SECTION 00 9113 – ADDENDUM NO. 2

Central Middle School
Greenwich, Connecticut

S/L/A/M Project No. 22367.00

This Addendum, dated October 22, 2024, forms a part of the Contract Documents, and modifies the original Bidding Documents dated September 30, 2024 and Addendum No. 1 dated October 16, 2024. Acknowledge receipt of this Addendum in the space provided on the Bid Form. Failure to do so may subject the Bidder to disqualification.

This Addendum is comprised of Page Nos. 1 of 6, and the following attachments:

1.1 BID RFI LOG (GCMS Phase 2 – Bidder's Question Log – dated 10/22/2024)

1.2 00 4000 – Turner Construction: Phase 2 of 3 Procurement Manual

A. 01 – Updated Drawings & Specifications List.

B. 02 – Updated Bid Package Breakdown.

C. 03b - Updated BP#9- Scope of Work - SITEWORK

D. 03b - Updated BP#10 - Scope of Work - CONCRETE

E. 03d - Updated BP#11 - Scope of Work - MASONRY

F. 03e - Updated BP#12 - Scope of Work - STRUCTURAL STEEL

G. 03f - Updated BP#13 - Scope of Work - MISC. METAL

H. 03h - Updated BP#15 - Scope of Work - ROOFING

I. 03k - Updated BP#18 - Scope of Work - MILLWORK & CASEWORK

J. 03l - Updated BP#19- Scope of Work - GLASS, GLAZING, & METAL PANELS

K. 03n - Updated BP#21 - Scope of Work – DRYWALL & GENERAL TRADES

L. 03o - Updated BP#22 - Scope of Work - CEILINGS

M. 03w - Updated BP#30 - Scope of Work – FOOD SERVICE EQUIPMENT

N. 03z.a - Updated BP#34 - Scope of Work – ELEVATORS

O. 03z.c - Updated BP#36 - Scope of Work – PLUMBING

P. 03z.d - Updated BP#37 - Scope of Work – HVAC & CONTROLS

Q. 03z.e - Updated BP#38 - Scope of Work – ELECTRICAL & FIRE ALARM

R. 03z.f - Updated BP#39 - Scope of Work – LOW VOLTAGE & AV

S. 03z.g - Updated BP#40 - Scope of Work – CONCRETE FLATWORK

T. 03z.h – Updated BP#41 – Scope of Work - LANDSCAPING

U. 31 – Updated Pre-purchased Equipment Contractor Coordination Matrices.

1.3 PROJECT MANUAL

A. REPLACE the follow specification section, previously dated September 30, 2024 with the revised section dated October 16, 2024

1. 00 3132 GEOTECHNICAL REPORT – This replaces the entire section including the report portions, previously a total of 72 pages replaced with 110 pages. The additional pages include an executive summary and additional laboratory information, behind the boring information)
2. 05 5000 METAL FABRICATIONS
3. 08 8710 DOOR HARDWARE
4. 12 3553.19 WOOD LABORATORY CASEWORK
5. 14 2100 ELECTRIC TRACTION ELEVATORS
6. 26 2726 WIRING DEVICES
7. 32 0529 GLACIAL BOULDERS FOR EXTERIOR IMPROVEMENT
8. 32 3113 CHAIN LINK FENCES AND GATES

B. ADD new specification section dated October 16, 2024

1. 08 5653 SECURITY AND SERVICE WINDOWS
2. 33 3115 TELEVISION INSPECTION OF PIPELINE

C. Additional Reports Issued for reference only, these Appendices to be Added to Vol 4 of 4

1. **Appendix A – Phase 1 Environmental Site Assessment. Dated May 30, 2023, authored by Langan Engineering**
2. **Appendix B – Underground Storage Tank Investigation Report, Dated November 16, 2023, authored by Langan Engineering**
3. **Appendix C – Limited In-Siti Soil Sampling, Dated April 1, 2024**
4. **Appendix D – Stormwater Pollution Control Plan for Greenwich Central Middle School (Issued in response to Bidder RFI #93), authored by Tighe & Bond**

1.4 DRAWINGS

A. Replace the following Drawing, previously issued on 09/30/2024 for BIDDING/PERMIT, or ADDENDUMNo.1 on 10/10/24 with new drawings dated 10/16/2024

1.	C101	OVERALL SITE STORMWATER MANAGEMENT PLAN
2.	C104	SITE STORMWATER MANAGEMENT PART PLAN
3.	C301	OVERALL SITE UTILITY PLAN
4.	SU100	MEP SITE UTILITY PLAN
5.	L101B	SITE DEMOLITION AND PREPARATION SOUTHEAST
6.	L202A	SITE MATERIALS NORTHEAST
7.	L202C	SITE MATERIALS SOUTHWEST
8.	L301C	SITE GRADING SOUTHWEST
9.	L404	SITE IRRIGATION PLAN
10.	S101A	FOUNDATION PLAN – PART A
11.	S101C	FOUNDATION PLAN – PART C
12.	S101E	FOUNDATION PLAN – PART E
13.	S211	FOUNDATION DETAILS
14.	A805	INTERIOR DETAILS
15.	A911	FINISH PRODUCT LIST – PART B AND FINISH NOTES
16.	FP000	FIRE PROTECTION ABBREVIATIONS, NOTES AND SYMBOLS
17.	FP101A	FIRE PROTECTION FIRST FLOOR PLAN - PART A
18.	FP101B	FIRE PROTECTION FIRST FLOOR PLAN - PART B
19.	FP101C	FIRE PROTECTION FIRST FLOOR PLAN - PART C
20.	FP101D	FIRE PROTECTION FIRST FLOOR PLAN - PART D
21.	FP101F	FIRE PROTECTION FIRST FLOOR PLAN - PART F
22.	FP102A	FIRE PROTECTION SECOND FLOOR PLAN - PART A
23.	FP102C	FIRE PROTECTION SECOND FLOOR PLAN - PART C
24.	FP102E	FIRE PROTECTION SECOND FLOOR PLAN - PART E
25.	PSU001	PLUMBING SITE UTILITY PLAN
26.	P100A	PLUMBING FIRST FLOOR UNDERSLAB PLAN - PART A
27.	P100B	PLUMBING FIRST FLOOR UNDERSLAB PLAN - PART B
28.	P100E	PLUMBING FIRST FLOOR UNDERSLAB PLAN - PART E
29.	P101A	PLUMBING FIRST FLOOR PLAN - PART A
30.	P101B	PLUMBING FIRST FLOOR PLAN - PART B
31.	P101D	PLUMBING FIRST FLOOR PLAN - PART D
32.	P101E	PLUMBING FIRST FLOOR PLAN - PART E
33.	P101F	PLUMBING FIRST FLOOR PLAN - PART F
34.	P102A	PLUMBING SECOND FLOOR PLAN -PART A
35.	P103A	PLUMBING ROOF PLAN - PART A
36.	P103F	PLUMBING ROOF PLAN - PART F
37.	P401	PLUMBING ENLARGED VIEWS
38.	P402	PLUMBING ENLARGED VIEWS
39.	P405	PLUMBING ENLARGED VIEWS
40.	P501	PLUMBING DETAILS
41.	P601	PLUMBING SCHEDULES AND DIAGRAMS
42.	M101B	MECHANICAL FIRST FLOOR PLAN - PART B
43.	M101C	MECHANICAL FIRST FLOOR PLAN – PART C
44.	M101E	MECHANICAL FIRST FLOOR PLAN – PATR E

45.	MP101A	MECHANICAL PIPING FIRST FLOOR PLAN - PART A
46.	MP101B	MECHANICAL PIPING FIRST FLOOR PLAN - PART B
47.	MP101C	MECHANICAL PIPING FIRST FLOOR PLAN - PART C
48.	MP101D	MECHANICAL PIPING FIRST FLOOR PLAN - PART D
49.	MP101E	MECHANICAL PIPING FIRST FLOOR PLAN - PART E
50.	MP102A	MECHANICAL PIPING SECOND FLOOR PLAN - PART A
51.	MP102C	MECHANICAL PIPING SECOND FLOOR PLAN - PART C
52.	MP102E	MECHANICAL PIPING SECOND FLOOR PLAN - PART E
53.	M601	MECHANICAL SCHEDULES
54.	M602	MECHANICAL SCHEDULES
55.	M700	MECHANICAL CONTROLS DIAGRAMS
56.	M701	MECHANICAL CONTROLS DIAGRAMS
57.	E000	ELECTRICAL ABBREVIATIONS, NOTES AND SYMBOLS
58.	EL101A	ELECTRICAL LIGHTING FIRST FLOOR PLAN - PART A
59.	EL101B	ELECTRICAL LIGHTING FIRST FLOOR PLAN - PART B
60.	EL101C	ELECTRICAL LIGHTING FIRST FLOOR PLAN - PART C
61.	EL101D	ELECTRICAL LIGHTING FIRST FLOOR PLAN - PART D
62.	EL101F	ELECTRICAL LIGHTING FIRST FLOOR PLAN - PART F
63.	EL102A	ELECTRICAL LIGHTING SECOND FLOOR PLAN - PART A
64.	EL102B	ELECTRICAL LIGHTING SECOND FLOOR PLAN - PART B
65.	EL102C	ELECTRICAL LIGHTING SECOND FLOOR PLAN - PART C
66.	EL102E	ELECTRICAL LIGHTING SECOND FLOOR PLAN - PART E
67.	EP101A	ELECTRICAL POWER FIRST FLOOR PLAN - PART A
68.	EP101C	ELECTRICAL POWER FIRST FLOOR PLAN - PART C
69.	EP101E	ELECTRICAL POWER FIRST FLOOR PLAN - PART E
70.	E400	ELECTRICAL ENLARGED PLANS - KITCHEN
71.	E401	ELECTRICAL ENLARGED PLANS - AUDITORIUM
72.	E501	ELECTRICAL DETAILS
73.	E603	ELECTRICAL PANEL SCHEDULES
74.	E701	FIRE ALARM RISER DIAGRAM
75.	T000	TECHNOLOGY SYMBOL LEGEND & GENERAL NOTES
76.	T101A	TECHNOLOGY FIRST FLOOR PLAN A
77.	T101B	TECHNOLOGY FIRST FLOOR PLAN B
78.	T101C	TECHNOLOGY FIRST FLOOR PLAN C
79.	T101D	TECHNOLOGY FIRST FLOOR PLAN D
80.	T101E	TECHNOLOGY FIRST FLOOR PLAN E
81.	T101F	TECHNOLOGY FIRST FLOOR PLAN F
82.	T102A	TECHNOLOGY SECOND FLOOR PLAN A
83.	T102C	TECHNOLOGY SECOND FLOOR PLAN C
84.	T102E	TECHNOLOGY SECOND FLOOR PLAN E
85.	TA000	AUDIO VISUAL SYMBOL LEGEND & GENERAL NOTES
86.	TY000	SECURITY SYMBOL LEGEND & GENERAL NOTES
87.	TY101A	SECURITY FIRST FLOOR PLAN A
88.	TY101C	SECURITY FIRST FLOOR PLAN C

B. Issued for refernce only to address Bidder RFI #91

1. **For Refernce Only** – PLAN AND PROFILE OF SEWER DATED September 6. 1961

GCMS Phase 2 - Bidder's Question Log

BQ #	Responsible Consultant	Reference	Date	Question	Answer	Date Item Responded	Answered By (Name / Company)	Attachment (SK# or Spec Section)	Status ("Closed")	Date Closed
1	Turner	Procurement Manual	10/1/24	What type of labor is being requested for this project? Union or CT Prevailing wage ? When is the estimated installation of the food service equipment? Substantial completion date ? Do you expect to need BIM Coordination on this project?	As this is a public bid, all work must be Prevailing Wage, there is not a requirement for Union Carpentry on this project. Reference Project manual item 10 – Minimum Rates and Classifications for Building Construction – CT Prevailing Wage Rates dated 9.23.24. Note that the State of Connecticut issues updated required rates each year on July 1. Review project schedule for Lower Level fitout scheduled to start September 2025 through June 2026 specific kitchen development will be within this range. See Additional Provisiosn/Scope of Work for all Subcontractors, item #55. Kitchen equipment to participate in BIM 3D Modeling.	10/1/2024	Turner/ J Phelan		Closed	10/1/2024
2	Turner	Procurement Manual	10/1/24	Is this project being done under Carpenter Union?	As this is a public bid, all work must be Prevailing Wage, there is not a requirement for Union Carpentry on this project. Reference Project manual item 10 – Minimum Rates and Classifications for Building Construction – CT Prevailing Wage Rates dated 9.23.24. Note that the State of Connecticut issues updated required rates each year on July 1.	10/1/2024	Turner/ J Phelan		Closed	10/1/2024
3	SLAM	A111.16	10/1/24	No Basis of Design was found for the Ballistic Level 3 Transaction Window at Entry Vestibule. Please provide basis of design for this product. **Turner Follow-up (10/16/24):** Please provide a spec to cover this item.	BOD will be ARMORTEX Aluminum Transaction Window system w/speaker furnished & installed by BP #19. **Turner Response (10/21/24):** Spec Section 08 5653 has been issued in Addendum #2	10/9/2024	SLAM		Closed	10/21/2024
4	SLAM	Spec -1 3575 & Dwg GC01	10/1/24	Delegated Design Procedure Spec (01 3573) and table on drawing GC01 includes Spec 28 5319, Distributed Antenna System. This spec was not found in document. Please confirm if applicable and provide spec.						
5	Turner	Procurement Manual	10/2/24	Where can I find the information on Small Business / MWBE participation percentage requirements.	Refer to the Invite to bid for specific package requirements in the Chart on Page 1 and 2. Also, reference the Boilerplate additional provisions item #4 page 3C.	10/2/2024	Turner/ J Phelan		Closed	10/1/2024
6	Turner	Procurement Manual	10/2/24	Is a bid bond required for bid submission?	A bid bond is applicable for bids in excess of $100,000. This information is detailed in the Invitation to Bid document along with additional required information for bid submission.	10/2/2024	Turner/ B Moore		Closed	10/7/2024
7	SLAM	3D/A522	10/3/24	Please confirm that the anchorage at Curtain Wall header is the Anchorage is concealed in mullions per detail 6C/A640.	Confirmed	10/9/2024	SLAM		Closed	10/16/2024
8	SLAM	1D/A640	10/3/24	Please provide clarifying detail of sunshade attachment to storefront mullion. Additionally, clarify how flashing/roof membrane extends around attachment bracket.	The Sunshade is provide by the window manufacture - all attchment detail is per there typical instaltion method for their system. The shade does not interact with the roof or wall membrane flashings as it attached to the window system only.	10/9/2024	SLAM		Closed	10/16/2024
9	SLAM	1C/A640	10/3/24	At South Elevation Main Entrance (5C/A310), there is concern of potential condensation accumulation at metal panel infill. Please confirm that no insulation is required on the inside of the glazed-in metal insulated panel.	There is no condesation concern and no insulation is required.	10/9/2024	SLAM		Closed	10/16/2024

Turner

GCMS Phase 2 - Bidder's Question Log

BQ #	Responsible Consultant	Reference	Date	Question	Answer	Date Item Responded	Answered By (Name / Company)	Attachment (SK# or Spec Section)	Status ("Closed")	Date Closed
10	SLAM	A901C	10/3/24	Please confirm that the wall panels (AWP8) in the Media/Production Classroom 1063 & Media Sound Booth are to be full height at all walls.	Per the Finish Product List AWP6 is to be full height. It is only to be installed on the 2 walls per room as shown on the Finish Plan A901C. Furnished & Installed by BP #18.	10/8/2024	SLAM		Closed	10/16/2024
11	SLAM	A122	10/3/24	Please confirm that 3A/A501 is the applicable detail for waterproofing at the elevator pit (A122). Additionally, will waterproofing be required at the interior of the elevator pit? Please provide details.	3A/A501 is the correct detail refernnce for the Elevator Pit. No see 5E/A122 plan refernce tht calls for exterior side waterproofing on all sides of the elevatior pit.	10/9/2024	SLAM		Closed	10/16/2024
12	SLAM	S410, S411, S420, S421, S430	10/3/24	There are details throughout the S400 series of drawings that do no show all the connection types, i.e. bolt sizes, weld types & sizes, etc..for items like hung lintels and perimeter angles. For example see 9/S410 or 15/S410. Are these intended to be delegated design? If so, no loads seem to have been provided. Please advise & provide these connection details where missing. **Turner Follow-up (10/16/24):** Confirm typical welds shown on Detail 1 of same page are adequate for these conditions.						
13	SLAM	6/S420	10/3/24	Please confirm that the joist bridging, diagonal horizontal bracing, and rigging beam connections to the joists will be a delegated design.	Confirmed.	10/8/2024	SLAM		Closed	10/16/2024
14	SLAM	S302B	10/3/24	Please confirm that the intent is for the basketball hoop supplemental steel supports, attachement to the roof joists, and any associated bracing to be a delegated design.	Basketball hoop supplemental steel supports and attachments to roof joists by basketball supplier (BP #21), inclusive of delegated design.	10/8/2024	SLAM		Closed	10/16/2024
15	SLAM	S302B	10/3/24	It is not clear how motorized partition will be mounted to the roof joists. Please provide details and a section cut. **Turner Follow-up (10/16/24):** Provide detail of mount to roof joists.						
16	SLAM	A522	10/3/24	Detail 3B/A522 shows CFMF angles attached to the top flange of the steel beams to support the skylight framing. Will CFMF be sufficient to carry this load or will strcutrual steel angles welded to the steel be required?						
17	SLAM	GC12	10/3/24	The steel framing between gridlines XB-XC and in front of gridline AK seems to be called out to be galvanized as well as coated in thermal insulative coating and intumescent paint. Are any special primers or prep required for these 3 coating to be applied on top of each other? Please confirm the order these coatings should be applied in.						
18	SLAM	S502	10/3/24	Please confirm that all the shear walls shown on S502 are 12" CMU.	See architect plans and arch wall type sheets for wall designations	10/10/2024	SLAM		Closed	10/16/2024
19	SLAM	S401 & A122	10/3/24	No elevator hoist beam size has been provided. Please provide size and bearing details.	This identified on the related structural drawings S302E.	10/10/2024	SLAM		Closed	10/16/2024
20	SLAM	Spec 055000	10/3/24	Please confirm that the "ships ladder" spec also applies to roof hatch ladders in 055000 2.6.c	The refernce to "ships ladder" in this section will be removed and replaced with a fixed ladder revision. **Turner Response (10/21/24):** Revised Spec Section 05 5000 has been issued in Addendum #2	10/16/2024	SLAM		Closed	10/21/2024
21	SLAM	T400	10/3/24	Please confirm the fiber & copper backbone interconnecting the IDF & MDF rooms is not required to be run in conduit, and that armored cable is sufficient.	Armored cable, as specified, is sufficient. **Turner Additional Response (10/21/24):** Armored cable & supports furnished & installed by BP #39 per scope of work documents.	10/16/2024	DA		Closed	10/21/2024

GCMS Phase 2 - Bidder's Question Log

BQ #	Responsible Consultant	Reference	Date	Question	Answer	Date Item Responded	Answered By (Name / Company)	Attachment (SK# or Spec Section)	Status ("Closed")	Date Closed
22	SLAM	T400	10/3/24	Please confirm scope & devices noted on the T set and TY set generally have conduit pathways to above accessible ceilings, unless otherwise noted. And that scope & devices on TA set (AV) have conduit directly to the AV cabinet supporting the space, unless otherwise noted as to be above accessible ceiling. **Turner Follow-up (10/21/24):** Please confirm that AV conduit and rough-in requirements for rooms other than the Gym, Cafeteria, and Auditorium are only what is identified in the AV conduit & cabling schedule on TA000.	Confirmed.	10/16/2024	DA			
23	SLAM	T101A & T101D	10/3/24	There doesn't appear to be any data, voice, or network connections shown for the fire alarm system on the technology drawings. Please advise and provide details.						
24	SLAM	T series	10/3/24	There doesn't appear to be any data or network connections shown for the BMS system on the technology drawings. Please advise and provide details.	See data adds for BMS in Addendum 02.	10/16/2024	DA		Closed	10/21/2024
25	SLAM	Spec 276010	10/3/24	Sheet GC0A calls for the DAS to be a delegated design. The spec doesn't explicitly mention any engineering or delegated design requirements or deisgner certifications. **Turner Follow-up (10/16/24):** Spec section 276010 was issued, but is not listed on the delegated design schedule shown on sheet GC0A. Spec section 28 5319 was not issued, but is listed on sheet GC0A. Please advise.						
26	SLAM	E602-E607	10/3/24	The panel schedules indicate a lot of spares. Are there truly this many spares available?	Spare capacity in panels to remain at this time.	10/10/2024	CES		Closed	10/16/2024
27	SLAM	SU500	10/3/24	Detail 1 and 4 on SU500 reference a concrete encasement detail in Note #4. Has this detail been provided? What sheet is it on? Please add sheet reference to this Note #4. Also, please confirm if any concrete encasement around site conduit is required. **Turner Follow-up (10/16/24):** On C508 ductbank detail notes reference concrete being needed beneath paved areas only. Please confirm. Also please provide spacing and concrete encasement dimensions (i.e. concrete cover).	Refer to CIVIL (Tighe and Bond) drawings for trenching detail requirements. Concrete encasement as required furnished & installed by Site Contractor (BP #09).	10/10/2024	CES			
28	SLAM	SU500	10/3/24	Sheet SU100 references a detail on SU500 for the primary electric manhole. There is no detail on SU500. Please provide this detail, size, and specifications on the primary electric manhole.	Refer to sheet SU501 for eversource hex manhole detail. References to SU500 will be changed to reference SU501. Site Contractor (BP #09) shall furnish & install the Eversource manhole & associated details, inclusive of coordination with BP #38.	10/10/2024	CES		Closed	10/16/2024
29	SLAM	C301, SU100	10/3/24	Note 28 on C301 alludes to utility company review and the design being subject to change pending utility company review. Have the utility companies reviewed & approved the current design? There is also mention of ultility "design by others". Can you please clarify the intent?						
30	SLAM	09 6500	10/3/24	RT1, RT2 and RT3 are all listed as 4mm thick. Can you please confirm that they should be listed as 2.5 mm thick to match up to all the other LVT's on the job.	All should be 2.5mm (not 4mm)	10/11/2024	SLAM		Closed	10/16/2024
31	SLAM	09 6500	10/3/24	RT2 and RT3 come with the same wear layer as all the other RT's lised but they are both 40 mill and the warranty is 25 years. This 40 mill and 25 year warranty are specific to the Amtico selections	The minimum wear layer for the resilient tiles is 20 mil and the basic warranty is 15 years - RT2 and RT3 exceed this with 40mil wear layer and a 25 year Warranty which is acceptable but not a requirement.	10/11/2024	SLAM		Closed	10/16/2024

GCMS Phase 2 - Bidder's Question Log

BQ #	Responsible Consultant	Reference	Date	Question	Answer	Date Item Responded	Answered By (Name / Company)	Attachment (SK# or Spec Section)	Status ("Closed")	Date Closed
32	SLAM	C301, SU100	10/3/24	Please confirm that the electrical utility company will install conductors from Stanwich Road to the pad mounted transformer. Please confirm that the utility company will also furnish & install the pad mounted transformer. The EC will then provide conductors from the utility transformer to MSB-1 & FP-DS. Please confirm that the telecom service provider will be installing conductors from Stanwich road to a demarcation / box in MDF 1066.	The electric utility company will provide primary cable from the riser pole to the pad mounted transformer. The project will provide the conduit ductbank, pulling structure with proper subgrade and grounding, transformer pad with subgrade and grounding, secondary conductors from the transformer to MSB-1 and FP-DS in conformance with the identified trench detail.The communication utility company will provide service cable from the riser pole to the Telecommunications Equipment Room full length underground.	10/11/2024	CES		Closed	10/16/2024
33	SLAM	Spec 260573	10/3/24	Please confirm all electrical power studies required. Spec section 260573 didn't seem to mention an Arc-Flash study. Is that required? Other spec sections refer to arc-flash labeling. We want to ensure all the studies required is clear.						
34	SLAM	Electrical Specs	10/3/24	We didn't see a spec for electrical infrastructrure vibration & seismic controls. Please confirm that there are no vibration or Seismic requirements for electrical systems. If there are, then please provide the appropriate spec.						
35	SLAM	Spec 323120, SU100, TY100	10/3/24	The spec for vehicle barrier gates calls for communiction wiring. SU100 shows power run to the gates, but doesn't explicitly show any communications cabling or infrastructure run to the gates. Please advise and update the drawings to clearly shown interconenctions and/or wiring details.	Refer to keynote E13 and note calling for (1) 2” conduit. Refer to note on site plan “(2) 2” CONDUITS FOR COMMUNICATIONS TO SITE CAMERAS AND EV CHARGING EQUIPMENT.” Refer to EV charging detail for communication conduit requirements. The base electrical contractor (BP #38) shall funrish & install all conduits / pathways. Low voltage contractor (BP #39) to furnish, install, terminate, & test all low voltage cabling.	10/13/2024	CES		Closed	10/16/2024
36	SLAM	Spec 262653 & SU100	10/3/24	The spec calls for the EV charging stations to be networked. There doesn't seem to be any data / LV cabling or connections indicated. Will these be connected via a cellular or wifi signal? Please advise and update the drawings to clearly show network connections required and/or wiring details.						
37	SLAM	Spec 260533	10/3/24	This spec section mentions related spec sections that have not been issued, i.e. 270533 Raceways for Communications Systems. Please advise and provide all specs required. Please ensure all related specs are provided or delete references throughout. **Turner Follow-up (10/16/24):** Please provide an updated spec with the corrected references.	Refernces to 27 0533 in this spec section should be replaced with 27 0536.	10/9/1902	CES			
38	SLAM	E Series	10/3/24	Please confirm that all motorized shades are intended to be manually & locally controlled. Confirm that they will not be integrated with any lighting controls system or have any automation.	Motorized shade control shall be manual and locally controlled.	10/13/2024	CES		Closed	10/16/2024
39	SLAM	E701 & Spec 262826	10/3/24	This spec mentions an Engine Start Monitoring system that is integrated with the Fire Alarm system. There doesn't appear to be reference to this on the fire alarm riser SOO (E701). Please advise and update accordingly.	Monitoring module for monitoring of the engine start circuit is added to floor plan and riser diagram in Addendum #2.	10/10/2024	CES		Closed	10/21/2024
40	SLAM	Spec 283100	10/3/24	Please confirm that MC Cable is acceptable for fire alarms systems in all concealed conditions (i.e. within walls and above accessible, finished ceilings), and that conduit is only required in "exposed" installations. Please confirm if areas with "cloud" ceilings are considered "exposed" (i.e. the Cafeteria).	MC Cable is acceptable for fire alarm systems in concealed areas. Areas with cloud ceilings are considered exposed, provide wire in conduit.	10/10/2024	CES		Closed	10/16/2024
41	SLAM	Spec 270536	10/3/24	This spec section mentions delegated design for seismic restraints. Is this required for the small amount of cable tray scope in IDF/MDF rooms? If so, please reference this spec in the delegated design matrix on the GC series of drawings.	Disregard requirement for delegated design for seismic restraints in Specification 27 0536.	10/16/2024	DA		Closed	10/21/2024

GCMS Phase 2 - Bidder's Question Log

BQ #	Responsible Consultant	Reference	Date	Question	Answer	Date Item Responded	Answered By (Name / Company)	Attachment (SK# or Spec Section)	Status ("Closed")	Date Closed
42	SLAM	E Series	10/3/24	Is there a spec for the overhead cord reels? Please advise or provide.	Cord reel spec to be "Industrial cord reel, with Hubbell HBL4729C twist-lock input connector, 25' SJO Cable Jacket, 12/3, Nema 5-20R connector for use by owner. White housing. Shall be provided with the following: Pivot Base Hubbell #HBLI340PH; Mounting Bracket Hubbell #HBLIMB; Ball Stop Hubbell #HLI12BS". Cord reels shall be furnished & installed by BP #38.	10/11/2024	CES		Closed	10/16/2024
43	SLAM	S421 & A521	10/3/24	Detail 1B on A521 shows CFMF supports for the MCM panel soffit around the Gym. Detail 1 on S421 shows a top chord extension for the roof joists to create a an overhang. What is the profile / shape of this top chord extension because it looks larger than a typical top chord. Also, is the intent for the CFMF to attach to this extension or will the CFMF hang from the roof deck overhang?	Top chord extension & profile (i.e. depth) is by joist fabricator (BP #12) as part of the delegated design process. CFMF is intend to attach to the extended top cord, infilling between members. CFMF furinshed & installed by BP #21.	10/9/2024	SLAM		Closed	10/16/2024
44	SLAM	MEPFS Drawings	10/3/24	Please provide matchlines on all plans.						
45	SLAM	L503 & L504	10/3/24	Please confirm the manufacturer and model number intended to be used for the metal screen fence and black chainlink viynl coated fence shown on L503 & L504.	Please see spec section 12 9300 for METAL SCREEN FENCE – Basis of Design is Pallisade Fortress Screen Fence as provided by Palm SHIELD. Please see spec section 32 3113 for CHAIN LINK FENCE – components called out. B.O.D. EAGLE FENCE or equal. Furnished & installed by BP #09.	10/11/2024	SLAM		Closed	10/16/2024
46	SLAM	TR1 & TR2	10/3/24	Details 7 & 8 seem to show a rigging beam up high and then a pipe batten hung from that beam. Details 3, 5, & 6 on TR1 show "compression tubes" and "strongbacks" between the rigging beam and pipe baten, which are not part of the details on TR2. It is not clear from the sections & details provided what the intended theatrical lighting / rigging assembly should be. Please provide updated or additonal details.						
47	SLAM	TR1 & TR2	10/3/24	Please confirm how the curtain tracks shown in Detail 2 on TR1 on the perimeter (adjacent to gridlines CN & CJ) should be supported. Can they be hung directly from the roof deck or is that an issue structurally?	Theatrical rigging contractor (BP #31) to provide intermediate support strut between rigging beams to support track. System is not to be huing directly form the roof deck.	10/9/2024	CT/SLAM		Closed	10/16/2024
48	SLAM	T-Series & A912	10/3/24	It is not clear from the drawings & specs if there will be any owner furnished, contractor installed Low Voltage and/or AV equipment and components (for example network switches, smartboards, etc.). If there is anything, please provide a responsibility matrix indicating this scope. Ideally an OFCI vs. OFOI vs. CFCI matrix should be provided, similar to the specialty equipment matrices on A912.	Refer to scope matrix added to T000, TA000, & TY000 in Addendum 02.	10/16/2024	DA		Closed	10/21/2024
49	SLAM	Spec 276010	10/3/24	Please confirm that the distributed antena system shown in the bid documents is intended for Emergency Responder Radio Coverage Only. And that there will not be a system for extended cellular coverage.	Confirmed. DAS is intended for Emergency Responder Radio Coverage only.	10/11/2024	CES		Closed	10/16/2024
50	SLAM	E400 & EP101D	10/3/24	It seems like under slab conduit and electrical circuit infrastructure will be required, especially for the kitchen and auditorium spaces. There doesn't appear to be any typcial below slab typical details in the E500 series. Please advise and provide. Also, please confirm it is acceptable to run feeders and branch circuits below the slab on grade generally. **Turner Follow-up (10/16/24):** Please follow-up with a typical below slab conduit detail for within the footprint of the school.	Underslab feeders and branch circuits below slab are acceptable means and methods procedure.	10/11/2024	CES

GCMS Phase 2 - Bidder's Question Log

BQ #	Responsible Consultant	Reference	Date	Question	Answer	Date Item Responded	Answered By (Name / Company)	Attachment (SK# or Spec Section)	Status ("Closed")	Date Closed
51	SLAM	E700	10/3/24	E700 shows the PV 1200A NEMA 3R disconnect and meter cabinet as "future" with dashed lines, seeming to indicate it is not part of the scope of work for this project. Is that true? However, E700 shows 1200A feeders from these future cabinets as being part of the scope of work for this project. Is this true? **Turner Follow-up (10/16/24):** Please provided updated drawings showing the (4) 4" empty conduits.	PV disconnect and meter cabinet is future and not part of the scope of work for this project. Space reserved for future PV equipment shown on EP101A, EP101C, EP101E and roof plans. 1200A feeder shown on E700 was intended to just be conduit and pull string. Reference to 1200A feeder will be removed in next addendum and replaced with note for (4) 4" conduits and pull strings, furnished & installed by BP #38.	10/11/2024	CES			
52	SLAM	E700	10/3/24	Detail 2 on E700 shows a Future PV System Riser Diagram. Please clarify what should be included in the base electrical bids. Will it be empty conduit w/ drag lines only to the general locations indicated.	Yes, base electrical bid (BP #38) will be empty conduit w/ drag lines. Refer to E700 Future PV System Conduit Riser Diagram, and roof plans for conduit stub up locations.	10/11/2024	CES		Closed	10/16/2024
53	SLAM	E700	10/3/24	Please confirm if the submetering shown in the submetering schedule on E700 is the only submetering required. Or is there addition submetering required for mechanical system and/or lighting not currently shown in this schedule? If so, please advise on a full list of submetering.	Confirmed. Submetering shown in schedule is all that is required. If you have specific system you have a question about please submit a more detsiled question. **Turner Follow-up Response (10/21/24):** The electrician (BP #38) to review all bid documents and specifications, and furnish & install all submetering identified therein.	10/16/2024	SLAM		Closed	10/21/2024
54	SLAM	S401 & A121	10/3/24	It is not clear from detail 1/S401 or 3D/A121 how the 2nd floor curtain wall / window will be supported. Please advise and provide the corresponding detail(s).	At the limited width of that window (7'-6) typical CFMF detailing & framing by BP #21 will be required (i.e. box headers and sills - double jamb king suds). Similar to 2D/A641 added in this Addednum	10/9/2024	SLAM		Closed	10/16/2024
55	SLAM	S211	10/3/24	Detail 1/S211 notes that 1st floor slab needs to be poured prior to backfill. Can you confirm if it is acceptable to backfill prior to pouring slab? Also note that detail 3/S211 does not require slab install prior to backfill. **Turner Follow-up (10/16/24):** Initial SLAM response will provide a hardship to construction sequence & scheduling. Please provide detail and plan locations for keyway at retaining wall footing to eliminate the requirement for placing this SOG prior to backfilling.						
New Bidder's Questions as of 10/04/24 Issuance										
56	Turner	Procurement Manual	10/8/24	Will the Turner Pre-Qualification Form be required for the bid, if the potential subcontractor has recently filled out pre-quals with Turner Construction?	Subcontractors who are currently Prequalified with Turner may request Turner provide a letter to verifiy prequalification. Copy of letter can be submitted with Bid in lieu of submission of the "Turner Prequalification Response Form" included within the project manual. Send requests for Prequalified letter Francesca Perugini at fperugini@tcco.com.	10/9/2024	JP/Turner		Closed	10/9/2024
57	Turner	Procurement Manual	10/8/24	What time do te buses arrive in the morning, and when do they pick-up in the afternoon.	CMS Dropoff starts at 7:20 a.m. and Dismissal time is 2:45 p.m.	10/9/2024	JP/Turner		Closed	10/9/2024
58	Turner	Procurement Manual	10/8/24	What percentage of the project is State funded vs. town funds?	Not applicable	10/16/2024	JP/Turner		Closed	10/16/2024
59	Turner	Procurement Manual	10/8/24	Is Turner planning on submitting and self-perform scopes?	Turner Self Perform (SPO) will not be bidding on any of the prime bid packages.	10/9/2024	CL/Turner		Closed	10/9/2024
60	SLAM	C305	10/9/24	There is a Heat Trace system for the grease waste system. The Civil Drawings say to reference details on the MEP drawings, MEP drawings only show HT-1 on the interior and then HT-2 on the portion of the exterior line shown on Drawing P100A. Shall HT-2 extend all the way to the grease trap on the site or just required for the first 10 feet of piping?	HT-2 shall extend all the way to the grease trap per Addendum #2. Heat trace installation shall be coordinated with Civil piping and routing. **Turner Additional Response (10/21/24):** Plumbing subcontractor (BP #36) to furnish heat trace and the Electrician (BP #38) to install per the Turner scope of work documents.	10/16/2024	CES		Closed	10/21/2024

GCMS Phase 2 - Bidder's Question Log

BQ #	Responsible Consultant	Reference	Date	Question	Answer	Date Item Responded	Answered By (Name / Company)	Attachment (SK# or Spec Section)	Status ("Closed")	Date Closed
61	SLAM	A902A	10/9/24	Classroom 2019 also does not show roller shades at the counter space. Please confirm if this area is to have roller shades.						
62	SLAM	21 05 33, 22 05 33	10/9/24	There is no Heat Trace Specificaiton for Fire Protection or Plumbing systems. Please provide specifications. Turner Follow-up (10/21/24): Please provide a written heat trace specification.	Refer to schedules on plumbing and fire protection drawings for heat trace specification.	10/16/2024	CES			
63	SLAM	275313	10/9/24	Is it acceptable to utilize Primex Clocks in lieu of SiteSync IQ by American Time?						
64	SLAM		10/9/24	Are the site boulders intended to be imported to site or harvested from site?						
65	SLAM	L404	10/9/24	On drawing L404 the site irrigation plan what is the location of the point of connection to the new building for irrigation piping?	Irrigation will connect in through the Fitness Room 1099. See Plumbing Drawings P101B for more information.	10/16/2024	SLAM/CES		Closed	10/21/2024
66	SLAM	Spec 08 4413	10/10/24	In regards to the ballistic curtainwall type ICW02, no specification was found for ballistic curtainwall framing. Can you please clarify or provide? Turner Follow-up (10/17/24): The lower section of the frame (3E/A632) has the bullet resistant glass, but not the upper. Typically, if any part of the frame is to have bullet resistant glass in it than the entire frame is to be bullet resistant. The glass doesn't have to be, as it shows in this case, but the frame does. Please clarify if the entire frame is to be bullet resistant.						
67	Turner	A924	10/10/24	Please confirm that the masonry for Sign Type R is not within the scope of the signage contractor.	The masonry will be by the Masonry subcontractor (BP #11) and the fiber cement paneling system will be by the drywall subcontractor (BP #21). The flush mount alum. letters will be by the signage contractor (BP #28).	10/16/2024	JM/Turner		Closed	10/16/2024
68	SLAM	A924	10/10/24	Please confirm that halo lit is acceptable for Sign Type S.						
69	Turner	10-1416-1	10/10/24	Is the dedication plaque detailed in Section 10-1415 part of the signage scope?	The millwork subcontractor (BP #18) will be responsible for the Plaques spec section.	10/16/2024	JM/Turner		Closed	10/16/2024
70	SLAM	Existing / As-Built Dwgs	10/10/24	Can drawings of the Existing Building Construction be provided?						
71	SLAM	05 2100	10/10/24	Specification section 05 2100-1.3B notes comprehensive engineering analysis of "special joists", signed and sealed by qualified engineer. It appearst the joist sizes are already on the documents, please clarify the intent of what joists are to be delegated design as 'special joists". Are there restrictions on the 'special joists', meaning do portions of the design need to align with sizes provided on the documents?	The SP designation on the framing plans is what defines a "Special Joist". The depth designations on the plans need to be adhered to. The delegated design specified and required, covers all of the rest of the loading criteria that goes into sizing the individual parts and pieces thst make up a typical joist. All of which are defined in the drawing set. See Soo1, Individual Details in the S400 Series and S700 series for loading information and notes. Along with other things that hang from the joists - I.E. Basketball Hoops, divider curtains, motors that move these things....etc. All of these things need to be factored into the delegated desing by the fabricator's engineer (by BP #12)	10/14/2024	SLAM		Closed	10/21/2024

GCMS Phase 2 - Bidder's Question Log

BQ #	Responsible Consultant	Reference	Date	Question	Answer	Date Item Responded	Answered By (Name / Company)	Attachment (SK# or Spec Section)	Status ("Closed")	Date Closed
72	SLAM	05 5000	10/10/24	Specification section 05 5000 is identified as delegeted design on sheet GC0A. Reviewign 05 5000-1.5 is notes notes ladders, backstop and elevator beams as delegated design. Please confirm these items are the extents of the delegated design requirements of this specification section 05 5000.	Paragraph 1.5-A says “ladders, backstop and equipment supports, and elevator beams”. Equipment support requiring delegated design should include support for the gym divider curtain, overhead coiling doors and grilles, and cubicle ceiling track support, unless covered by structural in their drawings. Turner Additional Response (10/21/24): Each bid package subcontractor is responsible for delegated design of their own scope items and coordination with associated trades for loads imposed. See Turner Scope of Work documents for delineation of scope.	10/16/2024	SLAM		Closed	10/21/2024
73	SLAM	08 4313	10/10/24	Specification section 08 4313 is identfied as delegated design on sheet GC0A. Reviewing the spec section 08 4313-1.5E it appears only to indicated attachments and anchors require delegated engineering analysis. Confirm this is the correct interpretation and that standard manufacturer data for the storefont framing in lieu of delegated design calcs.	Questioner’s interpretation is acceptable. Manufacturer’s published design data is sufficient to describe framing’s structural and physical characteristics.	10/16/2024	SLAM		Closed	10/21/2024
74	SLAM	A911	10/10/24	Finish Schedule doesn’t have a color for PL5 Wilsonart Plam, only a finish. It also shows PL7 Wilsonart Plam with no color or finish. Please advise a color and or finish selection are for these Plastic Laminates.	PL5 is a placeholder for finish on the face and sides of servery equipment only. There is no millwork in the servery. PL5 will match PL1. PL7 please use Formica, Specialty High Pressure Plastic Laminate, Magnetic, Writable Whiteboard surface, stain resistant in Crystal White. Both items have been modified in the Finish Materils list.	10/14/2024	SLAM		Closed	10/21/2024
75	Turner	Millwork SOW	10/10/24	SOW for Millwork and Casework (Scope Item #19) states we own furnish and install of TRM1 through TRM5. Details 1A, 1B, 3B/A805 all show Fry Reglet TRM trim being installed behind either wallcovering or AWP’s, both we don’t own. Shouldn’t this be furnished and installed under the Bid Packages that own the wallcovering and AWP Panels? Of all 5 TRM’s, the only one I see our Bid Package owning would be TRM3 per A911 as this if for the exposed edges tackboard that we do own. Please advise who will own the furnish and install of TRM1, TRM2, TRM4, & TRM5.	The Millwork subcontrator (BP #18) shall furnish and install all metal trim as noted in the millworks scope line item 19. The trim shall be coordinated with the adjacted trades material.	10/16/2024	JM/Turner		Closed	10/16/2024
76	SLAM	1E, 2E, 3E/A805	10/10/24	1E, 2E, & 3E/A805 show what looks like gyp. Panels on the top and bottom of all 3 types of display cases. Please advise if this is the design intent or are the tops and bottoms supposed to be Plam like the side walls? If gyp. on the top and bottom is the design intent, please advise who owns the gyp. furnish and install.	All sides of interior of display cases are to be PL7, this discription has been revised in the Finish Materials list.	10/16/2024	SLAM		Closed	10/16/2024
77	SLAM	64100	10/10/24	Spec Section 064100 – Architectural Wood Casework sub-section 2.9 Hardware states product grade as Grade 2. Since no cabinet door and drawer locks are listed, please confirm Grade 1 locks are not required. Also please advise the specific locks that are required for all cabinet doors and drawers since none are listed. a. 2.9/C states either side mounted recessed metal shelf standards or multiple holes for pin shelf rests with nominal 1in. spacing. Will standard 32mm spacing be acceptable, or are Metal Pilaster shelf standards required? b. 2.9/J calls for soft close door and drawer adjustable dampers. Are dampers required with self close European hinges and drawer slides, or are soft closed hinges and slides acceptable, not requiring the dampers?	Locks: Grade 2 is acceptable, Grade 1 not required. Owner to select specific lock types a: Standard 32mm spacing is acceptable. b. Provde a substitution request for alternate product types.	10/16/2024	SLAM

78	SLAM	64100	10/10/24	Architectural Wood Casework sub-section 2.1C states multiple-dovetailed/dovetail joint construction. Please advise if standard hardwood dowel construction is acceptable.	This method is acceptable as long as it conforms to the requirements and standards of AWI Custom Grade casework.	10/16/2024	SLAM		Closed	10/21/2024
79	SLAM	123553.19	10/10/24	Wood Laboratory Casework lists Acid Storage Cabinets, Solvent Storage Cabinets, and Mobile Tables. Please advise where these items are located as nothing is shown on any floor plans or elevations for these items. If these items are not required for this project, please advise if Div. 6 Architectural Wood Casework would be acceptable ilo of Div. 12 Lab Casework, still following hardware materials but using AWI Standard Construction as outlined in Spec Section 064100. Div. 12 Epoxy counters, google cabinets, and drying racks would still be supplied as speced. **Turner Follow-up (10/21/24):** Please provide a revised spec that removes references that are not applicable to this project.	Spec will be revised to remove refrences to Acid Storage, Solvent Storrage, and Mobile Tables as they are not in this projects scope. Both specification section will remain as is otherwise. **Turner Response (10/21/24):** Revised Spec Section 12 3553.19 has been issued in Addendum #2	10/16/2024	SLAM		Closed	10/21/2024
80	SLAM	08 4413	10/10/24	Specification section 08 4413 is identfied as delegated design on sheet GC0A. Reviewing the spec section 08 4413-1.5F and 1.6A it does not indicated any signed and sealed calculations are required. Please clafify the delegated design intent of this specification section.						
81	SLAM	08 4413	10/10/24	Specification section 08 4413-1.6B seems to indicate an off site mockup performance test. If this is required, additional information is required for testing procedures, size of mockup, etc. Or can standard manufacturer systems specified provide performance testing of the specified systems to meet this requirement. **Turner Follow-up (10/21/24):** Please advise and provide an updated spec removing reference to off-site performance testing.	The two required fleld tests are outlined in part 3.4 Field Qulaity Control to be included by BP #19.	10/13/2024	SLAM			
82	SLAM	12 6613	10/10/24	Specification section 12 6613 is identfied as delegated design on sheet GC0A. Reviewing the spec section 12 6613 and the requirements noted, can the specified manufacturers standard certification statement meet the delegated design requirements, assuming the specified seating meeting the requirements of this specification section.	Delgated design is required of the project specific seating design and layout, by BP #32.	10/13/2024	SLAM		Closed	10/21/2024
83	SLAM	22 1123	10/10/24	Specification section 22 1123-1.7C seems to indicate delegated design which is not called for on GC0A. Reviewing this spec section it is not clear if delegated design of "design piping system" is intended to included. Please clarify the design requirements of this specification section.						
84	SLAM	11 0610	10/10/24	Specification section 11 0610-1.9C seems to indicate delegated design which is not called for on GC0A. Reviewing this spec section it is not clear what portions of the specification section are to be delegated design and associated criteria. Please clarify the design requirements of this specification section.

85	SLAM	14 2100	10/10/24	Specification section 14 2100-1.6A seems to indicate delegated design which is not called for on GC0A. Reviewing this spec section appears guide rails are to be delegated design. Please confirm the design requirements of this specification section. Turner Follow-up (10/21/24): Please provide updated specs.	Paragraph 1.2-C outlines the items requiring delegated design – pit ladder, divider beams [where required], supports for entrances and rails, and hoisting beam (a/k/a machine beam). Paragraph 1.6-A will be revised to include these items; Article 1.5 will be revised to include a delegated design submittal (in coordination with Section 05 5000). Turner Response (10/21/24): Revised Spec Section 14 2100 has been issued in Addendum #2. The elevator subcontractor (BP #34) shall provide signed and sealed elevator drawings with supporting calculations for all elevator delegated design, except for the hoist beam, pit ladder, and pit grating. The elevator subcontractor (BP #34) shall design, furnish, & install all steel supports for sills and entrances as required. The hoist beam, pit ladder, & pit grating delegated design shall be performed by the misc metals subcontractor (BP #13), as they are responsible to furnish & install these components. The elevator subcontractor (BP #34) must provide all loads imposed to the misc metals subcontractor (BP #13).				Closed	10/21/2024
86	SLAM	22 0516 & 23 0516	10/10/24	Specification section 22 0516 and 23 0516 seems to indicate delegated design which is not called for on GC0A. Please confirm if these spec sections should be added to GC0A.						
87	Turner	A610	10/10/24	Please clarify under which bid package the Sliding Window at the Nurses Office, and the Bullet Resistant Pass Thru Window at the Admin Office fall under. Are there any specification for them?	Per the BP#19 scope of work, the Sliding Window at the Nurses Office and the BR Pass Thru Window at the Admin Office are to be furnished and installed by BP #19 (Glass & Glazing). No specs are provided for these items. A basis of design for the Bullen Resistant Pass Thru Window is referenced in RFI #3. Reference RFI #88 for product information of the sliding window at the Nurse's office.	10/10/2024	BM/Turner		Closed	10/21/2024
88	SLAM	A610	10/10/24	Please provide basis of design and specification of sliding window at the Nurse's office.						
89	SLAM	10 5113	10/10/24	Please see attached RFI 89 attachments for potential locker substatution request. Please advise if this substitution is acceptable.				Yes -- Substitution Request		
90				BQ NOT UTILIZED						
91	SLAM	00 3132	10/11/24	The Geotechnical boring information provided within the specification 00 3132 provides limited information at the phase 2 Turnaround (dwg C303) and deep Sanitary sewer roadwork excavation along Indian rock lane(C306, C307). Are Rock elevations known in these areas? What assuptions are to be made?	Limited Rock elevations are known at the intersection of Indian Rock Lane and Stanwich Road. See the attached existing sanitary sewer as-built which shows rock profile. The Rock profile is anticipated to undulate as shown on the as-built profiles and the provided geotechnical data. Encountering rock should be anticipated in contractor's bid.	10/16/2024	T&B		Closed	10/21/2024
92	SLAM	Site Utility	10/11/24	When reviewing the permit application for the Sanitary sewer the town noted the new lines need to be videoed to show the install from within the new pipes/manholes. There does not appear to be a mention of this video documentaiton. Will this be required by the Sitework Subcontractor? If yes please provide the details and specifications.	Sheet C-301 has been revised to include note 35. stating "ALL SANITARY SEWER MAINS AND LATERALS SHALL BE VIDEO RECORDED PER SEWER DIVISION PERMIT REQUIREMENTS AND PER SPECIFICATION 33 31 15." This will be required by the Sitework Contractor (BP#09).	10/16/2024	T&B		Closed	10/21/2024

BQ #	Responsible Consultant	Reference	Date	Question	Answer	Date Item Responded	Answered By (Name / Company)	Attachment (SK# or Spec Section)	Status ("Closed")	Date Closed
93	SLAM	Civil Series	10/11/24	There does not appear to be a Storm Water Pollution Prevention Plan included in the contract documents. Please advise if Sitework Subcontractor will be responsible for SWPPP and if so provide aproject specific plan	Sitework Subcontractor (BP #09) is responsible for the SWPCP. See the included Stormwater Pollution Control Plan for the project.	10/16/2024	T&B		Closed	10/21/2024
94	SLAM	05 3100	10/11/24	Detail 1B/A521 calls for Steel plates top and bottom of deck - fasten and seal with continuous butyl. Please confirm these steel plates are to be by the metal deck manfacturer as no plates are shown on the structural documents. Please provide length of steel plates, and the fastening requirements of the steel plates top and bottom. Where should continuous butyl be applied? Is the butyl part of the roofing specification to be installed by the roofer? Turner Follow-up (10/16/24): Please confirm that this plate is not structural. Are there any specific fastening requirements for the attachment of these plates?	Structural Steel subcontractor (BP #12) shall furnish & install steel plates called for on A521 and detailed on 1E/A501. See 1E/A501 detail for length requirement of the steel plates. Fastening requirements are to coordinated between the trades by the Contractor. The mason (BP #11) shall furnish & install two lines of butyl sealant & insulation called for on 1E/A501 at all block exterior wall locaitons and the drywall contractor (BP #21) at all other locations. Sealant should be provide at outermost parrallel flute and each perpendicular flute.	10/13/2024	SLAM			
95	SLAM	Civil Series	10/11/24	Will Sitework Subcontractor be responsible for to perform the Turbidity tests (as part of a SWPPP) for the stormwater leaving the site which typically is performed by the Geotech engineer/by Owner?	No, turbidity monitoring is no longer required under the current CT DEEP General Permit for the Discharge of Stormwater and Dewatering Wastewaters from Construction Activities.	10/16/2024	T&B		Closed	10/21/2024
96	SLAM	02 4100	10/11/24	During the site walk through it was clear there was a significant amount of existing tables, chairs, file cabinets, general ffe, etc. throughout the existing building. What is the intent for the removal of this equipment? Can a schedule be provided for what is to be salvaged by the owner and what is to be removed as waste by the demo subcontractor?						
97	SLAM	02 4100	10/11/24	During the site walk through it was clear there was a significant amount of exterior items not called to be demolished on the site demolition plans (C402, C403) including chain link backstops, basketball hoops, fenced garden, soccer goals, etc. Can a schedule be provided for what is to be salvaged by the owner and what is to be removed as waste by the Sitework subcontractor?						
98				BQ NOT UTILIZED						
99	SLAM	31 2300	10/11/24	Are reports available regarding the hazardous material clasification of the exiting soils to be removed?						
New Bidder's Questions as of 10/11/24 Issuance										
100	SLAM	M601	10/11/24	Remark #5 on the HVLS Fan Schedule on Drawing M601 states the color and finish of the CF-A fans shall be selected by the Architect. Please provide desired color and finish.						
101	CES	M502	10/11/24	The Mechanical piping floor plans indicate HWS, HWR, MCHWS & MCHWR feeding the active chilled beams, however, Details 6 & 7 on Drawing M502 indicate HWS, HWR, CHWS & CHWR. Please advise which is correct.						
102	SLAM	A200 Series	10/11/24	General Note #12 on the A200 series drawings state nothing other than ceiling systems can be supported from the roof deck where there is no concrete fill. In instances where long duct runs on the roof occur (i.e. from RTU-1 into the building), does this statement still apply? 9/M500 and 9/M501 indicate duct/pipe supports sitting on top of the roof insulation; In most cases, these supports will not be located over structural steel, but solely on top of metal decking. Should curbs/rails be specified? Is there a wind load concern for detail 9/M500 and 9/M501?

144	SLAM	A910	10/15/24	The finish schedule lists a specification for AWP7. No AWP7 panels can be located on the architectural drawings. Is this specification relevant to this project?						
145	Turner	Logistics Plans	10/15/24	Regarding the debris netting on the Turner Logistics Plans - A site bidder asked what is this 12'-15' feet debris netting? Is this 4 more feet on top of the fence w/ driving range style golf protection? How high? 12 or 15?	This is additional protection on top of the 8ft construction fence for the egress door on that side of the building. It can be an extension of the fence posts, provided it works, or a separate system. Spacing that would prevent a golf ball size object should be sufficient. The height should be 15 feet.	10/15/2024	JAC - Turner		Closed	10/16/2024
146	SLAM	34 0000	10/16/24	Sitework Bid Package includes spec. 34 0000 – Transportation. Can you please clarify are we to trench and backfill for the electrical package or do we own furnish and install of all aspects of the traffic control signal plans? Turner Follow-up (10/21/24): SLAM please provide electrical design for traffic control devices that require power.	Turner Response (10/21/24): Sitework Bidder Shall trench and backfill power requirmetns and Electrical Subcontractor shall be responsible for load carrying conductors, raceways and power connections. Sitework subcontractor shall furnish and install, solar panels, batteries any interconnecting or control wiring for these systems.	10/22/2024	JAC-Turner			
147	Turner	Logistics Plans & Sitework Scope	10/16/24	1. Please clarify the reference to 12-15'H debris netting requirements with 8'H driven temp fence. 2. Scope of Work 75 thru 77 - Please confirm this equipment will remain property of Sitework Subcontractor at end of project or if it is to be handed over to Turner/owner permanently? 3. Scope of work 88 - "This subcontractor shall furnish and install all rain gardens and swales..." Is landscaping package responsible for any planting? 4. Scopes of work for utility coordination references "this subcontractor shall include all fees..." Please confirm any new service or connection fees required by utility companies will be paid for by the owner. If this is not the case, please provide appropriate allowance or amounts for bidding purposes. 5. scope of work 123 and 124 - Confirm sitework is to furnish concrete bases, but all anchor bolts, conduit or other embedded items that may be required from other trades' lighting vendors, will be provided to sitework prior to precast.	1. See RFI Response #145 2. These will become property of the Town of Greenwich. 3. Landscaping Bid Package (BP #41) will be reponsible for Plantings. 4. This is will be sitework subcontractors (BP #09) responsibility to include the fees associated with utility tie-ins, tap fees and/or conection fees due to the utility company. 5. Anchor Bolts shall be funished and installed by Sitework Subcontractor (BP #09). Conduit inside concrete bases provided by Sitework Bid Pacakge shall be furnished and installed by Sitework Subcontractor. Furthurmore it is the Sitework Subcontractor's responsibility to cooridnate Anchor Bolt Size and Locations and conduit size and location with Electrical Subcontractor (BP #38 & 39). Additionaly, sitework subcontractor to include delegated design of footings, per the contract documents, including the anchor bolts.	10/16/2024	JAC-Turner		Closed	10/16/2024
148	Langan	28213	10/16/24	Specification Section 028213-1.6 notes that the contractor is to provide Testing Lab Services for asbestos abatement. Please clarify what the extent of these services would be and how this differs from the Testing Lab Services provided by Langan and the Owner.						
149	Langan	28432	10/16/24	Specification Section 028432-1.6 notes that the contractor is to provide Testing Lab Services for PCB remediation. Please clarify what the extent of these services would be and how this differs from the Testing Lab Services provided by Langan and the Owner.						
150	Turner	PSU001	1/16/24	Drawing PSU001 shows the 4" fire protetion line up to Fire Dept. Connection by DIV 21, but Turner's scope of work assigns this to sitework subcontractor. Please clarify	Sitework Subcontractor (BP #09) is responsible for this scope outside of the building up to 5 feet from the building. Itis their responsibility to be licenced to install this scope of work. Fire protection subcontrator (BP #35) will be rsponsible to bring this, and other fire protection services, from 5 feet outside the building into the building including providing the foundation penetration or sleeve / link seal.	10/16/2024	JAC- Turner		Closed	10/16/2024

161	Turner	32 1613.23 & 321640	10/17/24	BP #9 scope of work exclusion #6 states we should exclude all curbing unless otherwise indicated. Listed under exclusive specifications in the scope of work for BP#9 is precast concrete curbing (321613.23) and granite curbing (321640). Please advise as to who owns the curbing (BP#9 or BP #40).						
162	SLAM	32 1613.23 & 321640	10/17/24	There is no precast concrete curb shown on the plans nor is there a detail. Please confirm that all curbing is to be granite.						
163	Turner	03 6213	10/17/24	Is masonry to provide non-metallic non-shrinking grouting at the steel column and base plate locations?	The grouting at steel column and base plate locations to be furnished and installed by BP#10 Concrete.	10/17/2024	BM/Turner		Closed	10/17/2024
164	SLAM	A606	10/17/24	Drawing A606 seems to provide both Masonry and steel lintel schedule for masonry openings. Can either option be used at contractor choice for openings or are there specific areas that require masonry lintels and others that require steel?						
165	SLAM	A911	10/17/24	a: Finish Product List A911 calls out “9/16” DXL grid”. USG DXL grid is 15/16”. Please confirm USG DXT 9/16” grid should be utilized for APC-1-4. b: Finish Product List A911 APC-1,3,&4 states 70% recycled content. Please confirm if this is in reference to the tile recycled content, or if high recycled content grid is required?						
166	SLAM	3A/A520	10/17/24	Details 3A & 4C on A520 seem so show AVB below the window in the cavity behind the insulation at the expansion joint locations. (shown as dashed line). There also appears to show AVB outside of the vertical plywood also at the joint location. Please clarify if there is AVB at both locations or if the dashed line shown outside the plywood is part of the expansion joint. Also, where does the AVB behind the thermal insulation terminate, or confirm it terminates it terminates at the blocking at the steel beam/blocking at SOD?						
167	SLAM	A911	10/17/24	Substitution request for Certainteed products in lieu of USG. See attached RFI 167 request form.						
168	SLAM		10/17/24	Please advise if the roof joists at the Gym & Auditorium, which are a delegated design, need to account for the loads imposed by a future PV system. If so, please provide those future PV loads that need to be incorporated into the joist design.						
169	SLAM	SOW	10/17/24	Acoustical Ceiling SOW #22 states “This Subcontractor shall design, furnish & install an independent support system for all hung equipment, fixtures, ceiling and piping system that are directly below the metal roof deck. This support system must attach to structural steel framing members as the metal roof deck cannot be utilized for support. Refer to A200 series drawings General Note #12 for criteria.” Note #12B states “a. ACOUSTIC CEILING SYSTEMS (ACT TILES, ETC.) WEIGHING LESS THAN 5 LBS/SF AND HUNG AT 4'-0" O.C. BOTH DIRECTIONS. b. SINGLE LAYER GYPSUM BOARD CEILING SYSTEMS WEIGHING LESS THAN 5 LBS/SF AND HUNG AT 4'-0" O.C. BOTH DIRECTIONS.” Is it acceptable to hang ACT and GWB ceilings from the roof deck?						
170	SLAM	3B/A522	10/17/24	Please confirm that the vapor barrier at the skylight system notes to flap to inside face of curb is not required to lap to termination bar at roofing termination.						
171	SLAM	A126, A911	10/17/24	Drawing A126 does not have any interior layouts of the interior of the elevator cab walls and/or ceiling. Finish drawing A911 calls for Wilsonart Panels, clarify if this is for full height? are rails and/or base required?

BQ #	Responsible Consultant	Reference	Date	Question	Answer	Date Item Responded	Answered By (Name / Company)	Attachment (SK# or Spec Section)	Status ("Closed")	Date Closed
172	SLAM	5B/A805	10/17/24	Detail 5BA805 shows the overall height of the locker and enclosure at 3'-5 ½". This includes the 4" high Z base and the thickness of the enclosure top. Subtracting the height of the Z base this leaves a total dimension of 37 ½". The locker itself would need to have an overall height of 37 1/32" leaving 15/32" for the top of the enclosure, and the slight gap between the locker and the top. Is this acceptable?						
173	SLAM	Speciifcation 105113 2.2 A .8	10/17/24	Speciifcation 105113 2.2 A .8 states to provide sloped top to the extent indicated on drawings. The Corridor Lockers as seen on drawing A111.13 Elevations 4C,4D,4E, & 4F do not show sloped top. Is there supposed to be sloped top for these lockers?						
174	Turner	Scope of Work & Procurement Manual	10/17/24	1.General Trade Requirements for BP12 - Structural Steel, #7 - will the erectors foreman suffice as representation for the full-time superintendent at the jobsite? 2.Scope of Work BP12 – Structural Steel; #50, can the requirement to furnish and install bituminous paint be removed from this bid package? 3.Scope of Work BP12 – Structural Steel; #63, can the requirement to furnish and install the spray-applied insulative coating system be removed from this bid package?	1. This will be acceptable assuming the foreman has decision making authority for the prime steel contractor. The prime steel contractor must have their own dedicated project manager assigned to the project. And Turner reserves the right to request a full time on-site superintendent from the prime contractor at Turner's discretion, especially if their sub tier is not performing the role accordingly. ~~2. This scope of work item will remain with Structural Steel BP #12.~~ See follow-up response below. 3. This scope of work item will remain with Structural Steel BP #12. **Turner Follow-up Response (10/21/24):** 2. Bituminous paint shall be excluded from the steel subcontractor's scope (BP #12). The concrete subcontractor (BP #10) shall furnish & install the required concrete cover in lieu of bituminous paint. For example, see detail 4 on S200.		CL/Turner		Closed	10/21/2024
175	SLAM	MEPD000 & MEPD001	10/18/24	Please advise if there are any existing electrical feeds that originate from the Existing School, which is slated for demolition, that need to remain energized or be re-circuited from another source prior to demolishing the existing school.						
176	SLAM	SU100 & TY301	10/18/24	Detail 7 on TY301 shows a pole mounted secuitry camera. TY100 shows locations of these cameras. They seem to align with SL-3 & SL-4W site lighting fixtures on SU100. Is the intent that the cameras are mounted to the light fixture poles, or are they independent poles?						
177	Turner	Procurement Manual	10/18/24	Please advise if Misc. Metals (BP #13) is a set aside package.	Yes, BP #13 is a set aside package. See the "Invitation to Bid" for a full list of all set aside bid pacakges.	10/18/2024	CL/Turner		Closed	10/18/2024
178	SLAM	12 6100	10/18/24	With regards to specfication section 126100, Subsection 2.2.B.3. To achieve this test, requires treatment of the fabric before it is placed on the chair assembly and then the mock-up is burned. This process is best referred to as CAL 133 (California Bulletin 133). The treatment of the fabric has been determined to have cancer causing agencies. Because of this, CAL 133 is being eliminated. Can this portion of the specification to be omitted?						
New Bidder's Questions as of 10/18/24 Issuance										
179	SLAM	C506	10/18/24	Sanitary details on C506 show flexible coupling adapters at existing sanitary sewer lines. Note #13 on C301 calls for "Fernco" syle shield couplings with hardware requirements. Confirm Sitework subcontractors are to follow the noteson C301 in lieu of the details provided.

