complete data on the work and full information on related matters will be returned for correction.

F. CE and FCC Compliance Certificates:

G. Field quality-control reports

H. Current Specified Manufacturer Integrator Certification Letter

I. Current Specified Manufacturer Training Certificates (listing expiration dates) for Two technicians from the supporting office

J. Warranty: Software support and warranty information for all components, including Service Level Agreement (SLA) details, and duration of agreement from date of system acceptance by Owner. Submit sample of manufacturer's warranty and documentation of final executed warranty completed in Owner's name and registered with manufacturer.

K. Project Record Documents: Record actual locations of system components and installed wiring arrangements and routing.

1.07 QUALITY ASSURANCE

A. Comply with the following:
   1. NFPA 70.
   2. NFPA 101 (Life Safety Code).
   3. The requirements of the local authorities having jurisdiction.
   4. Applicable TIA/EIA standards.

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

D. Installer Qualifications: Company specializing in performing the work of this section with minimum three years documented experience with access control systems of similar size, type, and complexity and providing contract maintenance service as a regular part of their business; authorized manufacturer's representative.
   1. Contract maintenance office located within 100 miles (160 km) of project site.

E. Maintenance Contractor Qualifications: Same entity as installer.

F. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

G. The requirements of the State Building Code and local regulations establish the minimum acceptable quality of workmanship and materials, and all work shall conform thereto unless more stringent requirements are indicated or specified herein.

H. All work shall comply with the latest editions of the codes as referenced herein.

I. Follow manufacturer's directions for articles furnished, in addition to directions shown on drawings or specified herein.

J. Protect all work, materials, and equipment from damage during process of work. Replace all damaged or defective work, materials and equipment without additional cost to DCAMM.

K. All equipment and materials for permanent installation shall be the products of recognized manufacturers and shall be new.

L. Equipment and materials shall:
1. Where normally subject to Underwriters Laboratory Inc. listing or labeling services, be so listed or labeled.
2. Be without blemish or defect.
3. Not be used for temporary purposes.
4. Be in accordance with the latest applicable NEMA standards.
5. Be products which will meet with the acceptance of all authorities having jurisdiction over the work. Where such acceptance is contingent upon having the products examined, tested and certified by Underwriters or another recognized testing laboratory, the product shall be so examined, tested and certified.

M. Except for conduit, conduit fittings, outlet boxes, wire and cable, all items of equipment or material of one generic type shall be the product of one manufacturer throughout.

N. For items which are to be installed but not purchased as part of the electrical work, the electrical work shall include:
1. The coordination of their delivery.
2. Their unloading from delivery trucks driven into any point on the property line at grade level.
3. Their safe handling and field storage up to the time of permanent placement in the project.
4. The correction of any damage, defacement or corrosion to which they may have been subjected. Replacement, if necessary, shall be coordinated with Contractor who originally purchased the item.
5. Their field make up and internal wiring as may be necessary for their proper operation.
6. Their mounting in place including the purchase and installation of all dunnage, supporting members, and fastenings necessary to adapt them to architectural and structural conditions.
7. Their connection to building wiring including the purchase and installation of all termination junction boxes necessary to adapt and connect them to this wiring. Included also shall be the purchase and installation of any substitute lugs or other wiring terminations as may be necessary to adapt their terminals to the building wiring as called for and to the connection methods set forth in these specifications.

O. Items which are to be installed but not purchased as part of the electric work shall be carefully examined upon delivery to the project. Claims that any of these items have been received in such condition that their installation will require procedures beyond the reasonable scope of the electric work will be considered only if presented in writing within one week of the date of delivery to the project of the items in question. The work includes all procedures, regardless of how extensive, necessary to put into satisfactory operation, all items for which no claims have been submitted as outlined above.

P. Seismic Performance: Provide equipment capable of withstanding the effects of earthquake motions determined according to ASCE/SEI 7 and current building codes for the state of CT.
   1. The term “withstand” means “the system(s) will remain in place without separation of any parts when subjected to the seismic forces specified and the system will be fully operational after the seismic event.”

1.08 PROJECT CONDITIONS

A. Environmental Conditions: Capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:
   1. Interior, Controlled Environment: System components installed in temperature-controlled interior environments shall be rated for continuous operation in ambient temperatures of 36 to 122 deg F (2 to 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, noncondensing. Use NEMA 250, Type 1 enclosures.
   2. Interior, Uncontrolled Environment: System components installed in non- temperature-controlled interior environments shall be rated for continuous operation in ambient temperatures of 0 to 122 deg F (minus 18 to plus 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, noncondensing. Use NEMA 250, Type 3R enclosures.
   3. Exterior Environment: System components installed in locations exposed to weather shall be rated for continuous operation in ambient temperatures of minus 30 to plus 122 deg F (minus 34 to plus 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, condensing. Rate for continuous operation when exposed to rain as specified in NEMA 250, winds up to 85 mph and snow cover up to 24 inches thick. Use sufficiently rated NEMA 250 enclosures.
   4. Hazardous Environment: System components located in areas where fire or explosion hazards may exist because of flammable gases or vapors, flammable liquids, combustible dust, or ignitable fibers shall be rated, listed, and installed according to NFPA 70.
   5. Corrosive Environment: System components subject to corrosive fumes, vapors, and wind-driven salt spray in coastal zones. Use sufficiently rated NEMA 250 enclosures.
   6. Security Environment: Camera housing for use in high-risk areas where surveillance equipment may be subject to physical violence.

1.09 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

B. Store products in manufacturer's unopened packaging, keep dry and protect from damage until ready for installation.

1.10 FIELD CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

1.11 WARRANTY

A. See Division 01 – Closeout Submittals for additional warranty requirements.

B. The Integrator guarantees the Systems to be installed under this specification to be free from any defects in workmanship and materials for a period of one (1) year from the date of final completion/acceptance of the project by the Owner as evidenced by the date of final payment for the work. The Contractor shall promptly and at their own expense remedy any defects in the work and pay for any damage to other work resulting thereof, which shall appear during the period of time covered by this guarantee. Neither the final certificate of payment nor any provisions in this Agreement shall constitute an acceptance of work not done in accordance with this specification or relieve the Contractor of liability with respect to any expressed warranties or guarantees or responsibility for faulty materials or workmanship.

C. Submit manufacturer's standard warranties.

PART 2 PRODUCTS

2.01 SYSTEM REQUIREMENTS

A. Furnish and install Electronic Security System cabling consisting of required equipment, conduit, boxes, wiring, connectors, hardware, supports, accessories, software, system programming, etc. as necessary for a complete operating system that provides the functional intent indicated.

B. It is the responsibility of the contractor awarded this project to ensure the cable used is approved by the equipment manufacturer for its intended use and will meet environmental and distance requirements.

C. Shields and twisted wire are required unless PROHIBITED by the Access Control or Intrusion Detection Manufacturer.

D. 20 AWG is a minimum wire size unless PROHIBITED by the Access Control and Intrusion Detection Manufacturer.

2.02 CABLING:

A. All cabling shall be plenum rated.

B. Approved Manufacturer’s:
1. Belden
2. West Penn

C. System Cable: Provide cable as shown below or as recommended by the Manufacturer.
1. Low Voltage Security Alarm Signal Cable shall be twisted, single pair, shielded cable, with shield drain wire, with overall jacket, gauge calculated to compensate for length of run and current requirements. All conductors for security zone signal to be minimum #20 AWG, UL listed. All wires to be color coded. One pair #20 AWG per security device zone required.
2. Low Voltage Security Power, 12 VDC cable shall be minimum of #18 AWG for runs up to 150,’ and a minimum of #16 AWG for runs up to 300,’ twisted, shielded stranded, with

shield drain wire, UL listed, jacketed, pair, separate color code from any other power circuits.

3. Electric Lock Power Cable shall be minimum of #14 AWG for runs up to 200' serving a single lock. Twisted, shielded, stranded, jacketed pair, UL listed, separate color ode from any other power circuits.
4. Composite Cable (Reader, Lock, Monitor, REX): CAT6 jacketed Plenum cable with overall shield, including (6) Conductor Shielded 22AWG w/ripcord, 4-Conductor 22AWG w/ripcord, 4-Conductor 22AWG w/ripcord, and 4-Conductor 18 AWG w/ripcord; or equal with written approval by Security Consultant.
5. Lock Power, at Double Doors: Jacketed Plenum cable, unshielded, 4-conductor 18 AWG (7- strand), unshielded, or approved equal.
6. Request-to-Exit Cable, at Double Doors: Plenum rated jacket, 4-conductor 22 AWG (7-strand), unshielded, or approved equal.
7. Special Control Cable, at Double Emergency Exit Doors with Power Booster: Plenum rated cable, 4-conductor 12 AWG (19 strand), unshielded, or approved equal.
8. Card Reader Cable for second card reader at same portal: 3 Pair Shielded 22AWG or approved equal.
9. Alarm Monitoring: 1Pair Shielded 22AWG, or equal.
10. Area Motion Detector: 2 Pair Shielded 20AWG, or equal.
11. Push Buttons: 2 Conductor 18AWG.
12. Lockdown Buttons: 2 Pair Shielded 18AWG, or equal
13. Data: 2 Pair Shielded 20AWG, or equal.
14. Strobe: 2 Pair Shielded 18AWG, or equal.
15. Network Cable: CAT 6, or as required by Division 27, whichever is more stringent.

D. Cable installed below grade shall be rated for immersion in water.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that ratings and configurations of system components are consisted with the indicated requirements.

C. Verify that mounting surfaces are ready to receive the system components.

D. Verify that branch circuit wiring is installed, completed, tested, and ready for connection to system.

E. Verify that conditions are satisfactory prior to starting work.

F. Device Locations
   1. All device locations are to be field verified with the Owner prior to start of project. Architectural drawings are for approximation purposes only. Additional charges will not be allowed for outlet installation in areas not reviewed or approved by the Owner.

G. Examine pathway elements intended for cables. Check raceways and other elements for compliance with space allocations, installation tolerance, hazards to camera installation, and other conditions affecting installation.

H. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install access control system in accordance with NECA 1 (general workmanship).

B. Install products in accordance with manufacturer's instructions.

C. Unless otherwise indicated, use wiring in conduit.
   1. Use suitable listed cables in we locations, including underground raceways.
   2. Use suitable listed cables for vertical wire applications.
   3. All cabling shall be plenum rated.
   4. Install wiring in conduit for the following:
      a. Where required for rough-in.
      b. Where required by the AHJ.
      c. Where exposed to damage.
      d. Where installed outside the building.
      e. For exposed connections from outlet boxes to devices.
   5. Conduit: comply with section Division 26.
   6. Conceal cables unless specifically indicated to be exposed.
   7. User power transfer hinges specified within Division 08 for concealed connections to door hardware.
   8. Cables in the following areas may be exposed:
      a. Equipment Closets
   9. Route exposed cables in parallel or perpendicular to building structural members and surfaces.
   10. Do not exceed manufacturer's recommended maximum cable length between components.

D. Provide grounding and bonding in accordance with Division 26.

E. Install firestopping to preserve the fire resistance rating of partitions and other elements, using materials and methods specified in Division 07.

F. Install power supplies and other auxiliary components at control stations unless otherwise indicated.

G. Identify system components, wiring, cabling, and terminals according to ANSI/EIA/TIA standards.

H. Wiring may be run in concealed spaces without conduit, in electrical trays (approved by owner), and where otherwise shown on drawings, provided conductors are reasonably protected from mechanical and environmental damage.

I. Conductors run without conduit shall be approved, UL Listed, rated and labeled for Plenum use.

J. Secure wire and cable with approved supports in accordance with the referenced standards and the Authority Having Jurisdiction.

K. Provide cable supports at a minimum of 4-foot intervals.

L. Equipment and devices shall be installed on approved electrical back-boxes. Do not install equipment and devices directly on walls, ceilings or structural components without back- boxes.

M. Secure cables to cabinets, junction boxes, pull boxes and outlet boxes with approved cable clamps.

N. Independently support cables. Do not use other supports i.e., (suspended ceilings, suspended ceiling supporting members, lighting fixtures, mechanical piping, or mechanical ducts).

O. Support cable independently of junction boxes, pull boxes, fixtures, suspended ceiling T- bars, angle supports, and similar items.

P. Support cable using cable trays, D-brackets, support straps, support wires or other approved cable supports.

Q. Fasten cable supports to building structure and surfaces.

R. In shared electrical trays, open ducts, and other cable runs without conduit, separate and strap Access Control cable so that it is clearly distinguishable from all other cables.

S. Clearly mark security system cables at minimum intervals of every 10-feet. Marking shall be with a permanent, printed label, color-coded tag, or other distinguishing marking. Felt tip pen marking on the cable is not acceptable.

T. After installation, and before termination, wiring shall be checked and tested to insure there are no grounds, opens, or shorts on any conductors or shields. In addition, wiring between buildings or underground and all coax cables shall have insulation tested with a megohmmeter and a reading of greater than 20 megohms shall be required to successfully complete the test.

U. Run wires continuously from termination to termination without splices. Splices at junction box locations are not allowed.

V. Water-resistant protection shall be continuous throughout the cable in outdoor surface conduit, poles, in-slab pull-boxes, in-slab conduit, and underground conduit and pull-boxes, and in any areas subject to moisture and/or water infiltration.
   1. Splices/Junctions: Provide water-proof protection of splices and junctions, in surface conduit and boxes, in-slab conduit and pull-boxes, underground conduit, and underground pull-boxes, to prevent the entry of moisture or water into cables, splices or connections.
   2. Cable Entries: Provide water-blocking sealants at all conduit entries into pull- boxes, junction boxes, back-boxes, cabinets, etc., to prevent the entry of moisture or water into the conduit and cable system.

W. Labeling: Identify wire and cable clearly with permanent labels wrapped around the full circumference within one inch of each connection. Correlate the number designated on the associated Shop or Field Drawings. Assign wire or able designations consistently throughout a

given system. Each wire or cable shall carry the same labeled designation over its entire run. Regardless of intermediate terminations.

X. Boxes: Provide a box loop for wire and cable routed through pull boxes or controller panels. Cable loops and bends shall not be at a radius less than that recommended by the manufacturer. Coordinate pull box size with the Division 26 Contractor as necessary to accommodate this requirement.

Y. Wire Lacing and Dressing: Dress, lace, tie or harness wire and cable vertically, horizontally and at right angles to the enclosure surfaces to prevent mechanical stress on electrical connections as required herein and in accordance with accepted professional practice. No wire or cable shall be supported by a connection point.

Z. Non-Coaxial Connections: Make non-coaxial connections and approved splices within terminal cabinets (except microphone or line level) to screw-type barrier blocks with insulated crimp-type spade lugs. Size all lugs properly to assure high electrical integrity. Connect only one (1) wire per spade lug and not more than two (2) lugs per screw terminal.

AA. Non-Coaxial splicing at device locations to equipment with wire leads shall be made with pre-approved wire Dolphin Connectors.

BB. Shielded Cables: Shielded cables shall be insulated. Do not permit shields to contact conduit, raceway, boxes, terminal cabinets or equipment enclosures. Tin terminated shield drain wires and insulate with heat shrinkable tubing.

CC. Coaxial Splices: Coaxial splices, if required and approved, shall be on plate mounted dual - barrel type insulated BNC connectors, secured in such a manner that no stress is placed upon the connector.

DD. Unacceptable Conditions: Correct any unacceptable wiring conditions immediately upon discovery, and upon receiving notice to correct.

EE. Wiring to provide all 120 VAC sources and points of connection to same shall be by the Electrical Contractor.

FF. All wiring, including low voltage power, voice, signal and data communication, shall be installed in approved metal raceway as required. All wiring, conduit and installation shall be in accordance with the latest edition of the National Electrical Code, especially article 725, with conduit fill requirements as though system wiring were 120VAC, (40% conduit fill) and the requirements of Division 26, Electrical Specifications. Up- size conduits from sizes shown on drawings, as necessary not to exceed 40% fill criteria. All conduit shall be ¾” minimum unless otherwise noted on the riser diagrams.

GG. Ensure cabling shield does not touch terminal connections. Provide “one-end” ground on all shields using drain wires at control panels, power supplies, or head end equipment, then to separate and dedicated RF ground via #8 AWG copper cable. Insulate shield at device end with shrink tubing to completely cover shield and drain wire.

HH. Where multiple devices are served by the same shielded cable, shield continuity shall be maintained and properly insulated to eliminate intermittent grounding. Do not bring shield grounds directly to a building electrical ground point of connection. Carefully follow

manufacturer's instructions and advise Engineer accordingly. Shield grounds shall be treated as specified herein unless prohibited by manufacturers.

II. Lay out conduit and cable runs with Electrical and General Contractor prior to installation, and maintain 1'-0" clearance from parallel runs with 120VAC or larger voltage conduit and wiring. Cross 120VAC or larger voltage conduit runs at 90° to reduce EMI and RF induction in security wiring.

JJ. All wires shall be color coded to provide separate identification of intrusion alarm signal, 12 VDC, 24 VAC, or ACS/IDS system data communication, lock power, video signal, VSS alarm input, zone expansion or relay board power and data bus or any other system function. Wires shall be similarly coded for each system serviced throughout the entire installation.

KK. All resistors shall be solder connected or double crimp connected to eliminate any additional circuit resistance. Wires connected to resistors shall be solder-tinned to insure positive solder connection or crimp connection. Resistors shall be insulated with shrink tubing extending a minimum of 1" either side of resistor. (Unless factory installed and potted as part of magnetic contact construction.)

LL. No intermediate cable splices are allowed without the specific written approval of the Security Consultant. Request clarification and approval prior to installation of any splices.

MM. All alarm circuits shall be tagged at the device end and field control panel end with alarm panel or zone addressing module hardware circuit terminal address numbers.

NN. Transformers and power supplies shall be identified, along with their cable, at both transformer and load fed end of cable.

OO. Each alarm device system cable shall be tagged at both the device and control panel end with the device type (i.e. door contact, motion detector, etc.).

PP. All 12VDC power circuits shall be tagged at each device and 12VDC power supply fused terminal strip with 12VDC panel and fused circuit number.

QQ. All power cables shall be tagged at the device end and power panel end with matching numbers.

RR. All wiring in panels shall be neatly dressed, run parallel wherever possible, and provided with adequate slack for future maintenance and service terminations.

SS. All "unused" wire conductors shall be insulated to eliminate shorts and grounds, tagged with their terminal points and identified as "spare" at each end with a unique spare cable tag identification system.

TT. Minor deviations (relocations) in wire runs to installed mounting locations may be required prior to final acceptance when site conditions affect the equipment's operation, performance, or purpose. Relocations which require only minimal work (plus or minus 15') and/or materials shall be made without additional cost or credit.

UU. The Contractor shall note that connection of alarm zone circuits to the ACS/IDS panels will require the installation of end-of-line resistors in each zone circuit. Locate as close to the device as possible to provide as much circuit supervision as possible. EOL resistors shall not be located

at the panel for active security circuits. All unused zones shall have the end-of-line resistor mounted in the panel if manufacturers' requirements so dictate. Where end-of-line resistors are to be mounted at devices that are factory sealed and have factory configured wire leads, the resistor shall be spliced in-line with the leads as close to the device as possible (splices shall be soldered and covered with heat shrink tubing as specified elsewhere in these specifications).

VV. The Contractor shall install panel cover-operated tamper switches in each equipment enclosure, cabinet, housing, to actuate an alarm signal before access to equipment wiring within the enclosure is gained. Tamper switch mounting hardware shall be concealed so that the location of the switch cannot be visually detected from the exterior of the enclosure. These circuits shall be supervised.

WW. All wiring or cable shall be tested for, and be free of, opens and shorts. All wiring shall test free of grounds with the exception of circuits that are intended to be connected to the ground side of protective circuits.

XX. All wire and cables entering equipment cabinets and enclosures shall be grouped and tied inside the enclosures on 6-inch centers with self-locking nylon cable ties. All wiring shall be grouped in an orderly fashion. Under no circumstances is the use of adhesive tapes (electrical or other) permitted for either permanent or temporary ties or wire management.

YY. All stranded wiring that is connected to equipment that has terminal strips or screw lugs shall be terminated with either nylon insulated crimp-on spade lugs, equal to Thomas & Betts STA-KON fork tongue locking type or equivalent, sized for correct wire and screw sizes or shall be solid bare wire attached to screw terminals. Where compression screws are used to cap wiring, wiring shall be tinned to eliminate destranding and consequent poor connection. Each spade lug or wire shall be marked with a self- sticking numbered wire marker and documented on the as-built wiring diagrams.

ZZ. All wiring that is connected to equipment with solder lug connectors shall terminate wire to lug in a solder joint. The solder joint, lug and any bare wire shall be covered with heat shrink tubing. Multi-conductor bare wire ends shall be soldered to prevent de-stranding.

AAA. Each wire and cable shall be clearly marked within each enclosure, junction box, or where termination is made. Wires and cables shall be marked with a clear, heat-shrink system such as "Shrink Mark" or equivalent, labeling system as manufactured by RayChem. Cable numbers shall be generated on a PC. Felt-tip "Sharpie" type pen markings are unacceptable. Marking documentation shall be included with the detailed wiring diagram to be provided to the Owner on completion of the installation as part of the As-Built documentation in the "Project Manuals".

BBB. Wiring and cables that are installed shall maintain color coding from origination point to termination point. Where paired cable is used, the pairs in the cable shall be maintained in the run. Pairs shall not be separated to form different pairs than those in the original cable. Color coding shall be maintained within the system. Maintaining color coding applies to all type circuits in the system.

CCC. Review wiring type, scheme and tagging for all systems prior to installation, with factory/technical representatives. Advise the engineer of any required modifications prior to wire procurement and installation and obtain approval accordingly. It is the contractor's

responsibility to review the system's wiring with the factory representatives and supply the cables which meet their requirements. Where heavier gauge cables are specified by the engineer and such provide enhanced performance reliability, durability or future capacity, they shall be used unless prohibited by the manufacturer.

DDD. Paralleling of multi-conductor cables to "create" a cable of larger wire gauge is prohibited, except at door frame power transfer hinges.

EEE. Wiring diagrams shall be provided in all signal and power panels along with cable schedules, in a clear plastic envelope, for future use in system maintenance and service.

FFF. Run electric lock power circuits so that each electrified locking door opening is wired on its own wire pair to a dedicated fused circuit in the lock power supply.

GGG. Connect no more than five (5) 12VDC security devices to a single pair of 12VDC power wires without the engineer's approval. Terminate these 12VDC power circuits on a dedicated fused outlet in the 12VDC power supply

3.03 FIELD QUALITY CONTROL

A. Testing Agency: The Contractor shall engage a qualified testing agency to perform tests and inspections with the Owner and appointed project manager.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

C. Perform tests and inspections.
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

D. Tests and Inspections:
   1. Inspection: Verify that units and controls are properly installed, connected, and labeled, and that interconnecting wires and terminals are identified.
   2. Pretesting: Align and adjust system and pretest components, wiring, and functions to verify that they comply with specified requirements.
   3. Test Schedule: Schedule tests after pretesting has been successfully completed and system has been in normal functional operation for at least fourteen (14) days. Provide a minimum of ten (10) days notice of test schedule.
   4. Operational Tests: Perform operational system tests to verify that system complies with Specifications. Include all modes of system operation. Test equipment for proper operation in all functional modes.

E. Access Control System shall be considered defective if it does not pass tests and inspections.

F. Prepare test and inspection reports.

3.04 CLEANING

A. Remove rubbish and debris: Installation contractor is not allowed you use the onsite dumpster and is responsible to discard their own debris off site.

B. Clean installed items using methods and materials recommended in writing by manufacturer.

C. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

3.05 CLOSEOUT ACTIVITIES

A. See Division 01 – Closeout Submittals for Closeout Submittals.

3.06 PROTECTION

A. Protect installed system components from subsequent construction operations.

3.07 MAINTENANCE

A. See Division 01 – Execution and Closeout Requirements for additional requirements relating to maintenance service.

B. Adjustments:
   1. Occupancy Adjustments: When requested within twelve (12) months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two (2) visits to Project during other-than-normal occupancy hours for this purpose. Tasks shall include, but are not limited to, the following:
      a. Check cable connections.
      b. Check proper operation of access control devices.
      c. Provide a written report of adjustments and recommendations.

C. Provide to Owner, at no extra cost, a separate maintenance contract for the service and maintenance of the Access Control System for One Year from date of Substantial Completion. Include a separate description of preventative maintenance, systematic examination, cleaning, inspection, and testing, with a detailed schedule.

D. Conduct site visit at least once every three months to perform inspection, testing, and preventative maintenance. Submit report to Owner indicating maintenance performed along with evaluations and recommendations.

E. Provide trouble call-back service upon notification by Owner:
   1. Include allowance for call-back service during normal working hours at no extra cost to Owner.
   2. Owner will pay for call-back service outside of normal working hours on an hourly basis, based on actual time spent at the site and not including travel time; include hourly rate and definition of normal working hours in maintenance contract.

END OF SECTION

SECTION 28 0528 - PATHWAYS FOR SECURITY SYSTEMS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Related Drawings
   1. "T" Drawings – Technology Plans

C. Related Sections:
   1. Section 271000 – Communication Horizontal
   2. Section 280500 – Security Conductor Cables
   3. Section 281300 – Access Controls
   4. Section 281600 – Intrusion Detection
   5. Section 282300 – Video Surveillance

1.02 SUMMARY

A. Section Includes:
   1. Metal conduits and fittings.
   2. Nonmetallic conduits and fittings.
   3. Optical-fiber-cable pathways and fittings.
   4. Metal wireways and auxiliary gutters.
   5. Nonmetallic wireways and auxiliary gutters.
   6. Surface pathways.
   7. Boxes, enclosures, and cabinets.
   8. Handholes and boxes for exterior underground cabling.

1.03 DEFINITIONS

A. ARC: Aluminum rigid conduit.

B. GRC: Galvanized rigid steel conduit.

C. IMC: Intermediate metal conduit.

1.04 ACTION SUBMITTALS

A. Product Data: For surface pathways, wireways and fittings, floor boxes, hinged-cover enclosures, and cabinets.

B. Shop Drawings: For custom enclosures and cabinets. Include plans, elevations, sections, and attachment details.

1.05 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Pathway routing plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of items involved:
   1. Structural members in paths of pathway groups with common supports.
   2. HVAC and plumbing items and architectural features in paths of conduit groups with common supports.

B. Qualification Data: For professional engineer.

C. Seismic Qualification Certificates: For pathway racks, enclosures, cabinets, equipment racks and their mounting provisions, including those for internal components, from manufacturer.
   1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
   2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
   3. Detailed description of equipment anchorage devices on which certification is based and their installation requirements.
   4. Detailed description of conduit support devices and interconnections on which certification is based and their installation requirements.

D. Source quality-control reports.

PART 2 PRODUCTS

2.01 METAL CONDUITS AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. AFC Cable Systems, Inc.
   2. Allied Tube & Conduit; a Tyco International Ltd. Co.
   3. Alpha Wire Company
   4. Anamet Electrical, Inc.
   5. Electri-Flex Company
   6. O-Z/Gedney; a brand of EGS Electrical Group
   7. Picoma Industries; Subsidiary of Mueller Water Products, Inc.
   8. Republic Conduit
   9. Robroy Industries
   10. Southwire Company
   11. Thomas & Betts Corporation
   12. Western Tube and Conduit Corporation
   13. Wheatland Tube Company; a division of John Maneely Company

B. General Requirements for Metal Conduits and Fittings:

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Comply with TIA-569-B.

C. GRC: Comply with ANSI C80.1 and UL 6.

D. ARC: Comply with ANSI C80.5 and UL 6A.

E. IMC: Comply with ANSI C80.6 and UL 1242.

F. PVC-Coated Steel Conduit: PVC-coated rigid steel conduit.
1. Comply with NEMA RN 1.
2. Coating Thickness: 0.040 inch minimum.

G. EMT: Comply with ANSI C80.3 and UL 797.

H. Fittings for Metal Conduit: Comply with NEMA FB 1 and UL 514B.
1. Conduit Fittings for Hazardous (Classified) Locations: Comply with UL 886 and NFPA 70.
2. Fittings for EMT:
   a. Material: Steel.
   b. Type: Setscrew.
3. Expansion Fittings: PVC or steel to match conduit type, complying with UL-467, rated for environmental conditions where installed, and including flexible external bonding jumper.
4. Coating for Fittings for PVC-Coated Conduit: Minimum thickness of 0.040 inch, with overlapping sleeves protecting threaded joints.

I. Joint Compound for IMC, GRC, or ARC: Approved, as defined in NFPA 70, by authorities having jurisdiction for use in conduit assemblies, and compounded for use to lubricate and protect threaded conduit joints from corrosion and to enhance their conductivity.

2.02 NONMETALLIC CONDUITS AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. AFC Cable Systems, Inc.
2. Allied Tube & Conduit; a Tyco International Ltd. Co.
3. Anamet Electrical, Inc.
4. Arnco Corporation
5. CANTEX Inc.
6. CertainTeed Corp.
7. Condux International, Inc.
8. Electri-Flex Company
9. Kraloy
10. Lamson & Sessions; Carlon Electrical Products
11. Niedax-Kleinhuis USA, Inc.
12. RACO; a Hubbell company

13. Thomas & Betts Corporation

B. General Requirements for Nonmetallic Conduits and Fittings:
   1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
   2. Comply with TIA-569-B.

C. RNC: Type EPC-40-PVC complying with NEMA TC 2 and UL 651 unless otherwise indicated.

D. Rigid HDPE: Comply with UL 651A.

E. Continuous HDPE: Comply with UL 651B.

F. RTRC: Comply with UL 1684A and NEMA TC 14.

G. Fittings for RNC: Comply with NEMA TC 3; match to conduit or tubing type and material.

H. Solvent cements and adhesive primers shall have a VOC content of 510 and 550 g/L or less, respectively, when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.03 OPTICAL-FIBER-CABLE PATHWAYS AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Alpha Wire Company.
   2. Arnco Corporation.
   3. Endot Industries Inc.
   4. IPEX.
   5. Lamson & Sessions; Carlon Electrical Products.

B. Description: Comply with UL 2024; flexible-type pathway, approved for plenum installation unless otherwise indicated.
   1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
   2. Comply with TIA-569-B.

2.04 METAL WIREWAYS AND AUXILIARY GUTTERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Cooper B-Line, Inc.
   2. Hoffman; a Pentair company
   3. Mono-Systems, Inc.
   4. Square D; a brand of Schneider Electric

B. Description: Sheet metal, complying with UL 870 and NEMA 250 and sized according to NFPA 70.
   1. Metal wireways installed outdoors shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2. Comply with TIA-569-B.

C. Fittings and Accessories: Include covers, couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.

D. Wireway Covers: Screw-cover type unless otherwise indicated.

E. Finish: Manufacturer's standard enamel finish.

2.05 NONMETALLIC WIREWAYS AND AUXILIARY GUTTERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Allied Moulded Products, Inc.
2. Hoffman; a Pentair company
3. Lamson & Sessions; Carlon Electrical Products
4. Niedax-Kleinhuis USA, Inc.

B. General Requirements for Nonmetallic Wireways and Auxiliary Gutters:
1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Comply with TIA-569-B.

C. Description: Fiberglass polyester, extruded and fabricated to required size and shape, without holes or knockouts. Cover shall be gasketed with oil-resistant gasket material and fastened with captive screws treated for corrosion resistance. Connections shall be flanged and have stainless-steel screws and oil-resistant gaskets.

D. Description: PVC, extruded and fabricated to required size and shape, and having snap-on cover, mechanically coupled connections, and plastic fasteners.

E. Fittings and Accessories: Couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings shall match and mate with wireways as required for complete system.

F. Solvent cements and adhesive primers shall have a VOC content of 510 and 550 g/L or less, respectively, when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.06 SURFACE PATHWAYS

A. General Requirements for Surface Pathways:
1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Comply with TIA-569-B.

B. Surface Metal Pathways: Galvanized steel with snap-on covers complying with UL 5. Manufacturer's standard enamel finish in color selected by Architect.

1. Manufacturers: Subject to compliance with requirements, provide products by one (1) of the following:
   a. Mono-Systems, Inc.
   b. Niedax-Kleinhuis USA, Inc.
   c. Panduit Corp
   d. Wiremold/Legrand

C. Surface Nonmetallic Pathways: Two- or three-piece construction, complying with UL 5A, and manufactured of rigid PVC with texture and color selected by Architect from manufacturer's standard colors. Product shall comply with UL-94 V-0 requirements for self-extinguishing characteristics.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Hubbell Incorporated; Wiring Device-Kellems Division
   b. Lamson & Sessions; Carlon Electrical Products
   c. Mono-Systems, Inc.
   d. Panduit Corp.
   e. Wiremold/Legrand

2.07 BOXES, ENCLOSURES, AND CABINETS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Adalet

B. Cooper Technologies Company; Cooper Crouse-Hinds
1. EGS/Appleton Electric
2. Erickson Electrical Equipment Company
3. Hoffman; a Pentair company
4. Hubbell Incorporated; Killark Division
5. Lamson & Sessions; Carlon Electrical Products
6. Milbank Manufacturing Co.
7. Molex; Woodhead Brand
8. Mono-Systems, Inc.
9. O-Z/Gedney; a brand of EGS Electrical Group
10. RACO; a Hubbell company
11. Robroy Industries
12. Spring City Electrical Manufacturing Company
13. Stahlin Non-Metallic Enclosures; a division of Robroy Industries
14. Thomas & Betts Corporation
15. Wiremold/Legrand

C. General Requirements for Boxes, Enclosures, and Cabinets:
1. Comply with TIA-569-B.
2. Boxes, enclosures and cabinets installed in wet locations shall be listed for use in wet locations.

D. Sheet-Metal Outlet and Device Boxes: Comply with NEMA OS 1 and UL 514A.

E. Cast-Metal Outlet and Device Boxes: Comply with NEMA FB 1, aluminum, Type FD, with gasketed cover.

F. Box extensions used to accommodate new building finishes shall be of same material as recessed box.

G. Metal Floor Boxes:
   1. Material: Cast metal.
   2. Type: Fully adjustable.
   3. Shape: Rectangular.
   4. Listing and Labeling: Metal floor boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

H. Nonmetallic Floor Boxes: Nonadjustable, rectangular.
   1. Listing and Labeling: Nonmetallic floor boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

I. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1.

J. Cast-Metal Access, Pull, and Junction Boxes: Comply with NEMA FB 1 and UL 1773, cast aluminum with gasketed cover.

K. Device Box Dimensions: as specified within the Architectural drawings.

L. Nonmetallic Outlet and Device Boxes: Comply with NEMA OS 2 and UL 514C.

M. Hinged-Cover Enclosures: Comply with UL 50 and NEMA 250, with continuous-hinge cover with flush latch unless otherwise indicated.
   1. Metal Enclosures: Steel, finished inside and out with manufacturer's standard enamel.
   2. Nonmetallic Enclosures:
      a. Material: Plastic.
      b. Finished inside with radio-frequency-resistant paint.
   3. Interior Panels: Steel; all sides finished with manufacturer's standard enamel.

PART 3 EXECUTION

3.01 PATHWAY APPLICATION

A. Indoors: Apply pathway products as specified below unless otherwise indicated:
   1. Exposed, Not Subject to Physical Damage: EMT.
   2. Exposed, Not Subject to Severe Physical Damage: EMT.
   3. Exposed and Subject to Severe Physical Damage: GRC. Pathway locations include the following:
      a. Loading dock.
      b. Corridors used for traffic of mechanized carts, forklifts, and pallet-handling units.

c. Mechanical rooms.
d. Gymnasiums.

4. Concealed in Ceilings and Interior Walls and Partitions: EMT. Allow plenum cable in j-hooks or cable tray.
5. Damp or Wet Locations: GRC.
6. Pathways for Optical-Fiber or Communications Cable in Spaces Used for Environmental Air: Plenum-type, optical-fiber-cable pathway.
7. Pathways for Concealed General-Purpose Distribution of Optical-Fiber or Communications Cable: Plenum-type, optical-fiber-cable pathway.
8. Boxes and Enclosures: NEMA 250 Type 1, except use NEMA 250 Type 4 stainless steel in institutional and commercial kitchens and damp or wet locations.

B. Minimum Pathway Size: ¾-inch trade size. Minimum size for optical-fiber cables is 1 inch.

C. Pathway Fittings: Compatible with pathways and suitable for use and location.
1. Rigid and Intermediate Steel Conduit: Use threaded rigid steel conduit fittings unless otherwise indicated. Comply with NEMA FB 2.10.
2. PVC Externally Coated, Rigid Steel Conduits: Use only fittings listed for use with this type of conduit. Patch and seal all joints, nicks, and scrapes in PVC coating after installing conduits and fittings. Use sealant recommended by fitting manufacturer and apply in thickness and number of coats recommended by manufacturer.
3. EMT: Use setscrew or compression, cast-metal fittings. Comply with NEMA FB 2.10.

D. Do not install aluminum conduits, boxes, or fittings in contact with concrete or earth.

E. Install surface pathways only where indicated on Drawings.

F. Do not install nonmetallic conduit where ambient temperature exceeds 120 deg.

3.02 INSTALLATION

A. Comply with NECA 1, NECA 101, and TIA-569-B for installation requirements except where requirements on Drawings or in this article are stricter. Comply with NECA 102 for aluminum pathways. Comply with NFPA 70 limitations for types of pathways allowed in specific occupancies and number of floors.

B. Keep pathways at least 6 inches away from parallel runs of flues and steam or hot-water pipes. Install horizontal pathway runs above water and steam piping.

C. Complete pathway installation before starting conductor installation.

D. Comply with requirements in Section 260529 "Hangers and Supports for Electrical Systems" for hangers and supports.

E. Arrange stub-ups so curved portions of bends are not visible above finished slab.

F. Install no more than the equivalent of two (2) 90-degree bends in any pathway run. Support within 12 inches of changes in direction. Utilize long radius ells for all optical-fiber cables.

G. Conceal conduit and EMT within finished walls, ceilings, and floors unless otherwise indicated. Install conduits parallel or perpendicular to building lines.

H. Support conduit within 12 inches of enclosures to which attached.

I. Pathways Embedded in Slabs:
   1. Run conduit larger than 1-inch trade size, parallel or at right angles to main reinforcement. Where at right angles to reinforcement, place conduit close to slab support. Secure pathways to reinforcement at maximum 10-foot intervals.
   2. Arrange pathways to cross building expansion joints at right angles with expansion fittings.
   3. Arrange pathways to keep a minimum of 2 inches of concrete cover in all directions.
   4. Do not embed threadless fittings in concrete unless specifically approved by Architect for each specific location.
   5. Change from ENT to RNC, Type EPC-40-PVC before rising above floor.

J. Stub-ups to Above Recessed Ceilings:
   1. Use EMT, IMC, or RMC for pathways.
   2. Use a conduit bushing or insulated fitting to terminate stub-ups not terminated in hubs or in an enclosure.

K. Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions: Apply listed compound to threads of pathway and fittings before making up joints. Follow compound manufacturer's written instructions.

L. Coat field-cut threads on PVC-coated pathway with a corrosion-preventing conductive compound prior to assembly.

M. Terminate threaded conduits into threaded hubs or with locknuts on inside and outside of boxes or cabinets. Install insulated bushings on conduits terminated with locknuts.

N. Install pathways square to the enclosure and terminate at enclosures with locknuts. Install locknuts hand tight plus ¼ turn more.

O. Do not rely on locknuts to penetrate nonconductive coatings on enclosures. Remove coatings in the locknut area prior to assembling conduit to enclosure to assure a continuous ground path.

P. Cut conduit perpendicular to the length. For conduits of 2-inch trade size and larger, use roll cutter or a guide to ensure cut is straight and perpendicular to the length.

Q. Install pull wires in empty pathways. Use polypropylene or monofilament plastic line with not less than 200-lb tensile strength. Leave at least 12 inches of slack at each end of pull wire. Cap underground pathways designated as spare above grade alongside pathways in use.

R. Surface Pathways:
   1. Install surface pathway for surface telecommunications outlet boxes only where indicated on Drawings.
   2. Install surface pathway with a minimum 2-inch radius control at bend points.
   3. Secure surface pathway with screws or other anchor-type devices at intervals not exceeding 48 inches and with no less than two supports per straight pathway

section. Support surface pathway according to manufacturer's written instructions. Tape and glue are not acceptable support methods.

S. Pathways for Optical-Fiber and Communications Cable: Install pathways, metal and nonmetallic, rigid and flexible, as follows:
   1. ¾-Inch Trade Size and Smaller: Install pathways in maximum lengths of 50 feet.
   2. 1-Inch Trade Size and Larger: Install pathways in maximum lengths of 75 feet.
   3. Install with a maximum of two (2) 90-degree bends or equivalent for each length of pathway unless Drawings show stricter requirements. Separate lengths with pull or junction boxes or terminations at distribution frames or cabinets where necessary to comply with these requirements.

T. Install pathway sealing fittings at accessible locations according to NFPA 70 and fill them with listed sealing compound. For concealed pathways, install each fitting in a flush steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install pathway sealing fittings according to NFPA 70.

U. Install devices to seal pathway interiors at accessible locations. Locate seals so no fittings or boxes are between the seal and the following changes of environments. Seal the interior of all pathways at the following points:
   1. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
   2. Where an underground service pathway enters a building or structure.
   3. Where otherwise required by NFPA 70.

V. Comply with manufacturer's written instructions for solvent welding PVC conduit and fittings.

W. Expansion-Joint Fittings:
   1. Install in each run of aboveground RNC that is located where environmental temperature change may exceed 30 deg F, and that has straight-run length that exceeds 25 feet. Install in each run of aboveground RMC and EMT conduit that is located where environmental temperature change may exceed 100 deg F and that has straight-run length that exceeds 100 feet.
   2. Install type and quantity of fittings that accommodate temperature change listed for each of the following locations:
      a. Outdoor Locations Not Exposed to Direct Sunlight: 125 deg F temperature change.
      b. Outdoor Locations Exposed to Direct Sunlight: 155 deg F temperature change.
      c. Indoor Spaces Connected with Outdoors without Physical Separation: 125 deg F temperature change.
      d. Attics: 135 deg F temperature change.
   3. Install fitting(s) that provide expansion and contraction for at least 0.00041 inch per foot of length of straight run per deg F of temperature change for PVC conduits. Install fitting(s) that provide expansion and contraction for at least 0.000078 inch per foot of length of straight run per deg F of temperature change for metal conduits.
   4. Install expansion fittings at all locations where conduits cross building or structure expansion joints.

5. Install each expansion-joint fitting with position, mounting, and piston setting selected according to manufacturer's written instructions for conditions at specific location at time of installation. Install conduit supports to allow for expansion movement.

X. Mount boxes at heights indicated on Drawings. If mounting heights of boxes are not individually indicated, give priority to ADA requirements. Install boxes with height measured to center of box unless otherwise indicated.

Y. Recessed Boxes in Masonry Walls: Saw-cut opening for box in center of cell of masonry block, and install box flush with surface of wall. Prepare block surface to provide a flat surface for a raintight connection between box and cover plate or supported equipment and box.

Z. Horizontally separate boxes mounted on opposite sides of walls so they are not in the same vertical channel.

AA. Support boxes of three (3) gangs or more from more than one (1) side by spanning two (2) framing members or mounting on brackets specifically designed for the purpose.

BB. Fasten junction and pull boxes to or support from building structure. Do not support boxes by conduits.

CC. Set metal floor boxes level and flush with finished floor surface.

DD. Set nonmetallic floor boxes level. Trim after installation to fit flush with finished floor surface.

3.03 SLEEVE AND SLEEVE-SEAL INSTALLATION FOR COMMUNICATIONS PENETRATIONS

A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies. Comply with requirements in Section 271000 "Structured Cabling."

3.04 FIRESTOPPING

A. Install firestopping at penetrations of fire-rated floor and wall assemblies. Comply with requirements in Section 078413 "Penetration Firestopping."

3.05 PROTECTION

A. Protect coatings, finishes, and cabinets from damage or deterioration.
   1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
   2. Repair damage to PVC coatings or paint finishes with matching touchup coating recommended by manufacturer.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 28 1300 - ACCESS CONTROL SYSTEM

PART 1 GENERAL

1.01 Section Includes

A. System Requirements

B. Access Control Field Devices

C. Access Control System

1.02 RELATED REQUIREMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Division 07 - Firestopping.

C. Division 08 - Door Hardware: Electrically operated door hardware, for interface with access control system.
   1. Includes door hardware with integral request to exit devices.

D. Division 26 - Hydraulic Elevators: For interface with access control system.

E. Division 26 - Grounding and Bonding for Electrical Systems.

F. Division 26 - Conduit for Electrical Systems.

G. Division 26 - Identification for Electrical Systems: Identification products and requirements.

H. Division 27 - Structured Cabling: Data cables for access control system IP network connections.

I. Division 28 - Video Surveillance: For interface with access control system.

J. Division 28 - Building Intrusion Detection: For interface with access control system.

K. Division 28 - Fire Detection Alarm: For interface with access control system.

L. Refer to the following construction documents for Data Room locations and device locations only.
   1. "TY" Drawings – Security Plans

M. Any apparatus, appliance, material, or work not shown on the Drawings but mentioned in the Specifications, or vice versa, and any incidental accessories necessary to make the work complete and perfect in all respects and ready for operation, even if not particularly specified, shall be provided without additional expense. Coordinate with each system manufacturer to insure all hardware, firmware, relays, or other necessary components are provided prior to bid submission.

N. All work of this Section to comply with the requirements of the Conditions of Contract, with all Specification Sections of Division 01 – General Requirements, with the Security Drawings, and with all other Contract Documents.

O. Refer to Division 26 of the Contract Documents, Electrical, for all Specifications governing the installation of raceway (conduit, EMT, cable trays, wire trough, etc.), system junction and pull boxes, and device rough-in boxes, for all Security System work shown on the Security Drawings. Conduit, back box, and trough work to be provided by this Contractor.

P. Refer to Division 26 of the Contract Documents, Electrical, for all work related to the interconnection of Security System equipment to 120 VAC power sources.

Q. Refer to Division 09 of the Contract Documents, Finishes, for details relating to acoustical ceilings and gypsum board systems, floor finishes, painting, etc., for information pertinent to device and back box selection and installation.

R. Refer to Division 08 of the Contract Documents, Openings, for details relating to doors, door frames, windows, and window frames, for information pertinent to the selection of magnetic contact devices and their associated placement and installation, including back box selection and installation.

S. Refer to Division 08 of the Contract Documents, Openings, for details relating to door and door frame hardware and preparation, electrified lock power supplies, required coordination to accommodate these components and/or systems, lock voltage and current draw coordination, coordination of fail-safe electrified locks, and any other related equipment or requirements

T. Refer to Division 06, Wood, Plastics, Composites, and coordinate all desk locations and installation details with the Millwork Contractor.

U. Review all other Specification Sections as required to achieve complete inter- trade coordination.

1.03 DEFINITIONS

A. API: Application Programming Interface

B. AVI: Audio Video Interleave

C. CA: Certificate Authority

D. CAC: Common Access Card

E. CE: European Union Conformity

F. CPU: Central Processing Unit

G. CSV: Comma Separated Values

H. DNS: Domain Name Server

I. DSM: Door Status Monitor

J. DVR: Digital Video Recorder

K. EACS: Electronic Access Control System

L. FCC: Federal Communications Commission

M. FIPS: Federal Information Processing Standard

N. FIFO: First In – First Out

O. FTP: File Transfer Protocol

P. FRAC: First Responder Authentication Credential

Q. GB: Gigabyte

R. GSOC: Global Security Operations Center

S. GUI: Graphical User Interface

T. HA: High Availability

U. HTML: Hypertext Markup Language

V. 4, H.265: Video Compression Standards

W. I2C: Inter-Integrated Circuit

X. IEEE: Institute of Electrical and Electronics Engineers

Y. I/O: Input / Output

Z. IP: Internet Protocol

AA. IS: Integrated System

BB. JPEG: Joint Photographic Experts Group

CC. LAN: Local Area Network

DD. LDAP: Lightweight Directory Access Protocol

EE. MB: Megabyte

FF. MJPEG: Motion JPEG

GG. MSATA: Mini-Serial Advanced Technology Attachment

HH. MSP: Mobile Security Professional

II. MTBF: Mean-Time Between Failure

JJ. NAS: Network Attached Storage

KK. NAT: Network Address Translation

LL. NBAPI: NetBox Application Programming Interface

MM. NECA: National Electric Code Association

NN. NFPA: National Fire Protection Association

OO. NVR: Network Video Recorder

PP. ODBC: Open Database Connectivity

QQ. OS: Operating System

RR. OVID: Open Video Integration Driver

SS. PDF: Portable Document Format

TT. PIN: Personal Identification Number

UU. PIV: Personal Identity Verification

VV. PoE: Power over Ethernet

WW. PTZ: Pan-Tilt-Zoom

XX. RAID: Redundant Array of Independent Disks

YY. RAM: Random Access Memory

ZZ. REX: Request to Exit

AAA. RFID: Radio Frequency Identification

BBB. RoHS: Restriction of Hazardous Substances

TTT. WAN: Wide Area Network

UUU. Wi-Fi: Wireless Network

VVV. AS NECESSARY: Shall mean work which is required for completed construction, but is not necessarily shown or described in the Contract Documents.

WWW. AS REQUIRED: Shall mean work which is required for completed construction, but is not necessarily shown or described in the Contract Documents.

XXX. Substantial Completion: Shall mean that the project is sufficiently complete to be utilized for its intended use as stated in the body of this written specification.

YYY. Contractor/INTEGRATOR: Refers to the biding/installation Contractor responsible for furnishing and installation of all work indicated within this specification.

1.04 REFERENCE STANDARDS

A. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2015.

B. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

C. CSBC101.2 & CFSC 102.1 [in CT Projects] - Life Safety Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

D. UL 294 - Access Control System Units; Current Edition, Including All Revisions.

E. UL 1076 - Proprietary Burglar Alarm Units and Systems; Current Edition, Including All Revisions.

F. System shall be RoHS (Restriction of Hazardous Substances) compliant and meet proposed amendments to the reduction of toxic substances in manufacturing in stated in the Environmental Design of Electrical Equipment Act (EDEE).

G. Installation shall comply with NECA 1-2010 “Standard Practice of Good Workmanship in Electrical Construction”

H. Installation shall comply with NEC/NFPA 70E "Standard for Electrical Safety in the Workplace"

I. Electronic data exchange between Video Surveillance System and the Access Control System shall comply with SIA TVAC

J. Installation shall comply with FCC CFR 47 Part 15 Class A "Telecommunications, Radio, Frequency, Digital Device Emission:

K. Installation shall comply with Federal, State, and Local Codes and Authority Having Jurisdiction (AHJ).

L. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.05 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
1. Coordinate the work with other installers to provide suitable door hardware as required for both access control functionality and code compliance.
2. Coordinate the placement of readers with millwork, furniture, equipment, etc. installed under other sections or by others.
3. Coordinate the work with other installers to provide power for equipment at required locations.
4. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Access Control Cloud Services:
1. Subscription fees to be paid by Owner.
2. Obtain Owner approval of subscription fees and terms of service prior to submittal.

C. Preinstallation Meetings:
1. Conduct meeting with facility representative to review reader and equipment locations.
2. Conduct meeting with facility representative and other related equipment manufacturers to discuss access control system interface requirements.

D. Confidentiality of Documents
1. The project documents, consisting of all technical proposals, drawings, specifications, shop drawings, as-built drawings, manufacturer's literature, etc., shall be considered proprietary information and are to be treated with complete confidentiality. Dissemination of any security system documentation to any party not considered "need-to-know" without a pre-defined and approved agreement will be considered a violation of the contract documents and all pursuant clauses regarding financial penalties, project termination, and/or legal prosecution will apply. The Contractor is to obtain a list of "need-to-know" parties from the Owner and/or Construction Manager.
2. Use of the Contract drawings and specifications is restricted to the original site for which they were prepared. Publication therefore is expressly limited to such use. Re-use, reproduction, storage by any medium or publication by any method in whole or in part is prohibited. Visual contact with the Contract drawings and specifications constitutes

prima facie evidence of the acceptance of these restrictions. Unlawful publication, dissemination, and use of these documents carry significant liability and the Owner maintains the right to legally pursue restitution and/or penalty for violation of these confidentiality conditions.

3. All documents marked "DO NOT DUPLICATE" are to be returned to the Construction Manager for proper disposal and handling upon completion of their relevant use.

1.06 SUBMITTALS

A. See Division 01 – Administrative Requirements for submittal procedures.

1.07 Evidence of Qualifications for Installer:

1. The Contractor shall be a bona fide security systems contractor, licensed by the State of Connecticut for the installation of the low voltage security and signal communication systems, and engaged in security system maintenance, service and contracting for at least the last five years.
2. The Contractor shall employ technicians who have been trained by the Manufacturer specified within this section to install the systems of this Manufacturer.
3. The contractor shall be a factory authorized stocking distributor of the manufacturer of the equipment included in the system so that immediate replacement parts can be made from inventory and service provided as needed on an emergency basis.
4. The Contractor shall submit with the bid a manufacturer's certificate of acceptance of the qualifications of the Installing Contractor to install, test, maintain and repair the manufacturer's equipment.
5. In order for the Security Consultant to verify that they meet the competency requirements of this specification, Contractors must submit the following information if so requested:
    a. Proof that the Contractor has installed, services and maintained similar security systems for a minimum of ten (10) years.
    b. Proof that the Contractor is a firm which currently and regularly installs, services and maintains security systems as a full time business.
    c. The names and qualifications of security system technicians that shall perform and supervise the work, and perform tests or adjustments on the systems and equipment. Qualifications shall include all schooling, training, and history of work experience.
    d. A list of four prior systems comparable to the one specified under this contract which were installed, serviced, and maintained satisfactorily by the Contractor for a minimum of one (1) year. Each system listed shall include the firm or owner, location, person to contact (with telephone number), date of installation and service period, and a brief description of the system and work performed on the system.
6. The Contractor shall submit any other information required by the Security Consultant to determine the competency of the Contractor. If this information is not submitted as requested, it shall be submitted within the time specified by the Architect after the bid opening. If the Contractor fails to submit the information in accordance with the Security

Consultant's request, the Contractor shall be declared non-responsive, and may be rejected to perform the work specified within this section.

B. Design Data: Standby battery/UPS Calculations

C. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instruction for storage, handling, protection, examination, preparation, installation, and operation of product.

D. Manufacturer's detailed field-testing procedures.

E. Maintenance contracts.

F. Product Data: Provide details and technical specifications for each product indicated. Include physical dimensions, features, performance, electrical characteristics, ratings, software versions, and operating system details.

G. Shop Drawings:
1. General: General: Bid documents, including drawings, details and specifications are considered conceptual in nature, and provide direction on products and project requirements. Contractor is given a choice of methods that may be incorporated into the system. These choices may affect the overall design, configuration and installation of the proposed system.
2. Contractor Responsibility: Prepare and submit shop drawings, rendered in the latest AutoCAD DWG file format, which show details of all work to ensure proper installation of the work using those materials and equipment specified or allowed under the approved plans and specifications. A complete Shop Drawing submittal drawing package shall consist of Drawings, Equipment Data Sheet Submittals, and an Acceptance Testing Plan.
3. Completeness: The Equipment Submittals, Acceptance Testing Plan, and the Shop Drawings should be submitted as a complete and contiguous package. Partial or unmarked submittals will not be accepted for review.
4. Scheduling: A schedule of shop drawing submissions shall be submitted for the Architect and Owner's Representative review on a form acceptable to the Architect within ten (10) days after award of the Contract. The schedule of shop drawing submissions shall include as a minimum, but not limited to the requirements stated herein.
5. Requirements: Provide the following information complete, and in the manner described herein:
    a. Hardware, Application Software, and Network Requirements: A system description including analysis and calculations used in sizing equipment required by the security systems. The description shall show how the equipment will operate as a system to meet the performance requirements of the systems. The following information shall be supplied as a minimum:
        1) Server(s) processor(s), disk space and memory size
        2) Workstation(s) processor(s), disk space and memory size
        3) Description of facility (field) control equipment (Controllers/Field Panels, Models) and their configuration
        4) Operating System(s) Software, where software is provided or upgraded
        5) Application Software, with Optional and Custom Software Modules supplied in this project

6) Integration Schemes: Proposed connectivity, software, development requirements, and SDK information, for inter-system communication.
7) Network bandwidth and reliability requirements
8) Number and location of LAN ports required
9) Other specific network requirements, preferences, and constraints
10) Backup/archive system size and configuration
11) Start-up operations
12) System power requirements and Uninterruptible Power Supply (UPS) sizing
13) Device/Component environmental requirements (cooling and/or heating parameters)

b. Shop Drawings: Shop Drawings shall be numbered consecutively and shall accurately and distinctly present the following information:
1) Title Sheet
2) Floor Plans: Showing devices, pull boxes, cabinets, conduits and conductors in their proposed locations with device numbering scheme.
3) Riser Diagram: Showing all conduit relationships between devices shown on the Floor Plans. Show all power sources.
4) Single-Line/Block Diagrams: Show signal relationships of controls and devices within the system.
5) Custom Assembly Diagrams: For each custom assembly such as Access Control Terminal Cabinets, receptacle assemblies, or door control panels, provide an assembly drawing illustrating the appearance of the assembled device. Include dimensions, assembly components, and functional attributes (momentary or alternate action switch, lens color, panel finish)
6) Component Connection Diagrams
a) For each equipment component such as a computer, video switcher, camera or video recorder, show the rear elevation of the device and all connectors/terminations as a pictorial.
b) Show the wire designations on connectors. Typical wiring detail where multiple of same device is provided.
c) Show a schedule of the wire colors connected to the pins on each device connector.

c. Equipment Wiring Diagrams
1) Show a pictorial illustration of each equipment enclosure and/or terminal cabinet, including terminals, components and wiring devices.
2) Show the device nomenclature exactly as shown on the single line diagrams.
3) Terminations: Show every termination and terminating cable, with applicable cable and wire numbers matching the single line diagrams.
a) Every termination in the system must be documented.
b) Termination information may be rendered as a wiring list(s), if properly coordinated with, and referenced to, typical component and single-line diagrams. Otherwise, the Shop Drawings shall show a pictorial of every component in the system, with its terminations.
4) Show wire colors for each terminal.

5) For each wire exiting the enclosure, show the destination of the wire by floor, room number and the drawing number of the panel where the wire terminates.
6) Provide working dimensions and erection dimensions.
7) Arrangements and sectional views
8) Necessary details, including complete information for making connections between work under this Contract, existing work, and work under other Contracts.
9) Stock or standard drawings will not be accepted for review unless full identification and supplementary information is shown thereon in ink or typewritten form.
10) Duplicate of design drawings may be used where each sheet is modified to reflect contractor coordination, specific requirements of the project and multi discipline conditions.
11) Each Drawing or page shall include:
    a) Project name, Project Number and descriptions.
    b) Submittal date and space for revision dates.
    c) Identification of equipment, product or material.
    d) Name of Contractor and Subcontractor.
    e) Name of Supplier and Manufacturer.
    f) Relation to adjacent structure of material.
    g) Physical dimensions clearly identified.
    h) ASTM and Specifications references.
    i) Identification of deviations from the Contract Documents.
    j) Contractor's stamp, initialed or signed, dated and certifying to review of submittal, certification of field measurements and compliance with Contract.
    k) Location at which the equipment or materials are to be installed. Location shall mean both physical location and location relative to other connected or attached material.

d. Equipment Submittals
1) Provide a Title Page, with project name, Contractor’s name and address, contact information, date of submission, and submission revision number.
2) Provide a Parts List, for proposed equipment, materials, components and devices, listing the following information for each line item:
    a) The system type
    b) Model number
    c) Specification sheet page reference
3) Provide Manufacturers Specification Sheet with descriptive information for equipment, materials, components and devices. Number each page, to correspond with the Parts List.
4) Clearly delineate (with highlighter, arrow, or underline) on each specification sheet, specific model numbers, options and configurations being proposed for this project.
5) Indicate kinds of materials and finishes for equipment where more than one option is presented.

e. Acceptance Testing Plan
   1) Submit a written document detailing the test procedures to be followed in evaluating and proving the installed system(s).
   2) Provide a sample of the test forms to be used for each system and for each component of each system.
   3) Include all tests required by the equipment manufacturer and by this Specification

f. Spare Parts List: Submit a list of recommended spare parts for Owner's review & approval and/or amending. Spare parts shall comprise a minimum of 5% or minimum of 2 each of field devices, device termination boards and a minimum of 1 system controller boards.

g. Training Program
   1) Submit a training program 10 working days prior to scheduled training to be followed in training key employees in the operation and maintenance of the installed system at the project site. The proposed training program shall be designed to provide a level of basic competence with the system for selected personnel. These selected personnel shall then be expected to train other personnel as required, utilizing the training that they have been given and the body of training documentation provided by Contractor. This plan shall comply with the requirements stated in the "Training" section, of these Specifications, all stated hours of which shall be considered to be classroom hours.
   2) Submit a curriculum to account for, and relate, each subject to actual training time. All required hours shall be accounted for in this curriculum.
   3) The training plan shall cover the overall system, each individual system, each subsystem, and each component. The plan shall also cover procedures for database management, normal operations, and failure modes with response procedures for each failure. Each procedural item must be applied to each equipment level.

h. Incomplete or unchecked submittals which do not contain complete data on the work and full information on related matters will be returned for correction.

i. Verification: The contractor shall check and acknowledge all shop drawings and shall place his signature on all shop drawings submitted for approval. Contractor's signature shall constitute a representation that all quantities, dimensions, field construction criteria, materials, catalog numbers, performance criteria and similar data have been verified and that, in his opinion, the submittal fully meets the requirements of the Contract Documents.

j. Timeliness: The Contractor shall schedule, prepare and submit a complete shop drawing assembly in accordance with a time-table that will allow his suppliers and manufacturers sufficient time to fabricate, manufacture, inspect test and deliver their respective products to the project site in a timely manner so as to not delay the complete performance of the work.

k. Departure from Contract Requirements: If shop drawings show departures from the Contract requirements, the Contractor shall make specific mention thereof in his letter of transmittal, otherwise review of such submittals shall not constitute review of the departure. Review of the drawings shall constitute review of the specific

subject matter for which the drawings were submitted and not of any other structure, materials, equipment, or apparatus shown on the drawings.

l. Contractor Responsibility: The review of shop drawings will be general and shall not relieve the Contractor of responsibility for the accuracy of such drawings, nor for the proper fitting and construction of the work, nor for the furnishing of materials or work required by the Contract. No construction called for by shop drawings shall be initiated until such drawings have been reviewed and approved.

m. Shop Drawing Submittal Review: The procedure in seeking review of the shop drawings shall be as follows:

1) The Contractor shall submit four (4) complete sets and/or electronic PDFs of shop drawings with equipment submittals and other descriptive data with one copy of a letter of transmittal to the Architect for review thirty (30) working days after award of the contract. The letter of transmittal shall contain the project name, Architect's Project Number, the name of the Contractor, the list of drawings submitted including numbers and titles, requests for any review of departures from the contract requirements and any other pertinent information. Drawings submitted for review shall be full-sized and included with the equipment submittals.

2) Drawings or descriptive data will be stamped "Reviewed", "Furnish as Corrected", "Revise and Resubmit", "Rejected" or 'Submit Specific Item' and one copy with a Letter of Transmittal will be transmitted to the Contractor with the return of submitted documents.

3) If a shop drawing or data is stamped "Reviewed" or "Furnish as Corrected", no additional submittal is required for that shop drawing.

4) If a shop drawing or data is stamped "Revise and Resubmit" or "Rejected", the Contractor shall make the necessary corrections and resubmit the documents as required above. The letter transmitting corrected documents shall indicate that the documents are re-submittals.

5) The Contractor shall revise and resubmit the shop drawing as required, until they are stamped either "Reviewed" or "Furnish as Corrected."

H. Equipment and Software List: Include every piece of equipment and software by product/model name and/or number, manufacturer, serial number, revision number, location, and date of original installation. If factory and/or bench testing regimens are required by the project plan, add pretesting record of each piece of equipment and software, listing name of person testing, date of test, and adjustments made.

I. CE and FCC Compliance Certificates:

J. Field quality-control reports

K. Current Specified Manufacturer Integrator Certification Letter

L. Current Specified Manufacturer Training Certificates (listing expiration dates) for Two technicians from the supporting office

M. Warranty: Software support and warranty information for all components, including Service Level Agreement (SLA) details, and duration of agreement from date of system acceptance by

Owner. Submit sample of manufacturer's warranty and documentation of final executed warranty completed in Owner's name and registered with manufacturer.

N. Project Record Documents: Record actual locations of system components and installed wiring arrangements and routing.

O. Operation and Maintenance Data: Include detailed information on system operation, equipment programming and setup, replacement parts, and recommended maintenance procedures and intervals.
   1. Include contact information for entity that will be providing contract maintenance and trouble call-back service.
   2. General: The Contractor is responsible for providing accurate drawings and equipment manuals describing and depicting the systems as they are actually installed and operated.
   3. Phase One: Notwithstanding requirements specified elsewhere, submit the following labeled as the "Operating and Maintenance Manual" within thirty (30) days after Final Acceptance of the Installation:
      a. Record Drawings: Submit two (2) copies of revised versions of drawings as submitted in the "Shop and Field" and "Equipment Wiring Diagrams" Submittals showing actual device locations, conduit routing, wiring and relationships as they were constructed. Include nomenclature showing as-built wire designations and colors. Drawings shall include room numbers coinciding with Owner space planning numbering. Drawings shall be submitted in electronic editable AutoCAD files, in ".dwg" format, on CD or DVD disks.
      b. Manuals: Submit two (2) copies of each of the following materials in bound manuals, or electronic PDF copies on CD/DVD discs, with labeled dividers:
         1) A final Bill of Material for each system.
         2) Equipment Instruction Manuals: Complete, project specific comprehensive instructions for the operation of devices and equipment provided as part of this work.
         3) Manufacturers Instruction Manuals: Specification sheets, brochures, Operation Manuals and service sheets published by the manufacturers of the components, devices and equipment provided.
         4) Include information for testing, repair, troubleshooting, assembly, disassembly and recommended maintenance intervals.
         5) Provide a replacement parts list with current prices. Include list of recommended spare parts, tools, and instruments for testing and maintenance purpose.
         6) Performance, Test and Adjustment Data: Comprehensive documentation of performance verification according to parameters specified herein.
         7) Warranties: Provide an executed copy of the Warranty Agreement and copies of all manufacturers' Warranty Registration papers as described herein.

1.08 Quality Assurance

A. Comply with the following:
   1. NFPA 70.

2. NFPA 101 (Life Safety Code).
3. The requirement of the local authorities having jurisdiction.
4. Applicable TIA/EIA standards.

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

D. Installer qualifications: company specializing in performing the work of this section with minimum three years documented experience with access control systems of similar size, type, and complexity and providing contract maintenance service as a regular part of their business; authorized manufacturer's representative.
1. Contract maintenance office located within 100 miles (160km) of project site.

E. Maintenance contractor qualifications: same entity as installer.

F. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities jurisdiction.

G. The requirements of the State Building Code and local regulations establish the minimum acceptable quality of workmanship and materials, and all work shall conform thereto unless more stringent requirements are indicated or specified herein.

H. All work shall comply with the latest editions of the codes as referenced herein.

I. Follow manufacturer's directions for articles furnished, in addition to directions shown on drawings or specified herein.

J. Protect all work, materials, and equipment from damage during process of work. Replace all damaged or defective work, materials and equipment without additional cost to the Project.

K. All equipment and materials for permanent installation shall be the products of recognized manufacturers and shall be new.

L. Equipment and materials shall:
1. Where normally subject to Underwriters Laboratory Inc. listing or labeling services, be so listed or labeled.
2. Be without blemish or defect.
3. Not be used for temporary purposes.
4. Be in accordance with the latest applicable NEMA standards.
5. Be products which will meet with the acceptance of all authorities having jurisdiction over the work. Where such acceptance is contingent upon having the products examined, tested and certified by Underwriters or another recognized testing laboratory, the product shall be so examined, tested and certified.

M. Except for conduit, conduit fittings, outlet boxes, wire and cable, all items of equipment or material of one generic type shall be the product of one manufacturer throughout.

N. For items which are to be installed but not purchased as part of the electrical work, the electrical work shall include:
   1. The coordination of their delivery.
   2. Their unloading from delivery trucks driven into any point on the property line at grade level.
   3. Their safe handling and field storage up to the time of permanent placement in the project.
   4. The correction of any damage, defacement or corrosion to which they may have been subjected. Replacement, if necessary, shall be coordinated with Contractor who originally purchased the item.
   5. Their field make up and internal wiring as may be necessary for their proper operation.
   6. Their mounting in place including the purchase and installation of all dunnage, supporting members, and fastenings necessary to adapt them to architectural and structural conditions.
   7. Their connection to building wiring including the purchase and installation of all termination junction boxes necessary to adapt and connect them to this wiring. Included also shall be the purchase and installation of any substitute lugs or other wiring terminations as may be necessary to adapt their terminals to the building wiring as called for and to the connection methods set forth in these specifications.

O. Items which are to be installed but not purchased as part of the electric work shall be carefully examined upon delivery to the project. Claims that any of these items have been received in such condition that their installation will require procedures beyond the reasonable scope of the electric work will be considered only if presented in writing within one week of the date of delivery to the project of the items in question. The work includes all procedures, regardless of how extensive, necessary to put into satisfactory operation, all items for which no claims have been submitted as outlined above.

P. Seismic Performance: Provide equipment capable of withstanding the effects of earthquake motions determined according to ASCE/SEI 7 and current building codes for the state of CT.

Q. The term “withstand” means “the system(s) will remain in place without separation of any parts when subjected to the seismic forces specified and the system will be fully operational after the seismic event.”

1.09 PROJECT CONDITIONS

A. Environmental Conditions: Capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:
   1. Interior, Controlled Environment: System components installed in temperature-controlled interior environments shall be rated for continuous operation in ambient temperatures of 36 to 122 deg F (2 to 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, noncondensing. Use NEMA 250, Type 1 enclosures.
   2. Interior, Uncontrolled Environment: System components installed in non- temperature-controlled interior environments shall be rated for continuous operation in ambient temperatures of 0 to 122 deg F (minus 18 to plus 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, noncondensing. Use NEMA 250, Type 3R enclosures.

3. Exterior Environment: System components installed in locations exposed to weather shall be rated for continuous operation in ambient temperatures of minus 30 to plus 122 deg F (minus 34 to plus 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, condensing. Rate for continuous operation when exposed to rain as specified in NEMA 250, winds up to 85 mph and snow cover up to 24 inches thick. Use sufficiently rated NEMA 250 enclosures.
4. Hazardous Environment: System components located in areas where fire or explosion hazards may exist because of flammable gases or vapors, flammable liquids, combustible dust, or ignitable fibers shall be rated, listed, and installed according to NFPA 70.
5. Corrosive Environment: System components subject to corrosive fumes, vapors, and wind-driven salt spray in coastal zones. Use sufficiently rated NEMA 250 enclosures.
6. Security Environment: Camera housing for use in high-risk areas where surveillance equipment may be subject to physical violence.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

B. Store products in manufacturer's unopened packaging, keep dry and protect from damage until ready for installation.

1.11 FIELD CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

1.12 WARRANTY

A. See Division 01 – Closeout Submittals for additional warranty requirements.

B. The Integrator guarantees the Systems to be installed under this specification to be free from any defects in workmanship and materials for a period of one (1) year from the date of final completion/acceptance of the project by the Owner as evidenced by the date of final payment for the work. The Contractor shall promptly and at their own expense remedy any defects in the work and pay for any damage to other work resulting thereof, which shall appear during the period of time covered by this guarantee. Neither the final certificate of payment nor any provisions in this Agreement shall constitute an acceptance of work not done in accordance with this specification or relieve the Contractor of liability with respect to any expressed warranties or guarantees or responsibility for faulty materials or workmanship.

C. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of equipment related to the Access Control System, and control-station equipment that fail in materials or workmanship within specified warranty period.
   1. Warranty Period: The standard manufacturer’s warranty shall apply or a minimum of a one (1) year warranty from the date of Substantial Completion.

D. The Integrator shall provide all services required to maintain the system in an operational state as specified by the manufacturer for a period of one (1) year after acceptance.

E. Service response shall be within twelve (12) hours of the initial request for service and shall be provided twenty-four (24) hours per day, seven (7) days per week and three hundred sixty-five (365) days per year.

F. Contractor shall include, as part of this warranty, a program for maintenance for each integrated system.
   1. Provide details of coverage, preventive maintenance schedules, exclusions and service rates for all billable time and travel charges.
   2. Maintenance shall include two (2) semi-annual inspections and tests to verify the intended operation of the security system(s). System testing shall include but not be limited to the testing of all devises, fault modes and batteries. A detailed test report indicating these results and any corrective measures shall be furnished to the owner.

G. The Contractor shall provide software and firmware upgrades as required and available to the Owner.

H. Submit manufacturer's standard warranties.

PART 2 PRODUCTS

2.01 SYSTEM REQUIREMENTS

A. Furnish and install Access Control System consisting of required equipment, conduit, boxes, wiring, connectors, hardware, supports, accessories, software, system programming, etc. as necessary for a complete operating system that provides the functional intent indicated.

B. The awarded contractor of this section shall furnish and install a network access controlled system into this facility using electronic security devices. This integrated access control system shall incorporate all devices necessary to achieve the specified system, all associated monitoring and recording software, hardware, configuration, testing and training.

C. The contractor awarded this project must include the following licenses and configuration:
   1. Access Control Manufacturer licenses for each camera on the Specified VMS system
   2. Input / Output panels, and network nodes for all access-controlled doors, all door position switches, all duress & lockdown buttons, and all security strobes.
   3. Access Control Manufacturer Licenses for integration with the Specified Intrusion Detection System.
   4. Threat Level, Lockdown button configuration, and Day alarm configuration.
   5. Alarm and notification configuration through the Specified Access Control User Interface GUI.

D. This Access Control System described within this specification shall be fully integrated with the Video Surveillance, Intrusion Detection, Public Address, and Fire Alarm System.

E. All installation, peripheral devices, required licensing and configurations are required as part of this specification to establish a coherent, functional system as described within this bid package.

F. Security control and network cabling to/from the equipment rooms to the controlled doors, as described within the documents shall be furnished and installed by the contractor awarded this project.

G. Any and all additional interconnection cabling required for a functional system shall be furnished and installed by the contractor awarded this portion of work.

H. Final terminations to all devices are required by the Contractor awarded this Section.

I. The Contractor awarded this Section shall furnish and install a complete integrated security system and all associated, terminations, supporting devices, configuration of system, testing and training in accordance with this Bid package.

J. This specification is used to identify the requirements for an integrated access control system. The operator workstation(s) shall be used for database programming and storage of historical events and as a User interface with the Video Surveillance System.

K. This system shall be integrated with the building's fire alarm system for proper activation of "fail-secure" locking mechanisms.

L. All interconnections required to the fire alarm system shall be terminated by the fire alarm installers and shall be coordinated with the contractor awarded this portion of work.

M. All system configuration(s) shall be included to attain a fully functional system and shall be within the Scope of work of the awarded contractor of this Bid package. This configuration shall include but not be limited to the following:
   1. Configuration of all controlled doors and devices.
   2. Configuration of all cameras shall be managed from the Access Control Platform
   3. Configuration of LAN switches – Active Electronics as required.
   4. Configuration of Access Control platform shall allow for Web access into the Access Control and Video Surveillance systems from all schools and via an internet connection which shall VPN into the owner's network.
   5. Configuration of the Lockdown / Duress / Emergency buttons, as directed by the Security Consultant, Police Department, and Owner.
   6. Configuration of the Access Control, Intrusion Detection, and Video Surveillance integration.
   7. Configuration of the Day Alarm system, which will notify users of a propped or opened door equipped with door position switches, as directed by the security consultant and Owner.

N. Environmental Conditions: System(s) shall withstand the environmental conditions without mechanical or electrical failure, damage or degradation of its operating capacity Capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:
   1. Interior, Controlled Environment: System components installed in temperature-controlled interior environments shall be rated for continuous operation in ambient temperatures of 36 to 122 deg F (2 to 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, noncondensing. Use NEMA 250, Type 1 enclosures.

2. Interior, Uncontrolled Environment: System components installed in non- temperature-controlled interior environments shall be rated for continuous operation in ambient temperatures of 0 to 122 deg F (minus 18 to plus 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, noncondensing. Use NEMA 250, Type 3R enclosures.
3. Exterior Environment: System components installed in locations exposed to weather shall be rated for continuous operation in ambient temperatures of minus 30 to plus 122 deg F (minus 34 to plus 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, condensing. Rate for continuous operation when exposed to rain as specified in NEMA 250, winds up to 85 mph and snow cover up to 24 inches thick. Use sufficiently rated NEMA 250 enclosures.
4. Hazardous Environment: System components located in areas where fire or explosion hazards may exist because of flammable gases or vapors, flammable liquids, combustible dust, or ignitable fibers shall be rated, listed, and installed according to NFPA 70.
5. Corrosive Environment: System components subject to corrosive fumes, vapors, and wind-driven salt spray in coastal zones. Use sufficiently rated NEMA 250 enclosures.
6. Security Environment: Camera housing for use in high-risk areas where surveillance equipment may be subject to physical violence.

2.02 ACCESS CONTROL FIELD DEVICES

A. Proximity Readers:
1. The selected manufacturer shall be HID – USA in 15370 Barranca Pkwy, Irvine, CA. Other manufacturers will be considered, providing equipment meets or exceeds the quality and functionality specified.
2. The selected model shall be:
3. HID, RP40, Wall-mounted multiCLASS SE Reader
4. HID, RP15, Wall-Mounted Mullion Mount multiCLASS SE Reader
5. Features:
    a. Accepts 5 to 16 volts, meeting most voltage requirements.
    b. Available with Wiegand or Clock-and-Data interface.
    c. Allows easy upgrade from magstripe to a proximity reader; no rewiring or pulling of new cable required.
    d. Offers high reliability, consistent read-range and low power consumption in an easy-to-install package.
    e. Mounts directly onto metal with no change in read range performance.
    f. Provides multicolor LED, compatibility with all standard access control systems and internal or host control of LED and beeper.
    g. Includes multilingual installation manual.
6. Specifications:
    a. Typical Maximum* Read Range
        1) ProxCard® II card – up to 5.5 inches
        2) ISOProx® II card – up to 5 inches
    b. DuoProx® II card – up to 5 inches
        1) Smart ISOProx®/DuoProx® cards – up to 5 inches
        2) Proximity & MIFARE® card – up to 5 inches

3) ProxCard® Plus card – up to 2 inches
4) ProxKey® II keyfob – up to 2 inches
5) MicroProx® Tag – up to 2.5 inches
6) *Depending on local installation conditions.

c. Dimensions:
1) inches x 1.7 inches x 1.0 inch

d. Material:
1) Polycarbonate UL 94

e. Power Supply:
1) Standard MiniProx: 5-16 VDC
2) Loc. MiniProx: 5-16 VDC
3) Linear power supplies are recommended.

f. Current Requirements:
1) Max Average 30 mA
2) Typ Peak: 75 mA

g. Operating Temperature:
1) -22° to 150° F (-30° to 65° C)

h. Operating Humidity:
1) 0-95% relative humidity non-condensing

i. Weight:
1) With Terminal Strip: 3.5 oz.
2) With Pigtail: 3.8 oz.
3) Loc. MiniProx: 3.8 oz.

j. Transmit Frequency:
1) 125 kHz

k. Excite Frequency:
1) 125 kHz

l. Cable Distance:
1) Wiegand Interface: 500 feet
2) Clock-and-Data Interface: 50 feet
3) Recommended cable is ALPHA 1295 (22 AWG) 5 conductor
4) Minimum stranded with overall shield or equivalent. Additional conductors may be required for LED or beeper control.

m. Environmental:
1) IP55

n. Certifications:
1) UL294/cUL (US), FCC Certification (US), IC (Canada), CE (EU),
2) C-tick (Australia, New Zealand),
3) SRRC (China), MIC (Korea), NCC (Taiwan), MIC (Japan), iDA
4) (Singapore), RoHS

B. Request to Exit Sensor (REX / RTE):
1. Coordinate with the door hardware vendor and use the Provided Exit Request Touch Bar or Integral Lock Signal Switch, where specified in Division 08.
2. Where integral exit request touch bar is not specified, furnish an install the following:
a. Manufacturer:

1) BOSCH
   a) #DS160
   b) Approved Equivalent

C. Door Position Switches (Door Contacts):
   1. All Door Position Switches shall be Double Pole-Double Throw (DPDT).
   2. Door position switches shall be installed by the Contractor. The Contractor shall align, prepare, and fabricate doors and frames to accept specified door position switches. The Contractor shall be responsible for coordinating the installation, so systems and hardware operate as specified. Door Position Switches will be installed at the top of the door in the first instance. If unable to install on top, then side installation on the handle side is acceptable.
   3. Surface Mounted Door Switch: DPDT sensor. Interlogix or approved equal. Surface Mounted Magnetic Switch with armored cable. Route armored cable to junction box and permanently secure to box with clamp or set-screws. Use only where flush-mounted devices cannot be installed.
   4. Non-fire rated Doors, Flush Mount:
      a. Interlogix Model 1076C-W or approved equivalent Concealed Magnetic Door Switch.
   5. Fire Rated Doors:
      a. General: Contractor shall coordinate access control hardware equipment and installation so as to maintain the Fire Rating of each specific door to the satisfaction of the Local Authority Having Jurisdiction.

D. Lockdown Button:
   1. The selected model shall be: Alertus Lockdown Button or an Approved Equivalent
      a. The lock down button shall be green and labeled “LOCKDOWN”
      b. The lockdown button shall have a key-to-reset function
      c. Include plastic cover – STI #6518
   2. Lock-down buttons must be configured to Owner requirements. Minimally, these buttons will have to interface with the Access Control System, Intrusion Detection System, Public Address System, Fire Alarm System and Video Surveillance System.\
   3. Lock Down button shall connect to nearest alertus alert beacon to trigger text to speech announcement over interior fire alarm speakers and exterior public address speakers.
   4. Lock Down buttons shall automatically release fire-alarm hold-open doors.
   5. Lock Down buttons shall cause the security strobes to activate. Coordinate configuration and functionality with Security Consultant and Owner.
   6. Lockdown shall send emails and text messages to up to 50 users.
   7. Lockdown shall dial-out to the central monitoring company, through the intrusion detection panel.

E. Panic / Duress Button
   1. The selected model shall be: Sentrol UL Rated #3050 or an Approved DSX equivalent. Include bi-color latching LED and single pole, double throw contacts.
   2. Panic / Duress buttons must be configured to Owner requirements. Coordinate configuration and functionality with Security Consultant and Owner.

3. Panic / Duress button shall connect to nearest alertus Alert Beacon to trigger text to speech announcement over interior fire alarm speakers and exterior public address speakers.
4. Panic / Duress button shall dial-out to central monitoring.

F. Security Strobe Lights:
1. The selected model shall be:
   a. Talkaphone #ETP-EL12/24 or approved equal.
   b. Contractor shall demonstrate that lamps are visible in direct sunlight prior to final installation and approval.
   c. Include low voltage power supplies.
   d. Lights shall be controlled through outputs of the Access Control Panel. Coordinate configuration and functionality with Security Consultant and Owner.

G. Access Control Platform:
1. The access control platform shall be DSX. No others will be considered. The vendor awarded this project shall be fully factory trained and familiar with DSX access control systems.

H. Access Control Panel:
1. The selected model shall be:
   a. DSX-1048
   b. No others will be considered.
      1) QTY (A/R)

I. Access Control Intelligent Output Controller:
1. The selected model shall be:
   a. DSX-1042
   b. No others will be considered.
      1) QTY (A/R)

J. Access Control Intelligent Input Controller
1. The selected model shall be:
   a. DSX-1044
   b. No others will be considered.
      1) QTY (A/R)

K. Access Control Software:
1. The selected model shall be:
   a. WINDSX SQL
   b. No others will be considered.
      1) QTY of Licenses (A/R)

L. Door Release Buttons:
1. The selected model shall be:
   a. Dortronics #H276 series or an Approved DSX equivalent
   b. The door release button shall be engraved with the label “ASSOCIATED DOOR # Push to Release”

c. The door release button shall be mounted to FSR #DSKB Gang Table Box. Size table box to fit specified quantity of door release buttons.

M. Access Control Source Power:
1. Derive primary Access Control 120VAC power from a designated power source within the telecommunication room, as shown on the T & Y drawings.
2. Power cable shall be protected by conduit.
3. Transformer shall be installed in locked cabinets, protected by tamper switches. Plug-in transformers which are not protected by locked cabinets are not acceptable.
4. Serve all Low Voltage powered devices within the Access Control Cabinet from the Electronics Power Supply.
5. Provide barriers as necessary to separate Class 1 from Class II power.

N. Access Control System Source Power Supplies and Batteries:
1. Furnish and Install Altronix UL Listed Class II power supplies or approved equivalent.
2. Serve all low voltage powered devices within the Access Control Enclosure from the Electronics Power Supply.
3. Capacity: The power supply shall be capable of powering a minimum of 125 percent of the load required at the time of acceptance (25% spare capacity).
4. Power Monitoring: The system shall monitor the loss and restoration of power at the Access Control Panel of both primary and secondary loss of power. Loss and restoration of power shall be displayed at the console, but shall not require resetting the system.
5. Battery Back-up: Provide battery back-up to retain functions of all electronics for a period of four (4) hours upon loss of 120VAC power.

O. Lock Power Supply (LPS)
1. Provide Altronix, UL Listed Class II power supplies within a ventilated, locked, cabinet within the telecommunication rooms as noted on the T & Y drawings, or as otherwise required, to affect proper system performance. Cabinet shall be equipped with a tamper switch, which shall be connected to the Access Control System to provide a supervisory alarm. Power supply shall include separate terminals for each door lock. Power supply voltage shall be required by the hardware supplied locks.
2. Capacity: The power supply shall be capable of powering 200 percent of the load required at the time of acceptance (100% spare capacity).
3. Power Monitoring: The system shall monitor the loss and restoration of power at the Access Control Cabinet. Restoration of power shall be displayed at the console but shall not require resetting the system.
4. Battery Back-Up: Power supplies shall be equipped with integral battery recharging circuits and batteries. If a separate cabinet is used for batteries, the cabinet shall be locked and provided with a tamper switch connected to the Access Control System.
   a. Fail Safe Door Locks: Provide four (4) hours of battery backup for Low-Voltage electrified door hardware.
   b. Fail-Secure Door Locks: Provide battery backup enough to operate fail-secure door locks 100 times per hour, for four (4) hours.
5. Power supply output may be connected to remove UL-approved distribution board of the same manufacturer mounted within the Access Control Cabinet.
6. Provide a Fire Alarm Interface Relay to interface the LPS to the Access Control system and Fire Alarm System as shown on the contract drawings.

7. Transformers shall be installed in locked cabinets, protected by tamper switches. Plug-in transformers which are not protected by locked cabinets are not acceptable.

P. Auto Door Actuator Interface Relay: Furnish and install Dayton Model 5YR20N, or equal, with compatible relay base, at automated doors to ensure the Access Control System approved the Credential / Push Plate before actuator motor is engaged.

Q. Provide IDEC RTE series interval timer, or equal, for interface with motorized door Push Plates and the Automated Door Operator. This will be used to provide a functional time extension for the interaction of between the Access Control system and the Automated Door Hardware, to avoid damage and prevent unwanted alarms.
1. Unit shall be UL listed and operate on 24VDC.
2. Unit shall mount to UL listed relay socket.
3. Unit shall mount within the door operator housing.

R. Emergency Communication Device:
1. The Emergency Communication Device shall be Alertus #ALERTBEACON
2. Install Alert Beacons as shown on the TY Drawings.
3. The Alert Beacons shall sound and display custom text for lockdown, duress button, and software activated emergencies.
4. The Alert Beacons shall connect to the district Alertus server, coordinate configuration with Owner's IT & Security teams.
5. The Alert Beacons shall sound custom text over the facility Fire Alarm Emergency Communicators.
6. Include Alertus Text to Speech module or equivalent for custom text to speech announcements over the Fire Alarm Emergency Communicators. Coordinate with Fire Alarm System Vendor.
7. Coordinate custom text and configuration with Owner IT & Security team.
8. Alternatives shall not be accepted for Emergency Communication Devices.
9. Include all required licenses for a fully functional system.

S. Text To Speech Device:
1. The Emergency Text to Speech devices shall be Alertus #Text to Speech or equivalent (TTS).
2. Include QTY (2) so that one may send audio signal through the fire alarm control panel speakers and one may send audio signal to the exterior public address speakers.

T. Access Control Cabinet:
1. System controllers and field control boards serving a given area shall be installed inside Access Control Cabinets. No controller or control module shall be mounted independently of the cabinet and its power supplies. Refer to the drawings and the following descriptions for details on the Access Control Cabinet construction.

U. Provide Access Control Cabinets as described below, located in the telecommunication rooms where the access control cabling terminates, per the T & Y Drawings, to house all equipment. Each access control cabinet shall contain the following equipment to support the current and future alarm initiating and controlled devices to be connected to the Access Control System:
a. Access Control Cabinet:

1) Indoor: NEMA 2, hinged, locking cabinet by Access Control Manufacturer, Hoffman, or approved equal, sized to fit contents. Lock shall be coordinated with the Owner allowing replacement by the Owner.
2) Outdoor: Stainless steel, NEMA 4X, hinged locking handle cabinet by Access Control Manufacturer, Hoffman, or approved equal, sized to fit contents.
3) Provide door tamper switch and wire into alarm input for each Access Control Cabinet.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that ratings and configurations of system components are consisted with the indicated requirements.

C. Verify that mounting surfaces are ready to receive the system components.

D. Verify that branch circuit wiring is installed, completed, tested, and ready for connection to system.

E. Verify that conditions are satisfactory prior to starting work.

F. Device Locations
1. All device locations are to be field verified with the Owner prior to start of project. Architectural drawings are for approximation purposes only. Additional charges will not be allowed for outlet installation in areas not reviewed or approved by the Owner.

G. Examine pathway elements intended for cables. Check raceways and other elements for compliance with space allocations, installation tolerance, hazards to camera installation, and other conditions affecting installation.

H. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install access control system in accordance with NECA 1 (general workmanship).

B. Install products in accordance with manufacturer’s instructions.

C. Unless otherwise indicated, use wiring in conduit.
1. Use suitable listed cables in we locations, including underground raceways.
2. Use suitable listed cables for vertical wire applications.
3. All cabling shall be plenum rated.

D. Install wiring in conduit for the following:
a. Where required for rough-in.

b. Where required by the AHJ.
c. Where exposed to damage.
d. Where installed outside the building.
e. For exposed connections from outlet boxes to devices.

2. Conduit: comply with section Division 26.
3. Conceal cables unless specifically indicated to be exposed.
4. User power transfer hinges specified within Division 08 for concealed connections to door hardware.
5. Cables in the following areas may be exposed:
   a. Equipment Closets
6. Route exposed cables in parallel or perpendicular to building structural members and surfaces.
7. Do not exceed manufacturer's recommended maximum cable length between components.

E. Provide grounding and bonding in accordance with Division 26.

F. Install firestopping to preserve the fire resistance rating of partitions and other elements, using materials and methods specified in Division 07.

G. Install all devices and infrared illuminators level and plumb.

H. Install power supplies and other auxiliary components at control stations unless otherwise indicated.

I. Identify system components, wiring, cabling, and terminals according to ANSI/EIA/TIA standards.

J. Door Hardware Coordination
1. Doors shall not be locked in path of legal egress unless integrated with the fire alarm for release upon the fire alarm system notification. All access controlled locked door within the path of legal egress must be brought to the attention of the Architect and Security Consultant prior to rough-in.
2. Refer to Section Division 08 for Door Hardware requirements and coordination. Contractor shall work directly with door hardware supplier to ensure the provision of specified mechanical and electronic functionality.
3. Request to Exit Activation: Contractor shall configure the system such that Request to Exit devices and System Controllers will react quickly enough to bypass alarms before a fast-moving individual can reach and open the door. This bypass shall be evaluated and verified by the Contractor on the fully configured and operation Access Control system prior to acceptance testing. When possible, use door hardware with REX devices built into the hardware.
4. Fire Alarm Interface: Electrified locks, strikes and turnstiles which are part of this work and which may be locked in the path of legal exiting, shall be connected to the building Fire Alarm System in accordance with the AHJ requirement such that they automatically unlock in the event of activation of the Fire Alarm System. This shall occur whether the activation is a result of a manual pull station, smoke detector, or sprinkler flow switch.
   a. A fire alarm "general / common alarm relay" shall be programmed at the fire alarm control panel to activate the Access Control System interface relays located in each

Lock Power Supply cabinet. The Access Control Contractor shall research and provide all necessary fire alarm system conduit, wire, hardware, and programming to perform required interface.

b. This interface shall not depend on the Access Control System host or Remove Controllers for its operation. Locate these interface relays electrically ahead of lock power distribution. The Contractor shall supply and install programmed alarm interface relay(s) with sufficient capacity to control the power supplied to all controlled locks.

5. Access Control Lock Configuration
   a. Secured Doors: Doors equipped with electric locks shall be individually programmed for locking and unlocking at specific times of the day. A valid credential presented at a reader will allow the portal to unlock for a programmed period of time.
   b. Stairwell Door Locks:
      1) Stairwell doors which are locked from the stairwell side shall have the capability to be simultaneously unlocked upon a signal from the Fire Command Center, Fire Alarm Panel, or the Access Control Command Center when applicable.
      2) Stairwell locking systems shall, in all respects, comply with the requirements of the Building Codes for “Means of Egress”.
      3) Contractor shall provide clearly labeled switches, in the required locations, to unlock all stairwell doors simultaneously for “non-fire” emergencies. Coordinate wall or desk mounted switch style, with the Owner and the AHJ.
      4) This interface shall not depend on the Access Control System Host or Remote Controllers for its operation. Locate interface relays for each stairwell door electrically ahead of the Access Control System lock control, to independently override the Access Control System Control.
   c. Upon authorization by card reader or manual means, “door force” and “door held open” alarms associated with the portals shall be automatically bypassed (prevented from reporting an alarm) for a duration of time that is programmable on an individual door and individual cardholder basis.
   d. The door shall re-lock immediately upon closing, after an authorized access, and the bypass duration shall be immediately truncated. A door position switch will be required at every door for this purpose. The same door position switch shall be used to sense the position of the door for “door forced” and “door held open” alarms.
   e. Free Egress Authorization
      1) Unless otherwise shown on the plans or described herein, the system shall detect the normal egress of a user at any individual portal and shall bypass any alarm associated with the portal for a duration of time that is programmable on an individual door and individual cardholder basis.
      2) Timing shall be independently programmed for each portal during the initial enrollment process. This function allows extended timing for disabled persons to pass through a portal.
      3) The timing function shall automatically truncate after an adjustable period (0-4 seconds) after a portal is closed. This feature allows a subsequent alarm

at the portal to be detected and prevents the portal from being re-opened without an authorized request.

4) "Request-to-Exit" devices shall be used to signal the system that an individual is ready to exit the secured door. Request-to-Exit devices may include but not be limited to:
   a) Integral Lock Handle Signal Switches
   b) Touch Bars (Electro-Mechanical or Electronic)
   c) Push Bars (Mechanical)
   d) Push Buttons
5) On doors with integral electro-mechanical locking mechanisms (strikes, electrical panic hardware, or electrical mortise locks) the mechanical action of the door hardware shall enable egress without requiring release of the electrical mechanism. The Request-to-Exit device shall not unlock the door.
6) On doors with integral electro-mechanical locking mechanisms (magnetic locks), a Request-to-Exit device may unlock the door, releasing the electrical mechanism for the programmed duration. Refer to the drawings for details and direction.
7) On doors with Intercom Systems or Door Release Buttons, the Contractor shall interconnect the intercom system or door release button to activate the Request to Exit function and unlock the door. The door release request contact shall be connected to an input on the Access Control System, such that an event shall be registered into the Access Control System indicating its operation.

f. Sequences: Verify each door type sequence at each door with the Owner.
   1) Doors with Door Position Switches (DPS) and Request-to-Exit (REX) Devices:
      a) DPS and REX contacts shall be wired to Access Control System auxiliary input. Configure the Access Control System to mask the associated DPS alarm for a minimum of 45 seconds. Coordinate the required masking duration with the Owner.
      b) Access Control System shall report a "door forced" alarm when any time the door is opened without a valid REX request. The subsequent operation of an associated REX shall not abort a "door forced" alarm already sensed by the system.
      c) Access Control System shall report a "door-held-open" alarm after the door has been opened and the masking duration has ended.
   2) Doors with Electronic Locking (EL), DPS and REX devices:
      a) DPS and REX contacts shall be wired to Access Control System auxiliary input. Configure the Access Control System to mask the associated DPS alarm for a minimum of 45 seconds. Coordinate the required masking duration with the Owner.
      b) Electronic lock shall be wired to Access Control System auxiliary output. Configure the Access Control System to mask the associated DPS alarm during timed or commanded unlock.
      c) Electric lock shall be locked and unlocked based on preprogrammed schedules and conditions, and by manual control from the Access Control System client workstations.

d) Access Control System shall not cause an alarm event when door is unlocked.
e) Access Control System shall report a “door forced” alarm when any time the door is opened without a valid REX request. The subsequent operation of an associated REX shall not abort a “door forced” alarm already sensed by the system.
f) Access Control System shall report a “door-held-open” alarm after the door has been opened and the masking duration has ended during locked mode.
g) REX device shall not unlock the door.

3) Doors with Card Access Control (CR), EL, DPS and REX devices:
a) CR, EL, DPS and REX devices shall be wired to a door controller board.
b) Electronic lock shall be locked on command from the system at any time.
c) Electronic lock shall unlock during a preset time zone or from the system.
d) Electronic lock shall be unlocked and shall not require use of card reader during timed unlock mode.
e) Access Control System shall not report activity when door is scheduled unlocked.
f) During locked mode Card Reader shall unlock the door, mask DPS preventing alarm.
g) Access Control System shall report a “door-held-open” alarm after the door has been opened and the masking duration has ended.
h) Access Control System shall report a “door forced” alarm when any time the door is opened without a valid REX request. The subsequent operation of an associated REX shall not abort a “door forced” alarm already sensed by the system.
i) REX device shall not unlock door.

4) Doors with Auto-Operators, Proximity CR, EL, DPS and REX devices:
a) Auto-Operator controls, CR, EL, DPS and REX devices shall be wired to a door controller board.

5) Electronic lock shall be locked on command from the system at any time.
a) Electronic lock shall unlock during a preset time zone.
b) EACS shall not report alarm activity when door is unlocked.
c) Auto-Operator door dwell times will meet all ADA/DDA requirements.
d) Day mode: proximity card reader shall activate the auto operator to open the door.
e) Secure mode: Card reader, auto operator function, shall activate the auto door operator at all times.
f) Card Reader shall unlock the door, mask the DPS device preventing alarm and allow use of door open pushbuttons. Electronic lock to be unlocked prior to door open mechanism is engaged. Where auto door equipment is not provided with door open pushbuttons, the door shall automatically open after unlocking. NOTE: The exterior door open

pushbutton should not function without first presenting a valid access card.

g) Access Control System shall report a "door-held-open" alarm after the door has been opened and the masking duration has ended during locked mode.

h) Access Control System shall report a "door forced" alarm when any time the door is opened without a valid REX request. The subsequent operation of an associated REX shall not abort a "door forced" alarm already sensed by the system.

i) Use of push plate shall activate the Access Control System REX, unlock the door and operate the auto door system only after a valid card read.

j) Door shall report a door held open time when REX (push plate or signal from the door operator) is activated, door is opened from the secured side and the system bypass time has expired during locked mode.

k) Verify interior push plate is operational in both lock and unlocked modes.

l) Verify exterior push plate is operational during unlocked mode.

m) Verify exterior push plate is non-operational until valid card read during locked mode.

n) Verify exterior push plate is operational after valid card read during locked mode.

o) Verify door can be manually opened during locked mode from secured side.

g. Doors with Auto-Operators, Dual CR (Mag Stripe and Proximity types), EL, DPS and REX devices:

1) Auto-Operator controls, CR, EL, DPS and REX devices shall be wired to a door controller board.

2) Electric lock shall be locked on command from the system at any time.

3) Electric lock shall unlock during a preset time zone.

4) Door shall not report alarm activity when door is unlocked.

5) Secure mode:

a) Proximity card reader, auto operator function, shall open the door at all times.

b) During secure mode the card reader shall operate as item e above.

6) Access Control System shall report a "door-held-open" alarm after the door has been opened and the masking duration has ended during locked mode

7) Access Control System shall report a "door forced" alarm when any time the door is opened without a valid REX request. The subsequent operation of an associated REX shall not abort a "door forced" alarm already sensed by the system.

8) Use of push plate shall activate the Access Control System REX, unlock the door and operate the auto door system from the inside; however, the push plate will not operate the door from the exterior (secure) side unless there is a valid access card presented.

9) Door shall report a door held open time when REX (push plate or signal from the door operator) is activated, door is opened from the secured side and the system bypass time has expired during locked mode.
10) Verify interior push plate is operational in both locked and unlocked modes.
11) Verify exterior push plate is operational only during unlocked mode.
12) Verify exterior push plate is non-operational until valid card read during locked mode.
13) Verify exterior push plate is operational after valid card read during locked mode.
14) Verify door can be manually opened during locked mode from secured side.

h. Auto Sliding Doors shall operate similar to Doors with Auto-Operators (as applicable).
1) Contractor to coordinate and confirm door hardware includes electronic remote door locking control capability.
2) Verify sliding door break away feature is not disabled when door is in legal path of egress.

i. Exterior Gates:
1) Insert as defined by hardware group. [Provide gate with electric strike] [Provide gate with electrified mortise handle] CR, EL, DPS, REX wired to input / output / door controller card as required by application.
2) Gate shall operate as described for door with similar access control devices including being tied to the Fire Alarm System via a relay so the gates will unlock on receipt of a fire alarm.

6. Electrical Connections to Door Hardware: Wire connections to door hardware pigtail leads shall be made using the manufacturer-provided quick-connect devices, or by Dolphin insulated dis- placement connectors. Wire nuts and splices are not acceptable.
7. Tamper Devices
a. Terminal cabinets, equipment cabinets, enclosures, power supply cabinets, exposed wireways, and pull and junction boxes with wire connections or splices shall be equipped with tamper switches programmed to report an alarm.
b. Junction boxes requiring tamper switches that are associated with an individual alarmed de- vice (such as a door position switch) may report to the respective device alarm point if end- of-line resistors and the system are configured to support 6-state alarm reporting. Other cabinet and box tamper switches shall report as independent alarm points.
c. Power Supply/Battery Chargers: Power supply/battery chargers shall be connected to alarm monitoring points to provide an "Event" indication of tamper, power failures and other system troubles.

K. Access Control System Connectivity
1. Access Control Network: Access Control Servers, Client Workstations and Controllers shall reside on the Owners' Local Area (LAN) and/or Wide Area Network (WAN) to allow global event activity and shared data interchange.
2. Provide and coordinate with Owner IT adequate network "firewalls" to maintain the security of Access Control System controls and information while connected to shared computer networks and transmission media. Contractor shall coordinate shared resource

usage with the Owner, and develop network security schemes acceptable to the Owner to ensure the integrity of the Access Control System.

3. LAN Communications & Connectivity, (Integrated CPU's and Controller's)
    a. Provide LAN communications interfaces for the applicable Access Control System Server, Clients and Controllers to support multiple workstation and integration schemes that are part of this work.
    b. LAN Communications: Contractor shall utilize the facility's Local Area Network for Access Control System connections and interfaces, as shown on the drawings and described herein.
    c. Coordinate with Access Control System equipment and software manufacturers to provide network inter- face devices compatible with the established LAN/WAN network.
    d. Coordinate with the Owner's IT Department to provide servers, Access Control System clients, network interface devices, bandwidth utilization, and appurtenances acceptable to the Owner.
4. Controller Communications
    a. Between controllers at an individual location, and between controllers located within the same building, the controller network may be implemented using standard, twisted, shielded copper conductors as approved by the system manufacturer. It is also acceptable for controllers to be LAN connected, regardless of location.

L. Duress / Lockdown Alarm System
1. Furnish and install duress / lockdown alarm devices as shown on the Drawings, and as coordinated with final architectural millwork details, millwork shop drawings and consoles.
2. Wire alarm signal circuit using two-conductor twisted, shielded cable per cable specifications. Specified device contains latching L.E.D. Run additional two- conductor cable, dedicated to intrusion detection system, 12VDC power, per cable specifications, to power supply via reset switch at power supply.
3. Each hardwired duress alarm system device shall be wired to an Access Control input panel and intrusion detection remote field input module panels as separate 24 hour security zones.
4. Duress devices associated alarm signal circuitry to be fully supervised for open, short, normal and alarm. Provide required end-of-line resistors to achieve this supervision per manufacturer's specifications. Locate as close to device as possible, preferably in device homerun junction box. Protect wires from button to junction box using miniature Greenfield/stainless steel sheathing.
5. Provide separate 12 VDC, power kill, LED reset switch in security device low voltage power supply cabinet enclosure, and wire duress device LED power through switch. Label switch accordingly.

M. Emergency Standby Power
1. Low-Voltage Equipment: Access Control System Remote Controllers, peripheral devices and Lock Power Sup- plies shall have their own 4-hour battery back-up systems.
    a. Power back-up may be in the form of direct DC battery power back-up or by 120VAC Uninterruptable Power Supplies (UPS), depending upon equipment requirements.

b. Lock Power Supplies shall allow fail-secure locks to be operated by the system a minimum of 100 times-per-hour, during this time period. Fail-safe locks shall be maintained for the full 4-hours.
c. Battery back-up systems may be distributed throughout the facility to provide the required emergency power to individual components.
d. Battery back-up systems shall include battery chargers to keep storage batteries at their peak charge.

N. Security System Integration
1. The Contractor shall be responsible for providing hardware and software interfaces to achieve the specified system performance described herein and, by reference, realize absolute and seamless compatibility with the related component systems.
2. The Contractor shall ensure system additions and modifications provided under this scope of work have no negative effect on the individual components and systems, and their core functionality, and no permanent effect beyond that specified or implied by the scope of work.
3. Purpose
a. Integration is the process of designing, deploying, and configuring independently operating systems with the ability to request, receive, extract, process, and act upon information from other systems.
b. Successful system integration must address three fundamental issues:
1) Functionality: What information is needed, how it is to be requested and processed, and what functions or activities need to occur upon receipt of the information.
2) Connectivity: How systems will be connected to support the communication of information and commands. (Special interfaces, wiring, networks, databases.)
3) Communication: How information will be communicated between systems. (Instruction sets, language, protocols, formats, priority.)
4. Environment
a. Integration components shall generally comprise special elements of independent subsystems, and shall be located within, or in close proximity to, the processing components of each independent subsystem. Where subsystems require special hardware or communications interfaces to support integration, the special hardware should be located near the independent subsystem processing components or network appliance, based on the manufacturers' recommendation. See the drawings for details on mounting locations.
5. Infrastructure and Connectivity:
a. Devices/Appliances: Appliances and devices shall be connected to their respective systems via the applicable communications network.
b. System LAN/WAN Connectivity: System Servers and microprocessor-based Control Panels, shall reside on the Local Area Network (LAN) or Wide Area Network (WAN) tier designated for integrated components.
c. Enterprise: LAN networks will be connected to the Wide Area Network, to establish connectivity between remote sites and both the Primary and Alternate Security Operations Center (SOC – room SB05-1).
6. Attributes

a. The attributes of the integrated environment are primarily defined by the subsystems that are to be integrated. Verify existing system components to be expanded by this project.
b. Integrated systems comprise the processors, software, electrical control panels, data gathering panels, special data interfaces, and converters required to allow systems to communicate with each other, process information, and allow users to program and perform operations.

7. Functions
   a. The system shall provide the following automated processing rules, at a minimum:
   b. The object of "Access Control system integration" is to automatically configure the system to display, record, and report appropriate system activity to various elements of the system. Automatic configuration can free operators from difficult control tasks, give the operator more time to respond to events, reduce operator error, and ensure critical system tasks occur consistently.
   c. Electronic Access Control system elements shall be electronically integrated in such a way as to enable detection, database records and/or event-initiated instructions to be communicated between system components, to initiate recording, display, communication, and control activities.
   d. Event-Initiated Interface, General:
      1) The system shall support the capability to send and receive alarm and control messages between the Access Control System and video systems via a LAN communications link, using API, XML, or other industry-standard communication languages and formats, and shall act upon those messages received.
      2) The system shall support the capability to send and receive alarm and control messages and alarm signal between the Access Control system and Intrusion Detection System for lockdown / duress / and panic button initiation.
      3) Where integration may require the implementation of data interfaces, Contractor shall propose such integration to the Owner for approval, before proceeding with the work.
      4) Software routines required to accomplish the required data-interface with external equipment and controls will be fully developed, installed, tested and supported by the Contractor.
      5) The manufacturer of each applicable system will also support the data interface and will be engaged by the Contractor to provide on-site technical assistance where required to prepare, repair, configure, and test the system to operational condition.
      6) Communication of event information between systems shall take place automatically and immediately when the event is sensed by the System.

3.03 FIELD QUALITY CONTROL

A. Testing Agency: The Contractor shall engage a qualified testing agency to perform tests and inspections with the Owner and appointed project manager.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

C. Perform tests and inspections.
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

D. Tests and Inspections:
   1. Inspection: Verify that units and controls are properly installed, connected, and labeled, and that interconnecting wires and terminals are identified.
   2. Pretesting: Align and adjust system and pretest components, wiring, and functions to verify that they comply with specified requirements.
   3. Test Schedule: Schedule tests after pretesting has been successfully completed and system has been in normal functional operation for at least fourteen (14) days. Provide a minimum of ten (10) days notice of test schedule.
   4. Operational Tests: Perform operational system tests to verify that system complies with Specifications. Include all modes of system operation. Test equipment for proper operation in all functional modes.

E. Access Control System shall be considered defective if it does not pass tests and inspections.

F. Prepare test and inspection reports.

3.04 CLEANING

A. Remove rubbish and debris: Installation contractor is not allowed you use the onsite dumpster and is responsible to discard their own debris off site.

B. Clean installed items using methods and materials recommended in writing by manufacturer.

C. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

3.05 CLOSEOUT ACTIVITIES

A. See Division 01 – Closeout Submittals for Closeout Submittals.

B. Demonstration: Demonstrate proper operations of system to Owner and correct deficiencies or make adjustments as directed.

C. Training:
   1. By means of training classes augmented by individual instruction as necessary, the Bidding contractor shall fully instruct the BOE’s designated staff and personnel in the operation, adjustment and maintenance of all products, equipment and systems.
   2. General Training Requirements:
      a. The security contractor shall submit proposal to conduct training courses for the security personnel in the operation and maintenance of the security systems within this security project.

b. The security contractor shall include training manuals and aids in the quantity as requested by the Owner. The training manuals shall include an agenda, defined objectives for each lesson, and a detailed description of the subject matter for each lesson. All personnel providing the instructions shall be certified by the equipment manufacturer for all applicable hardware and software.

c. Approval of the planned training content and training schedule shall be obtained by the Owner at least 45 days before the training is scheduled.

d. Training shall be provided by qualified, factory trained and certified engineers familiar with each system and its operations and shall be provided at the site for a period of no less than the hours stipulated below.

3. Training Topics:

a. System Administration Training

1) This training shall focus on determining and implementing system operational parameters.

2) The first training class shall be conducted so that it is completed approximately 30 days prior to acceptance of the system and final system reliability testing. 8 Hours of Administration training; (2) 4-hour classes.

3) The second training class shall be conducted so that it is completed approximately 7 days prior to acceptance of the system and final system testing. The system administrator shall be included as part of this final system acceptance and reliability testing. 6 Hours of training; (2) 3-hour classes.

4) This Administrations training shall include:

a) Overall architecture and configuration of each system.
b) Use of all system functions.
c) ID badging design and production.
d) Card-holder setup and configuration.
e) Card-holder access level assignment.
f) Access Door programming.
g) Alarm setup and implementation.
h) Data storage and retrieval through reports.
i) Creation of reports.
j) System database backup procedures.
k) Hardware specifications.
l) Fault diagnosis and corrections.

b. System User Monitoring Training

1) This training shall be for each designated personnel at this school.

2) This training shall focus on day-to-day system operations. Each user shall be capable to start the systems, operate them, recover the systems after a failure, and describe the specific hardware architecture and operation of the systems.

3) The first training class shall be conducted so that it is completed approximately 30 days prior to acceptance of the system and final system reliability testing. All System User Training shall be performed at each school within this specification. 8 Hours of User training; (2) 4-hour classes.

4) The second training class shall be conducted so that it is completed approximately 7 days prior to acceptance of the system and final system testing. The system administrator shall be included as part of this final system acceptance and reliability testing. 6 Hours of User training; (2) 3-hour classes.
5) Training shall include:
   a) Use of overall system monitoring functions as determined by the security administration staff.
   b) Monitoring alarm events.
   c) Monitoring personnel access into the facility.
   d) Assessing, responding to, and clearing alarms and messages.
   e) Monitoring access door status.
   f) Running routine reports.
   g) General hardware architecture.
   h) Functional operation of each system and interaction between these systems.
   i) All Operator commands.
   j) Database entry.
   k) Report generation.
   l) Alarm assessment.
   m) Simple diagnostics.

c. System Troubleshooting and Maintenance Training
1) Training shall be provided with the internal features and configuration of the security systems so the user can trouble shoot and repair most configuration and physical device problems.
2) The training class shall be conducted so that it is completed approximately 14 days prior to acceptance of the system and final reliability testing. The users shall be included as part of this reliability testing. 8 Hours of training; (2) 4-hour classes.
3) This training shall include:
   a) System networking communications and diagnostics.
   b) Device configuration and programming.
   c) Controller setup.
   d) Wiring and cabling overview.
   e) System Diagnostics.
   f) Software troubleshooting.
   g) Physical layout of each piece of hardware.
   h) Preventive maintenance procedures and schedules.
   i) Calibration procedures.

d. IT Training
1) Training shall be provided information of the security systems to the IT staff. This shall include information as to how each system functions within the LAN/WAN network infrastructures. 4 Hours of training.
2) Topics shall include:
   a) Network topologies.
   b) Maintenance of data security.

4. Training hours and sessions must be documented by the instructor and approved by the Owner before project closeout.
5. Should the training be deemed as inadequate by the Owner, the owner reserves the right to retain outside manufacturer training. If this outside manufacturer training has an associated cost, this cost shall be deducted from the final invoice of this project.
6. The Owner reserves the right to request the Contractor to videotape training sessions and turn over video records (DVD format) to Owner as part of the "Owner Project Manuals" and Deliverables.

3.06 PROTECTION

A. Protect installed system components from subsequent construction operations.

3.07 MAINTENANCE

A. See Division 01 – Execution and Closeout Requirements for additional requirements relating to maintenance service.

B. Adjustments:
   1. Occupancy Adjustments: When requested within twelve (12) months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two (2) visits to Project during other-than-normal occupancy hours for this purpose. Tasks shall include, but are not limited to, the following:
      a. Check cable connections.
      b. Check proper operation of access control devices.
      c. Provide a written report of adjustments and recommendations.

C. Provide to Owner, at no extra cost, a separate maintenance contract for the service and maintenance of the Access Control System for One Year from date of Substantial Completion. Include a separate description of preventative maintenance, systematic examination, cleaning, inspection, and testing, with a detailed schedule.

D. Conduct site visit at least once every three months to perform inspection, testing, and preventative maintenance. Submit report to Owner indicating maintenance performed along with evaluations and recommendations.

E. Provide trouble call-back service upon notification by Owner:
   1. Include allowance for call-back service during normal working hours at no extra cost to Owner.
   2. Owner will pay for call-back service outside of normal working hours on an hourly basis, based on actual time spent at the site and not including travel time; include hourly rate and definition of normal working hours in maintenance contract.

END OF SECTION

SECTION 28 1600 - INTRUSION DETECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Refer to the following construction documents for Data Room locations and device locations only.
   1. "TY" Drawings – Security Plans

1.02 SUMMARY

A. The scope of work required as part of this project shall include a new intrusion detection system installed into the school.

B. Section Includes:
   1. Control Panel
   2. Motion Sensors
   3. Door Contacts
   4. Intrusion detection devices

C. These specifications contain the functional and operational requirements for an integrated intrusion alarm system employing motion detection devices and door contacts as the primary means of intrusion detection for selected interior protection. This procurement shall include all the equipment required at various facilities as shown on the Drawings.

D. Responsibility for the integrated security systems and equipment is specified in the following sections and shall be coordinated with the finish door hardware and Fire Alarm sections.

E. The intrusion system is intended to provide protection of selected facilities against intrusion and for the detecting or discouraging of burglary or vandalism during the hours the facilities are unoccupied and report signal to the Central Station.

F. General: Provide and install an integrated security system and all devices, terminations, associated supporting devices, configuration of system, testing and training in accordance with this Bid package to provide a complete and functional system.

G. The cabling shall be provided and installed by the contractor awarded this project and as described within the construction bid document and referenced on the drawings associated with this bid package. All other cabling required to provide a complete and functional system shall be furnished and installed by the Contractor awarded this portion of work.

H. This specification is used to identify the requirements for integrated Burglar entry systems encompassing door contacts and motion detectors.

I. Responsibility for the integrated security systems and equipment is specified in the following sections and shall be coordinated with the Finish Hardware and Fire Alarm sections of the Phase I Construction.

J. It is the intent of these specifications to procure a fully acceptable, effective and reliable integrated security system. Refer to the Drawings for division of responsibility. These specifications recognize the importance of complete system operation and are not limited to specifying of equipment only. The following are also required from the selected bidder:
1. Proven experience in the security business.
2. Prompt delivery and professional installation including service of equipment as specified.
3. Bidder must provide, for objective evaluation, references, which clearly state and show the effectiveness of proposed equipment and services.
4. Used products will not be acceptable. Manufacturer must satisfactorily demonstrate that he has supplied and will continue to supply products to avoid the obsolescence of equipment installed in the building.
5. All equipment shall be fully guaranteed for twelve (12) months. This guarantee shall become effective from the day of installation completion. When in normal operation, if the equipment is found to be below the manufacturer's specification, repair and replacement of equipment shall be provided. Repairs shall be started within twenty-four (24) hours and completed without delay. Installation contractor shall either stock spares or be capable of obtaining all required replacement parts within twenty-four (24) hours.
6. Extended warranty terms shall be provided by the installing security system integrator at the time of bid.

1.03 APPLICABLE STANDARDS

A. All of the work within the scope of this bid shall be performed in accordance with the applicable state, county and city laws and ordinances. The bidder shall be able to obtain all permits and licenses as required in addition to being a licensed contractor. All materials, supplies and equipment being furnished shall be installed in accordance with the latest version of the applicable standards of:
1. OSHA
2. Uniform Building Code
3. Americans with Disabilities Act (ADA)
4. Components of the system shall be of the type approved by Safety and Regulatory Agencies including:
    a. Underwriters' Laboratories (UL), Inc.
    b. Federal Communications Commission (FCC).
    c. Agency approvals and UL Listing declare the system's design, components, and installation shall meet the highest standards.
    d. System installation shall comply with UL 681 and UL 611.
5. Alarm detection systems intended for UL certified fire alarm reporting shall meet the requirements of UL Standard 985, NFPA Standard 72 Chapter 2.
6. The equipment shall comply with Part 68 of the FCC Telephone Requirements Rules.

7. All circuits and equipment shall be installed and protected according to the National Electric Code and any applicable local requirements.

1.04 DEFINITIONS

A. LCD: Liquid-crystal display.

B. LED: Light-emitting diode.

C. PIR: Passive infrared.

D. RFI: Radio-frequency interference.

E. Protected or Protection Zone: A space or area for which an intrusion must be detected and uniquely identified, the sensor or group of sensors assigned to perform the detection, and any interface equipment between sensors and communication link to central-station control unit.

1.05 SUBMITTALS

A. Product Data: Components for sensing, detecting, systems integration, and control, including dimensions and data on features, performance, electrical characteristics, ratings, and finishes.

B. Shop Drawings: Detail assemblies of standard components that are custom assembled for specific application on this Project.
   1. Functional Block Diagram: Show single-line interconnections between components including interconnections between components specified in this Section and those furnished under other Sections. Indicate methods used to achieve systems integration. Indicate control, signal, and data communication paths and identify programmable logic controllers, networks, and control interface devices and media to be used. Describe characteristics of network and other data communication lines.
   2. Raceway Riser Diagrams: Detail raceway runs required for intrusion detection and for systems integration. Include designation of devices connected by raceway, raceway type, and size, and type and size of wire and cable fill for each raceway run.
   3. Device Address List: Coordinate with final system programming.
   4. System Wiring Diagrams: Include system diagrams unique to Project. Show connections for all devices, components, and auxiliary equipment. Include diagrams for equipment and for system with all terminals and interconnections identified.
   5. Sensor detection patterns and adjustment ranges.

C. Equipment and System Operation Description: Include method of operation and supervision of each component and each type of circuit. Show sequence of operations for manually and automatically initiated system or equipment inputs. Description must cover this specific Project; manufacturer's standard descriptions for generic systems are not acceptable.

D. Field quality-control test reports.

E. Operation and Maintenance Data: For intrusion detection system to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
   1. Data for each type of product, including features and operating sequences, both automatic and manual.
   2. Central-station control-unit hardware and software data.

F. Warranty: Special warranty specified in this Section.

G. In the event that the installation contractor does not furnish or does not supply sufficient documentation, the owner has the right to engage a separate contractor to attain any or all required documentation. All costs related with this event shall result in a back charge to the installation vendor via a change order.

1.06 QUALITY ASSURANCE

A. Installer Qualifications:
   1. An employer of workers, at least one of whom is a technician certified by the National Burglar & Fire Alarm Association.
   2. Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.
   3. A copy of the Contractors Certified Installers Certificate shall be furnished with bid response.

B. Intrusion Detection Systems Integrator Qualifications: An experienced intrusion detection equipment supplier and/or Installer who has completed systems integration work for installations similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful in-service performance.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

D. FMG Compliance: FMG-approved and -labeled intrusion detection devices and equipment.

E. Comply with NFPA 70.

F. Electrical Power
   1. Normal System Power Supply: 120V, 60Hz, through a locked disconnect device and an isolation transformer in a central-station control unit. Central-station control unit shall supply power to all components connected to it unless otherwise indicated.
   2. Power Continuity for Central-Station Control Units: Batteries in power supplies of the central-station control unit and individual system components shall maintain continuous system operation during outages of both the normal and backup ac system supply.
      a. Batteries: Rechargeable, valve-regulated, recombinant, sealed, lead-acid type with nominal ten (10) year life expectancy. Capacity adequate to operate portion of system served, including audible trouble signal devices for up to four (4) hours and

audible and visual alarm devices under alarm condition for an additional ten (10) minutes.

b. Battery Charger: Solid-state fully automatic, variable-charging-rate type. Charger shall recharge fully discharged battery within twenty-four (24) hours.

G. Annunciation: Indicate a change in system condition and switching of system or component to backup power.

1.07 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer and Installer agree to repair or replace components of intrusion detection devices and equipment that fails in materials or workmanship within specified warranty period.
1. Warranty Period: The standard manufacturer's warranty shall apply or a minimum of a one (1) year warranty from the date of Substantial Completion.

PART 2 PRODUCTS

2.01 INTRUSION DETECTION SYSTEM

A. Basis of Design SHALL BE DIGITAL MONITORING PRODUCTS, INCORPORATED (DMP)
1. Series: XR550-DN Partitioned Commercial Burglary Alarm and Access Control Panel
2. Approved alternate manufacturers:
a. Bosch G series panels
3. The intrusion detection system shall be integrated with the access control system. Both systems shall utilize the same control panel.

B. Control Panel
1. DMP XR550-DN
2. The intrusion detection control panel shall have be furnished with the following functionality:
a. Onboard 10/100 Network Communication
b. Cellular Communication
c. Wi-Fi Communication
d. Access Control

C. Door Contacts
1. Refer to Door Hardware Schedule

D. MICROWAVE-PIR DUAL TECHNOLOGY MOTION SENSORS
1. DMP #CDX-DAM or approved equal.

E. 360° MOTION SENSORS
1. DMP#SX-360Z

F. Alarm Keypad Console
   1. DMP #7173

G. Glass Break Sensor
   1. DMP Model #5845LX

H. Panel Loop Expansions
   1. Hard-wired detection equipment shall communicate to the system by way of the control panel loop expansion bus. The equipment shall have a (3) year warranty as stated in the current DMP Product Catalog and meet or exceed features offered in the following products:
      a. Network Transient Suppressor – DMP Model 270
      b. Trouble Sounder – DMP Model 277
      c. Bus Splitter / Repeater Module – DMP Model 710
      d. Output Expansion Module DMP Model 716
      e. Dual Phone Line Module – DMP Model 893A
      f. Motion Detector – DMP Model 6155LX (wall mount with built-in zone expander)
      g. Motion Detector – DMP Model AP669 (ceiling mount 360' – requires DMP zone expander)
      h. Glass Break Detector – DMP Model 5845LX (includes built-in zone expander)
      i. Bus Splitter/Repeater Module – DMP Model 710
      j. Door Contact – DMP Model SM20WG (surface applications – requires DMP zone expander)
      k. Output Expansion Module - DMP Model 716
      l. Graphic Annunciator Module - DMP Model 717

2.02 ENCLOSURE

A. The Control Panel shall be enclosed in a metal cabinet, suitable for wall mounting. The dimensions shall not exceed 14.5 inches in height, 12.5 inches in width or 3 inches in depth.

2.03 ELECTRICAL POWER REQUIREMENTS

A. System Power – The Fire and Burglary Alarm System shall operate using standard 120 volts AC, 50/60 Hz power.
   1. Control Primary Power – Transformer power shall be 16.5 VAC, 40VA.
   2. Backup Battery – A rechargeable 12 VDC, gel type, lead acid backup battery shall be provided. The battery shall be rated between 7 and 34- ampere hours (AH).
   3. Alarm Power – Alarm power shall be 12 VDC, 1.7 amps for each bell output
   4. Auxiliary Standby Power – Standby power shall be 12 VDC, 750 mA maximum.
   5. Fusing – The battery input, auxiliary, and bell outputs shall be protected using PTC circuit breakers. All outputs shall be power limited.

2.04 SUBSTITUTIONS

A. Substitution of any item shall only be permitted when the Owner waives the specification(s) of a particular product(s) in writing, allowing a substitute item to be bid. It shall be the responsibility of the Contractor requesting the substitution that the proposed item is equivalent in each and every way to the originally specified product stated within this bid specification and drawing package and that it is in the best interest of the Owner to use the proposed substitute.

PART 3 EXECUTION

3.01 COMMISSIONING OF SYSTEMS AND EQUIPMENT

A. Engage a factory-authorized service representative or technician who is familiar with this project to participate and assist, if necessary, in the functional performance testing of the equipment include in this Division with the Commissioning Agent.

3.02 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of intrusion detection.
   1. Examine roughing-in for embedded and built-in anchors to verify actual locations of intrusion detection connections before intrusion detection installation.
   2. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of intrusion detection.

B. Inspect built-in and cast-in anchor installations, before installing intrusion detection, to verify that anchor installations comply with requirements. Prepare inspection reports.
   1. Remove and replace anchors where inspections indicate that they do not comply with requirements. Re-inspect after repairs or replacements are made.
   2. Perform additional inspections to determine compliance of replaced or additional anchor installations. Prepare inspection reports.

C. For material whose orientation is critical for its performance as a ballistic barrier, verify installation orientation.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.03 SYSTEM INSTALLATION

A. The System shall be installed and tested in accordance with the Manufacturer’s Installation instructions. The following conditions are applicable:

B. In order to ensure a complete, functional System, for bidding purposes, where information is not available from the Owner upon request, the worst case condition shall be assumed.

C. Interfaces shall be coordinated with the Owner’s representative, where appropriate.

D. All necessary backboxes, pullboxes, connectors, supports, conduit, cable, and wire shall be furnished and installed to provide a complete and reliable System installation.

E. All conduit, cable, and wire shall be installed parallel and square with building lines. Conduit fill shall not exceed forty percent (40%). All wires shall be gathered, labeled and tied to create an orderly installation.

F. Comply with UL 681.

3.04 WIRING INSTALLATION

A. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points. Use lacing bars and distribution spools. Separate power-limited and non-power-limited conductors as recommended in writing by manufacturer. Install conductors parallel with or at right angles to sides and back of enclosure. Connect conductors that are terminated, spliced, or interrupted in any enclosure associated with intrusion system to terminal blocks. Mark each terminal according to system's wiring diagrams. Make all connections with approved crimp-on terminal spade lugs, pressure-type terminal blocks, or plug connectors.

B. Wires and Cables:
   1. Conductors: Size as recommended in writing by system manufacturer, unless otherwise indicated.

C. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.

D. Install power supplies and other auxiliary components for detection devices at controllers, unless otherwise indicated or required by manufacturer. Do not install such items near devices they serve.

E. Identify components with engraved, laminated-plastic or metal nameplate for central-station control unit and each terminal cabinet, mounted with corrosion-resistant screws.

3.05 GROUNDING

A. Ground system components and conductor and cable shields to eliminate shock hazard and to minimize ground loops, common-mode returns, noise pickup, cross talk, and other impairments.

B. Signal Ground Terminal: Locate at main equipment rack or cabinet. Isolate from power system and equipment grounding. Provide 5-ohm ground. Measure, record, and report ground resistance.