GCMS Phase 2 - Bidder's Question Log

BQ #	Responsible Consultant	Reference	Date	Question	Answer	Date Item Responded	Answered By (Name / Company)	Attachment (SK# or Spec Section)	Status ("Closed")	Date Closed
180	Turner	Scope of Work & Procurement Manual	10/21/24	Who is responsible for the stone mulch to furnish and install?	Per the Landscapeing scope of work see exclusion#9. The Sitework contractor (BP #09) will furnish & install the stone mulch.	10/21/2024	Turner		Closed	10/21/2024
181	BC	Procurement Manual	10/21/24	Can the construction Start time be udjusted to 6 a.m. start Monday-Saturday in lieu of the current 7 a.m. start time?	Reference Greenwich Code of Ordinances, Chapter 6B Noise for requirements.				Closed	10/21/2024
182	SLAM	08 4313 & A611	10/21/24	Aluminum Storefront spec (08 4313) states the doors to be 2" thick where the door schedule (A611) calls for the doors to be 1 3/4" thick. Thermal doors are in actuality 2 1/4". Please confirm to follow the Aluminum Storefront specification for door thickness.						
183	SLAM	TA Series	10/21/24	Please confirm that ceiling mounted AV components in spaces other than the Gym, Cafeteria, & Auditorium will be furnished and installed by the Owner, including their associated support systems. For example, S1 speakers, S2 Speakers, and Plenum Enclosures.						
184	SLAM	T Series	10/21/24	Please confirm that Owner furnished WAPs will not require backboxes or supports provided by the Low Voltage subcontractor (BP #39).						
185	SLAM	T Series	10/21/24	Please confirm it is accepable to use plenum rataed cable supported by J-hooks in areas with "cloud" ceilings for low voltage & security cabling.						
186	SLAM	E700	10/21/24	Per Note E2 on E700, the electrician (BP #38) is to wire a remote EPO pushbutton for the Generator. Please advise where this EPO is located.						
187	SLAM	TA000	10/21/24	The new responsibility matrix issued in Addendum #2 lists the Gymnasium twice under Section #7 "AV Systems". Please confirm that one of these references was intended to be "Auditorium" instead.						
188	SLAM	14 2100	10/21/24	Please confirm that the elevator shaft walls were designed to be capable of supporting the elevator rail, entrance, & hoist beam loads imposed. There doesn't appear to be any support steel called for in the drawings. However, the revised 14 2100 spec section issued in Addendum #2 indicates elevator entrance and rail support steel to be a delegated desgin. Please advise.						
189	SLAM		10/22/24	For site pavers, Unilock Artline has (7) different sized blocks. Can you please clarify what size is required?						
190	SLAM	S002	10/22/24	The decking schedule on S002 calls for the decking to be attached with puddle welds. The 053100 Steel Decking spec calls for roof deck and floor deck to be fastened with powder actuated fasteners. Which is correct?						
191	SLAM	GC12, GC13	10/22/24	Per GC12 and GC13 there are multiple members including top chord joist extensions that require multiple coating systems - intumescent paint, galvanizing, and the 3-coat fluid applied insulative coating, or a combination thereof. Please provide detailed instructions as to the process, steps and sequence these different multiple coating systems are to be applied.						
192	Turner	Procurement Manual	10/22/24	Which bid package is responsible for the pony wall and anchors in detail 7/S210?	Per the Turner Scope of Work Documents, the General Trades subcontractor (BP #21) shall furnish & install all engineered posts and attachments for Pony Walls, for an example see 7/S210.	10/23/2024	CL/Turner		Closed	10/23/2024

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#9 - Sitework
Dated: 07.08.2024
Revised: 10.21.2024

C.1 **Specific Scope of Work**

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Sitework*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***Sitework*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

02 3000 – Subsurface Investigations
02 4113 – Site Utility Abandonment
10 1453 – Traffic Signage [Landscape]
10 1453 – Traffic Signage [Civil]
10 1454 – Traffic Signage Removal and Relocation
10 7516 – Ground-Set Flagpoles
12 9300 – Site Furnishings
31 1000 – Site Clearing
31 1000 – Selective Clearing and Thinning [Civil]
31 1005 – Athletic Field Site Preparation
31 1006 – Soil Striping and Stocking
31 1200 – Site Utility Preparation
31 2200 - Grading
31 2300 - Excavation, Backfill, Compaction and Dewatering
31 2316.26 – Rock Removal

32 1823.17 – Natural Infield and Warning Track Surfacing

32 3113 – Chain Link Fences and Gates
32 3118 – Metal Fences and Gates
32 3120 – Vehicle Barrier Gate
32 3223 – Segmental Retaining Walls
32 8415 – Sitework Sleeves
33 0513 - Manholes and Catchbasins
33 0514 - Breaking Into Existing Manholes and Catch Basins
33 1113 – Ductile Iron Pipe and Fittings
33 1300 - Disinfection of Water Distribution Systems
33 1400 - Testing of Water Distribution Systems
33 3113 - Polyvinyl Chloride (PVC) Pipe and Fittings
33 3114 - Testing of Sanitary Sewer and Storm Drainage Systems
33 3115 – Television Inspection of Pipeline
33 4100 – Storm Drainage
33 4113 - High Density Polyethylene Pipe and Fittings
33 4114 - Underground Warning Tape
33 4419 - Stormwater Treatment System
34 0000 – Transportation
34 4114 – Rectangular Rapid Flashing Beacon
34 4115 – LED School Radar Speed Display with Flashing Beacons
34 4117 – Pedestrian Push Button
34 7001 - Traffic Person
34 7002 – Maintenance and Protection of Traffic

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Division 00 - Procurement and Contracting Requirements
Division 01 – General Requirements
07 1400 – Fluid-Applied Waterproofing
07 2100 - Thermal Insulation
07 9200 - Joint Sealants

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#9 - Sitework
Dated: 07.08.2024
Revised: 10.21.2024

General Items

2. This Subcontractor has reviewed the Logistics & Phasing Plans and the Construction Schedule and has included all associated costs as relevant to this scope of work. It is extremely important to coordinate your work with the other adjacent Subcontractors during the various phases and perform the work as required by these documents. No come back costs will be entertained.
3. This Subcontractor will provide all pricing for changes within five (5) calendar days of notice of change (without exception). If subcontractor does not submit pricing within these terms, it will be assumed a ZERO cost change. The change orders shall include man-hours, material costs, tax (if applicable) and mark-ups as line items broken out separately.
4. Intent of the project Lean initiative is that all items that are to be installed are to prefabricated, arranged and shipped to project for ease of installation. Deliveries are to be packaged and labeled by room/area for ease of installation (kit-of-parts).
5. This Subcontractor shall be responsible to provide out of sequence work at no additional costs when required in coordination with other trades.
6. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
7. This Subcontractor's Project Manager/Foreman shall participate in Pull Planning Sessions which affect their scope of work. This Project Manager/Foreman shall provide input to further develop the accurate sequence and timing for completion of the work.
8. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
9. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
10. This Subcontractor shall organize and neatly place all materials, tools, etc.. This Subcontractor shall remove all debris resulting from their work on a daily basis to a trash Rubbermaid tilt truck provided by Others while working inside the building. This Subcontractor shall be responsible for all debris removal and disposal outside of the building. No trash or debris will remain in the work areas at the end of the shift. If debris is left in the work areas, it will be removed to the dumpster by others, and the labor expense back-charged to the responsible Subcontractor. Large sections of debris shall be disposed of to a dumpster provided by others by this Subcontractor.
11. For any materials stored inside the building, this Subcontractor shall be required to store all onsite material on racks, carts or pallets capable of being easily moved and shall coordinate the delivery of and location of stored material with the Turner Superintendent. If material is stored on pallets, this Subcontractor is responsible to have a pallet jack onsite at all times. This Subcontractor shall include relocation and consolidation of materials as directed by Turner.
12. This Subcontractor shall review, conform to, and furnish and install all requirements included in the Safety Additional Provisions included in this Agreement. This Subcontractor understands that this document is project specific and all provisions must be included in this Subcontractors' bid.
13. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.

14. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.
15. This Subcontractor shall be responsible for the removal and proper legal disposal of all rubbish and/or materials associated with the site demolition (exterior of the buildings) and all other work performed by this subcontractor.
16. This Subcontractor will make every effort possible to ensure that their waste is properly sorted and disposed of to divert as much waste as possible from disposal in a landfill. This Subcontractor will track this recycling effort using the Online Waste Tracking System established by Turner Construction Company. Each dumpster ticket is to be logged into this system and its recycled content reported as a means of tracking the total percentage of construction and demolition debris diverted from landfills. There is a $50 per month fee for use of this website and this Subcontractor shall include all costs in his bid for use of this service. Refer to the attached User's Manual for more information about this system. Refer to the Turner Tracker Manual in the referenced "Forms and Policies," dated January 2015, in Turner's Project Manual.
17. This Subcontractor shall furnish, remove, and dispose of the contents of 150 ea. thirty cubic yard dumpsters for the entire duration of the project above and beyond that of which is required by this subcontractor for the Sitework scope of work. This Subcontractor shall remove and replace dumpsters per the direction of Turner's Superintendent and shall have Turner sign the hauler's ticket for each load. Unsigned tickets will not be charged against this allowance and any unused portion of these allowances will be credited to the project upon the completion of each phase. Additional dumpsters in excess of the defined allowances for general debris will be reimbursed per the unit cost included with this bid proposal. This Subcontractor shall provide their own dumpsters for the sitework debris, which are not included as part of this allowance.
18. Any and all excavations or trenching outside the construction fence MUST be covered up and protected each night and work coordinated with Turner to ensure that no unnecessary hardships are imposed on the school or the community.
19. This Subcontractor shall include all casual dewatering of all excavations, trenches, or footings from the start of the foundations to project completion. Water discharged from the dewatering operation shall be discharged into the dewatering basin or unless otherwise indicated.
20. This Subcontractor shall assume that temporary electric will not be available for this Subcontractor's use during the various stages of Sitework. This Subcontractor shall include the use of generators as required for the duration of their Work.
21. This Subcontractor shall include an Initial Baseline Survey (with Control Points for lay-out) for the Project and line and grade layout for the building provided by a licensed surveyor. Prior to beginning construction of the new foundation work, a review meeting on site of these layout points must be held. Subsequent to this initial survey control and the provision of two X axis and four Y axis and 3 benchmark elevations for each phase of the project, this Subcontractor shall provide five (5) additional days for each phase (1,2, and 3 equals 15 additional days and 18 days total) for the installation of control in the building for use by Turner. The control points shall be established on a monument or a permanent surface that will protected and not be lost or altered. These point locations shall also be transferred and memorialized on a drawing to be submitted to Turner. This Subcontractor shall be responsible for all of their own surveying and layout using Total Station or a licensed surveyor after the initial control is established.

22. This Subcontractor shall include an underground utility survey with ground penetrating radar at the complete scope area to locate the existing utilities and immediately document same on the site utility drawings. This survey shall include the entire construction zone and shall be performed prior to the installation of the construction fence. This Subcontractor shall also contact "Call BeforeYou Dig" for each phase, prior to beginning excavation.

23. This Subcontractor's work shall be tested and inspected by an independent testing agency hired by the Owner, in accordance with the specifications. Such testing agency shall be selected by the Owner and all compensation for the testing agency shall by borne by Owner. This Subcontractor shall schedule all inspections 72 hours in advance of the time of the inspection.

24. This Subcontractor shall include furnishing, installing, and removing orange temporary construction fencing around any open trench within or outside of the construction fence at the end of each day or when work at the trench is suspended and the manpower and equipment is removed from the work zone. This Subcontractor shall install hard barriers for excavations deeper than 5'. For example, but not limited to temporary protection for the new sanitary line schedule for the summer of 2025, refer to page #3 of the Turner Logistics Plan as well as contract documents.

25. This Subcontractor shall provide steel plating over all utility trenching in the parking lots or roadways, outside the construction fence, at the end of each day or when the work is suspended and the manpower or equipment is removed from the work zone. Include provisions including but not limited to road plates, trench boxes, and/or sequence or work, etc, to allow for vehicle and personal access to parking areas, building footprint, site bathroom and Turner trailers during excavation for site utilities.

26. This Subcontractor shall be responsible for all site snow removal, including but not limited to Subcontractor access to the building, Subcontractor parking areas and trailer / tent entrances/exits and general construction circulation within the construction fence and at the Center School satellite parking lot for all phases of the project, as directed and to the satisfaction of Turner, on the day of each clean-up event. This Subcontractor shall also furnish and maintain three 5 gallon buckets of ice melt at the entryways to the building under construction over the course of the project, include spreading as required during snow/ice events. This Subcontractor shall remove all snow from excavated trenches and protect the trenches until formwork is installed, at which point the concrete Subcontractor shall protect his work. The Municipality will be responsible for all driveways, parking lots, and walkways outside the construction fence. This subcontractor shall provide breakout pricing for Weather Protection by phase in Application for Payment.

27. This Subcontractor shall include the furnishing, maintaining, and the removal of the temporary toilets as defined below and per the site logistics scope of work and as required for durations per the Project Schedule.

    a. This subcontractor shall provide, for the duration of the project schedule, self-contained temporary toilet trailer consisting of a minimum of 8 stall bathroom trailer – 2 women stall, 6 men stall, and 4 urinal restroom trailer (with flushable toilets) and hot water handwash stations similar to those provided by United Site Services, Bonavita Luxury Lavatories, WILLSCOTT (or approved equal) including delivery, set up, rental and removal at the completion of the project.

    b. This subcontractor shall provide excavation and backfill for temporary power.

c. Trailer to include sanitary tanks that allow for pumpout and domestic water tank for self-contained toilet trailer complex. Include domestic water tank until this subcontractor furnish and installs tie in of a temporary water line from the onsite temp hydrant – include heat trace as required for water line to prevent freezing. Include sanitary tanks & pumpout until the sanitary line can tied in along Indian Rock Lane in June 2025, this subcontractor shall then tie in toilet trailer by furnish and installing temporary sanitary line from toilet trailer to new sanitary manhole. Once these temp tie ins are in place domestic water tank and regular tank pumping are no longer required. This subcontractor shall include required hand soap refill, toilet tissue and paper towels at toilet trailer, and cleaning services at a minimum of 3 times per week. Include cap and remain in place the temporary sewer connection piping when toilet trailer is removed at the end of the project.

28. This Subcontractor shall include the furnishing, maintaining, and the removal of the Turner's Site Trailer(s) and as required for durations per the Project Schedule and per below.

a. This Subcontractor shall furnish, install, maintain and remove temporary trailer for Turner similar or equal to WILLSCOTT Redi-plex, triple 60x36 trailer (56x36 box), min 8' ceiling height, metal clad insulated panel exterior walls, combination through wall heating and cooling unit(s). All lighting and data to be included with unit. See plans for required layout and furniture requirements. Include window/door security bundle, 3 data hubs, 15 manager chairs, 38 stackable side chairs with arms, 31 standard desks (5ftx2.5ft), 15 Pedestal filing cabinets (3 drawer), 5 small white boards (3ft x 4ft), 9 large white boards (4ftx6ft), 13 L-desk privacy shields.

b. This Subcontractor shall furnish, install and maintain 4 stairs and platforms at Turner's office trailer with Canopy. Include all required support and rails to meet the requirements of the local AHJ. Include complex anchor setup and associated anchors, and complex vinyl skirting.

c. This Subcontractor shall provide and maintain a 4 CY closed top dumpster at the Turner Office Trailer.

d. This subcontractor shall provide excavation and backfill for temporary power and internet to trailer complex including the excavation/backfill as required for eventual removal of temp power. Include furnish and install of 4" pvc conduit for power service and 2" pvc conduit for internet to the jobsite from Orchard Street or Stanwich Road (tbd by utility). In addition, This subcontractor shall excavate and backfill as required for a 2" below grade conduit (F&I by electrical) to bring internet cable from Turner Trailer to the media center room 1055. Assume all conduits to be 3' below finish grade.

e. This Subcontractor shall include 3 - ten person conference tables and 1 – 4 person conference table.

f. This Subcontractor shall include cleaning the construction manager's construction trailer once per week by a professional cleaning company. Cleaning shall include vacuum and/or sweep, wet mop, trash removal, cleaning of all exposed surfaces and toilets and sinks.

g. This Subcontractor shall include relocation of Turner Trailer to Demolition area – Phase 2 per logistics plans in July 2026 until the completion of the project. Include single 36ft trailer for Phase 2 portion of the project with similar layout to WILLSCOTT Redi-Plex per Phase 1 requirements.

29. This Subcontractor shall furnish, install and continuously maintain the anti-tracking pads indicated on the Logistics Plans in conformance with the details included in the contract documents, including a wheel wash station and water hook-ups at the Main Exit. This subcontractor shall furnish, install and continuously maintain the 15' wide crushed stone drive, crushed stone Subcontractor parking area, and weed-block/crushed stone at Turner's Office Trailer at the sizes/depths/coverage areas indicated. This Subcontractor shall include continuous maintenance of the anti-tracking pads, wheel wash station, and crushed stone for the duration of this Phase of Work. This subcontractor to provide high pressure washers at each exit location for tire washing purposes. This subcontractor is to provide all materials necessary to hook up and retrieve water and a water truck must be provided by this subcontractor if water is not available on site. This subcontractor shall be responsible for street sweeping to maintain clear roadways around the site as directed by Turner. It is the intent of this scope that the sitework subcontractor manages the site to limit the amount of mud to exit the site on any truck or vehicle. Include removal and disposal of stone and anti-tracking pad at the time, and as required, for new work to be put in place.
30. This Subcontractor is responsible for all the Sitework scope clarified in the final Bidder's Question Log, which includes, but is not limited to, the items identified for the Sitework Bid Package #9.
31. This Subcontractor shall provide the final A-2 Site Survey at the completion of each phase, and provide the comprehensive survey at the completion of the entire project.
32. This Subcontractor shall furnish and install 2 each worker break heavy duty outdoor event tents inclusive of tables and seating for the duration of the project. Tents shall allow 50 workers each a place to eat lunch and take breaks.
    a. Include required tie down points to prevent damage to tent and to properly hold in place.
    b. Include 1 – microwave at each tent for use by workers.
    c. Include outdoor picnic tables with integral benches capable of seating 50 workers per tent.
    d. Include retractable sidewalls (or walls cable of being tied to vertical posts when not required for use) with entrances at two ends.
    e. In lieu of 2 tents, this subcontractor can install an Allshelter between the 40' connex provided under this agreement plus 1 additional as required for support and use by this subcontractor. All shelter to be fully enclosed and include full Endwall at one end and doorway endwall & doors at the other.
33. This Subcontractor shall follow and include all Town of Greenwich Standard Construction Notes including but not limited to soil tilling 12-16 inches and amended used for all construction equipment and used for contractor parking per note #10 on drawing C001.
34. This Subcontractor shall be responsible for the demolition, removal, and disposal of all existing site demolition as indicated on the contract documents. This includes, but is not limited to, the removal of existing concrete pads, benches, flagpoles, athletic/sports equipment, sheds, posts, concrete stairs, ramps, handrails, retaining walls, fencing, trees, paving, sidewalks, curbs, storm water structures and associated piping, sanitary structure and associated piping, water systems, piping, electrical systems as indicated in the contract documents. This Subcontractor shall coordinate any service suspensions with the utility company and pay for any associated permits or fees.
35. Given the limited space for storage on the site, this Subcontractor shall export from the site all topsoil compiled as part of the clearing and grubbing process in accordance with the contract documents.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#9 - Sitework
Dated: 07.08.2024
Revised: 10.21.2024

36. This Subcontractor shall be responsible for the protection of any underground or above ground utilities or structures within construction area or adjacent to new construction affected by this subcontractors scope.
37. This Subcontractor shall remove paving, walks and curbing as required to install site utilities and replace/restore in kind.
38. This Subcontractor shall salvage items as indicated on the contract documents including but not limited to plaque and bolder and plaque and bench, per drawing L101B. This Subcontractor shall also survey any memorial plaques that are not identified on the drawings, and turn them over to the Owner.
39. This Subcontractor shall provide the tree protection identified on the contract document.
40. This Subcontractor shall be responsible for removing any preexisting materials from the athletic field area as indicated on the contract documents including but not limited to the 32 9119.29 Athletic Field Root Zone.
41. This Subcontractor shall not store, clean or service equipment within 100' of the wetlands. This Subcontractor shall create a fueling area with a liner or pavement in a location that is coordinated with Turner's site logistics plan and this scope of work.
42. Any work performed by this Subcontractor for curb cuts, street work, all work outside property line, our outside of the construction temporary fence will require temporary fence protection installed, maintained and eventually removed by this Subcontractor.
43. This Subcontractor shall prepare the subgrade at the slabs on grade to accommodate the requirements for the haunches for the slab on grade indicated on the structural drawings.
44. This Subcontractor shall furnish, install and maintain wood framed platform and stairs at Turner's office trailer. Include all required support and rails to meet the requirements of the local AHJ.
45. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to cleanup general debris not necessarily associated with particular subcontractor ***(cardboard, plastic bottles, misc. trash item, general sweeping, etc.)***
46. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
47. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
48. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
49. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

50. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
51. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
52. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
53. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.
54. This Subcontractor shall furnish and install the project sign for the Department of Administrative Services as noted in spec section 01 5000. The location and details of the sign shall be coordinated with TCCO.

Site Logistics

55. This Subcontractor shall include the rental of a 40 ft connex box for Turner use to the site scope with the dates Phase 1, from January 2025 to March 2026 or at a minimum 15 months.
56. This Subcontractor shall furnish and install 2 ea. color, exterior grade project sign approx. 48'x96" (Graphics will be provided by others) including posts set into concrete and relocated 2 additional times for phasing. Include furnish and install of an additional 16 aluminum signs for use at vehicle gate locations and as directed by Turner(Graphics will be provided-include provisions for fence mounting).
57. This Subcontractor furnish, install and maintain 8-**Foot-High** temporary construction fence with full height blue scrim per the Turner Logistics Plans. The post shall be driven posts and this subcontractor shall include GPR or other non-destructive testing to scan for underground utilities prior to install driven posts. Temp fence details shall include but not be limited to the details on drawing C418. Additionally, beyond the details on the contract documents, this Subcontractor shall include top and bottom rails on temporary fence and include providing scrim with graphics that includes Greenwich BOE & CMS name and logo repeated on the scrim.
58. This Subcontractor shall furnish and install 20-foot slide style construction gates at locations designated by the Turner Logistics Plans. Construction Entrance/Anti Tracking Pads shall be installed and maintain at construction entrance gates. All Sliding gate posts shall be cast into below grade 3' deep concrete sonotube base for support.
    a. This subcontractor shall furnish (10) – 5' length stainless steel chain link for locking gates and (10) – 2" Master Combination outdoor lock, shakel, resettable.
59. This Subcontractor shall furnish and install 1 ea. pedestrian gate and pedestrian entry portal at each temporary fence vehicular slide gate unless otherwise shown on the logistics plans. This subcontractor shall include 2 additional pedestrian gates at upper portion of the site opposite of the entrance gates to be located by Turner Construction. Include hardware for latching and locking of gates.
60. This Subcontractor shall furnish install and maintain temporary construction drives as indicated on the contract documents and the Turner Logistics Plans, drives shall consist of a minimum of 6 inches of crushed stone or unless otherwise noted.

61. Per the Turner Logistics Plans, at emergency egress from existing building, this Subcontractor shall provide and maintain overhead protection. Temporary overhead protection shall maintain minimum 15' distance from new building for construction vehicles and allow for egress from the existing building. Include ¾" minimum plywood barrier at Construction side of overhead protection locations.
62. This Subcontractor shall provide post driven temporary wood poles for the site security cameras to be mounted at locations identified on the Turner Logistics Plans. (Cameras by others) This subcontractor shall include GPR or other non-destructive testing to scan for underground utilities prior to install driven posts.
63. This Subcontractor shall furnish and maintain grading and temporary crushed stone at 6-inch minimum depth as required for contractor parking area per the Turner Logistics Plans.
64. This Subcontractor shall furnish, install and maintain a minimum of 6 crane pads per the Turner Logistics Plans, crane pads shall include compaction of subgrade and minimum of 12" of crushed stone and measure 40ft by 40ft.
65. This Subcontractor shall include the removal and relocation of all temp fence, gates, construction entrances, security camera posts, construction drives, construction gates, anti-tracking pads, crane pads, contractor parking areas and relocation of temporary trailer and temp trailer bathroom complexes or proving new as required for the phasing, refer to the Turner Logistics Plans for specifics.
66. This Subcontractor shall include eventual removals of all temporary sitework logistics scope and temporary erosion controls at the completion of the project and restoration as required.
67. This Subcontractor shall furnish and install Metered Yard Hydrant with hose bib manifold at approx. location per the Logistics Plans, 100 lf of buried HDPE pipe for pathways of hoses for Phase 1. At phase 2 include relocating yard hydrant into out construction space to help facilitate demolition and furnish and install (2ea) 300 Gallon HDPE Containers with ball valves for distribution around site for other trade use.
68. This Subcontractor shall furnish and install the expansion of the heavy-duty concrete to accommodate temporary road access including but not limited to as shown on page 5 of the Turner Logistics Plans.
69. This Subcontractor shall include the creation of a temporary sidewalk including but not limited to as shown on page 5 of the Turner Logistics Plans. This Subcontractor shall also include the removal at the completion of the phase and removal/restoration.
70. This Subcontractor shall furnish, install and maintain asphalt millings, including removal for 50' around perimeter of building post foundations in phase 1 including but not limited to as shown on page 4 of the Turner Logistics Plans. Intent is that this Subcontractor shall be responsible for providing a uniform and level compacted grade around the building perimeter suitable for the support of scaffolding and lifts.
71. This Subcontractor shall furnish, install and maintain temporary 4-foot-wide stone walkways from Turner trailers, toilet trailer and parking area locations to the two entrances located each side of the Auditorium. Coordinate final layout with Turner superintendent. Assume 6" depth of ¾" stone. This Subcontractor shall remove all temporary sidewalks at the direction of Turner.
72. This Subcontractor to furnish, install and remove (4) Jersey barriers for protection against vehicular traffic at any and all O2, Flammable Gas and LPG storage tanks within the construction area, location tbd.
73. This Subcontractor will provide 30 traffic cones with telescoping cone bars to be used in areas designated at the direction of Turner.
74. This Subcontractor shall furnish, install, relocate and remove (6) additional jersey barriers in locations directed by Turner.

75. This Subcontractor shall furnish to the jobsite a Stihl Kombi system KM 131 R with Power Sweep, Bristle Bush and FS-KM Line Head Trimmer. Unit to be run-ready and include a 5.0-gallon safety gas can filled with mixed gas.
76. This Subcontractor shall furnish to the jobsite one Stihl BR 800 C-e Magnum backpack blower. Blower shall be run-ready.
77. This Subcontractor shall furnish to the jobsite one Toro Power Clear 721 R Snow Blower. Snow blowers shall be run-ready.

Erosion Control and Stormwater Management

78. This Subcontractor shall provide grading as required to create and maintain temporary swales as indicated on the contract documents.
79. This Subcontractor shall furnish install and maintain temporary water bars on construction drives as indicated on the contract documents.
80. This Subcontractor shall furnish and install all temporary sediment basins including but not limited to stone, drainage pipe/structures, dams, and connections to existing drainage systems as indicated on the contract documents.
81. This Subcontractor shall include cleaning / mechanical sweeping of any soil or debris from the construction site on the adjacent streets and the school's driveways and parking lot areas as required or within 24 hours of a request by Turner during the entire duration of the project.
82. This Subcontractor shall include dust control as required per the contract documents for duration of the Project. This Subcontractor shall provide a water truck, buffalo misters, or other means of dust control as needed to control the dust on site.
83. This Subcontractor shall tarp the stockpiles of onsite material, as required, to protect it from saturation during a rain event and to control dust migration on windy days with wind speeds over 10 mph.
84. This Subcontractor shall furnish, install and maintain all geotextile silt fence, inlet protection, silt sacks, hay bales/hay bale barriers, erosion control blankets and temporary sediment traps as indicated on the contract documents. Any stockpiled areas shall be surrounded in additional silt fencing.
85. This Subcontractor shall furnish, install and continuously maintain Erosion Control Measures required per the contract documents. This Subcontractor shall include all costs to remove and dispose of Erosion Control Measures at the end of the Project. Note that the quantity of anti-tracking pads shall be installed per Turner's site logistics plan and not the civil drawings.
86. This Subcontractor shall coordinate/cooperate with the Greenwich authorities and the independent inspector, as necessary, to ensure proper erosion control methods/practices are in place at all times. This Subcontractor shall inspect the erosion control measures on a weekly basis and as required per the SWPPP. This Subcontractor shall maintain a log book documenting the condition and/or repairs implemented following each inspection. This Subcontractor shall also provide a rain gauge and maintain a daily log documenting the actual rainfall on site on a daily basis.
87. This Subcontractor shall furnish and install all storm water management structures, chambers, isolators, drains, inlets/outlets, manholes, manhole accessories, cleanouts, hydrodynamic separator(s) and accessories including but not limited to excavate and backfill required for installation, bedding materials, piping and connections to existing piping as indicated on the contract documents.

88. This Subcontractor shall furnish and install all Rain Gardens and Swales including but not limited to filter fabric, pipe, crushed stone, bedding materials, subgrade, grading, soils and scarifying and tilling soil beneath gardens. Refer to Rain Garden Typical Cross Section and 5' Wide Stone Swale With 6" Underdrain details on drawing C504.
89. This Subcontractor shall furnish and install all below grade under drainage piping, roof leader drain piping and the above grade downspout boots between roof leaders and drain piping. Building mounted roof leaders are by others. Refer to drawing C504.
90. This Subcontractor shall furnish and install the below Second floor slab storm piping from 5' outside of the foundation (retaining) wall. Reference multiple locations as shown on PSU001 and associated scope shown on the Civil drawings.
91. This Subcontractor shall provide Greenwich soil mix as indicated on the contract documents including but not limited to where shown on drawing C504 beneath rain garden(s).

Excavation, Backfill and Trenching

92. This Subcontractor shall furnish and install fill materials as required by the contract documents to fill excavation at demolished building(s). Coordinate with Demolition Subcontractor and specification section 024100 3.1.
93. This Subcontractor shall include all of the excavation and backfill for the foundation system per the contract documents. With the use of the geotechnical information, the excavation is considered to be unclassified and this Subcontractor shall be responsible for all rock removal and the removal and replacement of unsuitable soils necessary for the installation of the new structures and the associated site utilities. No additional compensation will be made to complete work as shown on the Contract Documents
    a. This subcontractor shall assume line drilling of rock along the Emergency Path rock face (at the rear of the new building). Intent would be to achieve a clean wall of rock where visible.
94. This Subcontractor shall provide the fill material necessary to achieve the designated grades on site, as well as the fill material identified inside the building including as required by the contract documents.
95. This Subcontractor shall include all trench excavation, bedding and backfill for removal of existing and installation of all new underground utilities beneath slabs-on-grade (see Fire Protection, Plumbing, Mechanical, & Electrical drawings) in accordance with the contract documents.
96. This Subcontractor shall furnish and install the bedding material, filter fabric, and crushed stone required per the contract documents for all installations performed by this Subcontractor. Under-slab vapor barrier will be furnished and installed by the Concrete Subcontractor after this Subcontractor shall furnish and install the crushed stone under slab as indicated on the contract documents.
97. This Subcontractor shall ensure that all excavations are properly sloped or laid back per OSHA regulations to avoid any collapses or cave-ins. Shoring will be required for all trenches over 5' deep. Materials shall not be stockpiled within 4' of an open excavation edge. This Subcontractor to provide trench boxes as required for any excavation requiring workers to enter the trench(es).

Site Utilities

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#9 - Sitework
Dated: 07.08.2024
Revised: 10.21.2024

98. This Subcontractor shall furnish and install all drainage, water, gas, sewer, and fire protection services outside of the building foundation walls and extend to 5 feet from foundation walls. These site utilities 5 feet from the building and closer shall be by respective MEP trades. This Subcontractor shall include any these site utilities shown under slabs but outside of the foundations walls that are shown on civil drawings for example: drainage piping on drawings C102 from grid 2 to 3, D to E.
99. This Subcontractor shall demolish and dispose of all existing site utilities as indicated on the contract documents including but not limited to drainage/drainage structures, sewer, light pole bases, overhead electrical/telecom poles, gas, water and fire services and components.
100. This Subcontractor shall provide excavation and back fill to expose any electrical / communications conduits / services scheduled for demolition. Removal of conduit in soil shall be by this subcontractor, any concrete encased ductback scheduled for demolition shall be removed by this Subcontractor after the electrical subcontractor cuts and makes safes.
101. This Subcontractor shall abandon existing utilities including but not limited to plugging piping, filling piping with pumpable controlled low strength materials, removing portions of manholes, removing manhole frames and covers, breaking existing structures and filling with material as indicated on the contract documents.
102. This Subcontractor shall provide warning tapes for all underground utilities as indicated on the contract documents.
103. This Subcontractor shall saw cut / patch and restore any existing finish including but not limited to lawn, concrete sidewalk/curb or bituminous pavement/curb scheduled to remain as required to demolish, provide or otherwise access trenches for all proposed underground utilities.
104. This Subcontractor shall furnish and install all gas piping up to and including meter and manifold, connection to existing main, excavate and back fill and provide bedding materials for all gas piping as indicated on the contract documents. This Scope shall include contacting and coordinating with local utility and providing any gas connection fees.
105. This Subcontractor shall furnish and install all the site utilities including but not limited to Sanitary Sewer piping, manholes, structures, connections to existing, trenching and backfilling, and bedding materials as indicated on the contract documents. Include any sewer connection fees to local utility/municipality. Additionally, this scope shall include coring / patching existing sanitary structures as required for connections, refer to E303 for example. This subcontractor shall include and submit a MOP for review and approval by design team and the Town of Greenwich Sanitary sewer department of the new sanitary work, including any by-pass of existing for the work at Indian Rock Lane and Stanwich Road.
106. This Subcontractor shall provide all concrete encasement for sanitary sewers as indicated on the contract documents including but not limited to what is shown on drawing C303.
107. This Subcontractor shall furnish and install all fire protection and water service piping, connections to existing, taps, valves, trust blocks, air vents, blow off boxes/covers, piping restraints, providing trenching and backfilling, and bedding materials as indicated on the contract documents.
108. This Subcontractor shall flush and chlorinate the water lines prior to putting them into service. This Subcontractor shall coordinate with the plumber and the fire protection contractors prior to performing this work.

109. This Subcontractor shall coordinate with Aquarion for the installation of new and removal of existing water service and the tapping of all new water lines to the project. This Subcontractor shall provide all fees associated with this work and shall perform the taps or hire an approved subcontractors to perform this work. This Subcontractor shall furnish and install all vaults/water meter pits per Aquarion's requirements for the new water connections to the buildings. This Subcontractor shall install the domestic water service lines to within 5' of the foundation wall, all fire protection piping shall be extended through the foundation wall by this Subcontractor. The fire protection line shall have a flanged connections or otherwise coordinated with fire protection Subcontractor.

110. This Subcontractor shall provide excavation and backfill, including furnishing and install bedding materials for the fire protection service and any new hydrants as indicated on the contract documents. Coordinate with the local fire department for the thread connection requirements for these hydrants. This subcontractor shall furnish and install all piping, automatic ball drip and Siamese connection scope at the exterior of the building, reference detail 8/FP500.

111. This Subcontractor shall coordinate with the Gas Company for the installation of the new or relocated services to the buildings including any underground gas piping scheduled for removal. This Subcontractor shall excavate and backfill per the gas company's specifications for the primary piping to be installed by the gas company. This subcontractor shall furnish and install the gas meter pads per the Gas Company's specifications.

112. This Subcontractor shall excavate and backfill for temporary 4" x 4" x 20' power poles to be installed by the electrician as defined in the logistics plan and scope of work. At the end of the project, this Subcontractor shall remove these poles, backfill the hole, and grade the area in preparation for the site improvements and landscaping for this area.

113. This Subcontractor shall coordinate with the various utility companies (power, telephone, cable) regarding the installation of new utility poles, the relocation of existing utility poles, and the removal of utility poles as defined in the contract documents. This Subcontractor shall include all fees associated with this work.

114. This Subcontractor shall obtain the proper permits for all utility work and provide the police for traffic control at any street opening as required by Greenwich.

115. This Subcontractor shall hand dig around existing utilities to ensure that they are not damaged or broken by excavating equipment.

116. This Subcontractor shall excavate and backfill all electrical, security, and communication conduits including but not limited to the primary and secondary electric services as indicated the contract documents.

117. This Subcontractor shall coordinate with the power company and shall furnish and install the concrete transformer pad(s) in accordance with the power company's specifications. The electrical contractor shall furnish and install all underground conduits.

118. This Subcontractor shall furnish and install all electrical manholes including the primary electrical manhole and include patching around the knockouts once the EC runs the conduits/ductbank.

119. This Subcontractor shall encase all underground conduits in concrete as indicated on the contract documents and install warning tape in accordance with the contract documents.

120. This Subcontractor shall excavate and backfill all the electrical conduits between the building and the emergency generator. The electrical subcontractor shall furnish and install all conduits/ductbanks. This Subcontractor shall furnish and install the concrete pad(s) for the generator(s).

121. This Subcontractor shall excavate and backfill for all the telecom ductbanks between the utility poles and the buildings. The electrical subcontractor shall furnish and install all conduits/ductbanks. This Subcontractor shall encase these conduits and install a warning tape in accordance with the contract documents.

122. This Subcontractor shall excavate and backfill for the site power, EV charging, lighting conduits and the traffic control gates / motorized gate controller conduits as indicated on the contract documents, including but not limited to what is indicated on drawing SU100.

123. This Subcontractor shall also furnish and install the concrete light pole bases, blue light concrete bases, and site entrance sign (A924) as indicated on the contractor documents. This Subcontractor shall coordinate with the electrical contractor (or Vendor) for the anchor bolts layouts and the installation of the conduit, prior to pouring the concrete.

124. This Subcontractor shall furnish and install all anchor bolt for concrete bases that are indicated to be "by Site Contractor" including but not limited to site lighting concrete bases, refer to details on SU501, EV charging station concrete base anchor bolts, refer to detail 3/SU500 for example and blue light concrete base anchor bolts per 7/SU500.

125. This Subcontractor shall excavate, backfill, rig and set electrical/telcom vaults / hand-holes and electrical / telcom manholes provided by the electrical subcontractor or utility as indicated on the contract documents. This scope shall also include preparing subgrade and bedding materials for vaults/hand holes/manholes as required by the contract documents.

126. This Subcontractor shall excavate and backfill, provide bedding materials for and furnish and install all grease waste, connections, structures, grease traps and oil/water separators, and inspections as indicated by the contract documents.

127. This Subcontractor shall furnish and install all exterior grease traps as indicated on the contract documents.

128. This Subcontractor shall furnish and install the footing underdrain system and the defined enclosure (filter fabric and crushed stone) around these pipes at all the new foundations, and as indicated on the contract documents. These drains shall connect to the storm system as indicated on the contract documents.

Site Paving, Curbing, and Pavement Marking

129. This Subcontractor shall furnish and install all bituminous concrete pavements and walks shown on the Contract Documents. This scope includes all pavement patching associated with the installation of all utilities. See Turner's Sitework/Hardscape & Utility Phasing Plan, dated 3/22/17, for out of sequence utility work and paving requirements.

130. This Subcontractor will be responsible for all new or replacement Pavement Markings required for roadways, walkways and parking lots. This Subcontractor shall also furnish and install the transverse rumble strips and the speed humps with pavement markings, as indicated in the contract documents.

Site Concrete

131. This Subcontractor shall be responsible for the site concrete including but is not limited to; fence and gate footings, light pole bases, thrust blocks, encasement of ductbanks. This Subcontractor shall include sub-grade preparation for the concrete Subcontractor. This Subcontractor shall coordinate with the concrete Subcontractor for the connections of the sitework walkways to the concrete contractor's step and walkways.
132. This Subcontractor shall furnish and install rigid insulation between frost pads and adjacent construction including but not limited to detail 5 on drawing S200.
133. This Subcontractor shall furnish and install vertical rigid insulation and required protection board on interior & exterior side of foundation walls as indicated on the contract documents including but not limited to details 1D, 2D, 3D/A410, 3E, 1E, 1C, 2C/A412, all details on A413 and A418, 4D, 5D, 6D, 3E, 2E/A414, 2D, 3D/A415,1E, 3E, 4E, 5E/A417, 1E, 2E, 3E, 4E/A416 and 1D, 2D, 5D, 4E/A411. Include per typical foundation wall vertical insulation, ref A501.
134. This Subcontractor shall furnish and install decorative boulder selected from the site coordinate with Owner, Architect and Landscape Architect and furnish and install all concrete for signage including the foundation/footing for Street Front Signage. Refer to drawing A924
135. This Subcontractor shall furnish and install a 15' x 20'x 5" concrete pad for a free-standing mock in a location to follow. The removal of the mock-up and the pad will be by the demolition contractor. This scope of work shall also include but not be limited to subsurface prep of gravel below the slab as reference of drawing A315 and furnishing and installing a mockup of the louver screen wall.

Site Improvements

136. This Subcontractor shall remove, store and re-install existing batting cage scheduled for re-use as indicated on the contract documents.
137. This Subcontractor shall furnish and install the dumpster enclosures as indicated on the contact documents including but not limited to all slab(s) walls, fencing and doors/gates and associated hardware at dumpster enclosure. Reference drawing L504.
138. This Subcontractor shall furnish and install all metal screen fencing as indicated on the contract documents including but not limited to fencing per details 3A, 3D, 1D on drawing L503.
139. This Subcontractor shall furnish and install the site and traffic signage, wayfinding and parking signage, and pavement markings as indicated in the contract documents including but not limited to demolishing, relocating any existing traffic signage and/or eradicating any existing conflicting pavement markings.
140. This Subcontractor shall furnish and install all unit pavers on sand bed with metal edge restraint and the flagpole(s) per the contract documents.
141. This subcontractor shall provide a value for Alternate #3 as defined in the form of proposal.
142. This Subcontractor shall furnish and install all ADA traffic Control Bollards, Electronic ADA stanchions, site planters, site benches, bicycle racks, steppingstones, stone mulch and metal edging, seating and tables, live edge wood benches and boulders as indicated on the contract documents.
143. This Subcontractor shall furnish and install all gates including but not limited to vehicular double swing gate per detail 3B on drawing L502 and Cantilever chain-link fence sliding gate (if this alternate is accepted) per detail 3A on drawing L601. Include any required painting of gate per documents.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#9 - Sitework
Dated: 07.08.2024
Revised: 10.21.2024

144. This Subcontractor shall furnish and install all combination sign/boards, steel concrete filled and removable type bollards (including the footings, concrete fill and painting), timber guiderails, vehicles access gates, automatic traffic control gates (along with the footing specified by the manufacturer) , and chain link fencing as indicated in the contract documents. This Subcontractor shall coordinate with the Landscaper for the installation of the timber rails relative to their access for the installation of the landscaping.

145. This subcontractor shall engineer, furnish and install the segmental block retaining walls indicated in the contract documents including but not limited to Diamond Pro PS Block – Victorian Face per detail 1D/L503 and Metal Screen Fence(s) including but not limited to details shown on L503.

146. This Subcontractor shall furnish and install all exterior litter receptacles as indicated in the contract documents.

147. This Subcontractor shall furnish and install all Safety Netting as indicated on the contract documents, reference detail 1A on drawing L601.

148. This Subcontractor furnish and install all baseball and softball backstop systems as indicated on the contract documents including but not limited to the details on drawing L602.

149. This Subcontractor furnish and install the baseball/softball shade enclosures including but not limited to the benches and corrugated roofing the as indicated on the contract documents including but not limited to the details on drawing L602.

150. This Subcontractor shall provide all metal fencing, metal screen fencing, shade enclosures, bollards, backstop assemblies, stanchions, safety netting support metal, dumpster enclosure gates, vehicle gates, and foul ball poles in a painted or factory applied finish. All finish painting or providing in factory finish shall be included for exposed metals supplied by this Subcontractor.

151. This Subcontractor shall furnish and install the raised planters as indicated on the contract documents including but not limited to raised concrete planters per detail 3E on drawing L501.

152. This Subcontractor shall include the follow **Trade Allowances**: 120 hours of machine time (assume small wheel loader similar to CAT 930) and 320 hours of a laborer for required site logistic modifications associated with phasing and restoration of areas. Laborer Time to be included as journeyman rate including any required supervision. This will be billed based on the final agreed contractual wage rates and may only be expended by written authorization of Turner Construction and any unspent portion of this unused scope hours will be credited at the end of your contract based on approved labor rate.

Additional Items

153. This Subcontractor shall relocate the existing two (2) storage sheds on the property. Reference drawing L101A and Drawing L301A at grid line E & 1 for shaded rectangle intended to show existing sheds location. Please note – sheds will not be demolished, shed will be relocated per Owner's direction on the property.

154. This Subcontractor will not participate in the Contractor Controlled Insurance Program (CCIP). This subcontractor shall provide a General Liability Insurance program inclusive of a $20 MM per occurrence and $20MM per aggregate for Blasting Operations. Refer to CCIP Manual for additional information.

155. This Subcontractor shall provide to the jobsite, at start of construction activities, for use by the Turner Staff during the project and will be turned over and the property of the Town of Greenwich the following Utility Terrian Vehicle: POLARIS RANGER CREW XP 1000 NorthStar Edition Premium with Fixed Windshield, equipped with all the capabilities of RANGER CREW XP 1000, plus a factory-installed Pro Shield cab system, heating and air conditioning—with seating for 6 and doors. Include pedal-start feature to reduce unnecessary idling if available, and (3)-5 gallon gas cans for refueling. Assume refueling cans weekly for the course of the project.

156. This Subcontractor shall adhere to the included schedule specifically the duration on rock removal and sitework to allow for following activities. A minimum of two crews made up of the appropriate number of individuals shall be working on sitework and rock removal operations to adhere to the indicated durations and meet production levels necessary to complete as scheduled.

D. Exclusions

1. Exclude fiber mulch. (by Landscape)
2. Exclude polymer Concrete handholes (by EC)
3. Exclude heat trace at exterior sanitary piping.
4. Exclude furnishing and installing under-slab sanitary piping (By Plumbing Bid Package)
5. Exclude Soil Preparation specification 32 9113 (By Landscape Bid Package)
6. This Subcontractor shall exclude the following flatwork concrete unless otherwise indicated above including frost pads, sidewalks, sidewalk ramps and curbing as indicted on the contract documents which shall include the detectable warning strips. Exclude spec sections 32 1313 – Concrete Paving and 32 1373 – Concrete Paving Joint Sealants.
7. Excludes concrete washout.

E. Safety

1. This Subcontractor shall excavate all trenches assuming all soil to be Type C. Meaning all excavations shall be continuously sloped at a 34-degree angle in accordance to the OSHA standards. Sloping cannot exceed 20 feet without verification by a PE. BENCHING NOT ALLOWED IN TYPE C SOIL. This Subcontractor shall provide a detailed sheeting and soil retention plan for the work to be undertaken. This requirement does not attempt to characterize soil suitability for the support of structures or equipment but is only recommended for the purposes of trench collapse prevention.

2. This Subcontractor to provide a fall protection plan for all excavations 6 feet or greater in depth. This Subcontractor shall ensure excavation fall exposures are guarded by a hard barrier that meets OSHA's definition of guard railing. Orange fencing, danger or caution tape will not be acceptable.

3. This Subcontractor shall furnish, install and maintain an OSHA compliant wire rope guardrail system atop ALL site perimeter H pile soil retention systems. This is to be installed before any mass excavation begins to eliminate fall hazards during its installation. This Subcontractor will furnish and install a 3x3 steel angle posts atop each H pile sized to accommodate a toprail cable at 42" inches above walking surface and a midrail cable at 21" above the walking surface, terminated by 3 appropriately sized and spaced forged steel wire rope clips (Crosby or equal) torqued to manufacturers specifications. All steel posts, cabling, hardware and turnbuckles are to be furnished and installed by this Subcontractor. The minimum allowable cable size will be 3/8ths only if aircraft rated cable is used. The perimeter cable system is to include turnbuckles spaced at no more than every 100 feet with terminations made at all corners. This Subcontractor to also furnish, install and maintain orange mesh secured to the top rail and terminated into the top piece of lagging. This Subcontractor is to inspect and maintain all guardrails and mesh on a daily basis until backfilling is complete and railing no longer necessary for fall protection. Daily inspections shall be documented by this Subcontractor and made available to Turner upon request. Removal of safety cabling systems will be by others. This Subcontractor to incorporate four (4) pedestrian access/material loading areas independent of perimeter protection with removable cables and tie-off points for three (3) workers. These material loading areas to be located by Turner's Superintendent. This subcontractor to use the top edge of the lagging as a toe board and means to secure orange mesh, it is important that this Subcontractor allow for the height of the H-pile to be at least 6 inches above the adjacent walking surface elevation.
4. This Subcontractor shall provide (prior to arriving on site) all tabulated data for shoring boxes utilized for soil retention, including soil retention at the site utilities. This Subcontractor must ensure that they furnish, install, maintain and remove guard railing (includes a continuous top rail at 42 inches above grade, a midrail at 21 inches above grade, a toe board 4 inches above grade) at all sheeting, soldier pile or trench box that terminates 6 feet or greater above a lower level. This Subcontractor to furnish, install, maintain and remove such guard railing as well as provide daily documented inspections.
5. This Subcontractor shall have a 40-hour Hazwoper trained employee on site at all times. (for projects with the requirement outlined in the soils management plan.)
6. This Subcontractor to provide snow removal for the entire site including all areas identified within the Turner site logistics plan. Removal must be continuous throughout all areas within the site fencing and all access paths to all entries into the building including any areas in the building impacted by snow and ice. Snow removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms. This Subcontractor shall sand and de-ice as required to maintain safe conditions on site including: egress from each building, trailers and to the Site Emergency Rally / Muster location per the Crisis Management Plan. The snow removal will be accomplished prior to commencement of the days work shift to allow for safe entry without delay into the jobsite. This subcontractor is required to maintain at all times roadways and foot paths in a safe traversable condition by plowing, shoveling and utilizing surface treatments.
7. This Subcontractor shall ensure the grade differential between any (concrete) surface and adjacent rough grade is no more than 10 inches below finish floor elevation during all phases of construction. This Subcontractor shall be responsible for providing a uniform and level compacted grade around the building perimeter suitable for the support of scaffolding and lifts.

8. This Subcontractor shall provide and maintain anti-tracking pads and tire wash stations per the Turner Site Logistics Plan or as required by Turner. Each anti-tracking pad shall be constructed as specified by the contract documents or Turner. Tracking pads as defined by the site logistics plan or site improvement plan will prevail if more stringent than this requirement or if the area is required to be greater in size. This subcontractor to provide high pressure washers at each location for tire washing purposes. This Subcontractor shall provide the appropriate manpower to ensure ALL vehicular traffic is washed at these locations before entering onto municipal streets. These areas must be isolated from coming in contact with any soil remediation areas where required. This subcontractor is to provide all materials necessary to hook up and retrieve water and a water truck must be provided by this subcontractor if water is not available on site. This subcontractor shall be responsible for street sweeping to maintain clear roadways around the site as directed by Turner.
9. This subcontractor shall perform inspections of the erosion/stormwater control measure for the project, this Subcontractor is responsible to furnish, install, repair and remove all stormwater/erosion control measures, devices, fixtures, etc. per the Project SWPPP (Stormwater Pollution Prevention Plan) and all terms and conditions associated with this work. This includes responsibility for all corrective action required to remediate the stormwater controls per the inspections by Turner and by all 3rd party inspectors and maintain a documentation log confirming all corrective actions. See Turner Construction Company Stormwater Compliance Program for additional requirements.
10. This Subcontractor will be required to maintain a lined concrete wash out for their concrete work and will be responsible for removing all surplus concrete from the job site in accordance with contract documents. Concrete surplus must be removed on a weekly basis or as directed by Turner.
11. This Subcontractor shall ensure safe access in and around all footings by providing ramps at every footing and every 25’ along the foundation walls. If trenches are to be traversed ensure that walkways are at least 18 inches wide and are secured together when using two planks to make up the required width. If the height of the walkway exceeds 4 feet vertically this subcontractor will install guardrails to prevent falls from same walkway.
12. This subcontractor shall excavate around footings to allow for an unobstructed 2 foot wide clear path around all footings during wall construction, drainage and waterproofing installation activities. The adjacent footing grade must be maintained no lower than 16 inches below top of footing.
13. This Subcontractor shall coordinate with Turner Superintendent and backfill to within 2” the top of all footings, compacted and leveled prior to the commencement of wall forming operations.
14. This Subcontractor shall verify the presence of all existing underground utilities that may be affected by their work. This includes the use of non-intrusive methods such as hand digging or vacuum excavation of pot holes every 15' to locate known utilities per the Surface Penetrating Request Permit. This includes areas where fence posts for site containment fences are to be driven. This Subcontractor will contact “Call before You Dig” for layout of existing utilities and coordinate with the facilities department. This subcontractor will be responsible for maintaining utility markings.
15. This Subcontractor shall hire an independent GPR Subcontractor approved by Turner to grid out, locate and mark all existing underground utilities in all areas of disturbance. This GPR Subcontractor shall provide subsurface utility profiles in plan and elevation as built by a licensed surveyor with dimensions off existing site benchmarks that will remain throughout the project and submit copies to Turner. This subcontractor will be responsible to maintain with updated as builts and remark utilities for the duration of the project when needed. This subcontractor shall utilize hand digging and/or vacuum excavation when excavating within 12’ of existing utilities to identify their locations below grade.

16. This Subcontractor shall ensure that the soil/ fill conditions under any equipment i.e. SCAFFOLDING/HYDROMOBILES/CRANES have been coordinated with the Subcontractor providing the equipment to ensure suitable soil bearing capacity.
17. All building and structure shoring/underpinning systems must be designed by a professional engineer. Plans and calculations must be submitted to the engineer of record for approval prior to undertaking the work. Inspections must be performed daily by a qualified party designated by the subcontractor and maintain a documentation log confirming any corrective actions required.
18. This subcontractor shall ensure that if self-supporting temporary fence is required tube bases that project into adjacent walkways will not be permitted. Temporary fencing must be supported by one sided fence bases (either steel and/or sand bagged) or low profile high-visibility bases shall be used to eliminate tripping hazards to the public side. In general, scrim shall be wind resistant scrim.
19. This Subcontractor shall ensure that all temporary fence panels are free from protruding wires or other components that could scratch, catch or snag pedestrians as the pass by the fence.
20. This subcontractor is to furnish, install, maintain and remove all fencing, scrim covering, and gates for the full duration of the project as outlined in the project schedule and layout defined by Turner's Site Logistics Plan. Fence must be inspected for integrity and this contractor will perform any necessary repairs identified.
21. All designated walking paths must be temporarily graveled and regularly maintained using ¾" stone maximum. A path must be furnished and maintained from the site entry gate to the building perimeter entry location at all times.
22. This Subcontractor must provide daily dust control for all sitework so that dust is controlled to the point that it is not visible. This subcontractor shall provide their own water connection.
23. Excavator cabs windshield must be protected with both a suitable cage covering and safety glass when the excavator is being used in conjunction with a hydraulic breaker, hoe ram and during clearing and grubbing operations.
24. This contractor will coordinate with Turner to determine the location of air intakes into other buildings that could be adversely affected by exhaust fumes from its machinery. This contractor will be expected to protect the fresh air intake of existing buildings from exhaust, mists or dusts generated by their work.
25. This Subcontractor will provide 80 traffic cones with telescoping cone bars to be used in areas designated at the direction of Turner.
26. This subcontractor shall furnish, install, relocate and remove (10) additional jersey barriers in locations directed by Turner.
27. This subcontractor shall furnish, install, maintain, relocate as needed and remove jersey barriers or dead men along ramp excavation inclines as guardrail protection for motor vehicles and construction equipment.
28. This Subcontractor shall ensure all street plates have anti-skid surfaces with no open lift holes.
29. Blasting Operations to be governed OSHA and the Manual of Accident Prevention in Construction of the Associated General Contractors of America. This contractor will be required to submit blasting plans to be reviewed by a 3rd Party. A Pre-Blast Permit will be required to be completed for each blast sequence. Include all Town permits and associated cost as required for Blasting.
30. This Subcontractor shall develop, implement and maintain a road closure plan that follows MUTCD requirements for any road/lane closures or work adjacent to public roadways.

31. This subcontractor shall provide "Danger Construction Do Not Enter" on the exterior scrim of the site fence every 20'.
32. This Subcontractor to furnish, install and remove concrete barriers for protection against vehicular traffic at any and all O2, Flammable Gas and LPG storage tanks within the construction area as further defined by Turner's Site Logistics Plan. Also provide grading and 3/4" stone as a base for these enclosures.
33. ~~This Subcontractor shall relocate the existing two (2) storage sheds on the property. Reference drawing L101A and Drawing L301A at grid line E & 1 for shaded rectangle intended to show existing sheds location. Please note – sheds will not be demolished, shed will be relocated per Owner's direction on the property.~~ See Above.

F. Logistics and Schedule

1. This subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

G. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for a complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

Unit Prices:	Amount
Refer to Form of Proposal	

H. Alternate Prices

The following Alternate Prices reflect the work of this bid package under which the bid proposal was ***submitted, and these alternate shall remain valid for the life of the project and include all costs for a*** complete installation.

Alternates:	Amount
Refer to Form of Proposal	

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#10 - Concrete
Dated: 07.08.2024
Revised: 10.21.2024

C.1 **Specific Scope of Work**

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Concrete Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***Concrete Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
03 0156	Under-Slab Vapor Retarder

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

03 3250	Concrete Post Installed Anchors
03 6213	Non-Metallic Non-Shrink Grouting
07 2100	Thermal Insulation
07 9200	Joint Sealants

General Items

2. This Subcontractor will make every effort possible to ensure that their waste is properly sorted and disposed of to divert as much waste as possible from disposal in a landfill. This Subcontractor will track this recycling effort using the Online Waste Tracking System established by Turner Construction Company. Each dumpster ticket is to be logged into this system and its recycled content reported as a means of tracking the total percentage of construction and demolition debris diverted from landfills. There is a $50 per month fee for use of this website and this Subcontractor shall include all costs in his bid for use of this service. Refer to the attached User's Manual for more information about this system. Refer to the Turner Tracker Manual in the referenced "Forms and Policies," dated January 2015, in Turner's Project Manual.
3. This Subcontractor shall assume that temporary electric will not be available for this Subcontractor's use during the various stages of Sitework. This Subcontractor shall include the use of generators furnished and maintained by this subcontractor as required for the duration of their Work.

Bid Package Specific Scope

4. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
5. This Subcontractor shall include all measures needed for winter concrete installation as required based on the construction schedule timing of this work, including but not limited to tarps, blankets, electric blankets, heaters, enclosures, concrete admixtures, etc. This Subcontractor shall protect all concrete from freezing temperatures per the specifications. Upon finish grading and turnover from the Sitework Subcontractor, this Subcontractor shall include any snow removal and protect the subbase from winter weather.
6. This Subcontractor shall provide a lined dumpster for the purposes of wash out to be available for cleaning all concrete trucks, including concrete provided by other trades. Any concrete truck not using this for clean-out will be noted and the clean-up back-charge from the Site Subcontractor will be the Concrete Subcontractor's responsibility. Any excess concrete due to over placement shall be the responsibility of this Subcontractor to remove to this lined dumpster.
7. This Subcontractor shall repair, clean or restore any existing or new areas that are disturbed by concrete operations to the satisfaction of Owner and Construction Manager. This includes immediately cleaning all concrete splatter and spills due to concrete placement by this Subcontractor on all surfaces exposed to view. This includes, but is not limited to, stair stringers, stair landings, stair risers, architecturally exposed structural steel, and masonry walls.

8. This Subcontractor shall attend a pre-installation meeting 30 working days prior to any concrete being placed. The meeting will be organized by Turner and the following people should be in attendance; the Building official, Testing Agency, Special Inspector, Structural Engineer, Architect, Concrete Supplier and this Subcontractor. The purpose of the meeting is to review proposed concrete mix designs and as well as project specific requirements and how they are to be achieved.

9. This Subcontractor shall submit cold weather and hot weather concrete placement plans in accordance with ACI and include all costs to implement these plans.

10. This Subcontractor shall furnish and install all layout, concrete formwork, concrete reinforcement and cast-in- place concrete placement per the contract documents including but not limited to the following items. This shall include all accessories and means and methods required to provide a completed product per the documents.

    a. Foundation walls, strip footings, spread footings, piers
    b. Frost Pads and Recessed Frost Pads
    c. Slab on Grade
    d. Slab on Decks, supported slabs
    e. Elevator pits, including sump pits
    f. Slab for Radon Pits
    g. All concrete stairs, ramps, and walls connected to the building or within the building footprint
    h. Housekeeping pads required for all mechanical, electrical, plumbing, etc. equipment inside of the building
    i. All concrete on S-Series Drawings

11. This Subcontractor shall furnish and install all frost pads, recessed frost pads and supporting frost walls as shown on the contract documents. See L501 and Structural S200 drawings for details. Include rigid insulation between slabs per details.

12. This Subcontractor shall furnish and install the 8” reinforced frost walls and pad at perimeter of the two Chiller pads at the exterior of the building, as shown on S101A.

13. This Subcontractor shall furnish and install all Portland cement based underlayment at ramps, as shown on but not limited to detail 2/S201.

14. This Subcontractor shall furnish and install any structural grade rigid filler material at applicable locations, including but not limited to detail 2/S201.

15. This Subcontractor shall furnish and install all cast in place concrete stairs including at the Auditorium leading to the Stage Level.

16. This Subcontractor shall furnish and install masonry/brick shelves at the concrete foundation wall. Refer to details on the Structural drawing series for examples of this condition. This includes all preparation work and coordination with the Masonry Subcontractor for sizing and locations.

17. This Subcontractor shall be responsible for all coordination with the Elevator Subcontractor for dimensions, inserts and keeping the elevator pits clear of all debris and water.

18. This Subcontractor shall layout, form and place concrete and reinforcement for all stepped footings where indicated. Reference the Structural drawings.

19. This Subcontractor shall monitor the formwork during and after concrete placement to ensure the plumbness of walls and make adjustments as necessary.

20. This Subcontractor shall receive, distribute, and install all concrete embedded items supplied by others, including but not limited to anchor bolts, bearing pads, masonry embeds-dovetail slots, embedded angles, wall sleeves, etc. All locations of embedded items to be set via Total Station layout or similar.
21. This Subcontractor shall remove all snap ties, cut concrete fins and fill voids in the concrete surfaces within two weeks of concrete placement, refer to requirements of project specifications.
22. This Subcontractor shall provide a hand-rubbed finish on concrete foundations, walls and sides of slabs where they are exposed to view.
23. This Subcontractor shall provide all surveying and layout required for the work included with this package.
24. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
25. This Subcontractor shall include all horizontal underslab insulation where shown in the contract documents, including but not limited to 1D, 2D, 3D/A410, 3E, 1E, 1C, 2C/A412, all details on A413 and A418, 4D, 5D, 6D, 3E, 2E/A414, 2D, 3D/A415,1E, 3E, 4E, 5E/A417, 1E, 2E, 3E, 4E/A416 and 1D, 2D, 5D, 4E/A411.
26. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to cleanup general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)
27. This Subcontractor shall furnish & install all control joints, including but not limited to providing a control joint layout shop drawings for submission to design team for approval include details for required joint sealants by this subcontractor.
28. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
29. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
30. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
31. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

Slab-On-Grade / Slab-On-Deck

32. Immediately prior to the placement of concrete slabs, this Subcontractor shall thoroughly clean all areas to receive concrete. Compressed air shall not be used. This Subcontractor shall use vacuums or other methods that minimize dust.

33. This Subcontractor shall furnish and install haunched slabs where slab on grade abuts the foundation walls. Reference details in the Structural drawings.
34. This Subcontractor shall furnish and install haunched slabs underneath CMU walls as detailed on Drawings S-301 thru S-303 for example. Refer to architectural drawings for full extent of CMU walls. Also include haunched slab for the stairs at the auditorium shown on drawing S402 and 13/S210.
35. This Subcontractor shall include furnishing and installing all vapor retarder beneath the slab on grade shown on the Contract Documents and as specified in Specification Section 030156. This Subcontractor shall inspect the under slab vapor barrier system prior to slab placement and repair any damage prior to concrete placement.
36. This Subcontractor shall coordinate with the finish flooring subcontractors for their trade's tolerance level for flatness and curing procedures to understand if any conflicts exist between the trades. If there are differences in the requirements, this needs to be addressed upfront with Turner Construction prior to slab placement. This subcontractor shall include laser float at all slab on grade locations for level slabs. Include total station layout of Auditorium sloped slab on grade.
    a. Subcontractor shall, in addition to the floor leveling required for their own work, provide an additional 1000sf of ¼" thick floor leveling to be completed at the direction of the Turner Superintendent.

Miscellaneous Concrete Work

37. This Subcontractor shall furnish and install all concrete housekeeping pads required for mechanical, electrical, and plumbing equipment including but not limited to those shown on the Structural S100 series drawings. Coordinate layout with the mechanical subcontractors. Scope shall include doweling into the slab.
38. This Subcontractor shall be responsible for furnishing and installing all non-shrink grout where new structural members are to be installed at concrete construction; including, but not limited to details on column baseplates and beam bearing plates.
39. This Subcontractor shall furnish and install all toe boards and scrim at all slab on grade and slab on deck locations where a fall hazard exists in accordance with Turner Safety Additional Provisions. Removal will be by others.
40. This Subcontractor shall furnish and install wire mesh (or acceptable concrete reinforcement) at all stair tread infills and landings. This Subcontractor is to include furnishing and installing all concrete fill at metal stair pans.
41. This Subcontractor shall include the removal of temporary wood infills at metal stair pans. Installation of temporary wood infills by others.
42. This Subcontractor shall include furnishing and installing any slab depressions required for wood flooring or other similar finishes, including but not limited to those shown on drawing A091.
43. This Subcontractor shall furnish and install vertical wall dowel reinforcing as required at masonry or concrete walls. Coordinate dowel locations for masonry walls with the Masonry Subcontractor. Refer to drawing S502 for Shear wall elevations that included rebar details for masonry and around beams.
44. This Subcontractor shall coordinate with the Plumbing Subcontractor for location of radon pit venting.
45. This Subcontractor shall furnish and install "Giatec Smartrock Wireless Sensors" for the retaining wall concrete pour, reference details 1&2 on S211 for the full length of the wall. Include no less than 36 total monitors for this concrete placement including required sensors, hub and monitoring software/applications to provide daily results of strength and temperature readings. Assume 6 of the 36

sensors will be required for the calibration of mix designs, in the event there are additional monitors remaining after the placement of the retaining wall, the remaining monitors will be used at the discretion of Turner.

Coordination with Other Trades

46. This Subcontractor shall coordinate all requirements for Testing and Inspection in accordance with Field Quality Control section found in the Division 1 specifications and Concrete Specifications. This Subcontractor shall furnish any required cure box (or boxes) of sufficient capacity for concrete placement schedule. Inspections will be scheduled through the Construction Manager.
47. This Subcontractor shall be responsible for ordering, scheduling and sequencing of concrete deliveries required for the work. This shall include any premium time and standby labor required for continuous work (including the concrete supplier if required).
48. This Subcontractor will work closely with the Sitework Subcontractor to coordinate the scheduling and installation of excavation of concrete footings/foundations as shown. It is to be understood that this Subcontractor will give a minimum of (24) hour notice to the Sitework Subcontractor of specific footings/foundations to be excavated. If it is not feasible to access for direct concrete placement, this subcontractor shall include pump for concrete placement. At a minimum, this subcontractor shall assume concrete pump will be required for all slab on grade, slab on deck, walls, foundation walls, elevated slabs.
49. This Subcontractor shall coordinate all concrete work with all other subcontractors having work adjacent to or embedded within the concrete.
50. This Subcontractor shall coordinate and provide all openings in formwork for other trades as required. This includes box-outs and/or sleeves in walls and/or slabs for MEP/FP trades or other work that penetrates the concrete. Layout and sleeves shall be furnished by others and installed by this Subcontractor. All openings through concrete slabs will be formed and stripped to provide opening size unless they are shown on the structural steel drawings to receive an edge stop.
51. This Subcontractor shall coordinate all work with Plumbing Subcontractor for installation of trap primers and floor drains at concrete slabs on grade.
52. This Subcontractor shall coordinate with the Plumbing Subcontractor for floor drain heights to be maintained during the concrete pour.
53. This Subcontractor shall include costs to assist the Sitework Subcontractor in dewatering of footings and open foundations as required to perform the concrete work. The Sitework Subcontractor's work shall include, but not be limited to, pumping water, mud removal from excavations, clean-up, etc. This Subcontractor shall be responsible for the removal and reinstallation of formwork and/or reinforcement if deemed necessary.
54. This Subcontractor shall use anchor bolt patterns supplied by Steel Subcontractor for the setting of anchor bolts. This Subcontractor shall also include installation of anchor bolts and leveling plates provided by the Steel Subcontractor. All locations of embedded items to be set via Total Station layout or similar.
55. This Subcontractor shall include grouting of leveling plates. This Subcontractor shall include providing an as built survey of installed anchor bolts, embedded items and bearing plates prior to the scheduled start of structural steel erection. This survey shall be by a licensed registered surveyor independent of any other survey performed by the Steel Subcontractor. A combined survey from this Subcontractor and the Steel Subcontractor will not be accepted**.** The cost to replace or reset any bolt, embedded item or plate found out of tolerance for location or elevation will be the responsibility of this Subcontractor.

The survey / corrective work shall be done so as to not delay steel erection or work of other trades. Coordinate the phasing of the work with Turner Superintendent and the Steel Subcontractor.

56. This Subcontractor shall grout in elevator door sills.

57. This subcontractor shall furnish and install all fall protection at the level two slab on grade areas for the entire length of the retaining wall per Turners EH&S program upon removal of the retaining wall formwork. Fall protection will be removed by the Steel subcontractor for installation of metal decking.

58. This Subcontractor shall include and implement a 5S (sort, straighten, shine, standardize and sustain) Lean system strategy onsite to be approved by Turner Construction. If in Turner's observation 5S implementation is insufficient (i.e. lack of organization, excess trash/material accumulation), Turner reserves the right to direct this subcontractor to add a full time designated laborer at this subcontractors expense to comply with approved 5S strategy, or Turner will hire one at this Subcontractor's expense.

59. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.

Joint Sealants:

60. This Subcontractor will furnish and install all Joint Sealants within and at perimeter of work where called out.

Expansion Control:

61. This Subcontractor will furnish and install expansion joints or expansion control items where required within the concrete slabs and walls. This work includes but is not limited to furnishing any expansion joint ~~covers~~ sealant as required as well as boxing out for them in the slab pour and then grouting them in as part of the installation by this Subcontractor if required. Include Expansion joint details reflected on drawings A092 & A093

Add'l Items:

62. This Subcontractor will furnish and install the 3" concrete cover shown in detail 4/S200 in lieu of the bituminous paint.

D. Safety/Logistics

1. This Subcontractor has reviewed the Logistics Plans and the Construction Schedule and shall include all associated costs as relevant to achieve this scope of work within the Project Schedule. No come back costs will be entertained.

2. This Subcontractor shall review, conform to, and furnish and install all requirements included in the Safety Additional Provisions included in this Agreement. This Subcontractor understands that this document is project specific, and all provisions must be included in this Subcontractors' bid.

3. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible for removing snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.

4. This Subcontractor shall provide a site-specific plan on how they will comply with Turner's Ladder's Last Program.

5. This subcontractor shall ensure that any Lulls used on site are equipped with hydraulic fork positioners.

6. This subcontractor shall engage a 3rd Party to complete a GPR Survey to mark out existing utilities under and in the general area of any proposed Mobile Crane locations.

7. This Subcontractor to provide, install and maintain a safe, secured transition strip with beveled edges around the entire perimeter between all elevated and depressed slabs. This Subcontractor shall remove and dispose of the transition strip as directed by Turner.

8. Winter weather tarps are not allowed to be hung from the perimeter guardrail cables. This Subcontractor to furnish an independent means to secure the tarps. All tarps must be fire rated.

9. This contractor shall provide (50) D-Ring Fall Protection straps to be cast in place or wrapped around the exterior beams at locations identified by the Turner Superintendent. Straps shall be accessible between 7 and 8 feet AFF. Each contractor is responsible for visibly inspecting each tie off point before using. This subcontractor is responsible to inspect each strap after installation. All anchorage points shall be installed prior to turnover of each deck and to be removed by others.

10. This subcontractor shall furnish and install plywood over rebar mats that must be traversed either by this contractor or by any trade. The solid walking surface must be made of suitable material 4' in width and the full length of the mat.

11. This Subcontractor shall install one layer of mesh on mat slabs to prevent workers from falling within the rebar in between top and bottom mat.

12. This Subcontractor shall utilize a rebar shear in lieu of a chop saw or grinder to cut rebar.

E. Exclusions

1 This Subcontractor shall exclude all vertical underslab insulation where shown in the contract documents, including but not limited to 1D, 2D, 3D/A410, 3E, 1E, 1C, 2C/A412, all details on A413 and A418, 4D, 5D, 6D, 3E, 2E/A414, 2D, 3D/A415,1E, 3E, 4E, 5E/A417, 1E, 2E, 3E, 4E/A416and 1D, 2D, 5D, 4E/A411. (By BP#9 Sitework).

2 This Subcontractor shall exclude flatwork concrete outside of the building footprint, such as concrete sidewalks (2A/L501), concrete pavement (2B/L501), and concrete curbing (By BP#40 Concrete Flatwork).

3 This Subcontractor shall exclude concrete lightpole bases or concrete fill for bollards (By BP#9 Sitework).

4 This Subcontractor shall exclude excavation, preparation of subgrade, backfill and dewatering (By BP#9 Sitework).

5 This Subcontractor shall exclude dumpster enclosure pads, gas meter pads, generator pad(s), fence and gate footings, furniture footings, sign footings, light pole bases, thrust blocks, encasement of ductbanks. (By BP#40 Concrete Flatwork or BP #9 Sitework).

F. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for a complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

Unit Prices:	**Amount**
Refer to Form of Proposal	

G. Alternate Prices

The following Alternate Prices reflect the work of this bid package under which the bid proposal was ***submitted, and these alternates shall remain valid for the life of the project and include all costs for a*** complete installation.

Alternates:	**Amount**
Refer to Form of Proposal	

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP11 – Masonry
Dated: 07.08.2024
Revised: 10.21.2024

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Masonry Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***Masonry Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
04 2000	Unit Masonry
04 7323	Manufactured Building Stone Masonry

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Bid Package Specific Scope

1. This subcontractor shall include all costs for access to work including, but not limited to, scaffolding, stair towers, lifts, etc. This subcontractor shall furnish, install, inspect, maintain and remove all scaffolding required for the performance of the work of this Contract. This Subcontractor shall provide protection under work access to protect slabs. All other subcontractors requiring access shall complete liability waivers as determined by this subcontractor.
2. This subcontractor shall leave all work areas broom clean at the completion of this subcontractor's daily work this includes continuous housekeeping at the base of any scaffolding system.
3. This Subcontractor includes all blocking, brackets, fixtures, shims, connections, and other items necessary for a complete system.
4. This Subcontractor shall include all cutting, coring & sleeving for penetrations relative to your trade for a complete system.
5. This Subcontractor shall be responsible for all testing required per the drawings, specs, and state requirements.
6. This Subcontractor shall include all Sustainability requirements, including but not limited to CTHB Documentation.
7. This subcontractor shall receive, store and install all embeds, sleeves, access doors, louvers, vents, etc. within masonry partitions. This subcontractor shall coordinate with the MEP/FP and Elevator Subcontractors for the installation of electrical conduits and mechanical sleeves/pipes within masonry partitions. All embeds and sleeves are to be furnished by the respective trades requiring such, along with dimensioned shop drawings indicating locations. This subcontractor shall not accept material without formal transfer of care and custody paperwork. This subcontractor shall provide copies to Turner upon request. This subcontractor shall coordinate with respective subcontractors for, including but not limited to, all in-wall rough-in for electrical, elevator, and controls devices.
8. This subcontractor shall perform all layout of masonry partitions including locations of door openings. This subcontractor shall use a laser to ensure that all masonry walls are level and plumb. This subcontractor shall verify that door frames have been installed plumb and level and shall ensure they remain plumb and level during the masonry installation. The setting of hollow metal frames shall be by BP #21 Drywall & General Trades and aluminum frames by BP #19 Glass, Glazing, & Metal Panels.
9. This Subcontractor shall provide all surveying and layout for the work of this package. Survey will be by a Total Station or a Licensed Surveyor.
10. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
11. This Subcontractor shall furnish all the standard, special, finish, etc. warranties identified in the specifications.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP11 – Masonry
Dated: 07.08.2024
Revised: 10.21.2024

12. This subcontractor shall furnish and install all Exterior and Interior Masonry and Architectural Precast Concrete Work as required for complete systems. This shall include, but is not limited to, furnishing and installing all CMU, Masonry Veneer, Glass Unit Masonry, Cast Stone, Precast Architectural Concrete, accessories, etc. as shown on the Contract Documents.
13. This subcontractor will be responsible for any temporary connections, shoring or bracing and additional miscellaneous structural support not indicated on Contract Documents and required for a complete masonry system.
14. This subcontractor shall furnish, install, maintain and remove all weather protection required for the completion of the masonry work in accordance with the Project Schedule. This work shall include, but is not be limited to, shrink wrap (similar to Global Wrap or equal), enclosures, temporary heaters with fuel, admixtures, etc. and costs for hot water. This subcontractor shall include all heated enclosures, as required, for installation of masonry work in compliance with the specifications. The heated enclosure shall adhere to ALL safety policies required by the Safety Additional Provisions, and all safety requirements by Authorities Having Jurisdiction. If required for open flame heating source, this shall include 24-hour safety standby monitoring of the heating equipment and enclosures while in operation. This subcontractor shall provide breakout pricing for Weather Protection by phase in Application for Payment.
15. This subcontractor is required to provide a mixing station in a location acceptable to Turner and the Owner. This subcontractor shall keep mixing station clean and organized including, but not limited to, stockpile material, controlling dust, and daily removal of debris this subcontractor's dumpster. This subcontractor shall include weather protection as required.
16. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection of unfinished and finished work to prohibit damage from subsequent work. Protection must be approved by Turner.
17. This Subcontractor shall include the follow **Trade Allowance**: 80 hours of labor time for 5S and safety, protection and logistics requirements as directed by TCCo Superintendent. Laborer Time to be included as journeyman rate including any required supervision. This will be billed based on the final agreed contractual wage rates and may only be expended by written authorization of Turner Construction and any unspent portion of this unused scope hours will be credited at the end of your contract based on approved labor rate.
18. This Subcontractor shall coordinate all work with all other Subcontractors having work adjacent to or connecting to the work of this Subcontract.
19. This subcontractor shall protect roofing and metal deck, as per Roofing Subcontractor's recommendations, while performing work on upper masonry walls. Where this subcontractor is working on a finished roof, this subcontractor shall provide photographic documentation of the roof condition prior to the start of work. Failure to provide documentation will result in this subcontractor's responsibility to pay for costs associated with exterior and interior damage.
20. This subcontractor shall coordinate with MEP trades for locating and installing block outs in new masonry walls for duct and MEP raceways. This Contractor shall furnish and install lintels in masonry walls where block outs for MEPs are required. This Contractor shall coordinate these openings with the MEP contractors prior to wall construction, if this does not occur this Contractor shall cut and patch the partition at their own expense. See the MEP drawings for the extent of the new penetrations.
21. This Subcontractor shall furnish and install all mock-ups required for this scope of work per the contract documents, for example as shown on Drawing A-315.

22. This Subcontractor shall provide engineering stamp drawings and calculations of all delegated design items as indicated on the contract drawings.
23. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to clean up general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)
24. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
25. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule. Include separate early mobilization for install of all CMU that supports structural steel.
26. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
27. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.
28. This Subcontractor shall furnish and install all masonry components of the front signage as shown on documents, including but not limited to masonry veneer and flashing, for example as shown on 5D/A924.

Exclusive Specifications

Spec. 04 2000 Unit Masonry

29. This Subcontractor shall furnish and install all unit masonry and accessories as shown on the contract documents required for a complete system, including but not limited to grouting, masonry ties, anchorage, reinforcing steel, flashing, termination bars, drip edges, movement joints, weeps, etc.
30. This Subcontractor shall coordinate, furnish and install anchors as required, for example 13/S410 connection to steel tube.
31. This Subcontractor shall furnish and install all acoustical concrete masonry units as shown on documents for a complete system, for example as shown at Gymnasium A111.4.
32. This Subcontractor shall furnish and install all top of wall anchors for connecting interior masonry to underside of structure for joint stabilization, for example, as shown on Detail 1B/A605.
33. This Subcontractor shall exclude welded L anchorage at slab edge, for example 1A/A605. To be furnished and installed by BP #12 Structural Steel.
34. The BP #10 Concrete Subcontractor will furnish and install reinforcing steel dowels shown to be installed in cast-in-place concrete for reinforced CMU partitions. This subcontractor shall coordinate layout of masonry partitions with BP #10 Concrete Subcontractor.

Spec. 04 7323 Manufactured Building Stone Masonry

35. This Subcontractor shall furnish and install all manufactured stone masonry as shown on the contract documents for a complete system, including but not limited to anchor system, angles, mortar net, drainage mat, masonry ties, flashing, continuous metal flashing and sill drip edge, etc.
36. This Subcontractor shall design, furnish, and install anchors as shown on contract documents, for example ashlar stone anchor system as shown at detail 5B/A500.

Shared Specifications

Spec. 03 6213 Non-Metallic Non-Shrinking Grouting

37. This Subcontractor shall furnish and install all grout as shown on the contract documents for a complete system of this subcontractor's work. This Subcontractor shall furnish and install all grout except at Steel Column and Base Plate locations (By BP#10 Concrete).
38. This Subcontractor shall grout all new interior and exterior door frames installed in masonry interior and exterior walls. This subcontractor shall protect hinges from grouting operations in order to ensure a smooth door installation. Upon completion of grouting, this subcontractor shall clean excess grout to prepare for painting.

Spec. 05 5000 Metal Fabrications

39. This Subcontractor shall furnish and install all steel loose lintels as required per the contract documents, for example as shown on drawings A641 -A642 and lintel schedules on A606.

Spec. 07 2100 Thermal Insulation

40. This Subcontractor shall furnish and install insulation at all exterior veneer locations provided as part of this bid package scope of work. This includes but is not limited to all exterior wall assemblies with CMU back-up, concrete back-up, or stud and sheathing back-up with veneer provided by this subcontractor.

Spec. 07 2726 Fluid-Applied Membrane Air Barriers

41. This Contractor shall furnish and install **ALL** fluid-applied membrane air barriers as shown on the Contract Documents, including but not limited to masonry, FCP, skylight, louvers, curtainwall/storefront, rainscreen system, and metal panel locations with a minimum 1-foot overlap or per manufacturers requirements on vertical face with adjacent work. For example, this Subcontractor shall install membrane air barrier per detail 3A/A520.
42. This subcontractor shall provide all required termination bars as required per the Contract Documents for example as shown on 3D/A641.
43. This subcontractor shall furnish and install sealant at all through-wall penetrations and attachments that penetrate the air/vapor barrier as per manufacturer's requirements.

Spec. 07 6200 Sheet Metal Flashing and Trim

44. This Subcontractor shall furnish and install all formed wall flashings and trim within or adjacent (including at all perimeters) to exterior wall veneer provided by this Subcontractor.

Spec. 07 9200 Joint Sealants

45. This Subcontractor shall furnish and install all joint sealants, control joints and joint sealant assemblies within and at the perimeter of this subcontractor's work.
46. This Subcontractor shall furnish and install all joint sealants including but not limited to door frames, louvers, access doors and other items installed within masonry partitions and stone veneer by this subcontractor.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP11 – Masonry
Dated: 07.08.2024
Revised: 10.21.2024

Add'l Items

47. At the tops of all Masonry walls, this subcontractor shall include all required compressible filler, AVB and associated lapping requirements, infill of roof deck flutes with preformed mineral wool, refence details 1B&2B&3B/A521 as examples.
48. This Subcontractor shall furnish and install all movement and expansion joints within and at Perimeter of CMU Block and exterior wall systems installed by this subcontractor.

D. Safety

1. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible to remove snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.
2. This Subcontractor shall provide a site-specific plan on how they will comply with Turner's Ladder's Last Program.
3. This Subcontractor shall ensure that any Lulls used on site are equipped with hydraulic fork positioners.
4. This Subcontractor shall engage a 3rd Party to complete a GPR Survey to mark out existing utilities under and in the general area of any proposed Mobile Crane locations.
5. This subcontractor shall ensure scaffolding more than 4 tiers high is installed with debris netting covering the entirety of the non- working sides of the scaffolding full height extending to the top guardrail height of the upper most platform. All working platforms to include a guardrail, mid-rail and toe board per OSHA specifications. All scaffold bases will be installed on wood mudsills regardless if on level concrete. All scaffolding sections to be fully pinned and coupled. Stair towers are the required method of scaffold access. Others means such as ladders will be acceptable only when stair towers are not feasible. Fall protection must be provided at all scaffold access points by temporary gates, offset guardrails or other means to eliminate the fall hazard at access opening. All components are to be compatible. This subcontractor is responsible for a fully engineered scaffolding system that accounts for wind loading that may be imposed by scrim or tarp enclosures.

6. This Subcontractor shall ensure that Mortar tubs and other materials are prohibited from being landed on scaffold extended bracket support platforms. The subcontractor will be required to construct a separate scaffold bay/section bump out for which to receive material on. Workers must be protected from fall exposures should top or mid rails be removed when landing material on the scaffold structure. This Subcontractor shall provide a comprehensive scaffold and fall protection plan rendered by a qualified person. Plan should include plan and elevation renderings of the scaffold structure and key assembly and connection details. Scaffold erection and dismantling procedures must obey all regulations set forth by OSHA Subpart L 1926.451 and Turner's Site Safety Program. Maximum loading requirements must be provided for each bay. In the event the scaffolding needs to be built on an existing structure it shall be the responsibility of this Subcontractor to perform an engineering survey to determine if it can support the load of the scaffolding. In the event the existing structure needs to be shored or supported it shall be the responsibility of this Subcontractor to do so. The structure must be designed by an engineer to sustain potential wind loads produced from the encapsulating debris scrim or any winter weather protection barriers.
7. This Subcontractor shall ensure mixer staging areas if elevated above 2 feet have guard rails and stairs for access. The platform must be of solid construction and not a stack of pallets. All guards to mixers must be in place.
8. This Subcontractor is responsible to ensure that the perimeter protection of each floor that is affected by their work be maintained on a daily basis. If Guardrail systems need to be modified or removed to install the work this Subcontractor must ensure that they protect the floor edge by replacing the guardrails or installing a separate standard guardrail system. Open sided floors cannot be unprotected at any time. If this subcontractor's work replaces the guardrail edge protection this contractor will be responsible for removing and coordinating the return of the reusable guardrail/fall protection system (posts, cables, turnbuckles, clips,) to the concrete or structural steel subcontractors. Material should be palletized and returned in an orderly fashion.
9. This Subcontractor shall utilize a rebar shear in lieu of a chop saw or grinder to cut rebar.
10. This Subcontractor shall ensure stair access is provided for all scaffolding.
11. This Subcontractor shall ensure that all guardrails on scaffold systems are manufacturer fabricated standard fall protection rails.
12. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible to remove snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.

E. Exclusions

1. This Subcontractor shall exclude welded L anchorage at slab edge, for example 1A/A605 (By BP #12 Structural Steel).
2. This Subcontractor shall exclude hung lintels (By BP #12 Structural Steel).
3. This Subcontractor shall exclude masonry dowels cast in concrete and slab reinforcement at masonry partitions (By BP#10 Concrete).

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP11 – Masonry

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***BP #12 Structural Steel Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detailed references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***BP #12 Structural Steel Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
051200	Structural Steel Framing
052100	Structural Joist Framing
053100	Steel Decking
072163	Fluid Applied Insulative Coating

Shared Specifications

Additional Provisions/Scope of Work

Revised: 09.30.2024

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
Div 00	Division 00 – Procurement and Contracting Requirements
Div 01	Division 01 – General Requirements
033250	Concrete Post-Installed Anchors
050805	Factory-Applied Coatings for Metal
055000	Metal Fabrications

Bid Package Specific Scope

General

2. This subcontractor shall fully participate in all 3-D coordination - All work per 3-D MEP Coordination Additional Provisions. This shall include modeling all roof joists. This subcontractor is responsible for coordinating with all the MEP trades and resolve any conflicts or coordination issues.
3. This Subcontractor is aware that this is a High-Performance Building and submittals should be submitted according to these standards. This Subcontractor has included all costs associated with meeting these requirements as set forth in the Division 1 Specifications.
4. This Subcontractor will provide the necessary written documentation for meeting the CT High Performance requirements as outlined in the Division 1 specifications.
5. This Subcontractor is responsible for distributing material to all floors as required and its protection from damage during delivery, handling, storage, and installation.
6. Temporary power will not be available for Structural Steel erection. It is agreed and understood that this Subcontractor shall utilize gasoline-powered welders or similar in order to perform the welding associated with erection of the Structural Steel for this Project. In addition, this Subcontractor shall assume that temporary electric will not be available for this Subcontractor's use during steel erection. This Subcontractor shall include the use of generators as required for the duration of their Work.
7. Prior to entering the site this Subcontractor shall submit all fitness for use / inspection certifications required for cranes to the Construction Manager. This Subcontractor shall be responsible for all crane permits for his work. This matter is a very important safety requirement to follow, and no crane will be allowed to be used unless this paperwork is submitted and up to date. There shall be a pre-planning meeting prior to erecting the crane on site.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP12 – Structural Steel
Dated: 07.08.2024
Revised: 09.30.2024

8. This Subcontractor shall be responsible for ordering, scheduling, and sequencing of steel deliveries required for the work. This shall include any premium time.
9. No truck parking/idling is allowed on streets adjacent to project site while waiting to unload. This Subcontractor shall include accommodations as required to adhere to "just in time" deliveries. Refer to Turner's "Logistic Plans – Scope of Work" for delivery restrictions.
10. This Subcontractor shall include all costs for two (2) round trip inspection visits for two (2) individuals at the structural steel fabrication plant. These costs should include travel, meals, lodging, and round-trip airfare if necessary, from Greenwich, CT.
11. This Subcontractor shall review, conform to, and furnish and install all requirements included in the Safety Additional Provisions included in this Agreement. This Subcontractor understands that this document is project specific, and all provisions must be included in this Subcontractor's bid.
12. This Subcontractor is responsible for leaving the metal deck cleaned of all debris resulting from erection of structural steel and metal deck including removal of stud ferrules. Due to dust concerns, blowers and compressed air are prohibited. Prior to turnover, the Construction Manager shall review and accept metal deck cleanliness.
13. This Subcontractor shall provide snow/ice removal as required to perform the work of this trade. Provide all preheating of welds, covering etc. to work during winter conditions. Site Access/egress snow removal will be by Sitework Subcontractor.
14. The Sitework Subcontractor (BP #09) shall provide 5 crane pads (40'x40'each of 12" crushed stone). This Subcontractor shall coordinate locations and sizes with the Sitework Subcontractor. This subcontractor shall furnish & install their own additional pads, and any cribbing, dunnage, etc. that may be required for their crane set-up and steel erection.
15. This Subcontractor shall coordinate with the Owner's Special Inspections Testing Agency (TBD) as required per the plans and specifications including those referenced in The Statement of Special Inspections. This Subcontractor shall provide the Construction Manager with seventy-two (72) hour advance notice for all required inspections. This subcontractor shall provide means for the inspector to access work, including but not limited to appropriate lifts, ladders, scaffold, etc.
16. This Subcontractor shall furnish and install decking with support framing for a 6' x 6' Slab-On-Deck mock-up for firestopping penetrations.
17. This subcontractor shall provide PE stamped drawings, calculations, & all delegated design as indicated in the contract documents.
18. This subcontractor shall design, furnish, & install the roof safety tie off system. For an example see sheet A103D.
19. This subcontractor is responsible for pulling all permits as required for their scope of work. Any filing of permits associated with this scope to be performed by this subcontractor including associated filing fees to be paid by this subcontractor, permit fees by others.

20. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to cleanup general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)
21. This Subcontractor shall furnish and install "Safe-T-Strap" systems in accordance with Turner Safety Additional Provisions.
22. This Subcontractor shall provide holes in structural steel required by other trades including, but not limited to the Gymnasium folding partition, Auditorium rigging beams, etc. Coordinate work with applicable Subcontractors. Include 20 shop installed beam penetrations (assume no plate reinforcing required) with maximum diameter of 4", location TBD.
23. This subcontractor shall remove the fall protection at the level two slab on grade areas for the entire length of the retaining installed by the Concrete subcontractor prior to the installation of metal decking adjacent to this area.
24. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
25. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
26. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
27. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

050805 Factory-Applied Coatings for Metal

28. This Subcontractor shall furnish and install all hot-dipped galvanized structural steel as shown on the contract drawings, and as specified and required for complete systems regardless of details shown on drawings. This subcontractor shall include high performance factory applied primer and color topcoat, including but not limited to the structural members indicated on the GC series of drawings.
29. This subcontractor shall repair any damage to the applied steel coatings that occurs during the course of delivery, rigging, and installation. Welds made on architecturally exposed steel shall be ground smooth by this subcontractor for finishes. This Subcontractor shall also provide field touch up of galvanizing due to field welds and areas adjacent to welds as required.
30. This subcontractor shall furnish & install mock-ups of all exposed steel finishes, including but not limited to colored galvanized steel.

051200 Structural Steel Framing

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP12 – Structural Steel
Dated: 07.08.2024
Revised: 09.30.2024

31. This Subcontractor shall be responsible to furnish and install all Structural Steel and Exterior Wall Support Steel Work on the Structural & Architectural Drawings as required for complete systems regardless of detail, unless otherwise specifically called out in this scope of work. This work shall include, but not be limited to, all structural steel, angles, braces, bent plates, HSS steel framing, HSS steel posts, hung lintels, deck support angles, support angles bolted to CMU, embeds, fasteners, accessories including shims, clips, bolts, and studs, etc. This Subcontractor shall **exclude** loose lintels not attached to structural steel unless specifically called out in this scope of work.
32. This Subcontractor shall be responsible for designing, furnish and install all steel connections unless noted otherwise.
33. This Subcontractor shall be required to coordinate all Structural Steel Work with all other Subcontractors having work adjacent to or connecting to the Structural Steel Scope of Work.
34. This Subcontractor shall furnish all anchor bolts and other embedded items that are required for this scope of work. These are required to be on site at the start of the concrete operation with a complete set of layout drawings and templates. This Subcontractor shall coordinate with the Concrete and Masonry Subcontractors and the project schedule for the timing of this work. This Subcontractor shall document transfer of care and custody of embedded items to the Concrete and Masonry Subcontractor's and provide the Construction Manager with a copy upon request. This subcontractor is solely responsible for the care & custody of their materials.
35. This subcontractor must field verify & confirm that all cast in and embed layout & types are correctly installed before & after concrete or grout placement. This survey must be performed prior to the start of Structural Steel erection, by a licensed registered surveyor and be independent of any other survey performed by the Concrete Subcontractor. Notify the Construction Manager in writing of any deviations so that corrections can be made in ample time so as not to delay the Structural Steel erection.
36. This Subcontractor shall provide all necessary survey layout, etc. in order to properly perform their work. This includes, but is not limited to, a preconstruction survey for areas where interfacing with existing construction occurs. Surveys shall be submitted before related shop drawings are prepared. All Surveys shall be performed by a licensed surveyor or by Total Station as modeled.
37. This Subcontractor shall provide a Certified Survey of the plumbness of all columns as well as the elevations of all the column splices for submission to the Engineer & Turner to document compliance with Specifications.
38. This Subcontractor shall provide a Certified Survey of all framing members and metal deck, including but not limited to their elevations and indication that they are installed per allowable tolerances, for submission to the Engineer & Turner to document compliance with Specifications including prior to concrete placement where applicable.
39. This Subcontractor shall be responsible for providing framed openings in structural slabs. For example, refer to typical details on Drawing S400.
40. This subcontractor shall furnish & install all dunnage steel for mechanical equipment per the contract documents.
41. This subcontractor shall furnish & install all steel stub-ups for the louvered roof screens, for example see detail 12 on S410, coordinate final locations with exterior wall subcontractor.
42. This subcontractor shall furnish & install all lateral framing indicated on the contract drawings, including but not limited to all lateral brace frame connections (for examples see S500 & S501).
43. This subcontractor shall furnish & install temporary erection bracing as needed for all structural steel.

44. This Subcontractor shall furnish and install all support steel (i.e., channels and angles) and deck reinforcing / support (i.e. bent plates) required. For example, refer to the details on the S400 series of drawings. This Subcontractor shall coordinate with the Exterior Wall, Roofing and MEP Subcontractors for installation requirements. This subcontractor must confirm all steel is fully coordinated with the exterior wall prior to installation.
45. This Subcontractor shall coordinate steel coatings such as spray-on fireproofing, intumescent paint, thermal coatings, or concrete encasement with associated trades for primer requirements per the project specifications. Reference fireproofing plans for locations.
46. This Subcontractor shall coordinate with the painting specifications for steel that is exposed to view regarding paint finish. This Subcontractor shall coordinate with partition plans for steel columns exposed to view and shall be conscience of where factory labeling is placed so as not to require additional prep work by the painter.
47. This Subcontractor shall stencil column identification on all columns on all 4 sides approximately 7-8 ft. above floor. Stencils shall be in inconspicuous locations and compatible with finish and fireproofing material on columns. The stencil marks must be a minimum of 6" tall. Coordinate final locations during shop drawing submission.
48. This subcontractor shall make all pour stops and supplemental support steel adjustable to allow for flexibility during installation where possible and allowed / approved by the design team & the EOR.
49. This subcontractor shall furnish & install all steel supports required for the exterior wall mock-up shown on A315, including but not limited to HSS members, steel angles, connections, etc. Members required should be the same as those shown in similar permanent steel details, such as hung lintels.
50. ~~This subcontractor shall furnish & install bituminous paint on structural steel members as indicated in the contract documents, for example see detail 4 on S200.~~
51. This subcontractor shall furnish & install all CMU supports that are required to be welded to structural steel, including but not limited to angles, bent plates, epoxy anchors into CMU, etc. This subcontractor shall coordinate with the Mason (BP #11) for layout of supports. For an example see detail 1A on A605.
52. This subcontractor shall furnish & install the Auditorium rigging beams, including not limited to connections to the roof joists. For examples see S301D and detail ~~6~~ 5 on S402. This subcontractor must coordinate layout and locations of the rigging beams with the Theatrical Lighting Subcontractor (BP #38) and Theatrical Equipment Subcontractor (BP #31).

052100 Steel Joist

53. This Subcontractor shall design, furnish, and install all steel joists as shown on the contract drawings, and as specified and required for complete systems regardless of details shown on drawings.

053100 Steel Decking

54. This Subcontractor shall design, furnish, and install all steel decking as shown on the contract drawings, and as specified and required for complete systems regardless of details shown on drawings. The metal deck must be able to accommodate and be compatible to receive SOFP and or painted finish per the contract documents.

55. This Subcontractor shall furnish and install all metal deck & composite deck components for a complete floor system including but not limited to shear studs, connectors, flashings, metal closures, concrete stops, accessories, and fittings.
56. This subcontractor shall furnish & install acoustical insulation within flutes of acoustical metal deck to provide a complete acoustical deck system. This subcontractor must coordinate with the Roofing Subcontractor, General Trades, and MEP subcontractors to ensure there are no compatibility issues or conflicts.
57. This Subcontractor shall furnish and install roof drain sump pans. Coordinate installation locations of roof sump pans with Plumbing Subcontractor.
58. This Subcontractor shall deck over all framed openings, and coordinate & remobilize to cut the decking back for the MEP Subcontractors prior to the start of their MEP installations.
59. This Subcontractor shall survey perimeter pour stops with Total Station prior to deck pours and provide written confirmation to the construction Manager that all pour stops are within allowable tolerances.
60. This Subcontractor shall include metal deck layout and thickness so that shoring during of the deck is not required during concrete placement.

055000 Metal Fabrication

61. This Subcontractor shall furnish all loose bearing and leveling plates that are required for this scope of work. These are required to be on site at the start of the concrete operation with a complete set of layout drawings and templates. This Subcontractor shall coordinate with the Concrete and Masonry Subcontractor (BP #10 & 11) and the project schedule for the timing of this work. This Subcontractor shall document transfer of care and custody of embedded items to the Concrete Subcontractor and provide the Construction Manager with a copy upon request.
62. This Subcontractor shall furnish and install all steel required for the support of the exterior wall and window systems, including but not limited to HSS tubes, angles, bent plates, channels, hung lintels, etc. For example, see structural details on S410 through S430 and architectural detail 2A/A641.

072163 Fluid-Applied Insulative Coating

63. This Subcontractor shall furnish and install all spray-applied insulative coating systems for structural steel as shown on the contract drawings, and as specified and required for complete systems regardless of details shown on drawings, including but not limited to primer, insulative coating, and topcoat. For examples of where this system is required see the GC series of drawings and detail 2B on A521.
64. This subcontractor shall repair any damage to the applied steel coatings that occurs during the course of delivery, rigging, and installation.

D. Safety - See Safety Additional Provisions

1. This Subcontractor shall furnish & install (2) temporary stair towers for means of egress during construction. Stair towers to provide access to all floor levels and the roof.
2. This subcontractor shall furnish & install a scaffold platform at the deck height of their trailers for unloading steel. This platform must include adequate stairs for access.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP12 – Structural Steel
Dated: 07.08.2024
Revised: 09.30.2024

3. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible to remove snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.
4. This Subcontractor shall provide a site-specific plan on how they will comply with Turner's Ladder's Last Program.
5. This subcontractor shall ensure that any Lulls used on site are equipped with hydraulic fork positioners.
6. This subcontractor shall engage a 3rd Party to complete a GPR Survey to mark out existing utilities under and in the general area of any proposed Mobile Crane locations.
7. This Subcontractor shall ensure all connections involving washer plates are made final while the steel is still supported by the crane. Washer plates must be installed at the time of initial connection at all slap connections.
8. This Subcontractor shall furnish and install at locations of Structural Steel Framing, a complete safety cable guardrail system around all elevators, stair shafts and any openings of size 2 inches x 2 inches or greater and the entire building perimeter at each level including the ground floor and any other locations with elevation changes of more than 4 feet. A reusable guardrails system shall be of equal performance or greater than Perimeter Protection Products system. The posts shall be installed no more than ten feet apart. The post shall be "reusable type system" with adjustable cable guides. The cable heights of 42 and 21 inches must be maintained by this subcontractor. **Perimeter and shaft way beams that are to receive posts shall be hole punched in the fabrication shop and the under-mount post receiver is to be welded under the flange at the fabrication shop and shipped to the job ready for post installation.** Steel columns will be equipped with column clips of adjustable type to facilitate cable heights on column. Be sure to coordinate enough length into the posts in order to maintain rail height at the finish floor level and the finished roof elevation. Posts will need to be longer than 42 inches to accommodate the concrete thickness of the finished slabs and the composite roofing thickness. The Perimeter Protection Products 5'-6" post is to be used. This Subcontractor to install the cables into the posts and they shall be terminated by 3 appropriately sized and spaced forged steel wire rope clips (Crosby or equal) torqued to manufacturers specifications. The minimum allowable cable size will be 3/8ths only if aircraft rated cable is used. The perimeter cable system is to include turnbuckles spaced at no more than every three (3) columns. This Subcontractor is to inspect and maintain all guardrails on a daily basis until Structural Steel Work is complete and this subcontractor has demobilized from the site. Daily inspections shall be documented. Removal of safety cabling systems will be by others. This Subcontractor to incorporate four (4) material loading areas independent of perimeter protection with removable cables and tie-off points for three (3) workers. These material loading areas are to be located by Turner's Superintendent.
9. This subcontractor shall include furnish and install an additional (20) 3"x3" angle post welded at designated access points by Turner to secure temporary rails.
10. This Subcontractor shall detail and fabricate beam connections and column splices for safe erection as outlined in OSHA 1926, Subpart R, Section 1926.756 (c)(1). Include all costs for engineering and detailing as required. There shall be NO double live connections at columns or beams.
11. This Subcontractor shall furnish, install and maintain at all shaft openings at every other level debris net capable of supporting a person for the purposes of fall arrest and left in place. Nets shall be inspected daily until this contractor demobilizes from the site.

12. This Subcontractor is required to prevent and contain all slag from hitting the ground and levels below. Flame resistant blankets and other suitable means are acceptable.
13. This subcontractor shall furnish and install all stairways in pace with the erection of each floor. All stairways will be shipped to the project with the necessary tread infills attached. The interior guardrails are to be installed in pace with the erection of each floor.
14. This Subcontractor shall investigate and review deck/beam capacity prior to loading any floors with its materials and provide an engineered loading plan/drawing. This may include additional supports required to utilize any floor/deck and or identifying specific areas that can be utilized to pick from. This plan should account for tripping of columns not to exceed or point load structural assemblies. Loading plan must be reviewed and approved by the structural engineer prior to delivery. Post material loading specs on each floor and at location of a critical nature.
15. This Subcontractor shall provide all new rigging at the start of the project. Monthly documented inspections of all rigging shall be completed by this Subcontractor and provided to Turner upon request.
16. This Subcontractor shall provide a man basket on site at all times during the scope of work. The basket shall comply with all Turner and OSHA requirements and a test pick shall be performed once a week.

E. Exclusions

1. Demolition of existing structure (by Demolition Subcontractor, BP #08)
2. CFMF exterior wall clip / slip connections to base building steel (by General Trade Subcontractor, BP #21)
3. Furnishing and installing of loose lintels (by Masonry Subcontractor, BP #11)
4. Typical CFMF Seismic Restraint Details at Tops of Masonry Walls (By Masonry Subcontractor, BP #11), for an example see detail 1B on A605.
5. Expansion & Seismic joints (by Concrete, Roofing, and Exterior Wall Subcontractors (BP #10, 15, 19)
6. Exterior bollards (by Sitework Subcontractor, BP #09)
7. Steel for Street Signage, for example details 4, 5, & 6 on S212 (by Misc. Metals Subcontractor BP #13)
8. Miscellaneous Metals (by Miscellaneous Metals Subcontractor, BP #13), such as the metal stairs, elevator pit ladders, elevator hoist beams, areaway grating, vanity supports, overhead coiling door supports, Street sign framing (S212), and elevator pit ladders.
9. Exterior chain link fence (by Sitework Subcontractor, BP #09)
10. Roof screen at rooftop MEP equipment (by Roofing Subcontractor, BP #15)
11. Grouting of elevator sill angles, column baseplates, and beam bearing plates (by Concrete Subcontractor, BP #10)

F. Logistics and Schedule

1. This subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

G. Unit Prices

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP12 – Structural Steel
Dated: 07.08.2024
Revised: 09.30.2024

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

Unit Prices:	**Amount**
Refer to Form of Proposal	

H. Alternate Prices

The following Alternate Prices reflect the work of this bid package under which the bid proposal was ***submitted, and these alternates shall remain valid for the life of the project and include all costs for a*** complete installation.

Alternates:	**Amount**

BP13 – Miscellaneous Metals
Dated: 07.08.2024
Revised: 10.21.2024

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***BP #13 Miscellaneous Metals Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***BP #13 Miscellaneous Metals Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
055100	Metal Stairs
057000	Decorative Metal Railings
057100	Monumental Metal Stairs

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Bid Package Specific Scope

General

2. This Subcontractor shall include all 3D modelling in accordance with Turner's BIM Coordination Additional Provisions; this shall also include modeling all miscellaneous metals steel that is part of this subcontractor's scope of work. This subcontractor is responsible to coordinate with all the MEP trades and resolve any conflicts or coordination issues.
3. This Subcontractor is aware that this is a High-Performance Building and submittals should be submitted according to these standards. This Subcontractor has included all costs associated with meeting these requirements as set forth in the Division 1 Specifications.
4. This Subcontractor will provide the necessary written documentation for meeting the CT High Performance requirements as outlined in the Division 1 specifications.
5. This Subcontractor is responsible for distributing material to all floors as required and its protection from damage during delivery, handling, storage, and installation.
6. Temporary power will not be available for Misc Metal installation. It is agreed and understood that this Subcontractor shall utilize gasoline-powered welders or similar in order to perform the welding associated with erection of the Misc. Metal for this Project. In addition, this Subcontractor shall assume that temporary electric will not be available for this Subcontractor's use during steel erection. This Subcontractor shall include the use of generators as required for the duration of their Work.
7. Prior to entering the site this Subcontractor shall submit all fitness for use / inspection certifications required for cranes to the Construction Manager. This Subcontractor shall be responsible for all crane permits for his work. This matter is a very important safety requirement to follow and no crane will be allowed to be used unless this paperwork is submitted and up to date. There shall be a pre-planning meeting prior to erecting the crane on site.
8. This Subcontractor shall be responsible for ordering, scheduling and sequencing of steel deliveries required for the work. This shall include any premium time.
9. No truck parking/idling is allowed on streets adjacent to project site while waiting to unload. This Subcontractor shall include accommodations as required to adhere to "just in time" deliveries. Refer to Turner's "Logistic Plans – Scope of Work" for delivery restrictions.
10. This Subcontractor shall include all costs for two (2) round trip inspection visits for two (2) individuals at the structural steel fabrication plant. These costs should include travel, meals, lodging, and round-trip airfare if necessary, from Greenwich, CT.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP13 – Miscellaneous Metals
Dated: 07.08.2024
Revised: 10.21.2024

11. This Subcontractor shall review, conform to, and furnish and install all requirements included in the Safety Additional Provisions included in this Agreement. This Subcontractor understands that this document is project specific, and all provisions must be included in this Subcontractor's bid.
12. This Subcontractor shall perform all field touchup of finishes as it relates to this scope of work.
13. This Subcontractor shall provide snow/ice removal as required to perform work of this trade. Provide all preheating of welds, covering etc. to work during winter conditions. Access /egress snow removal will be by Sitework Subcontractor. This subcontractor shall provide breakout pricing for Weather Protection in Application for Payment.
14. This subcontractor shall furnish & install their own pads, cribbing, dunnage, etc. that may be required for the rigging associated with the Miscellaneous Metals scope of work.
15. This Subcontractor shall coordinate with the Owner's Special Inspections Testing Agency (TBD) as required per the plans and specifications including those referenced in The Statement of Special Inspections. This Subcontractor shall provide the Construction Manager with a minimum of seventy-two (72) hour advance notice for all required inspections. This subcontractor shall provide means for the inspector to access work, including but not limited to appropriate lifts, ladders, scaffold, etc.
16. This subcontractor is solely responsible for the care & custody of their materials.
17. This subcontractor shall provide PE stamped drawings, calculations, & all delegated design as indicated in the contract documents.
18. This subcontractor is responsible to pull all permits as required for their scope of work. Any filing of permits associated with this scope to be performed by this subcontractor including associated filing fees to be paid by this subcontractor, permit fees by others.
19. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to cleanup general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)
20. This Subcontractor shall coordinate all Miscellaneous Metals with all other Subcontractors having work adjacent to or connecting to the Miscellaneous Metals scope of work.
21. This Subcontractor shall provide holes in Miscellaneous Metals required by other trades including, but not limited to the, vanity supports, etc. Coordinate work with applicable Subcontractors.
22. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
23. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
24. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.

25. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

050805 Factory-Applied Coatings for Metal

26. This Subcontractor shall furnish and install all hot-dipped galvanized Miscellaneous Metals as shown on the contract drawings, and as specified and required for complete systems regardless of details shown on drawings.

27. This subcontractor shall repair any damage to the applied steel coatings that occurs during the course of delivery, rigging, and installation. Welds made on architecturally exposed steel shall be ground smooth by this subcontractor for finishes. This Subcontractor shall also provide field touch up of galvanizing due to field welds and areas adjacent to welds as required.

055000 Metal Fabrication

28. This Subcontractor shall design, furnish and install all miscellaneous metals, including but not limited to vanity supports, basketball hoop support steel, metal ladders, elevator hoist beam, elevator sump pump grating, gymnasium dividing partition support, etc. Note miscellaneous support steel framing includes framing and supports that are not specified in other specification sections but required for installation and are indicated on the contract documents. This subcontractor must coordinate with all other trades that are being supported by the miscellaneous metal.
29. This subcontractor shall furnish & install all necessary miscellaneous metals components, including but not limited to all connections, bearing plates, anchor bolts, embeds, etc. This subcontractor must coordinate with the concrete and or masonry subcontractor regarding embed layout and transfer of care & custody of these embedded components.

30. This Subcontractor shall be responsible to design, furnish and install all miscellaneous metals unless noted otherwise. This Subcontractor shall also be responsible to design, furnish and install all miscellaneous metals connections unless noted otherwise.

31. This subcontractor shall furnish & install miscellaneous metal support beams as needed for the divider curtain partition in the Gym.
32. This subcontractor shall furnish & install miscellaneous steel supports for the basketball hoops at the Gym.
33. This subcontractor shall furnish & install roof hatch ladders. For an example see A102C and A103C. Roof hatches themselves shall be **excluded** by this Subcontractor, as they will be furnished and installed by the roofing subcontractor.
34. This Subcontractor shall furnish and install the elevator sill support angles at each floor required but may not be shown on drawings.
35. This Subcontractor shall furnish and install the elevator hoist beam. This Subcontractor shall coordinate size and installation with Elevator Subcontractor.
36. This Subcontractor shall furnish and install the elevator sump pit covers and supports.

37. This Subcontractor shall furnish and install the elevator pit ladder.
38. This subcontractor shall furnish & install all radon pit framing, including but not limited to angles, deck, etc. See Detail ~~3~~ 2 on S201 on sheet for an example. The radon pit framing must be expedited to not delay underground work and placing the slabs on grade per the contract schedule. Coordinate piping requirements with Plumbing subcontractor.
39. This subcontractor shall furnish & install all steel framing, components, and connections necessary for the street signage. For examples see details 4, 5, & 6 on S212. This subcontractor must coordinate with the signage subcontractor prior to creating shop drawings, engineering, furnishing & installing.
40. This Subcontractor shall furnish all loose bearing and leveling plates that are required for this scope of work. These are required to be on site at the start of the concrete operation with a complete set of layout drawings and templates. This Subcontractor shall coordinate with the Concrete and Masonry Subcontractor and the project schedule for the timing of this work. This Subcontractor shall document transfer of care and custody of embedded items to the Concrete Subcontractor and provide the Construction Manager with a copy upon request.

055100 Metal Stairs, 057000 Decorative Metal Railings, & 057100 Monumental Metal Stairs

41. This Subcontractor shall design, furnish, and install all metal stairs, all guardrails and all handrails as complete systems, as shown on the contract documents and as specified. This shall include the appropriate design calculations for the stairs, railings, guardrails, and all supplemental support steel required beyond the structural members indicated on the contract documents.
42. This subcontractor shall design, furnish & install all connections required for metal stairs, handrails, guardrails, etc., including but not limited to any supplemental steel that may be required.
43. This subcontractor must expedite Stair 1 & Stair 2 per the contract schedule so that these stairs can be utilized for construction access and egress.
44. This subcontractor shall repair any damage to the applied steel coatings that occurs during the course of delivery, rigging, and installation. Welds made on architecturally exposed steel shall be ground smooth by this subcontractor for finishes. This Subcontractor shall also provide field touch up of galvanizing due to field welds and areas adjacent to welds as required.
45. This subcontractor shall furnish & install mock-ups of all exposed steel finishes, including but not limited to stainless steel rails.

079200 Joint Sealants

46. This Subcontractor shall furnish and install all joint sealants related to the miscellaneous metals scope as shown on the contract drawings

D. Safety - See Safety Additional Provisions

1. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible for removing snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.

2. This Subcontractor shall provide a site-specific plan on how they will comply with Turner's Ladder's Last Program.
3. This subcontractor shall ensure that any Lulls used on site are equipped with hydraulic fork positioners.
4. This subcontractor shall engage a 3rd Party to complete a GPR Survey to mark out existing utilities under and in the general area of any proposed Mobile Crane locations.
5. This Subcontractor shall ensure all connections involving washer plates are made final while the steel is still supported by the crane. Washer plates must be installed at the time of initial connection at all slap connections.
6. This Subcontractor shall furnish, install and maintain at all shaft opening for stairs at every other level debris nets capable of supporting a person for the purposes of fall arrest and left in place. Nets shall be inspected daily until this contractor demobilizes from the site.
7. This Subcontractor is required to prevent and contain all slag from hitting the ground and levels below. Flame resistant blankets and other suitable means are acceptable.
8. This subcontractor shall furnish and install all stairways in pace with the erection of each floor. All stairways will be shipped to the project with the necessary tread infills attached. The interior guardrails are to be installed in pace with the erection of each floor.
9. This Subcontractor to investigate and review deck/beam capacity prior to loading any floors with its materials and provide an engineered loading plan/drawing. **This may include additional supports required to utilize any floor/deck and or identifying specific areas that can be utilized to pick** from. This plan should account for tripping of columns not to exceed or point load structural assemblies. The loading plan must be reviewed and approved by the structural engineer prior to delivery. Post material loading specs on each floor and at location of a critical nature.
10. This Subcontractor shall provide all new rigging at the start of the project. Monthly documented inspections of all rigging shall be completed by this Subcontractor and provided to Turner upon request.

E. Exclusions

1. Demolition of existing structure (by Demolition Subcontractor, BP #08)
2. Furnishing and installing of loose lintels (by Masonry Subcontractor, BP #11)
3. Typical Seismic Restraint Details at Tops of Walls Under Metal Deck (By Masonry & Steel Subcontractors, BP #11 & 12)
4. Expansion & Seismic joints (by Concrete, Roofing, and Exterior Wall Subcontractors (BP #10, 15, 19)
5. Exterior bollards (by Sitework Subcontractor, BP #09)
6. Structural Steel (by Structural Steel Subcontractor, BP #12), such as the floor framing, roof joists, lateral bracing, and mechanical equipment dunnage
7. Concrete fill at stairs (by Concrete Subcontractor, BP #10)
8. Exterior fence & rails (by Sitework Subcontractor, BP #09)
9. Roof screen at rooftop MEP equipment (by Roofing Subcontractor, BP #15)

10. Grouting of elevator sill angles, column baseplates, and beam bearing plates (by Concrete Subcontractor, BP #10)
11. Overhead Coiling Door Supports (by General Trades BP #21)

F. Logistics and Schedule

1. This subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

G. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for a complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

Unit Prices:	Amount
Refer to Form of Proposal	

H. Alternate Prices

The following Alternate Prices reflect the work of this bid package under which the bid proposal was ***submitted, and these alternates shall remain valid for the life of the project and include all costs for a*** complete installation.

Alternates:	Amount
Refer to Form of Proposal	

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#15 – Roofing
Dated: 07.08.2024
Revised: 10.21.2024

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Roofing Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***Roofing Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
07 5423	Thermoplastic Membrane Roofing
07 7100	Roof Specialties
07 7200	Roof Accessories

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

DIV 01	Division 01 – General Requirements
07 6200	Sheet Metal Flashing and Trim
07 9513	Expansion Joint Cover Assemblies

Bid Package Specific Scope

1. This Subcontractor shall include all hoisting/rigging/scaffolding required for this scope of work.
2. This Subcontractor shall include all Sustainability requirements, including but not limited to CTHB Documentation.
3. This Subcontractor shall be responsible for maintaining fall protection at all Roofs for the duration of the project and fall protection removal (including removal of fall protection installed by Steel Bid Package). This Fall Protection plan shall be coordinated with Turner Safety. This Subcontractor shall also furnish and install engineered temporary tie-off points per Safety Ad pros.
4. This Subcontractor shall furnish and install all roofing systems in their entirety for a complete watertight system as shown on the Contract Documents, including but not limited to, protection board, vapor barrier, insulation, rubber membrane, metal flashings, copings, all necessary accessories i.e. walk pads, boots pitch pockets etc.
5. This Subcontractor shall include all sealants as required for a complete watertight system. This Subcontractor shall ensure the compatibility of the sealants with adjacent materials.
6. This Subcontractor shall furnish and install temporary watertight covers for all MEP curbs. These must be fastened to the curb.
7. This Subcontractor shall coordinate with ~~these~~ Masonry, Drywall, MEP, Glass & Glazing, Misc. Metals, etc. trades to confirm proper protection. This Subcontractor shall also spot check protection provided by other trades and report to TCCo any lack of or inadequate protection.
8. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
9. This Subcontractor shall include following **Trade Allowance:** 3,008 sf of ¾" pressure treated plywood (94 – 4x8 sheets) for temp roof protection as directed by TCCo Superintendent.
10. This Subcontractor will provide a final sweep and washdown of the roof at the end of each phase. This will include but not be limited to cleaning debris out of the drains and removing any soiling from the roof membrane. Review when complete with TCCo for acceptance.
11. This Subcontractor shall include the following **Trade Allowance**: 160 hours for 5S, Safety & protection and logistics including temporary measures for watertight as directed by TCCo Superintendent. Laborer Time to be included as journeyman rate including any required supervision. This will be billed based on the final agreed contractual wage rates and may only be expended by written authorization of Turner Construction and any unspent portion of this unused scope hours will be credited at the end of your contract based on approved labor rate.
12. This Subcontractor shall be responsible to review the contract documents and compare the materials and procedures with the manufacturer's recommended details and procedures and shall report any discrepancies to Turner and the Architect prior to beginning any work.
13. This Subcontractor shall include securing the perimeter of the roof temporarily if the parapet is not installed by the time the roof is installed, and a comeback to seal to the parapet.

14. Furnish and install any requirements shown on the contract documents for the Future PV Array system.
15. This Subcontractor shall furnish and install all mock-ups required for this scope of work per the contract documents, for example as shown on Drawing A-315.
16. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to clean up general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)
17. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
18. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
19. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
20. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

Spec. 07 5423 Thermoplastic Membrane Roofing

21. This Subcontractor shall furnish and install all TPO Roofing as shown on the contract documents for a complete system, including but not limited to Roofing Membrane and associated materials, coverboards, air vapor barriers, insulation, fasteners, sealants, walkway pads, etc.
22. This Subcontractor shall furnish and install flexible walkways per the contract documents. Include an additional 100’ of flexible walkway to be used at the discretion of the Turner Superintendent. This subcontractor will be responsible to protect the roof from damage and dirt and perform the work in a sequence that will keep the new roof clean.
23. This Subcontractor shall furnish all the standard, special, finish, etc. warranties identified in the specifications.
24. This Subcontractor shall furnish and install counterflashing, termination bar, and extended roofing system at skylight, for example as shown on 3B/A522.
25. This Subcontractor shall exclude furnish and install roof wood blocking, including but not limited to plywood, wood blocking, expansion joint blocking, wood curb blocking, etc. By BP #21 (Drywall & General Trades).

Spec. 07 7100 Roof Specialties

26. This Subcontractor shall furnish and install all roof specialties as required per contract documents, including but not limited to roof edge flashing, copings, fascia, expansion joint covers, scuppers, gutter & downspouts, and conductor heads.

27. This Subcontractor shall furnish and install all movement joints, including but not limited to, Roof to Roof and Roof to Exterior Wall, for a complete system as shown in the Contract Documents; for example, as shown on 2D/A530.
28. This Subcontractor shall furnish and install all movement and expansion joints for the roofing systems, for example as shown on 3E/A531. This Subcontractor shall coordinate with other trades for a complete system - BP #12 Structural Steel to furnish and install steel angles and BP #21 General Trades to furnish & install wood blocking & curb.
29. This Subcontractor shall furnish and install roof coverboard, roofing system, and stainless-steel sill pan at the Roof Louver Box Detail 1B/A531. Plywood sheathing, louver, CFMF, and insulation by BP #21 Drywall and General Trades.
30. This Subcontractor shall furnish and install thru-wall scuppers, for example as shown on 5E/A531.

Spec. 07 7200 Roof Accessories

31. This Subcontractor shall furnish and install all roof accessories per contract documents, including but not limited to roof hatches, smoke vents, curbs, metal covers, safety rail system, roof ladder safety post, pipe portals, pipe box, etc,
32. This Subcontractor shall furnish and install roof hatches with corresponding extended roof system as shown on contract documents, for example as shown on 1C/A530. Wood blocking by BP #21 Drywall and General Trades.
33. This Subcontractor shall furnish and install pipe portal system as shown on contract documents for a complete system, for example 5B/A530, 5D/A530 and 5E/A530.

Spec. 07 6200 Sheet Metal Flashing and Trim

34. This Subcontractor shall furnish and install all sheet metal flashing and trim at roofs as shown on contract documents, including but not limited to flashing of all roof penetrations and all MEP Curbs.
35. This Subcontractor shall furnish and install rainwater leader and custom fabricated galvanized bent plate, for example detail 3E/A511.

Add'l Items

36. This Subcontractor shall furnish and install all roofing systems of the front signage as shown on documents, including but not limited to membrane roof system, scupper, and fascia, for example as shown on 4D/A924.
37. This Subcontractor shall furnish and install all components of the Roof expansion joint shown on details on drawing A520 including but not limited to all Stainless Steel flashing, compressible insulation, fire resistant materials.

D. Safety

1. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible to remove snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.
2. This Subcontractor shall provide a site-specific plan on how they will comply with Turner's Ladder's Last Program.

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#15 – Roofing
Dated: 07.08.2024
Revised: 10.21.2024

3. This subcontractor shall ensure that any Lulls used on site are equipped with hydraulic fork positioners.
4. This subcontractor shall engage a 3rd Party to complete a GPR Survey to mark out existing utilities under and in the general area of any proposed Mobile Crane locations.
5. This Subcontractor is to anticipate all moves on the roof and understand areas where fall protection may be required. In the event proper anchorage locations for fall protection do not exist it will be the responsibility of this Subcontractor to provide suitable anchorage points for their workers using Personal Fall Arrest Systems. A Site-Specific Fall Protection Plan including type of fall protection equipment, maintenance and use, fall hazard assessment, access and training of all employees involved with fall protection or work at heights. This must be submitted and documented with Turner Construction prior to beginning such work onsite.
6. This Subcontractor shall roof around and make watertight the temporary fall protection posts on all roofs and provide final termination of the roofing system once the posts are removed. This contractor shall remove and return the reusable perimeter guard railing system (installed by others), at all roof levels, in its entirety, including removing posts and all associated cables and hardware, wood and ensure roof is weather tight to allow for completion of the roofing system. This subcontractor shall maintain a standard guardrail system or other fall protection systems approved by the Turner Superintendent upon removing the reusable perimeter guard railing system.
7. This subcontractor shall ensure any fall protection roof flagging that is installed by this Subcontractor is adequate to accommodate all other trades working on the roof.
8. This Subcontractor shall provide necessary protection, whether existing or created by the Subcontractor, to prevent their employees and others from falling through holes, etc. Any hole or floor penetration 2 inches or greater in any dimension must be protected by a cover capable of supporting, without failure, at least twice the weight of employees, equipment, and material loads that may be imposed on the cover at any one time. Covers shall be secured when installed so as to prevent accidental displacement by the wind, equipment, or employees. All covers shall be color coded or they shall be marked with the word “Hole” to provide warning of the hazard. If for any reason this Subcontractor has to remove a cover it is their responsibility to replace cover, re-secure and mark. Caution or Danger Tapes shall not be considered as acceptable barriers.
9. This subcontractor shall ensure all flammable and combustible materials including but not limited to mop heads and solvent covered rags are removed from the site each day. Flammable/combustible materials will be properly stored in accordance with OSHA standards.
10. This Subcontractor shall provide all necessary means to prevent material from falling off the roof or scaffolding. Falling object protection below will be the responsibility of this Subcontractor.
11. This contractor shall ensure that a crane plan including crane layout, anticipated swing paths, loading calculations, etc. is provided for all crane picks. Preplanning meeting to be held at least 2 weeks before arrival of crane to the job site. A critical pick is any pick putting the crane at 75% of its rated lifting chart capacity and must include an approved Pre-Plan with Turner Construction.
12. This Subcontractor shall participate in a Safety preplanning meeting at least 4 weeks prior to the start of work. This subcontractor should be prepared to review Turner’s Safety and Health Program as well as their own including their Hazardous Communication Program. Logistical items to be discussed include crane layout and picks, kettle location, roof access, fire watch, material storage, fire prevention, crisis management plan, etc.

13. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible to remove snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.
14. This subcontractor shall provide (#) stair towers for access to all roofs on all buildings per the Turner Logistics Plans. This shall include all rental costs and daily/ per shift inspections by a competent person. This stair towers shall be 'Systems Scaffold' or equal. This shall extend to the roof and this Subcontractor shall include a walkway with rails to step off on to the upper roof. These shall Remain until all the trades have finished their work on these roofs.
15. This Subcontractor shall furnish, install, maintain and remove an engineered overhead protection system at (3) locations as protected building entrances.
16. This subcontractor shall furnish, install and remove (remove upon completion of all roof work) individual sets of temporary access stairs at all changes in roof levels exceeding 19 inches in height difference between the walking/working surfaces. This subcontractor will coordinate with the roofing subcontractor to adjust stair height and position to allow for permanent installation and access stairs to remain in service for access between roof levels. Each stair must meet OSHA stairways (1926.1052) requirements including handrails, guardrails (where a fall hazard exists), equal spacing of treads and anti-slip surface on stair surfaces and landings.
17. This Subcontractor shall provide a "Systems Scaffolding", or similar, stair tower at the exterior of the building structure, location to be coordinated with the Turner Superintendent onsite. This shall be erected allowing access to each level including the roof. This stair tower shall remain until at least one permanent stair has been installed and all work including stair pan infills, masonry and other work has been completed. Coordinate stair handrails and safety cables with stair layout and install cables at landings prior to stair removal. This subcontractor shall include all inspection and identification (red/green tags & sign off) associated with temporary work platforms and temporary access stairways per OSHA.

E. Exclusions

1. This Subcontractor shall exclude roof wood blocking (By BP#21 Drywall & General Trades)
2. This Subcontractor shall exclude skylight (By BP# 19 Glass, Glazing, and Metal Panels)

F. Logistics and Schedule

1. This subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

G. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for a complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Millwork & Casework Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***Millwork & Casework Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
06 2000	Finish Carpentry
06 4100	Architectural Wood Casework
06 4200	Wood Paneling
06 6116	Solid Surfacing Fabrications
09 7800	Interior Wall Paneling
10 1100	Visual Display Units
10 1416	Plaques
10 5502	Mail Sorter
12 3553.19	Wood Laboratory Casework
12 3600	Countertops

Bid Package Specific Scope

Millwork and Casework

1. This Subcontractor shall furnish a blocking schedule indicating the exact locations of all in wall blocking required for the installation of new millwork, casework, counters and other items furnished and installed by this Subcontractor. Any blocking not indicated on this blocking schedule will be the responsibility of this Subcontractor. The blocking schedule & associated submittals must be approved by the design team prior to the start of exterior wall framing.
2. This Subcontractor shall include field verification of all installation locations prior to fabrication. Any discrepancies shall be brought to the attention of Turner Superintendent immediately.
3. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates for the millwork.
4. This Subcontractor shall furnish and install all grommets in all counters as indicated. Coordinate exact locations with Owner Representative as located in the field. This Subcontractor shall include a 2nd mobilization for the installation of grommets in locations as required by the Owner.
5. This Subcontractor shall provide all cut outs in millwork cabinets, counters, etc. as required for the installation of items by others including, but not limited to, sinks, electrical devices, etc.
6. This Subcontractor shall be responsible for the shimming of the new millwork as required for a level and plumb installation. This Subcontractor shall include all field scribing as required for a tight installation.

7. This Subcontractor shall broom sweep the entire work area where millwork operations are occurring at the end of each shift. This subcontractor shall utilize "dust-less" equipment while on the project.
8. This Subcontractor shall furnish and install all wood blocking required outside the GWB. This shall include counters mounted to plywood and all wood cleats. In wall blocking to be furnished and installed by the Drywall Subcontractor.
9. This subcontractor shall provide all wood paneling, trim, etc. in the auditorium, for example as shown on details A111.7. This subcontractor shall also include all out of GWB blocking for example as shown on detail 4B A111.7.
10. This Subcontractor shall furnish and install all counter, seating, and shelf support brackets, including, but not limited to, Rakks brackets, continuous aluminum angles, etc. This subcontractor shall coordinate with the Drywall subcontractor.
11. This Subcontractor shall include the costs for three full days of OFS to perform touch-ups of millwork and existing items throughout the project space. Turner / Owner / Architect will provide a list of items requiring touch-up including, but not limited to, doors, millwork, existing items.
12. This Subcontractor shall furnish and install protection over all horizontal and vertical items supplied by this Subcontractor. This subcontractor shall assume all protection is plastic corrugated board (correx) and is to be installed on an angle to avoid installed work being used as a surface to place material on. This Subcontractor shall maintain while your forces are onsite and prevent damage from dust, subsequent work, storage of materials, etc. as approved by Turner. This subcontractor shall provide a protection plan to Turner prior to installation.
13. This Subcontractor shall coordinate with the plumbing, mechanical, electrical, fire protection, low voltage and security subcontractors for final connections and equipment mounting in and through casework.
14. This Subcontractor shall furnish and install all trim/filler/etc. pieces required at built in appliances shown at this casework.
15. This subcontractor shall furnish and install all countertops, solid surfaces, windowsills, etc. This subcontractor shall coordinate and install all required cut outs with the MEP subcontractors.
16. This Subcontractor shall include all metal integral to the millwork and casework including, but not limited to trim, reveals, base, louvers, shelf channels, etc.
17. This Subcontractor shall include all glass integral to the millwork and casework including, but not limited to, shelves, sliding doors, etc.
18. This subcontractor shall furnish and install all display cases and all associated components, for example as shown on details 2E & 3E A805. This subcontractor shall include but not limited to all wood trim, ¾" plywood, shelving, glass, clad plywood, hardwood veneer, out of wall blocking/ shimming, etc. BP21 Drywall to install all framing, gypsum wall board, in wall blocking, GWB trim, and ½" plywood.
19. This subcontractor shall furnish and install all wire management systems, for example as shown on 1E/A803.
20. This subcontractor shall furnish and install all metal trim TRM1 through TRM5 as indicated on the plans. This subcontractor shall coordinate this work with adjacent trades work.
21. This subcontractor shall furnish and install all wood railings, wood shelves, wood base and brackets, for example as shown on detail 4A and 5A A805.
22. This subcontractor shall furnish and install all wood slats, shelf channels, etc. for a complete system. For example, as shown on 1E A804.

23. This subcontractor shall furnish and install all whiteboards and tack boards per plans.
24. This subcontractor shall furnish and install all plaques as indicated on the plans.
25. This subcontractor shall furnish and install all sound absorbing wall panels. This shall include but not limited to all panels, clips, blocking, shimming, etc. to complete the system and install.
26. This subcontractor shall furnish and install all wood wall paneling, for example as shown on 2D A111.2.
27. This subcontractor shall furnish and install all wood benches for example as shown on 3B/A804, include wood framing for all wood bench supports.
28. This subcontractor shall furnish all Rakks brackets and any other brackets that are called out to be installed in wall. These are to be turned over to BP21 Drywall to install. For example, as shown on 5E/ A805 & 1B/A801.
29. This subcontractor shall furnish and install all support brackets out of wall for example as shown on 1C/A803.
30. This subcontractor shall furnish and install the plastic laminate fascia ¾" plywood laminated for example as shown on detail 2E/A211, include sealant and backer rod.
31. This subcontractor shall furnish and install all visual display boards and associated trim. For example, TRM3.
32. This subcontractor shall furnish and install all brackets, millwork etc. associated with the display shelfs. Concealed blocking by BP21 Drywall. For example, as shown on 5A/A805.
33. This subcontract shall furnish and install EQ11 Mail Sorter.
34. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
35. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
36. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
37. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.
38. This subcontractor shall provide all acoustical diffusion wall panels ADP1 & ADP2.

Joint Sealants

39. This Subcontractor shall furnish and install all caulk joints within and to the adjacent surfaces as required for the complete installation of their work. This includes, but is not limited to, new counters, cabinets, backsplashes, etc.

D. ***Exclusions***

40. This subcontractor shall exclude trash bins in millwork (By owner)
41. This Subcontractor shall exclude sound absorbing ceiling panels- SAC1- (By BP#22)
42. This Subcontractor shall exclude furnish and install of wood doors (Furnish by BP#20 & Install by BP#21)
43. This subcontractor shall exclude installing Rakks Brackets. (Install By BP#21) This subcontractor shall furnish only the rakks brackets.

E. **Safety - See Safety Additional Provisions**

F. **Logistics & Schedule**

1. This Subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

G. ***Unit Prices***

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for a complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Glass, Glazing, & Metal Panels Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***Glass, Glazing, & Metal Panels Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
DIV 00	Procurement and Contracting Requirements
DIV01	General Requirements
03 3250	Concrete Post-Installed Anchors
07 2100	Thermal Insulation
07 2726	Fluid-Applied Membrane Air Barriers
07 6200	Sheet Metal Flashing and Trim
07 9200	Joint Sealants
08 7100	Door Hardware
08 0671	Door Hardware Schedule
07 9513	Expansion Joint Cover Assemblies

Bid Package Specific Scope

1. This Subcontractor shall be responsible for all testing required per the drawings, specs, and state requirements.
2. This Subcontractor shall include all Sustainability requirements, including but not limited to CTHPB Documentation.
3. This Subcontractor shall include the cost of all surveying and layout (baseline survey to be provided by others).
4. This Subcontractor shall include field Measurement as required prior to fabrications. This Subcontractor shall have the responsibility to field verify dimensions of existing openings prior to start of fabrication. This Subcontractor shall also coordinate dimensions with other Subcontractors installing work adjacent to items installed under this Subcontract. This Subcontractor shall be required to attend multiple coordination meetings scheduled by Turner to review shop drawings, existing conditions and tie-in locations.
5. This Subcontractor includes all blocking, brackets, fixtures, shims, connections, and other items necessary for a complete system.

6. This Subcontractor shall include all cutting, coring, sleeving, & firestopping for penetrations relative to your trade for a complete system.
7. This Subcontractor shall furnish all the standard, special, finish, etc. warranties identified in the specifications.
8. This Subcontractor shall be responsible to remove any temporary protection at window/door openings to perform their work and ensuring its weather tight at the end of each shift.
9. This Subcontractor shall be responsible for the removal of all factory stickers, emblems, and grease pencil marks, etc. adhered to the glass or frames. Final cleaning of the glass is by others.
10. This Subcontractor shall install shims as necessary to align and support their work in the proper location. In no case shall the shims interfere with or protrude into the caulking assembly identified in the design documents.
11. This Subcontractor shall take precautions where dissimilar metals will contact each other or corrosive substrates and protect against galvanic action by painting contact surfaces with bituminous coating or by other permanent separation as recommended by fabricators or manufacturers of dissimilar metals.
12. This Subcontractor shall provide a complete operating system for scope of work.
13. This Subcontractor shall coordinate all work with all other Subcontractors having work adjacent to or connecting to the work of this Subcontract.
14. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
15. This Subcontractor shall provide engineering stamp drawings and calculations of all delegated design items as indicated on the contract drawings.
16. This Subcontractor shall furnish and install all mock-ups required for this scope of work per the contract documents, for example as shown on Drawing A-315.
17. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to clean up general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)
18. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
19. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
20. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
21. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#19 – Glass, Glazing, & Metal Panels
Dated: 07.08.2024
Revised: 10.21.2024

Exclusive Specifications

Spec. 07 4213.23 Metal Composite Material Wall Panels

22. This Subcontractor shall design, furnish and install metal composite wall panels as shown on documents for a complete system. This scope of work shall include, but is not limited to, clips, fastening and support required. This Subcontractor shall coordinate with BP #21 Drywall and BP #15 Roofing.
23. This Subcontractor shall include any internal supports for the metal panels as required to withstand the designed loads for the project.
24. This Subcontractor shall include full coordination of membrane flashing(s) and composite metal panels glazed into the window system as indicated.
25. This Subcontractor shall design, furnish and install Exterior Wall Assembly Type 07 & Type 06, including metal wall panel system, CFMF subgirt furring, fluid applied vapor barrier 4" Mineral Wool insulation, thermally broken wall bracket, CFMF "Z" Furring, and vertical L-girt. This Subcontractor shall exclude the wall back up, that includes the gypsum sheathing, CFMF, and gyp board, to be by BP #21 (Drywall & General Trades).
26. This Subcontractor shall design, furnish and install metal panels at soffits, including but not limited to Type S3 and Type S2. This scope of work includes metal composite panel, cold form metal hat channels, insulation, fluid applied membrane air and vapor barrier, and cladding support system. Gypsum sheathing and cold form metal framing hung from structure by BP #21 (Drywall and General Trades).
27. This Subcontractor shall exclude wood blocking at gym overhang, for example as shown on 4C/A521, by #21 (Drywall & General Trades).
28. This Subcontractor shall design, furnish and install metal panels at front signage as shown on documents, for example as shown on 5C/A924.

Spec. 08 4313 & 08 4413 Aluminum-Framed Storefronts & Glazed Aluminum Curtain Walls

29. This Subcontractor shall furnish and install all exterior and interior aluminum doors, door hardware, glazing and frames as indicated on the contract drawings for a complete operating system
30. This Subcontractor shall include coordination and make provisions to accommodate all raceways internal to the storefront and curtainwall system as required for others including but not limited to electrical, tele/data and security.
31. This Subcontractor shall furnish and install all security glazing and Bullet Resistant (BWSR) scope within storefronts and curtainwalls, including doors with corresponding hardware, glazing, and frame as shown on documents.
32. This Subcontractor shall design, furnish and install complete exterior and interior aluminum storefront & curtainwall systems. This Subcontractor shall include the engineering and performance criteria associated with the aluminum storefront & curtain wall systems as required by project specifications. All connections and reinforcement shall be indicated on the shop drawings. The scope of work shall include, but is not limited to, supports, angles, blocking, fasteners, cover pieces, anchorage & internal reinforcement as well as shadow boxes. For example, this Subcontractor shall provide anchorage at curtain wall header, as shown on 6C/A640.

33. This Subcontractor shall tie-in AVB into glazing pocket at required locations, for example, details as shown on drawing A641. Include stripping in AVB within all storefront and curtainwall pockets and minimum 1 foot overlap or per manufacturer minimum requirements on vertical face with adjacent work.
34. This Subcontractor shall furnish and install all extruded sunshade louvers per contract documents, including but not limited to finish, mounting brackets/sunshade clips, trims and sills, for example as shown on 1D/A640.

Spec. 08 6300 Metal-Framed Skylights

33. This Subcontractor shall design, furnish and install scheduled skylight system, including but not limited to support bracket, loose fill mineral wool, perimeter flashing, foam seal, and steel plate attachment, for a complete system per contract documents, for example as shown on 3B/A522. This Subcontractor shall coordinate skylight size, and design requirements with Roofer (BP #15) and Drywall (BP #21). Include AVB at perimeter of skylight per details.

Spec. 08 8000 Glazing

34. This Subcontractor shall furnish and install all glazing per contract documents. The scope of work includes, but is not limited to, windows, aluminum doors, glazed curtain walls, glazed entrances, interior borrowed lites, storefronts, security glazing, fire protection rated glazing, laminated glass interlayers and accessories, HM sidelites and transoms.
35. This Subcontractor shall furnish and install schoolguard glazing at required locations per contract documents. For example, as shown and noted on Aluminum Frame Elevations A630 – A632.
36. This Subcontractor shall furnish and install friction fit mineral wool insulation at all spandrel glazing for insulated coated spandrel glazing (ICS) per Glazing Graphic Legend A630 – A632.

Spec. 08 8300 Mirrors

35. This Subcontractor shall provide and install all glass mirror, for example as shown in Fitness Room. The scope of work shall include, but not limited to, blocking drawing, trim, edge sealer, mastic, fasteners, anchors and inserts.
36. This Subcontractor shall exclude toilet accessory mirror units, to be provided by BP#21 Drywall and General Trades.

Spec. 08 9100 Louvers

36. This Subcontractor shall furnish and install all interior and exterior louvers, for example as shown on roof plans and schedule on A610.
37. This Subcontractor shall exclude the louvered air return and doors.

Spec. 08 9200 Louvered Equipment Enclosures

38. This Subcontractor shall design, furnish and install all louvered equipment enclosures/louver screen wall as a complete system with specified finishes & color. This subcontractor shall provide louver screen panel, post, and post base plate, for example as shown on 1A/A531. This subcontractor shall exclude structural support post below post base for louver screen wall, by BP #12 (Structural Steel).

39. This Subcontractor shall furnish and install access gates, for example 3E/A516 and 4E/A516.
40. This Subcontractor shall provide delegated design submittals with Professional Engineer stamp as specified in 1.4-D & 1.4-C-1.

Shared Specifications

Spec. 07 2100 Thermal Insulation

41. This Subcontractor shall furnish and install thermal insulation between the work of this bid package both similar and dissimilar materials including but not limited to metal panels, insulated coated spandrel glazing, and skylights.

Spec. 07 2726 Fluid-Applied Membrane Air Barriers

42. This Subcontractor shall furnish and install fluid-applied where AVB terminates into scope furnished and installed by this subcontractor. Include stripping in AVB within all work provided by this subcontractor including but not limited to storefront and curtainwall pockets, louvers, skylight with a minimum of 1 foot overlap or per manufacturer minimum requirements with adjacent work.

Spec. 07 6200 Sheet Metal Flashing and Trim

43. This Subcontractor shall furnish and install sheet metal flashing and trim at perimeter, head, sill, and integral withing the work of this bid package both similar and dissimilar materials.
44. This Subcontractor shall include flashing at 3E/A522, similar to typical curtain wall at sill slab-on grade 3A/A641.

Spec. 07 9200 Joint Sealants

45. This Subcontractor shall provide and install all joint sealants, including but not limited to backer rod and sealant, within this subcontractors systems and between the work of this bid package both similar and dissimilar materials.
46. This Subcontractor shall be responsible for providing all compatibility tests for sealants to adjoining materials.

Spec. 08 7100 & 08 0671 Door Hardware & Door Hardware Schedule

47. This Subcontractor shall furnish and install all hardware associated with the aluminum (interior & exterior) doors as indicated on the contract documents. This Subcontractor shall provide construction cylinders for all doors. Furnishing of final cylinders & keying is by D/F/H Subcontractor; installation of final cylinders is by Drywall & General Trades Subcontractor. This Subcontractor shall coordinate with the Electrical Subcontractor for installation and power and security requirements.
48. This Subcontractor shall furnish and install the automatic door operators and the remote activation paddles, mag locks, etc. specified for the aluminum doors including but not limited to wiring, start up by manufacturers authorized vendor of all electrical hardware devices, testing, troubleshooting with security and fire alarm. This Subcontractor is responsible for all the low voltage wiring between the operator and the remote paddles. Coordinate with the Electrical Subcontractor for the line voltage connection to this system.

49. This Subcontractor shall exclude the furnish of electronic security hardware (card readers) as it will be supplied and installed by the Security Subcontractor. This Subcontractor shall coordinate required cutouts and installation with Security Subcontractor.

Add'l Items

50. This Subcontractor shall furnish a blocking schedule indicating the exact locations of all in wall blocking required for the installation of this subcontractors work including but not limited to , metal panels, storefront, curtainwall, pass through, mirrors and other items furnished and installed by this Subcontractor. Any blocking not indicated on this blocking schedule will be the responsibility of this Subcontractor. The blocking schedule & associated submittals must be approved by the design team prior to the start of exterior wall framing.
51. This Subcontractor shall furnish and install the bullet resistant aluminum pass thru window and the 2-pane sliding window(nurse's office).
52. This Subcontractor shall furnish and install all movement and expansion joints within and at Perimeter of Curtainwall, storefront and exterior wall systems installed by this subcontractor.

D. Safety

53. This Subcontractor shall provide a site-specific plan on how they will comply with Turner's Ladder's Last Program.
54. This subcontractor shall ensure that any Lulls used on site are equipped with hydraulic fork positioners.
55. This subcontractor shall engage a 3rd Party to complete a GPR Survey to mark out existing utilities under and in the general area of any proposed Mobile Crane locations.
56. This Subcontractor is responsible to ensure that the perimeter protection of each floor that is affected by their work be maintained on a daily basis. Temporary perimeter guard railing systems that are required to be removed to allow for the installation of the exterior wall, will be replaced by this subcontractor who will provide a separate standard guardrail system, such as a Guardian or Garlock system, to protect the floor edge while the exterior wall is being installed. There shall not be any unprotected slab edges at any time.
57. During the installation this Subcontractor shall provide a secondary redundant means of material support in case the primary means of support fails.
58. This Subcontractor is to have all glass and glazing bulk materials labeled with the weight and is to coordinate with Turner the safe storage of materials to mitigate overload to any part of the structure.
59. This Subcontractor is to utilize Leading Edge fall protection in all circumstances where installation is done from the inside of the building.
60. This Subcontractor shall install a Controlled Access Zone below elevated work areas.
61. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible to remove snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#19 – Glass, Glazing, & Metal Panels
Dated: 07.08.2024
Revised: 10.21.2024

E. Exclusions

1. This Subcontractor shall exclude furnish and installing glazing at HM and wood Doors (By BP #20 Doors, Frames, & Hardware).
2. This Subcontractor shall exclude metal copings and fascia (By BP #15 Roofing).
3. This Subcontractor shall exclude gutters, downspouts, and recessed rainwater leader (By BP #15 Roofing).
4. This Subcontractor shall exclude flush sound barrier mullion cap (By BP #21 Drywall).
5. This Subcontractor shall exclude bathroom stainless framed mirrors (By BP #21 General Trades).
6. This Subcontractor shall exclude the louvered air return within HM doors.
7. This Subcontractor shall exclude structural support post below post base for louver screen wall (By BP #12 Structural Steel).
8. This Subcontractor shall exclude furnishing final door cylinders. To be furnished by BP#20 and installed by this subcontractor.
9. This Subcontractor shall exclude line voltage power for door hardware (By BP #38 Electrical).

F. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

Unit Prices:	**Amount**
Refer to Form of Proposal	

G. Alternate Prices

The following Alternate Prices reflect the work of this bid package under which the bid proposal was ***submitted, and these alternate shall remain valid for the life of the project and include all costs for a*** complete installation.

Alternates:	**Amount**
Refer to Form of Proposal	

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#21 – Drywall & General Trades
Dated: 07.08.24
Revised: 10.21.2024

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Drywall & General Trades Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***Drywall & General Trades Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
05 5400	Cold-Formed Metal Framing
06 1000	Rough Carpentry
06 8316	Fiberglass Reinforced Paneling
07 2119	Foamed-In-Place Insulation
07 23410	Direct-Applied Exterior Finish Systems
07 4646	Fiber-Cement Wall Panels
08 3323	Overhead Coiling Doors
08 3326	Overhead Coiling Grilles
09 2116	Gypsum Board Assemblies
09 2216	Non-Structural Metal Framing
10 2113.19	Plastic Toilet Compartments
10 2123	Cubicle Curtain and Track
10 2800	Toilet Accessories
10 4400	Fire Protection Specialties
11 3013	Appliances
11 5400	Art Education Equipment
11 5410	Technology Education Equipment
11 6623	Gymnasium Equipment
11 6643	Interior Electronic Scoreboard
11 7300	Patient Care Equipment

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
Div 00	Division 00 – Procurement and Contracting Requirements
Div 01	Division 01 – General Requirements
03 3250	Concrete Post-Installed Anchors
05 5000	Metal Fabrications
07 2100	Thermal Insulation

Bid Package Specific Scope

2. This Subcontractor shall include Daily Cleanup to Dumpster & daily trash recycling dumpsters.
3. This Subcontractor shall include all Sustainability requirements, including but not limited to CTHB Documentation.
4. This Subcontractor shall furnish all the standard, special, finish, etc. warranties identified in the specifications.
5. This Subcontractor shall provide a complete operating system for their scope of work.
6. This Subcontractor shall furnish and install all work associated with this Bid Package required for the mock-ups depicted on Drawing A-315.
7. This Subcontractor shall be responsible for providing out of sequence work at no additional costs when required in coordination with other trades.
8. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
9. This Subcontractor's Project Manager/Foreman shall participate in Pull Planning Sessions which affect their scope of work. This Project Manager/Foreman shall provide input to further develop the accurate sequence and timing for completion of the work.

10. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
11. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
12. This Subcontractor shall organize and neatly place all materials, tools, etc. This Subcontractor shall remove all debris resulting from their work on a daily basis to trash Rubbermaid tilt trucks provided by this Subcontractor, these buggies will be separate from the 24 provided for other trades. This Subcontractor shall be responsible to bring all their trash to a dumpster provided by others. No trash or debris will remain in the work areas at the end of the shift. If debris is left in the work areas, it will be removed to the dumpster by others, and the labor expense back charged to the responsible Subcontractor. Large sections of debris shall be disposed of to a dumpster provided by others by this Subcontractor.
13. This Subcontractor shall be required to store all onsite material on racks, carts or pallets capable of being easily moved and shall coordinate the delivery of and location of stored material with the Turner Superintendent. If material is stored on pallets, this Subcontractor is responsible to have a pallet jack onsite at all times. This Subcontractor shall include relocation and consolidation of materials as directed by Turner. This pallet jack must be accessible to Turner at all times. If it is to be chained and locked at the end of the shift, Turner must be provided with a key.
14. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
15. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.
16. This Subcontractor shall review, conform to, and furnish and install all requirements included in the Safety Additional Provisions included in this Agreement. This Subcontractor understands that this document is project specific, and all provisions must be included in this Subcontractors' bid.
17. This Subcontractor shall provide their own means of access for their scope of work. Any lifts used on interior slabs or elevated areas shall be approved by EOR or Third-Party Engineer.
18. All material cutting areas will be supplied with a portable waste container by this Subcontractor. Scrap will not be allowed to be thrown on the floor. All scrap must be put in this rubbish container.
19. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
20. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#21 – Drywall & General Trades
Dated: 07.08.24
Revised: 10.21.2024

Temporary Requirements

21. This Subcontractor has reviewed the Logistics & Phasing Plans and the Construction Schedule and has included all associated costs as relevant to this scope of work. It is extremely important to coordinate your work with the other adjacent contractors during the various phases and perform the work as required by these documents. No come back costs will be entertained.
22. This Subcontractor shall furnish, install and maintain temporary weather protection at all exterior wall openings, including but not limited to windows, doors, curtain wall, storefronts, etc.
    - At all window and other openings, this Subcontractor shall furnish, install and maintain provisions to provide for a watertight condition of the rough openings. The Glass and Glazing Subcontractor shall remove the temporary protection at window and storefront/curtain wall openings prior to installation of their work. Denseglass over openings will be removed by this Subcontractor. Other protection shall be removed by this Subcontractor as required for installation of new work.
    - At all storefront/curtainwall entrances, this Subcontractor shall furnish, install and maintain temporary partitions with temporary hollow metal frames, doors and hardware. Temporary walls to be watertight and constructed with metal studs, insulation and sheathing. Hollow metal doors and frames to be minimum 8-0 x 7-0, be equipped with heavy duty closers, and shall be lockable (keyed alike). Provide keys to Turner. Coordinate with the Glass & Glazing Subcontractor to locate temporary walls and doors at exterior storefront/curtainwall locations to allow installation without conflict with temporary provisions. This protection will remain in place until permanent systems are installed or as directed by Turner and removed by this Subcontractor. Include at **least 1 complete removal and replacement of the same.**
    - At all weathertight wall locations, this Subcontractor shall furnish and install all temporary partitions at discretion of Turner Superintendent. Temporary walls to be watertight and constructed with metal studs, insulation and sheathing. In addition to the Temporary Protection Plan requirements, an additional 100 LF of temporary partitions, approximately 15’ high and two (2) temporary HM doors and frames (7’0”x6’0”), hardware, including closers, shall be included to be used at the discretion of Turner. This Subcontractor shall include dismantling and removing as needed for new work or as directed by Turner.
23. This Subcontractor shall furnish, install, maintain, and/or remove temporary protection in accordance with Turner Safety Additional Provisions.
24. This Subcontractor shall furnish and build (15) temp power stands to support (2) quad outlets (by electrician), as well as (2) shelves for each stand, to support battery chargers. Locations to be determined by Tuner Superintendent.
25. This Subcontractor shall furnish and install a 4 sided- 10’ x 10’ x 8’ tall exterior plywood enclosure for the housing of exterior temp power and transformer for Phase 1 and Phase 2 of the project. This should include a lockable plywood door.
26. This Subcontractor shall build a 4’x8’ Information Board for display of Project Information, for example Building Permits. This board shall be on posts and moveable, as well as have a roof to keep the information board dry.

27. This Subcontractor shall build two (2) 4'x8' plan tables at the direction of Turner Superintendent. Plan tables to be constructed of wood. Tables to be dismantled and removed and disposed of, when directed by Turner
28. This Subcontractor shall furnish and deliver Four (2) walk behind floor sweepers. Cleaning should consist of the entire building footprint, and these sweepers should become available once exterior CFMF begins and be onsite until finished flooring is complete. These floor sweepers shall be (2)Bissell Commercial Mfr. Model # BG477 or equal and (2) Advance Terra 28B walk-behind sweepers – Include 10 filters for each unit.
29. This Subcontractor shall furnish and install temporary HM doors for use in permanent frames, hardware and locks for all electrical and data rooms.
30. This Subcontractor shall furnish and install temporary removable railing and net system(s) at all elevator shaft door openings per Turner Safety Standards.
31. This subcontractor shall furnish (24) Rubbermaid tilt trucks (60") for garbage and deliver to locations as directed by the Turner Superintendent for use by other trades. These shall be continuously monitored and be emptied by this subcontractor. These are not to be used for work or drawing tables on site. This subcontractor shall provide their own buggies/trucks for removal of their own drywall and stud debris.
32. This Subcontractor shall furnish and install plywood infills at newly installed metal stair pans to allow for use during construction. Along with any additional railings for temporary use at metal stairs. Removal by BP# 10 Concrete.
33. This Subcontractor shall furnish and install at the direction of Turner (200) - 3-foot-long cord holding Sky hooks similar or equal to the kind provided by Colony to be used by all trades on the project.

General

34. This Subcontractor shall include all requirements for "delegated design" items including, but not limited to, calculations, Professional Engineer Stamp, Errors and Omissions Insurance.
35. This Subcontractor shall provide all warranties per specifications.
36. This Subcontractor shall allow sufficient time to inspect and accept the work of the previous Subcontractor. Should any discrepancies be discovered, Turner shall be notified sufficiently in advance so that corrective action can be accomplished without effecting the progress of any other Subcontractor.
37. This Subcontractor shall provide all surveying and layout for the work of this package. The survey will be by Total Station or a Licensed Surveyor.
38. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
39. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to clean up general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)

GWB Partitions, Ceilings and Soffits

40. This Subcontractor shall be responsible for distributing all gypsum board to the rooms in which it is to be installed, upon delivery. It will NOT be stockpiled in one area.
41. This Subcontractor shall furnish and install the partition top tracks and clips, prior to SOFP. Top track shall be deep enough to include required SOFP thickness and deflection. Refer to CODE Drawings.
42. This Subcontractor shall furnish and install ALL components for a drywall fire rated assembly, both horizontal and/or vertical portions. Scope of work includes but is not limited to, shaftliner, insulation, drywall, firestopping (shaftwall locations only), track, and doghouse/lids.
43. This Subcontractor is required to provide Fire Rating Identification of Drywall and Masonry Partitions. For example, stenciling of Partition(s) with verbiage provided in the Contract Documents and/or required by the local AHJ.
44. This Subcontractor shall furnish and install ALL interior partitions including but not limited to: partitions to the underside of decking, pre-manufactured drywall ceiling suspension system, low wall partitions with required support and stiffener posts, drywall ceilings, beam encasements, soffits as shown and specified. Sealants – acoustical at top and bottom of walls, or penetrations created by this subcontractor, in-wall insulation, flat stock strapping/bridging, in-wall blocking, continuous sheet metal filler for deck flutes, sound isolation clips off of steel, metal trim and accessories of exposed areas (for example Details 2A and 4A on A600), controls joints, all stud and/or track associated to the partition, gypsum board – including but not limited to abuse, cement, fire rated, sound, and fiberglass ballistic panel.
45. This Subcontractor shall furnish and install taping joint treatments for GWB Assemblies as indicated on the contract documents and specifications.
46. This Subcontractor shall furnish and install cement board for base support as indicated on Contract Documents. For example, Detail 4E on A806
47. This Subcontractor shall furnish and install all components for a complete Fiberglass Ballistic Panel Partition. For example, partition type B1, B1A, and B1B are shown on drawing A600.
48. This Subcontractor shall coordinate with all other trades and identify critical walls and sequences. This subcontractor will provide header openings in framing and drywall as needed for MEPF trades following MEPF coordination. Coordinate with all the MEPF subcontractors for sleeves and penetrations and perform the necessary framing as required. Include separate mobilizations as required. This Subcontractor shall coordinate and install critical walls to facilitate the installation of Ductwork and MEP systems where top of wall access will be restricted following MEP FP Rough in prior to being watertight. Where critical walls are required, this Subcontractor shall provide paperless/ dens shield drywall equivalent to required type per partition schedule to protect potential moisture and damage from this early installation. Assume critical walls are where ductwork is within 2 feet of walls and runs parallel to the wall inhibiting access post ductwork installation, for example ductwork at Corridor 1115, Choral Room 1122, Waiting 1010, etc.
49. This Subcontractor shall vacuum out clean all bottom tracks and chases prior to installing drywall.
50. This Subcontractor shall furnish and install all in-wall insulation as identified on the wall type drawings. Additionally, this must be coordinated with other trades performing in wall work.
51. This Subcontractor shall coordinate, furnish and install all in-wall blocking including but not limited to millwork/millwork sills, signage, railings, base, chair rails toilet accessories, curtainwalls, windows, window treatment, storefronts, doors, wall-mounted items, food service equipment, owner furnished items, televisions or similar AV items, etc. This subcontractor shall also furnish and install any in-ceiling blocking required to support light fixtures or MEP devices that are supported from

GWB ceilings. Coordinate with MEP trades. The blocking around window / storefront and curtainwall openings, at the jambs, heads and sills. For example, blocking shown on details on Drawing A-641. This blocking shall be installed before exterior AVB. Include separate mobilizations as required.

52. This Subcontractor shall coordinate their work with other trade Subcontractors and allow for additional studding or framing to accommodate the work of others (i.e. electrical boxes, equipment, mechanical fixtures, mechanical and electrical cabinets and piping, etc.).
53. This Subcontractor shall coordinate and install any in-wall brackets or supports required by the millworker prior to closing walls. Furnished by millworker.
54. This Subcontractor shall furnish and install all GWB ceilings and soffits, including but not limited to, GWB board, metal framing, insulation, expansion joint systems channel molding and trim pieces (for example 1E/A210).
55. This Subcontractor shall coordinate and design their suspended ceiling system attachments with the new structure and decking capacities for fastening. Refer to Note 12 on A200 series drawings. This Subcontractor shall provide delegated design and include shop drawings and calculations indicating, but not limited to, load carrying capacities, point loads, etc
56. This Subcontractor shall furnish and install the framing and GBW associated to the Clouds located in the Auditorium. For example, Detail 1A/A111.8.
57. This Subcontractor shall design, furnish & install an independent support system for all hung equipment, fixtures, ceiling and piping system that are directly below the metal roof deck. This support system must attach to structural steel framing members as the metal roof deck cannot be utilized for support. Refer to A200 series drawings General Note #12 for criteria. This Subcontractor shall provide delegated design and include shop drawings and calculations indicating, but not limited to, load carrying capacities, point loads, etc. This Subcontractor shall include adding miscellaneous metal supports into the 3D model for coordination with all MEP trades.

Access Doors and Frames

58. This Subcontractor shall be responsible for the receipt, distribution, storage and installation of all access doors/panels being provided by Food Service, Elevator, and MEPF subcontractors (including all related blocking required for same). The Food Service, Elevator and MEPF Subcontractors have been instructed to arrange their work in such a manner so as to minimize the quantity of access doors required. All required access doors or panels shall be furnished from one (1) manufacturer with their ratings consistent with the respective partition/ceiling/floor ratings.

Expansion Control

59. This Subcontractor shall furnish and install expansion joint assemblies/covers at all interior drywall to drywall, drywall to ceiling, and masonry to drywall expansion joints, including associated blocking per the documents. This includes but not limited to the complete install of all joint types CWJ-1, CCJ-1, IFJ-1, IWJ-1, IWJ-2, EWJ-1 where shown on plans. Coordinate expansion joint assemblies with adjacent finishes.
60. This Subcontractor shall furnish and install any GWB ceiling and/or wall transitions and reveals associated to their work. For example, Detail 5F/A210

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#21 – Drywall & General Trades
Dated: 07.08.24
Revised: 10.21.2024

Joint Sealants

61. This Subcontractor shall furnish and install joint sealants within this work and where materials furnished and/or installed by this Subcontractor; including but not limited to control and expansion joints, adjacent to other building materials; exclude joint sealants for trades who follow your work (i.e. casework, plumbing fixtures).

Cold Formed Metal Framing

62. This Subcontractor shall design, furnish and install metal stud or light gage framing as indicated in the contract documents including attachments to structural steel framing.
63. This Subcontractor shall design, furnish and install all slip connections as indicated in the contract documents at cold formed metal framing or metal studs.
64. This Subcontractor shall furnish and install the CFMF tracks and clips, prior to SOFP. Top track and clips shall be deep enough to include required SOFP thickness and deflection. Refer to CODE Drawings.
65. This Subcontractor shall furnish and install engineered posts for pony walls as indicated on the Contract Documents. For example, detail 7/S210 or 5E/A602.

Exterior Framing

66. This Subcontractor is responsible for providing its own means to access the exterior wall construction.
67. This Subcontractor shall furnish and install the exterior cold formed metal framing as shown and specified. Scope of work includes, but not limited to, metal framing, deflection track, gypsum board, fiberglass faced gypsum board sheathing, and interior cavity insulation (spray and other). This Subcontractor shall coordinate stud spacing with other trades as required
68. This subcontractor shall keep sheathing in place over window openings for weather protection, to be cut out at a later date by this Subcontractor per direction of Turner Superintendent.
69. This Subcontractor is responsible for ensuring that the perimeter protection of each floor that is affected by their work be maintained on a daily basis. If guardrail systems need to be modified or removed to install the work this Subcontractor must ensure that they protect the floor edge by replacing the guardrails or installing a separate standard guardrail system. Open sided floors cannot be unprotected at any time. If this subcontractor's work replaces the guardrail edge protection this contractor will be responsible for removing and coordinating the return of the reusable guardrail/fall protection system (posts, cables, turnbuckles, clips) to the concrete or structural steel subcontractors. Material should be palletized and returned in an orderly fashion.
70. This Subcontractor shall provide the metal stud framing and insulation for the roof parapets and the metal stud framing for the roof expansion joints.
71. This Subcontractor shall furnish and install all framing, wood blocking and plywood including but not limited to all parapets and overflow scuppers, wood and framing for curbs associated to Roof Equipment (i.e. Condenser Units, Exhaust Fans, etc.), Expansion Joint blocking and wood curb (for example detail 3E/A531) and wood blocking and framing for roof hatches, skylights and perimeter

fascias throughout (For example, Detail 1A/A521). This Subcontractor shall also furnish, install, and coordinate with the roofer, plywood and wood blocking and CFMF for blocking support associated to the roofing system and its buildup (For example, Detail 1C/A521). This subcontractor shall include CFMF angle(s) as required to support their work, for example detail 3B/A522.

72. This Subcontractor shall furnish and install CFMF, mineral wool insulation, and blocking/plywood associated to the Roof Louver Boxes similar to that of 1B/A531.
73. This Subcontractor shall furnish and install CFMF, sheathing, blocking, plywood and spray foam within stud cavity for Exterior wall assemblies. This Subcontractor shall also furnish and install top of wall CFMF Galvanized Plate as shown on Contract Documents. For Example, Top of Wall Plate shown on 3E/A501.
74. This Subcontractor shall furnish and install the FCP (Fiber Cement Panel) Rainscreen System throughout including but not limited to framing, sheathing, fasteners, AVB, insulation and trim for penetrations. Coordinate with Mason for FCP to be installed on Masonry backup, include patching of AVB as required for attachments.
75. This Subcontractor shall furnish, install, and coordinate the installation of framing, blocking and plywood for the MCM (Metal Composite Material) Wall Panels as indicated on the Contract Documents.

Miscellaneous Work

76. This Subcontractor shall furnish and install all overhead coiling grilles/doors and required support steel and blocking whether shown or not. This Subcontractor is responsible for all control wiring to make grilles operational per the documents and shall coordinate the electrical requirements with the Electrical Subcontractor prior to completing installation. This subcontractor is responsible for any engineering for support and/or function of the overhead door system.
77. This Subcontractor shall furnish and install the CFMF 12GA Clips and Sheetmetal shown at top of wall(s) for all Masonry Partitions. For example, Details 1C and 1B on A-605. As well as the diagonal CFMF bracing/bent plate and clips. For example, 1A and 2A on A-605.
78. This Subcontractor shall furnish and install framing studs and track shown to support all display cases, example shown on 1E-3E A805. Along with GWB, blocking and fry reglet shown.
79. This Subcontractor shall furnish and install all Spray Foamed Insulation as identified on the Contract Documents and Specifications. This work shall be performed ~~a~~ on second shift, as not to affect other trades. This subcontractor shall furnish and install any preformed mineral wool insulation plugs or similar at metal deck flutes, butyl sealant and metal backer plates at framed partitions as indicated on the contract documents. For example typical detail 1E/A501.
80. This Subcontractor shall furnish and install a complete EIFS (Exterior Insulation Finish System) as indicated on the Contract Documents and Specifications.
81. This Subcontractor shall coordinate, furnish and install all Specialty Equipment identified on drawing A912 (Specialty Equipment –Product Information Schedule) with a “Purchase – C” to be furnished and installed by this Subcontractor, and items identified with a “Purchase – O” will be by Owner, but installed by this Subcontractor if it states “Install – C”. This subcontractor will be responsible for coordinating and installing equipment by the Owner identified in the Schedule. Provide necessary blocking as needed for equipment. Electrical and Plumbing will be by others. Scope shall include all necessary supports and blocking for all wall mounted display items specified.
82. This Subcontractor shall furnish and install all Fire Extinguishers, Fire Extinguisher Cabinets, and wall mounted brackets and blocking as indicated on the drawings.

83. This Subcontractor shall furnish and install all FRP / fiber-reinforced plastic sanitary wall panels as indicated on the contract documents.
84. This Subcontractor shall furnish and install all Cubicle Curtains and track as indicated on the contract documents and any supporting framing and blocking associated for install.
85. This Subcontractor shall furnish and install fire rated plywood backer boards at locations including but not limited to electrical panels, communications, and A/V equipment.
86. This Subcontractor shall coordinate, furnish and install the framing, blocking, and plywood for Locker installation. For example, detail 2B/A805. Lockers by others.
87. This Subcontractor shall coordinate, furnish, and install metal framing and drywall for Built-in Benches as indicated on Contract Documents. For Example, detail 5E/A805
88. This Subcontractor shall furnish and install the toilet partition enclosures, entrance screens and urinal screens including all anchorage, in-wall blocking, bracing support, overhead supports, etc. required to meet contract document requirements.
89. This Subcontractor shall furnish and install all Gym Equipment and Interior Scoreboard Equipment as identified on the Contract Documents and Specifications. Including but not limited to furnishing wall padding, basketball system, controls for gym equipment, floor mounted equipment etc. for a full functioning system. This Subcontractor shall coordinate with other adjacent trades for installation and function of their work. The power wiring of electronics will be by the Electrician, any required interconnected wiring to be by this subcontractor. This subcontractor shall include supports as required for equipment supplied by this subcontractor.
90. This Subcontractor shall furnish and install all Patient Care Equipment as indicated on the Contract Documents.
91. This Subcontractor shall furnish and install all Toilets Accessories and associated blocking as indicated on the Contract Documents and Specifications.
92. This Subcontractor shall furnish and install any drywall partition end caps or trim caps that abut up to adjacent constructions. For Example: Detail 1B/A541
93. This Subcontractor shall include the following **Trade Allowance:** 200 hours for a Laborer and material for use as directed by Turner for 5S, cleaning and additional safety provisions and logistics. Laborer Time to be included as journeyman rate including any required supervision. This will be billed based on the final agreed contractual wage rates and may only be expended by written authorization of Turner Construction and any unspent portion of this unused scope hours will be credited at the end of your contract based on approved labor rate.
94. This Subcontractor shall include the following **Trade Allowance:** 200 hours for a Carpenter and material for use as directed by Turner for additional safety provisions and logistics. Laborer Time to be included as Foreman rate including any required supervision. This will be billed based on the final agreed contractual wage rates and may only be expended by written authorization of Turner Construction and any unspent portion of this unused scope hours will be credited at the end of your contract based on approved labor rate.
95. This Subcontractor shall furnish and install all firestopping at all shaftwall assembly locations.

Doors, Frames and Hardware

96. This Subcontractor shall receive, and install all doors, frames, and hardware for this project. Upon delivery this subcontractor will review and accept doors as delivered. Written approval must be submitted to Turner Construction upon request.
97. This Subcontractor will take possession of doors frames and hardware and securely, and properly store until installation. This subcontractor shall inventory all deliveries upon receipt and notify Turner of any discrepancies or missing items. This subcontractor shall turn over all hardware not to be to be installed by this subcontractor to Turner Construction (i.e. power supplies). This Subcontractor will provide their own lockable room(s) for the storage of hardware, at a location agreed upon with Turner Superintendent.
98. This Subcontractor shall be responsible to receive, offload and install all hollow metal frames and doors, including at all new and masonry wall partitions. This Subcontractor shall be responsible to securely brace all door frames, check and adjust as masonry walls are being erected. This subcontractor is ultimately responsible for all frames being true and plumb. Grouting of frames in existing masonry partitions shall be by the Masonry Subcontractor. This subcontractor shall coordinate and provide a list of HM frames needed for installation at least 6 weeks prior to the start of drywall/sheathing of partitions.
99. This Subcontractor shall furnish, install and perform all control wiring necessary to make operational all overhead coiling doors, per the documents and shall coordinate the electrical and security requirements with the Electrical and Security Subcontractors prior to completing installation. Line voltage wiring by Electrical subcontractor.
100. This Subcontractor shall install final keyed cores at all doors, including the aluminum and glass doors and STC doors.
101. This Subcontractor shall install all door accessories and hardware provided by Door Vendor (BP#20), including but not limited to Door Closers, Locksets, Weatherstripping, Thresholds, Hinges, etc.
102. This Subcontractor shall Include the following **Trade Allowance:** 60 hours for door frame adjustments including materials as required (i.e. Bondo). Mechanic Time to be included as Foreman rate including any required supervision. This will be billed based on the final agreed contractual wage rates and may only be expended by written authorization of Turner Construction and any unspent portion of this unused scope hours will be credited at the end of your contract based on approved labor rate.
103. This Subcontractor shall furnish and install insulation and blocking for HM Door frames as indicated on the Contract Documents.

Add'l Items.

104. This Subcontractor shall provide (20) Expandable Safety Plastic Barriers – Portable Fence Units, for use to be determined by Turner Superintendent. These units shall be "Orange Expandable Safety Plastic Barrier: Adjustable 75" – Portable Fence" as found on Amazon or equal.

D. Exclusions

1. This Subcontractor shall exclude Room Signage (By BP#28).

2. This Subcontractor shall exclude Food Service Equipment (By BP#30).
3. This Subcontractor shall exclude top of Wall Firestopping at top of walls (By BP#17) except at shaftwall locations (Shaftwall firestop by this subcontractor).
4. This Subcontractor shall exclude Bathroom vanity support Brackets (By BP#13 Misc. Metal)
5. This Subcontractor shall exclude Metal Composite Material (By BP#19 Glass & Glazing)

E. Safety

2. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible for removing snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.
3. This Subcontractor shall provide a site-specific plan on how they will comply with Turner's Ladder's Last Program.
4. This subcontractor shall ensure that any Lulls used on site are equipped with hydraulic fork positioners.
5. This subcontractor shall engage a 3rd Party to complete a GPR Survey to mark out existing utilities under and in the general area of any proposed Mobile Crane locations.
6. This Subcontractor to investigate and review floor capacity prior to loading floor with sheetrock and provide a loading plan. The loading plan must be reviewed and approved by the structural engineer prior to delivery. Post drywall loading specs on each floor and at locations of a critical nature.
7. This subcontractor shall provide an engineered scaffolding plan for all work in shafts and stairwells. Compatibility between systems must be demonstrated to ensure stability of stairwell scaffold structures.
8. This subcontractor shall remove anchorage points installed by others, including "Safe T Straps" during ceiling installation.
9. This Subcontractor is responsible for ensuring that the perimeter protection of each floor that is affected by their work be maintained on a daily basis. If Guardrail systems need to be modified or removed to install the work this Subcontractor must ensure that they protect the floor edge by replacing the guardrails or installing a separate standard guardrail system. Open sided floors cannot be unprotected at any time. If this subcontractor's work replaces the guardrail edge protection this contractor will be responsible for removing and coordinating the return of the reusable guardrail/fall protection system (posts, cables, turnbuckles, clips,) to the concrete or structural steel subcontractors. Material should be palletized and returned in an orderly fashion.
10. This Subcontractor shall utilize fasteners when drywall is stored in a vertical/leaning manner to prevent accidental displacement equal or similar to RockSteady clips.
11. If scissor lifts are used to install drywall the lifts shall be equipped with a drywall package from the manufacturer.
12. This Subcontractor to ensure that drywall is stored flat and not leaning vertically against any surface. It is expected that the drywall stacks will be stored on dollies or in another fashion to allow for portability. PORTABLE A FRAME DOLLIES ARE TO HAVE LOCKABLE CASTER WHEELS.
13. This contractor shall not construct temporary guardrails using metal studs or track.

14. This subcontractor shall ensure that when securing wood guardrails to concrete or masonry, Tapcon screws
or an equivalent fastener are to be used (a wire and nail is not an acceptable method). When securing wood components together proper wood screws are required, sheetrock screws are not acceptable.
15. This subcontractor shall adequately secure doorframes to prevent tipping over.
16. This Subcontractor to also ensure all guards are maintained on equipment at all times. All material cutting areas will be supplied with a portable waste container by this Subcontractor. Scrap will not be allowed to be thrown on the floor. All scraps must be put in this rubbish container.
17. This Subcontractor shall use self-retractable knives to score drywall.
18. This Subcontractor shall establish an unloading and loading zone. If this subcontractor is loading the building on an upper level a fall protection system must be installed with leading edge capability.
19. This subcontractor shall provide and maintain 20 lb. ABC fire extinguishers and stands to be placed every 3000 SF around the entire site and building at all levels. Stands to be Fire-Mate Extinguisher Stand P14-1137 or equal. This subcontractor shall provide annual inspections of all fire extinguishers by a licensed 3rd party inspection company.
20. This subcontractor shall install portable eye wash stations on each floor. Locations to be coordinated with Turner. The eye was stations must be capable of delivering flushing fluid to the eyes at not less than 0.4 gallons per minute for 15 minutes. This subcontractor should furnish and install these as soon as the space is turned over to Turner.
21. This subcontractor is to furnish, install, maintain and remove 4 jobsite posting boards. Each shall be 4' high x 8' wide and shall be mounted on 4" x 4" posts 42" above the adjacent walking surface. Each posting board shall have a 2' wide roof water atop to help keep elements off the postings. All boards shall be made of pressure treated 4" x 4"s and 3/4" PT plywood. Boards to be located by Turner.
22. TEMPORARY STAIR PROTECTION: a.) This Subcontractor is to furnish, install, maintain and remove temporary handrails at all metal stairway locations along all stair stringers and landing areas. The railing system to be used is the Stringer Shield Stair Rail Clamping System by Safety Maker, Inc.as shown, including all the lumber for the handrail and midrail. B.) This Subcontractor to furnish, install, maintain and remove Eagle Industries Flame Retardant Safety Debris Netting ¼" knitted mesh over the entire railing system to prevent loose materials from falling through the handrails. C.) This Subcontractor shall furnish, install, maintain and remove temporary wood infills at all metal stair tread and landing locations. Infills must be full width without any voids or gaps between the infill and the metal framing of the stairways.
23. This Subcontractor is to provide daily documented inspections and perform maintenance of all perimeter guardrail systems at all floor and shaft edges upon the Structural Steel Contractor's demobilization from site. Documented training must be provided for all employees who will be maintaining the cables. The proper tools (i.e. come along) will be provided, by this subcontractor, to adequately tighten cables.
24. This subcontractor shall furnish and install at the direction of Turner 200 - 3-foot-long cord holding Sky hooks similar or equal to the kind provided by Colony to be used by all trades on the project.
25. This subcontractor shall furnish, install, maintain and remove temporary removable wooden guardrails with scrim at the front of all elevator shaft locations at each level to allow elevator installers entry into the shaft-way. Rails shall be in a three-sided configuration with the side parallel to the shaft opening 2' from the opening. A removable scrim shall be hung from above the elevator opening and extend down to the guardrail to prevent material from entering the shaft.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#21 – Drywall & General Trades
Dated: 07.08.24
Revised: 10.21.2024

F. Logistics & Schedule

1. This Subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

G. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for a complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

Unit Prices:	**Amount**
Refer to Form of Proposal	

H. Alternate Prices

The following Alternate Prices reflect the work of this bid package under which the bid proposal was ***submitted, and these alternates shall remain valid for the life of the project and include all costs for a*** complete installation.

Alternates:	**Amount**
Refer to Form of Proposal	

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#22 – Acoustical Ceilings
Dated: 07.08.2024
Revised: 10.21.2024

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Acoustical Ceilings Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detailed references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all the ***Acoustical Ceilings Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail /symbol /illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
09 5100	Acoustical Ceilings

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/ symbol/ illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Revised: 10.21.2024

Division 1	General Requirements
07 9200	Joint Sealants
07 9513	Expansion Joint Cover Assemblies
09 8430	Sound-Absorbing Wall and Ceiling Units
09 8416	Fixed Sound Reflective Panels

Bid Package Specific Scope

General-

1. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to cleanup general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)
2. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
3. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
4. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
5. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

Acoustical Ceiling Panels-

6. This Subcontractor shall provide all surveying and layout for the work of this package.
7. This Subcontractor shall furnish & install all acoustical ceiling panel types eg: metal and ACT with associated suspension systems as shown in the contract drawings and as listed in the room finish schedule.
8. This Subcontractor shall follow the reflected ceiling plan notes carefully as to locations where rooms get new ceilings and note the various types of ceilings. This Subcontractor shall coordinate with the MEP contractors for exact locations where duct and pipe run in order to facilitate the least amount of impact to installation of grid.
9. This Subcontractor shall furnish and install all ACT ceiling trim, perfricated prefinished metal trim, etc. For example, as shown on ceiling details on sheets A210 and A211.

10. This Subcontractor shall coordinate with the Painting Subcontractor to ensure the walls and soffits are taped and prime painted prior to the installation of the edge molding.

11. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.

12. This Subcontractor shall install the "Cut" tiles such that other trades can install their devices in preparation for an above ceiling inspection by the Building Official. The "full" ceiling tiles shall not be installed until the CM has received written signoffs from all Mechanical, Electrical, Plumbing, Fire Alarm, Low Voltage, Security, etc. Subcontractors that their scope is complete, and Turner Construction directs this subcontractor to proceed with this work.

13. This Subcontractor shall review the Mechanical, Fire Protection, Electrical, Fire Alarm, Security, Low Voltage, etc. drawings to confirm the count of the fixtures and devices that will be penetrating the ceiling systems installed by this Subcontractor. The Architectural RCP may not accurately represent the scope of work.

14. This Subcontractor shall include all trim and accessories at the acoustical ceiling system.

15. This Subcontractor shall include installing ceiling hangers for the suspension systems or any supports required prior to the spray fireproofing being applied to the deck above.

16. This Subcontractor shall furnish and install all prefabricated, prefinished metal edge trim. For example, as shown on detail 1D A210.

17. This subcontractor shall properly seal all gaps and penetrations at the ceiling system that is to be installed in the food service areas. This shall include but is not limited to ceiling to wall gaps, MEP penetrations, etc. This shall comply with the local Department of Health requirements.

18. This subcontractor shall furnish and install all sound absorbing ceiling panels. Refer to spec section-09 8416 all SAC1 locations. For example, as shown on A201E and detail 1E A211. This subcontractor shall include the entire system including but not limited to panels, CFMF clips, supports etc.

19. This subcontractor shall furnish and install all CFMF clips and supports required for their system. These clips and supports are to be installed prior to spray on fireproofing.

20. This subcontractor shall coordinate with the electrical subcontractor where their ceiling system integrates with various light fixtures. For example, as shown on 3C A210.

21. This subcontractor shall coordinate their ceiling system with BP37 HVAC & Controls for the radiant ceiling panels and chilled beams. BP37 HVAC & Controls is to furnish and install the radiant ceiling panels and chilled beams.

22. This Subcontractor shall design, furnish & install an independent support system for all hung equipment, fixtures, ceiling and piping system that are directly below the metal roof deck. This support system must attach to structural steel framing members as the metal roof deck cannot be utilized for support. Refer to A200 series drawings General Note #12 for criteria. This Subcontractor shall provide delegated design and include shop drawings and calculations indicating, but not limited to, load carrying capacities, point loads, etc. This Subcontractor shall include adding miscellaneous metal supports into the 3D model for coordination with all MEP trades.

23. This subcontractor shall paint and finish any cut exposed edges to all ceiling tiles and/ or ceiling systems.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#22 – Acoustical Ceilings
Dated: 07.08.2024
Revised: 10.21.2024

Joint Sealants

24. This Subcontractor shall provide acoustic joint sealants as specified in Specification 07 9200 and where indicated between the ceiling wall angle and the adjoining wall.

Expansion Control

25. This Subcontractor shall furnish & install the expansion joint system at acoustical ceiling locations as well as between acoustical ceiling panels and walls where indicated. Note: the expansion joint system between gypsum board ceilings is by the General Trades subcontractor. This includes but not limited to the complete install of all joint types CWJ-2, CCJ-2, where shown on plans. Coordinate expansion joint assemblies with adjacent finishes.

D. Exclusions

1. This Subcontractor shall exclude expansion joint systems within gypsum board ceilings to walls or gypsum board ceilings to each other. (By BP#21)
2. This Subcontractor shall exclude sound absorbing wall panels, ~~AWP12~~ (By BP#18)
3. This subcontractor shall exclude furnishing and installing the radiant ceiling panels. By BP37 HVAC & Controls.

E. Safety

1. This subcontractor shall provide an engineered scaffolding plan for all work in shafts and stairwells. Compatibility between systems must be demonstrated to ensure stability of stairwell scaffold structures.
2. This subcontractor shall remove anchorage points installed by others, including “Safe T Straps” during ceiling installation.
3. If scissor lifts are used to install ceiling grid the lifts shall be equipped with a drywall package from the manufacturer.
4. It is expected that the ceiling stacks will be stored on dollies or in another fashion to allow for portability. PORTABLE A FRAME DOLLIES ARE TO HAVE LOCKABLE CASTER WHEELS.
5. This contractor shall not construct temporary guardrails using metal studs or track.
6. "This Subcontractor to also ensure all guards are maintained on equipment at all time. All material cutting areas will be supplied with a portable waste container by this subcontractor. Scrap will not be allowed to be thrown on the floor. All scrap must be put in this rubbish container.
7. This Subcontractor shall use self-retractable knives to cut ceiling tiles if additional means is not presented.
8. This Subcontractor shall establish an unloading and loading zone. If this subcontractor is loading the building on an upper level a fall protection system must be installed with leading edge capability.
9. This Subcontractor shall establish a comprehensive scaffold plan including live load ratings and loading plan.

F. Logistics & Schedule

1. This Subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

G. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for a

complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

Unit Prices:	Amount
Refer to Form of Proposal	

H. Alternate Prices

The following Alternate Prices reflect the work of this bid package under which the bid proposal was ***submitted, and these alternates shall remain valid for the life of the project and include all costs for a*** complete installation.