C. Install grounding electrodes of type, size, location, and quantity indicated.

3.06 FIELD QUALITY CONTROL

A. Pretesting: After installation, align, adjust, and balance system and perform complete pretesting to determine compliance of system with requirements in the Contract Documents. Correct deficiencies observed in pretesting. Replace malfunctioning or damaged items with new ones and retest until satisfactory performance and conditions are achieved. Prepare forms for systematic recording of acceptance test results.
   1. Report of Pretesting: After pretesting is complete, provide a letter certifying that installation is complete and fully operable; include names and titles of witnesses to preliminary tests.

B. Perform the following field tests and inspections and prepare reports:
   1. Inspection: Verify that units and controls are properly labeled and interconnecting wires and terminals are identified.
   2. Operational Tests: Schedule tests after pretesting has been successfully completed. Test all modes of system operation and intrusion detection at each detection device. Test for detection of intrusion and for false alarms in each protected zone. Test for false alarms by simulating activities outside indicated detection patterns.
   3. Electrical Tests: Comply with NFPA 72, Section A-7. Minimum required tests are as follows:
      a. Verify the absence of unwanted voltages between circuit conductors and ground.
      b. Test all conductors for short circuits using an insulation-testing device.
      c. With each circuit pair, short circuit at the far end of circuit and measure circuit resistance with an ohmmeter. Record circuit resistance of each circuit on Record Drawings.
      d. Verify that each controller is in normal condition as detailed in manufacturer's operation and maintenance manual.
      e. Verify that transient surge-protection devices are installed according to manufacturer's written instructions.
      f. Test each initiating and indicating device for alarm operation and proper response at central-station control unit.

C. Report of Tests and Inspections: Prepare a written record of tests, inspections, and detailed test results in the form of a test log.

D. Tag all equipment, stations, and other components for which tests have been satisfactorily completed.

3.07 ADJUSTING

A. Occupancy Adjustments: When requested within twelve (12) months of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to three (3) visits to Project during other than normal occupancy hours for this purpose. Visits for this purpose shall be in addition to any required by warranty.

3.08 CLEANING

A. Remove rubbish and debris: Installation contractor is not allowed you use the onsite dumpster and is responsible to discard their own debris off site.

B. Clean installed items using methods and materials recommended in writing by manufacturer.

3.09 DEMONSTRATION – TRAINING

A. By means of training classes augmented by individual instruction as necessary, the Bidding contractor shall fully instruct the BOE's designated staff and personnel in the operation, adjustment and maintenance of all products, equipment and systems.

B. The Contractor shall be required to provide all training aids, e.g., notebooks, manuals as required.

C. All training shall be completed a minimum of two (2) weeks prior to system cut over. Training schedule shall be subject to the Owner approval.

D. Training shall be conducted by experienced personnel and supported by training aids. An adequate number and amount of training material shall be provided by the Contractor. The following is considered a minimum.
   1. Functional flow-charts, overall block diagrams, and descriptive material for all software;
   2. Schematic drawings for each of the hardware components;
   3. All procedure manuals, specification manuals, and operating manuals;
   4. As-built drawings.

E. Bidding contractor shall engage a factory-authorized service representative to provide formal training the Owner's maintenance personnel to adjust, operate, and maintain this Intrusion Detection system.

F. Training shall include the following:
   1. User Training; Eight (8) hours of instruction to the users at EACH school within this project shall be included as part of this specification. Eight (8) hours of instruction per school is required.
   2. Administrator Training; Twenty four (24) hours of advanced system administration training to the administrator of this system shall be included as part of this specification.
   3. All training shall be divided up into four (4) hour sessions as mandated by the Owner.

G. Training hours and sessions must be documented by the instructor and approved by the Owner before project closeout.

H. Should the training be deemed as inadequate by the owner, the owner reserves the right to retain outside manufacturer training. If this outside manufacturer training has an associated cost, this cost shall be deducted from the final invoice of this project.

SECTION 28 2300 - VIDEO SURVEILLANCE SYSTEM

SECTION 1 - GENERAL

1.01 SECTION INCLUDES

A. System Requirements

B. Uninterruptible Power Supplies

C. Surge Protection

D. Client Workstations

E. Cameras

F. Video Surveillance Software

1.02 RELATED REQUIREMENTS

A. The Contractor, Subcontractors and/or suppliers providing goods or services referenced in or related to this Section shall also be bound by the Documents identified in Division 01 Section "Summary", Paragraph 1.1A, entitled "Related Documents." OR Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Division 07 - Firestopping.

C. Division 08 - Door Hardware: Electrically operated door hardware, for interface with access control system. Includes door hardware with integral request to exit devices.

D. Division 26 - Hydraulic Elevators: For interface with access control system.

E. Division 26 - Grounding and Bonding for Electrical Systems.

F. Division 26 - Conduit for Electrical Systems.

G. Division 26 Identification for Electrical Systems: Identification products and requirements.

H. Division 27 - Structured Cabling: Data cables for access control system IP network connections.

I. Division 28 - Video Surveillance: For interface with access control system.

J. Division 28 -Building Intrusion Detection: For interface with access control system.

K. Division 28 - Fire Detection and Alarm: For interface with access control system.

L. Refer to the following construction documents for Data Room locations and device locations only.

1. "Y" Drawings – Security Plans
2. "T" Drawings – Technology Plans

M. Any apparatus, appliance, material, or work not shown on the Drawings but mentioned in the Specifications, or vice versa, and any incidental accessories necessary to make the work complete and perfect in all respects and ready for operation, even if not particularly specified, shall be provided without additional expense. Coordinate with each system manufacturer to insure all hardware, firmware, relays, or other necessary components are provided prior to bid submission.

N. All work of this Section to comply with the requirements of the Conditions of Contract, with all Specification Sections of Division 01 – General Requirements, with the Security Drawings, and with all other Contract Documents.

O. Refer to Division 26 of the Contract Documents, Electrical, for all Specifications governing the installation of raceway (conduit, EMT, cable trays, wire trough, etc.), system junction and pull boxes, and device rough-in boxes, for all Security System work shown on the Security Drawings. Conduit, back box, and trough work to be provided by this Contractor.

P. Refer to Division 26 of the Contract Documents, Electrical, for all work related to the interconnection of Security System equipment to 120 VAC power sources.

Q. Refer to Division 09 of the Contract Documents, Finishes, for details relating to acoustical ceilings and gypsum board systems, floor finishes, painting, etc., for information pertinent to device and back box selection and installation.

R. Refer to Division 08 of the Contract Documents, Openings, for details relating to doors, door frames, windows, and window frames, for information pertinent to the selection of magnetic contact devices and their associated placement and installation, including back box selection and installation.

S. Refer to Division 08 of the Contract Documents, Openings, for details relating to door and door frame hardware and preparation, electrified lock power supplies, required coordination to accommodate these components and/or systems, lock voltage and current draw coordination, coordination of fail-safe electrified locks, and any other related equipment or requirements

T. Refer to Division 27, Telecommunications for all Ethernet Cabling for the Cameras.

U. Review all other Specification Sections as required to achieve complete inter- trade coordination.

1.03 DEFINITIONS

A. API: Application Programming Interface

B. AVI: Audio Video Interleave

C. CA: Certificate Authority

D. CAC: Common Access Card

E. CE: European Union Conformity

F. CPU: Central Processing Unit

G. CSV: Comma Separated Values

H. DNS: Domain Name Server

I. DSM: Door Status Monitor

J. DVR: Digital Video Recorder

K. EACS: Electronic Access Control System

L. FCC: Federal Communications Commission

M. FIPS: Federal Information Processing Standard

N. FIFO: First In – First Out

O. FTP: File Transfer Protocol

P. FRAC: First Responder Authentication Credential

Q. GB: Gigabyte

R. GSOC: Global Security Operations Center

S. GUI: Graphical User Interface

T. HA: High Availability

U. HTML: Hypertext Markup Language

V. H.264, H.265: Video Compression Standards

W. I^2C: Inter-Integrated Circuit

X. IEEE: Institute of Electrical and Electronics Engineers

Y. I/O: Input / Output

Z. IP: Internet Protocol

AA. IS: Integrated System

BB. JPEG: Joint Photographic Experts Group

CC. LAN: Local Area Network

DD. LDAP: Lightweight Directory Access Protocol

EE. MB: Megabyte

FF. MJPEG: Motion JPEG

GG. MSATA: Mini-Serial Advanced Technology Attachment

HH. MSP: Mobile Security Professional

II. MTBF: Mean-Time Between Failure

JJ. NAS: Network Attached Storage

KK. NAT: Network Address Translation

LL. NBAPI: NetBox Application Programming Interface

MM. NECA: National Electric Code Association

NN. NFPA: National Fire Protection Association

OO. NVR: Network Video Recorder

PP. ODBC: Open Database Connectivity

QQ. OS: Operating System

RR. OVID: Open Video Integration Driver

SS. PDF: Portable Document Format

TT. PIN: Personal Identification Number

UU. PIV: Personal Identity Verification

VV. PoE: Power over Ethernet

WW. PTZ: Pan-Tilt-Zoom

XX. RAID: Redundant Array of Independent Disks

YY. RAM: Random Access Memory

ZZ. REX: Request to Exit

AAA. RFID: Radio Frequency Identification

BBB. RoHS: Restriction of Hazardous Substances

CCC. ROM: Read Only Memory

DDD. RU: Rack Unit

EEE. SFTP: Secure File Transfer Protocol

FFF. SHA: Secure Hash Algorithm

GGG. SIO: Serial Input / Output

HHH. SLA: Sealed Lead-Acid

III. SMS: Security Management System or Short Message Service (text messaging)

JJJ. SSL: Secure Sockets Layer

KKK. SUSP: Software Upgrade and Support Plan

LLL. TCP: Transmission control protocol - connects hosts on the Internet

MMM. TIA: Telecommunications Industry Association

NNN. TLS: Transport Layer Security

OOO. TWIC: Transportation Worker Identification Credential

PPP. UI: User Interface

QQQ. UPS: Uninterruptible Power Supply

RRR. UTP: Unshielded Twisted Pair

SSS. VMS: Video Management System

TTT. WAN: Wide Area Network

UUU. Wi-Fi: Wireless Network

VVV. AS NECESSARY: Shall mean work which is required for completed construction, but is not necessarily shown or described in the Contract Documents.

WWW. AS REQUIRED: Shall mean work which is required for completed construction, but is not necessarily shown or described in the Contract Documents.

XXX. Substantial Completion: Shall mean that the project is sufficiently complete to be utilized for its intended use as stated in the body of this written specification.

YYY. Contractor/INTEGRATOR: Refers to the biding/installation Contractor responsible for furnishing and installation of all work indicated within this specification.

1.04 REFERENCE STANDARDS

A. 47 CFR 15 - Radio Frequency Devices; current edition.

B. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2015.

C. NECA 303 - Standard for Installing Closed- Circuit Television (CCTV) Systems; 2005.

D. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

E. System shall be RoHS (Restriction of Hazardous Substances) compliant and meet proposed amendments to the reduction of toxic substances in manufacturing in stated in the Environmental Design of Electrical Equipment Act (EDEE).

F. Installation shall comply with NECA 1-2010 “Standard Practice of Good Workmanship in Electrical Construction”

G. Installation shall comply with NEC/NFPA 70E “Standard for Electrical Safety in the Workplace”

H. Electronic data exchange between Video Surveillance System and the Access Control System shall comply with SIA TVAC

I. Installation shall comply with FCC CFR 47 Part 15 Class A “Telecommunications, Radio, Frequency, Digital Device Emission:

J. Installation shall comply with Federal, State, and Local Codes and Authority Having Jurisdiction (AHJ).

K. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.05 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
1. Coordinate the placement of cameras with structural members, ductwork, piping, equipment, luminaires, diffusers, fire suppression system components, and other potential conflicts installed under other sections or by others.
2. Coordinate the work with other installers to provide power for cameras and equipment at required locations.
3. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Preinstallation Meetings:
1. Conduct meeting with facility representative to review camera and equipment locations and camera field of view objectives.
2. Conduct meeting with facility representative and other related equipment manufacturers to discuss video surveillance system interface requirements.

C. Confidentiality of Documents
1. The project documents, consisting of all technical proposals, drawings, specifications, shop drawings, as-built drawings, manufacturer’s literature, etc., shall be considered proprietary information and are to be treated with complete confidentiality. Dissemination of any security system documentation to any party not considered “need-to-know” without a pre-defined and approved agreement will be considered a violation of the contract documents and all pursuant clauses regarding financial penalties, project termination, and/or legal prosecution will apply. The Contractor is to obtain a list of “need-to-know” parties from the Owner and/or Construction Manager.
2. Use of the Contract drawings and specifications is restricted to the original site for which they were prepared. Publication therefore is expressly limited to such use. Re-use, reproduction, storage by any medium or publication by any method in whole or in part is prohibited. Visual contact with the Contract drawings and specifications constitutes prima facie evidence of the acceptance of these restrictions. Unlawful publication,

dissemination, and use of these documents carry significant liability and the Owner maintains the right to legally pursue restitution and/or penalty for violation of these confidentiality conditions.

3. All documents marked "DO NOT DUPLICATE" are to be returned to the Construction Manager for proper disposal and handling upon completion of their relevant use.

1.06 SUBMITTALS

A. See Division 01 – Administrative Requirements for submittal procedures.

B. Evidence of Qualifications for Installer:

1. The Contractor shall be a bona fide security systems contractor, licensed by the State of Connecticut for the installation of the low voltage security and signal communication systems, and engaged in security system maintenance, service and contracting for at least the last five years.
2. The Contractor shall employ technicians who have been trained by the Manufacturer specified within this section to install the systems of this Manufacturer.
3. The contractor shall be a factory authorized stocking distributor of the manufacturer of the equipment included in the system so that immediate replacement parts can be made from inventory and service provided as needed on an emergency basis.
4. The Contractor shall submit with the bid a manufacturer's certificate of acceptance of the qualifications of the Installing Contractor to install, test, maintain and repair the manufacturer's equipment.
5. In order for the Security Consultant to verify that they meet the competency requirements of this specification, Contractors must submit the following information if so requested:
    a. Proof that the Contractor has installed, services and maintained similar security systems for a minimum of ten (10) years.
    b. Proof that the Contractor is a firm which currently and regularly installs, services and maintains security systems as a full time business.
    c. The names and qualifications of security system technicians that shall perform and supervise the work, and perform tests or adjustments on the systems and equipment. Qualifications shall include all schooling, training, and history of work experience.
    d. A list of four prior systems comparable to the one specified under this contract which were installed, serviced, and maintained satisfactorily by the Contractor for a minimum of one (1) year. Each system listed shall include the firm or owner, location, person to contact (with telephone number), date of installation and service period, and a brief description of the system and work performed on the system.
6. The Contractor shall submit any other information required by the Security Consultant to determine the competency of the Contractor. If this information is not submitted as requested, it shall be submitted within the time specified by the Architect after the bid opening. If the Contractor fails to submit the information in accordance with the Security Consultant's request, the Contractor shall be declared non-responsive, and may be rejected to perform the work specified within this section.

C. Design Data: Standby battery/UPS Calculations

D. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instruction for storage, handling, protection, examination, preparation, installation, and operation of product.

E. Manufacturer's detailed field-testing procedures.

F. Maintenance contracts.

G. Product Data: Provide details and technical specifications for each product indicated. Include physical dimensions, features, performance, electrical characteristics, ratings, software versions, and operating system details.

H. Shop Drawings:
   1. General: General: Bid documents, including drawings, details and specifications are considered conceptual in nature, and provide direction on products and project requirements. Contractor is given a choice of methods that may be incorporated into the system. These choices may affect the overall design, configuration and installation of the proposed system.
   2. Contractor Responsibility: Prepare and submit shop drawings, rendered in the latest AutoCAD DWG file format, which show details of all work to ensure proper installation of the work using those materials and equipment specified or allowed under the approved plans and specifications. A complete Shop Drawing submittal drawing package shall consist of Drawings, Equipment Data Sheet Submittals, and an Acceptance Testing Plan.
   3. Completeness: The Equipment Submittals, Acceptance Testing Plan, and the Shop Drawings should be submitted as a complete and contiguous package. Partial or unmarked submittals will not be accepted for review.
   4. Scheduling: A schedule of shop drawing submissions shall be submitted for the Architect and Owner's Representative review on a form acceptable to the Architect within ten (10) days after award of the Contract. The schedule of shop drawing submissions shall include as a minimum, but not limited to the requirements stated herein.
   5. Requirements: Provide the following information complete, and in the manner described herein:
      a. Hardware, Application Software, and Network Requirements: A system description including analysis and calculations used in sizing equipment required by the security systems. The description shall show how the equipment will operate as a system to meet the performance requirements of the systems. The following information shall be supplied as a minimum:
         1) Server(s) processor(s), disk space and memory size
         2) Workstation(s) processor(s), disk space and memory size
         3) Description of facility (field) control equipment (Controllers/Field Panels, Models) and their configuration
         4) Operating System(s) Software, where software is provided or upgraded
         5) Application Software, with Optional and Custom Software Modules supplied in this project
         6) Integration Schemes: Proposed connectivity, software, development requirements, and SDK information, for inter-system communication.
         7) Network bandwidth and reliability requirements
         8) Number and location of LAN ports required

9) Other specific network requirements, preferences, and constraints
10) Backup/archive system size and configuration
11) Start-up operations
12) System power requirements and Uninterruptible Power Supply (UPS) sizing
13) Device/component environmental requirements (cooling and/or heating parameters)

b. Shop Drawings: Shop Drawings shall be numbered consecutively and shall accurately and distinctly present the following information:
1) Title Sheet
2) Floor Plans: Showing devices, pull boxes, cabinets, conduits and conductors in their proposed locations with device numbering scheme.
3) Riser Diagram: Showing all conduit relationships between devices shown on the Floor Plans. Show all power sources.
4) Single-Line/Block Diagrams: Show signal relationships of controls and devices within the system.
5) Custom Assembly Diagrams: For each custom assembly such as Access Control Terminal Cabinets, receptacle assemblies, or door control panels, provide an assembly drawing illustrating the appearance of the assembled device. Include dimensions, assembly components, and functional attributes (momentary or alternate action switch, lens color, panel finish)
6) Component Connection Diagrams
a) For each equipment component such as a computer, video switcher, camera or video recorder, show the rear elevation of the device and all connectors/terminations as a pictorial.
b) Show the wire designations on connectors. Typical wiring detail where multiple of same device is provided.
c) Show a schedule of the wire colors connected to the pins on each device connector.

c. Equipment Wiring Diagrams
1) Show a pictorial illustration of each equipment enclosure and/or terminal cabinet, including terminals, components and wiring devices.
2) Show the device nomenclature exactly as shown on the single line diagrams.
3) Terminations: Show every termination and terminating cable, with applicable cable and wire numbers matching the single line diagrams.
a) Every termination in the system must be documented.
b) Termination information may be rendered as a wiring list(s), if properly coordinated with, and referenced to, typical component and single-line diagrams. Otherwise, the Shop Drawings shall show a pictorial of every component in the system, with its terminations.
4) Show wire colors for each terminal.
5) For each wire exiting the enclosure, show the destination of the wire by floor, room number and the drawing number of the panel where the wire terminates.
6) Provide working dimensions and erection dimensions.
7) Arrangements and sectional views

8) Necessary details, including complete information for making connections between work under this Contract, existing work, and work under other Contracts.
9) Stock or standard drawings will not be accepted for review unless full identification and supplementary information is shown thereon in ink or typewritten form.
10) Duplicate of design drawings may be used where each sheet is modified to reflect contractor coordination, specific requirements of the project and multidiscipline conditions.
11) Each Drawing or page shall include:
    a) Project name, Project Number and descriptions.
    b) Submittal date and space for revision dates.
    c) Identification of equipment, product or material.
    d) Name of Contractor and Subcontractor.
    e) Name of Supplier and Manufacturer.
    f) Relation to adjacent structure of material.
    g) Physical dimensions clearly identified.
    h) ASTM and Specifications references.
    i) Identification of deviations from the Contract Documents.
    j) Contractor's stamp, initialed or signed, dated and certifying to review of submittal, certification of field measurements and compliance with Contract.
    k) Location at which the equipment or materials are to be installed. Location shall mean both physical location and location relative to other connected or attached material.

d. Equipment Submittals
1) Provide a Title Page, with project name, Contractor’s name and address, contact information, date of submission, and submission revision number.
2) Provide a Parts List, for proposed equipment, materials, components and devices, listing the following information for each line item:
    a) The system type
    b) Model number
    c) Specification sheet page reference
3) Provide Manufacturers Specification Sheet with descriptive information for equipment, materials, components and devices. Number each page, to correspond with the Parts List.
4) Clearly delineate (with highlighter, arrow, or underline) on each specification sheet, specific model numbers, options and configurations being proposed for this project.
5) Indicate kinds of materials and finishes for equipment where more than one option is presented.

e. Acceptance Testing Plan
1) Submit a written document detailing the test procedures to be followed in evaluating and proving the installed system(s).
2) Provide a sample of the test forms to be used for each system and for each component of each system.

3) Include all tests required by the equipment manufacturer and by this Specification

f. Spare Parts List: Submit a list of recommended spare parts for Owner's review & approval and/or amending. Spare parts shall comprise a minimum of 5% or minimum of 2 each of field devices, device termination boards and a minimum of 1 system controller boards.

g. Incomplete or unchecked submittals which do not contain complete data on the work and full information on related matters will be returned for correction.

h. Verification: The contractor shall check and acknowledge all shop drawings and shall place his signature on all shop drawings submitted for approval. Contractor's signature shall constitute a representation that all quantities, dimensions, field construction criteria, materials, catalog numbers, performance criteria and similar data have been verified and that, in his opinion, the submittal fully meets the requirements of the Contract Documents.

i. Timeliness: The Contractor shall schedule, prepare and submit a complete shop drawing assembly in accordance with a time-table that will allow his suppliers and manufacturers sufficient time to fabricate, manufacture, inspect test and deliver their respective products to the project site in a timely manner so as to not delay the complete performance of the work.

j. Departure from Contract Requirements: If shop drawings show departures from the Contract requirements, the Contractor shall make specific mention thereof in his letter of transmittal, otherwise review of such submittals shall not constitute review of the departure. Review of the drawings shall constitute review of the specific subject matter for which the drawings were submitted and not of any other structure, materials, equipment, or apparatus shown on the drawings.

k. Contractor Responsibility: The review of shop drawings will be general and shall not relieve the Contractor of responsibility for the accuracy of such drawings, nor for the proper fitting and construction of the work, nor for the furnishing of materials or work required by the Contract. No construction called for by shop drawings shall be initiated until such drawings have been reviewed and approved.

l. Shop Drawing Submittal Review: The procedure in seeking review of the shop drawings shall be as follows:

1) The Contractor shall submit four (4) complete sets and/or electronic PDFs of shop drawings with equipment submittals and other descriptive data with one copy of a letter of transmittal to the Architect for review thirty (30) working days after award of the contract. The letter of transmittal shall contain the project name, Architects's Project Number, the name of the Contractor, the list of drawings submitted including numbers and titles, requests for any review of departures from the contract requirements and any other pertinent information. Drawings submitted for review shall be full-sized and included with the equipment submittals.

2) Drawings or descriptive data will be stamped "Reviewed", "Furnish as Corrected", "Revise and Resubmit", "Rejected" or 'Submit Specific Item' and one copy with a Letter of Transmittal will be transmitted to the Contractor with the return of submitted documents.

3) If a shop drawing or data is stamped "Reviewed" or "Furnish as Corrected", no additional submittal is required for that shop drawing.

4) If a shop drawing or data is stamped "Revise and Resubmit" or “Rejected”, the Contractor shall make the necessary corrections and resubmit the documents as required above. The letter transmitting corrected documents shall indicate that the documents are re-submittals.
5) The Contractor shall revise and resubmit the shop drawing as required, until they are stamped either "Reviewed" or "Furnish as Corrected."

I. Equipment and Software List: Include every piece of equipment and software by product/model name and/or number, manufacturer, serial number, revision number, location, and date of original installation. If factory and/or bench testing regimens are required by the project plan, add pretesting record of each piece of equipment and software, listing name of person testing, date of test, and adjustments made.

J. CE and FCC Compliance Certificates:

K. Field quality-control reports

L. Current Specified Manufacturer Integrator Certification Letter

M. Current Specified Manufacturer Training Certificates (listing expiration dates) for Two technicians from the supporting office

N. Warranty: Software support and warranty information for all components, including Service Level Agreement (SLA) details, and duration of agreement from date of system acceptance by Owner. Submit sample of manufacturer’s warranty and documentation of final executed warranty completed in Owner’s name and registered with manufacturer.

O. Project Record Documents: Record actual locations of system components and installed wiring arrangements and routing.

P. Operation and Maintenance Data: Include detailed information on system operation, equipment programming and setup, replacement parts, and recommended maintenance procedures and intervals.
1. Include contact information for entity that will be providing contract maintenance and trouble call-back service.
2. General: The Contractor is responsible for providing accurate drawings and equipment manuals describing and depicting the systems as they are actually installed and operated.
3. Phase One: Notwithstanding requirements specified elsewhere, submit the following labeled as the "Operating and Maintenance Manual" within thirty (30) days after Final Acceptance of the Installation:
    a. Record Drawings: Submit two (2) copies of revised versions of drawings as submitted in the "Shop and Field" and "Equipment Wiring Diagrams" Submittals showing actual device locations, conduit routing, wiring and relationships as they were constructed. Include nomenclature showing as-built wire designations and colors. Drawings shall include room numbers coinciding with Owner space planning numbering. Drawings shall be submitted in electronic editable AutoCAD files, in “.dwg” format, on CD or DVD disks.
    b. Manuals: Submit two (2) copies of each of the following materials in bound manuals, or electronic PDF copies on CD/DVD discs, with labeled dividers:

1) A final Bill of Material for each system.
2) Equipment Instruction Manuals: Complete, project specific comprehensive instructions for the operation of devices and equipment provided as part of this work.
3) Manufacturers Instruction Manuals: Specification sheets, brochures, Operation Manuals and service sheets published by the manufacturers of the components, devices and equipment provided.
4) Include information for testing, repair, troubleshooting, assembly, disassembly and recommended maintenance intervals.
5) Provide a replacement parts list with current prices. Include list of recommended spare parts, tools, and instruments for testing and maintenance purpose.
6) Performance, Test and Adjustment Data: Comprehensive documentation of performance verification according to parameters specified herein.
7) Warranties: Provide an executed copy of the Warranty Agreement and copies of all manufacturers' Warranty Registration papers as described herein.

1.07 QUALITY ASSURANCE

A. Comply with the following:
   1. NFPA 70.
   2. Applicable TIA/EIA standards.

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

D. Installer Qualifications: Company specializing in performing the work of this section with minimum three years documented experience with video surveillance systems of similar size, type, and complexity and providing contract maintenance service as a regular part of their business; authorized manufacturer's representative.
   1. Contract maintenance office located within 100 miles (160 km) of project site.

E. Maintenance Contractor Qualifications: Same entity as installer.

F. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

G. The requirements of the State Building Code and local regulations establish the minimum acceptable quality of workmanship and materials, and all work shall conform thereto unless more stringent requirements are indicated or specified herein.

H. All work shall comply with the latest editions of the codes as referenced herein.

I. Follow manufacturer's directions for articles furnished, in addition to directions shown on drawings or specified herein.

J. Protect all work, materials, and equipment from damage during process of work. Replace all damaged or defective work, materials and equipment without additional cost to the Owner.

K. All equipment and materials for permanent installation shall be the products of recognized manufacturers and shall be new.

L. Equipment and materials shall:
1. Where normally subject to Underwriters Laboratory Inc. listing or labeling services, be so listed or labeled.
2. Be without blemish or defect.
3. Not be used for temporary purposes.
4. Be in accordance with the latest applicable NEMA standards.
5. Be products which will meet with the acceptance of all authorities having jurisdiction over the work. Where such acceptance is contingent upon having the products examined, tested and certified by Underwriters or another recognized testing laboratory, the product shall be so examined, tested and certified.

M. Except for conduit, conduit fittings, outlet boxes, wire and cable, all items of equipment or material of one generic type shall be the product of one manufacturer throughout.

N. For items which are to be installed but not purchased as part of the electrical work, the electrical work shall include:
1. The coordination of their delivery.
2. Their unloading from delivery trucks driven into any point on the property line at grade level.
3. Their safe handling and field storage up to the time of permanent placement in the project.
4. The correction of any damage, defacement or corrosion to which they may have been subjected. Replacement, if necessary, shall be coordinated with Contractor who originally purchased the item.
5. Their field make up and internal wiring as may be necessary for their proper operation.
6. Their mounting in place including the purchase and installation of all dunnage, supporting members, and fastenings necessary to adapt them to architectural and structural conditions.
7. Their connection to building wiring including the purchase and installation of all termination junction boxes necessary to adapt and connect them to this wiring. Included also shall be the purchase and installation of any substitute lugs or other wiring terminations as may be necessary to adapt their terminals to the building wiring as called for and to the connection methods set forth in these specifications.

O. Items which are to be installed but not purchased as part of the electric work shall be carefully examined upon delivery to the project. Claims that any of these items have been received in such condition that their installation will require procedures beyond the reasonable scope of the electric work will be considered only if presented in writing within one week of the date of delivery to the project of the items in question. The work includes all procedures, regardless of

how extensive, necessary to put into satisfactory operation, all items for which no claims have been submitted as outlined above.

P. Seismic Performance: Provide equipment capable of withstanding the effects of earthquake motions determined according to ASCE/SEI 7 and current building codes for the state of CT.
   1. The term “withstand” means “the system(s) will remain in place without separation of any parts when subjected to the seismic forces specified and the system will be fully operational after the seismic event.”

1.08 PROJECT CONDITIONS

A. Environmental Conditions: Capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:
   1. Interior, Controlled Environment: System components installed in temperature-controlled interior environments shall be rated for continuous operation in ambient temperatures of 36 to 122 deg F (2 to 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, noncondensing. Use NEMA 250, Type 1 enclosures.
   2. Interior, Uncontrolled Environment: System components installed in non- temperature-controlled interior environments shall be rated for continuous operation in ambient temperatures of 0 to 122 deg F (minus 18 to plus 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, noncondensing. Use NEMA 250, Type 3R enclosures.
   3. Exterior Environment: System components installed in locations exposed to weather shall be rated for continuous operation in ambient temperatures of minus 30 to plus 122 deg F (minus 34 to plus 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, condensing. Rate for continuous operation when exposed to rain as specified in NEMA 250, winds up to 85 mph and snow cover up to 24 inches thick. Use sufficiently rated NEMA 250 enclosures.
   4. Hazardous Environment: System components located in areas where fire or explosion hazards may exist because of flammable gases or vapors, flammable liquids, combustible dust, or ignitable fibers shall be rated, listed, and installed according to NFPA 70.
   5. Corrosive Environment: System components subject to corrosive fumes, vapors, and wind-driven salt spray in coastal zones. Use sufficiently rated NEMA 250 enclosures.
   6. Security Environment: Camera housing for use in high-risk areas where surveillance equipment may be subject to physical violence.

1.09 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions and NECA 303.

B. Store products in manufacturer's unopened packaging, keep dry and protect from damage until ready for installation.

1.10 FIELD CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

1.11 WARRANTY

A. See Section Division 01 – Closeout Submittals for additional warranty requirements.

B. The Integrator guarantees the Systems to be installed under this specification to be free from any defects in workmanship and materials for a period of one (1) year from the date of final completion/acceptance of the project by the Owner as evidenced by the date of final payment for the work. The Contractor shall promptly and at their own expense remedy any defects in the work and pay for any damage to other work resulting thereof, which shall appear during the period of time covered by this guarantee. Neither the final certificate of payment nor any provisions in this Agreement shall constitute an acceptance of work not done in accordance with this specification or relieve the Contractor of liability with respect to any expressed warranties or guarantees or responsibility for faulty materials or workmanship.

C. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of equipment related to the Access Control System, and control-station equipment that fail in materials or workmanship within specified warranty period.
   1. Warranty Period: The standard manufacturer’s warranty shall apply or a minimum of a one (1) year warranty from the date of Substantial Completion.

D. The Integrator shall provide all services required to maintain the system in an operational state as specified by the manufacturer for a period of one (1) year after acceptance.

E. Service response shall be within twelve (12) hours of the initial request for service and shall be provided twenty-four (24) hours per day, seven (7) days per week and three hundred sixty-five (365) days per year.

F. Contractor shall include, as part of this warranty, a program for maintenance for each integrated system.
   1. Provide details of coverage, preventive maintenance schedules, exclusions and service rates for all billable time and travel charges.
   2. Maintenance shall include two (2) semi-annual inspections and tests to verify the intended operation of the security system(s). System testing shall include but not be limited to the testing of all devises, fault modes and batteries. A detailed test report indicating these results and any corrective measures shall be furnished to the owner.

G. The Contractor shall provide software and firmware upgrades as required and available to the Owner.

H. Submit manufacturer's standard warranties.

PART 2 PRODUCTS

2.01 SYSTEM REQUIREMENTS

A. Furnish and install Video Surveillance System consisting of required equipment, conduit, boxes, wiring, connectors, hardware, supports, accessories, software, system programming, etc. as necessary for a complete operating system that provides the functional intent indicated.

B. The awarded contractor of this section shall furnish and install a network Video Surveillance (VSS) system into this facility using electronic security devices. This integrated VSS shall incorporate all devices necessary to achieve the specified system, all associated monitoring and recording software, hardware, configuration, testing and training.

C. The contractor awarded this project must include the following licenses and configuration:
   1. VSS licenses for each camera on the Specified Access Control System

D. The contractor shall provide a rack mounted UPS for each equipment rack provided for powering all equipment located within the equipment rack. The UPS shall be supplied with an auto-shutdown feature to allow an automatic orderly shutdown of the connected server. The auto-shutdown feature shall be connected to and programmed to shut down any servers contained within the equipment rack being powered from the UPS.

E. Surge Protection: Protect components from voltage surges originating external to equipment housing and entering through power, communication, signal, control, or sensing leads. Include surge protection for external wiring of each conductor's entry connection to components.

F. This VSS described within this specification shall be fully integrated with the Access Control and Intrusion Detection System.

G. All installation, peripheral devices, required licensing and configurations are required as part of this specification to establish a coherent, functional system as described within this bid package.

H. Security Ethernet cabling from the indicated Telecommunication Rooms to the Specified Cameras as described within the documents shall be furnished and installed by the contractor awarded Division 27.

I. Any and all additional interconnection cabling required for a functional system shall be furnished and installed by the contractor awarded this portion of work.

J. Final terminations to all devices are required by the Contractor awarded this Section.

K. The Contractor awarded this Section shall furnish and install a complete integrated security system and all associated, terminations, supporting devices, configuration of system, testing and training in accordance with this Bid package.

L. This specification is used to identify the requirements for an integrated VSS. The operator workstation(s) shall be used for database programming and storage of historical events and as a User interface with the Access Control System.

M. Within the VMS, the Contractor shall create floor plan maps that include camera icons appropriately placed according to actual location. Upon clicking a camera icon, the video feed associated with that camera shall automatically be called up and displayed.

N. System Design Intent:

1. It is the intention of this system design to provide a fully functional Video Surveillance System for, minimally, the following features:
    a. The end user shall be able to access live or recorded video from within the VSS software and shall have the following capabilities:
        1) The end user shall have the ability to pause, stop, resume, fast forward, frame advance, rewind, and move to a different time window.
        2) The user shall be able to quickly switch between live and recorded video.
        3) The user shall be able to view multiple video feeds simultaneously.
        4) Upon alarm input to the IDS or ACS, a predetermined video feed or feeds that are associated with that alarm shall automatically display in the Access Control System Software window. This video window shall have the capability to display recorded (IE 10 seconds prior to alarm) video.
        5) Within the VSS software window, the end user shall have the ability to call up and display live video from any camera. This shall include the ability to display multiple live camera views simultaneously through a matrix view.
        6) Within the VMS, the end user shall have the ability to export recorded video to a local hard drive or to a removable media (such as CD or USB drive). The system shall automatically watermark this video file for future proof of authenticity.

O. System Functionality Overview:
1. System shall provide high-quality delivery and processing of IP-based video and control data using standard Ethernet-based networks.
2. System shall have seamless integration of all video surveillance and control functions.
3. Graphical user interface software shall manage all IP-based video matrix switching and camera control functions and recording and archive/retrieval management. IP system shall also be capable of integrating into larger system environments.
4. System design shall include all necessary compression software for high-performance, dual-stream, Motion JPEG and H.264 video.
5. All camera signals shall be compressed to H.264, encoded, and delivered onto the network for processing and control by the IP video-management software.
6. Camera system units shall be ruggedly built and designed for extreme adverse environments, complying with NEMA Type environmental standards.
7. The Camera’s recorded images shall include masking of the unwanted areas within each camera view to minimize storage space. These recorded images shall be defined with the Owner and technology consultant.
8. Configuration of the Video Server to utilize two (2) Ethernet connections and Network Interface cards; one (1) for incoming video and recording and one (1) to send recorded video to the storage device.
9. Video management software shall be configured for the following.
    a. Recorded Video Compression Rate: H.264
    b. Frame Recorded Per Second: Fifteen (15).
    c. Resolution should be set at the highest obtainable from each camera specified.
    d. Stored data shall be saved for thirty (30) calendar days.
    e. Interior cameras shall record eighteen (18) hours per day.
    f. Exterior cameras shall record twenty-four (24) hours per day.
    g. Include 10% headroom storage.

h. Include subtotal for processing and management software.
i. Each camera "Field of View" shall be coordinated with the assistance of the Owner and/or the Security Consultant.

P. System Configuration Overview:
1. All system configuration(s) shall be included to attain a fully functional system and shall be within the Scope of work of the awarded Contractor of this section. This configuration shall include but not be limited to the following:
a. Configuration of all cameras to be managed via the Video Management software.
b. Configuration of Video Surveillance Server to view/record/access all cameras.
c. Configuration of the Video Surveillance Servers to monitor all connected cameras for video loss. Video loss detection shall create an alarm on the VMS, alert any connected workstation, and simultaneously send an email to the system administrator conveying the video loss condition.
d. Configuration of video storage devices with the server.
e. Configuration of Browser Based Client for up to (4) users groups.
f. Configuration of the Video Storage Server per the manufacturer's established best practices.
g. Configuration of the Video Management Server per the manufacturer's established best practices.
h. Configuration of the Video Mobile Server per the manufacturer's established best practices.
i. Integration with the Owner's Active Directory.
j. Configuration of LAN switches – Active Electronics, as related to the systems specified within this document. Including VLANS and IP addressing shall be as indicated by the Owner.
k. The Contractor shall coordinate any/all network connections with the Owner IT Department prior to making any physical connections to the Owner's network components. Failure to follow this directive may result in expenditures for repair and troubleshooting by the Owner's IT department or 3rd party IT contractor/vendor. Such expenditures to remedy any issues caused by incorrect coordination by the Contractor shall be borne by the Contractor.
l. The contractor will be responsible for establishing the security of all IP devices, servers, and VMS storage from adversary compromise (internal or external) in conjunction with the owner's IT Department.
m. The cost of investigation, repairs, and reprogramming resulting from any security breaches during the construction or operation of the systems (while under warranty or service agreement) attributable to the failure of the Contractor to implement approved IT security measures shall be borne by the contractor.
n. Configuration of the VMS and Access Control managed software to:
1) Allow complete interface between both platforms
2) Allow the Access Control System to access and view all video surveillance cameras.
3) Allow access and controlled network management system with Web and Internet access of the Video Surveillance system.
o. Programming camera names and recording parameters to optimize the camera for the environment for which it is operating in. Camera names shall be coordinated

with the Owner prior to configuration. Naming all cameras within the system is the responsibility of the Contractor.

Q. Environmental Conditions: System(s) shall withstand the environmental conditions without mechanical or electrical failure, damage or degradation of its operating capacity Capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:

1. Interior, Controlled Environment: System components installed in temperature-controlled interior environments shall be rated for continuous operation in ambient temperatures of 36 to 122 deg F (2 to 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, noncondensing. Use NEMA 250, Type 1 enclosures.
2. Interior, Uncontrolled Environment: System components installed in non- temperature-controlled interior environments shall be rated for continuous operation in ambient temperatures of 0 to 122 deg F (minus 18 to plus 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, noncondensing. Use NEMA 250, Type 3R enclosures.
3. Exterior Environment: System components installed in locations exposed to weather shall be rated for continuous operation in ambient temperatures of minus 30 to plus 122 deg F (minus 34 to plus 50 deg C) dry bulb and twenty to ninety percent (20-90%) relative humidity, condensing. Rate for continuous operation when exposed to rain as specified in NEMA 250, winds up to 85 mph and snow cover up to 24 inches thick. Use sufficiently rated NEMA 250 enclosures.
4. Hazardous Environment: System components located in areas where fire or explosion hazards may exist because of flammable gases or vapors, flammable liquids, combustible dust, or ignitable fibers shall be rated, listed, and installed according to NFPA 70.
5. Corrosive Environment: System components subject to corrosive fumes, vapors, and wind-driven salt spray in coastal zones. Use sufficiently rated NEMA 250 enclosures.
6. Security Environment: Camera housing for use in high-risk areas where surveillance equipment may be subject to physical violence.

2.02 VIDEO MANAGEMENT SYSTEM

A. The Video Management System shall be Avigilon Enterprise. No other manufacturer will be considered.

B. The Video Management Server shall be Avigilon.

C. Include an Avigilon Enterprise License per each device specified within this project.

2.03 CAMERAS

A. The camera manufacturer shall be Avigilon. No other manufacturer will be considered.

B. Refer to camera schedule for make and model.

C. Interior and Exterior cameras shall be Avigilon H5A, Dome, 6MP or better cameras.

D. The Exterior multi-sensor cameras shall be Avigilon H4A, Dome, 12MP or better cameras.

2.04 Uninterruptible Power Supply (UPS):

A. The Contractor shall supply individual UPS' each Telecommunication Room or Equipment Room where Active Electronics supplying data and signal to the Video Surveillance System is located. The UPS will be used to support Ethernet switch, servers, video recorders, and any other rack mount security equipment.

B. The Contractor shall supply individual UPS at security guard post. UPS will be used to support security workstation, monitors, printer, intercom master station, and any other security equipment in that location.

C. The UPS shall be as manufactured by APC or approved equal

D. The supplied UPS shall support the equipment at each location plus an additional 500 Watts at 120VAC for a minimum of fifteen (15) minutes under full load

E. The Contractor shall supply the appropriately sized UPS as dictated by the accepted submitted equipment as approved by the Engineer.

F. The UPS located in ER / TR locations shall be rack mountable and shall include all mounting hardware.

G. The UPS shall have the capability of sending SMTP email messages

H. The UPS shall be supplied with software to connect to the security system Ethernet network to allow for monitoring and alarm condition of the UPS including but not limited to the following;
   1. UPS on battery
   2. UPS load capacity exceeded
   3. UPS off line
   4. UPS overheat
   5. UPS experienced surge

2.05 Surge Protection:

A. Install Lightning / Surge protection for all exterior rated cameras. Ground all protectors to manufacturer recommendations and Code requirements.

B. The intent of the Lightning / Surge protector is to protect the connected electronics (switches, routers, servers) in the event a camera is struck by lightning.

C. Surge protectors shall be installed between camera and patch panel.

D. Acceptable manufacturers:
   1. Ditek
   2. Approved Equivalent

2.06 CLIENT WORKSTATIONS:

A. Client Viewing PC:
   1. Avigilon RM7-WKS-4MN

B. Wireless Mouse and Keyboard:
   1. IOGEAR #GKM552R
   2. Approved Equivalent

C. 55” Display and Mount:
   1. SAMSUNG #QM55R or approved equal
   2. The digital display shall meet the following requirements:
      a. 55” diagonal
      b. 3840 x 2160 minimal resolution
      c. 500 nit minimal brightness
      d. Approved for 24/7 operation
      e. Includes a standard manufacturer 3-year warranty
   3. CHIEF #MTM1U or approved equal
   4. Include Chief #FHB5147 Universal Flat Panel Mount Hardware Kit

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that ratings and configurations of system components are consisted with the indicated requirements.

C. Verify that mounting surfaces are ready to receive the system components.

D. Verify that branch circuit wiring is installed, completed, tested, and ready for connection to system.

E. Verify that conditions are satisfactory prior to starting work.

F. Device Locations
   1. All device locations are to be field verified with the Owner prior to start of project. Architectural drawings are for approximation purposes only. Additional charges will not be allowed for outlet installation in areas not reviewed or approved by the Owner.

G. Examine pathway elements intended for cables. Check raceways and other elements for compliance with space allocations, installation tolerance, hazards to camera installation, and other conditions affecting installation.

H. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install Video Surveillance system in accordance with NECA 1 (general workmanship).

B. Install products in accordance with manufacturer’s instructions.

C. Install cameras level and plumb.

D. Install cameras with 84-inch minimum clear space below cameras and their mountings. Change type of mounting to achieve required clearance.

E. Set pan unit and pan-and-tilt unit stops to suit final camera position and to obtain the field of view required for camera. Connect all controls and alarms and adjust.

F. Install power supplies and other auxiliary components within the Telecommunication Room unless otherwise indicated.

G. Install tamper switches on components indicated to receive tamper switches, arranged to detect unauthorized entry into system-component enclosures and mounted in self-protected, inconspicuous positions.

H. Identify system components, wiring, cabling, and terminals according to industry standards.

I. Unless otherwise indicated, use wiring in conduit.
   1. Use suitable listed cables in we locations, including underground raceways.
   2. Use suitable listed cables for vertical wire applications.
   3. All cabling shall be plenum rated.
   4. Install wiring in conduit for the following:
      a. Where required for rough-in.
      b. Where required by the AHJ.
      c. Where exposed to damage.
      d. Where installed outside the building.
      e. For exposed connections from outlet boxes to devices.
   5. Conduit: comply with section Division 26.
   6. Conceal cables unless specifically indicated to be exposed.
   7. User power transfer hinges specified within Division 08 for concealed connections to door hardware.
   8. Cables in the following areas may be exposed:
      a. Equipment Closets
   9. Route exposed cables in parallel or perpendicular to building structural members and surfaces.
   10. Do not exceed manufacturer’s recommended maximum cable length between components.

J. Provide grounding and bonding in accordance with Division 26.

K. Install firestopping to preserve the fire resistance rating of partitions and other elements, using materials and methods specified in Division 07.

L. Install power supplies and other auxiliary components at control stations unless otherwise indicated.

M. Identify system components, wiring, cabling, and terminals according to ANSI/EIA/TIA standards.

N. Security System Integration

1. The Contractor shall be responsible for providing hardware and software interfaces to achieve the specified system performance described herein and, by reference, realize absolute and seamless compatibility with the related component systems.
2. The Contractor shall ensure system additions and modifications provided under this scope of work have no negative effect on the individual components and systems, and their core functionality, and no permanent effect beyond that specified or implied by the scope of work.
3. Purpose
    a. Integration is the process of designing, deploying, and configuring independently operating systems with the ability to request, receive, extract, process, and act upon information from other systems.
    b. Successful system integration must address three fundamental issues:
        1) Functionality: What information is needed, how it is to be requested and processed, and what functions or activities need to occur upon receipt of the information.
        2) Connectivity: How systems will be connected to support the communication of information and commands. (Special interfaces, wiring, networks, databases.)
        3) Communication: How information will be communicated between systems. (Instruction sets, language, protocols, formats, priority.)
4. Environment
    a. Integration components shall generally comprise special elements of independent subsystems, and shall be located within, or in close proximity to, the processing components of each independent subsystem. Where subsystems require special hardware or communications interfaces to support integration, the special hardware should be located near the independent subsystem processing components or network appliance, based on the manufacturers' recommendation. See the drawings for details on mounting locations.
5. Infrastructure and Connectivity:
    a. Devices/Appliances: Appliances and devices shall be connected to their respective systems via the applicable communications network.
    b. System LAN/WAN Connectivity: System Servers and microprocessor-based Control Panels, shall reside on the Local Area Network (LAN) or Wide Area Network (WAN) tier designated for integrated components.
    c. Enterprise: LAN networks will be connected to the Wide Area Network, to establish connectivity between remote sites and both the Primary and Alternate Security Operations Center (SOC – room SB05-1).
6. Attributes
    a. The attributes of the integrated environment are primarily defined by the subsystems that are to be integrated. Verify existing system components to be expanded by this project.
    b. Integrated systems comprise the processors, software, electrical control panels, data gathering panels, special data interfaces, and converters required to allow systems to communicate with each other, process information, and allow users to program and perform operations.
7. Functions
    a. The system shall provide the following automated processing rules, at a minimum:

b. The object of "Access Control system integration" is to automatically configure the system to display, record, and report appropriate system activity to various elements of the system. Automatic configuration can free operators from difficult control tasks, give the operator more time to respond to events, reduce operator error, and ensure critical system tasks occur consistently.

c. Electronic Access Control system elements shall be electronically integrated in such a way as to enable detection, database records and/or event-initiated instructions to be communicated between system components, to initiate recording, display, communication, and control activities.

d. Event-Initiated Interface, General:

1) The system shall support the capability to send and receive alarm and control messages between the Access Control System and video systems via a LAN communications link, using API, XML, or other industry-standard communication languages and formats, and shall act upon those messages received.

2) The system shall support the capability to send and receive alarm and control messages and alarm signal between the Access Control system and Intrusion Detection System for lockdown / duress / and panic button initiation.

3) Where integration may require the implementation of data interfaces, Contractor shall propose such integration to the Owner for approval, before proceeding with the work.

4) Software routines required to accomplish the required data-interface with external equipment and controls will be fully developed, installed, tested and supported by the Contractor.

5) The manufacturer of each applicable system will also support the data interface and will be engaged by the Contractor to provide on-site technical assistance where required to prepare, repair, configure, and test the system to operational condition.

6) Communication of event information between systems shall take place automatically and immediately when the event is sensed by the System.

3.03 FIELD QUALITY CONTROL

A. Testing Agency: The Contractor shall engage a qualified testing agency to perform tests and inspections with the Owner and appointed project manager.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

C. Camera Field Verification:

1. All camera locations MUST to be field verified with the Owner prior to start of project. Architectural drawings are for approximation purposes only. Additional charges will not be allowed for installation in areas not reviewed or approved by the Owner.
2. Camera images will be reviewed with the Owner and the Security Consultant. The contractor shall plan for three adjustments of the camera's field of view as follows:
   a. Initial setup and testing

b. Owner and / or Security Consultant adjustments #1
c. Owner and / or Security Consultant adjustments #2

D. Perform tests and inspections.
1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

E. Tests and Inspections:
1. Inspection: Verify that units and controls are properly installed, connected, and labeled, and that interconnecting wires and terminals are identified.
2. Pretesting: Align and adjust system and pretest components, wiring, and functions to verify that they comply with specified requirements. Conduct tests at varying lighting levels, including day and night scenes as applicable. Prepare video-surveillance equipment for acceptance and operational testing as follows:
a. Prepare equipment list described in "Submittals" Article.
b. Verify operation of auto-iris lenses.
c. Set back-focus of fixed focal length lenses. At focus set to infinity, simulate nighttime lighting conditions by using a dark glass filter of a density that produces a clear image. Adjust until image is in focus with and without the filter.
d. Set back-focus of zoom lenses. At focus set to infinity, simulate nighttime lighting conditions by using a dark glass filter of a density that produces a clear image. Additionally, set zoom to full wide angle and aim camera at an object 50 to 75 feet away. Adjust until image is in focus from full wide angle to full telephoto, with the filter in place.
e. Set and name all preset positions; consult Owner's personnel.
f. Set sensitivity of motion detection.
g. Connect and verify responses to alarms.
h. Verify operation of control-station equipment.
3. Test Schedule: Schedule tests after pretesting has been successfully completed and system has been in normal functional operation for at least fourteen (14) days. Provide a minimum of ten (10) days notice of test schedule.
4. Operational Tests: Perform operational system tests to verify that system complies with Specifications. Include all modes of system operation. Test equipment for proper operation in all functional modes.

F. Video Surveillance System shall be considered defective if it does not pass tests and inspections.

G. Prepare test and inspection reports.

H. Occupancy Adjustments: When requested within twelve (12) months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two (2) visits to this Project location during other-than-normal occupancy hours for this purpose. Tasks shall include, but are not limited to, the following:
1. Check cable connections.
2. Check proper operation of cameras and lenses. Verify operation of auto-iris lenses and adjust back-focus as needed.

3. Adjust all preset positions; consult Owner's personnel.
4. Recommend changes to cameras, lenses, and associated equipment to improve Owner's use of video surveillance system.
5. Provide a written report of adjustments and recommendations

3.04 CLEANING

A. Clean installed items using methods and materials recommended in writing by manufacturer.

B. Clean video-surveillance-system components, including camera-housing windows, lenses, and monitor screens before installation and prior to final acceptance.

C. Remove rubbish and debris: Installation contractor is not allowed you use the onsite dumpster and is responsible to discard their own debris off site.

3.05 CLOSEOUT ACTIVITIES

A. See Division 01 – Closeout Submittals for Closeout Submittals.

B. Demonstration: Demonstrate proper operations of system to Owner and correct deficiencies or make adjustments as directed.

C. Training:
1. By means of training classes augmented by individual instruction as necessary, the Bidding contractor shall fully instruct the BOE’s designated staff and personnel in the operation, adjustment and maintenance of all products, equipment and systems.
2. General Training Requirements:
    a. The security contractor shall submit proposal to conduct training courses for the security personnel in the operation and maintenance of the security systems within this security project.
    b. The security contractor shall include training manuals and aids in the quantity as requested by the Owner. The training manuals shall include an agenda, defined objectives for each lesson, and a detailed description of the subject matter for each lesson. All personnel providing the instructions shall be certified by the equipment manufacturer for all applicable hardware and software.
    c. Approval of the planned training content and training schedule shall be obtained by the Owner at least 45 days before the training is scheduled.
    d. Training shall be provided by qualified, factory trained and certified engineers familiar with each system and its operations and shall be provided at the site for a period of no less than the hours stipulated below.
3. Training Topics:
    a. System Administration Training
        1) This training shall focus on determining and implementing system operational parameters.
        2) The first training class shall be conducted so that it is completed approximately 30 days prior to acceptance of the system and final system reliability testing. 8 Hours of Administration training; (2) 4-hour classes.

3) The second training class shall be conducted so that it is completed approximately 7 days prior to acceptance of the system and final system testing. The system administrator shall be included as part of this final system acceptance and reliability testing. 6 Hours of training; (2) 3-hour classes.
4) This Administrations training shall include:
   a) Overall architecture and configuration of each system.
   b) Use of all system functions.
   c) ID badging design and production.
   d) Card-holder setup and configuration.
   e) Card-holder access level assignment.
   f) Access Door programming.
   g) Alarm setup and implementation.
   h) Data storage and retrieval through reports.
   i) Creation of reports.
   j) System database backup procedures.
   k) Hardware specifications.
   l) Fault diagnosis and corrections.

b. System User Monitoring Training
1) This training shall be for each designated personnel at this school.
2) This training shall focus on day-to-day system operations. Each user shall be capable to start the systems, operate them, recover the systems after a failure, and describe the specific hardware architecture and operation of the systems.
3) The first training class shall be conducted so that it is completed approximately 30 days prior to acceptance of the system and final system reliability testing. All System User Training shall be performed at each school within this specification. 8 Hours of User training; (2) 4-hour classes.
4) The second training class shall be conducted so that it is completed approximately 7 days prior to acceptance of the system and final system testing. The system administrator shall be included as part of this final system acceptance and reliability testing. 6 Hours of User training; (2) 3-hour classes.
5) Training shall include:
   a) Use of overall system monitoring functions as determined by the security administration staff.
   b) Monitoring alarm events.
   c) Monitoring personnel access into the facility.
   d) Assessing, responding to, and clearing alarms and messages.
   e) Monitoring access door status.
   f) Running routine reports.
   g) General hardware architecture.
   h) Functional operation of each system and interaction between these systems.
   i) All Operator commands.
   j) Database entry.

k) Report generation.
l) Alarm assessment.
m) Simple diagnostics.

c. System Troubleshooting and Maintenance Training
1) Training shall be provided with the internal features and configuration of the security systems so the user can trouble shoot and repair most configuration and physical device problems.
2) The training class shall be conducted so that it is completed approximately 14 days prior to acceptance of the system and final reliability testing. The users shall be included as part of this reliability testing. 8 Hours of training; (2) 4-hour classes.
3) This training shall include:
a) System networking communications and diagnostics.
b) Device configuration and programming.
c) Controller setup.
d) Wiring and cabling overview.
e) System Diagnostics.
f) Software troubleshooting.
g) Physical layout of each piece of hardware.
h) Preventive maintenance procedures and schedules.
i) Calibration procedures.

d. IT Training
1) Training shall be provided information of the security systems to the IT staff. This shall include information as to how each system functions within the LAN/WAN network infrastructures. 4 Hours of training.
2) Topics shall include:
a) Network topologies.
b) Maintenance of data security.

4. Training hours and sessions must be documented by the instructor and approved by the Owner before project closeout.
5. Should the training be deemed as inadequate by the Owner, the owner reserves the right to retain outside manufacturer training. If this outside manufacturer training has an associated cost, this cost shall be deducted from the final invoice of this project.
6. The Owner reserves the right to request the Contractor to videotape training sessions and turn over video records (DVD format) to Owner as part of the “Owner Project Manuals” and Deliverables.

3.06 PROTECTION

A. Protect installed system components from subsequent construction operations.

3.07 MAINTENANCE

A. See Division 01 – Execution and Closeout Requirements for additional requirements relating to maintenance service.

B. Adjustments:
   1. Occupancy Adjustments: When requested within twelve (12) months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two (2) visits to Project during other-than-normal occupancy hours for this purpose. Tasks shall include, but are not limited to, the following:
      a. Check cable connections.
      b. Check proper operation of video surveillance devices.
      c. Provide a written report of adjustments and recommendations.

C. Provide to Owner, at no extra cost, a separate maintenance contract for the service and maintenance of the Access Control System for One Year from date of Substantial Completion. Include a separate description of preventative maintenance, systematic examination, cleaning, inspection, and testing, with a detailed schedule.

D. Conduct site visit at least once every three months to perform inspection, testing, and preventative maintenance. Submit report to Owner indicating maintenance performed along with evaluations and recommendations.

E. Provide trouble call-back service upon notification by Owner:
   1. Include allowance for call-back service during normal working hours at no extra cost to Owner.
   2. Owner will pay for call-back service outside of normal working hours on an hourly basis, based on actual time spent at the site and not including travel time; include hourly rate and definition of normal working hours in maintenance contract.

END OF SECTION

SECTION 28 3100 - FIRE DETECTION AND ALARM

PART 1 GENERAL

1.1 GENERAL PROVISIONS

A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections with DIVISION 1 - GENERAL REQUIREMENTS, which are hereby made a part of this Section of the Specifications.

B. Attention is directed Section 26 0400 – GENERAL CONDITIONS FOR ELECTRICAL TRADES, which is hereby made a part of this Section of the Specifications.

1.2 SUMMARY

A. Section includes fire alarm control panels, manual fire alarm stations, automatic smoke and heat detectors, fire alarm signaling appliances, and auxiliary fire alarm equipment and power and signal wire and cable.

B. Related Sections:
1. Division 07 – Firestopping
2. Division 08 – Hardware (for magnetic door hold open devices)
3. Division 21 – Fire Protection (for flow detection devices)
4. Division 23 – HVAC (for smoke dampers and fire/smoke dampers)
5. Section 26 05 19 – Building Wire and Cable
6. Section 26 05 26 – Grounding and Bonding
7. Section 26 05 33 – Identification for Electrical Systems, for labeling and identification requirements.

C. Allowances: Refer to Division 01 Section “Allowances” for lump-sum allowance for additional fire alarm devices.

D. Alternates: Refer to Division 01 Section “Alternates” for description of Work of this Section affected by alternates.

E. Unit Prices: Administrative and procedural requirement for unit prices for fire alarm and carbon monoxide devices are specified in Division 1 Section “Unit Prices”.

1.3 REFERENCES

A. ADA Standards - Americans with Disabilities Act (ADA) Standards for Accessible Design; current edition.

B. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

C. NFPA 72 - National Fire Alarm and Signaling Code

D. NFPA 101 - Life Safety Code

E. NFPA 601 - Standard for Security Services in Fire Loss Prevention

1.4 SYSTEM DESCRIPTION

A. This section of the specification includes the furnishing, installation, connection and testing of the microprocessor controlled, intelligent reporting fire alarm equipment required to form a complete, operative, coordinated system. It shall include, but not be limited to, alarm initiating devices, alarm notification appliances, Fire Alarm Control Panel (FACP), auxiliary control devices, annunciators, and wiring as shown on the drawings and specified herein.

B. The fire alarm system shall comply with requirements of NFPA Standard No. 72 for Local Protected Premises Signaling Systems except as modified and supplemented by this specification. The system field wiring shall be supervised either electrically or by software-directed polling of field devices.
1. The Secondary Power Source of the fire alarm control panel will be capable of providing at least 24 hours of backup power with the ability to sustain 5 minutes in alarm at the end of the backup period.

C. Basic Performance:
1. Alarm, trouble and supervisory signals from all intelligent reporting devices shall be encoded on Class B circuits, unless otherwise indicated on drawings.
2. Notification Appliance Circuits (NAC) shall be wired Class B as part of an addressable device connected by the SLC Circuit, unless otherwise indicated on drawings.
3. All circuits shall be power-limited, per UL864 9th edition requirements.
4. A single ground fault or open circuit on the system Signaling Line Circuit shall not cause system malfunction, loss of operating power or the ability to report an alarm when wire NFPA Style 6/7.
5. Alarm signals arriving at the main FACP shall not be lost following a primary power failure or outage of any kind until the alarm signal is processed and recorded.

D. Alarm Sequence of Operation: Actuation of initiating device causes the following system operations:
1. Local fire alarm signaling devices sound and display with signal.
2. Zone-coded signal transmits to municipal connection (where applicable).
3. Location of alarm zone indicates on fire alarm control panel and on remote annunciator panel.
4. Signal transmits to building mechanical controls, shutting down fans and operating dampers.
5. Signal transmits to building elevator control panel, initiating return to main floor or alternate floor and lockout for fire service.
6. Signal releases magnetic door hold opens.
7. Refer to drawings for additional actions required to occur during alarm state.

E. Trouble Sequence of Operation: System or circuit trouble causes the following system operations:
   1. Visual and audible trouble alarm indicates by zone at fire alarm control panel.
   2. Visual and audible trouble alarm indicates at remote annunciator panel.
   3. Trouble signal transmits to municipal connection.

1.5 SUBMITTALS

A. Division 01: Submittal procedures.

B. Shop Drawings: Indicate system wiring diagram showing each device and wiring connection; indicate annunciator layout, and design calculations.

C. Product Data: Submit catalog data showing electrical characteristics and connection requirements.

D. Test Reports: Indicate procedures and results for specified field testing and inspection.

E. Manufacturer's Field Reports: Indicate activities on site, adverse findings, and recommendations.

F. Manufacturer's Instructions: Indicate application conditions and limitations of use stipulated by Product testing agency specified under Regulatory Requirements. Include instructions for storage, handling, protection, examination, preparation, and installation of Product.

G. Submit complete fire alarm battery calculations, taking all devices within building into account.

1.6 CLOSEOUT SUBMITTALS

A. Division 01: Closeout procedures.

B. Project Record Documents: Record actual locations of fire alarm equipment.

C. Operation and Maintenance Data: Submit manufacturer’s standard operating and maintenance instructions.

1.7 QUALITY ASSURANCE

A. Conform to requirements of NFPA 70 and NFPA 101.

B. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with minimum three years documented experience.

C. Supplier Qualifications: Authorized distributor of specified manufacturer with minimum three years documented experience.

D. Installer Qualifications: Company specializing in installing the products specified in this section with minimum three years documented experience, and certified by the State as fire alarm installer.

E. Products: Listed and classified by Underwriters Laboratories, Inc as suitable for the purpose specified and indicated.

1.8 MAINTENANCE SERVICE

A. Division 01: Maintenance service.

B. Furnish service and maintenance of fire alarm equipment for one year from Date of Substantial Completion.

1.9 EXTRA MATERIALS

A. Division 01: Spare parts and maintenance products.

B. Provide (4) manual fire alarm pullstations, complete with all labor, material, and programming, to be located in the field as directed by the Local Authority having Jurisdiction.

C. Provide (6) fire alarm audio/visual appliances, complete with all labor, material, and programming, to be located in the field as directed by the Local Authority having Jurisdiction.

D. Provide (6) addressable ceiling type smoke detectors, complete with all labor, material, and programming, to be located in the field as directed by the Local Authority Having Jurisdiction.

E. Provide (4) addressable duct mounted smoked detectors, including all labor, material, and programming, to be located in the field as directed by the Local Authority having Jurisdiction.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials and products in unopened, factory labeled packages. Store and handle in strict compliance with manufacturer's instructions and recommendations. Protect from all possible damage. Sequence deliveries to avoid delays, but minimize on-site storage.

1.11 COORDINATION

A. Division 01: Pre-Installation conferencing.

B. Coordinate the installation of cable and equipment with other construction activities and the work of other sections.

C. Coordinate all connections to the building's HVAC system with the Division 23 contractor.

D. Coordinate all connections to the building's fire suppression system with the Division 21 contractor.

E. Coordinate all connections to door hardware with the Division 08 contractor.

1.12 WARRANTY

A. Contractor's Warranty: Warranty the installation to be free of defect for a period of one (1) year.

B. Equipment Warranty: For products noted in this section, provide manufacturer's standard warranty, minimum of one year.

PART 2 PRODUCTS

2.1 MANUFACTURER

A. Honeywell Silent Knight 6820 EVS.

B. No Substitutions: This is an owner sole source request.

2.2 CONTROL PANEL

A. Basis of design:
   1. Silent Knight 6820 EVS addressable control panel with voice-evac annunciation.

B. Product Description: Modular fire alarm control panel (FACP) with surface wall-mounted enclosure and shall contain a microprocessor-based Central Processing Unit (CPU). The CPU shall communicate with and control the following types of equipment used to make up the system: intelligent addressable smoke and thermal (heat) detectors, addressable modules, annunciators, and other system controlled devices.

C. In conjunction with intelligent Loop Control Modules and Loop Expander Modules, the main FACP shall perform the following functions:
   1. Supervise and monitor all intelligent addressable detectors and monitor modules connected to the system for normal, trouble and alarm conditions.
   2. Supervise all initiating signaling and notification circuits throughout the facility by way of connection to addressable monitor and control modules.
   3. Detect the activation of any initiating device and the location of the alarm condition. Operate all notification appliances and auxiliary devices as programmed. In the event of CPU failure, all SLC loop modules shall fallback to degrade mode. Such degrade mode shall treat the corresponding SLC loop control modules and associated detection devices as conventional two-wire operation. Any activation of a detector in this mode shall automatically activate associated Notification Appliance Circuits.

D. Power supply: Adequate to serve control panel modules, remote detectors, remote annunciators, relays, and alarm signaling devices. Include battery-operated emergency

power supply with capacity for operating system in standby mode for 24 hours followed by alarm mode for 5 minutes.

E. Batteries
1. The battery shall have sufficient capacity to power the fire alarm system for not less than twenty-four hours plus 5 minutes of alarm upon a normal AC power failure.
2. The batteries are to be completely maintenance free. No liquids are required. Fluid level checks for refilling, spills, and leakage shall not be required.
3. If necessary to meet standby requirements, external battery cabinet and charger systems may be used.

F. Remote Transmissions:
1. Provide local energy or polarity reversal or trip circuits as required.
2. The system shall be capable of operating a polarity reversal or local energy or fire alarm transmitter for automatically transmitting fire information to the fire department.
3. Provide capability and equipment for transmission of zone alarm and trouble signals to remote operator's terminals, system printers and annunciators.
4. Transmitters shall be compatible with the systems and equipment they are connected to such as timing, operation and other required features.

G. Field Programming
1. The system shall be programmable, configurable and expandable in the field without the need for special tools, laptop computers, or other electronic interface equipment. There shall be no firmware changes required to field modify the system time, point information, equations, or annunciator programming/information.
2. All field defined programs shall be stored in non-volatile memory.

H. Digital Voice Command Center (DVC)
1. The Digital Voice Command Center located with the FACP, shall contain all equipment required for all audio control, emergency telephone system control, signaling and supervisory functions. This shall include speaker zone indication and control, telephone circuit indication and control, digital voice units, microphone and main telephone handset.
2. Function: The Voice Command Center equipment shall perform the following functions:
    a. Operate as a supervised multi-channel emergency voice communication system.
    b. Operate as a two-way emergency telephone system control center.
    c. Audibly and visually annunciate the active or trouble condition of every speaker circuit and emergency telephone circuit.
    d. Audibly and visually annunciate any trouble condition for digital tone and voice units required for normal operation of the system.
    e. Provide all-call Emergency Paging activities through activation of a single control switch.
    f. As required, provide vectored paging control to specific audio zones via dedicated control switches.

g. Provide a factory recorded "library" of voice messages and tones in standard WAV. File format, which may be edited and saved on a PC running a current Windows® operating system.
h. Provide a software utility capable of off-line programming for the DVC operation and the audio message files. This utility shall support the creation of new programs as well as editing and saving existing program files. Uploading or downloading the DVC shall not inhibit the emergency operation of other nodes on the fire alarm network.
i. Support an optional mode of operation with four analog audio outputs capable of being used with UL 864 fire-listed analog audio amplifiers and SLC controlled switching.
j. The Digital Voice Command shall be modular in construction, and shall be capable of being field programmable without requiring the return of any components to the manufacturer and without requiring use of any external computers or other programming equipment.
k. The Digital Voice Command and associated equipment shall be protected against unusually high voltage surges or line transients.

3. Audio Amplifiers
   a. The Audio Amplifiers will provide audio power for distribution to speaker circuits.
   b. Multiple audio amplifiers may be mounted in a single enclosure, either to supply incremental audio power, or to function as an automatically switched backup amplifier(s).
4. Audio Message Generator (Prerecorded Voice)/Speaker Control:
   a. Each initiating zone or intelligent device shall interface with an emergency voice communication system capable of transmitting a prerecorded voice message to all speakers in the building.
   b. Actuation of any alarm initiating device shall cause a prerecorded message to sound over the speakers.
   c. A built-in microphone shall be provided to allow paging through speaker circuits.

I. Digital Alarm Communicator Transmitter (DACT, or UDACT). The DACT is an interface for communicating digital information between a fire alarm control panel and a UL-Listed central station.
   1. The DACT shall be an integral component of the fire alarm control panel requiring no interconnecting wiring or supervisory circuitry.
   2. Primary and secondary communication to central station monitoring shall be via cellular / GSM signal. Provide a separate external cellular communication panel per the following district sole source selection:
      a. Napco Starlink #SLE-MAXVI-CFB.
   3. The DACT shall be completely field programmable locally from the control panel keypad or remotely over a phone line using upload/download PC software.
   4. The DACT shall be capable of transmitting events in at least 15 different formats. This ensures compatibility with existing and future transmission formats.

5. Communication shall include vital system status such as:
   a. Independent Zone (Alarm, trouble, non-alarm, supervisory)
   b. Independent Addressable Device Status
   c. AC (Mains) Power Loss
   d. Low Battery and Earth Fault
   e. System Off Normal
   f. 12 and 24-Hour Test Signal
   g. Abnormal Test Signal (per UL requirements)
   h. EIA-485 Communications Failure
   i. Phone Line Failure
6. The DACT shall support independent zone/point reporting when used in the Contact ID format. In this format, the DACT shall support the transmission of up to 50 addressable points with the system. This enables the central station to have exact details concerning the location of the fire for emergency response.

2.3 REMOTE EMERGENCY VOICE EVACUATION MICROPHONES

A. Remote Microphones “EVAC”
   1. Provide a remote microphone with enclosure and annunciator selector switches. Remote microphone shall override digitized voice message and shall allow for manual page override for the area. Rooms indicated with remote microphones on drawings shall have the ability for all speakers in area to be overridden.
   2. Remote microphone shall be connected to main fire alarm control panel. Supervision and backup power shall be provided to all remote microphone locations.
   3. Provide flushed cabinet for mounting microphone, Dimensions: 6.0”W x 8.3”H, 3.6”D.

2.4 INITIATING DEVICES

A. Addressable Manual Pull Station
   1. Product Description: Manual addressable double-action station with break-glass rod.
   2. Mounting: Semi-Flush in finished spaces and Surface in unfinished spaces.
   3. Type: Non-coded.
   4. Backbox: Manufacturer's standard.
   5. Provide manual station guards on EACH manual station within the building. Station guards equal to "Stopper II" with audible horn.

B. Addressable Heat Detector
   1. Product Description: Addressable combination rate-of-rise and fixed temperature, spot heat detector.
   2. Temperature Rating: 135 degrees F (57 degrees C).
   3. Rate-of-Rise: 15 degrees F (8.3 degrees C).
   4. The choice of alarm reporting as a fixed temperature detector or a combination of fixed and rate of rise shall be made in system software and be changeable at any time without the necessity of hardware replacement.
   5. The detectors furnished shall have a listed spacing for coverage up to 2,500 square feet.

C. Addressable Photoelectric Ceiling Smoke Detector
   1. Product Description: NFPA 72, addressable photoelectric type ceiling smoke detector with the following features:
      a. Adjustable sensitivity.
      b. Plug-in base
      c. Visual indication of detector actuation.
   2. Mounting: 4 inch (102 mm) outlet box.
   3. Furnish two-wire detector with common power supply and signal circuits.
   4. The smoke detector shall be capable of providing three distinct outputs from the control panel. The outputs shall be from an input of smoke obscuration, a thermal condition or a combination of obscuration and thermal conditions.
   5. Low profile, white case shall not exceed 2.5 inches of extension below the finish ceiling.

D. Addressable Carbon Monoxide Detector
   1. Detectors shall meet UL2034 and UL2075.
   2. Detectors shall be ceiling mounted.
   3. Detectors shall be connected to the fire alarm system and shall have supervised circuits.
   4. Detectors shall be addressable and may be in combination with a smoke detector.
   5. Detectors shall be connected as a separate zone or programmed as a separate zone and shall only activate a supervisory signal at the main fire alarm control panel and at the remote annunciator panel.
   6. Detectors shall not activate the building evacuation system.

E. Addressable Duct Smoke Detector
   1. Product Description: NFPA 72, addressable photoelectric type with the following features:
      a. Auxiliary SPDT relay contact.
      b. Duct sampling tubes extending width of duct.
      c. Visual indication of detector actuation.
      d. Duct-mounted housing.
   2. Furnish two-wire detector with common power supply and signal circuits.
   3. Furnish and install a remote test switch for each duct smoke detector, flushed into nearest accessible ceiling.

F. Addressable Reflected Beam Smoke Detector
   1. The intelligent single-ended reflected beam smoke detector shall connect with two wires to the fire alarm control panel signaling line circuit (SLC). The detectors shall consist of a transmitter/receiver unit and a reflector and shall send data to the panel representing the analog level of smoke density. The detector shall be capable of being tested remotely via a keyswitch.
   2. Furnish and install a remote test switch for each beam smoke detector in locations indicated on drawings, or on wall nearest to beam detector mounted at 48” above finished floor.

G. Addressable Dry Contact Monitor Module

1. Addressable monitor modules shall be provided to connect one supervised IDC zone of conventional alarm initiating devices (any N.O. dry contact device) to one of the fire alarm control panel SLCs.
2. The monitor module shall mount in a 4-inch square (101.6 mm square), 2-1/8 inch (54 mm) deep electrical box.
3. The IDC zone shall be suitable for Style D/Class A or Style B/Class B operation. An LED shall be provided that shall flash under normal conditions, indicating that the monitor module is operational and in regular communication with the control panel.
4. For difficult to reach areas, the monitor module shall be available in a miniature package and shall be no larger than 2-3/4 inch (70 mm) x 1-1/4 inch (31.7 mm) x 1/2 inch (12.7 mm). This version need not include Style D or an LED.

H. Addressable Control Module
1. Addressable control modules shall be provided to supervise and control the operation of one conventional circuit of compatible Notification Appliances, 24 VDC powered, polarized audio/visual notification appliances.
2. The control module shall mount in a standard 4-inch square, 2-1/8 inch deep electrical box, or to a surface mounted backbox.
3. The control module NAC may be wired for Style Z or Style Y (Class A/B) with a current rating of 2 Amps for Style Z and 3 Amps for Style Y;
4. Audio/visual power shall be provided by a separate supervised circuit from the main fire alarm control panel or from a supervised UL listed remote supply.

2.5 REMOTE ANNUNCIATOR PANEL

A. Serially Connected Annunciator Requirements
1. Product Description: Supervised remote annunciator including audible and visual indication of fire alarm by zone, and audible and visual indication of system trouble.
2. Mounting: Factory mounted in flush wall-mounted enclosure.
3. The annunciator shall communicate to the fire alarm control panel via an EIA 485 (multi-drop) two-wire communications loop.
4. An EIA-485 repeater shall be available to extend the EIA-485 wire distance in 3,000 ft. increments. The repeater shall be UL864 approved.

2.6 MAGNETIC DOOR HOLDERS

A. Description: Units shall be listed to UL 228. Units are equipped for wall or floor mounting as indicated and are complete with matching door plate. Unit shall operate from a 24VDC source, powered via the fire alarm system, and develop a minimum of 25 lbs. holding force.

B. Material and Finish: Match door hardware.

2.7 SIGNALING APPLIANCES

A. Speakers
1. The speaker shall be listed to UL 1480 for Fire Protective Signaling Systems. It shall be a dual-voltage transformer speaker capable of operation at 25.0 or 70.7 nominal Vrms. The speaker shall have a frequency range of 400 to 4,000 Hz and shall have an operating temperature between 32°F and 120°F. It shall mount to a 4 x 4 x 2 1/8-inch back box.
2. A universal mounting plate shall be used for mounting ceiling and wall speaker products. The notification appliance circuit and amplifier wiring shall terminate at the universal mounting plate.
3. Speakers shall be plug-in and shall have the ability to check wiring continuity via a shorting spring on the universal mounting plate. The shorting spring shall also provide tamper resistance via an open circuit if the device is removed. Speaker design shall isolate speaker components to reduce ground fault incidents.
4. The speaker shall have power taps (from ¼ watt to 2 watts) and voltage that are selected by rotary switches. All models shall have a maximum sound output of 86 dB at 10 feet and shall incorporate an open back construction.
5. All notification appliances shall be backward compatible.
6. Speakers shall receive a separate twisted pair from the fire alarm control panel for voice communications.
7. Combination speaker/strobe devices shall meet the requirements specified under “Strobes” in addition to these specifications.

B. Strobes
1. The strobe shall consist of a xenon flash tube with associated lens/reflector system and operate on either 12V or 24V. The strobe shall also feature selectable candela output, providing options for 15 or 15/75 candela when operating on 12V and 15, 15/75, 30, 75, 110, or 115 when operating on 24V. The strobe shall comply with NFPA 72 and the Americans with Disabilities Act requirement for visible signaling appliances, flashing at 1 Hz over the strobe’s entire operating voltage range.
2. Strobe lights shall meet the requirements of the ADA, UL Standard 1971and be fully synchronized.

2.8 CONDUIT AND WIRE

A. Fire alarm cabling shall be wire in conduit, unless metal clad (MC) cable is specifically permitted to be installed by the Authority Having Jurisdiction, and is specified as an acceptable means of installation on the drawings.

B. Metal Clad (MC) Cable:
1. Type FPLP cable with galvanized interlocking steel with continuous red stripe.
2. NEC Article 760 rating for fire alarm control cables.
3. Install multiconductor cabling in accordance with NEC article 730.
4. Use permitted above accessible ceilings and concealed within walls to devices. Provide conduit and wire for final homeruns to control panels , transponders and power supplies.
5. Conductors shall comply with “Wire” paragraph below.

C. Conduit:
1. Conduit shall be in accordance with the National Electrical Code (NEC), local and state requirements.
2. Where possible, all wiring shall be installed in conduit or raceway. Conduit fill shall not exceed 40 percent of interior cross sectional area where three or more cables are contained within a single conduit.
3. Cable must be separated from any open conductors of power, or Class 1 circuits, and shall not be placed in any conduit, junction box or raceway containing these conductors, per NEC Article 760-29.
4. Wiring for 24 volt DC control, alarm notification, emergency communication and similar power-limited auxiliary functions may be run in the same conduit as initiating and signaling line circuits. All circuits shall be provided with transient suppression devices and the system shall be designed to permit simultaneous operation of all circuits without interference or loss of signals.
5. Conduit shall not enter the fire alarm control panel, or any other remotely mounted control panel equipment or backboxes, except where conduit entry is specified by the FACP manufacturer.
6. Conduit shall be 3/4 inch (19.1 mm) minimum.
7. All fire alarm junction boxes and raceways shall be identified and labeled in accordance with Section 26 05 33, “Identification for Electrical Systems”.

D. Wire:
1. All fire alarm system wiring shall be new.
2. Wiring shall be in accordance with local, state and national codes (e.g., NEC Article 760) and as recommended by the manufacturer of the fire alarm system. Number and size of conductors shall be as recommended by the fire alarm system manufacturer, but not less than 18 AWG (1.02 mm) for initiating device circuits and signaling line circuits, and 14 AWG (1.63 mm) for notification appliance circuits.
3. All wire and cable shall be listed and/or approved by a recognized testing agency for use with a protective signaling system.
4. Wire and cable not installed in conduit shall have a fire resistance rating suitable for the installation as indicated in NFPA 70 (e.g., FPLR).
5. Wiring used for the SLC multiplex communication loop shall be twisted and shielded and support a minimum wiring distance of 10,000 feet. The system shall permit use of IDC and NAC wiring in the same conduit with the SLC communication loop.
6. All field wiring shall be completely supervised.
7. The fire alarm control panel shall be capable of t-tapping Class B (NFPA Style 4) Signaling Line Circuits (SLCs).

E. Terminal Boxes, Junction Boxes and Cabinets: All boxes and cabinets shall be UL listed for their use and purpose.

F. Initiating circuits shall be arranged to serve like categories (manual, smoke, waterflow). Mixed category circuitry shall not be permitted except on signaling line circuits connected to intelligent reporting devices.

G. The fire alarm control panel shall be connected to a separate dedicated branch circuit, maximum 20 amperes. This circuit shall be labeled at the main power distribution panel as FIRE ALARM. Fire alarm control panel primary power wiring shall be 12 AWG. The control panel cabinet shall be grounded securely to either a cold water pipe or grounding rod.

PART 3 EXECUTION

3.1 EXAMINATION

A. Division 01: Coordination and project conditions.

B. Verify products and systems receiving devices are ready for installation.

3.2 INSTALLATION

A. Division 1 - Quality Control: Manufacturer's instructions.

B. Install manual station with operating handle 4 feet above finished floor.

C. Install audible and visual signal devices 6 feet 8 inches above finished floor.

D. Install 16 AWG minimum size conductors for fire alarm detection and signal circuit conductors, or as indicated on drawings.

E. Connect conduit and wire to door release devices, sprinkler flow switches, sprinkler valve tamper switches, fire suppression system control panels, duct smoke detectors and fire protection storage tank level sensor.

F. Automatic Detector Installation: Conform to NFPA 72E and NFPA 720 (remotely located from heating appliances as possible).

G. Installation shall be in accordance with the NEC, NFPA 72, local and state codes, as shown on the drawings, and as recommended by the major equipment manufacturer.

H. All conduit, junction boxes, conduit supports and hangers shall be concealed in finished areas and may be exposed in unfinished areas. Smoke detectors shall not be installed prior to the system programming and test period. If construction is ongoing during this period, measures shall be taken to protect smoke detectors from contamination and physical damage.

I. All fire detection and alarm system devices, control panels and remote annunciators shall be flush mounted when located in finished areas and may be surface mounted when located in unfinished areas, or on existing block constructed walls with no means to fish wiring.

J. Locate intelligent CO detectors as far away from CO source (fossil fuel burning appliance) as practical to minimize false alarms while maintaining manufacturer spacing criteria and NFPA required coverage.

K. Provide the services of a factory trained and authorized technician to perform all system software modifications, upgrades or changes. Field technicians shall be NICET Level 1 (minimum) certified.

L. The factory trained technician shall install initial data and artwork at each interactive firefighter's display.

M. The factory trained technician shall design the graphic layout based on area diagrams and floor plans.

3.3 MANUFACTURER'S FIELD SERVICES

A. Division 01: Manufacturer's field services.

B. Include services of factory certified technician to supervise installation, adjustments, final connections, and system testing.

3.4 TEST

A. The service of a competent, factory-trained engineer or technician authorized by the manufacturer of the fire alarm equipment shall be provided to technically supervise and participate during all of the adjustments and tests for the system. All testing shall be in accordance with NFPA 72 and the following:
   1. Before energizing the cables and wires, check for correct connections and test for short circuits, ground faults, continuity, and insulation.
   2. Close each sprinkler system flow valve and verify proper supervisory alarm at the FACP.
   3. Verify activation of all waterflow switches.
   4. Open initiating device circuits and verify that the trouble signal actuates.
   5. Open and short signaling line circuits and verify that the trouble signal actuates.
   6. Open and short notification appliance circuits and verify that trouble signal actuates.
   7. Ground all circuits and verify response of trouble signals.
   8. Check presence and audibility of tone at all alarm notification devices.
   9. Check installation, supervision, and operation of all intelligent smoke detectors using the walk test.
   10. Each of the alarm conditions that the system is required to detect should be introduced on the system. Verify the proper receipt and the proper processing of the signal at the FACP and the correct activation of the control points.
   11. When the system is equipped with optional features, the manufacturer's manual shall be consulted to determine the proper testing procedures. This is intended to address such items as verifying controls performed by individually addressed or grouped devices, sensitivity monitoring, verification functionality and similar.

B. Test carbon monoxide detectors and any associated alarms in accordance with NFPA 72H, NFPA 720, manufacturer's instructions and local fire department requirements.

3.5 FINAL INSPECTION/ ACCEPTANCE TESTING

A. Division 01 – Quality Control.

B. At the final inspection, a factory trained representative of the manufacturer of the major equipment shall demonstrate that the system functions properly in every respect.

C. Fire Alarm/Acceptance Testing Procedures:
   1. The fire alarm testing shall be as the authority having jurisdiction shall dictate. This will be as determined by the AHJ and shall include, but not be limited to, the requirements as set below:
      a. Protective Signaling Systems: All protective signaling systems shall meet with acceptance testing requirements of the applicable standards listed in NFPA 101 and NFPA 13.
      b. Prior Test Notification: At least five (5) working days prior to testing, the Electrical Contractor shall notify (in writing) the following people of the proposed date the acceptance tests are to be performed:
         1) Authority Having Jurisdiction
         2) General Contractor or Construction Manager
         3) Engineer of Record
         4) Equipment Supplier Representative
         5) Sprinkler Contractor (if applicable)
         6) HVAC Contractor (if applicable)
         7) Elevator Contractor (if applicable)

D. Certificates of Compliance:
   1. A Fire Alarm System Inspection and Testing Certification and Description form shall be prepared for each system per the requirements listed in NFPA 72, Chapter 7.
   2. After the completion of the operational acceptance tests and sign-off of test witness (with stipulations noted), final copies of the Certificates shall be forwarded to the AHJ.

E. Tests:
   1. All tests shall be conducted in accordance with the Manufacturer's Testing Recommendations.
   2. All testing equipment, apparatus (i.e. sound level decibel meter, 2-way radio communication, test devices, ladders, tools, lighting, etc.) and personnel shall be supplied by the Electrical Contractor.

3.6 INSTRUCTION

A. Instruction shall be provided as required for operating the system. Hands-on demonstrations of the operation of all system components and the entire system including program changes and functions shall be provided.

B. The contractor and/or the systems manufacturer's representatives shall provide a typewritten "Sequence of Operation" to the Owner.

C. Manufacturers representative shall provide Owner with a minimum of four (4) hours of onsite training on system. This training shall be followed up with an additional four (4) hours of onsite instruction at the discretion of the Owner, at any time during the warranty period.

END OF SECTION

SECTION 31 1000 - SITE CLEARING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Protecting existing vegetation to remain.
2. Removing existing vegetation.
3. Clearing and grubbing.
4. Stripping and stockpiling topsoil.
5. Removing above- and below-grade site improvements.
6. Salvaging of existing granite curb for reuse.

B. Related Sections:

1. Division 01 Section "Temporary Tree and Plant Protection" for installation of tree protection fencing and pruning of existing trees.
2. Division 01 Section(s) "Construction Waste Management and Disposal" and "Sustainability Compliance Procedures" for sustainability requirements
3. Division 31 Section "Soil Erosion and Sediment Controls" for installation of soil erosion control measures.
4. Division 32 Section "Soil Preparation" for testing of topsoil for reuse.

C. Alternates: Refer to Division 01 Section "Alternates" for description of Work of this Section affected by alternates.

1.3 DEFINITIONS

A. Subsoil: All soil beneath the topsoil layer of the soil profile and typified by a reduced or low level/the lack of organic matter and soil organisms.

B. Surface Soil: Soil that is present at the top layer of the existing soil profile at the Project site. In undisturbed areas, the surface soil is typically topsoil; but in disturbed areas such as urban environments, the surface soil can be subsoil.

C. Topsoil: Top layer of the soil profile consisting of existing native surface topsoil or existing in-place surface soil and is the zone where plant roots grow. Its appearance is generally friable, pervious, and black or a darker shade of brown, gray, or red than underlying subsoil; reasonably free of subsoil, clay lumps, gravel, and other objects more than 2 inches (50 mm) in diameter; and free of subsoil and weeds, roots, toxic materials, or other non soil materials.

D. Tree-Protection Zone: Area surrounding individual trees or groups of trees to be protected during construction and defined by a circle concentric with each tree with a radius 1.5 times the diameter of the drip line unless otherwise indicated.

E. Vegetation: Trees, shrubs, groundcovers, grass, and other plants.

1.4 MATERIAL OWNERSHIP

A. Except for stripped topsoil and other materials indicated to be stockpiled or otherwise remain Owner's property, cleared materials shall become Contractor's property and shall be removed from Project site.

1.5 INFORMATIONAL SUBMITTALS

A. Existing Conditions: Documentation of existing trees and plantings, adjoining construction, and site improvements that establishes preconstruction conditions that might be misconstrued as damage caused by site clearing.

1. Use sufficiently detailed photographs or videotape.
2. Include plans and notations to indicate specific wounds and damage conditions of each tree or other plants designated to remain.

B. Record Drawings: Identifying and accurately showing locations of capped utilities and other subsurface structural, electrical, and mechanical conditions.

1.6 QUALITY ASSURANCE

A. Preinstallation Conference: Conduct conference at Project site.

1.7 PROJECT CONDITIONS

A. Traffic: Minimize interference with adjoining roads, streets, walks, and other adjacent occupied or used facilities during site-clearing operations.

1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction.
2. Provide alternate routes around closed or obstructed traffic ways if required by Owner or authorities having jurisdiction.

B. Salvable Improvements: Carefully remove items indicated to be salvaged and store on Owner's premises where directed.

C. Utility Locator Service: Notify Call Before You Dig for area where Project is located before site clearing and provide evidence of compliance.

D. Do not commence site clearing operations until temporary erosion- and sedimentation-control and tree-protection measures are in place.

E. The following practices are prohibited within protection zones (non-construction zones):

1. Storage of construction materials, debris, or excavated material.
2. Parking vehicles or equipment.
3. Foot traffic.
4. Erection of sheds or structures.
5. Impoundment of water.
6. Excavation or other digging unless otherwise indicated.
7. Attachment of signs to or wrapping materials around trees or plants unless otherwise indicated.

F. Do not direct vehicle or equipment exhaust towards protection zones.

G. Do not allow vehicles to idle more than 3 minutes.

H. Prohibit heat sources, flames, ignition sources, and smoking within or near protection zones.

I. Soil Stripping, Handling, and Stockpiling: Perform only when the topsoil is dry or slightly moist.

J. Do not commence work prior to 8 am and all work must cease by 5 pm.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Satisfactory Soil Material: Requirements for satisfactory soil material are specified in Division 31 Section "Earthwork".

1. Obtain approved borrow soil material off-site when satisfactory soil material is not available on-site.

PART 3 - EXECUTION

3.1 PREPARATION

A. Protect and maintain benchmarks and survey control points from disturbance during construction.

B. Locate and clearly identify trees, shrubs, and other vegetation to remain. Wrap a 1-inch (25-mm) blue vinyl tie tape flag around each tree trunk at 54 inches (1372 mm) above the ground.

1. Obtain approval from Landscape Architect and Tree Warden prior to removal of existing trees.

C. Protect existing site improvements to remain from damage during construction.

1. Restore damaged improvements to their original condition, as acceptable to Owner.

3.2 TEMPORARY EROSION AND SEDIMENTATION CONTROL

A. General: Provide temporary erosion and sedimentation control on-site according to requirements in Division 31Section "Sedimentation and Erosion Controls".

B. Provide temporary erosion- and sedimentation-control measures to prevent soil erosion and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways, according to erosion- and sedimentation-control Drawings and requirements of authorities having jurisdiction.

C. Verify that flows of water redirected from construction areas or generated by construction activity do not enter or cross protection zones.

D. Inspect, maintain, and repair erosion- and sedimentation-control measures during construction until permanent vegetation has been established.

E. Remove erosion and sedimentation controls and restore and stabilize areas disturbed during removal.

3.3 TREE AND PLANT PROTECTION

A. General: Protect trees and plants remaining on-site according to requirements in Division 01 Section "Temporary Tree and Plant Protection".

B. Repair or replace trees, shrubs, and other vegetation indicated to remain or be relocated that are damaged by construction operations, in a manner approved by Architect.

3.4 CLEARING AND GRUBBING

A. Remove obstructions, trees, shrubs, and other vegetation to permit installation of new construction.

1. Do not remove trees, shrubs, and other vegetation indicated to remain or to be relocated.
2. Grind down stumps and remove roots, obstructions, and debris to a depth of 18 inches (450 mm) below exposed subgrade.

3. In the athletic field areas, all stumps and roots must be removed grinding is not acceptable.
4. Use only hand methods for grubbing within protection zones.
5. Chip removed tree branches and stockpile in areas approved by Landscape Architect for reuse in tree protection zones.

6. Invasive species such as Japanese knotweed or other noxious weeds and brush must not be chipped or mulched. Pull roots and remove intact to prevent the spread of seeds and cuttings that may root or contaminate the area.

3.5 TOPSOIL STRIPPING

A. Identify and confirm through sampling the depth of topsoil to be removed

B. Remove sod and grass before stripping topsoil.

C. Strip topsoil down to the sub=base material. in a manner to prevent intermingling with underlying subsoil or other waste materials. Identify the depth of the subbase material through inspection.

1. Remove subsoil and non soil materials from topsoil, including clay lumps, gravel, and other objects more than 2 inches (50 mm) in diameter; trash, debris, weeds, roots, and other waste materials.

D. Stockpile topsoil away from edge of excavations without intermixing with subsoil. Grade and shape stockpiles to drain surface water. Cover to prevent windblown dust and erosion by water.

1. Limit height of topsoil stockpiles to 72 inches (1800 mm).
2. Do not stockpile topsoil within protection zones.
3. Stockpile surplus topsoil to allow for respreading deeper topsoil.
4. Document the volume and mass of the materials that are being stockpiled for reuse/recycling.
5. Limit the organic material within stockpiles.
6. If the stockpiled material is to be held for more than 30 days , rotate the materials from the bottom to the top to prevent the development of anerobic conditions.

3.6 SITE IMPROVEMENTS

A. Remove existing above- and below-grade improvements as indicated and necessary to facilitate new construction.

B. Remove slabs, paving, curbs, gutters, and aggregate base as indicated.

1. Unless existing full-depth joints coincide with line of demolition, neatly saw-cut along line of existing pavement to remain before removing adjacent existing pavement. Saw-cut faces vertically.

3.7 DISPOSAL OF SURPLUS AND WASTE MATERIALS

A. Remove surplus soil material, unsuitable topsoil, obstructions, demolished materials, and waste materials including trash and debris, and legally dispose of them off Owner's property.

B. Separate recyclable materials produced during site clearing from other nonrecyclable materials. Store or stockpile without intermixing with other materials and transport them to recycling facilities. Do not interfere with other Project work.

END OF SECTION 31 1000

SECTION 311000 – SITE CLEARING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

All materials and construction methods shall conform to the Connecticut Department of Transportation Standard Specifications for Roads, Bridges, Facilities, and Incidental Construction Form 818 with modifications for the following item as stated in this specification:

- SELECTIVE CLEARING AND THINNING

1.2 SUMMARY – NOT USED

1.3 REFERENCES

State of Connecticut Department of Transportation Standard Specifications for Roads, Bridges, Facilities, and Incidental Construction Form 818, 2020 (Merged with Supplemental Specifications Dated July 2023)

Section 9.52 is amended as follows:

PART 2 PRODUCTS – NOT USED

PART 3 EXECUTION

Article 9.52.03 – Construction Methods is supplemented as follows:

Traffic Signal Equipment:

Prior to scheduling support structure installation and at least 14 days in advance of clearing operations, stake out the limits of vegetation and tree clearing to facilitate installation of traffic signal equipment as described below.

Visibly mark or flag trees scheduled to be removed.

The Engineer will review the identified trees and verify the limits of clearing and thinning prior to the Contractor proceeding with the cutting operation.

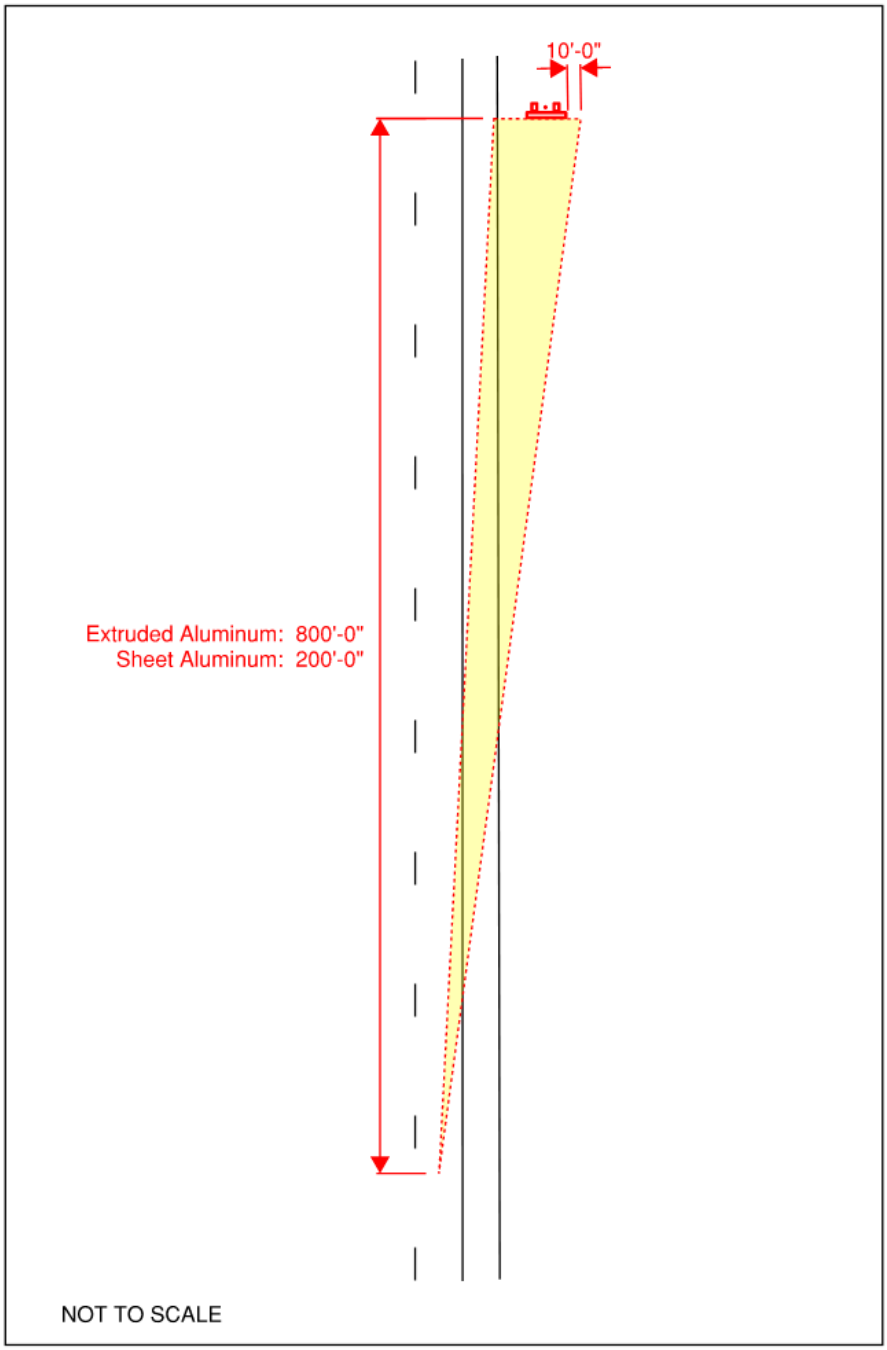
For the following intersections, cut, trim, and/or remove trees/tree limbs/vegetation as indicated below and to account for future vegetation growth when applicable. This work shall be completed prior to turning on the new signal equipment.

Int. No.	Location	Additional Information
XXX-XXX	Orchard Street At Coachlamp Lane	Trim tree branches at proposed RRFB sign locations.
XXX-XXX	Indian Rock Lane at Ponderosa Drive	Trim tree branches at proposed RRFB sign locations.
XXX-XXX	Orchard Street	Trim tree branches at proposed speed feedback sign locations.

Extruded and Sheet Aluminum Signs:

Prior to scheduling sign installation and at least 14 days in advance of clearing operations, stake out the limits of vegetation and tree clearing to provide visibility to signs as described below.

Visibly mark or flag trees proposed to be removed. Contact the Engineer if an adjustment to sign location can prevent tree removal.



The Engineer will review the identified trees and verify the limits of clearing and thinning prior to the Contractor proceeding with the cutting operation.

At all extruded aluminum sign and sign support locations, cut, trim and/or remove vegetation/tree limbs needed for installation and to provide visibility to the sign(s) and to account for future vegetation growth. The entire sign plus a 10’ buffer shall be visible for 800-ft measured from the center of the right-travel lane approaching the sign, as viewed from a 3.5-ft height above the roadway.

At all sheet aluminum sign locations, cut, trim and/or remove vegetation/tree limbs needed for installation and to provide visibility to the sign(s) and to account for future vegetation growth. The entire sign plus a 10’ buffer shall be visible for 200-ft measured from the center of the right-travel lane approaching the sign, as viewed from a 3.5-ft height above the roadway.

This work shall be completed prior to installing the sign panel onto the vertical supports.

Clearing and Thinning for Extruded Aluminum Signs & Sheet Aluminum Signs

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 31 1005 - ATHLETIC FIELD SITE PREPARATION PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

Sequence of Operations

1. Mobilization of Equipment
2. Land Survey
3. Strip turf from all existing athletic field turf areas.
4. Remove and stockpile existing root zone medium to a depth of 8 inches or when subbase is encountered.
5. Placement and Installation of Perimeter Drain
6. Placement and Installation of any required Irrigation System.
7. Provisional grading of the subbase material and consolidated to provide a 1 or 1.2 percent slope longitudinally from the center line of the field to the perimeter.
8. Placement of a shim layer of sand on top of the subbase layer to aid in accurate grading and to promote drainage
9. Upon re-grading of existing surfaces and installation of any required additional material, install, roll and consolidate subbase material to the final grades according to the Drawings. The final grading will be completed using three-axis computer-controlled laser grading implement to within ¼ inch.
10. Place engineered root zone mix in 1 to 2 inch lifts, to a minimum depth of six (6)", and grade

B. Related Requirements:

1. Division 01 Section(s) "Construction Waste Management and Disposal" and "Sustainability Compliance Procedures" for sustainability requirements.

2. Section 32 9113.29 - Athletic Field Root Zone: Preparation and blending of root zone mix.

3. Section 32 9219.22 - Athletic Field Seeding and Sodding: Seeding and sodding of athletic fields.

1.2 SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Section 01 3566.42 – Sustainability Compliance Procedures and provide the following in addition to other submittals:

1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material.

Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Shim Layer Sand shall consist of a screened drainage sand, the purpose of which is to assist with accurate grading of sub-base and to provide limited drainage and water holding capacity.

B. Shim Layer Sand shall be a washed screened drainage sand.

C. The Shim Layer Sand shall contain 93 to 97 percent sand with no less than 60 percent of the total sand falling into the medium through very coarse sand fractions, no more than 15 percent fine sand, and no more than 5 percent very fine sand, as determined by ASTM F1632 or D422.

D. The Shim Layer shall be free of sub-soil, large stones, earth clods, sticks, stumps, clay lumps, roots or other objectionable, extraneous matter or debris larger than one eighth (1/8) inches in diameter.

E. The Shim Layer Sand shall also be free of Quack grass rhizomes, Agropyron repens, and the nut-like tubers of Nutgrass, Cyperus esculentus, and all other primary noxious weeds.

F. The shim layer sand should be free of any organic matter.

G. The Shim Layer Sand shall not be delivered or used for planting while in a frozen or muddy condition.

H. The shim layer must be stockpiled in such a manner as to prevent contamination from soils, stones, debris, or organic materials.

I. The Drainage Pipe shall be of eight (8)" N-12 dual wall – HDPE pipe and shall be laid on a bed of four (4)" of specified three-eights (3/8) washed drainage stone.

J. The Drainage Stone shall be three-eighths (3/8)" washed drainage stone fitting the physical specifications outlined in Section 3.3 (K) (11)

PART 3 - EXECUTION

3.1 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities, trees, shrubs, and plantings from damage caused by planting operations.

1. Protect grade stakes set by others until directed to remove them.

B. Install erosion-control measures to prevent erosion or displacement of soils and discharge of soil-

bearing water runoff or airborne dust to adjacent properties and walkways.

C. The Contractor shall flag the limits of clearing shown on the drawings by accurate field survey with marked stakes or other means acceptable to the Landscape Architect. The Landscape Architect shall be notified a minimum of five (5) working days prior to scheduled commencement of clearing operations to review the flagged limits. Adjust the clearing limits as directed by the Landscape Architect.

D. Protection of all stockpiled materials from erosion and contamination by stone, organic matter, construction debris, or other inappropriate materials. Any contaminated stockpiled materials will need to be screened to remove contaminating debris. Cleaned materials can only be used with the approval of the Landscape Architect.

3.2 EXAMINATION

A. Examine areas to be worked for compliance with requirements and other conditions affecting performance.

1. Verify that no foreign or deleterious material or liquid such as paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, or acid has been deposited in soil within athletic field renovation area.
2. Do not mix or place soils and soil amendments in frozen, wet, or muddy conditions.
3. Suspend soil spreading, grading, and tilling operations during periods of excessive soil moisture until the moisture content reaches acceptable levels to attain the required results.
4. Uniformly moisten excessively dry soil that is not workable, and which is too dusty.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

C. If contamination by foreign or deleterious material or liquid is present in soil within athletic field renovation area, remove the soil and contamination as directed by Landscape Architect replace with new material to meet the existing specified material. The replacement material must be approved by the Landscape Architect or designee.

D. Alert the Landscape Architect so that the new material and installation technique may be inspected and approved.

E. The Landscape Architect must approve any changes to the means and methods of the athletic field construction, and/or materials.

F. Completion of work is subject to adverse climatic and ground conditions, which could affect the date of substantial completion. Any/all delays must be communicated with the Construction Manager as soon as possible

G. No work can progress unless testing results are approved by the Landscape Architect.

3.3 EXCAVATION AND SUB-BASE PREPARATION WORK

A. The Contractor is solely responsible for the discovery, presence, handling, means and methods of excavation, and responsible disposal of all material, hazardous or not, removed from the site.

B. The Landscape Architect is not responsible for pollution investigations, abatement procedures, or the means and methods of material removal and transport, nor do they direct or control the activity of any retained environmental consultant.

C. It is the contractor's responsibility to gain any and all permits that may be required for environmentally safe disposal at a recognized disposal center for the entire depth of excavation.

D. All work must be performed in the approximate sequence as listed below:

E. Mobilize Equipment:

1. Delivery and removal of all required equipment to site. Mobilization will require forty-eight (48) hour notice of intent prior to delivery of any construction equipment to be left on site. Notify the Construction Manager and Landscape Architect for authorization of mobilization.

2. Any proposed equipment substitutions must be approved by the landscape Architect prior to mobilization.

3. All equipment on site must be Low Ground Pressure (L.G.P.) which is defined as having a low ground pressure by flotation tire or track that is six (6) psi or less. Equipment which is not LGP is not allowed on the athletic field area.

F. Land Survey:

1. Prior to the use of any construction equipment, the Contractor's proposed field layout and elevation control strategies must be determined and marked.

2. Prior to work commencing, the Contractor is responsible for examining the site, and its existing contours. The field must meet final elevations according to the Drawings.
3. The Contractor must make sure the field reconstruction meets the final elevations provided in new grading plans (provided in this specification)

G. Topsoil Excavation and Stockpile:

1. The Contractor shall provide all labor, materials, and equipment (including LGP equipment) required to provide earth moving and sub-base elevations.

2. All contaminated Topsoil is to be removed from site and properly disposed. It is the responsibility of the contractor to make all and any necessary arrangement, secure licenses and permits and provides the Landscape Architect with proof for approval. All vehicles leaving the site must comply with the relevant elements of the Site Protection Guidance as shown on plans, utilizing a stone run out strip, trailer brush down, and covering the

trailers.

3. Remove any existing stone, remaining surface stabilization materials, and other debris to the depth of the existing sub-base.

4. The Contractor shall take all necessary precautions to prevent other excavated material or other objectionable material from becoming intermixed with the topsoil, either before or after the stripping and stockpiling operation. Stripping operations shall be completed prior to the start of excavation, trenching, or grading operations.

5. Transport all stone and debris material to stockpile holding area utilizing LGP hydraulic dump box trailers or equal attached to LGP tractors.

6. Remove existing topsoil material to specified depth and/or down to existing sub-base.

H. Sub-Base Preparation:

1. The sub-base material will require decompaction to enable accurate regrading to take place. This would take place following consultation with the Contractor the Construction Manager and Landscape Architect.

2. The sub-base materials shall be power raked to a depth of six (6)" and any stone or debris larger than four ()" in diameter shall be removed.

3. Laser grade sub-base to 0.25 inch of finish subbase elevation according to the Site Grading Drawing utilizing a LGP compact motorized cross slope dual laser grader or equal. The sub-base shall mirror the final grading plan of the field.

4. The sub-base should be compacted to no more than approximately ninety-five (95)% compaction level.

K. Installation of Perimeter Drainage

1. Drainage elements shall be installed in the quantities and locations identified on the Contract Drawings. Contact the Athletic Field Consultant if obstructions or conflicts are encountered.

2 Perimeter drain shall be placed in a minimum 24"x24" trench, with three sides lined (bottom, and two sides) with Mirafi 140N filter fabric or equivalent. No geotextile material shall be placed atop the perimeter drain trench.

3. Placement of 8" N-12 Dual Wall - HDPE no wrapped pipe, shall be on a bed of at least four (4)" of specified 3/8" drainage stone.

4. The top of pipe shall be at a minimum of twelve (12)" below all final field elevations.

5. Contractor shall install perimeter drainage pipe to allow for a minimum of 0.25% fall to provide positive drainage as indicated on the Grading and Drainage Plan (##).6.

6. An eight (8)" Round Grate surface drains, as manufactured by NDS (part no. 20), or equal

shall beinstalled on an eight (8)" N-12 Dual Wall – HDPE pipe riser which connects to the eight (8)" main drainage perimeter pipe, connected with 8" to 8" T joint manufactured by Advanced Drainage Systems, Inc. or approved equivalent. The 8" surface drain shall be placed in10" Round Carson TrussT Valve boxes or equivalent at the corners of the field as indicated on the Grading and Drainage Plan .

7. A four (4)" Round Grate surface drains, as manufactured by NDS (part no. 13), or equal shall be installed on a 4" N-12 Dual Wall – HDPE pipe riser which connects to the eight (8)" main drainage perimeter pipe, connected with four (4)" "Inserta TEE" or approved equivalent.

   The four (4)" surface drain shall be placed in six (6)" Round Carson TrussT Valve boxes or equivalent on seventy (70)' centers along the north and south limitsthe field as indicated on the Grading and Drainage Plan.

8. The joint tightness shall conform to ASTM D3212 for joints or drain and sewer plasticpipe using flexible elastomeric seals.

9. The gravel shall be clean, free of hazardous or regulated substances and free of organic material. Gravel shall have a minimum laboratory saturated hydraulic conductivity (Ksat rate) of twenty (20) inches per hour at a defined percentage of its maximum dry density, to be determined by an accredited laboratory

10. A sample of the athletic field gravel will be collected at its source for each seven hundred (700) tons to bedelivered to the site and a sieve analysis run on the sample to check its particle size using ASTM D-422 Standard Method (Section IV–Soil tests 2). The results of the tests are to be submitted to the Owner for approval.
11. The gravel shall meet the following gradation

(particle size)Sieve Size	Percent Passing by Weight
2"	100
1"	85-100
¾"	20-40
½"	10-20
5/64"	0-10

Note: Upon completion of the installation of the drainage elements the site shall be inspected by the Owner or Athletic Field Consultant, or a designee for approval and acceptance of the drainage installation.

L. installation of the Shim Layer

1. All specified sand shim layer material must be transported onto the subgrade through the use of LGP equipment.

2. Whenever possible, stockpiles shall be placed around the sand placement area for distribution by LGP equipment as listed in Appendix A or equal.

3. Haul, laser grade and compact a three (3)" uniform layer of specified sand shim layer over the established sub grade to meet the required slopes and elevations of finish grade. Utilize hauling, backfilling, grading, finish grading and compaction equipment as listed in Appendix A or equal.

4. The shim layer shall extend over the perimeter drain trenches.

5. The entire sand shim layer to be laser graded with a three-axis laser grader and compacted to meet the required slopes and elevations of finish grade elevations utilizing power raking, blending and ground preparation equipment as listed in Appendix A or equal. Box graders are not acceptable.

6. Upon completion of the installation of the sand shim layer the site shall be inspected by the Owner, Landscape Architect, or a designee for approval and acceptance of a uniform subbase profile and grade.

7. All grades of the sub-base and shim layer and all depths of the shim layer sand shall be verified by the Landscape Architect or designee prior to the work proceeding.

3.4 SAND SHIM LAYER PHYSICAL GRADATION

PERCENTAGE OF MAIN FRACTIONS		
DESCRIPTION	SIZE (MM)	PERCENT
SAND	0.05 - 2.0	93 - 97
SILT	0.002 - 0.05	1 - 3
CLAY	<0.002	1-3
PERCENTAGE OF SAND FRACTIONS		
DESCRIPTION	SIZE (MM)	PERCENT
NO. 5 GRAVEL	4.0	0
NO. 10 GRAVEL	2.0	0.5 - 1.5
VERY COARSE	1.0 - 2.0	8 - 11
COARSE	0.5 - 1.0	25 - 35
MEDIUM	0.25 - 0.5	35 - 45
FINE	0.10 - 0.25	10 - 15
VERY FINE	0.05 - 0.10	2.5 - 4.5

SECTION 31 1006 – SOIL STRIPPING AND STOCKPILING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
1. Stripping the existing soil.
2. Stockpiling the soil for later reuse.

B. Related Requirements:

1. Division 01 Section "Temporary Facilities and Controls" for temporary utility services, construction and support facilities, security and protection facilities.

2. Division 01 Section "Execution Requirements" for field engineering and surveying.

3. Division 01 Section(s) "Construction Waste Management and Disposal" and "Sustainability Compliance Procedures" for sustainability requirements.

4. Division 01 Section "Temporary Tree and Plant Protection" for installation of tree protection fencing and pruning of existing trees.

5. Division 31 Section "Erosion and Sedimentation Controls" for installation of soil erosion control measures.

6. Division 32 Section "Soil Preparation" for testing of topsoil for reuse.

7. Section 32 9113.29 – "Athletic Field Rootzone"

C. Alternates: Refer to Division 01 Section "Alternates" for description of Work of this Section affected by alternates.

1.3 DEFINITIONS

A. Subsoil: All soil beneath the topsoil layer of the soil profile, and typified by the lack of organic matter and soil organisms.

B. Surface Soil: Soil that is present at the top layer of the existing soil profile at the Project site. In undisturbed areas, the surface soil is typically topsoil; but in disturbed areas such as urban environments, the surface soil can be subsoil.

C. Topsoil: Top layer of the soil profile consists of existing native surface topsoil or existing in-place surface soil and is the zone where plant roots grow. Its appearance is generally friable, pervious, and black or a darker shade of brown, gray, or red than underlying subsoil; reasonably free of subsoil, clay lumps, gravel, and other objects more than 2 inches (50 mm) in diameter; and free of subsoil and weeds, roots, toxic materials, or other nonsoil materials.

D. Tree-Protection Zone: Area surrounding individual trees or groups of trees to be protected during construction, and defined by a circle concentric with each tree with a radius 1.5 times the diameter of the drip line unless otherwise indicated.

E. Vegetation: Trees, shrubs, groundcovers, grass, and other plants.

1.4 MATERIAL OWNERSHIP

A. Except for stripped topsoil and other materials indicated to be stockpiled or otherwise remain Owner's property, cleared materials shall become the Contractor's property and shall be removed from the Project site.

1.5 INFORMATIONAL SUBMITTALS

A. Existing Conditions: Documentation of any discovered contaminants or subsurface debris that may impact the ability of the soil to nurture plant growth or may impact the site construction.

1. Use sufficiently detailed photographs or videotape.

2. Include Global Positioning System (GPS) coordinates indicating the location of debris or contaminant

3. Notify the Landscape Architect and do not disturb the area further.

1.6 QUALITY ASSURANCE

A. Preinstallation Conference: Conduct a conference at the Project site.

1.7 PROJECT CONDITIONS

A. Traffic: Minimize interference with adjoining roads, streets, walks, and other adjacent occupied or used facilities during site-clearing operations.

1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from the Owner and authorities having jurisdiction.

2. Provide alternate routes around closed or obstructed traffic ways if required by the Owner or authorities having jurisdiction.

B. Utility Locator Service: Notify Call Before You Dig for the area where the Project is located before site clearing.

C. Do not commence site clearing operations until temporary erosion- and sedimentation-control and tree-protection measures are in place.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Erosion Control Material: Requirements for erosion control materials are specified in Division 31 Section "Sedimentation and Erosion Controls

B. Obtain approved borrow soil material off-site when a sufficient volume of satisfactory soil material is not available on-site.

C. If required to satisfy agronomic or sports turf performance requirements, obtain a proper sand amendment as specified in Section 32 9113.29 – Athletic Field Rootzone

PART 3 - EXECUTION

3.1 PREPARATION

A. Protect and maintain benchmarks and survey control points from disturbance during construction.

B. Locate and clearly identify trees, shrubs, and other vegetation to remain. Wrap a 1-inch (25-mm) blue vinyl tie tape flag around each tree trunk at 54 inches (1372 mm) above the ground.

C. Protect existing site improvements to remain from damage during construction.

1. Restore damaged improvements to their original condition, as acceptable to Owner.

3.2 TEMPORARY EROSION AND SEDIMENTATION CONTROL

A. General: Provide temporary erosion and sedimentation control on-site according to requirements in Division 31 Section "Sedimentation and Erosion Controls".

B. Provide temporary erosion- and sedimentation-control measures to prevent soil erosion and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways, according to erosion- and sedimentation-control Drawings and requirements of authorities having jurisdiction.

C. Verify that flows of water redirected from construction areas or generated by construction activity do not enter or cross-protection zones.

D. Inspect, maintain, and repair erosion- and sedimentation-control measures during construction until permanent vegetation has been established.

E. Remove erosion and sedimentation controls and restore and stabilize areas disturbed during removal.

3.3 TREE AND PLANT PROTECTION

A. General: Protect trees and plants remaining on-site according to requirements in Division 01 Section "Temporary Tree and Plant Protection".

B. Repair or replace trees, shrubs, and other vegetation indicated to remain or be relocated that are damaged by construction operations, in a manner approved by Architect.

3.4 TOPSOIL EXCAVATION:

1. The Contractor shall provide all labor, materials, and equipment (including LGP equipment) required to provide earth moving and sub-base elevations.

2. All contaminated Topsoil is to be removed from the site and properly disposed of. It is the responsibility of the contractor to make all and any necessary arrangement, secure licenses and permits and provide the Landscape Architect with proof for approval. All vehicles leaving the site must comply with the relevant elements of the Site Protection Guidance as shown on plans, utilizing a stone run-out strip, trailer brush down, and covering the trailers.

3. Remove any existing stone, remaining surface stabilization materials, and other debris to the depth of the existing sub-base.

4. The Contractor shall take all necessary precautions to prevent other excavated material or other objectionable material from becoming intermixed with the topsoil, either before or after the stripping and stockpiling operation. Stripping operations shall be completed prior to the start of excavation, trenching, or grading operations.

5. Transport all stone and debris material to stockpile holding area utilizing LGP hydraulic dump box trailers or equal attached to LGP tractors.

3.5 TURF REMOVAL, TOPSOIL EXCAVATION, AND STOCKPILING WORK

A. The Contractor is solely responsible for the discovery, presence, handling, means and methods of excavation, and responsible disposal of all material, hazardous or not, removed from the site.

B. The Landscape Architect is not responsible for pollution investigations, abatement procedures, or the means and methods of material removal and transport, nor do they direct or control the activity of any retained environmental consultant.

C. It is the contractor's responsibility to gain any and all permits that may be required for environmentally safe disposal at a recognized disposal center for the entire depth of excavation.

D. All work must be performed in the approximate sequence as listed below:

1. Site Inspection and Protection
2. Mobilize Equipment
3. Land Survey
4. Turf Removal and Disposal
5. Top Soil Excavation
6. Stockpile of Materials

E. Mobilize Equipment:

1. Delivery and removal of all required equipment to site. Mobilization will require forty- eight (48) hour notice of intent prior to delivery of any construction equipment to be left on site. Notify the Construction Manager and Landscape Architect for authorization of mobilization.

2. Any proposed equipment substitutions must be approved by the landscape Architect prior to mobilization.

3. All equipment on site must be Low Ground Pressure (L.G.P.) which is defined as having a low ground pressure by flotation tire or track that is 6 psi or less. No equipment that is not LGP is allowed on the athletic field area.

F. Land Survey:

1. Prior to the use of any construction equipment, the Contractor's proposed field layout and elevation control strategies must be determined and marked.

2. Prior to work commencing, the Contractor is responsible for examining the site, and its existing contours. The field must meet final elevations according to the Drawings.

3. The Contractor must make sure the field reconstruction meets the final elevations provided in new grading plans (provided in this specification)

G. Turf Removal:

1. Utilizing Global Positioning System or equivalent, locate and mark all site fixtures including, but not limited to, irrigation heads, quick couplers, goal post sleeves, and valve boxes.

2. Inspect area for debris and stone. "Koro Field Topmaker" cannot be run over temporary surface stabilizing material (stone, gravel sand).

3. Remove existing turf utilizing LGP turf tractor mounted "Koro Field Topmaker" or

equivalent at one (1) inch plus/minus one-eight (1/8) inch pass.

4. Transport pulverized turf and organic material to the designated stockpile holding area for removal from the site, utilizing LGP dump trailers or equivalent attached to LGP turf tractors or equivalent.

5. The Contractor is to provide equipment to load and haul all debris material away from the designated stockpile area and dispose of it off-site.

6. The contractor is responsible for off-site disposal costs and haulage fees.

7. Remove obstructions, trees, shrubs, and other vegetation to permit installation of new construction.

8. Do not remove trees, shrubs, and other vegetation indicated to remain or to be relocated.

9. Grind down stumps and remove roots, obstructions, and debris to a depth of 18 inches (450 mm) below the exposed subgrade.

10. In the athletic field areas, all stumps and roots must be removed grinding is not acceptable.

11. Use only hand methods for grubbing within protection zones.

12. Chip removed tree branches and stockpile in areas approved by Landscape Architect for reuse in tree protection zones.

13. Invasive species such as Japanese knotweed or other noxious weeds and brush must not be chipped or mulched. Pull roots and remove them intact to prevent the spread of seeds and cuttings that may root or contaminate the area.

H. Topsoil Excavation:

1. The Contractor shall provide all labor, materials, and equipment (including LGP equipment) required to provide earth moving and sub-base elevations.

2. All contaminated Topsoil is to be removed from the site and properly disposed of. Promptly notify the Landscape Architect, and document and photograph the location. if any contamination or debris is discovered and cease work in the area until the site is inspected.

3. It is the responsibility of the contractor to make all and any necessary arrangement, secure licenses and permits and provides the Landscape Architect with proof for approval. All vehicles leaving the site must comply with the relevant elements of the Site Protection Guidance as shown on plans, utilizing a stone run-out strip, trailer brush down, and covering the trailers.

4. Remove any existing stone, remaining surface stabilization materials, and other debris to the

depth of the existing topsoil.

5. The Contractor shall take all necessary precautions to prevent other excavated material or other objectionable material from becoming intermixed with the topsoil, either before or after the stripping and stockpiling operation. Stripping operations shall be completed prior to the start of excavation, trenching, or grading operations.

6. Transport all stone and debris material to the stockpile holding area utilizing LGP hydraulic dump box trailers or equal attached to LGP tractors.

7. Remove existing topsoil material to a specified depth and/or down to the existing sub-base.

8. Strip topsoil down to the subbase material in a manner to prevent intermingling with underlying subsoil or other waste materials. Identify the depth of the subbase material through inspection

9. Remove subsoil and non-soil materials from topsoil, including clay lumps, gravel, and other objects more than 2 inches (50 mm) in diameter; trash, debris, weeds, roots, and other waste materials.

I. Stockpile Location: The location must be chosen in consultation with the owner or their designee. Care must be taken to provide adequate footprint area for the stockpile to be located.

J. An estimation of the total volume of the stockpile should be agreed, this will be crucial in allowing the stockpile material to be protected from contamination, weather and environmental conditions.

K. Stockpile topsoil away from the edge of excavations without intermixing with subsoil.

L. Grade and shape stockpiles to drain surface water.

M. Cover to prevent windblown dust and erosion by water.

1. Limit the height of topsoil stockpiles to 72 inches (1800 mm) where applicable. This is to prevent anaerobic conditions within the stockpile and preserve microbial health.

2. The material may be windrowed.

3. Do not stockpile topsoil within protection zones.

4. Stockpile surplus topsoil to allow for respreading deeper topsoil.

5. Document the volume and mass of the materials that are being stockpiled for reuse/recycling.

6. Limit the organic material within stockpiles.

7. If the stockpiled material is to be held for more than 30 days, rotate the materials from the bottom to the top to prevent the development of anaerobic conditions.

8. Protect all stockpiled materials from erosion and contamination by stone, organic matter,

construction debris, or other inappropriate materials. Any contaminated stockpiled materials will need to be screened to remove contaminating debris. Cleaned materials can only be used with the approval of the Landscape Architect.

9. Remove subsoil and nonsoil materials from topsoil, including clay lumps, gravel, and other objects more than 2 inches (50 mm) in diameter; trash, debris, weeds, roots, and other waste materials.

10. Only stockpile materials in the area designated on the site plan. Do not stockpile materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.

11. Provide erosion-control measures to prevent erosion or displacement of bulk materials, discharge of soil-bearing water runoff, and airborne dust reaching adjacent properties, water conveyance systems, or walkways.

12. Stockpiled soils must be prevented from erosion which may alter particle size distributions.

13. Do not move or handle materials when they are wet or frozen.

14. Stockpiled soils must be stored in such a manner to prevent contamination by stone or other deleterious materials.

15. Differing materials, topsoil, sand, and debris for disposal must be stored in distinct areas where they will not cross-contaminate.

16. Soil stockpiles must not impede the other work on-site or present a risk of installed work.

17. Before stockpiling coordinate the location with other on-site trades.

END OF SECTION 31 1006

SECTION 311200 - SITE UTILITY PREPARATION

PART 1 GENERAL

1.1 RELATED DOCUEMENTS

A. Drawings and general provisions of the contract, including General and Supplementary Conditions and other Division I Specifications apply to this section.

1.2 SUMMARY

A. General: Perform site utility preparation in accordance with the Contract Documents.

1.3 COORDINATION

A. Coordinate and schedule the work of this Section with all trades involved to prevent interference, and to allow adequate time at the proper stage of construction to properly perform all work of this Section.

1.4 PROJECT CONDITIONS

A. Coordinate all street closings and/or obstructions, including pavement and curbing removals with all governing authorities and utility companies.

B. The existing property lines and topographic contours noted on the drawings are given for the convenience purposes only. The Engineer and the Owner will not be responsible for interpretations or conclusions drawn from this information. Notify the Architect immediately of any discrepancies in the existing property lines or existing topographic elevations.

C. Do not rely upon the location of existing structures, utilities, storm drainage structures, and piping shown on the drawings. Check and verify the location of all existing structures, utilities, and piping prior to commencing work.

D. Call 1-800-922-4455 (Call Before You Dig) and register before beginning any excavation at least 72 hours prior to the start of construction.

E. Locate and identify existing underground and overhead services and utilities within the Contract Limits. Provide adequate means of protection of utilities and services designated to remain. Repair utilities damaged during site work operations.

F. When uncharted or incorrectly charted underground piping or other utilities and services are encountered during site work operations, notify the applicable utility company immediately to obtain procedural directions. Cooperate with the applicable utility companies in maintaining active services in operation.

G. Perform site work operations and the removal of debris and waste materials to assure minimum

interference with the streets and day-to-day operations of the Owner.