Bid Package Specific Scope

General

2. This Subcontractor shall furnish and install all equipment shown on the Food service equipment drawings series FS drawings and as specified in 114000 unless stated otherwise.
3. This Subcontractor shall ensure all work is performed in accordance with Local, State & Health codes as well as regulatory agencies having jurisdiction.
4. This Subcontractor shall provide all permits and fees required for Food Service Equipment work. This Subcontractor shall take the lead responsibility in arranging a kickoff meeting with the Health Department and all inspections and meetings through final Health Department approval. This includes ensuring all Food Service Equipment is in clean and working order prior to the Health Department review. Check all water temperatures at the sinks and Dishwasher to ensure they meet with the Health Department acceptance prior to final walk through and if not, coordinate with the plumbing Subcontractor to resolve any issues. Include the reference made in note#2 on 2E-101.EK regarding coordination of cleanable surface requirements for health inspection with food service equipment.
5. This Subcontractor shall include coordinating the work shown on the Food Service Equipment FS series drawings with the corresponding MEP drawings and structural drawings to insure full coordinated installation of work. Included in this is participating in the MEP coordination meetings as it relates to the kitchen areas and including your work within the 3D coordination so that your work will not be in conflict with the other trades. Also included as part of this Subcontractors bid is the coordination of floor recesses with the concrete subcontractor as well as the coordination of your rooftop unit locations with the MEP contractors so that there are no conflicts in the field. This Subcontractor shall distribute material and be responsible for its protection from damage during delivery, handling, storage and installation. Protection is to be maintained by this Subcontractor as long as they are on site. Protection shall generally consist of Masonite and or homosote on exposed edges and faces to protect them from damage while on site. Should any damage occur due to the negligence of this contract's field personnel, all costs to repair and or restore same shall be the sole responsibility of this Subcontractor. This Subcontractor shall also protect the finish flooring during the installation of your work.
6. This Subcontractor shall provide all coring as required for this scope of work.
7. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
8. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. The composite crew is intended to clean up general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)

9. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
10. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
11. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
12. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

Food Service Equipment Specific:

13. This Subcontractor shall furnish and install the Ansul fire extinguishing systems for the Food Service Equipment and shall meet all applicable codes. Identify on shop drawings all connection points for hook-up to base building services. This Subcontractor is NOT responsible for the final electrical, fire protection and control connections related to this system as detailed on the Contract Documents. This Subcontractor shall coordinate with the Electrical, Fire Alarm, Controls and Pluming Contractors for tie in of the Ansul system other trades.
14. This Subcontractor shall include interlocking the Ansul system with the base building fire alarm system. The Electrical Subcontractor is responsible for the tie-in to the base building fire alarm system.
15. This Subcontractor shall furnish only all gas solenoid valves for the food service equipment. The valves will be installed by the Plumbing Subcontractor. This Subcontractor shall be present for any inspections.
16. This Subcontractor shall furnish only all access doors required for food service equipment. The access doors will be turned over by this subcontractor to be installed by Drywall Subcontractors.
17. This Subcontractor shall furnish and install all wiring, with necessary switches, fuses, shunt trip breakers, terminal boxes, controls, cords, flexible connectors, starters, VFD's disconnects and plugs. All of the equipment which is to be connected to the building electrical services shall be shown on the KEC shop drawings and tagged with voltage, phasing/load, grounding requirements, and NEMA plug type. All terminations of power required between a piece of equipment and its power source will be by the Electrician. All control and power wiring responsibilities between food service equipment and pieces will be wired according to the plans and specifications by this subcontractor. Any "Extra" connections as the result of items that are installed in more pieces than shown on the plans and specifications are the responsibility of the Food Service Equipment Contractor.
18. This Subcontractor shall furnish and install all caulking and sealants between countertops/backsplashes and adjoining walls as required to pass all inspections.
19. This Subcontractor shall include all layout and field measuring for this scope of work in accordance with the specifications.
20. This Subcontractor shall furnish and install the exhaust hoods for the Food Service Equipment in strict conformance with all applicable codes. Coordinate the height of the hood with the ceiling heights in the room and MEP coordination layout.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#30 – Food Service Equipment
Dated: 07.08.2024
Revised: 10.21.2024

21. The Subcontractor shall furnish and install the Freezer/cooler walk in's complete including all free-standing equipment and flooring. Coordinate the slab depression for them with the concrete subcontractor.
22. This Subcontractor shall furnish and install the Freezer and Cooler roof top condensers where located on the roof. This Subcontractor shall coordinate with the ~~MEP~~ Electrical contractor~~s~~ for electrical power service**s** to the condensers. This Subcontractor shall coordinate with the roofer for any and all roof top blocking/flashing required. Curbs for the condensers are by this Subcontractor.
23. This Subcontractor shall furnish & install all refrigeration piping for all equipment including condenser and evaporator units. Follow the requirements in the contract documents for the location of the roof top units and the distance from the Freezer and Cooler they serve.
24. This Subcontractor shall furnish and install all floor troughs w/gratings if and where detailed in the contract documents required for Food Service. Coordinate with the concrete subcontractor for all embedded Food Service items including these floor troughs. Include delivering all embedded items to the site prior to the pouring of the slab.
25. This Subcontractor shall include being involved in the start-up and commissioning process associated with the turnover of the kitchen equipment. If it is found that a piece of equipment(s) isn't performing as specified, it is incumbent upon this Subcontractor to remain engaged in the problem solving until the matter is resolved. For example, circuit breakers or GFI outlets tripping when equipment is running or dishwasher not achieving the appropriate temperatures. These problems need to be addressed and corrected at no Cost to the Owner unless it is found to be a design flaw that is creating the problem.
26. This Subcontractor shall provide coordination of all connections for the equipment that is provided within this scope of work. This includes, but is not limited to all electrical, water, waste and gas lines and mechanical, final connections will be by the MEP Subcontractors.
27. This Subcontractor shall provide layout and coordinate all MEP penetrations in the slab with the MEP Subcontractors and Concrete Subcontractor. Note: provide approved submittals 12 weeks prior to underground MEP work installation so everything gets roughed in properly as you need it.
28. This Subcontractor shall provide a specific in-wall and below slab rough in plan for all MEP requirements and in wall blocking requirements. This subcontractor shall include two field visits to conform all rough locations installed by others prior to wall closure, assume this will take two separate 8 hours days.
29. This Subcontractor shall provide to the Electrical and HVAC Subcontractors: power and control wiring diagrams for the inter-wiring within the exhaust hoods, light fixtures, the Ansul fire protection systems and all other items requiring work by these Subcontractors.
30. This Subcontractor shall furnish and install all required hangers, supports, straps, clips, angle iron, etc. for a complete installation of all food service equipment including support of exhaust hoods.
31. This Subcontractor shall furnish and install all hand sinks, associated faucets, brackets and accessories including but not limited to splash guards for each sink listed in the specifications. ~~These items are to be installed by the plumbing contractor~~.
32. This Subcontractor shall furnish and install all glass integral with the food service equipment shown on the FS drawings.
33. This Subcontractor shall furnish and install any and all plastic laminate surfaces, solid surface counters, stainless steel counters, etc. if and where shown on the FS series drawings.

34. This Subcontractor shall furnish and install all custom fabricated items shown on the FS series drawings such as stainless-steel counters, sneeze guards, stainless steel closure at ventilator, etc. per drawing details, specifications and or manufacturer's standard details.
35. This Subcontractor shall include all closeout documentation and training of the Owners staff as required per the contract documents. In addition, your scope shall include the scheduling of all training for each piece of Food service equipment required to be trained on and your firm shall be in attendance for all training. In no circumstance shall the Owner and or Turner Construction Company be left to coordinate this training and meet directly with the vendor of the piece of equipment. Your firm must take ownership of proper closeout and training and problem solving. Include an additional 16 hours of owner training in addition to the specification requirements to be used as directed by Turner Construction.
36. All Subcontractors are responsible for incorporating all work described in Bidder Questions relative to their Bid Package scope of work. Referenced Bid Packages on the Bidders Question Log do not necessarily list all impacted Subcontractors.

D. Exclusions

1. ~~This Subcontractor shall exclude the installation of hand sinks as this work will be performed by the plumbing Subcontractor.~~
2. This Subcontractor shall exclude the installation of dry heads in the freezer/cooler walk in's as this work will be by the Fire Protection Subcontractor.
3. This Subcontractor shall exclude the furnishing and installing of the supply and exhaust fans. This work will be by the HVAC Subcontractor.
4. This Subcontractor shall exclude all final HVAC, Plumbing and Electrical connections to the Food Service Equipment. This work to be by the applicable MEP contractor.

E. Safety

1. This subcontractor shall perform a negative exposure assessment if any Stainless-Steel Welding takes place per OSHA Standard 1926.1126 - Chromium and all other standards that apply.
2. This subcontractor shall use sleeves and cut 4 gloves when handling sharp metal or Sheetmetal.
3. This subcontractor shall complete a site-specific lock out tag out plan 4 weeks prior to mobilization.

F. Logistics and Schedule

1. This subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

G. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for a complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Elevators*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***Elevators*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
14 2100	Electric Traction Elevators

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Bid Package Specific Scope

2. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
3. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
4. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
5. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.
6. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
7. This Subcontractor shall receive, distribute, and install any concrete embedded items supplied by others, including but not limited to anchor bolts, bearing pads, embedded angles, pad sleeves, etc.
8. This Subcontractor shall provide all surveying and layout required for the work included with this package.
9. This Subcontractor shall coordinate all deliveries and storage locations with Turner personnel. Any on-site storage must be coordinated at least 48 hours in advance with the authorization of a Turner Superintendent. It is also understood that this Subcontractor shall store all materials on mobile rolling racks and or palletized so that materials can be relocated immediately by the subcontractor upon request if deemed necessary by Turner's Superintendent. (Assume there will be multiple moves), if pallets are used there must be a pallet jack on floor at all times provided by this Subcontractor.
10. This Subcontractor shall coordinate "Just in Time" delivery of Elevator Equipment with Turner. Turner will not be responsible for offsite storage and any required storage costs shall be included by this Subcontractor.
11. This Subcontractor shall maintain access for other trades to Corridor 1050 at all times. Turner will provide a location within a reasonable distance from the shaft for storage once Elevator Installation has begun. All material must be mobile per the "Nothing Hits the Ground" Policy
12. This Subcontractor shall include 1 set of Wall Protection Blankets for protection during construction. Protection blankets shall be installed within the elevator to allow for use and prevention of damage.
13. This Subcontractor shall furnish to and Coordinate with Mason and Concrete Subcontractors for shaft inserts and wall boxes for fixtures and in the shaft. This shall be included in the Elevator Shop Drawings. Any inserts not provided in time for installation by the Concrete or Masonry Subcontractors will be installed by this Subcontractor. This subcontractor shall not turn over material without formal transfer of care and custody paperwork. This subcontractor shall provide copies to Turner upon request.

14. This Subcontractor shall coordinate with Concrete Subcontractor for proper installation of sill detail at new and existing slab. This shall be included in the Elevator Shop Drawings.
15. This Subcontractor shall show on their Shop Drawings dimensioned locations for all items in the Elevator pit and shaft that are provided by other Trades, including but not limited to Electrical devices, ladders, sump pit covers, sprinkler heads, Fire alarm devices, penetrations, access doors and Hoist beams.
16. This Subcontractor shall coordinate with Flooring Contractor and include time for Elevator Installer to set car and lock open doors for flooring installation. This Subcontractor shall also provide and confirm compatibility of sub floor
17. This Subcontractor shall inspect the Elevator Pit, Shaft and Lobbies and submit a Punchlist to Turner of other trades items to complete prior to scheduling the final inspection. This Subcontractor shall inspect the work of other trades as it is put in place. This Subcontractor shall schedule a meeting on site to review punchlist with the affected trades and schedule completion of items. No additional time above the contract Allowance in Item 30 will be permitted for Punchlist Items. This must be included in the Elevator Bid.
18. This Subcontractor is responsible to furnish and install their own Fall Protection including anchorage points.
19. This Subcontractor shall furnish and install all provisions needed for Security at the Elevator including but not limited provisions for cameras and card access. Coordinate with the Security Contractor. This should be addressed in the Elevator Shop Drawings.
20. This Subcontractor shall coordinate with the Fire Alarm contractor for installation and testing of all Fire Alarm devices related to the elevator. This Subcontractor shall be present at the time of the Fire Marshal FA testing.
21. This Subcontractor shall coordinate with the proper AHJ for witnessing of testing. This subcontractor shall coordinate with the AHJ as required per the plans, specifications, Local and State requirements. This subcontractor shall provide Turner seventy two (72) hour advance notice for all required.
22. This subcontractor shall pull the required permits from the municipality for the elevator and any other associated required permits related to the elevator. This subcontractor shall be present along with a TCCO representative for all inspections that involve the elevator.
23. This Subcontractor shall include the following **Trade Allowance:** 48 hours for operation of the car for other trades work in the Elevator Shaft as coordinated, scheduled and directed by Turner. Operator Time to be included as Foreman rate including any required supervision. This will be billed based on the final agreed contractual wage rates and may only be expended by written authorization of Turner Construction and any unspent portion of this unused scope hours will be credited at the end of your contract based on approved labor rate.
24. This Subcontractor shall include 1 laborer per 10 person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m while the subcontractor is performing work on site. Composite crew is intended to cleanup general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)

Utilities and Rough-in Coordination

25. Thru wall and thru slab fire stopping will be by the Fire Stopping Subcontractor. This Subcontractor shall include the "putty-packs" needed to achieve ratings at push button back boxes.

26. This Subcontractor shall participate in the preparation of MEP 3D Coordination drawings. This Subcontractor shall be required to label and show their work on these Drawings and participate in Coordination meetings to resolve conflicts.

Quality Assurance / Quality Control

27. This Subcontractor has confirmed that all hoistway pit depths as designed are adequate for this Subcontractors equipment and conform to all applicable codes. This Subcontractor shall coordinate all "clear hoistway" dimensions at each pit and shaft as it relates to the work of others.
28. This Subcontractor shall include all work required to satisfy the State Elevator Inspector and obtain final acceptance of the elevators. This Subcontractor shall provide a written list to TCCo of all discrepancies that must be corrected by other trades. This Subcontractor shall pay all fees associated with State of Connecticut elevator inspections.
29. This Subcontractor has verified that all the structural steel as designed is adequate to support the installation of the new elevators. This Subcontractor shall be responsible for the installation of any additional support steel required but not shown for their work.
30. This Subcontractor is responsible for all surveying and layout required for this scope of work, control lines will be provided by others.
31. This Subcontractor has verified that the power shown on the Electrical drawings for the Elevators are compatible with the new elevator system.

Add'l Items

32. This Subcontractor furnish and install all interior cab panels, reference finish schedule on A911 for material requirements.

D. Safety & Logistics

1. This Subcontractor has reviewed the Logistics Plans and the Construction Schedule and shall include all associated costs as relevant to achieve this scope of work within the Project Schedule. No come back costs will be entertained.

2. This Subcontractor shall review, conform to, and furnish and install all requirements included in the Safety Additional Provisions included in this Agreement. This Subcontractor understands that this document is project specific and all provisions must be included in this Subcontractors' bid.

3. This Subcontractor shall maintain and remove full height (floor to underside of deck) fire rated mesh, scrim or similar product in front of the hoist way opening prior to the installation of the elevator doors at all levels.

4. This Subcontractor shall ensure that all hoist-ways are secured and protected with a standard guardrail at all times to prevent fall hazards.

5. This Subcontractor shall ensure all temporary cars are fully guard-railed.

6. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible to remove snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers.

Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.

7. This Subcontractor shall provide a site specific plan on how they will comply with Turner's Ladder's Last Program.

8. This subcontractor shall ensure that any Lulls used on site are equiped with hydraulic fork positioners.

E. Exclusions

1. This Subcontractor shall exclude furnishing and installing flooring inside of the elevator cab (By BP #25 Flooring).
2. This Subcontractor shall exclude furnish and installing the hoist beam (By BP #13 Misc Metal).
3. ~~This Subcontractor shall exclude furnishing and installing the interior wilsonart plam wall coverings (By BP #18 Millwork).~~
4. This Subcontractor shall exclude the Sump pit ladder (By BP#13 Misc. Metal)

F. Logistics and Schedule

1. This subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.
2. Logistics plans are provided conceptually and for bidding purposes. Successful bidder will be required to further refine logistics plans with the Turner superintendent prior to the start of work and during the project.
3. The Project Site must remain accessible to all Emergency Response Units at all times.
4. Overall schedule duration for installation of the work shall be per the Project Schedule. This Subcontractor understands that multiple shifts and/or extended hours may be required to meet the project schedule durations. Costs associated with multiple shifts are included as part of the bid.
5. This Subcontractor shall include all costs for out of sequence work, all phased work and all come back work. No additional compensation will be considered for comeback work.
6. This subcontractor shall be responsible for all hoisting and rigging of any and all equipment, materials, etc. required for the completion of the scope of work. This Subcontractor has included all crane rental fees and material hoist fees.
7. This Subcontractor understands that the elevator must be installed complete and ready for construction use as shown on the Construction Schedule without exception. This Subcontractor has included any and all premium time for installation and / or costs premiums for material procurement associated with meeting this date.

G. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for a complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

Bid Package Specific Scope

Submittals & Coordination

2. This subcontractor shall submit dimenstioned shop drawings and coordinate the layout in the field all equipment pads with concrete subcontractor.

3. Provide penetration drawings for interior, exterior, foundation and floor penetrations. This should include dimensions off columns, elevations above finish floor, and required opening size. Layout as required for proper field coordination is included under this scope.

4. This Subcontractor shall furnish, F.O.B. jobsite, all access doors for all valves and other equipment requiring access and which may become inaccessible at a later date in the drywall and masonry assemblies. This Subcontractor shall arrange their work in such a manner to minimize the quantity of access doors required. All items requiring accessibility shall be located in already accessible areas, such as above lay-in ceilings, etc. if at all possible. It is the responsibility of the Plumbing Subcontractor to coordinate and provide information regarding the location, sizes and quantities of access doors, panels, etc. required for their Work as well as furnish same. Failure to furnish the access doors and / or coordinated locations such that other Subcontractors (e.g., masonry, drywall, etc.) must go back to complete work, shall result in a back-charge to this Subcontractor for out of sequence Work accordingly. Also note that all required access doors and / or panels shall be furnished from one (1) manufacturer with their ratings consistent with the respective partition / ceiling / floor ratings and must be keyed alike. Access door type will be per the architect's direction in each location. This Subcontractor shall provide access door shop drawings indicating locations, types and sizes in architectural ceilings and partitions for design team review and approval.

5. This Subcontractor shall fully coordinate his work with other trades for construction sequence and methods. This Subcontractor shall be prepared to participate in extensive coordination meetings with other subcontractors to accomplish this. Changes to details as a result of this coordination and out-of-sequence work necessitated by this coordination shall be included.

6. This Subcontractor will provide the necessary written documentation for meeting the CT high performance requirements as outlined in the specifications.
7. This Subcontractor shall coordinate all installations with ceiling heights as per shown in the Contract Documents. All conflicts must be made in writing to Turner Construction immediately so that a corrective action can take place without delaying the work of any other Trade Subcontractor.
8. This subcontractor shall fully participate in all 3-D coordination. Each Subcontractor, in addition to this effort, shall coordinate and provide a coordinated Reflective Ceiling Plan for review by the design team for all ceiling mounted devices.
9. This subcontractor shall coordinate all installations to meet accessibility requirements as noted in the contract documents.
10. This Subcontractor will be required to relocate any piping, supports, or other part of the Plumbing system installed by this subcontractor that deviates from the coordinated drawings that prohibits access to any equipment, valve, damper, junction box or anything else requiring access in the future. Acceptable access shall be deemed by Turner, Owner, Engineer, or Cx agent.
11. This Subcontractor shall design, furnish & install an independent support system for all hung equipment, fixtures, ceiling and piping system that are directly below the metal roof deck. This support system must attach to structural steel framing members as the metal roof deck cannot be utilized for support. Refer to A200 series drawings General Note #12 for criteria. This Subcontractor shall provide delegated design and include shop drawings and calculations indicating, but not limited to, load carrying capacities, point loads, etc. This Subcontractor shall include adding miscellaneous metal supports into the 3D model for coordination with all MEP trades.
12. This Subcontractor shall include all labor and material to coordinate locations of pipe runs so as not to interfere with egress passages, Electrical Rooms and stairwells. Plumbing systems shall not run in or pass through stairways.
13. Utilize Total Station system to layout and set hanger supports and layout risers/ boxes/ penetrations/ underslab infrastructure.
14. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
15. This Subcontractor shall be responsible to core all penetrations required with this scope of work, this includes in the existing foundations, walls and slabs as well as where sleeves where not installed prior to placing of concrete.
16. This Subcontractor shall participate in rough-in inspection coordination with other trades and Turner Construction utilizing color-coded framing identification to illustrate completion and inspection ready areas. Color-code key and inspection sequencing will be identified by Turner Superintendent.

Demolition

17. This subcontractor shall make safe all Plumbing piping, equipment and accessories scheduled to be demolished, refer to MEPD000 and MEPD001. This subcontractor shall cut and leave an air gap at the location of the start of the demo this shall be at the upstream location at the source (i.e. equipment, valve, distribution point, etc. All material to be removed shall be painted green by this subcontractor, green markings must be no more than 5' apart. Any material to remain will be painted red with markings no more than 5' apart. The Demolition subcontractor will remove and dispose all piping, accessories and materials
18. This Subcontractor shall furnish, install and maintain 4 hose bid locations per Turner superintendant for use during the demolition and abatement of the existing building.

Plumbing

19. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
20. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
21. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
22. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.
23. This Subcontractor shall furnish and install all under slab plumbing systems in coordination with the Site Subcontractor, Demolition and Concrete Subcontractor. Excavation and backfill for under slab plumbing systems shall be performed by others.
24. This Subcontractor shall furnish and install the storm, sanitary and water services from 5' outside of the foundation footprint to the point of use. This includes the sleeves and link seals for each penetration of the foundation wall and connections to the piping outside the foundation wall installed by others.
25. This Subcontractor shall furnish and install caulking of all plumbing fixtures to walls and floors with a pre-approved colored caulk this includes but not limited to lavatories, water closets, shower enclosures, etc. Colors may vary by location/application.
26. This Subcontractor shall layout, furnish and install all sleeves and inserts required for their work.
27. This Subcontractor shall store roof drain baskets and install after roof installation. Provide 5% spare roof drain baskets. Additionally, clean out roof baskets every 3 months while on the project until substantial completion.
28. This Subcontractor shall furnish all heat trace and controllers as indicated on the plumbing drawings by the Contract Documents for installation by the Electrical Subcontractor. Include heat trace to the grease trap on site. This Subcontractor shall coordinate with the Electrical Subcontractor for power requirements and locations. Installation, circuiting, and terminations shall be provided by the Electrical Subcontractor. This Subcontractor shall furnish and install any insulation that is required per the manufacturer. This Subcontractor will obtain heat trace manufacturer inspection and sign-off certificate prior to the installation of insulation on all pipes with heat trace.

29. This intent is for no mechanical systems to be installed over electrical equipment, however, this Subcontractor shall furnish and install drain pans that are properly slopped and piped to nearest drain as indicated on the contract documents for Plumbing equipment and/or for any piping which is coordinated over electrical components. This Subcontractor shall ensure proper code clearances are maintained for installations over and around MEP equipment, this includes but is not limited to NEC Clear access requirements. In addition, if a drip pan is being utilized, this subcontractor shall furnish and install a full leak detection system including but not limited to, power, control wiring, BMS monitoring etc. All costs for such leak detection systems shall be burdened by this subcontractor.
30. This Subcontractor shall coordinate trap primer headers in an accessible location for the end user facilities.
31. This Subcontractor install all indirect drain lines at floor drains in a manner which minimizes splashing and overflow opportunity of water to the area floor area.
32. This Subcontractor shall coordinate and provide proper rough to millwork an casework. This subcontractor shall furnish and install all lavatories and sinks within millwork and casework locations. For millwork islands, ensure proper venting and operation per code.
33. This Subcontractor shall coordinate and provide proper rough and drain locations for Kitchen Equipment. This Subcontractor shall Furnish and install all piping and equipment connections, per plumbing and Food Service Documents, greater quantity and scope to prevail. Include all branch sanitary, grease waste, gas, hot water, cold water, hangers, valves, caulking, sealants, etc.
34. This Subcontractor shall provide final connections to all Food Service Equipment including but not limited to all domestic water, gas, sanitary and waste. Furnish and install all mixing valves associated with the Kitchen Equipment, assume this subcontractor shall have representative in attendance at Department of Health and AHJ inspection of Food Service Equipment. This subcontractor shall coordinate and set required temperature settings per local DOH for all sinks within the Food Service area.
35. This Subcontractor shall Furnish and install all floor drains, trench drains, floor sinks as indicated on the floor plans, and at locations indicated on the enlarged plans on the Food Service Drawings.
36. This Subcontractor shall coordinate with the Ansul system furnished by the Food Service subcontractor. This subcontractor shall furnish and install all components of the emergency gas shut off station enclosure.
37. This Subcontractor shall provide installation of all mockups identified in the project documents as well as materials for each type of wall/ slab penetration to complete a firestopping mockup for review and approval by AHJ and Design Team. Assume exterior wall penetration mockup will be required for wall hydrant and coordatied with A315. Include requirement for first install mockup of science classroom prior to start of remaining areas.
38. This Subcontractor shall coordinate all exterior wall penetration and hose bid installations with exterior wall contractors. All flashing requirements, cavity depth and freeze protection coordination must be performed to ensure the exterior wall thermal and moisture specifications are maintained with these penetrations.
39. This Subcontractor shall coordinate equipment voltages with the Electrical Design. Identify accessories requiring power in addition to those indicated on the documents at the submittal phase for design team confirmation and coordination.
40. This Subcontractor shall provide all final gas and plumbing connections to equipment provided by others including but not limited to Food Service and HVAC Equipment.

41. The Structural Steel Subcontractor shall deck over all framed openings and the MEP Subcontractors shall cut and remove the deck for their installations and penetrations. Cutting of deck will not be permitted prior to installation of scope of work.
42. This Subcontractor shall coordinate with all toilet accessory installations. Pay attention to locations of flushometers in coordination with grab bars and water supply rough in elevations.
43. This Subcontractor shall ensure proper support of plumbing connections to devices and fixtures and should not utilize the fixture as a support to avoid loosening of connection over time due to fixture movement.
44. This Subcontractor shall provide adequate support for all in-wall plumbing to ensure restraint of movement within the wall cavity. This includes but is not limited to supports at slab penetrations as well as on vertical lengths of piping to prevent movement within stud cavity.
45. This Subcontractor shall furnish, install and maintain 3 Mop sinks locations, 5 hose bid locations and 4 hand washing stations with hot water and sanitary hook up, to be located within the building per the direction of the Turner Superintendent. All temporary sanitary lines shall have a strainer included and cleaned buy this subcontractor once a week. Any Temporary water lines shall be insulated.
46. All above ceiling seismic and required sway bracing shall be installed and inspected minimum 4 weeks prior to any scheduled ceiling grid installation.
47. This Subcontractor shall furnish and install all components of the air compressor system as shown on the contract documents.
48. This Subcontractor shall furnish and install all acoustical sealant of all wall and floor penetrations by this subcontractor per specification section 079200. Firestopping will be by BP #17.

Commisioning

49. This Subcontractor shall fully cooperate with the Owner's Commissioning Agent for commissioning of systems furnished and/or installed by this Subcontractor.
50. This Subcontractor will provide a dedicated engineer / staff person on site dedicated to the contractor commissioning of all systems prior to occupancy. This includes documenting, organizing and submitting to the owner all startup reports, pre-functional checklists and any performance reports that may be required for each piece of equipment.
51. This Subcontractor's Project Manager and Commissioning engineer shall attend a weekly Commissioning/MEP coordination meeting for the duration of the project.
52. This subcontractor shall include sufficient time to fully commission all systems. Adequate man power shall be available to fully meet the commissioning requirements.
53. Start-up reports shall be submitted to Turner within (3) days of startup.
54. This Subcontractor shall submit fully filled out Pre-Functional and Functional test reports to TCCo.
55. This Subcontractor shall provide testing and balancing as it applies to this scope of work.
56. This Subcontractor shall provide documentation of air pre-test of all wet systems via completed flow permit for all systems.

57. This Subcontractor shall perform all required testing in accordance with the specifications. Testing is to be performed in a manner so as to complement the schedule and procedure of construction, and the Work of others. Test reports shall identify the system, infrastructure and area testing with specified test requirements. Any and all manpower, temporary connections, etc. required to accomplish this work in this manner are included. NOTE: This Subcontractor will test every piece of equipment in the presence of Turner and / or the Engineer and provide a full report to Turner and the Engineer accordingly.
58. This subcontractor shall coordinate with the Authority Having Jurisdiction as required per the plans and specifications including those referenced in The Statement of Special Inspections. This subcontractor shall provide Turner seventy two (72) hour advance notice for all required inspections.
59. This Subcontractor shall include all necessary shutdowns and / or tie-ins for your specific systems. This subcontractor shall assume all shutdowns and tie-ins are to be performed premium time; provide proper notification and coordination with all affected parties (Owner, Turner, local agencies, utilities, etc.).
60. This Subcontractor shall complete all identification, labeling and tagging prior to the installation of the ceiling grid by others so as to allow for proper inspections as to thoroughness of these items. Coordinate end user requirements per Specification 220553.
61. This Subcontractor shall include in their Bid all necessary overtime and / or off-hour work for testing so as not to delay the Work of other Trade Subcontractors. This includes testing in conjunction with any other Trade that tie-in to this Subcontractor's scope of Work.
62. This subcontractor shall include necessary piping, valves, fittings, and terminations as required for partial testing of systems as required by the needs of the project. Temporary isolations of phased or multi-level, area systems shall be included.
63. This subcontractor will be responsible for all costs associated with the reopening and patching of ceilings or walls required for corrective work. All required testing of piping must be scheduled and completed before ceilings are installed. This subcontract includes any out of sequence work and testing required to complete the work before ceiling work starts.
64. This Subcontractor shall participate in rough-in inspection coordination with other trades and Turner utilizing color coded framing identification to illustrate completion and inspection ready areas. Color code key and inspection sequencing will be identified by Turner Superintendent.

Miscellaneous

65. Maintain and operate all systems installed under this package from start-up thru substantial completion and turn-over to Owner. Perform maintenance per manufacturer's recommendations.
66. This Subcontractor shall maintain utmost care so as not to damage Spray-on Insulating materials. Any and all damages and / or over-scraped areas, which may require repair, shall be back-charged to the Subcontractor that causes the damage. Hangers and supports shall be installed prior to SOFP operations to minimize scraping after the fact.
67. This subcontractor shall receive, install all Owner plumbing equipment and appliances including connections as identified on the equipment contract documents.
68. This Subcontractor shall provide training as specified for all of the equipment and systems furnished by this Subcontractor by phases. This Subcontractor shall include two (2) man-days of additional training be used at Turner Construction Company's discretion.
69. This Subcontractor shall submit a fully detailed MOP (Method of Procedure) to TCCo two (2) Weeks prior to start up and/or testing of any piece of equipment.

70. This Subcontractor has included all additional fittings as required for a complete system. The drawings may NOT fully dictate the number of fittings/ valves required for a complete system.
71. This Subcontractor shall be responsible to protect all plumbing equipment. Any damage as a result to equipment not being protected will be at this subcontractor's expense.
72. This subcontractor shall grout with non-shrink grout all base plates that are used to support piping and/or equipment.
73. This subcontractor shall be responsible for all cost associated with rigging their equipment into the building.
74. This Subcontractor shall secure covers over waterclosets to prevent use during construction.
75. Through wall and floor to floor fire stopping is included in a separate bid package. This subcontractor must coordinate all penetrations with the fire stopping subcontractor.
76. This Subcontractor shall furnish and install the higher quantity of fixtures if a discrepancy occurs between the architectural and plumbing drawings.
77. This Subcontractor shall include 1 laborer per 10 person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m while the subcontractor is performing work on site. Composite crew is intended to cleanup general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)
78. This Subcontractor shall include all costs to provide delegated design criteria and submittals per the following, but not limited to, Delegated Design Table on Drawing GC0A. This Subcontractor has thoroughly read all Specification Sections regardless of what is indicated on the Delegated Design Table on Drawing GC0A and included all costs for delegated design scope of work.
79. This Subcontractor shall design and install all, but not limited to, channel support systems, heavy duty steel trapezes, seismic restraint hangers, etc. required for all Mechanical systems as indicated in the Contract Documents. All above ceiling seismic and required sway bracing shall be installed and inspected 4 weeks prior to any scheduled ceiling grid installation.

D. Safety

1. This Subcontractor to air test all wet systems prior to filling with water.
2. This Subcontractor is to control water used in pressure testing at all times. Water will not be allowed to be dumped out onto the building floors.
3. Subcontractor shall provide a containment method for cutting oils and shavings that consists of a pan and absorbent material or equivalent (cardboard is not sufficient). A plan on how cutting oil will be handled and disposed of shall be provided.
4. This subcontractor shall ensure all stub ups extend a minimum of 3' above the slab or walking surface. If this is not possible, a 3' or higher cone must be placed over the stub up. Impalement protection is required on all stub up, when a hazard exists.
5. This subcontractor shall utilize a threaded rod cutter in lieu of a porta band or grinder to cut all threaded rod.
6. This Subcontractor shall protect all downward protruding threaded rod with rubber caps to prevent injury to employees while working around rods.

7. This Subcontractor shall submit on and use only rounded edged saddle for all pipe support in lieu of saddles with 90 degree corners equal or similar to the Buckaroo Saddle
8. This subcontractor shall provide a stamped engineered rigging plan for any pre-fabricated vertical risers to be picked with a crane.
9. This Subcontractor shall supply at a minimum one spill kit per floor for interior demolition adjacent to active space, containing the following: 3 Kibosh 3/4" pipe menders, 3 Kibosh 1" pipe menders, 1 shut gun, 2 (3/4" & 1") shark bite fitting with ball valve, portable electric submersible pump with 3/4" threaded hose nipple, 50 feet of 3/4" hose, Rubbermaid with castors labeled with cover, a water diversion tarp and water barriers, and a shop vacuum.

E. Exclusions

1. This Subcontractor shall exclude Firestopping

F. Logistics and Schedule

1. This subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

G. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for a complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

Unit Prices:	**Amount**
Refer to Form of Proposal	

H. Alternate Prices

The following Alternate Prices reflect the work of this bid package under which the bid proposal was ***submitted, and these alternate shall remain valid for the life of the project and include all costs for a*** complete installation.

Alternates:	**Amount**
Refer to Form of Proposal	

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#36 - Plumbing
Dated: 07.08.2024
Revised: 10.21.2024

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#37 – HVAC & Controls
Dated: 07.08.2024
Revised: 10.21.2024

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***BP#37 – HVAC & Controls Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***BP#37 – HVAC & Controls Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
230400	General Conditions for Mechanical Trades
230516	Expansion Fittings and Loops for HVAC Piping
230517	Sleeves and Sleeve Seals for HVAC Piping
230523	General-Duty Valves for HVAC Piping
230529	Hangers and Supports for HVAC Piping, Ductwork and Equipment
230548	Vibration and Seismic Controls for HVAC Piping and Equipment
230553	Identification for HVAC Piping and Equipment
230593	Testing, Adjusting, and Balancing for HVAC
230900	Instrumentation and Controls for HVAC
230993	Sequence of Operations
232113	Hydronic Piping
232114	Hydronic Specialties
232123	Hydronic Pumps
232500	HVAC Water Treatment
233100	HVAC Ducts and Casings
233300	Air Duct Accessories
233400	HVAC Fans
233600	Air Terminal Units
233700	Air Outlets and Inlets

235100	Breechings, Chimneys, and Stacks
235239	Fire-Tube Boilers
235700	Heat Exchangers for HVAC
238126	Split-System Air-Conditioners
238200	Convection Heating and Cooling Units

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
DIV 00	Division 00 – Procurement and Contracting Requirements
DIV 01	Division 01 – General Requirements
019113	General Commissioning Requirements
079200	Joint Sealant
230700	HVAC Insulation
236411	Packaged Water Chillers – Scroll
237413	Modular Central Station Air-Handling Units

Bid Package Specific Scope

2. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
3. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
4. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
5. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

6. This Subcontractor shall furnish and install all mechanical systems, including but not limited to, associated piping, fittings, ductwork, fire/smoke dampers, hangers, supports, insulation, valves, actuators, identification, controls, and specialties as shown on the Contract Documents and in the Specifications. This Subcontractor is to include items not specifically shown but required for the operation of systems shown within this bid package.
7. This Subcontractor shall coordinate and provide all final Mechanical connections to equipment provided by others, including but not limited to, Food Service Equipment, Pre-Purchased Equipment, etc.
8. This Subcontractor shall file and pull all permits required for their Scope of Work. Utility connection coordination and cost shall also be included by this Subcontractor.
9. This Subcontractor shall provide rigging plans for all equipment and/or installations requiring the use of a crane at a minimum of one (1) month prior to the rigging operation. This Subcontractor shall include, but not limited to, all road plans, signage, traffic controls, etc. This Subcontractor shall coordinate crane pad locations with the BP#09 Sitework Subcontractor.
10. This Subcontractor shall include all costs for escalation on materials, labor, equipment, etc. for the durations indicated on the project schedule.
11. This Subcontractor shall provide all necessary layout including benchmarks, extending of control lines, etc. to properly perform their Work.
12. This Subcontractor shall provide a full-time competent Project Manager for the duration of the project. This individual must have the authority to make all decisions for this Subcontractor, attend all weekly meetings, and be responsible for all lower tier subcontractors and vendors.
13. This Subcontractor shall be required to continuously record the progress of the HVAC and Controls Work on a record set of Drawings, to be maintained on the jobsite at all times. The Architect, Engineer and Turner will review these Documents on a monthly basis in conjunction with their monthly payment application review; this shall be a condition of approval of each progress payment.
14. This Subcontractor understands the specific warrantee/guarantee period will start when the equipment/system is accepted by the Owner for their operation/use at the time of Substantial Completion. This Subcontractor shall include, but not limited to, ownership, preventative maintenance, protection, care, operation, cleaning, etc. for all HVAC equipment/systems, whether furnished by this Subcontractor or others, any gap duration between the scheduled start up of such equipment and owner acceptance of the equipment/system. This Subcontractor shall perform maintenance per equipment manufacturer's recommendations.
15. This Subcontractor shall be responsible for protecting all Mechanical equipment, whether furnished by this Subcontractor or by others. Any damage as a result to equipment not being properly protected will be repaired at this Subcontractor's expense.
16. This Subcontractor shall furnish and install all supports and support systems for mechanical equipment and piping if not indicated on the structural or mechanical drawings. Systems shall meet the requirements of seismic and sway parameters per the local building code and project specifications.
17. This Subcontractor shall provide their own lifts and access for construction. No scaffolding will be provided.
18. This Subcontractor shall submit shop drawings as well as layout and mark housekeeping pads for equipment provided and/or installed under this scope of work. Installation of housekeeping pads will be by BP#10 – Concrete.

19. This Subcontractor shall be responsible for coring all penetrations required with this scope of work. This includes, but not limited to, foundations, walls, slabs, etc. as well as where sleeves were not installed prior to placing of concrete.

20. This Subcontractor shall coordinate, layout, furnish and install all sleeves and inserts required for their work. Sound sealing shall be by this Subcontractor. Firestopping will be by the BP#17 Firestopping Subcontractor. Throughout the entirety of the construction progress/schedule, this Subcontractor shall review all sleeve locations installed within, but not limited to, gypsum partitions, masonry partitions, concrete foundation walls, steel decking, etc. and confirm the sleeves are located and installed where needed as progress continues for the other associated Subcontractors (i.e. confirm sleeve locations prior to the Masonry Subcontractor setting masonry blocks and/or grout). Commencement of this Subcontractor's work will constitute this Subcontractor's acceptance of the existing conditions.

21. This Subcontractor shall provide locations of all HVAC pipe sleeves and penetrations to the BP#17 Firestopping Subcontractor so they can properly seal/stop the HVAC pipe sleeves, penetrations. This Subcontractor shall coordinate duct and pipe insulation with firestopping, sleeves, and penetrations.

22. This Subcontractor shall furnish and install all expansion fittings and expansion loop material, size and spacing. Reference specification table, 23 0516 page – 9.

23. This Subcontractor shall furnish, F.O.B. jobsite, all access doors for all valves and other equipment requiring access and which may become inaccessible at a later date in the drywall and masonry assemblies. This Subcontractor shall arrange their work in such a manner to minimize the quantity of access doors required. All items requiring accessibility shall be located in already accessible areas, such as above lay-in ceilings, etc. if at all possible. It is the responsibility of the Mechanical Subcontractor to coordinate and provide information regarding the location, sizes and quantities of access doors, panels, etc. required for their Work as well as furnish same. Failure to furnish the access doors and / or coordinated locations such that other Subcontractors (e.g., masonry, drywall, etc.) must go back to complete work, shall result in a back-charge to this Subcontractor for out of sequence Work accordingly. Also note that all required access doors and / or panels shall be furnished from one (1) manufacturer with their ratings consistent with the respective partition / ceiling / floor ratings and must be keyed alike. Access door type will be per the architect's direction in each location. This Subcontractor shall provide access door shop drawings indicating locations, types and sizes in architectural ceilings and partitions for design team review and approval.

24. This Subcontractor shall furnish and install all HVAC and Controls equipment along with, but not limited to, all associated piping, insulation, conduit, wire, terminations, start-up, commissioning, etc. indicated in the Contract Documents **not** being furnished by SourceBlue.

25. This Subcontractor shall furnish and install Boilers B-1 and B-2. This Subcontractor shall include all costs for, but not limited to, rigging, protection, connections, startup, commissioning, controls, etc. This Subcontractor shall refer to all Contract Drawings and specifications to furnish and install a complete operating system including, but not limited to, pressure relief valves, solenoid valves, electronic spark ignitions, low water cut-off switches, temperature sensors, manufacturer accessories, etc. Associated EPO's to be furnished and installed by the BP#38 Electrical Subcontractor.

26. The BP#12 Structural Steel Subcontractor shall deck over all framed openings and this Subcontractor shall cut and remove the deck for their installations and penetrations.

27. Open ends of ductwork are NOT acceptable. ALL ductwork (whether or not installed or stored) are required to be covered at all times (especially its openings) even during transport by this Subcontractor. This Subcontractor shall inspect and protect the open ends of all installed ductwork daily. All duct work must be stored on movable carts and protected. This Subcontractor shall issue reports of investigations and corrective action of open ends of ductwork to Turner Construction on a weekly basis.
28. This Subcontractor shall furnish and install all Hydronic Radiant Ceiling Panels and Active Chilled Beam units per the associated schedules on Drawings M601 and M602. This shall include all, but limited to, associated pipes, valves, fittings, control valves, etc. per Details 7, 8, 9, and 10 on Drawing M502 as an example. This Subcontractor shall coordinate mounting of these units with the scheduled ceilings as well as furnish and install all components required to support, hang and finish these units including, but not limited to, hangers, rods, finish trim, t-bars, Coanda wing trims, etc. This Subcontractor shall coordinate installation and support of these units with the BP#22 Acoustical Ceilings Subcontractor.
29. This Subcontractor shall utilize a Total Station system for surveying and layout as well as setting hanger supports and layout risers/ boxes/ penetrations/ under slab infrastructure, etc. This Subcontractor shall include utilizing the Total Station system by downloading the MEP Coordination and/or Design model and using such model to layout the points. The Total Station system shall not be utilized solely as a transit.
30. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
31. This Subcontractor shall provide Turner Construction with twenty-five (25) USB Data Loggers to record temperature and humidity. These Data Loggers are to be Bluetooth compatible and interface with a cell phone application provided by the manufacturer.
32. This Subcontractor shall furnish and install all identification, labeling and tagging defined in the Contract Documents prior to the installation of the ceiling grid by others so as to allow for proper inspections as to thoroughness of these items.
33. This Subcontractor shall furnish and install all fire, smoke and combination dampers with actuators. Required quantity of dampers to be fully coordinated and included by this Subcontractor with the Architectural Partition and slab rating plans.
34. This Subcontractor shall paint the interior of metal ducts that are visible through registers and grilles and that do not have duct liner. Apply one coat of flat, black, latex paint over a compatible galvanized-steel primer.
35. This Subcontractor shall include all necessary shutdowns and / or tie-ins for your specific systems. This includes all required premium time, proper notification and coordination with all affected parties (Owner, Turner, local agencies, utilities, etc.).
36. This Subcontractor shall furnish and install all specialty ductwork including kitchen hood exhaust ductwork, and fabric ductwork.
37. This Subcontractor shall furnish and install all breeching, chimneys, and vents for equipment including but not limited to, boilers, water heater, generator, etc.
38. This Subcontractor shall grout with non-shrink grout all base plates that are used to support piping and/or equipment.

39. This Subcontractor shall include all costs to provide delegated design criteria and submittals per the following, but not limited to, Delegated Design Table on Drawing GC0A. This Subcontractor has thoroughly read all Specification Sections regardless of what is indicated on the Delegated Design Table on Drawing GC0A and included all costs for delegated design scope of work.

40. This Subcontractor shall design, furnish & install an independent support system for all, but not limited to, hung equipment, fixtures, ~~ceiling and~~ piping systems, ductwork, registers, grilles, diffusers, etc. that are ~~directly below the~~ typically supported from a metal roof deck. This support system must attach to structural steel framing members as the metal roof deck cannot be utilized for support, either above or below the roof deck. Refer to A200 series drawings General Note #12 for criteria. This Subcontractor shall provide delegated design and include shop drawings and calculations indicating, but not limited to, load carrying capacities, point loads, etc. This Subcontractor shall include adding miscellaneous metal supports into the 3D model for coordination with all MEP trades.

41. This Subcontractor shall design and install all, but not limited to, channel support systems, heavy duty steel trapezes, seismic restraint hangers, etc. required for all Mechanical systems as indicated in the Contract Documents. All above ceiling seismic and required sway bracing shall be installed and inspected 4 weeks prior to any scheduled ceiling grid installation.

42. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to cleanup general debris not ~~necessary~~ necessarily associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)

43. This Subcontractor shall furnish and install all acoustical sealant of all wall and floor penetrations by this subcontractor per specification section 079200. Firestopping will be by BP #17.

44. This subcontractor shall furnish and install all aluminum fabricated duct plenum boxes & louvers on all associated roofs. For example, reference 1B/ A531 & M103A.

45. This Subcontractor shall include 2 complete cleanings of equipment and systems provided under this scope. Cleanings shall be performed prior to initial energizing equipment and again prior to turnover to the Owner. Cleanings shall include complete debris, dust removal and wiping of all internal and external components and shall be in accordance with manufacturers approved methods.

46. This subcontractor shall provide video recording of owner demonstrations and trainings for all installed equipment.

Early Equipment Use

47. This subcontractor shall provide all labor and material for early start-up and use of HVAC systems for early heating & cooling. Provide extended warranties & cleaning of all systems for like-new turn-over conditions at time of Substantial Completion. Please include the following in your bid:

    A. Include labor and materials for filter changes at VRF, HR and roof top units. One (1) at final cleaning and one (1) final set of filters in each piece of equipment used for early cooling / dehumidification as needed. This is in addition to what is specified.

    B. Include time to assist in additional start up by manufacturer if required for equipment used for early cooling / dehumidification.

    C. Include any routine maintenance required per the O & M manuals.

    D. Include furnishing, installing and maintaining filter media on RGD's and before VRF, HR and RTU Unit pre-filters.

E. Include furnish and installation of means to bypass any heat or energy recovery wheels within major Mechanical Equipment (i.e. RTUs, DOAs, etc.). Heat or energy recovery wheels cannot get dirty.

Logistics

48. Temporary power will be provided in accordance with Turner's Temporary Light and Power Additional Provisions. This Subcontractor shall be responsible for any additional power requirements not provided in this document for the work of your trade.
49. This Subcontractor is required to provide neat rack storage of materials on the working floors. Space is limited, therefore, a neat and organized work area is required to be maintained by all trades.
50. This Subcontractor shall coordinate and plan all large deliveries, whether equipment, materials or any other items, with Turner Construction to determine impact of the Project's logistics and identify any obstacles such as, but not limited to, requiring larger gates, larger exterior wall leave-outs, etc. to ensure the delivery is successful and does not impact the overall Project Schedule.
51. This Subcontractor shall review all areas of high roofs and confirm access can be achieved with the lift and/or crane they intend to utilize at a minimum of two (2) weeks prior to the installation date. This review shall include, but not limited to, all types of obstructions, site grading, already installed materials/systems, etc.
52. This Subcontractor shall provide temporary heating for the winter of 2025-2026 (Beginning October 2025 to the end of March 2026) for the interior construction of the new school. Assume fifteen (15) 480V electric units, similar to Heat Wagon P6000, located per Turner's Temporary Heating Additional Provisions. This Subcontractor shall size accordingly to provide a minimum of 50-degree ambient air temperature. Coordinate quantity of units required and include distribution to each floor level. Coordinate Electrical requirements and points of connection with the BP#38 Electrical Subcontractor accordingly.

Submittals & Coordination

53. This Subcontractor shall provide penetration drawings for, but not limited to, interior, exterior, foundation, partition and floor penetrations. This shall include dimensions off columns, elevations above finish floor, and required opening size. Layout as required for proper field coordination is included under this scope.
54. This Subcontractor shall coordinate all Mechanical and Controls equipment voltages with the Electrical Design. Identify accessories requiring power in addition to those indicated on the documents during the submittal phase for design team confirmation and coordination.
55. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing, one (1) week in advance, any discrepancies that may prevent the proper execution, installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled. This notice should provide sufficient time to repair conditions without impacting the overall Project Schedule. Commencement of this Subcontractor's work will constitute this Subcontractor's acceptance of the existing conditions.
56. This Subcontractor shall coordinate installation height and dimensions of all, but not limited to, roof top equipment, curbs, supports, ducts, pipes, insulation, conduit, etc. with the BP#15 Roofing contractor to ensure minimum clearances for flashings, pitch pockets, etc. are maintained.

57. This Subcontractor shall furnish and install a complete insulated piping system through all roof penetrations. This includes, but not limited to, all required Counter Flashing, Rigid insulation, link seals, Anchor/Stop plates, Pipe sleeves, Pipe guides, etc. Start and stop point locations of counter flashing shall be coordinated with Turner Construction and the BP#15 Roofing Subcontractor.
58. This Subcontractor shall furnish and install all roof supports for their work, including but not limited to, all roofing pads and other necessary materials. This Subcontractor shall coordinate with the BP#15 Roofing Subcontractor all details and installations to comply with the roofing warranty.
59. This Subcontractor shall coordinate and perform all roof penetrations when the BP#15 Roofing Subcontractor is on-site and present so the penetrations can be flashed/closed properly and in accordance with the roofing warranty requirements.
60. This Subcontractor shall maintain utmost care so as not to damage the Spray-on Insulating materials. Any and all damages and / or over-scraped areas, which may require repair, shall be back charged to the Subcontractor that causes the damage. Hangers and supports shall be installed prior to SOFP operations to minimize scraping after the fact.
61. This Subcontractor shall coordinate all domestic water tie-ins with the Plumbing Subcontractor.
62. This Subcontractor shall coordinate all exterior wall penetration installations with the exterior wall contractors. All, but not limited to, details, flashing requirements, cavity depth and freeze protection coordination(s) must be performed to ensure the exterior wall thermal and moisture specifications are maintained with these penetrations.
63. This Subcontractor will be required to relocate any piping, supports, or other parts of the Mechanical system installed by this Subcontractor that deviates from the coordinated drawings that prohibits access to any equipment, valve, damper, junction box or anything else requiring access in the future. Acceptable access shall be deemed by Turner, Owner, Engineer, or Commissioning Agent.
64. This Subcontractor shall participate in rough-in inspection coordination with other trades and Turner Construction utilizing color-coded framing identification to illustrate completion and inspection ready areas. Color-code key and inspection sequencing will be identified by Turner Superintendent.
65. Duct-mounted smoke detectors shall be furnished by the BP#38 Electrical and Fire Alarm Subcontractor. This Subcontractor shall coordinate locations, sizes, orientation and layout of all Duct-mounted smoke detectors with the BP#38 Electrical and Fire Alarm Subcontractor. This Subcontractor shall install all Duct-mounted smoke detectors. This Subcontractor shall reseal all associated penetrations and ensure sealing and insulation are adequate. Power wiring of Duct Smoke & Fire/Smoke dampers will be by the BP#38 Electrical and Fire Alarm Subcontractor. This Subcontractor shall furnish and install all interconnecting control wiring between the duct-mounted smoke detector and fire/smoke damper including but not limited to alarm points, status/position, shut down of Mechanical equipment, notification by BMS subcontractor, etc.
66. This intent is for no mechanical systems to be installed over electrical equipment, however, this Subcontractor shall furnish and install drain pans that are properly slopped and piped to nearest drain as indicated on the contract documents for Mechanical equipment and/or for any piping which is coordinated over electrical components. This Subcontractor shall ensure proper code clearances are maintained for installations over and around MEP equipment, this includes but is not limited to NEC Clear access requirements. In addition, if a drip pan is being utilized, this subcontractor shall furnish and install a full leak detection system including but not limited to, power, control wiring, BMS monitoring etc. All costs for such leak detection systems shall be burdened by this subcontractor.

67. This Subcontractor shall coordinate installations with the BP#21 Drywall & General Trades and BP#22 Acoustical Ceiling Subcontractors of all equipment and systems, including but not limited to, registers, diffusers, grilles, hydronic radiant ceiling panels, active chilled beams, fan coil units, etc. to ensure proper fit and finish at all ceilings and walls.
68. This Subcontractor shall review and confirm all, but not limited to, Mechanical, Controls, Electrical, Fire Alarm, etc., necessary penetrations and connections are installed within the curb prior to the installation of any rooftop equipment. This Subcontractor shall provide sign-off sheets to Turner Construction.
69. This Subcontractor shall provide access within all equipment curbs to allow for any under-unit connections (i.e. duct, gas, electric, condensate, etc.) so these services don't need to be connected while the unit(s) are suspended during the rigging/installation process.
70. This Subcontractor shall include all labor and material to coordinate locations of pipe runs so as not to interfere with egress passages, Electrical Rooms and stairwells. Piping systems shall not run in or pass through Electrical Rooms or stairways.
71. This Subcontractor shall furnish and install all roof curbs, stands, duct/pipe supports, counter flashing, etc. required for their work. This Subcontractor shall coordinate roofing depths and blocking requirements furnished and installed by the BP#15 Roofing Subcontractor.
72. This subcontractor shall coordinate with the BP#38 electrical and BP#30 food service subcontractors to provide the required sequence of operations for the ansul system. This subcontractor shall include all but not limited to wiring, conduit, devices, testing, etc. for a complete operational system. For example, refer to 1/E502, E701 & 5/P501.

Coordination with SourceBlue

73. This Subcontractor understands SourceBlue will be furnishing the following HVAC equipment: Dedicated Outdoor Air Units DOA-1, DOA-2, DOA-3, DOA-4 and DOA-5; Rooftop Units RTU-1, RTU-2 and RTU-3; Heat Recovery Ventilator HRV-1; Air Cooled Chillers CH-1 and CH-2. This Subcontractor has received, reviewed, included costs and understands the scope of work to be performed in the Equipment Coordination Matrix(ces). This Subcontractor is responsible for all work to be performed under the Trade Partner – MECH, Trade Partner – BMS, and where applicable, Trade Partner – OTHER roles and responsibilities.
74. This Subcontractor shall review the submittals for all equipment furnished by SourceBlue and shall furnish and install any HVAC and/or Controls components not provided by SourceBlue to provide a complete and operational system.
75. This Subcontractor shall include receiving and storing the above-referenced SourceBlue-furnished equipment in an insured and suitable location as per the associated equipment manufacturer's directions for up to a year's time. This Subcontractor shall include all costs to transport this equipment to the jobsite.
76. Upon arrival to the jobsite, all, but not limited to, marshaling, hoisting, rigging, setting and associated costs shall be provided by this Subcontractor for the pre-purchased HVAC equipment. All costs to protect and ensure no damage occurs during the storage, transportation, rigging and installation phases shall be included.

77. This Subcontractor understands SourceBlue will be furnishing seismic curbs for the following, but not limited to, HVAC equipment: Dedicated Outdoor Air Units DOA-1, DOA-2, DOA-3, DOA-4 and DOA-5; Rooftop Units RTU-1, RTU-2 and RTU-3; Heat Recovery Ventilator HRV-1. This Subcontractor shall contract a third-party engineer licensed in the State the work is being performed to design curb attachment to building structure. This Subcontractor shall include all costs associated with coordinating, installing and attaching these curbs. This engineer shall review installed field conditions and issue a report confirming all attachment of rooftop equipment and/or curbs to the structure are adequate prior to setting the unit(s).

Demolition

78. This Subcontractor has included all Mechanical Demolition notes and scope of work identified on the Contract Documents including, but not limited to, Drawings MEPD000 and MEPD001.

79. This Subcontractor shall make safe all HVAC and Controls piping, equipment and accessories scheduled to be demolished. This subcontractor shall cut and leave an air gap at the location of the start of the demolition at the upstream source/location (i.e. equipment, valve, distribution point, etc.). All material to be removed shall be painted green by this Subcontractor, green markings must be no more than 5' apart. Any material to remain will be painted red with markings no more than 5' apart. Removal and disposal of all piping, accessories and materials will be provided by the BP#08 Demolition & Abatement Subcontractor.

80. The BP#08 Demolition & Abatement Subcontractor will perform all MEP mass demolition and removals (piping, conduits, wire, equipment, etc.) for all phases of the work after the services have been cut, capped and made safe by the MEP trades. This Subcontractor will be responsible for capturing and properly disposing of the refrigerant of all Mechanical equipment from the existing Building.

81. This Subcontractor has received, reviewed and included all costs for phased demolition of the existing Building and associated HVAC and Controls per the Phasing & Logistics Plans. This Subcontractor acknowledges and understands portions of the existing Building will be abated and demolished prior to the entire Building. This Subcontractor shall coordinate with the BP#08 Demolition and Abatement Subcontractor with respect to the sequencing of the work relative to the zoning and shutdown or continued operation of the existing HVAC and Controls systems.

Controls

82. This Subcontractor shall furnish and install, but not limited to, all labor, materials, services, equipment and transportation necessary for a complete and operational system of automatic temperature control and BMS (Building Management System) along with required control wiring in accordance with provisions of the contract documents. This Subcontractor shall include all, but not limited to, computer hardware/software, input/output devices, controllers, local area networks, sensors, control devices, actuators, control units, etc. required for a complete operating system.

83. This Subcontractor is required to furnish and install, but not limited to, all conduit, boxes, devices, wiring, terminations, etc., for a complete and operational low voltage Controls system as well as equipment interlocks between fans, dampers, detection devices, actuators, etc. This Subcontractor shall verify voltages are compatible between components, whether furnished under this scope of work or by others (i.e. SourceBlue pre-purchased equipment).

84. This Subcontractor will be responsible for all costs associated with the reopening and patching of ceilings and/or walls required for corrective work. All required testing must be scheduled and completed before ceilings are installed or walls are closed.
85. This Subcontractor shall coordinate, furnish, install, wire, test, startup and commission all sensors such as but not limited to temperature, humidity, carbon dioxide, combination temperature/humidity/CO2, etc. required for a complete operating system. This Subcontractor shall produce and submit shop drawings indicating exact locations of sensors which will be reviewed and approved by the Design Team prior to any wall rough-in.
86. This Subcontractor shall generate, test and confirm functioning BMS graphics and all equipment Sequence of Operations prior to the start of Commissioning, Owner Training and Owner acceptance/occupancy.
87. The BP#38 Electrical & Fire Alarm Subcontractor will provide power to all Controls DDC Panels. This Subcontractor shall provide power to all control devices downstream of the DDC Panels per the plans and specifications.
88. This Subcontractor shall include all, but not limited to, cabling, terminations, patch panels, etc. to provide network connections to their BMS/Controls system required for a complete operating system. This Subcontractor shall include both temporary and permanent installations to comply with the Project Schedule.
89. This Subcontractor shall review all contract drawings and specifications to furnish and install all required BMS integrations, programming, etc. For example, reference Keynote FP18 on Drawing FP101E, 2/P500, 1/E500, 1/E501, 1/E701, etc.

Commissioning and Testing

90. This Subcontractor shall include, but not limited to, all necessary piping, valves, fittings, and terminations as required for partial testing of systems as required by the needs of the project. Temporary isolations of phased or multi-level, area systems shall be included.
91. This Subcontractor shall fully cooperate with the Owner's Commissioning Agent for commissioning of systems furnished and/or installed by this Subcontractor. This Subcontractor's Project Manager and Commissioning Engineer shall attend a weekly Commissioning/MEP Coordination meeting for the duration of the project. This Subcontractor shall include sufficient time to fully commission all systems. This Subcontractor shall be responsible for Controls commissioning until each system is fully operational and accepted by the independent Commissioning Agent and/or Owner.
92. This Subcontractor will provide a dedicated engineer / staff person on site dedicated to the commissioning of all systems prior to occupancy. This includes, but is not limited to, documenting, organizing and submitting startup reports, pre-functional checklists, functional checklists and any performance reports that may be required for each piece of equipment within three (3) days of startup. This Subcontractor shall provide adequate manpower to fully meet the commissioning requirements.
93. This Subcontractor shall perform all required testing in accordance with the specifications. Testing is to be performed in a manner to complement the Project Schedule and procedure of construction, and the Work of others. Test reports shall identify the system, infrastructure and area testing with specified test requirements. Any and all manpower, temporary connections, etc. required to accomplish this work in this manner are included. NOTE: This Subcontractor will test every piece of equipment in the presence of Turner and / or the Engineer and provide a full report to Turner and the Engineer accordingly.

94. This Subcontractor will be responsible for all costs associated with the reopening and patching of ceilings or walls required for corrective work. All required testing of HVAC and Controls systems must be scheduled and completed before ceilings are installed. This subcontract includes any out of sequence work and testing required to complete the work before ceiling work starts.

95. This Subcontractor shall include in their scope of Work, the proper starting, testing, and water / air balancing of the HVAC system. This is to include all costs associated with working with the Controls Subcontractor for starting, stopping, adjusting, and modifying all equipment with the Balancing Subcontractor (i.e., the Balancing and Control Subcontractors are to work together simultaneously full-time during the balancing phase). Any repair and / or replacement costs for ceiling tiles damaged during this phase shall be this Subcontractor's responsibility.

96. This Subcontractor will be responsible for all sheave changes for any HVAC equipment on the project that does not meet the design CFM.

97. This Subcontractor shall coordinate the Mechanical installation sequence, provide and execute a building flush-out schedule/procedure to meet the CT High Performance Building Requirements identified in Specification Section 230500. This Subcontractor shall provide the necessary written documentation including, but not limited to, confirmation of balancing completion, flush-out procedure, hourly trend logs, etc. as well as furnish and install new filtration media on all associated HVAC equipment.

98. This Subcontractor shall perform and document all pressure tests for all ductwork, piping and equipment as required by the contract documents, commissioning and QA/QC requirements. This Subcontractor shall visually mark all tested sections of ductwork. Testing is to be scheduled according to the needs of the project. This Subcontractor shall coordinate with the associated trades and pressure test all ductwork and/or piping scheduled to be concealed in a chase or behind partitions prior to being permanently concealed.

99. This Subcontractor shall include in their Bid all necessary overtime and / or off-hour work for testing so as not to delay the Work of other Trade Subcontractors. This includes testing in conjunction with any other Trade that tie-in to this Subcontractor's scope of Work.

Additional Scope Clarifications

100. This Subcontractor shall include, but not limited to, all design, furnishing and installation of metal support stands for all exterior ductwork associated with Dust Collector DC-1. This Subcontractor shall also include, but not limited to, all design, furnish and installation of Dust Collector DC-1 supports. See Drawing ME for reference.

101. This Subcontractor shall furnish and install all condensate piping, traps, supports, clean outs, insulation, etc., associated with all equipment requiring such. This Subcontractor shall coordinate with the Plumbing drawings and Plumbing Subcontractor for indirect drain connections into storm piping. Refer to 7/P501 for coordination purposes; BP#36 – Plumbing to furnish and install all storm piping, backwater valves and J.R. Smith Model No. 3950 (or equal) air gaps; This Subcontractor shall install their condensate drain pipe into the air gap and adjust the inlet set screw; This Subcontractor shall furnish all access doors for these applications to either BP#11 – Masonry or BP#21 – Drywall and General Trades for installation, depending on the ceiling and/or partition type.

102. This Subcontractor shall furnish, rig, install, connect, test, commission, etc., all Mechanical equipment indicated on the Contract Documents NOT being furnished by SourceBlue. This shall include, but not be limited to, finned tube radiators, hydronic radiant ceiling panels, HVLS fans, fan coils, VAVs, exhaust fans, Duct Collector DC-1, split system AC units and outdoor units, cabinet unit heaters, unit heaters, duct silencers, active chilled beams, diffusers, registers, air filtration units, heat exchangers, duct mounted hot water reheat coils, mechanical pumps, etc.

103. This Subcontractor shall include, but not limited to, furnishing, coordinating, installing, wiring, testing, etc., all pressure sensors on the mechanical piping system indicated on the Contract Documents.

D. Exclusions

1. This Subcontractor shall exclude Division 22 Plumbing Scope of work (By BP#36 – Plumbing).
2. This Subcontractor shall exclude furnish and installation of concrete housekeeping pads beneath equipment (By BP#10 – Concrete).
3. This Subcontractor shall exclude trenching, excavation and backfilling of any exterior below-grade scope of work (By BP#09 – Sitework).
4. This Subcontractor shall exclude Penetration Firestopping (By BP#17 – Firestopping).
5. This Subcontractor shall exclude rigging, furnishing or installation of the walk-in refrigerator and freezer condensing units as well as associated refrigerant piping and insulation (By BP#30 – Food Service Equipment).