H. Obtain written permission from governing authorities when required to obstruct the street. Provide alternate routes around obstructed traffic ways when required by governing authorities. Provide traffic control when and as required by the Town of Greenwich or the Connecticut Department of Transportation as applicable.

I. Remove all encumbrances which interfere with the proper fulfillment of all work without additional cost to the Owner.

J. Control dust caused by work operations. Dampen surfaces with water, as required to control all dust. Comply with air pollution control regulations of governing authorities. Exercise every reasonable precaution throughout the life of the contract to minimize dust arising from construction operations, hauling, storage, or demolition.

K. Protect existing and adjacent buildings, structures, pavement, light fixtures, and utilities to remain from damage caused by work operations. Repair and/or restore of damage caused by construction operations at no additional expense to the Owner. Protect all benchmarks, control points, and engineering reference points; re-establish, if damaged or disturbed.

PART 2 PRODUCTS

2.1 MATERIALS

A. None.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine the areas and conditions where site preparation is to be provided. Notify the Owner, in writing, of conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions have been corrected in an acceptable manner.

3.2 SITE UTILITY LAYOUT, LINES, AND LEVELS

A. Before removals, topsoil stripping, excavation, filling, or rough grading operations are started, stake out site areas for the work of this Contract. Provide layout for all site utility related items, including, but not limited to, access road limits crossing berm limits, and all miscellaneous site features.

Site utility layout is to be performed by a surveyor licensed by the State of Connecticut.

B. Site utility layout, lines and levels may be subject to possible modifications, whether by inaccuracies in existing grades, or by other site conditions. Except in the case of substantial increases in material quantities, authorized in writing by the Owner, such modifications will not entitle General Contractor(s) to additional compensation.

B. The drawings indicate existing grade elevations and contours. The existing elevations are given for the convenience purposes in arriving at the quantities of excavation, grading and backfilling. The Engineer and the Owner do not assume any responsibility for the correctness of the existing grade elevations.

3.4 SITE UTILITY DEMOLITION AND REMOVALS

A. The work includes all other existing materials or work necessary to install new work as shown and/or specified and to connect same to existing structures or pavements in an approved manner. Completely remove all foundations, abandoned utilities, and all other items that interfere with new construction.

B. Remove existing construction features as required for the execution of the contract work. Perform such work in a manner to avoid any damages to the construction and finishes scheduled to remain. Where new work is required to be built adjacent to or connected with existing construction, cut or remove the existing construction and replace with new construction to the extent required to solidly build and anchor the new work in place.

C. Completely remove existing paving, including all base material, as required to accommodate new construction. Saw cut and remove existing roadway paving a sufficient distance to permit installation of new work, as required.

3.5 DISPOSALS

A. Properly dispose of all materials and debris resulting from the demolition and removal operations; legally dispose of all materials as required by the project environmental consultant and at a location approved by the Owner.

B. Maintain all disposal routes clear, clean, and free of debris. Keep all streets clean along the disposal routes.

C. On-site burning of combustible materials is not permitted.

D. Accumulation of materials for disposal is not permitted. Disposal is to be made as fast as materials accumulate.

E. Obtain all required and necessary permits or approvals for off-site disposals.

3.6 EXISTING UTILITY AND STORM DRAINAGE ABANDONMENT

A. Completely remove all existing utilities, underground tanks and storm drainage structures and piping that interfere with new construction or as noted on the drawings. Properly cut, cap, and abandon all other utilities or storm drainage structures or piping that does not interfere with construction. Maintain all utilities to the existing buildings until the time of demolition.

C. Contact appropriate utility companies prior to abandonment and properly coordinate all work with the utility companies.

D. At all times, maintain a positive outlet for storm drainage and sanitary sewers on site were encountered.

E. Backfill removed buried utilities in accordance with project specifications, Town requirements or State requirements as applicable.

END OF SECTION

SECTION 31 2200 - GRADING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes:

1. Removal and storage of topsoil.
2. Rough grading the site for site structures.

B. Related Requirements:

1. 01 Section(s) "Construction Waste Management and Disposal" and "Sustainability Compliance Procedures" for sustainability requirements
2. Section 01 5639 - Temporary Tree and Plant Protection.
3. Section 31 1000 - Site Clearing.
4. Section 31 2300 – Excavation, Backfill, Compaction and Dewatering.
5. Section 31 2316.26 – Rock Removal.
6. Section 31 2323 – Borrow Material: Filling and compaction.
7. Section 32 9119 – Soil Preparation: Topsoil testing, planting soil placement and finish grading.
8. Section 32 9113.29 – Athletic Field Root Zone
9. Section 32 9219.22 – Athletic Field Seeding and Sodding
10. Section 32 9219 - Seeding: Finish ground cover.
11. Section 32 9300 - Plants: Finish plant materials.

1.3 SUBMITTALS

A. Project Record Documents: Accurately record actual locations of utilities remaining by horizontal dimensions, elevations or inverts, and slope gradients.

B. CTHPB Documentation Submittals: Comply with Section 01 3566.42 – Sustainability Compliance Procedures and provide the following in addition to other submittals:

1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

PART 2 PRODUCTS

2.1 MATERIALS

A. Topsoil and Planting Mix: See Section 32 9115 - Topsoil and Planting Mix

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that survey bench mark and intended elevations for the Work are as indicated.

B. Verify the absence of standing or ponding water.

3.2 PREPARATION

A. Identify required lines, levels, contours, and datum.

B. Stake and flag locations of known utilities.

C. Locate, identify, and protect from damage above- and below-grade utilities to remain.

D. Notify utility company to remove and relocate utilities.

E. Provide temporary means and methods to remove all standing or ponding water from areas prior to grading.

F. Protect site features to remain, including but not limited to bench marks, survey control points, existing structures, fences, sidewalks, paving, and curbs, from damage by grading equipment and vehicular traffic.

G. Protect trees and other plantings to remain according to Section 01 5639 - Temporary Tree and Plant Protection.

3.3 ROUGH GRADING

A. Remove topsoil from areas to be further excavated, re-landscaped, or re-graded, without mixing with foreign materials.

B. Do not remove topsoil when wet.

C. Remove subsoil from areas to be further excavated, re-landscaped, or re-graded.

D. Do not remove wet subsoil, unless it is subsequently processed to obtain optimum moisture content.

E. When excavating through roots, perform work by hand and cut roots according to Section 01 5639 - Temporary Tree and Plant Protection. F. See Section 31 2323 for filling procedures.

G. Benching Slopes: Horizontally bench existing slopes greater than 1:4 to key fill material to slope for firm bearing.

H. Stability: Replace damaged or displaced subsoil to same requirements as for specified fill.

I. Remove and replace soils deemed unsuitable by classification and which are excessively moist due to lack surface water control.

3.4 SOIL REMOVAL AND STOCKPILING

A. Remove sod and grass before stripping topsoil.

B. Strip topsoil to depth of 6 inches (150 mm) in a manner to prevent intermingling with underlying subsoil or other waste materials.

1. Remove subsoil and nonsoil materials from topsoil, including clay lumps, gravel, and other objects more than 2 inches (50 mm) in diameter; trash, debris, weeds, roots, and other waste materials.

C. Stockpile excavated topsoil on site.
1. Stockpile topsoil away from edge of excavations without intermixing with subsoil. Grade and shape stockpiles to drain surface water. Cover to prevent windblown dust and erosion by water.
2. Limit height of topsoil stockpiles to 72 inches (1800 mm).
3. Do not stockpile topsoil within protection zones.
4. Stockpile surplus topsoil to allow for respreading deeper topsoil. D. Stockpile subsoil to be re-used on site; remove remainder from site.

D. Stockpiles: Use areas designated on site; subsoil pile depth not to exceed 8 feet (2.5 m); topsoil stockpiles depth not to exceed 4 feet (1.25 m). Protect from erosion.

3.5 TOLERANCES

A. Top Surface of Subgrade: Plus or minus 0.10 foot (1-3/16 inches) (30 mm) from required elevation.

3.6 REPAIR AND RESTORATION

A. Existing Facilities, Utilities, and Site Features to Remain: If damaged due to this work, repair or replace to original condition.

B. Trees to Remain: If damaged due to this work, repair or replace according to Section 01 5639 - Temporary Tree and Plant Protection.

C. Other Existing Vegetation to Remain: If damaged due to this work, replace with vegetation according to Section 01 5639 - Temporary Tree and Plant Protection.

3.7 FIELD QUALITY CONTROL

A. See Section 31 2323 for compaction density testing.

END OF SECTION 31 2200

SECTION 312300 - EXCAVATION, BACKFILL, COMPACTION AND DEWATERING

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes

1. Excavation, backfill and compaction for buildings, retaining walls and other structures
2. Excavation, backfill and compaction for subsurface utilities
3. Removal, handling and disposal of rock not covered under Section 312316.26
4. Earth retention systems
5. Excavation, backfill and compaction for the abandonment of existing pipe
6. Temporary dewatering systems

B. Related Sections

1. Section 003132 – Geotechnical data
2. Section 023000 – Subsurface Investigations
3. Section 312500 – Soil Erosion and Sediment Controls
4. Section 312323 – Borrow Materials
5. Section 312316.26 – Rock Removal
6. Section 316616 – Aggregate Piers

1.2 REFERENCES

A. ASTM D1557-07 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft3 (2,700 kN-m/m3))

B. Federal Register 40 CFR Part 122, United State Environmental Protection Agency (USEPA) Administered Permit Programs (National Pollution Discharge Elimination System or NPDES), Storm Water Discharge

C. ASTM D1556-07 - Standard Test Method for Density and Unit Weight of Soil in Place by the Sand-Cone Method

D. ASTM D2487-06e1 - Standard Practice for Classification of Soils for Engineering Purposes (Unified Soil Classification System)

E. ASTM D6938-08a - Standard Test Method for In-Place Density and Water Content of Soil and Soil-Aggregate by Nuclear Methods (Shallow Depth)

F. 29 CFR Part 1926 Subpart P - OSHA Excavation Regulations 1926.650 through 1926.652 including Appendices A through F

1.3 DEFINITIONS

A. Benching - A method of protecting employees from cave-ins by excavating the sides of an excavation to form one or a series of horizontal levels or steps, usually with vertical or near-vertical surfaces between levels.

B. Earth Retention Systems - Any structural system, such as sheeting and bracing or cofferdams, designed to retain in-situ soils in place and prevent the collapse of the sides of an excavation in order to protect employees and adjacent structures.

C. Excavation - Any man-made cut, cavity, trench, or depression in an earth surface, formed by earth removal.

D. Protective System - A method of protecting employees from cave-ins, from material that could fall or roll from an excavation face or into an excavation, or from the collapse of adjacent structures. Protective systems include earth retention systems, sloping and benching systems, shield systems, and other systems that provide the necessary protection.

E. Registered Professional Engineer - A person who is registered as a professional engineer in the state where the work is to be performed. However, a professional engineer, registered in any state is deemed to be a "registered professional engineer" within the meaning of this standard when approving designs for "manufactured protective systems" or "tabulated data" to be used in interstate commerce.

F. Licensed Environmental Professional - A person who is registered by the State of Connecticut to render Hazardous Waste Site Cleanup Activity Opinions.

G. Shield System - A structure that is designed to withstand the forces imposed on it by a cave-in and thereby protects employees within the structure. Shields can be permanent structures or can be designed to be portable and moved along as work progresses. Additionally, shields can be either pre-manufactured or job-built in accordance with 29 CFR 1926.652(c)(3) or (c)(4). Shields used in trenches are usually referred to as "trench boxes" or "trench shields."

H. Sloping - A method of protecting employees from cave-ins by excavating to form sides of an excavation that are inclined away from the excavation so as to prevent cave-ins. The angle of incline required to prevent a cave-in varies with differences in such factors as the soil type, environmental conditions of exposure, and application of surcharge loads.

I. Temporary Dewatering System – A system to lower and control water to maintain stable, undisturbed subgrades at the lowest excavation levels. Dewatering shall be provided for all pipelines, structures and for all other miscellaneous excavations.

J. Trench - A narrow excavation (in relation to its length) made below the surface of the ground, of at least three feet in depth. In general, the depth is greater than the width, but the width of a trench (measured at the bottom) is not greater than 15 feet (4.6 m).

1.4 SUBMITTALS

A. Drawings and calculations for each Earth Retention System required in the Work. The submittal shall be in sufficient detail to disclose the method of operation for each of the various stages of construction required for the completion of the Earth Retention Systems.

1. Submit calculations and drawings for Earth Retention Systems prepared, signed and stamped by a Professional Engineer registered in the state where the work is performed.

B. Performance data for the compaction equipment to be utilized

C. Construction methods that will be utilized for the removal of rock

D. Dewatering plan for the excavation locations. Design shall include calculations and drawings stamped and signed by a Professional Engineer registered in the state where the work is performed.

1.5 QUALITY ASSURANCE

A. All Excavation, Trenching, and related Earth Retention Systems shall comply with the requirements of OSHA excavation safety standards (29 CFR Part 1926 Subpart P), and other State and local requirements. Where conflict between OSHA and State regulations exists, the more stringent requirements shall apply.

B. The following test procedures will be performed by the Owner's inspection agency. Results will be submitted to the Engineer for review.

1. Modified Proctor Test (ASTM D1557) results and soil classification (ASTM D2487) for all proposed backfill materials at the frequency specified below:

a. For suitable soil materials removed during excavation, perform one test for every 1,000 cubic yards of similar soil type. Similarity of soil types will be as determined by the Engineer.

b. For borrow materials; perform tests at frequency specified in Section 312323 - Borrow Materials.

2. Compaction test results (i.e. ASTM D6938 or ASTM D1556) at a frequency of one test for every 100 cubic yards of material backfilled. The Engineer will determine the locations and lifts to be tested.

a. The Engineer may specify additional compaction testing when there is evidence of a change in the quality of moisture control or the effectiveness of compaction.

b. If all compaction test results within the initial 25% of the total anticipated number of tests indicate compacted field densities equal to or greater than 95% of maximum dry density at optimum moisture content, the Engineer may reduce frequency of compaction testing. In no case will the frequency be reduced to less than one test for every 500 cubic yards of material backfilled.

c. The Contractor is cautioned that compaction testing by nuclear methods may not be effective where excavation sidewalls impact the attenuation of the gamma radiation or where oversize particles (i.e. large cobbles or coarse gravels) are present. In these cases, other field density testing methods may be required.

C. Employ the services of a dewatering specialist or firm when well points, deep wells, recharge systems, or equal systems are required. Specialist shall have completed at least 5 successful dewatering projects of equal size and complexity and with equal systems.

1.6 PROJECT CONDITIONS

A. Notify Call Before You Dig and obtain Call Before You Dig identification numbers.

B. Notify utility owners in reasonable advance of the work and request the utility owner to stake out on the ground surface the underground facilities and structures. Notify the Engineer in writing of any refusal or failure to stake out such underground utilities after reasonable notice.

C. Make explorations and Excavations to determine the location of existing underground structures, pipes, house connection services, and other underground facilities in accordance with Paragraph 3.2.D of this Section.

PART 2 PRODUCTS

2.1 SOIL MATERIALS

A. Fill material is subject to the approval of the Engineer and may be either material removed from excavations or borrow from off site. Fill material, whether from the excavations or from borrow, shall be of such nature that after it has been placed and properly compacted, it will make a dense, stable fill.

B. Satisfactory fill materials shall include materials classified by ASTM D 2487 as GW, GP, GM, GP-GM, GW-GM, GC, GP-GC, SW, and SP. Additional requirements are included in Section 02320.

C. Fill type shall be as indicated below and/or as shown on the drawings:

Location	Acceptable Materials
Areas Beneath Footings, Floor Slabs, or Structures	Granular Fill, Gravel Borrow, Crushed Stone
Footing, Foundation and Structure Backfill	Granular Fill, Gravel Borrow, Crushed Stone
Areas within 10' of Existing or Proposed Building or Structure Footing or Slab	Granular Fill, Gravel Borrow, Crushed Stone
Landscaped Areas	Ordinary Fill, Granular Fill, Gravel Borrow, Crushed Stone

D. Blast rock fill is suitable for use beyond 12 inches from building foundations, slabs and utilities, unless other materials are specified on the Drawings. A minimum of 12 inches of choke stone shall be placed over the blast rock fill. The blast rock fill and choke stone shall be placed in loose lift thickness not exceeding 18 inches. The blast rock fill and choke stone shall be thoroughly compacted with heavy compaction equipment to achieve a firm, stable and unyielding condition.

E. Satisfactory fill materials shall not contain trash, refuse, vegetation, masses of roots, individual roots more than 18 inches long or more than 1/2 inch in diameter, or stones over 6 inches in diameter. Unless otherwise stated in the Contract Documents, organic matter shall not exceed minor quantities and shall be well distributed.

F. Satisfactory fill materials shall not contain frozen materials nor shall backfill be placed on frozen material.

G. Excavated surface and/or pavement materials such as gravel or trap rock that are salvaged may be used as a sub-grade material, if processed to the required gradation and compacted to the required degree of compaction. In no case shall salvaged materials be substituted for the required gravel base.

2.2 DEWATERING MATERIALS

A. Provide haybales and silt fence in accordance with Section 312500.

B. Provide silt filter bags (Dandy Dewatering Bag, Dirtbag, JMP Environ-Protection Filter Bag, or equal) of adequate size to match flow rate.

C. Provide dewatering equipment and materials for engineered dewatering systems.

PART 3 EXECUTION

3.1 PREPARATION

A. Public Safety and Convenience

1. Adhere to the requirements of the latest revision of the CTDOT Standard Specifications for Roads, Bridges, and Incidental Construction, 'Form 818', for all excavation work.

2. Take precautions for preventing injuries to persons or damage to property in or about the Work.

3. Provide safe access for the Owner and Engineer at site during construction.

4. Do not obstruct site drainage, natural watercourses or other provisions made for drainage.

3.2 CONSTRUCTION

A. Earth Retention Systems

1. Provide Earth Retention Systems necessary for safety of personnel and protection of the Work, adjacent work, utilities and structures.

2. Maintain Earth Retention Systems for the duration of the Work.

3. Sheeting

a. Systems shall be constructed using interlocking corner pieces at the four corners. Running sheet piles by at the corners, in lieu of fabricated corner pieces, will not be allowed.

b. Drive sheeting ahead of and below the advancing excavation to avoid loss of materials from below and from in front of the sheeting.

c. Sheeting is to be driven to at least the depth specified by the designer of the earth retention system, but no less than 2 feet below the bottom of the Excavation.

4. Soldier piles with lagging

a. Provide soldier piles or H-piles of sizes required to contain lagging, sheeting, or planking in accordance with the approved Earth Retention System Submittal.

b. Provide heavy timber boards or planking of sizes indicated on approved Earth Retention System Submittal. Lagging boards or planking shall be secured and contained in place by H- piles (soldier piles), with boards inserted in the recesses between the H-flanges.

c. Soldier piles are to be driven to at least the depth specified by the designer of the Rarth Retention System, but no less than 2 feet below the bottom of the Excavation.

d. Install lagging members as indicated and in a manner which will prevent loss of soil. Wedge lagging members against undisturbed earth or place compacted fill or slurry fill into voids behind lagging.

5. Remove earth retention system, unless designated to be left in place, in a manner that will not endanger the construction or other structures. Backfill and properly compact all voids left or caused by the withdrawal of sheeting.

a. Remove earth retention systems, which have been designated by the Engineer to be left in place, to a depth of 3 feet below the established grade.

B. Excavation

1. Perform excavation to the lines and grades indicated on the Drawings. Backfill unauthorized over-excavation in accordance with the provisions of this Section, at no additional cost to the Owner.

2. Excavate with equipment selected to prevent damage to existing utilities or other facilities. Hand excavate as necessary to locate utilities or avoid damage.

3. Sawcut the existing pavement in the vicinity of the excavation prior to the start of excavation in paved areas, so as to prevent damage to the paving outside the requirements of construction. The sawcut shall be neat in appearance with no ragged lines; trim pavement as necessary.

4. Perform excavation in such a manner as to prevent disturbance of the final subgrade. The Engineer or Owner may require the final six inches of excavation be performed by hand, with the use of a smooth-faced bucket, or other means acceptable to the Engineer or Owner, at no additional cost if subgrade disturbance is considered excessive as judged by the Engineer or Owner.

5. During excavation, material satisfactory for backfill shall be stockpiled in an orderly manner at a distance from the sides of the excavation equal to at least one half the depth of the excavation, but in no case closer than 2 feet.

   a. Excavated material not required or not suitable for backfill shall be removed from the site and disposed of in accordance with local, State and Federal laws and regulations.

   b. Perform grading to prevent surface water from flowing into the excavation.

   c. Pile excavated material in a manner that will endanger neither the safety of personnel in the excavation nor the Work itself. Avoid obstructing sidewalks and driveways.

   d. Hydrants under pressure, valve pit covers, valve boxes, manholes, curb stop boxes, fire and police call boxes, or other utility controls shall be left unobstructed and accessible until the Work is completed.

6. Grade or create berms or swales to direct surface water from excavations to appropriate structures designed to accommodate storm water. If no structures exist, direct water to areas that minimize impacts to adjacent structures and properties.

7. Make pipe trenches as narrow as practicable and keep the sides of the trenches undisturbed until backfilling has been completed. Provide a clear distance of 12 inches on each side of the pipe.

8. Perform the excavation in such a manner as to prevent disturbance of the final subgrade. If excessive subgrade disturbance is occurring, as judged by the Owner or Engineer, then the final 6 inches of the excavation shall be performed by hand, with the use of a smooth-faced bucket, or other means acceptable to the Engineer or Owner, at no additional cost to the Owner.

    a. Grade the excavation bottom to provide uniform bearing and support for the bottom quadrant of each section of pipe.

    b. Excavate bell holes at each joint to prevent point bearing.

    c. Remove stones greater than 6 inches in any dimension from the bottom of the trench to prevent point bearing.

9. If satisfactory materials are not encountered at the design subgrade level, excavate unsatisfactory materials to the depth directed by the Engineer and properly dispose of the material. Backfill the resulting depth of excavation with satisfactory fill materials and compact in accordance with the provisions of this Section.

10. Satisfactory materials below building structures (foundations or slabs) consist of undisturbed native inorganic soils (native granular soil or native sandy clay) or bedrock, or compacted borrow placed above these materials. Existing fill or buried organic-containing materials are not suitable to remain in place below building structures and shall be completely removed from within the building footprint and footing bearing zones (defined as the 1 horizontal to 1 vertical plane extending downward and outward from one foot beyond the edge of footings) and replaced with suitable compacted backfill.

    a. An aggregate pier ground improvement alternate to complete removal and replacement of existing fill or buried organic-containing materials from below building structures shall be provided in accordance with Section 316616 – Aggregate Piers. The Owner will elect either removal and replacement or the aggregate pier alternate.

    ~~a. In lieu of complete removal and replacement of existing fill or buried organic-containing materials from below building structures, aggregate piers may be installed in accordance with Section 316616 – Aggregate Piers.~~

C. Backfill and Compaction

1. Unless otherwise specified or indicated on the Drawings, use satisfactory material removed during excavation for backfilling trenches. The Engineer may require stockpiling, drying, blending and reuse of materials from sources on the Project.

2. Spread and compact the material promptly after it has been deposited. When, in the Engineer's judgment, equipment is inadequate to spread and compact the material properly, reduce the rate of placing of the fill or employ additional equipment.

3. Prior to backfilling or placement of structures, excavated subgrades shall be proof compacted with either 10 passes of a 10-ton vibratory drum roller for open excavations or 6 passes of a large, reversible, walk behind vibratory compactor capable of exerting a minimum force of 2,000 pounds in trench or pit excavations. Soft or weak spots shall be over-excavated and replaced with compacted Granular Fill or compacted Crushed Stone wrapped in a non-woven geotextile, as directed by the Owner or their representative. If proof compaction will prove detrimental to the subgrade due to the presence of groundwater, static rolling may be allowed at the discretion of the Engineer or Owner.

    a. Where aggregate piers are installed in accordance with Section 316616 – Aggregate Piers, prepare subgrades in accordance with requirements of that section and those of the aggregate pier designer.

4. Soil bearing surfaces shall be protected against freezing and the elements before and after concrete placement. If construction is performed during freezing weather, structures shall be backfilled as soon as possible after they are constructed. Insulating blankets or other means shall be used for protection against freezing at the discretion of the Engineer or Owner.

5. When excavated material is specified for backfill and there is an insufficient amount of this material at a particular location on the Project due to rejection of a portion thereof, consideration will be given to the use of excess material from one portion of the Project to make up the deficiency existing on other portions of the Project.

    a. Use borrow material if there is no excess of excavated material available at other portions of the Project.

6. Backfilling and compaction methods shall attain at least 95% of maximum dry density at optimum moisture content as determined in accordance with ASTM D1557. All backfill shall be firm and stable after compaction.

    a. In areas outside the building footprint where structures are not supported (landscaped areas), backfilling and compaction methods shall attain at least 90% of maximum dry density at optimum moisture content as determined in accordance with ASTM D1557.

    b. In areas outside the building footprint where pavements or sidewalks are to be supported, backfilling and compaction methods shall attain at least 90% of maximum dry density at optimum moisture content as determined in accordance with ASTM D1557, except the final 2 feet below pavement or sidewalk section subgrades shall attain at least 95% of maximum dry

density at optimum moisture content as determined in accordance with ASTM D1557. The section subgrade shall be defined as the elevation of the bottom of the aggregate base/subbase, whichever is lower.

7. Do not place stone or rock fragments larger than six inches in greatest dimension in the backfill.

8. Maximum loose lift height for backfilling existing or borrow material shall be 12 inches, unless satisfactory compaction is demonstrated otherwise to the Engineer through field-testing. In no case shall loose lift height for backfilling exceed 2 feet.

9. Do not drop large masses of backfill material into the trench endangering the pipe or adjacent utilities.

10. Install pipe in rock excavated trenches on a 3/4" crushed stone bedding with a minimum depth of 6 inches. Shape the stone bedding at the pipe bells to provide uniform support. Encase the pipe in the 3/4" crushed stone bedding to a grade 6 inches over the top of the pipe and the full width of the trench.

11. Backfill from the bottom of the trench to the centerline of the pipe with the specified material. This initial backfill is to be placed in layers of no more than 6 inches and thoroughly tamped under and around the pipe. This initial backfilling shall be deposited in the trench for its full width on both sides of the pipe, fittings and appurtenances simultaneously.

12. Electrical conduit not encased in concrete, shall be backfilled with sand borrow conforming to the requirements of Section 312323. The backfill shall be placed in the trench for its full width and shall extend to 12 inches over the conduit.

13. Where excavation is made through permanent pavements, curbs, paved driveways, or paved sidewalks, or where such structures are undercut by the excavation, place the entire backfill to sub-grade with granular materials and compact in 6 inch layers, unless satisfactory compaction is demonstrated otherwise to the Engineer through field-testing. Use approved mechanical tampers for the full depth of the trench. If required, sprinkle the backfill material with water before tamping so as to improve compaction. Any trenches improperly backfilled, or where settlement occurs, shall be reopened to the depth required to correct the problem, and shall then be refilled and properly compacted with the surface restored to required grade at no additional expense.

14. The Contractor shall not place backfill against or on structures until they have attained sufficient strengths to support the loads to which they will be subjected, without distortion, cracking, or other damage. As soon as possible after the structures are adequate, they shall be backfilled with suitable backfill material.

15. Place and compact backfill around manholes, vaults, pumping stations, gate boxes or other structures in six inch layers unless satisfactory compaction is demonstrated otherwise to the Engineer through field-testing, from a point one

foot over the pipe. Exercise care to protect and prevent damage to the structures.

D. Test Pit Excavation

1. General requirements of test pits are specified in Section 023000 Subsurface Investigations and Section 316616 Aggregate Piers.

E. Dewatering

1. Obtain the following construction dewatering permits, as required:

   a. US EPA Dewatering General Permit

   b. CT DEEP permit titled "General Permit for the Discharge of Stormwater and Dewatering Wastewaters from Construction Activities" (DEEP-WPED-GP-015)

2. Provide, operate and maintain adequate pumping, diversion and drainage facilities in accordance with the approved dewatering plan to maintain the excavated area sufficiently dry from groundwater and/or surface runoff so as not to adversely affect construction procedures nor cause excessive disturbance of underlying natural ground. Locate dewatering system components so that they do not interfere with construction under this or other contracts.

3. Conduct operations so as to prevent at all times the accumulation of water, ice and snow in excavations or in the vicinity of excavated areas so as to prevent water from interfering with the progress or quality of the work.

4. Take actions necessary to ensure that dewatering discharges comply with permits applicable to the Project. Dispose of water from the trenches and excavations in such a manner as to avoid public nuisance, injury to public health or the environment, damage to public or private property, or damage to the work completed or in progress.

5. Repair any damage resulting from the failure of the dewatering operations and any damage resulting from the failure to maintain all the areas of work in a suitable dry condition, at no additional cost to the Owner.

6. Exercise care to ensure that water does not collect in the bell or collar holes to sufficient depth to wet the bell or collar of pipes waiting to be jointed.

7. Take precautions to protect new work from flooding during storms or from other causes. Control the grading in the areas surrounding all excavations so that the surface of the ground will be properly sloped to prevent water from running into the excavated area. Where required, provide temporary ditches for drainage. Upon completion of the work, all areas shall be restored to original condition.

8. Brace or otherwise protect pipelines and structures not stable against uplift during construction.

9. Do not excavate until the dewatering system is operational and the excavation may proceed without disturbance to the final subgrade.

10. Unless otherwise specified, continue dewatering uninterrupted until the structures, pipes, and appurtenances to be installed have been completed such that they will not float or be otherwise damaged by an increase in groundwater elevation.

11. Temporarily lower the groundwater level at least two feet below excavations to limit potential "boils", loss of fines, or softening of the ground. If any of these conditions are observed, submit a modified dewatering plan to the Engineer within 48 hours. Implement the approved modified plan and repair any damage incurred at no additional cost to the Owner.

12. When subgrades are soft, weak, or unstable due to improper dewatering techniques, remove and replace the materials in accordance with Section 312323 at no additional cost to the Owner.

13. Notify the Engineer immediately if any settlement or movement is detected of survey points adjacent to excavations being dewatered. If settlement is deemed by the Engineer to be related to the dewatering, submit a modified dewatering plan to the Engineer within 24 hours. Implement the approved modified plan and repair any damage incurred to the adjacent structure at no additional cost to the Owner.

14. Dewatering discharge:

    a. Install sand and gravel, or crushed stone, filters in conjunction with sumps, well points, and/or deep wells to prevent the migration of fines from the existing soil during the dewatering operation.

    b. Transport pumped or drained water without interference to other work, damage to pavement, other surfaces, or property. Pump water through a silt filter bag or other approved sedimentation device prior to discharge to grade of drainage system.

    c. Do not discharge water into any sanitary sewer system.

    d. Provide separately controllable pumping lines.

    e. The Engineer reserves the right to sample discharge water at any time.

15. Install erosion/sedimentation controls for velocity dissipation at point discharges onto non-paved surfaces.

16. Removal

    a. Do not remove dewatering system without written approval from the Engineer.

b. Backfill and compact sumps or ditches with screened gravel or crushed stone in accordance with Section 312323.

c. Remove well points and deep wells. Backfill abandoned well holes with cement grout having a water cement ratio of 1 to 1 by volume.

3.3 PROTECTION

A. Protection of Existing Structures

1. All existing foundations, conduits, wall, pipes, wires, poles, fences, property line markers and other items which the Engineer decides must be preserved in place without being temporarily or permanently relocated, shall be carefully supported and protected from damage by the Contractor. Should such items be damaged, they shall be restored by the Contractor to at least as good condition as that in which they were found immediately before the Work began.

B. Accommodation of Traffic

1. Streets and drives shall not be unnecessarily obstructed. The Contractor shall take such measures at his own expense to keep the street or road open and safe for two-way traffic unless otherwise indicated.

2. Construct and maintain such adequate and proper bridges over excavations as may be necessary or as directed for the safe accommodation of pedestrians and vehicles. Provide substantial barricades at crossings of trenches, or along the trench to protect the traveling public.

3. Where deemed necessary, such additional passageways as may be directed shall be maintained free of such obstructions. All material piles, open excavations, equipment, and pipe which may serve as obstructions to traffic shall be protected by proper lights, signage, or guards as necessary.

4. All traffic controls shall be in accordance with the Manual on Uniform Traffic Control Devices for Streets and Highways, latest edition.

C. Erosion and Sedimentation Control

1. Take all necessary steps to prevent soil erosion.

2. Plan the sequence of construction so that only the smallest practical area of land is exposed at any one time during construction.

3. Temporary vegetation and/or mulching shall be used to protect critical areas exposed during construction as judged by the Engineer.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 312316.26 – ROCK REMOVAL

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes

1. Rock excavation for trenches and structures.

B. Related Sections

1. Section 312300 – Excavation, Backfill, Compaction and Dewatering

1.2 DESCRIPTION

A. Removal of boulders greater than 1 cubic yard in volume is included under this Section of work. Removal of boulders under 1 cubic yard in volume is not considered part of this work and is considered a part of the work specified under Section 312300.

B. Rock excavation shall mean solid ledge rock or solid concrete which in the opinion of the Engineer requires for its removal, drilling and blasting, wedging, sledging, firing, or breaking up with power operated hand tools.

C. Material removed solely with a power-operated excavator or loose, previously blasted ledge, broken stone, weathered rock, cemented gravel, hardpan, or glacial till which may be encountered during excavation operations is not considered rock excavation.

1.3 SUBMITTALS

A. Construction methods that will be utilized for the removal of rock on the project.

B. Qualifications of professional blasting Consultant and a pre-blast survey.

C. A description of the proposed method for blasting, prior to beginning any blasting operations, detailing the proposed methods of blasting including the type of information to be included in the blasting monitoring seismograph reports.

1. Seismograph reports shall include plan of drilling, amount and type of loadings, kind and distribution of blasting caps, delays used and amount of explosive per day, order of firing, distance and direction of recording station from blast area, type of ground at recording station, time of readings displacements and frequency, copy or record, and brief discussion on vibratory effects.

D. Conduct pre-blast structure survey prior to start of blasting.

1. Conduct pre-blast structure survey on structures within areas affected by work that may be damaged by blasting. Include aboveground structures within at least 500 feet of areas to be blasted.

2. The purpose of the survey is to document existing conditions of structures prior to blasting. The survey is intended to be used as evidence in ascertaining whether and to what extent damage may have occurred as a result of blasting.

3. Record information for each structure surveyed:

   a. Age and type of construction

   b. Location and character of cracks

   c. Evidence of settlement and leakage

   d. Other pertinent information

4. Record pre-blast survey information on forms prepared specifically for pre-blast surveys.

5. Supplement written records with photographs or videotape recording.

6. Submit copies of written records and photographs or videotapes to respective property owner, as well as to the Engineer with the property owner's permission, prior to the start of blasting.

E. Blasting records - For each blast, document the following:

1. Location of blast in relation to Project Stationing or coordinate systems and elevation.

2. Date and times of loading and detonation of blast.

3. Name of person in responsible charge of loading and firing.

4. Details of blast design, as previously specified.

5. Vibration records including location and distance of seismograph geophones to blast and to nearest structure and measured peak particle velocity. Report peak particle velocity in units of inches per second.

6. Air-blast records. Report peak air blast values in units of pounds per square inch overpressure above atmospheric or in decibels at linear response.

7. Comments by blaster in charge regarding damage to existing facilities, adjacent property, or completed work, misfires, fly rock occurrences, unusual results, or unusual effects.

PART 2 PRODUCTS – NOT USED

PART 3 EXECUTION

3.1 BLASTING

A. Comply with OSHA, State and Local regulations when blasting and handling explosives.

1. The Town of Greenwich Fire Department approval is required for all blasting operations. A pre-blast survey must be completed. The Fire Chief or his designated representative must witness the survey.

B. Assume full responsibility for the safety of the blasting operations and perform the work in a manner that will ensure the safety of personnel and that of existing structures, adjacent buildings, and completed new construction. The Contractor will be held responsible for claims for damage to property and underground structures. Repair in kind utilities, pipelines or house services damaged while conducting pre-drilling and blasting activities. Repair and maintain roadway and paved surfaces that are cracked or damaged during the course of pre-drilling and blasting.

C. Comply with current OSHA regulations as well as engage the services of a qualified, professional blasting Consultant who will design, review, evaluate and modify the blasting operations. Design the initial blasts and conduct test blasts (minimum four tests) until regular production-controlled blast patterns are developed that produce the desired rate of excavation while meeting the requirements for vibration and air blast control specified. Periodically, or when requested by the Engineer, review the blasting operations and make such changes in the blasting operations as are required to produce a controlled blasting operation meeting the requirements of these specifications. Review by the Engineer of the Contractor's blast design shall not relieve the responsibility for obtaining adequate rock breakage.

D. Provide adequate notice to residents that may be affected by the use of explosives. In residential areas, provide the following:

1. Certificate of Insurance to cover a blasting operation.

2. Evidence that residential homes have been reviewed to satisfy all parties that pre-construction conditions are well documented.

E. Blasting Design Criteria

1. Exercise care in the drilling and blasting operations so that the remaining rock remains stable and to reduce overbreak to a minimum.

2. Control blasting by limiting the charge per delay to that which produces limited levels of ground vibrations as herein specified. Hire a qualified testing agency to measure the radial particle velocities using a seismograph. Peak radial particle velocity shall be the measure of the level of vibration.

3. The charge weight per delay used in blasting shall be such that the peak radial particle velocity shall not exceed 2.0 inches per second measured on the foundation material, rock, or overburden at the nearest structure. The Contractor shall modify the size and type of explosives used to meet this criteria or other limiting criteria.

4. For areas where controlled blasting is required, the charge weight per delay shall be such that the peak radial particle velocity shall not exceed 1.0 inch per second.

5. Air blast overpressures from blasting operations shall not exceed 0.02 psi.

6. The maximum depth of lift to be removed at any one time shall not exceed 6 feet.

7. Use blasting mats, chained logs, warning signs, guards, etc., in accordance with the best practice.

8. All blasting operations shall be done by electronic or non-electric detonation.

9. Restrict blasting to daylight hours. In no case will blasting operations be permitted before 8:00 AM or after 5:00 PM.

10. These criteria may be adjusted by the Owner, if the blasting procedures based on monitoring results or in the opinion of the Owner are likely to be disruptive to nearby businesses, people, or to cause damage to structures. These changes may require the Contractor to revise blast design and reduce the size of charges.

F. In areas where the Contractor is allowed to pre-drill and blast ledge or rock formations without first removing the over-burden, the Contractor shall be required to firmly establish a profile of the solid ledge or rock that cannot be ripped free by the excavating machine. The actual pay quantities will be based on the inspector's determination of the actual profile and extent of the rock formations drilled and blasted by the Contractor and his verification of the rock formations once the excavation has been opened.

G. Minimum excavation and clearance within rock trenches shall be per Section 312300.

H. The use of perchlorate containing explosives is prohibited.

3.2 BACKFILL

A. Backfill must be with material from the excavation or where the excavated material is considered unsuitable for backfill, with material wasted from other area of the job or, when directed by the Engineer in writing, with ordinary borrow. No stones, rocks, or boulders shall be used as backfill.

B. Minimum pipe bedding requirements shall be per Section 312300.

END OF SECTION

SECTION 312323 - BORROW MATERIALS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes

1. Gravel Borrow
2. Processed Aggregate Base
3. Granular Fill
4. Sand Borrow
5. Stone Borrow
6. Ordinary Borrow
7. Blast Rock Fill & Choke Stone

B. Related Sections

1.3 SUBMITTALS

A. Representative Samples of borrow materials taken from the source. Tag, label, and package the Samples as requested by Engineer. Provide access to the borrow site for field evaluation and inspection.

B. Provide sieve analysis (ASTM C136) from certified soils testing laboratory for all borrow materials. Take and test a sample, at no additional cost to the Owner for each 1,500 c.y. of borrow material placed.

C. Provide modified proctor analysis (ASTM D1557) from certified soils testing laboratory for all borrow materials.

1. Take and test a sample of borrow material once unless more frequent testing is deemed necessary by the Engineer or Owner due to material variation, or as directed by the Engineer.

D. The Engineer reserves the right to require more frequent testing than that which is specified above should the borrow characteristics change.

1.4 QUALITY ASSURANCE

A. No borrow shall be placed prior to the approval of Samples by the Engineer.

1.5 PROJECT/SITE CONDITIONS

A. Existing Conditions

1. Comply with any environmental requirements and restrictions.

2. Keep all public and private roadway surfaces clean during hauling operations and promptly and thoroughly remove any borrow or other debris that may be brought upon the surface before it becomes compacted by traffic. Frequently clean and keep clean the wheels of all vehicles used for hauling to avoid bringing any dirt upon the paved surfaces.

PART 2 PRODUCTS

2.1 GRAVEL BORROW

A. Gravel Borrow shall consist of inert material that is hard, durable stone and coarse sand, free from loam and clay, surface coatings, and deleterious materials. The coarse aggregate shall have a percentage of wear, by the Los Angeles Abrasion Test, of not more than 50.

Gradation requirements for Gravel Borrow shall be determined by AASHTO-T11 and T27 and shall conform to the following:

Sieve	Percent by Weight Passing

½ inch	50 – 85
No. 4	40 – 75
No. 50	8 – 28
No. 200	0 - 10

Maximum size of stone in Gravel Borrow shall be 2 inches.

2.2 PROCESSED AGGREGATE BASE

A. The compacted Processed Aggregate Base to be used for gravel access roads and pavement base, or other area where a firm, free-draining subgrade is needed shall consist of inert material that is hard, durable stone and coarse sand, free from loam and clay, surface coatings and deleterious materials. The coarse aggregate shall have a percentage of wear, by the Los Angeles Abrasion Test, of not more than 50.

B. Gradation requirements shall conform to the following:

Sieve	Percent by Weight Passing
2 ½"	100
2"	95 – 100
¾"	50 – 75
¼"	25 – 45
No. 40	5 – 20
No. 200	2 - 12

C. Stockpile the processed materials in such a manner to minimize segregation of particle sizes. All processed gravel shall come from approved stockpiles.

2.3 GRANULAR FILL

A. Granular Fill to be used as fill material to achieve gravel base grade beneath structures, pavement, or other area requiring structural fill shall consist of inert material that is hard, durable stone and sand, free from loam and clay, surface coatings and deleterious materials. The coarse aggregate shall have a percentage of wear, by the Los Angeles Abrasion Test, of not more than 50.

B. Gradation requirements for Granular Fill shall conform to the following:

	Percent by Weight Passing	
Sieve Size	**Minimum**	**Maximum**

2/3rds loose lift thickness	100	--
No. 10	30	95
No. 40	10	70
No. 200	0	15

C. Existing subsurface materials may be re-used as Granular Fill, regardless of its gradation, provided it is environmentally appropriate, free of organics, debris, stones greater than two thirds the lift thickness in diameter, or other unsuitable material, and they are placed to the required degree of compaction and to a stable condition. Brick or concrete shall be crushed to smaller than 2 inches in its longest dimension, mixed thoroughly with the soil to create a homogeneous backfill material, and shall not compose more than 20 percent of the backfill volume. Existing cobbles and boulders, if present, shall be removed from the material prior to reuse.

However, site soils which contain greater than 15% fines (material passing the No. 200 sieve) shall not be used in locations that require free draining materials such as immediately beneath slabs or pavement, or behind retaining walls. It should be noted that some of the existing site soils have a relatively high fine-grained content, which will likely make them difficult to place and compact to the required degree of compaction and to a stable condition when excessively wet, and therefore would not be suitable for use.

2.4 SAND BORROW

A. Sand Borrow material shall be supplied from an off-site borrow area approved by the Engineer. Testing of the off-site Sand Borrow shall be at the Contractor's expense.

B. Sand Borrow shall consist of clean, inert, hard, durable grains of quartz or other hard, durable, rock, free from loam or clay, surface coatings and deleterious materials. The allowable amount of material passing a No. 200 sieve as determined by ASTM-C117 shall not exceed 10% by weight.

C. Material shall consist of a clean, non-plastic, granular material conforming to the requirements of a SW, SP or SM under the Unified Soil Classification System (USCS) (ASTM D2487).

D. The material shall have the characteristics that when placed and compacted, the soil particles will bind together so as to form a solid, stable surface capable of supporting rubber-tired vehicular traffic during wet weather periods as well as extended dry weather periods. The borrow material shall not contain fines to the extent that the surface layer becomes "greasy" when wet.

E. The material shall not contain stones larger than 3/8 inch in diameter.

F. Material consisting of frozen clogs, ice and snow will be rejected.

G. All sand borrow material to be used shall be subject to approval by Engineer, and Engineer reserves the right to reject any borrow material from the job that does not meet the above requirements.

2.5 STONE BORROW

A. Crushed Stone Borrow

1. Crushed stone borrow shall consist of one of the following materials:

   a. Durable crushed rock consisting of the angular fragments obtained by breaking and crushing solid or shattered natural rock, and free from a detrimental quantity of thin, flat, elongated or other objectionable pieces. A detrimental quantity will be considered as any amount in excess of 15% of the total weight. Thin stones shall be considered to be such stones whose average width exceeds 4 times their average thickness. Elongated stones shall be considered to be stones whose average length exceeds 4 times their average width.

   b. Durable crushed gravel stone obtained by artificial crushing of gravel boulders or fieldstone with a minimum diameter before crushing of 8 inches.

2. The crushed stone shall be free from clay, loam or deleterious material and not more than 1.0% of satisfactory material passing a No. 200 sieve will be allowed to adhere to the crushed stone.

3. The crushed stone shall have a maximum percentage of wear as determined by the Los Angeles Abrasion Test (AASHTO-T-96) as follows:

   a. For Class 1 Bit. Conc. 30%**

   b. For Cement Concrete Aggregate 45%***

   c. Crushed Stone for Subbase 45%

   **Crushed stone for this use shall consist of crushed or shattered natural rock only. Crushed gravel stone will not be permitted.

   ***Except for 5000 psi or greater cement concrete and prestressed concrete which shall be 30%.

4. Crushed stone placed in total thickness greater than 6 inches shall be wrapped in a non-woven geotextile filter fabric, such as Mirafi 140N or approved equal, with the exception of where placed in rock trenches, geotextile filter fabric is not required to separate the stone from rock.

5. The crushed stone shall conform to the grading requirements shown in the following grading Table.

Sieve Size	Percent by Weight Passing Minimum	Maximum
1 ½" Crushed Stone		
2"	100	--
1 ½"	95	100
1"	35	70
¾"	0	25
¾" Crushed Stone		
1"	100	--
¾"	90	100
½"	10	50
3/8"	0	20
No. 4	0	5
3/8" Crushed Stone		
3/8"	100	--
No. 4	85	100
No. 8	10	40
No. 16	0	10
No. 50	0	5

B. Dense Graded Stone Borrow

1. The crushed stone used for backfill shall be a dense graded mixture and conform to the following gradation requirements.

Sieve Size (Square Openings)	Percent by Weight Passing Minimum	Maximum
5/8″	100	--
½″	85	100
3/8″	15	45

#4	0	15
#8	0	5

2.6 ORDINARY BORROW

A. Ordinary borrow shall have the physical characteristics of soils designated as type GW, GP, GM, SW, SP or SM, under USCS and shall not be specified as gravel borrow, sand borrow, special borrow material or other particular kind of borrow. It shall have properties such that it may be readily spread and compacted for the formation of embankments. The borrow shall not include rocks with a major dimension greater than 8 inches.

2.7 BLAST ROCK FILL & CHOKE STONE

A. Blast rock fill and choke stone shall be free from litter and foreign materials.

B. Blast rock fill shall be material generated from on-site rock removal.

C. Choke stone shall be a well-grade mixture of blast rock fill less than 6 inches in major dimension and granular fill.

D. Blast rock fill shall conform to the following gradation requirements:

	Percent by Weight Passing	
Sieve Size	**Minimum**	**Maximum**
12″	100	-
4″	0	25
¾”	0	10

PART 3 EXECUTION

3.1 INSTALLATION

A. Prior to the placement of borrow material, site preparation shall be completed as required by the Contract Documents, and approved by the Engineer.

B. Ensure that all materials are properly stockpiled on site to prevent contamination by other materials.

C. Place borrow material over the entire area in uniform lifts and compact in accordance with Section 322300.

D. Utilize on-site soils prior to using off-site borrow provided on-site soils meet the requirements of the specifications.

E. Utilize gravel borrow in all locations where a surface treatment has not been specified but requires a firm finish surface.

F. Processed aggregate base is intended to provide a stable foundation for driveways, sidewalk and roadway repair where a gravel base has been specified.

G. Borrow shall be used as a replacement for unsuitable materials where poor soil conditions are encountered during the progress of the work, where approved by the Engineer. Borrow type will be determined by the Engineer. Borrow material used as a replacement for unsuitable soil is not intended to be an aid to dewatering.

H. Shape borrow used for pipe foundation material so that it supports the pipe properly and will not damage the pipe, bells, collars, or the pipe fittings.

I. Place all borrow to keep it free of other materials and to prevent segregation.

END OF SECTION

SECTION 312333 - TRENCHING AND BACKFILLING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the contract, including General and Supplementary Conditions and other Division 1 Specifications, apply to this section.

1.2 SUMMARY

A. General: Perform trench excavation and backfill in accordance with the Contract Documents. The Work includes but is not limited to trench excavation and backfill to within five (5) feet of proposed building for the following:

1. Storm drainage, stormwater management, sanitary sewers, water distribution and site utility services construction.

B. Stanwich Road, Orchard Street and Indian Rock Lane are Town Streets and trenching and backfill requirements shall comply with Town requirements. Contractor shall obtain all necessary permits prior to any excavation within Town streets.

C. Related Sections include the following:

1. Section 312500 – Soil Erosion and Sediment Controls
2. Section 333113 – Poly Vinyl Pipe (PVC) Pipe and Fittings
3. Section 334113 – High Density Polyethylene Pipe and Fittings
4. Section 334100 – Storm Drainage
5. Section 312300 - Excavation, Backfill, Compaction and Dewatering

1.3 COORDINATION

A. Coordinate and schedule the work of this Section with all trades involved to prevent interference, and in order to allow adequate time at the proper stage of construction to properly perform all work of this Section.

PART 2 PRODUCTS

2.1 MATERIALS

A. Materials shall comply with CTDOT Form 818, "Standard Specifications for Road, Bridges, and Incidental Construction" latest revision.

B. Roadway materials installed within Town of Greenwich Roadway Right-of-Way shall conform with the Town of Greenwich Department of Public Works standards and requirements.

C. Drainage materials installed within the Town of Greenwich Roadway Right-of-Way shall conform with the Town of Greenwich Engineering Division standards, details, and requirements.

D. Sanitary Sewer installations shall conform with the Town of Greenwich Roadway Right-of-Way shall conform with the Town of Greenwich Sewer Division standards, details, and requirements.

PART 3 EXECUTION

3.1 EXCAVATION, TRENCHING AND BACKFILL

A. General: Perform excavation to the depths shown or specified.

B. During excavation, pile material suitable for backfilling in an orderly manner a sufficient distance from the banks of the trench to avoid overloading and to prevent slides or cave-ins.

C. Remove all excavated materials not required or suitable for backfill per the site environmental consultant's requirements and the Owner.

D. Grade as necessary to prevent surface water from flowing into trenches or other excavations. Remove any water accumulating therein by pumping or by other approved method.

E. Install sheeting and shoring as necessary for the protection of the Work and for the safety of personnel.

F. Unless otherwise indicated, excavation to be open cut.

G. Excavation is classified as earth excavation and includes excavation to subgrade elevations indicated, regardless of character of materials and obstructions encountered, pavements, and other obstructions visible on ground surface, underground structures, utilities, and other items indicated to be demolished and removed, together with earth and other materials, excluding rock.

H. Rock, for the purposes of classification shall consist of rock material in beds, ledges, unstratified masses, conglomerate deposits and boulders of rock material that exceed 1 cubic yard that cannot be removed by rock excavating equipment without systematic drilling, ram hammering, ripping, or blasting. Rock excavating equipment is defined as a late-model, track-mounted, hydraulic excavator equipped with a 42-inch wide, maximum, short-tip radius rock bucket, rated at not less than 138-hp flywheel power with bucket-curling force of not less than 28,090 lbf and stick-crowd force of not less than 18,650 lbf; measured according to SAE J-1179.

I. Backfill and surface excavations for utilities occurring in or across streets or sidewalks with temporary paving or crushed stone as soon as possible after Work is completed.

J. Maintain temporary paving or surfacing in a condition acceptable to the Owner until permanent pavement can be installed.

3.2 SIZES OF TRENCHES

A. Ensure trenches are the necessary width for the proper laying of the pipe and ensure the banks areas nearly vertical as practicable.

B. Accurately grade the bottom of the trenches to provide uniform bearing and support for each section of the pipe on undisturbed soil at every point along its entire length.

C. Except where rock is encountered, take care not to excavate below the depths indicated or specified.

D. Where rock excavations are required, excavate the rock to a minimum overdepth of 6 inches below the trench depths indicated on the drawings or specified.

E. Backfill overdepths in the rock excavation and unauthorized overdepths with thoroughly compacted sand or gravel as specified.

F. Whenever wet or otherwise unstable soil that is incapable of properly supporting the pipe, as determined by the Owner's Geotechnical Consultant, is encountered in the bottom of the trench, remove such soil to the depth required and backfill the trench to the proper grade with coarse sand, fine gravel, or other suitable material.

G. Ensure trenches for utilities are of a depth that will provide the following minimum depths of cover from existing grade or from indicated finished grade, whichever is lower, unless otherwise specifically shown:

1. Four feet - six inches minimum cover for water and fire protection lines,

2. Thirty inches minimum cover for electrical and telephone conduit.

3. Three feet minimum cover over storm and sanitary sewer.

4. Three feet minimum cover of gas services per utility company standards.

H. For bedding of piping, ensure the width of the trench at and below the top of the pipe is such that the clear space between the barrel of the pipe and the trench wall is between 6 and 12 inches on either side of the pipe.

I. Ensure the width of the trench above the pipe crown is as wide as necessary for sheeting and bracing and the proper performance of the Work.

J. Round the bottom of the trench so that at least the bottom quadrant of the pipe rests firmly on undisturbed soil for as nearly as the full length of the barrel as proper joining operations will permit.

K. Ensure the part of the excavation described in subsection J above is performed manually only a few feet in advance of the pipe laying by men skilled in this type of Work.

3.3 EXISTING UTILITY LINES

A. Contact "Call Before You Dig" at 1-800-922-4455 72 hours in advance of any construction to verify the location of utilities.

B. Protect existing utility lines to be retained that are shown on the drawings or the locations of which are made known to the General Contractor prior to excavation operations from damage during excavation and backfilling. If such lines are damaged, the Contractor will repair at his expense.

3.4 BACKFILL RESTRICTIONS AND REQUIREMENTS

A. Do not backfill trenches until all required pressure and other tests have been performed and until the utilities systems as installed conform to the requirements of the drawings and specification.

B. Carefully backfill the trenches with the excavated materials approved for backfilling consisting of earth, loam, sand, sand and gravel, soft shale, or other approved materials, free from large clods of earth, stones over 2-1/2 inches maximum dimension, or other undesirable material as specified in Section 31 2300. Deposit backfill in 6 inch layers then thoroughly and carefully tamp until the pipe has a cover of not less than one (1) foot.

C. Carefully place the remainder of the backfill material in the trench in one-foot layers and tamp. Settling the backfill with water is not permitted.

D. Grade the surface to a reasonable uniformity and leave the mounding over trenches in a uniform and neat condition.

E. The Owner's Geotechnical Consultant may reject any on-site or borrow materials which he considers unsuitable for intended backfill or fill usage.

F. Under all paved areas, compact the fill and/or backfill to 95% of the maximum density at optimum moisture when tested in accordance with ASTM Designation D1557.

G. Perform field density tests by the approved Soil Testing Laboratory at locations and elevations as directed.

H. Backfill trenches excavated under footings and within 18 inches of bottom of footings with compacted select backfill; fill with concrete to elevation of bottom of footings.

3.5 TRAFFIC CONTROL

A. Maintain access for vehicular and pedestrian traffic required for other construction activities and for public when working in roadway right-of-way.

B. Provide public flagmen, barricades, warning signs and warning lights as required. Obtain required Town Street opening permits before start of work.

END OF SECTION

SECTION 312500 - SOIL EROSION AND SEDIMENT CONTROLS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the contract, including General and Supplementary Conditions and other Division I Specifications, apply to this section.

1.2 SUMMARY

A. General: Perform site utility preparation in accordance with the contract documents.

B. This Section includes the following:

1. Dust control.
2. Drainage and erosion control.
3. Haybales and siltation fence.
4. Sediment trapping devices.
5. Construction Entrance.

C. Related Sections – Not Used

1.3 REFEREENCES

A. State of Connecticut Department of Transportation "Standard Specifications for Roads, Bridges, Facilities and Incidental Construction, Form 818," as amended.

1.4 SUBMITTALS – NOT USED

PART 2 PRODUCTS

2.1 HAYBALES

A. Haybales required for siltation control shall be wire tied bales of the type normally used for siltation or erosion control or construction projects.

2.2 FILTER FABRIC

A. Filter fabric siltation fencing shall be a woven filter fabric having a weight of at least 2.5 ounces per square yard, a thickness of at least 17 mils, a coefficient of permeability of not less than 0.0009 centimeters per second and allows a water flow rate of a minimum 40 gallons per minute per square yard. The material shall have a high sediment filtration capacity, high slurry flow and minimum clogging characteristics. The material shall be an approved equal to FW-300 as

manufactured by Mirafi, Inc., Charlotte, North Carolina; Amoco 2130 by Nilex, Inc., Centennial, CO; MISF 180 by Mutual Industries, PA; or approved equal.

2.3 SEDIMENT TRAPPING DEVICES

A. Sediment trapping devices shall be Siltsack®, Dandy Bag II®, or approved equal.

2.4 MULCH

A. Hay mulch shall consist of mowed cured grass, clover, alfalfa, timothy, oats, or wheat. No salt hay shall be used.

2.5 CONSTRUCTION ENTRANCE

A. Stone

1. Stone shall be crushed stone conforming to CTDOT Form 818, Article M.02.01-1, Gradation No. 3.

B. Geotextile

1. Geotextile shall be Mirafi 500X, or approved equal.

PART 3 EXECUTION

3.1 DUST CONTROL

A. Control dust during the Work. Use a mechanical street sweeper as needed or at the request of the Engineer.

B. Prevent dust from becoming a nuisance or hazard. During construction, excavated material and open or stripped areas are to be policed and controlled to prevent spreading of the material.

C. Control dust during the work on-site using calcium chloride and/or water.

D. During the Work on-site, all paved road and driveway surfaces shall be scraped and broomed free of excavated materials on a daily basis. The surfaces shall be hosed down or otherwise treated to eliminate active or potential dust conditions and the natural road or wearing surface shall be exposed.

E. Ensure that the existing equipment, facilities, and occupied space adjacent to or nearby areas of the work do not come in contact with dust or debris as a result of concrete demolition, excavation or surface preparation for coatings.

F. Control dust by the construction of temporary wooden frame/polyethylene sheeting walls and covering enclosures separating adjacent or nearby areas and equipment from the Work site.

3.2 DRAINAGE AND EROSION CONTROL

A. Control erosion and siltation during the construction through mulching, haybales, siltation fencing, diversion and control of storm water run-off, ponding areas, and similar methods.

B. Provide and maintain sediment trapping systems.

C. Discharge surface runoff from any disturbances to the site into silt containment basins. Utilize siltation prevention measures including haybale and geotextile fences before discharge to drainage systems.

D. Control surface waters within the construction area through the use of temporary culverts.

E. Install sediment trapping devices in catch basins located in existing paved areas with sediment trapping devices to minimize the transport of sediment through the subsurface stormwater collection system.

3.3 HAYBALES AND SILTATION FENCE

A. Place and maintain both haybales and a staked filter fabric siltation fence along the entire length of the proposed construction between the area of construction and where shown on the Drawings or required by permit.

B. Install haybales by anchoring bales butted together to existing ground with at least 2 stakes per bale. The stake shall be a minimum of 1-inch square cross section and shall be long enough to penetrate 12 inches into the ground. Replace deteriorated haybales. Remove and dispose of the haybales following the successful growth of vegetation in the areas disturbed by the construction. Haybales shall not be removed until their removal is approved by the Engineer.

C. Install a filter fabric siltation fence in addition to the staked haybales, prior to construction and remove after full surface restoration has been achieved. Install the siltation fence parallel and immediately adjacent to the haybales as shown on the Drawings. Install as follows:

1. Hand shovel excavate a small trench on the upstream side of the desired fence line location.

2. Unroll the siltation fence system, position the post in the back of the trench (downhill side), and hammer the post at least 1½ feet into the ground.

3. Lay the bottom 6 inches of the fabric into the trench to prevent undermining by storm water run-off.

4. Backfill the trench and compact.

3.4 CONSTRUCTION ENTRANCE

A. Install construction entrance at the locations shown on the plans.

B. Clear the area of the construction entrance of all vegetation, roots, and other objectionable material. Place the stone to the specified dimensions.

C. Maintain the pads in a condition that prevents tracking or flow of mud onto public rights-of-way. This may require periodic top dressing with CTDOT No. 3 stone, as conditions demand, and repair and/or cleanout of any structures used to trap sediment. Remove all material spilled, dropped, washed, or tracked from vehicles onto roadways or into storm drains immediately.

3.5 RESTORATION

A. Provide erosion control, seed and mulch and netting for surface restoration of areas disturbed during construction activities.

B. Provide temporary stabilization of disturbed areas that remain inactive greater than 14 consecutive days to minimize erosion. Methods to minimize erosion may include but are not limited to:

1. Spreading straw and/or providing temporary planting stabilization.

2. Installing jute netting.

3. Preparing surfaces to increase the runoff flow path, reduce the runoff flow velocity, or create small storage pockets to retain surface flows. Methods of accomplishing this include using mechanical devices such as track equipment or sheep's foot rollers.

C. Place mulch on seeded areas. Use jute netting on areas having a slope greater than 3 horizontal to 1 vertical, to anchor the mulch until a satisfactory growth is obtained. If seeding is not possible because of the time of the year, apply mulch and netting to stabilize the area until such time as seed can be sown.

D. Provide grading, refertilizing, reseeding, remulching and/or netting to maintain the restored areas until the Work is accepted by the Owner.

E. See Landscape Specifications for seed.

3.6 CLEANING

A. Remove any sediment that builds up around the haybales or catchbasins.

B. Clean sediment trapping devices periodically during the Work. Devices shall be cleaned on a weekly basis or more frequently if the devices become clogged.

C. Clean catchbasins that collect sediment as a result of the Work.

END OF SECTION

SECTION 316616 - AGGREGATE PIERS

PART 1 GENERAL

1.1 SUMMARY

A. This work shall consist of designing, furnishing, installing, and testing aggregate piers in accordance with these specifications and as shown on the Drawings. Refer to Drawing sheets C-206 and S-101A through S-101F.

B. Design and installation of the aggregate piers shall be in accordance with the criteria provided herein and good engineering practice.

C. Aggregate pier ground improvement shall be provided as an alternate to complete removal and replacement of existing fill or buried organic-containing materials from below building structures. The Owner will elect to accept or reject the aggregate pier alternate. Work associated with this specification shall not be initiated without written acceptance of the aggregate pier alternate by the Owner.

D. The Contractor shall provide the cost and associated units for the aggregate pier alternate in accordance with Section 01 2201 – Unit Prices.

E. Aggregate pier ground improvement is required for improving existing fill and buried organics for support of building foundations and the slab on grade ground floor within the unsuitable soil limits shown on the Drawings, and as verified by the Contractor.

F. Aggregate piers shall be designed and installed to account for presence of cobbles, boulders, or other obstructions within the subsurface and within pier installation depths at each pier location. The Contractor's base bid shall include installation of aggregate piers, including pre-augering each pier location prior to installation of the pier aggregate. Additionally, for 50% of the Contractor's designed piers, the Contractor's base bid shall include pre-drill of each pier using a down-hole hammer or pre-excavating each pier location and backfill of the pre-excavated pier location with excavated soil after removal of cobbles, boulders or other materials that would otherwise obstruct the installation of the pier using displacement installation methods. Unit costs for pre-drill using a down-hole hammer, and unit costs for pre-excavating each pier location and backfill of the pre-excavated pier location with excavated soil after removal of cobbles, boulders or other materials that would otherwise obstruct the installation of the pier using displacement installation methods, shall be provided. The Contractor will be paid for pre-augering each pier location and for the actual quantity of pre-drill or pre-excavate. The Contractor will be paid for only one of the pre-drill or pre-excavate installation methods employed, whichever is the method used to achieve the final installed pier tip elevation.

G. Related Sections

2. Section 312316 – Excavation, Backfill, Compaction and Dewatering
3. Section 312323 – Borrow Material

H. Where reference is made herein to the Owner, the Owner may delegate responsibilities to the Owner's Engineer or the Architect.

1.2 REFERENCES

A. Connecticut State Building Code, latest edition

B. ASTM D1143 – Standard Test Methods for Deep Foundations Under Static Axial Compressive Load

C. ASTM D6913 - Standard Test Methods for Particle-Size Distribution (Gradation) of Soils Using Sieve Analysis

1.3 QUALIFICATIONS

A. The contractor performing the work described in the specification shall have installed aggregate piers of similar size and complexity for a minimum of five years, and shall include at last ten projects completed in New England on which the contractor has installed aggregate piers of similar size and complexity to this project, with at least two projects that included use of down-hole hammer techniques for installing aggregate piers.

B. The contractor shall engage their own engineer who shall have at least five years of experience in the design and construction of aggregate piers, and shall include at last ten projects completed in New England using aggregate piers of similar size and complexity to this project. Rig operators and on-site supervisors shall have a minimum of one year experience installing aggregate piers with the contractor's organization.

C. The Owner will approve or reject the contractor's qualifications and staff within 14 calendar days after receipt of the submission. Work shall not be started on any aggregate pier nor any materials ordered until approval of the contractor's qualifications is given. The Owner may suspend the aggregate pier work if the contractor substitutes unqualified personnel for approved personnel. The contractor shall be fully liable for additional costs resulting from the suspension of work and no adjustment in contract time resulting from the suspension of work will be allowed.

1.4 DESIGN REQUIREMENTS

A. The Contractor shall be responsible for the design and construction of the aggregate pier system. The aggregate pier system shall be properly designed by a Professional Engineer registered in the State of Connecticut, who practices in a discipline applicable to work and has more than five years of experience in the design of aggregate pier systems of similar size and complexity as this project.

B. The design of the aggregate pier system shall be based on the minimum required allowable bearing pressure shown on the Contract Drawings and herein, and the allowable total and differential settlement criteria indicated herein. The aggregate pier system shall be designed in accordance with generally accepted engineering practice.

C. The aggregate pier elements shall be constructed by compacting aggregate using special high-energy impact densification equipment. Aggregate piers shall be installed by pre-augering the pier cavity or use of down-hole hammer drilling techniques, unless existing fill at the pier location is pre-excavated to remove obstructions which may otherwise refuse the aggregate pier installation equipment. It specifically shall not be assumed that piers can be installed using displacement methods without the use of pre-augering, down-hole hammer pre-drilling, or pre-excavation of existing fill.

D. The aggregate piers shall be in a columnar-type configuration and shall be used to reinforce soils for the support of foundations and the first floor building slabs within the limits shown on the Drawings, and as verified by the Contractor. Refer to Drawing sheets C-206 and S-101A through S-101F.

E. The aggregate piers shall be laid out in a logical manner such that piers are generally evenly spaced, to the extent practical, and slab-support piers align with slab joints.

F. The aggregate pier layout shall consider the elevation of the working grade, elevations of bottom of footing or foundation element subgrades, and the corresponding excavation slope angles for excavation to footing or foundation subgrades such that piers are laid out to avoid the ground improvement designer's designated "no dig zone" around installed piers, to the extent practicable.

G. Ground improvement shall be designed for any loads imposed by proposed raises in grade, as applicable.

H. Aggregate piers shall fully penetrate existing fill and buried organics and shall terminate in the inorganic native soils. The actual depths / elevations of the bottom of the piers shall satisfy the minimum penetrations referenced above, and meet the performance criteria specified herein.

I. The ground improvement designer shall coordinate with the Contractor to determine the ground elevation that will exist at the time of aggregate pier installation. The ground improvement design shall include consideration of any fill placed over the aggregate piers to achieve final elevations.

J. All underground utility lines shall be identified, located, and protected from damage or displacement. Utility companies and other responsible authorities shall be contacted to locate and mark the locations and, if they so desire, direct or assist with protecting the underground installation.

K. The aggregate pier design shall meet the following criteria:

1. Footings:
    a. Minimum allowable bearing pressure: 4 kips per square foot
    b. Total settlement: ≤ 1.0 inch
    c. Differential settlement between footings: ≤ 0.5 inch (over 30 feet)
2. Slab on Grade: Maximum total settlement: ≤0.5 inch

L. The ground improvement design shall assume footings supported on non-aggregate pier improved soils, beyond the extent of the aggregate pier improvement area, have estimated settlement of 0.75 inch for the purposes of differential settlements. The ground improvement design shall be required to satisfy differential settlement performance requirements between the aggregate pier and non-aggregate pier supported areas.

M. The ground improvement system shall be designed to preclude plastic bulging deformations at the top-of-pier design stress. The results of the modulus tests shall be used to verify the design assumptions. The requirement for performance of a successful modulus test shall not be waived without authorization by the Owner.

N. The aggregate piers shall be designed using an aggregate pier stiffness modulus to be verified by the results of the modulus test described in Part 3 of these specifications.

O. In addition to improvement of unsuitable soils for support of foundations and slabs, the intent of the aggregate piers is to minimize import and export of soil from the site. Therefore, if pre-excavate is employed, the design and construction of aggregate piers shall be such that excavated soils can be used to backfill the pre-excavated locations after removal of obstructions within the excavated material.

1.5 SUBMITTALS

A. Qualifications

1. At time of the bid, submit a list containing at least ten projects completed in New England within the past five years on which the contractor and engineer have installed aggregate piers of similar size and complexity to this project. Include at least two projects for which the contractor –utilized down-hole hammer techniques for installing aggregate piers. A brief

description of each project and a reference shall be included for each project listed. At a minimum, the reference shall include an individual's name, current email address, and current phone number.

2. Prior to the start of work, the Contractor shall submit a list identifying the engineer, equipment operators and on-site supervisors who will be assigned to the project. The list shall contain a summary of each individual's experience, and it shall be complete enough for the Owner's review. The list shall contain a summary of each individual's experience. Should the Contractor elect to change any of these intended personnel prior to or during construction of the aggregate piers, this same approval process is required for the new personnel prior to their starting work on the Project. The Contractor shall not be compensated for any delays resulting from such changes of personnel.

B. Submit a detailed narrative describing the construction method to be employed and encompassing all aspects of the site operation.

C. Submit a detailed narrative describing the means and methods to be employed for installation of aggregate piers through soils containing frequent occurrences of cobbles, boulders and/or obstructions.

D. Submit working drawings and a Design Submittal describing the ground improvement system intended for use. The working drawings and design submission, stamped/sealed by a Professional Engineer licensed in the State of Connecticut, shall be submitted at least 21 calendar days prior to the desired commencement of ground improvement work. The working drawings and Design Submittal shall include the following:

1. A written summary report which describes the overall ground improvement design.

2. Applicable code requirements and design references and methodology.

3. Design criteria including but not limited to soil strength properties, consolidation properties, unit weights, design groundwater elevation(s), and aggregate pier properties.

   a. Include references and basis for selection of matrix soil properties, including stiffness/compressibility and ratio of pier to matrix soil stiffness.

   b. Include at least five (5) modulus test results for similar aggregate piers installed in similar soil conditions to provide basis for selected ground improvement pier properties.

4. Design information including but not limited to bearing capacity analysis, settlement analysis, and details and design of load transfer pad (if required).

5. Installation means and methods, including general notes for constructing the aggregate piers and other special construction requirements.

6. Layout plan of aggregate piers, on the foundation drawing, with pier number/identification. The layout plan shall identify any piers that are expected to be located within the ground improvement designer's designated "no dig zone" around installed piers with consideration to the working elevation and bottom of footing or foundation element subgrade elevations.

7. Table listing all aggregate piers by number/identification with corresponding design pier diameter, length, top of pier elevation, tip of pier elevation, and other relevant information.

8. Requirements for repair of aggregate piers that are impacted by adjacent excavations such as to not void the aggregate pier contractor's warrantee.

9. Requirements to ensure adequate confinement of the piers between completion of installation and completion of sitework and foundation construction, including identification of piers that are expected to be impacted by adjacent construction/excavations.

10. If pre-excavation is to be performed, provide details for required excavation slope angles to avoid loss of confining stress to nearby already-installed piers, as applicable.

11. Requirements or limitations for use of excavation support systems in proximity to aggregate piers.

E. Submit requirements for backfill of locations where pre-excavation is to be performed prior to aggregate pier installation, including material composition/gradation requirements, backfilling requirements, minimum installed density, requirements for density testing, etc., as applicable.

F. Submit modulus test load test reaction piles and frame design, including diameter, type, reinforcement, depth as well as the reaction frame and beams. All details and supporting calculations shall be submitted for review.

G. Submit calibration records load cells, hydraulic jacks, pumps and pressure gauges shall be submitted at least 7 calendar days prior to performing the modulus testing.

H. The Owner will acknowledge and respond to the Contractor's working drawings and design submission within 14 calendar days after receipt of the submission.

I. Modulus Test Data – The Contractor shall furnish a description of the installation equipment, installation records, complete test data, analysis of test data, and recommended design parameter values for the aggregate piers based on the modulus test results. The report shall be stamped/sealed by a Professional Engineer licensed in the State of Connecticut.

J. Daily Progress Reports – The Contractor shall furnish a complete and accurate record of aggregate pier installation. The record shall indicate the pier location, verticality, identification number, diameter, length, volume of aggregate, and final elevations or depths of the base and top of each pier. The record shall also indicate the type and size of the installation equipment used, and the use of pre-augering, pre-drilling, or pre-excavation for installation of the pier. The Contractor shall immediately report any unusual conditions encountered during installation to the Owner.

K. As-built plans for the installed aggregate piers based on actual locations and tip elevations. The surveyed locations shall be sealed and signed by a licensed surveyor and tip elevations shall be certified by the Contractor’s Professional Engineer.

1.6 QUALITY CONTROL

A. Contractor’s Quality Control Representative

1. The Contractor shall have a full-time Quality Control Representative to verify and document all installation procedures. The Quality Control Representative shall immediately report any unusual conditions encountered during installation to the Owner. The quality procedures shall include the preparation of aggregate pier installation reports completed during each day of installation and containing the following information, as applicable:

   a. Aggregate pier location.

   b. Pre-auger or pre-drill diameter and depth, or pre-excavate depth, and description of soils encountered.

   c. Volume of aggregate introduced.

d. Aggregate pier installation depth.

e. Number of lifts.

f. Procedure to construct each lift.

g. Base diameter and height of the remaining aggregate cone formed after constructing each pier and extracting the tooling out of the ground.

h. Volume of aggregate used for each pier construction.

i. Planned and actual aggregate pier elevations at the top and bottom of the element, and explanation of deviations.

j. Type and size of hammer equipment used.

k. Aggregate description.

l. Record of flow rates of water or compressed air pressure (if applicable).

m. Documentation of any unusual conditions encountered.

B. Allow the Owner to access the work, observe, and document pier installations as required.

1.7 QUALITY ASSURANCE

A. Perform work in accordance with the Connecticut State Building Code.

B. Field Monitoring and Testing

1. Install all aggregate piers in the presence of an authorized representative of the Owner, unless otherwise notified in writing that aggregate piers can be installed without presence of the Owner.

1.8 PROJECT/SITE CONDITIONS

A. Existing Conditions

1. A geotechnical report (Geotechnical Evaluation – Greenwich Central Middle School, Greenwich, CT, by Tighe & Bond and dated January 26, 2024) has been prepared for this Project and is available for information only. The opinions expressed in this report are those of the Owner's geotechnical engineer and represent interpretations of subsoil conditions, tests, and results of analyses conducted by Owner's geotechnical engineer. Owner will not be responsible for interpretations or conclusions drawn from this information by the Contractor.

2. Subsurface conditions at the site include frequent occurrence of cobbles, boulders, and/or other obstructions. The Contractor is notified that SPT blow counts shown on the boring logs are indicative of relatively high density soils as well as soils containing materials that will obstruct penetration of direct-push displacement mandrel installation methods and possibly augers. The use of down-hole hammer or pre-excavation shall be expected in order to install the aggregate piers to the required depths.

3. The subsurface exploration information is considered to represent the conditions at the locations of the subsurface explorations at the time the subsurface explorations were made. Variations from the conditions disclosed by the subsurface explorations shall be anticipated in planning and estimating the Work.

4. Contractor shall perform test pits at the time of construction, prior to the Design Submittal, to verify the extents of unsuitable soils shown on the Drawings. Refer to Section 3.1 of this specification.

1.9 ALLOWABLE TOLERANCES

A. Centerline of aggregate piers shall not be more than 6 inches from indicated plan location.

B. Top elevation of aggregate pier shall be within +/- 1 inch of the design vertical elevation.

C. Pier tip elevation shall be within 6 inches of the design vertical elevation.

1.10 COORDINATION

A. Coordinate work with that of other trades affecting or affected by work of this Section. Cooperate with such trades to assure the steady progress of all work under the Contract.

B. The Contractor shall coordinate all excavations made subsequent to aggregate pier installations so that excavations do not encroach on the aggregate piers as shown in the approved shop drawings and design submission. Protection of completed aggregate piers is the responsibility of the Contractor. Piers that are impacted by excavations made subsequent to aggregate pier installations shall be repaired as detailed in the Design Submittal.

1.11 SEQUENCING AND SCHEDULING

A. Provide a fully equipped aggregate pier installation rig in full-time operation at the site during the Work and mobilize additional equipment, if necessary, to complete the Work on schedule.

B. Aggregate piers located in areas to be excavated or demolished, shall not be installed until the excavation has been completed.

C. Commence installing the initial aggregate piers for selection of the modulus test element immediately upon mobilizing to the site.

D. Once the test element has been installed, tested and approved, commence installation of production aggregate piers. Contractor may proceed with production aggregate pier installation prior to completion of the test at his own risk, with approval from the Owner.

1.12 DELIVERY, STORAGE AND HANDLING

A. Stockpile materials only in indicated staging areas within the property limits. Keep public ways and areas clean and clear of all spillages from construction operations and from trucks hauling materials to or from the project site.

B. Take special care in promptly and legally disposing of material from the work area, including all drill spoils. Disposal of drill spoils on-site or in the sewer system shall not be permitted. No temporary collecting ponds or lagoons shall be allowed.

PART 2 PRODUCTS

2.1 AGGREGATE

A. Aggregate used for aggregate pier construction shall be Type 1 Grade B in accordance with ASTM D1241-68, No. 57 stone. Aggregate shall demonstrate suitable performance during modulus testing.

B. Potable or other suitable water shall be used to increase aggregate moisture content where required. The Contractor shall provide all water needed for aggregate pier construction.

PART 3 EXECUTION

3.1 SUBUSRFACE INVESTIGATIONS

A. Contractor shall perform test pits at the perimeter of the limits of unsuitable soils shown on the Drawings to verify the extents (lateral and vertical) of unsuitable for aggregate pier design and installation. Test pits shall be performed at maximum 50-foot increments along the perimeter of the limits of unsuitable soils shown on the Drawings, where that perimeter is within the interior of the building footprint. Where unsuitable soils are observed to be present at the limits of unsuitable soils shown on the Drawings, excavate additional test pit(s) at 15-foot distances perpendicular to the limits of unsuitable soils shown on the Drawings to delineate the extents of unsuitable soils.

B. Coordinate with the Owner for performing test pits of this section. The Owner will record subsurface conditions at the test pits, including composition of soils encountered and determination of depth to top of inorganic native soils.

3.2 GENERAL REQUIREMENTS

A. The Contractor shall protect existing adjacent property, utilities and structures, and completed work from damage associated with the aggregate pier installation operation. Damage due to aggregate pier installation shall be repaired by the Contractor at their own expense.

B. The Contractor shall determine the aggregate pier locations in the field and establish all elevations required.

C. The Contractor shall employ a licensed Connecticut Professional Land Surveyor or a Connecticut Professional Civil Engineer, familiar with aggregate pier installation, who shall establish lines and levels. The Contractor shall be responsible for the correct location of aggregate piers, and establishing actual aggregate pier locations.

D. Install all aggregate piers at the proper locations shown in the Design Submittal, unless superseded by revised plan provided by the ground improvement designer and approved by the Owner. Aggregate pier locations shall be checked during installation and appropriate measures taken, as necessary to maintain the correct aggregate pier location.

E. Prior to installation of the aggregate pier elements, each pier location shall be prepared by pre-augering a cavity to the design pier depth.

F. If cobbles, boulders, or other obstructions are encountered that prevent pre-augering of the cavity to the design pier depth, the use of (an) additional method(s) below shall be employed to achieve the design pier depth:

1. Use of a down-hole hammer to pre-drill/pre-bore the aggregate pier cavity such that obstructions will not prevent installation of the aggregate pier to the design depth; or

    a. The down-hole hammer shall be of sufficient diameter such that the aggregate pier tooling can be installed through the pre-bored cavity without being obstructed by buried obstructions.

2. Pre-excavating the existing fill, removing any obstructions that would otherwise refuse the pier installation equipment, and then backfilling the excavation with excavated materials after removal of obstructions from the soil matrix.

3.3 INSTALLATION

A. The following are general criteria for the construction of the aggregate piers. Unless otherwise approved by the Owner, the installation method used for ground improvement construction shall be that as used in the construction of the successful modulus test pier(s).

B. Use machines or combinations of machines and equipment that are in good working condition, are safe to operate and will produce the results specified herein.

C. Use equipment that is capable of advancing the aggregate piers through the subsurface materials efficiently and timely to meet the project schedule.

D. The equipment shall be of sufficient size and capacity, and be capable of installing aggregate piers to the minimum depths required by the design.

E. The equipment shall be capable of installing aggregate piers in the presence of very dense granular soils and obstructions, where encountered.

F. Aggregate Pier Systems

1. After pre-augering, pre-drilling or pre-excavation, aggregate pier systems shall be constructed by advancing a specially designed mandrel with a minimum 15-ton static force augmented by dynamic vertical ramming energy to the full design depth. The hollow-shaft mandrel, filled with aggregate, is incrementally raised, permitting the aggregate to be released into the cavity, and then lowered by vertically advancing and/or ramming to densify the aggregate and force it laterally into the adjacent soil. The cycle of raising and lowering the mandrel is repeated to the top of pier elevation. The cycle distance shall be determined by the aggregate pier designer.

2. A high-energy impact densification apparatus shall be employed to vertically densify the aggregate pier elements during installation of each constructed lift of aggregate.

3. Densification shall be performed using a mandrel/tamper. The mandrel/tamper foot is required to adequately increase the lateral earth pressure in the matrix soil during installation. Compaction equipment that induces horizontal vibratory energy shall not be permitted.

4. Downward crowd pressure shall be applied to the mandrel during installation.

G. Obstructions

1. Obstructions, such as rocks, cobbles, boulders, and/or gravel shall be anticipated within the fill and native soils. The Contractor shall have sufficient capacity, equipment, and tooling necessary to allow for aggregate piers to achieve the design tip elevations, including penetrating obstructions, unless obstructions are otherwise pre-excavated. Piers terminating in existing fill shall be rejected.

H. Modulus Test

1. A modulus test shall be performed to verify the parameter values selected for the design of the aggregate piers. The test pier shall be agreed upon by the ground improvement designer and the Owner. The modulus test shall include the following:
   a. The test element shall be tested to a load equal to the element area times at least 150 percent of the aggregate pier maximum design stress (not allowable bearing pressure for footings) to demonstrate that the element exhibits safe response during service loading.

b. The top of the pier shall be exposed and a test plate/cap having the same diameter as the test aggregate pier shall be placed/constructed. The test plate/cap shall not extend beyond the edge of the aggregate pier.

c. General test procedures, including load increments, load increment duration, and load decrements shall be in accordance with ASTM D1143 and ASTM D1194.

d. A telltale shall be installed at the bottom of the test aggregate pier so that bottom-of-aggregate pier deflections can be determined.

e. With the exception of the load increment representing approximately 117% of the design maximum stress at the top of the aggregate pier, all load increments shall be held for a minimum of 15 minutes, a maximum of 1 hour, and until the rate of deflections reduces to 0.01 inches per hour or less.

f. The load increment that represents approximately 117% of the design maximum stress on the aggregate pier shall be held for a minimum of 15 minutes, a maximum of 4 hours, and until the rate of deflection reduces to 0.01 inches per hour or less.

g. A seating load equal to 5% of the maximum load shall be applied to the test place/cap prior to application of load increments and prior to measurement of deflections to compensate for surficial disturbance.

h. Modulus testing shall be performed in accordance with the requirements outlined in the Design Submittal.

i. The location of the modulus test shall be approved by the Owner.

j. The modulus test pier shall be installed in a manner that will be consistently used throughout aggregate pier installation. The details of the installation procedure shall be recorded by the Contractor's quality control representative.

3.4 SITE SUBGRADE PREPARATION

A. Subgrades shall be prepared in accordance with Section 312316 Excavation, Backfill, and Compaction and the following paragraphs.

B. Prior to placing fill on the aggregate pier subgrade, the exposed subgrade soils shall be thoroughly compacted with a hand-operator vibratory compactor or vibratory roller. Static compaction may be allowed if acceptable to the Owner. Compaction shall be performed on the same day that fill is to be placed and shall extend over the entire subgrade to compact any loose surficial soil.

C. Excavation and compaction of all subgrades shall be the responsibility of the Contractor.

D. Excavations to expose the tops of aggregate piers shall be made carefully to prevent disturbance of the piers. Excavations shall be protected until concrete placement to prevent softening of the matrix soil between and around the aggregate piers before placing concrete.

3.5 REJECTED AGGREGATE PIERS

A. Aggregate piers improperly located or installed beyond the maximum allowable tolerances shall be abandoned and replaced with new piers unless the Designer and Owner approve other remedial measures. Aggregate piers terminating above the inorganic native soils shall be rejected. All material and labor required to replace rejected piers shall be provided at no additional cost to the Owner.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 0529 - GLACIAL BOULDERS FOR EXTERIOR IMPROVEMENTS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Glacial Boulders.

B. Related Requirements:

1. Section 017419 - Construction and Demolition Waste Management and Disposal.

2. Division 01 Section(s) "Construction Waste Management and Disposal" and "Sustainability Compliance Procedures" for sustainability requirements

3. Section 31 2200 - Grading: Preparation of site for boulder placement.

4. Section 31 2300 Excavation, Backfill, Compaction and Dewatering: Excavation for installing concrete footings.

1.3 SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Section 01 3566.42 – Sustainability Compliance Procedures and provide the following in addition to other submittals:

1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

B. Photographs for Initial Selection: For each source of glacial boulders, provide at least ten photographs of all sizes of boulders. Provide at least three sources from which the Landscape Architect is to select.

C. Photographs for Verification:
1. For each boulder indicated, include at least four photographs of three potential boulders

considered for use. Photographs are to exhibiting extremes of the full range of color and other visual characteristics. If fewer than the required number of boulders are selected from the submitted photographs, additional photographs shall be submitted for selection.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain boulders through one source from a single supplier.

B. Boulder Review and Selection: Landscape Architect may observe review and select individual boulders either at the source or at site before placement for compliance with requirements and may reject unsatisfactory boulders at any time during progress of work. Remove rejected boulders immediately from Project site.

1. Notify Landscape Architect of sources of boulders seven days in advance of delivery to site.

C. Pre-installation conference: Conduct conference at project site to comply with requirements in Section 01 3000 - Administrative Requirements. The purpose of the conference is to meet with Landscape Architect on-site to select boulders to be used.

PART 2 PRODUCTS

2.1 LEED PERFORMANCE REQUIREMENTS

A. For all permanently installed products and materials related to the work of this Section, provide products and materials that meet the Project's LEED performance criteria as outlined in PART 2–PRODUCTS of Section 018113 – Sustainable Design Requirements.

2.2 STONE SOURCE

A. Varieties and Sources: Obtain materials of each type from same source for the entire project. Approval of stone supplier is required prior to purchase.

2.3 GLACIAL BOULDERS

A. Boulders: Off-site Shall be selected from on-Site boulders and shall be randomly sized. Boulder size shall vary from the maximum size to the minimum size. No boulders shall be obtained from on-site unless approved by the Landscape Architect.
   1. Boulders shall be naturally rounded glacial erratics as found in glacial till deposits on-site, and to be of solid basalt, sedimentary or granitic naturally occurring stone, free from flaking, decomposition or weathering.
   2. Boulders shall not be stone material from ledge excavations.
   3. Minimum Size: 4 feet by 3 feet by 3 feet.
   4. Maximum Size: No maximum however some of the largest should be at least be 8 feet by 6 feet by 6 feet.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for correct and level finished grade, mounting surfaces, installation tolerances, and other conditions affecting performance.
   1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 GLACIAL BOULDERS

A. Install boulders at locations, elevations and height as indicated on the Drawings and as directed by Landscape Architect.

B. Set firmly in place with approximately half the boulder exposed as indicated on the Drawings.

3.3 CLEANUP AND PROTECTION

A. After completing installation of boulders, remove spots, dirt, and debris.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 1216 - ASPHALT PAVING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. The State of Connecticut Department of Transportation Standard Specifications for Roads, Bridges and Incidental Construction, Form 816, 2004, and latest Supplemental specifications (ConnDOT Form 816) apply to this work, with the exception of provisions for measurements and payments.

1.2 SUMMARY

A. This Section includes the following:

1. Hot-mix asphalt paving of parking lots and drives.
2. Hot-mix porous asphalt paving of parking lots and drives.
3. Hot-mix asphalt paving of walkways.
4. Pavement-marking paint of parking lots and driveway.

B. Related Requirements:

1. Division 01 Section(s) "Construction Waste Management and Disposal" and "Sustainability Compliance Procedures" for sustainability requirements

2. Division 31 Section "Excavation, Backfill, Compaction and Dewatering" for aggregate subbase and base courses and for aggregate pavement shoulders.

3. Division 32 Section "Concrete Paving Joint Sealants" for joint sealants and fillers at paving terminations.

C. Alternates: Refer to Division 01 Section "Alternates" for description of Work of this Section affected by alternates.

1.3 DEFINITIONS

A. Hot-Mix Asphalt Paving Terminology: Refer to ASTM D 8 for definitions of terms.

B. ConnDOT: Connecticut Department of Transportation.

1.4 SYSTEM DESCRIPTION

A. Provide hot-mix asphalt paving according to materials, workmanship, and other applicable requirements of standard specifications of State of Connecticut Department of Transportation (ConnDOT).

1.5 SUBMITTALS

A. Product Data: For each type of product indicated. Include technical data and tested physical and performance properties.

B. CTHPB Documentation Submittals: Comply with Section 01 3566.42 – Sustainability Compliance Procedures and provide the following in addition to other submittals:

1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

C. Job-Mix Designs: Certification, by authorities having jurisdiction, of approval of each job mix proposed for the Work.

D. Job-Mix Designs: For each job mix proposed for the Work.

E. Shop Drawings: Indicate pavement markings, lane separations, and defined parking spaces. Indicate, with international graphics symbol, spaces dedicated to people with disabilities.

F. Samples: For each paving fabric, 12 by 12 inches (300 by 300 mm) minimum.

G. Qualification Data: For manufacturer and synthetic track base installer.

H. Material Test Reports: For each paving material.

I. Material Certificates: For each paving material, signed by manufacturers.

1.6 QUALITY ASSURANCE

A. Paving Installation Qualifications: Company shall have successful experience in the installation of the various standard and porous bituminous pavement and base installations required as part of this project. The Contractor shall provide competent workmen skilled in installations.

1. The installer’s supervisor shall have a minimum of 5 years of experience as either a construction manager or a supervisor of synthetic track base installations.

2. The installer shall have a minimum of 5 track installations.

B. Manufacturer Qualifications: A qualified manufacturer.

1. Manufacturer shall be a paving-mix manufacturer registered with and approved by and registered with ConnDOT.

C. Testing Agency Qualifications: Qualified according to ASTM D 3666 for testing indicated, as documented according to ASTM E 548.

D. Asphalt-Paving Publication: Comply with AI MS-22, "Construction of Hot Mix Asphalt Pavements", unless more stringent requirements are indicated.

E. Preinstallation Conference: Conduct conference at Project site.

1. Review methods and procedures related to hot-mix asphalt paving including, but not limited to, the following:

a. Review proposed sources of paving materials, including capabilities and location of plant that will manufacture hot-mix asphalt.
b. Review requirements for protecting paving work, including restriction of traffic during installation period and for remainder of construction period.

F. Flood Testing: At the discretion of the Landscape Architect, the Contractor shall flood test all asphalt pavement for proper drainage by flooding with water in ample quantities to demonstrate the correct shaping of the pavement.

1. Flood testing of subbase for synthetic running track subbase is mandatory.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver pavement-marking materials to Project site in original packages with seals unbroken and bearing manufacturer's labels containing brand name and type of material, date of manufacture, and directions for storage.

B. Store pavement-marking materials in a clean, dry, protected location within temperature range required by manufacturer. Protect stored materials from direct sunlight.

1.8 PROJECT CONDITIONS

A. Environmental Limitations: Do not apply asphalt materials if subgrade is wet or excessively damp or if the following conditions are not met:

1. Tack Coat: Minimum surface temperature of 60 deg F(15.5 deg C).
2. Slurry Coat: Comply with weather limitations of ASTM D 3910.

3. Asphalt Base Course: Minimum surface temperature of 40 deg F(4 deg C) and rising at time of placement.

4. Asphalt Surface Course: Minimum surface temperature of 60 deg F(15.5 deg C) at time of placement.

B. Pavement-Marking Paint: Proceed with pavement marking only on clean, dry surfaces and at a minimum ambient or surface temperature of 40 deg F(4 deg C) for oil-based materials, 50 deg F(10 deg C) for water-based materials, and not exceeding 95 deg F(35 deg C).
1. Provide manufacturer's standard warranty, minimum of one year.

PART 2 - PRODUCTS

2.1 AGGREGATES

A. General: Use materials and gradations that have performed satisfactorily in previous installations.

B. Base Coarse: Comply with Section "Earth Moving" for pavement base materials. Processed Aggregate base material for Asphalt Paving shall comply with the requirements of Section M.05.01 of ConnDOT 816.

C. Subbase Course: Comply with Section "Earth Moving" for pavement subbase material.

D. Mineral Filler: Comply with section M.04.01.1a of ConnDOT 816.

E. Reclaimed Asphalt Pavement: Comply with Section M.02.01.3 for use as subbase material under bituminous concrete pavement.

2.2 ASPHALT MATERIALS

A. Asphalt Cement: AASHTO M226.

B. Tack Coat: AASHTO M 140, emulsified asphalt, cationic emulsified asphalt, slow setting, diluted in water, of suitable grade and consistency for application.

C. Water: Potable.

2.3 AUXILIARY MATERIALS

A. Herbicide: Commercial chemical for weed control, registered by the EPA. Provide in granular, liquid, or wettable powder form.

B. Joint Sealant: Comply with section M.04.02 of ConnDOT 816.

C. Pavement-Marking Paint: comply with section M.07.20 of ConnDOT 816, for 15 minute dry paint.

1. Color: White, blue, Yellow. (see plans and details for color use.)

2.4 MIXES

A. Recycled Content of Hot-Mix Asphalt: Postconsumer recycled content and preconsumer recycled content conforming with Section M.04.01.5 of ConnDOT Form 816.

B. Hot-Mix Asphalt:

1. Base Course: Class 1: Complying with Section M.04.01 of ConnDOT Form 816.
2. Surface Course: Class 2: Complying with Section M.04.01 of ConnDOT Form 816.
3. Subbase Course: Class 4: Complying with Section M.04.01 of ConnDOT Form 816.
4. Porous Bituminous Concrete Paving: Shall be equal to Porous Bituminous Concrete – Torrington Plant Mix as provided by O & G Industries, Inc (860.489.9261). Base and choker courses shall be as detailed and noted on the drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that subgrade is dry and in suitable condition to support paving and imposed loads.

B. Proof-roll subbase using heavy, pneumatic-tired rollers to locate areas that are unstable or that require further compaction.

C. Proceed with paving only after unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

A. General: Immediately before placing asphalt materials, remove loose and deleterious material from substrate surfaces. Ensure that prepared subgrade is ready to receive paving.

1. Sweep loose granular particles from surface of unbound-aggregate base course. Do not dislodge or disturb aggregate embedded in compacted surface of base course.

B. Herbicide Treatment: Apply herbicide according to manufacturer's recommended rates and written application instructions. Apply to dry, prepared subgrade or surface of compacted-aggregate base before applying paving materials.

1. Mix herbicide with prime coat if formulated by manufacturer for that purpose.

C. Tack Coat: Apply uniformly to surfaces of existing pavement at a rate of 0.05 to 0.15 gal./sq. yd.(0.2 to 0.7 L/sq. m).

1. Allow tack coat to cure undisturbed before applying hot-mix asphalt paving.
2. Avoid smearing or staining adjoining surfaces, appurtenances, and surroundings. Remove spillages and clean affected surfaces.

3.3 PROCESSED AGGREGATE BASE:

A. Box-out and place processed Aggregate Base in locations and to depths indicated on the drawings.

B. Compact Processed Aggregate Base to 95% ASHO compaction as in compliance with Form 816.

3.4 HOT-MIX ASPHALT PLACING

A. Machine place hot-mix asphalt on prepared surface, spread uniformly, and strike off. Place asphalt mix by hand to areas inaccessible to equipment in a manner that prevents segregation of mix. Place each course to required grade, cross section, and thickness when compacted.

1. Place hot-mix asphalt subbase and base course in number of lifts and thicknesses indicated.
2. Place hot-mix asphalt surface course in single lift.
3. Spread mix at minimum temperature of 250 deg F (121 deg C).
4. Begin applying mix along centerline of crown for crowned sections and on high side of one-way slopes, unless otherwise indicated.
5. Regulate paver machine speed to obtain smooth, continuous surface free of pulls and tears in asphalt-paving mat.

B. Place paving in consecutive strips not less than 10 feet (3 m) wide unless infill edge strips of a lesser width are required.

1. After first strip has been placed and rolled, place succeeding strips and extend rolling to overlap previous strips. Complete a section of asphalt base course before placing asphalt surface course.

C. Promptly correct surface irregularities in paving course behind paver. Use suitable hand tools to remove excess material forming high spots. Fill depressions with hot-mix asphalt to prevent segregation of mix; use suitable hand tools to smooth surface.

3.5 JOINTS

A. Construct joints to ensure a continuous bond between adjoining paving sections. Construct joints free of depressions with same texture and smoothness as other sections of hot-mix asphalt course.

1. Clean contact surfaces and apply tack coat to joints.
2. Offset longitudinal joints, in successive courses, a minimum of 6 inches (150 mm).
3. Offset transverse joints, in successive courses, a minimum of 24 inches (600 mm).
4. Construct transverse joints as described in AI MS-22, "Construction of Hot Mix Asphalt Pavements".
5. Compact joints as soon as hot-mix asphalt will bear roller weight without excessive displacement.
6. Compact asphalt at joints to a density within 2 percent of specified course density.

3.6 COMPACTION

A. General: Begin compaction as soon as placed hot-mix paving will bear roller weight without excessive displacement. Compact hot-mix paving with hot, hand tampers or vibratory-plate compactors in areas inaccessible to rollers.

1. Complete compaction before mix temperature cools to 185 deg F(85 deg C).

B. Breakdown Rolling: Complete breakdown or initial rolling immediately after rolling joints and outside edge. Examine surface immediately after breakdown rolling for indicated crown, grade, and smoothness. Correct laydown and rolling operations to comply with requirements.

C. Intermediate Rolling: Begin intermediate rolling immediately after breakdown rolling while hot-mix asphalt is still hot enough to achieve specified density. Continue rolling until hot-mix asphalt course has been uniformly compacted to the following density:

1. Average Density: 96 percent of reference laboratory density according to AASHTO T 245, but not less than 94 percent nor greater than 100 percent.
2. Average Density: 92 percent of reference maximum theoretical density according to ASTM D 2041, but not less than 90 percent nor greater than 96 percent.

D. Finish Rolling: Finish roll paved surfaces to remove roller marks while hot-mix asphalt is still warm.

E. Edge Shaping: While surface is being compacted and finished, trim edges of pavement to proper alignment. Bevel edges while asphalt is still hot; compact thoroughly.

F. Repairs: Remove paved areas that are defective or contaminated with foreign materials and replace with fresh, hot-mix asphalt. Compact by rolling to specified density and surface smoothness.

G. Protection: After final rolling, do not permit vehicular traffic on pavement until it has cooled and hardened.

H. Erect barricades to protect paving from traffic until mixture has cooled enough not to become marked.

3.7 INSTALLATION TOLERANCES FOR GENERAL PAVING

A. Thickness: Compact each course to produce the thickness indicated within the following tolerances:

1. Base Course: Plus or minus 1/2 inch (13 mm).
2. Surface Course: Plus 1/4 inch(6 mm), no minus.

B. Surface Smoothness: Compact each course to produce a surface smoothness within the following tolerances as determined by using a 10-foot(3-m) straightedge applied transversely or longitudinally to paved areas:

1. Base Course: 1/4 inch (6 mm)
2. Surface Course: 1/8 inch (3 mm).
3. Crowned Surfaces: Test with crowned template centered and at right angle to crown. Maximum allowable variance from template is 1/4 inch (6 mm).

3.8 PAVEMENT MARKING

A. Do not apply pavement-marking paint until layout, colors, and placement have been verified with Landscape Architect.

B. Allow paving to age for 30 days before starting pavement marking.

C. Sweep and clean surface to eliminate loose material and dust.

D. Apply paint with mechanical equipment to produce pavement markings, of dimensions indicated, with uniform, straight edges. Apply at manufacturer's recommended rates to provide a minimum wet film thickness of 15 mils(0.4 mm).

3.9 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections and to prepare test reports.

1. Testing agency will conduct and interpret tests and state in each report whether tested Work complies with or deviates from specified requirements.

B. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

C. Thickness: In-place compacted thickness of hot-mix asphalt courses will be determined according to ASTM D 3549.

D. Surface Smoothness: Finished surface of each hot-mix asphalt course will be tested for compliance with smoothness tolerances.

E. In-Place Density: Testing agency will take samples of uncompacted paving mixtures and compacted pavement according to ConnDOT 816.

F. Flood Testing: All asphalt pavements shall be flood tested for proper drainage by flooding with water in ample quantities to demonstrate the correct shaping of the pavement.

1. Landscape Architect must be present to witness the flood tests. The Contractor shall notify the Landscape Architect a minimum of 3 working days prior to the flood testing.
2. Flood test immediately after the asphalt is capable of handling traffic, but within 24 hours. If, after 20 minutes of drying time there are birdbaths evident, pavement with excessive ponding shall be repaired. Areas with ponding which have a water depth of 3/16 inch or more shall be corrected.

3. Repair: Any areas requiring correction by means of remedial overlay shall be prepared by grinding the pertinent areas and placement of fine asphalt concrete patch mix over a tack coat. No cold tar patching, skin patching or sand mix patching will be acceptable.
4. Repair of Subbase for Synthetic Running Track: Corrective action method and materials for ponding on subbase of synthetic running track shall be accepted in writing by the Synthetic Running Track Contractor.

G. Oils Spills on Subbase of Synthetic Running Track: Any oil spills (hydraulic, diesel, motor oil, etc.) must be completely removed, either by chipping out or removing and replacing with new, keyed in asphalt. The minimum depth of any asphalt replacement shall be one inch. The curing time for the asphalt base is 28 days. It shall be the responsibility of the Synthetic Running Track Contractor to determine if the asphalt substrate has cured sufficiently prior to the application of synthetic running track surfacing system.

H. Remove and replace or install additional hot-mix asphalt where test results or measurements indicate that it does not comply with specified requirements.

3.10 DISPOSAL

A. Except for material indicated to be recycled, remove excavated materials from Project site and legally dispose of them in an EPA-approved landfill.

1. Do not allow excavated materials to accumulate on-site.

END OF SECTION 32 1216

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 1313 - CONCRETE PAVING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. State of Connecticut, Department of Transportation, Form 816 Standard Specification of Roads, Bridges and Incidental Construction, 1995, and as amended.

1.2 SUMMARY

A. This Section includes exterior cement concrete pavement for the following:

1. Concrete Sidewalk Pavement.
2. Concrete Footing for Bleachers.
3. Heavy Duty Concrete Pavement.
4. Concrete Utility Pads.
5. Concrete Curbs.
6. Concrete Edge at Synthetic Track Trench Drain.
7. Concrete Edge at Synthetic Sports Field.
8. ADA detectable warning tiles.

B. Related Requirements:

1. Division 01 Section(s) "Construction Waste Management and Disposal" and "Sustainability Compliance Procedures" for sustainability requirements

2. Division 03 Section "Cast-in-Place Concrete" for footings of walls, stairs, signs, site furnishings, and other general building applications of concrete.

3. Division 11 Section "Track and Field Equipment" for formwork of track and field events.

4. Division 31 Section "Excavation, Backfill, Compaction and Dewatering" for subgrade preparation, grading, and subbase course.

C. Alternates: Refer to Division 01 Section "Alternates" for description of Work of this Section affected by alternates.

1.3 DEFINITIONS

A. Cementitious Materials: Portland cement alone or in combination with one or more of blended hydraulic cement, fly ash and other pozzolans, and ground granulated blast-furnace slag.

1.4 SUBMITTALS

A. Product Data: For each type of manufactured material and product indicated.

B. CTHPB Documentation Submittals: Comply with Section 01 3566.42 – Sustainability Compliance Procedures and provide the following in addition to other submittals:

1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

C. Design Mixtures: For each concrete pavement mixture. Include alternate mixture designs when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

D. Qualification Data: For manufacturer.

E. Material Test Reports: From a qualified testing agency indicating and interpreting test results for compliance of the following with requirements indicated, based on comprehensive testing of current materials:

1. Aggregates.

F. Material Certificates: Signed by manufacturers certifying that each of the following materials complies with requirements:

1. Cementitious materials.
2. Steel reinforcement and reinforcement accessories.
3. Admixtures.
4. Curing compounds.
5. Joint fillers.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Manufacturer of ready-mixed concrete products who complies with ASTM C 94/C 94M requirements for production facilities and equipment.

1. Manufacturer certified according to NRMCA's "Certification of Ready Mixed Concrete Production Facilities".

B. ACI Publications: Comply with ACI 301, "Specification for Structural Concrete", unless modified by requirements in the Contract Documents.

C. Concrete Testing Service: Engage a qualified independent testing agency to perform material evaluation tests and to design concrete mixtures.

D. Mockups of ADA Tactile Warning Tiles: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.

1. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

E. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01 Section "Project Management and Coordination".

1. Before submitting design mixtures, review concrete pavement mixture design and examine procedures for ensuring quality of concrete materials and concrete pavement construction practices. Require representatives, including the following, of each entity directly concerned with concrete pavement, to attend conference:

a. Contractor's superintendent.
b. Independent testing agency responsible for concrete design mixtures.
c. Ready-mix concrete producer.
d. Concrete pavement subcontractor.

1.6 PROJECT CONDITIONS

A. Traffic Control: Maintain access for vehicular and pedestrian traffic as required for other construction activities.

1.7 WARRANTY

A. Special Warranty: Contractor agrees to repair or replace components of tactile warning surfaces that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Deterioration of finishes beyond normal weathering and wear.
b. Separation or delamination of materials and components.

2. Warranty Period: One year from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 FORMS

A. Form Materials: Plywood, metal, metal-framed plywood, or other approved panel-type materials to provide full-depth, continuous, straight, smooth exposed surfaces.

1. Use flexible or curved forms for curves with a radius 100 feet (30.5 m) or less.

B. Form-Release Agent: Commercially formulated form-release agent that will not bond with, stain, or adversely affect concrete surfaces and will not impair subsequent treatments of concrete surfaces.

2.2 STEEL REINFORCEMENT

A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

B. Plain-Steel Welded Wire Reinforcement: ASTM A 185, fabricated from as-drawn steel wire into flat sheets.

C. Reinforcing Bars: ASTM A 615/A 615M, Grade 60(Grade 420); deformed.

D. Plain Steel Wire: ASTM A 82, as drawn.

E. Deformed-Steel Wire: ASTM A 496.

F. Joint Dowel Bars: ASTM A 615/A 615M, Grade 60 (Grade 420) plain-steel bars. Cut bars true to length with ends square and free of burrs.

G. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars, welded-wire reinforcement, and dowels in place. Manufacture bar supports according to CRSI's "Manual of Standard Practice" from steel wire, plastic, or precast concrete of greater compressive strength than concrete specified, and as follows:

1. Equip wire bar supports with sand plates or horizontal runners where base material will not support chair legs.

2.3 CONCRETE MATERIALS

A. Regional Materials: Provide concrete materials that have been manufactured within 500 miles (800 km) of Project site from aggregates and cement that have been extracted, harvested, or recovered, as well as manufactured, within 500 miles (800 km) of Project site.

B. Cementitious Material: Use the following cementitious materials, of the same type, brand, and source throughout the Project:

1. Portland Cement: ASTM C 150, Type I and II. Supplement with the following:

a. Fly Ash: ASTM C 618, Class C or F.
b. Ground Granulated Blast-Furnace Slag: ASTM C 989, Grade 100 or 120.

C. Aggregates: ASTM C 33, uniformly graded from a single source with coarse aggregate as follows:

1. Per governing jurisdictions as referenced in Section 1.2C.

D. Water: ASTM C 94/C 94M.

E. Air-Entraining Admixture: ASTM C 260.

F. Chemical Admixtures: Provide admixtures certified by manufacturer to be compatible with other admixtures and to contain not more than 0.1 percent water-soluble chloride ions by mass of cementitious material.

1. Water-Reducing Admixture: ASTM C 494/C 494M, Type A.
2. Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D.
3. High-Range, Water-Reducing Admixture: ASTM C 494/C 494M, Type F.
4. High-Range, Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type G.

2.4 CURBING MATERIALS

A. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd.(305 g/sq. m) dry.

B. Water: Potable.

C. Evaporation Retarder: Waterborne, monomolecular film forming; manufactured for application to fresh concrete.

D. Clear Waterborne Membrane-Forming Curing Compound: ASTM C 309, Type 1, Class B.

2.5 RELATED MATERIALS

A. Expansion- and Isolation-Joint-Filler Strips: Concrete Sidewalk Pavement: ASTM D 1751, asphalt-saturated cellulosic fiber.

2.6 CONCRETE MIXTURES

A. Prepare design mixtures, proportioned according to ACI 301, for each type and strength of normal-weight concrete determined by either laboratory trial mixes or field experience.

1. Use a qualified independent testing agency for preparing and reporting proposed concrete mixture designs for the trial batch method.

B. Proportion mixtures to provide normal-weight concrete with the following properties:

1. Compressive Strength (28 Days): 4000 psi (27.6 MPa).
2. Maximum Water-Cementitious Materials Ratio at Point of Placement: 0.45.
3. Slump Limit: 4 inches (100 mm), plus or minus 1 inch (25 mm).

C. Add air-entraining admixture at manufacturer's prescribed rate to result in normal-weight concrete at point of placement having an air content as follows:

1. Air Content: 5 percent plus or minus 1.5 percent for 3/4-inch (19-mm) nominal maximum aggregate size.

D. Limit water-soluble, chloride-ion content in hardened concrete to 0.15 percent by weight of cement.

E. Chemical Admixtures: Use admixtures according to manufacturer's written instructions.

1. Use water-reducing admixture, high-range, water-reducing admixture, or high-range, water-reducing and retarding admixture in concrete, as required, for placement and workability.
2. Use water-reducing and retarding admixture when required by high temperatures, low humidity, or other adverse placement conditions.

F. Cementitious Materials: Limit percentage, by weight, of cementitious materials other than portland cement according to ACI 301 requirements for concrete exposed to deicing chemicals as follows:

1. Fly Ash or Pozzolan: 25 percent.
2. Ground Granulated Blast-Furnace Slag: 50 percent.

2.7 CONCRETE MIXING

A. Ready-Mixed Concrete: Measure, batch, and mix concrete materials and concrete according to ASTM C 94/C 94M. Furnish batch certificates for each batch discharged and used in the Work.

1. When air temperature is between 85 deg F(30 deg C) and 90 deg F(32 deg C), reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F(32 deg C), reduce mixing and delivery time to 60 minutes.

2.8 ADA TACTILE WARNING SURFACING, GENERAL

A. Accessibility Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities and ICC A117.1 for tactile warning surfaces.

1. For tactile warning surfaces composed of multiple units, provide units that when installed provide consistent side-to-side and end-to-end dome spacing that complies with requirements.
2. Source Limitations: Obtain each type of tactile warning surfacing, anchor, and fasteners from single source with resources to provide materials and products of consistent quality in appearance and physical properties.

2.9 DETECTABLE WARNING TILES

A. Cast-in-Place Detectable Warning Tiles: Accessible truncated-dome detectable warning tiles with replaceable surface configured for setting flush in new concrete walkway surfaces, with slip-resistant surface treatment on domes and field of tile.
   1. Material: Molded glass- and carbon-fiber-reinforced polyester.
   2. Color: Black
   3. Mounting:

      a. Replaceable detectable warning tile wet-set into freshly poured concrete and surface-fastened to permanently embedded anchors.

2.10 ACCESSORIES

A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of tactile warning surfaces, noncorrosive and compatible with each material joined, and complying with the following:

   1. Furnish Type 316 stainless-steel fasteners for exterior use.
   2. Fastener Heads: For nonstructural connections, use flathead or oval countersunk screws and bolts with tamper-resistant heads, colored to match tile.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine exposed subgrades and subbase surfaces for compliance with requirements for dimensional, grading, and elevation tolerances.

B. Proof-roll prepared subbase surface below concrete pavements with heavy pneumatic-tired equipment to identify soft pockets and areas of excess yielding.

   1. Completely proof-roll subbase in one direction. Limit vehicle speed to 3 mph (5 km/h).
   2. Proof-roll with a loaded 10-wheel tandem-axle dump truck weighing not less than 15 tons (13.6 tonnes).
   3. Subbase with soft spots and areas of pumping or rutting exceeding depth of 1/2 inch (13 mm) require correction according to requirements in Division 2 Section "Earthwork".

C. Proceed with concrete pavement operations only after nonconforming conditions have been corrected and subgrade is ready to receive pavement.

D. **ADA Tactile Warning Tiles:**

   1. Verify that pavement is in suitable condition to begin installation according to manufacturer's written instructions. Verify that installation of tactile warning surfacing will comply with accessibility requirements upon completion.
   2. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Remove loose material from compacted subbase surface immediately before placing concrete.

3.3 EDGE FORMS AND SCREED CONSTRUCTION

A. Set, brace, and secure edge forms, bulkheads, and intermediate screed guides for pavement to required lines, grades, and elevations. Install forms to allow continuous progress of work and so forms can remain in place at least 24 hours after concrete placement.

B. Clean forms after each use and coat with form-release agent to ensure separation from concrete without damage.

3.4 STEEL REINFORCEMENT

A. General: Comply with CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement.

B. Clean reinforcement of loose rust and mill scale, earth, ice, or other bond-reducing materials.

C. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position during concrete placement. Maintain minimum cover to reinforcement.

D. Install welded wire reinforcement in lengths as long as practicable. Lap adjoining pieces at least one full mesh, and lace splices with wire. Offset laps of adjoining widths to prevent continuous laps in either direction.

3.5 JOINTS

A. General: Form construction, isolation, and contraction joints and tool edgings true to line with faces perpendicular to surface plane of concrete. Construct transverse joints at right angles to centerline, unless otherwise indicated.

B. Construction Joints: Set construction joints at side and end terminations of pavement and at locations where pavement operations are stopped for more than one-half hour unless pavement terminates at isolation joints.

1. Continue steel reinforcement across construction joints, unless otherwise indicated. Do not continue reinforcement through sides of pavement strips, unless otherwise indicated.
2. Provide tie bars at sides of paving strips where indicated.

C. Isolation Joints: Form isolation joints of preformed joint-filler strips abutting concrete curbs, catch basins, manholes, inlets, structures, walks, other fixed objects, and where indicated.

1. Locate expansion joints at intervals of 20 feet (15.25 m), unless otherwise indicated.
2. Extend joint fillers full width and depth of joint.

3. Terminate joint filler not less than 1/2 inch (13 mm) or more than 1 inch(25 mm) below finished surface if joint sealant is indicated.
4. Place top of joint filler flush with finished concrete surface if joint sealant is not indicated.
5. Furnish joint fillers in one-piece lengths. Where more than one length is required, lace or clip joint-filler sections together.
6. Protect top edge of joint filler during concrete placement with metal, plastic, or other temporary preformed cap. Remove protective cap after concrete has been placed on both sides of joint.

D. Contraction Joints: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Construct contraction joints for a depth equal to at least one-fourth of the concrete thickness, as follows:

1. Use grooving tool to form contraction joints after initial floating by grooving and finishing each edge of joint with grooving tool to a 1/4-inch (6-mm) radius. Repeat grooving of contraction joints after applying surface finishes.

E. Edging: Tool edges of paving, curbs, and joints in concrete after initial floating with an edging tool to a 1/4-inch (6-mm) radius. Repeat tooling of edges after applying surface finishes.

1. All Contraction, Isolation and Construction joints to be edged.

3.6 CONCRETE PLACEMENT

A. Inspection: Before placing concrete, inspect and complete formwork installation, steel reinforcement, and items to be embedded or cast in. Notify other trades to permit installation of their work.

B. Remove snow, ice, or frost from subbase surface and reinforcement before placing concrete. Do not place concrete on frozen surfaces.

C. Moisten subbase to provide a uniform dampened condition at time concrete is placed. Do not place concrete around manholes or other structures until they are at required finish elevation and alignment.

D. Comply with ACI 301 requirements for measuring, mixing, transporting, and placing concrete.

E. Do not add water to fresh concrete after testing.

F. Deposit and spread concrete in a continuous operation between transverse joints. Do not push or drag concrete into place or use vibrators to move concrete into place.

G. Consolidate concrete according to ACI 301 by mechanical vibrating equipment supplemented by hand spading, rodding, or tamping.

1. Consolidate concrete along face of forms and adjacent to transverse joints with an internal vibrator. Keep vibrator away from joint assemblies, reinforcement, or side forms. Use only square-faced shovels for hand spreading and consolidation. Consolidate with care to prevent dislocating reinforcement, dowels, and joint devices.

H. Screed pavement surfaces with a straightedge and strike off.

I. Commence initial floating using bull floats or darbies to impart an open textured and uniform surface plane before excess moisture or bleed water appears on the surface. Do not further disturb concrete surfaces before beginning finishing operations or spreading surface treatments.

J. Cold-Weather Placement: Comply with ACI 306.1 and as follows. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.

1. When air temperature has fallen to or is expected to fall below 40 deg F(4.4 deg C), uniformly heat water and aggregates before mixing to obtain a concrete mixture temperature of not less than 50 deg F(10 deg C) and not more than 80 deg F(27 deg C) at point of placement.
2. Do not use frozen materials or materials containing ice or snow.
3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in mix designs.

K. Hot-Weather Placement: Comply with ACI 301 and as follows when hot-weather conditions exist:

1. Cool ingredients before mixing to maintain concrete temperature below 90 deg F(32 deg C) at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
2. Cover steel reinforcement with water-soaked burlap so steel temperature will not exceed ambient air temperature immediately before embedding in concrete.
3. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade moisture uniform without standing water, soft spots, or dry areas.

L. Curbs: When automatic machine placement is used for curb placement, submit revised mix design and laboratory test results that meet or exceed requirements. Produce curbs to required cross section, lines, grades, finish, and jointing as specified for formed concrete. If results are not approved, remove and replace with formed concrete.

3.7 FLOAT FINISHING

A. General: Do not add water to concrete surfaces during finishing operations.

B. Float Finish: Begin the second floating operation when bleed-water sheen has disappeared and concrete surface has stiffened sufficiently to permit operations. Float surface with power-driven floats, or by hand floating if area is small or inaccessible to power units. Finish surfaces to true planes. Cut down high spots and fill low spots. Refloat surface immediately to uniform granular texture.

1. Medium-to-Fine-Textured Broom Finish: Draw a soft bristle broom across float-finished concrete surface perpendicular to line of traffic to provide a uniform, fine-line texture.

3.8 SPECIAL FINISHES

A. ADA Tactile Warning Tiles:

1. Concrete Paving Installation: Comply with installation requirements in Section 32 1313 "Concrete Paving". Mix, place, and finish concrete to conditions complying with detectable warning tile manufacturer's written requirements for satisfactory embedment of removable tile.
2. Set each detectable warning tile accurately and firmly in place with embedding anchors and fasteners attached, and firmly seat tile back in wet concrete by tamping or vibrating. If necessary, temporarily apply weight to tiles to ensure full contact with concrete.
3. Set surface of tile flush with surrounding concrete and adjacent tiles, with variations between tiles and between concrete and tiles not exceeding plus or minus 1/8 inch (3 mm) from flush.
4. Protect exposed surfaces of installed tiles from contact with wet concrete. Complete finishing of concrete paving surrounding tiles. Remove concrete from tile surfaces.
5. Clean tiles using methods recommended in writing by manufacturer.

3.9 CONCRETE PROTECTION AND CURING

A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures.

B. Comply with ACI 306.1 for cold-weather protection.

C. Evaporation Retarder: Apply evaporation retarder to concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching 0.2 lb/sq. ft. x h(1 kg/sq. m x h) before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete, but before float finishing.

D. Begin curing after finishing concrete but not before free water has disappeared from concrete surface.

E. Curing Methods: Cure concrete by moisture curing, moisture-retaining-cover curing, curing compound, or a combination of these as follows:

1. Moist Curing: Keep surfaces continuously moist for not less than seven days with the following materials:

   a. Water.
   b. Continuous water-fog spray.

c. Absorptive cover, water saturated and kept continuously wet. Cover concrete surfaces and edges with 12-inch (300-mm) lap over adjacent absorptive covers.

2. Curing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating and repair damage during curing period.

3.10 ADA TACTILE WARNING TILES: CLEANING AND PROTECTION

A. Remove and replace tactile warning surfacing that is broken or damaged or does not comply with requirements in this Section. Remove in complete sections from joint to joint unless otherwise approved by Architect. Replace using tactile warning surfacing installation methods acceptable to Architect.

B. Protect tactile warning surfacing from damage and maintain free of stains, discoloration, dirt, and other foreign material.

3.11 PAVEMENT TOLERANCES

A. Comply with tolerances of ACI 117 and as follows:

1. Elevation: 1/4 inch (6 mm).
2. Thickness: Plus 3/8 inch (10 mm), minus 1/4 inch (6 mm).
3. Surface: Gap below 10-foot- (3-m-) long, unleveled straightedge not to exceed 1/4 inch (6 mm).
4. Lateral Alignment and Spacing of Tie Bars and Dowels: 1 inch (25 mm).
5. Vertical Alignment of Tie Bars and Dowels: 1/4 inch (6 mm).
6. Alignment of Dowel-Bar End Relative to Line Perpendicular to Pavement Edge: Length of dowel 1/4 inch per 12 inches (6 mm per 300 mm).
7. Joint Spacing: 3 inches (75 mm).
8. Contraction Joint Depth: Plus 1/4 inch (6 mm), no minus.
9. Joint Width: Plus 1/8 inch (3 mm), no minus.

3.12 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.

B. Testing Services: Testing of composite samples of fresh concrete obtained according to ASTM C 172 shall be performed according to the following requirements:

1. Testing Frequency: Obtain at least 1 composite sample for each 100 cu. yd.(76 cu. m) or fraction thereof of each concrete mix placed each day.

a. When frequency of testing will provide fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.

2. Slump: ASTM C 143/C 143M; one test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mix. Perform additional tests when concrete consistency appears to change.
3. Air Content: ASTM C 231, pressure method; one test for each composite sample, but not less than one test for each day's pour of each concrete mix.
4. Concrete Temperature: ASTM C 1064; one test hourly when air temperature is 40 deg F(4.4 deg C) and below and when 80 deg F(27 deg C) and above, and one test for each composite sample.
5. Compression Test Specimens: ASTM C 31/C 31M; cast and laboratory cure one set of three standard cylinder specimens for each composite sample.
6. Compressive-Strength Tests: ASTM C 39/C 39M; test 1 specimen at 7 days and 2 specimens at 28 days.

a. A compressive-strength test shall be the average compressive strength from 2 specimens obtained from same composite sample and tested at 28 days.

C. Strength of each concrete mix will be satisfactory if average of any 3 consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi (3.4 MPa).

D. Test results shall be reported in writing to Architect, concrete manufacturer, and Contractor within 48 hours of testing. Reports of compressive-strength tests shall contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.

E. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Architect but will not be used as sole basis for approval or rejection of concrete.

F. Additional Tests: Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Architect.

G. Remove and replace concrete pavement where test results indicate that it does not comply with specified requirements.

H. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.13 REPAIRS AND PROTECTION

A. Remove and replace concrete pavement that is broken, damaged, or defective or that does not comply with requirements in this Section.

B. Drill test cores, where directed by Architect, when necessary to determine magnitude of cracks or defective areas. Fill drilled core holes in satisfactory pavement areas with portland cement concrete bonded to pavement with epoxy adhesive.

C. Protect concrete from damage. Exclude traffic from pavement for at least 14 days after placement. When construction traffic is permitted, maintain pavement as clean as possible by removing surface stains and spillage of materials as they occur.

D. Maintain concrete pavement free of stains, discoloration, dirt, and other foreign material. Sweep concrete pavement not more than two days before date scheduled for Substantial Completion inspections.

END OF SECTION 32 1313

SECTION 32 1373 - CONCRETE PAVING JOINT SEALANTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Expansion and contraction joints within cement concrete pavement.
2. Joints between cement concrete and asphalt pavement.

B. Related Requirements:

1. Division 01 Section(s) "Construction Waste Management and Disposal" and "Sustainability Compliance Procedures" for sustainability requirements

2. Division 07 Section "Joint Sealants" for sealing nontraffic and traffic joints in locations not specified in this Section.

3. Division 32 Section "Asphalt Paving" for constructing joints between concrete and asphalt pavement.

4. Division 32 Section "Concrete Paving" for constructing joints in concrete pavement.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

A. Product Data: For each joint-sealant product indicated.

B. CTHPB Documentation Submittals: Comply with Section 01 3566.42 – Sustainability Compliance Procedures and provide the following in addition to other submittals:

1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.

2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

C. Samples for Verification: For each type and color of joint sealant required. Install joint-sealant samples in 1/2-inch- (13-mm-) wide joints formed between two 6-inch- (150-mm-) long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.

D. Paving-Joint-Sealant Schedule: Include the following information:

1. Joint-sealant application, joint location, and designation.
2. Joint-sealant manufacturer and product name.
3. Joint-sealant formulation.
4. Joint-sealant color.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Product Certificates: For each type of joint sealant and accessory.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

B. Product Testing: Test joint sealants using a qualified testing agency.

1.7 FIELD CONDITIONS

A. Do not proceed with installation of joint sealants under the following conditions:

1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer or are below 40 deg F (5 deg C).
2. When joint substrates are wet.
3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, products listed in other Part 2 articles.

2.2 MATERIALS, GENERAL

A. Compatibility: Provide joint sealants, backing materials, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer based on testing and field experience.

B. Colors of Exposed Joint Sealants: As selected by Architect from manufacturer's full range.

2.3 COLD-APPLIED JOINT SEALANTS

A. General: Pavement sealants shall be a polyurethane based complying with ASTM C-920, Type S (single componenent),or Type M (multicomponent), Use group T (traffic) or NT (non-traffic), Class 35 (minimium) and the following. Any sealants used shall be recommended for the specific use by the manufacturer. Sealant and backer-rod materials shall be compatible as noted by the manufacturers submitted.

1. Horizontal joints in areas of vehicular traffic shall comply with: ASTM C-920, Grade P (pourable or self-leveling) Use T. Color Grey.
2. Horizontal joints in areas of pedestrian, or light vehicular traffic shall comply with ASTM C-920, Grade NS (non-sag), use T or NT. Submitted product shall be available in a minimum of 7 standard colors.
3. Vertical Joints: Shall comply with ASTM C-920, Grade NS (non-sag), use T or NT. Submitted product shall be available in a minimum of 7 standard colors.

B. Typical Manufacturers (non exclusive):

1. BASF.
2. Bostik.
3. Pecora.
4. Sika.
5. Tremco.
6. W. R. Meadows.

2.4 JOINT-SEALANT BACKER MATERIALS

A. Joint-Sealant Backer Materials: Nonstaining; compatible with joint substrates, sealants, primers, and other joint fillers; and approved for applications indicated by joint-sealant manufacturer, based on field experience and laboratory testing.

B. Round Backer Rods for Cold-Applied Sealants: ASTM D 5249, Type 3, of diameter and density required to control sealant depth and prevent bottom-side adhesion of sealant.

2.5 PRIMERS

A. Primers: Product recommended by joint-sealant manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint-sealant-substrate tests and field tests.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine joints indicated to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting joint-sealant performance.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Cleaning of Joints: Before installing joint sealants, clean out joints immediately to comply with joint-sealant manufacturer's written instructions.

1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.

B. Joint Priming: Prime joint substrates where indicated or where recommended in writing by joint-sealant manufacturer, based on preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.

3.3 INSTALLATION OF JOINT SEALANTS

A. Comply with joint-sealant manufacturer's written installation instructions for products and applications indicated, unless more stringent requirements apply.

B. Joint-Sealant Installation Standard: Comply with recommendations in ASTM C 1193 for use of joint sealants as applicable to materials, applications, and conditions.

C. Install backer materials of type indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.

1. Do not leave gaps between ends of backer materials.
2. Do not stretch, twist, puncture, or tear backer materials.
3. Remove absorbent backer materials that have become wet before sealant application and replace them with dry materials.

D. Install sealants using proven techniques that comply with the following and at the same time backings are installed:

1. Place sealants so they directly contact and fully wet joint substrates.
2. Completely fill recesses provided for each joint configuration.
3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.

E. Tooling of Nonsag Sealants: Immediately after sealant application and before skinning or curing begins, tool sealants according to requirements specified below to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint.

1. Remove excess sealants from surfaces adjacent to joint.

2. Use tooling agents that are approved in writing by joint-sealant manufacturer and that do not discolor sealants or adjacent surfaces.

F. Provide joint configuration to comply with joint-sealant manufacturer's written instructions, unless otherwise indicated.

G. Provide recessed joint configuration for sealants in areas of vehicular traffic per manufacturers recommended recess depth and at locations indicated.

3.4 CLEANING AND PROTECTION

A. Clean off excess joint sealant as the Work progresses, by methods and with cleaning materials approved in writing by joint-sealant manufacturers.

B. Protect joint sealants, during and after curing period, from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated joint sealants immediately and replace with joint sealant so installations in repaired areas are indistinguishable from the original work.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 1400 - UNIT PAVERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and Volume 1 Project Contract Manual apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Pedestrian Concrete Unit Pavers
2. Edge restraints for unit pavers.

B. Related Requirements:

1. Division 31 Section “Excavation, Backfill, Compaction and Dewatering”

2. Division 32 Section for compacted subgrade and subbase course, if any, under unit pavers.

3. Division 32 Section "Joint Sealants" for sealing control and expansion joints in unit pavers with elastomeric sealants.

1.3 SUBMITTALS

A. Product Data: For the following:

1. Concrete pavers.
2. Edge restraints.

B. CTHPB Documentation Submittals: Comply with Section 01 3566.42 – Sustainability Compliance Procedures and provide the following in addition to other submittals:

1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

C. Samples for Initial Selection: Manufacturer's color charts consisting of units or sections of units showing the full range of colors, textures, and patterns available for each type of unit paver indicated.

D. Samples for Verification: Full-size units of each type of unit paver indicated; in sets for each color, texture, and pattern specified, showing the full range of variations expected in these characteristics.

E. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

1.4 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who has completed unit paver installations similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

B. Source Limitations: Obtain each type of unit paver, joint material, and setting material from one source with resources to provide materials and products of consistent quality in appearance and physical properties.

C. Mockups: Before installing unit pavers, build mockups for each form and pattern of unit pavers required to verify selections made under sample Submittals and to demonstrate aesthetic effects and qualities of materials and execution. Build mockups to comply with the following requirements, using materials indicated for the completed Work, including same base construction, special features for expansion joints, and contiguous work as indicated:

1. Build mockups in the location and of the size indicated or, if not indicated, as directed by Architect.
2. Demonstrate the proposed range of aesthetic effects and workmanship.
3. Obtain Architect's written approval of mockups before starting unit paver installation.
4. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
5. Demolish and remove mockups when directed.
6. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Protect unit pavers and aggregate during storage and construction against soiling or contamination from earth and other materials.

1. Cover pavers with plastic or use other packaging materials that will prevent rust marks from steel strapping.

1.6 PROJECT CONDITIONS

A. Cold-Weather Protection: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen subgrade or setting beds. Remove and replace unit paver work damaged by frost or freezing.

1.7 WARRANTY

A. For products noted in this section, provide manufacturer's standard warranty, minimum of one year.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 UNIT PAVERS

A. Concrete Pavers: Solid, interlocking paving units, ASTM C 936, made from normal-weight aggregates in sizes and shapes indicated. See drawings for locations.

1. Pedestrian Concrete Unit Pavers Basis of Design – Unilock Artline

a. Thickness: 2 ¾" vehicular, 2 ¼" pedestrian.

b. Color: to be selected by Landscape Architect from full range of colors and finishes.

2.3 ACCESSORIES

A. Paver Edge Restraint Material: Paver edge restraints shall be Pave Edge Rigid, by Pave Tech, Inc. and provided by Ideal Concrete Block, Co., or an approved equal.

B. Geotextile Soil Separator: Shall be Propex 601 as manufactured by Propex, Inc. 6025 Lee Highway, Suite 425, PO Box 22788, Chattanooga, TN 37422 as distributed by Ferguson Water Works, Co., Newington, C T; 124 Costello Road Newington, CT (Connecticut) 06111-5156; Phone: (860) 666-5634 or 1-800-382-4581 or approved equal.

2.4 AGGREGATE SETTING-BED MATERIALS

A. Graded Aggregate for Base: Per manufacturer's specifications

B. Geotextile Fabric: TYPAR 3401-G Geotextile Fabric manufactured by Advanced Drainage Systems (1.800.821.6710) or approved equal.

C. Sand for Leveling Course: Sound, sharp, washed, natural sand or crushed stone complying with gradation requirements of ASTM C 33 for fine aggregate.

D. Sand for Joints: Techni-seal Polymeric Sand as manufactured by Techni-Seal, 1470 rue De Coulomb, Boucherville, Quebec, Canada J4B 7K2 (514) 523-2110 or approved equal.

PART 3 - EXECUTION

3.1 PREPARATION

A. Proof-roll prepared subgrade surface to check for unstable areas and areas requiring additional compaction. Proceed with unit paver installation only after deficient subgrades have been corrected and are ready to receive subbase for unit pavers.

3.2 INSTALLATION, GENERAL

A. Do not use unit pavers with chips, cracks, voids, discolorations, and other defects that might be visible or cause staining in finished work.

B. Mix pavers from several pallets or cubes, as they are placed, to produce uniform blend of colors and textures.

C. Cut unit pavers with motor-driven masonry saw equipment to provide clean, sharp, unchipped edges. Cut units to provide pattern indicated and to fit adjoining work neatly. Use full units without cutting where possible. Hammer cutting is not acceptable.

1. For concrete pavers, a block splitter may be used.

D. Joint Pattern: As indicated.

E. Tolerances: Do not exceed 1/16-inch (1.6-mm) unit-to-unit offset from flush (lippage) nor 1/8 inch in 24 inches (3 mm in 600 mm) and 1/4 inch in 10 feet (6 mm in 3 m) from level, or indicated slope, for finished surface of paving.

F. Expansion and Control Joints: Provide for sealant-filled joints at locations and of widths indicated. Provide joint filler as backing for sealant-filled joints where indicated. Install joint filler before setting pavers. Sealant materials and installation are specified in Division 7 Section "Joint Sealants."

G. Provide edge restraints as indicated. Install edge restraints before placing unit pavers.

1. Install edge restraints to comply with manufacturer's written instructions. Install stakes at intervals required to hold edge restraints in place during and after unit paver installation.
2. For metal edge restraints with top edge exposed, drive stakes at least 1 inch (25 mm) below top edge.

3.3 AGGREGATE SETTING-BED PAVER APPLICATIONS

A. Compact soil subgrade uniformly to at least 95 percent of ASTM D 1557 laboratory density.

B. Place geotextile over prepared subgrade, overlapping ends and edges at least 12 inches (300 mm).

C. Place aggregate base over compacted subgrade. Provide compacted thickness indicated. Compact base to 100 percent of ASTM D 1557 maximum laboratory density and screed to depth required to allow setting of pavers.

D. Place geotextile over compacted base course, overlapping ends and edges at least 12 inches (300 mm).

E. Place leveling course and screed to a thickness of 1 to 1-1/2 inches (25 to 38 mm), taking care that moisture content remains constant and density is loose and constant until pavers are set and compacted.

F. Treat leveling base with soil sterilizer to inhibit growth of grass and weeds.

G. Set pavers with a minimum joint width of 1/16 inch (1.6 mm) and a maximum of 1/8 inch (3 mm), being careful not to disturb leveling base. If pavers have spacer bars, place pavers hand tight against spacer bars. Use string lines to keep straight lines. Fill gaps between units that exceed 3/8 inch (10 mm) with pieces cut to fit from full-size unit pavers.

1. When installation is performed with mechanical equipment, use only unit pavers with spacer bars on sides of each unit.

H. Vibrate pavers into leveling course with a low-amplitude plate vibrator capable of a 3500- to 5000-lbf (16- to 22-kN) compaction force at 80 to 90 Hz. Perform at least three passes across paving with vibrator. Vibrate under the following conditions:

1. After edge pavers are installed and there is a completed surface or before surface is exposed to rain.
2. Before ending each day's work, fully compact installed concrete pavers to within 36 inches (900 mm) of the laying face. Cover open layers with nonstaining plastic sheets overlapped 48 inches (1200 mm) on each side of the laying face to protect it from rain.

I. Spread dry sand and fill joints immediately after vibrating pavers into leveling course. Vibrate pavers and add sand until joints are completely filled, then remove excess sand. Leave a slight surplus of sand on the surface for joint filling.

J. Do not allow traffic on installed pavers until sand has been vibrated into joints.

K. Repeat joint-filling process 30 days later.

3.4 REPAIR, POINTING, CLEANING, AND PROTECTION

A. Remove and replace unit pavers that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units as intended. Provide new units to match adjoining units and install in same manner as original units, with same joint treatment and with no evidence of replacement.

END OF SECTION 32 1400

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 1500 - AGGREGATE SURFACING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Stone Mulch Surfacing.

B. Related Requirements:

1. Division 01 Section(s) "Construction Waste Management and Disposal" and "Sustainability Compliance Procedures" for sustainability requirements

2. Section 31 2200 - Grading: Preparation of site paving.

3. Section 31 2323 – Borrow Material: Compacted subbase for paving.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated.

B. CTHPB Documentation Submittals: Comply with Section 01 3566.42 – Sustainability Compliance Procedures and provide the following in addition to other submittals:

1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

C. Samples for Verification:
1. For each stone type indicated. Include at least two samples in each set for each type of stone, exhibiting extremes of the full range of color and other visual characteristics expected in completed Work. Samples will establish the standard by which stone provided will be judged.
2. Weed Control Barrier: 12 by 12 inches (300 by 300 mm).
3. Edging Materials and Accessories: Manufacturer's standard size, to verify color selected.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain each type of aggregate through one source from a single manufacturer.

B. Pre-installation conference: Conduct conference at project site to comply with requirements in Section 01 3000 - Administrative Requirements.

PART 2 PRODUCTS

2.1 STONE SOURCE

A. Varieties and Sources: Obtain materials of each type from same source for the entire project. Approval of stone supplier is required prior to purchase. Subject to compliance with requirements, provide stone of one of the following varieties from the following source or equivalent:

2.2 STONE MULCH SURFACING

A. River-washed Stone Mulch: Off-site, naturally occurring river-washed stone free of iron, fines, dust (less than 2 percent passing the No. 200 sieve), organic materials, snow, ice, and other unsuitable materials as approved by Landscape Architect. Mulch shall be washed free of all fines.
   1. Type: Rounded riverbed gravel or smooth-faced stone.
   2. Size Range: 1 ½ to 2-inch diameter.
   3. Color: Readily available natural gravel color range as approved by Landscape Architect.

B. Stone Mulch Edge Restraints: Standard commercial-aluminum angle edging, rolled edge, fabricated in sections of standard lengths.
   1. Basis-of-Design Product: Subject to compliance with requirements, provide “PermaStrip” angled aluminum landscape edging as manufactured by Permaloc Corporation or comparable product by a licensee of one of the following:
      a) Brickstop Corporation.
      b) Curv-Rite, Inc.
      c) Sure-loc Edging Corporation.
   2. Edging Size: 3/16 inch (3.2 mm) thick by 6 inches (102 mm) tall by 1-1/2 inches wide.
   3. Stakes: 18 inches (300 mm) long, 3 minimum per 8-foot section.
   4. Accessories: Standard tapered ends, corners, and splicers.
   5. Finish: Electrostatically applied baked on paint.
   6. Color: Black.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for correct and level finished grade, mounting surfaces, installation tolerances, and other conditions affecting performance.
   1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 STONE MAINTENANCE STRIP INSTALLATIONS

A. Steel Edging: Install steel edging where indicated according to manufacturer's written instructions. Anchor with steel stakes spaced approximately 30 inches (760 mm) apart, driven below top elevation of edging.

B. Install weed-control barriers before mulching according to manufacturer's written instructions. Completely cover area to be mulched, overlapping edges a minimum of 6 inches (150 mm) and secure seams with galvanized pins.
   1. Mulch backfilled and compacted surfaces areas to receive stone mulch. Apply 4-inch (100-mm) average thickness of mineral mulch over whole surface, and finish level with adjacent finish grades.

3.3 CLEANUP AND PROTECTION

A. During installation, keep adjacent paving and construction clean and work area in an orderly condition.

B. After completing installation of stone materials, inspect components. Remove spots, dirt, and debris. Repair damaged finishes to match original finish or replace component.

3.4 DISPOSAL

A. Remove surplus stone materials and waste material including excess subsoil, unsuitable soil, trash, and debris and legally dispose of them off Owner's property.

END OF SECTION 32 1500

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 1613.23 - PRECAST CONCRETE CURB

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Precast concrete curbs.

B. Related Requirements:

1. Division 01 Section(s) "Construction Waste Management and Disposal" and "Sustainability Compliance Procedures" for sustainability requirements

2. Section 31 2200 – "Grading": Preparation of subsoil for curbing.

3. Section 31 2300 – "Excavation, Backfill, Compaction and Dewatering"

4. Section 31 2323 – "Borrow Material": Compacted fill for curbing.

5. Section 32 1373 – "Concrete Paving Joint Sealants": Sealing expansion joints between curb units and between curbing and adjacent concrete pavement.

1.3 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. CTHPB Documentation Submittals: Comply with Section 01 3566.42 – Sustainability Compliance Procedures and provide the following in addition to other submittals:

1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

C. Product Data: Provide manufacturer's product data and materials certification for all materials other than water and aggregates.

D. Samples:
   1. Joint materials.
   2. Precast concrete curbs.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain precast concrete curb and joint material from one source with resources to provide materials and products of consistent quality in appearance and physical properties.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Store curbing on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied.

B. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.

C. Store liquids in tightly closed containers protected from freezing.

1.6 PROJECT CONDITIONS

A. Cold-Weather Protection: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen subgrade or setting beds. Remove and replace curb unit work damaged by frost or freezing.

1.7 WARRANTY

A. For products noted in this section, provide manufacturer’s standard warranty, minimum of one year.

PART 2 PRODUCTS

2.1 PRECAST CONCRETE CURB

A. Precast Concrete Curbs: Made from normal-weight concrete with a compressive strength not less than 6000 psi (41 MPa) and water absorption not more than 5 percent, in shapes and sizes indicated, and shall conform to Section 8.21.02 of Form 816 and the following:
   1. Color and Texture: As selected by Architect from manufacturer's full range.
   2. Straight Curbing: 6 feet minimum length.
   3. Curved Curbing: Radial sections shall be provided for all radii of 100 feet and less. Radii larger than 100 feet shall be constructed of 4-foot minimum lengths of straight curbing.
   4. Corner Curbing: Provide inside and outside corner pieces for all 90-degree corners.
   5. Transition Curbing: Provide 6-foot-long transition ends at all curb transitions.
   6. Angled Joints: All angled joints shall be cut and fit to form exposed joints with continuous joint with of no greater than ½ inch.
   7. No drill marks will be accepted on any exposed surfaces.

B. Joint Fillers: ASTM D1751, asphalt-saturated cellulosic fiber or ASTM D1752, cork or self-expanding cork in preformed strips.

C. Joint Dowel Bars: Plain steel bars, ASTM A615/A615M, Grade 60(Grade 420). Cut bars true to length with ends square and free of burrs.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine areas indicated to receive curbing, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Do not use units with chips, cracks, voids, discolorations, and other defects that might be visible in finished work.

B. Cut curbing with motor-driven masonry saw equipment to provide clean, sharp, unchipped edges. Use full units without cutting where possible. Hammer cutting is not acceptable.

C. Tolerances: Do not exceed 1/16-inch (1.6-mm) unit-to-unit offset from flush (lippage) nor 1/8 inch in 24 inches (3 mm in 600 mm) and 1/4 inch in 10 feet (6 mm in 3 m) from level, or indicated slope, for finished surface of curbing.

D. Expansion Joints: Provide for pre-molded joint filler between each curb unit and recess below surface of concrete and extending to subgrade. Finish each joint with foam filler backer rod as backing for joint sealant. Install joint filler before completing adjacent work. Sealant materials and installation are specified in Section 32 1373 - Concrete Paving Joint Sealants.

3.3 CURB PLACEMENT

A. Set curb on edge. Settle into place with a heavy wooden hand rammer. Set level, true line, and plumb on compacted base as indicated on the Drawings.

B. Place concrete joint setting beds as shown on the Drawings. Ensure that top exposed edge of curb face is consistent and true to line and grade. Support curb as required until concrete cures and all backfill operations have been completed.

C. Backfill with approved material, compacted to 95 percent modified AASHTO Laboratory density (ASTM D1557, Method C).

D. Seal all exposed joints according to Section 32 1373 - Concrete Paving Joint Sealants and to the Drawings.

3.4 REPAIRING, POINTING, AND CLEANING

A. Remove and replace curb units that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining curbing. Provide new units to match adjoining units and install in same manner as original units, with same joint treatment and with no evidence of replacement.

END OF SECTION 32 1613.

SECTION 32 1640 - GRANITE CURBING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Form 816 - State of Connecticut Department of Transportation Standard Specifications for Roads, Ramps and Incidental Construction, 2004.

1.2 SUMMARY

A. Section Includes:

1. Granite curbs - vertical.

B. Related Requirements:

1. Division 01 Section(s) "Construction Waste Management and Disposal" and "Sustainability Compliance Procedures" for sustainability requirements

2. Division 31 Section "Excavation, Backfill, Compaction and Dewatering" for fill materials.

3. Division 31 Section "Borrow Materials"

4. Division 03 Section "Cast-in-Place Concrete".

1.3 ACTION SUBMITTALS

A. Product Data: For materials other than water and aggregates.

B. Product Data: For the following:

1. Stone curbs.

C. Documentation Submittals: Comply with Section 01 3566.42 – Sustainability Compliance Procedures and provide the following in addition to other submittals:

1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material.

Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Samples for Initial Selection: For the following:

1. Granite for stone curbs.

E. Samples for Verification:

1. Stone curbs.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain each type of stone curb, joint material, and setting material from single source with resources to provide materials and products of consistent quality in appearance and physical properties.

B. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

C. Preinstallation Conference: Conduct conference at Project site.

1.5 PROJECT CONDITIONS

A. Cold-Weather Protection: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen subgrade or setting beds. Remove and replace unit paver work damaged by frost or freezing.

PART 2 - PRODUCTS

2.1 GRANITE CURBS

A. Granite curbs shall conform to Section M.12.06-1 of Form 816.

1. No drill marks will be accepted on any exposed surface.
2. Dimensions shall conform to the Drawings.
3. Granite shall comply with ASTM C 615.
4. Vertical Granite Curbs:

a. Granite Color and Grain: Light gray with medium grain.
b. Top Width: 6 inches.
c. Face Height: Varies, as shown on drawings.
d. Total Height: 2'-6" inches.
e. Length: 4'-0", as shown on drawings.

f. Top Finish: Thermal.
g. Face Finish: Split.
h. End Finish: Saw cut.

2.2 MORTAR MIX

A. General: Comply with referenced standards and with manufacturers' written instructions for mix proportions, mixing equipment, mixer speeds, mixing containers, mixing times, and other procedures needed to produce joint materials of uniform quality and with optimum performance characteristics. Discard mortars if they have reached their initial set before being used.

B. Mortar Materials: Conform to Article M.11.04 of Form 816.

PART 3 - EXECUTION

3.1 PREPARATION

A. Sweep concrete substrates to remove dirt, dust, debris, and loose particles.

3.2 INSTALLATION, GENERAL

A. Granite curb installation shall conform to Section 8.13 of Form 816 and to the City of Fairfield's specifications for construction.

B. Do not curb units with chips, cracks, voids, discolorations, or other defects that might be visible or cause staining in finished work.

C. Cut curb units with motor-driven masonry saw equipment to provide clean, sharp, unchipped edges. Cut units to fit adjoining work neatly. Use full units without cutting where possible. Hammer cutting is not acceptable.

3.3 GRANITE CURB

A. Set curb on edge. Settle into place with a heavy wooden hand rammer. Set level, true line, and plumb on compacted base as indicated on the Drawings.

B. Place concrete joint setting beds as shown on the Drawings. Ensure that top exposed edge of curb face is consistent and true to line and grade. Support curb as required until concrete cures and all backfill operations have been completed.

C. Backfill with approved material, compacted to 95 percent modified AASHTO Laboratory density (ASTM D-1557, Method C).

D. Point joints with mortar for the full depth and width of curbing. At approximately 50 foot intervals, a ½ inch joint shall not be filled with mortar but left free for expansion. Conform to the details on the Drawings.

E. Where cobblestone curb embedded in concrete is indicated as edge restraints for concrete pavement on an aggregate setting bed, install curb embedded in concrete and allow concrete to cure before placing aggregate setting bed and pavement. Hold top of concrete below aggregate setting bed.

3.4 REPAIRING, POINTING, AND CLEANING

A. Remove and replace unit pavers that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Provide new units to match adjoining units and install in same manner as original units, with same joint treatment and with no evidence of replacement.

B. Pointing: During tooling of joints, enlarge voids or holes and completely fill with grout. Point joints at sealant joints to provide a neat, uniform appearance, properly prepared for sealant application.

C. Cleaning: Remove excess grout from exposed paver surfaces; wash and scrub clean.

END OF SECTION 32 1640

SECTION 32 1726 - TACTILE WARNING SURFACING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Cast-in-place replaceable tactile pavers.

B. Related Requirements:

1. Division 01 Section(s) "Construction Waste Management and Disposal" and "Sustainability Compliance Procedures" for sustainability requirements

2. Section 32 1313 "Concrete Paving" for concrete walkways serving as substrates for tactile warning surfacing.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. CTHPB Documentation Submittals: Comply with Section 01 3566.42 – Sustainability Compliance Procedures and provide the following in addition to other submittals:

1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

C. Samples for Initial Selection: For each type of exposed finish requiring color selection.

D. Samples for Verification: For each type of tactile warning surface, in manufacturer's standard sizes unless otherwise indicated, showing edge condition, truncated-dome pattern, texture, color, and cross section; with fasteners and anchors.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance Data: For tactile warning surfacing, to include in maintenance manuals.

1.5 QUALITY ASSURANCE

A. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.

1. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.6 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.7 PROJECT CONDITIONS

A. Cold-Weather Protection: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen subgrade or setting beds. Remove and replace unit paver work damaged by frost or freezing.

1.8 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of tactile warning surfaces that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Deterioration of finishes beyond normal weathering and wear.
b. Separation or delamination of materials and components.

2. Warranty Period: One year minimum from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 TACTILE WARNING SURFACING, GENERAL

A. Accessibility Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities and ICC A117.1 for tactile warning surfaces.

1. For tactile warning surfaces composed of multiple units, provide units that when installed provide consistent side-to-side and end-to-end dome spacing that complies with requirements.

B. Source Limitations: Obtain each type of tactile warning surfacing, anchor, and fasteners from single source with resources to provide materials and products of consistent quality in appearance and physical properties.

2.2 DETECTABLE WARNING TILES

A. Cast-in-Place Detectable Warning Tiles: Accessible truncated-dome detectable warning tiles with replaceable surface configured for setting flush in new concrete walkway surfaces, with slip-resistant surface treatment on domes and field of tile.

1. Detectable Warning Tiles: Subject to compliance with requirements, provide "Cast-in-Place Replaceable Tactile Warning Surface Tiles", as manufactured by ADA Solution, Inc., of Chelmsford, MA, (Phone: 800-372-0519, Fax: 978-262-9125, www.adatile.com.
2. Material: Molded glass- and carbon-fiber-reinforced polyester.
3. Color: Brick Red
4. Shapes and Sizes:

    a. Rectangular panel, 24 by 36 inches, 24 by 48 inches, and 24 by 60 inches.
    b. Radius panel, nominal 24 inches deep by 10-foot and 15-footoutside radius.

5. Dome Spacing and Configuration: 2.35-inch spacing in square pattern.
6. Mounting:

    a. Replaceable detectable warning tile wet-set into freshly poured concrete and surface-fastened to permanently embedded anchors.

2.3 ACCESSORIES

A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of tactile warning surfaces, noncorrosive and compatible with each material joined, and complying with the following:

1. Furnish Type 316 stainless-steel fasteners for exterior use.
2. Fastener Heads: For nonstructural connections, use flathead or oval countersunk screws and bolts with tamper-resistant heads, colored to match tile.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that pavement is in suitable condition to begin installation according to manufacturer's written instructions. Verify that installation of tactile warning surfacing will comply with accessibility requirements upon completion.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF TACTILE WARNING SURFACING

A. General: Prepare substrate and install tactile warning surfacing according to manufacturer's written instructions unless otherwise indicated.

B. Place tactile warning surfacing units in dimensions and orientation indicated. Comply with location requirements of AASHTO MP 12.

3.3 INSTALLATION OF DETECTABLE WARNING TILES

A. Removable Cast-in-Place Detectable Warning Tiles:

1. Concrete Paving Installation: Comply with installation requirements in Section 32 1313 "Concrete Paving". Mix, place, and finish concrete to conditions complying with detectable warning tile manufacturer's written requirements for satisfactory embedment of removable tile.
2. Set each detectable warning tile accurately and firmly in place with embedding anchors and fasteners attached, and firmly seat tile back in wet concrete by tamping or vibrating. If necessary, temporarily apply weight to tiles to ensure full contact with concrete.
3. Set surface of tile flush with surrounding concrete and adjacent tiles, with variations between tiles and between concrete and tiles not exceeding plus or minus 1/8 inch from flush.
4. Protect exposed surfaces of installed tiles from contact with wet concrete. Complete finishing of concrete paving surrounding tiles. Remove concrete from tile surfaces.
5. Clean tiles using methods recommended in writing by manufacturer.

3.4 CLEANING AND PROTECTION

A. Remove and replace tactile warning surfacing that is broken or damaged or does not comply with requirements in this Section. Remove in complete sections from joint to joint unless otherwise approved by Architect. Replace using tactile warning surfacing installation methods acceptable to Architect.

B. Protect tactile warning surfacing from damage and maintain free of stains, discoloration, dirt, and other foreign material.

END OF SECTION 32 1726

SECTION 32 1823.17 - NATURAL INFIELD AND WARNING TRACK SURFACING

PART 1 – GENERAL

1.0 SEQUENCE OF WORK

1. Consolidate the areas leaving a 4" depth for infield clay surfacing or warning track material.
2. Install the base anchors.
3. Place the infield clay or warning track material in 2" lifts.
4. Scarify between lifts.
5. Consolidate to 85-90%.
6. Apply calcium chloride.
7. Rake and roll the areas.
8. Apply inflow conditioner.
9. Install the mound.
10. Clean the turf areas.

1.1 SECTION INCLUDES

A. Baseball and softball skinned surfacing.

1. Using existing in-place materials and new materials as needed for grade adjustment, the Contractor shall furnish, and construct infield mix and warning track surfaces to the lines and grades shown on the plans as specified in this section, including the provision of all materials, labor, tools, equipment and transportation necessary to complete the work.
2. In advance of installing the additional infield mix and warning track surfacing, the Contractor shall be responsible for skimming and relocation or removal of existing materials if needed.

1.2 RELATED REQUIREMENTS

A. Division 01 Section(s) “Construction Waste Management and Disposal” and “Sustainability Compliance Procedures” for sustainability requirements.

B. Section 11 6833 – Athletic Field Equipment: Baseball and softball bases and pitching rubbers.

C. Section 31 2300 – Excavation, Backfill, Compaction and Dewatering: Subgrade Preparation.

D. Section 32 3113 – Chain Link Fences and Gates: Baseball and softball backstops.

1.3 REFERENCE STANDARDS

A. ASTM D689 – Standard Test Method for Internal Tearing Resistance of Paper; 2017.

1.4 SUBMITTALS

A. See Section 01 3000 – Administrative Requirements, for submittal procedures.

B. CTHPB Documentation Submittals: Comply with Section 01 3566.42 – Sustainability Compliance Procedures and provide the following in addition to other submittals:

1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

C. Product Data: For each type of product.

1. Include particle size analysis for infield mix.

D. Samples: For each bulk-supplied material, 1-quart (1-L) volume of each in sealed containers labeled with content, source, and date obtained. Each sample shall be typical of the lot of material to be furnished; provide an accurate representation of composition, color, and texture.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: An independent operated laboratory; experienced in soil science, soil testing specific to baseball and softball fields with the experience and capability to conduct the testing indicated; and that specializes in types of tests to be performed.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Remove contaminated and rejected material from project site immediately.

B. Handle and store so to keep dry and maintain workability of infield materials.

PART 2 – PRODUCTS

2.1 INFIELD MIX

A. Acceptable Manufacturers: Subject to compliance with requirements, provide products by one of the following as approved by the Landscape Architect:

1. DuraEdge Products, Inc. (866) 867-0052.
2. Partac Peat Corporation, (908) 637-8421.

B. Infield Mix: As available from local infield mix suppliers and complying with the following requirements:

1. Shall be clean, dry clay mixed with washed mason-type sand resulting in a weed-free mixture that is reddish brown in color, having a yield of 1.35 tons per cubic yard when placed loose or 1.5 tons per cubic yard when compacted to 85 to 90 percent on a Standard Proctor Test (ASTM D689). Infield mix shall possess the following particle size analysis:

a) Total Sand Content: 70 to 75 percent.
b) Combined amount of sand retained on medium, coarse and very coarse sieves shall be greater than or equal to 50 percent.
c) Combined amount of silt and clay shall be 25 to 30 percent.
d) The SCR ratio (silt clay ratio) shall be 0.5 to 1.0.
e) No particles shall be greater than 3 millimeters.
f) Equal to or less than 5 percent of particles shall be retained on the 2-millimeter sieve.

2.2 PITCHING MOUND MIX

A. Acceptable Manufacturers: Subject to compliance with requirements, provide products by one of the following as approved by the Landscape Architect:

1. DuraEdge Products, Inc. (866) 867-0052.
2. Partac Peat Corporation, (908) 637-8421.

B. Pitching Mound Mix: As available from local infield mix suppliers and complying with the following requirements:

C. Shall be clean, dry clay mixed with washed mason-type sand resulting in a weed-free mixture that is reddish brown in color, having a yield of 1.35 tons per cubic yard when placed loose or 1.75 tons per cubic yard when compacted to 85 to 90 percent on a Standard Proctor Test (ASTM D689). Pitching Mound mix shall possess the following particle size analysis:

1. Total Sand Content: 15 to 28 percent.
2. Total Clay Content: 30 percent.
3. The SCR ratio (silt clay ratio) shall be 0.75 to 1.25.

4. No particles shall be greater than 3 millimeters.

2.3 INFIELD TOPDRESSING

A. Amendments shall be installed in accordance with the Infield Mix manufacturer's recommendations to include, but not be limited, to the following:

1. Calcined Clay: "Turface Pro League Heritage Red Conditioner", as manufactured by Profile Products LLC, 750 Lake Cook Road, Suite 440, Buffalo Grove, IL (800) 207-6457.
2. Expanded Shale: "ProSlide Engineered Topdressing", a professional grade expanded shale topdressing.
3. Calcium Chloride
4. Inflow infield conditioner by precision laboratories.

2.4 WARNING TRACK MIX

A. Acceptable Manufacturers: Subject to compliance with requirements, provide products by one of the following as approved by the Landscape Architect:

1. DuraEdge Products, Inc., (866) 867-0052.
2. Partac Peat Corporation, (908) 637-8421.

B. Warning Track Mix: As available from local infield mix suppliers and complying with the following requirements:

1. Shall be clean, crushed brick mixed with #10 limestone resulting in a mix that is reddish brown in color, having a yield of 1.3 tons per cubic yard and possessing the following particle size analysis:

PART 3 – EXECUTION

3.1 SITE PREPARATION

A. Grade subgrade within 10 inches of finish grade and thoroughly compact.

B. Check that finished grade will match proposed grades shown on plan. Make corrections as required prior to placing Infield Mix materials.

3.2 BLECAVATE, INSTALL, ROLL AND COMPACT INFIELD MIX AREAS

A. All infield mix areas are to be tilled to a depth of 4 inches (101.6 mm) with a Blecavator. Conventional tilling is unacceptable.

B. The Contractor shall perform blending operations within the areas delineated on the plans. The

contractor shall prepare the soil using the Blecavator, which is a heavy duty contra-rotating rotor with blades that dig into the ground throwing soil, debris, and rocks against a sorting screen mounted behind the rotor for separating rocks and debris. The fine soil is deposited over the top and leveled off. The rear packer roll on the Blecavator firms up the finished areas ready for fine grading. Within the area delineated on plans, the contractor shall be directed by the Engineer, to perform blending for 4-inch (101.6-mm) depth of infield mix in order to achieve a homogeneous blend of soil composition over the entire infield within the limits of the full depth renovation areas.

C. Upon regrading of existing surfaces and installation of the required additional material, the Contractor shall install, roll and compact the infield mixes and warning track materials specified to a compacted finished depth as specified on the construction plans. Complete installation of clay surfaces in conformance with the manufacturer's recommendations or as otherwise required by the Engineer.

D. The edges of the infield mixes and warning track shall meet the grades of adjacent turf areas. No ridges or depressions will be permitted at edges.

E. Infield turf areas are to be seeded and maintained per Section 32 9219 - Seeding.

3.3 SKINNED INFIELD AND PITCHING MOUND INSTALLATION

A. Place mixes in lifts of 2 inches (50.8 mm) and compact with a 1-ton vibratory roller until an optimum compaction is achieved. Scarify the surface to facilitate bonding of the next lift and repeat until finish grade elevation is achieved.

1. Pitching Mound Compaction: 90 to 95 percent.
2. Skinned Infield Compaction: 85 to 90 percent.

B. Apply calcium chloride evenly at the rate of 3/4 pounds per square yard as recommended by mix manufacturer. Mix into top 2 inches (50.8 mm) by raking or dragging.

C. Rake to smooth grade; then compact with small roller leveling edges of existing grades. Remove all rocks and debris over 1/2- inch (12.7-mm) in size (in any dimension).

D. Remove from the field of play all infield material contaminated by installation. Remove all infield materials from adjacent lawns or sod. Trim all edges with lawn straight and true.

E. Finish Grading: Infield Mix shall be laser graded to a tolerance of 1/8-inch (3.175-mm). Slope infield towards outfield at 1 percent slope.

F. Topdressing: Following final approval of infield surfacing, topdressing shall be applied to the surface. Topdressing material shall be either expanded shale or calcined clay as recommended by manufacturer and applied at a rate of 1 pound per square foot.

3.4 WARNING TRACK INSTALLATION

A. Excavate material from the warning track area to a depth of 7 inches (177.8 mm) below the final finished grade.

B. Compact the subgrade until 90 to 95 percent compaction is achieved.

C. Install geotextile fabric to prevent weed migration through the warning track area.

D. Place 3 inches (76.2 mm) of processed aggregate base capped with 1 inch (25,4 mm) of stone dust for a total of 4 inches (101.6 mm).

E. Place the warning track material of the top of the stone dust. The depth of the warning track material shall be 3 inches (76.2 mm) at completion of compaction.

F. When placing the processed aggregate, stone dust and warning track materials, use lifts of 2 inches (50.8 mm) or less and compact with a minimum 1-ton vibratory roller until an optimum compaction between 90 and 95 percent is achieved. Scarify the surface to facilitate bonding of the next lift and repeat until finish grade elevation is achieved.

END OF SECTION 32 1823.17

SECTION 32 3113 - CHAIN LINK FENCES AND GATES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

1.2 SUMMARY

A. Section Includes:

1. Chain Link Fence.

a. Chicanes.

b. Baseball/Softball backstop with hood.

c. Baseball/Softball sideline and dugout fences.

d. Field Perimeter fence

e. Synthetic Turf fence (Alternate No. S1).

f. Tennis court fence.

2. Posts, rails, and frames - polymer coated.

3. Wire fabric - polymer coated.

4. Concrete for footings.

5. Manual swing and / or slide gates with related hardware.

a. Swing gates.

b. Slide gates.

B. Related Requirements:

a. Division 01 Section(s) "Construction Waste Management and Disposal" and "Sustainability Compliance Procedures" for sustainability requirements

b. Section 03 3000 - Cast-in-Place Concrete: Concrete anchorage for posts.

1.3 REFERENCE STANDARDS

A. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware 2016a.

B. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength 2018a.

C. ASTM F567 - Standard Practice for Installation of Chain-Link Fence 2014a.

D. ASTM F668 - Standard Specification for Polyvinyl Chloride (PVC) and Other Organic Polymer-Coated Steel Chain-Link Fence Fabric 2017.

E. ASTM F1043 - Standard Specification for Strength and Protective Coatings on Steel Industrial Fence Framework 2018.

F. ASTM F1083 - Standard Specification for Pipe, Steel, Hot-Dipped Zinc-Coated (Galvanized) Welded, for Fence Structures 2018.

G. CLFMI CLF-FIG0111 - Field Inspection Guide 2014.

H. CLFMI CLF-PM0610 - Product Manual 2017.

I. CLFMI WLG 2445 - Wind Load Guide for the Selection of Line Post and Line Post Spacing 2018.

J. FS RR-F-191/1D - Fencing, Wire and Post Metal (Chain-Link Fence Fabric) 1990.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on fabric, posts, accessories, fittings and hardware.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 – Sustainability Compliance Procedures and provide the following in addition to other submittals:

1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Design Calculations: For high wind load areas, provide calculations for fence fabric and accessory selection as well as line post spacing and foundation details. See CLFMI WLG 2445 for line post and spacing guidance.

E. Manufacturer's Installation Instructions: Indicate installation requirements and procedures.

F. Field Inspection Records: Provide installation inspection records that include post settings, framework, fabric, barbed wire, fittings and accessories, gates, and workmanship.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than three years of documented experience.

B. Fence Installer: Company with demonstrated successful experience installing similar projects and products, with not less than five years of documented experience.

1.6 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective Work within a one year period after Date of Substantial Completion.

C. Provide manufacturer’s standard warranty for vinyl-coated chain link fence system, minimum of one year.

PART 2 - PRODUCTS

2.1 COMPONENTS

A. Line Posts: 1.9 inch (48 mm) diameter w/ cap.

B. Corner and Terminal Posts: 2.38 inch (60 mm) diameter w/ cap.

C. Gate Posts: 3-1/2 inch (89 mm) diameter w/ cap.

D. Top and Brace Rail: 1.66 inch (42 mm) diameter, plain end, sleeve coupled.

E. Bottom Rail: 1.66 inch (42 mm) diameter, plain end, sleeve coupled.

F. Gate Frame: 1.66 inch (42 mm) diameter for welded fabrication.

G. Fabric: diamond mesh interwoven wire, top selvage knuckle end closed, bottom selvage twisted tight.

a. Standard Fence Fabric:

1. Mesh Size: 2-inch (50mm).
2. Mesh Gauge: 9-gauge core wire with a dia. of 0.148 inch (3.76mm).

H. Tension Wire: 6 gauge, 0.1920 inch (4.9 mm) thick steel, single strand.

I. Tension and Brace Bands: Pressed steel.

J. Tension Bars: Steel, length not less than 2 inches (50 mm) shorter than full height of chain-link fabric.

K. Tie Wire: Hot-dip galvanized steel wire according to ASTM F626 for attaching chain-link fabric to posts, rails and frames.

2.2 MATERIALS

A. Posts, Rails, and Frames:

a. ASTM A1011/A1011M, Designation SS; hot-rolled steel strip, cold formed to pipe configuration, longitudinally welded construction, minimum yield strength of 50 ksi (345 MPa); zinc coating complying with ASTM F1043 and ASTM F1083.
b. Line Posts: Type I round in accordance with FS RR-F-191/1D.
c. Terminal, Corner, Rail, Brace, and Gate Posts: Type I round in accordance with FS RR-F-191/1D.
d. Comply with CLFMI CLF-PM0610.
e. ASTM F668 polymer-coated

B. Wire Fabric:

a. ASTM F668 polymer-coated steel chain link fabric.
b. Comply with CLFMI CLF-PM0610.
c. Standard Fence:

1. Mesh Size: 2-inch (50mm).
2. Mesh Gauge: 9-gauge core wire with a dia. of 0.148 inch (3.76mm).

C. Concrete for Bases:

a. Shall be as specified in Section 03 3005.

2.3 FENCE COMPONENTS

A. Line Posts: 1.9 inch (48 mm) diameter.

B. Corner and Terminal Posts: 2.38 inch (60 mm) diameter.

C. Fabric: 1-3/4 inch (44 mm) diamond mesh interwoven wire, 6 gage, 0.1920 inch (4.9 mm) thick, top selvage knuckle end closed, bottom selvage knuckle end closed.

2.4 MANUAL GATES AND RELATED HARDWARE

A. Hardware for Single Swinging Gates: 180 degree hinges, 2 for gates up to 60 inches (1,525 mm) high, 3 for taller gates; fork latch with gravity drop and padlock hasp; keeper to hold gate in fully open position.

B. Hardware for Double Swinging Gates: 180 degree hinges, 2 for gates up to 60 inches (1,525 mm) high, 3 for taller gates; drop bolt on inactive leaf engaging socket stop set in concrete, active leaf latched to inactive leaf preventing raising of drop bolt, padlock hasp; keepers to hold gate in fully open position.

C. Hardware for Cantilever Slide Gates, Class 1 with external roller assemblies:

   a. Hangers, Roller Assemblies, and Stops.
   b. Latch: Permitting operation from both sides of gate with provisions for padlocking accessible from both sides of gate.

D. Hinges: Finished to match fence components.

E. Latches: Finished to match fence components.

2.5 ACCESSORIES

A. Caps: Cast steel galvanized; sized to post diameter, set screw retainer and finished to match fence components.

B. Fittings: Sleeves, bands, clips, rail ends, tension bars, fasteners and fittings; steel.

2.6 CHAIN LINK FENCE FINISHES

A. Posts, Components, and Fabric: Vinyl coated over coating of 1.8 ounces per square foot galvanizing (over coating of 550 g/sq m galvanizing).

B. Hardware: Hot-dip galvanized to weight required by ASTM A153/A153M.

C. Accessories: Same finish as fabric.

D. Color(s): Black.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verification of Conditions: Verify that areas are clear of obstructions or debris.

B. Preinstallation Testing: Test areas for ledge.

3.2 PREPARATION

A. Removal: Obstructions or debris.

B. Ground Preparation:

a. Grading shall be completed prior to beginning of installation.

3.3 INSTALLATION

A. Install framework, fabric, accessories and gates to heights indicated on drawings and in accordance with ASTM F567.

B. Set intermediate, terminal, and gate posts plumb, in concrete footings with top of footing 6 inches below finish grade. Slope top of concrete for water runoff.

C. Provide top rail through line post tops and splice with 6 inch (150 mm) long rail sleeves.

D. Install center brace rail on corner gate leaves.

E. Do not stretch fabric until concrete foundation has cured 28 days.

F. Stretch fabric between terminal posts or at intervals of 100 feet (30 m) maximum, whichever is less.

G. Position bottom of fabric 2 inches (50 mm) above finished grade.

H. Fasten fabric to top rail, line posts, braces, and bottom tension wire with tie wire at maximum 15 inches (380 mm) on centers.

I. Attach fabric to end, corner, and gate posts with tension bars and tension bar clips.

J. Install bottom tension wire stretched taut between terminal posts.

K. Do not attach the hinged side of gate to building wall; provide gate posts.

L. Install hardware and gate with fabric to match fence.

M. Provide concrete center drop to footing depth and drop rod retainers at center of double gate openings.

N. Peen all bolts upon installation.

O. Perform three random field inspections confirming proper installation.

3.4 TOLERANCES

A. Maximum Variation From Plumb: 1/4 inch (6 mm).

B. Maximum Offset From True Position: 1 inch (25 mm).

C. Do not infringe on adjacent property lines.

3.5 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for additional requirements.

B. Layout: Verify that fence installation markings are accurate to design, paying attention to gate locations, underground utilities, and property lines.

C. Post Settings: Randomly inspect three locations against design for:

a. Hole diameter.
b. Hole depth.
c. Hole spacing.

D. Fence Height: Randomly measure fence height at three locations or at areas that appear out of compliance with design.

E. Gates: Inspect for level, plumb, and alignment.

F. Workmanship: Verify neat installation free of defects. See CLFMI CLF-FIG0111 for field inspection guidance.

3.6 CLEANING

A. Leave immediate work area neat at end of each work day.

B. Clean jobsite of excess materials; scatter excess material from post hole excavations uniformly away from posts. Remove excess material if required.

C. Clean fence with mild household detergent and clean water rinse well.

D. Remove mortar from exposed posts and other fencing material using a 10 percent solution of muriatic acid followed immediately by several rinses with clean water.

E. Touch up scratched surfaces using materials recommended by manufacturer. Match touched-up paint color to factory-applied finish.

F. See Section 01 7419 - Construction Waste Management and Disposal, for additional requirements.

3.7 CLOSEOUT ACTIVITIES

A. See Section 01 7800 - Closeout Submittals, for closeout submittals.

END OF SECTION 32 3113

SECTION 32 3118 - METAL FENCES AND GATES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Security steel fence and gates

2. Steel fence.

B. Related Requirements:

1. Division 01 Section(s) "Construction Waste Management and Disposal" and "Sustainability Compliance Procedures" for sustainability requirements

2. Section 03 3000 – "Cast-in-Place Concrete"

3. Section 08 7100 – "Door Hardware": Panic hardware for emergency egress gates.

4. Section 31 2300 – "Excavation, Backfill, Compaction and Dewatering".

1.3 REFERENCE STANDARDS

A. ASTM A276/A276M - Standard Specification for Stainless Steel Bars and Shapes 2017.

B. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process 2020.

C. ASTM B117 - Standard Practice for Operating Salt Spray (Fog) Apparatus 2019.

D. ASTM D523 - Standard Test Method for Specular Gloss 2014 (Reapproved 2018).

E. ASTM D714 - Standard Test Method for Evaluating Degree of Blistering of Paints 2002 (Reapproved 2017).

F. ASTM D822/D822M - Standard Practice for Filtered Open-Flame Carbon-Arc Exposures of Paint and Related Coatings 2013 (Reapproved 2018).

G. ASTM D1654 - Standard Test Method for Evaluation of Painted or Coated Specimens Subjected to Corrosive Environments 2008, with Editorial Revision (2017).

H. ASTM D2244 - Standard Practice for Calculation of Color Tolerances and Color Differences

from Instrumentally Measured Color Coordinates 2021.

I. ASTM D2794 - Standard Test Method for Resistance of Organic Coatings to the Effects of Rapid Deformation (Impact) 1993 (Reapproved 2019).

J. ASTM D3359 - Standard Test Methods for Rating Adhesion by Tape Test 2022.

K. ASTM F2408 - Standard Specification for Ornamental Fences Employing Galvanized Steel Tubular Pickets 2016.

L. ASTM F2656/F2656M - Standard Test Method for Crash Testing of Vehicle Security Barriers 2020.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Conduct a preinstallation meeting one week prior to start of work of this section; require attendance by affected installers.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Submit manufacturer's data sheets on each product to be used, including:
1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
3. Installation methods.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 – Sustainability Compliance Procedures and provide the following in addition to other submittals:

1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Shop Drawings:
1. Indicate plan layout, spacing of components, post foundation dimensions, hardware anchorage, gates, and schedule of components.

E. Samples: Submit two samples of fence panels, slat infill, 24 inch (609 mm) by 24 inch (609 mm) in size illustrating construction and colored finish.

F. Manufacturer's Installation Instructions: Indicate installation requirements, post foundation anchor bolt templates, etc.

G. Manufacturer's Qualification Statement.

H. Installer's Qualification Statement.

I. Manufacturer's Warranty.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with minimum five years documented experience.

B. Installer Qualifications: Experienced with type of construction involved and materials and techniques specified and approved by fence manufacturer.

1.7 DELIVERY, STORAGE AND HANDLING

A. Store materials in a manner to ensure proper ventilation and drainage. Protect against damage, weather, vandalism and theft.

1.8 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements

B. Correct defective Work within a five year period after Date of Substantial Completion.

C. Provide five year manufacturer warranty for the electro-coated surface against cracking, peeling, chipping, blistering or corroding.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Metal Fences and Gates:
   1. Ameristar Perimeter Security, USA: www.ameristarfence.com/#sle.
   2. Substitutions: See Section 01 6000 - Product Requirements.

B. Specialty Hardware:
   1. DAC Industries, Inc; Detex Exit Bar: www.dacindustries.com/#sle.
   2. Substitutions: See Section 01 6000 - Product Requirements.

2.2 FENCES

A. Fences: Complete factory-fabricated system of posts and panels, accessories, fittings, and fasteners; finished with electrodeposition coating, and having the following performance characteristics:
   1. Capable of resisting vertical load, horizontal load and infill performance requirements for fence categories defined in ASTM F2408.

B. Electro-Deposition Coating: Multistage pretreatment/wash with zinc phosphate, followed by epoxy primer and acrylic topcoat.

1. Total Coating Thickness: 2 mils (0.058 mm), minimum.
2. Color: As shown on drawings.
3. Coating Performance: Comply with general requirements of ASTM F2408.
   a) Adhesion: ASTM D3359 (Method B); Class 3B with 90 percent or more of coating remaining in tested area.
   b) Corrosion Resistance: ASTM B117, ASTM D714 and ASTM D1654; 1/8 inch (15.8 mm) coating loss or medium No.8 blisters after 1,500 hours.
   c) Impact Resistance: ASTM D2794; 60 inch pounds (6.8 N m).
   d) Weathering Resistance: ASTM D523, ASTM D822/D822M and ASTM D2244; less than 60 percent loss of gloss.

C. Steel: ASTM A653/A653M; tensile strength 45,000 psi (310 MPa), minimum.
   1. Hot-dip galvanized; ASTM A653/A653M, G60.
   2. 62 percent recycled steel, minimum.

D. Fasteners: ASTM A276/A276M, Type 302 stainless steel; finished to match fence components.

E. Hinges: Finished to match fence components.
   1. Brackets: Round.
   2. Mounting: Center.
   3. Closing: Manual.

F. Latches: Finished to match fence components.
   1. Brackets: Round.
   2. Locking: Mechanical.

2.3 HIGH-SECURITY STEEL FENCE

A. Basis-of-Product Design: Subject to compliance with requirements, provide "Impasse II High Security Steel Fence System", Gauntlet Style as manufactured by Ameristar Perimeter Security USA Inc.or a comparible product by the following as approved by Landscape Architect:
   1. Ametco Manufacturing Corporation.
   2. Fortress Building Products

B. Provide fence meeting requirements for Industrial class as defined by ASTM F2408 and capable of resisting impact from specified vehicle weight and speed when tested according to ASTM F2656/F2656M.

C. Fence Panels: Mechanically fastened with internal reinforcement and tamperproof fasteners; 6 feet (1.8 m) high by 6 feet (1.8 m) long.
   1. Panel Style: Three rail.
   2. Panel Strength: Capable of supporting 400 pound (181 kg) load applied at midspan without deflection.
   3. Attach panels to posts with manufacturer's standard panel brackets.

D. Posts: Double-wall, I-beam shape; prepunched for rails and cables.
   1. Bending Strength: 93,700 psi (64,600 kPa) load applied at midspan without deflection.
   2. Size: 1-3/4 inch (44.5 mm) by 4 inches (102 mm).
   3. Post Cap: Manufacturer's standard cast aluminum.

E. Rails: Steel channels with lower leg designed to carry cables, sensor wiring and alarm system components.
   1. Size: 2 inches (51 mm) by 2 inches (51 mm) by 11 gauge nominal thickness.
   2. Pale Holes: 6 inches (152 mm) on center.

F. Pales: Corrugated steel strips; 3/4 inch (19 mm) thick.
   1. Spacing: 6 inches (152 mm) on center.
   2. Size: 2-3/4 inches (70 mm) by 3/4 inch (19 mm).
   3. Style: Pales with rounded tip extend above top rail.

G. Color: As indicated on Metal Finish Schedule.

H. Swing Gates:
   1. Swing gates shall be fabricated using 2 inch square by 12 gauage rail, 2 inches square by 12 gauage gate ends, and 2.75 inch by 0.75 inch by 0.075 pales. Gates that exceed 6 feet in width will have a 2 inch square by 11gauage. intermediate upright. All rail and upright intersections shall be joined by welding. All pale and rail intersections shall also be joined by welding.

   2. Pedestrian swing gates shall be self-closing, having a gate leaf no larger than 48 inch in width. Integrated hinge-closer set (2 qty) shall be ADA compliant that shall include a variable speed and final snap adjustment with compact design (no greater than 5” x 6” footprint). Hinge-closer set (2 qty) shall be tested to a minimum of 500,000 cycles and capable of self-closing gates up to a maximum gate weight of 260 lbs. and maximum weight load capacity of 1,500 lbs. Hinge-closer device shall be externally mounted with tamper-resistant security fasteners, with full range of adjustability, horizontal (.5” - 1.375”) and vertical (0 - .5”). Maintenance free hinge-closer set shall be tested to operate in temperatures of negative 20 F to 200 F degrees, and swings to negative 2 degrees to ensure reliable final lock engagement.

I. Sliding Cantilever Gates:
   1. Basis-of-Design Product: Provide "TransPort IS" as manufactured by Ameristar Perimeter Security USA Inc.with design matching style, height, and color of fence system. The dual enclosed track slide gate shall be an aluminum component design using tracks, uprights, pales, hardware, fittings, and fasteners. Gate installation shall comply with latest ASTM F2200 standards for automated gates, regardless if the gate is of manual operation.

2.4 BARRIER FENCE

A. Basis-of-Product Design: Subject to compliance with requirements.

B. Provide fence meeting requirements for Industrial class as defined by ASTM F2408 and capable of resisting impact from specified vehicle weight and speed when tested according to ASTM F2656/F2656M.
   1. Panel Style: Two rail.
   2. Panel Strength: Capable of supporting 400 pound (181 kg) load applied atmidspan without deflection.
   3. Attach panels to posts with manufacturer's standard panel brackets.
   4. Bending Strength: 93,700 psi (64,600 kPa) load applied at midspan without deflection.
   5. Size: 1-1/4 inch (31.75 mm) x 15/16 inch (23.81 mm).

6. Size: 4 inch (101 mm) square by 11 gauge, 0.1196 inch (3.04 mm thick).
7. Size: 4 inch (101 mm) square by 11 gauge, 0.1196 inch (3.04 mm thick).

C. Rails: Steel channels with lower leg designed to carry cables, sensor wiring and alarm system components.
1. Size: 2 inches (51 mm) by 2 inches (51 mm) by 11 gauge nominal thickness.
2. Pale Holes: 6 inches (152 mm) on center.

D. Pales: Corrugated steel strips; 3/4 inch (19 mm) thick.
1. Spacing: 6 inches (152 mm) on center.
2. Size: 2-3/4 inches (70 mm) by 3/4 inch (19 mm).
3. Style: Pales with rounded tip extend above top rail.

E. Color: As indicated on Metal Finish Schedule.

PART 3 EXECUTION

3.1 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

A. Clean surfaces thoroughly prior to installation.

3.3 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Set fence posts in accordance with the manufacturer recommended spacing.

C. When cutting rails immediately seal the exposed surfaces by:
1. Removing metal shavings from cut area.
2. Apply zinc-rich primer to thoroughly cover cut edge and drilled hole; allow to dry.
3. Apply two coats of custom finish spray paint matching fence color.
4. Failure to seal exposed surfaces in accordance with manufacturer's instructions will negate manufacturer's warranty.

D. Space gate posts according to the manufacturers' drawings, dependent on standard out-to-out gate leaf dimensions and gate hardware selected.
1. Base type and quantity of gate hinges on the application, weight, height, and number of gate cycles.
2. Identify the necessary hardware required for the application on the manufacturer's gate drawings.
3. Provide gate hardware by the manufacturer of the gate and install in compliance with manufacturer's recommendations.

3.4 TOLERANCES

A. Maximum Variation From Plumb: 1/4 inch (6.3 mm).

B. Maximum Offset From Indicated Position: 1 inch (25.4 mm).

C. Minimum Distance from Property Line: 6 inches (152 mm).

3.5 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for additional requirements.

B. Layout: Verify that fence installation markings are accurate to design, paying attention to gate locations, underground utilities, and property lines.

C. Post Settings: Randomly inspect three locations against design for:
   1. Hole diameter.
   2. Hole depth.
   3. Hole spacing.

D. Fence Height: Randomly measure fence height at three locations or at areas that appear out of compliance with design.

E. Gates: Inspect for level, plumb, and alignment.

F. Workmanship: Verify neat installation free of defects.

3.6 CLEANING

A. Leave immediate work area neat at end of work day.

B. Clean jobsite of excess materials; scatter excess material from post hole excavations uniformly away from posts. Remove excess material if required.

C. Clean fence with mild household detergent and clean water rinse well.

D. Remove mortar from exposed posts and other fencing material using a 10 percent solution of muriatic acid followed immediately by several rinses with clean water.

E. Touch up scratched surfaces using materials recommended by manufacturer. Match touched-up paint color to factory-applied finish.

F. See Section 01 7429 - Construction Waste Management and Disposal, for additional requirements.

3.7 CLOSEOUT ACTIVITIES

A. See Section 01 7800 - Closeout Submittals, for closeout submittals.

B. See Section 01 7900 - Demonstration and Training, for additional requirements.

3.8 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair, or replace damaged products before Date of Substantial Completion.

END OF SECTION

SECTION 32 3120 - VEHICLE BARRIER GATES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Delegated design for:

a. Automatic vehicular barrier gate.
b. Manual vehicular barrier gate.
c. Motorized gate operator.
d. Communications and controls.
e. Miscellaneous appurtenances.

B. Related Requirements:

1. Division 01 Section(s) "Construction Waste Management and Disposal" and "Sustainability Compliance Procedures" for sustainability requirements.

2. Division 01 Section "Delegated Design Procedures"

3. Division 03 Section "Cast-in-Place Concrete" for concrete foundations.

4. Division 31 Section "Excavation, Backfill, Compaction and Dewatering" for site excavation, fill, and backfill where decorative metal gates are located.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated.

B. CTHPB Documentation Submittals: Comply with Section 01 3566.42 – Sustainability Compliance Procedures and provide the following in addition to other submittals:

1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.

2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

C. Shop Drawings: For gates, gate posts, operators, communications, electronics, and miscellaneous appurtenances required for full and proper operation of gate system. Include plans, elevations, sections, details, and attachments to other work.

D. Samples: For each fence material and for each color specified.

1. Provide Samples 12 inches (300 mm) in length for linear materials.

E. Welding certificates.

F. Concrete mix and related test data per Section 32 1313 "Concrete Paving".

1.4 QUALITY ASSURANCE

A. Installer Qualifications: Fabricator of products.

B. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel".

C. Preinstallation Conference: Conduct conference at Project site.

PART 2 - PRODUCTS

2.1 AUTOMATIC VEHICLE BARRIER GATES

A. Electronic Gate (Daley Drive Entrance) - Basis of Design:

1. Provide equal to Transport Link | Chain Link Cantilever Gate – Item No. 04 x 827 as provided by Ameristar Fence (888.333.3422) www.Ameristarfence.com.
2. Provide 4' Height / Dual (27' Opening) with all posts, chain link fabric, lockable gate hardware, bracing, motor & electronic controls, electronic timer, and misc. appurtenances as required for full and proper operation.
3. Finish / Color: Black PVC Vinyl coating.

2.2 MANUAL VEHICULAR BARRIER GATE

A. Manual Lift Arm Barrier Gate – Basis of Design:
1. Provide equal to Avon Manual Barrier by Avon Barrier, www.avon-barrier.com, 149 South Liberty Lane, Bristol, UK BS3 2TL or approved equal.
2. Finish/Color: To be selected by Landscape Architect

3. Boom Mounted “STOP”.
4. Boom Mounted pogo stick and support.

2.3 MISCELLANEOUS MATERIALS

A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

B. Concrete: Normal-weight, air-entrained, ready-mix concrete complying with requirements in Division 03 Section "Cast-in-Place Concrete" with a minimum 28-day compressive strength of 20 MPa (3000 psi), 75-mm (3-inch) slump, and 25-mm (1-inch) maximum aggregate size.

C. Non-shrink Grout: Factory-packaged, non-staining, noncorrosive, nongaseous grout complying with ASTM C 1107 and specifically recommended by manufacturer for exterior applications.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for site clearing, earthwork, pavement work, construction layout, and other conditions affecting performance of the Work.

B. Do not begin installation before final grading is completed unless otherwise permitted by Architect.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Stake locations of gates and terminal posts. Indicate locations of utilities, underground structures, benchmarks, and property monuments. Meet w/ Architect / City to gain written confirmation of field layout.

1. Construction layout and field engineering are specified in Division 01 Section "Execution".

3.3 GATE INSTALLATION

A. Foundations / Post Setting: Mount components / Set posts in concrete footings at indicated spacing per manufacturer’s recommendations and per approved shop drawings into firm, undisturbed soil.

1. Verify that posts are set plumb, aligned, and at correct height and spacing, and hold in position during setting with concrete or mechanical devices.
2. Posts Set in Concrete: Extend post to within 6 inches (150 mm) of specified excavation depth, but not closer than 3 inches (75 mm) to bottom of concrete.

a. Concealed Concrete: Top 6 inches (152.4 mm) below grade as indicated on Drawings to allow covering with surface material. Slope top surface of concrete to drain water away from post.

3. Provide foundations / slabs as required per manufacturer's recommendations and as detailed for proper installation of the vehicular gate. All exposed concrete surfaces shall be hand-rubbed finish.

B. Gates / Hardware: Install all gates, hardware, motors, electronics, and appurtenances as detailed and noted on drawings and as per manufacturer's recommendations.

3.4 ADJUSTING

A. Gates: Adjust gates to operate smoothly, easily, and quietly, free of binding, warp, excessive deflection, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range. Confirm that latches and locks engage accurately and securely without forcing or binding.

B. Lubricate hardware and other moving parts. Touch up any minor damages to finish that may have occurred during installation.

C. Conduct meeting with Architect / Engineer / City to review gate operation and demonstrate that all equipment and components are properly operating.

END OF SECTION 32 3120

SECTION 32 3223 - SEGMENTAL RETAINING WALLS

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Segmental Retaining Wall

1.2 RELATED REQUIREMENTS

A. Division 01 Section(s) "Construction Waste Management and Disposal" and "Sustainability Compliance Procedures" for sustainability requirements

B. Section 00 3132 - Available Project Information: Geotechnical Report.

C. Section 04 7200 – "Cast Stone Masonry": Seat wall caps.

D. Section 31 2200 – "Grading": Rough and finish grading.

E. Section 31 2316 – "Excavation, Backfill, Compaction and Dewatering".

F. Section 33 4000 – "Storm Drainage System".

1.3 REFERENCE STANDARDS

A. AASHTO M 288 - Standard Specification for Geosynthetic Specification for Highway Applications 2017.

B. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures Most Recent Edition Cited by Referring Code or Reference Standard.

C. ASTM C1262 - Standard Test Method for Evaluating the Freeze-Thaw Durability of Manufactured Concrete Masonry Units and Related Concrete Units 2010.

D. ASTM C140/C140M - Standard Test Methods for Sampling and Testing Concrete Masonry Units and Related Units 2020a.

E. ASTM C1372 - Standard Specification for Dry-Cast Segmental Retaining Wall Units 2017.

F. ASTM D698 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lbf/ft3 (600 kN-m/m3)) 2012, with Editorial Revision (2015).

G. ASTM D1241 - Standard Specification for Materials for Soil-Aggregate Subbase, Base, and Surface Courses 2015.

H. ASTM D4491/D4491M - Standard Test Methods for Water Permeability of Geotextiles by Permittivity 2020.

I. ASTM D4632/D4632M - Standard Test Method for Grab Breaking Load and Elongation of Geotextiles 2015a.

J. ASTM D4751 - Standard Test Methods for Determining Apparent Opening Size of a Geotextile 2020b.

K. ASTM D5321/D5321M - Standard Test Method for Determining the Shear Strength of Soil-Geosynthetic and Geosynthetic-Geosynthetic Interfaces by Direct Shear 2020.

L. ASTM D6638 - Standard Test Method for Determining Connection Strength Between Geosynthetic Reinforcement and Segmental Concrete Units (Modular Concrete Blocks) 2018.

M. ASTM D6916 - Standard Test Method for Determining the Shear Strength Between Segmental Concrete Units (Modular Concrete Blocks) 2018.

N. NCMA TR-127 - Design Manual for Segmental Retaining Walls 2010, Third Edition.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate the installation of soil reinforcement with segmental retaining wall size, location, and installation of service utilities.

B. Preinstallation Meeting: Conduct a preinstallation meeting one week prior to the start of the work of this section with the material supplier, installer, and the Architect.

C. Sequencing: Ensure that utility connections are achieved in an orderly and expeditious manner.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. CTHPB Documentation Submittals: Comply with Section 01 3566.42 – Sustainability Compliance Procedures and provide the following in addition to other submittals:

1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

C. Segmental Retaining Wall Units:

1. Manufacturer's product data.
2. Test data on unit strength and shear resistance between units.
3. Test data on soil reinforcement connection.
4. Manufacturer's certification that units meet requirements of specification.
5. Storage and handling requirements and recommendations.
6. Installation methods.

D. Samples for Initial Selection: For concrete units and each type of product, ingredient, or admixture requiring color and texture selection.

E. Samples for Verification: For each color and texture of concrete unit required. Submit 12-inch by 24-inch piece of full-size unit.

F. Shop Drawings: Engineering drawings for installation, including elevations, large-scale details of elevations, typical sections, details, and connections, soil reinforcement, and drainage provisions.

1. Include marked up contract drawings showing exact dimensions for blocks, required coping, and other minor revisions.
2. Design Data: Submit detailed design calculations showing compliance with specified design criteria and material evaluations performed in accordance with specified design standard, signed and sealed by Design Engineer.

G. Design Engineer's Qualification Statement.

H. Concrete Unit Manufacturer Qualification Statement.

I. Installer Qualification Statement.

1.6 QUALITY ASSURANCE

A. Design Engineer Qualifications: Provide design by or under direct supervision of Professional Engineer experienced in the work of this section and licensed in the State in which the Project is located and:

1. Having a minimum of five years documented experience in design of reinforced soil structures.
2. Employed by firm that has designed a minimum of 500,000 square feet (46,450 sq m) of segmental retaining walls.
3. Having minimum of $2,000,000 aggregate liability insurance.

B. Installer Qualifications: Firm specializing in design and installation of segmental retaining walls and:

1. With not less than 2 years documented experience.
2. With a minimum of five previously constructed successful projects, similar in size and magnitude, using specified retaining wall system; provide contact names and numbers.

3. Having site supervisor with verifiable qualified experience suitable for this project.
4. Approved by retaining wall system manufacturer.

C. Preconstruction Soil Testing: Engage a qualified independent testing agency to test soil reinforcement and backfill materials for compliance with design criteria.

1. Testing Agency Qualifications: As specified in Section 01 4000.

D. Product Testing: Performed by qualified independent testing agency or by manufacturer and witnessed by qualified independent testing agency.

E. Copies of Documents at Project Site: Maintain at the project site a copy of each referenced document that prescribes execution requirements.

1.7 MOCK-UP

A. Prior to erection of retaining walls, provide mock-up for evaluation of installation workmanship.

B. Erect 4 by 4 feet (1200 by 1200 mm) sample of eacwall using materials specified.

C. Locate mock-up where directed by Architect.

D. Do not start masonry work until mock-up has been approved by Architect.

E. Retain mock-up during construction as standard for judging completed work. Do not alter or destroy mock-up until work is completed.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Confirm that the specified materials have been delivered. Provide a product certification with each shipment.

B. Store products above ground on wood pallets or blocking, in manufacturer's unopened packaging, until ready for installation.

C. Prevent excessive soil and mud from coming in contact with face of concrete units.

D. Protect material from damage. Do not use damaged material. Remove damaged material from the site.

E. Store and dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with requirements of local authorities having jurisdiction.

1.9 FIELD CONDITIONS

A. Ambient Conditions: Do not install polymeric materials when temperatures are below minus 20 degrees F (minus 29 degrees C).

B. Existing Conditions: See subsurface investigation report; see Section 00 3100.

1.10 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective Work within a one year period after Date of Substantial Completion.

C. Provide manufacturer's standard warranty for Segmental Retaining Wall, minimum of one year.

PART 2 - PRODUCTS

2.1 RETAINING WALLS

A. Delegated Design: Contractor is responsible for design of the retaining walls.

B. Design Standard: Design retaining walls to be capable of withstanding the effects of gravity loads due to soil pressures resulting from grades indicated, determined in accordance with:

1. NCMA TR-127.
2. Include effects of sloped backfill as indicated on drawings.
3. Include effects of superimposed loads (surcharge) as indicated on drawings.
4. In addition, comply with applicable local, state, and federal codes and regulations.
5. This design method considers potential failure modes categorized by external, internal, local, compound, and global stability.
6. Architect has considered global stability and has indicated minimum design requirements in Contract Documents.
7. Seismic Stability: Perform analysis in accordance with ASCE 7.
8. Provide engineering services as required for analysis for all modes of stability.
9. Use of design software for calculations is permitted.
10. Submit complete shop drawings showing all features of the design.

C. Drainage: Design to prevent water accumulation in retained soil; use drainage fill and drainage pipe as specified in Section 33 4100; provide outlets at 50-foot (15 m) intervals along length of wall, minimum.

D. Minimum Factor of Safety: Design with the following stability requirements:

1. Sliding = 1.5.
2. Pullout = 1.5.
3. Tensile Overstress = 1.5.
4. Overturning = 2.0.
5. Bearing Capacity = 2.0.

2.2 SEGMENTAL RETAINING WALL

A. Retaining Wall Units: Machine-formed wet-cast concrete blocks of shapes and sizes suitable for the retaining wall configuration required and complying with ASTM C1776 and the following:

1. Basis-of-Design Product: Subject to compliance with requirements, provide "Daimond Pro PS" modular block units as produced by Belgard or one of the following acceptable products:

    1. Concord XL by Unilock
    2. Alta Pro by Nicolock

2. Finish/Color: Victorian Face/Color to be selected by Landscape Architect.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify location of existing structures and utilities prior to excavation.

B. Protect adjacent structures from the effects of excavation.

C. Verify that layout dimensions are correct, and substrate is in proper condition for installation.

D. Notify Architect of unsatisfactory conditions.

E. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Sitework:

1. Remove unwanted trees, bushes, and debris as specified in Section 31 1000.

B. Excavation:

1. Excavate to lines and grades indicated on drawings.
2. Do not disturb embankment or foundation beyond lines. Minimize over-excavation; fill over-excavated areas with compacted reinforced backfill or leveling pad material at Contractor's expense.
3. After excavation, and prior to placement of leveling materials, Geotechnical Engineer will examine bearing soil surface to verify strength meets or exceeds design requirements and assumptions.
4. Replace unsuitable bearing soil as directed by Architect.
5. Provide means of controlling surface water away from excavation during construction.
6. Perform rough and finish grading as specified in Section 31 2200.

C. Leveling Pad:

1. Depth: As indicated by delegated design submittal.
2. Width: 6 inches (152 mm) minimum extension beyond front and back faces of units.
3. In lieu of pad made solely of aggregate or concrete, pad may be 3 inches (75 mm), minimum, of thick compacted sand or crushed rock, covered with 2 inches (50 mm) to 3 inches (75 mm) of unreinforced concrete.
4. Location: Top of pad at 1 inch (25 mm) below grade for each 8 inches (200 mm) that wall extends above grade.
5. Compact aggregate to lines and grades on drawings, in lifts 6 inches (152 mm) thick, maximum.
6. Use only hand-operated compaction equipment within 36 inches (1 m) of back of wall.

D. Verify level grade before proceeding.

E. Install drainage collection pipe with a continuous fall in the direction of flow. Cap open ends as necessary to prevent soil and debris from entering.

3.3 INSTALLATION

A. Install in accordance with drawings, manufacturer instructions, and applicable codes and regulations.

B. Segmental Retaining Wall Units:

1. Place first course of units on leveling pad; check alignment and level. Check for full contact with base and for stability.
2. Place units side by side for full length of wall, aligning back face of straight walls using string line or offset from base line and back face of curved walls using flexible pipe or other method recommended by manufacturer.
3. Do not leave gaps between units.
4. Lay out corners and curves in accordance with manufacturer's instructions. Do not leave gaps to produce wall batter or curvature.
5. Cut blocks with saw; do not split units.
6. Sweep excess material from tops of units before laying succeeding courses.
7. Place a maximum of 2 succeeding courses above level backfill. Check for proper alignment and batter.
8. Where top of wall changes elevation, step units to match grade or turn top course into embankment.
9. Where bottom of wall changes elevation, step base leveling pad and extend lowest course a minimum of two units into slope.
10. Install shear connectors per manufacturer recommendations.

C. Drainage Fill: Place drainage fill in, between, and behind units.

1. Compact to lines and grades on drawings, in lifts 6 inches (152 mm) thick, maximum; decrease lift thickness where necessary to achieve required density.
2. Extend drainage fill 6 inches (150 mm) beyond back face of units.

3. Base of drainage fill elevation shall not exceed two courses or 16 inches (400 mm) from base of wall units.

D. Backfill: Place, spread, and compact backfill from behind drainage fill to undisturbed soil while minimizing the development of slack in the soil reinforcement.

1. Use only lightweight hand-operated compaction equipment within 3 feet (900 mm) from back wall face, or one half of wall height, whichever is greater.
2. Place backfill in lifts of maximum 6 inches (150 mm) to 8 inches (200 mm) loose thickness where hand compaction is used and 8 inches (200 mm) to 10 inches (250 mm) where heavy compaction equipment is used.
3. Compact backfill to 95 percent maximum density and upper 2 feet (600 mm) of backfill to 98 percent maximum density, standard Proctor, as determined in accordance with ASTM D698, or as recommended by Geotechnical Engineer.
4. Moisture content of backfill prior to and during compaction to be within plus or minus 2 percentage points dry of optimum and uniform throughout each layer.
5. Do not operate tracked construction equipment directly upon soil reinforcement. Maintain a minimum fill thickness of 6 inches (150 mm) for operation of tracked vehicles over soil reinforcement. Minimize turning of tracked vehicles while over soil reinforcement.
6. Operate wheeled equipment at speeds less than 10 miles per hour (16 kph) over soil reinforcement.
7. Prevent contamination of the filter fabric, unit fill, blanket drains, chimney drains, and/or drainage composite from poor drainage materials such as fine grained silt and clay.

E. Cap Units: Install cast stone with masonry adhesive.

1. Verify in-place top of wall elevation prior to installation of cap units and adjust accordingly.
2. Clear cap units and top course of segmental retaining wall units of debris and standing water before applying adhesive.
3. Apply masonry adhesive to top surface of top unit and place cap into position over projecting pins. Protect wall face from masonry adhesive.

F. Site Drainage:

1. At end of each day:
    1. Grade backfill a minimum of 2 percent away from wall to prevent runoff from adjacent areas from entering wall site and to prevent ponding at the wall.
    2. Construct a berm at the crest of the wall to prevent surface water from overtopping.
2. At completion, if other work adjacent to wall is not to be done immediately (paving, landscaping, etc.), grade top of backfill and provide temporary drainage to prevent water runoff toward the wall.
3. Surface water control and groundwater seepage shall be the responsibility of the project Architect.

3.4 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for additional requirements.

B. Provide manufacturer's field representative to observe and inspect concrete units.

C. Observe and inspect:

1. Concrete units: For correct type, for quality installation with courses that are level and follow the designed batter ratio.
2. Soil backfill: For correct type, for specified compaction with level grading prior to reinforcement installation.
3. Soil reinforcement: For correct type, for solid connection to concrete units, and for smooth and taut installation.
4. Field location in plan and elevation.

D. Soil Tests: For every new soil type and/or for every 2,000 cubic yard per running foot (1,500 cm/m) perform Atterberg Limit, Sieve Analysis, and Proctor Compaction tests. Perform additional testing per project Architect.

E. Owner will engage inspection and testing services, including independent laboratories, to provide quality assurance and testing services during construction. Contractor will secure necessary construction control testing during construction.

F. Correct work found deficient and not in accordance with drawings and specifications.

3.5 CLEANING

A. Clean wall face to remove debris and stains.

B. Leave adjacent paved areas broom clean.

C. See Section 01 7419 - Construction Waste Management and Disposal, for additional requirements.

3.6 PROTECTION

A. Prevent damage to wall and earthwork by subsequent construction and uncontrolled runoff until substantial completion; repair damage due to failure to protect wall or earthwork.

B. Do not operate equipment with wheel loads in excess of 150 pounds per square foot (1000 kPa) live load within 10 feet (3 m) from the wall face.

C. Do not place temporary soil or fill stockpiles adjacent to wall.

END OF SECTION 32 3223

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 8415 - SITEWORK SLEEVES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Sleeves for Site Lighting.

B. Related Requirements:

1. Division 01 Section(s) "Construction Waste Management and Disposal" and "Sustainability Compliance Procedures" for sustainability requirements

2. Division 26 Electrical Sections for site electrical work requiring sleeves beneath pavement.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. CTHPB Documentation Submittals: Comply with Section 01 3566.42 – Sustainability Compliance Procedures and provide the following in addition to other submittals:

1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Deliver piping with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe-end damage and to prevent entrance of dirt, debris, and moisture.

B. Store plastic piping protected from direct sunlight. Support to prevent sagging and bending.

PART 2 - PRODUCTS

2.1 PIPES, TUBES, AND FITTINGS

A. PVC Pipe: ASTM D 1785, PVC 1120 compound, Schedule 40 with solvent weld couplings.

2.2 SLEEVE BACKFILL

A. Drainage Backfill: Cleaned gravel or crushed stone, graded from 3/4 inch (19 mm) minimum to 3 inches (75 mm) maximum.

2.3 ACCESSORIES

A. Detectable Warning Tape: Acid- and alkali-resistant, polyethylene film warning tape manufactured for marking and identifying underground utilities, a minimum of 6 inches (150 mm) wide and 4 mils (0.1 mm) thick, continuously inscribed with a description of the utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30 inches (750 mm) deep; colored as follows:

1. Red: Electric.
2. Blue: Water systems.

PART 3 - EXECUTION

3.1 EARTHWORK

A. Excavating, trenching, and backfilling are specified in Division 31 Section "Earthwork".

B. Install warning tape directly above sleeves under pavement at 6 inches (150 mm) below subgrade under pavement and slabs.

C. Provide minimum cover over top of underground sleeves for piping and wiring according to the following:

1. Irrigation Main Piping Sleeves: Minimum depth of not less than 18 inches (450 mm) below average local frost depth.
2. Circuit Piping Sleeves: 12 inches (300 mm).
3. Drain Piping Sleeves: 12 inches (300 mm).
4. Irrigation System Wiring Sleeves: 24 inches (600 mm).
5. Site Lighting Wiring Sleeves: 24 inches (600 mm).

3.2 PREPARATION

A. Set stakes to identify locations of proposed site sleeves. Obtain Architect's approval before excavation.

3.3 SLEEVE INSTALLATION

A. Location and Arrangement: Drawings indicate location of sleeves. Install sleeves as indicated unless deviations are approved on Coordination Drawings.

B. Install sleeves free of sags and bends.

C. Install groups of sleeves parallel to each other.

D. Lay sleeves on solid subbase, uniformly sloped without humps or depressions.

E. Install PVC piping in dry weather when temperature is above 40 deg F (5 deg C).

F. Install sleeves for piping and wiring under parking lots, roadways, and sidewalks.

G. Install sleeves made of Schedule 40 PVC pipe.

3.4 SITE LIGHTING SLEEVE INSTALLATION

A. Install wiring for site lighting and signage lighting in separate sleeve, but in same trench as irrigation piping sleeve and at 12 inch separation from piping sleeve under paved areas.

3.5 IDENTIFICATION

A. Warning Tapes: Arrange for installation of continuous, underground, detectable warning tapes over sleeves during backfilling of trenches.

3.6 CLEANING

A. Flush dirt and debris from sleeves before sealing with duct tape and backfilling. Installation of irrigation system to follow in next phase of construction.

END OF SECTION 32 8415

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 8423 - SITE IRRIGATION SYSTEM

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.3 SUMMARY

A. Section Includes:

1. Pipe and tubing, wiring, fittings, valves, sprinkler heads, emitters, bubblers and accessories.
2. Control system.
3. Backflow Preventor.

B. RELATED REQUIREMENTS**:**

1. Section 01 – "Construction and Demolition Waste Management and Disposal" and Sustainability Compliance Procedures".
2. Section 26 0519 - Low-Voltage Electrical Power Conductors and Cables.
3. Section 26 0533.13 - Conduit for Electrical Systems.
4. Section 31 2316.13 - Trenching: Excavating and backfilling for irrigation piping.

1.4 REFERENCE STANDARDS

A. ASTM D2241 – Standard Specification for Poly (Vinyl Chloride) (PVC) Pressure-Rated Pipe (SDR Series); 2020.

B. ASTM D2564 – Standard Specification for Solvent Cements for Poly (Vinyl Chloride) (PVC) Plastic Piping Systems; 2020.

C. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum); 2020.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate the work with site backfilling, landscape grading and delivery of plant material.

B. Preinstallation Meeting: Convene meeting with Landscape Architect, Landscape Contractor, and Owner's Representative two weeks prior to commencing work of this Section to ensure proper coordination of scheduling and installation requirements.

1.5 PERFORMANCE REQUIREMENTS AND SYSTEM DESIGN

A. Delegated Design: Design 100 percent coverage irrigation system, including comprehensive coordination with a qualified professional engineer, using performance requirements and design criteria indicated.

B. For soil conditions of the site, see Geotechnical Report prepared for the project.

C. Design Requirements:
1. New Irrigation System: All portions of the site within the limits of construction to be irrigated as indicated on the Drawings. New system to include all portions of the existing system to remain outside of the limits of construction and new irrigation within limits of construction.
2. Water Coverage:
3. All areas shall have heat-to-head coverage with matched precipitation rates capable of delivering 2 inches of precipitation per week.
4. System shall be designed and installed so as to minimize over spray onto all paved areas, buildings, and other non-irrigated areas.
5. Irrigation zone control shall be automatic operation with controller (including rain sensor) and automatic control valves.
6. Minimum Working Pressures: The following are minimum pressure requirements for piping, valves, and specialties unless otherwise indicated:
7. Irrigation Main Piping: 200 psig (1380 kPa).
8. Circuit Piping: 150 psig (1035 kPa).
9. Location of Irrigation Lines: System shall be designed to avoid locating irrigation main and zone lines within drip line of existing trees to remain.
10. Location of Sprinklers and Specialties: Design location is approximate. Make minor adjustments necessary to avoid plantings and obstructions such as signs and light standards. Maintain 100 percent irrigation coverage of areas indicated.
11. Sleeves: Provide sleeves beneath all pavements for irrigation wiring and piping.

1.6 SUSTAINABLE DESIGN REQUIREMENTS

1.7 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. CTHPB Documentation Submittals: Comply with Section 01 3566.42 – Sustainability Compliance Procedures and provide the following in addition to other submittals:
1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional

C. Delegated-Design Submittal: For irrigation systems indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

D. Product Data: Provide component and control system and wiring diagrams.

E. Zoning Chart: Show each irrigation zone and its control valve.

F. Shop Drawings: Indicate piping layout to water source, location of sleeves under pavement, location and coverage of sprinkler heads, components, plant and landscaping features, site structures, schedule of fittings to be used.

G. Samples: Provide one outlet of each type, with housing. Accepted samples may be used in the Work.

H. Operation and Maintenance Data:

3. Provide instructions for operation and maintenance of system and controls, seasonal activation and shutdown, and manufacturer's parts catalog.
4. Provide schedule indicating length of time each valve is required to be open to provide a determined amount of water.

I. Record Documents: Record actual locations of all components; piping system; conduit; tubing; wiring; heads and emitters.

J. Maintenance Materials: Provide the following for Owner's use in maintenance of project.

5. See Section 01 6000 - Product Requirements, for additional provisions.
6. Extra Sprinkler Heads: One of each type and size.
7. Extra Valve Keys for Manual Valves: One
8. Extra Valve Box Keys: One
9. Extra Valve Marker Keys: One
10. Wrenches: One for each type head core and for removing and installing each type head.

1.8 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than three years of documented experience.

B. Installer Qualifications: Company specializing in performing the work of this section with minimum 5 years of experience of documented experience.

1.9 WARRANTY

A. For products noted in this section, provide manufacturer’s standard warranty, minimum of one year.

PART 2 PRODUCTS

2.1 IRRIGATION SYSTEM

A. Electric solenoid controlled underground irrigation system, with low point self drain.

B. Manufacturers:
1. Rain Bird Sales, Inc**:** www.rainbird.com
2. Toro Company**:** www.toro.com
3. Hunter Industries: www.hunterindustries.com
4. Alternate manufacturer if Approved Equal

2.2 PIPE MATERIALS

A. PVC Pipe: ASTM D2241; 200 psi (1.38 MPa); pressure rated upstream from controls, 160 psi (1.10 Mpa) downstream solvent welded sockets.

B. Fittings: Type and style of connection to match pipe.

C. Pipe Risers at Valves: 160 psi (1.10 Mpa) PVC pipe.

D. Solvent Cement: ASTM D2564 for PVC pipe and fittings

E. Sleeve Material: PVC

2.3 TUBING

A. Poly Tubing and Micro Tubing: Sizing, PSI, and length to meet delegated design requirements to properly irrigate the designated areas.

B. Fittings: Type and style of connection to match tubing. Spacing, type, and number of emitters / bubblers to meet delegated design requirements to properly irrigate the designated areas.

2.4 OUTLETS

A. Rotary Type Sprinkler Head: Pop-Up with screens; fully adjustable for flow and pressure; size as indicated; with letter or symbol designating degree of arc and arrow indicating center of spray pattern.

B. Spray Type Sprinkler Head: Pop-Up

C. Quick Coupler: Factory-fabricated bronze or brass, two-piece assembly. Include coupler water-seal valve; removable upper body with spring-loaded or weighted, rubber-covered cap; hose swivel with ASTM B1.20, 3/4-11NH threads for garden hose on outlet; and operating key.

2.5 VALVES

A. Ball Valves: Bronze; non-rising stem.

B. Automatic Control Valves: Molded-plastic body, normally closed, diaphragm type with manual-flow adjustment, and operated by 24-V ac solenoid.

C. Automatic Drain Valves: Spring-loaded-ball type of corrosion-resistant construction and designed to open for drainage if line pressure drops below 2-1/2 to 3 psig (17 to 20 kPa).

D. Backflow Preventers: Bronze body construction, double check valve type. Size and type as required to meet applicable Building Code and Delegated Design requirements and ensure proper functioning of the system.

E. Valve Box and Cover; open bottom and openings for piping designed for installation flush with grade.
   1. Size: As required for valves and service.
   2. Shape: Round, Square or Rectangular.
   3. Sidewall Material: PE, ABS, or FRP.
   4. Cover Material: PE, ABS, or FRP.
   5. Color: Green.

F. Drain Valve: Spring-loaded-ball type of corrosion-resistant construction and designed to open for drainage if line pressure drops below 2-1/2 to 3 psig (17 to 20kPa).

2.6 CONTROLS

A. Controller: Automatic controller, microprocessor solid state control with visible readout display; temporary override feature to bypass cycle for inclement weather; programmable for 7 days in quarter hour increments, with automatic start and shutdown.

B. Controller Housing: NEMA 250 Type 3; weatherproof, watertight, with lockable access door.

C. Valves: Hydraulic; normally open; hydraulic tubing; including required fittings and accessories.

D. Wire Conductors: Color coded.

2.7 GENERAL

A. All misc. appurtenances as required to meet Delegated Design requirements and ensure proper functioning of the system.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify location of existing utilities, vegetation, rock outcroppings, and/or misc site improvements to remain.

B. Verify that required utility connections are available, in proper location, and ready for use.

3.2 PREPARATION

A. Irrigation system layout indicated is diagrammatic only. Route piping to avoid plants, ground cover, and structures.

B. Layout and stake locations of system components to be reviewed by project Landscape Architect and/or Owner Representative in field prior to installation.

C. Review layout requirements with other affected work. Coordinate locations of sleeves under paving to accommodate system.

3.3 TRENCHING

A. Trench and backfill in accordance with Section 31 2300 Excavation, Backfill, Compaction, and Dewatering and Section 31 2333 Trenching and Backfilling.

B. Trench to accommodate grade changes and slope to drains.

C. Maintain trenches free of debris, material, or obstructions that may damage pipe.

3.4 GENERAL INSTALLATION

A. Install pipe, valves, controls, and outlets/spray heads/emitters in accordance with manufacturer's instructions.

B. The minimum depth of cover of the pipe and wire shall meet applicable code requirements and geotechnical report recommendations.

C. Connect to utilities.

D. Set outlets and box covers at finish grade elevations.

E. Provide for thermal movement of components in system.

F. Use threaded nipples for risers to each outlet.

G. After piping is installed, but before outlets are installed and backfilling commences, open valves and flush system with full head of water.

3.5 EXCAVATING, PIPE AND WIRE LAYING AND BACKFILLING

A. Pipe shall be installed strictly in accordance with the recommendations of the manufacturer, including bedding of pipe in the bottom trench and securely thrusting any fittings to change the direction of the pipe. Thrust blocks shall be poured so as not to interfere with any pipe joint or connection.

B. The minimum depth of cover of the pipe and wire shall be as follows:
   1. Main line piping: minimum twenty (20) inches;
   2. Zone piping (downstream of automatic control valves): twelve (12) inches;
   3. Wire in main line pipe trench shall be at the depth of the pipe;

4. Wire in separate trench from pipe: twenty-four (24) volt wire, twelve (12) inches;
5. Wire under roads and through culverts shall be installed in 1 1/2 inch conduit. Conduit shall extend five (5) feet beyond road or culvert and shall be plugged with duct seal or approved equal.

C. Wire shall be installed in the same trench as the pipe wherever possible. All wire shall be installed with at least one percent (1%) slack, thirty-six (36) inch expansion loop at each forty-five (45) degree or ninety (90) degree turn in the trench and have an eighteen (18) inch expansion loop at each automatic valve. Wire may be laid with a vibratory plow but never pulled.

D. When wire runs do not follow pipe trenches, they are to be laid in a straight line which shall be carefully located on the as-built plan. If a change of direction is required on these runs, they are to made at an angle between two (2) straight runs, and not as a sweeping curve. A splice box is to be installed at the angle point with sufficient wire slack to allow wires to be raised at least twenty-four (24) inches above grade.

E. Backfill material shall be free from rock, large stones, or other unsuitable substances to prevent damage to pipe and wire during backfilling operations. Backfill is to be approved by the Owner.

F. Excess material shall be removed to a readily accessible location on site, as designated by the Owner's representative, at the Contractor's expense. The Owner shall supply replacement backfill material at his expense, as and in quantities requested by the Contractor.

G. Deleterious material shall be dug and hauled to an accessible dumping site at a pre-determined contract price per cubic yard. Determination of deleterious material shall be made jointly by the Owner's representative and the Contractor's superintendent.

H. Backfilling shall be done by hand, so as to place it under, around, and above the pipe in stages so that it is hand tampered in layers to a point six (6) inches above the pipe. Special care shall be taken to ensure that this layer is completely free of stones and other deleterious matter. The remainder of the trench may be machine backfilled with available soil. Machine placed backfill shall be compacted to the original density by machine tamping, rolling, or puddling to prevent settlement in the trench.

I. Throughout the entire work period, it shall be the responsibility of the Contractor to refill any trenches that may have settled due to incomplete compaction. However, it shall not be the responsibility of the Contractor to refill any trenches that may have been washed out by natural rainfall or run-off.

J. Trenches shall be compacted and left flush with the present grade and hand raked clean of stone with a fine rake. Loam and reseeding shall be done as required.

K. Wherever conditions permit, pipe shall be installed with a vibratory plow to minimize damage to the existing turf.

3.6 AUTOMATIC IRRIGATION-CONTROL SYSTEM INSTALLATION

A. Equipment Mounting: Install interior controllers on wall.
   1. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   2. Install anchor bolts to elevations required for proper attachment to supported equipment.

B. Install control cable in same trench as irrigation piping and at least 2 inches (51 mm) below or beside piping. Provide conductors of size not smaller than recommended by controller manufacturer. Install cable in separate sleeve under paved areas.

3.7 FIELD QUALITY CONTROL

A. Field inspection testing will be performed under provisions of Section 01 4000 – Quality Requirements.

B. Prior to backfilling, test system for leakage**.**

C. System is acceptable if no leakage or loss of pressure occurs during test period.

3.8 SYSTEM STARTUP

A. Prepare and start system in accordance with manufacturer’s instructions.

B. Adjust control system to achieve time cycles required.

C. Change or Adjust head types for full water coverage as directed.

3.9 CLOSEOUT ACTIVITIES

A. Instruct Owner’s personnel in operation and maintenance of system, including adjusting of sprinkler heads. Use operation and maintenance data as basis for demonstration.

3.10 MAINTENANCE

A. See Section 01 7000 – Execution and Closeout Requirements, for additional requirements relating to maintenance service.

B. Provide a separate maintenance contract for specified maintenance service.

C. Provide one complete spring start-up and a fall shutdown by installer, at no extra cost to Owner.

3.11 AS-BUILT DRAWINGS

A. After completion of the installation, the Contractor shall furnish an “as built” drawings of the system to the Owner.

B. The drawings shall include accurate measurements from two fixed permanent features to gate valves, valves boxes, splice boxes, pipe at road crossings, etc.

END OF SECTION 32 8423

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 9113 - SOIL PREPARATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Providing, testing, placing and finish grading all stockpiled and borrow topsoil and planting soil for planting beds and tree pits as shown on the Drawings and specified herein to properly complete all lawn and planting operations.

B. Related Requirements:

1. Division 01 Section(s) “Construction Waste Management and Disposal” and “Sustainability Compliance Procedures” for sustainability requirements.

2. Division 31 Section "Site Clearing" for stripping and stockpiling of topsoil.

3. Division 32 Section "Turf and Grasses" for reuse of amended topsoil.

4. Division 32 Section "Plants" for reuse of amended topsoil as ingredient in planting soil mix.

C. Alternates: Refer to Division 01 Section "Alternates" for description of Work of this Section affected by Alternates.

1.3 QUALITY ASSURANCE

A. Topsoil:

1. Topsoil Analysis: Furnish soil analysis by a qualified soil-testing laboratory stating percentages of organic matter; gradation of sand, silt, and clay content; cation exchange capacity; sodium absorption ratio; deleterious material; pH; and mineral and plant-nutrient content of topsoil.

a. Report suitability of topsoil for plant growth. State recommended quantities of nitrogen, phosphorous, and potash nutrients and soil amendments to be added to produce a satisfactory topsoil.

2. Before delivery of any borrow topsoil, furnish the Architect with a 5 gallon sample of material and a written statement identifying source and origin from which topsoil is to be obtained, names and addresses of owners, depth to be stripped and vegetation type supported grown during the past two years.
3. Both borrow and stockpiled topsoil shall be tested.
4. Topsoil testing costs shall be borne by the Contractor.

5. Testing laboratory shall be:

   a. Soil and Plant Tissue Laboratory, West Experiment Station, 682 North Pleasant Street, Amherst, MA 01003, (413) 545-2311, website: www.umass.edu/plsoils/soiltest.
   b. Substitute laboratory may be used if approved by the Owner and Architect.

1.4 SUBMITTALS

A. Topsoil test results shall be submitted to the Landscape Architect for review to determine acceptability. The Architect will be the sole judge of acceptance.

B. Product data for each soil amendment to be added to topsoil or prepared planting soil mix.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 – Sustainability Compliance Procedures and provide the following in addition to other submittals:

1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

1.5 PRODUCT HANDLING

A. Delivery of borrow topsoil to the site shall be coordinated such that it is placed as delivered and no stockpiling required.

PART 2 - PRODUCTS

2.1 BORROW TOPSOIL

A. Not to contain materials harmful to plant life, to be clean, fertile, friable, well-draining, natural sandy loam. All topsoil to be screened with a ¾" sieve and free of any subsoil earth clods, sods, stones over 3/4" in any dimension, sticks, roots, weeds, litter and other deleterious material.

Topsoil shall be uniform in quality and texture and contain organic matter and mineral elements necessary for sustaining healthy plant growth.

B. Topsoil shall have the following optimum ranges unless otherwise approved by the Architect.

1. Organic matter content: 6 to 15 percent (by loss of ignition at 375 C method of testing).

C. Nutrient levels shall be achieved by the Contractor's addition of amendments to the topsoil to meet the optimum nutrient levels specified in the testing laboratory report.

D. Proposed topsoil shall meet the USDA Soils Textural Classification percentages of sand, silt, and clay for "sandy loam" or "loam" classification.

E. Topsoil shall be completely free of any toxic chemical, hazardous waste and any material or condition that would prevent the establishment of a suitable lawn.

F. Topsoil shall be friable and with sufficient structure to give good tilth and aeration. Continuous, air-filled pore space content on a volume/volume basis shall be at least 15 percent when moisture is present at field capacity. Soil shall have a field capacity. Soil shall have a field capacity of at least 15 percent on a dry weight basis.

2.2 STOCKPILED TOPSOIL

A. Proposed for reuse shall conform to all requirements of paragraph 2.1 of this Section.

2.3 AMENDED TOPSOIL

A. Mix tested topsoil with soil amendments and fertilizers as recommended by the topsoil analysis to produce amended topsoil.

2.4 PLANTING SOIL MIX FOR PLANTING BEDS AND TREE PITS

A. Mix Amended Topsoil (topsoil as amended by Paragraph 2.3 of this Section) with one of the following soil amendments in the following quantities to produce planting soil:

1. Ratio of loose compost to amended topsoil by volume: 1:3.
2. Ratio of loose sphagnum or muck peat to amended topsoil by volume: 1:3.
3. Ratio of loose wood derivatives to amended topsoil by volume: 1:3.

2.5 INORGANIC SOIL AMENDMENTS

A. The following inorganic soil amendments shall be added to planting soil when recommended by topsoil analysis:

1. Lime: ASTM C 602, agricultural limestone containing a minimum 80 percent calcium carbonate equivalent and as follows:

a. Class: Class T, with a minimum 99 percent passing through No. 8(2.36-mm) sieve and a minimum 75 percent passing through No. 60(0.25-mm) sieve.
b. Provide lime in form of dolomitic limestone if soil analysis requires the addition of magnesium.

2. Sulfur: Granular, biodegradable, containing a minimum of 90 percent sulfur, with a minimum 99 percent passing through No. 6(3.35-mm) sieve and a maximum 10 percent passing through No. 40(0.425-mm) sieve.
3. Agricultural Gypsum: Finely ground, containing a minimum of 90 percent calcium sulfate.
4. Sand: Clean, washed, natural or manufactured, free of toxic materials.
5. Diatomaceous Earth: Calcined, diatomaceous earth, 90 percent silica, with approximately 140 percent water absorption capacity by weight.

2.6 ORGANIC SOIL AMENDMENTS

A. The following organic soil amendments shall be added to planting soil when recommended by topsoil analysis:

1. Compost: Well-composted, stable, and weed-free organic matter, pH range of 5.5 to 8; moisture content 35 to 55 percent by weight; 100 percent passing through 1-inch (25-mm) sieve; soluble salt content of 5 to 10 decisiemens/m; not exceeding 0.5 percent inert contaminants and free of substances toxic to plantings; and as follows:

a. Organic Matter Content: 50 to 60 percent of dry weight.
b. Feedstock: Agricultural, food, or industrial residuals; biosolids; yard trimmings; or source-separated or compostable mixed solid waste.

2. Wood Derivatives: Decomposed, nitrogen-treated sawdust, ground bark, or wood waste; of uniform texture and free of chips, stones, sticks, soil, or toxic materials.

a. In lieu of decomposed wood derivatives, mix partially decomposed wood derivatives with ammonium nitrate at a minimum rate of 0.15 lb/cu. ft. (2.4 kg/cu. m) of loose sawdust or ground bark, or with ammonium sulfate at a minimum rate of 0.25 lb/cu. ft. (4 kg/cu. m) of loose sawdust or ground bark.

3. Manure: Well-rotted, unleached, stable or cattle manure containing not more than 25 percent by volume of straw, sawdust, or other bedding materials; free of toxic substances, stones, sticks, soil, weed seed, debris, and material harmful to plant growth.

2.7 FERTILIZERS

A. The following fertilizers may be added to planting soil as recommended by topsoil analysis:

1. Bonemeal: Commercial, raw or steamed, finely ground; a minimum of 1 and a maximum of 4 percent nitrogen and a minimum of 10 and a maximum of 20 percent phosphoric acid.

2. Commercial Fertilizer: Commercial-grade complete fertilizer of neutral character, consisting of fast- and slow-release nitrogen, 50 percent derived from natural organic sources of urea formaldehyde, phosphorous, and potassium in the following composition:

    a. Composition: 1 lb/1000 sq. ft. (0.45 kg/92.9 sq. m) of actual nitrogen, 4 percent phosphorous, and 2 percent potassium, by weight.
    b. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified soil-testing laboratory.

3. Chelated Iron: Commercial-grade FeEDDHA for dicots and woody plants, and commercial-grade FeDTPA for ornamental grasses and monocots.

B. Slow-Release Fertilizer: Granular or pelleted fertilizer consisting of 50 percent water-insoluble nitrogen, phosphorus, and potassium in the following composition:

1. Composition: 20 percent nitrogen, 10 percent phosphorous, and 10 percent potassium, by weight.
2. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified soil-testing laboratory.

C. Planting Tablets: Tightly compressed chip type, long-lasting, slow-release, commercial-grade planting fertilizer in tablet form. Tablets shall break down with soil bacteria, converting nutrients into a form that can be absorbed by plant roots.

1. Size: 5-gram tablets.
2. Nutrient Composition: 20 percent nitrogen, 10 percent phosphorous, and 5 percent potassium, by weight plus micronutrients.

2.8 MISCELLANEOUS PRODUCTS

A. Mycorrhizal Fungi: Dry, granular inoculant containing at least 5300 spores per lb (0.45 kg) of vesicular-arbuscular mycorrhizal fungi and 95 million spores per lb (0.45 kg) of ectomycorrhizal fungi, 33 percent hydrogel, and a maximum of 5.5 percent inert material.

PART 3 - EXECUTION

3.1 GENERAL

A. Place planting soil and fertilizers according to requirements in other Specification Sections.

B. Verify that no foreign or deleterious material or liquid such as paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, or acid has been deposited in planting soil.

C. Proceed with placement only after unsatisfactory conditions have been corrected.

3.2 PROTECTION

A. Protection Zone: Identify protection zones according to Section 01 5639 "Temporary Tree and Plant Protection".

B. Protect areas of in-place soil from additional compaction, disturbance, and contamination. Prohibit the following practices within these areas except as required to perform planting operations:

1. Storage of construction materials, debris, or excavated material.
2. Parking vehicles or equipment.
3. Vehicle traffic.
4. Foot traffic.
5. Erection of sheds or structures.
6. Impoundment of water.
7. Excavation or other digging unless otherwise indicated.

C. If planting soil or subgrade is overcompacted, disturbed, or contaminated by foreign or deleterious materials or liquids, remove the planting soil and contamination; restore the subgrade as directed by Architect and replace contaminated planting soil with new planting soil.

D. If compaction occurs with light tractors, scarify to a depth of 4-inches and regrade.

3.3 PREPERATION OF UNAMENDED, ON-SITE SOIL BEFORE AMENDING

A. Excavation: Excavate soil from designated area(s) to a depth of 6 inches (150 mm) and stockpile until amended.

B. Unacceptable Materials: Clean soil of concrete slurry, concrete layers or chunks, cement, plaster, building debris, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, acid, and other extraneous materials that are harmful to plant growth.

C. Unsuitable Materials: Clean soil to contain a maximum of 8 percent by dry weight of stones, roots, plants, sod, clay lumps, and pockets of coarse sand.

D. Screening: Pass unamended soil through a 2-inch (50-mm) sieve to remove large materials.

3.4 PLACING MANUFACTURED PLANTING SOIL OVER EXPOSED SUBGRADE

A. General: Apply manufactured soil on-site in its final, blended condition. Do not apply materials or till if existing soil or subgrade is frozen, muddy, or excessively wet.

B. Subgrade Preparation: Till subgrade to a minimum depth of 6 inches (150 mm). Remove stones larger than 2 inches (50 mm) in any dimension and sticks, roots, rubbish, and other extraneous matter and legally dispose of them off Owner's property.

1. Apply approximately half the thickness of planting soil over prepared, loosened subgrade. Mix thoroughly into top 4 inches (100 mm) of subgrade. Spread remainder of planting soil.

C. Application: Spread planting soil to total depth as indicated on drawings, but not less than required to meet finish grades after natural settlement. Do not spread if soil or subgrade is frozen, muddy, or excessively wet.

1. Lifts: Apply planting soil in lifts not exceeding 8 inches (200 mm**)** in loose depth for material compacted by compaction equipment, and not more than 4 inches (100 mm) in loose depth for material compacted by hand-operated tampers.

D. Compaction: Compact each lift of planting soil to 75 to 82 percent of maximum Standard Proctor density according to ASTM D 698, except where a different compaction value is indicated on Drawings.

E. Finish Grading: Grade planting soil to a smooth, uniform surface plane with loose, uniformly fine texture. Roll and rake, remove ridges, and fill depressions to meet finish grades.

3.5 PREPARATION AND FINISHED GRADING FOR PLANTING BEDS

A. Shape subgrades and prepare planting beds according to Division 32 Section "Plants".

B. Planting soil will not be permitted to be spread until topsoil test reports and amendments have been submitted and approved.

C. Prepare planting soil off-site before spreading according to Division 32 Section "Plants".

D. Spread topsoil according to Division 32 Section "Plants".

3.6 EXCESS STOCKPILED TOPSOIL

A. Remains property of Owner and is to be deposited by the Contractor in an approved location unless approved otherwise.

END OF SECTION 32 9113

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 9113.29 - ATHLETIC FIELD ROOT ZONE

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   A. The contractor is to confirm all materials and volumes and shall furnish all labor, materials, equipment (including low ground pressure at six (6) psi) and transportation required to furnish and place, r prepare rootzone for the field.
   B. Blending operations may be performed off site by a qualified soil blending company approved by the landscape architect or designee if materials are to be imported. All blending shall be by a blending, mixing and screening plant, such as a trommel or equivalent. Bucket mixing is not acceptable.
   C. The Contractor shall be responsible for removing any preexisting materials from the athletic field area per the procedure detailed in "Site Clearing-Turf Removal-Subgrade Preparation".
   D. This work shall consist of preparing a root zone mixture consisting of proposed new sand. The root zone mix will be evaluated by using ASTM F2396 test methods. A sand sample shall be submitted to the testing agent identified in these specifications for analysis and adherence to specifications prior to blending operations. Sand shall not be blended, nor shall the blended material be delivered to the site until approved by the Landscape Architect or designee. The contractor is solely responsible for gaining the approval before purchase and delivery of the material.
   E. A representative sample or samples, of blended soil may be submitted for Environmental Analysis prior to spreading at the direction of the Landscape Architect,. The blended soil shall not be spread without the express written permission of the Landscape Architect.
   F. No heavy-duty equipment and vehicular traffic shall be allowed on the prepared areas. Only low ground pressure (LGP) equipment is to be used.

B. Related Requirements:

   A. Division 01 Section(s) "Construction Waste Management and Disposal" and "Sustainability Compliance Procedures" for sustainability requirements
   B. Section 31 1005 – "Athletic Field Site Preparation": Turf removal and subgrade preparation.
   C. Section 32 1823.17 – "Natural Infield and Warning Track Surfacing": Installation of infield mixes and warning tracks.
   D. Section 32 8423 – "Irrigation Systems": Irrigation of athletic fields.
   E. Section 32 9219.22 – "Athletic Field Seeding and Sodding": Seeding of athletic fields.

1.3 REFERENCE STANDARDS

A. ASTM F2396 - Standard Guide for Construction of High-Performance Sand-Based Rootzones for Athletic Fields; 2011.

1.4 SAMPLES/TESTS

A. The Contractor shall furnish a methodology/project plan of their approach to the project no less than ten (10) days prior to the start of construction.

B. The Contractor shall furnish a Certified Laboratory Report from the laboratories identified in showing the soils classification physical characteristics including particle size distribution, soils performance characteristics including Ksat, and nutrient analysis (both chemical and paste extract) of representative samples of the sand that is proposed to be used, including the extent of lime and fertilizer required.

C. Samples submitted for approval must be representative of the total volume to be furnished, taken in the presence of the Engineer, and delivered to a certified laboratory by the Contractor; all costs for such shall be borne by the Contractor.

D. If the material does not conform to the above requirements and also the requirements as laid out in it shall be rejected, and additional sources shall be found. Sampling and testing shall be accomplished as specified herein until an approved material is found, all at the Contractor's expense.

E. To assure that materials fulfill specified requirements regarding textural analysis, organic matter content, pH, and fertility, depending on the approach, testing must be undertaken:
   1. Prior to blending using materials on site and supplied.
   2. At time of delivery; on-site.

F. For quality control, immediately following spreading on site, soil may be tested at the Landscape Architect’s discretion.

1.5 SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Section 01 3566.42 – Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.

   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional

1.6 NOTIFICATION

A. The Contractor shall notify the Landscape Architect in writing at least 10 days in advance of the time he intends furnishing root zone mix sand or amendments stating the location and amount of such deposit, the name and address of the supplier and also shall furnish such facilities, transportation and assistance as the Landscape Architect may require for collecting and forwarding samples.

B. Any changes to the means and methods of the athletic field construction, and/or materials, must be approved by the Landscape Architect.

C. Completion of work is subject to adverse climatic conditions, which could affect the date of substantial completion. Any/all delays must be communicated with the Construction Manager as soon as possible.

D. No work can progress unless the Landscape Architect approves testing results.

1.7 QUALITY CONTROL

A. Root Zone Mix Sand: A one-gallon sample for every 1000 cu yds (765 cu m) of root zone mix shall be tested by the Landscape Architect Testing Agent for approval coming per material source. All costs shall be borne by the Contractor.

B. Prior to seeding, contractor shall notify the Landscape Architect and provide the Landscape Architect with compaction tests with a digital cone penetrometer along the center line of the field as well as in off center areas to ensure that the root zone mix has not been heavily compacted. Compaction test shall fall within the industry standards for fields and must reach a minimum of one hundred and fifty (150) psi and not exceed a maximum of two hundred and fifty (250) psi and any areas of the field that exceed these standards shall be corrected at the contractor's expense prior to seeding.

1.8 QUALITY ASSURANCE

A. Contractor Qualifications: A qualified Contractor whose work has resulted in successful athletic field construction and performance turf establishment.

B. Contractor Experience: The Contractor must have completed at least five (5) projects per year of similar scope over the past three (3) consecutive years.

A. General Experience:

a) Five (5) years' experience of athletic fields construction, resurfacing and/or renovations similar to scope of project over the last three (3) consecutive years.

b) Provide reports of above said athletic fields projects as to the type of projects involved in, including but not limited to; start and end dates, adherence to target/ key performance indicators, scope of works completed along with contact persons and

contact details for said clients

c) Provide testimonies from previous clients, including but not limited to; quality of work, staff/employee interactions, tidiness of site, timekeeping and punctuality and overall client satisfaction levels. Include any measured field performance metrics (i.e. infiltration rate, hardness, rotational traction) and any standards to which the field was constructed.

B. Staff/Employees:

a) Provide resumes for all staff/employees who will be responsible for carrying out scope of works, including but not limited to, full time and seasonal/short term employees.

b) Resumes will be required for all employees/staff involved in the project.

c) Resumes to include:

1) Experience level relevant to the project needs/scope of work.
2) Qualifications level relevant to the project needs/scope of work.

d) Must provide evidence that all staff/employees have at least three (3) years' experience of similar scope of work for project over the last three (3) consecutive years.

e) Provide evidence of continued professional development of all/any employees involved in project for last three (3) consecutive years.

f) Shall have a supervisor on the site who is experienced in the construction of sports fields. Supervisor's name and experience shall be submitted to the Engineer for approval.

g) Shall have membership of one or more of the following Professional associations for a minimum of the last three (3) consecutive years.

1) New England Sports Field Management Association (NESFMA).
2) Sports Turf Managers Association (STMA).

C. Insurance / Certifications:

a) Must be in possession of a suitable level of public liability insurance and any other relevant insurances required by the state and/or client.

D. Equipment:

a) Must be in possession and provide a detailed list of a suitable level of tools/equipment/machinery and or equivalent required to carry out the scope of work for said project.

b) All equipment and or equivalent should be in a condition able to carry out scope of work. Any certificates proving this will be required as part of the submission.

c) All equipment must be verified by the Contractor as being leak free and fit for use.
d) The proposed equipment must be approved by the Landscape Architect prior to commencing work on the Athletic Fields.

e) Contractor must be able to prove that all equipment to be used on the athletic fields is Low Ground Pressure (6 PSI).

E. Additional:

a) Provide a project plan identifying all key indicator/target points, which clearly shows an integrated approach to quality control and quality assurance.

b) Provide a detailed methodology of how the required works will be carried out, this should be inclusive and synced to the project plan.

c) Is required to submit samples, test results and/or certification of all material prior to delivery to the site. All materials are to be approved by the Landscape Architect prior to their use. These certifications shall comply with specifications and scope of project and where applicable, with any standards that may be implied.

d) Approved Soil Testing Laboratories: Contractor shall submit a chemical, saturated paste extract, and physical soil test of the rootzone mix prior to seeding. Testing of the existing Rootzone Material and washed screened sand shall be performed by:

For particle size analysis and complete physical performance

Turf & Soil Diagnostics
Trumansburg, NY 14886
(607) 387-5694

For chemical and paste extracts

Logan Labs, LLC
620 North Main Street
Lakeview, OH 43331
(937) 842-2433

1.9 DELIVERY, STORAGE, AND HANDLING

A. Seed and Other Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and indication of conformance with state and federal laws, as applicable.

B. Bulk Materials:

A. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.

B. Provide erosion-control measures to prevent erosion or displacement of bulk materials, discharge of soil-bearing water runoff, and airborne dust reaching adjacent properties, water conveyance systems, or walkways.

C. Accompany each delivery of bulk fertilizers, lime, and soil amendments with appropriate certificates.

D. Fertilizers, lime, and soil amendments must be stored in a secure, locked area, and must be protected from the elements and from temperature and humidity extremes.

E. Stockpiled materials must be stored in such a manner to prevent contamination from stones, organic matter, or other deleterious materials. In addition, precautions must be taken to prevent cross contamination between soils that are to be removed from the site and materials that are being imported. Cross contamination can occur through runoff, direct contact, equipment, or wind-blown dust, as well as other possibilities.

1.10 SITEWORK CONSTRUCTION EQUIPMENT BY USE

A. Excavation, Earth Moving, and Grading:

A. Utilize Model 550 J Crawler Dozer as manufactured by John Deere equipment or equivalent, which meets the following specifications:

a) Laser T Guided Capability.
b) Tier 3/Stage 3A emissions certified engine.
c) Net power – 85 hp. at 2200 rpm.
d) Maximum speed (forward and reverse) 5 mph.
e) Track gauge – 5 ft.
f) Length of track on ground – 7 ft. 2 in.
g) Ground contact area – 4128 sq. in.
h) Maximum ground pressure – 5.8 psi.
i) Number of track rollers – 6.
j) Track pitch – 6.29 in.
k) Track shoes, each side – 40.
l) Standard shoe type – single grouser.
m) Blade width – 9 ft. 7 in.
n) Blade height – 3 ft. 2 in.
o) SAE blade capacity – 2/57 cu. yd.
p) Lade lift height – 2 ft. 7 in.

q) Digging depth – 20.6 in.
r) Blade tilt – 1 ft. 3 in.
s) Ground clearance – 14 in.
t) SAE operating weight – 18,252 lbs.

B. Utilize Model Z Axis 50 U Series Mini Excavator as manufactured by Hitachi or equivalent, which meets the following specifications:

a) Net power – 40 hp. at 2,500 rpm.
b) Weight – 10,758 lbs.
c) Speed – 1.7 to 2.8 mph.
d) Track – rubberized 15 in.
e) Maximum ground pressure – 4.49 psi.
f) Ground clearance – 13 in.
g) Front grading blade width – 78 in.
h) Grade ability – 30".
i) Maximum digging reach – 236 in.
j) Maximum digging depth – 141 in.
k) Maximum cutting height – 222 in.
l) Maximum vertical wall – 111 in.

B.Stripping of Existing Grass Surface:

A. Utilize Model FTM 2000 Koro Field Top Maker as Manufactured by Pols International, Stationsweg 36, 3214 VK Zuidland, Netherlands or equivalent that meets the following specifications:

a) Working width – 78 in.
b) Working depth – 1.75 in.
c) Weight – 2448 lbs.
d) Horsepower requirements – 70 hp.
e) Number of cutting blades – 64.
f) Side conveyor extension.

B. Utilize Model 6425 Turf Tractor as manufactured by John Deere Equipment or equivalent, which meets the following specifications:

a) Engine power – 125 hp.
b) PTO power – 114 hp.
c) Wheelbase – 94.5 in.
d) Weight – 10,064 lbs.
e) Rear lift – 5,100 lbs.
f) Front tire – 10.00 – 16 low ground pressure high floatation turf tire.
g) Rear tire – 16.9 – 30 low ground pressure high floatation turf tire.

C.Hauling of Stripped Material off Field:

A. Utilize Dirtcub Hydraulic Dump-box as manufactured by TYCROP Manufacturing or equivalent that meets the following specifications:

a) Bed size – 60 13/16" x 70 1/8' L.
b) Unit Size – 68 1/8" W x 45 9/16" H.
c) Weight – 956 lbs.
d) Payload: 3000 lbs.
e) Suspension – Low ground pressure (maximum 5 psi) 4 wheel4-wheel walking beam evenly distributing.

B. Utilize Model 4720 Turf Tractor as Manufactured by John Deere Equipment or equivalent that meets the following requirements:

a) Engine power – 58 hp.
b) PTO power – 56 hp.
c) Wheelbase – 71.5 in.
d) Weight – 3,860 lbs.
e) Rear lift – 2,500 lbs.
f) Front tire – 8.00 – 16 low ground pressure high floatation turf tire.
g) Rear tire – 13.6 – 28 low ground pressure high floatation turf tire.

D. Loading, Backfilling, Power Raking Specifications:

A. Utilize Model 287 Compact Track and Multi Terrain Loader as manufactured by Caterpillar Inc, or equivalent that meets the following specifications:

a) Net Power – 82 HP.
b) Operating Weight – 10,275 lb.
c) Maximum speed (forward and reverse) – 7 mph.
d) Length of Track on Ground – 73 in.
e) Ground contact area – 2,610 sq. in.
f) Maximum ground pressure – 3.8 psi.
g) Ground clearance – 11 in.
h) Vehicle width – 77 in.
i) Clearance at maximum lift/dump – 94 in.
j) Quick connect accessory and implement capability.

B. Utilize Model MX7H Hydraulic Power Angle Mounted Grading and Blending Implement as manufactured by Harley Rake or equivalent and meets the following specifications:

a) Front attachment plate for track and multi terrain loader.
b) Working width to cover multi terrain loader trucks.
c) Aggressor pointed carbide teeth.
d) Dual independently adjustable gauge wheels.
e) Weight – 1050 lb.
f) Length – 64 in.
g) Width (overall) – 93 in.
h) Raking width – 84 in.
i) Raking width (full range) – 79 in.
j) Angle roll - 20°.
k) Removable/reversible end plates.

C. Utilize Model TD – 460 low ground pressure large area top dresser as manufactured by Tyco Manufacturing or equivalent, which meets the following specifications:

a) Weight – 3,400 lbs.
b) Length – 167 in.
c) Height – 63 in.
d) Width – 89 in.
e) Hopper load capacity – 75 cu. ft.
f) Capability to spread wet or dry materials including soil mixes, sand, stone, gravel, Inorganic material, composted products and wood chips.
g) Capability to perform as multifunctional trailer for material handling and relocation tasks with an unloading time of 30 seconds.
h) Low ground pressure four-wheel walking beam suspension.
i) Unlockable metering gate to float freely during bulk unloading operations.
j) Removable metering gate for hauling construction and landscape materials.
k) Independent control valves for adjusting the speed of floor conveyor belt and the finishing brush.
l) 72" wide spread and distribution of material.

D. Utilize Model BV150 Ground preparation machine as manufactured by BLEC USA or equivalent which meets the following specifications:

a) Working width – 60 in.
b) Working depth – 9 in.
c) Gear box – single speed 540 RPM.
d) No. of blades – 36.
e) Overload safety – friction multi-plate clutch.
f) Maximum working output/hr. 5300 sq. yd.
g) Maximum 1.5 mph working speed – 2.0 mph.
h) 3 point3-point hitch – cat 2.
i) Weight – 2,300 lbs.
j) Length – 71 in.
k) Height – 44 in.
l) Width – 82 in.

E. Utilize Model 5425 Turf Tractor as manufactured by John Deere Equipment or equivalent which meets the following specifications:

a) Engine power – 81 hp.
b) PTO power – 65 hp.
c) Wheelbase – 85.7 in.
d) Weight – 7,385 lbs.
e) Rear lift – 3,374 lbs.
f) Front tire – 7.50 – 16 low ground pressure high floatation turf tire.
g) Rear tire – 16.9 – 30 low ground pressure high floatation turf tire.

E. Finish Grading:

A. Utilize Model 106 P Compact Motorized Cross Slope Dual Laser Grader as manufactured by Laser-Grader Manufacturing or equivalent that meets the following specifications:

a) Weight – 3,200 lbs.
b) Length – 11 ft. 6 in.
c) Height – 7 ft. 2 in.
d) Width (excluding blades) – 4 ft.
e) Front pusher blade width – 5 ft.
f) Mold board width – 6 ft.
g) Mold board height – 12 in.
h) Variable speed: 0 – 10 mph.
i) Outside turning radius – 9 ft.
j) Inside turning radius – 5 ft.
k) Mold board functions.
l) Left and right manual raise and lower.
m) Side shift and blade rotation.
n) Grading tolerance - +/- 1/8 in. accuracy equipped with Trimble GCS 600 Grande Control System with two LR410 laser receivers monitored by dual LED grade displays as programmed through a CB420 control box providing the ability to calculate angle, slope and cross slope.
o) Trimble control package plumbed into hydraulics for "automatic" laser control.
p) 6 wheel6-wheel drive via hydraulic wheel motors.
q) Power steering.
r) ROPS certified roll bar.

2 Any proposed substitution of equipment as an equivalent must receive written approval by the Landscape architect or their designee prior to any operation on site..

PART 2 PRODUCTS

2.1 AMENDED ROOT ZONE MATERIAL

A. Amended Root Zone Material shall conform to the following:

1. Organic Matter Content: Minimum of 3 to 5 percent.
2. Infiltration rate shall be greater than inches per hour.
3. Soil shall not be compactable to more than 200 psi.
4. If additional sands are needed they must be mixed by a soil plant or trommel, bucket mixing is not acceptable.
5. The soils textural shall meet the following gradation:

IMPORTED ROOT ZONE

Description	Size (mm)	Percent
Sand	0.05 to 2.0	80 to 86
Silt	0.002 to 0.05	5 to 9.5
Clay	<0.002	1.5 to 3.5

Combined silt and clay (#140 and #270) shall not exceed 10 percent. No stone greater than 1/4-inch (6 mm).

a.

SAND FRACTIONS			
Conventional Name	Retained on U.S. Sieve No. (mm)	Diameter	Percent
Very Coarse Sand	#18	1.0 to 2.0	5 to 9
Coarse Sand	#35	0.5 to 1	20 to 24
Medium Sand	#60	0.25 to 0.5	30 to 34
Fine Sand	#140	0.10 to 0.25	10 to 25
Very Fine Sand	#270	0.05 to 0.10	5 to 10

B. Soil Testing

1. The rootzone blend shall be tested for nutrition through a chemical test and a saturated paste extract. The physical characteristics and performance shall be tested by a complete physical test with particle size distribution, infiltration, and porosity.

PART 3 EXECUTION

3.1 PLACEMENT

A. Amended Root Zone Mix:

1. After excavation and removal of the existing turf and organic material to no less than a depth of eight (8) inches and no more than a depth of eight and a half (8.5) inches.

2. The subbase condition and grade, presence of debris and compaction levels must be verified and approved by the landscape Architect or designee prior to proceeding with the installation of the shim layer or rootzone.

3. The irrigation system is to be installed before if the amended root zone mix is to be applied.

4. All amended rootzone mix placed around irrigation components shall be placed by hand and compacted utilizing hand tools.

5. Prior to spreading of amended rootzone material, the subbase grades, irrigation, and drainage must be approved in writing by the Landscape Architect or their designee.

6. Under no circumstances will rubber-tired vehicles more than one (1) ton be allowed on the gravel/existing base or root zone mix prior to, during or after the spreading of the root

zone mix without a LGP rating of six (6) PSI.

7. Finish grades shall be established per the grading plan, using a three-axis laser grader. Box graders are not acceptable.

8. Finish grades shall be verified by the Contractor using laser operation survey instruments with a tolerance of +/- 1/4-inch.

9. No compaction shall be required beyond that extent necessary to place amended rootzone.

10. Amended Root Zone Mix shall be graded in such a manner as to establish a loose, friable seedbed.

11. The entire site to be seeded shall be laser graded and compacted to predetermined finish grade elevations utilizing power raking and ground preparation equipment as listed in Appendix A or equal.

12. All edges, corners, and material transition areas shall be graded and compacted by manual labor, if necessary, to insure consistent elevation control with surface stabilization and firmness throughout the site. The site shall be inspected for acceptable finish grade and compaction by the Landscape Architect.

13. At the completion of finish grading to +/- one quarter inch and compaction, the irrigation system will be tested, and sprinkler heads installed.

14. The final grades, amended rootzone condition, compaction levels and amended rootzone depth shall all be inspected and approved by the Landscape Architect or designee prior to proceeding with seeding.

15. The seed surface shall be smooth and free of any debris larger than 3/8 inch. Any irregularities in the surface resulting from construction operations shall be corrected to prevent the formation of depressions or crowns. The seeding surface shall be able to provide seed to soil contact.

3.2 ADDITIVES

A. The Contractor shall apply any additives or nutrients as detailed in Section 32 9219.22 - Athletic Field Seeding and Sodding.

END OF SECTION 32 9113.29

SECTION 32 9200 - TURF AND GRASSES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Seeding.
2. Hydroseeding.
3. Sod (Alternate)
4. Erosion-control material(s).

B. Related Requirements:

1. Division 01 Section(s) "Construction Waste Management and Disposal" and "Sustainability Compliance Procedures" for sustainability requirements

2. Division 31 Section "Site Clearing" for topsoil stripping and stockpiling.

3. Division 31 Section "Excavation, Backfill, Compaction and Dewatering" for excavation, filling and backfilling, and rough grading.

4. Division 31 Section "Soil Erosion and Sedimentation Controls" for additional erosion control measures.

5. Division 32 Section "Soil Preparation" for planting medium.

6. Division 32 Section "Plants" for border edgings.

7. Division 33 Section “Storm Drainage” for subsurface drainage.

1.3 DEFINITIONS

A. Duff Layer: The surface layer of native topsoil that is composed of mostly decayed leaves, twigs, and detritus.

B. Finish Grade: Elevation of finished surface of planting soil.

C. Manufactured Topsoil: Soil produced off-site by homogeneously blending mineral soils or sand with stabilized organic soil amendments to produce topsoil or planting soil.

D. Pesticide: A substance or mixture intended for preventing, destroying, repelling, or mitigating a pest. This includes insecticides, miticides, herbicides, fungicides, rodenticides, and molluscicides. It also includes substances or mixtures intended for use as a plant regulator, defoliant, or desiccant.

E. Pests: Living organisms that occur where they are not desired or that cause damage to plants, animals, or people. These include insects, mites, grubs, mollusks (snails and slugs), rodents (gophers, moles, and mice), unwanted plants (weeds), fungi, bacteria, and viruses.

F. Planting Soil: Standardized topsoil; existing, native surface topsoil; existing, in-place surface soil; imported topsoil; or manufactured topsoil that is modified with soil amendments and perhaps fertilizers to produce a soil mixture best for plant growth.

G. Subgrade: Surface or elevation of subsoil remaining after excavation is complete, or top surface of a fill or backfill before planting soil is placed.

H. Subsoil: All soil beneath the topsoil layer of the soil profile and typified by the lack of organic matter and soil organisms.

I. Surface Soil: Soil that is present at the top layer of the existing soil profile at the Project site. In undisturbed areas, the surface soil is typically topsoil, but in disturbed areas such as urban environments, the surface soil can be subsoil.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.5 INFORMATIONAL SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Section 01 3566.42 – Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional

B. Qualification Data: For Landscape Installer.

C. Certification of Grass Seed: From seed vendor for each grass-seed monostand or mixture, stating the botanical and common name, percentage by weight of each species and variety, and percentage of purity, germination, and weed seed. Include the year of production and date of packaging.