E. Safety

1. This Subcontractor to air test all wet systems prior to filling with water.
2. This Subcontractor is to control water used in pressure testing at all times. Water will not be allowed to be dumped out onto the building floors.
3. This Subcontractor shall provide a containment method for cutting oils and shavings that consists of a pan and absorbent material or equivalent (cardboard is not sufficient). A plan on how cutting oil will be handled and disposed of shall be provided. Plan should not allow for any oil to stain or penetrate the concrete slab or finished surfaces, this subcontractor shall be responsible for any damage to installed material.
4. This subcontractor shall ensure all stub ups extend a minimum of 3’ above the slab or walking surface. If this is not possible, a 3’ or higher cone must be placed over the stub up. Impalement protection is required on all stub up, when a hazard exists.
5. This subcontractor shall utilize a threaded rod cutter in lieu of a porta band or grinder to cut all threaded rod.
6. This Subcontractor shall protect all downward protruding threaded rod with rubber caps to prevent injury to employees while working around rods.
7. This Subcontractor shall submit on and use only rounded edged saddle for all pipe support in lieu of saddles with 90-degree corners equal or similar to the Buckaroo Saddle.
8. This subcontractor shall provide a stamped engineered rigging plan for any prefabricated vertical risers to be picked with a crane.
9. This Subcontractor shall supply at a minimum one spill kit per floor for interior demolition adjacent to active space, containing the following: 3 Kibosh 3/4" pipe menders, 3 Kibosh 1" pipe menders, 1 shut gun, 2 (3/4" & 1") shark bite fitting with ball valve, portable electric submersible pump with 3/4" threaded hose nipple, 50 feet of 3/4" hose, Rubbermaid with castors labeled with cover, a water diversion tarp and water barriers, and a shop vacuum.
10. This Subcontractor shall review, conform to, and furnish and install all requirements included in the Safety Additional Provisions included in this Agreement. This Subcontractor understands this document is project specific and all provisions must be included in this Subcontractors’ bid.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#37 – HVAC & Controls
Dated: 07.08.2024
Revised: 10.21.2024

F. Logistics and Schedule

1. This subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

G. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

Unit Prices:	**Amount**
Refer to Form of Proposal	

H. Alternate Prices

The following Alternate Prices reflect the work of this bid package under which the bid proposal was ***submitted, and these alternates shall remain valid for the life of the project and include all costs for a*** complete installation.

Alternates:	**Amount**
Refer to Form of Proposal	

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP #38 – Electrical & Fire Alarm
Dated: 07.08.2024
Revised: 10.21.2024

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***BP #38 Electrical & Fire Alarm Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***BP #38 Electrical & Fire Alarm Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
260400	General Conditions for Electrical Trades
260503	Equipment Wiring Connections
260519	Electrical Power Conductors and Cables
260526	Grounding and Bonding for Electrical Systems
260529	Hangers and Supports for Electrical Systems
260533	Raceway and Boxes for Electrical Systems
260534	Floor Boxes for Electrical Systems
260536	Cable Trays for Electrical Systems
260553	Identification for Electrical Systems
260923	Lighting Control Devices
262653	Electric Vehicle Charging Equipment
262716	Electrical Cabinets and Enclosures
262726	Wiring Devices
262813	Fuses
264113	Lightning Protection for Structures
265100	Lighting
265561	Theatrical Lighting
283100	Fire Detection and Alarm

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
Div 00	Division 00 – Procurement and Contracting Requirements
Div 01	Division 01 – General Requirements
019113	General Commissioning Requirements
260573	Overcurrent Protective Device Coordination Study
262200	Low-Voltage Transformers
262413	Switchboards
262416	Panelboards

General / Phasing & Logistics

2. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
3. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
4. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
5. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

6. The drawings are diagrammatic and may not be complete in every detail. They reflect the intent of the Arch/Engineer to provide a complete working system in compliance with all codes as shown by the documents. This contractor shall include any other equipment or devices necessary to provide a complete functioning system. This Trade Contractor shall include, as part of his work, the cost of relocating his work, due to the coordination procedure as part of his trade agreement price.
7. This Subcontractor shall provide a full-time competent Project Manager for the duration of the project. This individual must have the authority to make all decisions for this subcontractor, attend all weekly meetings, and be responsible for all lower tier subcontractors and vendors. This Subcontractor shall submit a complete organization chart indicating the title and names of the people that will staff the project. Submit resumes of each person on the organization chart for Turner's approval. This shall include Project Managers, Commissioning Manager, Foreman, Superintendents and other key personnel as required by Turner Construction.
8. This Subcontractor shall be required to continuously record the progress of the Electrical Work on a record set of Drawings, to be maintained on the jobsite at all times. The Architect, Engineer and Turner will review these Documents on a monthly basis in conjunction with their monthly payment application review; this shall be a condition of approval of each progress payment.
9. This Subcontractor shall examine the work of others, which will affect this subcontractor work and notify Turner well in advance of any condition, which will prevent the proper execution of this subcontractor's work. This shall include but not be limited to this subcontractor reviewing the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled. Any notice must provide sufficient time to repair conditions without impacting the overall schedule. Commencement of this subcontractor's work will constitute this subcontractor's acceptance of the existing conditions.
10. This Subcontractor is aware that this is a High-Performance Building and submittals should be submitted according to these standards. This Subcontractor has included all costs associated with meeting these requirements as set forth in the Division 1 Specifications.
11. This Subcontractor will provide the necessary written documentation for meeting the CT High Performance requirements as outlined in the Division 1 Specifications.
12. This Subcontractor shall provide all necessary layout including benchmarks, extending of control lines, etc. in order to properly perform the Work.
13. This Subcontractor shall be responsible for providing out of sequence work at no additional costs when required in coordination with other trades.
14. Utilize Total Station system to layout all electrical distribution including but not limited to set hanger supports and layout risers/ boxes/ penetrations etc. for under slab and within slab on deck, cast in slab locations required for electrical infrastructure.
15. This subcontractor shall furnish and install all supports and support systems for Electrical equipment and piping including if not indicated on the structural drawings. Systems shall meet the requirements of seismic and sway parameters per the local building code and project specifications.
16. Each Subcontractor understands that Quality Control and Quality Assurance is a specific commitment and attitude, which is required during the implementation of the work. The focus required to establish a quality level, by developing in-place mock-ups, by providing skilled supervision and by monitoring daily production quality are all expected to be carried out during the execution on this Contract.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP #38 – Electrical & Fire Alarm
Dated: 07.08.2024
Revised: 10.21.2024

17. It is understood that the specific warrantee/guarantee period will start when the equipment/system is accepted by the Owner for their operation/use at this time of Substantial Completion. Any gap between the scheduled start up of equipment and owner acceptance of the system shall be included.
18. This Subcontractor has reviewed the On-Site Phasing & Logistics Plans and the Construction Schedule and has included all associated costs as relevant to this scope of work. It is extremely important to coordinate your work with the other adjacent Subcontractors during the various phases and perform the work as required by these documents. No come back costs will be entertained.
19. This subcontractor shall provide and maintain all temporary light and power as per OSHA standards, Turner safety Manual and the Temporary Light and Power Additional Provisions for Construction purposes issued within the Procurement manual. This is in addition to temporary scope indicated on the Contract Documents and phasing requirements. This Subcontractor shall provide relocation and cut over of this temporary system to the permanent power source as soon as source is available in each area and removal all temporary devices and wiring.
20. This subcontractor shall furnish & install complete metering system for all temporary electric panels provided under their scope of work, including but not limited to all metering devices, wiring, etc., reference the Jobsite Metering Components & Fuel Tracking Log for additional information.
21. This subcontractor shall furnish & install temporary solar powered lighting along the temporary sidewalk per the On-Site Phasing & Logistics Plans.
22. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
23. No truck parking/idling is allowed on streets adjacent to the project site while waiting to unload. This Subcontractor shall include accommodations as required to adhere to “just in time” deliveries. Refer to Turner’s “Logistic Plans – Scope of Work” for delivery restrictions.
24. All Change Order quotes shall include labor per NECA Column 1 and Full breakdown of all pricing is required and should be broken out separately for each drawing. Pricing shall be provided in accordance with the expected project conditions, breaking out any premium installations required at the time of the installation i.e.: closed ceiling, furniture, additional cleaning etc. No additional compensation will be considered for logistics, staging, inefficiencies and/or coordination with other contractors if not clearly broken out in the Change Order Proposal.
25. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
26. This Subcontractor’s Project Manager/Foreman shall participate in Pull Planning Sessions which affect their scope of work. This Project Manager/Foreman shall provide input to further develop the accurate sequence and timing for completion of the work.
27. This Subcontractor shall provide their own lifts and access for construction. No scaffolding will be provided.
28. This Subcontractor shall be responsible to core all penetrations required with this scope of work, this includes but is not limited to foundations, walls and slabs as well as where sleeves where not installed prior to placing of concrete.
29. This subcontractor is responsible to pull all permits as required for their scope of work. Any filing of permits associated with this scope to be performed by this subcontractor including associated filing fees to be paid by this subcontractor, building permit fees by others. This subcontractor to include special permits such as Generator Permits, EV chargers, etc.

30. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. Composite crew is intended to clean up general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)

Demolition

31. This subcontractor is responsible for all tracing of existing circuits prior to disconnect. Any circuits found to feed areas of the building or other other buildings that are to remain active shall be rerouted to ensure occupied spaces remain active. This subcontractor understands that the demolition will be performed in multiple phases and will perform the demolition work according to these phases.
32. This subcontractor shall cut, cap, and make safe all Electrical, equipment and accessories scheduled to be demolished, including but not limited to the exterior electrical service, existing Low Voltage Systems, existing Fire Alarm, etc. Coordinate with the utility company & AHJ as required. For an example see sheet notes on MEPD000 & MEPD001. This subcontractor shall cut and leave an air gap at the location of the start of the demo; this shall be at the upstream location at the source (i.e. equipment, valve, distribution point, etc.). All material to be removed shall be painted green by this subcontractor, green markings must be no more than 5' apart. Any material to remain will be painted red with markings no more than 5' apart. The Demolition subcontractor (BP #08) will remove and dispose of all materials.
33. The Demolition Subcontractor (BP #08) will perform all MEP mass demolition and removals (piping, conduits, wire, equipment, etc.) for all phases of the work after the services have been cut, capped and made safe by the MEP trades. The Demolition Subcontractor (BP #08) will remove and dispose of all the demolished material and equipment from the basement.

Power Distribution

34. This Subcontractor shall furnish and install a complete and fully functional power distribution system including but not limited to all raceways, supports, backboxes, receptacles, outlets, junction boxes, busway, disconnects, wire mold, floor boxes, etc. This Subcontractor shall furnish & install all electrical devices as it relates to your work on all Drawings, including but not limited to all receptacles, switches, overhead power reels, etc. Greater quantities and quality prevails.
35. This subcontractor shall furnish & install all site electrical infrastructure, including but not limited to handholes, conduit pathways / ductbanks, site lighting, emergency blue light communication stations, EV charging stations, receptacles, low voltage pathways & handholes / manholes, etc., reference SU100 for example of these electrical scope items. This subcontractor shall exclude excavation and backfill which will be performed by the Sitework Subcontractor.
36. This subcontractor shall furnish & install all Emergency Blue Light Communication Stations. For example, conduit pathways, pole, and fixtures provided by this Subcontractor. This subcontractor must coordinate requirements with the Low Voltage Subcontractor. The Low Voltage subcontractor shall perform all low voltage cabling, terminations, and low voltage testing as required.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP #38 – Electrical & Fire Alarm
Dated: 07.08.2024
Revised: 10.21.2024

37. This Subcontractor shall provide Site lighting templates for anchor bolts and conduit layout to sitework contractor. This subcontractor shall furnish site lighting anchor bolts & conduit for the sitework contractor to install within the concrete bases. Concrete bases will be furnished and installed by the sitework contractor.
38. This subcontractor shall furnish and install power for all equipment on the equipment schedules and shown on the Contract Documents.
39. This Subcontractor shall furnish and install all necessary mounting hardware, hangers, brackets, seismic supports, pull boxes, etc. for a complete electrical distribution and lighting system.
40. This subcontractor shall provide PE stamped drawings, calculations, & all delegated design as indicated in the contract documents.
41. This Subcontractor shall provide and Coordinate equipment voltages with Plumbing/mechanical equipment and identify accessories requiring power in the submittal phase for design team confirmation.
42. This Subcontractor shall coordinate and provide power for leak detection equipment as required per the Contract Documents.
43. This subcontractor shall furnish & install all final electrical power connections and terminations as required to items furnished by others, including but not limited to security doors, fire doors/gates, automatic door entrances and gates, overhead coiling doors, mechanical blinds/ shades, screens, kitchen equipment, seating, theater equipment, signage etc. Regardless if circuitry is identified on plans.
44. This Subcontractor shall provide wiring of all Plumbing and HVAC Equipment, including but not limited to circulator pumps, aquastats, motors, electronic valves, meters, emergency control valves, monitoring stations, shunt trip interconnect requirements for gas shut off, etc. This subcontractor shall furnish & install dedicated circuits for equipment as needed.
45. This Subcontractor shall coordinate and install all final connections for power to Food Service Equipment. This subcontractor shall include all interconnections for food service equipment in the field. This subcontractor must be present and participate in all DOH and AHJ inspections.
46. This subcontractor shall furnish, install, and wire all EPO and emergency shutoff systems. This subcontractor shall wire, terminate, and test all valves and equipment furnished by others, including but not limited to solenoid valves. This subcontractor shall review and coordinate with all drawing & specification disciplines for EPO requirements, including but not limited to the mechanical, food service, & plumbing disciplines.
47. This subcontractor must notify all trades and Turner a minimum of (10) days in advance, and receive approval to proceed, before performing any shutdowns.
48. This subcontractor shall install all heat tracing and control panels to be furnished by others. This subcontractor shall furnish and install final connections, terminations, and circuiting for heat tracing. This subcontractor shall be responsible for testing all heat traces prior to concealing and/or burying the system.
49. This Subcontractor shall Coordinate any phased existing to remain lighting requirements indicated on the documents and associated temporary infrastructure required by the phase construction.
50. This Subcontractor shall coordinate all requirements of the new electrical service and UTILITY METER with the local power company, Turner and Owner.

51. This Subcontractor shall coordinate and provide required power for Division 8 Hardware requirements per the hardware schedule and Contract Documents.
52. This subcontractor shall provide panel schedules for any existing or new panels modified or installed by this subcontractor.
53. This Subcontractor shall coordinate with the Controls Subcontractor (BP #37) and provide source and breakers for 120V power to controls devices and all BMS / DDC panels. 120V raceway and circuit shall be provided complete by this Subcontractor. This subcontractor shall include 6 (120V) dedicated circuits for controls power in addition to the power shown on the documents. This subcontractor shall reference the Mechanical series of drawings for BMS control panel locations.
54. This subcontractor shall furnish & install all wiring associated with the fire pump ATS and fire pump controller. The Fire Protection subcontractor (BP #35) will furnish and set this equipment in place.
55. This subcontractor shall furnish & install the fire pump ~~disconnect~~ main service switch (FP-DS) shown on E700, including but not limited to all associated wiring.
56. SourceBlue shall provide the Power Studies as described and required in spec section 260573. This subcontractor shall provide all required feeder sizing, feeder lengths and any other information based on this subcontractor's work required to complete these studies. Within two weeks of award, this subcontractor must provide anticipated feeder sizes and lengths for use with initial study. Final sizes and lengths to be provided when MEP coordination is complete.
57. This subcontractor shall furnish & install all ARC Flash Hazard Labeling of electrical equipment.
58. This Subcontractor shall design, furnish & install an independent support system for all, but not limited to, hung equipment, fixtures, ~~ceiling and piping~~ electrical systems, conduit, cable tray, etc. that are directly below the metal roof deck. This support system must attach to structural steel framing members as the metal roof deck cannot be utilized for support, either above or below the roof deck. Refer to A200 series drawings General Note #12 for criteria. This Subcontractor shall provide delegated design and include shop drawings and calculations indicating, but not limited to, load carrying capacities, point loads, etc. This Subcontractor shall include adding miscellaneous metal supports into the 3D model for coordination with all MEP trades.
59. This Subcontractor shall design, furnish, and install all, but not limited to, hangers, supports, channel support systems, heavy duty steel trapezes, seismic restraint hangers, etc. required for all Electrical systems as indicated in the Contract Documents. All above ceiling scope shall be installed and inspected 4 weeks prior to any scheduled ceiling grid installation.
60. This subcontractor shall furnish & install overhead cord reels.
61. This subcontractor shall coordinate, furnish, & install a typical exterior conduit penetration and exterior back box at each different exterior wall material type, as part of the exterior wall mock-up process for Design Team review. Reference A315 for the intended exterior wall mock-up.
62. This subcontractor shall prioritize and maximize the under slab 3D BIM modeling for utilization of below slab conduit raceways prior to concrete placement.
63. This Subcontractor shall Utilize Total Station layout of all seating boxes at the auditorium, all boxes located within concrete slabs, and conduit stub ups within walls.

Lightning Protection & Grounding

64. This Subcontractor shall furnish and install a complete grounding and bonding system as indicated on the contract documents from grounding source (ground loop, building steel, rebar, etc.) up to and including main grounding bus bars and connection any equipment requiring ground connection. This subcontractor shall furnish & install all grounding bars in telecommunications rooms.
65. This Subcontractor shall design, furnish and install a complete lightning protection system in conformance with the contract documents and applicable codes, including but not limited to conduit pathways, conductors, grounding rods, air terminals, etc. This subcontractor is responsible for providing a lighting protection system, UL Master Label. Note this system is delegated design for the lighting protection systems as indicated in the contract documents by this subcontractor.

Lighting

66. This subcontractor shall furnish & install all lighting as called for on the Contract Documents, including but not limited to all exterior lighting, signage lighting, athletic field lighting, landscape lighting, etc. Lighting may be shown on several drawings including but not limited to RCPs and Electrical Lighting plans. This Subcontractor shall provide lighting with the understanding that when documents indicate differences the greater quantity and quality prevails. This includes but is not limited to specialty lighting such as theatrical and aisle lighting.
67. This subcontractor shall furnish & install a complete and fully functioning theatrical lighting system for the auditorium, including but not limited to all rigging equipment, pipe & clamp support system, etc. This subcontractor must coordinate and fully integrate the AV & all other stage / auditorium system components for a complete system.
68. This subcontractor must identify all light fixtures that are installed in sheetrock ceilings and submit them for early release to ensure they are available prior to the start of sheetrock ceilings per the project schedule.
69. This subcontractor shall include coordination with general trades (BP #21) for modeling of all lighting fixtures and associated manufacturer clearances. Coordinate ceiling types, materials, soffits, architectural features, detailed locations, FFE and equipment. This subcontractor must model all light fixtures, as well as all electrical equipment provided by others and installed by this subcontractor, to ensure a fully coordinated electrical system with all other trades.
70. This Subcontractor shall provide shop drawing for all exit lighting & exit signs (low level and typical overhead) for approval by AHJ.
71. This subcontractor shall furnish and install a complete and fully functioning lighting control system, including but not limited to all modules, switches, sensors, panels, time clocks, photocells, conduit, wiring, connectors, circuitry, etc., as required to complete the system whether or not shown on the drawings. Reference for examples E500 & E501. This subcontractor shall furnish & install all wiring and infrastructure necessary to provide network connectivity to lighting controls devices and components, including but not limited to network cabling, terminations, patch panels, etc.
72. This Subcontractor shall coordinate directly with all other trades providing auditorium & stage equipment for all lighting and power requirements, for example theatrical seating & motorized curtain rigging vendors.
73. This Subcontractor shall coordinate under slab electrical infrastructure with all Subcontractors to ensure proper rough in requirements are installed for approved equipment, fixtures, devices, etc.
74. This Subcontractor shall coordinate and store lighting materials off site in an appropriate facility. It should not be assumed the building will be secure nor large enough to store lighting materials.

Low Voltage and Security System Rough-in & Coordination

75. This Subcontractor shall provide all in-wall conduit raceways and back boxes for all low voltage, telecom, security and AV systems as indicated on the contract documents. Any specialty AV or Telecom backboxes shall be furnished by the Telecom and/or AV subcontractor respectively and installed by this Subcontractor (i.e. Chief PAC boxes). This subcontractor shall provide all standard back boxes, NEMA rated boxes, and conduit pathways to an accessible location. This subcontractor shall furnish & install all grounding of LV pathways installed per the scope of work herein.
76. This subcontractor shall furnish & install all low voltage and security site underground raceways & ductbank required, including but not limited to ductbank for new telecom service, underground raceways / conduit for site cameras, all handholes, etc. For a reference see sheet SU100.
77. This subcontractor must expedite their 3D BIM model and shop drawings of low voltage and AV rough in order to ensure this is reviewed and fully coordinated with the low voltage and AV subcontractor.
78. Where low voltage, tele/data, AV & Security jacks share a common floor box with 120vac power, this contractor is required to furnish and install the back box, cover plate, and appropriate sized conduit with a pull string (coordinated with the respective Tel/data sub-contractor) which will be routed to the nearest accessible ceiling in accordance with typical installations throughout the project. The tel/data, Security & AV subcontractor (BP #39) will pull the data lines and terminate the jacks.
79. This subcontractor shall furnish & install all in-wall raceways & junction boxes required for access controlled & secured doors, automatic door operators, overhead coiling doors, etc. including but not limited to junction boxes, back boxes, conduit for power, conduit for low voltage cabling, pull strings, etc. This includes conduit raceway through the door frame up to an accessible location in the ceiling. For example, reference drawing TY302. Please note that references of electrical components being installed by "General Contractor" will be by this subcontractor. Raceways within the door slab shall be provided by the Doors/Hardware Subcontractor (BP #20).
80. This subcontractor shall furnish & install all line side power (i.e. 120V) from electrical panels to power supplies / transformers & equipment required for any access controlled & secured doors, overhead coiling doors, and/or auto-opening doors. Power supplies and transformers shall by furnished and installed by the Door Hardware Subcontractor and/or Low Voltage Subcontractor for their respective systems.
81. This subcontractor must coordinate and integrate with the BDA / DAS / ERRCS system(s), including but not limited to fire alarm integration. This subcontractor is solely responsible for furnishing & installing all fire alarm infrastructure. Rough-in for DAS / BDA / ERRCS systems will be furnished and installed by the Low Voltage Contractor (BP #39), since this is a delegated design and the drawings do not indicate the system requirements and device count.

BMS / ATC Coordination

82. This Subcontractor shall provide power to HVAC ATC Subcontractors Control Panels. Any and all other electrical power connections beyond ATC/DDC Control Panel devices shall be furnished and wired by the ATC Contractor, at no additional cost to the project. This requirement includes the furnishing and installing of 120V, circuit breakers in electric panelboards, wire, conduit junction boxes, etc.

Fire Alarm

83. This subcontractor shall furnish and install a complete and fully functioning, code-compliant fire alarm system per the documents.
84. This subcontractor shall furnish and install paging speakers associated with the fire alarm system as shown in the fire alarm drawings and specifications.
85. This subcontractor shall furnish and install conduit and raceway for the fire alarm system.
86. This subcontractor shall coordinate, furnish and install and terminate all fire alarm requirements associated with the Building Temperature Controls (BAS / BMS) Vendor (BP #37) including but not limited to the sequence of operations.
87. This subcontractor shall coordinate, furnish, install and terminate all fire alarm components necessary for fire smoke dampers that are provided by others.
88. Coordinate locations of all Fire Alarm devices, including but not limited to pull stations, horn strobes, etc. shown on the contract documents with the Architect/Engineer and with Turner to resolve any conflicts with the Work of other trades and to confirm exact locations.
89. This subcontractor shall furnish & install all the power required to operate a complete Fire Alarm system. For example, if multiple control panels need individual power circuits, and only one is shown, any additional circuits for this equipment will be this subcontractor's responsibility. Any additional circuits will be detailed, quantified, and reported to the Design Team.
90. This Subcontractor will furnish and wire all duct smoke detectors consistent with the Fire Alarm Specifications and per Contract Documents. This subcontractor will coordinate locations, orientations, layout & size of duct smoke detectors in conjunction with the HVAC contractor (BP #37). HVAC Subcontractor (BP #37) will install the duct smoke detectors. This subcontractor will furnish and install any necessary transformers and low voltage wiring. All fire alarm terminations will be by this subcontractor.
91. This Subcontractor shall wire smoke detectors that are factory installed and integral to HVAC units (and furnish and install fire alarm modules as required). This subcontractor shall wire all smoke/fire dampers furnished and installed by others. This subcontractor shall wire and make final connections to all the duct mounted smoke detectors & FSD's for a fully functioning and complete system. This subcontractor shall review and include any devices shown on Mechanical Drawings in addition to the Electrical/Fire Alarm drawings.
92. This Subcontractor shall furnish and install wiring and connection of sprinkler system equipment & components to the Fire Alarm system, including but not limited to water flow and supervisory switches. The Fire Alarm drawings may not show all devices, this subcontractor shall review and include any devices shown on Fire Protection Drawings in addition to the Electrical drawings. Fire Protection / Sprinkler subcontractor (BP #35) shall furnish and install the switches.
93. This Subcontractor shall coordinate with the Security (BP #39) & Door Hardware Subcontractor (BP #20) to furnish & install all power and fire alarm integration for access controlled & secure doors, automatic door operators, overhead coiling doors, etc. including but not limited to all fire alarm cabling, relays, control modules, terminations, etc. This subcontractor shall furnish & install all final power & fire alarm connections and terminations as required to items furnished by others, including but not limited to connections from equipment to fire alarm modules. This Subcontractor shall coordinate Door holders or closers withhold-open provided as part of door hardware and security specifications.
94. This Subcontractor shall coordinate with the Low Voltage subcontractor (BP #39) for integration of the BDA / Emergency Responder Radio Communication System (ERRCS) as it pertains to providing a complete, fully functioning, and compliant fire alarm system.

95. This Subcontractor shall Coordinate FA device depth requirements with architectural finishes, depths and clearances and notify the Design team of any conflicts via the RFI process.
96. This Subcontractor shall coordinate, furnish and install all FA devices required in the elevator hoist ways to meet the design documents, NFPA and Authority Having Jurisdiction.
97. This Subcontractor shall coordinate and provide all required components and interconnect wiring for the operation and monitoring of the Food Service Equipment Ansul System. (Reference drawing E400 for location)
98. This subcontractor shall coordinate and provide all required components for the operation and monitoring of the natural gas detection systems.
99. This subcontractor shall coordinate, furnish, & install all wiring and components necessary for the operation and monitoring of roof smoke / heat vents, for an example see A103D.
100. This subcontractor shall coordinate, furnish, & install all wiring and components necessary to mute all AV, sound systems, and theatrical systems, for an example see the sequence of operations on E701.
101. This Subcontractor shall include pretesting 100% of the fire alarm devices PRIOR to performing acceptance testing with Turner and the AHJ. The pretesting shall be performed during off hours.
102. This Subcontractor shall coordinate elevator recall and elevator shunt trip Systems with Elevator Contractor indicated on Electrical Drawings.

Commissioning and Testing

103. This Subcontractor shall fully cooperate with the Owner's Commissioning Agent for commissioning of systems furnished and/or installed by this Subcontractor.
104. This Subcontractor will provide a dedicated engineer / staff person on site dedicated to the contractor commissioning of all systems prior to occupancy. This includes documenting, organizing and submitting to the owner all startup reports, pre-functional checklists and any performance reports that may be required for each piece of equipment.
105. This Subcontractor's Project Manager and Commissioning engineer shall attend a weekly Commissioning/MEP coordination meeting for the duration of the project.
106. This subcontractor shall include sufficient time to fully commission all systems. Adequate manpower shall be available to fully meet the commissioning requirements.
107. Start-up reports shall be submitted to Turner within (3) days of startup.
108. This Subcontractor shall submit fully filled out Pre-Functional and Functional test reports to TCCo.
109. This Subcontractor shall perform all required testing in accordance with the specifications. Testing is to be performed in a manner so as to complement the schedule and procedure of construction, and the Work of others. Test reports shall identify the system, infrastructure and area testing with specified test requirements. Any and all manpower, temporary connections, etc. required to accomplish this work in this manner are included. NOTE: This Subcontractor will test every piece of equipment in the presence of Turner and / or the Engineer and provide a full report to Turner and the Engineer accordingly.
110. This subcontractor shall coordinate with the Authority Having Jurisdiction as required per the plans and specifications including those referenced in The Statement of Special Inspections. This subcontractor shall provide Turner a minimum of seventy-two (72) hour advance notice for all required inspections.

111. This Subcontractor shall include all necessary shutdowns and / or tie-ins for your specific systems. This subcontractor shall assume all shutdowns and tie-ins are to be performed premium time; provide proper notification and coordination with all affected parties (Owner, Turner, local agencies, utilities, etc.).

112. This Subcontractor shall complete all identification, labeling and tagging prior to the installation of the ceiling grid by others so as to allow for proper inspections as to thoroughness of these items.

113. This Subcontractor shall include in their Bid all necessary overtime and / or off-hour work for testing so as not to delay the Work of other Trade Subcontractors. This includes testing in conjunction with any other Trade that tie-in to this Subcontractor's scope of Work.

114. This subcontractor will be responsible for all costs associated with the reopening and patching of ceilings or walls required for corrective work. All required testing of piping must be scheduled and completed before ceilings are installed. This subcontract includes any out of sequence work and testing required to complete the work before ceiling work starts

115. This Subcontractor shall participate in rough-in inspection coordination with other trades and Turner utilizing color coded framing identification to illustrate completion and inspection ready areas. Color code key and inspection sequencing will be identified by Turner Superintendent.

116. This Subcontractor shall provide fuel for the Generator testing and Commissioning as well as ensure a full tank of fuel is present at time of substantial completion acceptance by the Owner. This subcontractor must provide all components necessary to fully test the generator, including but not limited to temporary load bank as needed.

117. This Subcontractor shall provide training as specified for all of the equipment and systems furnished by this Subcontractor by phases. This Subcontractor shall include two (2) man-days of additional training be used at Turner Construction Company's discretion.

118. This subcontractor shall include all training required for systems installed by this subcontractor, including but not limited to videotaping the training sessions for turnover to the Owner.

SourceBlue Coordination

119. This subcontractor has received and understands the SourceBlue Equipment List and Coordination Matrices. This subcontractor accepts and agrees to perform the scope identified as this subcontractors responsibility in these matrices.

120. This Subcontractor shall coordinate, receive, offload, hoist, protect, store, set in place, install, wire, & test all electrical distribution equipment being furnished by SourceBlue or others. This shall include start up requirements and commissioning. Once this subcontractor receives and accepts delivery of equipment provided by others, it is in their sole care & custody. This subcontractor is responsible to inspect and identify any damages or deficiencies prior to accepting delivery & taking custody. If any equipment or component is damaged or lost after taking custody, it will be the responsibility of this subcontractor to repair or replace it at their expense.

121. This subcontractor shall provide off-site storage for electrical equipment furnished by SourceBlue. Materials shall be brought on site per "Just In Time Delivery" provisions. This subcontractor shall include **6 months** of offsite storage for all equipment supplied by SourceBlue.

122. This subcontractor shall furnish & install all electrical distribution equipment and components **not** identified as being furnished by SourceBlue.

123. This subcontractor is responsible for the means & methods of rigging and fitting electrical distribution equipment through existing & new conditions (i.e. doorways). This subcontractor shall assume the generator and main electrical switchgear will be rigged and installed in place on premium time.

Coordination & Miscellaneous

124. The intent of the project Lean initiative is that all items that are to be installed are to prefabricated, arranged and shipped to project for ease of installation. Devices installed with partitions will be prefabricated with conduits/ piping as coordinated in the BIM model. These devices are to be packaged and labeled by room for ease of installation (kit-of-parts).

125. This subcontractor shall fully participate in all 3-D coordination, this Contractor stall take the lead on modeling the ceilings and developing with the other Subcontractors a comprehensive coordinated Reflective Ceiling Plan for all ceiling devices, light fixtures, soffit conditions and special framing support systems.

126. This subcontractor shall provide shop drawings and models showing blocking requirements for their systems and scope of work. Blocking will be furnished & installed by the General Trades Subcontractor. This subcontractor is responsible for coordination in order to ensure the correct type & size of blocking is provided in the correct locations.

127. This subcontractor shall coordinate all installations to meet accessibility requirements as noted in the contract documents and all NEC clearance required for maintenance and code.

128. This Subcontractor will be required to relocate any conduit, wire, or other part of the Electrical system installed by this subcontractor that deviates from the coordinated drawings that prohibits access to any equipment, valve, damper, junction box or anything else requiring access in the future. Acceptable access shall be deemed by Turner, Owner, Engineer, or Cx agent.

129. This Subcontractor will coordinate, furnish and install their work within millwork & casework in accordance with the contract documents and building code. This subcontractor shall include pathways, wiring, devices and cover plates within finished walls, millwork panels, desks, etc.

130. This subcontractor shall receive, rig, install, and power all motor starters and VFD's for equipment furnished by owner and other subcontractors.

131. This subcontractor shall receive, rig, install, and power all owner furnished equipment as indicated in the contract documents.

132. This Subcontractor shall coordinate, furnish and install all electrical power & controls to motorized shades and shade controllers, including but not limited to interconnecting low voltage wiring, wall switches, all wiring associated with integrating motorized shades and the lighting control system, etc... The shades, motors, and motor controllers will be furnished & mounted by the Shade Subcontractor (BP #33). This subcontractor shall be responsible for assisting the Shade Subcontractor (BP #33) with testing the motorized shade systems upon completion.

133. This subcontractor shall make all internal connections between shipping splits needed for mechanical equipment.

134. This Subcontractor shall maintain utmost care so as not to damage Spray-on Insulating materials. Any and all damages and / or over-scraped areas, which may require repair, shall be back charged to the Subcontractor that causes the damage. Hangers and supports shall be installed prior to SOFP operations to minimize scraping after the fact.

135. This Subcontractor shall furnish, F.O.B. jobsite, all access doors for all valves and other equipment requiring access and which may become inaccessible at a later date in the drywall and masonry assemblies. This Subcontractor shall arrange their work in such a manner to minimize the quantity of access doors required. All items requiring accessibility shall be located in already accessible areas, such as above lay-in ceilings, etc. if at all possible. It is the responsibility of the Mechanical Subcontractor to coordinate and provide information regarding the location, sizes and quantities of access doors, panels, etc. required for their Work as well as furnish same. Failure to furnish the access doors and / or coordinated locations such that other Subcontractors (e.g., masonry, drywall, etc.) must go back to complete work, shall result in a back-charge to this Subcontractor for out of sequence Work accordingly. Also note that all required access doors and / or panels shall be furnished from one (1) manufacturer with their ratings consistent with the respective partition / ceiling / floor ratings and must be keyed alike. Access door type will be per the architect's direction in each location. This Subcontractor shall provide access door shop drawings indicating locations, types and sizes in architectural ceilings and partitions for design team review and approval.

136. This Subcontractor shall provide installation of all mockups identified in the project documents as well as materials for each type of wall/ slab penetration to complete a firestopping mockup for review and approval by AHJ and Design Team.

137. This subcontractor shall provide a concrete housekeeping pad layout to the concrete subcontractor for all required locations of concrete equipment pads.

138. This Subcontractor is required to cut ceiling pads for ceiling mounted devices installed under this scope of work. Ceiling pads shall be furnished by the Ceiling Subcontractor (BP #22).

139. The subcontractor shall include 2 complete cleanings of equipment and systems provided under this scope. Cleanings shall be performed prior to initial energizing equipment and again prior to turnover to the Owner. Cleanings shall include complete debris, dust removal and wiping of all internal and external components and shall be in accordance with manufacturers approved methods.

140. Additional drawings required during the coordination process are as follows:

    a) Space allocations and equipment paths for future equipment shall be planned for and included within all coordination drawings presented during the construction phases. This area shall not be utilized for any other means when equipment is installed.

    b) Provide penetration drawings for interior, exterior, foundation and floor penetrations. This should include dimensions off columns, elevations above the finish floor, and required opening size. Layout as required for proper field coordination is included under this scope.

    c) Provide equipment loading drawing showing loading paths of all equipment and required access. This includes any equipment purchased by others but received under this scope. This does not replace any Turner scheduling or logistics plan.

    d) Provide rigging plan for all equipment requiring the use of a crane. Plan does not replace any Turner Logistics plan.

141. This Subcontractor shall be responsible for complete coordination of all generator, UPS, ATS and Switchgear Controls. This shall include all coordination and wiring required between manufacturers and interconnection requirements.

142. In addition to all other protection requirements listed elsewhere in the project documents, this Subcontractor is responsible for complete protection of equipment installed under this scope. This shall include protection from external dust, debris, and adjacent construction activities. Additionally, all sensitive exposed components such as controls, meters, displays, etc. shall be individually covered with protective material to avoid damage and/or scratching. The protection plan shall be reviewed with Turner prior to implementation and all resulting damage from improper protection shall be the responsibility of this subcontractor.

143. This Subcontractor will be required to develop a Method of Procedure (MOP) for various specific operations occurring during construction, testing and commissioning of this project. The MOP must itemize in step-by-step, detailed fashion, each work task and time frame for a complete and safe procedure for execution of specific work activities. Examples of work activities requiring a written MOP may include, but not limited to, operations that present heightened safety concern, tie-in or shutdown of live/energized equipment, equipment/system testing, etc. The MOP must be prepared by This Subcontractor and submitted to Turner Construction for review and approval prior to the start of associated work.

144. This Subcontractor shall provide all permanent identification/labels for equipment, systems and components provided under this scope of work and per the specification requirements. Provide complete submittal of all identification components such as nameplates, tags, special signage, type, size, material, fastening/mounting methods, text, font and color for review and coordination prior to release. The submittal shall also include a table of all identification items clearly indicating the above characteristics for each and referencing associated cut-sheets/product literature.

145. This Subcontractor shall be responsible for the review of equipment submittals provided by other trades requiring external power connection and/or controls as part of this scope of work. Provide comments for coordination of adequate cable entrance space, method of connection, and conformance with required electrical installation and the project documents.

146. This Subcontractor shall coordinate all locations of equipment power supplies and disconnects with equipment locations installed by the other MEP Subcontractors

147. This Subcontractor shall provide equipment grounding infrastructure requirements. This will include but not limited to lighting, cable tray, SDT Flooring, IT/ AV/ Telecomm/ Plumbing/ Mechanical equipment per manufacturer, LV racks, all grounding bus bars, and devices and all other ground requirements weather indicated or not on the contract documents.

148. This Subcontractor shall coordinate with Roof Subcontractor to ensure penetrations meet specifications and layout requirements to maintain the required roofing manufacturer's warranty.

149. This Subcontractor shall layout, furnish and install all sleeves and inserts required for their work. This includes coordinating with Firestopping Subcontractor (BP #17) for receipt and install of pre-manufactured firestopped sleeves. Sound sealing shall be by this Subcontractor, including but not limited to acoustical putty pads. Firestopping will be by Fire Stopping Subcontractor.

150. Through wall and floor to floor fire stopping is included in a separate bid package. This subcontractor must coordinate all penetrations with the fire stopping subcontractor. This subcontractor will receive and install any in slab/cast in place sleeves or assemblies required for this subcontractor's scope of work.

151. This subcontractor shall ensure that the nothing hits the ground policy is followed during underground electrical infrastructure installation, as well as above grade.

152. This subcontractor shall furnish & install all submetering required per the contract documents, including but not limited to all associated pathways, conductors, etc. For an example see the submetering schedule on E700.

153. This Subcontractor shall include all costs to provide delegated design criteria and submittals per the following, but not limited to, Delegated Design Table on Drawing GC0A. This Subcontractor has thoroughly read all Specification Sections regardless of what is indicated on the Delegated Design Table on Drawing GC0A and included all costs for delegated design scope of work.

D. Safety

1. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible for removing snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.
2. This Subcontractor shall provide a site-specific plan on how they will comply with Turner's Ladder's Last Program.
3. This subcontractor shall ensure that any Lulls used on site are equipped with hydraulic fork positioners.
4. This subcontractor shall engage a 3rd Party to complete a GPR Survey to mark out existing utilities under and in the general area of any proposed Mobile Crane locations.
5. This Subcontractor to eliminate slip/trip/fall hazards to surrounding trades or ensure all stub ups extend a minimum of 3' above the slab or walking surface. If this is not possible, a 3' or higher cone must be placed over the stub up. Impalement protection is required on all stub up, when a hazard exists.
6. This Subcontractor is to mark with labels all Temporary Electrical Power Panels and circuit breakers. All electrical panels (temporary or otherwise) shall be governed by an external main disconnect switch at the panel.
7. All temporary power receptacles shall be protected by Ground Fault Circuit Interrupters (GFCI).
8. The electrical contractor must perform and document monthly testing and inspection of all temporary power installations.
9. This subcontractor to provide a minimum of Battery Charging Stations with 8 outlets in 2 locations per each floor of new construction and each shall be designated only for charging tool batteries. Battery charging stations shall be constructed as a shelf or rack.
10. All temporary lighting shall be completely protected on all sides to eliminate the potential of the bulb coming in contact with anything.
11. All temporary lighting shall be run with sheathed multi-conduction wire. No single strand wiring is allowed. Temporary lighting must never be put on the same circuit as temporary or permanent receptacles; temporary lights must be on a dedicated circuit and cannot be used for power.

12. Temporary lighting must be at least 8 feet AFF, LED and generate a minimum of 8-foot candles in all construction work areas. There shall be at least one bulb per room throughout the building.
13. This Subcontractor, prior to concrete slab on deck placements shall install temporary lighting from the deck above by pulling temporary lights up through the deck.
14. All temporary power connections must be either 8 feet AFF or installed in a junction box. Monkey fists are not allowed below 8 feet.
15. This Subcontractor must have all energized switches and outlets covered with wall plates prior to energizing these circuits.
16. This subcontractor shall provide a written plan showing the temporary lighting and power receptacles.
17. This subcontractor shall hardwire an evacuation horn and strobe at Three locations per floor with two pull stations on the ground level. Locations shall be reviewed by the Turner Superintendent.
18. This subcontractor shall install emergency lighting in stairwells, lamps shall remain lit for 1 hour in the event of a loss of power to the building.
19. This subcontractor shall utilize a threaded rod cutter in lieu of a porta band or grinder to cut all threaded rods.
20. This Subcontractor shall protect all downward protruding threaded rods with rubber caps to prevent injury to employees while working around rods.

E. Logistics and Schedule

1. This subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

F. Exclusions

1. This Subcontractor shall EXCLUDE Trenching, excavation & backfill (by Sitework Subcontractor (BP #09))
2. This Subcontractor shall EXCLUDE concrete bases for site light fixtures (by Sitework Subcontractor (BP #09))
3. This Subcontractor shall EXCLUDE wood backer boards in Electrical rooms (By General Trades (BP #21))
4. This Subcontractor shall EXCLUDE Penetration Firestopping as it will be performed by Firestopping Subcontractor (BP #17). This Subcontractor shall provide an add alternate on the Bid Form of Proposal to perform penetration firestopping related to this scope of work.

G. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

Unit Prices:	**Amount**
Refer to Form of Proposal

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***BP #39 Low Voltage & AV Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***BP #39 Low Voltage & AV Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Div 01	Division 01 – General Requirements
019113	General Commissioning Requirements
079200	Joint Sealants

Bid Package Specific Scope

2. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
3. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
4. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
5. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.
6. The drawings are diagrammatic and may not be complete in every detail. They reflect the intent of the Arch/Engineer to provide for a complete working system in compliance with all codes as shown by the documents. This contractor shall include any other equipment or devices necessary to provide a complete functioning system. This Trade Contractor shall include, as part of his work, the cost of relocating his work, due to the coordination procedure as part of his trade agreement price.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP39 – Low Voltage & AV
Dated: 07.08.2024
Revised: 10.21.2024

7. This Subcontractor shall provide a full-time competent Project Manager for the duration of the project. This individual must have the authority to make all decisions for this subcontractor, attend all weekly meetings, and be responsible for all lower tier subcontractors and vendors. This Subcontractor shall submit a complete organization chart indicating the title and names of the people that will staff the project. Submit resumes of each person on the organization chart for Turner's approval. This shall include Project Managers, Commissioning Manager, Foreman, Superintendents and other key personnel as required by Turner Construction.
8. This Subcontractor shall be required to continuously record the progress of the ~~Electrical~~ Low Voltage & AV Work on a record set of Drawings, to be maintained on the jobsite at all times. The Architect, Engineer and Turner will review these Documents on a monthly basis in conjunction with their monthly payment application review; this shall be a condition of approval of each progress payment.
9. This Subcontractor shall examine the work of others, which will affect this subcontractor's work and notify Turner well in advance of any condition which will prevent the proper execution of this subcontractor's work. This shall include but not be limited to this subcontractor reviewing the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled. Any notice provides sufficient time to repair conditions without impacting overall schedule. Commencement of this subcontractor's work will constitute this subcontractor's acceptance of the existing conditions.
10. This Subcontractor is aware that this is a High-Performance Building and submittals should be submitted according to these standards. This Subcontractor has included all costs associated with meeting these requirements as set forth in the Division 1 Specifications.
11. This Subcontractor will provide the necessary written documentation for meeting the CT High Performance requirements as outlined in the Division 1 specifications.
12. This Subcontractor shall provide all necessary layout including benchmarks, extending of control lines, etc. in order to properly perform the Work.
13. This Subcontractor shall be responsible for providing out of sequence work at no additional costs when required in coordination with other trades.
14. Utilize total station system to layout and set hanger supports and layout risers/ boxes/ penetrations/ underslab infrastructure.
15. This subcontractor will provide all supports and support systems for ~~Electrical~~ Low Voltage & AV equipment, infrastructure, and pathways ~~piping~~ if not indicated on the structural drawings. Systems shall meet the requirements of seismic and sway parameters per the local building code and project specifications.
16. This subcontractor shall include all costs for escalation on materials, labor, equipment, etc. for the durations indicated on the project schedule.
17. Each Subcontractor understands that Quality Control and Quality Assurance is a specific commitment and attitude, which is required during the implementation of the work. The focus required to establish a quality level, by developing in-place mock-ups, by providing skilled supervision and by monitoring daily production quality are all expected to be carried out during the execution on this Contract.
18. It is understood that the specific warrantee/guarantee period will start when the equipment/system is accepted by the Owner for their operation/use at this time of Substantial Completion. Any gap between the scheduled start up of equipment and owner acceptance of the system shall be included.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP39 – Low Voltage & AV
Dated: 07.08.2024
Revised: 10.21.2024

19. This Subcontractor shall review, conform to, and furnish and install all requirements included in the Safety Additional Provisions included in this Agreement. This Subcontractor understands that this document is project specific, and all provisions must be included in this Subcontractors' bid.
20. This Subcontractor has reviewed the Logistics & Phasing Plans and the Construction Schedule and has included all associated costs as relevant to this scope of work. It is extremely important to coordinate your work with the other adjacent Subcontractors during the various phases and perform the work as required by these documents. No come back costs will be entertained.
21. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
22. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
23. This Subcontractor will provide all pricing for changes within five (5) calendar days of notice of change (without exception). If the subcontractor does not submit pricing within these terms, it will be assumed a ZERO cost change. The change orders shall include man-hours, material costs, tax and mark-ups as separate line items broken out separately. This subcontractor will utilize Turner's standard change order cover sheet for all change orders.
24. All Change Order quotes shall be price labor per NECA Column 1 Full breakdown of all pricing is required and should be broken out separately for each drawing. Pricing shall be provided in accordance with the expected project conditions, breaking out any premium installations required at the time of the installation ie: closed ceiling, furniture, additional cleaning etc. No additional compensation will be considered for logistics, staging, inefficiencies and/or coordination with other contractors in not clearly broken out in the Change Order Proposal.
25. This Subcontractor shall organize and neatly place all materials, tools, etc. This Subcontractor shall remove all debris resulting from their work on a daily basis to a dumpster provided by others. No trash or debris will remain in the work areas at the end of the shift. If debris is left in the work areas, it will be removed to the dumpster by others, and the labor expense back charged to the responsible Subcontractor. Large sections of debris shall be disposed of to a dumpster provided by others by this Subcontractor.
26. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
27. No truck parking/idling is allowed on streets adjacent to the project site while waiting to unload. This Subcontractor shall include accommodations as required to adhere to "just in time" deliveries. Refer to Turner's "Logistic Plans – Scope of Work" for delivery restrictions.
28. This Subcontractor shall include consistent and complete scheduling and coordination with all other trades to properly sequence the work and for the complete scope under this agreement.
29. This Subcontractor's Project Manager/Foreman shall participate in Pull Planning Sessions which affect their scope of work. This Project Manager/Foreman shall provide input to further develop the accurate sequence and timing for completion of the work.
30. This Subcontractor shall provide their own lifts and access for construction. No scaffolding will be provided.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP39 – Low Voltage & AV
Dated: 07.08.2024
Revised: 10.21.2024

31. This Subcontractor shall be responsible to core all penetrations required with this scope of work, this includes but is not limited to foundations, walls and slabs as well as where sleeves where not installed prior to placing of concrete.
32. This subcontractor is responsible for pulling all permits required for their scope of work.
33. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. The composite crew is intended to clean up general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)

Low Voltage & AV

34. This Subcontractor shall furnish and install complete Low Voltage, AV, & Security Systems, including but not limited to head end equipment, pullboxes, devices & cover plates, cameras, WAPs, device boxes, hangers, J-hooks, low voltage cabling, conduit, cable tray, racks, cabinets, panels, uninterruptible power supplies, switches, patch panels, cameras, card readers, door contacts, lock down, etc. for all low voltage systems, including but not limited to telecommunications, telephone, data, optical fiber, security, AV, DAS / ERRCS / BDA system(s), etc. as shown on Contract Documents.
35. All data cabling & terminations required to connect all building systems to the network / internet shall be furnished, installed, and terminated by this subcontractor, including but not limited to network connections for Fire Alarm, Lighting Controls, Elevator, BMS / ATC controls, electrical metering, etc.
36. This subcontractor shall design, furnish & install all infrastructure for the DAS / ERRCS / BDA, including but not limited to all fire rated cabling, conduit pathways, in-wall rough, hangers & supports, backboxes, devices, etc. for a complete and fully functioning system. For an example, see detail 4 on E502. The Fire Alarm subcontractor will be responsible for all fire alarm integration.
37. The Electrical Subcontractor (BP#38) shall furnish & install in-wall rough, including standard electrical boxes with conduit raceways to accessible ceilings, for use by this Subcontractor except as indicated herein. This subcontractor shall furnish & install any additional pathways required above ceilings. Non-standard boxes shall be furnished by this subcontractor and installed by the Electrical Subcontractor. This subcontractor shall furnish & install any in-wall pathways required at low voltage system cabinets, including but not limited to installing the low voltage cabinet(s).
38. This subcontractor shall furnish and install their own conduit & cable tray pathways as needed for low voltage systems above ceiling. The Electrical Subcontractor (BP#38) will only be providing in-wall rough for use by this subcontractor.
39. This Subcontractor shall coordinate all in wall rough-in requirements with the Electrical Contractor (BP #38) and shall assume infrastructure will be installed concurrently with Electrical infrastructure. It is the Low Voltage Subcontractor's responsibility to ensure timely and correct information is provided to the Electrical Contractor to facilitate this installation. Any cost associated with delays and or incorrect information will be the responsibility of this Low Voltage Subcontractor. This Subcontractor shall provide the Electrical Contractor with detailed shop drawings electronically via Revit, CAD, and PDF to properly coordinate this effort.
40. The Electrical Contractor (BP #38) shall furnish & install all low voltage and security site underground raceways & ductbank required, including but not limited to ductbank for new telecom service, underground raceways / conduit for site cameras, all handholes, etc. For a reference see sheet SU100.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP39 – Low Voltage & AV
Dated: 07.08.2024
Revised: 10.21.2024

41. This subcontractor shall coordinate, review, confirm, & sign off on all low voltage in-wall rough & site pathways being provided by the Electrical Subcontractor (BP#38). If any additional pathways (i.e. conduit, cable tray, etc.) are required after coordination & sign-off, then this subcontractor shall furnish & install them at their own expense.
42. This subcontractor shall furnish & install all ladder rack, conduit, & cable tray assemblies / pathways within data rooms (IDF/MDF). J-Hooks and other support of free air / plenum rated cabling for low voltage systems shall also be furnished & installed by this Subcontractor.
43. This subcontractor shall furnish & install all low voltage wiring and devices required for auto opening doors, overhead coiling doors, and access controlled / secured doors, including but not limited to cabling, terminations, access control panel(s) & board(s), door contacts, REX devices, crash bars, I.R. sensors, card readers, alarms, power supplies / transformers, etc. Electric strikes to be furnished by others but installed & wired by this subcontractor. This subcontractor shall furnish & install all power supplies per the hardware schedule hardware specifications. This subcontractor shall furnish & install all 12V/24V wiring from power supplies to equipment. Raceways through doors frames will be furnished & installed by the Electrical Subcontractor. This subcontractor shall furnish & install all wiring through pathways for a complete and fully functioning door.
44. This subcontractor shall furnish & install all power supplies and transformers required for Low Voltage & Security system components. The Low Voltage Subcontractor shall be required to bring 120v power from the nearest junction box to any Low Voltage or Security power supply, panels, or subpanels that are not quantified on the Electrical series of drawings. If power is shown on the Electrical series of drawings, then the Electrical Subcontractor (BP#38) will furnish, install and terminate 120V power. This subcontractor shall furnish, install, & terminate all 12V/24V wiring from these power supplies, panels, etc.
45. This Subcontractor shall coordinate with the Electrical subcontractor for all shared floor box and poke-thru requirements. Shared floor boxes and poke thrus shall be furnished & installed by the Electrical subcontractor (BP #38). This subcontractor is responsible for installing and terminating all low voltage cabling within the floor box for the low voltage system. This subcontractor shall furnish & install all floor boxes that are dedicated solely to low voltage systems.
46. This Subcontractor shall furnish, install and test all cabling, terminations and devices associated with the Low Voltage scope of work.
47. This subcontractor shall provide PE stamped drawings, calculations, & all delegated design as indicated in the contract documents.
48. This Subcontractor shall furnish and install all site & exterior low voltage electrical as indicated on the contract documents, including not limited to security cameras, emergency call stations, gate card readers and all communications / control wiring, etc. Also reference Civil, Landscape, & Architectural drawings for system details. Irrigation control wiring and pathways for control wiring shall be furnished and installed by the Irrigation contractor.
49. This subcontractor shall furnish & install all low voltage required for Emergency Blue Light Call Stations. Conduit pathways, pole, and fixtures provided by the Electrical Subcontractor. This subcontractor must coordinate requirements with the Electrical Subcontractor. This subcontractor shall perform all low voltage cabling, terminations, and testing as required.
50. This Subcontractor shall coordinate all requirements of the new telecommunications service(s) with the Owner and local power company.
51. This subcontractor shall furnish & install a complete and fully functioning public address system as indicated in the contract documents.

52. This subcontractor shall furnish & install a complete and fully functioning building clock system as indicated in the contract documents.
53. This subcontractor shall furnish & install all grounding required for their own scope of work, including but not limited to equipment furnished by others but installed by this subcontractor. The Electrical Subcontractor (BP #38) shall furnish & install grounding bus bars indicated in the contract documents.
54. This Subcontractor shall coordinate, receive, offload, hoist, protect, store, set in place, install, wire, & test all Low Voltage & AV equipment being furnished by the Owner. This shall include start up requirements and commissioning. Once this subcontractor receives and accepts delivery of equipment provided by others, it is in their sole care & custody. This subcontractor is responsible for inspecting and identifying any damage or deficiencies prior to accepting delivery & taking custody. If any equipment or component is damaged or lost after taking custody, it will be the responsibility of this subcontractor to repair or replace it at their expense.
55. This Subcontractor shall design, furnish & install an independent support system for all, but not limited to, hung equipment, fixtures, ~~ceiling and piping~~ low voltage systems, low voltage system components, etc. that are directly below the metal roof deck. This support system must attach to structural steel framing members as the metal roof deck cannot be utilized for support, either above or below the roof deck. Refer to A200 series drawings General Note #12 for criteria. This Subcontractor shall provide delegated design and include shop drawings and calculations indicating, but not limited to, load carrying capacities, point loads, etc. This Subcontractor shall include adding miscellaneous metal supports into the 3D model for coordination with all MEP trades.
56. This Subcontractor shall design and install all, but not limited to, channel support systems, heavy duty steel trapezes, seismic restraint hangers, etc. required for all Low Voltage & AV systems as indicated in the Contract Documents. All above ceiling scope shall be installed and inspected 4 weeks prior to any scheduled ceiling grid installation.
57. This subcontractor shall coordinate with the BP#38 electrical and BP#30 food service subcontractors to provide the required sequence of operations for the ansul & fire alarm systems. This subcontractor shall include all, but not limited to, wiring, conduit, devices, testing, etc. for complete operational systems. For example, muting of all sound systems and theatrical systems, refer to 1/E502, E701 & 5/P501.

Demolition

58. This subcontractor is responsible for all tracing of existing circuits prior to disconnect. Any circuits found to feed areas of the building or other buildings that are to remain active shall be rerouted to ensure occupied spaces remain active. This subcontractor understands that the demolition will be performed in multiple phases and will perform the demolition work according to these phases.
59. This subcontractor shall cut, cap, & make safe all Low Voltage & Security equipment and accessories scheduled to be demolished. For an example see sheet MEPD000 & MEPD001. This subcontractor shall cut and leave an air gap at the location of the start of the demo, this shall be at the upstream location at the source (i.e. equipment, valve, distribution point, etc.) All material to be removed shall be painted green by this subcontractor, green markings must be no more than 5' apart. Any material to remain will be painted red with markings no more than 5' apart. The Demolition subcontractor (BP #08) will remove and dispose of all materials.
60. The low voltage and security shall be cut, capped and made safe prior to the start of the demo/abatement.

61. The Demolition Subcontractor (BP #08) will perform all MEP mass demolition and removals (piping, conduits, wire, equipment, etc.) for all phases of the work after the services have been cut, capped and made safe by the MEP trades. The Demolition Subcontractor (BP #08) will remove and dispose of all the demolished material and equipment from the basement.
62. This subcontractor shall coordinate, furnish, & install a typical exterior conduit penetration and exterior back box at each different exterior wall material type, as part of the exterior wall mock-up process for Design Team review. Reference A315 for the intended exterior wall mock-up.

Commissioning and Testing

63. This Subcontractor shall fully cooperate with the Owner's Commissioning Agent for commissioning of systems furnished and/or installed by this Subcontractor.
64. This Subcontractor will provide a dedicated engineer / staff person on site dedicated to the contractor commissioning of all systems prior to occupancy. This includes documenting, organizing and submitting to the owner all startup reports, pre-functional checklists and any performance reports that may be required for each piece of equipment.
65. This Subcontractor's Project Manager and Commissioning engineer shall attend a weekly Commissioning/MEP coordination meeting for the duration of the project.
66. This subcontractor shall include sufficient time to fully commission all systems. Adequate manpower shall be available to fully meet the commissioning requirements.
67. Start-up reports shall be submitted to Turner within (3) days of startup.
68. This Subcontractor shall submit fully filled out Pre-Functional and Functional test reports to TCCo.
69. This Subcontractor shall perform all required testing in accordance with the specifications. Testing is to be performed in a manner so as to complement the schedule and procedure of construction, and the Work of others. Test reports shall identify the system, infrastructure and area testing with specified test requirements. Any and all manpower, temporary connections, etc. required to accomplish this work in this manner are included. NOTE: This Subcontractor will test every piece of equipment in the presence of Turner and / or the Engineer and provide a full report to Turner and the Engineer accordingly.
70. This subcontractor shall coordinate with the Authority Having Jurisdiction as required per the plans and specifications including those referenced in The Statement of Special Inspections. This subcontractor shall provide Turner a minimum of seventy-two (72) hours in advance notice for all required inspections.
71. This Subcontractor shall include all necessary shutdowns and / or tie-ins for your specific systems. This includes all required premium time, proper notification and coordination with all affected parties (Owner, Turner, local agencies, utilities, etc.).
72. This Subcontractor shall complete all identification, labeling and tagging prior to the installation of the ceiling grid by others so as to allow for proper inspections as to thoroughness of these items.
73. This Subcontractor shall include in their Bid all necessary overtime and / or off-hour work for testing so as not to delay the Work of other Trade Subcontractors. This includes testing in conjunction with any other Trade that tie-in to this Subcontractor's scope of Work.

74. This subcontractor will be responsible for all costs associated with the reopening and patching of ceilings or walls required for corrective work. All required testing of piping must be scheduled and completed before ceilings are installed. This subcontract includes any out of sequence work and testing required to complete the work before ceiling work starts.
75. This Subcontractor shall participate in rough-in inspection coordination with other trades and Turner utilizing color coded framing identification to illustrate completion and inspection ready areas. Color code key and inspection sequencing will be identified by Turner Superintendent.
76. This Subcontractor shall provide training as specified for all of the equipment and systems furnished by this Subcontractor by phases. This Subcontractor shall include two (2) man-days of additional training be used at Turner Construction Company's discretion.
77. This subcontractor shall include all training required for systems installed by this subcontractor, including but not limited to videotaping the training sessions for turnover to the Owner.

Coordination & Miscellaneous

78. This subcontractor shall fully participate in all 3-D coordination - All work per 3-D MEP Coordination Additional Provisions. This Subcontractor shall be responsible for all coordination activities and requirements identified for the Electrical Subcontractor in the BIM additional Provisions as pertinent to Low Voltage & AV systems scope of work. Ceiling modeling lead will remain by the Electrical Subcontractor however this Subcontractor shall coordinate Low Voltage with the Electrician as required.
79. This subcontractor must include 3D modeling of all cable bundles on J-hooks & IDF/MDF room raceways & equipment to ensure a fully coordinated installation, as well as for turnover of accurate 3D as-builts. This subcontractor must also coordinate locations of all hangers & embeds.
80. This subcontractor shall provide shop drawings and models showing blocking requirements for their systems and scope of work. Blocking will be furnished & installed by the General Trades Subcontractor. This subcontractor is responsible for coordination in order to ensure the correct type & size of blocking is provided in the correct locations.
81. The intent of the project Lean initiative is that all items that are to be installed are to prefabricated, arranged and shipped to project for ease of installation. Devices installed with partitions will be prefabricated with conduits/ piping as coordinated in the BIM model. These devices are to be packaged and labeled by room for ease of installation (kit-of-parts).
82. This subcontractor shall coordinate all installations to meet accessibility requirements as noted in the contract documents and all NEC clearance required for maintenance and code.
83. This Subcontractor will be required to relocate any conduit, wire, or other part of the Electrical system installed by this subcontractor that deviates from the coordinated drawings that prohibits access to any equipment, valve, damper, junction box or anything else requiring access in the future. Acceptable access shall be deemed by Turner, Owner, Engineer, or Cx agent

84. This Subcontractor shall furnish, F.O.B. jobsite, all access doors for all valves and other equipment requiring access and which may become inaccessible at a later date in the drywall and masonry assemblies. This Subcontractor shall arrange their work in such a manner to minimize the quantity of access doors required. All items requiring accessibility shall be located in already accessible areas, such as above lay-in ceilings, etc. if at all possible. It is the responsibility of the Mechanical Subcontractor to coordinate and provide information regarding the location, sizes and quantities of access doors, panels, etc. required for their Work as well as furnish same. Failure to furnish the access doors and / or coordinated locations such that other Subcontractors (e.g., masonry, drywall, etc.) must go back to complete work, shall result in a back-charge to this Subcontractor for out of sequence Work accordingly. Also note that all required access doors and / or panels shall be furnished from one (1) manufacturer with their ratings consistent with the respective partition / ceiling / floor ratings and must be keyed alike. Access door type will be per the architect's direction in each location. This Subcontractor shall provide access door shop drawings indicating locations, types and sizes in architectural ceilings and partitions for design team review and approval.
85. This Subcontractor shall provide installation of all mockups identified in the project documents as well as materials for each type of wall/ slab penetration to complete a firestopping mockup for review and approval by AHJ and Design Team.
86. This Subcontractor is required to cut ceiling pads for ceiling mounted devices installed under this scope of work. Ceiling pads shall be furnished by the Ceiling Subcontractor (BP #22).
87. This Subcontractor shall maintain utmost care so as not to damage Spray-on Insulating materials. Any and all damages and / or over-scraped areas, which may require repair, shall be back charged to the Subcontractor that causes the damage. Hangers and supports shall be installed prior to SOFP operations to minimize scraping after the fact.
88. This Subcontractor will provide all pricing for changes within five (5) calendar days of notice of change (without exception). If subcontractor does not submit pricing within these terms, it will be assumed a ZERO cost change. The change orders shall include man-hours, material costs, tax and mark-ups as separate line items broken out separately. This subcontractor will utilize Turner's standard change order cover sheet for all change orders.
89. This subcontractor shall include 2 complete cleanings of equipment and systems provided under this scope. Cleanings shall be performed prior to initial energizing equipment and again prior to turnover to the Owner. Cleanings shall include complete debris, dust removal and wiping of all internal and external components and shall be in accordance with manufacturers approved methods.
90. Additional drawings required during the coordination process are as follows:
    a) Space allocations and equipment paths for future equipment shall be planned for and included within all coordination drawings presented during the construction phases. This area shall not be utilized for any other means when equipment is installed.
    b) Provide penetration drawings for interior, exterior, foundation and floor penetrations. This should include dimensions off columns, elevations above finish floor, and required opening size. Layout as required for proper field coordination is included under this scope.
91. In addition to all other protection requirements listed elsewhere in the project documents, this Subcontractor is responsible for complete protection of equipment provided under this scope. This shall include protection from external dust, debris, and adjacent construction activities. Additionally, all sensitive exposed components such as controls, meters, displays, etc. shall be individually covered with protective material to avoid damage and/or scratching. The protection plan shall be reviewed with Turner prior to implementation and all resulting damage from improper protection shall be the responsibility of this subcontractor.