D. Product Certificates: For soil fertilizers, from manufacturer.

E. Pesticides and Herbicides: Product label and manufacturer's application instructions specific to Project.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: Recommended procedures to be established by Owner for maintenance of turf and meadows during a calendar year. Submit before expiration of required maintenance periods.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: A qualified landscape Installer whose work has resulted in successful turf and meadow establishment.

1. Professional Membership: Installer should be a member in good standing, for at least the past three (3) consecutive years, of either the Professional Landcare Network, New England Sport Field Management Association, (NESFMA).
2. Experience: Five years' experience in turf installation in addition to requirements in Division 01 Section "Quality Requirements".
3. Installer's Field Supervision: Require Installer to maintain an experienced full-time supervisor on Project site when work is in progress.
4. Pesticide Applicator: State licensed, commercial.
5. Any substitutions of professional certifications or associations must be submitted in writing, with supporting documentation, and must be approved by the Landscape Architect.
6. The Installer must be able to prove that they have all LGP (low ground pressure – less than six (6) psi).
7. The Installer must own, or have fully executed lease contractors for, all of the required equipment necessary to complete the work. If the required equipment is being leased, the Installer must provide satisfactory evidence of operator experience and training qualifications with the identical equipment to the Landscape Architect.
8. Selected installer must install athletic fields using his/her own crews, subcontracting of installation work will not be allowed.

1.8 JOB CONDITIONS AND UTILITIES

A. Utilities: Contractor is responsible for contacting Call Before You Dig (CBYD) before commencement of work or arranging with the owner for this to be carried out and must be approved by Tom Irwin Advisors

B. Contractor is responsible for having all utilities clearly marked and having all appropriate protections of marked utilities and must be approved by Tom Irwin Advisors

C. Contactor is responsible for damage to any marked utilities.

D. Excavation: must not take place when conditions are detrimental to plant growth are encountered, such as rubble fill, adverse drainage conditions, or obstructions, notify Tom Irwin Advisors before spreading Rootzone.

E. All work shall be performed between the hours of Seven (7) am and Five (5) pm unless otherwise agreed between the contractor and Tom Irwin Advisors

F. Before the project commences, If necessary, all personnel on site must present evidence of a successful CORI check suitable for work in a school zone if required.

G. Sod Restrictions: Apply sod during one of the following periods. Coordinate sod periods with initial maintenance periods to provide required maintenance from date of Substantial Completion.

1. Spring Planting: March 15th to June 15th.
2. Fall Planting: August 15th to November 15th. (Recommended)

H. Weather Limitations: Proceed with sod installation only when existing and forecasted weather conditions permit sodding to be performed when beneficial and optimum results may be obtained. Apply products during favorable weather conditions according to manufacturer's written instructions.

1.9 DELIVERY, STORAGE, AND HANDLING

B. Seed and Other Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and indication of conformance with state and federal laws, as applicable.

C. Bulk Materials:

1. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.
2. Provide erosion-control measures to prevent erosion or displacement of bulk materials, discharge of soil-bearing water runoff, and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
3. Accompany each delivery of bulk fertilizers, lime, and soil amendments with appropriate certificates.
4. All Seed, Fertilizers, Insecticides, and Soil amendments must be used immediately or stored in an access-controlled structure and not subject to excessive moisture, heat, or cold.
5. The location of storage facilities must be approved by the Landscape Architect.

D. Planting Restrictions: Plant during one of the following periods. Coordinate planting periods with initial maintenance periods to provide required maintenance from date of Substantial Completion.

1. Spring Planting: March 15th to June 15th.
2. Fall Planting: August 15th to November 15th.

E. Weather Limitations: Proceed with planting only when existing and forecasted weather conditions permit planting to be performed when beneficial and optimum results may be obtained. Apply products during favorable weather conditions according to manufacturer's written instructions.

PART 2 - PRODUCTS

2.1 SEED

A. All products and material required for the successful completion of the project shall be as specified unless otherwise communicated by the contractor. All products and materials shall be authenticated by the supplier and Landscape Architect upon delivery and before use.

B. Grass Seed: Must be certified through the National Turfgrass Evaluation Program (NTEP).

C. Grass Seed: Fresh, clean, dry, new-crop seed complying with AOSA's "Journal of Seed Technology; Rules for Testing Seeds" for purity and germination tolerances.

D. Seed Species: Seed of grass species as follows, with not less than 95 percent germination, not less than 85 percent pure seed, and not more than 0.5 percent weed seed:

1. Grass seed mixture shall be as indicated on the Drawings.

E. Certification of grass seed selected shall clearly state no less than 98 percent germination, no less than 98 percent pure seed, and no more than 0.2 percent weed seed.

2.2 SOD (ALTERNATE)

A. The sod shall be a crop of one year but not more than 2 years old from the date of seed seeding.

B. Sod shall be machine cut at a uniform thickness of three quarters (3/4) inch sod pad only) by thirty (30) inch width at the time of cutting.

C. Measurement of thickness will exclude top growth and thatch; damaged rolls will not be acceptable.

D. Sod shall be stored in rolls with grass topside inverted so that the topsoil is to the exterior.

E. Sod will be free from annual and perennial weeds and weed grasses

2.3 PLANTING SOILS

A. Topsoil: Amend topsoil for seed areas as outlined in topsoil test results as indicated in Division 32 Section "Topsoil and Planting Mix".

2.4 FERTILIZERS

A. Commercial Fertilizer: Commercial-grade complete fertilizer of neutral character, consisting of fast- and slow-release nitrogen, 50 percent derived from natural organic sources of urea formaldehyde, phosphorous, and potassium in the following composition:

1. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified soil-testing laboratory.

B. Slow-Release Fertilizer: Granular or pelleted fertilizer consisting of 50 percent water-insoluble nitrogen, phosphorus, and potassium in the following composition:

1. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified soil-testing laboratory.

2.5 MULCHES

A. Straw Mulch: Provide air-dry, clean, mildew- and seed-free, salt hay or threshed straw of wheat, rye, oats, or barley.

B. Compost Mulch: Well-composted, stable, and weed-free organic matter, pH range of 5.5 to 8; moisture content 35 to 55 percent by weight; 100 percent passing through 1-inch (25-mm) sieve; soluble salt content of 2 to 5 decisiemens/m; not exceeding 0.5 percent inert contaminants and free of substances toxic to plantings; and as follows:

1. Organic Matter Content: 50 to 60 percent of dry weight.
2. Feedstock: Animal bedding and manure, pesticide or chemical free green waste, , and crop residues. Feedstock must comply with USDA Organic Regulations: § 205.203(c)(1),
3.

Description	Percent
Passing ½ inch screen	100%

Passing a 1" screen	>90%
Passing a 4 mm screen	>85%
Passing a 2 mm screen	. >65%

1. Derived from a well-decomposed source of organic matter.
2. Produced using an aerobic composting process, meeting Code of Federal Regulations (CFR) 503 for time, temperature, and heavy metal concentrations.
3. No visible admixture of refuse or other physical contaminants, nor any material toxic to plant growth.
4. Certified by the U.S. Composting Council's Seal of Testing Assurance (STA) program.
5. Conforms to chemical, physical, and biological parameters of AASHTO R 52, with the following additional requirements:

a. Follow U.S. Composting Council's TMECC guidelines for all testing.
b. Organic Matter Content: 30% minimum.
c. pH: between 6.0 and 8.0.
d. Maturity (growth screening): Minimum 90% emergence for all compost to be vegetated.
e. Carbon to Nitrogen ratio (C:N) less than 25:1 upon completion.
f. Ratio of Ammonium to Nitrate less than 3:1
g. Soluble salts less than 10 dS/m
h. Respirometry less than 8 mg CO2-C per g OM per day
i. Shall Comply with EPA 503 regulations for metals and all state regulations
j. No free water
k. No viable weed seeds
l. The compost must maintain a stable temperature between 155 F and 170 F for a minimum of 3 days.

4.

C. Fiber Mulch: Biodegradable, dyed-wood, cellulose-fiber mulch; nontoxic and free of plant-growth or germination inhibitors; with a maximum moisture content of 15 percent and a pH range of 4.5 to 6.5.

D. Nonasphaltic Tackifier: Colloidal tackifier recommended by fiber-mulch manufacturer for slurry application; nontoxic and free of plant-growth or germination inhibitors.

E. Asphalt Emulsion: ASTM D 977, Grade SS-1; nontoxic and free of plant-growth or germination inhibitors.

2.6 PESTICIDES

A. General: Pesticide, registered and approved by EPA, acceptable to authorities having jurisdiction, and of type recommended by manufacturer for each specific problem and as required for Project conditions and application. Do not use restricted pesticides unless authorized in writing by authorities having jurisdiction.

B. Pre-Emergent Herbicide (Selective and Non-Selective): Effective for controlling the germination or growth of weeds within planted areas at the soil level directly below the mulch layer.

C. Post-Emergent Herbicide (Selective and Non-Selective): Effective for controlling weed growth that has already germinated.

2.7 EROSION-CONTROL MATERIALS

A. Erosion-Control Blankets: Biodegradable wood excelsior, straw, or coconut-fiber mat enclosed in a photodegradable plastic mesh. Include manufacturer's recommended steel wire staples, 6 inches (150 mm) long.

B. Erosion-Control Fiber Mesh: Biodegradable burlap or spun-coir mesh, a minimum of 0.92 lb/sq. yd. (0.5 kg/sq. m), with 50 to 65 percent open area. Include manufacturer's recommended steel wire staples, 6 inches (150 mm) long.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas to be planted for compliance with requirements and other conditions affecting performance.

1. Verify that no foreign or deleterious material or liquid such as paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, or acid has been deposited in soil within a planting area.
2. Do not mix or place soils and soil amendments in frozen, wet, or muddy conditions.
3. Suspend soil spreading, grading, and tilling operations during periods of excessive soil moisture until the moisture content reaches acceptable levels to attain the required results.
4. Uniformly moisten excessively dry soil that is not workable and which is too dusty.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

C. If contamination by foreign or deleterious material or liquid is present in soil within a planting area, remove the soil and contamination as directed by Architect and replace with new planting soil.

3.2 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities, trees, shrubs, and plantings from damage caused by planting operations.

1. Protect adjacent and adjoining areas from hydroseeding and hydro mulching overspray.
2. Protect grade stakes set by others until directed to remove them.

B. Install erosion-control measures to prevent erosion or displacement of soils and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways.

3.3 TURF AREA PREPARATION

A. General: Prepare planting area for soil placement and mix planting soil according to Section 32 9115 "Topsoil and Planting Mix".

B. Placing Planting Soil: Place and mix planting soil in place over exposed subgrade according to Section 32 9115 "Topsoil and Planting Mix".

1. Reduce elevation of planting soil to allow for soil thickness of sod.

C. Moisten prepared area before planting if soil is dry. Water thoroughly and allow surface to dry before planting. Do not create muddy soil.

D. Ensure that the soil is not overly compact. If the soil compaction, as measured with a cone penetrometer is greater than one hundred and seventy five (175) PSI, loosen the soil to a depth of 4 inches with a rake or harrow. Re-level the soil to meet specified grades.

E. Before planting, obtain Landscape Architect's acceptance of finish grading; restore planting areas if eroded or otherwise disturbed after finish grading.

3.4 PREPARATION FOR EROSION-CONTROL MATERIALS

A. Prepare area as specified in "Turf Area Preparation" Article.

B. For erosion-control mats, install planting soil in two lifts, with second lift equal to thickness of erosion-control mats. Install erosion-control mat and fasten as recommended by material manufacturer.

C. Fill cells of erosion-control mat with planting soil and compact before planting.

D. For erosion-control blanket or mesh, install from top of slope, working downward, and as recommended by material manufacturer for site conditions. Fasten as recommended by material manufacturer.

E. Moisten prepared area before planting if surface is dry. Water thoroughly and allow surface to dry before planting. Do not create muddy soil.

3.5 SEEDING

A. Sow seed with a dimple seeder and a slice seeder. Do not broadcast or drop seed. Evenly distribute seed by sowing equal quantities in two directions at right angles to each other.

1. Do not use wet seed or seed that is moldy or otherwise damaged.
2. Do not seed against existing trees. Limit extent of seed to outside edge of planting saucer.

B. Sow seed at a total rate of 5 lb/1000 sq. ft. per direction for a total application of 10 lbs/1000 sq. ft.

C. Rake seed lightly into top 1/8 inch (3 mm) of soil, roll lightly, and water with fine spray.

D. Protect seeded areas with slopes exceeding 1:4 with erosion-control blankets and 1:6 with erosion-control fiber mesh installed and stapled according to manufacturer's written instructions.

E. Protect seeded areas with slopes not exceeding 1:6 by spreading straw mulch.

F. Spread uniformly at a minimum rate of two (2) tons/acre (42 kg/92.9 sq. m) to form a continuous blanket 1-1/2 inches (38 mm) in loose thickness over seeded areas. Spread by hand, blower, or other suitable equipment. Straw mulch to be maintained in place by one of the following methods:

1. Anchor straw mulch by crimping into soil with suitable mechanical equipment.
2. Bond straw mulch by spraying with asphalt emulsion at a rate of 10 to 13 gal./1000 sq. ft. (38 to 49 L/92.9 sq. m). Take precautions to prevent damage or staining of structures or other plantings adjacent to mulched areas. Immediately clean damaged or stained areas.

G. Protect seeded areas from hot, dry weather or drying winds by applying compost mulch, peat mulch, or planting soil within 24 hours after completing seeding operations. Soak areas, scatter mulch uniformly to a thickness of 3/16 inch (4.8 mm), and roll surface smooth.

3.6 HYDRO MULCHING

A. Hydro mulching: Mix specified fertilizer and fiber mulch in water, using equipment specifically designed for hydro mulch application. Continue mixing until uniformly blended into homogeneous slurry suitable for hydraulic application.

B. Mix slurry with fiber-mulch manufacturer's recommended tackifier.

C. Mulch for hydro mulch to cover mechanically seeded areas shall be fiber- processed from whole wood chips manufactured specifically for standard hydraulic mulching equipment. Fiber shall not be produced from recycled material such as sawdust, paper, or cardboard.

D. Moisture content shall not exceed 10%, plus or minus 3%, as defined by the pulp and paper industry standards. Fiber shall have a water holding capacity of not less than 900 grams of water per 100 grams fiber.

E. Apply slurry cover coat of fiber mulch (hydro mulching) at a rate of 1000 lb/acre (10.4 kg/92.9 sq. m).

F. Mulch shall disperse into a uniform slurry when mixed with water. Mulch shall be nontoxic to plant life or animal life.

G. Mulch shall contain a non-petroleum based tackifier and a green dye for visual monitoring during application, but non-injurious to plant growth.

3.7 SOD (ALTERNATE)

A. Sod will be installed from September 15th to November 30th, as long as ground is not frozen.

B. Sod shall be harvested, delivered and installed within a period of twenty-four (24) hours. The soil on the sod pads shall be kept moist at all times

C. Immediately prior to installation, the sod bed shall be lightly raked with a fine-toothed harrow of hand rake to provide a surface for the sod to root into.

D. The sod bed shall be reasonably moist and watered in necessary. The sod shall be installed smoothly edge to edge with a maximum joint tolerance of 1/16”

E. A big roll sod installer shall be the equivalent to a Werner KMWI tracked sod installer with a forty-eight (48)” minimum width roll capacity.

F. Sod shall be installed perpendicular to the direction of play.

G. Sod shall be installed with vertical joints being staggered by five (5)’ foot

H. Sod shall be irrigated during and immediately after installation to prevent drying out. Irrigation shall be continuous to allow moisture to penetrate and through the sod pad and into the topsoil immediately below the pad.

I. After sod has been installed the sod shall be rolled with an approved weighted roller, not to exceed sixty-five (65) pounds per foot of width.

3.8 TURF RENOVATION (AFTER INSTALLATION)

A. Renovate turf damaged by Contractor's operations, such as storage of materials or equipment and movement of vehicles.

1. Reestablish turf where settlement or washouts occur or where minor regrading is required.
2. Install new planting soil as required.

B. Remove sod and vegetation from diseased or unsatisfactory turf areas using a sod cutter; do not bury in soil.

C. Maintain a consistent depth with the sod cupper and ensure that the edges of the removed area are parallel and uniform.

D. Remove topsoil containing foreign materials, such as oil drippings, fuel spills, stones, gravel, and other construction materials resulting from Contractor's operations, and replace with new planting soil.

E. Loosen the soil, add soil to replace the soil removed, regrade with iron rake such that the repaired area will match the finish grades.

F. Remove waste and foreign materials, including weeds, soil cores, grass, vegetation, and turf, and legally dispose of them off Owner's property.

G. Till stripped, bare, and compacted areas thoroughly to a soil depth of six (6) inches.

H. Apply soil amendments and initial fertilizer required for establishing new turf and mix thoroughly into top 4 inches (100 mm) of existing soil. Install new planting soil to fill low spots and meet finish grades.

1. Soil Amendment(s): According to requirements of Division 32 Section "Topsoil and Planting Mix". Apply as recommended by topsoil analysis.
2. Initial Fertilizer: Commercial fertilizer or Slow-release fertilizer applied according to manufacturer's recommendations.

I. Apply seed or sod and protect with straw mulch as required for new turf.

J. Water newly planted areas and keep moist until new turf is established.

3.9 TURF MAINTENANCE

A. Maintain and establish turf by watering, fertilizing, weeding, mowing, trimming, replanting, and performing other operations as required to establish healthy, viable turf. Roll, regrade, and replant bare or eroded areas and re-mulch to produce a uniformly smooth turf. Provide materials and installation the same as those used in the original installation.

1. Fill in as necessary soil subsidence that may occur because of settling or other processes. Replace materials and turf damaged or lost in areas of subsidence.
2. In areas where mulch has been disturbed by wind or maintenance operations, add new mulch and anchor as required to prevent displacement.
3. Apply treatments as required to keep turf and soil free of pests and pathogens or disease. Use integrated pest management practices whenever possible to minimize the use of pesticides and reduce hazards.

B. Watering: Install and maintain temporary piping, hoses, and turf-watering equipment to convey water from sources and to keep turf uniformly moist to a depth of four (4) inches.

1. Schedule watering to prevent wilting, puddling, erosion, and displacement of seed or mulch. Lay out temporary watering system to avoid walking over muddy or newly planted areas.
2. During the first two weeks after planting water turf with fine spray at a minimum rate of 1/8 inch at 4 am, 8 am, 11am, 2 pm, 5 pm, and 10 pm, unless rainfall precipitation is adequate.
3. After the grass has established Water turf with fine spray at a minimum rate of 1 inch (25 mm) per week unless rainfall precipitation is adequate.

C. Mow turf as soon as top growth is tall enough to cut. Repeat mowing to maintain specified height without cutting more than 1/3 of grass height. Remove no more than 1/3 of grass-leaf growth in initial or subsequent mowings. Do not delay mowing until grass blades bend over and become matted. Do not mow when grass is wet. Schedule initial and subsequent mowings to maintain the following grass height:

1. Mow to a height of 1-1/2 to 2 inches (38 to 50 mm).

2. All clippings must be removed.

3. Mowing blades must be properly sharpened to prevent torn or ragged leaf tips of the grass blades

4. Do not delay mowing until the the grass blades bed over and become matted.

D. Turf Post fertilization: Apply fertilizer after initial mowing and when grass is dry.

1. Use fertilizer that will provide actual nitrogen of at least 1 lb/1000 sq. ft. (0.45 kg/92.9 sq. m) to turf area.

3.10 SATISFACTORY TURF

A. Turf installations shall meet the following criteria as determined by Architect:

1. Satisfactory Seeded Turf: At end of maintenance period, a healthy, uniform, close stand of grass has been established, free of weeds and surface irregularities, with coverage exceeding 95 percent over any 10 sq. ft. (0.92 sq. m) and no bare spots.
2. The soil compaction will be between 150 and 200 pounds per in^2 (PSI) at a 3 inch depth.
3. The infiltration rate of the Project sites will not be below three (3) inches of water per hour as measured using a double ring infiltrometer with a falling head

B. Use specified materials to reestablish turf that does not comply with requirements and continue maintenance until turf is satisfactory.

3.11 PESTICIDE APPLICATION

A. Apply pesticides and other chemical products and biological control agents in accordance with requirements of authorities having jurisdiction and manufacturer's written recommendations. Coordinate applications with Owner's operations and others in proximity to the Work. Notify Owner before each application is performed.

B. Post-Emergent Herbicides (Selective and Non-Selective): Apply only as necessary to treat already-germinated weeds and in accordance with manufacturer's written recommendations.

3.12 RESTORATION OF SETTLED GRADES

A. At the end, twelve months after the date of substantial completion of the soil installation work, inspect the site and restore any areas where the grades have settled beyond the elevations shown on the drawings.

1. Lawn areas: Remove the sod using mechanical sod cutter from the settled area and add the specified top soil or planting mix. Re sod the area using the sod cut from the lawn. In the event that the sod cannot be reused, install new sod that matches the seed mix on the lawn.

2. Planting Areas: Where the settlement is 3-inches or less, remove the mulch, top dress the area with the specified topsoil or planting mix and re mulch.
3. Planting Areas: Where the settlement is greater than 3-inches remove the mulch and plants, add the specified topsoil or planting mix and re mulch.

3.13 CLEANUP AND PROTECTION

A. Promptly remove soil and debris created by turf work from paved areas. Clean wheels of vehicles before leaving site to avoid tracking soil onto roads, walks, or other paved areas.

B. Erect temporary fencing or barricades and warning signs as required to protect newly planted areas from traffic. Maintain fencing and barricades throughout maintenance period and remove after plantings are established.

C. Remove erosion-control measures after grass establishment period.

3.14 MAINTENANCE SERVICE

A. Turf Maintenance Service: Provide full maintenance by skilled employees of landscape Installer. Maintain as required in "Turf Maintenance" Article. Begin maintenance immediately after each area is planted and continue until acceptable turf is established but for not less than the following periods:

1. Seeded Turf: 90 days from date of Substantial Completion.

    a. When maintenance period has not elapsed before end of planting season, or if turf is not fully established, continue maintenance during next planting season.

B. Meadow Maintenance Service: Provide full maintenance by skilled employees of landscape Installer. Maintain as required in "Meadow Maintenance" Article. Begin maintenance immediately after each area is planted and continue until acceptable meadow is established, but for not less than 40 days from maintenance period below:

1. Maintenance Period: 90 days from date of Substantial Completion.

END OF SECTION 32 9200

SECTION 32 9219.22 - ATHLETIC FIELD SEEDING AND SODDING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this section.

1.2 SUMMARY

A. Section Includes:

1. Seeding.

B. Related Requirements: Division 01 Section(s) "Construction Waste Management and Disposal" and "Sustainability Compliance Procedures" for sustainability requirements

1. Division 01 Section(s) "Construction Waste Management and Disposal" and "Sustainability Compliance Procedures" for sustainability requirements.

2. Section 31 1005 – "Athletic Field Site Preparation": Turf removal and disposal.

3. Section 31 2323 – "Borrow Material"

4. Section 31 2300 – "Excavation, Backfill, Compaction and Dewatering" for Excavation, filling and backfilling, and rough grading.

5. Section 32 9113.29 – "Athletic Field Root Zone": Root zone mix.

1.3 DEFINITIONS

A. Duff Layer: The surface layer of native topsoil that is composed of mostly decayed leaves, twigs, and detritus.

1. Finish Grade: Elevation of finished surface of planting soil.

2. Engineered Topsoil: Soil produced off-site by homogeneously blending mineral soils or sand with stabilized organic soil amendments to produce topsoil or planting soil.

3. Pesticide: A substance or mixture intended for preventing, destroying, repelling, or mitigating a pest. This includes insecticides, miticides, herbicides, fungicides, rodenticides, and molluscicides. It also includes substances or mixtures intended for use as a plant regulator, defoliant, or desiccant.

4. Pests: Living organisms that occur where they are not desired or that cause damage to plants, animals, or people. These include insects, mites, grubs, mollusks (snails and slugs), rodents (gophers, moles, and mice), unwanted plants (weeds), fungi, bacteria, and viruses.

5. Planting Soil: Standardized topsoil; existing, native surface topsoil; existing, in-place surface soil; imported topsoil; or manufactured topsoil that is modified with soil amendments and perhaps fertilizers to produce a soil mixture best for plant growth.

6. Subgrade: Surface or elevation of subsoil remaining after excavation is complete, or top surface of a fill or backfill before planting soil is placed.

7. Subsoil: All soil beneath the topsoil layer of the soil profile and typified by the lack of organic matter and soil organisms.

8. Surface Soil: Soil that is present at the top layer of the existing soil profile at the Project site. In undisturbed areas, the surface soil is typically topsoil, but in disturbed areas such as urban environments, the surface soil can be subsoil.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.5 SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Section 01 3566.42 – Sustainability Compliance Procedures and provide the following in addition to other submittals:

1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.

2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regionalQualification Data: For Athletic Field Contractor.

B. Certification of Grass Seed: From seed vendor for each grass-seed monostand or mixture, stating the botanical and common name, percentage by weight of each species and variety, and percentage of purity, germination, and weed seed. Include the year of production and date of packaging.

C. Product Certificates: For soil fertilizers, from manufacturer.

D. Pesticides and Herbicides: Product label and manufacturer's application instructions specific to Project.

E. Approved Soil Testing Laboratories: Contractor shall submit a chemical, saturated paste extract, and physical soil test of the rootzone mix prior to seeding and subsequently when called for in these specifications. Testing of the existing Rootzone Material and washed screened sand shall be performed by:

1. For particle size analysis and complete physical performance:

Turf & Soil Diagnostics
Trumansburg, NY 14886
(607) 387-5694

2. For chemical and paste extracts:

Logan Labs, LLC
620 North Main Street
Lakeview, OH 43331
(937) 842-2433

F. Any changes to the means and methods of the athletic field construction, and/or materials, must be approved in writing by the Landscape Architect.

G. Completion of work is subject to adverse climatic conditions which could affect the date of substantial completion. Any/all delays must be communicated in writing with the Construction Manager as soon as possible

H. No work can progress unless testing results are approved by the Landscape Architect.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: Recommended procedures to be established by Owner for maintenance of athletic field turf during a calendar year. Submit before expiration of required maintenance periods.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: A qualified Athletic Field Contractor whose work has resulted in successful turf establishment as follows:

1. General Experience:

a. Five (5) years' experience of athletic fields construction, resurfacing and/or renovations similar to scope of project over the last three (3) consecutive years.

b. Provide references and reports of above said athletic fields projects as to the type of projects involved in, including but not limited to; start and end dates, adherence to target/ key performance indicators, scope of works completed along with contact persons and contact details for said clients.
c. Provide testimonies from previous clients, including but not limited to; quality of work, staff/employee interactions, tidiness of site, timekeeping and punctuality and overall client satisfaction levels.

2. Staff/Employees:

a. Provide resumes for all staff/employees who will be responsible for carrying out scope of works, including but not limited to, full time and seasonal/short term employees.
b. Resumes will be required for all employees/staff involved in the project.
c. Resumes to include:

1). Experience level relevant to the project needs/scope of work.
2). Qualifications level relevant to the project needs/scope of work.

d. Must provide evidence that all staff/employees have at least three (3) years' experience of similar scope of work for project over the last three (3) consecutive years.
e. Provide evidence of continued professional development of all/any employees involved in project for last three (3) consecutive years.
f. Shall have a supervisor on the site who is experienced in the construction of sports fields. Supervisor's name and experience shall be submitted to the Landscape Architect for approval.
g. Shall have membership of one or more of the following Professional associations for a minimum of the last three (3) consecutive years:

1). New England Sports Field Management Association (NESFMA).
2). Sports Field Management Association (SFMA).

3. Insurances / Certifications:

a. Must be in possession of a suitable level of public liability insurance and any other relevant insurances required by the state and/or client.

4. Equipment:

a. Must be in possession and provide a detailed list of a suitable level of tools/equipment/machinery and or equivalent required to carry out the scope of work for said project.
b. All equipment and or equivalent must be in a condition able to carry out scope of work. Any certificates proving this will be required as part of the submission. All equipment must be verified as being free of any leaks or defects.
c. All proposed equipment to be used for seeding shall be approved by the Landscape Architect prior to commencing work.

d. The Contractor must be able to prove that they have all LGP (low ground pressure – less than six (6) psi construction and renovation equipment

5. Additional:

a. Provide a project plan identifying all key indicator/target points, which clearly shows an integrated approach to quality control and quality assurance.
b. Provide a detailed methodology of how the required works will be carried out., this should be inclusive and synced to the project plan.
c. Contractor is required to submit samples, test results and/or certification of all material prior to delivery to the site. All materials are to be approved by the Landscape Architect prior to their use. These certifications shall comply with specifications and scope of project and where applicable, with any standards that may be implied.
d. All chemical applications shall follow CT Law including applications on School Grounds and the Best Practices as detailed in NESFMA *"Best Management Practices for the Sports Field Manager: A Professional Guide for Environmental Sports Field Management in New England"*

6. Pesticide Applicator: State licensed, commercial.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Seed and Other Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and indication of conformance with state and federal laws, as applicable.

B. Bulk Materials:

1. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.
2. Provide erosion-control measures to prevent erosion or displacement of bulk materials, discharge of soil-bearing water runoff, and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
3. Accompany each delivery of bulk fertilizers, lime, and soil amendments with appropriate certificates.
4. Fertilizers, lime, and soil amendments must be stored in a secure, locked area, and must be protected from the elements and heat/cold extremes.
5. Immediately remove from the site all materials, which are not true to name, and all materials that do not comply with the specified requirements.
6. Use all means necessary to protect materials from theft, tampering, and weather before, during and after installation, and to protect the work and materials of all other trades.
7. All materials must be stored or stockpiled in such a manner so as not to present a threat to the environment. Erosion controls and run off protection must be implemented. All materials must be stored in accordance with relevant protection plans.
8. All materials must be inspected by the Athletic Field Consultant prior to acceptance and such inspection shall be documented with, at a minimum, the name of the inspector, the

material inspected, the person or company delivering the materials, the results of the inspection, and the date and time of acceptance

9. Contamination: Immediately remove from the site all materials that have been contaminated. In the case of contamination of stockpiled items, confer with the Athletic Field Consultant and if directed remove the entire stockpile from site immediately at no cost to the Owner.
10. Repair and Replacement: in the event of damage, immediately make all repairs and replacements necessary to the approval of the Athletic Field Consultant and at no additional cost to the Owner.

1.9 FIELD CONDITIONS

A. Seeding Restrictions: Seed during one of the following periods, if climatic and ground conditions are favorable. Coordinate seeding periods with initial maintenance periods to provide required maintenance from date of Substantial Completion.

1. Spring Seeding: April 15th to June 15th.
2. Fall Seeding: August 15th to November 15th.

B. Weather Limitations: Proceed with seeding and sodding only when existing and forecasted weather conditions permit seeding and sodding to be performed when beneficial and optimum results may be obtained. Apply products during favorable weather conditions according to manufacturer's written instructions.

PART 2 PRODUCTS

2.1 SEED

A. Grass Seed: Must be certified through National Turf Grass Evaluation Program.

B. Seed Mixtures:

1. Evenly apply 900 lbs. of "Hash Mark Sports Turf Mix" seed as specified in Appendix B or equal at the rate of 10 lbs./1,000 Sq. Ft. in two directions (5 lbs. in each direction) utilizing seed injection drum spike or slice seeding implement at 1" x 1" spacing towed behind a LGP turf tractor as in Appendix A or equal. See Appendix B for the Planting Plan.

a. Hash Mark Sports Turf Mix.
b. Sundial Tall Fescue 19.96%.
c. Falcon IV Tall Fescue 19.85%.
d. Dallas Tall Fescue 19.83%.
e. Ashland Kentucky Bluegrass 19.80%.
f. Double Time GLS Perennial Ryegrass 9.91%.
g. Palmer III Perennial Ryegrass 9.83%.

C. Seed of grass species as follows, with not less than 98 percent germination, not less than 98 percent pure seed, and not more than 0.2 percent weed seed:

2.2 PLANTING SOILS

A. Topsoil: Topsoil for athletic field seeded and sodded areas as indicated in Section 32 9113.29 - "Athletic Field Root Zone".

2.3 FERTILIZERS

A. Nutrient application - Evenly spread soil amendment "Renovate Plus" or equal at the rate of 25 lbs./1,000 Sq. Ft. Lightly scarify and incorporate into the top 1 to 2 inches of new rootzone profile utilizing a super rake surface preparation machine or equal prior to seeding or sodding.

B. Nutrient application – Evenly spread seedbed amendment "Myco-Replenish 3-3-3 SG" or equal at the rate of 10 lbs./1,000 Sq. Ft prior to seeding or sodding.

C. Evenly spread seedbed amendment and 4-way wetting agent "Vivax Plus Fertilizer 0-0-20 SG" or equal at the rate of 5 lbs./1,000 Sq. Ft within 3 days of seeding or sodding.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine areas to be seeded or sodding for compliance with requirements and other conditions affecting performance.

1. Verify that no foreign or deleterious material or liquid such as paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, or acid has been deposited in soil within a planting area.
2. Do not mix or place soils and soil amendments in frozen, wet, or muddy conditions.
3. Suspend soil spreading, grading, and tilling operations during periods of excessive soil moisture until the moisture content reaches acceptable levels to attain the required results.
4. Uniformly moisten excessively dry soil that is not workable, and which is too dusty.
5. Proceed with installation only after unsatisfactory conditions have been corrected.

B. If contamination by foreign or deleterious material or liquid is present in soil within a planting area, remove the soil and contamination as directed by Architect and replace with new planting soil.

3.2 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities, trees, shrubs, and plantings from damage caused by planting operations.

B. Install erosion-control measures to prevent erosion or displacement of soils and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways.

3.3 TURF AREA PREPARATION

A. General: Prepare planting area for soil placement and mix root zone mix according to Section 32 9113.29 - "Athletic Field Amended Root Zone".

B. Placing Amended Root Zone Mix: Place and mix root zone mix in place over exposed subgrade according to Section 32 9113.29 - "Athletic Field Root Zone".

C. Moisten prepared area before planting if soil is dry. Water thoroughly and allow surface to dry before planting. Do not create waterlogged soil conditions.

D. Before planting, obtain Landscape Architect's written acceptance of finish grading and rootzone material; restore planting areas if eroded or otherwise disturbed after finish grading.

3.4 SEEDING

A. Evenly apply seed as specified in two (2) directions, utilizing LGP turf tractor mounted unequal twin disc slitting system with a maximum 3-inch spacing between discs or equivalent as specified in Section 32 9113.29 - Athletic Field Root Zone.

1. Do not use wet seed or seed that is moldy or otherwise damaged.
2. Do not seed against existing trees. Limit extent of seed to outside edge of tree planting ring.
3. Do not seed during excessively windy conditions. (>15 mph wind gusts)

B. Sow seed at a total rate of 10 lb./1000 sq. ft. (4.5 kg/92.9 sq. m). 5 lbs of seed per direction.

C. The Contractor must utilize LGP turf tractor mounted with an oscillating arm broadcast applicator or equivalent to broadcast spread the following, within 24-48 hours of seeding:

1. Nutrient amendments - "Earthworks Micro Replenish 3-3-3 SG" or equivalent at 10 lbs./1,000 sq. ft. .
2. Evenly apply 2,200 lbs. of a compost and mineral soil amendment to aid rapid seed establishment "Renovate Plus" or equal at a rate of 25.25 lbs. per 1000 square feet to the soil surface.
3. Nutrient and hydration amendment - "Precision Labs Vivax 0-0-20" or equivalent at the rate of 5 lbs/1,000 sq. ft.

3.5 TURF MAINTENANCE (INCLUSIVE OF GROW-IN AND ESTABLISHMENT)

A. Maintain and establish turf seeded (and sodded areas if sod has been chosen) by utilizing proper irrigation, fertilizing, weeding, mowing, trimming, replanting, aeration, and performing other operations as required to establish healthy, viable turf. For seeded areas only; regrade, and replant bare or eroded areas to produce a uniformly smooth turf. The Contractor must provide materials and installation the same as those used in the original seeded and sodded areas.

1. Fill in as necessary any soil subsidence with a rootzone mix that is consistent with the existing materials, which may occur because of settling or other processes. Replace materials and turf damaged or lost in areas of subsidence.
2. Apply treatments as required to keep turf and soil free of pests and pathogens or disease.
3. Use integrated pest management practices (IPM) whenever possible to minimize the use of pesticides and reduce hazards.

B. Irrigation:

1. Schedule irrigation to prevent wilting, puddling, erosion and displacement of seed.
2. Irrigate turf with computer-controlled irrigation system, if installed and operational, to maintain appropriate moisture levels which will sustain sod or seed health and promote root development. Irrigate regularly unless rainfall precipitation is adequate
3. If computer-controlled irrigation system is not operational the Contractor is required to furnish, install, and maintain a system of temporary pipe, sprinklers and service connections which are adequate to irrigate the turf areas daily to maintain appropriate moisture levels which will sustain turf health and vigor, and to promote root development.
4. Once per week, the Contractor must monitor Volumetric Moisture Content (VMC) with a moisture probe such as Pogo Pro+, TDR-300 or equivalent to assure that the rootzone has sufficient moisture content. As guidance the VMC should be no less than twenty five (25)% to thirty five (35)% in the areas tested. Fifteen (15) designated points on the field should be tested to create representative sampling.

C. Grow-In Agronomic Requirements:

1. Apply fertilizer to dry turf and water in post application.

2. All nutrient, plant health, amendments, and cultural practices must be followed as the Grow In And Establishment section. Any deviations from this plan must be approved by the Landscape Architect or their designee.

3.6 GROW-IN AND ESTABLISHMENT

A. Applications: All dates and timing to be approved by the Athletic Field Consultant, based on environmental and surface conditions. Products and rates may be adjusted with the

approval of the Athletic Field Consultant based on soil tests and specific growth requirements. Apply fertilizer to dry turf and water in post application. See Appendix B for recommended product labels.

1. Ten (10) days after seeding, evenly apply "Proscape 21-22-1 Mesotrione SGN 125" or equal at the rate of 4.5 lbs./1,000 Sq. Ft. to the surface.
2. Ten (10) days after seeding, evenly apply "Vivax Plus Fertilizer 0-0-20" at the rate of 5 lbs./1,000 Sq. Ft. to the surface.
3. Thirty (30) days after seeding, evenly apply "Nutrite 16-24-10 SGN 200" or equal at the rate of 4 lbs./1,000 Sq. Ft. to the surface.
4. Product solutions supplier requirements - Must make bi-weekly visits to assist Contractor on fertility, performance turf establishment and product effectiveness.

B. Spring/Summer Applications (Date to be determined based on athletic Field Completion):

1. All dates and timing to be approved by the Athletic Field Consultant, based on environmental and surface conditions. Products and rates may be adjusted with the approval of the Athletic Field Consultant based on soil tests and specific growth requirements. Apply fertilizer to dry turf and water in post application.

C. Spray Foliar Application:

1. Evenly apply "Vivax" or equal at the rate of 3.67 oz/1,000 Sq. Ft.;
2. "Fame SC" or equal at the rate of 0.36 oz/1,000 Sq. Ft.;
3. "Phos-Fight 0-0-26" or equal at the rate of 3.67 oz/1,000 Sq. Ft.;
4. "Sea-3" or equal at the rate of 3.67 oz/1,000 Sq. Ft.;
5. "TurfRx Green" or equal at the rate of 3.67 oz/1,000 Sq. Ft.; and
6. "TurfRx K+ Micro Crystal" or equal at the rate of 1.84 oz/1,000 Sq. Ft. to the surface.

D. Granular Application:

1. Evenly apply "28-0-10SGN 200" or equal at the rate of 4 lbs./1,000 Sq. Ft., to the surface. Apply as specified and water in with ¼" of irrigation.

E. Spray Foliar Application:

1. Evenly apply "Pylex" or equal at the rate of 0.03 oz/1,000 Sq. Ft., to the turf surface;
2. "Q4 Plus" Post emergent Herbicide or equal at a rate of 3.00 oz/1000 Sq. Ft.;
3. "Border 2.0" Drift Control Product efficacy or equal at a rate of 0.37 oz/1000 Sq. Ft.

F. Granular Application:

1. Evenly apply "Replenish 5-4-5" or equal at the rate of 6.8 lbs./1,000 Sq. Ft., to the surface. Apply as specified and water in with ¼" of irrigation.
2. "Sili-Cal SS SG" or equal at the rate of 20 lbs./1,000 Sq. Ft., to the surface. Apply as specified and water in with ¼" of irrigation.

G. Granular Application:

1. Evenly apply "Replenish 5-4-5" or equal at the rate of 6.8 lbs./1,000 Sq. Ft., to the surface. Apply as specified and water in with ¼" of irrigation.

3.7 AERATION (DEEP TINE)

A. Carry out deep tine aeration using a vertical action aerator equipment fitted with three quarter (¾) " diameter tines with a three (3)" x three (3)" spacing pattern to a depth of seven (7)" minimum. Forward speed should be three (3) MPH. Turning of equipment should happen at safe distance off the field footprint to reduce compaction and or surface damage.

3.8 AGRONOMIC TESTING SOIL ANALYSIS (IN FALL POST ESTABLISHMENT)

A. Carry out comprehensive soil core testing using the specified soil testing laboratories. This should consist of chemical extraction as well a paste extraction and also physical analysis covering at a minimum particle size distribution. Cores shall be harvested at a minimum of twenty (20) sample points spread evenly throughout the athletic field covering both high wear areas and non-high wear areas. A core shall be extracted from a depth of four (4)" using a three quarter (¾") diameter soil corer or probe or equal.

B. Product solutions supplier requirements - Must make bi-weekly visits to assist Contractor on fertility, performance turf establishment and product effectiveness.

3.9 PERFORMANCE QUALITY STANDARDS TESTING

A. Carry out a complete Performance Quality Standards Assessment. Inclusive of over three hundred and fifty (350) tests encompassing thirty-four (34) criteria including but not limited to GMax/Surface hardness, rotational traction, shear vane strength, infiltration, soil compaction, elevation, turf height of cut, planarity, ball roll and ball bounce, in ten (10) identified areas as per ASTM standards throughout the athletic field, covering Structural, Presentation and Playability.

3.10 MOWING

A. Mow turf once top growth reaches an average height of two and a half (2.5") inches. Mow to the height of two (2") inches.

B. All clippings MUST be removed.

C. Mow turf using a collection system, with properly sharpened rotary blades.

D. Repeat mowing to maintain specified height without cutting more than 1/3 of grass height.

E. Remove no more than 1/3 of grass-leaf growth in initial or subsequent mowing's.

F. Do not delay mowing until grass blades bend over and become matted.

G. Do not mow when grass is wet. Schedule initial and subsequent mowing's to maintain the following grass height.

H. Continue mowing practices at desired height of two and a half" (2.5 inches) until the end of the growing season.

3.11 SATISFACTORY TURF

A. Seed and sod installations shall meet the following criteria as determined by Architect:

1. Satisfactory Seeded Turf Areas: At end of maintenance period, a healthy, uniform, close stand of grass has been established, free of weeds and surface irregularities, with coverage exceeding 95 percent over any ten (10) sq. ft. and bare spots not exceeding three (3) by three (3) inches.

B. Use previously specified materials to reestablish turf that does not comply with requirements and continue maintenance until turf complies with requirements.

C. Substantial Completion Field Testing:

1. Soil structural consolidation readings at the six (6) inch depth must be a minimum of one-hundred and fifty (150) psi and a maximum of one hundred and seventy-five (175) psi using a digital cone penetrometer or equivalent. The readings will be taken at fifteen (15) designated points on the field, of which a minimum of seven (7) of those readings must be taken along the center of the field.
2. Surface Impact Levels must be a minimum of fifty (50) Gravities to a maximum of seventy (70) Gravities using a Clegg Surface Impact Tester or equivalent. The readings will be taken at fifteen (15) points on the field of which a minimum of seven (7) of those readings must be taken along the center of the field..
3. Infiltration rate of water into the rootzone must achieve a minimum of two (2) inches per hour. The reading will be taken at five (5) designated points on the field, of which a minimum of three (3) of those readings must be taken along the center of the field.
4. If any of the above readings are outside of the agreed tolerances, then corrective action will need to be carried out. This would be following consultation between the Landscape Architect, Landscape Architect's Representative, and Contractor.

3.12 RESTORATION OF SETTLED GRADES

A. At the end, three (3) months after the date of substantial completion of the soil installation work, inspect the site and restore any areas where the grades have settled beyond the elevations shown on the Drawings.

3.13 CLEANUP AND PROTECTION

A. Promptly remove soil and debris created by turf work from paved areas. Clean wheels of vehicles before leaving site to avoid tracking soil onto roads, walkways, or other paved areas.

B. Erect temporary fencing or barricades and warning signs as required to protect newly planted areas from traffic. Maintain fencing and barricades throughout maintenance period and remove after plantings are established.

3.14 MAINTENANCE SERVICE

A. Turf Maintenance Service: Provide full maintenance by skilled employees of Athletic Field Contractor. Maintain as required in "Turf Maintenance" Article. 3.5, 3.6, 3.7, 3.8,3.9,3.10, 3.11 (above). Begin maintenance immediately after each area is planted and continue until acceptable turf is established but for not less than the following periods:

1. Seeded Turf: ninety (90) days from date of Substantial Completion.
2. When maintenance period has not elapsed before end of planting season, or if turf is not fully established, continue maintenance during next planting season.

END OF SECTION 32 9219.22

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 9300 - PLANTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Plants.

B. Related Requirements:

1. Division 01 Section(s) "Construction Waste Management and Disposal" and "Sustainability Compliance Procedures" for sustainability requirements

2. Division 01 Section "Temporary Tree and Plant Protection" for protecting, trimming, pruning, repairing, and replacing existing trees to remain that interfere with, or are affected by, execution of the Work.

3. Division 31 Section "Site Clearing" for protection of existing trees and plantings, topsoil stripping and stockpiling, and site clearing.

4. Division 31 Section "Excavation, Backfill, Compaction and Dewatering" for excavation, filling, and rough grading and for subsurface aggregate drainage and drainage backfill materials.

5. Division 32 Section "Soil Preparation" for planting medium.

6. Division 32 Section "Turf and Grasses" for turf (lawn), and hydroseeding.

1.3 DEFINITIONS

A. Backfill: The earth used to replace or the act of replacing earth in an excavation.

B. Balled and Burlapped Stock: Plants dug with firm, natural balls of earth in which they were grown, with ball size not less than sizes indicated; wrapped with burlap, tied, rigidly supported, and drum laced with twine with the root flare visible at the surface of the ball as recommended by ANSI Z60.1.

C. Container-Grown Stock: Healthy, vigorous, well-rooted plants grown in a container, with a well-established root system reaching sides of container and maintaining a firm ball when removed

from container. Container shall be rigid enough to hold ball shape and protect root mass during shipping and be sized according to ANSI Z60.1 for type and size of plant required.

D. Duff Layer: The surface layer of native topsoil that is composed of mostly decayed leaves, twigs, and detritus.

E. Finish Grade: Elevation of finished surface of planting soil.

F. Manufactured Topsoil: Soil produced off-site by homogeneously blending mineral soils or sand with stabilized organic soil amendments to produce topsoil or planting soil.

G. Pesticide: A substance or mixture intended for preventing, destroying, repelling, or mitigating a pest. This includes insecticides, miticides, herbicides, fungicides, rodenticides, and molluscicides. It also includes substances or mixtures intended for use as a plant regulator, defoliant, or desiccant.

H. Pests: Living organisms that occur where they are not desired, or that cause damage to plants, animals, or people. These include insects, mites, grubs, mollusks (snails and slugs), rodents (gophers, moles, and mice), unwanted plants (weeds), fungi, bacteria, and viruses.

I. Planting Area: Areas to be planted.

J. Planting Soil: Standardized topsoil; existing, native surface topsoil; existing, in-place surface soil; imported topsoil; or manufactured topsoil that is modified with soil amendments and perhaps fertilizers to produce a soil mixture best for plant growth.

K. Plant; Plants; Plant Material: These terms refer to vegetation in general, including trees, shrubs, vines, ground covers, ornamental grasses, bulbs, corms, tubers, or herbaceous vegetation.

L. Root Flare: Also called "trunk flare". The area at the base of the plant's stem or trunk where the stem or trunk broadens to form roots; the area of transition between the root system and the stem or trunk.

M. Stem Girdling Roots: Roots that encircle the stems (trunks) of trees below the soil surface.

N. Subgrade: Surface or elevation of subsoil remaining after excavation is complete, or the top surface of a fill or backfill before planting soil is placed.

O. Subsoil: All soil beneath the topsoil layer of the soil profile, and typified by the lack of organic matter and soil organisms.

P. Surface Soil: Soil that is present at the top layer of the existing soil profile at the Project site. In undisturbed areas, the surface soil is typically topsoil; but in disturbed areas such as urban environments, the surface soil can be subsoil.

1.4 COORDINATION

A. Coordination with Turf Areas (Lawns): Plant trees, shrubs, and other plants after finish grades are established and before planting turf areas unless otherwise indicated.

1. When planting trees, shrubs, and other plants after planting turf areas, protect turf areas, and promptly repair damage caused by planting operations.

1.5 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project Site with Landscape Architect, Owner's Rep, and Tree Warden to ensure that the project scope and expectations are to be met.

B. Conduct meeting a minimum of 4 weeks prior to beginning implementation of planting operations.

1.6 SPECIAL CONDITIONS:

A. Any excavation within the Critical Root Zone will be done carefully to expose tree roots to be cut. Tree roots with a diameter of one-half inch or larger wil I be severed cleanly with a sharp pair of lopping shears. Tree roots too large for lopping shears may be cut with a power cut-off saw. Back-fill adjacent to the severed roots will be good quality topsoil mixed with and equal amount of peat moss. Excavated roots will be back- filled the same day to prevent drying.

B. A commercial tree service equipped with supersonic air excavating equipment (i.e., "Air Spade") may be required to be used to carefully expose roots for pruning. With air excavation, a trench can be dug and the location on the root can be selected for cutting. This will allow a more sensitive selection of cut location. For example, if the root branches, it may be possible to locate the cut to save the branch of the root that does not travel toward the area to be excavated. It may also be possible to relocate small roots by excavating around them and replanting them inside the retained rooting area.

C. Tree Fertilization and Aeration: Immediately after construction all trees impacted by excavation operations should be backfilled with topsoil and not left open so that the tree's roots dry out. Trenches near trees should be backfilled within 2-4 hours after excavation and not left open over night. Trees should be fertilized by high pressure liquid injection method with a slow-release organic fertilizer mixed with an organic root growth enhancer. The following rates will apply: (formulated for I 00 gals. of water) 20 lbs. of Davey Arbor Green® (30-10-7) or equivalent. I lb. of MycorTree Injectable® containing beneficial spores of the endo- and ectomysorrizal Mycorrhizal fungi with PHC BioPak™ biostimulant. Apply I 00 gallons of this mixture per 2,000 square feet of available root area. Soil injection should be 8 - 12 inches deep using an injector probe at 150 - 200 lbs pressure. Injection shall begin four feet out from the trunk of the tree and be spaced two and a half feet apart, injecting on a 2 ½ foot grid extending beyond the dripline or out to area of root severance. It should be noted that tree root zones may extend onto private property and should also be treated there when permitted

1.7 ACTION SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Section 01 3566.42 – Sustainability Compliance Procedures and provide the following in addition to other submittals:

1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional

B. Product Data: For each type of product.

1. Plant Materials: Include quantities, sizes, quality, and sources for plant materials.
2. Plant Photographs: Include digital color photographs of each required species and size of plant material as it will be furnished to Project. Take photographs from an angle depicting true size and condition of the typical plant to be furnished. Include a scale rod or other measuring device in each photograph. For species where more than 20 plants are required, include a minimum of three photographs showing the average plant, the best quality plant, and the worst quality plant to be furnished. Identify each photograph with the full scientific name of the plant, plant size, and name of the growing nursery.

C. Samples for Verification: For each of the following:

1. Organic and Compost Mulch: 1-quart (1-L) volume of each organic mulch required; in sealed plastic bags labeled with composition of materials by percentage of weight and source of mulch. Each Sample shall be typical of the lot of material to be furnished; provide an accurate representation of color, texture, and organic makeup.
2. Weed Control Barrier: 12 by 12 inches (300 by 300 mm).

1.8 INFORMATIONAL SUBMITTALS

A. Qualification Data: For landscape Installer. Include list of similar projects completed by Installer demonstrating Installer's capabilities and experience. Include project names, addresses, and year completed, and include names and addresses of owners' contact persons.

B. Product Certificates: For each type of manufactured product, from manufacturer, and complying with the following:

1. Manufacturer's certified analysis of standard products.
2. Analysis of other materials by a recognized laboratory made according to methods established by the Association of Official Analytical Chemists, where applicable.

C. Pesticides and Herbicides: Product label and manufacturer's application instructions specific to Project.

D. Sample Warranty: For special warranty.

1.9 CLOSEOUT SUBMITTALS

A. Maintenance Data: Recommended procedures to be established by Owner for maintenance of plants during a calendar year. Submit before expiration of required maintenance periods.

1.10 QUALITY ASSURANCE

A. Installer Qualifications: A qualified landscape Installer whose work has resulted in successful establishment of plants.

1. Professional Membership: Installer shall be a member in good standing of either the Professional Landcare Network or the American Nursery and Landscape Association.
2. Experience: Five years' experience in landscape installation in addition to requirements in Division 01 Section "Quality Requirements".
3. Installer's Field Supervision: Require Installer to maintain an experienced full-time supervisor on Project site when work is in progress.
4. Pesticide Applicator: State licensed, commercial.

B. Soil-Testing Laboratory Qualifications: An independent or university laboratory, recognized by the State Department of Agriculture, with the experience and capability to conduct the testing indicated and that specializes in types of tests to be performed.

C. Soil Analysis: For each unamended soil type, furnish soil analysis and a written report by a qualified soil-testing laboratory stating percentages of organic matter; gradation of sand, silt, and clay content; cation exchange capacity; sodium absorption ratio; deleterious material; pH; and mineral and plant-nutrient content of the soil.

1. Testing methods and written recommendations shall comply with USDA's Handbook No. 60.
2. The soil-testing laboratory shall oversee soil sampling; with depth, location, and number of samples to be taken per instructions from Architect. A minimum of three one gallon representative samples shall be taken from varied locations for each soil to be used or amended for planting purposes.
3. Report suitability of tested soil for plant growth.

    a. Based upon the test results, state recommendations for soil treatments and soil amendments to be incorporated. State recommendations in weight per 1000 sq. ft. (92.9 sq. m) or volume per cu. yd. (0.76 cu. m) for nitrogen, phosphorus, and potash nutrients and soil amendments to be added to produce satisfactory planting soil suitable for healthy, viable plants.
    b. Report presence of problem salts, minerals, or heavy metals, including aluminum, arsenic, barium, cadmium, chromium, cobalt, lead, lithium, and vanadium. If such problem materials are present, provide additional recommendations for corrective action.

D. Provide quality, size, genus, species, and variety of plants indicated, complying with applicable requirements in ANSI Z60.1.

E. Measurements: Measure according to ANSI Z60.1. Do not prune to obtain required sizes.

1. Trees and Shrubs: Measure with branches and trunks or canes in their normal position. Take height measurements from or near the top of the root flare for field-grown stock and container grown stock. Measure main body of tree or shrub for height and spread; do not measure branches or roots tip to tip. Take caliper measurements 6 inches (150 mm) above the root flare for trees up to 4-inch (100-mm) caliper size, and 12 inches (300 mm) above the root flare for larger sizes.
2. Other Plants: Measure with stems, petioles, and foliage in their normal position.

F. Plant Material Observation: Landscape Architect shall be given the opportunity to observe plant material either at place of growth or at site before planting for compliance with requirements for genus, species, variety, cultivar, size, and quality. Provide transportation and accompany Landscape Architect to this location. Landscape Architect retains right to observe trees and shrubs further for size and condition of balls and root systems, pests, disease symptoms, injuries, and latent defects and to reject unsatisfactory or defective material at any time during progress of work. Remove rejected trees or shrubs immediately from Project site.

1. Notify Architect of sources of planting materials seven days in advance of delivery to site.

G. Preinstallation Conference: Conduct conference at Project site.

1.11 DELIVERY, STORAGE, AND HANDLING

A. Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and indication of conformance with state and federal laws if applicable.

B. Bulk Materials:

1. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.
2. Provide erosion-control measures to prevent erosion or displacement of bulk materials, discharge of soil-bearing water runoff, and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
3. Accompany each delivery of bulk fertilizers, lime, and soil amendments with appropriate certificates.

C. Deliver bare-root stock plants freshly dug. Immediately after digging up bare-root stock, pack root system in wet straw, hay, or other suitable material to keep root system moist until planting.

D. Do not prune trees and shrubs before delivery. Protect bark, branches, and root systems from sun scald, drying, wind burn, sweating, whipping, and other handling and tying damage. Do not bend or bind-tie trees or shrubs in such a manner as to destroy their natural shape. Provide protective covering of plants during shipping and delivery. Do not drop plants during delivery and handling.

E. Handle planting stock by root ball.

F. Apply antidesiccant to trees and shrubs using power spray to provide an adequate film over trunks (before wrapping), branches, stems, twigs, and foliage to protect during digging, handling, and transportation.

1. If deciduous trees or shrubs are moved in full leaf, spray with antidesiccant at nursery before moving and again two weeks after planting.

G. Wrap trees and shrubs with burlap fabric over trunks, branches, stems, twigs, and foliage to protect from wind and other damage during digging, handling, and transportation.

H. Deliver plants after preparations for planting have been completed, and install immediately. If planting is delayed more than six hours after delivery, set plants and trees in their appropriate aspect (sun, filtered sun, or shade), protect from weather and mechanical damage, and keep roots moist.

1. Set balled stock on ground and cover ball with soil, peat moss, sawdust, or other acceptable material.
2. Do not remove container-grown stock from containers before time of planting.
3. Water root systems of plants stored on-site deeply and thoroughly with a fine-mist spray. Water as often as necessary to maintain root systems in a moist, but not overly-wet condition.

1.12 FIELD CONDITIONS

A. Field Measurements: Verify actual grade elevations, service and utility locations, irrigation system components, and dimensions of plantings and construction contiguous with new plantings by field measurements before proceeding with planting work.

B. Planting Restrictions: Plant during one of the following periods. Coordinate planting periods with maintenance periods to provide required maintenance from date of Substantial Completion.

1. Spring Planting of Deciduous Plants: March 1st to May 15th
2. Spring Planting of Evergreen Plants: March 1st to June 1st.
3. Fall Planting of both Deciduous and Evergreen Plants: October 1st until soil becomes frozen.

Note: These planting dates may be modified based on written agreement by the Landscape Architect in coordination with the Tree Warden.

C. Weather Limitations: Proceed with planting only when existing and forecasted weather conditions permit planting to be performed when beneficial and optimum results may be obtained. Apply products during favorable weather conditions according to manufacturer's written instructions and warranty requirements.

D. Coordination with Turf Areas (Lawns): Plant trees, shrubs, and other plants after finish grades are established and before planting turf areas unless otherwise indicated.

1. When planting trees, shrubs, and other plants after planting turf areas, protect turf areas, and promptly repair damage caused by planting operations.

1.13 WARRANTY

A. Special Warranty: Installer agrees to repair or replace plantings and accessories that fail in materials, workmanship, or growth within specified warranty period.

11 Months after acceptance to begin the Warrantee, the Contractor shall walk the site with the Landscape Architect, the Town Tree Warden, and Town Arborist to determine if there are any plants that require replacement.

1. Failures include, but are not limited to, the following:

    a. Death and unsatisfactory growth, except for defects resulting from abuse, lack of adequate maintenance, or neglect by Owner, or incidents that are beyond Contractor's control.
    b. Structural failures including plantings falling or blowing over.
    c. Faulty performance of edgings.
    d. Deterioration of metals, metal finishes, and other materials beyond normal weathering.

2. Warranty Periods from Date of Substantial Completion:

    a. Trees, Shrubs, Vines, and Ornamental Grasses: 12 months.
    b. Ground Covers, Biennials, Perennials, and Other Plants: 12 months.

3. Include the following remedial actions as a minimum:

    a. Immediately remove dead plants and replace unless required to plant in the succeeding planting season.
    b. Replace plants that are more than 25 percent dead or in an unhealthy condition at end of warranty period.
    c. A limit of one replacement of each plant will be required except for losses or replacements due to failure to comply with requirements.
    d. Provide extended warranty for period equal to original warranty period, for replaced plant material. Note: All planting requirements noted in this specification section including Item 3.11 for maintenance shall apply to replaced plant material.

PART 2 - PRODUCTS

2.1 PLANT MATERIAL

A. General: Furnish nursery-grown plants true to genus, species, variety, cultivar, stem form, shearing, and other features indicated in Plant Schedule or Plant Legend shown on Drawings and complying with ANSI Z60.1; and with healthy root systems developed by transplanting or root pruning. Provide well-shaped, fully branched, healthy, vigorous stock, densely foliated when in

leaf and free of disease, pests, eggs, larvae, and defects such as knots, sun scald, injuries, abrasions, and disfigurement.

1. Trees with damaged, crooked, or multiple leaders; tight vertical branches where bark is squeezed between two branches or between branch and trunk ("included bark"); crossing trunks; cut-off limbs more than 3/4 inch (19 mm) in diameter; or with stem girdling roots will be rejected.
2. Collected Stock: Do not use plants harvested from the wild, from native stands, from an established landscape planting, or not grown in a nursery unless otherwise indicated.

B. Provide plants of sizes, grades, and ball or container sizes complying with ANSI Z60.1 for types and form of plants required. Plants of a larger size may be used if acceptable to Architect, with a proportionate increase in size of roots or balls.

C. Root-Ball Depth: Furnish trees and shrubs with root balls measured from top of root ball, which shall begin at root flare according to ANSI Z60.1. Root flare shall be visible before planting.

D. Labeling: Label at least one plant of each variety, size, and caliper with a securely attached, waterproof tag bearing legible designation of common name and full scientific name, including genus and species. Include nomenclature for hybrid, variety, or cultivar, if applicable for the plant as shown on Drawings.

2.2 PLANTING SOILS

A. Planting Soil: Amend topsoil for planting beds as outlined in topsoil test results as indicated in Division 32 Section "Topsoil and Planting Mix".

2.3 MULCHES

A. Organic Mulch: Free from deleterious materials and suitable as a top dressing of trees and shrubs, consisting of the following:

1. Type: 100 percent shredded bark.
2. Size Range: 3 inches (76 mm) maximum, 1/2 inch (13 mm) minimum.
3. Color: Natural.

B. Compost Mulch: Well-composted, stable, and weed-free organic matter, pH of 5.5 to 8; moisture content 35 to 55 percent by weight; 100 percent passing through a 1-inch (25-mm) sieve; soluble-salt content of 2 to 5 dS/m; not exceeding 0.5 percent inert contaminants and free of substances toxic to plantings; and as follows:

1. Organic Matter Content: 50 to 60 percent of dry weight.
2. Feedstock: Agricultural, food, or industrial residuals; biosolids; yard trimmings; or source-separated or compostable mixed solid waste.

2.4 WEED-CONTROL BARRIERS

A. Provide biodegradable coir weed mats made from the fibrous husks of coconuts.

B. The mats used shall not have a high salt content nor contained any embedded pathogens – Contractor shall provide manufacturer's product date to confirm prior to use on-site.

2.5 PESTICIDES

A. General: Pesticide registered and approved by EPA, acceptable to authorities having jurisdiction, and of type recommended by manufacturer for each specific problem and as required for Project conditions and application. Do not use restricted pesticides unless authorized in writing by authorities having jurisdiction.

Note: All pesticides / herbicides used shall be organic and shall be a product which is allowed for use by the Town of Greenwich / Tree Warden.

B. Pre-Emergent Herbicide (Selective and Non-Selective): Effective for controlling the germination or growth of weeds within planted areas at the soil level directly below the mulch layer.

C. Post-Emergent Herbicide (Selective and Non-Selective): Effective for controlling weed growth that has already germinated.

2.6 MISCELLANEOUS PRODUCTS

A. Antidesiccant: Water-insoluble emulsion, permeable moisture retarder, film forming, for trees and shrubs. Deliver in original, sealed, and fully labeled containers and mix according to manufacturer's written instructions.

B. Mycorrhizal Fungi: Dry, granular inoculant containing at least 5300 spores per lb (0.45 kg) of vesicular-arbuscular mycorrhizal fungi and 95 million spores per lb (0.45 kg) of ectomycorrhizal fungi, 33 percent hydrogel, and a maximum of 5.5 percent inert material.

Note: In all disturbed areas where topsoil is being placed and re-spread from existing topsoil stockpiles, the Contractor shall also inoculate those areas with naturally occurring, existing on-site topsoil to assist in re-establishment of the on-site mycorrhizal fungi. Rate 1 CF per 1,000 SF of soil area. Notify Landscape Architect / Tree Warden prior to spreading. Shall be spread at the same time as the product noted in Item 2.6.B above.

C. Filter Fabric: Nonwoven geotextile manufactured for separation applications and made of polypropylene, polyolefin, or polyester fibers or combination of them.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas to receive plants for compliance with requirements and conditions affecting installation and performance.

1. Verify that no foreign or deleterious material or liquid such as paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, or acid has been deposited in soil within a planting area.
2. Do not mix or place soils and soil amendments in frozen, wet, or muddy conditions.
3. Suspend soil spreading, grading, and tilling operations during periods of excessive soil moisture until the moisture content reaches acceptable levels to attain the required results.
4. Uniformly moisten excessively dry soil that is not workable and which is too dusty.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

C. If contamination by foreign or deleterious material or liquid is present in soil within a planting area, remove the soil and contamination as directed by Architect and replace with new planting soil.

3.1 CARE OF PLANTS PRIOR TO PLANTING

A. When plants are taken from storage to the planting site, roots of plants shall be immersed in water immediately upon opening the bundle and kept in water until planted. The Contractor shall have sufficient tanks and pails to keep roots of plants from opened bundles in water until planted. Rootball and container plants shall be immersed for a minimum of 10 minutes prior to planting. Do not remove containers or wire baskets until plant is at planting pit.

3.2 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities and turf areas and existing plants from damage caused by planting operations.

B. Install erosion-control measures to prevent erosion or displacement of soils and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways.

C. Lay out individual tree and shrub locations and areas for multiple plantings. Stake locations, outline areas, adjust locations when requested, and obtain Landscape Architect's acceptance of layout before excavating or planting. Make minor adjustments as required.

D. Apply antidesiccant to trees and shrubs using power spray to provide an adequate film over trunks (before wrapping), branches, stems, twigs, and foliage to protect during digging, handling, and transportation.

1. If deciduous trees or shrubs are moved in full leaf, spray with antidesiccant at nursery before moving and again two weeks after planting.

3.3 PLANTING AREA ESTABLISHMENT

A. Loosen subgrade of planting areas to a minimum depth of 12 inches (300 mm). Remove stones larger than 1 inch (25 mm) in any dimension and sticks, roots, rubbish, and other extraneous matter and legally dispose of them off Owner's property.

1. Apply approved fertilizer as required by Division 32 Section "Topsoil and Planting Mix" directly to subgrade before loosening.
2. Thoroughly blend planting soil off-site before spreading.

    a. Delay mixing fertilizer with planting soil if planting will not proceed within a few days.
    b. Mix lime with dry soil before mixing fertilizer.

3. Spread planting soil to a minimum depth of 18 inches (450 mm) as indicated on the Drawings, but not less than required to meet finish grades after natural settlement. Do not spread if planting soil or subgrade is frozen, muddy, or excessively wet.

    a. Spread approximately one-half the thickness of planting soil over loosened subgrade. Mix thoroughly into top 4 inches (100 mm) of subgrade. Spread remainder of planting soil.

B. Finish Grading: Grade planting areas to a smooth, uniform surface plane with loose, uniformly fine texture. Roll and rake, remove ridges, and fill depressions to meet finish grades.

C. Before planting, obtain Architect's acceptance of finish grading; restore planting areas if eroded or otherwise disturbed after finish grading.

D. Application of Mycorrhizal Fungi: At time directed by Architect, broadcast dry product uniformly over prepared soil at rate recommended by the manufacturer.

3.4 EXCAVATION FOR TREES AND SHRUBS

A. Planting Pits and Trenches: Excavate circular planting pits with sides sloping inward at a 45-degree angle. Excavations with vertical sides are not acceptable. Trim perimeter of bottom leaving center area of bottom raised slightly to support root ball and assist in drainage away from center. Do not further disturb base. Ensure that root ball will sit on undisturbed base soil to prevent settling. Scarify sides of planting pit smeared or smoothed during excavation.

1. Excavate approximately three times as wide as ball diameter for balled and burlapped or container-grown stock.
2. Excavate at least 12 inches (300 mm) wider than root spread and deep enough to accommodate vertical roots for bare-root stock.
3. Do not excavate deeper than depth of the root ball, measured from the root flare to the bottom of the root ball.
4. If area under the plant was initially dug too deep, add soil to raise it to the correct level and thoroughly tamp the added soil to prevent settling.
5. Maintain required angles of repose of adjacent materials as shown on the Drawings. Do not excavate subgrades of adjacent paving, structures, hardscapes, or other new or existing improvements.

6. Maintain supervision of excavations during working hours.
7. Keep excavations covered or otherwise protected when unattended by Installer's personnel.

B. Backfill Soil: Subsoil and topsoil removed from excavations may not be used as backfill soil unless otherwise indicated.

C. Obstructions: Notify Architect if unexpected rock or obstructions detrimental to trees or shrubs are encountered in excavations.

1. Hardpan Layer: Drill 6-inch- (150-mm-) diameter holes, 24 inches (600 mm) apart, into free-draining strata or to a depth of 10 feet (3 m), whichever is less, and backfill with free-draining material.

D. Drainage: Notify Architect if subsoil conditions evidence unexpected water seepage or retention in tree or shrub planting pits.

E. Fill excavations with water and allow to percolate away before positioning trees and shrubs.

3.5 TREE, SHRUB, AND VINE PLANTING

A. Only plants which have had their roots immersed in water for at least 10 minutes immediately prior to planting shall be installed. The Contractor shall have sufficient tanks and pails for immersing rootball and container plants prior to planting. Containers and wire baskets are to be removed only after plant has been immersed at the planting pit.

B. Before planting, fill excavations with water and allow to percolate away before positioning trees and shrubs.

C. Before planting, verify that root flare is visible at top of root ball according to ANSI Z60.1. If root flare is not visible, remove soil in a level manner from the root ball to where the top-most root emerges from the trunk. After soil removal to expose the root flare, verify that root ball still meets size requirements.

D. Remove stem girdling roots and kinked roots. Remove injured roots by cutting cleanly; do not break.

E. Set balled and burlapped stock plumb and in center of planting pit or trench with root flare 1 inch (25 mm) above adjacent finish grades.

1. Use planting soil conforming to Division 32 Section "Topsoil and Planting Mix" for backfill.
2. After placing some backfill around root ball to stabilize plant, carefully cut and remove burlap, rope, and wire baskets from tops of root balls and from sides, but do not remove from under root balls. Remove pallets, if any, before setting. Do not use planting stock if root ball is cracked or broken before or during planting operation.
3. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.

4. Place planting tablets in each planting pit when pit is approximately one-half filled; in amounts recommended in soil reports from soil-testing laboratory. Place tablets beside the root ball about 1 inch (25 mm) from root tips; do not place tablets in bottom of the hole.
5. Continue backfilling process. Water again after placing and tamping final layer of soil.

F. Set container-grown stock plumb and in center of planting pit or trench with root flare 1 inch (25 mm) above adjacent finish grades.

1. Use planting soil conforming to Division 32 Section "Topsoil and Planting Mix" for backfill.
2. Carefully remove root ball from container without damaging root ball or plant.

3. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
4. Place planting tablets in each planting pit when pit is approximately one-half filled; in amounts recommended in soil reports from soil-testing laboratory. Place tablets beside the root ball about 1 inch (25 mm) from root tips; do not place tablets in bottom of the hole.
5. Continue backfilling process. Water again after placing and tamping final layer of soil.

G. When planting on slopes, set the plant so the root flare on the uphill side is flush with the surrounding soil on the slope; the edge of the root ball on the downhill side will be above the surrounding soil. Apply enough soil to cover the downhill side of the root ball.

3.6 TREE, SHRUB, AND VINE PRUNING

A. Prune, thin, and shape trees, shrubs, and vines according to standard professional horticultural and arboricultural practices. Unless otherwise indicated by Architect, do not cut tree leaders; remove only injured, dying, or dead branches from trees and shrubs; and prune to retain natural character.

B. Do not apply pruning paint to wounds.

3.7 GROUND COVER AND PLANT PLANTING

A. Set out and space ground cover and plants other than trees, shrubs, and vines as indicated in even rows with triangular spacing.

B. Use planting soil conforming to Division 32 Section "Topsoil and Planting Mix" for backfill.

C. Dig holes large enough to allow spreading of roots.

D. For rooted cutting plants supplied in flats, plant each in a manner that will minimally disturb the root system but to a depth not less than two nodes.

E. Work soil around roots to eliminate air pockets and leave a slight saucer indentation around plants to hold water.

F. Water thoroughly after planting, taking care not to cover plant crowns with wet soil.

G. Protect plants from hot sun and wind; remove protection if plants show evidence of recovery from transplanting shock.

3.8 APPLYING COMPOST TO SURFACE OF PLANTING SOIL

A. Application: Apply compost 3 inches (76 mm) of compost to surface of in-place planting soil in planting beds prior to installation of weed control fabric and mulch. Do not apply materials or till if existing soil or subgrade is frozen, muddy, or excessively wet. Rake compost into top 3 inches (76 mm) of planting soil.

3.9 PLANTING AREA MULCHING

A. Prior to installing weed-control barriers, incorporate a 3 to 4 inches depth of composted mulch into the top 6 inches of the planting bed.

B. Install weed-control barriers before mulching according to manufacturer's written instructions. Completely cover area to be mulched, overlapping edges a minimum of 6 inches (150 mm) and secure seams with galvanized pins.

C. Mulch backfilled surfaces of planting areas and other areas indicated.

1. Trees and Tree-like Shrubs in Turf Areas: Apply organic mulch ring of 3-inch (75-mm) average thickness, with radius around trunks or stems as indicated on the Drawings. Do not place mulch within 3 inches (75 mm) of trunks or stems.
2. Organic Mulch in Planting Areas: Apply 3-inch (75-mm) average thickness of organic mulch extending 12 inches (300 mm) beyond edge of individual planting pit or trench and over whole surface of planting area, and finish level with adjacent finish grades. Do not place mulch within 3 inches (75 mm) of trunks or stems.

3.10 BED EDGING

A. Shovel-Cut Edging: Separate mulched areas from turf areas with a 45-degree, 4- to 6-inch- (100- to 150-mm-) deep, shovel-cut edge as shown on Drawings.

3.11 PLANT MAINTENANCE

A. Maintain plantings by pruning, cultivating, watering, weeding, fertilizing, mulching, restoring planting saucers, adjusting and repairing tree-stabilization devices, resetting to proper grades or vertical position, and performing other operations as required to establish healthy, viable plantings. Spray or treat as required to keep trees and shrubs free of insects and disease.

Note: The contractor shall take special care to provide water for new plants throughout the growing season and through the warrantee period to ensure all plants remain robustly viable and that no plants dry out to a degree that would compromise their overall health. If products such as

"Gator Bags" are to be used, the Contractor is to notify the Landscape Architect of the regular monitoring and filling of those reservoirs to ensure that water is present, available, and reaching the plant material as intended.

B. Fill in as necessary soil subsidence that may occur because of settling or other processes. Replace mulch materials damaged or lost in areas of subsidence.

C. Apply treatments as required to keep plant materials, planted areas, and soils free of pests and pathogens or disease. Use integrated past management practices whenever possible to minimize the use of pesticides and reduce hazards. Treatments include physical controls such as hosing off foliage, mechanical controls such as traps, and biological control agents.

3.12 PESTICIDE APPLICATION

A. Apply pesticides and other chemical products and biological control agents in accordance with authorities having jurisdiction and manufacturer's written recommendations. Coordinate applications with Owner's operations and others in proximity to the Work. Notify Owner before each application is performed.

B. Pre-Emergent Herbicides (Selective and Non-Selective): Apply to tree, shrub, and ground-cover areas in accordance with manufacturer's written recommendations. Do not apply to seeded areas.

C. Post-Emergent Herbicides (Selective and Non-Selective): Apply only as necessary to treat already-germinated weeds and in accordance with manufacturer's written recommendations.

3.13 REPAIR AND REPLACEMENT

A. General: Repair or replace existing or new trees and other plants that are damaged by construction operations, in a manner approved by Landscape Architect.

1. Submit details of proposed pruning and repairs.
2. Perform repairs of damaged trunks, branches, and roots within 24 hours, if approved.
3. Replace trees and other plants that cannot be repaired and restored to full-growth status, as determined by Architect.

B. Remove and replace trees that are more than 25 percent dead or in an unhealthy condition before the end of the corrections period or are damaged during construction operations that Landscape Architect determines are incapable of restoring to normal growth pattern.

1. Provide new trees of same size as those being replaced for each tree of 6 inches (150 mm) or smaller in caliper size.
2. Species of Replacement Trees: Same species being replaced.

3.14 RESTORATION OF SETTLED GRADES

A. At the end, twelve months after the date of substantial completion of the soil installation work, inspect the site and restore any areas where the grades have settled beyond the elevations shown on the Drawings.

1. Lawn areas: Remove the sod using mechanical sod cutter from the settled area and add the specified top soil or planting mix. Re sod the area using the sod cut from the lawn. In the event that the sod cannot be reused, install new sod that matches the seed mix on the lawn.
2. Planting Areas: Where the settlement is 3-inches or less, remove the mulch, top dress the area with the specified topsoil or planting mix and re mulch.
3. Planting Areas: Where the settlement is greater than 3-inches remove the mulch and plants, add the specified topsoil or planting mix and re mulch.

3.15 CLEANUP AND PROTECTION

A. During planting, keep adjacent paving and construction clean and work area in an orderly condition. Clean wheels of vehicles before leaving site to avoid tracking soil onto roads, walks, or other paved areas.

B. Remove surplus soil and waste material including excess subsoil, unsuitable soil, trash, and debris and legally dispose of them off Owner's property.

C. After installation and before Substantial Completion, remove nursery tags, nursery stakes, tie tape, labels, wire, burlap, and other debris from plant material, planting areas, and Project site.

3.16 DISPOSAL

A. Remove surplus soil and waste material including excess subsoil, unsuitable soil, trash, and debris and legally dispose of them off Owner's property.

3.17 MAINTENANCE SERVICE

A. Maintenance Service for Trees and Shrubs: Provide maintenance by skilled employees of landscape Installer. Maintain as required in Part 3. Begin maintenance immediately after plants are installed and continue until plantings are acceptably healthy and well established but for not less than maintenance period below.

1. Maintenance Period: 12 months from date of Substantial Completion.

B. Maintenance Service for Ground Cover and Other Plants: Provide maintenance by skilled employees of landscape Installer. Maintain as required in Part 3. Begin maintenance immediately after plants are installed and continue until plantings are acceptably healthy and well established but for not less than maintenance period below.

1. Maintenance Period: Six months from date of Substantial Completion.

END OF SECTION 32 9300

SECTION 330513 - MANHOLES AND CATCH BASINS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the contract, including General and Supplementary Conditions and other Division I Specifications, apply to this section.

1.2 SUMMARY

A. This Section includes the following:

1. Precast concrete manholes.

2. Precast concrete catch basins and yard drains.

3. Cast iron manhole frames and covers.

4. Cast iron catch basin and yard drain frames and grates.

B. Related Sections

1. Section 33 3114 – Testing of Sanitary Sewer and Storm Drainage Systems.

1.3 REFERENCES

A. AASHTO – American Association of State Highway and Transportation Officials, Standard Specifications for Highways and Bridges, most recent edition.

B. ASTM C32 – Standard Specification for Sewer and Manhole Brick (made from clay or shale).

C. ASTM A48 – Standard Specification for Gray Iron Castings.

D. ASTM C150 – Standard Specification for Portland Cement.

E. ASTM C207 – Standard Specification for Hydrated Lime for Masonry Purposes.

F. ASTM C478 – Standard Specification for Precast Reinforced Concrete Manhole Sections.

G. ASTM C443 – Standard Specification for Joints for Circular Concrete Sewer and Culvert Piping Using Rubber Gaskets.

H. ASTM C923 – Standard Specification for Resilient Connectors between Reinforced Concrete Manhole Structures, Pipes and Laterals.

I. ASTM C990 – Standard Specification for Joints for Concrete Pipe, Manholes, and Precast Box Sections Using Preformed Flexible Joint Sealants.

J. State of Connecticut Department of Transportation "Standard Specifications for Roads, Bridges, Facilities and Incidental Construction, Form 818," as amended.

1.4 SUBMITTALS

A. Submit Shop Drawings, showing details of construction, reinforcing, joints, pipe connections to structures, manhole rungs, manhole frames and covers, dampproofing coating, catch basin frames and grates.

B. Submit weights of manhole frames and covers and catch basin frames and grates.

C. Submit design calculations including verification of adequate anti-flotation features and lateral earth pressures. Calculations shall verify that the manhole structure has been designed to withstand the burial depth, submergence due to flooding, flotation, and dead and live loads.

1.5 QUALITY ASSURANCE

A. The quality of materials, the process of manufacture, and the finished sections shall be subject to inspection and approval by the Engineer, or other representative of the Owner. Such inspection may be made at the place of manufacture, or at the Site after delivery, or at both places, and the materials shall be subject to rejection at any time on account of failure to meet any of the Specification requirements, even though samples may have been accepted as satisfactory at the place of manufacture. Material rejected after delivery to the job shall be marked for identification and shall be removed from the job at once. Materials which have been damaged after delivery will be rejected, and if already installed, shall be acceptably repaired, if permitted, or removed and replaced, at no additional cost to the Owner.

B. At the time of inspection, the materials will be carefully examined for compliance with the latest ASTM designation specified and these Specifications, and with the approved manufacturer's drawings. Manhole sections will be inspected for general appearance, dimension, "scratch-strength," blisters, cracks, roughness, and soundness. The surface shall be dense and close-textured.

C. Imperfections in manhole sections may be repaired, subject to the approval of the Engineer, after demonstration by the manufacturer that strong and permanent repairs result. Repairs will be carefully inspected before final approval. Cement mortar used for repairs shall have a minimum compressive strength of 4,000 psi at 7 days and 5,000 psi at 28 days, when tested in 3 inch by 6

inch cylinders stored in the standard manner. Epoxy mortar may be utilized for repairs subject to the approval of the Engineer.

D. Personnel shall have confined space entry training as appropriate for the work to be performed.

E. Manholes and catch basins shall be designed for lateral earth pressures and to resist flotation.

F. Manholes, catch basins, drainage structures, connections, testing, and acceptances shall conform with the Greater New Haven WPCA standards, materials, and requirements.

PART 2 PRODUCTS

2.1 PRECAST CONCRETE MANHOLE AND CATCH BASIN SECTIONS

A. Precast concrete barrel sections and transition top sections, shall conform to ASTM C478 and the following requirements:

1. The wall thickness shall not be less than 5 inches for 48 inch diameter reinforced barrel sections, 6 inches for 60 inch diameter reinforced barrel sections and 7 inches for 72 inch diameter reinforced barrel sections.

2. Top sections shall be eccentric except that flat top sections shall be used where shallow cover requires a top section less than 4 feet as shown on the Drawings.

3. Barrel sections shall have tongue and groove joints.

4. All sections shall be cured by an approved method and shall not be shipped nor subjected to loading until the concrete compressive strength has attained 3,000 psi and not before 5 days after fabrication and/or repair, whichever is longer.

5. Precast concrete barrel sections with precast top slabs and precast concrete transition sections shall be designed for a minimum of AASHTO HS20-44 loading plus the weight of the soil above at 120 pcf.

6. The date of manufacture and the name and trademark of the manufacturer shall be clearly marked on each precast section.

7. Precast concrete bases shall be monolithically constructed. The thickness of the bottom slab of the precast bases shall not be less than the barrel sections or top slab whichever is greater. Precast concrete bases shall be constructed with a 6 inch extended base, unless otherwise shown on the Drawings.

8. Knock out panels for piping shall be provided in precast sections at the locations shown on the Drawings. They shall be integrally cast with the section, 2½ inches thick and shall be sized as shown on the Drawings. There shall be no steel reinforcing in knock out panels.

9. The side wall height of the base section shall be a minimum of 12 inches above the top of the pipe coming into the manholes and catch basins.

10. A 2'-0" deep minimum sump shall be provided below catch basin outlet pipes.

2.2 BRICK MASONRY

A. Bricks shall be good, sound, hard and uniformly burned, regular and uniform in shape and size, of compact texture. Underburned or salmon brick will not be acceptable and only whole brick shall be used unless otherwise permitted. In case bricks are rejected by the Engineer, they shall be immediately removed from the site of the work and satisfactory bricks substituted, at no additional cost to the Owner.

1. Bricks for the channels and shelves shall comply with the latest specifications of ASTM C32 for Sewer Brick, Grade SM.

2. Bricks for building up and leveling manhole frames shall conform to ASTM C32 Grade MS.

3. Poured concrete inverts will not be allowed.

B. Mortar used in the brickwork shall be composed of one part Type II portland cement conforming to ASTM C150 to two parts sand to which a small amount of hydrated lime not to exceed 10 lbs. to each bag of cement shall be added.

C. Sand used shall be washed, cleaned, screened, sharp and well graded as to different sizes and with no grain larger than will pass a No. 4 sieve. Sand shall be free from vegetable matter, loam, organic or other materials of such nature or of such quantity as to render it unsatisfactory.

D. Hydrated lime shall conform to ASTM C207, Type S.

2.3 MANHOLE FRAMES AND COVERS

A. Manhole frames and covers shall be of good quality, strong, tough, even grained cast iron, smooth, free from scale, lumps, blisters, sand holes and defects of any kind. Manhole covers and frame seats shall be machined to a true surface. Castings shall be thoroughly cleaned and subject to hammer inspection. Cast iron shall conform to ASTM A48, Class 30B.

B. Sanitary sewer manhole covers shall meet the requirements of the Town Greenwich Department of Public Works standards, materials, and requirements.

C. Sanitary sewer manhole frames and covers shall comply with the detail shown on the Drawings and the Town of Greenwich Department of Public Works standards, requirements, and materials.

D. On-site storm sewer manholes shall be as specified on the Contract Drawings. Storm sewer manholes located within Town right of way shall conform to Town standards.

E. On-site catch basin frame and grates shall comply as specified on the contract drawings. Catch basins located within Town roadway right of way shall conform to Town standards. Catch basins located within State right of way shall conform to the Connecticut Department of Transportation standards.

2.4 CATCH BASIN FRAMES AND GRATES

A. Catch basin frames and grates shall be of good quality, strong, tough, even grained cast iron, smooth, free from scale, lumps, blisters, sand holes and defects of any kind which render them unfit for the service for which they are intended. Grate and frame seats shall be machined to a true surface. Castings shall be thoroughly cleaned and subject to hammer inspection. Cast iron shall conform to ASTM A48, Class 30B.

B. The catch basin frames and grates shall comply with the details shown on the Drawings.

2.5 JOINTING PRECAST MANHOLE SECTIONS

A. Tongue and groove joints of precast manhole sections shall be sealed with a preformed flexible joint sealant. The preformed flexible joint sealant shall conform to ASTM C990.

2.6 MANHOLE RUNGS

A. Manhole rungs shall be drop front design, 14 inches wide with an abrasive step surface, steel reinforced, copolymer, polypropylene, plastic. Manhole rungs shall conform to OSHA requirements.

2.7 FLEXIBLE PIPE-TO-STRUCTURE CONNECTORS

A. The flexible pipe-to-structure connectors shall be designed to provide a positive seal between the connector and the structure wall and between the connector and the pipe.

B. The flexible boot shall be manufactured of EPDM synthetic rubber in accordance with ASTM C443 and C923 and shall be 3/8 inch thick or greater.

C. The external bands shall be made entirely of 304 series non-magnetic stainless steel.

D. The flexible connectors shall be provided with a wedge-type or toggle-type expander to secure the pipe in the structure opening.

E. The flexible connectors shall meet the following criteria, in accordance with ASTM C923:

1. Shall not leak when subjected to a head pressure of 10 psi for 10 minutes.

2. Shall have the ability to deflect 7 degrees in any direction without leakage under the head pressure conditions described above.

3. Shall not leak when subject to a load of 150 lbs./in. pipe diameter and the head pressure conditions described above.

2.8 DAMPPROOFING

A. Provide two coats of bituminous dampproofing on outer surfaces of precast manholes at the rate of 20-25 square feet per gallon in accordance with manufacturer's instructions.

B. Dampproofing coating shall be a factory-applied asphalt compound specially made to adhere to below grade concrete structures.

C. The dampproofing shall be Sonoshield semi-mastic, as manufactured by BASF; Dehydratine 4 by Euclid Chemical; RIW Marine Liquid by Toch Brothers; or approved equal.

2.9 NON-SHRINK, WATER-PROOF GROUT

A. Non-shrink, water-proof grout shall be Hallemite; Waterplug; Embeco; or approved equal.

PART 3 EXECUTION

3.1 INSTALLATION

A. Installation

1. Construct manholes and catch basins to the dimensions shown on the Drawings and as specified. Protect all work against flooding and flotation.

2. Set precast concrete barrel sections so as to be plumb and with sections in true alignment with a ¼ inch maximum tolerance to be allowed.

3. Install the precast sections in a manner that will result in a watertight joint. Seal the joints of precast concrete barrel sections with the preformed flexible joint sealant used in sufficient quantity to fill 75% of the joint cavity. Fill the outside and inside precast section joints with non-shrink grout and finish flush with the adjoining surfaces. Plug holes in the concrete barrel sections required for handling or other purposes with a non-shrink, water-proof grout or concrete and rubber plugs, and finish flush on the inside.

4. Backfilling shall be done in a careful manner, bringing the fill up evenly on all sides.

5. All precast structures shall be set on a level bed of ¾" crushed stone meeting the requirements of CTDOT Form 818, Article M.01.01 No. 6 stone.

B. Pipe Connections

1. Stubs

a. Connect pipe stubs for future extensions to the structures as shown on the Drawings and close the stub end by a suitable watertight plug.

2. For pipes with smooth exterior surfaces (PVC, ductile iron, HDPE pressure pipe, steel, etc), use flexible pipe-to-structure connectors.

3. Where flexible pipe-to-structure connectors cannot be used, such as pipes with rough, irregular or corrugated exterior surfaces (concrete, corrugated metal, HDPE drainage pipe, etc):

a. After the new pipe has been set in place, completely fill the hole around the new pipe and structure with non-shrink, water-proof grout.

b. Place a 6 inch thick concrete encasement a total of 12 inches in length around the pipe stub adjacent to the exterior wall of the structure. Concrete shall have a 28 day compressive strength of 3,000 psi.

C. Manhole Rung Installation

1. Steel reinforced copolymer polypropylene plastic steps shall be press fitted by hand driven hammer into preformed holes in cured precast sections, on 12 inch centers, by the precast concrete manufacturer.

D. Brickwork

1. Mix mortar only in such quantity as may be required for immediate use and use before the initial set has taken place. Do not retain mortar for more than one and one-half hours and constantly work over with a hoe or shovel until used. Anti-freeze mixtures will not be allowed in the mortar. No masonry shall be laid when the outside temperature is below 40°F unless provisions are made to protect the mortar, bricks, and finished work from frost by heating and enclosing the work with tarpaulins or other suitable material. The Engineer's decision as to the adequacy of protection against freezing shall be final.

2. Construct channels and shelves of brick as shown on the Drawings. The brick channels shall correspond in shape with the lower half of the pipe. The top of the shelf shall be set at the elevation of the crown of the highest pipe and shall be sloped 1 inch per foot to drain toward the flow through channel. Construct brick surfaces exposed to sewage flow with the nominal 2 inch by 8 inch face exposed (i.e., bricks on edge).

3. Set manhole covers and frames and catch basin frames and grates in a full mortar bed and bricks, a maximum of 12 inches thick for conical tops and 6 inches thick for flat top sections,

utilized to assure frame and cover are set to the existing grade. Reset the manhole frames and covers and catch basin frames and grates to final grade prior to placement of final paving.

3.2 LEAKAGE TEST

A. Leak test sewer manholes in conjunction with the pipeline in accordance with Section 33 3114.

3.3 CLEANING

A. Clean all new manholes and catch basins of silt, debris, and foreign matter of any kind, prior to final inspection.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 330514 - BREAKING INTO EXISTING MANHOLES AND CATCH BASINS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the contract, including General and Supplementary Conditions and other Division I Specifications, apply to this section.

1.2 SUMMARY

A. Related Section includes

1. Breaking through the walls and inverts of existing manholes and catch basins.

2. Connecting new pipes to existing structures.

3. Ancillary work associated with making the new connections to the existing structures.

1.3 REFERENCES

A. ASTM C443 – Standard Specification for Joints for Circular Concrete Sewer and Culvert Piping Using Rubber Gaskets.

B. ASTM C923 - Standard Specification for Resilient Connectors Between Reinforced Concrete Manhole Structures, Pipes and Laterals.

1.4 SUBMITTALS

A. Submit shop drawings showing pipe connection details.

1.5 QUALITY ASSURANCE

A. Personnel shall have confined space entry training as appropriate for the work to be performed.

PART 2 PRODUCTS

2.1 MATERIALS

A. Flexible Pipe-to-Structure Connectors

1. The flexible connectors shall be designed to provide a positive seal between the connector and the structure wall and between the connector and the pipe.

2. The flexible boot shall be manufactured of EPDM synthetic rubber in accordance with ASTM C443 and C923 and shall be 3/8 inch thick or greater.

3. The external bands shall be made entirely of 304 series non-magnetic stainless steel.

4. The flexible connectors shall be provided with a wedge-type or toggle-type expander to secure the pipe in the structure opening.

5. The flexible connectors shall meet the following criteria, in accordance with ASTM C923:

   a. Shall not leak when subjected to a head pressure of 10 psi for 10 minutes.

   b. Shall have the ability to deflect 7 degrees in any direction without leakage under the head pressure conditions described above.

   c. Shall not leak when subject to a load of 150 lbs./in. pipe diameter and the head pressure conditions described above.

B. Non-shrink, water-proof grout

1. Non-shrink, water-proof grout shall be Hallemite; Waterplug; Embeco; or approved equal.

PART 3 EXECUTION

3.1 INSTALLATION

A. General

1. Core drill into existing structures in such a fashion as to make an opening of suitable size to accommodate the connecting pipe without excessive damage to the existing structure.

2. Core drilling and manhole connections shall conform to the Town of Greenwich Public Works requirements.

B. Manholes

1. For manholes, break out and rebuild existing inverts as required to provide an adequate base under the new channels being installed, and shaped to provide smooth continuous hydraulic flow through the manhole.

2. Control existing flows as required during the period of construction. No sewage or drainage will be permitted to flow directly against concrete or other masonry work until it is at least 48 hours old.

   a. Temporary handling of sewage or drainage flows may be accomplished by inserting pipes from the inlet to the outlet of the manhole and by using temporary plugs, where appropriate, provided that such pipes do not interfere with satisfactory completion of the work and shaping of the inverts, nor cause excessive backing-up in the existing system upstream of the diversion. In cases where this type of temporary handling of flows is not possible, provide the necessary dams, plugs, etc., as required in upstream manholes, and pump the flow around the structure under construction.

   b. When sewage is pumped or otherwise diverted around a particular structure, it shall be discharged back into the sewage system through existing downstream manholes.

Under no circumstances shall sewage be permitted to run onto the surface of the ground.

C. Catch Basins

1. All catch basin openings, created as a result of the removal and replacement of the existing drains connected to the catch basins with new drainpipes, shall be sealed. This work shall be performed using masonry to match existing construction, where applicable, and non-shrink grout to provide a neat patch.

D. Pipe Connections

1. Rebuild and tightly close existing manhole walls and inverts and catch basin walls to provide an integral, water-tight structure around the new pipes.

2. For pipes with smooth exterior surfaces (PVC, ductile iron, HDPE, steel, etc), use flexible pipe-to-structure connectors.

3. Where flexible pipe-to-structure connectors cannot be used, such as pipes with rough, irregular, or corrugated exterior surfaces (concrete, corrugated metal or HDPE, etc):

   a. After the new pipe has been set in place, completely fill the hole around the new pipe and structure with non-shrink, water-proof grout.

   b. Place a 6-inch-thick concrete encasement a total of 12 inches in length around the pipe stub adjacent to the exterior wall of the structure. Concrete shall have a 28-day compressive strength of 3,000 psi.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 331113 - DUCTILE IRON PIPE AND FITTINGS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes

1. Ductile iron pipe and fittings, direct buried or in below grade vaults
2. Restrained joints and fittings
3. Cast-in-place concrete thrust blocks

B. Related Sections

1. Section 31 2333 – Trenching and Backfilling
2. Section 33 4114 – Underground Warning Tape

1.2 REFERENCES

A. Pipe and fittings shall conform to the latest edition of the following standards unless otherwise specified:

1. ANSI/AWWA C104/A21.4, Cement Mortar Lining for Ductile Iron Pipe and Fittings for Water.
2. ANSI/AWWA C110/A21.10, Ductile Iron and Grey Iron Fittings 3″ through 48″ for Water and Other Liquids.
3. ANSI/AWWA C111/A21.11, Rubber-Gasket Joints for Ductile Iron Pressure Pipe and Fittings.
4. ANSI/AWWA C150/A21.50,Thickness Design of Ductile Iron Pipe.
5. ANSI/AWWA C151/A21.51, Ductile Iron Pipe, Centrifugally Cast, for Water.
6. ANSI/AWWA-C153/A21.53, Ductile Iron Compact Fittings Water Service.
7. ANSI/AWWA C600, Installation of Ductile Iron Water Mains and their Appurtenances.
8. ANSI/AWWA C800, Underground Service Line Valves and Fittings.
9. ANSI/AWWA C651, Disinfecting Water Mains.
10. ASTM A307, Standard Specification for Carbon Steel Bolts and Studs, 60,000 psi Tensile Strength.
11. Ductile Iron Pipe Research Association, “Thrust Restraint Design for Ductile Iron Pipe” (Third Edition).

1.3 SUBMITTALS

A. Administrative Submittals

1. Detailed description of proposed pipe handling and installation methods along with the manufacturer's approval.

2. Construction details and schedule of operation for each connection to existing piping at least 30 days prior to beginning the Work. Approval must be received before commencement of Work on-site.

B. Shop Drawings

1. Manufacturer's scale drawings, cuts or catalogs including descriptive literature and complete characteristics and specifications and code requirements. Submit shop drawings for ductile iron pipe, types of joint, fittings, couplings, filling rings, lining, and coating.

C. Quality Control Submittals

1. Certificates of compliance on pipe materials.

2. Prior to first shipment of pipe, submit certified test reports that the pipe for this Contract was manufactured and tested in accordance with the ASTM and ANSI/AWWA Standards specified herein.

3. Manufacturers of pipe on the project shall have an established, annually audited, and certified, quality control procedure for manufacturing of pipe. Each manufacturer shall be certified by an independent, third-party auditor for compliance with all requirements of the AWWA standards. The manufacturer shall submit a current certificate of compliance for the plant facility where the pipe is to be made. Certificate of compliance shall be submitted for each additional year of pipe manufacturing during the duration of the Project. The manufacturer shall not change the plant manufacturing the pipe during the duration of the Work.

1.4 QUALITY ASSURANCE

A. Ductile iron pipe shall be from a single manufacturer. Fittings shall be from a single manufacturer, not necessarily the pipe manufacturer.

B. Shop Inspection - Materials are subject to inspection and approval at the manufacturing plant by the Engineer.

C. The Engineer will inspect the pipe and fittings after delivery. The pipe shall be subject to rejection at any time on account of failure to meet any of the Specification requirements. Pipe rejected after delivery or at any point during the progress of the Work, shall be marked for identification and shall immediately be removed from the job site and replaced at no additional cost to the Owner.

D. Test pipe under pressure for defects and leakage in accordance with Section 33 1400 – Testing of Water Distribution Systems.

E. All pipe and fittings shall be manufactured in North America.

1.5 PROJECT CONDITIONS

A. Secure permits and pay fees required to carry out the piping work. Comply with laws, ordinances, codes, rules, and regulations of the local and state authorities having jurisdiction over the Work. Where provisions of the Contract Documents are in conflict with the codes, the code shall govern.

The Contract Documents shall govern when in excess of the required or minimum regulations or codes.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. American Cast Iron Pipe Company

B. Griffin Pipe Products

C. U.S. Pipe

D. or approved equal

2.2 PIPE AND FITTINGS - GENERAL

A. Ductile iron pipe shall be designed in accordance with AWWA C150 and shall be manufactured in accordance with AWWA C151. Fittings and other materials referenced in this section shall conform to the latest edition of the references listed in Paragraph 1.2 of this section.

B. Unless otherwise indicated or specified in the Contract Documents, direct buried ductile iron pipe shall be Class 52 with push on joints and shall meet the Aquarion Water Company standards and requirements.

C. Unless otherwise indicated or specified in the Contract Documents, ductile iron flanged pipe for vault or above ground service, or for installation in buried vaults, shall be Class 53 with flanged joints

D. Unless otherwise indicated or specified in the Contract Documents, direct buried fittings shall be ductile iron or gray iron with mechanical joints.

E. Pipe and fittings for water, sewage, or sludge service, except where specified, shall have a bituminous outside coating in accordance with AWWA C110, C151 or C153, as applicable.

F. Obtain from the manufacturer sufficient gauged pipe sections in accordance with AWWA C151 to ensure the availability of each pipe diameter required on the Project.

G. Pipe and fittings shall be cement mortar lined and seal coated on the interior in accordance with AWWA C104. Cement mortar lining shall be twice the standard thickness; tolerance shall be minus 0 inches, plus 1/8 inch.

2.3 PIPE AND FITTING JOINTS

A. Push-on-joints and mechanical joints shall conform to ANSI/AWWA C111/A21.11.

B. Where indicated on the Drawings, provide restrained joints suitable for a 250-psi working pressure and fabricated of heavy section cast iron casting. Gaskets shall meet the material requirements of ANSI/AWWA A21.11/C111 for mechanical joint gaskets.

2.4 FITTINGS

A. Fittings shall be ductile iron.

B. Fittings less than or equal to 12 inches in size shall conform to ANSI/AWWA C110/A21.10 or ANSI/AWWA C153/A21.53 and shall have a 350-psi pressure rating.

C. Fittings greater than 12 inches in size shall conform to ANSI/AWWA C110/A21.10 or ANSI/AWWA C153/A21.53 and shall have the following pressure ratings:

1. Fittings greater than 12 inches and less than or equal to 24 inches - 350 psi

2. Fittings greater than 24 inches - 250 psi

D. Mechanical joint retainer glands shall be installed on all mechanical joints, except where rodding is used. Retainer glands shall be specifically designed to fit standard mechanical joint bells with corrosion resistant, high strength, low-alloy T-head bolts conforming to ANSI/AWWA A21.11/C-111 and ANSI/AWWA A21.53/C-153. Retainer glands shall be manufactured of ductile iron conforming to ASTM A536-80 grade 60-42-10. Wedges shall be of hardened ductile iron and require the same torque in all sizes. These devices shall have a minimum 250 psi pressure rating with a minimum safety factor of 2:1 and shall be EBAA IRON, Inc., series 1100 or approved equal. Glands shall be listed with Underwriters Laboratories and/or approved by Factory Mutual and shall meet the Aquarion Water Company standards and requirements.

E. Cast-in-place concrete thrust blocks are required at all fittings and will be used in conjunction with retainer glands, as specified in Paragraph 3.12 of this section. Thrust blocks, solid concrete blocks with oak wedges, are to be installed at all bends, tees, hydrants or A.O.B.E. against undisturbed earth.

F. Anchoring tees shall have main run ends as indicated on the Drawings or as required for the installation. The branch shall have a plain end with an integral gland and rotating mechanical joint gland to provide a restrained connection with the adjacent valve or fitting.

2.5 COUPLINGS

A. Couplings and transitional couplings for pipe less than or equal to 12 inches in diameter shall consist of a long body cast iron sleeve and shall have gaskets suitable for the pipe being joined. The bolts and nuts shall be corrosion resistant high strength, low alloy steel such as Cor-Ten steel or an approved equal. Couplings shall be Romac style 501, Dresser style 153, Rockwell type 441, or approved equal. Transition couplings for pipe less than or equal to 12 inches in diameter shall be Dresser Style 162, Rockwell Type 441, Smith Blair Omni Style 442, or approved equal.

B. Couplings and transitional couplings for pipe greater than 12 inches in diameter shall consist of a steel sleeve and with gaskets suitable for the pipe being joined. The bolts and nuts shall be corrosion resistant high strength, low alloy steel such as Cor-Ten steel or an approved equal. Couplings shall be Dresser style 38, Smith Blair Style 311, Romac Style 400, or approved equal. Transition couplings for pipe greater than 12 inches in diameter shall be Dresser Style 62, Smith Blair Style 413, Romac Style TC400, or approved equal.

C. Provide couplings with an exterior epoxy coating.

D. Solid sleeves shall have long body type (12 inches min.) and mechanical joints with retainer glands.

2.6 GASKETS, GLANDS, NUTS, AND BOLTS

A. Gaskets, glands, nuts, bolts and accessories shall conform to ANSI/AWWA C111/A21.11 or C153/A21.53, as appropriate.

B. Gaskets shall be of plain tipped rubber, suitable for exposure to the liquid within the pipe.

C. Lubricants must be suitable for the type of fluid to be carried by the pipeline, and shall be NSF approved for water service, where applicable.

D. Glands shall be ductile or cast iron.

E. Bolts shall be high strength, low alloy.

F. Requirements for flanged joints:

1. Gaskets for flanged joints shall be full faced red rubber, 1/8 inches thick. Gaskets shall conform to the dimensions of Table A.1 of ANSI/AWWA C115/A21.15. Ring gaskets shall be utilized for joints 14 inches in diameter and larger.

2. Assemble flanged joints with bolts and nuts, bolt studs with nut on each end, or studs with nuts in tapped flanges. Bolts and nuts shall be of low carbon steel conforming to the chemical and mechanical requirements of ASTM A307, 60,000 psi tensile strength, Grade B. Bolts, nuts and studs shall be cadmium plated.

2.7 TEST CONNECTIONS

A. Install air release, test connections, and blow offs in the piping for pressure testing and disinfection at locations to be determined by the Contractor and approved by the Engineer.

1. Corporation cocks shall be in accordance with ANSI/AWWA C800 and shall be ¾ inch diameter with CC thread on inlet by iron pipe thread flare on outlet as manufactured by Mueller, Ford, McDonald or approved equal.

2. Copper tubing shall be annealed Type K soft tubing and shall conform to the requirements of ASTM B88.

3. Upon completion of testing and disinfection, remove the corporation cock and replace with a brass plug and the copper tubing removed. Field swab the brass plug for disinfection in accordance with AWWA C651.

PART 3 EXECUTION

3.1 GENERAL

A. Deliver, handle, store and install ductile iron pipe in accordance with ANSI/AWWA C600.

3.2 DELIVERY, STORAGE AND HANDLING

A. Delivery of Pipe and Fittings

1. Coordinate delivery of pipe and fittings with installation and unload along the line of work outside the trench near as practicable to the point of final placement, facing in the specified direction and properly wedged secure. Give minimum 24 hour notice to the Engineer prior to pipe deliveries. Notice shall include the method of unloading.

2. Unload and handle pipe and fittings with a crane or backhoe of proper capacity outfitted with a steel cable sling, belt sling or other specially designed attachment to protect the pipe coating.

3. At the end of each work week, no more than the amount of pipe to be installed the following work week shall remain along the construction route. All pipes remaining at the construction route are to be properly wedged to prevent movement and not interfere with traffic or pedestrian movement. All excess pipes are to be stockpiled at an approved staging yard in accordance with AWWA C600.

B. Storage of Materials

1. Store pipe in a manner to keep pipe interior free from dirt and foreign matter. Store pipe on wood blocking, rails or other suitable materials. Pipe shall not be stored on stones.

2. Pipe may be stored on top of each other to the maximum stacking height specified by AWWA C600.

3. Protect materials subject to corrosion in accordance with manufacturer's recommendations.

4. If pipe or project materials are stored at the Contractor’s approved staging yard, the Engineer shall be permitted reasonable access to the staging yard for inspection of the pipe and materials.

5. Pipe ends shall be sealed tight using polyethylene bags and tape immediately after unloading, regardless of the storage time length, in order to keep foreign matter and wind blown debris out.

6. All vales, hydrant and fittings are to be stored off of the ground on wooden pallets.

C. Handling Materials

1. Handle materials in such a manner so as to prevent damage to the concrete or mortar coating or lining.

2. Materials are to be handled using methods approved by the pipe manufacturer.

3. Materials damaged during handling will be rejected and shall be replaced at the Contractor’s expense.

4. Ensure that no foreign materials enter the materials during handling.

3.3 COORDINATION

A. Existing mains may have to be shut down to complete the connections as shown on the Drawings and as specified herein.

1. Existing valves will only be operated by the Owner.

2. Submit requests for shutdown of existing piping to the Engineer at least 5 working days prior to the operations and reschedule operations to prevent conflicts with the Owner's operations.

3. The Owner reserves the right to cancel the shut-down at any time without penalty if system conditions exist in which it would be a matter of public health or safety to do so.

4. The Owner does not guarantee complete shut down of valves. Make necessary provisions to do work under existing conditions.

3.4 DEFECTIVE PIPE

A. Defective pipe or fittings will be rejected for use on this project. Defective pipe is classified as follows:

1. Damage to interior cement-mortar lining

2. Insufficient cement-mortar lining thickness

3. Pipe out of round

4. Damaged pipe barrel area

5. Damaged pipe bells or spigots

6. Missing, misplaced or illegible marking and identification

7. Outside pipe diameter shall not exceed allowable tolerance

B. If defective pipe is discovered after it has been installed, it shall be removed and replace with sound pipe, at no additional cost to the Owner.

3.5 JOB CONDITIONS

A. Environmental Requirements

1. Do not lay pipe when weather conditions are unsuitable, as determined by the Engineer, for pipe laying work.

2. Equipment for pipe laying shall be maintained in good operating order.

3. Job site shall be kept clean of debris and organized.

B. Protection

1. At all times when pipe laying is not in progress, the open ends of pipe shall be closed by a watertight plug. This provision shall apply at all times when pipe laying operations are suspended.

C. Work Affecting Existing Pipelines

1. Work on Existing Pipelines:

a. Prior to any work on existing pipelines, remove soils, rust, and other debris from the exterior wall of the pipe a minimum of 12 inches beyond the work area.

b. Cut pipes as shown or required with machines specifically designed for this work.

c. Install temporary plugs to keep out all mud, dirt, water, and debris.

d. Provide necessary adapters, fittings, pipe, and appurtenances required.

e. Cut or tap existing mains at the mid span of a pipe barrel. In no case shall a pipe be cut or tapped within 24 inches of a pipe joint.

3.6 CLEANING PIPE AND FITTINGS

A. Clean and remove foreign matter from the interior of each pipe and fitting before placing in the trench. Remove pipe and fittings whose interior has been contaminated with oil, gasoline or kerosene and replace at no additional cost to the Owner. Remove pipe and fittings whose interior has been contaminated with any material which is a regulated drinking water contaminate or which damages the cement and replace at no additional cost to the Owner. Should foreign material or contaminants be observed in previously installed pipe, cease work until foreign material or contaminated pipe is decontaminated or removed.

B. Remove all lumps, blisters, and excess coal-tar coating from the bell and spigot ends of each pipe or fitting. The outside of the spigot and the inside of the bell shall be wire-brushed and wiped clean and be dry and free from oil and grease before the pipe or fitting is laid.

C. On all ductile iron pipe or fittings, the bell of the pipe and the spigot of the adjacent pipe or fitting shall be wire-brushed and cleaned of rust and dirt. The bell of the pipe or fitting and the spigot of the adjacent pipe shall then be lubricated with the joint lubricant furnished with the pipe, and used in accordance with the manufacturer's directions.

3.7 ALIGNMENT AND GRADE

A. Lay and maintain the pipe at the required lines and grades as shown on the Drawings. Fittings shall be at the locations indicated on the Drawings and as required to construct the pipeline with joints centered, and spigots properly fitted. No deviation shall be made from the line and grade indicated on the drawings, except with the approval of the Engineer.

B. Joint Openings and Deflection:

1. The maximum allowable joint openings and deflection for push-on joint pipe and restrained joint pipe shall be one-half the manufacturer's maximum allowable opening and deflection.

C. Line or Grade Conflicts with Other Structures

1. Wherever obstructions not shown on the Drawings are encountered during the progress of the Work and interfere to such an extent that an alteration in the Drawing is required, the Engineer will order a deviation from the line and grade at locations where obstructions such as culverts, ducts, wire and/or pipes are encountered. The pipe shall be laid over or under such obstacles with a clearance of 6 inches. The choice of "over" or "under" is shown on the Drawings, but the Engineer reserves the right to make any alterations at the time of construction.

D. Where underground conditions indicate a change of alignment or grade, such change shall be made only with the written consent of the Engineer.

E. Except at locations indicated on the Drawings by the profile, do not establish high points where air can accumulate.

3.8 PIPE INSTALLATION

A. General Requirements

1. Prepare the pipe trench in accordance with Section 312333 Trenching and Backfilling.

2. Keep trenches dewatered while installing pipe until all required pipe joints have been made and the trench has been backfilled above the water table to a point where pipe uplift will not occur when the pipe is empty.

3. Carefully lower pipe and fittings into the trench piece by piece by means of a crane, ropes or other tools or equipment, in such a manner as to prevent damage to pipeline materials and protective coatings and linings. Under no circumstances shall pipeline materials be dropped or dumped into the trench.

4. Carefully inspect pipe and fittings for cleanliness and defects prior to placing them in the trench.

5. Install underground warning tape over the pipe in accordance with Section 334114 Underground Warning Tape.

B. Laying Pipe

1. Install pipe with a minimum of 4.5 feet of cover, unless indicated otherwise on the Drawings or directed by the Regional Water Authority.

2. Prevent foreign material from entering the pipe while it is being placed in the line. During laying operations, no debris, tools, clothing, or other materials shall be placed in the pipe.

3. When laying pipe, the spigot end shall be centered in the bell, the pipe forced home and the joint completely assembled. The pipe shall be adjusted to correct line and grade and secured in place with approved backfill material, properly tamped under and around the pipeline.

4. When laying the pipe, remove and replace fittings that do not allow a sufficient and uniform space for joints at no additional cost to the Owner.

C. Cutting Pipe

1. Furnish pipe in full lengths. Cut ductile iron pipe without damage to the pipe or cement lining. The cutting shall be done to leave a smooth end at right angles to the axis of the pipe.

2. Cut ductile iron pipe either by the use of compression-type chain cutters which exert an even continuous force on the wall of the pipe or by power driven abrasive wheels.

3. On ductile iron pipe using rubber joints, the outside edge of the cut end must be tapered back approximately ¼ inch at an angle of about 30 degrees so as to provide for the proper assembly of this joint.

D. Permissible Deflection at Joints

1. Wherever it is necessary to deflect pipe from a straight line, either in the vertical or horizontal plane, to avoid obstructions or where long-radius curves are permitted, the amount of deflection allowed shall not exceed one-half of the manufacturer's maximum allowable joint deflection and shall be approved by the Engineer.

2. Radius curves indicated on the Drawings or approved during Shop Drawing review shall be made using full lengths of pipe. The use of short lengths of pipe and extra joint in order to make a smaller radius turn will not be allowed without the written approval of the Engineer.

3.9 PUSH-ON JOINTS

A. Push-on joints shall be made in accordance with the manufacturer's instructions. Install gaskets in the pipe bell after lowering the pipe into the trench for installation. Thoroughly clean the bell and spigot of dirt and tar blisters in the trench utilizing a wire brush or bristle brush. Insert rubber gasket in the groove of the bell end of the pipe beginning at the bottom of the bell and working to the top of the bell. Apply lubricant per the manufacturer's recommendations utilizing a paint brush to the pipe gasket and the pipe spigot to be joined. Place a clean rag under the joint to protect the joint from dirt caused by unintentional grounding of the pipe during jointing. Upon completion, remove the rag. Align the plain end of the pipe to be laid and insert in the bell of the pipe to which it is to be joined and push home with a jack or by other means. After joining the pipe use a metal feeler to make certain that the rubber gasket is correctly located.

3.10 MECHANICAL JOINTS

A. Mechanical joints shall be made in accordance with Appendix A of ANSI A21.11/AWWA C111 and the manufacturer's instructions. Thoroughly clean and lubricate the joint surfaces and rubber gasket before assembly. Tighten bolts to the specified torques. Under no conditions shall extension wrenches or an extended handle ratchet wrench be used to secure greater leverage.

3.11 RESTRAINED JOINTS

A. Install restrained joints on all fittings, bends, tees and at a minimum of two pipe lengths either side of a fitting. Make the joint assemblies in accordance with the manufacturer's recommendations.

3.12 CONCRETE THRUST BLOCKS

A. Concrete thrust blocks shall be used in conjunction with retainer glands or other restraining methods at all tees, bends, offsets, hydrants, caps and plugs. Concrete shall be 3,000 psi.

B. Place cast-in-place concrete thrust blocks at all bends (regardless of the angle of deflection or direction), caps, offsets, hydrants, and tees, as well as in locations shown on the Drawings or directed by the Engineer. Cast-in-place thrust blocks shall be formed with wood forms; rough earth forms are not acceptable. Protect pipeline materials and fittings from direct adherence of the concrete thrust block by wrapping in plastic, roofing felt, reinforced manila paper or similar material. The thrust block shall not bear directly on the joint and shall not interfere with future adjustments, tightening, or removal of the joint. Thrust blocks shall bear against undisturbed soil at the side or end of the trench and this undisturbed surface shall be carefully cleaned off so as to be vertical. The thrust blocks shall have a minimum horizontal thickness of 2 feet and shall have the minimum bearing area listed on the Drawings, measured perpendicular to the direction of thrust.

3.13 DISINFECTION

A. Disinfect pipe, fittings, and valves in accordance with Section 33 1300 – Disinfection of Water Distribution Systems, before placing into service.

3.14 TESTING

A. Pipe, fittings, and valves installed under this contract shall be tested in accordance with Section 33 1400 – Testing of Water Distribution Systems, before being placed into service.

3.15 INFORMATION

A. Provide "as-built" survey made by a licensed surveyor registered in the State of Connecticut, paid for by the Site Contractor, showing all actual locations, inverts, grades of structures and piping. Furnish one set to the owner and one set to the Site Engineer. As-builts shall meet the Aquarion Water Company requirements

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 331300 - DISINFECTION OF WATER DISTRIBUTION SYSTEMS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes

1. Procedures for disinfecting new and repaired water distribution systems.

B. Related Sections

1. Section 33 1400 – Testing of Water Distribution Systems.
2. Section 33 1113 – Ductile Iron Pipe and Fittings.

1.2 REFERENCES

A. American Water Works Association, AWWA C651, *AWWA Standard for Disinfecting Water Mains.*

B. American Public Health Association, American Water Works Association and Water Pollution Control Federation, *Standard Methods For the Examination of Water and Wastewater.*

1.3 SUBMITTALS

A. A formal statement in writing to the Engineer that all crews responsible for installation and repairs within the operating distribution system have been properly trained and are aware of prescribed construction practices and disinfection procedures to avoid contamination to the operating distribution system.

B. The name of competent person(s) responsible for the disinfection processes and performing the required bacteriological sampling. The Engineer will approve the disinfection process to be used in advance of any disinfection efforts.

C. Certificate of compliance that the independent commercial laboratory performing the bacteriological sampling analyses is certified with the State Department of Environmental Protection and U.S. Environmental Protection Agency for analyzing public drinking water supplies.

D. Certified results for all bacteriological sampling prior to restoring or placing the distribution system into service.

E. For each section of pipe to be chlorinated, the Contractor shall inform the Engineer in writing of the locations for taps to be installed and utilized for the procedure.

1.4 QUALITY ASSURANCE

A. Qualifications & Certifications

1. The Contractor shall employ trained personnel aware of the need to carefully observe prescribed construction practices and disinfection procedures in order to prevent contamination to the distribution system.

2. The competent person(s) responsible for the disinfection processes and bacteriological sampling shall be familiar with AWWA C651- Standards for Disinfecting Water Mains and experienced with the Continuous Feed Method of disinfection. The Engineer shall approve disinfection procedures in advance.

3. Bacteriological sampling shall be made in full accordance with AWWA C651 and under the supervision of the Engineer.

4. An independent commercial laboratory certified for analyzing public drinking water supplies by the State Department of Environmental Protection and U.S. Environmental Protection Agency shall analyze all bacteriological samples and provide certified results to the Engineer and/or Owner for review prior to restoring or placing the system into service.

5. Contractor shall coordinate all testing, disinfection and acceptance of new water and fire protection services with the Aquarion Water Company.

1.5 PROJECT/SITE CONDITIONS

A. The general procedure for disinfection and analyses is described in Part 3, Execution, of this section. If project conditions warrant the need for special disinfection procedures, obtain prior written approval from the Engineer.

PART 2 PRODUCTS

2.1 MATERIALS

A. The forms of chlorine used in the disinfection operations shall conform to ANSI/AWWA B300. Materials Safety Data Sheets (MSDS) for the disinfectant shall be readily available for reference. The competent person responsible for the disinfection operation shall be fully trained and equipped to handle any emergency that may arise.

PART 3 EXECUTION

3.1 DISINFECTION

A. Before being placed into service, all new water pipelines shall be chlorinated using the Continuous Feed Method specified in AWWA C651 – Section 4.4.3. The Engineer shall approve the procedure in advance.

1. The Contractor will determine the location of the chlorination and sampling points in the field. The Contractor shall install taps for chlorinating, sampling and expulsion of air and shall uncover, backfill, and plug the taps as required.

2. Prior to disinfecting the water main, the main shall be completely filled to remove all air pockets and then flushed to remove particulate. The flushing velocity in the main shall not

be less than 2.5 ft/s unless the Engineer and/or Owner determine that the conditions do not permit the required flow to be discharged to waste.

TABLE 3.1-1
Required Flow to Flush Pipelines (40 psi residual pressure in water main)*

Pipe Diameter (in)	Flow Required to Produce 2.5 ft/s (Approximate) Velocity in Main	Number of 2 ½ inch Hydrant Outlets
4	100 gpm	1
6	200 gpm	1
8	400 gpm	1
10	600 gpm	1
12	900 gpm	2
16	1600 gpm	2

**AWWA C651, AWWA Standard for Disinfecting Water Mains*

3. At a point not more than 10 feet downstream from the beginning of the new main, water entering the new main shall receive a dose of chlorine fed at a constant rate such that the water will not have less than 25 mg/L (PPM) free chlorine throughout the entire section of pipe to be chlorinated.

TABLE 3.1-2
Chlorine Required to Produce 25-mg/L Concentration in 100 Feet of Pipe – By Diameter*

Pipe Diameter (in)	100 % Chlorine (Pounds)	1% Chlorine Solution (Gals.)
4	0.013	0.16
6	0.030	0.36
8	0.054	0.65
10	0.085	1.02

12	0.120	1.44
16	0.217	2.60

**AWWA C651, AWWA Standard for Disinfecting Water Mains*

4. The chlorinated water is to remain in the new pipeline for at least 24-hours. After a contact time of 24-hours there should be a free chlorine concentration of not less than 10 mg/L (PPM). During this period, proper precautions are to be taken to prevent this chlorinated water from flowing back into the existing system.

5. All valves and hydrants within the treated section shall be operated to ensure disinfection of the appurtenances.

B. The Tablet Method consisting of placing calcium hypochlorite granules or tablets in the water main as it is being installed and then filling the main with potable water and allowing it to set for a contact period is not acceptable.

C. The interior of all pipes, fittings and valves used in making a repair or tie-in shall be swabbed or sprayed with a one percent (1%) hypochlorite solution before they are installed.

3.2 FINAL FLUSHING

A. Following the chlorination period, all treated water shall be flushed from the lines at their extremities and replaced with water from the distribution system.

1. Flushing the main is to be accomplished at as high a velocity as possible consistent with the ability of the Contractor to collect the discharge water for proper disposal.

2. All treated water flushed from the lines shall be disposed of by discharging to the nearest sanitary sewer or by other approved means provided in AWWA C651.

3. Flushing shall be done in strict conformance with all applicable local, state and federal regulations. No discharge of chlorinated water to any storm sewer or natural watercourse will be allowed.

3.3 BACTERIOLOGICAL ANALYSES

A. After the 24-hour disinfection period and all chlorine solution has been thoroughly flushed, the bacteriological sampling and analysis of the replacement water may then be performed.

1. Bacteriological sampling shall be made by the Contractor's competent person(s) in full accordance with AWWA C651- Section 5, *Bacteriological Tests* and under the supervision of the Engineer.

2. Analysis shall be performed by an independent commercial laboratory certified by the State Department of Environmental Protection and U.S. Environmental Protection Agency for analyzing public drinking water supplies. All results shall be provided to the Engineer for review.

3. Two consecutive sets of acceptable samples, taken at least 24-Hours apart are required prior to placing the main into service. Failure of any one of the bacteriological test samples shall require rechlorination and retesting by the Contractor.

4. The line shall not be placed in service until the bacteriological requirements of AWWA C651 are met.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 331400 - TESTING OF WATER DISTRIBUTION SYSTEMS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes

1. Testing of pipe, castings, fittings, valves, and accessories.

2. Contractor shall coordinate all water and fire protection services testing with the Aquarion Water Company.

1.2 REFERENCES

A. American Water Works Association, AWWA C600, AWWA Standard for Installation of Ductile-Iron Water Mains and Their Appurtenances.

1.3 SUBMITTALS

A. List of equipment and personnel to be used for the pressure test.

PART 2 PRODUCTS – NOT USED

PART 3 EXECUTION

3.1 TEST PARAMETERS

A. For water mains, the pressure test shall not be conducted until the new main has been flushed clean, disinfected in accordance with Section 33 1300 and the chlorinated water properly disposed of. After acceptable completion of the water system disinfection, the Contractor may commence pressure testing of the new water main.

B. Run pressure test and leakage test simultaneously in accordance with ANSI/AWWA C600.

C. Test pressure shall not be less than 1.25 times the working pressure at the highest point along the test section. Test pressure shall not exceed pipe or thrust-restraint design pressures.

D. The hydrostatic test shall be of at least 2-hour duration or until such time as the Engineer indicates acceptance of the pipeline.

E. Test pressure shall not vary by more than ±5 psi (35 MPa or 0.35 bar) for the duration of the test.

F. On pipelines where the elevation along the route of construction varies substantially, the Engineer reserves the right to valve off and test portions of the line.

G. Do not operate valves in either direction at differential pressure exceeding the rated valve working pressure. Use of a test pressure greater than the rated valve pressure can result in trapped test pressure between the gates of a double-disc gate valve. For tests at these pressures, the test setup should include a provision, independent of the valve, to reduce the line pressure to the rated valve

pressure on completion of the test. The valve can then be opened enough to equalize the trapped pressure with the line pressure, or fully opened if desired.

H. Test pressure shall not exceed the rated pressure of the valves when the pressure boundary of the test section includes closed, resilient-seated gate valves or butterfly valves.

3.2 TIME FOR MAKING TESTS

A. No pipeline is to be placed under pressure or subjected to hydrostatic pressure until at least 5 days have elapsed after the concrete thrust blocks have been installed. If high early strength concrete is used in the concrete thrust blocks, the hydrostatic pressure can be applied to the main after 2 days have elapsed from time of construction of the thrust blocks.

B. The Contractor will be allowed to complete backfilling as hereinbefore specified, prior to undertaking the leakage and pressure tests. Backfilling prior to conducting tests will be at the option of the Contractor with the exception of intersections, driveways, crosswalks and other such locations where holding open the trench may adversely affect the public.

C. Pipelines may be subjected to hydrostatic pressure and inspected for leakage at any convenient time after the trench has been partially backfilled. Partial backfilling shall consist of filling along the center of the pipe length and leaving the joint open for inspection.

3.3 OPERATION OF EXISTING WATER SYSTEM

A. Do not operate any valve or other control device on the existing water system for any purpose. Do not make any tap or cut-in to the existing water system without the approval of the Engineer and unless an authorized representative of the Owner is present.

B. When the Contractor's operations require the adjustment of any hydrant, valves, or other control device on the existing system, the Owner will provide authorized personnel for the purpose of supervising the operation of these control devices. Provide the personnel for the operation of these devices.

3.4 PREPARATION

A. Conduct connections to the existing system under the Engineer’s direction.

B. To allow for proper filling, venting, testing, etc., install any corporation stops and/or special fittings which may be required. All such installation will be subject to the Engineer’s approval.

C. Foreign materials left in pipelines during installation often results in valve or hydrant seat leakage during pressure tests. Thorough flushing is recommended prior to a pressure test by partially opening and closing valves and hydrants several times under expected line pressure, with flow velocities adequate to flush foreign material out of the main, valves and hydrants. Flushing requirements are specified in Specification 33 1300.

3.5 PROCEDURE

A. On completion of the pipeline or any valved section thereof, fill pipeline with water and test. Draw water from the existing water system under the direction of the Engineer and Aquarion Water Company.

B. Before applying the specified test pressure, expel air completely from the pipe, valves, and hydrants. If permanent air vents are not located at all high points, install corporation cocks at such points so that the air can be expelled as the line is filled with water. After all the air has been expelled, close the corporation cocks and apply the test pressure. At the conclusion of the pressure test, either remove and plug or leave in place the corporation cocks at the discretion of the Owner.