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP39 – Low Voltage & AV
Dated: 07.08.2024
Revised: 10.21.2024

92. This Subcontractor will be required to develop a Method of Procedure (MOP) for various specific operations occurring during construction, testing and commissioning of this project. The MOP must itemize in step-by-step, detailed fashion, each work task and time frame for a complete and safe procedure for execution of specific work activities. Examples of work activities requiring a written MOP may include, but not limited to, operations that present heightened safety concern, tie-in or shutdown of live/energized equipment, equipment/system testing, etc. The MOP must be prepared by This Subcontractor and submitted to Turner Construction for review and approval prior to the start of associated work.

93. This subcontractor shall include sufficient time to fully commission all systems. Adequate man power shall be available to fully meet the commissioning requirements.

94. This Subcontractor shall provide all permanent identification/labels for equipment, systems and components provided under this scope of work and per the specification requirements. Provide complete submittal of all identification components such as nameplates, tags, special signage, type, size, material, fastening/mounting methods, text, font and color for review and coordination prior to release. The submittal shall also include a table of all identification items clearly indicating the above characteristics for each and referencing associated cut-sheets/product literature.

95. Through wall and floor to floor fire stopping is included in a separate bid package. This subcontractor must coordinate all penetrations with the fire stopping subcontractor. This subcontractor will receive and install any in slab/cast in place sleeves or assemblies required for this subcontractor's scope of work. The coordination of wall and floor sleeves will be critical to the success of this project.

96. This Subcontractor shall layout, furnish and install all sleeves and inserts required for their work. This includes coordinating with Firestopping Subcontractor (BP #17) for receipt and install of pre-manufactured firestopped sleeves. Sound sealing shall be by this Subcontractor, including but not limited to acoustical putty pads. Firestopping will be by Fire Stopping Subcontractor.

~~97. This Subcontractor will furnish and install the electrical power circuits for the Automatic Door Operators and Electric Overhead Doors. This includes terminations of wiring, furnishing and installing of the relays/control modules for the interface with the fire alarm system, wiring electric hinges, crash bars, I.R. sensors, raceways for card readers and push plates (Includes running wires inside of metal frames). Wiring of the Fire Alarm system to the control modules will be by this subcontractor. Power supplies furnished by the Security Subcontractor shall be installed and connected to power circuits by this Subcontractor above an accessible ceiling. The Door Hardware shall be furnished by others.~~ See Item #43 for automatic door operator scope.

~~98. This Subcontractor will furnish and install the electrical power circuits for Electric Overhead Doors. This includes terminations of wiring, furnishing and installing of the relays/control modules for the interface with the fire alarm system (if required), wiring electric sensors, raceways for card readers and key switches (Includes running wires inside of metal frames). Include coordination with Overhead Door installer for specific electrical requirements. Wiring of the Fire Alarm system to the control modules will be by this subcontractor (if required).~~ See Item #43 for overhead coiling door scope.

99. This Subcontractor shall include all costs to provide delegated design criteria and submittals per the following, but not limited to, Delegated Design Table on Drawing GC0A. This Subcontractor has thoroughly read all Specification Sections regardless of what is indicated on the Delegated Design Table on Drawing GC0A and included all costs for delegated design scope of work.

Revised: 10.21.2024

D. Safety

1. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible for removing snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.
2. This Subcontractor shall provide a site-specific plan on how they will comply with Turner's Ladder's Last Program.
3. This subcontractor shall ensure that any Lulls used on site are equipped with hydraulic fork positioners.
4. This subcontractor shall engage a 3rd Party to complete a GPR Survey to mark out existing utilities under and in the general area of any proposed Mobile Crane locations.
5. This subcontractor shall utilize a threaded rod cutter in lieu of a porta band or grinder to cut all threaded rods.
6. This Subcontractor shall protect all downward protruding threaded rods with rubber caps to prevent injury to employees while working around rods.
7. This Subcontractor shall eliminate slip/trip/fall hazards to surrounding trades and ensure all stub ups extend a minimum of 3' above the slab or walking surface. If this is not possible, a 3' or higher cone must be placed over the stub up. Impalement protection is required on all stub ups, when a hazard exists.

E. Logistics and Schedule

1. This subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

F. Exclusions

2. This Subcontractor shall EXCLUDE wood backer boards in Electrical rooms (By General Trades BP #21)
3. This Subcontractor shall EXCLUDE Penetration Firestopping as it will be performed by Firestopping Subcontractor (BP #17). This Subcontractor shall provide an add alternate on the Bid Form of Proposal to perform penetration firestopping related to this scope of work.
4. Exterior bollards (by Sitework Subcontractor (BP#9)

G. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

Unit Prices:	**Amount**

BP#40 – Concrete Flatwork
Dated: 07.08.2024
Revised: 10.21.2024

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Concrete Flat Work*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***Concrete Flat Work*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
32 1313	Concrete Paving
32 1373	Concrete Paving and Joint Sealants
32 1726	Tactile Warning Surfaces

Shared Specifications

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

General Items

2. This Subcontractor will make every effort possible to ensure that their waste is properly sorted and disposed of to divert as much waste as possible from disposal in a landfill. This Subcontractor will track this recycling effort using the Online Waste Tracking System established by Turner Construction Company. Each dumpster ticket is to be logged into this system and its recycled content reported as a means of tracking the total percentage of construction and demolition debris diverted from landfills. There is a $50 per month fee for use of this website and this Subcontractor shall include all costs in his bid for use of this service. Refer to the attached User's Manual for more information about this system. Refer to the Turner Tracker Manual in the referenced "Forms and Policies," dated January 2015, in Turner's Project Manual.
3. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
4. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
5. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
6. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

Bid Package Specific Scope

7. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.

8. This Subcontractor shall include all measures needed for winter concrete installation as required based on the construction schedule timing of this work, including but not limited to tarps, blankets, heaters, enclosures, etc. This Subcontractor shall protect all concrete from freezing temperatures per the specifications. Upon finishing grading and turnover from the Sitework Subcontractor, this Subcontractor shall include any snow removal and protect the subbase from winter weather.

9. This Subcontractor shall provide a lined dumpster for the purposes of wash out to be available for cleaning trucks. Any concrete truck not using this for clean-out will be noted and the clean-up back-charge from the Site Subcontractor will be the Concrete Subcontractor's responsibility. Any excess

concrete due to over placement shall be the responsibility of this Subcontractor to remove to this lined dumpster.

10. This Subcontractor shall repair, clean or restore any areas that are disturbed by concrete operations to the satisfaction of the Owner and Construction Manager. This includes immediately cleaning all concrete splatter and spills due to concrete placement by this Subcontractor on all finish surfaces or landscaped areas.

11. This Subcontractor shall attend a pre-installation meeting 30 working days prior to any concrete being placed. The meeting will be organized by Turner and the following people should be in attendance; the building official, Testing Agency, Special Inspector, Structural Engineer, Architect, Concrete Supplier and this Subcontractor. The purpose of the meeting is to review proposed concrete mix designs as well as project specific requirements and how they are to be achieved.

12. This Subcontractor shall submit cold weather and hot weather concrete placement plans in accordance with ACI and include all costs to implement these plans.

13. This Subcontractor shall furnish and install all layout, concrete formwork, concrete reinforcement and cast-in- place concrete placement per the documents for the following items. This shall include all accessories and means and methods required to provide a completed product per the documents.

    a. Concrete Sidewalk Pavement
    b. Concrete Footing for Bleachers
    c. Heavy Duty Concrete Pavement
    d. Concrete Utility Pads
    e. Concrete Curbs
    f. Concrete Edge at Synthetic Track Trench Drain
    g. Concrete Edge at Synthetic Sports Field
    h. ADA detectable warning tiles

14. This Subcontractor shall furnish and install all type “2A” pedestrian concrete pavement as shown on but not limited to the Landscape and Civil drawings both within the project fenceline and along abutting roads (see 2A/L501 for details). This Subcontractor is to include tactile warning strips, transitions, ramps and ensuring that all sidewalks meet ADA and local requirements.

15. This Subcontractor shall furnish and install all type “2B” heavy duty concrete pavement as shown on but not limited to the Landscape and Civil drawings (see 2B/L501 for details).

16. This Subcontractor shall furnish and install all exterior concrete utility pads, including but not limited to transformer pads, dumpster enclosure pads, gas meter pads, dust collection system pads and generator pad(s).

17. This Subcontractor shall furnish and install any structural grade rigid filler material at applicable locations.

18. This Subcontractor shall furnish and install any exterior cast in place concrete curbing.

19. This Subcontractor shall layout, form and place concrete and reinforcement for all stepped concrete where indicated.

20. This Subcontractor shall monitor the formwork during and after concrete placement to ensure the plumbness of edges and make adjustments as necessary.

21. This Subcontractor shall receive, distribute, and install any concrete embedded items supplied by others, including but not limited to anchor bolts, bearing pads, embedded angles, pad sleeves, etc.

22. This Subcontractor shall remove all snap ties, cut concrete fins and fill voids in the concrete surfaces within two weeks of concrete placement at exposed surfaces.
23. This Subcontractor shall provide all surveying and layout required for the work included with this package.
24. Immediately prior to the placement of concrete slabs, this Subcontractor shall thoroughly clean all areas to receive concrete. Compressed air shall not be used. This Subcontractor shall use vacuums or other methods that minimize dust.
25. This Subcontractor shall furnish and install haunched slabs where required. Reference details in the Structural drawings.
26. This Subcontractor shall furnish and install all outdoor concrete pads required for mechanical, electrical, and plumbing equipment including but not limited to those shown on the Civil and Landscape drawings. See list of exclusions at end of this document.

Coordination with Other Trades

27. This Subcontractor shall coordinate all requirements for Testing and Inspection in accordance with Field Quality Control section found in the Division 1 specifications and Concrete Specifications. This Subcontractor shall furnish any required cure box (or boxes) of sufficient capacity for concrete placement schedule. Inspections will be scheduled through the Construction Manager.
28. This Subcontractor shall be responsible for ordering, scheduling and sequencing of concrete deliveries required for the work. This shall include any premium time and standby labor required for continuous work (including the concrete supplier if required).
29. This Subcontractor will work closely with the Sitework Subcontractor to coordinate the scheduling of excavation for concrete flatwork areas as shown.
30. This Subcontractor shall coordinate all concrete work with all other subcontractors having work adjacent to or embedded within the concrete.
31. This Subcontractor shall coordinate and provide all openings in formwork for other trades as required. This includes box-outs and/or sleeves in slabs for MEP trades or other work that penetrates the concrete. Layout and sleeves shall be furnished by others and installed by this Subcontractor.
32. This Subcontractor shall coordinate with the Sitework Subcontractor for any drains, cleanouts, hand holes or valve caps within hardscaped areas to be maintained during the concrete pour.

Joint Sealants:

33. This Subcontractor will furnish and install all Joint Sealants within and at perimeter of work abutting adjacent work where required per the contract documents.

Expansion Control:

34. This Subcontractor will furnish and install Expansion Control where required within the concrete flatwork.

D. Exclusions

1. This Subcontractor shall exclude concrete lightpole bases or concrete fill for bollards (By BP #9 Sitework)

2. This Subcontractor shall exclude foundation walls, strip footings, interior spread footings, piers, frost pads, recessed frost pads, interior slabs on grade, slabs on decks, elevator pits, sump pits, radon pits, interior housekeeping pads and any other interior structural concrete items (By BP #10 Concrete).
3. This Subcontractor shall exclude fence footings, gate footings, furniture footings, bench footings, athletic field equipment footings, signage footings, light pole bases, thrust blocks, encasement of ductbanks and bituminous concrete (By BP #9 Sitework).
4. This Subcontractor shall exclude type "2C" concrete pedestrian pavers (By BP #9 Sitework).
5. This Subcontractor shall exclude excavation, surface preparation and backfill (By BP #9 Sitework).
6. This Subcontractor shall exclude the frost walls beneath the exterior Chiller pads (By BP #10 Concrete).

E. **Safety**

1. This Subcontractor and its Contractors (rod busters) shall eliminate impalement and puncture hazards attributable to exposed rebar and anchor bolts. This Subcontractor is to utilize rebar that is candy caned (or bent to 180 degrees) to eliminate impalement hazards when approved by the Engineer of Record. If this is not possible, this Subcontractor is responsible for any rebar protection that may pose an impalement or laceration hazard to workers. This Subcontractor shall provide, maintain and remove all necessary rebar impalement protection. This Subcontractor, at the request of Turner, from time to time may be asked to bend steel bars over to eliminate impalement hazards. It will be this Subcontractors responsibility to comply with and complete these requests.

2. This Subcontractor shall provide daily clean up and removal of surplus concrete spoils from within the building and jobsite immediately following concrete operations and placed in dumpster that is approved for concrete disposal.

3. This Subcontractor shall ensure safe access/egress in and around all their work areas. If trenches are to be traversed ensure that walkways are at least 18 inches wide and are secured together when using to planks to make up the required width. If the travel height of the walkway exceeds 4 feet vertically this Contractor will install guardrails to prevent falls from same walkway. FORMWORK is not to be used for any type of walkway, ladder, scaffolding or any other type of support platform other than the intended use for which it was manufactured. Concrete formed and decked areas must have a continuous access corridor running through the work area to prevent employees from stepping over material.

4. This Subcontractor shall provide temporary portable generators or other power supply sources for their use until such time the temporary power has been brought to the site by others. Temporary portable power sources being used must be GFCI protected.

5. This Subcontractor to provide, install and maintains a safe, secured transition strip with beveled edges around the entire perimeter between all elevated and depressed slabs. This Subcontractor shall remove and dispose of the transition strip as directed by Turner.

6. Winter weather tarps are not allowed to be hung from the perimeter guardrail cables. This Subcontractor to furnish an independent means to secure the tarps. All tarps must be fire rated.

7. This Subcontractor shall utilize a rebar shear in lieu of a chop saw or grinder to cut rebar.

8. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible for removing snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.

9. This Subcontractor shall provide a site-specific plan on how they will comply with Turner's Ladder's Last Program.

10. This subcontractor shall ensure that any Lulls used on site are equipped with hydraulic fork positioners.

11. This subcontractor shall engage a 3rd Party to complete a GPR Survery to mark out existing utilities under and in the general area of any proposed Mobile Crane locations.

F. Logistics and Schedule

1. This subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

G. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

Unit Prices:	**Amount**
Refer to Form of Proposal	

H. Alternate Prices

The following Alternate Prices reflect the work of this bid package under which the bid proposal was ***submitted, and these alternates shall remain valid for the life of the project and include all costs for a*** complete installation.

Alternates:	**Amount**
Refer to Form of Proposal	

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#41 – Landscaping
Dated: 07.26.2024
Revised: 10.21.2024

C.1 Specific Scope of Work

Without the intent of limiting the Scope of Work to be performed by the Subcontractor, included is the furnishing and installing of the ***Landscaping*** in accordance with the contract documents and as further enumerated within these Additional Provisions. The items listed herein are NOT intended to be a complete list of work items to be performed under this agreement. Furthermore, detail references are included for convenience but are not intended to identify all applicable details.

1. Includes performing all of the ***Landscaping*** in accordance with the Contract Documents and as established in the Project Specifications and Document List. This includes the following Specification Sections specifically but does not limit the Subcontractor from the responsibility of the entire Project Documents Scope of Work:

Exclusive Specifications

Specification Sections listed below as 'Exclusive' shall be considered the sole responsibility of this Subcontractor. This Subcontractor shall furnish and install all products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible for performing a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the entire scope of work for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these exclusive specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Shared Specifications

Additional Provisions/Scope of Work

New Central Middle School Project
State Project No. 057-0114 N
Greenwich, CT
BP#41 – Landscaping
Dated: 07.26.2024
Revised: 10.21.2024

Specification Sections listed below as 'Shared' shall be considered the mutual responsibility of two (2) or more Subcontractors. This Subcontractor shall furnish and install products listed within these specification sections in conformance with all requirements and as indicated in the Contract Documents, including coordination with other related sections as listed within these specification sections and in reference to the entire Contract Specifications and Drawings. This Subcontractor shall be responsible to perform a complete and thorough review of the Contract Documents and include in their lump sum bid amount all costs to complete the specific scope, as defined below, for products listed within these specification sections. This includes, but is not limited to, the review of all drawings, details, notes, keys, keynotes, legends, symbols, abbreviations, schedules, callouts, and all applications of the products listed within these shared specification sections for a complete system which are reasonably inferable (i.e. similar detail/symbol/illustration, adjacent construction, means & methods, etc.) from the Contract Documents. No additional costs will be considered without clear and definitive substantiation.

Spec. #	Specification Name
DIV 00	Procurement and Contracting Requirements
DIV 01	General Requirements

General Items

2. This Subcontractor will make every effort possible to ensure that their waste is properly sorted and disposed of to divert as much waste as possible from disposal in a landfill. This Subcontractor will track this recycling effort using the Online Waste Tracking System established by Turner Construction Company. Each dumpster ticket is to be logged into this system and its recycled content reported as a means of tracking the total percentage of construction and demolition debris diverted from landfills. There is a $50 per month fee for use of this website and this Subcontractor shall include all costs in his bid for use of this service. Refer to the attached User's Manual for more information about this system. Refer to the Turner Tracker Manual in the referenced "Forms and Policies," dated January 2015, in Turner's Project Manual.
3. This Subcontractor shall examine the layout and installation of all adjacent work performed by others at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.
4. This Subcontractor shall include multiple mobilizations as required by the latest issuance of the project schedule.
5. This Subcontractor must meet the latest issuance of the project schedule. To this end, this Subcontractor understands that all adjacent work may not be 100% complete at the time of field dimension verification and this Subcontractor shall coordinate with other trades and accept reasonable hold-to dimensions which may be required to meet the delivery and installation dates.
6. This Subcontractor shall clean all items installed by this Subcontractor and install, secure and maintain appropriate protection to prohibit damage from subsequent work. Protection must be approved by Turner.

Bid Package Specific Scope

7. This Subcontractor shall examine the layout and site conditions at weekly intervals leading up to the date of installation and shall report to Turner in writing any discrepancies that may affect the installation or operation of the scope provided under this agreement to avoid any delay in starting work as scheduled.

8. This Subcontractor shall furnish and install all the plantings as defined in the contract documents, including but not limited to trees, shrubs, grasses, ground cover and perennials as listed on the Plant Material List on drawing L402.
9. This Subcontractor shall include furnishing and installing all of the topsoil required for this scope of work in accordance with the contract documents. This Subcontractor is to assume that there will be no topsoil salvaged or stockpiled by the sitework contractor. See "Soil Preparation" specification 32 9113 for further clarifications.
10. This Subcontractor shall coordinate with the sitework contractor and flatwork concrete subcontractors regarding the timing of the installation of the hardscape included within their scopes of work. This Subcontractor is to coordinate their activities to minimize impacts to finish hardscape work. If this Subcontractor has to work around or travel over finished hardscape areas, this Subcontractor is to furnish and install any protective measures to avoid damaging the hardscape. Include plywood sheeting or wood planks for any locations where small equipment needs to pass over hardscape. Repair costs for any damage to finish hardscape will be incurred by this Subcontractor if it is determined to be at fault.
11. This Subcontractor shall furnish and install all mulches at planting bed areas as required by the contract documents. Include type "2D" Fiber Mulch as shown on but not limited to the L200 drawing series.
12. This Subcontractor shall provide the maintenance, watering, pruning, replacements, mowing and all warranty requirements defined in the contract documents for 1 year following substantial completion.
13. This Subcontractor shall furnish and install the irrigation system as required by the contract documents. This Subcontractor shall furnish and install any subgrade sleeving required beneath hardscape. Connection to water supply to be made 5' outside of foundation wall, piping up to that point fed from inside of the building is to be provided by the Plumbing Subcontractor.
14. This Subcontractor shall include furnishing and installing all mulch and plantings shown at Rain Gardens and Swales. See Exclusions for Rain Garden components that are to be provided by Others.
15. This Subcontractor shall include 1 laborer per 10-person workforce while working on site but no less than 1 person for a composite cleanup crew. The composite cleanup crew will be required for 2 hours each Friday from 12:30-2:30 p.m. while the subcontractor is performing work on site. The composite crew is intended to clean up general debris not necessary associated with particular subcontractor (cardboard, plastic bottles, misc. trash item, general sweeping, etc.)

Coordination with Other Trades

16. This Subcontractor shall coordinate all requirements for Testing and Inspection in accordance with Field Quality Control section found in the Division 1 specifications and Landscaping specifications.
17. This Subcontractor shall be responsible for ordering, scheduling and sequencing of deliveries required for the work. This shall include any premium time and standby labor required for receiving a delivery.
18. This Subcontractor will work closely with the Sitework Subcontractor to coordinate the scheduling of excavation, backfilling, utility and any subgrade work around the site so that it is not to impact or delay landscaping activities.

Safety/Logistics

19. This Subcontractor has reviewed the Logistics Plans and the Construction Schedule and shall include all associated costs as relevant to achieve this scope of work within the Project Schedule. No come back costs will be entertained.

20. This Subcontractor shall review, conform to, and furnish and install all requirements included in the Safety Additional Provisions included in this Agreement. This Subcontractor understands that this document is project specific, and all provisions must be included in this Subcontractors' bid.

21. This Subcontractor shall be required to store all onsite material on racks, carts or pallets capable of being easily moved and shall coordinate the delivery of and location of stored material with the Turner Superintendent. If material is stored on pallets, this Subcontractor is responsible to have a pallet jack onsite at all times. This Subcontractor shall include relocation and consolidation of materials as directed by Turner.

22. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible for removing snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.

23. This Subcontractor shall provide a site-specific plan on how they will comply with Turner's Ladder's Last Program.

24. This subcontractor shall ensure that any Lulls used on site are equipped with hydraulic fork positioners.

25. This subcontractor shall engage a 3rd Party to complete a GPR Survey to mark out existing utilities under and in the general area of any proposed Mobile Crane locations.

26. This Subcontractor is to include 320 hours good for the life of the project for use as directed by Turner Construction. This is to cover labor and material costs for additional 5S site cleanup, restoration of abutting landscaping above and beyond what is shown on the contract documents or called for in this scope of work per the direction of the Turner Superintendent. This will be billed based on the contractual wage rates and may only be expended by written authorization of Turner Construction and any unspent portion of this unused scope hours will be credited at the end of your contract based on approved labor rate.

D. Exclusions

1. This Subcontractor shall exclude concrete light pole bases, concrete planters or concrete fill for bollards (By BP #9 Sitework)
2. This Subcontractor shall exclude structural concrete, concrete sidewalk pavement, heavy duty concrete pavement, concrete utility pads, concrete curbs, concrete edge at synthetic track and ADA detectable warning tiles. (By BP #40 Flatwork Concrete).
3. This Subcontractor shall exclude dumpster enclosure pads, gas meter pads, generator pad(s), fence and gate footings, furniture footings, sign footings, light pole bases, thrust blocks, encasement of ductbanks and bituminous concrete (By BP #9 Sitework).
4. This Subcontractor shall exclude type "2C" concrete pedestrian unit pavers (By BP #9 Sitework).
5. This Subcontractor shall exclude exterior concrete pads for Air Cooling Chiller – 1 and 2 as indicated on the contract documents (By BP #9 Sitework).

6. This Subcontractor shall exclude all Rain Gardens and Swales including but not limited to filter fabric, pipe, crushed stone, bedding materials, subgrade, grading, Greenwich soil mix and scarifying and tilling soil beneath gardens. Refer to Rain Garden Typical Cross Section and 5' Wide Stone Swale With 6" Underdrain details on drawing C504 (By BP #9 Sitework).
7. This Subcontractor shall exclude all below grade under drainage piping, roof leader drain piping and the above grade downspout boots between roof leaders and drain piping (By BP #9 Sitework).
8. This Subcontractor shall exclude fill materials as required by the contract documents to fill excavation at demolished building(s) (By BP #9 Sitework). Coordinate final grades with Sitework Contractor.
9. This Subcontractor shall exclude all site furnishings and fixtures, including but not limited to signage, bollards, concrete planters, site benches, bicycle racks, stepping stones, stone mulch and metal edging, seating and tables, live edge wood benches, boulders, vehicular gates, chain link fencing, metal screen fencing, baseball/softball field shade enclosures, athletic fencing, and dumpster enclosures as indicated on the contract documents (By BP #9 Sitework).
10. This subcontractor shall exclude the segmental block retaining walls indicated in the contract documents (By BP #9 Sitework).
11. This Subcontractor shall exclude the raised planters as indicated on the contract documents including but not limited to raised concrete planters per detail 3E on drawing L501. (By BP #9 Sitework).
12. This Subcontractor shall furnish and install all pitching rubber(s), home plate(s), and bases including but not limited to stanchions, ground anchors, and concrete blocks as indicated on the contract documents. Reference details 2B and 2C on drawing L601.

E. Safety

1. The Sitework Contractor shall be responsible for snow removal of the site, access roads and walkways to the building. This subcontractor will be responsible for removing snow and ice from all other areas for their work including but not limited to their work areas, material areas, storage conex's and trailers. Snow and ice removal is not allowed to free fall from upper levels of buildings, scaffolding or platforms.
2. This subcontractor shall provide a site-specific plan specifically outlining how they will comply with Turners ladders last program.

F. Logistics and Schedule

1. This subcontractor shall include the requirements of the Project Logistics Plan and Project Schedule.

G. Unit Prices

The following Unit Prices reflect the work of this bid package under which the bid proposal was submitted, and all unit prices shall remain valid for the life of the project and include all costs for a complete installation. Unit prices which do not affect the work of this bid package have been filled in "not applicable (n/a)". ***UNIT PRICES ARE GOOD FOR BOTH ADDS AND DEDUCTS.***

Unit Prices:	**Amount**
Refer to Form of Proposal	

H. Alternate Prices

The following Alternate Prices reflect the work of this bid package under which the bid proposal was ***submitted, and these alternates shall remain valid for the life of the project and include all costs for a*** complete installation.

29	Coordinate installation (including assembly, location and connections)	A	A	A	L	L	L	L	
30	**DOAS**								
31	Internal seismic vibration isolation as per spec			F&I					
32	Assemble units if shipped in sections (manufacturer to provide direction if needed)			A	F&I	A			
33	For buildings with Aluminum wire, provide approved Aluminum-to-Copper junction					F&I			
34	All mechanical/plumbing piping, mechanical ductwork connections, and associated hardware and accessories				F&I				
35	All power conduit, wiring, and terminations					F&I			
36	All Building Automation system controls and interface with equipment, including low voltage wiring						F&I		
37	Housekeeping bad and/or inertia base and submit to A/E for approval	A	A					F&I	Housekeeping pads and/or inertia base furnished and installed by BP#10 Concrete Subcontractor.
38	BACnet interface			F			I		
39	Motor starters and/or VFD's			F		I			
40	If starter is provided by others, provide coordination to ensure starter/equipment are compatible. For example, torque requirements, size…			A	A	A	A	A	
41	Disconnect switch			F		I			
42	Duct silencers				F&I				
43	Externally wrapped insulation				F&I				
44	Internal insulation			F&I					
45	Check belt tension if needed				L				
46	Assemble units shipped in sections (manufacturer to provide direction if needed)			A	L				
47	Mounting and wiring of any sensors outside of the units including wall, and duct mounted, sensors						F & I		
48	Start up		A	L	A	A	A		
49	Start up reports			F	F	F	F		
50	Engage qualified testing agency to perform tests and inspections				A			A	Owner
51	All field testing referenced in specifications			F	F	F	F		
52	All factory testing referenced in specifications			F&I					
53	Anchor bolts or welds for installation of unit to curb			F	I				
54	Design and install curb to building structure attachment				F&I				
55	External vibration				F&I				
56	Internal vibration isolation			F & I					
57	Hardware to assemble units shipped in sections			F	I				
58	Assemble components shipped loose: (i.e. filters and mixing boxes)			F	I				
59	Cleaning of mechanical equipment and mechanical rooms prior to substantial completion				F				
60	Provide list of all components shipping loose		A	F					
61	Isolation valves, motorized valves, gauges, actuators and control valves				F & I		F & I		
62	Disconnect switch (Separate from Starter/VFD)					F & I			
63	Duct Smoke detectors				I	F			
64	Power conduit, wiring, and terminations to Duct Smoke Detectors					F&I			
65	Control conduit, wiring, terminations, and programming to Duct Smoke Detectors						F&I		
66	Fire Smoke / Smoke Dampers				F & I				
67	Fire alarm wiring					F&I			
68	Installation of all actuators for dampers				F&I				
69	Insulation of coil piping internal to air handling unit			F&I					
70	Drain pan			F & I					
71	Initial filters and belts			F	I				
72	Spare filters and belts			F	I				
73	Motor alignment			L	L				
74	Check belt tension (if belt driven fan)				L				

ATTACHMENT C - COORDINATION MATRIX - BP#2 - DOAS

Greenwich Central Middle School – State Project No. 057-0114N
9 Indian Rock Ln. Greenwich, CT
8/13/2024

Material procurement for this project is supplied by Turner Construction. This matrix coordinates responsibility for the scopes identified.

SECTION 003132 – GEOTECHNICAL DATA

PART 1 GENERAL

1.1 SUMMARY

A. For the preparation of Bidding Documents, Engineer has relied upon the following reports and tests of subsurface and latent physical conditions of the site. The location of all bore holes and test pits is shown on the Drawings.

1. Geotechnical report, Soil boring and test pit data, and laboratory test results (attached)

a. The subsurface data are not guaranteed as to accuracy or completeness, nor are they a part of the Contract Documents.

b. Bidders are cautioned that the subsurface data have been utilized for general design purposes only. No explicit or implicit representation is made as to the nature of the materials which may be encountered below the surface of the ground.

c. The making available of this subsurface data to Bidders is not intended to relieve them from their responsibility to familiarize themselves with the subsurface and other site conditions.

2. Plan and Profile of Sewer in Stanwich Road & Fairfield Road Greenwich, CT dated Sept. 6, 1961 (attached)

a. The subsurface information provided is not guaranteed as to accuracy or completeness, nor are they a part of the Contract Documents.

b. Bidders are cautioned that the information provided is for general design purposes only. No explicit or implicit representation is made as to the nature of the materials which may be encountered below the surface of the ground.

PART 2 PRODUCTS – NOT USED

PART 3 EXECUTION – NOT USED

Re: **Geotechnical Evaluation – Greenwich Central Middle School, Greenwich, CT**

Dear Mr. Morhardt:

Tighe & Bond is pleased to present this geotechnical evaluation for the proposed new Central Middle School at 9 Indian Rock Lane in Greenwich, Connecticut. A preliminary geotechnical evaluation report dated October 17, 2023 was previously prepared by Tighe & Bond for the project This geotechnical report was prepared to present supplemental subsurface data and geotechnical recommendations, and is intended to supersede the preliminary geotechnical evaluation report in its entirety.

A Site Locus is presented as Figure 1 of Appendix A. This evaluation was completed in general accordance with our agreement dated February 2, 2023. Elevations in this report reference the North American Vertical Datum of 1988 (NAVD 88).

Executive Summary

Tighe & Bond conducted a subsurface exploration program in August and November 2023 consisting of nine geotechnical borings and eleven geotechnical test pits. For this evaluation, Tighe & Bond also incorporated 20 borings and 12 test pits performed by ATANE in 2022. In general, subsurface conditions encountered in the explorations consisted of surficial topsoil, forest mat or recreational field sand underlain by native granular soils and bedrock, or in the eastern portion of the proposed building and to the east/southeast of the proposed building the surficial materials were underlain by existing granular fill followed by a layer of buried sand with organics, followed by native granular soils, a discontinuous layer of sandy clay that was 0.5 to 3 feet thick, and bedrock.

The existing fill and underlying sand with organics layers are not suitable to remain in place below the proposed building footprint (slab and foundations) due to the potential for intolerable settlement of the building foundations and/or slab that may result from additional load on the uncontrolled fill of variable composition and density, and organic-containing layers that are expected to decompose over the life of the structure. Existing fill and underlying sand with organics should be completely over-excavated from below the proposed building footprint and foundation bearing zones (defined as the 1 horizontal to 1 vertical [1H:1V] lines extending down and away from the bottom of footing elevation starting at 1 foot away from the footing edge) to the top of suitable native soils, and be replaced with suitable compacted backfill. After completion of over-excavation and replacement of the unsuitable materials, the proposed building can be supported on conventional shallow soil-supported footings and a soil-supported slab-on-grade bearing on native soils or suitable compacted backfill placed over native soils. A maximum net allowable bearing pressure of 4 kips per square foot (ksf)

is recommended for footings. Total and differential settlements are anticipated to be less than 1 inch and ½ inch, respectively.

Permanent slopes and/or retaining walls are planned to the west of the proposed building, with maximum cuts of up to 22 feet. The thickness of overburden soils in the existing hillside where the permanent slopes and/or retaining walls are planned was approximately 3 to 14.5 feet, with an average thickness of approximately 7 feet. It is anticipated that the proposed permanent slopes and/or retaining walls could consist of a combination of permanent rock and soil slopes, or modular block or mechanically-stabilized earth (MSE) retaining walls. These areas were not accessible during our exploration program due to dense tree growth.

Once access is available at the actual locations of proposed permanent slopes and/or retaining walls, at least 2 borings are recommended along the alignment of the proposed permanent slope and/or retaining wall to the west of the southern portion of the proposed building to estimate the thickness of overburden soil and composition/quality of bedrock. A bedrock core is recommended to be collected for the full elevation range of the potential rock cut.

Site Conditions

Existing – The site is located at 9 Indian Rock Lane in Greenwich, Connecticut, and is currently developed with the existing Central Middle School. The existing site includes an approximately 76,000 square foot school building in the southern portion of the site, parking and driveway areas to the south of the existing building, recreational fields to the north of the existing building, and wooded areas to the west and north of the existing building and recreational fields. Indian Rock Lane borders the site to the south, and Stanwich Road and Orchard Street border the site to the west and east, respectively.

Based on the Property / Boundary & Topographic Survey dated May 22, 2023, and prepared by Martin Surveying Associates, LLC (Martin), ground surface topography in the above-referenced recreational field area is approximately elevation 45 feet, and then slopes upward to the west (toward Stanwich Road) and north to approximately elevation 85 feet to 110 feet at a typical steepness of 4 horizontal to 1 vertical (4H:1V).

Proposed – The proposed project generally consists of demolishing the existing building and construction of a new approximately 110,000 square-foot, multi-story school building in the northern portion of the site. The proposed building is planned to be located partially in the existing recreational field, and to the west into the existing wooded, upward sloping area. The proposed building is planned to have a lowest floor at elevation 47 feet, and a second floor level with a slab at elevation 63 feet. The western portion of the proposed building is planned to be single-story with the slab at elevation 63 feet (i.e., no lower level in the western portion of the building). The eastern-portion of the building with a FFE at elevation 47 feet will require approximately 1 to 4 feet of fill to achieve the FFE, and the western portion of the building with a FFE at elevation 63 feet will require approximately 2 to 18 feet of fill to achieve the FFE.

In addition to the proposed new building, proposed construction includes new parking/driveway areas, retaining walls or cut slopes to the west of the proposed building (cutting into the existing slope for the lower finished roadway grades), new recreational fields to the south of the proposed building (in the footprint of the existing building to be demolished), and stormwater management features. Two primary retaining walls or cut slopes

are planned to the west of the proposed building: the northern wall / cut slope is proposed to be approximately 140 feet in length and is expected to be cut into the existing slope and will have a maximum height of approximately 9 feet; and the southern wall / cut slope is proposed to be approximately 340 feet in length and is expected to be cut into the existing slope and will have a maximum height of approximately 22 feet.

Subsurface Conditions

The generalized subsurface conditions described in the text below summarize trends observed in the explorations. The boundaries between soil strata are approximate and are based on interpretations of widely spaced explorations and samples. Actual conditions could be more variable.

Tighe & Bond Borings and Test Pits – Nine geotechnical borings (T&B-B-1 through T&B-B-9) were drilled by General Borings, Inc. (General Borings) between August 28 and 30, 2023. Borings were advanced with 3.25-inch inside-diameter hollow-stem augers. Split-spoon sampling and Standard Penetration Tests (SPTs) were conducted semi-continuously to a depth of up to 7 feet below ground surface (bgs), and at 5-feet intervals thereafter to the termination depths of the borings. Auger refusal on presumed bedrock was encountered in each of the borings at depths ranging from approximately 3 to 29 feet bgs. At borings T&B-B-4 and T&B-B-8, auger refusal was encountered and the borings were off-set and drilled to deeper depths, and the offset borings were identified as T&B-B-4A and T&B-B-8A, respectively. Bedrock core samples were collected at two borings: T&B-B-1 from a depth of 6.5 to 11.5 feet bgs; and T&B-B-2 from a depth of 3 to 8 feet bgs. Borings were backfilled upon completion with cuttings.

Eleven geotechnical test pits (TP-101 through TP-111) were excavated on November 11 through 17, 2023 by General Borings using a Volvo EC55L excavator to depths ranging from approximately 3 to 8 feet bgs. After completion of the test pits, the pits were backfilled with excavated material in controlled lifts and compacted with the heel of the bucket.

Boring and test pit locations are shown on Figure 2 of Appendix A. Tighe & Bond boring and test pit logs are included in Appendix B.

Explorations by Others – Borings and test pits were performed by ATANE that were documented in a report titled Preliminary Geotechnical Investigation for Central Middle School, dated October 10, 2022. Twenty borings (B-1 through B-20) were drilled by Soil Testing, Inc. on August 23 through 25, 2022, and on September 3, 2022. The borings were drilled using 4.25-inch inside-diameter hollow-stem augers. Split-spoon sampling SPTs were typically conducted continuously or semi-continuously to the termination depths of the borings. Borings were advanced to maximum depths ranging from 3 to 16 feet bgs, and auger refusal was noted on the boring logs at 12 of the borings at depths ranging from 3 to 12 feet bgs.

Twelve test pits (TP-1 through TP-12) were excavated by JJK Electric on August 12, 2022 using a Bobcat E35. Test pits were excavated to maximum depths ranging from 3 to 10 feet bgs.

The ATANE borings logs did not include ground surface elevations, and the test pit logs included ground surface elevations that vary significantly from the existing ground surface

elevations shown on the Martin Property / Boundary & Topographic Survey. Therefore, for this evaluation the ground surface at each of the ATANE borings and test pits were interpolated based on an overlay of the ATANE exploration location plan on the Martin Property / Boundary & Topographic Survey. This assumes there have not been any significant grade changes since ATANE's explorations and the Martin Property / Boundary & Topographic Survey.

Boring and test pit locations are shown on Figure 2 of Appendix A, based on the above-referenced overlay. The ATANE boring and test pit logs are included in Appendix C.

Laboratory Testing – Laboratory tests were performed as part of the ATANE exploration program consisting of nine sieve analysis tests (ASTM C136), eight specific gravity tests (ASTM D854) and two Atterberg limits tests (ASTM D4318). Additionally, laboratory tests were performed on soil and rock samples collected from the Tighe & Bond borings and test pits consisting of four mechanical Particle Size Analysis tests (ASTM D6913), six organic content tests (ASTM D2974), six natural moisture content tests (ASTM D2216) and two uniaxial compressive strength tests (ASTM D7012D). Tighe & Bond and ATANE laboratory test results are included in Appendix D.

Summary of Subsurface Conditions – In general, subsurface conditions encountered in the explorations consisted of surficial topsoil, forest mat or recreational field sand underlain by native granular soils and bedrock, or in the eastern portion of the proposed building and to the east/southeast of the proposed building the surficial materials were underlain by existing granular fill followed by a layer of buried sand with minor organics, followed by native granular soils, a discontinuous layer of sandy clay that was 0.5 to 3 feet thick, and bedrock. The native granular soils were typically medium dense to very dense, with the exception of the upper 2 to 3 feet that was occasionally very loose to loose. The existing fill was variable in density, ranging from very loose to very dense where SPTs were performed. The buried sand with minor organics was loose to medium dense where SPTs were performed.

Table 1 below presents the general stratigraphy encountered at the subsurface exploration locations in descending depth from the ground surface. A tabular summary of subsurface conditions is included as Table B1 in Appendix B.

Table 1
Description of Subsurface Conditions

Strata (In Descending Depth)	General Description [1]
FILL[2,3]	Loose to very dense, brown, gray or black, fine to coarse SAND (portions of which are only fine SAND), up to 50% Gravel, up to 50% Silt, trace Roots, trace Asphalt or trace "debris," *or* SILT, trace Gravel, trace Clay; fill contains Cobbles and Boulders
SAND WITH MINOR ORGANICS[2,3,4]	Loose, brown or tan, fine to coarse or fine to medium SAND, up to 50% Silt, up to 50% Gravel, trace to little Organics; layer contains Cobbles
NATIVE GRANULAR SOIL[5]	Medium dense to very dense, brown, gray or black, fine to coarse SAND (portions of which are only fine SAND), up to 50% Gravel, up to 50% Silt *or* GRAVEL, some fine to coarse Sand, little Silt *or* SILT, some fine to medium Sand; layer contains Cobbles and Boulders
SANDY CLAY[6]	Gray, low plasticity CLAY or Clayey SILT, with minor proportions of Sand, Gravel or Sand-Clay mixtures

1. Definition of Soil Description Terms: "trace" = 0-10%, "little" = 10-20%, "some" = 20-35%, "and" = 35-50%, by weight
2. Encountered at T&B-B-5 and T&B-B-8, TP-101 through TP-111, and interpreted to have been encountered at TP-1, TP-6, and TP-8 through TP-11.
3. The borings and test pits performed by ATANE do not explicitly identify fill, sand with minor organics, and native soils on each of the logs. Fill at the ATANE borings and test pits, as well as the sand with minor organics layer, where not explicitly identified as fill was interpreted by Tighe & Bond as part of this evaluation.
4. Based on six laboratory organic and moisture content tests of soil samples collected from the sand with minor organics layer, the organic content and moisture content of the layer ranged from 1.1% to 10.5% and 20.7% to 52.1%, respectively.
5. The upper 2 feet of the native soil where present directly below ground surface was very loose to loose at some locations, likely the result of seasonal freeze/thaw.
6. Encountered at TP-104, B-4, TP-3, TP-4, and TP-7 through TP-11.

Of the 52 total subsurface explorations, 21 of the explorations terminated upon encountering refusal on presumed bedrock at depths ranging from approximately 3 to 29 feet bgs. A 0.5- to 3.5-feet thick weathered bedrock zone was encountered before apparent intact bedrock at four of the Tighe & Bond borings. In general, refusal elevations were shallower in the western portion of the site (the existing hillside) and deeper in the central portion of the site (south-central portion of the proposed building footprint). Two 5-foot long bedrock cores were collected at borings drilled in the northern portion of the site (T&B-B-1 and T&B-B-2). Based on the rock cores and consistent with the 1985 Bedrock Geological Map of Connecticut, bedrock underlying the site consists of gneiss as part of the Hawley Formation. The Rock Quality Designation (RQD) of samples collected ranged from 70 to 78 percent, indicating fair to good rock quality.

Groundwater was encountered at depths ranging from approximately 6 to 10 feet bgs, corresponding to approximately elevation 39 feet to 33 feet, in explorations performed in the existing recreational field area; groundwater was not encountered in borings drilled on the

existing hillside. Water levels were taken during or shortly after drilling/excavating and may not reflect stabilized conditions. Water levels can fluctuate with season, precipitation, and nearby construction or other below grade activities, such as excavation, dewatering, wells, infiltration basins, etc. The possibility of groundwater level fluctuations should be considered during design.

Geotechnical Evaluation and Recommendations

The analyses and recommendations submitted in this evaluation are based upon the data obtained from the relatively widely spaced subsurface explorations. Subsurface explorations included as part of this evaluation were performed by others (ATANE), not under the observation of Tighe & Bond. The evaluation and recommendations provided herein should be considered only as reliable as the information on which they were based. The nature and extent of variations between explorations may not become evident until construction. If significant variations from these descriptions appear during construction, it will be necessary to re-evaluate these recommendations.

Subsurface conditions encountered in the borings within the footprint of the proposed building generally consisted of native granular soils underlain by bedrock, or (in the eastern portion of the proposed building footprint) existing fill with minor organics underlain by a layer of granular soil with minor organics, followed by native granular soils, a discontinuous layer of sandy clay, and bedrock. The thickness of the organic-containing layer was observed to range from approximately 0.5 to 3.5 feet. Based on six laboratory organic and moisture content tests of soil samples collected from the sand with minor organics layer from Tighe & Bond borings and test pits, the organic content and moisture content of the layer ranged from 1.1% to 10.5% and 20.7% to 52.1%, respectively. ATANE explorations describe "some organic materials" within the fill and granular soil with minor organics layers.

The existing fill and underlying sand with organics layers are not suitable to remain in place below the proposed building footprint (slab and foundations) due to the potential for intolerable settlement of the building foundations and/or slab that may result from the presence of uncontrolled fill of variable composition and density, and organic-containing layers that are expected to decompose over the life of the structure. Existing fill and underlying sand with organics should be completely over-excavated from below the proposed building footprint and foundation bearing zones (defined as the 1H:1V lines extending down and away from the bottom of footing elevation starting at 1 foot away from the footing edge) to the top of suitable native soils, and be replaced with suitable compacted backfill. After completion of over-excavation and replacement of the unsuitable materials, the proposed building can be supported on conventional shallow soil-supported footings and a soil-supported slab-on-grade bearing on native soils or suitable compacted backfill placed over native soils.

In areas outside the proposed building footprint (such as pavement and landscaped areas), the existing fill and underlying sand with organics layers are considered suitable to remain in place.

Foundation and Slab Design – It is recommended the proposed building be designed with conventional soil-supported spread and continuous footing foundations. Per the 2022 Connecticut State Building Code, footings should bear a minimum of 3.5 feet below adjacent ground surface exposed to freezing temperatures for frost protection. Interior footings not

exposed to freezing temperatures should bear a minimum of 1.5 feet below the slab; however, possible building shut downs or power failures should be considered.

Foundations are recommended to bear on native granular soil or compacted Granular Fill, Gravel Borrow or Crushed Stone wrapped in a non-woven geotextile separation fabric, placed over native granular soil after over-excavation of the existing fill and underlying sand with organics layers.

Bedrock is not expected to be encountered at or within 12 inches of footing bearing elevations. Although not expected, if bedrock is encountered above or within 12 inches of footing bearing elevations, the bedrock should be removed to 12 inches below the bottom of footing and be replaced with compacted Crushed Stone. This will help limit differential settlement or concrete cracking that may occur due to bearing on dissimilar materials (bedrock versus soil).

A maximum net allowable bearing pressure of 4 ksf is recommended for footings. The net allowable bearing pressure is based on column and wall footings having a minimum width of 3 feet and 2 feet, respectively. At the recommended bearing pressure, total and differential settlements are anticipated to be less than 1 inch and ½ inch, respectively. Most settlement will occur during construction as dead load is applied.

Where footings are stepped, the maximum steepness of the steps should be 2H:1V.

An ultimate coefficient of friction equal to 0.45 ($\delta = 24$ degrees) should be used for concrete on existing granular soils or on compacted Granular Fill, Gravel Borrow or Crushed Stone. The recommended ultimate passive earth pressure against the sides of footings is 400 pounds per cubic foot as an equivalent fluid unit weight. A factor of safety of 2.0 is recommended to be applied to the ultimate passive earth pressure value.

The floor slab may be designed as a slab-on-grade bearing on 12 inches of compacted Gravel Borrow or Crushed Stone placed over native granular soil or compacted Granular Fill if used as backfill after removal and replacement of the existing fill and underlying sand with organics layers.

Subgrades and required fill to achieve proposed grade should be prepared, placed, and compacted as recommended later in this letter.

Foundation and Underslab Drainage – Groundwater was encountered at depths ranging from 6 to 10 feet bgs, corresponding to approximately elevation 39 feet to 33 feet. Based on this information, foundation and underslab drainage is not likely necessary, with the exception of the foundation/retaining wall that will provide transition between the lower portion of the building with FFE at elevation 47 feet and the upper portion of the building with FFE at 63 feet, which should include a foundation perimeter drain. The foundation perimeter drain should consist of a perforated PVC drain, at least 6 inches in diameter, and should be surrounded by appropriate filters such as crushed stone, gravel, and/or geotextiles. Water collected in pipes should be conveyed to properly filtered sump pumps for discharge or daylighted by gravity, if possible.

Lateral Earth Pressures – Earth-retaining structures should be designed to resist lateral pressures generated by soil backfill material and any temporary or permanent surcharge loads. At-rest conditions can be used for design of walls that are not free to deflect or rotate

(braced walls). Walls that are free to deflect or rotate (unbraced walls) should be designed using active conditions.

Table 2, below, provides recommended lateral loads.

Table 2
Lateral Earth Pressures

Condition	Recommended Value
Braced / At-Rest	At Rest Earth Pressure Coefficient (k_o): 0.50 Equivalent Fluid Pressure: 65 pcf[1] Surcharge: 0.5 times the vertical surcharge load uniformly distributed over the height of the wall (in psf[1])
Unbraced / Active[2]	Active Earth Pressure Coefficient (k_a): 0.33 Equivalent Fluid Pressure: 45 pcf Surcharge: 0.33 times the vertical surcharge load uniformly distributed over the height of the wall

1. pcf = pounds per cubic foot; psf = pounds per square foot
2. For active conditions to be developed, the wall must rotate about its base with lateral top movement of approximately 0.002H, where H is the height of the wall.

The recommended earth pressures above are based on level ground surface at the top of the wall. These design values were calculated using a soil unit weight of 130 pcf and a friction angle of 30 degrees, assuming the use Granular Fill or Gravel Borrow as backfill against the wall. The design values above do not include unbalanced hydrostatic loads; the values provided assume drainage will be included in the design of earth retaining structures. Where the calculated lateral earth pressure is less than 200 psf, it should be increased to 200 psf (as a surcharge) to account for compaction induced stresses.

The resultant earth pressure should be applied at a location of H/3 from the bottom of the wall.

According to the Connecticut State Building Code, seismic lateral earth pressure loads on basement and retaining walls in Seismic Design Categories A through C need not be considered. It is anticipated that Seismic Design Categories A through C will apply for this project, but should be confirmed by the structural engineer.

The recommended minimum factors of safety against sliding and overturning are 1.5. A coefficient of friction equal to 0.45 ($\delta = 24$ degrees) may be used for concrete on existing granular soil or and compacted Granular Fill, Gravel Borrow or Crushed Stone.

Seismic Design – Based on data from the borings, the site is assigned to Site Class D, according to the State of Connecticut Building Code. The design spectral response accelerations at short periods (S_{DS}) and at 1-second period (S_{D1}) are 0.292 and 0.095, respectively. These values were calculated based on mapped spectral response accelerations and the appropriate magnification factors for Site Class D. The structural engineer should determine the Seismic Design Category based upon the assumed seismic use group.

Based on standard penetration test N-values, composition of the soils encountered in the test borings, and depth of groundwater observed, the site soils are not considered susceptible to liquefaction.

Pavement Design – Table 3 provides minimum recommended pavement cross-sections for the proposed pavement areas:

Table 3
Minimum Pavement Sections

Layer Description	Layer Thickness (inches)	
	Light Use	**Heavy Use**
Bituminous Concrete Wearing Course	1.5	2
Bituminous Concrete Binder Course	2	2.5
Processed Aggregate Base (CTDOT M.05.01)	8	12

Permanent Slopes and Site Retaining Walls – Permanent slopes and/or retaining walls are planned to the west of the proposed building. The thickness of overburden soils in the existing hillside where the permanent slopes and/or retaining walls are planned was approximately 3 to 14.5 feet, with an average thickness of approximately 7 feet. It is anticipated that the proposed permanent slopes and/or retaining walls could consist of a combination of permanent rock and soil slopes, or modular block or mechanically-stabilized earth (MSE) retaining walls. Additional subsurface explorations will be necessary to determine the thickness of overburden soil and composition/quality of bedrock at the actual locations of proposed permanent slopes and/or retaining walls. However, preliminary recommendations for permanent soil and rock slopes are as follows.

Permanent soil slopes should be loamed and seeded, and should not be steeper than 2H:1V unless additional slope stabilization measures are provided; however, it is recommended that soil slopes be 3H:1V or flatter as they provide additional slope stability and are easier to mow and maintain.

Bedrock cut slopes should not be steeper than 1H:6V, should be cleared of any loose rock, and should have a 5-foot setback clear of soil at the top of the bedrock before any soil slopes begin. The bedrock should be pre-split for a clean, durable rock face. For rock cut slopes greater than 6 feet in height, the toe of bedrock cut slopes should include a rock fall zone, which should generally consist of a ditch that is at least 12 feet wide and 3.5 feet deep, for rock slopes of up to 20 feet in height. If construction of a rock fall ditch is not feasible due to space limitations, rock fall catchment fencing should be considered.

Additional Subsurface Explorations –Once access is available at the actual locations of proposed permanent slopes and/or retaining walls, at least 2 borings are recommended along the alignment of the proposed permanent slope and/or retaining wall to the west of the southern portion of the proposed building to estimate the thickness of overburden soil and composition/quality of bedrock. A bedrock core is recommended to be collected for the full elevation range of the potential rock cut.

Geotechnical Construction Recommendations

This section provides comments related to foundation construction, earthwork, and other geotechnical aspects of the project that will aid those responsible for preparing construction specifications.

Initial Site Preparation – Initial site preparation should include stripping of vegetation, topsoil and forest mat from areas of proposed work and clearing/grubbing existing trees where they exist in proposed improvement areas. Tree removal should include removal of root systems. Excavations for removal of trees and root systems should be properly backfilled with compacted Granular Fill, Gravel Borrow or Crushed Stone, as described herein.

Excavation and Fill – Conventional heavy construction equipment should be suitable for excavation in existing soil materials. It should be expected that cobbles and boulders will be present within soils at the site. Excavation should conform to OSHA excavation regulations contained in 29 CFR Part 1926, latest edition. Subgrades should be excavated in such a way to minimize disturbance, such as using a smooth faced bucket. Gravel Borrow or Crushed Stone should be used for the slab base course. Other fill needed below the structure, if any, should consist of Granular Fill, Gravel Borrow, or Crushed Stone wrapped in a non-woven geotextile separation fabric. Blast rock fill may be used as fill below the structure, provided it is placed as described in the Reuse of Existing Soils section, herein.

All backfill should be placed in 12-inch maximum lifts and should be compacted to 95 percent of the maximum dry density as determined by the Modified Proctor laboratory test (ASTM D1557). Thinner lifts may be needed depending on the material placed and the type of compactor used. Crushed Stone should be placed in loose lift thicknesses of less than 12 inches and be compacted with heavy compaction equipment to achieve an unyielding subgrade.

Table 4 presents the required gradations for imported materials.

Table 4
Recommended Gradation Requirements for Borrow Materials

Sieve Size	**Percent Finer by Weight**		
	Granular Fill	**Gravel Borrow**	**1-1/2" Crushed Stone**
2/3rd lift thickness	100		
2 inch	--	100	100
1½ inch	--	--	95-100
1 inch	--	--	35-70
¾ inch	--	--	0-25
½ inch	--	50-85	--

Sieve Size	Percent Finer by Weight		
	Granular Fill	**Gravel Borrow**	**1-1/2" Crushed Stone**
No. 4	--	40-75	--
No. 10	30-95	--	--
No. 40	10-70	--	--
No. 50	--	8-28	--
No. 200	0-15	0-10	--

Rock Removal – Bedrock removal should be anticipated to achieve finished grades to the west of the proposed building. It is anticipated that bedrock removal of up to approximately 1 to 2 feet within localized areas can likely be completed efficiently using mechanical methods, such as a hydraulic hoe-ram. Where bedrock removal is required to greater depths (such as the permanent slopes and/or retaining walls are planned to the west of the proposed building), systematic drilling and blasting may be considered in order to efficiently remove rock to reach the required elevations. Controlled blasting with pre-splitting is recommended to form the faces of slopes that will be permanently exposed.

If systematic drilling and blasting is pursued, blast hole depths should be controlled in order to reduce breakage 12 inches below the intended rock removal elevation, to the extent practicable. Controlled blasting procedures are recommended to: limit the charge weight using millisecond delays; limit the peak particle velocity at adjacent structures to acceptable levels; and yield rock sizes suitable for use as fill. Controlled blasting methods also need to maintain vibrations at the nearest residence and nearby existing buildings/utilities within the requirements of State and local codes, with additional consideration given for sensitive structures (if present). A common basis for establishing maximum permissible vibration for residential houses is the criteria published by the United States Bureau of Mines (USBM) "safe levels of blasting vibration for houses using a combination of velocity and displacement."

Pre-blast surveys of existing structures to remain and water supply wells (if any) are recommended within 500 feet of the proposed blast area.

We recommend the contractor familiarize her/himself with bedrock excavation conditions before construction. In addition, project specifications should clearly define bedrock excavation.

Excavation Slopes and Temporary Earth Support – It is anticipated that excavations will be accomplished by sloping or benching the sides of the excavations. Where space is not available to safely lay back excavations, a temporary earth support system will be required. Temporary earth support systems, like slide rail or trench boxes, if required, should be selected by the contractor and be designed by an experienced Professional Engineer registered in the State of Connecticut and retained by the Contractor.

The Owner and the Contractor should make themselves aware of and become familiar with applicable local, state, and federal safety regulations, including the current Occupational

Safety and Health Administration (OSHA) Excavation and Trench Safety Standards. Construction site safety generally is the sole responsibility of the Contractor, who shall also be solely responsible for the means, methods, and sequencing of construction operations.

The Contractor should be aware that slope height, slope inclination, or excavation depths (including utility trench excavations) should in no case exceed those specified in local, state, or federal safety regulations, e.g. OSHA Health and Safety Standards for Excavations, 29 CFR Part 1926, or successor regulations. Such regulations are strictly enforced and, if they are not followed, the Owner, Contractor, and/or earthwork and utility subcontractors could be liable for substantial penalties.

Dewatering – Groundwater may be encountered during excavation to remove existing fill and buried sand with minor organics. If dewatering becomes necessary it can likely be accomplished by pumping from properly filtered sumps and be discharged according to federal, state, and local regulations. If groundwater is encountered, the groundwater level should be temporarily lowered at least two feet below excavations to limit potential "boils", loss of fines, or softening of the ground. Surface water entering the construction area should be diverted away from excavations.

Bearing Surface Preparation – Acceptable subgrades for supporting footings and slabs consist of native granular soil or compacted Granular Fill, Gravel Borrow or Crushed Stone wrapped in a non-woven geotextile separation fabric, placed over native granular soil. Existing fill and sand with organics layers are not suitable to remain in place below the proposed building slab and foundation bearing zones (defined as the 1H:1V lines extending down and away from the bottom of footing elevation starting at 1 foot away from the footing edge) and should be over-excavated to the top of suitable native soils, and be replace with compacted backfill.

The existing fill and sand with organics layers are expected to be suitable to remain in place below landscaped areas, pavements and light ancillary structures (such as transformer pads, dumpster pads or similar).

Prior to placement of fill or backfill, the native granular soil subgrades (within the building footprint or exterior of the building footprint, where present) or existing fill subgrades (outside the building footprint, only) should be proof compacted with either 10 passes of a 10-ton vibratory drum roller for open excavations or 6 passes of a large, reversible, walk behind vibratory compactor capable of exerting a minimum force of 2,000 lbs in trench or pit excavations. Any subgrades that are soft or yielding under proof compaction efforts should be removed to expose suitable subgrades, and should be replaced with compacted Granular Fill, Gravel Borrow or compacted Crushed Stone wrapped in a non-woven geotextile. Any cobbles or boulders protruding the subgrade should be removed and backfilled with Granular Fill or Gravel Borrow prior to proof compaction to ensure proper ground contact with the compaction equipment.

Due to the relatively high fines (silt) content, some of the bearing surfaces may be easily disturbed during foundation construction activities should they become wet from precipitation or groundwater. If desired, the bearing surfaces may be over-excavated by 6 to 12 inches and replaced by a layer of compacted Crushed Stone wrapped in a separation geotextile to provide a stable working surface.

Soil bearing surfaces should be protected against freezing and the elements before and after concrete placement. If construction is performed during freezing weather, footings and foundation walls should be backfilled as soon as possible after they are constructed. Alternatively, insulating blankets or other means may be used for protection against freezing.

Reuse of Existing Soils – Existing subsurface materials, excluding topsoil/forest mat, may be re-used as Granular Fill, regardless of its gradation, provided it is environmentally appropriate, free of organics, debris, stones greater than two thirds the lift thickness in diameter, or other unsuitable material, and they are placed to the required degree of compaction. It should be noted that some of the existing site soils have a relatively high fine-grained content, which could make them difficult to place and compact to the required degree of compaction when excessively wet.

Existing site soils may not be re-used as Gravel Borrow or Crushed Stone unless it meets the gradation requirements presented above, which is unlikely. Existing topsoil/subsoil may be reused in landscaped areas but should be tested for pH, percent organics, and nutrient content and modified as needed to support vegetative growth. It was not within Tighe & Bond's scope of work to evaluate the potential for soil contamination with regard to suitability for reuse or for off-site disposal purposes.

Rock generated during bedrock removal may be used as Blast Rock Fill. Blast Rock Fill should not be used within 12 inches of building foundations, slabs, and utilities. Blast Rock Fill may be used below pavement subbase course and landscape areas, provided it is well graded. If re-used on site, Blast Rock Fill should meet the gradation provided in Table 5. Blast Rock Fill should be placed in loose lift thicknesses of less than 18 inches and be compacted with heavy compaction equipment. A minimum of 12 inches of compacted "choke stone" should be placed over the Blast Rock Fill. Choke stone should be a well-graded mixture of blast rock fragments less than 6 inches in size and Granular Fill, such that it can be readily compacted to fill voids in the Blast Rock Fill below.

Closing

The preceding recommendations provided herein are for specific application to the Central Middle School at 9 Indian Rock Lane in Greenwich, Connecticut, in accordance with generally accepted soil and foundation engineering practices. No warranty, expressed or implied, is made. In the event that any changes in the design or location of the proposed structure are made, the conclusions and recommendations in this report should not be considered valid unless verified in writing. This report is for design purposes only and may not be sufficient to prepare accurate quantity take-offs. It is discouraged that this report in its entirety be included in the construction documents or be provided to a contractor. Rather, the construction recommendations should be incorporated appropriately into the construction specifications as well as exploration locations, exploration logs, and laboratory test results for the contractor's use under informational purposes only.

Thank you for the opportunity to provide these services. Please contact Brian Nereson at (603) 978-5826 or bnereson@tighebond.com if you should have any questions, comments, or require additional information.

Very truly yours,

TIGHE & BOND, INC.

1. Existing ground surfaces elevations rounded to the nearest 0.5-foot
2. Includes surficial topsoil thickness
3. Sand with minor organics layer is typically of mix of granular soil with minor organic materials
4. (C) indicates rock core collected at refusal elevation
5. Indicates depth / elevation of water seeping into test pit; seepage may or may not represent the groundwater level

Groundwater Readings

Date	Time	Depth	Casing	Sta. Time
8/29		10'	15'	

Depth (ft.)	Casing Blows Per Ft.	Sample No. / Rec.(in)	Sample Depth (ft.)	Blows Per 6"	PID Reading (ppm)	Sample Description	General Stratigraphy	Notes	Well Construction
						Borehole advanced to 10 feet without sampling. Refer to B-8.			
10		S-1 / 12	10-11.1	12-30		Very dense, brown, fine to coarse SAND, some Gravel, little Silt	**GLACIAL TILL**		
				50/1					
15		S-2 / 2	15-15.3	50/4		Very dense, brown, WEATHERED ROCK	15' **WEATHERED ROCK**	2	
						End of Boring at 15.5 feet. Auger Refusal.			