C. Slowly fill each valved section of pipe with water and apply the specified test pressure as described in Part 3.1 by means of a pump connected to the pipe in a manner satisfactory to the Engineer. Valves shall not be operated in either the opening or closing direction at differential pressures above the rated pressure. The system shall be stabilized at the test pressure before conducting the leakage test.

3.6 EXAMINATION UNDER PRESSURE

A. Examine exposed pipes, fittings, valves, hydrants, and joints carefully during the test.

B. Repair or replace any cracked or defective pipe, fittings, valves, hydrants, or joints that are discovered following the pressure tests with sound material and repeat the test until it is satisfactory to the Engineer.

3.7 LEAKAGE TEST

A. Leakage is defined as the quantity of water that must be supplied into the newly laid pipe, or any valved section thereof to maintain pressure after the pipe has been filled with water and the air has been expelled. Testing shall include all hydrants and hydrant branches. Leakage shall not be measured by a drop in pressure in a test section over a period of time.

B. No pipe installation will be accepted if the leakage is greater than that determined by the following formula:

$$L = \frac{SD\sqrt{P}}{148{,}000}$$

Where: L = allowable leakage, in gallons per hour

S = length of pipe tested, in feet

D = nominal diameter of the pipe, in inches

P = average test pressure during the leakage test, in pounds per square inch (gauge)

This formula is based on an allowable leakage of 10.5 gpd/mi/in of nominal diameter at a pressure of 150 psi.

C. When testing against closed metal-seated valves, an additional leakage per closed valve of 0.0078 gph/in. of nominal valve size will be allowed.

D. When hydrants are in the test section, the test shall be made against the closed main valve in the hydrant.

E. Acceptance of Installation - acceptance will be determined on the basis of allowable leakage. If any test of laid pipe discloses leakage greater than that specified in this section, locate, and make approved repairs as necessary until the leakage is within the specified allowance at no additional cost to the Owner.

F. Visible leaks are to be repaired, regardless of the amount of leakage.

END OF SECTION

SECTION 333113 - POLYVINYL CHLORIDE (PVC) PIPE AND FITTINGS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the contract, including General and Supplementary Conditions and other Division I Specifications, apply to this section.

1.2 SUMMARY

A. Section Includes

1. PVC Gravity Pipe and Fittings

2. Perforated PVC Drain Pipe

B. Related Sections

1. Section 31 2300 - Excavation, Backfill, Compaction and Dewatering

2. Section 31 2333 – Trenching and Backfilling

3. Section 33 3114 – Testing of Sanitary Sewer and Storm Drainage Systems

1.3 REFERENCES

A. ASTM D2412 - Standard Test Method for External Loading Properties of Plastic Pipe by Parallel-Plate Loading.

B. ASTM D2444 - Standard Test Method for Impact Resistance of Thermoplastic Pipe and Fittings by Means of a Tup (Falling Weight).

C. ASTM D3034 - Specification for Type PSM Polyvinyl Chloride (PVC) Sewer Pipe and Fittings.

D. ASTM D3212 - Specification for Joints for Drain and Sewer Plastic Pipes Using Flexible Elastomeric Seals.

E. ASTM F477 - Specification for Elastomeric Seals (Gaskets) for Joining Plastic Pipe.

1.4 SUBMITTALS

A. Submit specifications and shop drawings for materials and equipment furnished under this Section.

B. Prior to first shipment of pipe, submit certified test reports that the pipe for this Contract was manufactured and tested in accordance with the ASTM Standards specified herein.

1.5 QUALITY ASSURANCE

A. Each type of PVC pipe and fittings shall be from a single manufacturer and shall conform with the Metropolitan District Commission standards, materials, and requirements.

B. Inspection of the pipe will also be made by the Owner after delivery. The pipe shall be subject to rejection at any time on account of failure to meet any of the Specification requirements. Pipe rejected after delivery shall be marked for identification and shall immediately be removed from the job site.

1.6 SPARE PARTS

A. Supply 4 tee handle wrench operators suitable to operate the curb stops installed under this section.

PART 2 PRODUCTS

2.1 MATERIALS

A. Gravity Pipe

1. Polyvinyl chloride (PVC) pipe shall be of the size indicated on the Drawings or as specified and shall conform to the latest revision of ASTM D3034, Type SDR 35 for diameters less than or equal to 15-inch diameter and ASTM F679 for pipe greater than 15-inch diameter. Standard laying lengths shall not exceed 14.0 feet.

2. Joints shall be elastomeric gasket joints and shall provide a watertight seal. Assembly of joints shall be in accordance with ASTM D3212.

3. The minimum "pipe stiffness" (load divided by change in inside diameter in direction of load application) at 5% deflection shall be at least 46 psi for pipe tested in accordance with ASTM D2412.

4. No shattering or splitting shall be evident when 150 ft.-lbs. and 210 ft.-lbs. is impacted on 4 inch and 6-inch diameter pipe, respectively, in accordance with ASTM Method of Test D2444.

5. Pipe lengths and fittings to be used on the project shall be clearly marked on the outside in bold type with the name of the manufacturer, pipe size, pipe material, pipe class, and ASTM designation.

6. Gravity Pipe Lateral Connections.

   a. Gravity pipe lateral connection wyes and tees are to be laid in the run of the main pipeline. The wyes and tees shall be the same material as the main line and shall conform in material, joints, and class with the line into which they are to be laid.

   b. Eighth and sixteenth bends and end plugs are to be of the same material and class or strength designation as the pipe for the house connection.

   c. Unless noted on the Drawings, house service piping shall be 6-inch diameter and shall be of the same material as the main line PVC pipe.

7. Lateral Service Chimneys

   a. Pipe and fittings shall be 6-inch diameter and be of the same material as the main line PVC pipe.

   b. Construct service chimneys with precast concrete sections. Cast-in-place chimneys will not be acceptable.

   c. Concrete chimneys shall be designed so that the weight of the chimney is not transferred onto the main line pipe or tee.

   d. Concrete used for construction of chimneys shall be 5,000 psi at 28 days.

B. Perforated Pipe

1. Perforated polyvinyl chloride pipe shall be Type PS-46 PVC and conform to ASTM F758. Perforated pipe shall be furnished in lengths of not more than 20 feet.

2. Alternately, perforated polyvinyl chloride pipe hall conform to ASTM D3034 in sizes 4 through 15 inch. Perforations shall be two rows of ½ inch diameter holes spread longitudinally, 6 inches (maximum) apart and shall be oriented 120 degrees apart (60 degrees either side of the pipe bottom). A maximum tolerance of ¼-inch on hole spacing and size will be allowed. The top of pipe shall be marked for ease of installation.

PART 3 EXECUTION

3.1 HANDLING PIPE AND FITTINGS

A. Take care in loading, transporting, and unloading to prevent injury to the pipe. Do not drop pipe or fittings. Examine pipe and fittings before installing, and no piece shall be installed that is found to be defective.

B. If any defective pipe is discovered after it has been installed, remove, and replace it with a sound pipe in a satisfactory manner. Thoroughly clean pipe and fittings before installing, keep clean until they are used in the work, and conform to the lines, grades and dimensions required when installed.

C. Pipe ends requiring cutting shall be cut square without damage to the remaining pipe. Bevel cut pipe ends 1/8 inch at approximately 30 degrees to provide proper assembly of the joint. Beveling can be done with a coarse file or portable grinder.

D. Support stored pipe from below at not more than 3-foot intervals to prevent deformation. Do not stack pipe higher than 6 feet. Store pipe and fittings in a manner which will keep them at ambient outdoor temperatures. Provide temporary shading as required to meet this requirement. Simply covering of the pipe and fittings which allows temperature buildup when exposed to direct sunlight will not be permitted.

3.2 INSTALLATION

A. No single piece of pipe shall be laid unless it is generally straight. The centerline of the pipe shall not deviate from a straight line drawn between the centers of the openings at the ends of the pipe by more than 1/16 inch per foot of length. If a piece of pipe fails to meet this required check for straightness, it shall be rejected and removed from the site. Laying instructions of the manufacturer shall be explicitly followed.

B. Install piping and fittings true to alignment and grade. If necessary, each length of pipe shall be cleaned out before installation.

C. Excavation, trenching and back filling procedures shall be in accordance with Section 31 2333.

D. All PVC gravity pipe shall be installed on a bed of 3/4-inch crushed stone borrow meeting the requirements of Section 31 2000 and have a minimum depth of 6 inches. The 3/4-inch crushed stone borrow shall also completely encase the pipe and cover the pipe to a grade 6 inches over the top of the pipe for the entire width of the trench. Bell holes shall be made in the 3/4-inch crushed stone borrow bedding such that the pipe shall be uniformly supported throughout the entire length of the barrel section.

E. All sections of gravity sewer pipe will be low pressure air tested in accordance with Section 33 3114.

F. All PVC force main pipe shall be installed with proper bedding using compacted native materials which provide uniform longitudinal support under the pipe. When an unstable subgrade material is encountered which will provide inadequate pipe support, additional trench depth should be excavated and refilled with suitable material. Initial backfill material should be placed to a

minimum one foot over the top of the pipe. Pipe backfill material should be selected and placed carefully, avoiding stones, frozen lumps, and debris.

G. Deflections in Pipe Alignment.

1. Wherever it is necessary to deflect pipe from a straight line, either in the vertical or horizontal plane, to avoid obstructions or where long-radius curves are permitted, the amount of deflection allowed shall not exceed that required for satisfactory making of the joint and shall be approved by the Engineer.

2. Prior to deflecting the pipeline, the spigot of the pipeline should be marked flush with the bell end to assure that the spigot is not withdrawn excessively as the result of the deflection. After the pipe is deflected, an adequate depth of jointing material must remain on the side where the spigot is away from home and an adequate width of caulking space must remain on the opposite side of the pipe at the face of the bell.

3. The maximum deflection recommended by the manufacturer when using any pipe system must be observed when deflecting a pipeline.

4. In general, all radius curves called for on the Drawings or permitted at the time of construction are to be made using full lengths of pipe. The use of short lengths of pipe and extra joints in order to make a smaller radius turn will not be allowed without the written approval of Engineer.

H. Unsuitable Laying Conditions

1. No pipe shall be laid in water, in an unsuitable trench or during unsuitable weather conditions.

I. “As-Built” Information

1. Provide “as-built” survey made by a licensed surveyor registered in the State of Connecticut, paid for by the Site Contractor, showing all actual locations, inverts, grades of structures and piping. Furnish one set to the owner and one set to the Site Engineer. As-builts shall meet the Town of Greenwich Public Works requirements.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 333114 - TESTING OF STORM DRAINAGE AND SANITARY SEWER SYSTEMS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the contract, including General and Supplementary Conditions and other Division I Specifications, apply to this section.

1.2 SUMMARY

A. Section Includes

1. Testing of Storm Drainage Systems

2. Testing of Gravity Sanitary Sewer Systems

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.1 TESTING OF STORM DRAINAGE SYSTEMS

A. Storm drainage pipes shall be sighted to ensure that pipes are straight between structures, correctly sloped, clean of debris and sediment and generally free flowing. Alignment shall meet the requirements of Paragraph 3.2.G.

B. Storm drainage structures shall be sighted to ensure that all structures are clean of debris and sediment, have frames, covers, grates, inverts, sumps, and other specified appurtenances installed.

C. All PVC or HDPE drainage pipe shall be tested for deflection in accordance with Paragraph 3.2.E after forty-five (45) days from completion of backfill operations.

D. Conform with the Town of Greenwich Sewer Division standards, materials, and requirements.

3.2 TESTING OF GRAVITY SANITARY SEWER SYSTEMS

A. All gravity sewers shall be tested for allowable leakage by low pressure air test or by an infiltration/exfiltration water test as described herein.

B. Low Pressure Air Test

1. After completing backfill of a section of pipe including laterals, conduct a line acceptance test using low-pressure air. The test shall be performed according to the specified procedures and under the supervision of the Engineer. Follow the testing procedures outlined below.

2. Seal test pneumatic plugs before use in the actual test installation. Lay one length of pipe on the ground and seal at both ends with the pneumatic plugs to be checked. Introduce air into the plugs to 25 psig. Pressurize the sealed pipe to 5 psig. The plugs shall hold against this pressure without bracing and without movement of the plugs out of the pipe.

3. After a manhole reach of pipe has been backfilled and cleaned, and the pneumatic plugs have been checked, place the plugs in the line at each manhole and inflate to 25 psig. Introduce low pressure air into this sealed line until the internal air pressure reaches 4 psig greater than the average back pressure of any groundwater that may be over the pipe. Allow a minimum of two minutes for the air pressure to stabilize. After the stabilization period (3.5 psig minimum pressure in the pipe), disconnect the air hose from the control panel to the air supply. The portion of the line being tested has passed the test if the time required in minutes for the pressure to decrease from 3.5 to 2.5 psig (greater than the average back pressure of any groundwater that may be over the pipe) is not be less than the time shown for the given diameters and lengths in Table 1 at the end of this section.

4. Air tests shall cover a 1.0 psig pressure drop; 0.5 psig pressure drop tests are not acceptable.

5. In areas where groundwater is known to exist, install a one-half inch diameter capped pipe nipple, approximately 10 inches long, through the manhole wall on top of one of the sewer lines entering the manhole. The nipple shall be installed at the time the sewer line is installed. Immediately prior to the line acceptance test, determine the elevation of the groundwater by removing the pipe cap, blowing air through the pipe nipple to remove any obstructions, and then connecting clear plastic tube to the nipple. Hold the hose vertically and measure the height after the water has stopped rising in this plastic tube. Divide the height in feet by 2.3 to establish the pressure in pounds per square inch (psig) that will be added to all readings. (For example, if the height of water is 11-1/2 feet, then the added pressure will be 5 psig. This increases the 3.5 psig to 8.5 psig, and the 2.5 psig to 7.5 psig. The allowable drop of one pound per square inch and the timing remain the same.)

6. The maximum starting test pressure should not exceed 9 psig, regardless of groundwater level above the pipe. If the groundwater level is such that the added pressure would be greater than 5.5 psig (12.7 feet), the pipe section may be tested using a starting pressure of 9 psig.

7. Each pipe nipple installed to measure groundwater levels should be recapped subsequent to the air testing procedure to prevent future infiltration.

8. As an alternative to installing a pipe nipple in a manhole to measure the height of groundwater, excavate a test pit over the pipe to determine the height of groundwater.

C. Vacuum Test for Manholes - Gravity Sewer Line.

1. After a manhole has been constructed, conduct a manhole acceptance test using the following vacuum test procedure:

a. Plug all lift holes with an approved non-shrink grout.

b. Plug all pipes entering the manhole, taking care to securely brace the plug from being drawn into the manhole.

c. Place the test head at the inside of the top of the precast concrete cone section and inflate the seal in accordance with the manufacturers' recommendations.

d. Draw a vacuum of 10 inches of mercury and shut off the vacuum pump. With the valves closed, measure the time for the vacuum to drop to 9 inches. The manhole shall pass if the time is greater than:

1 min. 0 sec. for 0-ft. to 10-ft. deep manholes

1 min. 15 sec. for 10-ft. to 15-ft. deep manholes

1 min. 30 sec. for 15-ft. to 25-ft. deep manholes

e. If the manhole fails the initial test, make repairs with a non-shrink grout. Retest until a satisfactory test is obtained.

D. Infiltration/Exfiltration Test

1. All gravity type sewers shall be subjected to either an infiltration or an exfiltration test unless otherwise specified. The type of test required will be contingent upon groundwater conditions in the area where lines are to be tested. These tests shall include losses or gains through manholes as well as through pipe walls and joints, as well as through house connection fittings and pipe. No building shall be connected to a newly installed sewer until the sewer has been satisfactorily tested.

2. Where lines are installed in areas having a high groundwater level, conduct an infiltration test of a minimum four-hour duration under the supervision of the Engineer. Isolate various sections of the sewer using of watertight plugs and measure the quantity of water entering the pipe during a predetermined time. If the conditions are such that groundwater table

varies depending on surrounding influence and time of the year or if the table elevation is unknown at the time of testing, excavate test holes as directed by the Engineer.

3. Where lines are installed in relatively dry areas, conduct an exfiltration test. Conduct this test by isolating various sections of the line using watertight plugs and filling the line with water to a predetermined level. Determine the loss of water in a predetermined time by measuring the quantity of water required to refill the line to the original level.

4. The Engineer will determine the length of line to be tested at one time, depending on the grade of the sewer.

5. Include losses through manholes in determining the loss in a line. For exfiltration test, fill manholes to the bottom of the cone or flat top section and allow to stabilize before beginning test. Refilling to reference line may be required before commencing test.

6. The maximum acceptable loss, through either infiltration or exfiltration, shall not exceed 100 gallons per mile per 24 hours per inch of diameter of the pipe tested. When two or more pipeline sections are tested at the same time, the allowable leakage for the shortest section shall be used as the acceptable loss for the entire length being tested.

E. Allowable Deflection Test for PVC or HDPE Pipe (Sewer or Drain Pipe) - Unless otherwise specified, all gravity and drain PVC or HDPE pipe shall be tested for allowable deflection in accordance with the procedure noted below.

1. Pipe deflection measured not less than 45 days after the backfill has been completed as specified shall not exceed 5 percent. Deflection shall be computed by multiplying the amount of deflection (average outside diameter less twice the average wall thickness diameter when measured) by 100 and dividing by the nominal diameter of the pipe.

2. Deflection shall be measured with a rigid mandrel (Go-No-Go) device cylindrical in shape and constructed with a minimum of nine or ten evenly spaced arms or prongs. Submit drawings of the mandrel with complete dimensions for each diameter of pipe to be tested. Hand pull the mandrel through all sewer and drain lines.

3. Uncover any section of pipe not passing the mandrel and replace the bedding and backfill to prevent excessive deflection. Retest repaired pipe immediately upon backfilling of trench until acceptable.

4. Retest the repaired section of pipeline from manhole to manhole again after the 45 day backfill period until acceptable.

F. Test Failures

1. In case leakage or deflection exceeds the above specified amount, locate the failure and repair them at no additional cost to the Owner.

2. Pipelines with shear-type breaks, fishmouths or damaged gaskets, cracked bells or couplings, hairline fractures, or structural damage shall be replaced in kind. Mechanical sleeve couplings, poured concrete collars or similar repairs are not permitted. The use of pressure grouting repair techniques will not be allowed without the written consent of the Engineer.

3. After repairs have been made, re-test the line and repeat the process of repairing and re-testing until results within the above specified limits are obtained.

G. Alignment of Gravity Sewers and Drains

1. Lay gravity sewers and drains accurately to line and grade.

2. After the pipe is laid and backfill complete, visually inspect the interior of the pipe from manhole to manhole. If it is not possible to sight from manhole to manhole through the pipe, the alignment is considered unacceptable.

3. If the alignment is unacceptable due to horizontal displacement, the Contractor will be allowed to construct intermediate manholes at his own expense. If the alignment is unacceptable due to vertical displacement, remove and replace the pipe to the proper grade.

3.3 PAYMENT FOR TESTS

1. No separate payment will be made for preparing or carrying out tests of pipelines or structures. Furnish all materials, equipment, gauges, pumps, specials, temporary tappings in line, and water or other things required for making the tests. Test all manholes and pipe installed as part of the Work.

TABLE I

SPECIFICATION TIME REQUIRED FOR A 1.0 PSIG PRESSURE DROP

FOR SIZE AND LENGTH OF PIPE INDICATED FOR Q=0.0015

1	2	3	4	Specification Time for Length (L) Shown (min:sec)

END OF SECTION

SECTION 334100 - STORM DRAINAGE

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the contract, including General and Supplementary Conditions and other Division I Specifications, apply to this section.

1.2 SUMMARY

A. General: Provide storm drainage systems in accordance with the Contract Documents.

B. Related Sections include the following:

1. Section 31 2500 – Soil Erosion and Sediment Controls
2. Section 31 2300 - Excavation, Backfill, Compaction and Dewatering
3. Section 31 2333 – Trenching and Backfilling
4. Section 33 0514 – Breaking into Existing Manholes and Catch Basins
5. Section 33 4419 – Stormwater Treatment System

1.3 COORDINATION

A. Coordinate and schedule the work of this Section with all trades involved to prevent interference, and in order to allow adequate time at the proper stage of construction to properly perform all work of this Section.

1.4 REQUIREMENTS AND RESTRICTIONS

A. Requirements given herein may be affected by other related requirements of the project specifications. Correlation of all contract requirements is the responsibility of the Contractor.

B. Connect to storm drain lines at a point five (5) feet outside the building lines. All drain lines within a point five (5) feet outside the building lines are specified in the Plumbing Division.

C. Work to comply with all applicable codes and regulations. Furnish all bonds necessary to get a permit for cuts and connections to sewer.

D. The term "Local Standards" as used herein, means the standards of design and construction of the Town of Greenwich, or State of Connecticut, whichever is applicable.

E. Maintain in operating condition all active utilities, sewers, gutters, and other drains encountered in the utility installation. Repair to the satisfaction of the Owner any surface or subsurface improvements damaged during the course of the Work (unless such improvement is shown to be abandoned or removed), whether or not such improvement is shown on the Drawings.

1.5 APPLICABLE STANDARDS

A. Town of Greenwich applicable standards for roadway standards.

B. Standard Specifications for Roads, Bridges and Incidental Construction Form 818 as issued by the State of Connecticut Department of Transportation, 2020 edition with all latest amendments thereto.

C. The Town of Greenwich Public Works standards, materials, and requirements.

1.6 SUBMITTALS

A. Structure details for manholes, catch basins, trench drains, oil interceptors, vortex swirl separators, rims, frames, grates, etc.

B. Certification of Specification Compliance for drainage structures including catch basins and manholes.

C. All piping certifications, casting data and the like as may be required by the Owner.

D. Product data for geotextile fabric for riprap aprons, if substitution is requested.

E. Product data for erosion control blanket, if substitution is requested.

PART 2 PRODUCTS

2.1 MATERIALS

A. Pipe:

1. Polyvinyl Chloride (PVC) Pipe: Pipe and fittings to conform to ASTM D 3034 "Type PSM Polyvinyl Chloride (PVC) Sewer pipe and fittings, Class SDR-35." The minimum modulus of elasticity shall be 400,000 psi.

2. Corrugated Exterior / Smooth Interior HDPE Pipe and Fittings: Pipe and fittings to conform to ASTM D3350 minimum cell classification 324420C (4”-10”) or 325420C (12”-60”). The polyethylene pipe and fittings shall comply with AASHTO M294, Type S (smooth wall interior)

B. Structures and Miscellaneous:

1. Concrete – Class "A" Concrete conforming to ConnDOT Form 818, Article M.03.01, 3,000 p.s.i. to comply with requirements and workmanship set forth in the referenced standards.

2. Ensure precast structures are yard manufactured of 5,000 p.s.i. material and are in accordance with standard details as shown on the drawings - ASTM C-478 and in compliance with Section M.08.02.4 of the reference standard.

3. Concrete block for drainage structures shall conform to the requirements of ASTM C 55, Grade S II.

4. Masonry concrete units for drainage structures shall conform to the requirements of ASTM C139.

5. Brick for adjustment – AASHTO M 91, Grade SM, except that the depth shall be 2-1/4 inches, the width 3-5/8 inches and the length 8 inches, and except that the maximum water-absorption by 5-hour boiling shall not exceed 15% for an average of five bricks, or 18% for an individual brick.

6. Ensure frames and covers or gratings are provided where indicated on the drawings of cast iron conforming to ASTM A-48, Class 30 and are similar and equal to Campbell Foundry Company as required by drawing details. Machine casting frame and grating seats to prevent rocking. Unit assemblies to comply with Section M.08.02-5 of the reference standard.

7. Catch basin bell traps are to be constructed of cast iron for pipe sizes up to 24 inches, and galvanized fabricated steel for pipe sizes 24 inches and over. Hanger plates to be constructed of same metal.

8. Aluminum Steps for Manholes: Aluminum conforming to AASHTO M199 (ASTM C478), with ends in concrete walls coated with zinc chromate paint conforming to Federal Specification TT-P645.

C. Backfill and Bedding Material:

1. The backfill envelope of select material, consisting of crushed stone and sand, for storm drain piping shall meet the following gradation:

   a. 100% passing 1/4-inch sieve; not more than 35% passing the No. 50 sieve; not more than 10% passing the No. 100 sieve.

   b. All percentages are by weight and shall be determined in accordance with ASTM D422.

2. Bedding Material shall be as follows:

   a. For structures, crushed stone conforming to ConnDOT Form 818, Article M.02.06-1.

D. Riprap Aprons:

1. Riprap for riprap aprons shall be sound, tough, durable and angular rock, free from decomposed stones or other defects impairing its durability and shall conform to the gradation of Modified Riprap as specified in ConnDOT Form 818, Article M.12.02-3.

2. Granular fill beneath riprap aprons shall conform to ConnDOT Form 818, Article M.02.01-2.

3. Geotextile for riprap aprons shall be Mirafi 140N, or approved equal.

E. Drainage Swales:

1. Erosion Control Blanket for turf establishment in swales shall be North American Green S75, or approved equivalent.

2. Seeding for grass swales in wetland areas shall be "New England Wetmix", by New England Wetland Plants, Amherst, Massachusetts, or approved equal.

F. Biofiltration Swales:

1. Seeding for biofiltration swale slopes and bottoms shall be "New England Control/Restoration Mix", by New England Wetland Plants, Amherst, Massachusetts, or approved equal.

2. Permeable soil shall be a mixture of 60% sand conforming to ConnDOT Form 818, Article M.08.01-21, 20% Topsoil conforming to Section 02900, and 20% Leaf Compost.

3. Crushed Stone: ConnDOT Grading No. 6, conforming to ConnDOT Form 818, Article M.02.01-1.

4. Separation Geotextile: Mirafi 140N or approved equal.

F. Balance of materials shall be as indicated on the Drawings and/or specified elsewhere in this Section.

PART 3 EXECUTION

3.1 INSPECTION

A. Provide adequate survey controls to construct the utility lines and structures as shown on the Drawings. Deviations from the plans will be permitted only with the approval of the Owner. Provide an "as-built" record made by a licensed surveyor registered in the State of Connecticut, and paid for by the Site Contractor, showing all actual locations, inverts, grades, etc. Furnish one set furnished to the Owner and one set to the Site Engineer.

B. Examine the areas and conditions under which the site storm drainage system is to be installed. Notify the Owner and Site Contractor in writing of conditions detrimental to the proper and timely completion of the Work. Do not proceed with the Work until unsatisfactory conditions have been corrected in an acceptable manner.

C. Dig test pits at the locations shown on the Drawings or ordered by the Owner before installation of storm drainage systems. Notify Engineer 48 hours before start of test pits. Test pit excavations shall have neat, clean cut and vertical sides. Provide Engineer with survey of utilities within the hole showing horizontal and vertical location of top and bottom of all pipes, ducts and structures and a description of size and type of material. Backfill, compaction and surfacing to be in accordance with Section 31 2333 – Trenching and Backfilling.

3.2 TRAFFIC CONTROL

A. Maintain access for vehicular and pedestrian traffic as required for other construction activities and for public when working in road rights-of-way.

B. Provide flagmen, barricades, warning signs and warning lights as required. Obtain required opening permits before start of Work.

3.3 INSTALLATION

A. Lay out all drainage systems, starting from the downstream end, true to line and grade to provide positive pitch, and place "in-the-dry".

B. Length of piping shown is approximate. Provide all piping required to complete system.

C. Lay pipe true to the lines and grades shown on the Drawings or ordered by the Engineer.

D. Before laying pipe, wipe the insides of sockets and outside of spigots clean of all dirt, grease, sand or water.

E. The pipe should not be dropped from the delivery truck into an open trench or onto uneven surface, it should not be dragged or struck against another pipe or object, the pipe should not be dragged across the ground.

F. Where soft foundation is encountered in the progress of the Work, Site Contractor to remove such soft foundations as unsuitable material and material as described in the excavation of unsuitable material or as ordered by the Owner's Geotechnical Consultant. Place crushed stone not less than six inches in depth in wet trenches as bedding to support pipe and

structures, on the order of the Owner's Geotechnical Consultant. Ensure stone is of a quality acceptable to the Owner's Geotechnical Consultant and not larger than will pass through a one (1) inch ring.

G. Conduct backfilling so that no stone having a dimension larger than five (5) inches shall be placed within six (6) inches of completed sewer line and none larger than nine (9) inches in diameter shall be placed less than fifteen (15) inches above the pipe.

H. Install gaskets in accordance with manufacturer's recommendations for use of lubricants, cements, and other special installation requirements.

I. At the point where the proposed sewer construction meets a live or exiting sewer, the new sewer shall be securely plugged with brick and mortar until the entire new sewer construction is completed and ready for final inspection. No deviations from this provision will be allowed.

J. Plastic Pipe: Install plastic piping in accordance with pipe manufacturer's instructions. Use joint adhesives as recommended by manufacturer to suit basic pipe materials. Where standards herein conflict, the more stringent shall apply.

3.4 CLEANING CONDUIT

A. Clean interior of conduit of dirt and other superfluous material as Work progresses. Maintain swab or drag in line and pull past each joint as it is completed.

B. In large, accessible conduit, brushes and brooms may be used for cleaning.

C. Place plugs in ends of uncompleted conduit at end of day or whenever Work stops.

D. Flush lines between manholes if required to remove collected debris.

3.5 JOINT ADAPTERS

A. Make joints between cast iron pipe and other types of pipe with standard manufactured cast iron adapters and fitting.

3.6 ROOF DRAIN CONNECTIONS

A. Connect roof drains to storm drainage system with standard adapters. Grout joints between PVC pipe, cast iron pipe and concrete pipes thoroughly with cement mortar to make watertight joints.

3.7 CLOSING ABANDONED UTILITIES

A. Close open ends of abandoned underground utilities in accordance with Drawings. Provide sufficiently strong closures to withstand hydrostatic or earth pressure that may result after ends of abandoned utilities have been closed.

3.8 INTERIOR INSPECTION

A. Inspect conduit to determine whether line displacement or other damage has occurred.

B. Perform inspections after lines between manholes or catch basin locations have been installed and approximately two feet of backfill is in place and at completion of Project.

C. If inspection indicates poor alignment, debris displaced pipe, infiltration, or other defects, correct such defects to the satisfaction of the Engineer. Debris to be disposed off-site at Construction Manager's expense.

3.9 DRAINAGE STRUCTURES (REFER TO DETAILS)

A. Inspect conduit to determine whether line displacement or other damage has occurred.

B. Set brick and/or block in mortar with joints full and fill all joints.

C. In manholes form invert channel of concrete, fill, smooth and accurately shape to conform to outside of adjoining pipe. Change direction of channel with true curve of as large as radius as possible.

D. Where structures are constructed of solid concrete catch basin block, set block in cement mortar and fill all cross joints.

E. Set frames and grates to proper elevations and in bed of mortar.

3.10 EXISTING UTILITIES

A. Utility locations shown are approximate. Contractor shall determine exact locations before submitting bid.

B. When encountered in Work or as indicated, protect existing active sewer, water, gas, electric, other utility services, structures; where required for proper execution of Work, relocate them as directed by the Utility Company responsible for the service. If existing active services are not indicated but are encountered, requiring protection or relocation, determine with utility company providing said service the appropriate action required to provide protection or method of relocation; advise Owner of all changes and manner of same.

SECTION 334113 - HIGH DENSITY POLYETHYLENE PIPE AND FITTINGS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the contract, including General and Supplementary Conditions and other Division I Specifications, apply to this section.

1.2 SUMMARY

A. Section Includes

1. High density polyethylene (HDPE) pipe for:

a. On-site storm drainage lines.

2. Types of HDPE piping specified in this section include:

a. Corrugated exterior, smooth interior, solid wall HDPE pipe.

b. Corrugated exterior, smooth interior, perforated HDPE pipe

B. Related Sections

1. Section 31 2300 – Excavation, Backfill, Compaction and Dewatering

2. Section 31 2333 – Trenching and Backfilling

3. Section 33 3114 – Testing of Sanitary Sewer and Storm Drainage Systems

1.3 REFERENCES

A. AASHTO M252 –Corrugated Polyethylene Drainage Pipe

B. ASSHTO M294 – Corrugated Polyethylene Pipe, 300- to 1200-mm Diameter

C. AASHTO MP7 – Corrugated Polyethylene Pipe, 1300- to 1500-mm Diameter

O. ASTM F667 – Standard Specification for Large Diameter Corrugated Polyethylene Pipe and Fittings

P. ASTM F1417 – Standard Test Method for Installation Acceptance of Plastic Gravity Sewer Lines Using Low-Pressure Air

1.4 SUBMITTALS

A. Submit product data on the pipe, fittings, and accessories.

B. Prior to first shipment of pipe, submit certified test reports that the pipe for this Contract was manufactured and tested in accordance with the appropriate ASTM standards specified herein.

C. All on-site storm sewers shall conform to Advance Drainage Systems ADS N12 WT IB pipe or approved equal.

1.5 DELIVERY, STORAGE AND HANDLING

A. When lifting with slings, only wide fabric choker slings capable of safely carrying the load shall be used. Wire rope or chain shall not be used to handle pipe.

PART 2 PRODUCTS

2.1 MANUFACTURER – GENERAL

A. The manufacturer shall have manufacturing and quality assurance facilities capable of producing and assuring the quality of the pipe and fittings required by these specifications.

B. Pipe and fittings from different manufacturers shall not be interchanged for the same type of pipe and application.

2.2 PIPE IDENTIFICATION

A. The following shall be continuously indent printed on the pipe or spaced at intervals not exceeding five-feet:

1. Name and/or trademark of the pipe manufacturer.

2. Nominal pipe size.

3. Dimension ratio.

4. The letters “PE” followed by the polyethylene grade in accordance with the ASTM designation, followed by the hydrostatic design basis in PSI.

5. A production code from which the date and place of manufacture can be determined.

2.3 CORRUGATED EXTERIOR / SMOOTH INTERIOR HDPE PIPE AND FITTINGS

A. General

1. The polyethylene pipe and fittings shall comply with AASHTO M294, Type S (smooth wall interior).

2. Piping shall be manufactured by Advanced Drainage Systems, Inc., or approved equal.

3. Pipe material and fittings shall be high density polyethylene meeting ASTM D3350 minimum cell classification 324420C (4”-10”) or 325420C (12”-60”).

4. Installation shall be in accordance with ASTM D2321.

5. Pipe shall be joined with the bell-and-spigot joint. Gaskets and joint lubricant shall be utilized. On-site storm sewer pipe shall be ADS N12 WT IB type pipe or approved equal.

6. Minimum parallel plate pipe stiffness shall be as recommended for each specified diameter pipe per ASTM Test Method D2412.

7. The pipe and fittings shall be free of foreign inclusions and visible defects. The ends of the pipe shall be cut squarely and cleanly so as not to adversely effect joining.

8. The nominal size of the pipe and fittings is based on the nominal inside diameter of the pipe. Corrugated fittings may be either molded or fabricated by the manufacturer. Fittings and gaskets supplied by manufacturers other than the supplier of the pipe shall not be permitted without the approval of the Engineer.

2.4 JOINTS FOR CORRUGATED PIPING

A. General

1. Joints of corrugated pipe sections and fittings other than smooth interior, shall be made with split couplings, corrugated to engage the pipe corrugations, and shall engage a minimum of 4 corrugations, 2 on each side of the pipe joint. Where required by the Engineer, a neoprene gasket shall be utilized with the coupling to provide a soil tight joint.

2. Joints of smooth interior, corrugated pipe sections shall be as per manufacturer's instructions utilizing gasketed PVC or HDPE joints meeting ASTM D-3212.

3. Installation shall be in accordance with ASTM Recommended Practice D-2321 or as specified by the Engineer or local approving agency.

B. Watertight Pipe

1. Provides superior watertight performance.

2. Meets ASTM D3212 requirements of 10.8 PSI for 10 minutes with no leakage.

3. Shall be ADS, N-12 IB WT (watertight joint type) piping or approved equal.

C. Manhole Boot Connection

1. Watertight seal made with rubber manhole boot as manufactured by Press Seal, or approved equal.

2. Alternatively, watertight seal made by Alok, or approved equal, in which case maximum insertion angle is 7 degrees.

D. Watertight Seals for Corrugated HDPE Pipe - Shall be NPC Corrugated Pipe Adapter compatible with Kor-N-Seal manhole connector.

2.5 CORRUGATED INTERIOR/SMOOTH EXTERIOR SLOTTED HDPE PIPE

A. Corrugated, slotted, HDPE tubing shall meet AASHTO M-252. Slotted tubing shall be supplied factory wrapped in a polyester geotextile filter sock. The filter sock shall have a minimum weight of 3.0 oz/square yard, a minimum burst strength of 100 psi, and an apparent opening size of 35.

B. A manufacturers' certification that the product was manufactured, tested, and supplied in accordance with this specification shall be furnished to the Engineer upon request.

C. There shall be a minimum soil cover of 12 inches, as measured from the top of the pipe, for H-20 loading conditions.

D. Filter Fabric Wraps

1. Extra strong synthetic materials are to be used with perforated drainage pipe to prevent infiltration of fine soil particles while allowing water to flow freely.

2. Material shall be ADS Sock, as manufactured by Advanced Drainage Systems or approved equal.

PART 3 EXECUTION

3.1 PREPARATION

A. The Contractor shall verify that the surface has been prepared to the proper line and grade by shooting invert elevation grades.

3.2 INSTALLATION

A. Open-Cut Installations

1. Polyethylene pipe and fittings shall be installed in accordance with ASTM Standards, and the manufacturers recommendations.

2. Pipe is to be lifted or rolled into position, not dragged over the prepared bedding.

3. The pipe is to be set at the slope and grades indicated on the plans. Ensure pipe remains at proper grades by shoring it.

4. All HDPE piping shall be bedded in 6” of crushed stone unless noted otherwise.

5. Crushed stone shall be used as backfill to a point of 6" above the top of the pipe unless noted otherwise.

6. Clay dams shall be installed in the stone backfill as directed by the Engineer to prevent groundwater migration. Spacing shall be 50 ft. maximum.

7. No single piece of pipe shall be laid unless it is generally straight. The centerline of the pipe shall not deviate from a straight line drawn between the centers of the openings at the ends of the pipe by more than 1/16 inch per foot of length. If a piece of pipe fails to meet this requirement check for straightness, it shall be rejected and removed from the site. Laying instructions of the manufacturer shall be explicitly followed.

8. Install piping and fittings true to alignment and grade. If necessary, each length of pipe shall be cleaned out before installation.

B. Joint Couplings

1. Joint couplings shall be installed in accordance with manufacturer's recommendations.

2. Remove the protective paper and wrap the collar around the pipe with the mastic side to the pipe. The overlap shall be at the top of the pipe.

3. Secure the steel straps. The closing flap shall cover the exposed straps.

4. Encase the entire joint with a minimum of 8 inches of concrete on all sides. The concrete encasement shall extend along the pipe 12 inches on each side of the joint.

3.3 TESTING

A. Pressure Testing

1. All sections of polyethylene drain and sewer pipe shall be tested in accordance with Section 33 3114.

3.4 "AS-BUILT" INFORMATION

1. Provide "as-built" survey made by a licensed surveyor registered in the State of Connecticut, paid for by the Site Contractor, showing all actual locations, inverts, grades of structures and piping. Furnish one set to the owner and one set to the Site Engineer. As-Built plans shall conform with the Town of Greenwich Public Works requirements.

END OF SECTION

SECTION 334114 - UNDERGROUND WARNING TAPE

PART 1 GENERAL

1.1 RELATED SECTIONS

A. Drawings and general provisions of the contract, including General and Supplementary Conditions and other Division I Specifications, apply to this section.

1.2 SUMMARY

A. Section Includes

1. Underground Warning Tape for site drainage and

1.3 SUBMITTALS

A. Shop Drawing Submittals

1. Product Data

PART 2 PRODUCTS

2.1 MATERIALS

A. Metallic warning tape for underground piping shall be polyethylene tape with metallic core for easy detection and location of piping with a metal detector.

B. Tape shall be 6 inches wide.

C. Tape shall be as manufactured by Seton Name Plate Corp., New Haven, CT; Presco Detectable Underground Warning tape, Sherman, Texas; Blackburn Manufacturing, Neligh, NE; Mercotape, Hachensach, NJ; or approved equal.

D. The warning tape shall be heavy gauge 0.004 inch polyethylene and shall be resistant to acids, alkalis and other soil components. It shall be highly visible in the following colors with the associated phrases stamped in black letters and repeated at a maximum interval of 40 inches.

Type of Utility	Color	Warning Message
Sanitary Sewer	Green	CAUTION – SANITARY SEWER BURIED BELOW
Storm Drain	Green	CAUTION - STORM DRAIN BURIED BELOW
Water	Blue	CAUTION – WATER LINE BURIED BELOW
Electric	Red	CAUTION – ELECTRIC LINE BURIED BELOW
Tel-Com	Orange	CAUTION – TELEPHONE LINE BURIED BELOW
Gas	Yellow	CAUTION – GAS LINE BURIED BELOW

E. The tape shall be of the type specifically manufactured for marking and locating utilities.

PART 3 EXECUTION

3.1 INSTALLATION

A. All buried pipe and fittings shall be installed with metallic-lined underground warning tape located approximately 18 inches below grade to allow detection by a metal detector.

END OF SECTION

SECTION 334419 - STORMWATER TREATMENT SYSTEM

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the contract, including General and Supplemental Conditions and other Division I Specifications, apply to this section.

1.2 SUMMARY

A. General: Provide precast concrete stormwater treatment systems and appurtenances and stormwater management systems in accordance with the Contract Documents.

B. Related Sections include the following:

1. Section 31 2500 – Soil Erosion and Sediment Controls
2. Section 31 2300 - Excavation, Backfill, Compaction and Dewatering
3. Section 31 2333 – Trenching and Backfilling
4. Section 33 4100 – Storm Drainage

1.3 QUALITY CONTROL INSPECTION

A. The quality of materials, the process of manufacture, and the finished sections are subject to inspection by the Engineer. Such inspection may be made at the place of manufacture, or on the work site after delivery, or at both places, and the sections are subject to rejection at any time if material conditions fail to meet any of the specification requirements, even though sample sections may have been accepted as satisfactory at the place of manufacture. Mark sections rejected after delivery to the site and remove from the site at once. Reject all sections that have been damaged beyond repair during delivery and, if already installed, repair acceptably, if permitted, or remove and replace, at no additional expense to the Owner.

B. Inspect all sections for general appearance, dimensions, soundness, etc. Ensure the surface is dense, close textured and free of blisters, cracks, roughness, and exposure of reinforcement.

1.4 SUBMITTALS

A. Annotate shop drawings to indicate all materials to be used and all applicable standards for materials, required tests of materials and design assumptions for structural analysis. Design calculations and shop drawings to be certified by a Professional Engineer retained by the system manufacturer and licensed in the State of Connecticut.

PART 2 PRODUCTS AND MATERIALS

2.1 MATERIALS

A. Stormwater management infiltrators shall be StormTech MC-3500 manufactured by Advanced Drainage Systems or approved equal.

B. The stormwater treatment system manufacturer to furnish documentation which supports all product performance claims and details storage capacities and maintenance requirements.

1. Stormwater Treatment System shall be a CDS hydrodynamic separator by ConnTech Engineered Solutions, LLC. The model shall be as shown on the contract drawings or approved equal.

PART 3 EXECUTION

3.1 INSTALLATION

A. Stormwater Treatment System – CDS Hydrodynamic Separator

1. Construct each Stormwater Treatment System per the sizes shown on the Drawings and as specified herein. Install at elevations and locations shown on the Drawings or as otherwise directed by the Engineer. In general, install per manufacturer's recommendations.

2. Place the precast base unit on a ¾" crushed stone bed of minimum thickness of six inches after compaction or of greater thickness and compaction if specified elsewhere. Crushed stone bed shall be level prior to setting the structure base and check the precast base section of the trap for level at all four comers after it is set. If the slope from any corner to any other corner exceeds 0.5%, remove the base section and re-level the granular subbase material.

3. Prior to setting subsequent sections, place butyl mastic sealant equal to ASTM C990 along the construction joint in the section that is already in place.

4. Prior to setting the precast roof section, install the circular swirl chamber wall by bolting the swirl chamber to the side walls at the three (3) tangent points and at the 3-inch-wide inlet tab using HILTI brand concrete anchors or equivalent 1/2-inch diameter by 3-inch minimum length at heights of approximately three inches (3 ") off the floor and at the mid-height of the completed trap (at locations of pre-drilled holes in 7aluminum components). Seal the bottom edge of the swirl chamber to the trap sidewalls to the outside of the swirl chamber from the floor to the same height as the inlet pipe invert using a butyl mastic or approved equal sealant.

5. Prior to setting the precast roof section, place butyl mastic sealant equal to ASTM C990 along the top of the baffle wall, using more than one layer of mastic if necessary, to a thickness at least one inch (1") greater than the nominal gap between the top of the baffle and the roof section.

   Determine the nominal gap either by field measurement or the shop drawings. After placement of the roof section has compressed the butyl mastic sealant in the gap, finish sealing the gap with an approved non-shrink grout on both sides of the gap using the butyl mastic as a backing material to which to apply the grout. Also apply non-shrink grout to the joints at the side edges of the baffle wall.

6. After setting the precast roof section of the stormwater treatment system, set precast concrete manhole riser sections, to the height required to bring the cast iron manhole covers to grade, so that the sections are vertical and in true alignment with a 1/4 inch maximum tolerance allowed. Fill the outside and inside joint with a comparatively dry mortar (one part cement and two parts sand) and finish flush with the adjoining surfaces. Backfill carefully, bringing the fill up evenly on all sides. If leaks appear, clean the inside joints and caulk with lead wool to the satisfaction of the Engineer. Precast sections shall be set in a manner that will result in a watertight joint.

7. Plug holes in the concrete sections made for handling or other purposes with a non-shrink grout or by grout in combination with concrete plugs.

8. Where holes must be cut in the precast sections to accommodate pipes, do all cutting before setting the sections are in place to prevent any subsequent jarring which may loosen the mortar joints. The Contractor shall make all pipe connections.

3.2 FIELD TESTING

A. Stormwater Treatment Systems

1. Fill all stormwater treatment systems with water up to the lowest pipe invert and test for ex-filtration. Any loss of water constitutes a system that is not watertight. Find the leak and correct.

2. Test all stormwater treatment systems for leakage around the grit chamber while leaving water in the rest of the trap up to the bottom of the lowest opening in the grit chamber. If water flows into the grit chamber, find the leak and correct.

3.3 CLEANING TREATMENT SYSTEM

A. At the end of the construction phase, once the storm drainage system has been accepted and approved by the Owner and Engineer, the Stormwater Treatment System and Stormwater Management Systems shall be pumped out and cleaned by a licensed hauler and the sediment and liquid disposed of off-site.

B. Once the system is cleaned and accepted by the Engineer, fill the Stormwater System with water up to the lowest pipe invert.

END OF SECTION

SECTION 340000 – TRANSPORTATION

PART 1 GENERAL

1.1 RELATED DOCUMENTS

All general requirements and covenants shall conform to the Connecticut Department of Transportation Standard Specifications for Roads, Bridges, Facilities, and Incidental Construction Form 818 with modifications for the following sections as stated in this specification:

- SECTION 1.05 – CONTROL OF THE WORK
- SECTION 1.06 – CONTROL OF MATERIALS
- SECTION 1.07 – LEGAL RELATIONS AND RESPONSIBILITIES
- SECTION 1.08 – PROSECUTION AND PROGRESS

1.2 SUMMARY

SECTION 1.05 - CONTROL OF THE WORK

Article 1.05.02 - Plans, Working Drawings and Shop Drawings are supplemented as follows:

Sub article 1.05.02 - (2) is supplemented by the following:

Traffic Signal Items:

When required by the contract documents or when ordered by the Engineer, The Contractor shall prepare and submit product data sheets, working drawings and/or shop drawings for all traffic signal items, except Steel Span Poles and Mast Arm Assemblies when applicable, to the Division of Traffic Engineering for review before fabrication. The packaged set of product data sheets, working drawings and/or shop drawings shall be submitted in an electronic portable document format (.pdf).

The packaged set submitted in an electronic portable document format (.pdf) shall be in an individual file with appropriate bookmarks for each item. The electronic files for product data sheets shall be created on ANSI A (8 ½" x 11"; 216 mm x 279mm; letter) sheets. Working drawings and shop drawings shall be created on ANSI B (11" x 17"; 279 mm x 432 mm; ledger/tabloid) sheets.

Please send the pdf documents via email to:

APWhite@tighebond.com

SECTION 1.06 - CONTROL OF MATERIALS

Article 1.06.01 - Source of Supply and Quality:

Add the following:

Traffic Signal Items:

For the following traffic signal items, the contractor shall submit a complete description of the item, shop drawings, product data sheets and other descriptive literature which completely illustrates such items presented for formal review. Such review shall not change the requirements for a certified test report and materials certificate as may be called for. All documents shall be grouped into one separate file for each group of items as indicated by the Roman numerals below (for example, one pdf file for all of the pedestal items). The documents for all of the traffic signal items shall be submitted at one time, unless otherwise allowed by the engineer.

I. 1117111A – Rectangular Rapid Flashing Beacon Assembly (Type B)
II. School Radar Speed Display Sign with Flashing Beacons (Solar Powered)

SECTION 1.07 - LEGAL RELATIONS AND RESPONSIBILITIES

Article 1.07.13 - Contractor's Responsibility for Adjacent Property, Facilities, and Services is supplemented as follows:

The following company and representative shall be contacted by the Contractor to coordinate the protection of their utilities on this project 30 days prior to the start of any work on this project involving their utilities:

Ms. Amy Siebert
Town of Greenwich
101 Field Point Road PO Box 2540-Town Hall
Greenwich, CT 06836
(203) 622-7740

Mr. Frank Gomes
Cablevision
28 Cross Street
Norwalk, CT 06851
(203) 750-5630

Mr. Eric Clark
Crown Castle Fiber, LLC
1781 Highland Avenue, Suite 102
Cheshire, CT 06410
(203) 649-3904

Mr. David Vega
CenturyLink Communications

Enfield, CT 06082
(860) 763-6005

Mr. Carlos Vizcarrondo
Aquarion
600 Lindley Street
Bridgeport, CT 06606
(203) 337-5950

When ready for inspection, the Contractor should be present for the release of the connection of electrical service. The local Building Department shall be contacted for electrical service inspections for controllers located on town roads located within the respective municipality.

SECTION 1.08 - PROSECUTION AND PROGRESS

Article 1.08.03 - Prosecution of Work:

Add the following:
The Contractor shall stake the limits of the concrete sidewalks and ramps in conjunction with staking the locations of foundations to ensure that pedestrian push buttons will be located appropriately and will be accessible from a landing area.

The Contractor shall notify the project engineer on construction projects, or the district permit agent on permit jobs, when all traffic signal work is completed. The project engineer or district permit agent will notify the Division of Traffic Engineering to coordinate a field inspection of all work. Refer to Section 10.00 – General Clauses For Highway Illumination And Traffic Signal Projects, Article 10.00.10, and corresponding special provision.

Article 1.08.04 - Limitation of Operations - Add the following:

In order to provide for traffic operations as outlined in the Special Provision "Maintenance and Protection of Traffic," the Contractor will not be permitted to perform any work which will interfere with the described traffic operations on all project roadways as follows:

Monday through Friday between 6:00 a.m. and 9:00 a.m. & between 2:00 p.m. and 6:00 p.m.
Saturday and Sunday between 10:00 a.m. and 6:00 p.m.

Additional Restrictions:

A. The Contractor shall not be allowed to close any roadways or detour traffic.

Additional Lane Closure Restrictions

It is anticipated that work on adjacent projects may be ongoing simultaneously with this project. The Contractor shall be aware of those projects and anticipate that coordination will be required to maintain proper traffic flow at all times on all project roadways, in a manner consistent with these specifications and acceptable to the Engineer.

The Contractor will not be allowed to perform any work that will interfere with traffic operations on a roadway when traffic operations are being restricted on that same roadway, unless there is at least a one-mile clear area length where the entire roadway is open to traffic, or the closures have been coordinated and are acceptable to the Engineer. The one-mile clear area length shall be measured from the end of the first work area to the beginning of the signing pattern for the next work area.

SECTION 344114 – RECTANGULAR RAPID FLASHING BEACON

PART 1 GENERAL

1.1 RELATED DOCUMENTS

All materials and construction methods shall conform to the Connecticut Department of Transportation Standard Specifications for Roads, Bridges, Facilities, and Incidental Construction Form 818 with modifications for the following item as stated in this specification:

- RECTANGULAR RAPID FLASHING BEACON (RRFB) – TYPE B

1.2 SUMMARY

Furnish and install a rectangular rapid flashing beacon (RRFB) at the locations indicated on the plans or where directed by the Engineer.

Each RRFB will be a complete assembly consisting of but not limited to the following:

- RRFB unit with two rapidly flashed rectangular-shaped yellow LED indications
- Controller cabinet (circuit breaker, timer or solid-state circuit boards etc.) or any electrical component hardware
- Pedestal
- Pedestal Foundation
- Pedestrian Pushbutton with accessible features
- Pushbutton Signs
- Mounting hardware
- If Solar, all solar equipment

Type B: Double sided RRFB will contain four rapidly flashed rectangular-shaped yellow LED indications (two indications on each side facing traffic)

RECTANGULAR RAPID FLASHING BEACON PEDESTRIAN CROSSWALK SYSTEMS

Rectangular Rapid Flashing Beacon (RRFB) Pedestrian Crosswalk Systems provide drivers real-time warning when pedestrians are in or about to enter an approaching crosswalk. This popular, MUTCD-compliant option heightens driver awareness in a variety of applications.

- School zone crossings
- Multilane uncontrolled crossings
- High-speed pedestrian crossings

TAPCO
TRAFFIC & PARKING CONTROL CO., INC.

Blinker® LED Products

Rectangular Rapid Flash Beacon: RRFB-XL2

Extra-large beacons provide greater visibility, ideal for high-speed and multi-lane pedestrian & school crossings

- Driver yielding rates of 80-90%
- Large LEDs exceed FHWA standards
- Completely modular
- Various mounting options

RRFBs have produced 80% to 90% driver compliance in yielding to pedestrians at high-risk uncontrolled crossings. This is the highest yielding rate of all devices not featuring a red display, and up to 4 times greater than standard round beacons. RRFBs cost less than other devices with similar vehicular yield rates.

RRFB options include:

- Advance RRFB wirelessly linked to Crossing RRFB
- Self-powered remote bollard-mounted pushbutton
- Passively activated systems

PATENT NUMBERS 6,943,698 AND 6,693,556. OTHER PATENTS PENDING.

Rectangular Rapid-Flash Beacon (RRFB)
LED Crosswalk Warning System
Solar powered.
No AC required.
RRFBs are user-actuated amber LEDs that supplement warning signs at intersections without signals or mid-block crosswalks. Two arrays of alternately flashing LEDs use an irregular flash pattern (similar to emergency flashers on police vehicles), commanding the attention of drivers day and night. The RRFB has been show to provide an 80% reduction to Yield-to-Pedestrian traffic, exceeding that of standard beacons. As a low cost alternative to traffic signals, it's no wonder why RRFB systems are taking the country by storm! The RRFB units install easily onto new or existing signal poles, and TAPCO can provide completed system with poles and hardware. The FHWA requires that RRFB systems are solely for use in pedestrian or school crossings, and must be pedestrian activated (actively or passively).
TAPCO's RRFB LEDs are the brightest and most durable on the market
Society of Automotive Engineers (SAE) standard J595 and FHWA compliant LED light intensity
Modular component construction maintenance quick and easy
Solar powered, no AC power required (110v optional)
RRFB LEDs can flash on front and sides, alerting drivers and pedestrians simultaneously Compatible with Intelligent Transportation Systems (ITS)
MUTCD interim approval
Multiple LED lens sizes available
(large lens shown here)

IWS CONTROLLER

SPECIFICATIONS

POWER	6V and 12VDC with power indicator light
INPUTS	2 digital inputs
OUTPUTS	2x two-channel (able to drive two warnings per output)
PROGRAMMABILITY	Locally using serial input (RS232) or remotely using BlinkLink® via cell modem
PROGRAM ACTIVATION OPTIONS	24/7, Dusk 'til Dawn, BlinkLink® Scheduling, Time Clock, Custom Input
LED-WARNING CONTROL COMPATIBILITY	BlinkerSign®, BlinkerBeacon™, RRFB-XL2™
DIMMABILITY	Auto-adjustable via solar panel (6V systems) Auto-adjustable via photocell sensor (12V systems)
INTERNAL SYSTEM CLOCK	Integrated with on-board battery backup
SELF-DIAGNOSTIC CAPABILITY	Internal temperature monitor
DAYLIGHT SAVING TIME	User programmable
OPERATING TEMPERATURE RANGE	-40°F to 176°F (-40°C to 80°C)
ENCLOSURE	IP67 rated
ENCLOSURE DIMENSIONS	3.2"W x 3.7"H x 2.5"D

BLINKERBEAM® WIRELESS RADIO

SPECIFICATIONS

POWER INPUT	5VDC
INPUT	1 digital input, micro USB
OUTPUTS	2 digital output lines, host serial lines for OTA serial
PROGRAMMABILITY	Locally using USB port or front-mounted joystick
LCD DISPLAY	4 lines at 21 characters per line
OPERATION POWER MODES	3 levels available, 0.25, 0.5 or 1 watt
CONNECTIVITY	Activates warning LEDs concurrently
FREQUENCY	License free 900 MHz Frequency Hopping Spread Spectrum with 10 different RF patterns to prevent interference between collocated radio systems
RANGE	900 feet or longer with optional antenna
SERIAL DATA RATE	19,200Baud
STATUS LEDS	Red, green, yellow, amber
FCC ID	2ANWN-02ANWN
AVAILABLE ANTENNAS	6dBi Omni - Fiberglass 3dBi Omni Whip - RPSMA 3dBI Omni Low Profile 10.64dBi Yagi
OPERATING TEMPERATURE	-40°F to 176°F (-40°C to 80°C); less than 90% RH
DIMENSIONS	3.2"W x 3.7"H x 2.5"D

MORNINGSTAR corporation

SUNSAVER™

SOLAR CONTROLLER

Morningstar is pleased to introduce our third generation ***SunSaver***. Since its first market introduction in 1996, over 1 million SunSaver controllers have been installed in over 73 countries for numerous solar power systems including oil/gas, telecom and instrumentation, marine and boating, and remote homes. We have retained much of our legacy design including the same ratings, footprint and simple user interface, and have added several new and advanced high value features:

- Full electronic protections
- 4 stage battery charging
- Self-diagnostics to detect critical faults
- Multi-color status LED
- 3 LED's for battery state of charge
- Dead battery recovery
- Telecom mode for sensitive loads
- Maximum charge limiting for sensitive loads
- Cover to protect wire terminals
- Additional certifications

Key Features and Benefits

Extremely High Reliability

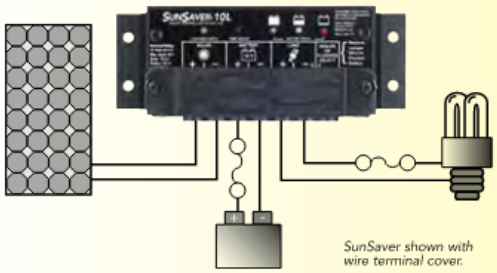
- Failure rate of less than 1 per 1,000 shipped (<0.1%)
- 100% solid state. Power MOSFET design
- Manufactured in an ISO 9000 factory
- 100% pre-shipment functional testing

Longer Battery Life

- Advanced PWM charging
- Series design (not shunt) for cool operation
- 4-stage charging: bulk, absorption, float, equalize
- Optimized sealed or flooded battery set points
- Temperature compensated charging
- Low voltage load disconnect on several versions

Designed for Harsh Environments

- Temperature rating of –40°C to +60°C
- Epoxy encapsulation for protection against humidity and dust ingress
- Corrosion protection: marine rated terminals and anodized aluminum case
- Certified for use in hazardous locations



Easy to Install and Use

- Factory pre-sets result in no required install settings
- Electronic protections prevent damage from wiring mistakes
- Fully automatic operation and fault recovery
- LED's display extensive information about status, faults and battery condition

SUNSAVER™ SOLAR CONTROLLER

SunSaver Versions

	Solar Current	Load Current	System Voltage	LVD
• SS-6-12V	6A	6A	12V	No
• SS-6L-12V	6A	6A	12V	Yes
• SS-10-12V	10A	10A	12V	No
• SS-10L-12V	10A	10A	12V	Yes
• SS-10L-24V	10A	10A	24V	Yes
• SS-20L-12V	20A	20A	12V	Yes
• SS-20L-24V	20A	20A	24V	Yes

SunSaver shown with wire terminal cover.

TECHNICAL SPECIFICATIONS

Electrical

- **Max. PV and load ratings** — Per above
- **System voltage** — 12 or 24 volts
- **Min. battery voltage** — 1 volt
- **Regulation voltage**

	12 volt	24 volt
Sealed battery	14.1 V	28.2 V
Flooded battery	14.4 V	28.8 V

- **Load disconnect** — 11.5 V / 23.0 V
- **LVD reconnect** — 12.6 V / 25.2 V
- **Max. solar voltage**
  - 12V battery — 30 volts
  - 24V battery — 60 volts
- **Load in-rush capability**
  - SunSaver-6 — 45 amps
  - SunSaver-10 — 65 amps
  - SunSaver-20 — 140 amps
- **Self-consumption** — < 8 mA
- **Voltage accuracy** — 12V: +/– 25 mV (typical); 24V: +/– 48 mV (typical)
- **Transient surge protection** — 1500W per connection

Mechanical

- **Wire size** — 5 mm² / #10 AWG
- **Weight (unpacked)** — 0.23kg / 8 oz.
- **Dimensions** — 15.2 x 5.5 x 3.4 cm; 6.0 x 2.2 x 1.3 inch

Environmental

- **Ambient temperature** — –40°C to +60°C
- **Storage temperature** — –55°C to +80°C
- **Humidity** — 100% non-condensing
- **Tropicalization** — Epoxy encapsulation; Marine rated terminals; Anodized aluminum case

Electronic Protections

- **Solar:** Overload, short-circuit, high voltage
- **Load:** Overload, short-circuit, high voltage
- **Battery:** High voltage
- **All:** Reverse polarity, high temperature, lightning and transient surges
- **Reverse current at night**

Battery Charging

- **Charging method** — 4 stage series PWM
- **Charging stages** — Bulk, absorption, float, equalize
- **Temperature compensation**
  - Coefficient — 12V: –30mV/°C; 24V: –60mV/°C
  - Range — –30°C to +60°C
  - Set points — Absorption, float, equalize

LED Indications

- **Status LED (1)** — Charging or not charging; Solar error conditions
- **Battery LED's (3)** — Battery level; Charging stage

Certifications

- **ETL Listed to UL 1741 and CSA C22.2 No. 107.1-01**
- **Hazardous Locations** — Class 1, Division 2, Groups A,B,C,D; CSA C22.2#213
- **EMC Directives** — Immunity, emissions, safety
- **FCC** — Class B Part 15
- **CE**
- **RoHS**
- **ISO 9000**

WARRANTY: ***Five year warranty period. Contact Morningstar or your authorized distributor for complete terms.***

Polara iNX Push button

SPECIFICATIONS

POWER	10 to 24VDC
PUSH BUTTON	ADA compliant. Field adjustable directional arrow is standard; bidirectional and blank buttons available. Optional adjustable locator tone
ACTIVATION CONFIRMATION	Yellow LEDs and voice confirmation activated when push button is pressed; custom message available
PUSH BUTTON HOUSING	Yellow powder coat finish is standard; black and green available
SPEAKER	Field replaceable, weather resistant, 10-watt audio amplifier Maximum volume: 100 dB at 1 meter
INSTRUCTIONAL SIGN	9" x 12" is standard; larger signs available; braille available. Retroreflective sheeting with tamper-resistant mounting screws
OPERATING FORCE	Three adjustable settings: .5 to 3.5 pounds
IDLE CURRENT DRAW	~9mA @ 12 VDC
PEAK CURRENT DRAW	~500mA (@15VDC) with voice message at maximum
ENCLOSURE	NEMA 250 Type 4X Powdercoated cast aluminum cover and backplate
CONNECTIVITY	Bluetooth 5.0 Polara Field Service app for customization
WIRING	6 conductor
OPERATING TEMPERATURE RANGE	-30°F to 165°F (-34°C to 74°C)
DIMENSIONS	9"W x 18.2"L x 2.6"H

1026-01039 10/14/2020

POLARA

Function

Push button station (PBS) for use on crosswalks with flashing yellow lights. Connects to RRFB to enable triggering of crosswalk lights and can provide a locate tone and a voice message. Voice message can be set to play 1/2/3 times, or for the entire time the lights are flashing. Factory Default Setting is to play 2 times per FHWA.

Features

- Instructional 9"x12" retro-reflective sign with tamper-resistant mounting screws
- One yellow LED that flashes when warning lights are flashing
- ADA-compliant push button with directional arrow, field adjustable to point left, right, up, or down
- 10-watt audio amplifier
- Weather resistant speaker
- Volume and other settings set using the free Polara service app, connected over Bluetooth
- Standard English Message: "Yellow lights are flashing" (Default 2X per FHWA)
- Standard Spanish Message: "Las luces amarillas estan relampaqueando"

Electrical Properties

Power Requirements	
DC In	10-24 VDC
Lights In	7-32 VDC
Idle Current Draw	~15mA @ 12 VDC (Locate Tone With Default Settings)
Peak Current Draw (15 VDC Input Power)	~500mA with Voice Message at maximum

Mechanical Properties

Physical	
Enclosure Type	Plastic sealed housing, powdercoated cast aluminum cover and backplate
Installation	3/4" or smaller banding or 2 tapped 1/4-20 holes on 6" centers; 1/2" or larger hole for wire access
Dimensions	
Width	9" (with 9x12" sign) / 5.1 (without sign)
Length	18.2" (with 9x12" sign) / 14" (without sign)
Maximum Height	2.6"

Operating Specifications	
Parameter	**Rating**
Operating Temp. Range	-34°C to +74°C (-30°F to +165°F)
Storage Temp. Range	-45°C to +85°C (-50°F to +185°F)
Operating Force	3.0 lbs max
Switch Operating Life	Greater than 20 million operations
Max. Volume	100 dB @ 1 meter

Design Compliance	
Test Type	**Compliance**
Functionality	MUTCD 2009-4E
Temperature and Humidity	NEMA TS2
Mechanical Shock and Vibration	NEMA TS2
iNX Enclosure	NEMA 250 Type 4X

Notes:
1. Designed to comply with applicable sections of referenced standards
2. All specifications are subject to change without notice
3. All specifications are typical unless otherwise specified

Doc. iNX-CutSheet Rev. C-25329 05/19/2020 Dimensions are in inches. www.polara.com

PART 3 EXECUTION

- Each RRFB indication will be mounted on a standard aluminum pedestal and in accordance with dimensions and details shown on the plan.

- Each Solar RRFB will require a location free of any vegetation or obstruction which will inhibit solar charging.

- Each RRFB shall initiate operation only upon pedestrian actuation and shall cease operation after a programed time as shown on the plan or determined by the Engineer (based on MUTCD procedures).

- All RRFBs associated with a given crosswalk (including those with an advance crossing sign, if used) shall, when activated, simultaneously commence operation of their rapid-flashing indications and shall cease operation simultaneously.

- Install the pedestrian pushbutton according to the manufacturer's instructions.

- Position the pedestrian pushbutton so the plane of the sign face is parallel to the crossing (sign is facing perpendicular) and the arrow is pointing in the same direction as the crossing, not necessarily at the ramp. Notify the Engineer if there is any discrepancy or ambiguity between the plans and field conditions that prevent placement of the pedestrian pushbutton as shown on the plan.

- Set the minimum sound levels of the locator tone and the speech message when there is little or no ambient noise as in nighttime operation. Set the volume of speech message and pushbutton locator tones to a maximum of 5dBA louder than ambient sound. The locator tone should be audible 6' to 12' from the pushbutton or to the building line, whichever is less. Confirm the volume of both speech message and the locator tone increases with an increase in ambient sound and subsequently decreases when the ambient noise decreases.

Mechanical and Electrical Requirements:

a) Dimensions:
- Each indication shall be at least 5" wide by 2" high.
- The indications shall be aligned horizontally, with the longer dimension horizontal and with a minimum space of 7" between the two indications
- The outside edges of the indications, including any housing, shall not project beyond the outside edges of the sign that it supplements.

b) Power:
- Hardwired:
  - AC input, 100-240 VAC, 50/60Hz
  - DC output, 12 VDC, +/- 1%
- Solar:
  - DC input, 12 VDC, 55W
  - DC output, 12 VDC, +/- 1%

c) Temperature & Humidity:
- All components will be capable of continuous operation in accordance with NEMA Standards

d) Indications:
- Flash Pattern:
  - When actuated, the two yellow indications in each RRFB unit shall flash in a rapidly flashing sequence and shall provide 75 flashing sequences per minute.
  - Shall comply with MUTCD https://mutcd.fhwa.dot.gov/resources/interim_approval/ia21/ia21.pdf
- Optics:
  - ITE LED
- Light Intensity:
  - During daytime conditions: shall meet the minimum specifications for Class 1 yellow peak luminous intensity in the Society of Automotive Engineers (SAE) Standard J595 (Directional Flashing Optical Warning Devices for Authorized Emergency, Maintenance, and Service Vehicles) dated January 2005.
  - During nighttime conditions: an automatic signal dimming device shall be used to reduce the brilliance of the indications.
- Housing Color:
  - Federal Yellow

e) Control Cabinet:
- Shall be NEMA 3R type

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 344115 – LED SCHOOL RADAR SPEED DISPLAY SIGN WITH FLASHING BEACONS ASSEMBLY (HARDWIRED)

PART 1 GENERAL

1.1 RELATED DOCUMENTS

All materials and construction methods shall conform to the Connecticut Department of Transportation Standard Specifications for Roads, Bridges, Facilities, and Incidental Construction Form 818 with modifications for the following item as stated in this specification:

- LED SCHOOL RADAR SPEED DISPLAY SIGN WITH FLASHING BEACONS ASSEMBLY (HARDWIRED)

1.2 SUMMARY

The work shall consist of furnishing and installing LED School Radar Speed Display Sign with Flashing Beacon Assemblies (Hardwired) and their associated power supplies in accordance with the contract documents or as directed by the Engineer.

1.3 REFERENCES

State of Connecticut Department of Transportation Standard Specifications for Roads, Bridges, Facilities, and Incidental Construction Form 818, 2020 (Merged with Supplemental Specifications Dated July 2023)

PART 2 PRODUCTS

The Contractor shall furnish LED Radar Speed Display Sign with Flashing Beacon Assemblies (Hardwired) in accordance with these requirements:

TRAFFICLOGIX

SafePace® Beacon System Specifications

The SafePace Beacon System provides a visual alert to drivers of changed driving conditions such as pedestrians crossing or construction ahead. Beacons have been proven to improve safety by making drivers more vigilant and are a low cost, low maintenance solution. They can be combined with any of the SafePace signs to create a complete school zone system.

Basic Technical Data	
LED Signal Head	ITE VTCSH LED circular signal
LED Color	Yellow (Amber)
LED Signal Housing	ITE compliant, UV stabilized polycarbonate (yellow)
Beacon Size	305 mm (12 inch), or 203 mm (8 inch) diameter
Power Requirements	12 V DC / 5 Watt
Power Source	Powered directly from radar sign
Operating Temperature	-40 °C (-40 °F) to 74 °C (165 °F)
Ambient Light Control	Controlled by the radar sign
Flash Pattern	MUTCD compliant alternating pattern
Programming	24/7 365 day scheduling including holidays and exception days
Warranty	2 year limited warranty

Features	
Flashing beacon lights notify motorists of changed driving conditions.	Proven to improve safety in school zones by decreasing vehicle speeds by up to 7 mph.
Easy to use management software allows you to turn systems on and off multiple times per day and set beacon schedules and exceptions.	Multiple configurations available including vertical or horizontal placement and single or double beacons.
Can be used as an accessory to any of the SafePace radar signs.	Draws power directly from the sign, so no additional power source is required.
Excellent visibility even in poor lighting conditions.	Two year limited warranty.

SafePace® 100
Driver Feedback Sign

TRAFFIC LOGIX

The Traffic Logix® SafePace® 100 driver feedback sign is the solution that fits your budget.

This compact radar speed sign offers exceptional visibility and power efficiency in a lightweight and portable solution. Featuring the options you need at remarkably affordable pricing, the SafePace 100 driver feedback sign will help you keep your neighborhoods safe for years to come.

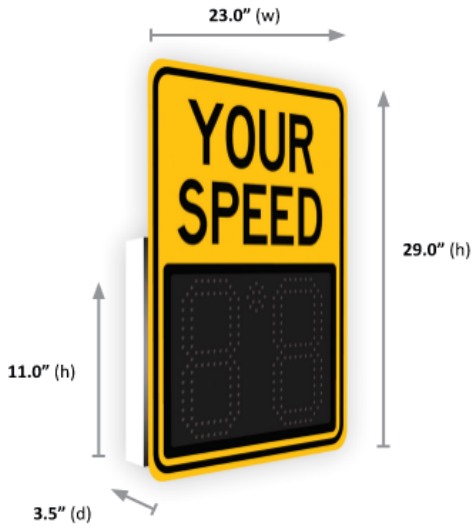
Choice of faceplate colors available

100 Specifications

Digit Size	11″
Height	29″
Weight	21 lbs
24/7, 365 Scheduling	✓
Data Collection	✓
Solar Compatibility	✓
Battery Operated	✓
Universal Mounting	✓
Cloud Compatibility	✓
Trailer Compatibility	✓
Dolly Compatibility	✓
Hitch Compatibility	✓
Warranty	2 Years

Features

Energy Efficient: The sign can function up to 3 weeks autonomously with optional battery power depending on volume.



Optimal Visibility: Unique light enhancing, anti-glare lens system as well as automatic ambient light adjustment provide brilliant visibility even in poor lighting conditions.

User Friendly: Software Interface: Easy-to-use management software lets you set sign parameters quickly and easily while optional data collection allows you to download traffic data, and generate statistical reports.

Stealth Mode: Collect baseline traffic data while speed display appears blank to motorists.

Speed Violator Strobe: Programmable flashing strobe to alert speeding drivers comes standard with every sign.

Technical Specifications

- Miles Per Hour (mph) or Kilometers Per Hour (km/h)
- Aluminum protective cover: 0.25" (d)
- High-Intensity prismatic reflective sheeting on "YOUR SPEED" signs with black colored text
- MUTCD approved colors and format
- Operating Temperatures F (C): -40° (-40°) to 185° (85°)
- Conformal coating on all circuit boards
- Power
  - Power input:
    - AC 90~264 VAC
    - 12 VDC
  - Vcc: 5.5 VDC to 16 VDC (18V max)
  - Icc@12 VDC (radar always on): Display blank- 9.5 mA
  - Display at night: 21 mA
  - Display max bright: 415 mA
  - Radar RF out: 5 mW maximum
  - Power Efficiency:
    - Best in class power efficiency
    - Low power SS300 radar drives display eliminate extra CPU
    - Built in ambient light sensing and automatic brightness control
    - Ambient temperature compensation of LED drive voltage
    - High efficiency boost regulator for LED drive voltage
    - With no traffic present, radar automatically powers down display, reducing power consumption to 0.1W
  - Power Options
    - AC power input: 90~264 VAC
    - DC power input: 12 VDC
    - Battery power option offers extended life:
      - 3 Cell, 9.6V, 10Ah Lithium-Ion Phosphate battery with up to 2 weeks operation between charges (under normal operating conditions)
      - 4 Cell, 12.8V, 15Ah Lithium-Ion Phosphate battery with up to 4 weeks operation between charges (under normal operating conditions)
    - Solar power
      - Compact, 20W solar panel (15.4" x 9.8" x 0.71")

- Display
  - LEDs 208:
    - Digits: 196 Amber, 15°, 5 mm, luminous Intensity (4180 - 8200)
    - Speed Violator Strobe: 12 White, 15°, 5 mm , luminous intensity (4180 - 8200)
  - Optical lenses: 208 lenses
  - Display Brightness:
    - 11,000 nits (cdm) maximum
    - 550 nits (cdm) at night
  - Ambient light sensor and automatic brightness adjustment
- Enclosure
  - 12 gauge aluminum, flat black powder coated front for reduced glare and maximum contrast; light gray powder coated body to minimize heat absorption
  - Weatherproof, NEMA 4X-12, IP65 level compliant
  - Non-sealed and ventilated

Communication

- **Bluetooth 4.0** → standard recommended configuration (**"BlueFin"** Bluetooth card installed on **"BackFin"** sign controller card by default)
- **Wi-Fi** → optional configuration upon request (**"Wi-Fin"** Wi-Fi card optionally installed on **"BackFin"** sign controller card – connect to radar sign configured as network access point)
- **GPRS** → optional configuration upon request (**"SimFin"** card optionally installed on **"BackFin"** sign controller card to insert SIM (Subscriber Identity Module) card

Programming

- SafePace® Pro Management Software application
- Display Settings:
  - Display On/Stealth Modes (In Stealth Mode, speed is not displayed but data is collected)
  - Display Minimum Speed, Display Maximum Speed
  - Digit Flashing Speed Threshold (digits flash above selected speed)
  - Speed Violator Strobe (pulsing strobe flashes with digits or alone above Display Maximum Speed)

©2015 Traffic Logix Corporation

Data Collection and Statistical Analysis & Reporting (optional feature)

- Traffic data collected and stored by location
- Stealth Mode (capture baseline traffic data with speed display off)
- Download through Serial Port connection
- Statistical Reporting & Charts
  - Summary Reports
  - Weekly Reports
  - Period Comparison Reports
  - Reporting Parameters:
    - Average Vehicle Count
    - Total Vehicle Count
    - Average Speed
    - Average Number of Speed Violations
    - Total Number of Speed Violations
  - Other Features:
    - Minimum and Maximum Speed
    - 85% Speed
    - Counters by Speed Bins
    - 5 MPH Bin Resolution
    - Reports print directly or can be exported into CSV format, MS Excel, Adobe Acrobat PDF and HTML
    - Charts may be printed directly or converted into Adobe Acrobat PDF and picture formats

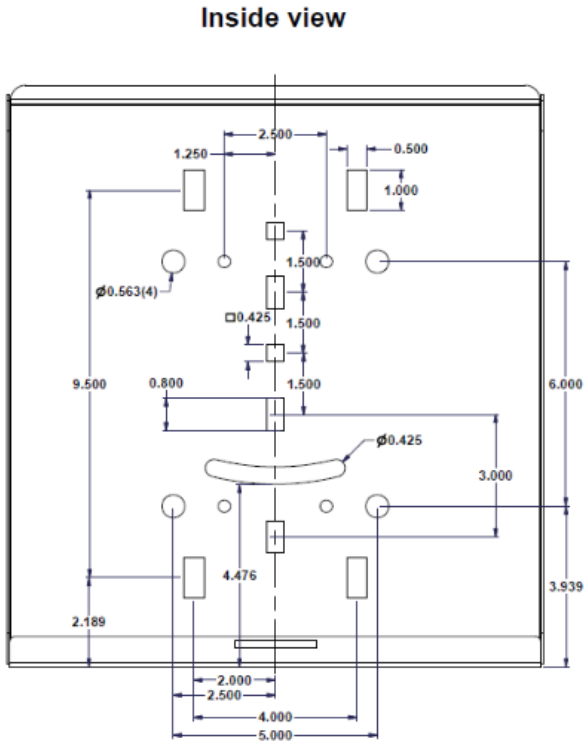
Mounting Options



- Standard mounting bracket system (use banding brackets to fasten sign to steel or wooden pole)
- Universal Mounting Bracket System
  - Universal mounting options: circular, square and telspar poles
  - Theft resistant
  - Promotes sign portability: sign locks into mounting bracket with a turn of a key
- Sign dolly mounting system
  - Battery-powered sign recommended
  - Speed limit face plate not included
- Sign mounted to/compatible with SafePace Cruiser LT Lightweight Trailer
  - Battery box storage not included with trailer
  - See web-site trailer specifications for more details

Ver. 2.9

Warranty

Subject to the following conditions, Traffic Logix Corporation ("Traffic Logix") warrants that the SafePace® 100 Speed sign (the "Product") is free from defects in materials and workmanship. This limited warranty begins on the invoice date of your purchase of the Product and extends:

- For TWO (2) calendar years on the radar sign, and
- For ONE (1) calendar year on the batteries.

This limited warranty extends only to the original purchaser of the Product when purchased either directly through Traffic Logix® or through an authorized Traffic Logix® distributor and is not assignable or transferable to any subsequent purchaser or end-user. Traffic Logix's® obligation and liability under this warranty are expressly limited to repairing or replacing, at Traffic Logix's® option, defective products. In no circumstances shall Traffic Logix's® liability, whether in contract or tort, under any warranty, in negligence, or otherwise, exceed the amount of the purchase price of the product. Traffic Logix® shall not be liable for special, indirect, or consequential damages of any kind. This warranty does not cover damages resulting from normal wear and tear, incorrect installation or operation, use other than for the product's intended purposes, vandalism, and extraordinary environmental circumstances. Traffic Logix® reserves the right to charge for these damages to the product at rates normally charged for repairing such products not covered under this warranty. Damages resulting from any physical changes or alterations made to the product other than Traffic Logix® will render this warranty VOID. Using any parts or accessories not supplied or approved by Traffic Logix®, such as battery chargers, will further render the warranty VOID.

Traffic Logix® neither assumes, nor authorizes any person to assume for it, any other liability in connection with the sale of the Product, and there are no agreements or warranties collateral to or affecting this limited warranty.

THE LIMITED WARRANTY SET FORTH IN THIS AGREEMENT IS THE EXCLUSIVE AND SOLE WARRANTY APPLICABLE TO THIS PURCHASE. ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO THE IMPLIED WARRANTY OF MERCHANTABILITY AND THE IMPLIED WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE ARE EXPRESSLY DISCLAIMED.

Traffic Logix® does not warrant that any of its products will meet or comply with the requirements of any applicable federal, state or local safety code, law, regulation or ordinance ("Applicable Safety Laws"). Buyer acknowledges that Traffic Logix's® products are to be used only in accordance with the attached Conditional Terms of Use and any Applicable Safety Laws. Buyer agrees that there shall be no coverage or benefits of any kind under this limited warranty if it is determined by Traffic Logix® that the Product was not installed or used in accordance with the Conditional Terms of Use or Applicable Safety Laws, or if the Product has been altered in any way by anyone other than Traffic Logix®, or if the Product has been subject to any misuse or accident. In addition, Buyer assumes and agrees to indemnify Traffic Logix® for all risk, liability or expense that results from any installation or use of the Product that is not in accordance with the Conditional Terms of Use or any Applicable Safety Laws.

©2015 Traffic Logix Corporation

Warranty Replacement Procedure

In order to submit a claim for the repair or replacement of the Product under this limited warranty, you must do the following:

1) Obtain a Return Materials Authorization number by contacting Customer Support. Do not ship your defective product to Traffic Logix® prior to contacting Customer Support.

2) A Customer Support agent will evaluate the Product to determine if it is defective. If the product is defective, then you will need to submit your contact information, and proof of purchase (including the date or purchase), in order to obtain repair or replacement parts.

3) The Customer Service Agent will provide you with instructions on how to have defective parts repaired or replaced.

©2015 Traffic Logix Corporation

PART 3 EXECUTION

The wiring of the assembly shall be completed by a Connecticut Licensed Electrician.

The Contractor shall submit to the Engineer for approval: complete shop drawings, detailed specifications, catalog cuts, parts lists, instruction sheets, and wiring diagrams for the equipment to be installed. The Contractor will be required to install wiring connecting all powered equipment to existing utility pole power (to be coordinated with utility company/companies) to complete the work.

The Contractor shall conduct approved stand-alone, system performance tests of the equipment installed. The tests shall, at a minimum, satisfactorily exercise all stand-alone functional requirements of the field equipment. Following successful completion of the system performance tests, a 90 calendar-day test shall be performed. The purpose of the operational test is to demonstrate reliability of the system equipment for a 90-day period. Final acceptance shall be based on the satisfactory completion of the 90-day test.

The setup and programming of the assembly shall be completed and coordinated by the Contractor. The display options and patterns shall be coordinated with the Greenwich Department of Public Works.

SECTION 344117 – PEDESTRIAN PUSH BUTTON

PART 1 GENERAL

1.1 RELATED DOCUMENTS

All materials and construction methods shall conform to the Connecticut Department of Transportation Standard Specifications for Roads, Bridges, Facilities, and Incidental Construction Form 818 with modifications for the following item as stated in this specification:

- PEDESTRIAN PUSH BUTTON

1.2 SUMMARY – NOT USED

1.3 REFERENCES

State of Connecticut Department of Transportation Standard Specifications for Roads, Bridges, Facilities, and Incidental Construction Form 818, 2020 (Merged with Supplemental Specifications Dated July 2023)

PART 2 PRODUCTS

Article M.16.08 - Pedestrian Push Button:

For RRFB (Rectangular Rapid Flashing Beacon):

Delete the entire section and replace with the following:

A. General

- Size and force compliant with ADA, Section 14.2.5, Crossing Controls.
- Tamper-proof, and Vandal-proof, Weatherproof, Freeze-proof, Impact-resistant design and construction.
- Completely insulated to preclude electrical shock under any weather conditions.
- Wire entrance through the rear.
- Stainless steel mounting hardware.
- Any features in conflict with this spec and MUTCD shall be disabled.
- Accessible features shall:
  - conform to the MUTCD
  - provide the speech message “yellow lights are flashing” that shall be spoken twice
  - include tactile arrow on the button
  - include a locator tone
  - not use vibrotactile indications or percussive indications for the audible information
    - The vibrotactile feedback shall be disabled.

B. Audible Pushbutton Locator Tone

- Frequency: repeating tone at one (1) second intervals
- Tone duration: ≤ 0.15 seconds
- Volume:
  - Minimum setting of zero
  - Manually adjustable initial setting
  - Automatically adjusted after initial setting. Volume increased in response to a temporary increase in ambient noise and subsequently decreased with a decrease in ambient noise.

  - Maximum volume: 100 dBA which is the approximate sound pressure of a gasoline powered lawn mower nearby.
  - Automatic volume adjustment independent of other APS&Ds at the intersection.
  - Should not be disabled but have the capability of being disabled without affecting operation of other features.
- Silent only when RRFB yellow lights are flashing. Active all other times.

C. Tactile Arrow Pushbutton:
- Pushbutton contained in a circular assembly which fits inside the housing and is attached to the housing with 4 screws.
- The confirmation light shall flash simultaneously with the RRFB indications.
- ADA compliant: Size: ≥ 2.0" diameter, Actuation force: ≤ 5 ft-lb
- Shape: Circular, raised slightly above housing so that it may be actuated with the back of a hand
- Tamper-proof, vandal-proof, weatherproof, freeze-proof, impact-resistant design and construction.
- Tactile Arrow:
  - Attached to surface of the button assembly by a tamperproof method.
  - Raised slightly above surface of pushbutton, minimum 0.125"
  - Size: Length ≥ 1.5", Height ≥ 1.0"
  - Color: Sharp contrast to background color of pushbutton and housing

D. Housing
- Die cast aluminum meeting requirements of ASTM B85.
- Designed to attach 9" x 12" four-hole advisory sign.
- Flat back to facilitate surface mount.
- Available hardware to either pedestal top-mount or pole side-mount on diameter range of 3½" to 15".
- Available extension bracket of a size indicated on the plan – 18" maximum.

E. Painting
- All Surfaces of the unit shall be finished with 3 coats of infrared oven-baked paint, before assembly.
  - **First coat:** Primer shall be epon-oxide baking primer and shall meet and exceed 1 performance specification of FS TT-P-664.
  - **Second coat:** Gray Enamel shall be lusterless and shall meet the requirements of FS TT-E-527.
  - **Third coat:** The housing, all brackets, and hardware shall be YELLOW exterior-baking enamel and shall meet the requirements of FS TT-E-489. The color shall be No. 13538, Federal Standard No. 595.

PART 3 EXECUTION – NOT USED

END OF SECTION

SECTION 347001 – TRAFFICPERSON

PART 1 GENERAL

1.1 RELATED DOCUMENTS

All materials and construction methods shall conform to the Connecticut Department of Transportation Standard Specifications for Roads, Bridges, Facilities, and Incidental Construction Form 818 with modifications for the following items as stated in this specification:

- TRAFFICPERSON (MUNICIPAL POLICE OFFICER)
- TRAFFICPERSON (UNIFORMED FLAGGER)

1.2 SUMMARY

Under this item the Contractor shall provide the services of Trafficpersons of the type and number, and for such periods, as the Engineer approves for the control and direction of vehicular traffic and pedestrians. Traffic persons requested solely for the contractor's operational needs will not be approved for payment.

1.3 REFERENCES

State of Connecticut Department of Transportation Standard Specifications for Roads, Bridges, Facilities, and Incidental Construction Form 818, 2020 (Merged with Supplemental Specifications Dated July 2023)

PART 2 PRODUCTS – NOT USED

PART 3 EXECUTION

Prior to the start of operations on the project requiring the use of Trafficpersons, a meeting will be held with the Contractor, Trafficperson agency or firm, and Engineer, if applicable, to review the Trafficperson operations, lines of responsibility, and operating guidelines which will be used on the project. A copy of the municipality's billing rates for Municipal Police Officers and vehicles, if applicable, will be provided to the Engineer prior to start of work.

On a weekly basis, the Contractor shall inform the Engineer of their scheduled operations for the following week and the number of Trafficpersons requested. The Engineer shall review this schedule and approve the type and number of Trafficpersons required. In the event of an unplanned, emergency, or short-term operation, the Engineer may approve the temporary use of properly clothed persons for traffic control until an authorized Trafficperson may be obtained. In no case shall this temporary use exceed 8 hours for any operation.

If the Contractor changes or cancels any scheduled operations without prior notice of same as required by the agency providing the Trafficpersons, and such that Trafficperson services are no longer required, the Contractor will be responsible for payment at no cost to the Department of any show-up cost for any Trafficperson not used because of the change. Exceptions, as approved by the Engineer, may be granted for adverse weather conditions and unforeseeable causes beyond the control and without the fault or negligence of the Contractor.

Trafficpersons assigned to a work site are to only take direction from the Engineer.

Trafficpersons shall wear a high visibility safety garment that complies with OSHA, MUTCD, ASTM Standards and the safety garment shall have the words "Traffic Control" clearly visible on the front and rear panels (minimum letter size 2 inches (50 millimeters)). Worn/faded safety garments that are no longer highly visible shall not be used. The Engineer shall direct the replacement of any worn/faded garment at no cost to the Town.

A Trafficperson shall assist in implementing the traffic control specified in the Maintenance and Protection of Traffic contained elsewhere in these specifications or as directed by the Engineer. Any situation requiring a Trafficperson to operate in a manner contrary to the Maintenance and Protection of Traffic specification shall be authorized in writing by the Engineer.

Trafficpersons shall consist of the following types:

1. Uniformed Law Enforcement Personnel: Law enforcement personnel shall wear the high visibility safety garment provided by their law enforcement agency. If no high visibility safety garment is provided, the Contractor shall provide the law enforcement personnel with a garment meeting the requirements stated for the Uniformed Flaggers' garment.

Law Enforcement Personnel may also be used to conduct motor vehicle enforcement operations in and around work areas as directed and approved by the Engineer.

Municipal Police Officers: Uniformed Municipal Police Officers shall be sworn Municipal Police Officers or Uniformed Constables who perform criminal law enforcement duties from the Municipality in which the project is located. Their services will also include an official Municipal Police vehicle when requested by the Engineer. Uniformed Municipal Police Officers will be used on non-limited access highways. If Uniformed Municipal Police Officers are unavailable, other Trafficpersons may be used when authorized in writing by the Engineer.

Uniformed Municipal Police Officers and requested Municipal Police vehicles will be used at such locations and for such periods as the Engineer deems necessary to control traffic operations and promote increased safety to motorists through the construction sites.

2. Uniformed Flagger: Uniformed Flaggers shall be persons who have successfully completed flagger training by the American Traffic Safety Services Association (ATSSA), National Safety Council (NSC) or other programs approved by the Engineer. A copy of the Flagger's training certificate shall be provided to the Engineer before the Flagger performs any work on the project. Uniformed Flaggers shall conform to Chapter 6E, Flagger Control, in the Manual of Uniformed Traffic Control Devices (MUTCD) and shall wear high-visibility safety apparel, use a STOP/SLOW paddle that is at least 18 inches (450 millimeters) in width with letters at least 6 inches (150 millimeters) high. The paddle shall be mounted on a pole of sufficient length to be 6 feet (1.8 meters) above the ground as measured from the bottom of the sign.

Uniformed Flaggers will only be used on non-limited access highways to control traffic operations when authorized in writing by the Engineer.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 347002 – MAINTENANCE AND PROTECTION OF TRAFFIC

PART 1 GENERAL

1.1 RELATED DOCUMENTS

All materials and construction methods shall conform to the Connecticut Department of Transportation Standard Specifications for Roads, Bridges, Facilities, and Incidental Construction Form 818 with modifications for the following items as stated in this specification:

- MAINTENANCE AND PROTECTION OF TRAFFIC

1.2 SUMMARY

Article 9.71.01 – Description *is supplemented by the following:*

The Contractor shall maintain and protect traffic as described by the following and as limited in the special provision for Section 1.08 - Prosecution and Progress:

All Roads (Orchard St, Indian Rock Ln, Stanwich Rd, Coachlamp Ln, Ponderosa Dr)

The Contractor shall maintain and protect a minimum of 1 lane of traffic in each direction with each lane on a paved travel path not less than 11 feet in width, with the following exceptions:

1. During the allowable periods and when the Contractor is actively working, the Contractor will be permitted to maintain and protect at least an alternating one-way traffic operation on a paved travel path not less than 11 feet in width and no more than 300 feet in length, unless specified elsewhere in the Contract. There shall be no more than one alternating one-way traffic operation within the Project limits without prior approval of the Engineer.
2. The Contractor will not be permitted to close any roadways or detour traffic.

Commercial and Residential Driveways

The Contractor shall maintain access to and egress from all commercial and residential driveways throughout the Project limits. The Contractor will be permitted to temporarily close affected driveways while actively working with coordination and permission from the owner or proprietor.

Intermediate Term Sidewalk Closures

The Contractor shall maintain and protect existing pedestrian accommodations, or a minimum of 4 feet in width, on all existing sidewalks, sidewalk ramps, and access to pedestrian pushbuttons, with the following exception:

- During the allowable periods and when the Contractor is actively constructing pedestrian amenities or installing signal equipment, the Contractor will be allowed to close pedestrian sidewalks and sidewalk ramps and restrict access to pedestrian pushbuttons for no more than a continuous 48 hour period of time.

No more than two corners of an intersection may be closed for an intermediate term sidewalk closure at any time. Where all four corners of an intersection have sidewalks and sidewalk ramps, diagonal corners shall not be closed at the same time.

During the intermediate term sidewalk closure, all approaches to the sidewalk shall be blocked by Construction Barricade Detectable with Sidewalk Closed signs.

The Contractor shall ensure that traffic control signals with pedestrian phases where access to the pushbuttons cannot be provided are revised at the start of the closure to automatically activate the pedestrian phase every signal cycle.

Intermediate term sidewalk closures may be extended to 72 hours with prior approval of the Engineer.

1.3 REFERENCES

State of Connecticut Department of Transportation Standard Specifications for Roads, Bridges, Facilities, and Incidental Construction Form 818, 2020 (Merged with Supplemental Specifications Dated July 2023)

PART 2 PRODUCTS – NOT USED

PART 3 EXECUTION

Article 9.71.03 - Construction Methods *is supplemented as follows:*

General

Unpaved travel paths will only be permitted for areas requiring full depth and full width reconstruction. The unpaved section shall be the full width of the road and shall be perpendicular to the travel lanes. The Contractor will be allowed to maintain traffic on processed aggregate for a duration not to exceed 10 calendar days and opposing traffic lane dividers shall be used as a centerline.

The Contractor is required to delineate any raised structures within the travel lanes, so that the structures are visible day and night, unless there are specific Contract plans and provisions to temporarily lower these structures prior to the completion of work.

The Contractor shall schedule operations so that pavement removal and roadway resurfacing shall be completed full width across a roadway or bridge section by the end of a work shift, or as directed by the Engineer.

When the installation of all intermediate courses of bituminous concrete pavement is completed for the entire roadway, the Contractor shall then install the final course of bituminous concrete pavement.

When the Contractor is excavating adjacent to the roadway, the Contractor shall provide a 3 foot shoulder between the work area and travel lanes, with traffic drums spaced every 50 feet. At the end of the work shift if the vertical drop-off exceeds 3 inches, the Contractor shall provide a temporary bituminous concrete traversable slope of 4:1 or flatter that is acceptable to the Engineer.

The Contractor, during the course of any active overhead construction work, shall close the lanes directly below the work area for the entire length of time overhead work is being undertaken.

At no time shall an overhead sign be left partially removed or installed.

When an existing sign is to be relocated or replaced, the work shall be completed during the same work shift.

The field installation of a signing pattern shall constitute interference with existing traffic operations and shall not be allowed, except during the allowable periods.

On limited-access highways, construction vehicles entering travel lanes shall not be allowed without a lane closure. The lane closure shall be of sufficient length to allow vehicles to enter or exit the work area at the posted speed limit, in order to merge with existing traffic.

Existing Signing

The Contractor shall maintain all existing overhead and side-mounted signs within the Project limits throughout the duration of the Project. The Contractor shall temporarily relocate signs and sign supports as many times as deemed necessary, and shall install temporary sign supports if necessary and as directed by the Engineer.

Requirements for Winter

The Contractor shall schedule a meeting with representatives of the Town/City to determine any interim traffic control measures the Contractor shall accomplish prior to winter to provide safety to motorists and permit adequate snow removal procedures. This meeting shall be held prior to October 31 of each year and will include, but not be limited to, discussion of the status and schedule of the following items: lane and shoulder widths, pavement restoration, traffic signal work, pavement markings, and signing.

Signing Patterns

The Contractor shall erect and maintain all signing patterns in accordance with the traffic control plans contained herein. Proper distances between advance warning signs and proper taper lengths are mandatory.

Pavement Markings - Non-Limited Access Roadways

During construction, the Contractor shall maintain all pavement markings on paved surfaces on all roadways throughout the limits of the Project.

Temporary pavement markings shall be installed on each intermediate course of bituminous concrete pavement and on any milled surface by the end of the work shift.

Permanent Epoxy Resin Pavement Markings shall be installed on the final course of bituminous concrete pavement within 10 calendar days of the final pavement installation if no Pavement Marking Grooves are proposed.

Temporary Pavement Markings

Temporary pavement markings that will be in place for less than 72 continuous hours may consist of temporary plastic pavement marking tape at the Contractor's expense. Additionally;

1. These temporary pavement markings shall include centerlines, lane lines (solid and broken), and stop bars.
2. Centerlines shall consist of two 4 inch wide yellow markings, 2 feet in length, side by side, 4 inches apart, at 40 foot intervals.
3. Lane lines shall consist of 4 inch wide white markings, 2 feet in length, at 40 foot intervals.
4. No passing zones shall be posted with signs in those areas where the final centerlines have not been established on two-way roadways.
5. Stop bars may consist of two 6 inch wide white markings or three 4 inch wide white markings placed side by side.
6. The temporary plastic pavement marking tape shall be installed in accordance with Section 12.12.
7. The Contractor shall remove and dispose of the temporary plastic pavement marking tape prior to another course of bituminous concrete pavement being installed.

Temporary pavement markings that will be in place for 72 continuous hours or more should consist of temporary painted pavement markings and shall be installed in accordance with Section 12.09. The markings shall include centerlines, edge lines, lane lines (solid and broken), lane-use arrows, and stop bars on each intermediate course of bituminous concrete pavement and on any milled surface by the end of the work shift Edge lines and lane-use arrows are not required if the next course of bituminous concrete pavement will be placed within 10 calendar days.

All temporary pavement markings exposed throughout the winter shall be Epoxy Resin Pavement Markings, unless directed otherwise by the Engineer.

Temporary pavement markings, as described above, shall be maintained until the permanent pavement markings are installed.

Final Pavement Markings

Refer to Pavement Marking Groove special provisions for pavement marking requirements. Permanent epoxy resin pavement markings shall be installed in accordance with Section 12.10 and the applicable Traffic Engineering Standard Drawings.

If Temporary Plastic Pavement Marking Tape is installed, then the Contractor shall remove and dispose of these markings during the same work shift that the permanent epoxy resin pavement markings are to be installed. The cost of furnishing, installing and removing the Temporary Plastic Pavement Marking Tape shall be at the Contractor's expense.

Traffic Control During Construction Operations

The following guidelines shall assist field personnel in determining when and what type of traffic control patterns to use for various situations. These guidelines shall provide for a safer and more efficient movement of traffic through work zones and enhance the safety of work forces in the work area.

Traffic Control Patterns

Traffic control patterns shall be used when a work operation requires that all or part of any vehicle or work area protrudes onto any part of a travel lane or shoulder or is within the clear zone. For each situation, the installation of traffic control devices shall be based on the following:

- Speed and volume of traffic.
- Duration of operation.
- Exposure to hazards.

Traffic control patterns shall be uniform, neat, and orderly in order to command respect from the motorist.

Lane reduction tapers should be placed so that the entire length of the taper is installed on a tangent section of roadway and the entire taper area can be seen by the motorist.

All existing conflicting signs shall be removed, covered with an opaque material, or turned so that they are not legible to oncoming traffic prior to implementing a traffic control pattern. The existing signs shall be uncovered or reinstalled once the pattern is removed.

A buffer area should be provided during installation of a traffic control pattern and maintained for the duration of the work. The buffer area shall be free of any equipment, workers, materials, and parked vehicles.

Construction Traffic Control Plans 19 through 25 should be used for moving operations such as line striping, rumble strips, pothole patching, mowing, or sweeping when it is necessary for equipment to occupy a travel lane.

Traffic control patterns are not required for vehicles on an emergency patrol type activity or for a short duration stop of up to one hour, as long as the equipment is contained within the shoulder. Flashing lights, arrow boards, truck-mounted or trailer-mounted impact attenuators, and appropriate Trafficperson(s) shall be used when required.

In a situation not adequately covered by the Construction Traffic Control Plans, the Contractor shall contact the Engineer for assistance prior to setting up a traffic control pattern.

Placement of Signs

Signs shall be placed in a position that allows motorists the opportunity to reduce their speed prior to the work area. Signs shall be installed on the same side of the roadway as the work area. On multi-lane divided highways, advance warning signs shall be installed on both sides of the highway. On directional roadways (on-ramps, off-ramps, one-way roads) where the sight distance to signs is restricted, these signs should be installed on both sides of the roadway.

Allowable Adjustment of Signs and Devices Shown on the Construction Traffic Control Plans

The Construction Traffic Control Plans contained herein show the location and spacing of signs and devices under ideal conditions. Signs and devices should be installed as shown on these plans.

The proper application of the Construction Traffic Control Plans and installation of traffic control devices is dependent upon actual field conditions.

In the case of a horizontal or vertical sight restriction in advance of the work area, the traffic control pattern shall be extended to provide adequate sight distance for approaching traffic.

Adjustments to the Construction Traffic Control Plans shall only be made at the direction of the Engineer.

Table 1 indicates the minimum taper lengths required for a lane closure based on the posted speed limit and lane width of the roadway. These taper lengths shall only be used when the recommended taper lengths shown on the Construction Traffic Control Plans cannot be achieved.

Table 1 – Minimum Taper Length

POSTED SPEED LIMIT (MPH)	MINIMUM TAPER LENGTH FOR A SINGLE LANE CLOSURE (FEET)	
	FREEWAYS	SECONDARY ROADS
30 OR LESS	180	165
35	245	225
40	320	295
45	540	495
50	600	550
55	660	605
65	780	715

1. Work Zone Safety Meetings

1.a) Prior to the commencement of work, a Work Zone Safety Meeting shall be conducted with representatives from DOT Construction, Connecticut State Police (Local Barracks), Municipal Police, the Contractor (Project Superintendent) and the Traffic Control Subcontractor (if different than the prime Contractor) to review the traffic operations, lines of responsibility, and operating guidelines which will be used on the Project. DOT Traffic Engineering shall be invited to the Work Zone Safety Meeting. Other Work Zone Safety Meetings during the course of the Project should be scheduled as needed.

1.b) A Work Zone Safety Meeting Agenda shall be developed and used at the Meeting to outline the anticipated traffic control issues during the construction of this Project. Any issues that can't be resolved at these Meetings will be brought to the attention of the District Engineer and the Office of Construction. The agenda shall include:

i. Review Project scope of work and time;
ii. Review Section 1.08, Prosecution and Progress;
iii. Review Section 9.70, Trafficpersons;
iv. Review Section 9.71, Maintenance and Protection of Traffic;
v. Review Contractor's schedule and method of operations;
vi. Review special concern areas: ramps, turning roadways, medians, lane drops, etc.;
vii. Open discussion of work zone questions and issues;
viii. Discussion of review and approval process for changes in Contract requirements as they relate to work zone areas.

2. General

2.a) Traffic control patterns shall only be installed if the required minimum number of signs, traffic cones, traffic drums, and other equipment (i.e. one Arrow Board for each lane closed, two Truck-Mounted or Trailer-Mounted Attenuators (TMAs), Changeable Message Sign, etc.) are on Site.

2.b) The Contractor shall have spare maintenance and protection of traffic equipment (TMAs, Arrow Board, Changeable Message Sign(s), construction signs, traffic cones, traffic drums, etc.) available at all times in case of mechanical failures, etc. Spare maintenance and protection of traffic equipment

installed as a result of a sudden equipment breakdown shall be replaced by the Contractor within 24 hours.

2.c) Failure of the Contractor to have the required minimum number of signs, personnel, and equipment, which results in the pattern not being installed, shall not be a reason for a time extension or claim for lost time.

2.d) In cases of differences of opinion between the Contractor and the Inspection staff, the Contractor shall follow the directions of the Engineer. The matter shall be brought to the District Office for resolution immediately or, in the case of work after regular business hours, on the next business day.

3. Installing and Removing Traffic Control Patterns

3.a) Lane closures shall be installed beginning with the advance warning signs and proceeding forward toward the work area.

3.b) Lane closures shall be removed in the reverse order, beginning at the end of the work area, or traffic control pattern, and proceeding back toward the advance warning signs.

3.c) Stopping traffic may be allowed within the allowable hours stated in Section 1.08.04:

i. For those activities stated within the Contract.
ii. During paving, milling operations, or similar activities where, in the middle of the operation, it is necessary to flip the pattern to complete the operation on the other half of the roadway so traffic does not travel across the longitudinal joint or difference in roadway elevation.
iii. To move slow moving equipment across live traffic lanes into the work area.

3.d) The Contractor shall adhere to using the proper signs, placing the signs correctly, and ensuring the proper spacing of signs.

3.e) Additional devices are required on entrance ramps, exit ramps, and intersecting roads to warn and/or move traffic into the proper travel path prior to merging with or exiting from the mainline traffic. This shall be completed before installing the mainline pattern past the ramp or intersecting roadway.

3.f) Workers are prohibited from crossing the travel lanes on limited access roadways to install and remove signs or other devices on the opposite side of the roadway. Any signs or devices on the opposite side of the roadway shall be installed and removed separately.

4. Use of Arrow Boards

4.a) On limited access roadways, one Arrow Board shall be used for each lane that is closed. The Arrow Board shall be installed concurrently with the installation of the traffic control pattern and its placement shall be as shown on the Construction Traffic Control Plans. Additional Arrow Boards shall be deployed if sight distances are limited.

4.b) On non-limited access roadways, the use of an Arrow Board for lane closures is optional. The roadway geometry, sight distance, and traffic volume shall be considered in the decision to use the Arrow Board.

4.c) A vehicle displaying an arrow board shall be equipped with high-intensity rotating, flashing, oscillating, or strobe lights.

4.d) The flashing arrow mode shall be used for lane closure (merge) tapers.

4.e) The flashing arrow mode shall not be used for temporary alternating one-way traffic operations or to laterally shift lanes of traffic.

4.f) The flashing double arrow mode shall only be used for closing a center lane on a multilane roadway where adjacent left and right lanes remain open.

4.g) For shoulder work or roadside work near the shoulder, the Arrow Board shall be positioned in the shoulder and the flashing alternating diamond mode should be used.

4.h) The flashing alternating diamond caution mode should also be used when supplemental Arrow Boards are positioned in an already closed lane.

5. Use of Truck-Mounted or Trailer-Mounted Impact Attenuators (TMAs)

5.a) On limited access roadways, lane closures shall use a minimum of two TMAs to install and remove traffic control patterns. If two TMAs are not available, then the pattern shall not be installed.

5.b) On non-limited access roadways, the use of TMAs to install and remove patterns closing a lane(s) is optional. The roadway geometry, sight line distance, and traffic volume shall be considered in the decision to utilize the TMAs.

5.c) On limited access roadways, one TMA shall be placed on the shoulder and the second TMA shall be approximately 1,000 feet ahead blocking the lane to establish the advance and transition signing. The Arrow Board mounted on the TMA shall be in the arrow mode when taking the lane. The sign truck and workers shall be at sufficient distance ahead of the second TMA. In no case shall the TMA be used as the sign truck or a work truck. Once the transition is in place, the TMAs shall travel in the closed lane until all Portable Changeable Message Signs, signs, Arrow Boards, and cones/drums are installed. The Arrow Board mounted on the TMA should be in the flashing alternating diamond caution mode when traveling in the closed lane.

5.d) A TMA shall be placed prior to the first work area in the pattern. If there are multiple work areas within the same pattern, then additional TMAs shall be positioned at each additional work area as needed. The Arrow Board mounted on the TMA should be in the flashing alternating diamond caution mode when in the closed lane.

5.e) TMAs shall be positioned a sufficient distance prior to the workers or equipment being protected to allow for appropriate vehicle roll-ahead in the event that the TMA is hit, but not so far that an errant vehicle could travel around the TMA and into the work area. For additional placement and use details, refer to Section 18.06. Some operations, such as paving and concrete repairs, do not allow for placement of the TMA(s) within the specified distances. In these situations, the TMA(s) shall be placed at the beginning of the work area and shall be advanced as the paving or concrete operations proceed.

5.f) TMAs will be paid for in accordance with how the unit is used. If it is used as a TMA and is in the proper location as specified, then it will be paid for at the specified hourly rate for Truck-Mounted or Trailer-Mounted Impact Attenuator. When the TMA is used as an Arrow Board, it will be paid for at the daily rate for Arrow Board. If a TMA is used to install and remove a pattern and is also used as an Arrow Board in the same day, then the unit will be paid for as a Truck-Mounted or Trailer-Mounted Impact Attenuator for the hours used to install and remove the pattern, typically 2 hours (1 hour to install and 1 hour to remove). If the TMA is also used as an Arrow Board during the same day, then the unit will only be paid for at the daily rate as an Arrow Board.

6. Use of Traffic Drums and Traffic Cones

6.a) On limited-access highways, ramps, and turning roadways:

i. Traffic drums shall be used for taper channelization.
ii. Traffic drums shall be used to delineate raised catch basins and other hazards.
iii. Traffic cones with a minimum height of 42 inches may be used in place of drums in the tangent section of a closed lane or shoulder.
iv. Traffic cones less than 42 inches in height shall not be used.

6.b) On all roadways:

i. Traffic drums shall be used in place of traffic cones in traffic control patterns that are in effect for more than a 36-hour duration.
ii. Traffic cones shall not be left unattended.
iii. Traffic cones with a minimum height of 42 inches shall be used when the posted speed limit is 45 MPH or above.

6.c) Typical spacing of traffic drums and/or cones shown on the Construction Traffic Control Plans in the Contract are maximum spacings and may be reduced to meet actual field conditions as required.

7. Use of Barricade Warning Lights

7.a) Barricade Warning Lights may be installed on channelizing devices when used in a merge taper. The Barricade Warning Lights shall flash in a sequential pattern when used in a merge taper. The successive flashing shall occur from the upstream end (beginning) of the merge taper to the downstream end (end) of the merge taper.

7.b) Type C Barricade Warning Lights may be used at night to delineate the edge of the travel way.
7.c) Type B Barricade Warning Lights shall be used on post-mounted advanced warning signs.

8. Use of Portable Changeable Message Signs (PCMS)

8.a) On limited access roadways, one PCMS shall be used in advance of the traffic control pattern for all lane closures. Prior to installing the pattern, the PCMS shall be installed and in operation, displaying the appropriate lane closure information. The PCMS shall be positioned ½ to 1 mile ahead of the start of the lane closure taper. If the distance to the nearest exit ramp is greater than the specified ½ to 1 mile distance, then an additional PCMS shall be positioned a sufficient distance ahead of the exit ramp (and before the previous on-ramp where practical) to alert motorists to the work and therefore offer them an opportunity to take the exit.

8.b) On non-limited access roadways, the use of PCMS for lane closures is optional. The roadway geometry, sight line distance, and traffic volume shall be considered in the decision to use the PCMS.

8.c) PCMS should be placed off the shoulder of the roadway and behind a traffic barrier, if practical. Where a traffic barrier is not available to shield the PCMS, it should be placed off the shoulder and outside of the clear zone. If a PCMS has to be placed on the shoulder of the roadway or within the clear zone, it should be placed on the paved shoulder with a minimum of five traffic drums placed in a taper in front of it to delineate its position. The taper shall meet minimum distance requirements for a shoulder closure. The PCMS shall be protected if it is used for a continuous duration of 36 hours or more.

8.d) The PCMS shall be removed from the clear zone and have the display screen cleared and turned 90 degrees away from the roadway when the PCMS is no longer required.

8.e) The PCMS should not be used within 1,000 feet of an existing PCMS or Variable Message Sign (VMS).

8.f) A PCMS message shall:

i. consist of no more than two phases;
ii. contain no more than three lines of text per phase;
iii. have no more than eight characters per line, including spaces.

8.g) The PCMS should be used for specific situations that need to command the motorist's attention which cannot be conveyed with standard construction signs. The PCMS should not be used for generic messages (ex.: Road Work Ahead, Bump Ahead, Gravel Road, etc.) or for messages that need to be displayed for long periods of time, such as during stage construction. These types of messages should be displayed with construction signs. Special signs shall be coordinated with the Office of Construction and the Division of Traffic Engineering for the proper layout/dimensions required.

8.h) Typical messages that are allowed on the PCMS are shown below. Approval must be received from the Office of Construction for any message(s) different than the typical messages shown in Figure 1.

8.i) All messages shall comply with the information provided in Tables 2 and 3.

Message No.	Phase 1	Phase 2	Message No.	Phase 1	Phase 2
1	LEFT LANE CLOSED	MERGE RIGHT	9	LANES CLOSED AHEAD	REDUCE SPEED
2	2 LEFT LANES CLOSED	MERGE RIGHT	10	LANES CLOSED AHEAD	USE CAUTION
3	LEFT LANE CLOSED	REDUCE SPEED	11	EXIT XX CLOSED	USE EXIT YY
4	2 LEFT LANES CLOSED	REDUCE SPEED	12	EXIT XX CLOSED USE YY	FOLLOW DETOUR
5	RIGHT LANE CLOSED	MERGE LEFT	13	2 LANES SHIFT AHEAD	USE CAUTION
6	2 RIGHT LANES CLOSED	MERGE LEFT	14	3 LANES SHIFT AHEAD	USE CAUTION
7	RIGHT LANE CLOSED	REDUCE SPEED			
8	2 RIGHT LANES CLOSED	REDUCE SPEED

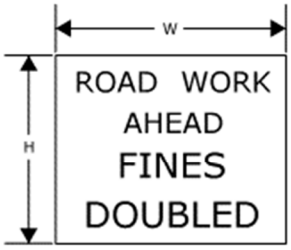
9. Use of State Police Officers

9.a) State Police may be used only on limited access highways and secondary roadways that are under their primary jurisdiction. A minimum of one Officer may be used per critical sign pattern; however, a State Police presence is not required. Shoulder closures and right lane closures can generally be implemented without the presence of a State Police Officer. Left lane closures may also be implemented without State Police presence in areas with only moderate traffic and wide, unobstructed medians. It may be desirable to have a State Police presence, when available, under specific situations, such as nighttime lane closures; left lane closures with minimal width for setting up advance signs and staging; lane and shoulder closures on turning roadways/ramps or mainline where sight distance is minimal; and closures where extensive turning movements or traffic congestion regularly occur; however, they are not required.

9.b) If a State Police presence is provided, once the pattern is in place, the State Police Officer should be positioned in a non- hazardous location in advance of the pattern to provide advance warning to the motorist. If traffic backs up beyond the beginning of the pattern, then the State Police Officer shall reposition so that they are located prior to the backup. The State Police Officer should not be located immediately behind or within the roll ahead area of any TMA or within the work zone buffer area. The State Police Officer shall not be positioned in such a way that the State Police Officer obstructs any construction warning signs or PCMS from view of the motorist.

9.c) Other functions of the State Police Officer(s) may include:

i. Assisting construction vehicles entering and exiting the work area.
ii. Enforcement of motor vehicle laws within the work area, if specifically requested by the Engineer.



9.d) State Police Officers assigned to a work site shall take direction from the Engineer.

REGULATORY SIGN "ROAD WORK AHEAD, FINES DOUBLED"

THE REGULATORY SIGN "ROAD WORK AHEAD FINES DOUBLED" SHALL BE INSTALLED FOR ALL WORK ZONES THAT OCCUR ON ANY STATE HIGHWAY AND MUNICIPAL ROAD IN CONNECTICUT WHERE THERE ARE WORKERS PRESENT ON THE HIGHWAY.

THE "ROAD WORK AHEAD FINES DOUBLED" REGULATORY SIGN SHALL BE PLACED AFTER THE SERIES 16 SIGN AND IN ADVANCE OF THE "ROAD WORK AHEAD" SIGN.

NOTES FOR TRAFFIC CONTROL PLANS

1. IF A TRAFFIC STOPPAGE OCCURS IN ADVANCE OF SIGN (A), THEN AN ADDITIONAL SIGN (A) SHALL BE INSTALLED IN ADVANCE OF THE STOPPAGE.

2. SIGNS (AA), (A), AND (D) SHOULD BE OMITTED WHEN THESE SIGNS HAVE ALREADY BEEN INSTALLED IN ADVANCE TO DESIGNATE A LARGER WORK ZONE THAN THE WORK ZONE THAT IS ENCOMPASSED ON THIS PLAN.

3. SEE TABLE 1 FOR ADJUSTMENT OF TAPERS IF NECESSARY.

4. TRAFFIC CONES AND PORTABLE CONSTRUCTION SIGNS SHALL NOT BE LEFT UNATTENDED.

5. ALL CONFLICTING SIGNS WITHIN THE LIMITS OF A ROADWAY / LANE CLOSURE AREA SHALL BE COVERED WITH AN OPAQUE MATERIAL WHILE THE CLOSURE IS IN EFFECT, AND UNCOVERED WHEN THE ROADWAY / LANE CLOSURE IS RE-OPENED TO ALL LANES OF TRAFFIC.

6. IF THIS PLAN REMAINS IN CONTINUOUS OPERATION FOR MORE THAN 48 HOURS, THEN ANY EXISTING CONFLICTING PAVEMENT MARKINGS SHALL BE ERADICATED OR COVERED, AND TEMPORARY PAVEMENT MARKINGS THAT DELINEATE THE PROPER TRAVELPATHS SHALL BE INSTALLED.

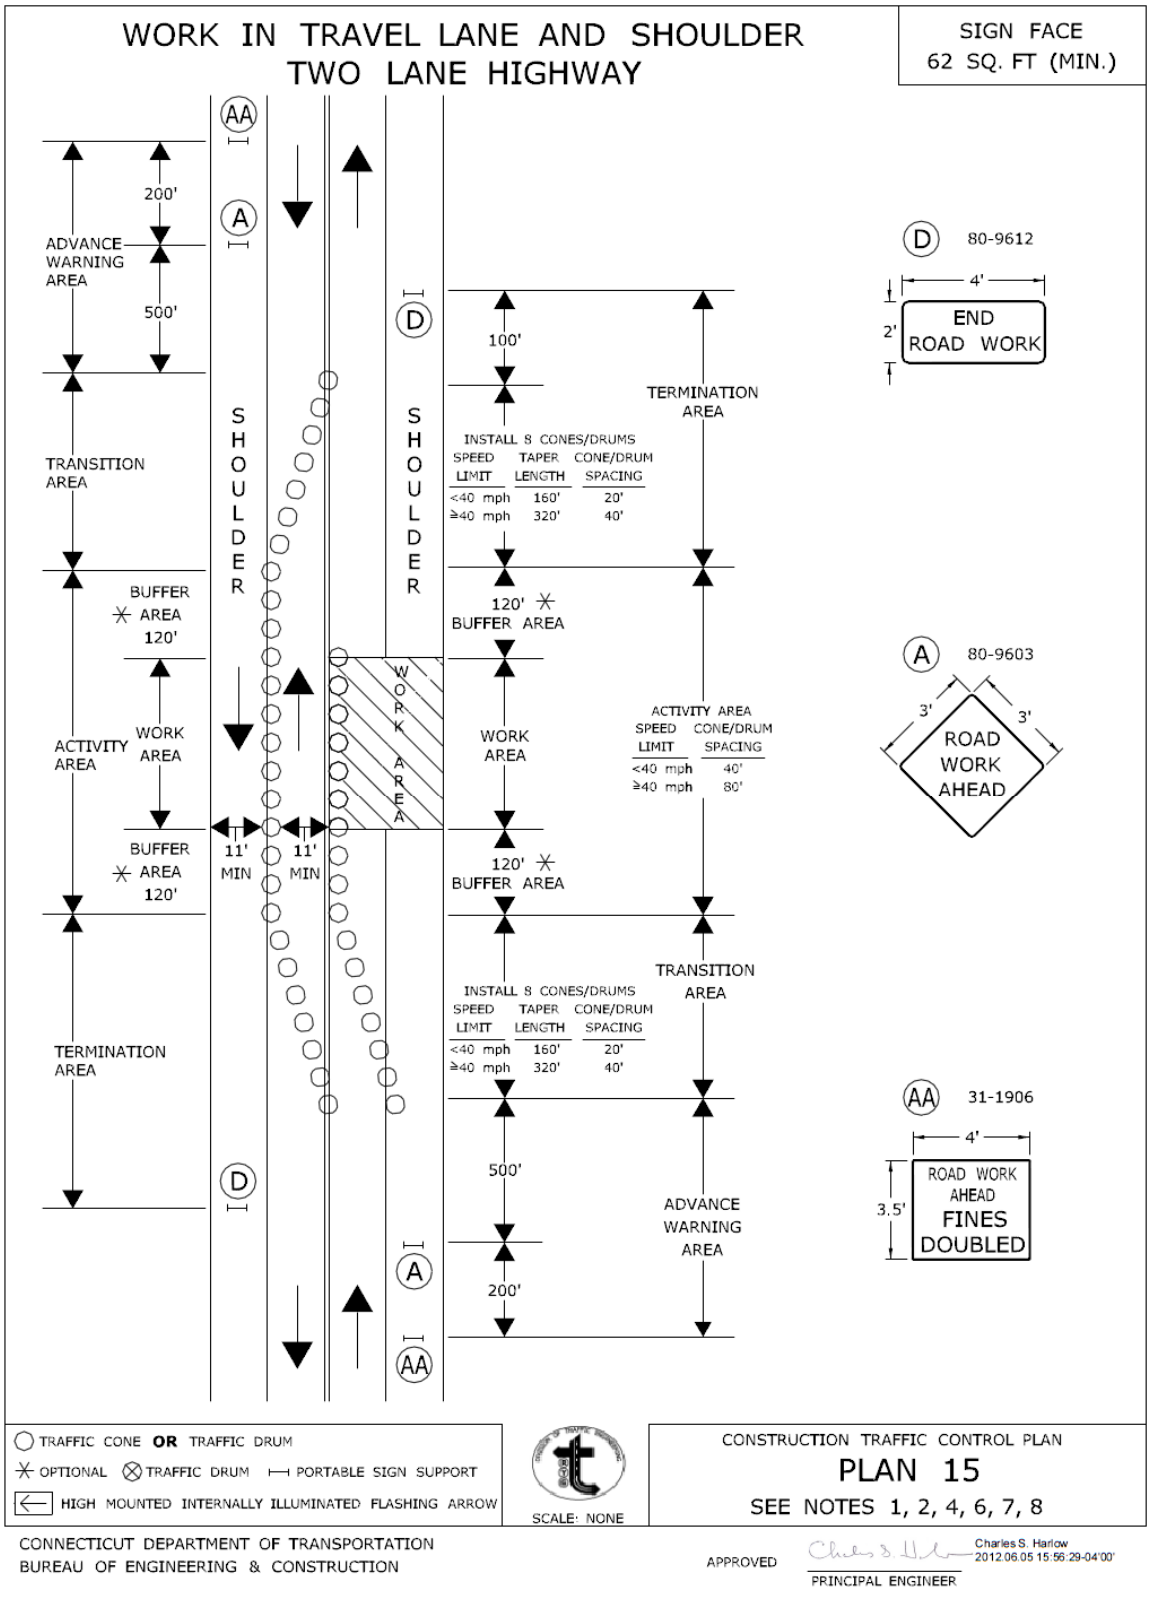
7. DISTANCES BETWEEN SIGNS IN THE ADVANCE WARNING AREA MAY BE REDUCED TO 100' ON LOW-SPEED URBAN ROADS (SPEED LIMIT ⩽ 40 MPH).

8. IF THIS PLAN IS TO REMAIN IN OPERATION FROM SUNSET TO SUNRISE, INSTALL BARRICADE WARNING LIGHTS - HIGH INTENSITY ON ALL POST-MOUNTED DIAMOND SIGNS IN THE ADVANCE WARNING AREA.

9. A PORTABLE CHANGEABLE MESSAGE SIGN SHALL BE INSTALLED ONE HALF MILE TO ONE MILE IN ADVANCE OF THE LANE CLOSURE TAPER.

10 SIGN (P) SHALL BE MOUNTED A MINIMUM OF 7 FEET FROM THE PAVEMENT SURFACE TO THE BOTTOM OF THE SIGN.

TABLE 1 - MINIMUM TAPER LENGTHS



POSTED SPEED LIMIT (MILES PER HOUR)	MINIMUM TAPER LENGTH FOR A SINGLE LANE CLOSURE
30 OR LESS	180'
35	245'

HAND SIGNAL METHODS TO BE USED BY UNIFORMED FLAGGERS

THE FOLLOWING METHODS FROM SECTION 6E.07, FLAGGER PROCEDURES, IN THE "MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES," SHALL BE USED BY UNIFORMED FLAGGERS WHEN DIRECTING TRAFFIC THROUGH A WORK AREA. THE STOP/SLOW SIGN PADDLE (SIGN NO. 80-9950) SHOWN ON THE TRAFFIC STANDARD SHEET TR-1220 01 ENTITLED, "SIGNS FOR CONSTRUCTION AND PERMIT OPERATIONS" SHALL BE USED.

A. TO STOP TRAFFIC

TO STOP ROAD USERS, THE FLAGGER SHALL FACE ROAD USERS AND AIM THE STOP PADDLE FACE TOWARD ROAD USERS IN A STATIONARY POSITION WITH THE ARM EXTENDED HORIZONTALLY AWAY FROM THE BODY. THE FREE ARM SHALL BE HELD WITH THE PALM OF THE HAND ABOVE SHOULDER LEVEL TOWARD APPROACHING TRAFFIC.

B. TO DIRECT TRAFFIC TO PROCEED

TO DIRECT STOPPED ROAD USERS TO PROCEED, THE FLAGGER SHALL FACE ROAD USERS WITH THE SLOW PADDLE FACE AIMED TOWARD ROAD USERS IN A STATIONARY POSITION WITH THE ARM EXTENDED HORIZONTALLY AWAY FROM THE BODY. THE FLAGGER SHALL MOTION WITH THE FREE HAND FOR ROAD USERS TO PROCEED.

C. TO ALERT OR SLOW TRAFFIC

TO ALERT OR SLOW TRAFFIC, THE FLAGGER SHALL FACE ROAD USERS WITH THE SLOW PADDLE FACE AIMED TOWARD ROAD USERS IN A STATIONARY POSITION WITH THE ARM EXTENDED HORIZONTALLY AWAY FROM THE BODY. TO FURTHER ALERT OR SLOW TRAFFIC, THE FLAGGER HOLDING THE SLOW PADDLE FACE TOWARD ROAD USERS MAY MOTION UP AND DOWN WITH THE FREE HAND, PALM DOWN.

CODE INFORMATION

1. OCCUPANCY CLASSIFICATION (CSBC 302):

USE GROUP(S): E, A-1, A-2, A-3, A-4, B, S-1

ACCESSORY USE AREAS (CSBC 508.2): A-3 - CONFERANCE ROOMS

MIXED OCCUPANCIES (CSBC 508)

NON-SEPARATED USES (CSBC 508.3): YES

SEPARATED USES (CSBC 508.4): NO

2. CONSTRUCTION TYPE CLASSIFICATION (CSBC 602.0):

MINIMUM TYPE OF CONSTRUCTION REQUIRED: IB

ACTUAL TYPE OF CONSTRUCTION PROVIDED: IB

3. BUILDING HEIGHT & MODIFICATIONS (CSBC 503 & 504):

ALLOWABLE HEIGHT IN STORIES/FEET: 6 / 180'

TABULAR HEIGHT IN STORIES/FEET: 5 / 160'

INCREASE FOR SPRINKLERS IN STORIES/FEET: 1 / 20'

ACTUAL HEIGHT IN STORIES/FEET: 2 / 32'

STORIES ABOVE GRADE: 2

4. ACTUAL BUILDING AREA (CSBC 502.1 & CHAPTER 2):

GROSS BUILDING AREA PER FLOOR:

FIRST FLOOR GROSS BUILDING AREA: 74,184 SF

SECOND FLOOR GROSS BUILDING AREA: 53,104 SF

TOTAL GROSS BUILDING AREA: 127,288 SF

5. BUILDING AREA & MODIFICATIONS (CSBC 503 & 506):

CALCULATION NOT APPLICABLE - UNLIMITED AREA BUILDING

ALLOWABLE AREA (*Aa*) CALCULATION BY OCCUPANCY CLASSIFICATION:

At = TABULAR AREA (CSBC TABLE 506.2)

If = INCREASE FOR FRONTAGE - SEE BELOW (CSBC 506.3): N/A

ALLOWABLE AREA EQUATION 5-1 (CSBC 506.1):

Aa = At + (At x If) + (At x Is)

Aa (N/A) = N/A + (N/A x N/A) + (N/A x N/A) = N/A SF

Aa (N/A) = N/A + (N/A x N/A) + (N/A x N/A) = N/A SF

FRONTAGE INCREASE (*If*) CALCULATIONS (CSBC 506.3):

	NORTH	EAST	SOUTH	WEST
TOTAL PERIMETER:	N/A FT	N/A FT	N/A FT	N/A FT
TOTAL FRONTAGE	N/A FT	N/A FT	N/A FT	N/A FT

TOTAL PERIMETER (*P*): N/A FT

TOTAL FRONTAGE (*F*): N/A FT

FRONTAGE INCREASE EQUATION 5-2 (CSBC 506.3):

If = (F/P - 0.25) W/30

If = (N/A' / N/A' - 0.25) N/A /30) = N/A

FRONTAGE INCREASE - VALUE OF W - EQUATION 5-3 (CSBC 506.2.1):

W = [(L1 x w1) + (L2 x w2) + (L3 x w3)...] / F

W = [(N/A' x N/A') + (N/A' x N/A') + (N/A x N/A)....] / F = N/A FT

7a. CASE 2a - MIXED OCCUPANCIES - NON-SEPARATED (CSBC 508.3): ALLOWABLE BUILDING AREA (CSBC 506.2.2):

CALCULATION NOT APPLICABLE - UNLIMITED AREA BUILDING

ALLOWABLE BUILDING AREA CALCULATION - 'MOST RESTRICTIVE' (CSBC 508.3.2) FOR EACH FLOOR

(OCC. CLASS _ -)

ACTUAL AREA / ALLOWABLE AREA (Aa) ≤ 1

(OCC. CLASS _ -)

N/A SF / N/A SF = N/A - **OK**

MIXED OCCUPANCY TOTAL ALLOWABLE BUILDING AREA DETERMINATION CALCULATIONS (CSBC 506.5) FOR MULTI-STORY BUILDINGS (3 OR MORE STORIES)

CALCULATION NOT APPLICABLE - UNLIMITED AREA BUILDING

(OCC. CLASS _ -)

ACTUAL AREA / ALLOWABLE AREA (Aa) = X

FIRST FLOOR - MIXED OCCUPANCIES:

(OCC. CLASS _ -)

N/A SF / N/A SF = N/A

SECOND FLOOR - MIXED OCCUPANCIES:

(OCC. CLASS _ -)

N/A SF / N/A SF = N/A

THIRD FLOOR - SINGLE OCCUPANCY:

(OCC. CLASS _ -)

N/A SF / N/A SF = N/A

\+

TOTAL OF ALL FLOORS LESS THAN 3: N/A - **OK**

8. FIRE RESISTANCE RATED REQUIREMENTS FOR BUILDING ELEMENTS (CBC TABLE 601):

BUILDING ELEMENT	FIRE SEP. DIST. (FEET)	RATING REQ'D	RATING PROVIDED
STRUCTURAL FRAME, INCLUDING COLUMNS, GIRDERS, TRUSSES		2 HR	2 HR
BEARING WALLS			
EXTERIOR			
NORTH	N/A	2 HR	2 HR @ GYM
EAST	N/A	2 HR	2 HR @ GYM

13. ENTIRE BUILDING SPRINKLERED (CSBC 903.1):

YES

14. THRESHOLD BUILDING CONDITIONS (CSBC 107.7):

YES

15. CODES TO WHICH THIS PROJECT WAS DESIGNED:

2022 STATE OF CONNECTICUT STATE BUILDING CODE - CSBC

- 2021 INTERNATIONAL BUILDING CODE IBC
- 2021 INTERNATIONAL MECHANICAL CODE - IMC
- 2021 INTERNATIONAL PLUMBING CODE - IPC
- 2021 INTERNATIONAL ENERGY CONSERVATION CODE - IECC
- 2020 NFPA 70 NATIONAL ELECTRICAL CODE, of the NATIONAL FIRE PROTECTION ASSOC, INC.
- 2017 ICC/ANSI A117.1 ACCESSIBLE and USABLE BUILDINGS and FACILITIES ANSI
- 2018 AMENDMENTS TO THE CONNECTICUT STATE BUILDING CODE

2008 CONNECTICUT PUBLIC HEALTH CODE - PHC

2010 ADA STANDARDS FOR ACCESSIBLE DESIGN

2017 ICC/ANSI A117.1 ACCESSIBLE and USABLE BUILDINGS and FACILITIES, AS AMENDED BY 2022 CONNECTICUT STAE BUILDING CODE

2022 CONNECTICUT STATE FIRE SAFETY CODE - CSFSC

- 2021 INTERNATIONAL FIRE CODE - IFC
- 2021 AMENDMENTS TO THE CONNECTICUT FIRE SAFETY CODE
- 2018 NFPA 10 - STANDARD FOR PORTABLE FIRE EXTINGUISHERS
- 2019 NFPA 13 - STANDARD FOR THE INSTALLATION OF SPRINKLER SYSTEMS
- 2019 NFPA 72 - NATIONAL FIRE ALARM AND SIGNALING CODE

2022 CONNECTICUT STATE FIRE PREVENTION CODE - CFPC

- 2021 NFPA 1, UNIFORM FIRE CODE

16. EXIT ACCESS:

COMMON PATH OF TRAVEL LIMITATIONS (CSBC 1006.2.1)

ALLOWABLE: 75' (A & E OCC.) PROVIDED: <75'

ALLOWABLE: 100' (B OCC.) PROVIDED: < 100'

EXIT ACCESS TRAVEL DISTANCE LIMITATIONS (CSBC 1017.2)

ALLOWABLE: 250' (A & E OCC.) PROVIDED: < 250'

ALLOWABLE: 300' (B OCC.) PROVIDED: < 300'

MINIMUM CORRIDOR WIDTH (CSBC 1020.3)

ALLOWABLE: 72" (E WHEN OCC. >100) PROVIDED: > 72"

CORRIDOR DEAD END LIMITATION (CSBC 1020.4)

ALLOWABLE: 20' (A OCC.) PROVIDED: < 20'

ALLOWABLE: 50' (B & E OCC.) PROVIDED: < 50'

17. EGRESS CAPACITY OF DOORS (CSBC 1005.1):

DOORS WITH STANDARD HOLLOW METAL FRAMES AND BUTT HINGES

SIZE	CLEAR WIDTH	MAX. OCC. LOAD (CAP = .2"/OCC)
(1) 3'-0"	33.125"	165 OCCUPANTS
(1) 3'-2"	35.125"	175 OCCUPANTS
(1) 3'-4"	37.125"	185 OCCUPANTS
(1) 3'-6"	39.125"	195 OCCUPANTS
(1) 3'-8"	41.125"	205 OCCUPANTS
(1) 3'-10"	43.125"	215 OCCUPANTS
(1) 4'-0"	45.125"	225 OCCUPANTS
(2) 3'-0"	67.125"	337 OCCUPANTS

(2) 3'-7"	81.125"	407 OCCUPANTS
(2) 3'-8"	83.125"	417 OCCUPANTS
(2) 3'-10"	87.125"	437 OCCUPANTS
(2) 4'-0"	91.125"	457 OCCUPANTS

18. INTERIOR FINISHES (CSBC 803.11):

GROUP A-1, A-2, A-3 AND A-4 OCCUPANCY:

VERTICAL EXITS & EXIT PASSAGEWAYS - CLASS "A" OR "B"

EXIT ACCESS CORRIDORS & OTHER EXITS - CLASS "A" OR "B"

ROOMS AND ENCLOSED SPACES - CLASS "A", "B" OR "C"

GROUP E AND B OCCUPANCY:

VERTICAL EXITS & EXIT PASSAGEWAYS - CLASS "A" OR "B"

EXIT ACCESS CORRIDORS & OTHER EXITS - CLASS "A", "B" OR "C"

ROOMS AND ENCLOSED SPACES - CLASS "A", "B" OR "C"

19. HISTORIC BUILDING:

"NO"

20. EGRESS-RELATED CODE INFORMATION:

FLOOR AREA ALLOWANCES PER OCCUPANT (CSBC 1004.5)

CLASSROOM OCCUPANCY - 20 NET

SHOP & VOCATIONAL ROOM OCCUPANCY - 50 NET

BUSINESS/OFFICE OCCUPANCY - 150 GROSS

CAFETERIA OCCUPANCY - 15 NET

GYMNASIUM OCCUPANCY - 5 NET

MEDIA CENTER READING AREAS - 50 NET

MEDIA CENTER STACKS AREA - 100 GROSS

EXERCISE ROOMS - 50 GROSS

KITCHEN OCCUPANCY - 200 GROSS

STORAGE & MECHANICAL OCCUPANCY - 300 GROSS

EGRESS WIDTH PER OCCUPANT SERVED

EGRESS - STAIRS = .3" PER PERSON (CSBC 1005.3.1)

EGRESS - CORRIDORS, RAMPS AND DOORS = .2" PER PERSON (CSBC 1005.3.2)

THRESHOLD BUILDING CRITERIA

NO.	THRESHOLD LIMITS	YES	NO
1	HAVING FOUR STORIES		X
2	60 FEET IN HEIGHT		X
3	WITH A CLEAR SPAN OF 150 FEET IN WIDTH		X
4	CONTAINING 150,000 SQUARE FEET OF TOTAL GROSS FLOOR AREA		X
5	WITH AN OCCUPANCY OF 1,000 PERSONS	X	

DEFERRED SUBMITTALS SUMMARY (CSBC 107.3.4.1) - DELEGATED DESIGN

1E OVERALL FIRST FLOOR PLAN
1/16" = 1'-0"

FIRE SAFETY PLAN GENERAL NOTES

1. FIRE BARRIERS, FIRE WALLS, FIRE PARTITIONS, SMOKE BARRIERS AND SMOKE PARTITIONS SHALL BE LABELED IN ACCESSIBLE CONCEALED FLOOR, FLOOR-CEILING AND ATTIC SPACES WITH PAINTED SIGNAGE.

FIRE SAFETY LEGEND

REFER TO FLOOR PLANS AND WALL PARTITION TYPES (DRAWING A600) FOR SPECIFIC PARTITION DETAILS AND LOCATIONS

- ROOM OCCUPANT LOAD
  - 500 SF / 50 SF P = 10P — AREA IN SQ. FT. / OCCUPANT LOAD FACTOR (IBC TABLE 1004.1.2)
- EXIT CAPACITY
  - 7 / 165 — ACTUAL LOAD / EXIT CAPACITY
- 15 → DIRECTION OF TRAVEL WITH ACCUMULATED OCCUPANT LOAD
- ×-146'- → MAXIMUM TRAVEL DISTANCE FROM FURTHEST POINT
- AREA OF REFUGE
- NON ACCESSIBLE EXIT
- ACCESSIBLE EXIT
- RE — REQUIRED EXIT FOR BALANCED EGRESS CAPACITY PER 1005.1.1
- FLUSH CONDITION

FIRE RATING DESIGNATIONS:

SECOND FLOOR FIRE SAFETY PLAN

Date: 07/08/2024
Scale: 1/16" = 1'-0"
Proj. Number: 22367.00
Drawing Number: GC02

Autodesk Docs://22367.00 - Greenwich Central Middle School/A_22367_GREENWICH_CENTRAL_MS_R22.rvt
9/25/2024 11:05:49 AM

1E 1 - FIRST FLOOR FIRE PROOFING PLAN
1/16" = 1'-0"

NOTE - THIS PLAN COVERS:
- ALL THE COLUMNS THAT SPAN BETWEEN THE LOWER AND FIRST FLOOR LEVELS

FIRE PROOFING NOTES

1. REFER TO CODE INFORMATION SHEET AND FIRE SAFETY PLANS FOR ADDITIONAL INFORMATION AND FIRE RATINGS.

2. FIRE PROOFING (SFRM) AND ARCHITECTURAL TREATMENT PLANS ARE INTENDED TO SHOW GENERAL SCOPE OF WORK AREAS TO RECEIVE FIRE PROOFING AND OTHER STEEL TREATMENT AS INDICATED IN LEGEND. PLANS ARE DIAGRAMMATIC AND NOT TO BE SCALED.

3. COLUMNS TO RECEIVE SFRM AS INDICATED ON PLANS. FIRE PROTECTION TO BE CONTINUOUS ALONG ENTIRE LENGTH OF COLUMN. UL DESIGN X772, UL DESIGN X625.

4. ALL FLOOR BEAMS TO BE PROTECTED WITH SFRM TYPE "1" PER FIRE PROOFING LEGEND. ALL OTHER FLOOR AND ROOF FRAMING (BEAMS, GIRDERS, JOISTS, ETC.) TO RECEIVE SFRM AS INDICATED ON PLANS. UL DESIGN X772

5. FLOOR SLABS SHALL BE 2 HOUR RATED (UL DESIGN D907) - 5-1/4" LIGHTWEIGHT CONCRETE SLAB. NO SFRM AT UNDERSIDE OF DECK. BEAMS SHALL HAVE SFRM AS INDICATED ON PLANS.

6. ROOF ASSEMBLIES SHALL BE 1 HOUR RATED PER UL DESIGN P719. (UNLESS NOTED OTHERWISE) AS INDICATED ON PLANS. UNDERSIDE OF ALL METAL ROOF DECK AND SUPPORTING BEAMS SHALL BE PROTECTED WITH SFRM AS INDICATED ON PLANS. ROOF FRAMING OVER 20'-0" FROM FINISHED FLOOR BELOW DOES NOT NEED TO BE PROTECTED.

7. STAIR SUPPORT INCLUDING HANGERS, CLIPS, POSTS, ETC THAT MAY BE PROVIDED BY STAIR MFR SHALL BE FIREPROOFED TO ACHIEVE 2 HOUR RATING. PROVIDE SFRM FIREPROOFING FOR ITEMS THAT ARE CONCEALED AND INTUMESCENT COATING FOR ANY EXPOSED ITEMS.

8. STEEL SUPPORTING EXTERIOR CANOPIES (THAT CONNECT TO BUILDING) SHALL BE 1 HOUR RATED WITH INTUMESCENT COATING.

9. ALL EXPOSED STEEL LOOSE LINTELS AND HUNG STEEL LINTELS TO BE GALVANIZED, SHOP PRIMED AND FIELD PAINTED.

10. REFER TO SHEET A600 FOR SPECIFIC UL-TESTED PARTITION ASSEMBLIES

11. REFER TO FINISH PRODUCT LIST FOR FINISH COATINGS FOR FIREPROOFING.

HAZARDOUS BUILDING MATERIALS ABATEMENT PLAN - FIRST FLOOR

GENERAL NOTES:

1. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR IS RESPONSIBLE FOR THE VERIFICATION OF ALL EXISTING CONDITIONS, QUANTITIES, AND FOR NOTIFYING THE CONSULTANT OF ANY DISCREPANCIES PRIOR TO FINALIZING BID.
2. ABATEMENT AND REMEDIATION IN ALL AREAS WILL START WITH SELECTIVE DEMOLITION AND REMOVING MATERIALS AT THE CEILING LEVEL AND END WITH THE MATERIALS AT THE FLOORING LEVEL. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR WILL COORDINATE AND PERFORM ENOUGH SELECTIVE DEMOLITION/DEMOLITION TO IDENTIFY/LOCATE AND ACCESS ALL MATERIALS TO BE REMOVED/ABATED/REMEDIATED. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL OPEN UP WALLS, AND CEILINGS TO CHECK FOR HIDDEN PIPING, DUCT, ETC. AS WELL AS DEMOLISHING MILLWORK, CABINETRY, ALL NON-MOVEABLE OBJECTS, LAYER(S) OF FLOORING, WALLS, MATERIALS ATTACHED TO WALLS, ETC. TO LOCATE KNOWN AND POTENTIAL ASBESTOS AND ASSUMED PCB CONTAINING MATERIALS. INTERIOR AND EXTERIOR SELECTIVE DEMOLITION/DEMOLITION AND PROBING MUST OCCUR THROUGHOUT THE WORK AREAS BEFORE CONTAINMENT CONSTRUCTION AND ABATEMENT CAN START. ASSUME THE ABATEMENT WORK WILL INCLUDE FULL CONTAINMENTS THROUGHOUT THE ENTIRE INTERIOR OF THE 1957 ORIGINAL BUILDING. EXTERIOR ABATEMENT/REMEDIATION WILL BE EITHER PERFORMED IN CONTAINMENT (INTERIOR) OR THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR WILL INSTALL POLYETHYLENE SHEETING ON THE INTERIOR OF THE BUILDING AND REMOVE MATERIALS FROM THE EXTERIOR. ALL GROUND SURFACES MUST ALSO BE PROTECTED WITH PLYWOOD AND TWO LAYERS OF 10-MIL REINFORCED POLYETHYLENE SHEETING. THIS GROUND PROTECTION MUST EXTEND AT LEAST 20 FEET AWAY FROM THE BUILDING FOUNDATION (OR FARTHER - ENOUGH TO PREVENT BUILDING MATERIALS FROM TOUCHING UNPROTECTED GROUND AND FLOOR SURFACES). THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR WILL PAY FOR ALL CONTAMINATION/REMEDIATION/ABATEMENT OF INTERIOR AND EXTERIOR SURFACES, INCLUDING GROUND SURFACES IF LANGAN DEEMS THEY HAVE CONTAMINATED THESE SURFACES. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR WILL SUPPLY LIFTS, SCAFFOLDING, STAGING, ETC. TO LANGAN IN AREAS OF REMEDIATION/ABATEMENT UNTIL ALL VISUAL INSPECTIONS HAVE PASSED. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR WILL PROVIDE TEMPORARY SHORING IN AREAS THAT REQUIRE IT.
3. MATERIALS FOUND TO CONTAIN LESS THAN ONE PERCENT ASBESTOS AND DISTURBANCE OR REMOVAL OF THESE MATERIALS IS PART OF THE BASE BID WORK. THESE MATERIALS MUST BE REMOVED USING PROPER ENGINEERING CONTROLS TO PREVENT AIRBORNE DUST AND BE PROPERLY DISPOSED OF.
4. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR/DEMOLITION CONTRACTOR SHALL ONLY USE HEAVY EQUIPMENT OPERATORS THAT HAVE PROPER ASBESTOS AND/OR HAZWOPER TRAINING WHEN DISTURBING/REMOVING/MOVING AND LOADING ASBESTOS, LEAD, AND PCB CONTAINING MATERIALS. ACCEPTABLE TRAINING FOR ASBESTOS CAN BE 32 OR 40 HOUR ASBESTOS WORKER/SUPERVISOR WITH ANNUAL REFRESHER TRAINING. 40 HOUR HAZWOPER TRAINING AND ANNUAL REFRESHER TRAINING IS REQUIRED FOR OPERATORS HANDLING LEAD AND/OR PCB CONTAINING/CONTAMINATED MATERIALS. ALL OPERATORS MUST ALSO HAVE CURRENT MEDICAL, FIT TEST DATA, AND WEAR RESPIRATORS DURING WORK. ALL CONTRACTORS MUST COMPLY WITH ALL APPLICABLE OSHA LEAD REGULATIONS AND THIS WORK (AND ALL CORRESPONDING OSHA REGULATION COMPLIANCE) IS INCLUDED IN THE BASE BID.
5. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR, THEIR SUBCONTRACTORS, WASTE TRANSPORTERS MUST SUBMIT LANDFILL INFORMATION TO LANGAN AND THE OWNER PRIOR TO THE SHIPMENT OF ANY WASTE. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR(S)/HAULER(S) CANNOT SHIP WASTE UNTIL LANGAN AND THE OWNER HAVE APPROVED THE LANDFILL THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR/HAULER IS/ARE PROPOSING TO SHIP THE WASTE TO. ALL PCB TCLP SAMPLING OF THE WASTE MUST BE PERFORMED BY THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR (IF TESTING IS APPROVED BY LANGAN AND THE OWNER) WITH LANGAN PRESENT AND THE RESULTS MADE AVAILABLE TO LANGAN AND THE OWNER PRIOR TO WASTE SHIPMENT. LANGAN MAY PERFORM ADDITIONAL TCLP SAMPLING TO CONFIRM THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR'S RESULTS. LANGAN WILL PERFORM THE LEAD TCLP SAMPLING FOR CLASSIFICATION OF THE DEMOLITION AND ABATEMENT WASTE. PLEASE SEE THE ASBESTOS, PCB, AND LEAD-BASED PAINT SPECIFICATIONS FOR ADDITIONAL REQUIREMENTS AND CONTRACTORS LIABILITY.
6. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR, THEIR SUBCONTRACTORS, WASTE TRANSPORTERS AND/OR LANDFILL(S) DO NOT HAVE PERMISSION TO TAKE/ANALYZE BUILDING MATERIALS FOR PCB CONTENT/ CONCENTRATIONS WITHOUT WRITTEN PERMISSION FROM THE BUILDING OWNER PRIOR TO SUCH SAMPLING. SHOULD THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR OR OTHER PARTIES LISTED ABOVE TAKE/ANALYZE PCB SAMPLES WITHOUT THE OWNER'S PERMISSION AND PCB'S ARE FOUND TO BE >1 PPM, THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR WILL BE RESPONSIBLE FOR ALL COSTS ASSOCIATED WITH THE ABATEMENT/ REMEDIATION/REPLACEMENT OF ALL THE INTERIOR/EXTERIOR BUILDING MATERIALS AND ADJACENT SURFACES, INCLUDING SOIL/ASPHALT/CONCRETE/ETC. AS WELL AS ALL COSTS ASSOCIATED WITH PROJECT DELAYS, ATTORNEY FEES FOR ALL PARTIES AFFECTED AND ALL COSTS RESULTING FROM CT DEEP/EPA REQUIREMENTS THAT MAY OCCUR AS A RESULT.
7. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR WILL BE RESPONSIBLE FOR HIRING AN ENGINEER AND OTHER APPROPRIATE PERSONNEL TO ENSURE THAT ALL REQUIRED SELECTIVE DEMOLITION AND DEMOLITION ACTIVITIES ARE SAFE TO PERFORM FOR ALL PERSONNEL ON SITE. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR(S) WILL BE FINANCIALLY RESPONSIBLE FOR ANY DAMAGE THAT MAY OCCUR TO THE SITE, ON-SITE PERSONNEL, FINES, PENALTIES, ETC. THEY WILL ALSO BE RESPONSIBLE FOR PAYING/REIMBURSING ALL LEGAL FEES/COSTS FOR ALL PARTIES INVOLVED WITH THE PROJECT SHOULD SELECTIVE DEMOLITION OR DEMOLITION ACTIVITIES CAUSE INJURY OR DEATH TO ANY PERSONS ON SITE.
8. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR IS RESPONSIBLE FOR PROVIDING TEMPORARY WATER, POWER, AND HEAT AS NEEDED AT THE SITE (24 HOURS A DAY). TEMPORARY LIGHTING WITHIN THE WORK AREAS MUST BE CONNECTED TO GROUND FAULT CIRCUIT INTERRUPTER (GFCI) POWER PANELS INSTALLED BY A STATE OF CONNECTICUT LICENSED ELECTRICIAN AND LOCATED OUTSIDE OF THE WORK AREAS. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL BE RESPONSIBLE FOR PAYING FOR THE USE OF POWER AND WATER UNLESS THE OWNER AGREES IN WRITING TO PAY FOR THESE UTILITIES. IT SHALL ALSO BE THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR'S RESPONSIBILITY TO PROVIDE ALL FIXED AND TEMPORARY CONNECTIONS AND HOOK-UPS AS WELL AS OBTAINING PERMITS AND PAYING ALL FEES FOR MAKING SUCH SERVICES AVAILABLE FOR HIS WORK AS IS NECESSARY. ALL POWER AND WATER MUST BE SUPPLIED 24 HOURS A DAY THROUGHOUT THE ABATEMENT PROJECT. CT DPH WILL BE NOTIFIED IMMEDIATELY IF ACTIVE CONTAINMENTS DO NOT HAVE SUFFICIENT NEGATIVE PRESSURE THROUGHOUT THE ABATEMENT PROCESS UNTIL ACCEPTABLE REOCCUPANCY AIR RESULTS ARE RECEIVED. THE USE OF PORTABLE GENERATORS WILL REQUIRE 24 HOURS A DAY, 7 DAYS A WEEK CONTINUOUS OPERATION IF NEGATIVE AIR MACHINES IN CONTAINMENTS ARE POWERED BY THEM. THIS CONTINUOUS OPERATION MUST REMAIN IN PLACE FROM THE TIME THE PRE-ABATEMENT VISUAL IS COMPLETED UP UNTIL CLEARANCE RE-OCCUPANCY SAMPLING RESULTS HAVE PASSED. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR WILL PAY THE OWNER A $2,500 PENALTY SHOULD THE POWER BE FOUND TO NOT BE RUNNING THE NEGATIVE AIR MACHINES IN ACTIVE ABATEMENT CONTAINMENTS. THIS PENALTY WILL APPLY DAILY AND THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR IS ALSO RESPONSIBLE FOR PAYING ALL CT DPH FINES THAT MAY BE IMPOSED ON THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR AND OWNER.
9. THE WORK IN THE TUNNEL/CRAWL/MECHANICAL DUCT SPACES IS NOT SHOWN ON DRAWINGS. VERIFY WORK PRIOR TO BID.

HAZARDOUS BUILDING MATERIALS ABATEMENT NOTES (SEE ASBESTOS ABATEMENT SPECIFICATION AND PCB >50 PPM SPECIFICATIONS FOR ADDITIONAL INFORMATION NOT INCLUDED ON DRAWINGS)

1. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS CONTAINING FLOOR TILES (MULTIPLE LAYERS OF MATERIALS) AS ACM.
2. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS CONTAINING PIPE, PIPE FITTING, PIPE HANGER AND ROOF DRAIN INSULATION AS ACM.
3. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS CONTAINING SINK UNDERCOATING AS ACM.
4. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS CONTAINING CERAMIC FLOOR AND COVE BASE MUD BED AND ADHESIVE/BACKING AS ACM.
5. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS CONTAINING WOOD WALL PANEL ADHESIVE AS ACM.
6. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS CONTAINING BULLETIN BOARD, "CHALK" BOARD AND OTHER WALL ADHESIVES/GLUE DAUBS AS ACM.
7. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS AND ASSUMED PCB >50 PPM CONTAINING CEILING/DECK CAULKING COMPOUND MATERIALS AS ACM AND PCB BULK PRODUCT WASTE.
8. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS AND ASSUMED PCB >50 PPM CONTAINING INTERIOR WINDOW GLAZING COMPOUNDS AS ACM AND PCB BULK PRODUCT WASTE.
9. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS AND ASSUMED PCB >50 PPM CONTAINING INTERIOR WALL/WALL AND WALL/COLUMN CAULKING COMPOUNDS AS ACM AND PCB BULK PRODUCT WASTE.
10. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASSUMED PCB >50 PPM CONTAINING INTERIOR/EXTERIOR DOOR WINDOW GLAZING COMPOUNDS AS PCB BULK PRODUCT WASTE.
11. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS AND ASSUMED PCB >50 PPM CONTAINING INTERIOR/EXTERIOR DOOR/WINDOW/DOOR WINDOW/WALL/COLUMN CAULKING AND GLAZING COMPOUNDS AS ACM AND PCB BULK PRODUCT WASTE.
12. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS AND ASSUMED PCB >50 PPM CONTAINING INTERIOR/EXTERIOR VENT CAULKING COMPOUNDS AS ACM AND PCB BULK PRODUCT WASTE.
13. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS AND ASSUMED PCB >50 PPM CONTAINING INTERIOR/EXTERIOR DOOR/WINDOW/WALL/COLUMN CAULKING AND GLAZING COMPOUNDS AS ACM AND PCB BULK PRODUCT WASTE.
14. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS AND ASSUMED PCB >50 PPM CONTAINING INTERIOR/EXTERIOR WINDOW/WALL/COLUMN/WINDOW WALLS/DOOR CAULKING AND GLAZING COMPOUNDS AS ACM AND PCB BULK PRODUCT WASTE.
15. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS AND ASSUMED PCB >50 PPM CONTAINING EXTERIOR WALL/WALL EXPANSION AND COLUMN CAULKING COMPOUNDS AS ACM AND PCB BULK PRODUCT WASTE.
16. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS CONTAINING ROOF PENETRATION FLASHING MATERIALS AS ACM.

ADD ALTERNATE #10
THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF PCB >50 PPM CONTAINING PAINT/PAINTED MATERIALS AS PCB BULK PRODUCT WASTE.

ADD ALTERNATE #11
THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF PCB <50 PPM CONTAINING PAINT/PAINTED MATERIALS AS PCB CTDEEP REGULATED WASTE.

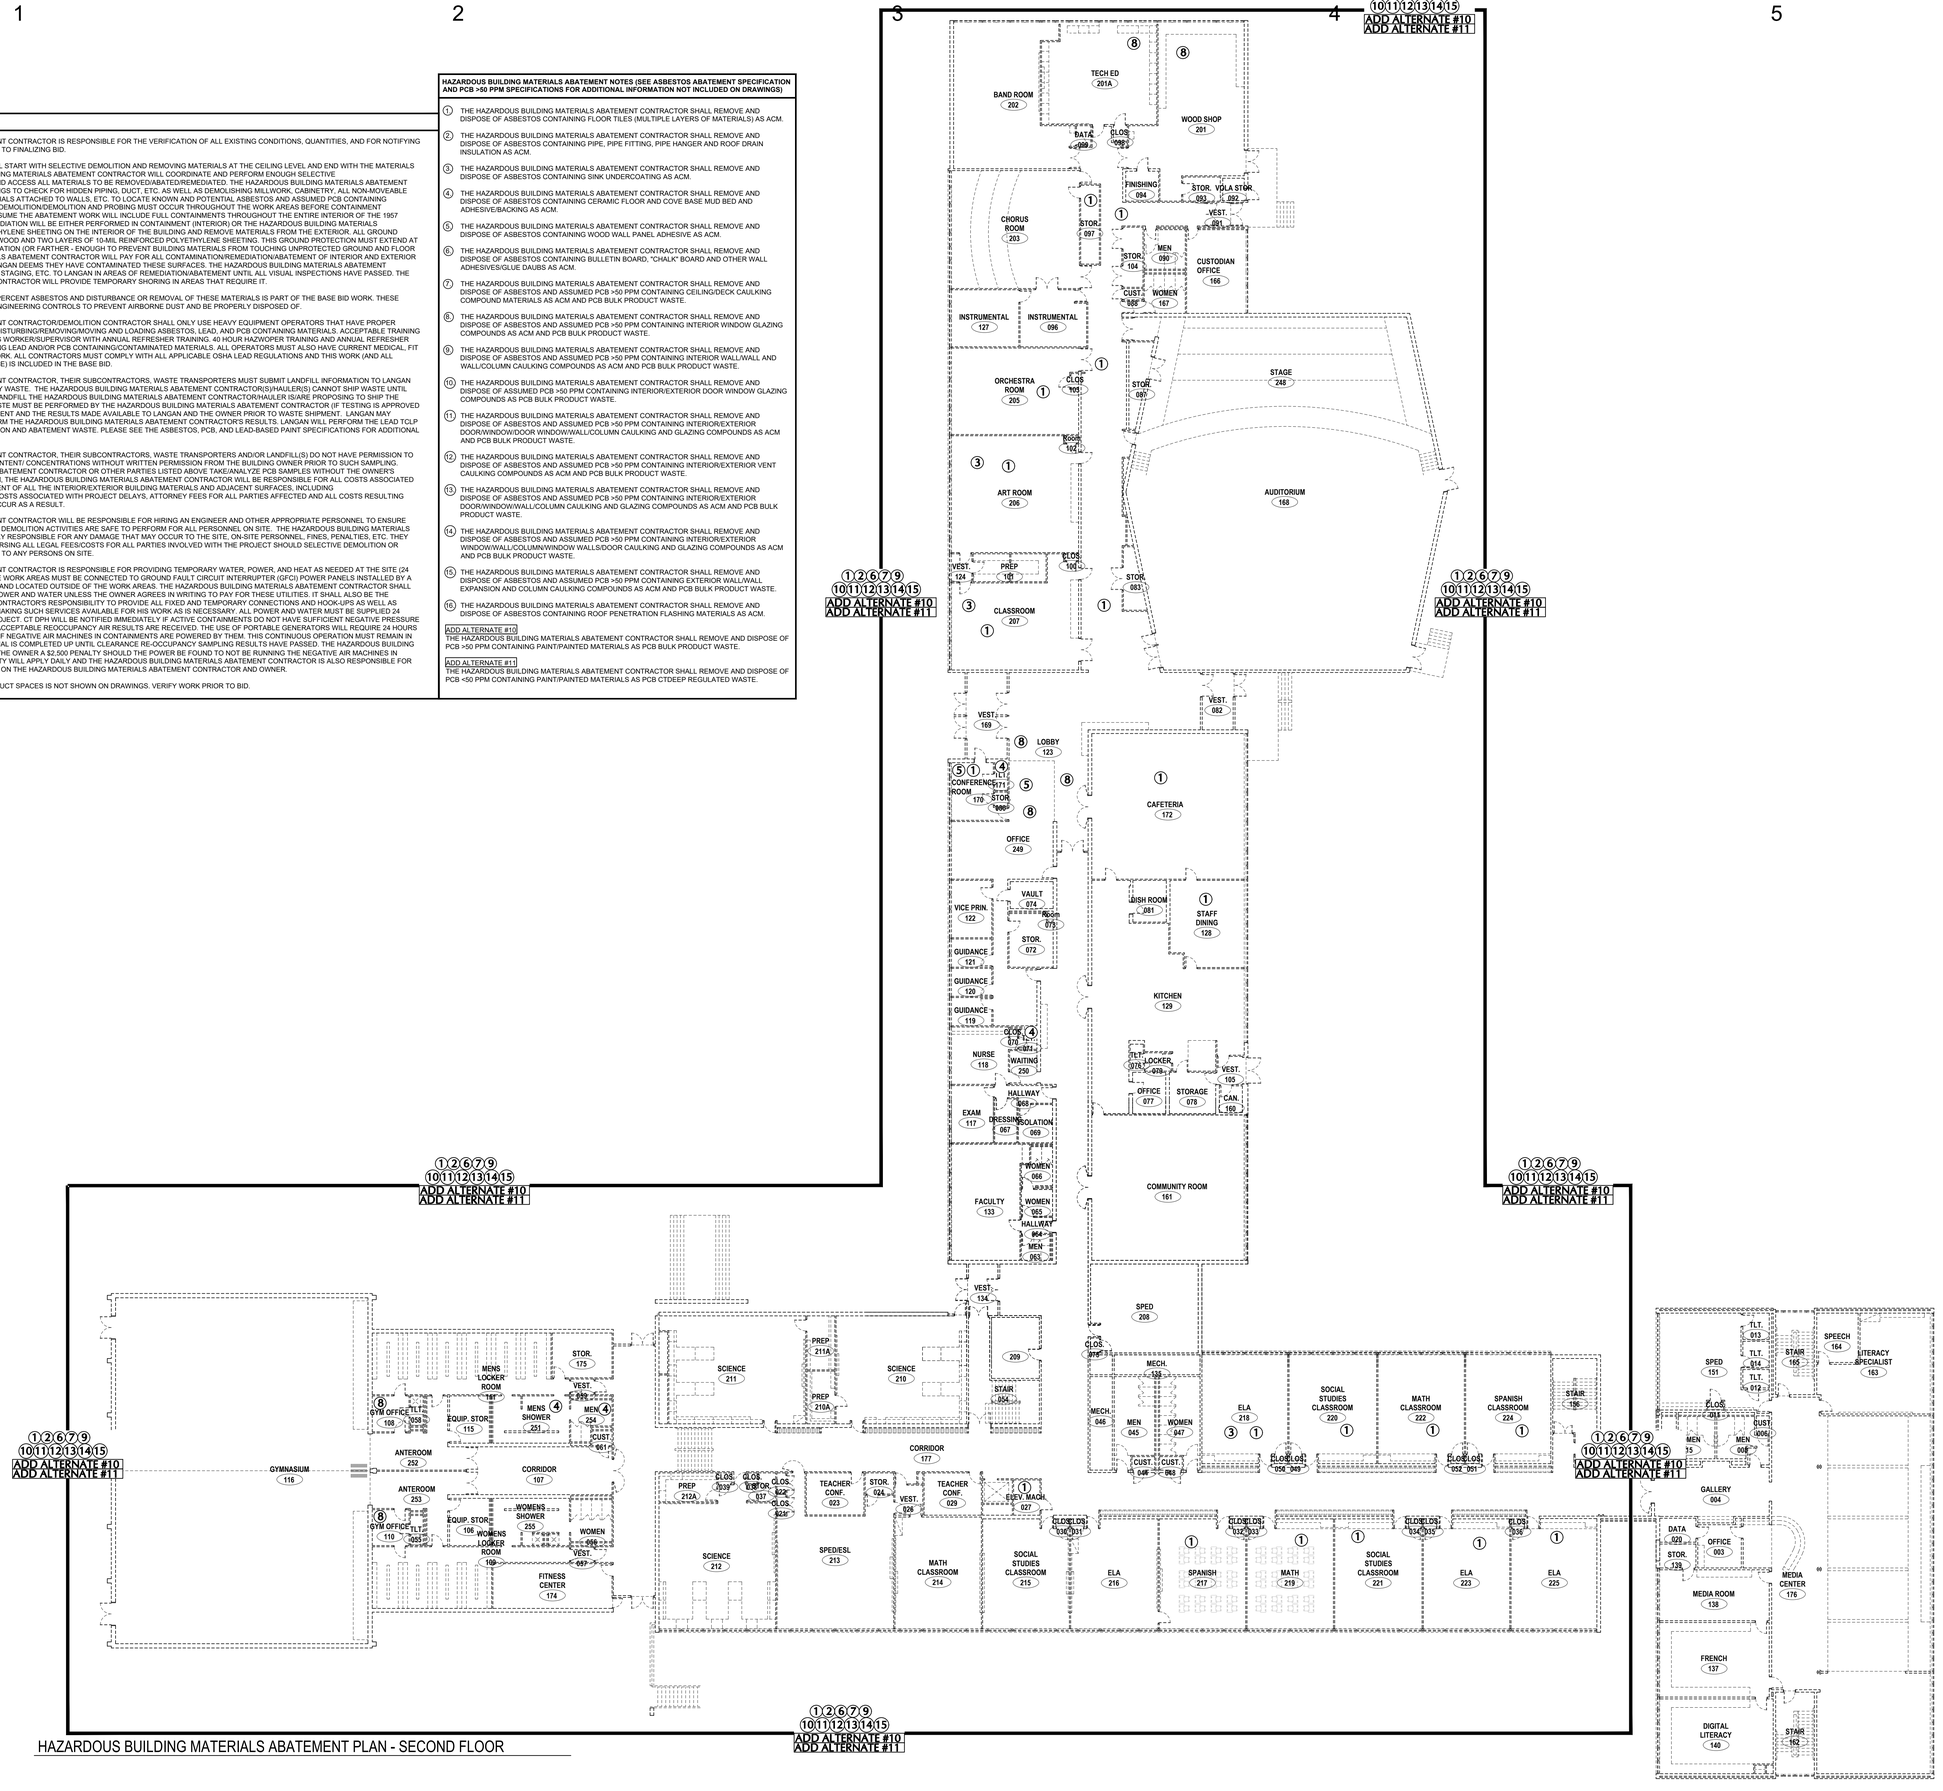
GENERAL NOTES:



1. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR IS RESPONSIBLE FOR THE VERIFICATION OF ALL EXISTING CONDITIONS, QUANTITIES, AND FOR NOTIFYING THE CONSULTANT OF ANY DISCREPANCIES PRIOR TO FINALIZING BID.
2. ABATEMENT AND REMEDIATION IN ALL AREAS WILL START WITH SELECTIVE DEMOLITION AND REMOVING MATERIALS AT THE CEILING LEVEL AND END WITH THE MATERIALS AT THE FLOORING LEVEL. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR WILL COORDINATE AND PERFORM ENOUGH SELECTIVE DEMOLITION/DEMOLITION TO IDENTIFY/LOCATE AND ACCESS ALL MATERIALS TO BE REMOVED/ABATED/REMEDIATED. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL OPEN UP WALLS, AND CEILINGS TO CHECK FOR HIDDEN PIPING, DUCT, ETC. AS WELL AS DEMOLISHING MILLWORK, CABINETRY, ALL NON-MOVEABLE OBJECTS, LAYER(S) OF FLOORING, WALLS, MATERIALS ATTACHED TO WALLS, ETC. TO LOCATE KNOWN AND POTENTIAL ASBESTOS AND ASSUMED PCB CONTAINING MATERIALS. INTERIOR AND EXTERIOR SELECTIVE DEMOLITION/DEMOLITION AND PROBING MUST OCCUR THROUGHOUT THE WORK AREAS BEFORE CONTAINMENT CONSTRUCTION AND ABATEMENT CAN START. ASSUME THE ABATEMENT WORK WILL INCLUDE FULL CONTAINMENTS THROUGHOUT THE ENTIRE INTERIOR OF THE 1957 ORIGINAL BUILDING. EXTERIOR ABATEMENT/REMEDIATION WILL BE EITHER PERFORMED IN CONTAINMENT (INTERIOR) OR THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR WILL INSTALL POLYETHYLENE SHEETING ON THE INTERIOR OF THE BUILDING AND REMOVE MATERIALS FROM THE EXTERIOR. ALL GROUND SURFACES MUST ALSO BE PROTECTED WITH PLYWOOD AND TWO LAYERS OF 10-MIL REINFORCED POLYETHYLENE SHEETING. THIS GROUND PROTECTION MUST EXTEND AT LEAST 20 FEET AWAY FROM THE BUILDING FOUNDATION (OR FARTHER - ENOUGH TO PREVENT BUILDING MATERIALS FROM TOUCHING UNPROTECTED GROUND AND FLOOR SURFACES). THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR WILL PAY FOR ALL CONTAMINATION/REMEDIATION/ABATEMENT OF INTERIOR AND EXTERIOR SURFACES, INCLUDING GROUND SURFACES IF LANGAN DEEMS THEY HAVE CONTAMINATED THESE SURFACES. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR WILL SUPPLY LIFTS, SCAFFOLDING, STAGING, ETC. TO LANGAN IN AREAS OF REMEDIATION/ABATEMENT UNTIL ALL VISUAL INSPECTIONS HAVE PASSED. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR WILL PROVIDE TEMPORARY SHORING IN AREAS THAT REQUIRE IT.
3. MATERIALS FOUND TO CONTAIN LESS THAN ONE PERCENT ASBESTOS AND DISTURBANCE OR REMOVAL OF THESE MATERIALS IS PART OF THE BASE BID WORK. THESE MATERIALS MUST BE REMOVED USING PROPER ENGINEERING CONTROLS TO PREVENT AIRBORNE DUST AND BE PROPERLY DISPOSED OF.
4. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR/DEMOLITION CONTRACTOR SHALL ONLY USE HEAVY EQUIPMENT OPERATORS THAT HAVE PROPER ASBESTOS AND/OR HAZWOPER TRAINING WHEN DISTURBING/REMOVING/MOVING AND LOADING ASBESTOS, LEAD, AND PCB CONTAINING MATERIALS. ACCEPTABLE TRAINING FOR ASBESTOS CAN BE 32 OR 40 HOUR ASBESTOS WORKER/SUPERVISOR WITH ANNUAL REFRESHER TRAINING. 40 HOUR HAZWOPER TRAINING AND ANNUAL REFRESHER TRAINING IS REQUIRED FOR OPERATORS HANDLING LEAD AND/OR PCB CONTAINING/CONTAMINATED MATERIALS. ALL OPERATORS MUST ALSO HAVE CURRENT MEDICAL, FIT TEST DATA, AND WEAR RESPIRATORS DURING WORK. ALL CONTRACTORS MUST COMPLY WITH ALL APPLICABLE OSHA LEAD REGULATIONS AND THIS WORK (AND ALL CORRESPONDING OSHA REGULATION COMPLIANCE) IS INCLUDED IN THE BASE BID.
5. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR, THEIR SUBCONTRACTORS, WASTE TRANSPORTERS MUST SUBMIT LANDFILL INFORMATION TO LANGAN AND THE OWNER PRIOR TO THE SHIPMENT OF ANY WASTE. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR(S)/HAULER(S) CANNOT SHIP WASTE UNTIL LANGAN AND THE OWNER HAVE APPROVED THE LANDFILL THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR/HAULER IS/ARE PROPOSING TO SHIP THE WASTE TO. ALL PCB TCLP SAMPLING OF THE WASTE MUST BE PERFORMED BY THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR (IF TESTING IS APPROVED BY LANGAN AND THE OWNER) WITH LANGAN PRESENT AND THE RESULTS MADE AVAILABLE TO LANGAN AND THE OWNER PRIOR TO WASTE SHIPMENT. LANGAN MAY PERFORM ADDITIONAL TCLP SAMPLING TO CONFIRM THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR'S RESULTS. LANGAN WILL PERFORM THE LEAD TCLP SAMPLING FOR CLASSIFICATION OF THE DEMOLITION AND ABATEMENT WASTE. PLEASE SEE THE ASBESTOS, PCB, AND LEAD-BASED PAINT SPECIFICATIONS FOR ADDITIONAL REQUIREMENTS AND CONTRACTORS LIABILITY.
6. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR, THEIR SUBCONTRACTORS, WASTE TRANSPORTERS AND/OR LANDFILL(S) DO NOT HAVE PERMISSION TO TAKE/ANALYZE BUILDING MATERIALS FOR PCB CONTENT/ CONCENTRATIONS WITHOUT WRITTEN PERMISSION FROM THE BUILDING OWNER PRIOR TO SUCH SAMPLING. SHOULD THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR OR OTHER PARTIES LISTED ABOVE TAKE/ANALYZE PCB SAMPLES WITHOUT THE OWNER'S PERMISSION AND PCB'S ARE FOUND TO BE >1 PPM, THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR WILL BE RESPONSIBLE FOR ALL COSTS ASSOCIATED WITH THE ABATEMENT/ REMEDIATION/REPLACEMENT OF ALL THE INTERIOR/EXTERIOR BUILDING MATERIALS AND ADJACENT SURFACES, INCLUDING SOIL/ASPHALT/CONCRETE/ETC. AS WELL AS ALL COSTS ASSOCIATED WITH PROJECT DELAYS, ATTORNEY FEES FOR ALL PARTIES AFFECTED AND ALL COSTS RESULTING FROM CT DEEP/EPA REQUIREMENTS THAT MAY OCCUR AS A RESULT.
7. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR WILL BE RESPONSIBLE FOR HIRING AN ENGINEER AND OTHER APPROPRIATE PERSONNEL TO ENSURE THAT ALL REQUIRED SELECTIVE DEMOLITION AND DEMOLITION ACTIVITIES ARE SAFE TO PERFORM FOR ALL PERSONNEL ON SITE. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR(S) WILL BE FINANCIALLY RESPONSIBLE FOR ANY DAMAGE THAT MAY OCCUR TO THE SITE, ON-SITE PERSONNEL, FINES, PENALTIES, ETC. THEY WILL ALSO BE RESPONSIBLE FOR PAYING/REIMBURSING ALL LEGAL FEES/COSTS FOR ALL PARTIES INVOLVED WITH THE PROJECT SHOULD SELECTIVE DEMOLITION OR DEMOLITION ACTIVITIES CAUSE INJURY OR DEATH TO ANY PERSONS ON SITE.
8. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR IS RESPONSIBLE FOR PROVIDING TEMPORARY WATER, POWER, AND HEAT AS NEEDED AT THE SITE (24 HOURS A DAY). TEMPORARY LIGHTING WITHIN THE WORK AREAS MUST BE CONNECTED TO GROUND FAULT CIRCUIT INTERRUPTER (GFCI) POWER PANELS INSTALLED BY A STATE OF CONNECTICUT LICENSED ELECTRICIAN AND LOCATED OUTSIDE OF THE WORK AREAS. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL BE RESPONSIBLE FOR PAYING FOR THE USE OF POWER AND WATER UNLESS THE OWNER AGREES IN WRITING TO PAY FOR THESE UTILITIES. IT SHALL ALSO BE THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR'S RESPONSIBILITY TO PROVIDE ALL FIXED AND TEMPORARY CONNECTIONS AND HOOK-UPS AS WELL AS OBTAINING PERMITS AND PAYING ALL FEES FOR MAKING SUCH SERVICES AVAILABLE FOR HIS WORK AS IS NECESSARY. ALL POWER AND WATER MUST BE SUPPLIED 24 HOURS A DAY THROUGHOUT THE ABATEMENT PROJECT. CT DPH WILL BE NOTIFIED IMMEDIATELY IF ACTIVE CONTAINMENTS DO NOT HAVE SUFFICIENT NEGATIVE PRESSURE THROUGHOUT THE ABATEMENT PROCESS UNTIL ACCEPTABLE REOCCUPANCY AIR RESULTS ARE RECEIVED. THE USE OF PORTABLE GENERATORS WILL REQUIRE 24 HOURS A DAY, 7 DAYS A WEEK CONTINUOUS OPERATION IF NEGATIVE AIR MACHINES IN CONTAINMENTS ARE POWERED BY THEM. THIS CONTINUOUS OPERATION MUST REMAIN IN PLACE FROM THE TIME THE PRE-ABATEMENT VISUAL IS COMPLETED UP UNTIL CLEARANCE RE-OCCUPANCY SAMPLING RESULTS HAVE PASSED. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR WILL PAY THE OWNER A $2,500 PENALTY SHOULD THE POWER BE FOUND TO NOT BE RUNNING THE NEGATIVE AIR MACHINES IN ACTIVE ABATEMENT CONTAINMENTS. THIS PENALTY WILL APPLY DAILY AND THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR IS ALSO RESPONSIBLE FOR PAYING ALL CT DPH FINES THAT MAY BE IMPOSED ON THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR AND OWNER.
9. THE WORK IN THE TUNNEL/CRAWL/MECHANICAL DUCT SPACES IS NOT SHOWN ON DRAWINGS. VERIFY WORK PRIOR TO BID.

HAZARDOUS BUILDING MATERIALS ABATEMENT NOTES (SEE ASBESTOS ABATEMENT SPECIFICATION AND PCB >50 PPM SPECIFICATIONS FOR ADDITIONAL INFORMATION NOT INCLUDED ON DRAWINGS)

1. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS CONTAINING FLOOR TILES (MULTIPLE LAYERS OF MATERIALS) AS ACM.
2. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS CONTAINING PIPE, PIPE FITTING, PIPE HANGER AND ROOF DRAIN INSULATION AS ACM.
3. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS CONTAINING SINK UNDERCOATING AS ACM.
4. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS CONTAINING CERAMIC FLOOR AND COVE BASE MUD BED AND ADHESIVE/BACKING AS ACM.
5. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS CONTAINING WOOD WALL PANEL ADHESIVE AS ACM.
6. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS CONTAINING BULLETIN BOARD, "CHALK" BOARD AND OTHER WALL ADHESIVES/GLUE DAUBS AS ACM.
7. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS AND ASSUMED PCB >50 PPM CONTAINING CEILING/DECK CAULKING COMPOUND MATERIALS AS ACM AND PCB BULK PRODUCT WASTE.
8. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS AND ASSUMED PCB >50 PPM CONTAINING INTERIOR WINDOW GLAZING COMPOUNDS AS ACM AND PCB BULK PRODUCT WASTE.
9. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS AND ASSUMED PCB >50 PPM CONTAINING INTERIOR WALL/WALL AND WALL/COLUMN CAULKING COMPOUNDS AS ACM AND PCB BULK PRODUCT WASTE.
10. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASSUMED PCB >50 PPM CONTAINING INTERIOR/EXTERIOR DOOR WINDOW GLAZING COMPOUNDS AS PCB BULK PRODUCT WASTE.
11. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS AND ASSUMED PCB >50 PPM CONTAINING INTERIOR/EXTERIOR DOOR/WINDOW/DOOR WINDOW/WALL/COLUMN CAULKING AND GLAZING COMPOUNDS AS ACM AND PCB BULK PRODUCT WASTE.
12. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS AND ASSUMED PCB >50 PPM CONTAINING INTERIOR/EXTERIOR VENT CAULKING COMPOUNDS AS ACM AND PCB BULK PRODUCT WASTE.
13. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS AND ASSUMED PCB >50 PPM CONTAINING INTERIOR/EXTERIOR DOOR/WINDOW/WALL/COLUMN CAULKING AND GLAZING COMPOUNDS AS ACM AND PCB BULK PRODUCT WASTE.
14. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS AND ASSUMED PCB >50 PPM CONTAINING INTERIOR/EXTERIOR WINDOW/WALL/COLUMN/WINDOW WALLS/DOOR CAULKING AND GLAZING COMPOUNDS AS ACM AND PCB BULK PRODUCT WASTE.
15. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS AND ASSUMED PCB >50 PPM CONTAINING EXTERIOR WALL/WALL EXPANSION AND COLUMN CAULKING COMPOUNDS AS ACM AND PCB BULK PRODUCT WASTE.
16. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS CONTAINING ROOF PENETRATION FLASHING MATERIALS AS ACM.

ADD ALTERNATE #10
THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF PCB >50 PPM CONTAINING PAINT/PAINTED MATERIALS AS PCB BULK PRODUCT WASTE.

ADD ALTERNATE #11
THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF PCB >50 PPM CONTAINING PAINT/PAINTED MATERIALS AS PCB CTDEEP REGULATED WASTE.

GENERAL NOTES:

1. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR IS RESPONSIBLE FOR THE VERIFICATION OF ALL EXISTING CONDITIONS, QUANTITIES, AND FOR NOTIFYING THE CONSULTANT OF ANY DISCREPANCIES PRIOR TO FINALIZING BID.

2. ABATEMENT AND REMEDIATION IN ALL AREAS WILL START WITH SELECTIVE DEMOLITION AND REMOVING MATERIALS AT THE CEILING LEVEL AND END WITH THE MATERIALS AT THE FLOORING LEVEL. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR WILL COORDINATE AND PERFORM ENOUGH SELECTIVE DEMOLITION/DEMOLITION TO IDENTIFY/LOCATE AND ACCESS ALL MATERIALS TO BE REMOVED/ABATED/REMEDIATED. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL OPEN UP WALLS, AND CEILINGS TO CHECK FOR HIDDEN PIPING, DUCT, ETC. AS WELL AS DEMOLISHING MILLWORK, CABINETRY, ALL NON-MOVEABLE OBJECTS, LAYER(S) OF FLOORING, WALLS, MATERIALS ATTACHED TO WALLS, ETC. TO LOCATE KNOWN AND POTENTIAL ASBESTOS AND ASSUMED PCB CONTAINING MATERIALS. INTERIOR AND EXTERIOR SELECTIVE DEMOLITION/DEMOLITION AND PROBING MUST OCCUR THROUGHOUT THE WORK AREAS BEFORE CONTAINMENT CONSTRUCTION AND ABATEMENT CAN START. ASSUME THE ABATEMENT WORK WILL INCLUDE FULL CONTAINMENTS THROUGHOUT THE ENTIRE INTERIOR OF THE 1957 ORIGINAL BUILDING. EXTERIOR ABATEMENT/REMEDIATION WILL BE EITHER PERFORMED IN CONTAINMENT (INTERIOR) OR THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR WILL INSTALL POLYETHYLENE SHEETING ON THE INTERIOR OF THE BUILDING AND REMOVE MATERIALS FROM THE EXTERIOR. ALL GROUND SURFACES MUST ALSO BE PROTECTED WITH PLYWOOD AND TWO LAYERS OF 10-MIL REINFORCED POLYETHYLENE SHEETING. THIS GROUND PROTECTION MUST EXTEND AT LEAST 20 FEET AWAY FROM THE BUILDING FOUNDATION (OR FARTHER - ENOUGH TO PREVENT BUILDING MATERIALS FROM TOUCHING UNPROTECTED GROUND AND FLOOR SURFACES). THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR WILL PAY FOR ALL CONTAMINATION/REMEDIATION/ABATEMENT OF INTERIOR AND EXTERIOR SURFACES, INCLUDING GROUND SURFACES IF LANGAN DEEMS THEY HAVE CONTAMINATED THESE SURFACES. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR WILL SUPPLY LIFTS, SCAFFOLDING, STAGING, ETC. TO LANGAN IN AREAS OF REMEDIATION/ABATEMENT UNTIL ALL VISUAL INSPECTIONS HAVE PASSED. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR WILL PROVIDE TEMPORARY SHORING IN AREAS THAT REQUIRE IT.

3. MATERIALS FOUND TO CONTAIN LESS THAN ONE PERCENT ASBESTOS AND DISTURBANCE OR REMOVAL OF THESE MATERIALS IS PART OF THE BASE BID WORK. THESE MATERIALS MUST BE REMOVED USING PROPER ENGINEERING CONTROLS TO PREVENT AIRBORNE DUST AND BE PROPERLY DISPOSED OF.

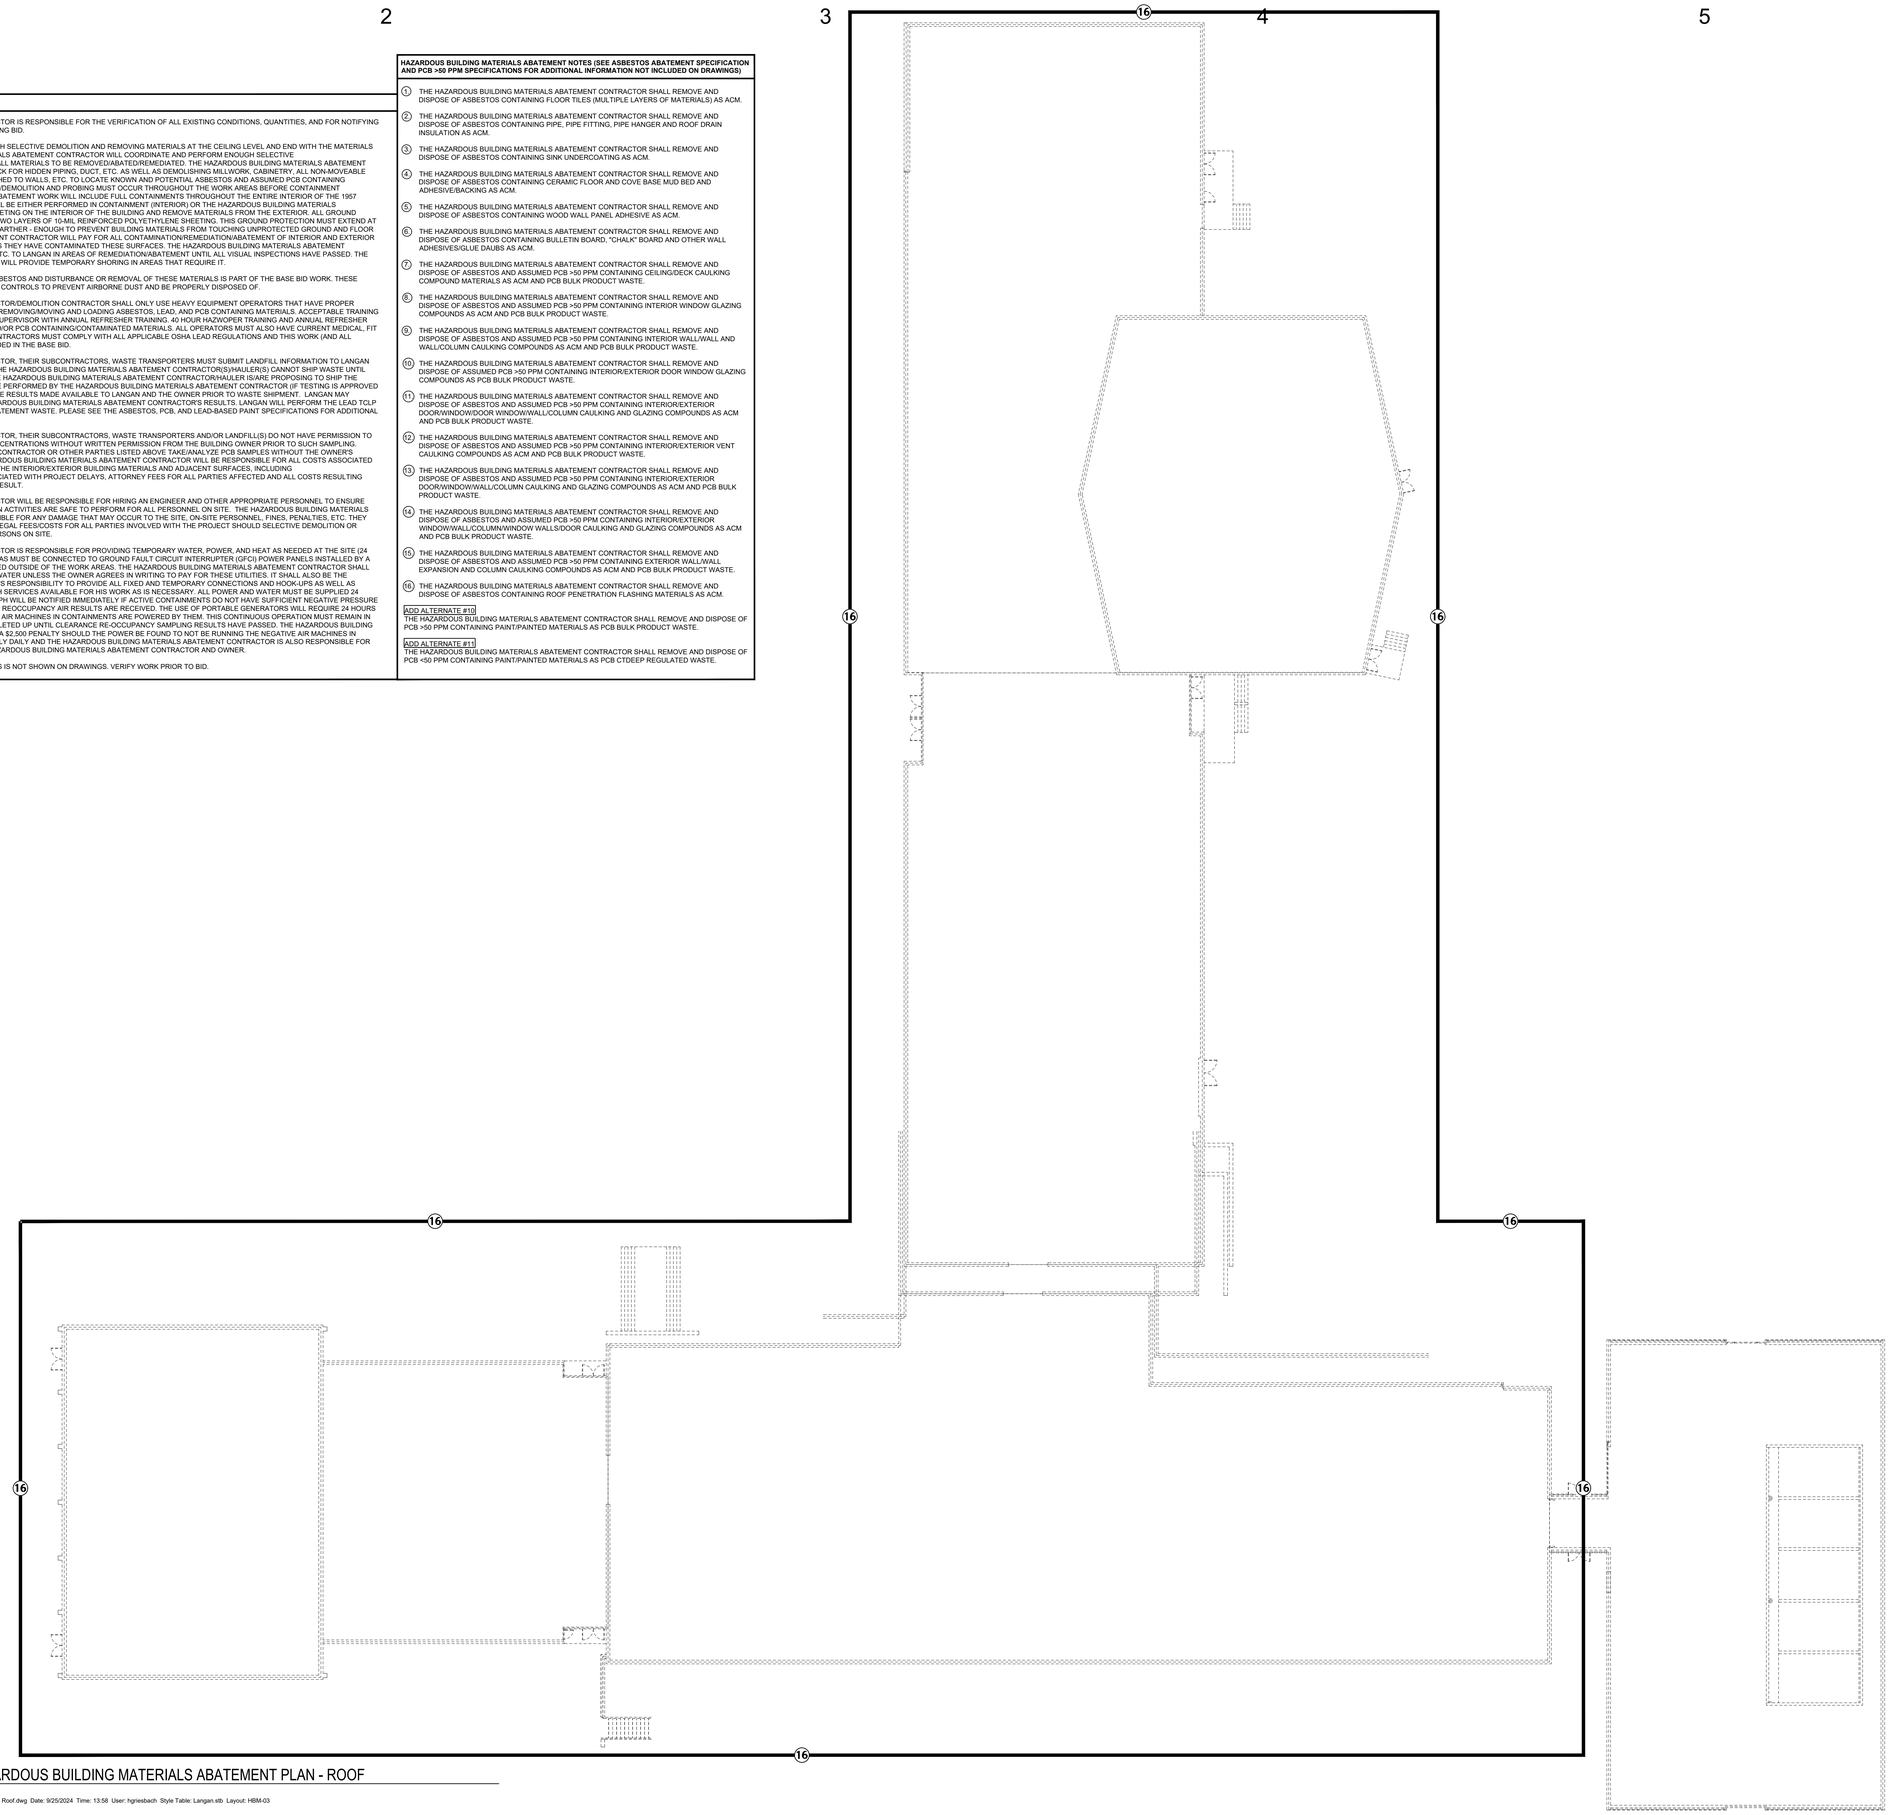
4. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR/DEMOLITION CONTRACTOR SHALL ONLY USE HEAVY EQUIPMENT OPERATORS THAT HAVE PROPER ASBESTOS AND/OR HAZWOPER TRAINING WHEN DISTURBING/REMOVING/MOVING AND LOADING ASBESTOS, LEAD, AND PCB CONTAINING MATERIALS. ACCEPTABLE TRAINING FOR ASBESTOS CAN BE 32 OR 40 HOUR ASBESTOS WORKER/SUPERVISOR WITH ANNUAL REFRESHER TRAINING. 40 HOUR HAZWOPER TRAINING AND ANNUAL REFRESHER TRAINING IS REQUIRED FOR OPERATORS HANDLING LEAD AND/OR PCB CONTAINING/CONTAMINATED MATERIALS. ALL OPERATORS MUST ALSO HAVE CURRENT MEDICAL, FIT TEST DATA, AND WEAR RESPIRATORS DURING WORK. ALL CONTRACTORS MUST COMPLY WITH ALL APPLICABLE OSHA LEAD REGULATIONS AND THIS WORK (AND ALL CORRESPONDING OSHA REGULATION COMPLIANCE) IS INCLUDED IN THE BASE BID.

5. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR, THEIR SUBCONTRACTORS, WASTE TRANSPORTERS MUST SUBMIT LANDFILL INFORMATION TO LANGAN AND THE OWNER PRIOR TO THE SHIPMENT OF ANY WASTE. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR(S)/HAULER(S) CANNOT SHIP WASTE UNTIL LANGAN AND THE OWNER HAVE APPROVED THE LANDFILL THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR/HAULER ISIARE PROPOSING TO SHIP THE WASTE TO. ALL PCB TCLP SAMPLING OF THE WASTE MUST BE PERFORMED BY THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR (IF TESTING IS APPROVED BY LANGAN AND THE OWNER) WITH LANGAN PRESENT AND THE RESULTS MADE AVAILABLE TO LANGAN AND THE OWNER PRIOR TO WASTE SHIPMENT. LANGAN MAY PERFORM ADDITIONAL TCLP SAMPLING TO CONFIRM THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR'S RESULTS. LANGAN WILL PERFORM THE LEAD TCLP SAMPLING FOR CLASSIFICATION OF THE DEMOLITION AND ABATEMENT WASTE. PLEASE SEE THE ASBESTOS, PCB, AND LEAD-BASED PAINT SPECIFICATIONS FOR ADDITIONAL REQUIREMENTS AND CONTRACTORS LIABILITY.

6. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR, THEIR SUBCONTRACTORS, WASTE TRANSPORTERS AND/OR LANDFILL(S) DO NOT HAVE PERMISSION TO TAKE/ANALYZE BUILDING MATERIALS FOR PCB CONTENT/ CONCENTRATIONS WITHOUT WRITTEN PERMISSION FROM THE BUILDING OWNER PRIOR TO SUCH SAMPLING. SHOULD THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR OR OTHER PARTIES LISTED ABOVE TAKE/ANALYZE PCB SAMPLES WITHOUT THE OWNER'S PERMISSION AND PCB'S ARE FOUND TO BE >1 PPM, THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR WILL BE RESPONSIBLE FOR ALL COSTS ASSOCIATED WITH THE ABATEMENT/ REMEDIATION/REPLACEMENT OF ALL THE INTERIOR/EXTERIOR BUILDING MATERIALS AND ADJACENT SURFACES. INCLUDING SOIL/ASPHALT/CONCRETE/ETC. AS WELL AS ALL COSTS ASSOCIATED WITH PROJECT DELAYS, ATTORNEY FEES FOR ALL PARTIES AFFECTED AND ALL COSTS RESULTING FROM CT DEEP/EPA REQUIREMENTS THAT MAY OCCUR AS A RESULT.

7. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR WILL BE RESPONSIBLE FOR HIRING AN ENGINEER AND OTHER APPROPRIATE PERSONNEL TO ENSURE THAT ALL REQUIRED SELECTIVE DEMOLITION AND DEMOLITION ACTIVITIES ARE SAFE TO PERFORM FOR ALL PERSONNEL ON SITE. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR(S) WILL BE FINANCIALLY RESPONSIBLE FOR ANY DAMAGE THAT MAY OCCUR TO THE SITE, ON-SITE PERSONNEL, FINES, PENALTIES, ETC. THEY WILL ALSO BE RESPONSIBLE FOR PAYING/REIMBURSING ALL LEGAL FEES/COSTS FOR ALL PARTIES INVOLVED WITH THE PROJECT SHOULD SELECTIVE DEMOLITION OR DEMOLITION ACTIVITIES CAUSE INJURY OR DEATH TO ANY PERSONS ON SITE.

8. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR IS RESPONSIBLE FOR PROVIDING TEMPORARY WATER, POWER, AND HEAT AS NEEDED AT THE SITE (24 HOURS A DAY). TEMPORARY LIGHTING WITHIN THE WORK AREAS MUST BE CONNECTED TO GROUND FAULT CIRCUIT INTERRUPTER (GFCI) POWER PANELS INSTALLED BY A STATE OF CONNECTICUT LICENSED ELECTRICIAN AND LOCATED OUTSIDE OF THE WORK AREAS. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL BE RESPONSIBLE FOR PAYING FOR THE USE OF POWER AND WATER UNLESS THE OWNER AGREES IN WRITING TO PAY FOR THESE UTILITIES. IT SHALL ALSO BE THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR'S RESPONSIBILITY TO PROVIDE ALL FIXED AND TEMPORARY CONNECTIONS AND HOOK-UPS AS WELL AS OBTAINING PERMITS AND PAYING ALL FEES FOR MAKING SUCH SERVICES AVAILABLE FOR HIS WORK AS IS NECESSARY. ALL POWER AND WATER MUST BE SUPPLIED 24 HOURS A DAY THROUGHOUT THE ABATEMENT PROJECT. CT DPH WILL BE NOTIFIED IMMEDIATELY IF ACTIVE CONTAINMENTS DO NOT HAVE SUFFICIENT NEGATIVE PRESSURE THROUGHOUT THE ABATEMENT PROCESS UNTIL ACCEPTABLE REOCCUPANCY AIR RESULTS ARE RECEIVED. THE USE OF PORTABLE GENERATORS WILL REQUIRE 24 HOURS A DAY, 7 DAYS A WEEK CONTINUOUS OPERATION IF NEGATIVE AIR MACHINES IN CONTAINMENTS ARE POWERED BY THEM. THIS CONTINUOUS OPERATION MUST REMAIN IN PLACE FROM THE TIME THE PRE-ABATEMENT VISUAL IS COMPLETED UP UNTIL CLEARANCE RE-OCCUPANCY SAMPLING RESULTS HAVE PASSED. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR WILL PAY THE OWNER A $2,500 PENALTY SHOULD THE POWER BE FOUND TO NOT BE RUNNING THE NEGATIVE AIR MACHINES IN ACTIVE ABATEMENT CONTAINMENTS. THIS PENALTY WILL APPLY DAILY AND THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR IS ALSO RESPONSIBLE FOR PAYING ALL CT DPH FINES THAT MAY BE IMPOSED ON THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR AND OWNER.



9. THE WORK IN THE TUNNEL/CRAWL/MECHANICAL DUCT SPACES IS NOT SHOWN ON DRAWINGS. VERIFY WORK PRIOR TO BID.

HAZARDOUS BUILDING MATERIALS ABATEMENT NOTES (SEE ASBESTOS ABATEMENT SPECIFICATION AND PCB >50 PPM SPECIFICATIONS FOR ADDITIONAL INFORMATION NOT INCLUDED ON DRAWINGS)

1. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS CONTAINING FLOOR TILES (MULTIPLE LAYERS OF MATERIALS) AS ACM.
2. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS CONTAINING PIPE, PIPE FITTING, PIPE HANGER AND ROOF DRAIN INSULATION AS ACM.
3. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS CONTAINING SINK UNDERCOATING AS ACM.
4. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS CONTAINING CERAMIC FLOOR AND COVE BASE MUD BED AND ADHESIVE/BACKING AS ACM.
5. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS CONTAINING WOOD WALL PANEL ADHESIVE AS ACM.
6. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS CONTAINING BULLETIN BOARD, "CHALK" BOARD AND OTHER WALL ADHESIVES/GLUE DAUBS AS ACM.
7. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS AND ASSUMED PCB >50 PPM CONTAINING CEILING/DECK CAULKING COMPOUND MATERIALS AS ACM AND PCB BULK PRODUCT WASTE.
8. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS AND ASSUMED PCB >50 PPM CONTAINING INTERIOR WINDOW GLAZING COMPOUNDS AS ACM AND PCB BULK PRODUCT WASTE.
9. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS AND ASSUMED PCB >50 PPM CONTAINING INTERIOR WALL/WALL AND WALL/COLUMN CAULKING COMPOUNDS AS ACM AND PCB BULK PRODUCT WASTE.
10. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASSUMED PCB >50 PPM CONTAINING INTERIOR/EXTERIOR DOOR WINDOW GLAZING COMPOUNDS AS PCB BULK PRODUCT WASTE.
11. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS AND ASSUMED PCB >50 PPM CONTAINING INTERIOR/EXTERIOR DOOR/WINDOW/DOOR WINDOW/WALL/COLUMN CAULKING AND GLAZING COMPOUNDS AS ACM AND PCB BULK PRODUCT WASTE.
12. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS AND ASSUMED PCB >50 PPM CONTAINING INTERIOR/EXTERIOR VENT CAULKING COMPOUNDS AS ACM AND PCB BULK PRODUCT WASTE.
13. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS AND ASSUMED PCB >50 PPM CONTAINING INTERIOR/EXTERIOR DOOR/WINDOW/WALL/COLUMN CAULKING AND GLAZING COMPOUNDS AS ACM AND PCB BULK PRODUCT WASTE.
14. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS AND ASSUMED PCB >50 PPM CONTAINING INTERIOR/EXTERIOR WINDOW/WALL/COLUMN/WINDOW WALLS/DOOR CAULKING AND GLAZING COMPOUNDS AS ACM AND PCB BULK PRODUCT WASTE.
15. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS AND ASSUMED PCB >50 PPM CONTAINING EXTERIOR WALL/WALL EXPANSION AND COLUMN CAULKING COMPOUNDS AS ACM AND PCB BULK PRODUCT WASTE.
16. THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF ASBESTOS CONTAINING ROOF PENETRATION FLASHING MATERIALS AS ACM.

ADD ALTERNATE #10
THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF PCB >50 PPM CONTAINING PAINT/PAINTED MATERIALS AS PCB BULK PRODUCT WASTE.

ADD ALTERNATE #15
THE HAZARDOUS BUILDING MATERIALS ABATEMENT CONTRACTOR SHALL REMOVE AND DISPOSE OF PCB <50 PPM CONTAINING PAINT/PAINTED MATERIALS AS PCB CTDEEP REGULATED WASTE.

MAP NOTES:

1. THIS MAP AND SURVEY HAVE BEEN PREPARED PURSUANT TO THE REGULATIONS OF CONNECTICUT STATE AGENCIES SECTIONS 20-300b-1 THROUGH 20-300b-20 AND "THE MINIMUM STANDARDS FOR SURVEYS AND MAPS IN THE STATE OF CONNECTICUT" ADOPTED JUNE 21, 1996; AMENDED OCTOBER 26, 2018.
2. THE TYPE OF SURVEY PERFORMED AND THE MAPPED FEATURES DEPICTED HEREON ARE IN ACCORDANCE WITH THE REQUIREMENTS OF AN PROPERTY AND TOPOGRAPHIC SURVEY AND IS INTENDED TO DEPICT TOPOGRAPHIC FEATURES AS THEY RELATE TO THE ADJACENT PROPERTY/BOUNDARY LINES.
3. THE PROPERTY / BOUNDARY DETERMINATION / OPINION IS BASED UPON A RESURVEY OF MAP REFERENCE A & B AND CONFORMS TO CLASS A-2 ACCURACY.
4. THE HORIZONTAL BASELINE CONFORMS TO A CLASS A-2 ACCURACY. THE VERTICAL BASELINE CONFORMS TO A CLASS V-2 ACCURACY. THE TOPOGRAPHIC FEATURES CONFORM TO A CLASS T-2 ACCURACY.
5. THE NORTH ARROW AND BEARINGS ARE BASED UPON THE CONNECTICUT STATE COORDINATE SYSTEM N.A.D. 1983 (2011). THE ELEVATIONS ARE BASED UPON THE NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD 88) USING GEOID 18. COORDINATES AND ELEVATIONS WERE DETERMINED FROM RTK GPS OBSERVATIONS MADE ON FEBRUARY 23, 2023, USING THE CT DOT RTK NETWORK KNOWN AS ACORN (CTDA BASE), HAVING THE FOLLOWING VALUES:

   LATITUDE = N 41° 03' 57.06968"
   LONGITUDE = W 73° 30' 25.94233"
   ELLIPSOID HEIGHT = -13.266M

6. UNDERGROUND UTILITIES, STRUCTURES AND FACILITY LOCATIONS DEPICTED AND NOTED HEREON HAVE BEEN COMPILED, IN PART FROM RECORD MAPPING SUPPLIED BY THE RESPECTIVE COMPANIES OR GOVERNMENTAL AGENCIES, FROM OTHER SOURCES, AND OBSERVABLE SURFACE EVIDENCE WHILE CONDUCTING THE FIELD SURVEY. THESE LOCATIONS MUST BE CONSIDERED AS APPROXIMATE IN NATURE. ADDITIONALLY, OTHER SUCH FEATURES MAY EXIST ON THE SITE. THE EXISTENCE WHICH IS UNKNOWN TO MARTIN SURVEYING ASSOCIATES, LLC.. ALL CONTRACTORS ARE REQUIRED TO CONTACT CALL-BEFORE-YOU-DIG AT 1-800-922-4455 FOR LOCATION AND OR STAKEOUT OF ANY UTILITY PRIOR TO ANY EXCAVATION.
7. THE TOPOGRAPHIC FEATURES DEPICTED HEREON ARE THE RESULT OF A FIELD SURVEY CONDUCTED FEBRUARY, 2023 THROUGH MAY, 2023.

GENERAL NOTES

1. NOTIFY "CALL BEFORE YOU DIG" AT 1-800-922-4455 AND OTHER UTILITY OWNERS IN THE AREA NOT ON THE "CALL BEFORE YOU DIG" LIST AT LEAST 72 HOURS PRIOR TO ANY DIGGING, TRENCHING, ROCK REMOVAL, DEMOLITION, BORING, BACKFILLING, GRADING, LANDSCAPING, OR ANY OTHER EARTH MOVING OPERATIONS.
2. REFERENCE IS MADE TO PLAN ENTITLED "PROPERTY/ BOUNDARY & TOPOGRAPHIC SURVEY" PREPARED FOR GREENWICH CENTRAL MIDDLE SCHOOL. PREPARED BY MARTIN SURVEYING ASSOCIATES, LLC, DATED MAY 22, 2023.
3. LOCATIONS OF EXISTING UTILITIES ARE APPROXIMATE. IN ADDITION, SOME UTILITIES MAY NOT BE SHOWN. DETERMINE THE EXACT LOCATION OF UTILITIES BY TEST PIT OR OTHER METHODS, AS NECESSARY TO PREVENT DAMAGE TO UTILITIES AND/OR INTERRUPTIONS IN UTILITY SERVICE. PERFORM TEST PIT EXCAVATIONS AND OTHER INVESTIGATIONS TO LOCATE UTILITIES, AND PROVIDE THIS INFORMATION TO THE ENGINEER, PRIOR TO CONSTRUCTING THE PROPOSED IMPROVEMENTS. LOCATE ALL EXISTING UTILITIES TO BE CROSSED BY HAND EXCAVATION.
4. NOT ALL OF THE UTILITY SERVICES TO BUILDING ARE SHOWN. THE CONTRACTOR SHALL ANTICIPATE THAT THE PROPERTY HAS SERVICE CONNECTIONS FOR THE VARIOUS UTILITIES.
5. BOLD TEXT AND LINES INDICATE PROPOSED WORK. LIGHT TEXT AND LINES INDICATE APPROXIMATE EXISTING CONDITIONS.
6. TIGHE & BOND ASSUMES NO RESPONSIBILITY FOR ANY ISSUES, LEGAL OR OTHERWISE, RESULTING FROM CHANGES MADE TO THESE DRAWINGS WITHOUT WRITTEN AUTHORIZATION FROM TIGHE & BOND.
7. EXCAVATE ADDITIONAL TEST PITS TO LOCATE EXISTING UTILITIES AS DIRECTED OR APPROVED BY THE ENGINEER.
8. NOTIFY THE ENGINEER OF ANY UTILITIES IDENTIFIED DURING CONSTRUCTION THAT ARE NOT SHOWN ON THE DRAWINGS OR THAT DIFFER IN SIZE OR MATERIAL.
9. THE CONTRACTOR IS RESPONSIBLE FOR SITE SAFETY; COORDINATION WITH THE OWNER, ALL SUBCONTRACTORS, AND WITH OTHER CONTRACTORS WORKING WITHIN THE LIMITS OF WORK, THE MEANS AND METHODS OF CONSTRUCTING THE PROPOSED WORK.
10. OBTAIN, PAY FOR AND COMPLY WITH PERMITS, NOTICES AND FEES NECESSARY TO COMPLETE THE WORK. ARRANGE AND PAY FOR NECESSARY INSPECTIONS AND APPROVALS FROM THE JURISDICTIONAL AUTHORITIES.
11. SHORE UTILITY TRENCHES WHERE FIELD CONDITIONS DICTATE AND/OR WHERE REQUIRED BY LOCAL, STATE AND FEDERAL HEALTH AND SAFETY CODES.
12. FIELD VERIFY ALL EXISTING CONDITIONS PRIOR TO CONSTRUCTION. IF FIELD CONDITIONS ARE OBSERVED THAT VARY SIGNIFICANTLY FROM THOSE SHOWN ON THE DRAWINGS, IMMEDIATELY NOTIFY THE ENGINEER IN WRITING FOR RESOLUTION OF THE CONFLICTING INFORMATION.
13. ALL CONSTRUCTION SHALL COMPLY WITH THE TOWN OF GREENWICH REQUIREMENTS, THE STATE OF CONNECTICUT BASIC BUILDING CODE, AMERICANS WITH DISABILITIES ACT (ADA), THE CONNECTICUT GUIDELINES FOR SOIL AND EROSION AND SEDIMENT CONTROL, OSHA, CT DOT FORM 818 (LATEST EDITION).
14. ALL DEVELOPMENT ACTIVITIES TO BE UNDERTAKEN WITHIN THE STREET RIGHT-OF-WAY AND OTHER PUBLIC LANDS SHALL COMPLY FULLY WITH TOWN STANDARDS UNLESS APPROVED DEVIATION IS SPECIFICALLY SET FORTH AS PART OF THIS APPLICATION. ALL WORK WITHIN THE STATE RIGHT-OF-WAY WILL COMPLY WITH THE CT DOT FORM 818 WITH THE LATEST SPECIAL PROVISIONS AND TYPICAL STATE STANDARD DETAILS.
15. PROTECT AND MAINTAIN ALL UTILITIES IN THE AREAS UNDER CONSTRUCTION DURING THE WORK. LEAVE ALL PIPES AND STRUCTURES WITHIN THE LIMITS OF THE CONTRACT IN A CLEAN AND OPERABLE CONDITION AT THE COMPLETION OF THE WORK. TAKE ALL NECESSARY PRECAUTIONS TO PREVENT SAND AND SILT FROM DISTURBED AREAS FROM ENTERING THE DRAINAGE SYSTEM.
16. NOTIFY THE ENGINEER IN WRITING OF ANY CONFLICT, ERROR, AMBIGUITY, OR DISCREPANCY WITH THE PLANS OR BETWEEN THE PLANS AND ANY APPLICABLE LAW, REGULATION, CODE, STANDARD SPECIFICATION, OR MANUFACTURER'S INSTRUCTIONS.
17. THE CONTRACTOR IS RESPONSIBLE FOR SUPPORT OF EXISTING UTILITIES AND REPAIR OR REPLACEMENT COSTS OF UTILITIES DAMAGED DURING CONSTRUCTION, WHETHER ABOVE OR BELOW GRADE. REPLACE DAMAGED UTILITIES IMMEDIATELY AT NO ADDITIONAL COST TO THE OWNER AND AT NO COST TO THE PROPERTY OWNER.
18. TAKE NECESSARY MEASURES AND PROVIDE CONTINUOUS BARRIERS OF SUFFICIENT TYPE, SIZE, AND STRENGTH TO PREVENT ACCESS TO ALL WORK AND STAGING AREAS AT THE COMPLETION OF EACH DAYS WORK.
19. NO OPEN TRENCHES WILL BE ALLOWED OVER NIGHT. THE USE OF ROAD PLATES TO PROTECT THE EXCAVATION WILL BE CONSIDERED UPON REQUEST, BUT BACKFILLING IS PREFERRED.
20. THE CONTRACTOR IS RESPONSIBLE FOR ALL NECESSARY TRAFFIC CONTROL/SAFETY DEVICES TO ENSURE SAFE VEHICULAR AND PEDESTRIAN ACCESS THROUGH THE WORK AREA, OR FOR SAFELY IMPLEMENTING DETOURS AROUND THE WORK AREA. PERFORM TRAFFIC CONTROL IN ACCORDANCE WITH THE CONTRACTOR'S APPROVED TRAFFIC CONTROL PLAN.
21. MAINTAIN EMERGENCY ACCESS TO ALL PROPERTIES WITHIN THE PROJECT AREA AT ALL TIMES DURING CONSTRUCTION.
22. WHEN WORKING IN THE ROAD, PROVIDE THE OWNER AND LOCAL FIRE/POLICE/SCHOOL AUTHORITIES A DETAILED PLAN OF APPROACH INDICATING METHODS OF PROPOSED TRAFFIC ROUTING ON A DAILY BASIS. PROVIDE COORDINATION TO ENSURE COMMUNICATION AND COORDINATION BETWEEN THE OWNER, CONTRACTOR AND LOCAL FIRE/POLICE/SCHOOL AUTHORITIES THROUGHOUT THE CONSTRUCTION PERIOD.
23. REMOVE AND DISPOSE OF ALL CONSTRUCTION-RELATED WASTE MATERIALS AND DEBRIS IN STRICT ACCORDANCE WITH ALL APPLICABLE LOCAL, STATE, AND FEDERAL LAWS.
24. REMOVE STUMPS AND BRUSH FROM SITE, OR CHIP AND USE DURING LANDSCAPING. DO NOT BURY STUMPS ON SITE.
25. THE TERM "DEMOLISH" USED ON THE DRAWINGS MEANS TO REMOVE AND DISPOSE OF IN ACCORDANCE WITH LOCAL, STATE, AND FEDERAL REQUIREMENTS.
26. THE TERM "ABANDON" USED ON THE DRAWINGS MEANS TO LEAVE IN PLACE AND TAKE APPROPRIATE MEASURES TO DECOMMISSION AS SPECIFIED OR NOTED ON THE DRAWINGS.
27. ALL PROPOSED WORK MAY BE ADJUSTED IN THE FIELD BY THE OWNER'S PROJECT REPRESENTATIVE TO MEET EXISTING CONDITIONS.
28. SPECIAL ATTENTION OF THE CONTRACTOR IS CALLED TO THE REQUIRED TYPE AND COMPACTION OF PIPE BEDDING AND BACKFILL SPECIFIED ON THESE DRAWINGS. THESE REQUIREMENTS WILL BE STRICTLY ENFORCED.
29. THE GENERAL CONTRACTOR SHALL RETAIN A PROFESSIONAL ENGINEER OR LAND SURVEYOR REGISTERED BY THE STATE OF CONNECTICUT TO LAY OUT THE BUILDING, UNDERGROUND UTILITY LINES, AND OTHER SITE WORK FROM THE HORIZONTAL AND VERTICAL CONTROL INFORMATION FURNISHED BY THE OWNER AND TO ESTABLISH AND RECORD THE NECESSARY ELEVATIONS, AT NO ADDITIONAL COST TO THE OWNER.
30. THE GENERAL CONTRACTOR SHALL FORWARD A LETTER FROM HIS LAND SURVEYOR OR PROFESSIONAL ENGINEER STATING THAT THE CONTROL INFORMATION FURNISHED BY THE OWNER IS ACCURATE OR SHALL IDENTIFY INACCURACIES, IF THEY EXIST. THE GENERAL CONTRACTOR SHALL NOT TAKE ADVANTAGE OF ERRORS, WHICH MAY BE INCLUDED IN THE CONTROL INFORMATION. STAKES AND MARKINGS SHALL BE PRESERVED.
31. PRIOR TO ISSUANCE OF A CERTIFICATE OF OCCUPANCY, THE ENGINEERING BUREAU MAY REQUIRE A CERTIFICATION LETTER STATING THAT THE DEVELOPMENT WAS CONSTRUCTED IN ACCORDANCE TO THE APPROVED PLANS, AND AN "AS-BUILT" DRAWING SHALL BE SUBMITTED.
32. THE GENERAL CONTRACTOR IS RESPONSIBLE FOR COORDINATING WITH A LICENSED SURVEYOR TO PREPARE AN "AS-BUILT" PLAN. THE CONTRACTOR IS RESPONSIBLE TO COORDINATE WITH A SITE ENGINEER 48 HOURS PRIOR TO ANY INSPECTIONS.
33. THE ENGINEERING DIVISION OF THE DEPARTMENT OF PUBLIC WORKS AND THE INSPECTING ENGINEER SHALL BE NOTIFIED BY THE CONTRACTOR THREE (3) DAYS PRIOR TO THE COMMENCEMENT OF EACH PHASE OF CONSTRUCTION.
34. THE WORK SHALL BE DONE IN CONFORMANCE WITH THE CONTRACT DOCUMENTS/PLANS UNLESS CHANGES HAVE BEEN APPROVED IN WRITING BY THE DESIGN ENGINEER PRIOR TO THE WORK BEING DONE.
35. A PRECONSTRUCTION MEETING SHALL BE HELD WITH THE OWNER, ARCHITECT AND ENGINEER TO REVIEW THE SCOPE OF CONSTRUCTION. THE CONTRACTOR SHALL BE RESPONSIBLE TO COORDINATE THE PRECONSTRUCTION MEETING.
36. ALL CONSTRUCTION SHALL MEET OR EXCEED TOWN OF GREENWICH AND STATE OF CONNECTICUT STANDARDS AND SPECIFICATIONS, INCLUDING APPLICABLE SECTIONS OF THE CONNECTICUT AND TOWN OF GREENWICH BUILDING AND HEALTH CODES.
37. ALL CONSTRUCTION SHALL BE OBSERVED BY A PROFESSIONAL ENGINEER PRIOR TO BACKFILL AND AS THE WORK PROGRESSES.
38. UPON COMPLETION OF CONSTRUCTION AND PRIOR TO THE ISSUANCE OF A CERTIFICATE OF OCCUPANCY, A LETTER OF CERTIFICATION FROM A PROFESSIONAL ENGINEER REGISTERED IN THE STATE OF CONNECTICUT AND AN "IMPROVEMENT SURVEY" MAP THAT DEPICTS AS-BUILT CONDITIONS FROM A LAND SURVEYOR REGISTERED IN THE STATE OF CONNECTICUT SHALL BE SUBMITTED TO THE ENGINEERING DIVISION OF THE PUBLIC WORKS DEPARTMENT FOR REVIEW AND APPROVAL FOR THE PURPOSE OF CONFIRMING THAT CONSTRUCTION WAS COMPLETED SUBSTANTIALLY IN COMPLIANCE WITH THE APPROVED PLANS AS AMENDED FROM TIME TO TIME.
39. A CERTIFICATION TO THE SATISFACTION OF THE TOWN ENGINEER SHALL BE SUBMITTED BY A REGISTERED PROFESSIONAL ENGINEER DECLARING THAT CONSTRUCTION HAS BEEN COMPLETED SUBSTANTIALLY IN ACCORDANCE WITH THE APPROVED PLANS.

TOWN OF GREENWICH STANDARD CONSTRUCTION NOTES

1. A HIGHWAY PERMIT IS REQUIRED FOR ALL WORK WITHIN THE TOWN OF GREENWICH - RIGHT OF WAY.
2. ALL WORK WITHIN THE TOWN OF GREENWICH -- RIGHT OF WAY SHALL BE CONSTRUCTED TO TOWN OF GREENWICH STANDARDS.
3. CATCH BASINS FOR PRIVATE DRIVEWAYS SHALL HAVE A MINIMUM GRATE OF TWO FEET BY TWO FEET. IF THE DRIVEWAY IS CURBED THE CATCH BASIN SHALL HAVE A MINIMUM CURB INLET OF SIX INCHES. EACH DRIVEWAY CATCH BASIN SHALL ALSO HAVE A MINIMUM TWO -FOOT SUMP AND BELL TRAP.
4. ALL DRAINAGE CONNECTIONS TO THE TOWN DRAINAGE SYSTEM SHALL BE GRAVITY LINES. IF A DISCHARGE FROM A SUMP PUMP IS CONNECTED TO THE TOWN DRAINAGE SYSTEM, IT MUST DISCHARGE TO A DRAINAGE STRUCTURE ON PRIVATE PROPERTY AND THEN BE CONNECTED TO THE TOWN DRAINAGE SYSTEM. ALL SUMP PUMPS REQUIRE A BACKFLOW PREVENTER (CHECK VALVE) BETWEEN THE PUMP AND THE DRAINAGE STRUCTURE. A DRAIN CONNECTION PERMIT FROM THE HIGHWAY DIVISION IS REQUIRED FOR ALL CONNECTIONS TO THE TOWN DRAINAGE SYSTEM.
5. IN ROADWAY CUTS, SUBDRAINS SHALL BE REQUIRED IF SEEPAGE OCCURS DURING CONSTRUCTION OR WITHIN ONE YEAR AFTER ROAD CONSTRUCTION IS COMPLETED AND ACCEPTED, EVEN THOUGH PLANS MAY HAVE BEEN APPROVED WITHOUT SUBDRAINS AND/OR ROADWAY CONSTRUCTION HAS BEEN COMPLETED.
6. ALL RETAINING WALLS GREATER THAN THREE FEET ARE REQUIRED TO BE DESIGNED, AND INSPECTED DURING CONSTRUCTION BY A PROFESSIONAL ENGINEER REGISTERED IN THE STATE OF CONNECTICUT.
7. ALL DETENTION/RETENTION SYSTEMS SHALL BE INSTALLED PER MANUFACTURER'S SPECIFICATIONS. ALL SYSTEMS SHALL USE A MANIFOLD SYSTEM TO DISTRIBUTE RUNOFF EVENLY INTO EACH ROW OF INFILTRATORS. DETENTION SYSTEMS WILL HAVE A MANIFOLD SYSTEM THAT CREATES THE LONGEST TRAVEL TIME TO THE CONTROL STRUCTURE. ALL DETENTION/RETENTION SYSTEMS MUST USE A STRUCTURE SUCH AS A MANHOLE FOR THE CONTROL STRUCTURE SO ALL FLOW CONTROL DEVICES CAN BE ACCESSED FOR MAINTENANCE.
8. ALL INFILTRATION SYSTEMS MUST MEET THE STORMWATER INFILTRATION/RECHARGE DESIGN REQUIREMENTS IN APPENDIX B OF THE TOWN OF GREENWICH DRAINAGE MANUAL. THERE MUST BE AT LEAST A 2-FOOT SEPARATION DISTANCE FROM THE BOTTOM OF STONE BELOW THE INFILTRATION STRUCTURE TO THE SEASONAL HIGH GROUNDWATER OR BEDROCK/LEDGE (THIS SEPARATION REQUIREMENT MAY BE WAIVED OR REDUCED BY THE APPROVING AUTHORITY ON A CASE-BY-CASE BASIS). A 3-FOOT SEPARATION DISTANCE IS REQUIRED FROM THE BOTTOM OF STONE BELOW THE INFILTRATION STRUCTURE TO SEASONAL HIGH GROUNDWATER FOR LAND USES WITH HIGHER POTENTIAL POLLUTANT LOADS (HIGH LOAD AREAS). PRIOR TO THE INSTALLATION OF THE INFILTRATORS THE ENGINEER SHALL VERIFY THE INFILTRATION STRUCTURE IS BEING INSTALLED IN THE APPROVED LOCATION AND IF THE LOCATION HAS BEEN CHANGED ADDITIONAL SOIL TESTING SHALL BE PERFORMED AND THE ENGINEER SHALL APPROVE THE REVISED LOCATION. A REVIEW BY THE APPROVING AUTHORITY' WILL BE REQUIRED.
9. EACH BMP TO BE INSTALLED SHALL HAVE THE SOILS BENEATH THE BMP SCARIFIED OR TILLED TO IMPROVE INFILTRATION.
10. THE CONTRACTOR MUST CONSTRUCT THE BIORETENTION AREA FOLLOWING THE SPECIFICATIONS IN APPENDIX G OF THE TOWN OF GREENWICH DRAINAGE MANUAL FEBRUARY 2012 AS AMENDED.
11. ALL AREAS THAT ARE USED BY CONSTRUCTION EQUIPMENT AND USED FOR CONTRACTOR PARKING MUST HAVE THE SOIL TILLED 12 TO 16 INCHES AND AMENDED WITH SMALL AMOUNTS OF ORGANIC MATERIAL IF NEEDED. THE AREA TO BE RESTORED SHALL BE DETERMINED BY THE SITE ENGINEER.
12. COMPOST-AMENDED SOILS MUST FOLLOW THE REQUIREMENTS AS STATED IN THE TOWN OF GREENWICH DRAINAGE MANUAL FEBRUARY 2012 AS AMENDED.
13. TO OBTAIN A CERTIFICATE OF OCCUPANCY THE SUBMITTAL MUST INCLUDE THE FOLLOWING:
    - ITEMS ON CHECKLIST FOR CERTIFICATE OF OCCUPANCY -- FORM CL-105
    - IMPROVEMENT LOCATION SURVEY (ITEMS ON CHECKLIST FOR IMPROVEMENT LOCATION SURVEY DEPICTING "AS-BUILT" CONDITIONS - FORM CL-106)

GREENWICH LID NOTES

1. THE PROPONENT SHALL NOTIFY THE APPROVING AUTHORITY BEFORE STARTING LAND-DISTURBING ACTIVITY. THE PROPONENT SHALL ALSO NOTIFY THE APPROVING AUTHORITY BEFORE CONSTRUCTING THE KEY COMPONENTS OF THE STORMWATER MANAGEMENT SYSTEM.
2. PERIODIC INSPECTIONS OF THE STORMWATER MANAGEMENT SYSTEM CONSTRUCTION SHALL BE CONDUCTED BY THE APPROVED PROFESSIONAL ENGINEER OF RECORD (SEE "ENGINEER & DEVELOPER OF RECORD" CERTIFICATION FORM IN APPENDIX K OF THE TOWN OF GREENWICH DRAINAGE MANUAL). THE TOWN RESERVES THE RIGHT TO CONDUCT INSPECTIONS AT ANY TIME. WRITTEN INSPECTION REPORTS SHALL INCLUDE: THE INSPECTION DATE AND LOCATION; EVALUATION OF COMPLIANCE WITH THE STORMWATER APPROVAL; AND ANY DEVIATIONS FROM THE APPROVED PLANS.
3. AT A MINIMUM, INSPECTIONS SHALL INCLUDE: AN INITIAL SITE INSPECTION PRIOR TO APPROVAL OF ANY PLAN; INSPECTION OF SITE EROSION CONTROLS; INSPECTION OF THE STORMWATER MANAGEMENT SYSTEM PRIOR TO BACKFILLING OF ANY UNDERGROUND DRAINAGE OR STORMWATER CONVEYANCE STRUCTURES; AND A FINAL INSPECTION BEFORE THE SURETY IS RELEASED. THE STORMWATER SYSTEM SHALL BE INSPECTED TO VERIFY ITS AS-BUILT FEATURES, AND THE INSPECTOR SHALL ALSO EVALUATE THE SYSTEM DURING A STORM EVENT. IF THE INSPECTOR FINDS THE SYSTEM ADEQUATE, THIS SHALL BE REPORTED TO THE APPROVING AUTHORITY.
4. IF THE SYSTEM IF FOUND TO BE INADEQUATE TO OPERATIONAL FAILURE, EVEN THOUGH BUILT ACCORDING TO THE APPROVED PLANS, THE SYSTEM SHALL BE CORRECTED BY THE PROPONENT BEFORE FINAL APPROVAL IS GRANTED BY THE APPROVING AUTHORITY. IF THE PROPONENT FAILS TO ACT, THE APPROVING AUTHORITY MAY USE THE SURETY TO COMPLETE THE WORK. IF THE SYSTEM DOES NO COMPLY WITH THE APPROVED PLANS, CORRECTIVE ACTION SHALL BE REQUIRED AND A STOP WORK ORDER SHALL BE ISSUES UNTIL ANY VIOLATIONS ARE CORRECTED AND ALL WORK PREVIOUSLY COMPLETED HAS RECEIVED APPROVAL BY THE APPROVING AUTHORITY.
5. UPON COMPLETION, THE PROPONENT SHALL CERTIFY THAT THE PROJECT IS IN ACCORDANCE WITH APPROVED PLANS AND SPECIFICATIONS, AND SHALL PROVIDE INSPECTIONS TO ADEQUATELY DOCUMENT COMPLIANCE. THE APPROVING AUTHORITY WILL ISSUE A LETTER CERTIFYING COMPLETION UPON ITS RECEIPT AND APPROVAL OF THE FINAL INSPECTION AND REPORTS, AND/OR UPON OTHERWISE DETERMINING THAT ALL WORK WAS COMPLETED IN CONFORMANCE WITH THE APPROVED PLANS.

NOTES

ALL ON-SITE SOILS HAVE BEEN CLASSIFIED AS HYDROLOGIC SOIL GROUP B OR C AS PER USDA NRCS WEB SOIL SURVEY. THE NRCS REPORT CAN BE FOUND AS AN APPENDIX TO THE PROJECT DRAINAGE REPORT.

SUBSURFACE SOIL INVESTIGATION RESULTS CAN BE FOUND ON APPENDIX B OF THE DRAINAGE SUMMARY REPORT.

REFER TO SHEET PZ-L401 THROUGH PZ-403 FOR INFORMATION REGARDING LANDSCAPING.

USDA NRCS SOIL IDENTIFICATION:

- 73C — B - CHALTON-CHATFIELD COMPLEX, 0 TO 15 % SLOPES, VERY ROCKY
- 75E — B - CHALTON-CHATFIELD COMPLEX, 15 TO 45 % SLOPES, VERY ROCKY
- 306 — B - UDORTHENTS-URBAN LAND COMPLEX
- 308 — C - UDORTHENTS, SMOOTHED

SITE UTILITY NOTES

1. REFERENCE IS MADE TO PLAN ENTITLED "PROPERTY/ BOUNDARY & TOPOGRAPHIC SURVEY" PREPARED FOR GREENWICH CENTRAL MIDDLE SCHOOL. PREPARED BY MARTIN SURVEYING ASSOCIATES, LLC, DATED MAY 22, 2023.
2. ELEVATIONS REFER TO THE NORTH AMERICAN VERTICAL DATUM OF 1988 - NAVD88.
3. THE CONTRACTOR SHALL COORDINATE/VERIFY THE EXACT SIZES, LOCATIONS, ELEVATIONS, OF ALL PROPOSED BUILDING UTILITY SERVICES WITH THE PROJECT MECHANICAL, ELECTRICAL AND PLUMBING DRAWINGS PRIOR TO ANY CONSTRUCTION OPERATIONS.
4. THE CONTRACTOR SHALL COORDINATE HIS WORK WITH THE WORK DONE BY THE RESPECTIVE UTILITY COMPANIES.
5. INSTALL CLEANOUT TO GRADE 5' OFF FACE OF BUILDING ON ALL ROOF LEADERS.
6. THE CONTRACTOR SHALL MAINTAIN EXISTING STORM SEWER FLOWS BY PUMPING OR OTHER MEANS APPROVED BY THE OWNER'S REPRESENTATIVE DURING CONSTRUCTION OF THE PROPOSED STORM SEWER IN LOCATIONS WHERE SEWERS ARE BEING INSTALLED, REPLACED OR RELOCATED.
7. ALL PROPOSED ROOF DRAINS FOR THE PROPOSED BUILDINGS SHALL BE CONNECTED TO THE PROPOSED STORM DRAINAGE SYSTEMS AS DEPICTED ON SHEETS C-102 - C-105. FINAL LOCATION OF THE PROPOSED ROOF DRAINS SHALL BE COORDINATED BETWEEN THE CONTRACTOR, THE ARCHITECT, AND THE PROJECT ENGINEER.
8. THE PROPOSED BUILDING FOOTING DRAINS SHALL DISCHARGE VIA GRAVITY TO GRADE AS DEPICTED ON SHEET SHEETS C-102 - C-105. THE CONTRACTOR SHALL VERIFY THE EXISTING PIPE INVERT IN THE FILED PRIOR TO START OF CONSTRUCTION.
9. MINIMUM COVER ON ALL PIPES SHALL BE TWO FEET (2') UNLESS OTHERWISE NOTED.
10. ALL PIPE SHALL BE INSTALLED STRAIGHT AND AT THE VERTICAL AND HORIZONTAL ALIGNMENT SHOWN. PIPES SHALL HAVE A UNIFORM SLOPE AS SPECIFIED.
13. INSTALL "FERNCO" STYLE SHIELDED COUPLINGS AT ALL LOCATIONS WHERE JOINING PIPES OF DIFFERENT MATERIALS AND/OR SIZES PER MANUFACTURER'S RECOMMENDATIONS. "FERNCO" STYLE SHIELDED COUPLINGS SHALL BE BANDED RUBBER (SHIELD COUPLINGS) GASKETED COUPLING TYPE WITH TYPE 316 S.S. HARDWARE AND OUTSIDE SHEER RING SHALL BE STRONG BACK SEWER COUPLING RC 5000 SERIES BY FERNCO, FLEX-SEAL ADJUSTABLE REPAIR COUPLING (ARC) BY MISSION RUBER COMPANY, OR APPROVED EQUAL.
15. THE LOCATIONS OF ITEMS NOT DIMENSIONED ON THE DRAWINGS SHALL BE FIELD STAKED BY THE CONTRACTOR AND THEIR LOCATIONS APPROVED BY THE OWNER'S REPRESENTATIVE PRIOR TO INSTALLATION.
16. THE CONTRACTOR SHALL ADJUST THE TOP OF FRAME/GRATE ELEVATIONS OF ALL EXISTING AND PROPOSED SANITARY/STORM/WATER MANHOLES, CATCH BASINS, AREA DRAINS, VALVE COVERS AND APPURTENANCES, WITHIN THE PROJECT LIMIT LINE TO MEET THE PROPOSED GRADES.
17. WHEN RAISING EXISTING MANHOLES TO FINISHED GRADE, CONTRACTOR SHALL NOT EXCEED THE MAXIMUM AMOUNT OF BRICK COURSES AS SHOWN ON THE DETAILS. CONTRACTOR SHALL RAISE STRUCTURE WITH STANDARD MANHOLE COMPONENTS AS APPROVED BY THE ENGINEER.
18. THE MANHOLE FRAME AND COVER SHALL BE CENTERED ON THE PRECAST OPENING. UNDER NO CIRCUMSTANCES WILL AN OFFSET FRAME AND COVER BE ACCEPTABLE. PRIOR TO FINAL PAVING, THE CONTRACTOR SHALL CHECK ALL MANHOLE STRUCTURES TO ASSURE THE FRAME AND COVER IS CENTERED ON THE PRECAST OPENING. THE CONTRACTOR WILL BE RESPONSIBLE FOR ALL WORK REQUIRED TO CENTER FRAME AND COVER.
19. WHEN CONNECTING NEW PIPES TO EXISTING STRUCTURES SUCH AS MANHOLES, THE STRUCTURE SHALL BE COMPLETELY CLEANED OUT. THE HOLE MADE IN THE STRUCTURE SHALL BE MADE AS SMALL AS POSSIBLE. THE STRUCTURE SHALL BE REPAIRED TO MATCH ITS ORIGINAL TYPE OF CONSTRUCTION. THE JOINT BETWEEN THE STRUCTURE AND THE PIPE SHALL BE MADE WATERTIGHT BY UTILIZING AN A-LOK SYSTEM OR KOR-N-SEAL-BOOT CONNECTION.
20. THE CONTRACTOR SHALL MAINTAIN SANITARY SEWER FLOWS BY PUMPING OR OTHER MEANS APPROVED BY THE OWNER'S REPRESENTATIVE DURING CONSTRUCTION OF THE PROPOSED SANITARY SEWER IN LOCATIONS WHERE SEWERS ARE BEING INSTALLED, REPLACED OR RELOCATED.
21. UNDER NO CIRCUMSTANCES SHALL TRENCH WATER BE ALLOWED TO DRAIN OFF THROUGH SANITARY SEWER LINES.
22. ALL CRUSHED STONE SHALL BE GRADATION NO. 6 AS PER CT DOT FORM 818, ARTICLE M.01.01. STONE SHALL CONSIST OF SOUND, TOUGH, DURABLE PARTICLES FREE FROM SOFT, THIN, ELONGATED, LAMINATED, FRIABLE, MICACEOUS, OR DISINTEGRATED PIECES OF MUD, DIRT OR OTHER DELETERIOUS MATERIAL.
23. THE STORM AND SANITARY SEWER SHALL BE ENCASED IN CONCRETE FOR A DISTANCE OF 10 FEET ON EITHER SIDE OF ANY INTERSECTION BETWEEN THE SANITARY SEWER AND STORM SEWER. WHERE CONCRETE ENCASEMENT IS REQUIRED, TEMPORARILY SUPPORT THE PIPES IN PLACE. USE SUFFICIENT CONCRETE TO ENCASE PIPING NOT LESS THAN 6 INCHES AT ALL POINTS. THE ENCASEMENT SHALL BE ADEQUATELY SUPPORTED WITH A STONE BASE AND SHALL BE KEYED INTO THE FOUNDATION WALL TO PREVENT DAMAGE FROM SETTLEMENT.
24. UTILITIES SHOWN ON THESE PLANS ARE "NOT GUARANTEED" TO BE COMPLETE OR CORRECT. PRIOR TO ANY SITE ACTIVITIES, THE CONTRACTOR SHALL BE RESPONSIBLE FOR VERIFICATION OF CLEARANCES OF PROPOSED UTILITIES FROM EXISTING UTILITIES. THIS VERIFICATION SHALL INCLUDE PHYSICAL OBSERVATION BY MEANS OF TEST PITS OF THE LOCATIONS OF AFFECTED UTILITIES. THE CONTRACTOR SHALL NOTIFY THE SITE ENGINEER IMMEDIATELY OF ANY CONFLICT.
25. EASEMENTS MAY BE REQUIRED IN FAVOR OF THE VARIOUS UTILITY COMPANIES.
26. ELECTRIC, TELEPHONE, AND CABLE SERVICES SHALL BE INSTALLED IN CONFORMANCE TO THE REQUIREMENTS OF THE GOVERNING UTILITY COMPANIES.
27. DOMESTIC WATER, FIRE PROTECTION SERVICES, AND ALL WATER MAIN TAPS SHALL CONFORM TO THE REQUIREMENTS OF THE AQUARION WATER COMPANY.
28. IT IS THE CONTRACTOR'S RESPONSIBILITY TO INSTALL UTILITIES AS SHOWN ON THIS SHEET. THE CONTRACTOR SHALL WORK WITH THE UTILITY COMPANIES AND SITE ENGINEER TO ENSURE THE INSTALLATION IS IN CONFORMANCE TO THE REQUIREMENTS OF THE GOVERNING UTILITY COMPANY. ALL CONDUITS SHALL BE CONCRETE ENCASED AS MAY BE REQUIRED BY THE GOVERNING UTILITY COMPANY. PROPOSED ELECTRIC, TELEPHONE, CABLE, GAS AND WATER SERVICES ARE SHOWN FOR SCHEMATIC PURPOSES ONLY AND ARE SUBJECT TO CHANGE PENDING UTILITY COMPANY REVIEW. THESE UTILITIES SHALL BE DESIGNED BY OTHERS AND INSTALLED IN CONFORMANCE TO THE REQUIREMENTS OF THE GOVERNING UTILITY COMPANIES.
29. FOR INFORMATION ON THE PRIMARY ELECTRICAL WIRING AND THE SECONDARY ELECTRICAL CONDUITS, WIRING, AND MATERIALS - SEE PROJECT ELECTRICAL DRAWINGS.
30. THE CONTRACTOR MUST SUPPLY AND INSTALL DRAG LINES WITH ALL CONDUITS.
31. IN GENERAL, EACH UTILITY SHALL HAVE A MINIMUM HORIZONTAL CLEARANCE OF THREE FEET TO ANY OTHER UNDERGROUND UTILITY.
32. ALL UTILITIES ABANDONED SHALL BE CAPPED OR REMOVED IN ACCORDANCE WITH UTILITY COMPANIES' REQUIREMENTS.
33. DETECTABLE TAPE SHALL BE USED TO MARK PIPING LISTED BELOW. THE IDENTIFICATION TAPE SHALL BE BURIED AT LEAST 6-INCHES TO 10-INCHES BELOW FINAL GRADE BUT NO CLOSER THAN 12-INCHES TO THE BURIED UTILITY PIPING OR SERVICE.

SOIL EROSION AND SEDIMENTATION CONTROL NARRATIVE:

GREENWICH CENTRAL MIDDLE SCHOOL IS A NEW MIDDLE SCHOOL AND BALL FIELDS LOCATED ON THE EXISTING CENTRAL MIDDLE SCHOOL CAMPUS ON INDIAN ROCK LANE IN GREENWICH, CT.

THIS PHASE WILL INCLUDE THE CONSTRUCTION OF A NEW MIDDLE SCHOOL BUILDING, STORMWATER MANAGEMENT SYSTEM, BITUMINOUS CONCRETE DRIVEWAYS AND PARKING, RETAINING WALLS, CURBS, LANDSCAPING, LIGHTING, AND SIDEWALKS

STORMWATER MANAGEMENT WILL BE ACCOMMODATED ON-SITE. SURFACE RUNOFF WILL BE COLLECTED AND CONVEYED IN CATCH BASINS AND LOW IMPACT DEVELOPMENT BEST MANAGEMENT PRACTICES THAT WILL TREAT THE FIRST 1" OF RUNOFF TO MEET THE TOWN OF GREENWICH DRAINAGE MANUAL AND THE CTDEEP WATER QUALITY MANUAL GUIDELINES FOR 80% TSS REMOVAL. THE STORMWATER MANAGEMENT SYSTEM WILL TREAT THE WATER QUALITY VOLUME AND REDUCE THE PEAK FLOW AND RUNOFF QUANTITY FROM THE SITE.

APPROXIMATELY 7.6 ACRES WILL BE DISTURBED.

PHASE 1 CONSTRUCTION START: FALL 2024

PHASE 1 CONSTRUCTION END: SUMMER 2026

SITE SOIL EROSION AND SEDIMENTATION CONTROL SHALL FOLLOW THE TOWN OF GREENWICH REQUIREMENTS AND DETAILS AS WELL AS THE CTDEEP 2024 CONNECTICUT GUIDELINES FOR SOIL EROSION AND SEDIMENT CONTROL.

SOIL EROSION AND SEDIMENTATION CONTROL NARRATIVE:

GREENWICH CENTRAL MIDDLE SCHOOL IS A NEW MIDDLE SCHOOL AND BALL FIELDS LOCATED ON THE EXISTING CENTRAL MIDDLE SCHOOL CAMPUS ON INDIAN ROCK LANE IN GREENWICH, CT.

THE PHASE WILL INCLUDE DEMOLITION OF THE EXISTING MIDDLE SCHOOL, CONSTRUCTION OF BALL FIELDS, SANITARY SEWER, GAS, WATER, UNDERGROUND ELECTRIC AND TEL-DATA UTILITIES, STORMWATER MANAGEMENT SYSTEM, BITUMINOUS CONCRETE DRIVEWAYS AND PARKING, RETAINING WALLS, CURBS, LANDSCAPING, LIGHTING, AND SIDEWALKS

STORMWATER MANAGEMENT WILL BE ACCOMMODATED ON-SITE. SURFACE RUNOFF WILL BE COLLECTED AND CONVEYED IN CATCH BASINS AND LOW IMPACT DEVELOPMENT BEST MANAGEMENT PRACTICES THAT WILL TREAT THE FIRST 1" OF RUNOFF TO MEET THE TOWN OF GREENWICH DRAINAGE MANUAL AND THE CTDEEP WATER QUALITY MANUAL GUIDELINES FOR 80% TSS REMOVAL. THE STORMWATER MANAGEMENT SYSTEM WILL TREAT THE WATER QUALITY VOLUME AND REDUCE THE PEAK FLOW AND RUNOFF QUANTITY FROM THE SITE.

APPROXIMATELY 6.2 ACRES WILL BE DISTURBED.

PHASE 2 CONSTRUCTION START: SUMMER 2026

PHASE 2 CONSTRUCTION END: SUMMER 2027

SITE SOIL EROSION AND SEDIMENTATION CONTROL SHALL FOLLOW THE TOWN OF GREENWICH REQUIREMENTS AND DETAILS AS WELL AS THE CTDEEP 2024 CONNECTICUT GUIDELINES FOR SOIL EROSION AND SEDIMENT CONTROL.

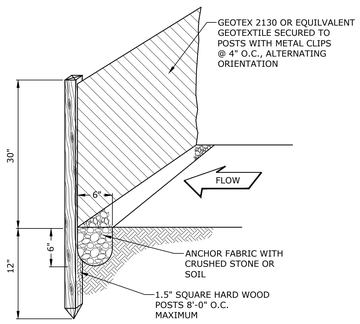
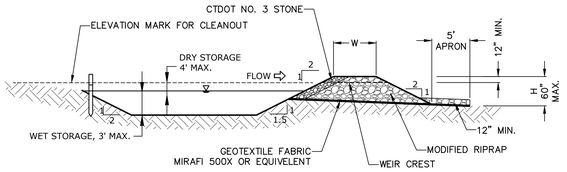
SITE SOIL EROSION AND SEDIMENTATION CONTROL NOTES:

1. THE PROPOSED DEVELOPMENT IS ENTITLED "GREENWICH CENTRAL MIDDLE SCHOOL" IN GREENWICH, CONNECTICUT.
2. EROSION CONTROL NARRATIVE REFERS TO DRAWINGS C-401 THROUGH C-416.
3. THE PROPOSED SITE DEVELOPMENT WILL CONSIST OF SELECTIVE CLEARING AND GRUBBING STORMWATER MANAGEMENT, AND UTILITIES.
4. THE DEVELOPMENT IS LOCATED IN GREENWICH, CONNECTICUT AND IS LOCATED OFF OF INDIAN ROCK LANE, BETWEEN ORCHARD STREET AND STANWICH ROAD.
5. SURVEY CONDITIONS TAKEN FROM PLAN ENTITLED "PROPERTY / BOUNDARY & TOPOGRAPHIC SURVEY "GREENWICH CENTRAL MIDDLE SCHOOL" 9 INDIAN ROCK LANE GREENWICH, CONNECTICUT" , PREPARED BY MARTIN SURVEYING ASSOCIATES LLC, 201 CHRISTIAN LANE,SUITE B BERLIN, CT 06037, 860-832-9328, DATED 5-22-2023.
6. ALL EROSION CONTROL MEASURES SHALL BE INSTALLED AS SHOWN ON THE PLANS AND ELSEWHERE AS ORDERED BY THE OWNER'S REPRESENTATIVE, OR THE TOWN OF GREENWICH.
7. ALL CATCH BASINS SHALL BE PROTECTED WITH SILT SACKS, HAYBALE RING, SILT FENCE OR BLOCK AND STONE INLET PROTECTION THROUGHOUT THE CONSTRUCTION PERIOD AND UNTIL ALL DISTURBED AREAS ARE THOROUGHLY STABILIZED.
8. WHEREVER POSSIBLE, EROSION AND SEDIMENT CONTROL MEASURES SHALL BE INSTALLED PRIOR TO CONSTRUCTION.
9. ADDITIONAL CONTROL MEASURES SHALL BE INSTALLED DURING CONSTRUCTION PERIOD AS ORDERED BY THE OWNER'S REPRESENTATIVE, OR THE TOWN OF GREENWICH. THE PROCUREMENT, INSTALLATION AND MAINTENANCE OF ADDITIONAL SOIL EROSION AND SEDIMENTATION CONTROL MEASURES TO REPLACE DAMAGED MEASURES, EMERGENCY REPAIRS, AND TO MEET CONDITIONS OF THE SITE AS CONSTRUCTION PROGRESSES SHALL BE INCLUDED IN CONTRACTORS LUMP SUM BID PRICE.
10. ALL SEDIMENTATION AND EROSION CONTROL MEASURES SHALL BE MAINTAINED IN EFFECTIVE CONDITION THROUGHOUT THE CONSTRUCTION PERIOD.
11. SEDIMENT REMOVED SHALL BE DISPOSED OF LEGALLY OFFSITE.
12. THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTION AND MAINTENANCE OF ALL EROSION CONTROL MEASURES THROUGHOUT THE CONSTRUCTION PERIOD.
13. THE CONTRACTOR SHALL MAINTAIN A SUPPLY OF SILT FENCE/HAYBALES AND ANTI-TRACKING CRUSHED STONE ON-SITE FOR EMERGENCY REPAIRS.
14. THE CONTRACTOR SHALL UTILIZE APPROVED METHODS/MATERIALS FOR PREVENTING THE BLOWING AND MOVEMENT OF DUST FROM EXPOSED SOIL SURFACES ONTO ADJACENT PROPERTIES AND SITE AREAS.
15. ALL DRAINAGE STRUCTURES SHALL BE INSPECTED WEEKLY BY THE CONTRACTOR AND CLEANED TO PREVENT THE BUILD-UP OF SILT.
16. THE CONTRACTOR SHALL CAREFULLY COORDINATE THE PLACEMENT OF EROSION CONTROL MEASURES WITH THE PHASING OF CONSTRUCTION.
17. KEEP ALL PAVED ROADWAYS CLEAN. SWEEP BEFORE FORECASTED STORMS OR WEEKLY AS NECESSARY.
18. TREAT ALL UNPAVED SURFACES IN ACCORDANCE WITH LANDSCAPE PLANS.
19. HAYBALE BARRIERS AND SILT FENCING SHALL BE INSTALLED ALONG THE TOE OF CRITICAL CUT AND FILL SLOPES AS SHOWN ON THE PLANS AND AS DIRECTED BY THE TOWN OF GREENWICH.
20. ALL TRUCKS LEAVING THE SITE MUST BE COVERED.
21. DISTURBED SLOPES GREATER THAN 3:1 AND SEDIMENT TRAPS AS SHOWN ON THE PLANS SHALL BE IMMEDIATELY STABILIZED WITH EROSION CONTROL BLANKET, NORTH AMERICAN GREEN SC150BN OR APPROVED EQUIVALENT.
22. ALL SEDIMENTATION AND EROSION CONTROLS SHALL BE CHECKED WEEKLY AND AFTER EACH RAINFALL EVENT. NECESSARY REPAIRS SHALL BE MADE WITHOUT DELAY.
23. PRIOR TO ANY FORECASTED RAINFALL, EROSION AND SEDIMENT CONTROLS SHALL BE INSPECTED AND REPAIRED AS NECESSARY.
24. AFTER ALL DISTURBED AREAS HAVE BEEN STABILIZED, EROSION CONTROLS MAY BE REMOVED ONCE AUTHORIZATION TO DO SO HAS BEEN SECURED FROM THE TOWN. DISTURBED AREAS SHALL BE SEEDED AND MULCHED.
25. ALL DRAINAGE SWALES SHALL BE STABILIZED WITH EROSION CONTROL BLANKET, NORTH AMERICAN GREEN C125BN OR APPROVED EQUIVALENT.
26. CONTRACTOR IS TO COMPLY WITH THE REQUIREMENTS OF THE SOIL EROSION AND SEDIMENTATION CONTROL PLAN, DETAILS, AND SPECIFICATIONS.

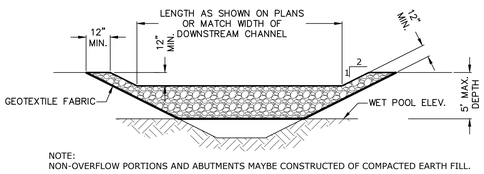


CONSTRUCTION SEQUENCE

PHASE 1:

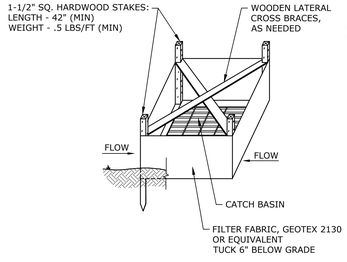


1. THE INSPECTING ENGINEER AND ARBORIST SHALL MEET WITH THE CONTRACTOR AND OWNER TO REVIEW THE SEDIMENT AND EROSION CONTROL (S&E PLAN) AND DISCUSS ANY MODIFICATIONS TO CONSTRUCTION SEQUENCE OR S&E PLAN.
2. INSTALL TREE PROTECTION AND TRIM LIMBS THAT MAY BE DAMAGED BY CONSTRUCTION EQUIPMENT.
3. INSTALL CONSTRUCTION FENCE AND ACCESS GATES AS SHOWN ON THE PLANS.
4. INSTALL TRACKING PAD AND ESTABLISH STAGING AREA WITH TRAILERS.
5. CONSTRUCT TEMPORARY SEDIMENT BASIN AND REQUIRED PIPING AS SHOWN ON THE PLANS.
6. INSTALL SILT FENCE AND CONSTRUCTION FENCE AS SHOWN ON THE PLANS.
7. INSTALL REMAINING SEDIMENT AND EROSION CONTROLS.
8. RELOCATE AND INSTALL THE EXISTING CONCRETE INFILTRATION SYSTEM AS SHOWN ON THE PLANS.
9. DEMOLISH ANY STRUCTURES OR UNDERGROUND UTILITIES AS SPECIFIED ON THE PLANS.
10. PERFORM GENERAL EARTHWORK FOR THE BUILDING. EXCAVATE AND INSTALL FOUNDATION.
11. CONSTRUCT THE BUILDING AND BACKFILL THE FOUNDATION AS SOON AS POSSIBLE.
12. INSTALL UNDERGROUND STORMWATER SYSTEM.
13. INSTALL SANITARY SEWER, WATER, GAS, ELECTRIC, AND TELEPHONE UTILITIES.
14. ROUGH GRADE DRIVEWAY AND INSTALL DRIVEWAY BASE.
15. INSTALL BITUMINOUS CONCRETE BINDER COURSE.
16. SEED & MULCH DISTURBED AREAS AND INSTALL LANDSCAPING AS SOON AS POSSIBLE.
17. MAINTAIN ALL SEDIMENT AND EROSION CONTROLS IN AN EFFECTIVE CONDITION DURING THE PHASE 1 CONSTRUCTION PERIOD.
18. CLEAN EFFECTED PORTION OF ON & OFF SITE ROADS AND DRIVEWAYS.
19. REMOVE ACCUMULATED SILT AND DEBRIS FROM CATCH BASINS, AREA DRAIN SUMPS & PIPES OF EFFECTED STORM DRAINS.
20. REMOVE ACCUMULATED SEDIMENT FROM EFFECTED AREAS AND DISPOSE OF LEGALLY.
21. REMOVE TEMPORARY SEDIMENT AND EROSION CONTROLS AND TREE PROTECTION.

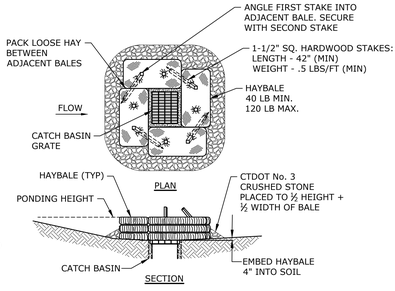


PHASE 2:

1. THE INSPECTING ENGINEER AND ARBORIST SHALL MEET WITH THE CONTRACTOR AND OWNER TO REVIEW THE SEDIMENT AND EROSION CONTROL (S&E PLAN) AND DISCUSS ANY MODIFICATIONS TO CONSTRUCTION SEQUENCE OR S&E PLAN.
2. INSTALL TREE PROTECTION AND TRIM LIMBS THAT MAY BE DAMAGED BY CONSTRUCTION EQUIPMENT.
3. INSTALL CONSTRUCTION FENCE AND ACCESS GATES AS SHOWN ON THE PLANS.
4. INSTALL TRACKING PAD AND ESTABLISH STAGING AREA WITH TRAILERS.
5. INSTALL SILT FENCE AND CONSTRUCTION FENCE AS SHOWN ON THE PLANS.
6. INSTALL REMAINING SEDIMENT AND EROSION CONTROLS.
7. DEMOLISH EXISTING BUILDING.
8. DEMOLISH ANY STRUCTURES OR UNDERGROUND UTILITIES AS SPECIFIED ON THE PLANS.
9. PERFORM GENERAL EARTHWORK FOR THE BUILDING. EXCAVATE AND INSTALL FOUNDATION.
10. ROUGH GRADE THE BALL FIELDS.
11. INSTALL STORMWATER, SANITARY SEWER, WATER, GAS, ELECTRIC, AND TELEPHONE UTILITIES.
12. ROUGH GRADE DRIVEWAY AND INSTALL DRIVEWAY BASE.
13. INSTALL BITUMINOUS CONCRETE BINDER COURSE.
14. SEED & MULCH DISTURBED AREAS AND INSTALL LANDSCAPING AS SOON AS POSSIBLE.
15. MAINTAIN ALL SEDIMENT AND EROSION CONTROLS IN AN EFFECTIVE CONDITION DURING THE PHASE 2 CONSTRUCTION PERIOD.
16. CLEAN EFFECTED PORTION OF ON & OFF SITE ROADS AND DRIVEWAYS.
17. REMOVE ACCUMULATED SILT AND DEBRIS FROM CATCH BASINS, AREA DRAIN SUMPS & PIPES OF EFFECTED STORM DRAINS.
18. REMOVE ACCUMULATED SEDIMENT FROM EFFECTED AREAS AND DISPOSE OF LEGALLY.
19. REMOVE TEMPORARY SEDIMENT AND EROSION CONTROLS AND TREE PROTECTION.

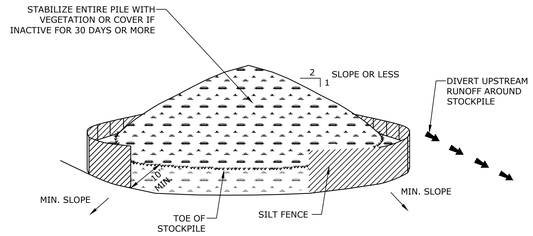


SILT FENCE
NO SCALE



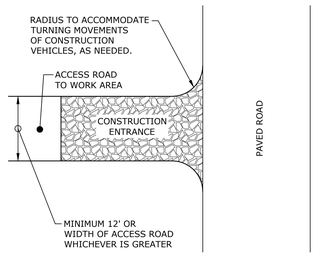
NOTE:
NON-OVERFLOW PORTIONS AND ABUTMENTS MAYBE CONSTRUCTED OF COMPACTED EARTH FILL.

TEMPORARY SEDIMENT TRAP
NO SCALE

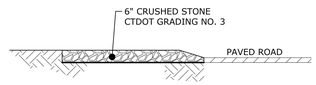


SILT FENCE INSTALLATION AT CATCH BASIN AT LOW POINTS

HAYBALE FILTER INSTALLATION AT CATCH BASIN AT LOW POINTS



CATCH BASIN EROSION CONTROL
NO SCALE



INSTALLATION NOTES:

1. AREA CHOSEN FOR STOCKPILING OPERATIONS SHALL BE DRY AND STABLE.
2. MAXIMUM SLOPE OF STOCKPILE SHALL BE 2H:1V.
3. UPON COMPLETION OF SOIL STOCKPILING, EACH PILE SHALL BE SURROUNDED WITH EITHER SILT FENCING OR HAYBALES, THEN STABILIZED WITH VEGETATION OR COVERED.

NOTE:
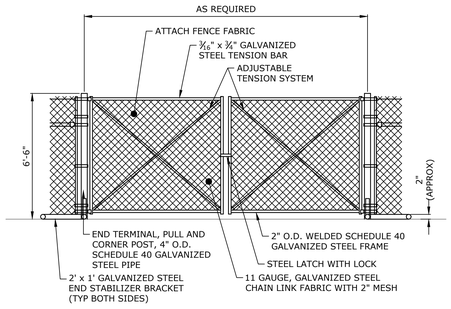
HORIZONTAL STAPLE SPACING SHOULE BE ALTERED IF NECESSARY TO ALLOW STAPLES TO SECURE THE CRITICAL POINTS ALONG THE CHANNEL SURFACE REFER TO GENERAL STAPLE PATTERN GUIDE FOR CORRECT STAPLE RECOMMENDATIONS FOR CHANNELS.



CRITICAL POINTS
A. OVERLAPS AND SEAMS
B. PROJECTED WATER LINE
C. CHANNEL BOTTOM/SIDE SLOPE VERTICIES

1. PREPARE SOIL BEFORE INSTALLING BLANKETS, INCLUDING APPLICATION OF LIME, FERTILIZER, AND SEED.
2. BEGIN AT THE TOP OF THE CHANNEL BY ANCHORING THE BLANKET IN A 6" DEEP X 6" WIDE TRENCH. BACKFILL AND COMPACT THE TRENCH AFTER STAPLING.
3. ROLL CENTER BLANKET IN DIRECTION OF WATER FLOW ON BOTTOM OF CHANNEL.
4. PLACE BLANKETS END OVER END (SHINGLE STYLE) WITH A 6" OVERLAP. USE A DOUBLE ROW OF STAGGERED STAPLES 4" APART TO SECURE BLANKETS.
5. FULL LENGTH EDGE OF BLANKETS AT TOP OF SIDE SLOPES MUST BE ANCHORED IN 6" DEEP X 6" WIDE TRENCH. BACKFILL AND COMPACT THE TRENCH AFTER STAPLING.
6. BLANKETS ON SIDE SLOPES MUST BE OVERLAPPED 4" OVER THE CENTER BLANKET AND STAPLED (2" FOR C350 MATTING).
7. IN HIGH FLOW CHANNEL APPLICATIONS, A STAPLE CHECK SLOT IS RECOMMENDED AT 30 TO 40 FOOT INTERVALS. USE A ROW OF STAPLES 4' APART OVER THE ENTIRE WIDTH OF THE CHANNEL. PLACE A SECOND ROW 4" BELOW THE FIRST ROW IN A STAGGERED PATTERN.
8. TERMINAL END OF THE BLANKETS MUST BE ANCHORED IN A 6" DEEP X 6" WIDE TRENCH. BACKFILL AND COMPACT THE TRENCH AFTER STAPLING.

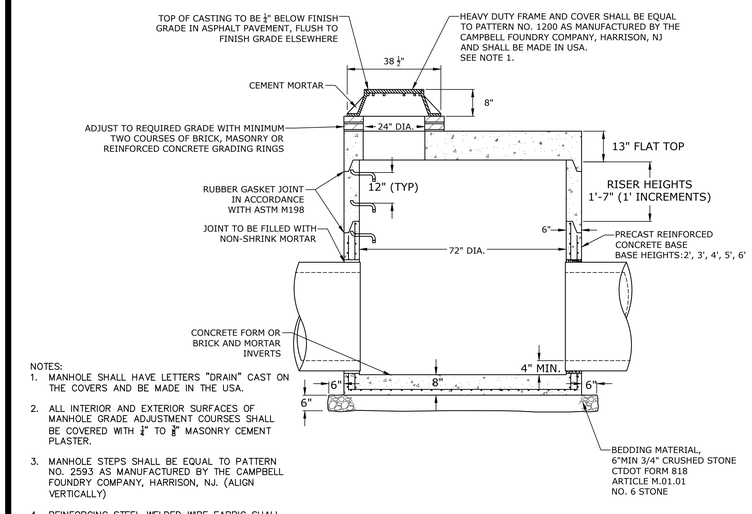
CDS2020-5-C DESIGN NOTES
THE STANDARD CDS2020-5-C CONFIGURATION IS SHOWN. ALTERNATE CONFIGURATIONS ARE AVAILABLE AND ARE LISTED BELOW. SOME CONFIGURATIONS MAY BE COMBINED TO SUIT SITE REQUIREMENTS.
CONFIGURATION DESCRIPTION
GRATED INLET ONLY (NO INLET PIPE)
GRATED INLET WITH INLET PIPE OR PIPES
CURB INLET ONLY (NO INLET PIPE)
CURB INLET WITH INLET PIPE OR PIPES
SEPARATE OIL BAFFLE (SINGLE INLET PIPE REQUIRED FOR THIS CONFIGURATION)
SEDIMENT WEIR FOR NJDEP / NJCAT CONFORMING UNITS

FRAME AND COVER
(DIAMETER VARIES)
N.T.S.

SITE SPECIFIC DATA REQUIREMENTS



STRUCTURE ID			
WATER QUALITY FLOW RATE (CFS OR L/s)			*
PEAK FLOW RATE (CFS OR L/s)			*
RETURN PERIOD OF PEAK FLOW (YRS)			*
SCREEN APERTURE (2400 OR 4700)			*
PIPE DATA:	I.E.	MATERIAL	DIAMETER
INLET PIPE 1	*	*	*
INLET PIPE 2	*	*	*
OUTLET PIPE	*	*	*
RIM ELEVATION			*
ANTI-FLOTATION BALLAST		WIDTH	HEIGHT
		*	*
NOTES/SPECIAL REQUIREMENTS:			
* PER ENGINEER OF RECORD			

GENERAL NOTES
1. CONTECH TO PROVIDE ALL MATERIALS UNLESS NOTED OTHERWISE.
2. DIMENSIONS MARKED WITH ( ) ARE REFERENCE DIMENSIONS. ACTUAL DIMENSIONS MAY VARY.
3. FOR FABRICATION DRAWINGS WITH DETAILED STRUCTURE DIMENSIONS AND WEIGHTS, PLEASE CONTACT YOUR CONTECH ENGINEERED SOLUTIONS LLC REPRESENTATIVE. www.contechES.com
4. CDS WATER QUALITY STRUCTURE SHALL BE IN ACCORDANCE WITH ALL DESIGN DATA AND INFORMATION CONTAINED IN THIS DRAWING.
5. STRUCTURE SHALL MEET AASHTO HS20 AND CASTINGS SHALL MEET HS20 (AASHTO M 306) LOAD RATING, ASSUMING GROUNDWATER ELEVATION AT, OR BELOW, THE OUTLET PIPE INVERT ELEVATION. ENGINEER OF RECORD TO CONFIRM ACTUAL GROUNDWATER ELEVATION.
6. PVC HYDRAULIC SHEAR PLATE IS PLACED ON SHELF AT BOTTOM OF SCREEN CYLINDER. REMOVE AND REPLACE AS NECESSARY DURING MAINTENANCE CLEANING.

INSTALLATION NOTES
A. ANY SUB-BASE, BACKFILL DEPTH, AND/OR ANTI-FLOTATION PROVISIONS ARE SITE-SPECIFIC DESIGN CONSIDERATIONS AND SHALL BE SPECIFIED BY ENGINEER OF RECORD.
B. CONTRACTOR TO PROVIDE EQUIPMENT WITH SUFFICIENT LIFTING AND REACH CAPACITY TO LIFT AND SET THE CDS MANHOLE STRUCTURE (LIFTING CLUTCHES PROVIDED).
C. CONTRACTOR TO ADD JOINT SEALANT BETWEEN ALL STRUCTURE SECTIONS, AND ASSEMBLE STRUCTURE.
D. CONTRACTOR TO PROVIDE, INSTALL, AND GROUT PIPES. MATCH PIPE INVERTS WITH ELEVATIONS SHOWN.
E. CONTRACTOR TO TAKE APPROPRIATE MEASURES TO ASSURE UNIT IS WATER TIGHT, HOLDING WATER TO FLOWLINE INVERT MINIMUM. IT IS SUGGESTED THAT ALL JOINTS BELOW PIPE INVERTS ARE GROUTED.

NOTES

- MANIFOLD SIZE TO BE DETERMINES BY SITE DESIGN ENGINEER. SEE TECH NOTE #6.33 FOR MANIFOLD SIZING GUIDANCE.
- DUE TO THE ADAPTATION OF THIS CHAMBER SYSTEM TO SPECIFIC SITE AND DESIGN CONSTRAINTS, IT MAY BE NECESSARY TO CUT AND COUPLE ADDITIONAL PIPE TO STANDARD MANIFOLD COMPONENTS IN THE FIELD.
- THE DESIGN ENGINEER MUST REVIEW ELEVATIONS AND IF NECESSARY ADJUST GRADING TO ENSURE THE CHAMBER COVER REQUIREMENTS ARE MET.
- THIS CHAMBER SYSTEM WAS DESIGNED WITHOUT SITE-SPECIFIC INFORMATION ON SOIL CONDITIONS OR BEARING CAPACITY. THE SITE DESIGN ENGINEER IS RESPONSIBLE FOR DETERMINING THE SUITABILITY OF THE SOIL AND PROVIDING THE BEARING CAPACITY OF THE INSITU SOILS. THE BASE STONE DEPTH MAY BE INCREASED OR DECREASED ONCE THIS INFORMATION IS PROVIDED.
- **NOT FOR CONSTRUCTION:** THIS LAYOUT IS FOR DIMENSIONAL PURPOSES ONLY TO PROVE CONCEPT & THE REQUIRED STORAGE VOLUME CAN BE ACHIEVED ON SITE.

ACCEPTABLE FILL MATERIALS: STORMTECH MC-3500 CHAMBER SYSTEMS

	MATERIAL LOCATION	DESCRIPTION	AASHTO MATERIAL CLASSIFICATIONS	COMPACTION / DENSITY REQUIREMENT
D	**FINAL FILL:** FILL MATERIAL FOR LAYER 'D' STARTS FROM THE TOP OF THE 'C' LAYER TO THE BOTTOM OF FLEXIBLE PAVEMENT OR UNPAVED FINISHED GRADE ABOVE. NOTE THAT PAVEMENT SUBBASE MAY BE PART OF THE 'D' LAYER	ANY SOIL/ROCK MATERIALS, NATIVE SOILS, OR PER ENGINEER'S PLANS. CHECK PLANS FOR PAVEMENT SUBGRADE REQUIREMENTS.	N/A	PREPARE PER SITE DESIGN ENGINEER'S PLANS. PAVED INSTALLATIONS MAY HAVE STRINGENT MATERIAL AND PREPARATION REQUIREMENTS.
C	**INITIAL FILL:** FILL MATERIAL FOR LAYER 'C' STARTS FROM THE TOP OF THE EMBEDMENT STONE ('B' LAYER) TO 24" (600 mm) ABOVE THE TOP OF THE CHAMBER. NOTE THAT PAVEMENT SUBBASE MAY BE A PART OF THE 'C' LAYER.	GRANULAR WELL-GRADED SOIL/AGGREGATE MIXTURES, <35% FINES OR PROCESSED AGGREGATE. MOST PAVEMENT SUBBASE MATERIALS CAN BE USED IN LIEU OF THIS LAYER.	AASHTO M145[4] A-1, A-2-4, A-3 OR AASHTO M43[4] 3, 357, 4, 467, 5, 56, 57, 6, 67, 68, 7, 78, 8, 89, 9, 10	BEGIN COMPACTIONS AFTER 24" (600 mm) OF MATERIAL OVER THE CHAMBERS IS REACHED. COMPACT ADDITIONAL LAYERS IN 12" (300 mm) MAX LIFTS TO A MIN. 95% PROCTOR DENSITY FOR WELL GRADED MATERIAL AND 95% RELATIVE DENSITY FOR PROCESSED AGGREGATE MATERIALS.
B	**EMBEDMENT STONE:** FILL SURROUNDING THE CHAMBERS FROM THE FOUNDATION STONE ('A' LAYER) TO THE 'C' LAYER ABOVE.	CLEAN, CRUSHED, ANGULAR STONE	AASHTO M43[4] 3, 4	NO COMPACTION REQUIRED.
A	**FOUNDATION STONE:** FILL BELOW CHAMBERS FROM THE SUBGRADE UP TO THE FOOT (BOTTOM) OF THE CHAMBER.	CLEAN, CRUSHED, ANGULAR STONE	AASHTO M43[4] 3, 4	PLATE COMPACT OR ROLL TO ACHIEVE A FLAT SURFACE.[2,3]

PLEASE NOTE:
1. THE LISTED AASHTO DESIGNATIONS ARE FOR GRADATIONS ONLY. THE STONE MUST ALSO BE CLEAN, CRUSHED, ANGULAR. FOR EXAMPLE, A SPECIFICATION FOR #4 STONE WOULD STATE: "CLEAN, CRUSHED, ANGULAR NO. 4 (AASHTO M43) STONE".
2. STORMTECH COMPACTION REQUIREMENTS ARE MET FOR 'A' LOCATION MATERIALS WHEN PLACED AND COMPACTED IN 9" (230 mm) (MAX) LIFTS USING TWO FULL COVERAGES WITH A VIBRATORY COMPACTOR.
3. WHERE INFILTRATION SURFACES MAY BE COMPROMISED BY COMPACTION, FOR STANDARD DESIGN LOAD CONDITIONS, A FLAT SURFACE MAY BE ACHIEVED BY RAKING OR DRAGGING WITHOUT COMPACTION EQUIPMENT. FOR SPECIAL LOAD DESIGNS, CONTACT STORMTECH FOR COMPACTION REQUIREMENTS.
4. ONCE LAYER 'C' IS PLACED, ANY SOIL/MATERIAL CAN BE PLACED IN LAYER 'D' UP TO THE FINISHED GRADE. MOST PAVEMENT SUBBASE SOILS CAN BE USED TO REPLACE THE MATERIAL REQUIREMENTS OF LAYER 'C' OR 'D' AT THE SITE DESIGN ENGINEER'S DISCRETION.

NOTES:

1. CHAMBERS SHALL MEET THE REQUIREMENTS OF ASTM F2418, "STANDARD SPECIFICATION FOR POLYPROPYLENE (PP) CORRUGATED WALL STORMWATER COLLECTION CHAMBERS" CHAMBER CLASSIFICATION 45x76 DESIGNATION SS.
2. MC-3500 CHAMBERS SHALL BE DESIGNED IN ACCORDANCE WITH ASTM F2787 "STANDARD PRACTICE FOR STRUCTURAL DESIGN OF THERMOPLASTIC CORRUGATED WALL STORMWATER COLLECTION CHAMBERS".
3. THE SITE DESIGN ENGINEER IS RESPONSIBLE FOR ASSESSING THE BEARING RESISTANCE (ALLOWABLE BEARING CAPACITY) OF THE SUBGRADE SOILS AND THE DEPTH OF FOUNDATION STONE WITH CONSIDERATION FOR THE RANGE OF EXPECTED SOIL MOISTURE CONDITIONS.
4. PERIMETER STONE MUST BE EXTENDED HORIZONTALLY TO THE EXCAVATION WALL FOR BOTH VERTICAL AND SLOPED EXCAVATION WALLS.
5. REQUIREMENTS FOR HANDLING AND INSTALLATION:
   - TO MAINTAIN THE WIDTH OF CHAMBERS DURING SHIPPING AND HANDLING, CHAMBERS SHALL HAVE INTEGRAL, INTERLOCKING STACKING LUGS.
   - TO ENSURE A SECURE JOINT DURING INSTALLATION AND BACKFILL, THE HEIGHT OF THE CHAMBER JOINT SHALL NOT BE LESS THAN 3".
   - TO ENSURE THE INTEGRITY OF THE ARCH SHAPE DURING INSTALLATION, a) THE ARCH STIFFNESS CONSTANT SHALL BE GREATER THAN OR EQUAL TO 450 LBS/FT/% THE ASC IS DEFINED IN SECTION 6.2.8 OF ASTM F2418. AND b) TO RESIST CHAMBER DEFORMATION DURING INSTALLATION AT ELEVATED TEMPERATURES (ABOVE 73° F / 23° C), CHAMBERS SHALL BE PRODUCED FROM REFLECTIVE GOLD OR YELLOW COLORS.

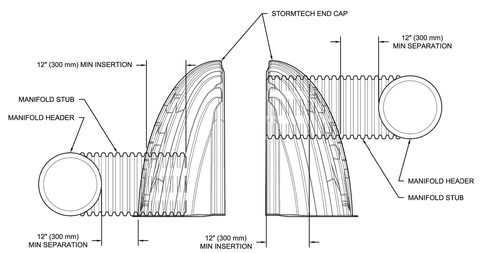
MC-3500 ISOLATOR ROW PLUS DETAIL
NTS

INSPECTION & MAINTENANCE

STEP 1) INSPECT ISOLATOR ROW PLUS FOR SEDIMENT
- A. INSPECTION PORTS (IF PRESENT)
  - A.1. REMOVE/OPEN LID ON NYLOPLAST INLINE DRAIN
  - A.2. REMOVE AND CLEAN FLEXSTORM FILTER IF INSTALLED
  - A.3. USING A FLASHLIGHT AND STADIA ROD, MEASURE DEPTH OF SEDIMENT AND RECORD ON MAINTENANCE LOG
  - A.4. LOWER A CAMERA INTO ISOLATOR ROW PLUS FOR VISUAL INSPECTION OF SEDIMENT LEVELS (OPTIONAL)
  - A.5. IF SEDIMENT IS AT, OR ABOVE, 3" (80 mm) PROCEED TO STEP 2. IF NOT, PROCEED TO STEP 3.
- B. ALL ISOLATOR PLUS ROWS
  - B.1. REMOVE COVER FROM STRUCTURE AT UPSTREAM END OF ISOLATOR ROW PLUS
  - B.2. USING A FLASHLIGHT, INSPECT DOWN THE ISOLATOR ROW PLUS THROUGH OUTLET PIPE
    - i) MIRRORS ON POLES OR CAMERAS MAY BE USED TO AVOID A CONFINED SPACE ENTRY
    - ii) FOLLOW OSHA REGULATIONS FOR CONFINED SPACE ENTRY IF ENTERING MANHOLE
  - B.3. IF SEDIMENT IS AT, OR ABOVE, 3" (80 mm) PROCEED TO STEP 2. IF NOT, PROCEED TO STEP 3.

STEP 2) CLEAN OUT ISOLATOR ROW PLUS USING THE JETVAC PROCESS
- A. A FIXED CULVERT CLEANING NOZZLE WITH REAR FACING SPREAD OF 45° (1.1 m) OR MORE IS PREFERRED
- B. APPLY MULTIPLE PASSES OF JETVAC UNTIL BACKFLUSH WATER IS CLEAN
- C. VACUUM STRUCTURE SUMP AS REQUIRED

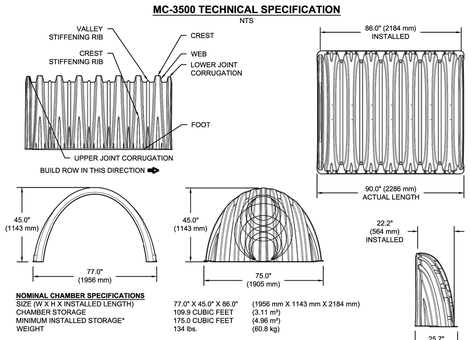
STEP 3) REPLACE ALL COVERS, GRATES, FILTERS, AND LIDS; RECORD OBSERVATIONS AND ACTIONS.



STEP 4) INSPECT AND CLEAN BASINS AND MANHOLES UPSTREAM OF THE STORMTECH SYSTEM.

NOTES

1. INSPECT EVERY 6 MONTHS DURING THE FIRST YEAR OF OPERATION. ADJUST THE INSPECTION INTERVAL BASED ON PREVIOUS OBSERVATIONS OF SEDIMENT ACCUMULATION AND HIGH WATER ELEVATIONS.



2. CONDUCT JETTING AND VACTORING ANNUALLY OR WHEN INSPECTION SHOWS THAT MAINTENANCE IS NECESSARY.

NOTES:
1. BACKFILLING OF TRENCHES SHALL BE ACCOMPLISHED IMMEDIATELY AFTER THE PIPE IS LAID. COMPACTION REQUIREMENTS SHALL BE ATTAINED BY THE USE OF MECHANICAL TAMPS ONLY. EACH AND EVERY LAYER OF BACKFILL SHALL BE PLACED LOOSE IN 6" LAYERS AND THOROUGHLY COMPACTED IN PLACE.
2. ALL MATERIALS SHALL HAVE AN IN PLACE DENSITY OF 100% STANDARD PROCTOR TO A DEPTH 6" BELOW GRADE. UNLESS NOTED OTHERWISE.
3. EXCAVATED MATERIALS SUCH AS DEBRIS AND REMOVED PAVEMENT IS NOT SUITABLE FOR TRENCH BACKFILL.
4. CARE MUST BE EXERCISED TO ENSURE PLACEMENT AND COMPACTION OF THE EMBEDMENT MATERIALS IN THE HAUNCHES. HAUNCHED MATERIALS MAY BE CLASS I, II OR III AND MUST BE PLACED AND COMPACTED IN 6 INCH MAXIMUN LIFTS COMPACTED TO 95 PERCENT STANDARD PROCTOR DENSITY.
5. ALL EMBEDMENT MATERIALS SHOULD BE FREE FROM LUMPS OF FROZEN SOIL OR ICE WHEN PLACED. EMBEDMENT MATERIALS SHOULD BE PLACED AND COMPACTED AT OPTIMUM MOISTURE CONTENT.
6. WHERE DEWATERING IS NECESSARY, WATER SHOULD BE REMOVED UNTIL THE PIPE HAS BEEN INSTALLED AND THE BACKFILL HAS BEEN PLACED TO SUFFICIENT HEIGHT TO PREVENT FLOTATION OF THE PIPELINE.
7. WHEN MINIMUM COVER IS NOT POSSIBLE, CONCRETE ENCASEMENT MAY BE REQUIRED. REFER TO SCD No. 651.31 PRIOR APPROVAL FROM THE HIGHWAY DIVISION OR TOWN ENGINEER SHALL BE REQUIRED FOR THE ENCASEMENT.

WATER MAIN INSTALLATION NOTES

1. WATER MAIN DETAILS, SPECIFICATION, TESTING AND INSTALLATION SHALL COMPLY WITH THE STANDARDS AND REQUIREMENTS OF AQUARION WATER COMPANY.
2. CONTRACTOR SHALL COORDINATE ALL WATER MAIN INSTALLATION INCLUDING ALL PIPING, FITTINGS, VALVES, TAPPING, SHUT DOWNS, ETC. WITH AQUARION WATER COMPANY.
3. AFTER PLACING APPROXIMATELY 2 FEET OF BACKFILL MATERIAL OVER ALL UTILITY PIPING, THE CONTRACTOR SHALL PLACE A 6" WIDE STRIP OF DURABLE, COLOR CODED (BLUE FOR WATER) UNDERGROUND UTILITY DETECTABLE WARNING TAPE IMPRINTED WITH AN APPROPRIATE WARNING INDICATING THE PRESENCE OF THE BURIED UTILITY.
4. WHEN CROSSING A SEWER, WATER MAIN JOINTS SHALL BE SPACED A MINIMUM OF 9' FROM THE INTERSECTION WITH THE SEWER.
5. CONTRACTOR SHALL EXCAVATE TEST PITS AT LOCATIONS SHOWN ON THE CONTRACT DRAWINGS WELL IN ADVANCE OF PIPE LAYING OPERATIONS TO CHECK FOR POSSIBLE CONFLICTS AND SUBSEQUENT METHODS OF REMEDY, AS DETERMINED BY THE OWNER'S REPRESENTATIVE, SHOULD CONFLICTS EXIST. ALL COST FOR TEST PITS SHALL BE INCLUDED IN THE PRICE BID FOR THE CONTRACT.
6. ALL JOINTS SHALL BE RESTRAINED WITH RETAINER GLANDS (MEGALUG SERIES 1100, MANUFACTURED BY EBAA IRON SALES, INC. OR AQUARION APPROVED EQUIVALENT).
7. ALL FITTINGS SHALL BE MECHANICAL JOINT WITH RETAINER GLANDS IN EACH DIRECTION. ALL FOLLOWER GLANDS SHALL BE REPLACED WITH RETAINER GLANDS.
8. INSTALLATION OF DUCTILE IRON PIPE, FITTINGS, BLOW-OFFS, PIPE SUPPORTS AND APPURTENANCES SHALL BE IN ACCORDANCE WITH AQUARION WATER COMPANY STANDARDS.
9. THE WATER MAIN SHALL BE DUCTILE IRON PIPE CLASS 52, LINED WITH DOUBLE THICKNESS CEMENT MORTAR, IN ACCORDANCE WITH ANSI/AWWA C151/A21. 51-81, AND SPECIFICATIONS INCLUDED IN THIS CONTRACT.
10. ALL EXISTING STRUCTURES, INCLUDING SANITARY SEWERS, LATERALS, STORM SEWERS, CATCH BASINS, MANHOLES AND UTILITY POLES, WHICH DURING THE EXECUTION WILL BE CONSIDERED BY THE OWNER'S REPRESENTATIVE AS BEING DISTURBED OR DAMAGED BY THE WATER MAIN INSTALLATION SHALL BE RESTORED OR REPLACED BY THE CONTRACTOR IN ACCORDANCE WITH THE TECHNICAL SPECIFICATIONS WHICH GOVERNED THE CONSTRUCTION OF THAT STRUCTURE AND TO THE SATISFACTION OF THE CTARNG, THE AUTHORITY HAVING JURISDICTION, AND THE OWNER'S REPRESENTATIVE. ALL COSTS FOR SUCH WORK, INCLUDING TEMPORARY RELOCATION OF THE AFOREMENTIONED STRUCTURES, SHALL BE CONSIDERED AS HAVING BEEN INCLUDED IN THE LUMP SUM CONTRACT PRICE.
11. ANY DEFLECTION OF THE WATER MAIN SHALL BE MADE ACCORDING TO THE RECOMMENDATION CONTAINED WITHIN DUCTILE IRON PIPE RESEARCH ASSOCIATION STANDARDS.
12. MINIMUM DEPTH OF COVER OVER PROPOSED WATER MAIN SHALL BE 4.5 FEET.
13. ALL INSTALLED WATER MAIN SHALL BE TESTED ACCORDING TO THE REQUIREMENTS OF AQUARION WATER COMPANY. TEST PRESSURE FOR THE WATER MAIN IS 200 PSI.
14. WATER MAIN, FITTINGS, VALVES, CURB BOXES, ETC. SHALL BE INSTALLED ACCORDING TO THE LATEST AQUARION WATER COMPANY RULES, REGULATIONS, AND SPECIFICATIONS.
15. CONTRACTOR SHALL INSTALL TEMPORARY BLOW-OFF ASSEMBLY, INCLUDING GATE VALVE, AS REQUIRED FOR FLUSHING PROPOSED WATER MAIN IN ACCORDANCE WITH AQUARION WATER COMPANY REQUIREMENTS. REMOVAL OF ALL TEMPORARY SYSTEMS IS INCLUDED IN THE LUMP SUM BID PRICE.
16. NOT ALL BENDS, FITTINGS, OFFSETS, CONNECTORS, CHLORINATION VALVES, BLOW-OFF ASSEMBLIES, ETC. ARE NOT SHOWN ON THE DRAWINGS. INSTALLATION OF WATER MAIN AND SERVICES SHALL CONFORM TO AQUARION WATER STANDARDS AND GUIDELINES.

ELECTRIC, CATV, AND TELEPHONE SERVICE
INSTALLATION BENEATH PAVED AREAS

ELECTRIC DUCTBANK NOTES:

1. ALL CONDUIT SHOWN ARE 5" DIAMETER PVC SCHEDULE 40 UNLESS OTHERWISE NOTED.
2. ALL SWEEPS AND RISER CONDUITS SHALL BE SCHEDULE 40 PVC UNLESS OTHERWISE NOTED.
3. PROVIDE BASE AND INTERMEDIATE SPACERS WHICH CONNECT TOGETHER TO FORM A UNIFORM SUPPORT 4'-0" ON CENTER.
4. WHERE NOTED, PROVIDE THE REQUIRED RACKING IN EACH MANHOLE TO ALLOW ALL CARRIERS TO TIE OFF SLACK IN AN ORDERLY FASHION.
5. ALL DUCTS SHALL BE CONCRETE ENCASED.
6. ALL DUCTBANKS SHALL BE FORMED ON IT'S SIDES.
7. ALL"SPARE" OR UNUSED CONDUITS SHALL BE PROVIDED WITH A $\frac{3}{4}$" NYLON DRAG LINE.
8. ALL CONDUIT BENDS SHALL BE A MINIMUM OF 12X THE CONDUIT RADIUS.
9. PITCH CONDUITS TOWARDS MANHOLES AND AWAY FROM BUILDINGS. AVOID CREATING LOW POINTS IN CONDUIT RUNS BETWEEN MANHOLES.
10. CONDUITS EXTENDED FROM MANHOLES, TRANSFORMERS, SWITCHGEAR, TUNNEL WALLS, BUILDING FOUNDATION WALLS SHALL BE GALVANIZED RIGID STEEL.
11. ALL DUCTBANK MATERIALS SHALL CONFORM TO THE RESPECTIVE UTILITY COMPANIES' STANDARDS AND MEET ALL REQUIREMENTS.

ELECTRIC, CATV, AND TELEPHONE SERVICE
INSTALLATION BENEATH LANDSCAPED AREAS

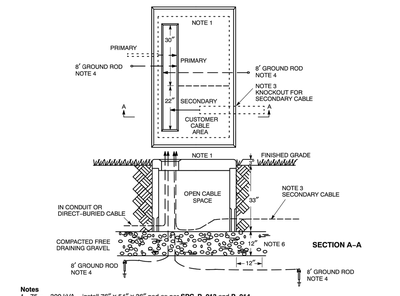
TEL-DATA/CATV DUCTBANK NOTES:

1. DUCTS SHOWN ARE 4" DIAMETER PVC TYPE EB UNLESS OTHERWISE NOTED.
2. ALL SEEPS AND RISER CONDUIT SHALL BE PVC TYPE EB UNLESS OTHERWISE NOTED.
3. ALL DUCTS SHALL BE CONCRETE ENCASED.
4. ALL DUCTBANKS SHALL BE FORMED ON ITS SIDES.
5. PROVIDE BASE AND INTERMEDIATE SPACERS WHICH CONNECT TOGETHER TO FORM A UNIFORM SUPPORT 6'-0" ON CENTER.
6. PROVIDE THREE 1 $\frac{1}{2}$" NON-METALLIC FLEX INTERDUCT WITH STRING LINES IN EACH OF THE 6 PVC DUCTS.
7. WHERE NOTED, PROVIDE THE REQUIRED RACKING IN EACH MANHOLE TO ALLOW ALL CARRIERS TO TIE OFF SLACK IN AN ORDERLY FASHION.
8. TEL-CATA/CATV MANHOLES SHALL NOT BE SPACED FURTHER THAN 500 FEET APART.
9. ALL CONDUITS TO BE LABELLED A TO Z.
10. ALL CONDUIT BENDS SHALL BE A MINIMUM OF 12X THE CONDUIT RADIUS.
11. PITCH CONDUITS TOWARDS MANHOLES AND AWAY FROM BUILDINGS. AVOID CREATING LOW POINTS IN CONDUIT RUNS BETWEEN MANHOLES.
12. ALL DUCTBANK MATERIALS SHALL CONFORM TO THE RESPECTIVE UTILITY COMPANIES' STANDARDS AND MEET ALL REQUIREMENTS.

GENERAL – Pad–mounted oil insulated equipment (such as transformers, transclosures, switches, etc) should be installed so as to be accessible, not constitute an environmental hazard or a fire hazard, and be protected from damage. In URD areas transformers installed at residential front lot lines are not subject to the requirements of this Standard, refer to **DTR 42.031**.

LOCATION – The pad–mounted equipment should be installed at a location where permanent access will be assured for future operation and maintenance as well as to permit installation, replacement and removal of the equipment by means of a winch truck with the boom up. Where noise may be a problem, careful consideration should be given when selecting a location. Areas subject to flooding should be avoided, as should other environmentally sensitive areas noted in **DSEM Section 06.32**. The building owner's and/or tenant's fire insurance carrier may restrict the proximity of the equipment to doors, windows or combustible materials and such requirements are the responsibility of the customer subject to the requirements of Northeast Utilities. In the absence of other requirements, the equipment shall be located with the following minimum clearances from various building facilities. The distances mentioned in this section shall not supersede any local ordinance or code which requires greater clearances.

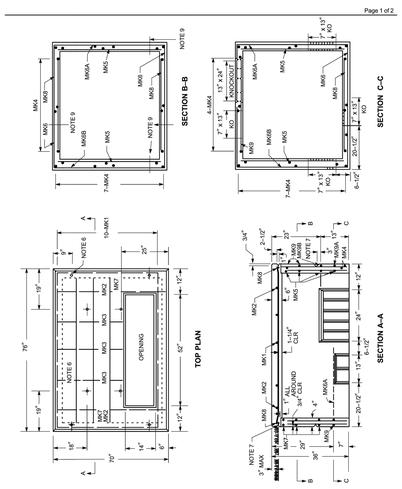
Item	Minimum Distance In Front of In Feet	To Side of In Feet	Below In Feet
Door	20	10	–
Air intake	10	10	25
Window	10	3	5
Fire escape	20	20	–
Combustible wall	6	6	–
Noncombustible wall	5	3	–
Fuel tanks (above and below grade)	10	10	–
Natural gas or propane connections			
CT/MA	3	3	–
NH	15	15	–
Gasoline dispensing unit	20	20	–



OIL SUMP – If the surrounding grade pitches toward critical areas, it is recommended that an oil sump be provided. This should consist of 3/4–inch trap rock fill under and around the equipment pad adequate to contain the quantity of oil in the equipment to be installed at the given location.

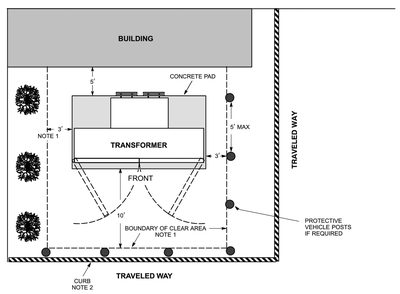
ADDITIONAL FIRE PROTECTION – If the building owner's and/or tenant's combustible facilities adjacent to the equipment require fire protection beyond that provided by oil sump, it shall be their responsibility to provide such protection in the form of space separation, fire resistant barriers, automatic spray systems, other oil containment facilities, or other means approved by their fire insurance company.

EQUIPMENT PROTECTION – Where pad–mounted equipment would be exposed to possible damage by vehicular traffic, protective bumpers are to be installed on exposed sides. Galvanized steel pipes 4–inch minimum diameter filled with concrete, I–beams 5–inch minimum, or other suitable means of protection may be used as bumpers. Such pipes or I–beams shall extend 42–inch minimum both above and below grade. Heavier bumpers set deeper should be considered where exposed to heavy trucks. Bumpers should be 10–foot minimum from the operating side of concrete pad and on the other sides 36–inch minimum from equipment or pad, whichever projects farther. The maximum spacing between bumpers on exposed sides should be 60 inches.



EQUIPMENT LOCKS – Any equipment, with provisions for locking, that is left on site and is accessible to the general public, shall be padlocked. This includes installations that are not complete and not energized. Completed pad–mount transformer installations shall meet "TAMPERPROOF EQUIPMENT LOCK" requirements, **DTR 03.401**.

ORIGINAL	PAD–MOUNTED OIL INSULATED EQUIPMENT LOCATION AND MECHANICAL PROTECTION			
10/9/73				
APPROVED				
1/05/02	NORTHEAST UTILITIES	DESIGN & APPLICATION STANDARD	DTR 42.061	9



Notes
1. 75 – 300 kVA – Install 76" x 54" x 36" pad as per **SPC P–013** and **P–014**.
   500 – 2500 kVA – Install 76" x 70" x 36" pad as per **SPC P–015** and **P–016**.
2. **Primary Cable**
   a. Install direct–buried cables a minimum of 30 inches below grade.
   b. Install cables in conduit a minimum of 24 inches below grade.
   c. Loop cables in cable pit before making connections.
3. **Secondary Cable** – Leave enough cable to extend 6 feet above pad for future reconnecting to transformers with higher secondary terminals. Customer cable(s) shall enter through the rear knockout and shall be confined to the area defined as the secondary cable area.
4. **Galvanized Steel Ground Rods** – Install in trench and connect #2 copper conductors from rods through pad opening and extending 5 feet above pad. Minimum separation of ground rods is 8 feet.
5. The following DTR/DSEM's should also be used:
   a. **DTR 17.083** – **THREE–PHASE TRANSFORMER CONNECTIONS**
   b. **DTR 33.217** – **600–VOLT CONNECTOR GUIDE – FOR NEMA PADS – THREE–PHASE PAD–MOUNT TRANSFORMERS**
   c. **DTR 42.061** – **LOCATION AND MECHANICAL PROTECTION REQUIREMENTS**
   d. **DTR 44.221** – **FAULT INDICATOR GUIDE – SOLID DIELECTRIC CABLES**
   e. **DTR 56.509** – **PRIMARY – SECONDARY AND TRANSFORMER GROUNDING**
   f. **DSEM Section 14.21** – **LOADING LIMITS – THREE–PHASE TRANSFORMERS**
   g. **DSEM Section 07.30** – **CONVENTIONAL UG LOOPS**
   h. **DTR 56.221** – **JACKETED PRIMARY CABLE – GROUNDING**
6. The excavation for the pad shall be carried to a depth of 12 inches below the bottom of the pad. The bottom layer of backfill shall be compacted, clean gravel, free of foreign matter and construction debris, extending 12 inches beyond the circumference of the structure, and in accordance with Connecticut DOT Spec M.05.06 Grading "A" or Metropolitan District MPW Spec No. 03.0 Type b. The remaining backfill shall not contain ashes, cinders, refuse, vegetable matter, or debris. Backfill shall be placed in 6–inch layers and compacted with mechanical tampers to not less than 95 percent of the maximum dry density as determined by the standard compaction tests, AASHTO T180 or ASTM D698.

Notes
1. To inspect, provide access, operate elbow connectors and ventilate the transformer, the above specified clear area distances to buildings or shrubs shall be maintained. The distance from the building is to the concrete transformer pad. Property line shall be considered an obstruction, since fences, shrubs, etc. may be installed at a future date by adjacent property owners. Because of the possibility of cooling fins overhanging the pad, side clearances to be increased to 5 feet for transformers 1000 kVA and larger.
2. If no curb exists, or transformer is located closer than 10 feet to the traveled way, protective vehicle posts (●) shall be installed as specified in **DTR 42.061**.
3. Top of transformer pad shall be installed 3 inches above final grade.
4. Transformer shall not be located on steep grades where access to or elbow operation is made difficult.
5. Transformer shall meet the minimum distances to doors, windows, fire escapes, air intakes and walls as specified in **DTR 42.061**.
6. Transformer ***is not*** to be located with its doors facing the building.
7. Refer to **DTR 58.301** for specific instructions on the installation of the transformer pad.
8. Refer to **DSEM Section 06.32** for information on environmental considerations.

NOTES
1. Design loading shall be in accordance with AASHTO HS20–1983.
2. Concrete and concrete design shall be in accordance with ACI 318–1986.
3. Concrete shall have a minimum 28 day strength of 4000 psi and a maximum 28 day strength of 5000 psi.
4. Five inch x 12 inch knockouts, (3) in the top, (3) in the bottom and (1) 12 inch x 13 inch knockout in the bottom shall be clear of reinforcement.
5. 3/4 inch – coil loop inserts – 6 inch – (Dayton B–16) with insert locator plug (Dayton T–21). Two each in top and bottom sections for lifting with swivel plate. Inserts are to be secured in place with rebar.
6. Zinc alloy inserts 5/8 inch – 11 x 1–1/2 inches for extension (3) on 41 inch bolt circle.
7. Zinc alloy inserts 3/4 inch – 10 x 3 inches for cable pulling (4) opposite knockouts in bottom section.
8. Zinc alloy inserts 1/2 inch – 13 x 1–1/2 inches (6) for mounting junction connectors.
9. Zinc alloy inserts 3/8 inch – 16 x 1–1/2 inches (6) for supporting ground bus.
10. Manufacturer's identification and month/year when manufactured shall be legibly marked in/on concrete on the outside upper part.

NOTES:

ALL RRFB EQUIPMENT, SIGNS, AND PAVEMENT MARKINGS TO BE OWNED AND MAINTAINED BY THE TOWN OF GREENWICH.

TOWN RRFB ASSEMBLY

TECHNICAL NOTES	OFFICE RECORD
RECTANGULAR RAPID FLASHERS TO FLASH FOR 16 SECONDS UPON EACH ACTUATION.	REV # TIR # N/A SM # SIGNAL REVISED:
16 SECOND TIMER SHOULD RESET UPON EACH ACTUATION.	INSTALLED RECTANGULAR RAPID FLASHING BEACON (RRFB) ASSEMBLY UNDER PERMIT.
SPEECH MESSAGE OF "YELLOW LIGHTS ARE FLASHING" TO PLAY TWICE UPON EACH ACTUATION.	

CONSTRUCTION NOTES:

ALL MATERIALS AND CONSTRUCTION METHODS SHALL CONFORM TO THE FOLLOWING CURRENT D.O.T. DOCUMENTS WHICH CAN BE ACCESSED ON THE CTDOT WEBSITE:

- STANDARD SPECIFICATION FOR ROADS, BRIDGES, AND INCIDENTAL CONSTRUCTION (FORM 818)
- SUPPLEMENTAL SPECIFICATIONS TO FORM 818
- STANDARD INSTALLATION AND GUIDE DETAIL SHEETS

ALL TRAFFIC SIGNAL EQUIPMENT IS NEW.

STAKE ALL R.O.W. PRIOR TO EXCAVATION.

ANY PROPOSED REVISIONS TO THE LOCATION OF THE APPURTENANCES SHOWN ON THE PLAN MUST BE SUBMITTED FOR REVIEW AND APPROVAL BY THE TOWN PRIOR TO INSTALLATION.

PUSH BUTTON TO HAVE LOCATOR TONES AND AUDIBLE MESSAGE.

THE LOCATION OF TRAFFIC SIGNAL FOUNDATIONS WHEN IN OR ADJACENT TO SIDEWALK SHALL BE VERIFIED PRIOR TO INSTALLATION TO PROVIDE A FREE PATH OF NOT LESS THAN 4 FEET. IF A MINIMUM OF 4 FOOT FREE PATH IS UNAVAILABLE, NOTIFY THE ENGINEER AND CONTACT THE TOWN OF GREENWICH.

SEE SPECIAL PROVISION ITEM #1117111A - RECTANGULAR RAPID FLASHING BEACON - TYPE B.

RECTANGULAR RAPID FLASHING BEACON TO BE PEDESTRIAN ACTUATED, SOLAR POWERED, AND WIRELESS ACTIVATED.

COORDINATE WITH UTILITY COMPANY REPRESENTATIVES LISTED IN SPECIAL PROVISION 1.07 - LEGAL RELATIONS AND RESPONSIBILITIES.

INSTALL RRFB ASSEMBLIES ON 14' PEDESTALS.

RRFB SHALL MEET THE FLASHING REQUIREMENTS OF THE MUTCD AND FHWA INTERIM APPROVAL AND REMAIN ACTIVATED FOR 16 SECONDS TO ALLOW PEDESTRIAN CROSSING OF THE FULL WIDTH OF ORCHARD STREET.

PUSH BUTTONS TO BE INSTALLED WITH "PUSH BUTTON TO TURN ON WARNING LIGHTS" SIGN (CTDOT NO. 31-0846).

THE RRFB AND PUSH BUTTONS SHALL BE DIRECTIONAL CONFIGURATION AND HAVE SIDE-EMITTING PEDESTRIAN CONFIRMATION LIGHTS.

REMOVE EXISTING "SCHOOL CROSSING" SIGN.

THE CONTRACTOR SHALL REPLACE IN KIND ALL DISTURBED AREAS ASSOCIATED WITH THE CONSTRUCTION OF SIGNAL EQUIPMENT TO THE SATISFACTION OF THE TOWN OF GREENWICH.

(D) INSTALL TYPE 10 SIDEWALK RAMP PER GUIDE SHEET.

PAVEMENT MARKING NOTES:

ERADICATE ANY EXISTING CONFLICTING PAVEMENT MARKINGS.

INSTALL NEW CROSSWALK ACROSS ORCHARD STREET AS SHOWN ON THE PLAN.

INSTALL YIELD LINES AS SHOWN ON THE PLAN.

APPROVED BY:

STATE OF CONNECTICUT
DEPARTMENT OF TRANSPORTATION

PROJECT NUMBER: G5068-003
PROJECT DESCRIPTION: GREENWICH CENTRAL MIDDLE SCHOOL OFF-SITE IMPROVEMENTS
TOWN(S): GREENWICH
DRAWING TITLE: CONCRETE SIDEWALK RAMPS SHEET 4 OF 11

DRAWING NO. CSR-01
SHEET NO.

LASTED SAVED BY: RichardH **FILE NAME:** W:\CT_CONNECT_DDE\CT_Configuration\Organization\Cell\CTDOT_Borders_Contract.cel
PLOTTED DATE: 12/6/2023

THE DETECTABLE WARNING STRIP SHALL BE CONSTRUCTED USING ADA SOLUTIONS (OR APPROVED EQUAL) 24" X 48" CAST-IN-PLACE TACTILE PANELS IN BRICK RED. ALTERNATIVE COLORS AND DESIGNS REQUIRE APPROVAL BY THE HIGHWAY DIVISION.

NOTES:

1. SIDEWALK RAMPS SHALL BE CONSTRUCTED AT ALL PEDESTRIAN CROSSWALKS IN ALL NEW DESIGNS AND AT PEDESTRIAN CROSSWALK LOCATIONS WHERE AN EXISTING CURB OR WALK IS TO BE DISTURBED BY CONSTRUCTION.
2. DRAINAGE DESIGN IN THE VICINITY OF SIDEWALK RAMPS SHALL BE CONSIDERED AN INTEGRAL PART OF THE DESIGN OF THOSE RAMPS. NO DRAINAGE STRUCTURES SHALL BE PLACED WITHIN THE LIMITS OF A SIDEWALK RAMP ON THE DESIGNS.
3. REGARDLESS OF THE TYPE OF PAVEMENT OF ADJACENT SIDEWALK, ALL SIDEWALK RAMPS SHALL BE CONSTRUCTED OF CLASS "C" CONCRETE IN ACCORDANCE WITH THE STATE OF CONNECTICUT DEPARTMENT OF TRANSPORTATION FORM 817 SECTION M.03.02 (AS AMENDED).
4. ALL SIDEWALK RAMPS SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE DETAILS FOR SIDEWALKS, EXCEPT THE FINAL TEXTURE OF THE CONCRETE SURFACE SHALL HAVE A COARSE BROOM FINISH TRANSVERSE TO THE SLOPE OF THE RAMP.
5. CARE SHALL BE TAKEN TO ASSURE A UNIFORM GRADE ON THE RAMP, FREE OF SAGS AND SHORT GRADE CHANGES.
6. MINIMUM WIDTH OF SIDEWALK RAMPS SHALL BE 4 FEET.
7. THE BOTTOM OF THE RAMP SHALL MEET THE BACK ELEVATION OF THE CURB. THE CURB LIP HEIGHT IS NOT TO EXCEED 1/4" ABOVE THE EDGE OF THE ROADWAY PAVEMENT.
8. SUBBASE FOR SIDEWALK RAMPS SHALL BE 6"-3/4" COMPACTED TRAPROCK (95% COMPACTION REQUIRED).

THIS SIGN ADDED FOR THIS PROJECT ONLY.

NOTES:

1. THE LEGEND "O.S.T.A." SHALL APPEAR ON ALL R- SERIES SIGNS EXCEPT WHEN SUFFIXED WITH THE LETTER "Z".
2. FOR SPECIFIC SIGN DESIGN CONTACT CONN. D.O.T., DIVISION OF TRAFFIC ENGINEERING. FOR BOLT HOLE PATTERN REFER TO FHWA PUBLICATION "STANDARD HIGHWAY SIGNS". SIGNS OF DIFFERENT DIMENSIONS TO BE ERECTED ON THE SAME POSTS, OR SPAN/MAST ARM MOUNTED, MAY REQUIRE SPECIAL BOLT HOLE PATTERNS.
3. POSTS - SEE STANDARD SHEET TR-1208_02 - "METAL SIGN POSTS AND SIGN MOUNTING DETAILS."
4. POSTS SHALL BE 4 LBS./FT.
5. SIGNS SHALL BE FABRICATED OF ONE CONTINUOUS PIECE OF SHEET ALUMINUM. SPLICING OF SHEET ALUMINUM WILL NOT BE ACCEPTED.
6. FOR OVERHEAD MOUNTED SIGNS, SEE STANDARD SHEET TR-1114_01 - "BONDING AND UTILITY POLE ATTACHMENT DETAILS, SIGN HANGER, "Y" CLAMP DETAIL."

COLORS:

BACKGROUND - WHITE - EXCEPT AS NOTED.

LEGEND - BLACK - EXCEPT AS NOTED.

ALL SIGNS TO USE TYPE IX RETROREFLECTIVE SHEETING WITH THE EXCEPTION OF OVERHEAD MOUNTED SIGNS AND SIGNS DESIGNATED WITH AN * WHICH SHALL BE TYPE XI RETROREFLECTIVE SHEETING.

THIS SIGN ADDED FOR THIS PROJECT ONLY.

NOTES:

1. FOR SPECIFIC SIGN DESIGN CONTACT CONN. D.O.T., DIVISION OF TRAFFIC ENGINEERING.
   FOR BOLT HOLE PATTERN REFER TO FHWA PUBLICATION "STANDARD HIGHWAY SIGNS".
   SIGNS OF DIFFERENT DIMENSIONS TO BE ERECTED ON THE SAME POSTS, OR SPAN/MAST ARM MOUNTED, MAY REQUIRE SPECIAL BOLT HOLE PATTERNS.
2. POSTS - SEE STANDARD SHEET TR-1208_02 "METAL SIGN POSTS AND SIGN MOUNTING DETAILS."
3. POSTS SHALL BE 4 LBS./FT.
4. SIGNS SHALL BE FABRICATED OF ONE CONTINUOUS PIECE OF SHEET ALUMINUM.
   SPLICING OF SHEET ALUMINUM WILL NOT BE ACCEPTED.
5. FLUORESCENT YELLOW RETROREFLECTIVE STRIPS SHALL BE INSTALLED ON ALL SIGN POSTS FOR W1-6 AND W1-8 SIGNS.
   FLUORESCENT YELLOW GREEN RETROREFLECTIVE STRIPS SHALL BE INSTALLED ON ALL SIGN POSTS FOR S1-1 AND W11-2 SIGNS LOCATED AT CROSSINGS. RETROREFLECTIVE STRIPS SHOULD NOT BE INSTALLED ON ADVANCE CROSSING WARNING SIGNS.
   SEE STANDARD SHEET TR-1208_01 "SIGN PLACEMENT AND RETROREFLECTIVE STRIP DETAILS" FOR RETROREFLECTIVE STRIP DETAILS AND INSTALLATION.

COLORS:

BACKGROUND - YELLOW - EXCEPT AS NOTED.
LEGEND - BLACK - EXCEPT AS NOTED.
ALL SIGNS TO USE TYPE XI RETROREFLECTIVE SHEETING.

DOCUMENT ALL LOOP DETECTOR VALUES BOTH CALCULATED AND MEASURED.

DEFINITIONS:

LOOP: #14 AWG WIRE IN SAWCUT, TERMINATED IN HANDHOLE, IMSA SPEC 51-7.
LEAD-IN: 14/2 SHIELDED TWISTED PAIR CABLE FROM HANDHOLE TO CONTROLLER, IMSA SPEC 50-2.
LOOP CIRCUIT: LOOP SAWCUT WIRE SPLICED TO 14/2 LEAD-IN CABLE.
AMPLIFIER: ELECTRONIC DEVICE CONNECTED TO LOOP CIRCUIT. SENSES CHANGE IN RESONANT FREQUENCY AND CREATES AN OUTPUT TO THE CONTROLLER.
MEGOHMETER: INSTRUMENT SPECIFICALLY DESIGNED TO TEST THE INSULATION RESISTANCE OF A CIRCUIT. COMMON MANUFACTURERS: AMEC®, AMPROBE®, FLUKE®, MEGGER®.

1: RESISTANCE:

1a: INSULATION RESISTANCE: PERFORM A 600 VOLT (MINIMUM) MEGOHMETER TEST ON LOOP CIRCUIT. THE LOOP AMPLIFIER MUST BE DISCONNECTED FROM THE LOOP CIRCUIT OR THE LOOP AMPLIFIER WILL BE DAMAGED. THE RESISTANCE OF THE LOOP WIRE TO GROUND MUST BE GREATER THAN 100 MEG OHMS.

1b: WIRE RESISTANCE: MEASURE THE DC RESISTANCE OF THE LOOP CIRCUIT. THE LOOP CIRCUIT MUST BE DISCONNECTED FROM THE AMPLIFIER. USING AN OHMMETER CONNECTED ACROSS THE LOOP CIRCUIT, MEASURE THE DC RESISTANCE OF THE CONDUCTORS. THE RESISTANCE SHOULD BE LESS THAN 4 OHMS.

NOTE: ALL TESTS SHALL BE DONE AT THE CONTROLLER ASSEMBLY (CA), HOWEVER IT IS RECOMMENDED TO PERFORM A PRELIMINARY MEGOHMETER TEST AT THE HANDHOLE PRIOR TO SEALING THE SAWCUT AND SPLICING TO THE LEAD-IN. IF A DEFECTIVE LOOP WIRE IS FOUND, IT MAY BE EASILY REPLACED.

2: LOOP CIRCUIT INDUCTANCE:

2a: CALCULATE INDUCTANCE OF LOOP (L_{LOOP}) AND LEAD-IN CABLE ($L_{14/2}$).

LOOP INDUCTANCE (ENGLISH)

$L_{LOOP} = (P/4)(N^2 + N)$

LEAD-IN INDUCTANCE

$L_{14/2} = (0.24\,\mu H/FT)(D)$

LOOP INDUCTANCE (METRIC)

$L_{LOOP} = (3.28P/4)(N^2 + N)$

LEAD-IN INDUCTANCE

$L_{14/2} = (0.78\,\mu H/m)(D)$

WHERE:

L_{LOOP} = INDUCTANCE OF INDIVIDUAL LOOP SEGMENTS IN MICROHENRIES (μH).
$L_{14/2}$ = INDUCTANCE OF LEAD-IN CABLE.
P = PERIMETER OF INDIVIDUAL LOOP SEGMENT, IN FEET OR METERS.
N = NUMBER OF TURNS.
D = LENGTH OF LEAD-IN CABLE FROM SPLICE IN HANDHOLE TO CONTROLLER, IN FEET OR METERS.

$L_T = L_1 + L_2 + L_3$ etc.,
(TOTAL INDUCTANCE OF SEGMENTED LOOP SPLICED IN SERIES.)

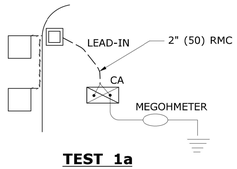
$L_T = 1 / [(1 / L_1) + (1 / L_2) + (1 / L_3) + \text{etc.}]$,
(TOTAL INDUCTANCE OF SEGMENTED LOOP SPLICED IN PARALLEL.

WHERE:

L_T = TOTAL INDUCTANCE OF THE SEGMENTED ARRANGEMENT.
L_1, L_2, L_3 = INDUCTANCE OF INDIVIDUAL LOOP SEGMENTS.

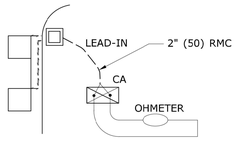
EXAMPLE: (IN ENGLISH)

6' x 6', 4 TURNS, APPROXIMATELY 300' FROM THE CONTROLLER



$L_{LOOP} = (24/4)(4^2 + 4)$
$L_{LOOP} = (6)(20)$
$L_{LOOP} = 120\,\mu H$

$L_{14/2} = (0.24\,\mu H/FT)(300)$
$L_{14/2} = (0.24)(300)$
$L_{14/2} = 72\,\mu H$



2b: MEASURE INDUCTANCE OF LOOP AND LEAD-IN AT CONTROLLER. USE INSTRUMENT DESIGNED TO MEASURE LOOP CIRCUIT INDUCTANCE.

3: POWER INTERRUPTION:

AFTER THE AMPLIFIER HAS TUNED AND IS OPERATING, DISCONNECT POWER BY REMOVING FUSE OR HARNESS CONNECTOR. RETURN POWER TO THE AMPLIFIER AND CONFIRM IT RE-TUNES AUTOMATICALLY WITHOUT ANY MANUAL ADJUSTMENTS.

TEST 1a

TEST 1b

PROJECT:

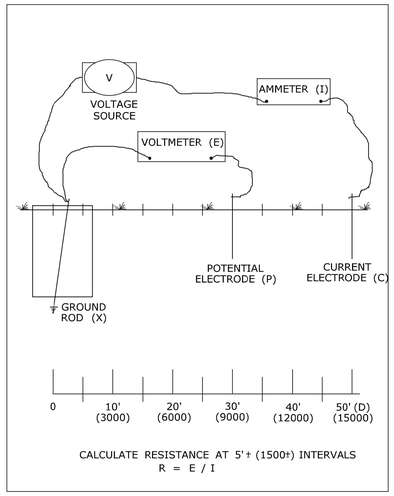
D4A FRONT					
D4B REAR					
D5					
D6A					
D6B					

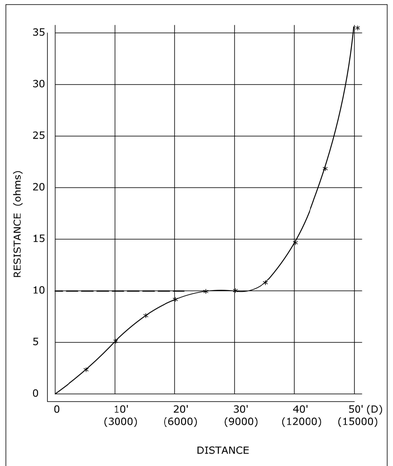
LOOP CIRCUIT TEST DATA (EXAMPLE)



TEST PROCEDURE:

- INSERT ELECTRODE (C) A DISTANCE (D) FROM THE FOUNDATION. RECOMMEND A MINIMUM 50'.
- CONNECT A VOLTAGE SOURCE AND AMMETER BETWEEN THE FOUNDATION GROUND ROD (X) AND C.
- MEASURE THE CURRENT FLOW (I) BETWEEN X AND C.
- INSERT POTENTIAL ELECTRODE (P) AT 5'(1500) INTERVALS IN A STRAIGHT LINE TO ELECTRODE C.
- MEASURE VOLTAGE (E) AT EACH LOCATION OF P.
- CALCULATE RESISTANCE (R) AT EACH LOCATION OF P USING THE FORMULA R=E/I.
- PLOT THE VALUES ON A RxD GROUND RESISTANCE CHART.
- THE ACTUAL GROUND RESISTANCE IS WHERE THE PLOTTED CURVE IS RELATIVELY FLAT, USUALLY AT 62%± OF D. SEE EXAMPLE CHART: CURVE FLATTENS OUT AT 10 OHMS, APPROXIMATELY 30' (9000) FROM FOUNDATION.
- IF GROUND RESISTANCE IS GREATER THAN 10 OHMS, PERFORM CORRECTIVE ACTION AND RE-TEST.

SUGGESTED CORRECTIVE ACTION:



A. INSTALL ADDITIONAL 10' (3000) GROUND ROD(S).
REFER TO NESC SECTION 09, RULE 94.B.2.
DRIVE ADDITIONAL GROUND RODS NO CLOSER TO FOUNDATION THAN 6'(1800). IF MORE THAN ONE IS NEEDED, SPACE MINIMUM 6'(1800) APART.
BONDS TO ADDITIONAL GROUND ROD(S) SHALL BE MADE BY A CLAMP DESIGN FOR DIRECT BURIAL OR BY EXOTHERMIC WELDING TECHNIQUE.
TOP OF ADDITIONAL GROUND ROD(S) SHALL BE 6" (150) BELOW GRADE.

B. IN AREAS OF SHALLOW BEDROCK, INSTALL A GROUND GRID OR ARRAY CONSISTING OF BURIED WIRE, RODS, STRIPS OR PLATES.
REFER TO NESC SECTION 09, RULE 94.B.3.
REFER TO NEC SECTION 250.
MINIMUM DEPTH OF 18" (450).
GRID CONNECTIONS AND BONDS ON GROUND GRID SHALL BE MADE BY CLAMPS DESIGNED FOR DIRECT BURIAL OR BY EXOTHERMIC WELDING TECHNIQUE.

CALCULATE RESISTANCE AT 5'± (1500±) INTERVALS
R = E / I

3 POINT GROUND RESISTANCE TEST CIRCUIT

GROUND RESISTANCE CHART (EXAMPLE)

INDUCTIVE LOOP TEST PROCEDURE

PIN	COLOR	FUNCTION
A	WHITE	110 VAC Neutral
B	BROWN	Output Relay Common (moving contact)
C	BLACK	110 VAC (Fused)
D	RED	Loop
E	ORANGE	Loop
F	YELLOW	Output Relay Contact (Closes with moving contact when detecting vehicle)
G	BLUE	Output Relay Contact (Opens with moving contact when detecting vehicle)
H	GREEN	Chassis Ground
J	GREY	110 VAC Delay/Extend Override
Shell		Ground (shall be connected to pin H in the connector)

DETECTOR AMPLIFIER PIN DESIGNATION

NOTES:
1. WHEN REQUESTED BY THE ENGINEER, MEASURE RESISTANCE-TO-GROUND OF GROUND ROD AT TRAFFIC CONTROL FOUNDATIONS. SEE FALL-OF-POTENTIAL METHOD. IF LESS THAN 10 ohms, INSTALL SUPPLEMENTAL ELECTRODES AS REQUIRED. NEC ARTICLE 250.
2. DURING THE TEST, THE GROUND ROD SHOULD NOT BE BONDED TO ANY RMC IN THE FOUNDATION.
3. THE VOLTAGE SOURCE, VOLTMETER, AMMETER, ELECTRODES P AND C, AND CONNECTING CABLES ARE AVAILABLE AS A SPECIALIZED TEST INSTRUMENT.
4. REFER TO NATIONAL ELECTRICAL SAFETY CODE (NESC) SECTION 09, GROUNDING METHODS FOR ELECTRIC SUPPLY AND COMMUNICATIONS FACILITIES.
5. REFER TO NATIONAL ELECTRICAL CODE (NEC) CHAPTER 2, ARTICLE 250, GROUNDING.

3 POINT FALL-OF-POTENTIAL GROUND RESISTANCE TEST

LEGEND AS SHOWN ON TRAFFIC CONTROL SIGNAL PLAN:
- INDUCTIVE LOOP DETECTOR
- SAW CUT
- RIGID METAL CONDUIT
- HANDHOLE

REV.	DATE	REVISION DESCRIPTION
2	1-2014	REVISED GROUND RESISTANCE NOTES.
1	4-2012	MINOR REVISIONS.

THE INFORMATION, INCLUDING ESTIMATED QUANTITIES OF WORK, SHOWN ON THESE SHEETS IS BASED ON LIMITED INVESTIGATIONS BY THE STATE AND IS IN NO WAY WARRANTED TO INDICATE THE CONDITIONS OF ACTUAL QUANTITIES OF WORK WHICH WILL BE REQUIRED.

Plotted Date: 1/7/2014

DIMENSIONS ARE IN ENGLISH (") & METRIC UNITS (mm).
METRIC DIMENSIONS ARE ROUNDED:
- OVER 1" TO NEAREST 5 mm
- UNDER 1" TO NEAREST 1 mm.

TYPICAL PLACEMENT OF OVERHEAD SIGNS ON SIGN SUPPORTS

NOTES:

1) FOR PLACEMENT OF CANTILEVER SIGN SUPPORT USE APPLICABLE PORTION OF ABOVE DETAIL.
2) BARRIER SYSTEMS MAY BE REQUIRED FOR BOTH SIDES OF SUPPORTS IN MEDIANS.
3) IMPACT PROTECTION SHALL BE PROVIDED FOR THE SIGN SUPPORTS LOCATED WITHIN CLEAR ZONE.
4) SIGN SUPPORT FOUNDATIONS SHALL BE LOCATED OUTSIDE OF BARRIER SYSTEMS DEFLECTION AREA.
5) ALL SIGNS ARE TO BE LEVEL, REGARDLESS OF CAMBER IN SUPPORT.

TYPICAL PLACEMENT OF SIDE MOUNTED SIGNS ON STRUCTURAL STEEL BREAKAWAY SIGN SUPPORTS

NOTES:

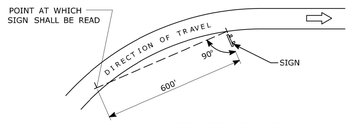
1) MIN. VERTICAL CLEARANCE ABOVE SIDEWALKS SHALL BE 7'.
2) WHERE GUIDE RAIL IS USED, THE OFFSET TO THE NEAR EDGE OF SIGN FACE SHALL BE AS SHOWN ELSEWHERE IN THE CONTRACT PLANS.
3) ON INTERSECTING ROADS AT RAMP TERMINI, THE OFFSET TO THE NEAR EDGE OF OF SIGN FACE SHALL BE 6' MIN. FROM POINT "E".
4) IF 30'-0" MIN. CANNOT BE MET, PLEASE CONTACT THE ENGINEER.

FOR MAXIMUM EFFECTIVENESS, POSITION SIDE MOUNTED SIGNS ON STRUCTURAL STEEL BREAKAWAY SIGN SUPPORTS AS FOLLOWS:

ON A TANGENT SECTION, POSITION THE SIGN SO THE VERTICAL AXIS IS PLUMB AND THE HORIZONTAL AXIS IS AT AN ANGLE OF 90° WITH THE TRAFFIC LANE WHICH THE SIGN SERVES. SIGNS LOCATED 30 FT OR MORE FROM THE EDGE OF THE ROAD SHALL BE TURNED APPROXIMATELY 3° TOWARD THE ROAD.

DIAGRAM "A"

ON A HORIZONTAL CURVE SECTION, POSITION THE SIGN SO THE VERTICAL AXIS IS PLUMB AND THE HORIZONTAL AXIS IS AT AN ANGLE OF 90° WITH A STRAIGHT LINE BETWEEN THE SIGN AND THE POINT AT WHICH THE SIGN SHALL BE READ.



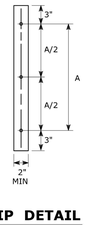


DIAGRAM "B"

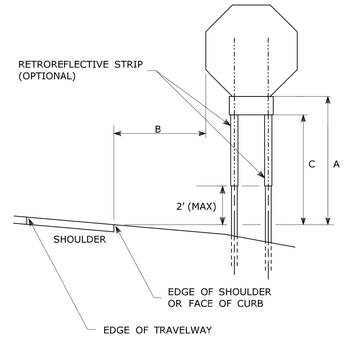
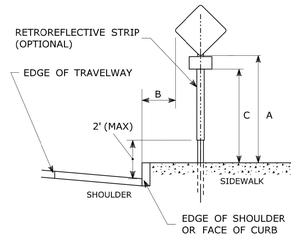
SIGN ORIENTATION DETAILS FOR SIDE MOUNTED SIGNS ON STRUCTURAL STEEL BREAKAWAY SIGN SUPPORTS

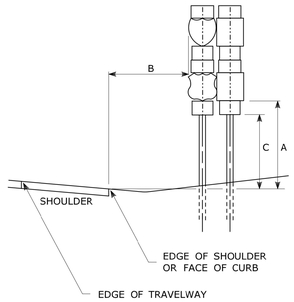
RETROREFLECTIVE STRIPS 48" LONG OR LESS:

RETROREFLECTIVE STRIPS OVER 48" LONG:





RETROREFLECTIVE STRIP DETAIL



NOTES:

RETROREFLECTIVE STRIPS WHICH ARE 48 IN LONG OR LESS SHALL BE ATTACHED USING 2 BOLTS AND RETROREFLECTIVE STRIPS OVER 48 IN LONG SHALL BE ATTACHED USING 3 BOLTS AS SHOWN ON THE DETAILS ABOVE.
REFER TO STANDARD SHEET No. TR-1208_02 "METAL SIGN POSTS AND SIGN MOUNTING DETAILS" FOR MOUNTING DETAILS.

RETROREFLECTIVE STRIP COLOR SHALL MATCH THE BACKGROUND COLOR OF THE SIGN, EXCEPT THAT THE COLOR OF THE STRIP FOR "YIELD" AND "DO NOT ENTER" SIGNS SHALL BE RED.

TYPICAL SIGN PLACEMENT DETAIL

NOTES:

ALL SIGNS AND SHIELDS ON DIRECTIONAL ASSEMBLIES SHALL ABUT VERTICALLY.

REFER TO STANDARD SHEET No. TR-1208_02 "METAL SIGN POSTS AND SIGN MOUNTING DETAILS" FOR SIGN POSTS AND SIGN MOUNTING.

IF A RETFOREFLECTIVE STRIP IS USED ON SIGN SUPPORT, IT SHALL BE PLACED FOR THE FULL LENGTH OF THE SUPPORT FROM THE BOTTOM OF THE SIGN TO WITHIN 2 FT ABOVE THE EDGE OF THE ROADWAY.

PARKING SIGNS TYPICALLY USE 45° MOUNTING BRACKET.

DIM."A" MIN SIGN HEIGHT	DIM."B" MIN LATERAL OFFSET ①	DIM."C" MIN PLAQUE HEIGHT ①	ASSEMBLY LOCATION
7' ②	6' 12' ③	5'	SIGNS ON FREEWAYS AND EXPRESSWAYS EXCEPT CHEVRON ALIGNMENT SIGNS, ONE-DIRECTION LARGE ARROW SIGNS, DO NOT ENTER SIGNS, AND WRONG WAY SIGNS
5'	2'	4'	• SIGNS IN RURAL AREAS • DO NOT ENTER AND WRONG WAY SIGNS ALONG EXIT RAMPS • DO NOT ENTER AND WRONG WAY SIGNS ON LIMITED ACCESS HIGHWAYS
5'	2'	N/A	• CHEVRON ALIGNMENT SIGNS LOCATED ON FREEWAYS, EXPRESSWAYS, RAMPS, AND IN RURAL AREAS • ONE-DIRECTION LARGE ARROW SIGNS LOCATED ON FREEWAYS, EXPRESSWAYS, RAMPS, AND IN RURAL AREAS
4'	6' 12' ③	N/A	INCIDENT MANAGEMENT SIGNS AND MILE POST MARKER ASSEMBLIES LOCATED ON FREEWAYS AND EXPRESSWAYS
4'	2'	4'	CENTRAL ISLANDS OF ROUNDABOUTS
7'	2' ④	6'	BUSINESS & RESIDENTIAL AREAS WHERE PARKING OR OTHER OBSTRUCTIONS LIMIT VISIBILITY
7'	2' ④	7'	SIDEWALKS ⑤

① OR AS DIRECTED BY THE ENGINEER

② 8 FT MINIMUM HEIGHT REQUIRED IF A SUPPLEMENTAL PLAQUE IS SUBMOUNTED BELOW THE MAJOR SIGN.

③ 6 FT FROM EDGE OF SHOULDER, WHEN SHOULDER IS OVER 6 FT WIDE
12 FT FROM EDGE OF TRAVELWAY, WHEN SHOULDER IS LESS THAN 6 FT WIDE.

④ A LATERAL OFFSET OF AT LEAST 1 FT FROM THE FACE OF THE CURB MAY BE USED WHERE SIDEWALK WIDTH IS LIMITED OR WHERE EXISTING UTILITY POLES ARE CLOSE TO THE CURB.

⑤ A CLEAR PATH OF NOT LESS THAN 4 FT SHALL BE PROVIDED IN SIDEWALK AREAS.

REV.	DATE	REVISION DESCRIPTION
3	8-2018	INCLUDED INCIDENT MANAGEMENT AND MILE MARKER SIGNS.
2	4-2017	MINOR REVISIONS.
1	2-2011	MINOR REVISIONS.

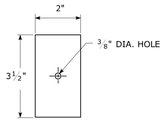
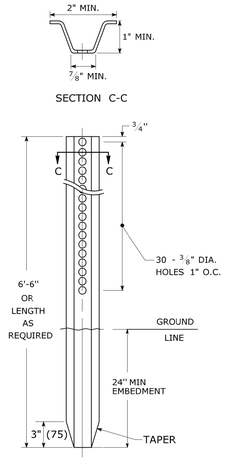
TYPICAL METAL SIGN POSTS



TYPICAL SIGN PANEL ATTACHMENT

TYPICAL BACK TO BACK SIGN PANEL ATTACHMENT

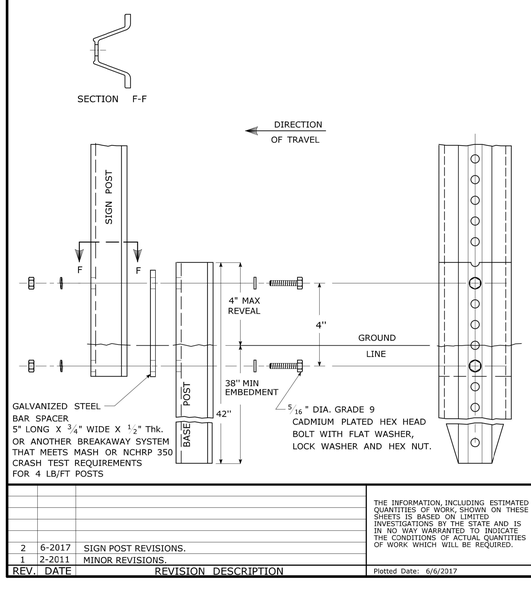


TYPICAL BACK-UP PLATE

BOLTS - STAINLESS STEEL CONFORMING TO ASTM F593, ALLOY GROUP 1 OR 2 (ALLOY TYPES 304 OR 316).
SELF LOCKING NUTS - STAINLESS STEEL CONFORMING TO ASTM F594, ALLOY GROUP 1 OR 2 (ALLOY TYPES 304 OR 316).
WASHERS - STAINLESS STEEL CONFORMING TO ASTM A240, (ALLOY TYPES 304 OR 316).

METAL DELINEATOR POST

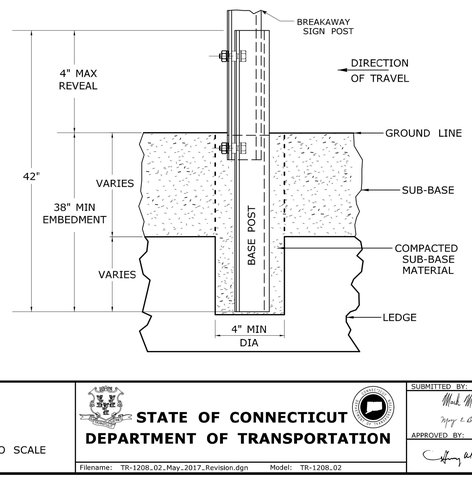
WT./FT. = 1.12 LBS./FT. MIN.



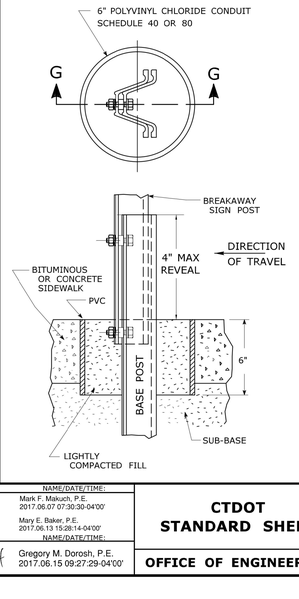
GENERAL NOTES:

1. STEEL FOR DELINEATOR POSTS SHALL BE ASTM A36 STEEL. STEEL FOR ALL OTHER POSTS SHALL CONFORM TO THE MECHANICAL REQUIREMENTS OF ASTM A 499 GRADE 80 AND TO THE CHEMICAL REQUIREMENTS OF ASTM A1 CARBON STEEL TEE RAIL HAVING NOMINAL WEIGHT (MASS) OF 91 LBS. OR GREATER PER LINEAR YARD.
2. AFTER FABRICATION, ALL STEEL POSTS, STRAPS AND PLATES SHALL BE GALVANIZED TO MEET THE REQUIREMENTS OF ASTM A123.
3. WASHERS FOR BREAKAWAY INSTALLATIONS SHALL MEET ASTM F436, TYPE 1.
4. SPACER BAR FOR BREAKAWAY INSTALLATION SHALL CONFORM TO THE MECHANICAL REQUIREMENTS OF ASTM A36.
5. ALL BOLTS, NUTS, AND WASHERS FOR BREAKAWAY INSTALLATIONS SHALL BE GALVANIZED TO MEET THE REQUIREMENTS OF ASTM A153.
6. ALL SIGN POSTS SHALL HAVE BREAKAWAY FEATURES THAT MEET AASHTO REQUIREMENTS CONTAINED IN THE CURRENT "STANDARD SPECIFICATIONS FOR STRUCTURAL SUPPORTS FOR HIGHWAY SIGNS, LUMINAIRES AND TRAFFIC SIGNALS." THE BREAKAWAY FEATURES SHALL BE STRUCTURALLY ADEQUATE TO CARRY THE SIGNS SHOWN IN THE PLANS AT 60 mph WIND LOADINGS. INSTALLATIONS SHALL BE IN ACCORDANCE WITH MANUFACTURERS RECOMMENDATIONS.
7. SIGN POSTS SHALL BE 4 LBS./FT.

BREAKAWAY INSTALLATION

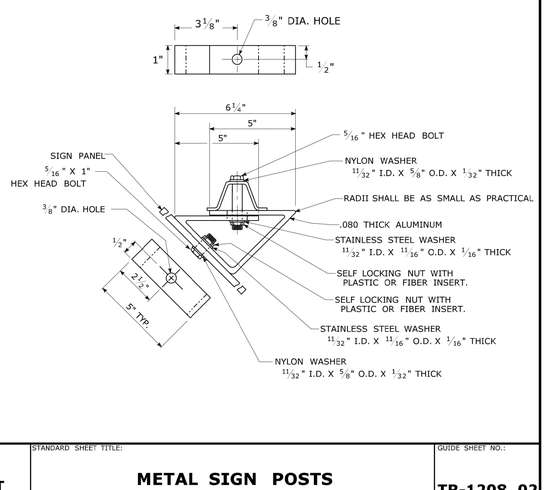


FOR 4 LBS./FT. POSTS



TYPICAL SIGN POST INSTALLATION IN LEDGE

LEDGE SHALL BE REMOVED TO DRIVE THE BASE POST TO A DEPTH OF 38".



HOLE SHALL BE FILLED WITH SUB-BASE MATERIAL AND COMPACTED WITH A TAMPING BAR, OR TECHNIQUE APPROVED BY THE ENGINEER, PRIOR TO BASE POST INSTALLATION.

TYPICAL SLEEVE FOR PAVED AREAS

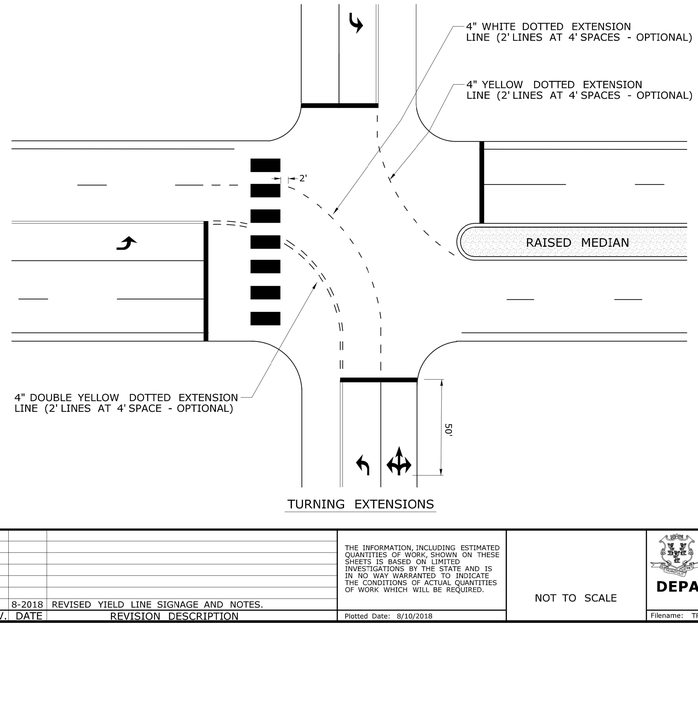
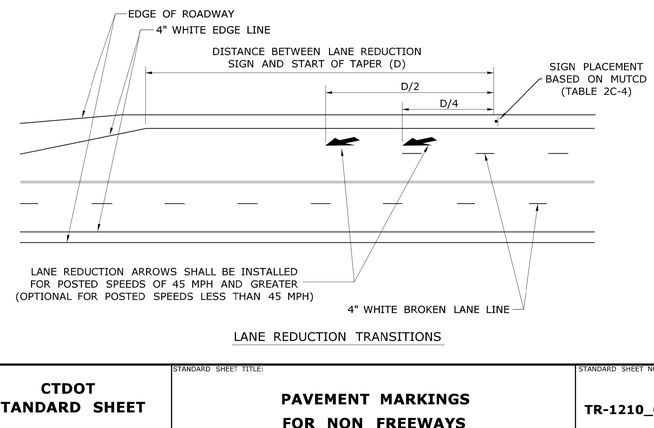
PAVEMENT MARKINGS FOR
CENTERLINE AND SHOULDER LINE



PAVEMENT MARKINGS FOR
STOP BARS, YIELD LINES, AND CROSSWALKS



PAVEMENT MARKINGS FOR TURNING LANES
AND ROAD LANE-DROP

TWO-WAY LEFT-TURN MARKINGS APPLICATIONS

TURNING EXTENSIONS

LANE REDUCTION TRANSITIONS

NOTES:

STOP BARS AND YIELD LINES

1. STOP BARS AND YIELD LINES SHALL BE WHITE.
2. STOP BARS SHALL BE 12" MIN. UNLESS OTHERWISE NOTED ON PLANS.
3. STOP BARS TO BE PLACED A MINIMUM OF 4' IN ADVANCE OF THE NEAREST EDGE OF CROSSWALK AND SHOULD BE PLACED 90° TO THE CENTERLINE OF THE ROADWAY. TO
4. IN THE ABSENCE OF A MARKED CROSSWALK THE STOP BAR SHOULD BE PLACED 90' THE CENTERLINE OF THE ROADWAY, AT THE DESIRED STOPPING POINT AT LEAST 5' AND NO MORE THAN 30' FROM THE NEAREST EDGE OF THE INTERSECTING ROADWAY.
5. THE STOP SIGN SHOULD BE PLACED IN LINE WITH THE STOP BAR. HOWEVER, IF THE STOP SIGN CANNOT BE LOCATED EXACTLY WHERE VEHICLES ARE EXPECTED TO STOP, THE STOP BAR SHOULD BE PLACED AT THE STOPPING POINT.
6. FOR STOP BARS AT RAMPS SEE DETAILS "R", "S", "T", & "U" AND NOTES ON TRAFFIC STANDARD SHEET TR-1210 07 "PAVEMENT MARKINGS FOR DIVIDED HIGHWAYS EXIT RAMPS".
7. FOR YIELD LINE INSTALLATIONS, ONLY FULL TRIANGLES ARE TO BE INSTALLED.

(8) MID-BLOCK CROSSWALKS ARE CROSSWALKS LOCATED MORE THAN 50 FEET FROM A SIGNALIZED OR UNSIGNALIZED INTERSECTION. YIELD LINES ASSOCIATED WITH MIDBLOCK CROSSWALKS SHALL BE INSTALLED AND SHOULD BE LOCATED 20 TO 50 FEET IN ADVANCE OF THE NEAREST CROSSWALK LINE OR AS DIRECTED BY THE ENGINEER.
WHERE A YIELD LINE EXISTS ON AN APPROACH TO A CROSSWALK, THE APPROAPRIATE "YIELD TO PEDESTRIANS" SIGN IS REQUIRED.

(9) FOR CROSSWALKS AT UNSIGNALIZED INTERSECTIONS WITH MINOR STREET STOP CONTROL, YIELD LINES SHALL BE INSTALLED ON MULTI-LANE APPROACHES, BUT NOT SINGLE LANE APPROACHES.

10. THE YIELD SIGN SHOULD BE PLACED IN LINE WITH A YIELD LINE. HOWEVER, IF THE YIELD SIGN CANNOT BE LOCATED EXACTLY WHERE VEHICLES ARE EXPECTED TO YIELD, THE YIELD LINE SHOULD BE PLACED AT THE YIELDING POINT.

CROSSWALKS

11. CROSSWALK MARKINGS SHALL BE WHITE.

(12) AT LOCATIONS WHERE THE CROSSWALK IS SKEWED, BARS TO BE PARALLEL TO ℄ AND ENDS OF BARS TO BE PARALLEL. THE LENGTH OF THE BARS WILL VARY DEPENDING ON THE ANGLE OF SKEW.

13. BARS SHOULD BE NO CLOSER THAN 1' FROM EDGE OF ROAD.
14. ONLY FULL LENGTH BARS ARE TO BE INSTALLED.
15. DECORATIVE CROSSWALKS SHALL BE BANDED FROM CURB TO CURB WITH A MINIMUM 12" WIDE WHITE TRANSVERSE LINE ALONG EACH EDGE.

(16) 24" WIDE SPACE TO BE CENTERED ON YELLOW CENTERLINE.

PAVEMENT MARKINGS FOR TURNING LANES

(17) INSTALL AT LEAST TWO ARROWS PER LANE WHERE STORAGE LENGTH IS GREATER THAN 150 FEET.

2. COORDINATE SITE LIGHTING LOCATIONS WITH SITE LANDSCAPING PLANS.
3. REFER TO DRAWING SU500 & SU501 FOR SITE ELECTRICAL DETAILS.
4. REFER TO SU501 FOR LIGHT FIXTURE AND SITE POLE SCHEDULES.
5. WHERE UNDERGROUND UTILITIES ARE LIKELY TO BE ENCOUNTERED THE CONTRACTOR SHALL EXCAVATE BY HAND.
6. REFER TO LANDSCAPE & CIVIL SITE PLANS FOR FINAL LOCATIONS OF LIGHTING FIXTURES, FLAGPOLES AND OTHER SITE UTILITIES.
7. WHERE 277V & 120V CIRCUITS OCCUPY THE SAME HANDHOLE/RACEWAY, IDENTIFY NEUTRAL CONDUCTORS PER NEC.
8. PROVIDE CONDUIT PLUGS WITH 1/4" NYLON DRAG LINE ATTACHED IN ALL EMPTY CONDUITS.
9. EXISTING OVERHEAD UTILITIES NOT SHOWN. COORDINATE WITH UTILITY COMPANY AS REQUIRED.

UNDERGROUND UTILITY NOTE

THE CONTRACTOR IS TO BE FULLY RESPONSIBLE FOR CONTACTING THE LOCAL CABLE TELEVISION COMPANY, POWER COMPANY, TELEPHONE COMPANY, GAS COMPANY, WATER AND SEWER COMPANY AND ANY OTHER UTILITY COMPANY WITHIN THE AREA PRIOR TO PROCEEDING WITH ANY EXCAVATION. BY LAW, THE CONTRACTOR IS REQUIRED TO CALL BEFORE DOING ANY EXCAVATION, DIGGING HOLES OR DRIVING POSTS REGARDLESS OF WHETHER IT IS WITHIN THE STREET LINE OR ON PRIVATE PROPERTY. OBTAIN INFORMATION REGARDING THE EXISTENCE AND LOCATION OF ANY UNDERGROUND FACILITIES BY CALLING 811.

WATER PREVENTION MEASURES

1. PITCH ALL UNDERGROUND CONDUITS SUCH THAT THEY ARE ANGLED DOWNWARDS AWAY FROM THE BUILDING. CONDUITS SHALL NOT BE PITCHED DOWNWARDS TOWARD THE BUILDING, ALLOWING GROUND WATER TO ENTER BUILDING.
2. PROVIDE FOAM SEALANT FOR ALL ACTIVE ELECTRIC CONDUITS CONTAINING CONDUCTORS, EQUAL TO POLYWATER FST. LOCATE AT INTERIOR END OF EACH ACTIVE CONDUIT (AT EXTERIOR ENCLOSURE AND WHERE CONDUIT TERMINATES IN BUILDING). FOR SPARE CONDUITS WITHOUT CONDUCTORS, PROVIDE CAP AT EACH END.
3. ALL CONDUITS (ACTIVE AND SPARE) SHALL SWEEP UPWARD A MINIMUM OF 12" ABOVE THE BASE OF HANDHOLES OR OTHER EXTERIOR STRUCTURES.
4. COORDINATE SWEEP AT TRANSFORMER PADS WITH UTILITY COMPANY DETAILS AND STANDARDS.

ELECTRICAL SITE UTILITY KEY NOTES

- E1 FURNISH AND INSTALL A POLYMER CONCRETE HANDHOLE WITH SECURABLE STAMPED COVER IDENTIFYING "ELECTRICAL" THAT IS 36"X36"X24" WITH OPEN BOTTOM
- E2 FURNISH AND INSTALL A POLYMER CONCRETE HANDHOLE WITH SECURABLE STAMPED COVER IDENTIFYING "ELECTRICAL" THAT IS 18"X18"X24" WITH OPEN BOTTOM
- E3 EV CHARGING STATION - SHALL BE SINGLE PEDESTAL MOUNT FOR ADA PARKING SPACES AND DUAL PEDESTAL MOUNT FOR TANDEM CHARGING STATION LOCATIONS. EC SHALL PROVIDE AND INSTALL CHARGEPOINT #CPF25-L23-PD (SINGLE PORT) AND #CPF25-L23-PD-DUAL (DUAL-PORT). REFER TO DETAIL #3 / SU500 FOR THE CONCRETE BASE MOUNTING DETAIL.
- E4 1"C, 4#8 & 8 GND (TYPICAL 277V SITE LIGHTING)
- E5 EMERGENCY BLUE LIGHT COMMUNICATION STATION REFER TO DETAIL 7/SU500 FOR BASE AND MOUNTING DETAIL. PROVIDE AND INSTALL A CODE BLUE CORPORATION #CB-1S SERIES EMERGENCY PHONE TOWER. THE PROVIDED UNIT SHALL HAVE THE FOLLOWING FEATURES: LS2000 FULL DUPLEX SIP COMPATIBLE VOIP PHONE; BEACON/STROBE; SAFETY BLUE;
- E6 PROVIDE GFCI DUPLEX RECEPTACLE WITH IN-USE WEATHERPROOF COVER INSIDE NEMA 4X LOCKABLE ENCLOSURE, EQUAL TO HOFFMAN COMLINE, 12"X12"X6" IN ISZE. MOUNT ON SIDE OF DUGOUT, 42" ABOVE GRADE. PROVIDE 2#10+1#10G, 1"C
- E7 FURNISH AND INSTALL A POLYMER CONCRETE HANDHOLE WITH SECURABLE STAMPED COVER IDENTIFYING "COMMUNICATION" THAT IS 18"X18"X24" WITH OPEN BOTTOM
- E8 POWER FOR MOTORIZED GATE CONTROLLER
- E9 1"C, 4#8 & #8G (277V SITE LIGHTING) "SHP", 1,3 VIA LCPA #1, LCPA #2
- E10 1"C, 4#8 & #8G (277V SITE LIGHTING) "SHP", 2,4 VIA LCPA #3, LCPA #4
- E11 1"C, 4#8 & #8G (277V SITE LIGHTING) "SHP", 5,7 VIA LCPA #5, LCPA #6
- E12 (1) 2" CONDUIT FOR FUTURE COMMUNICATIONS (1) 1" C, 2#10 & #10G (SITE CAMERAS) "EVLP", 1
- E13 (1) 2" CONDUIT FOR FUTURE COMMUNICATIONS (1) 1" C, 2#10 & #10G (SITE CAMERAS) "EVLP", 2
- E14 1"C, 2#10 & #10G (MOTORIZED GATE CONTROLLER), "EVLP", 3
- E15 1"C, 2#10 & #10G (MOTORIZED GATE CONTROLLER), "EVLP", 4
- E16 PROVIDE 6'-0" RECESSED LINEAR LIGHT FIXTURE EACH SIDE OF MONUMENT AND ELECTRICAL BACKBOX WITH WEATHERPROOF SERVICE SWITCH. COORDINATE EXACT MOUNTING LOCATION WITH ARCHITECTURAL DETAILS.

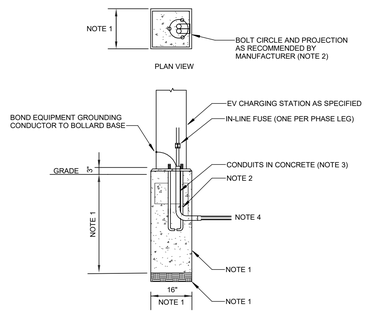
NOTES:

1. TYPICAL CONDUITS AND QUANTITIES SHOWN, REFER TO DRAWINGS FOR QUANTITIES AND SIZES.
2. COORDINATE AND GROUP CONDUITS IN COMMON TRENCH. SINGLE ROW SHOWN, MULTIPLE ROW DUCT BANKS ARE ACCEPTABLE, MAINTAINING SEPARATION DISTANCE REQUIREMENTS.
3. PROVIDE SUITABLE SEPARATORS AND CHAIRS 4 FT. MAX. ON CENTER, SET TO COMPACTED TRENCH BOTTOM AND BAND CONDUITS TOGETHER PRIOR TO BACKFILL OR PLACING CONCRETE.
4. REFER TO CONCRETE ENCASEMENT DETAIL WHERE CONCRETE ENCASEMENT IS REQUIRED. USE 'TYPE EB' SCHEDULE 40 PVC CONDUIT.

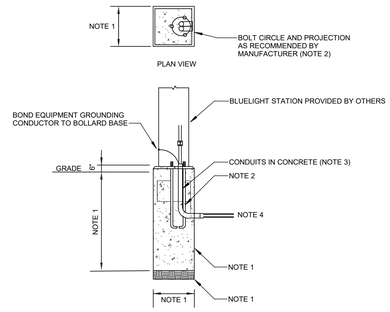


1 TYPICAL PRIMARY ELECTRIC/TELECOMMUNICATIONS TRENCHING DETAIL
1/8" = 1'-0"

NOTES

1. 500-2500 KVA - INSTALL 76"X 70" X 36" PAD AS PER UTILITY Co. SPC P-015 AND P-016 (BY DIVISION 33)
2. PRIMARY CABLE
   A. INSTALL DIRECT BURIED CABLES A MINIMUM OF 30" BELOW GRADE.
   B. INSTALL CABLES IN CONDUIT A MINIMUM OF 24" BELOW GRADE.
   C. LOOP CABLES IN CABLE PIT BEFORE MAKING CONNECTIONS.
3. SECONDARY CABLE - LEAVE SLACK FOR FUTURE RECONNECTING TO TRANSFORMERS WITH HIGHER SECONDARY TERMINALS.
4. 3/4" COPPER GROUND ROD - INSTALL IN TRENCH AND CONNECT A #2 COPPER CONDUCTOR FROM ROD THROUGH PAD OPENING AND EXTENDING 5' ABOVE PAD.
5. THE FOLLOWING UTILITY Co. DTR'S SHOULD ALSO BE USED:
   A. DTR 42.061 - LOCATION AND MECHANICAL PROTECTION REQUIREMENTS.
   B. DTR 56.509 - PRIMARY, SECONDARY AND TRANSFORMER GROUNDING.
   C. DTR 17.063 - THREE PHASE TRANSFORMER CONNECTIONS.
6. THE EXCAVATION FOR THE PAD SHALL BE CARRIED TO A DEPTH OF 12" BELOW THE BOTTOM OF THE PAD WALLS. THE BACKFILL UNDER THE PAD WALLS SHALL BE A CLEAN GRAVEL, FREE OF FOREIGN MATTER AND CONSTRUCTION DEBRIS, AND IN ACCORDANCE WITH CONNECTICUT DOT SPEC M.02.06 GRADING "A"; OR MASSACHUSETTS DPW SPEC M1.03.0 TYPE B. BACKFILL SHALL BE PLACED IN 6" LAYERS AND COMPACTED WITH MECHANICAL TAMPERS TO NOT LESS THAN 95 PERCENT OF THE MAXIMUM DRY DENSITY AS DETERMINED BY STANDARD COMPACTION TESTS, AASHTO T180 OR ASTM D698.

2 EVERSOURCE CT/WMA - TRANSFORMER PAD DETAIL
NTS



NOTES:

1. CONCRETE EV CHARGING STATION BASE SHALL BE PROVIDED BY SITE CONTRACTOR. REFER TO STRUCTURAL BASE DETAILS FOR REQUIRED DEPTH, REINFORCEMENT AND CONCRETE SPECIFICATIONS. EV CHARGING STATION BASE SHALL BE SET ON UNDISTURBED SOIL.
2. ANCHOR BOLTS SHALL BE PROVIDED IN EV CHARGING STATION BASE BY SITE CONTRACTOR, ADHERING TO STRUCTURAL BASE DETAILS AND SPECIFICATIONS. COORDINATE EXACT BOLT HOLE PATTERN WITH ELECTRICAL CONTRACTOR AND APPROVED EV CHARGING STATION MANUFACTURER PRIOR TO INSTALLATION.
3. ELECTRICAL CONTRACTOR SHALL PROVIDE SCHEDULE 40 PVC CONDUIT SWEEPS WITHIN EV CHARGING STATION BASE. COORDINATE EXACT STUB-UP LOCATION OF ALL CONDUITS WITH APPROVED EV CHARGING STATION MANUFACTURER BOLT HOLE PATTERN PRIOR TO INSTALLATION.
4. ELECTRICAL CONTRACTOR SHALL PROVIDE UNDERGROUND CONDUITS TO THE EV CHARGING STATION AS SPECIFIED ON SITE ELECTRICAL PLAN. REFER TO TRENCHING DETAILS FOR MINIMUM BURIAL DEPTH AND ADDITIONAL INFORMATION. MINIMUM SIZE/QUANTITY SHALL BE:

   * SINGLE PORT EV CHARGING STATION CIRCUIT: 2#8+1#10G, 1-1/4" SCHEDULE 40 PVC CONDUIT, 1" SCHEDULE 40 PVC CONDUIT FOR COMMUNICATIONS, COORDINATE WITH DIV. 27

   * DUAL PORT EV CHARGING STATION CIRCUIT: 4#8+1#10G, 1-1/2" SCHEDULE 40 PVC CONDUIT, 1" SCHEDULE 40 PVC CONDUIT FOR COMMUNICATIONS, COORDINATE WITH DIV. 27

3 EXTERIOR EV BASE DETAIL
NTS

NOTES:

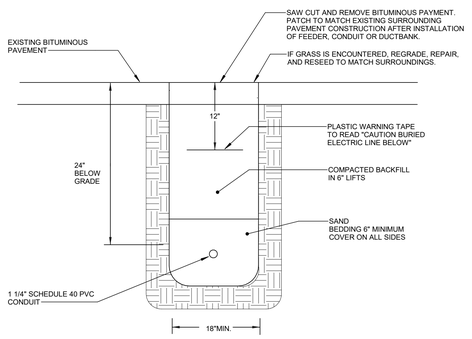
1. CONCRETE BLUELIGHT STATION BASE SHALL BE PROVIDED BY SITE CONTRACTOR. REFER TO STRUCTURAL BASE DETAILS FOR REQUIRED DEPTH, REINFORCEMENT AND CONCRETE SPECIFICATIONS. BASE TO EXTEND 6" ABOVE GRADE AND 6" BEYOND THE OVERALL UNIT DIAMETER. BLUELIGHT STATION BASE SHALL BE SET ON UNDISTURBED SOIL.
2. ANCHOR BOLTS SHALL BE PROVIDED IN BLUELIGHT STATION BASE BY SITE CONTRACTOR, ADHERING TO STRUCTURAL BASE DETAILS AND SPECIFICATIONS. COORDINATE EXACT BOLT HOLE PATTERN WITH ELECTRICAL CONTRACTOR AND APPROVED BLUELIGHT STATION MANUFACTURER PRIOR TO INSTALLATION.
3. ELECTRICAL CONTRACTOR SHALL PROVIDE SCHEDULE 40 PVC CONDUIT SWEEPS WITHIN BLUELIGHT STATION BASE. COORDINATE EXACT STUB-UP LOCATION OF ALL CONDUITS WITH APPROVED BLUELIGHT STATION MANUFACTURER BOLT HOLE PATTERN PRIOR TO INSTALLATION.
4. ELECTRICAL CONTRACTOR SHALL PROVIDE UNDERGROUND CONDUITS TO THE BLUELIGHT STATION AS SPECIFIED ON SITE ELECTRICAL PLAN. REFER TO TRENCHING DETAILS FOR MINIMUM BURIAL DEPTH AND ADDITIONAL INFORMATION. MINIMUM SIZE/QUANTITY SHALL BE:

   * POWER CIRCUIT CIRCUIT: 2#8+1#10G, 1-1/4" SCHEDULE 40 PVC CONDUIT
   * COMMUNICATIONS CONDUIT: 1-1/2" SCHEDULE 40 PVC CONDUIT

7 BLUELIGHT BASE DETAIL
NTS

NOTES:

1. TYPICAL CONDUITS AND QUANTITIES SHOWN, REFER TO DRAWINGS FOR QUANTITIES AND SIZES.
2. COORDINATE AND GROUP CONDUITS IN COMMON TRENCH. SINGLE ROW SHOWN, MULTIPLE ROW DUCT BANKS ARE ACCEPTABLE, MAINTAINING SEPARATION DISTANCE REQUIREMENTS.
3. PROVIDE SUITABLE SEPARATORS AND CHAIRS 4 FT. MAX. ON CENTER, SET TO COMPACTED TRENCH BOTTOM AND BAND CONDUITS TOGETHER PRIOR TO BACKFILL OR PLACING CONCRETE.
4. REFER TO CONCRETE ENCASEMENT DETAIL WHERE CONCRETE ENCASEMENT IS REQUIRED. USE 'TYPE EB' SCHEDULE 40 PVC CONDUIT.



4 TRENCH DETAIL - MAIN 3000A ELECTRICAL SERVICE AND FIRE PUMP SERVICE
NTS

NOTES:

1. PROVIDE STANDARD HANDHOLE. COVER COLOR SHALL BE AS COORDINATED WITH THE OWNER
2. COVER, RING AND BOX SHALL BE MADE OF SAME MATERIAL
3. PROVIDE IMPRINTED LOGO WITH 'ELECTRIC' OR 'COMMUNICATIONS' LOGO AS INDICATED ON DRAWINGS.
4. PROVIDE EXTENSION BASES AND GRADE ADJUSTABLE EXTENSIONS TO SET FLUSH WITH GRADE AND TO SET AT DEPTH TO ALLOW CONDUITS TO ENTER THE BASE HORIZONTALLY.
5. PITCH CONDUITS AWAY FROM HANDHOLE.
6. REFER TO DRAWINGS FOR SIZES.
7. PROVIDE TIER 22 DESIGN FOR ALL HANDHOLES LOCATED IN PAVED AREAS OR WHERE SUBJECT TO VEHICULAR TRAFFIC. TIER 15 DESIGN ELSEWHERE.
8. PROVIDE HANDHOLE WITH DIVIDED INTERIOR OPTION TO SEPARATE POWER AND COMMUNICATIONS CABLING, WHERE MULTIPLE SERVICES ARE SHOWN ON SITE PLAN.

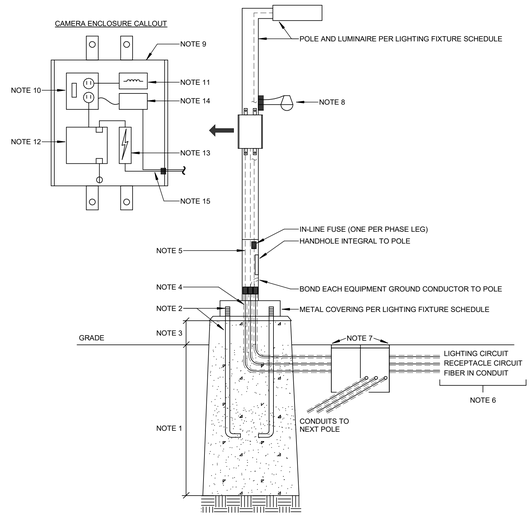
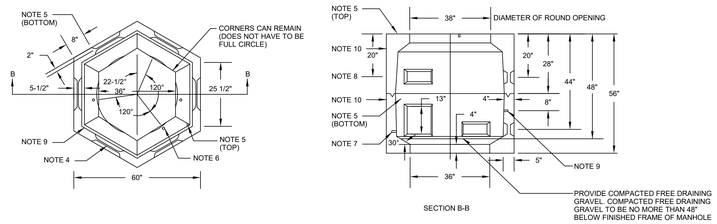
SITE LIGHTING FIXTURE SCHEDULE



TYPE	BASIS OF DESIGN MANUFACTURER / MODEL	VOLTAGE	SOURCE	FIXTURE DESCRIPTION - BASIS OF DESIGN
SL1-3BC	EXO / SLING ASL1-80L-25-3K7-3-UNV-BC-BLT	UNV	5500LM, 37W 3000K LED	POLE MOUNTED EXTERIOR LED LIGHTING FIXTURE WITH 24 INCH X 11.7 INCH HEAD, MOUNTED T.O.F. AT 12 FEET ABOVE FINISHED GRADE. CORROSION RESISTANT, DIE-CAST ALUMINUM HOUSING WITH POWDER COAT FINISH; 70 CRI, L70 AT 400,000+ HOURS; 0-10V STANDARD DIMMING DRIVER; BACKLIGHT CONTROL. **COLOR:** TO BE SELECTED BY ARCHITECT
SL1-4F	EXO / SLING ASL1-80L-25-3K7-4F-UNV-BC-BLT	UNV	5500LM, 74W 3000K LED	SAME AS TYPE "SL1-3BC" EXCEPT WITH "TYPE 4F" OPTIC STRIKE PHOTOMETRY. **COLOR:** TO BE SELECTED BY ARCHITECT
SL1-4WBC	EXO / SLING ASL1-80L-25-3K7-4W-UNV-BC-BLT	UNV	5500LM, 37W 3000K LED	SAME AS TYPE "SL1-3BC" EXCEPT WITH "TYPE 4W" OPTIC STRIKE PHOTOMETRY. **COLOR:** TO BE SELECTED BY ARCHITECT
SL1-5QW	EXO / SLING ASL1-80L-25-3K7-5QW-UNV-BLT	UNV	5500LM, 37W 3000K LED	SAME AS TYPE "SL1-3BC" EXCEPT WITH "TYPE 5QW" OPTIC STRIKE PHOTOMETRY AND WITHOUT BACKLIGHT CONTROL. **COLOR:** TO BE SELECTED BY ARCHITECT
SL-3	EXO / SLING ASL1-80L-39-3K7-3-UNV-BLT	UNV	4971LM, 38W 3000K LED	POLE MOUNTED EXTERIOR LED LIGHTING FIXTURE WITH 24 INCH X 11.7 INCH HEAD, MOUNTED T.O.F. AT 14 FEET ABOVE FINISHED GRADE. CORROSION RESISTANT, DIE-CAST ALUMINUM HOUSING WITH POWDER COAT FINISH; 70 CRI, L70 AT 400,000+ HOURS; 0-10V STANDARD DIMMING DRIVER. **COLOR:** TO BE SELECTED BY ARCHITECT
SL-4F	EXO / SLING ASL1-80L-39-3K7-4F-UNV-BLT	UNV	4885LM, 39W 3000K LED	SAME AS TYPE "SL-3" EXCEPT WITH "TYPE 4F" OPTIC STRIKE PHOTOMETRY. **COLOR:** TO BE SELECTED BY ARCHITECT
SL-4W	EXO / SLING ASL1-80L-39-3K7-4W-UNV-BLT	UNV	4879LM, 38W 3000K LED	SAME AS TYPE "SL-3" EXCEPT WITH "TYPE 4W" OPTIC STRIKE PHOTOMETRY. **COLOR:** TO BE SELECTED BY ARCHITECT
SL-4WB	EXO / SLING ASL1-80L-39-3K7-4W-UNV-BLT	UNV	(2) 4879LM, 38W 3000K LED	SAME AS TYPE "SL-4W" EXCEPT WITH DUAL HEAD LAYOUT. **COLOR:** TO BE SELECTED BY ARCHITECT
SL-5QW	EXO / SLING ASL1-80L-39-3K7-5QW-UNV-BLT	UNV	4975LM, 38W 3000K LED	SAME AS TYPE "SL-3" EXCEPT WITH "TYPE 5QW" OPTIC STRIKE PHOTOMETRY. **COLOR:** TO BE SELECTED BY ARCHITECT
SLF	POLETOP MOUNTED LED FLAGPOLE LIGHT - PROVIDED WITH THE FLAGPOLE - WIRED UNDER DIVISION 26	120V	1000LM, 15W 3000K LED	PROVIDE POWER AND CONTROL TO A SELF CONTRAINED LIGHTING FIXTURE PROVIDED WITH THE FLAGPOLE.

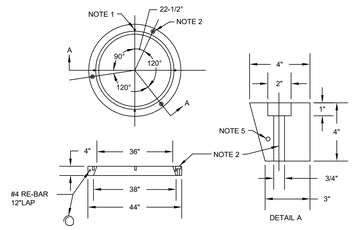
NOTES:
1. LIGHT FIXTURES IN THE SCHEDULE SHALL BE CONSIDERED BASIS OF DESIGN. EQUAL FIXTURE SUBSTITUTIONS ARE ACCEPTABLE FOR ALL FIXTURES IN THE LIGHTING FIXTURE SCHEDULE, UNLESS INDICATED OTHERWISE. EQUAL FIXTURE APPROVAL SHALL BE AS JUDGED BY THE ENGINEER AND THE ARCHITECT. IN ADDITION TO THE REQUIREMENTS LISTED IN THE LIGHTING FIXTURE SCHEDULE AND IN THE SPECIFICATIONS, THE PROPOSED EQUAL FIXTURES SHALL:
   A. BE THE SAME GENERAL SIZE, STYLE AND SHAPE, INCLUDING BUT NOT LIMITED TO LENS CONSTRUCTION AND SHADING.
   B. BE OF EQUAL QUALITY CONSTRUCTION AND FINISH.
   C. BE SUPPLIED WITH ALL REQUIRED ACCESSORIES TO MATCH THE SPECIFIED (BASIS OF DESIGN) FIXTURE.
   D. PROVIDE THE SAME DISTRIBUTION, EFFICACY AND SOURCE LUMEN OUTPUT.
   E. HAVE THE SAME LISTINGS AS THE BASIS OF DESIGN FIXTURE, INCLUDING DLC AND ENERGY STAR QUALIFICATIONS.
2. ALL FIXTURES SHALL BE UL LISTED.
3. ALL NECESSARY MOUNTING HARDWARE SHALL BE FURNISHED AND INSTALLED.
4. REFER TO ARCHITECTURAL DRAWINGS FOR SPECIFIC DETAILS, ARRANGEMENT, MOUNTING HEIGHTS, SUSPENSION LENGTHS, CEILING CONSTRUCTION, ETC. ALL COLORS AND FINISHES SHALL BE SELECTED BY ARCHITECT.
5. FIXTURES SHALL BE SEISMICALLY SUPPORTED AS REQUIRED BY THE APPLICABLE BUILDING CODE. FIXTURES SHALL BE SUPPORTED FROM THE BUILDING STRUCTURE AND SHALL BE INDEPENDENT OF DUCTS, PIPES, CEILINGS AND THEIR SUPPORTING MEMBERS. FIXTURES SHALL BE SUPPORTED WITH A MINIMUM OF 2 SUPPORTS.
6. REFER TO SPECIFICATIONS FOR ADDITIONAL REQUIREMENTS.



NOTES:
1. CONCRETE POLE BASE SHALL BE PROVIDED BY SITE CONTRACTOR. REFER TO STRUCTURAL POLE BASE DETAILS FOR REQUIRED DEPTH AND CONCRETE SPECIFICATIONS. POLE BASE SHALL BE SET ON UNDISTURBED SOIL. DIAMETER OF POLE BASE SHALL BE COORDINATED WITH BASE PLATE COVER DIMENSIONS, AS SPECIFIED. CONCRETE BASE SHALL BE LARGE ENOUGH TO ACCOMMODATE BASE PLATE WITH NO OVERHANG.
2. ANCHOR BOLTS SHALL BE PROVIDED IN POLE BASE BY SITE CONTRACTOR, ADHERING TO STRUCTURAL POLE BASE DETAILS AND SPECIFICATIONS. COORDINATE EXACT BOLT PATTERN WITH ELECTRICAL CONTRACTOR AND APPROVED POLE MANUFACTURER PRIOR TO INSTALLATION.
3. IN GRASSY AREAS NOT WITHIN PARKING AREAS, SIDEWALKS OR OTHER AREAS WITHOUT VEHICLE PARKING, **3 INCHES** OF CONCRETE SHALL BE EXPOSED ABOVE GRADE. IN PARKING AREAS, **36 INCHES** OF CONCRETE SHALL BE EXPOSED ABOVE GRADE. PROVIDE 1 INCH CHAMFER AROUND TOP OF CONCRETE BASE.
4. ELECTRICAL CONTRACTOR SHALL PROVIDE SCHEDULE 40 PVC CONDUIT SWEEPS WITHIN CONCRETE POLE BASE. COORDINATE EXACT STUB-UP LOCATION OF ALL CONDUITS WITH APPROVED POLE MANUFACTURER BOLT PATTERN PRIOR TO INSTALLATION.
5. ELECTRICAL CONTRACTOR SHALL PROVIDE FLEXIBLE METAL CONDUIT WITHIN POLE TO LIGHT FIXTURE.
6. ELECTRICAL CONTRACTOR SHALL PROVIDE UNDERGROUND CONDUITS TO THE LIGHT POLE AS SPECIFIED ON SITE PLAN. REFER TO TRENCHING DETAILS FOR MINIMUM BURIAL DEPTH AND ADDITIONAL INFORMATION. MINIMUM SIZE/QUANTITY SHALL BE:
   - LIGHTING CIRCUIT: PROVIDE 2#10+1#10G, 1-1/4"C. SCH.40 PVC.

2 SITE LIGHTING POLE DETAIL
NTS

NOTES:
1. CONCRETE POLE BASE SHALL BE PROVIDED BY SITE CONTRACTOR. REFER TO STRUCTURAL POLE BASE DETAILS FOR REQUIRED DEPTH AND CONCRETE SPECIFICATIONS. POLE BASE SHALL BE SET ON UNDISTURBED SOIL. DIAMETER OF POLE BASE SHALL BE COORDINATED WITH BASE PLATE COVER DIMENSIONS, AS SPECIFIED. CONCRETE BASE SHALL BE LARGE ENOUGH TO ACCOMMODATE BASE PLATE WITH NO OVERHANG.
2. ANCHOR BOLTS SHALL BE PROVIDED IN POLE BASE BY SITE CONTRACTOR, ADHERING TO STRUCTURAL POLE BASE DETAILS AND SPECIFICATIONS. COORDINATE EXACT BOLT PATTERN WITH ELECTRICAL CONTRACTOR AND APPROVED POLE MANUFACTURER PRIOR TO INSTALLATION.
3. IN GRASSY AREAS IN PARKING AREAS, SIDEWALKS OR OTHER AREAS WITHOUT VEHICLE PARKING, **3 INCHES** OF CONCRETE SHALL BE EXPOSED ABOVE GRADE. IN PARKING AREAS, **36 INCHES** OF CONCRETE SHALL BE EXPOSED ABOVE GRADE. PROVIDE 1 INCH CHAMFER AROUND TOP OF CONCRETE BASE.
4. ELECTRICAL CONTRACTOR SHALL PROVIDE SCHEDULE 40 PVC CONDUIT SWEEPS WITHIN CONCRETE POLE BASE. COORDINATE EXACT STUB-UP LOCATION OF ALL CONDUITS WITH APPROVED POLE MANUFACTURER BOLT PATTERN PRIOR TO INSTALLATION.
5. ELECTRICAL CONTRACTOR SHALL PROVIDE FLEXIBLE METAL CONDUIT WITHIN POLE TO LIGHT FIXTURE.
6. ELECTRICAL CONTRACTOR SHALL PROVIDE UNDERGROUND CONDUITS TO THE LIGHT POLE AS SPECIFIED ON SITE PLAN. REFER TO TRENCHING DETAILS FOR MINIMUM BURIAL DEPTH AND ADDITIONAL INFORMATION. MINIMUM SIZE/QUANTITY SHALL BE:
   - RECEPTACLE CIRCUIT: PROVIDE 2#10+1#10G, 1-1/4"C. SCH.40 PVC.
   - FIBER: PROVIDE 2-STRAND OM4 MM FIBER OPTIC CABLE (OUTDOOR RATED) IN 2"C. SCH.40 PVC. PROVIDE INDIVIDUAL 2-STRAND FIBER FOR EACH CAMERA ON CIRCUIT, ROUTED IN SAME CONDUIT, MAXIMUM OF 10 CAMERAS. REFER TO SITE PLAN FOR CAMERAS ON FIBER CIRCUIT. AT EACH POLE, ONE 2-STRAND FIBER CABLE SHALL BRANCH OFF TO MEDIA CONVERTER/ CAMERA AND REMAINING CABLES SHALL CONTINUE TO NEXT POLE.
7. ELECTRICAL CONTRACTOR SHALL PROVIDE 24"L x 24"W x 36"D PRECAST POLYMER CONCRETE ENCLOSURE WITH ANSI 77 TIER 15 OR 22 COVER RATED FOR TRAFFIC APPLICATIONS. PROVIDE WITH DIVIDED INTERIOR TO SEPARATE POWER AND FIBER WIRING. REFER TO SITE HANDHOLE DETAIL FOR ADDITIONAL INFORMATION.
8. SECURITY SUBCONTRACTOR SHALL PROVIDE CAMERA PER SECURITY SPECIFICATIONS AND/OR CAMERA SCHEDULE. PROVIDE POLE MOUNTING KIT AS REQUIRED BY MANUFACTURER. MOUNTING HEIGHT OF CAMERA SHALL BE PER SECURITY SPECIFICATIONS/ CAMERA SCHEDULE. WHERE NOT NOTED, CAMERA SHALL BE MOUNTED 2 FEET BELOW BOTTOM OF LUMINAIRE.
9. EC SHALL PROVIDE NEMA 4X ENCLOSURE ON POLE EQUAL TO HOFFMAN NVENT/COMLINE SERIES, 16"H x 16"W x 8"D IN DIMENSION. PROVIDE WITH MANUFACTURER APPROVED MOUNTING KIT FOR POLE APPLICATIONS. PROVIDE WITH GASKETED, LOCKABLE HINGED FRONT DOOR. LOCATE OPPOSITE OF CAMERA AT SAME MOUNTING HEIGHT ON POLE.
10. EC SHALL PROVIDE GFCI DUPLEX RECEPTACLE WITH INTEGRAL TOGGLE SWITCH POWERED VIA 120VAC CIRCUIT TO POLE. PROVIDE WITH WEATHERPROOF BACKBOX WITHIN ENCLOSURE ON POLE.
11. EC SHALL PROVIDE ELECTRIC HEATER FOR ENCLOSURE, EQUAL TO HOFFMAN NVENT SERIES (20W, 120VAC INPUT, 3.9"H x 1.5"W x 3.0"D.) POWERED VIA RECEPTACLE IN ENCLOSURE. PROVIDE WITH THERMOSTAT BY SAME MANUFACTURER.
12. SECURITY SUBCONTRACTOR SHALL PROVIDE IP-TO-FIBER MEDIA CONVERTER FOR CAMERA, PER SECURITY SPECIFICATIONS. POWER VIA RECEPTACLE IN ENCLOSURE. TERMINATE FIBER AT MEDIA CONVERTER USING MANUFACTURER APPROVED CONNECTORS.
13. SECURITY SUBCONTRACTOR SHALL PROVIDE ETHERNET SURGE PROTECTIVE DEVICE FOR CAMERA CABLING, BONDED TO METAL POLE.
14. WHERE APPLICABLE PER CAMERA SPECIFICATIONS, IF CAMERA REQUIRES AN EXTERNAL POWER SUPPLY FOR PTZ FUNCTIONALITY, LENS HEATER, ETC., POWER SUPPLY SHALL BE PROVIDED BY SECURITY SUBCONTRACTOR IN ENCLOSURE. PROVIDE POWER SUPPLY PER CAMERA MANUFACTURER REQUIREMENTS. POWER VIA LINE SIDE OF RECEPTACLE CIRCUIT.
15. SECURITY SUBCONTRACTOR SHALL PROVIDE SHIELDED CAT.6 CABLING TO CAMERA (AND 24VDC CABLING FROM EXTERNAL POWER SUPPLY IF REQUIRED BY CAMERA SPECIFICATIONS). PROVIDE BUSHING/ GROMMET THROUGH ENCLOSURE. CABLING SHALL BE ROUTED IN LIQUID TIGHT FLEXIBLE METAL CONDUIT, SECURED TIGHT TO POLE, AND TERMINATED IN CAMERA MOUNTING KIT PER MANUFACTURER'S REQUIREMENTS.



3 SITE LIGHTING POLE DETAIL WITH CAMERA
NTS

SECTION B-B

NOTES:
1. DESIGN LOADING SHALL BE IN ACCORDANCE WITH AASHTO HS20-1983.
2. CONCRETE AND CONCRETE DESIGN SHALL BE IN ACCORDANCE WITH ACI 318-1986.
3. CONCRETE SHALL HAVE A MINIMUM 28 DAY STRENGTH OF 4000 PSI AND A MAXIMUM 28 DAY SRENGTH OF 5000 PSI.
4. FIVE INCH X 12 INCH KNOCKOUTS, (3) IN THE TOP, (3) IN THE BOTTOM AND (1) 12"INCH X 13" INCH KNOCKOUT IN THE BOTTOM SHALL BE CLEAR OF REINFORCEMENT.
5. 3/4 INCH-COIL LOOP INSERTS-6 INCH-(DAYTON B-16) WITH INSERT LOCATOR PLUG (DAYTON T-21). TWO EACH IN TOP AND BOTTOM SECTIONS FOR LIFTING WITH SWIVEL PLATE. INSERTS ARE TO BE SECURED IN PLACE WITH REBAR.
6. ZINC ALLOY INSERTS 3/8 INCH-11x1-1/2 INCHES FOR EXTENSION (3) ON 41 INCH BOLT CIRCLE.