Notes:
1. Samples taken with a split spoon sampler driven by an autohammer.
2. Auger refusal at 15.5 feet.

Proportions Used

TRACE (TR.)	0 - <10%
LITTLE (LI.)	10 - <20%
SOME (SO.)	20 - <35%
AND	35 - <50%

Density/Consistency

VERY LOOSE	0-4	VERY SOFT	<2
LOOSE	4-10	SOFT	2-4
MEDIUM DENSE	10-30	MEDIUM	4-8
DENSE	30-50	STIFF	8-15
VERY DENSE	>50	VERY STIFF	15-30
		HARD	>30

SECTION 05 5000 - METAL FABRICATIONS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Miscellaneous framing and supports.
   1. General: Provide miscellaneous steel framing and equipment support framing not specified in other Sections as needed to complete the work. Applications include but are not limited to:
      a) Secondary support framing for basketball backstop assemblies.
      b) Support of equipment, ducts, piping, and other items indicated to be suspended from the floor/roof deck above.
         1) Slotted channel framing.
      c) Above ceiling support of cubicle curtain track.
      d) Miscellaneous steel trim.
      e) Elevator machine beams, hoist beam, and /or divider beams.
      f) Supports for overhead doors and grilles.
      g) Tube reinforcement for low partitions.
      h) Miscellaneous steel angles, plates, and channels.
      i) Tower stanchion for automatic door operator activation device.

B. Metal ladders ~~and ships ladders:~~
   1. Roof ladder with platform.
   2. Roof hatch ladder(s).
   3. Elevator pit ladder.

C. Products furnished, but not installed, under this section include the following:
   1. Loose steel lintels.
   2. Shelf (relieving) angles.
   3. Anchor bolts, steel pipe sleeves, slotted-channel inserts, and wedge type inserts indicated to be cast into concrete or built into unit masonry.

1.2 RELATED REQUIREMENTS

A. Section 01 3573 - Delegated Design Procedures.

B. Section 01 3566.42 - Sustainability Compliance Procedures.

C. Section 01 7419 – Construction Waste Management and Disposal.

D. Section 05 0805 - Factory-Applied Coatings For Metal: Requirements for shop-priming, and /or shop finishing galvanized steel.

1.3 REFERENCE STANDARDS

A. AAMA 611 - Voluntary Specification for Anodized Architectural Aluminum; 2014 (2015 Errata).

B. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

C. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless; 2022.

D. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products; 2017.

E. ASTM A283/A283M - Standard Specification for Low and Intermediate Tensile Strength Carbon Steel Plates; 2018.

F. ASTM A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength; 2021.

G. ASTM A501/A501M - Standard Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing; 2021.

H. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.

I. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength; 2023.

J. ASTM B210/B210M - Standard Specification for Aluminum and Aluminum-Alloy Drawn Seamless Tubes; 2019a.

K. ASTM B211/B211M - Standard Specification for Aluminum and Aluminum-Alloy Rolled or Cold Finished Bar, Rod, and Wire; 2019.

L. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2021.

M. ASTM F3125/F3125M - Standard Specification for High Strength Structural Bolts and Assemblies, Steel and Alloy Steel, Heat Treated, Inch Dimensions 120 ksi and 150 ksi Minimum Tensile Strength, and Metric Dimensions 830 MPa and 1040 MPa Minimum Tensile Strength; 2023.

N. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2020, with Errata (2023).

O. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer; 2004.

P. SSPC-Paint 20 - Zinc-Rich Coating (Type I - Inorganic, and Type II - Organic); 2019.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data:
   1. Slotted channel framing.
   2. Manufactured metal ladders and ships ladders.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Shop Drawings: Show fabrication and installation details. Indicate profiles, sizes, connection attachments, reinforcing, anchorage, size and type of fasteners, and accessories. Include erection drawings, elevations, and details where applicable. Provide shop drawings for the following:
   1. Miscellaneous framing and supports for applications where framing and supports are not specified in other sections. These may include, but are not limited to:
      a) Secondary support framing for gymnasium equipment (basketball backstop assemblies and gymnasium divider).
      b) Above-ceiling support of cubicle ceiling track.
      c) Supports for overhead coiling doors and grilles.
   2. Elevator machine beams, hoist beams, and/or divider beams.
   3. Metal ladders.
   4. Shelf angles.
   5. Miscellaneous steel trim including steel angle bases and edging.
   6. Loose steel lintels.
   7. Design data: Submit drawings and supporting calculations, signed and sealed by a qualified professional structural engineer.

E. Designer's Qualification Statement.

1.5 QUALITY ASSURANCE

A. Design ladders, backstop and equipment supports, and elevator beams under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in the State in which the Project is located.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Structural Performance of ~~Aluminum~~ Ladders: Ladders, including landings, are to withstand the effects of loads and stresses within limits and under conditions specified in ANSI/ASC A14.3.

2.2 MATERIALS - STEEL

A. Steel Sections: ASTM A36/A36M.

B. Steel Tubing: ASTM A501/A501M hot-formed structural tubing.

C. Plates: ASTM A283/A283M.

D. Pipe: ASTM A53/A53M, Grade B Schedule 40, black finish.

E. Slotted Channel Framing: ASTM A653/A653M, Grade 33.

F. Slotted Channel Fittings: ASTM A1011/A1011M.

G. Bolts, Nuts, and Washers: ASTM A307, Grade A, plain.

H. Bolts, Nuts, and Washers: ASTM F3125/F3125M, Type 1, plain.

I. Welding Materials: AWS D1.1/D1.1M; type required for materials being welded.

J. Shop and Touch-Up Primer: SSPC-Paint 15, complying with VOC limitations of authorities having jurisdiction.

K. Touch-Up Primer for Galvanized Surfaces: SSPC-Paint 20, Type I - Inorganic, complying with VOC limitations of authorities having jurisdiction.

2.3 ~~MATERIALS - ALUMINUM~~

A. ~~Extruded Aluminum: ASTM B221 (ASTM B221M), 6063 alloy, T6 temper.~~

B. ~~Sheet Aluminum: ASTM B209 (ASTM B209M), 5052 alloy, H32 or H22 temper.ladder~~

C. ~~Aluminum-Alloy Drawn Seamless Tubes: ASTM B210/B210M, 6063 alloy, T6 temper.~~

D. ~~Aluminum-Alloy Bars: ASTM B211/B211M, 6061 alloy, T6 temper.~~

E. ~~Bolts, Nuts, and Washers: Stainless steel.~~

2.4 FABRICATION

A. Fit and shop assemble items in largest practical sections, for delivery to site.

B. Fabricate items with joints tightly fitted and secured.

C. Continuously seal joined members by intermittent welds and plastic filler.

D. Grind exposed joints flush and smooth with adjacent finish surface. Make exposed joints butt tight, flush, and hairline. Ease exposed edges to small uniform radius.

E. Exposed Mechanical Fastenings: Flush countersunk screws or bolts; unobtrusively located; consistent with design of component, except where specifically noted otherwise.

F. Furnish components required for anchorage of fabrications. Fabricate anchors and related components of same material and finish as fabrication, except where specifically noted otherwise.

2.5 FABRICATED ITEMS

A. Shelf Angles, Channels, and Plates Not Attached to Structural Framing.

B. Lintels: As detailed.

C. Elevator Hoistway Divider Beams: Beam sections; prime paint finish.

D. Slotted Channel Framing: Fabricate channels and fittings from structural steel complying with the referenced standards; hot-dipped galvanized per ASTM A1 Grade G65. finish.

2.6 METAL LADDERS

A. General:
   1. Comply with ANSI A14.3, except for elevator pit ladders.
   2. For elevator pit ladders, comply with ASME A17.1/CSA B44.

B. Steel Ladders:~~Elevator pit ladder.~~
   1. Space siderails 18 inches apart unless otherwise indicated.
   2. Siderails: Continuous, 3/8-by-2-1/2-inch steel flat bars, with eased edges.
   3. Rungs: 3/4-inch steel bars.
   4. Fit rungs in centerline of siderails; plug-weld and grind smooth on outer rail faces.
   5. Provide nonslip surfaces on top of each rung, either by coating rung with aluminum-oxide granules set in epoxy-resin adhesive or by using a type of manufactured rung filled with aluminum-oxide grout.
   6. Provide platforms as indicated fabricated from welded or pressure-locked steel bar grating, supported by steel angles. Limit openings in gratings to no more than 1/2-inch in least dimension.
   7. Support each ladder at top and bottom with welded or bolted steel brackets. Refer to Drawing A531 for spacing of intermediate brackets.
   8. Galvanize ladders, including brackets. No additional finish required.

C. ~~Ships Ladders: Provide metal ships' ladders where indicated. Fabricate of open-type construction with channel or plate stringers and pipe and tube railings unless otherwise indicated. Provide brackets and fittings for installation.~~

2.7 MISCELLANEOUS STEEL TRIM

A. Unless otherwise indicated, fabricate units from steel shapes, plates, and bars of profiles shown with continuously welded joints and smooth exposed edges. Miter corners and use concealed field splices where possible.

B. Provide cutouts, fittings, and anchorages as needed to coordinate assembly and installation with other work.

2.8 LOOSE STEEL LINTELS AND SHELF ANGLES

A. Fabricate loose steel lintels from steel angles and shelf angles and shapes of size indicated for openings and recesses in masonry walls and partitions at locations indicated. Fabricate in single lengths for each opening unless otherwise indicated. Weld adjoining members together to form a single unit where indicated.
   1. Shop-galvanize and shop-prime loose steel lintels and shelf angles located in exterior walls.

2.9 FINISHES - STEEL

A. Prime paint steel items.
   1. Exceptions: Galvanize items to be embedded in concrete and items to be embedded in masonry.
   2. Exceptions: Galvanize all steel ladders.
   3. Galvanize loose lintels and shelf angles.

B. Prime Painting Non-Galvanized Items: One coat. Shop prime with universal shop primer.
   1. Shop Priming: Apply shop primer to comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.

C. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A153/A153M for steel and iron hardware and with ASTM A123/A123M for other steel and iron products.
   1. Lintels: Do not quench or apply post galvanizing treatments that might interfere with paint adhesion. Refer to Section 05 0805 for more detailed information on shop-coating these items

D. ~~Galvanizing of Non-structural Items: Galvanize after fabrication to ASTM A123/A123M requirements.~~

E. Preparation for Shop Priming Galvanized Items: See Section 05 0805.

2.10 ~~FINISHES - ALUMINUM~~

A. ~~As-Fabricated Finish: AA-M12.~~

B. ~~Class I Natural Anodized Finish: AAMA 611 AA-M12C22A41 Clear anodic coating not less than 0.7 mils thick.~~

2.11 FABRICATION TOLERANCES

A. Squareness: 1/8 inch maximum difference in diagonal measurements.

B. Maximum Offset Between Faces: 1/16 inch.

C. Maximum Misalignment of Adjacent Members: 1/16 inch.

D. Maximum Bow: 1/8 inch in 48 inches.

E. Maximum Deviation From Plane: 1/16 inch in 48 inches.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field conditions are acceptable and are ready to receive work.

3.2 PREPARATION

A. Clean and strip primed steel items to bare metal where site welding is required.

3.3 INSTALLATION

A. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal fabrications. Set metal fabrications accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.

B. Fastening to In-Place Construction: Provide anchorage devices and fasteners where metal fabrications are required to be fastened to in-place construction. Provide threaded fasteners for use with concrete and masonry inserts, toggle bolts, through bolts, lag screws, wood screws, and other connectors.

C. Install items plumb and level, accurately fitted, free from distortion or defects.

D. Provide for erection loads, and for sufficient temporary bracing to maintain true alignment until completion of erection and installation of permanent attachments.

E. Field weld components as indicated on drawings.

F. Perform field welding in accordance with AWS D1.1/D1.1M.

G. Obtain approval prior to site cutting or making adjustments not scheduled.

H. After erection, prime welds, abrasions, and surfaces not shop primed , except surfaces to be in contact with concrete.

I. Metal Framing and Supports: Install framing and supports to comply with requirements of items being supported, including manufacturers' written instructions and requirements indicated on Shop Drawings.
   1. Anchor supports for operable partitions, overhead doors, and overhead grilles securely to, and rigidly brace from, building structure.

3.4 TOLERANCES

A. Maximum Variation From Plumb: 1/4 inch per story, non-cumulative.

B. Maximum Offset From True Alignment: 1/4 inch.

C. Maximum Out-of-Position: 1/4 inch.

END OF SECTION 05 5000

SECTION 08 5653 - SECURITY AND SERVICE WINDOWS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Security transaction windows with pass-through device.

B. Sliding service window for nurse's office.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 01 7419 – Construction Waste Management and Disposal.

C. Section 07 9200 - Joint Sealants: Sealing joints between frames and adjacent construction.

1.3 REFERENCE STANDARDS

A. AAMA 611 - Voluntary Specification for Anodized Architectural Aluminum; 2014 (2015 Errata).

B. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2021.

C. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric); 2021.

D. SSPC-Paint 33 - Coal-Tar Mastic Coating, Cold Applied; 2015.

E. UL 752 - Standard for Bullet-Resisting Equipment; Current Edition, Including All Revisions.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Manufacturer's published data showing materials, construction details, dimensions of components, and finishes. Include product description for window assemblies including bullet-resistant ratings.

C. Include manufactuer's written installlation instructions.

D. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit 5d: For adhesives and sealants, documentation including printed statement of VOC content.
   2. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.

3. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

E. Shop Drawings: Drawings prepared specifically for this project, showing plans, elevations, sections, details of construction, anchorage to other work, hardware, and glazing.
1. For new work show required opening dimensions and allowance for field deviation.
2. For field glazed windows, include detailed instructions for glazing installation.

F. Test Reports: Test reports for specific window model and glazing to be furnished, showing compliance with specified requirements; window and glazing may be tested separately, provided window test sample adequately simulates the glazing to be used.
1. Include testing agency qualifications.
2. For structural, forced entry, and ballistic tests, provide details on method of anchorage to test frame.

G. Samples of Color Anodized Finishes: Frame member sections showing range of color to be expected in finished work.

H. Coordination Drawings: For each window opening, show locations and details of items necessary to anchor windows that must be installed by others, in sufficient detail that installer of those items can do so correctly without reference to the actual window itself.

I. Manufacturer's Qualification Statement.

J. Installer's Qualification Statement.

1.5 QUALITY ASSURANCE

A. Fixed Window Assemblies: Ballistic Level 3, tested to UL 752.

B. Manufacturer Qualifications: Firm with at least 10 years experience in the manufacture of windows of the type specified and able to provide test reports showing that their standard manufactured products meet the specified requirements; custom designed products not acceptable.

C. Testing Agency Qualifications: Independent testing agency able to show experience in conducting tests of the type specified and:

D. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years of documented experience.

1.6 WARRANTY

A. See Section 01 7800 - Closeout Submittals for additional warranty requirements.

B. Provide window manufactuer's standard one-year warranty against defects in materials and workmanship.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store window assemblies upright in protected, dry area, off ground or floor, with at least 1/4 inch space between individual units.

B. Do not cover with non vented coverings that create excessive humidity.

C. Remove wet coverings immediately.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Security Transaction Windows with Pass-Through Device:
   1. Basis of Design: **Armortex**: www.armortex.com.
   2. Substitutions: See Section 01 6000 - Product Requirements.

2.2 ASSEMBLIES

A. Security Windows:
   1. Dimensions, profiles, features, and performance specified and indicated on drawings are required; do not deviate unless specifically approved by Architect under substitution procedures; see Section 01 6000.
   2. Design to fit openings indicated on drawings; design to accommodate deviation of actual construction from dimensions indicated on drawings.
   3. Fabricate frames and sash with corners mitered or coped full depth with concealed welded joints.
   4. Design anchorages to provide performance equivalent to that required for window unit; provide anchorages at least equivalent to those by which the tested units were anchored to the test frame.
   5. Separate dissimilar metals to prevent corrosion by galvanic action by painting contact surfaces with primer or with sealant or tape recommended by manufacturer for the purpose.
   6. Weld components before finishing and in concealed locations, to greatest extent possible; minimize distortion and discoloration of finish; remove residue of welding; grind exposed welds smooth and finish to match.
   7. Label units to indicate which side is which, such as inside/outside or secure/non-secure; use labels that are removable after installation but durable enough not to be lost during delivery, storage, handling, and installation.

2.3 SECURITY TRANSACTION WINDOWS WITH PASS-THROUGH DEVICE

A. Security Transaction Windows with Pass-Though Device:
   1. Location: Built within exterior wall, as indicated on drawings.
   2. Ballistic Resistance: Tested to meet UL 752, Level 3.
   3. Window Type: Fixed.
      a) Overall Window Frame Size: As indicated on drawings.
      b) Frame Material: Aluminum.
   4. Glazing: Single (monolithic), clear, and ballistic resistant.

5. Pass-Through Device: Deal tray mounted below window..
6. Communication: Integrated speaker.
7. Products:
   a) Basis of Design: **Armortex**; **Aluminum Transaction Window w/ Speaker.**

2.4 SERVICE WINDOW UNIT

A. Location: Built within interior wall, as indicated on drawings.

B. Type of Use: As indicated on drawings.

C. Window Type: Sliding, single horizontal.
   1. Configuration: XOX (fixed, sliding, fixed).
   2. Operation: Manual. Window rolls on top-hung ball bering rollers.
   3. Track: Double overhead enclosed track for by-passing sliding glass panels.
      a) Include all hangers, rollers, guides, and glass panel hardware for a complete installaiton.
   4. Mounting: Flush with wall surface.
   5. Window Size: As indicated on drawings.
   6. Frame Material: Aluminum. 6063-T5 extrusions.
      a) Finish: Clear anodized.
   7. Sidelights: _____.
   8. Header: Manufacturer's standard type.
   9. Sill: Manufacturer's standard type.

D. Glazing: Single (monolithic), clear.
   1. Tempered safety glazing. See Section 08 8000, Glass Type TS.

E. Lock: Provide sliding glass door lock for each operable glass panel, catch style for installation in track, equipped with a keyed cylinder.

F. Products:
   1. Basis of Design: **CR Laurence Co. (CRL)**; **Barbara Model Pass-Thru, D1030A**: www.crlaurence.com.
   2. Substitutions: See 01 6000 - Product Requirements.

2.5 ASSEMBLY COMPONENTS - SECURITY WINDOW

A. Aluminum Framing: ASTM B221 (ASTM B221M) extrusions of alloy and temper selected by manufacturer for strength, corrosion resistance, and finish required; not less that 1/8 inch thick at any location of frame and sash members.
   1. Bullet Resistant Composite: Manufactuer's UL-listed propoetery bullet-resistant material integrated into frame, to achieve level of bullet resistance indicated.

B. Frame Anchors: Mild steel plates, shapes, or bars, concealed in completed construction; provide anchorage devices as necessary to securely fasten windows to adjacent construction; use security fasteners for exposed anchors.
   1. Provide minimum of two anchors per side of window plus one additional anchor for each 18 inches or fraction thereof more than 36 inches in height or width.

C. Glazing: UL-listed laminated glass or glass/polycarbonate. composite.

D. Glazing Seals: Factory installed; molded EPDM or neoprene compressible gaskets and compression strips.

E. Glazing Tape: Manufacturer's standard.

F. Neoprene Setting Block: Manufacturer's standard.

G. Stainless Steel Caps for Window (Glass) Edges: Manufacturer's standard.

H. Deal Trays: Formed stainless steel, recessed into counter or sill for mounting under glazing frame.
   1. Style: Plain curved recess with exposed flanges for flush mounting in counter or sill.
   2. Clear Opening Height: Nominal 1-1/2 inches.
   3. Tray Dimensions: Manufactuer's standard for window size.

I. Shelf for Deal Tray: Manufacturer's standard high-pressure laminated shelf, Color: black.

J. Bituminous Paint: Cold-applied asbestos-free asphalt mastic, complying with SSPC-Paint 33; 30 mils, 0.030 inch minimum thickness per coat.

2.6 FINISHES

A. Class I Natural Anodized Finish: AAMA 611 AA-M12C22A41 Clear anodic coating not less than 0.7 mils thick.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that window openings are ready for installation of windows.

B. Notify Architect if conditions are not suitable for installation of windows; do not proceed until conditions are satisfactory.

3.2 INSTALLATION

A. Install in accordance with manufacturer's instructions, approved shop drawings, and drawing details.

B. Install windows in correct orientation (inside/outside or secure/non-secure).

C. Anchor windows securely in manner so as to achieve performance specified.

D. Separate metal members from concrete and masonry using bituminous paint.

E. Set sill members and sill flashing in continuous bead of sealant.

3.3 CLEANING

A. Clean exposed surfaces promptly after installation without damaging finishes.

B. Remove and replace defective work.

END OF SECTION 08 5653

SECTION 08 7100 - DOOR HARDWARE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes commercial door hardware for the following:

1. Swinging doors.
2. Sliding doors.
3. Other doors to the extent indicated.

B. Door hardware includes, but is not necessarily limited to, the following:

1. Mechanical door hardware.
2. Electromechanical door hardware.
3. Automatic operators.
4. Cylinders specified for doors in other sections.

C. Related Sections:

1. Division 08 Section “Hollow Metal Doors and Frames”.
2. Division 08 Section “Bullet Resistant Doors and Frame”.
3. Division 08 Section “Aluminum-Framed Entrances and Storefronts”.

D. Codes and References: Comply with the version year adopted by the Authority Having Jurisdiction.

1. ANSI A117.1 - Accessible and Usable Buildings and Facilities.
2. ICC/IBC - International Building Code.
3. NFPA 70 - National Electrical Code.
4. NFPA 80 - Fire Doors and Windows.
5. NFPA 101 - Life Safety Code.
6. NFPA 105 - Installation of Smoke Door Assemblies.
7. UL/ULC and CSA C22.2 - Standards for Automatic Door Operators Used on Fire and Smoke Barrier Doors and Systems of Doors.
8. State Building Codes, Local Amendments.

E. Standards: All hardware specified herein shall comply with the following industry standards as applicable. Any undated reference to a standard shall be interpreted as referring to the latest edition of that standard:

1. ANSI/BHMA Certified Product Standards - A156 Series.
2. UL10C - Positive Pressure Fire Tests of Door Assemblies.
3. ANSI/UL 294 - Access Control System Units.
4. UL 305 - Panic Hardware.
5. ANSI/UL 437- Key Locks.

1.3 SUBMITTALS

A. Product Data: Manufacturer's product data sheets including installation details, material descriptions, dimensions of individual components and profiles, operational descriptions and finishes.

B. Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing, fabrication and assembly of door hardware, as well as procedures and diagrams. Coordinate the final Door Hardware Schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.

1. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule."
2. Organization: Organize the Door Hardware Schedule into door hardware sets indicating complete designations of every item required for each door or opening. Organize door hardware sets in same order as in the Door Hardware Sets at the end of Part 3. Submittals that do not follow the same format and order as the Door Hardware Sets will be rejected and subject to resubmission.
3. Content: Include the following information:

    a. Type, style, function, size, label, hand, and finish of each door hardware item.
    b. Manufacturer of each item.
    c. Fastenings and other pertinent information.
    d. Location of door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.
    e. Explanation of abbreviations, symbols, and codes contained in schedule.
    f. Mounting locations for door hardware.
    g. Door and frame sizes and materials.
    h. Warranty information for each product.

4. Submittal Sequence: Submit the final Door Hardware Schedule at earliest possible date, particularly where approval of the Door Hardware Schedule must precede fabrication of other work that is critical in the Project construction schedule. Include Product Data, Samples, Shop Drawings of other work affected by door hardware, and other information essential to the coordinated review of the Door Hardware Schedule.

C. Shop Drawings: Details of electrified access control hardware indicating the following:

1. Wiring Diagrams: Upon receipt of approved schedules, submit detailed system wiring diagrams for power, signaling, monitoring, communication, and control of the access control system electrified hardware. Differentiate between manufacturer-installed and field-installed wiring. Include the following:

   a. Elevation diagram of each unique access controlled opening showing location and interconnection of major system components with respect to their placement in the respective door openings.
   b. Complete (risers, point-to-point) access control system block wiring diagrams.
   c. Wiring instructions for each electronic component scheduled herein.

2. Electrical Coordination: Coordinate with related sections the voltages and wiring details required at electrically controlled and operated hardware openings.

D. Keying Schedule: After a keying meeting with the owner has taken place prepare a separate keying schedule detailing final instructions. Submit the keying schedule in electronic format. Include keying system explanation, door numbers, key set symbols, hardware set numbers and special instructions. Owner must approve submitted keying schedule prior to the ordering of permanent cylinders/cores.

E. Informational Submittals:

1. Product Test Reports: Indicating compliance with cycle testing requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified independent testing agency.

F. Operating and Maintenance Manuals: Provide manufacturers operating and maintenance manuals for each item comprising the complete door hardware installation in quantity as required in Division 01, Closeout Procedures.

1.4 QUALITY ASSURANCE

A. Manufacturers Qualifications: Engage qualified manufacturers with a minimum 5 years of documented experience in producing hardware and equipment similar to that indicated for this Project and that have a proven record of successful in-service performance.

B. Certified Products: Where specified, products must maintain a current listing in the Builders Hardware Manufacturers Association (BHMA) Certified Products Directory (CPD).

C. Installer Qualifications: A minimum 3 years documented experience installing both standard and electrified door hardware similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

D. Door Hardware Supplier Qualifications: Experienced commercial door hardware distributors with a minimum 5 years documented experience supplying both mechanical and electromechanical hardware installations comparable in material, design, and extent to that indicated for this Project. Supplier recognized as a factory direct distributor by the manufacturers of the primary materials with a warehousing facility in Project's vicinity. Supplier to have on staff a certified Architectural Hardware Consultant (AHC) available during the course of the Work to consult with Contractor, Architect, and Owner concerning both standard and electromechanical door hardware and keying.

E. Source Limitations: Obtain each type and variety of door hardware specified in this section from a single source unless otherwise indicated.

1. Electrified modifications or enhancements made to a source manufacturer's product line by a secondary or third party source will not be accepted.
2. Provide electromechanical door hardware from the same manufacturer as mechanical door hardware, unless otherwise indicated.

F. Each unit to bear third party permanent label indicating compliance with the referenced testing standards.

G. Keying Conference: Conduct conference to comply with requirements in Division 01 Section "Project Meetings." Keying conference to incorporate the following criteria into the final keying schedule document:

1. Function of building, purpose of each area and degree of security required.
2. Plans for existing and future key system expansion.
3. Requirements for key control storage and software.
4. Installation of permanent keys, cylinder cores and software.
5. Address and requirements for delivery of keys.

H. Pre-Submittal Conference: Conduct coordination conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier(s), Installer(s), and Contractor(s) to review proper methods and the procedures for receiving, handling, and installing door hardware.

1. Prior to installation of door hardware, conduct a project specific training meeting to instruct the installing contractors' personnel on the proper installation and adjustment of their respective products. Product training to be attended by installers of door hardware (including electromechanical hardware) for aluminum, hollow metal and wood doors. Training will include the use of installation manuals, hardware schedules, templates and physical product samples as required.
2. Inspect and discuss electrical roughing-in, power supply connections, and other preparatory work performed by other trades.
3. Review sequence of operation narratives for each unique access controlled opening.
4. Review and finalize construction schedule and verify availability of materials.

5. Review the required inspecting, testing, commissioning, and demonstration procedures

I. At completion of installation, provide written documentation that components were applied according to manufacturer's instructions and recommendations and according to approved schedule.

1.5 DELIVERY, STORAGE AND HANDLING

A. Inventory door hardware on receipt and provide secure lock-up and shelving for door hardware delivered to Project site. Do not store electronic access control hardware, software or accessories at Project site without prior authorization.

B. Tag each item or package separately with identification related to the final Door Hardware Schedule, and include basic installation instructions with each item or package.

C. Deliver, as applicable, permanent keys, cylinders, cores, access control credentials, software and related accessories directly to Owner via registered mail or overnight package service. Instructions for delivery to the Owner shall be established at the "Keying Conference".

1.6 COORDINATION

A. Templates: Obtain and distribute to the parties involved templates for doors, frames, and other work specified to be factory prepared for installing standard and electrified hardware. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing hardware to comply with indicated requirements.

B. Door Hardware and Electrical Connections: Coordinate the layout and installation of scheduled electrified door hardware and related access control equipment with required connections to source power junction boxes, low voltage power supplies, detection and monitoring hardware, and fire and detection alarm systems.

C. Door and Frame Preparation: Doors and corresponding frames are to be prepared, reinforced and pre-wired (if applicable) to receive the installation of the specified electrified, monitoring, signaling and access control system hardware without additional in-field modifications.

1.7 WARRANTY

A. General Warranty: Reference Division 01, General Requirements. Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

B. Warranty Period: Written warranty, executed by manufacturer(s), agreeing to repair or replace components of standard and electrified door hardware that fails in materials or workmanship

within specified warranty period after final acceptance by the Owner. Failures include, but are not limited to, the following:

1. Structural failures including excessive deflection, cracking, or breakage.
2. Faulty operation of the hardware.
3. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
4. Electrical component defects and failures within the systems operation.

C. Warranty Period: Unless otherwise indicated, warranty shall be one year from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SCHEDULED DOOR HARDWARE

A. General: Provide door hardware for each door to comply with requirements in Door Hardware Sets and each referenced section that products are to be supplied under.

B. Designations: Requirements for quantity, item, size, finish or color, grade, function, and other distinctive qualities of each type of door hardware are indicated in the Door Hardware Sets at the end of Part 3. Products are identified by using door hardware designations, as follows:

1. Named Manufacturer's Products: Product designation and manufacturer are listed for each door hardware type required for the purpose of establishing requirements. Manufacturers' names are abbreviated in the Door Hardware Schedule.

C. Substitutions: Requests for substitution and product approval for inclusive mechanical and electromechanical door hardware in compliance with the specifications must be submitted in writing and in accordance with the procedures and time frames outlined in Division 01, Substitution Procedures. Approval of requests is at the discretion of the architect, owner, and their designated consultants.

2.2 BUTT HINGES

A. Hinges: ANSI/BHMA A156.1 butt hinges with number of hinge knuckles and other options as specified in the Door Hardware Sets.

1. Quantity: Provide the following hinge quantity:

a. Two Hinges: For doors with heights up to 60 inches.
b. Three Hinges: For doors with heights 61 to 90 inches.
c. Four Hinges: For doors with heights 91 to 120 inches.
d. For doors with heights more than 120 inches, provide 4 hinges, plus 1 hinge for every 30 inches of door height greater than 120 inches.

2. Hinge Size: Provide the following, unless otherwise indicated, with hinge widths sized for door thickness and clearances required:

    a. Widths up to 3'0": 4-1/2" standard or heavy weight as specified.
    b. Sizes from 3'1" to 4'0": 5" standard or heavy weight as specified.

3. Hinge Weight and Base Material: Unless otherwise indicated, provide the following:

    a. Exterior Doors: Heavy weight, non-ferrous, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate standard weight.
    b. Interior Doors: Standard weight, steel, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate heavy weight.

4. Hinge Options: Comply with the following:

    a. Non-removable Pins: With the exception of electric through wire hinges, provide set screw in hinge barrel that, when tightened into a groove in hinge pin, prevents removal of pin while door is closed; for the all out-swinging lockable doors.

5. Manufacturers:

    a. Basis of Design: McKinney (MK) - TA/T4A Series, 5-knuckle.
    b. Hager Companies (HA) – BB Series, 5-knuckle.
    c. Dormakaba BEST (ST) – F/FBB Series, 5-knuckle.

2.3 CONTINUOUS HINGES

A. Continuous Geared Hinges: ANSI/BHMA A156.26 Grade 1-600 continuous geared hinge. with minimum 0.120-inch thick extruded 6063-T6 aluminum alloy hinge leaves and a minimum overall width of 4 inches. Hinges are non-handed, reversible and fabricated to template screw locations. Factory trim hinges to suit door height and prepare for electrical cut-outs.

1. Where specified, provide modular continuous geared hinges that ship in two or three pieces and form a single continuous hinge upon installation.
2. Manufacturers:.

    a. Basis of Design: Pemko (PE).
    b. Dormakaba BEST (ST).

2.4 SLIDING AND FOLDING HARDWARE

A. Sliding and Folding Door Hardware: Hardware is to be of type and design as specified and should conform with ANSI/BHMA A156.14.

1. Sliding Bi-Passing Pocket Door Hardware: Provide complete sets consisting of track, hangers, stops, bumpers, floor channel, guides, and accessories indicated.
2. Cascading: Provide a bi-parting or single direction telescoping system as required with a minimum 200 lb. per door capacity.
3. Bi-folding Door Hardware: Rated for door panels weighing up to 125 lb.
4. Pocket Sliding Door Hardware: Rated for doors weighing up to 200 lb.
5. Manufacturers:

    a. Basis of Design: Pemko (PE) or equal as described above.

2.5 POWER TRANSFER DEVICES

A. Concealed Quick Connect Electric Power Transfers: Provide concealed wiring pathway housing mortised into the door and frame for low voltage electrified door hardware. Furnish with Molex™ standardized plug connectors and sufficient number of concealed wires (up to 12) to accommodate the electrified functions specified in the Door Hardware Sets. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Wire nut connections are not acceptable.

1. Manufacturers:

    a. Pemko (PE) - EL-CEPT Series.
    b. Securitron (SU) - EL-CEPT Series.

B. Electric Door Wire Harnesses: Provide electric/data transfer wiring harnesses with standardized plug connectors to accommodate up to twelve (12) wires. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Provide sufficient number and type of concealed wires to accommodate electric function of specified hardware. Provide a connector for through-door electronic locking devices and from hinge to junction box above the opening. Wire nut connections are not acceptable. Determine the length required for each electrified hardware component for the door type, size and construction, minimum of two per electrified opening.

1. Provide one each of the following tools as part of the base bid contract:

    a. McKinney (MK) - Electrical Connecting Kit: QC-R001.
    b. McKinney (MK) - Connector Hand Tool: QC-R003.

2. Manufacturers:

    a. Basis of Design: McKinney (MK) - QC-C Series.
    b. Hager Companies (HA)- Quick Connect.
    c. Dormakaba BEST (ST) – WH Series.

2.6 DOOR OPERATING TRIM

A. Flush Bolts and Surface Bolts: Provide products conforming to ANSI/BHMA A156.3 and A156.16, Grade 1.

1. Flush bolts to be furnished with top rod of sufficient length to allow bolt retraction device location approximately six feet from the floor.
2. Furnish dust proof strikes for bottom bolts.
3. Surface bolts to be minimum 8” in length and U.L. listed for labeled fire doors and U.L. listed for windstorm components where applicable.
4. Provide related accessories (mounting brackets, strikes, coordinators, etc.) as required for appropriate installation and operation.
5. Manufacturers:

    a. Basis of Design: Rockwood (RO).
    b. Trimco (TC)

B. Coordinators: ANSI/BHMA A156.3 door coordinators consisting of active-leaf, hold-open lever and inactive-leaf release trigger. Model as indicated in hardware sets.

1. Manufacturers:

    a. Basis of Design: Rockwood (RO).
    b. Trimco (TC)
    c. Ives.

C. Door Push Plates and Pulls: ANSI/BHMA A156.6 door pushes and pull units of type and design specified in the Hardware Sets. Coordinate and provide proper width and height as required where conflicting hardware dictates.

1. Push/Pull Plates: Minimum .050 inch thick, size as indicated in hardware sets, with beveled edges, secured with exposed screws unless otherwise indicated.
2. Door Pull and Push Bar Design: Size, shape, and material as indicated in the hardware sets. Minimum clearance of 2 1/2-inches from face of door unless otherwise indicated.
3. Offset Pull Design: Size, shape, and material as indicated in the hardware sets. Minimum clearance of 2 1/2-inches from face of door and offset of 90 degrees unless otherwise indicated.
4. Pulls, where applicable, shall be provided with a 10” clearance from the finished floor on the push side to accommodate wheelchair accessibility.
5. Fasteners: Provide manufacturer's designated fastener type as indicated in Hardware Sets.
6. Manufacturers:

    a. Basis of Design: Rockwood (RO).
    b. Trimco (TC).

2.7 CYLINDERS AND KEYING

A. General: Cylinder manufacturer to have minimum (10) years experience designing secured master key systems and have on record a published security keying system policy.

B. Cylinder Types: Original manufacturer cylinders able to supply the following cylinder formats and types:

1. Threaded mortise cylinders with rings and cams to suit hardware application.
2. Rim cylinders with back plate, flat-type vertical or horizontal tailpiece, and raised trim ring.
3. Bored or cylindrical lock cylinders with tailpieces as required to suit locks.
4. Tubular deadlocks and other auxiliary locks.
5. Mortise and rim cylinder collars to be solid and recessed to allow the cylinder face to be flush and be free spinning with matching finishes.
6. Keyway: Match Facility Standard.

C. Patented Cylinders: ANSI/BHMA A156.5, Grade 1 Certified Products Directory (CPD) listed cylinders employing a utility patented and restricted keyway requiring the use of a patented key. Cylinders are to be protected from unauthorized manufacture and distribution by manufacturer's United States patents.

1. Patented key systems shall not be established with products that have an expired patent. Expired systems shall only be specified and supplied to support existing systems.
2. Manufacturers:

    a. Medeco (MC) - X4.
    b. No substitution.

D. Keying System: Each type of lock and cylinders to be factory keyed.

1. Supplier shall conduct a "Keying Conference" to define and document keying system instructions and requirements.
2. Furnish factory cut, nickel-silver large bow permanently inscribed with a visual key control number as directed by Owner.
3. Existing System: Field verify and key cylinders to match Owner's existing system.

E. Key Quantity: Provide the following minimum number of keys:

1. Change Keys per Cylinder: Two (2)
2. Master Keys (per Master Key Level/Group): Five (5).
3. Construction Control Keys (where required): Two (2).
4. Permanent Control Keys (where required): Two (2).

F. Construction Keying: Provide temporary keyed construction cores.

G. Key Registration List (Bitting List):

1. Provide keying transcript list to Owner's representative in the proper format for importing into key control software.
2. Provide transcript list in writing or electronic file as directed by the Owner.

2.8 MORTISE LOCKS AND LATCHING DEVICES

A. Mortise Locksets, Grade 1 (Heavy Duty): Provide ANSI/BHMA A156.13, Series 1000, Operational and Security Grade 1 Certified Products Directory (CPD) listed mortise locksets. Listed manufacturers shall meet all functions and features as specified herein.

1. Provide locksets with functions and features as follows:

a. Heavy duty 12-gauge wrought steel case.
b. Stainless steel 3/4" one-piece anti-friction reversible latchbolt with a one-piece hardened stainless steel 1” projection deadbolt.
c. Where required by code, provide knurling or abrasive coating on all levers leading to hazardous areas.
d. Meets UL and CUL Standard 10C Positive Pressure, Fire Test of Door Assemblies with levers that meet A117.1 Accessibility Code.
e. Meets UL Certification Directory ZHLL.R21744 for products used in windstorm rated assemblies.
f. Status indicators inside, outside, or on both sides of doors as specified; available with wording for “locked/unlocked”, “vacant/occupied” or custom wording options. Indicator to be located above the cylinder with the inside thumb-turn not blocking the visibility of the indicator status.
g. Ten-year limited warranty for mechanical functions.

2. Manufacturers:

a. Basis of Design: Sargent Manufacturing (SA) - 8200 Series.
b. Corbin Russwin Hardware (COR) – ML2000 Series.
c. Schlage (SC) – L9000 Series.

2.9 CYLINDRICAL LOCKS AND LATCHING DEVICES

A. Cylindrical Locksets, Grade 1 (Heavy Duty): ANSI/BHMA A156.2, Series 4000, Operational Grade 1 Certified Products Directory (CPD) listed cylindrical locksets. Listed manufacturers shall meet all functions and features as specified herein.

1. Provide locksets with functions and features as follows:

a. Meets ANSI/BHMA A156.41 for single motion egress.

b. Where required by code, provide knurling or abrasive coating on all levers leading to hazardous areas.
c. Meets UL and CUL Standard 10C Positive Pressure, Fire Test of Door Assemblies with levers that meet A117.1 Accessibility Code.
d. Exceeds ANSI/BHMA A156.2 requirements by 2.6 times for 3,100 in-lb. abusive locked lever torque with no entry while maintaining egress.
e. Exceeds ANSI/BHMA A156.2 requirements by 8 times for 1,600 lbs. offset lever pull with no entry for protection against attacks.
f. Exceeds ANSI/BHMA A156.3 requirements by 2 times for latch retraction with 100 lb. preload while maintaining operation in warped doors.
g. Exceeds ANSI/BHMA A156.3 requirements by 20 times for no access with minimum 100 vertical impacts for protection against vandalism attempts.
h. Independent return springs allow lock to exceed ANSI/BHMA A156.2 Grade 1 cycle requirements without lever sag.
i. Ten-year limited warranty for mechanical functions.

2. Manufacturers:

a. Basis of Design: Sargent Manufacturing (SA) - 10X Line.
b. Corbin Russwin Hardware (COR) – CLX3300 Series.
c. Schlage (SC) – ND Series.

2.10 DEADLOCKS AND LATCHES

A. Cylindrical Deadlocks: ANSI/BHMA A156.36 Grade 1 Certified Products Directory (CPD) listed deadlocks to fit standard ANSI 161 preparation. Provide tapered collars to resist vandalism and 1" throw solid steel bolt with hardened steel roller pins. Deadlocks to be products of the same source manufacturer and keyway as other locksets.

1. Manufacturers:

a. Basis of Design: Sargent Manufacturing (SA) - 480 Series.
b. Corbin Russwin Hardware (COR) – DL4000 Series.
c. Schlage (SC) L460 Series.

B. Narrow Case Deadlocks and Deadlatches: ANSI/BHMA 156.13 Series 1000 Grade 1 narrow case deadlocks and deadlatches for swinging or sliding door applications. All functions shall be manufactured in a single sized case formed from 12 gauge minimum, corrosion resistant steel (option for fully stainless steel case and components). Provide minimum 2 7/8" throw laminated stainless steel bolt. Bottom rail deadlocks to have 3/8” diameter bolts.

1. Manufacturers:

a. Basis of Design: Adams Rite Manufacturing (AD) - MS1850S / MS1950 Series or equal as described above.

2.11 LOCK AND LATCH STRIKES

A. Strikes: Provide manufacturer's standard strike with strike box for each latch or lock bolt, with curved lip extended to protect frame, finished to match door hardware set, unless otherwise indicated, and as follows:

1. Flat-Lip Strikes: For locks with three-piece antifriction latchbolts, as recommended by manufacturer.
2. Extra-Long-Lip Strikes: For locks used on frames with applied wood casing trim.
3. Aluminum-Frame Strike Box: Provide manufacturer's special strike box fabricated for aluminum framing.
4. Double-lipped strikes: For locks at double acting doors. Furnish with retractable stop for rescue hardware applications.

B. Standards: Comply with the following:

1. Strikes for Mortise Locks and Latches: BHMA A156.13.
2. Strikes for Bored Locks and Latches: BHMA A156.2.
3. Strikes for Auxiliary Deadlocks: BHMA A156.36.
4. Dustproof Strikes: BHMA A156.16.

2.12 CONVENTIONAL EXIT DEVICES

A. General Requirements: All exit devices specified herein shall meet or exceed the following criteria:

1. Exit devices shall have a five-year warranty.
2. At doors not requiring a fire rating, provide devices complying with NFPA 101 and listed and labeled for "Panic Hardware" according to UL305. Provide proper fasteners as required by manufacturer including sex nuts and bolts at openings specified in the Hardware Sets.
3. Where exit devices are required on fire rated doors, provide devices complying with NFPA 80 and with UL labeling indicating "Fire Exit Hardware". Provide devices with the proper fasteners for installation as tested and listed by UL. Consult manufacturer’s catalog and template book for specific requirements.
4. Except on fire rated doors, provide exit devices with hex key dogging device to hold the pushbar and latch in a retracted position. Provide optional keyed cylinder dogging on devices where specified in Hardware Sets.
5. Devices must fit flat against the door face with no gap that permits unauthorized dogging of the push bar. The addition of filler strips is required in any case where the door light extends behind the device as in a full glass configuration.
6. Flush End Caps: Provide flush end caps made of architectural metal in the same finish as the devices as in the Hardware Sets. Plastic end caps will not be acceptable.
7. Lever Operating Trim: Where exit devices require lever trim, furnish manufacturer's heavy duty escutcheon trim with threaded studs for thru-bolts.

a. Lock Trim Design: As indicated in Hardware Sets, provide finishes and designs to match that of the specified locksets.
b. Where function of exit device requires a cylinder, provide a cylinder (Rim or Mortise) as specified in Hardware Sets.

8. Vertical Rod Exit Devices: Where surface or concealed vertical rod exit devices are used at interior openings, provide as less bottom rod (LBR) unless otherwise indicated. Provide dust proof strikes where thermal pins are required to project into the floor.
9. Narrow Stile Applications: At doors constructed with narrow stiles, or as specified in Hardware Sets, provide devices designed for maximum 2" wide stiles.
10. Dummy Push Bar: Nonfunctioning push bar matching functional push bar.
11. Rail Sizing: Provide exit device rails factory sized for proper door width application.
12. Through Bolt Installation: For exit devices and trim as indicated in Door Hardware Sets.

B. Conventional Push Rail Exit Devices (Heavy Duty): ANSI/BHMA A156.3, Grade 1 Certified Products Directory (CPD) listed exit devices. Listed manufacturers shall meet all functions and features as specified herein.

1. Provide exit devices with functions and features as follows:

a. Where required by code, provide knurling or abrasive coating on all levers leading to hazardous areas.
b. Meets UL and CUL Standard 10C Positive Pressure, Fire Test of Door Assemblies with levers that meet A117.1 Accessibility Code.
c. Five-year limited warranty for mechanical features.

2. Electromechanical exit devices shall have the following functions and features:

a. Universal Molex plug-in connectors that have standardized color-coded wiring and are field configurable in fail safe or fail secure and operate from 12vdc to 24vdc regulated.
b. EcoFlex or equivalent technology that reduces energy consumption up to 92% as certified by GreenCircle.
c. Options to be available for request-to-exit or enter signaling, latchbolt and touchbar monitoring.
d. Field configurable electrified trim to fail-safe or fail-secure that operates from 12-24VDC.
e. Five-year limited warranty for electromechanical features.

3. Manufacturers:

a. Basis of Design: Sargent Manufacturing (SA) - 80 Series.
b. Corbin Russwin Hardware (COR) – ED4000 / ED5000 Series.
c. Precision (PR) – Apex 2000 Series.

2.13 DOOR CLOSERS

A. All door closers specified herein shall meet or exceed the following criteria:

1. General: Door closers to be from one manufacturer, matching in design and style, with the same type door preparations and templates regardless of application or spring size. Closers to be non-handed with full sized covers.
2. Standards: Closers to comply with UL-10C for Positive Pressure Fire Test and be U.L. listed for use of fire rated doors.
3. Size of Units: Comply with manufacturer's written recommendations for sizing of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Where closers are indicated for doors required to be accessible to the Americans with Disabilities Act, provide units complying with ANSI ICC/A117.1.
4. Closer Arms: Provide heavy duty, forged steel closer arms unless otherwise indicated in Hardware Sets.
5. Closers shall not be installed on exterior or corridor side of doors; where possible install closers on door for optimum aesthetics.
6. Closer Accessories: Provide door closer accessories including custom templates, special mounting brackets, spacers and drop plates as required for proper installation. Provide through-bolt and security type fasteners as specified in the hardware sets.

B. Door Closers, Surface Mounted (Heavy Duty): ANSI/BHMA A156.4, Grade 1 Certified Products Directory (CPD) listed surface mounted, heavy duty door closers with complete spring power adjustment, sizes 1 thru 6; and fully operational adjustable according to door size, frequency of use, and opening force. Closers to be rack and pinion type, one piece cast iron or aluminum alloy body construction, with adjustable backcheck and separate non-critical valves for closing sweep and latch speed control. Provide non-handed units standard.

1. Heavy duty surface mounted door closers shall have a 30-year warranty.

2. Manufacturers:

a. Sargent Manufacturing (SA) - 351 Series.
~~b. Dorma 8900 Series.~~
~~c. LCN Closers (LC) 4040XP Series.~~
d. No substitution.

2.14 ELECTROHYDRAULIC DOOR OPERATORS

A. Electrohydraulic Door Operators (High Traffic): Provide ANSI/BHMA A156.19 Certified Products Directory (CPD) listed low energy operators that meet ANSI/BHMA A156.4 requirements and are UL listed for use on fire rated doors and UL10C certified that comply with requirements for the Americans with Disabilities Act (ADA). Operators shall be verified by GreenCircle to offer energy savings of 19% when compared to similar products to accommodate openings up 250 pounds and 48” wide.

1. Provide operators with features as follows:

    a. Non-handed with push and pull side mounting.
    b. Operates as mechanical surface closer during close cycles, when door is opened manually or if power is off.
    c. Activation by push button, hands-free or radio frequency devices.
    d. On board electronics to collect usage and cycle count data to facilitate preventative maintenance/diagnostics.
    e. Two-year limited warranty.
    f. Wi-Fi interface where the operator is a secure, password protected WiFi hot spot with no connection to building's IT required.
        1) Simple setup with no app required.
        2) View status and make adjustments without removing the cover.
        3) Built-in logic to support single use restroom applications with no external relay boards, logic modules, position switches required.
    g. Mounting backplate to simplify and speed up installation.

2. Operators shall have the following functionality:

    a. Adjustable Hold Open: Amount of time a door will stay in the full open position after an activation.
    b. Blow Open for Smoke Ventilation: Door opens when signal is received from alarm system allowing air or smoke to flow through opening. Door will stay open until signal from alarm system is stopped.
    c. Infinite Hold Open: Door will hold open at set position until power is turned off.
    d. Obstruction Detection: Door closes if it hits an obstruction while opening; door will reverse to open position if it hits an obstruction while closing. Door will stop once it hits an obstruction and will rest against the obstruction until removed.
    e. Open Delay: Delays operator opening for locking hardware.
    f. Overload Safety Shut-Off: After two minutes of receiving a door activation signal, inverter times out and door closes to prevent motor/inverter damage.
    g. Presence Detector Input: Input for external sensor to detect presence at door open or close position only.
    h. Push & Go: As the door is manually opened, the operator "senses" movement and opens door to the full-open position.
    i. Selector Mode Switch: Off disables the signal inputs unless Blow Open is activated, on activates the signal inputs, hold open activates the unit (unless Blow Closed is activated) to the hold open position.
    j. Vestibule Delay: When the wall switch is pressed, first door in vestibule will open. Second door will open once vestibule door delay has expired. Delay is adjustable.

3. Manufacturers:

    a. Basis of Design: Norton Rixson (NO) - 6000 Series.
    b. Stanley – Magic Force Series.

2.15 SURFACE MOUNTED CLOSER HOLDERS

A. Electromagnetic Door Holders: ANSI A156.15 electromagnetic door holder/releases with a minimum 20 to 40 pounds holding power and single coil construction able to accommodate.12VDC, 24VAC, 24VDC and 120VAC. Coils to be independently wound, employing an integral fuse and armatures to include a positive release button.

1. Manufacturers:

   a. Basis of Design: Norton Rixson (RF) - 980/990 Series.
   b. Sargent Manufacturing (SA) 1560 Series.
   c. LCN Door Closers (LC) – SEM7800 Series.

2.16 ARCHITECTURAL TRIM

A. Door Protective Trim

1. General: Door protective trim units to be of type and design as specified below or in the Hardware Sets.
2. Size: Fabricate protection plates (kick, armor, or mop) not more than 2" less than door width (LDW) on stop side of single doors and 1” LDW on stop side of pairs of doors, and not more than 1" less than door width on pull side. Coordinate and provide proper width and height as required where conflicting hardware dictates. Height to be as specified in the Hardware Sets.
3. Where plates are applied to fire rated doors with the top of the plate more than 16” above the bottom of the door, provide plates complying with NFPA 80. Consult manufacturer’s catalog and template book for specific requirements for size and applications.
4. Protection Plates: ANSI/BHMA A156.6 protection plates (kick, armor, or mop), fabricated from the following:

   a. Stainless Steel: 300 grade, 050-inch thick.

5. Options and fasteners: Provide manufacturer's designated fastener type as specified in the Hardware Sets. Provide countersunk screw holes.
6. Manufacturers:

   a. Basis of Design: Rockwood (RO).
   b. Trimco (TC).

2.17 DOOR STOPS AND HOLDERS

A. General: Door stops and holders to be of type and design as specified below or in the Hardware Sets.

B. Door Stops and Bumpers: ANSI/BHMA A156.16, Grade 1 door stops and wall bumpers. Provide wall bumpers, either convex or concave types with anchorage as indicated, unless floor or other types of door stops are specified in Hardware Sets. Do not mount floor stops where they will impede traffic. Where floor or wall bumpers are not appropriate, provide overhead type stops and holders.

1. Manufacturers:

a. Basis of Design: Rockwood (RO).
b. Trimco (TC).

C. Overhead Door Stops and Holders: ANSI/BHMA A156.8, Grade 1 Certified Products Directory (CPD) listed overhead stops and holders to be surface or concealed types as indicated in Hardware Sets. Track, slide, arm and jamb bracket to be constructed of extruded bronze and shock absorber spring of heavy tempered steel. Provide non-handed design with mounting brackets as required for proper operation and function.

1. Manufacturers:

a. Basis of Design: Norton Rixson (RF).
b. Sargent Manufacturing.

2.18 ARCHITECTURAL SEALS

A. General: Thresholds, weatherstripping, and gasket seals to be of type and design as specified below or in the Hardware Sets. Provide continuous weatherstrip gasketing on exterior doors and provide smoke, light, or sound gasketing on interior doors where indicated. At exterior applications provide non-corrosive fasteners and elsewhere where indicated.

B. Smoke Labeled Gasketing: Assemblies complying with NFPA 105 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for smoke control ratings indicated, based on testing according to UL 1784.

1. Provide smoke labeled perimeter gasketing at all smoke labeled openings.

C. Fire Labeled Gasketing: Assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to UL-10C.

1. Provide intumescent seals as indicated to meet UL10C Standard for Positive Pressure Fire Tests of Door Assemblies, and NFPA 252, Standard Methods of Fire Tests of Door Assemblies.

D. Sound-Rated Gasketing: Assemblies that are listed and labeled by a testing and inspecting agency, for sound ratings indicated.

E. Replaceable Seal Strips: Provide only those units where resilient or flexible seal strips are easily replaceable and readily available from stocks maintained by manufacturer.

F. Manufacturers:

1. Basis of Design: Pemko (PE).
2. Reese Enterprises Inc. (RE).
3. National Guard Products (NG)>

2.19 ELECTRONIC ACCESSORIES

A. Door Position Switches: Door position magnetic reed contact switches specifically designed for use in commercial door applications. On recessed models the contact and magnetic housing snap-lock into a 1" diameter hole. Surface mounted models include wide gap distance design complete with armored flex cabling. Provide SPDT, N/O switches with optional Rare Earth Magnet installation on steel doors with flush top channels.

1. Manufacturers:

a. Basis of Design: Securitron (SU) - DPS Series or equal as described above.

B. Intelligent Switching Power Supplies: Provide power supplies with single, dual or multi-voltage configurations at 12 and/or 24VDC. Power Supply shall have battery backup function with an integrated battery charging circuit. The power supply shall have a standard, integrated Fire Alarm Interface (FAI). The power supply shall provide capability for secondary voltage, power distribution, direct lock control and network monitoring through add on modules. The power supply shall be expandable up to 16 individually protected outputs. Output modules shall provide individually protected, continuous outputs and/or individually protected, relay controlled outputs. Network modules shall provide remote monitoring functions such as status reporting, fault reporting and information logging.

1. Manufacturers:

a. Basis of Design: Securitron (SU) - AQL Series or equal as described above.

2.20 FABRICATION

A. Fasteners: Provide door hardware manufactured to comply with published templates generally prepared for machine, wood, and sheet metal screws. Provide screws according to manufacturers recognized installation standards for application intended.

2.21 FINISHES

A. Standard: Designations used in the Hardware Sets and elsewhere indicate hardware finishes complying with ANSI/BHMA A156.18, including coordination with traditional U.S. finishes indicated by certain manufacturers for their products.

B. Provide quality of finish, including thickness of plating or coating (if any), composition, hardness, and other qualities complying with manufacturer's standards, but in no case less than specified by referenced standards for the applicable units of hardware

C. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine scheduled openings, with Installer present, for compliance with requirements for installation tolerances, labeled fire door assembly construction, wall and floor construction, and other conditions affecting performance.

B. Notify architect of any discrepancies or conflicts between the door schedule, door types, drawings and scheduled hardware. Proceed only after such discrepancies or conflicts have been resolved in writing.

3.2 PREPARATION

A. Hollow Metal Doors and Frames: Comply with ANSI/DHI A115 series.

B. Wood Doors: Comply with ANSI/DHI A115-W series.

3.3 INSTALLATION

A. Install each item of mechanical and electromechanical hardware and access control equipment to comply with manufacturer's written instructions and according to specifications.

1. Installers are to be trained and certified by the manufacturer on the proper installation and adjustment of fire, life safety, and security products including: hanging devices; locking devices; closing devices; and seals.

B. Mounting Heights: Mount door hardware units at heights indicated in following applicable publications, unless specifically indicated or required to comply with governing regulations:

1. Standard Steel Doors and Frames: DHI's "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames."
2. DHI TDH-007-20: Installation Guide for Doors and Hardware.
3. Where indicated to comply with accessibility requirements, comply with ANSI A117.1 "Accessibility Guidelines for Buildings and Facilities."
4. Provide blocking in drywall partitions where wall stops or other wall mounted hardware is located.

C. Retrofitting: Install door hardware to comply with manufacturer's published templates and written instructions. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work specified in Division 9 Sections. Do not install surface-mounted items until finishes have been completed on substrates involved.

D. Thresholds: Set thresholds for exterior and acoustical doors in full bed of sealant complying with requirements specified in Division 7 Section "Joint Sealants."

E. Storage: Provide a secure lock up for hardware delivered to the project but not yet installed. Control the handling and installation of hardware items so that the completion of the work will not be delayed by hardware losses before and after installation.

3.4 FIELD QUALITY CONTROL

A. Field Inspection (Punch Report): Reference Division 01 Sections “Closeout Procedures”. Produce project punch report for each installed door opening indicating compliance with approved submittals and verification hardware is properly installed, operating and adjusted. Include list of items to be completed and corrected, indicating the reasons or deficiencies causing the Work to be incomplete or rejected.

1. Organization of List: Include separate Door Opening and Deficiencies and Corrective Action Lists organized by Mark, Opening Remarks and Comments, and related Opening Images and Video Recordings.

3.5 ADJUSTING

A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.

3.6 CLEANING AND PROTECTION

A. Protect all hardware stored on construction site in a covered and dry place. Protect exposed hardware installed on doors during the construction phase. Install any and all hardware at the latest possible time frame.

B. Clean adjacent surfaces soiled by door hardware installation.

C. Clean operating items as necessary to restore proper finish. Provide final protection and maintain conditions that ensure door hardware is without damage or deterioration at time of owner occupancy.

3.7 DEMONSTRATION

A. Instruct Owner's maintenance personnel to adjust, operate, and maintain mechanical and electromechanical door hardware.

3.8 DOOR HARDWARE SETS

A. The hardware sets represent the design intent and direction of the owner and architect. They are a guideline only and should not be considered a detailed hardware schedule. Discrepancies, conflicting hardware and missing items should be brought to the attention of the architect with corrections made prior to the bidding process. Omitted items not included in a hardware set should be scheduled with the appropriate additional hardware required for proper application and functionality.

1. Quantities listed are for each pair of doors, or for each single door.
2. The supplier is responsible for handing and sizing all products.
3. Where multiple options for a piece of hardware are given in a single line item, the supplier shall provide the appropriate application for the opening.
4. At existing openings with new hardware the supplier shall field inspect existing conditions prior to the submittal stage to verify the specified hardware will work as required. Provide alternate solutions and proposals as needed.

B. Refer to Section 08 7101, Door Hardware Sets, for hardware sets.

END OF SECTION 087100

SECTION 12 3553.19 - WOOD LABORATORY CASEWORK

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Standard and custom wood cabinets and cabinet hardware.

B. ~~Tables.~~

C. ~~Acid storage cabinets.~~

D. ~~Solvent storage cabinets.~~

E. Laboratory sinks.

F. Pegboards.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 06 1000 - Rough Carpentry: Blocking and nailers for anchoring casework.

C. Section 07 9200 - Joint Sealants: Sealing joints between casework and countertops and adjacent walls, floors, and ceilings.

D. Section 12 3600 - Countertops: Epoxy resin countertops for laboratory casework.

1.3 DEFINITIONS

A. Exposed: Portions of casework visible when drawers and cabinet doors are closed, including end panels, bottoms of cases more than 42 inches above finished floor, tops of cases less than 72 inches above finished floor and all members visible in open cases or behind glass doors.

B. Semi-Exposed: Portions of casework and surfaces behind solid doors, tops of cases more than 72 inches above finished floor and bottoms of cabinets more than 30 inches but less than 42 inches above finished floor.

C. Concealed: Sleepers, web frames, dust panels and other surfaces not generally visible after installation and cabinets less than 30 inches above finished floor.

1.4 REFERENCE STANDARDS

A. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar; 2023.

B. ASTM C920 - Standard Specification for Elastomeric Joint Sealants; 2018.

C. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2023d.

D. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials; 2022.

E. BHMA A156.9 - American National Standard for Cabinet Hardware; 2015.

F. HPVA HP-1 - American National Standard for Hardwood and Decorative Plywood; 2016.

G. NFPA 30 - Flammable and Combustible Liquids Code; 2018.

H. SEFA 1 - Laboratory Fume Hoods; 2010.

I. SEFA 2 - Installations; 2010.

J. SEFA 3 - Laboratory Work Surfaces; 2010.

K. SEFA 7 - Laboratory Fixtures; 2010.

L. SEFA 8W - Laboratory Grade Wood Casework; 2016.

M. SEFA 11 - Liquid Chemical Storage Cabinets; 2012.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate installation of casework with related items.

B. Preinstallation Meeting: Conduct a preinstallation meeting one week prior to the start of the work of this section; require attendance by all affected installers.

1.6 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Component dimensions, configurations, construction details, joint details, attachments; manufacturer's catalog literature on hardware, accessories, and service fittings, if any.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit b4: For composite wood products, documentation indicating that product contains no urea formaldehyde.
   2. Laboratory Test Reports for Credit b4: For ccomposite wood and agrifiber products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
   3. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

4. Certificates for Credit d13: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Inlcude statement indicating cost for each certified wood product.

D. Shop Drawings: Indicate casework types, sizes, and locations, using large scale plans, elevations, and cross sections. Include rough-in and anchors and reinforcements placement dimensions and tolerances, clearances required, and utility locations, if any. Include coordinated information for laboratory equipment specified in another section and/or furnished by Owner.

E. Samples For Color Selection: Wood samples, fully finished, for color and species selection. Minimum Sample Size: 2 inches by 3 inches.

F. Test Reports: From independent laboratory indicating compliance with referenced chemical-resistance standards for cabinet finish and liner materials.

G. Installer's qualification statement.

H. Maintenance Data: Manufacturer's recommendations for care and cleaning.

I. Finish touch-up kit for each type and color of materials provided.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum ten years of documented experience.

B. Installer Qualifications: Company specializing in performing work of the type specified in this section, with not less than 7 years of documented experience and approved by manufacturer.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Protect items provided by this section, including finished surfaces and hardware items during handling and installation. For metal surfaces, use polyethylene film or other protective material standard with the manufacturer.

B. Acceptance at Site:
1. Do not deliver or install casework until the conditions specified under Part 3, Examination Article of this section have been met. Products delivered to sites that are not enclosed and/or improperly conditioned will not be accepted if warping or damage due to unsatisfactory conditions occurs.

C. Storage:
1. Store casework in the area of installation. If necessary, prior to installation, temporarily store in another area, meeting the environmental requirements specified under Part 3, "Site Verification of Conditions" paragraph of this section.

1.9 WARRANTY

A. See Section 01 7800 - Closeout Submittals for additional warranty requirements.

B. Correct defective work within a five year period after Date of Substantial Completion, at no additional cost to Owner. Defects include, but are not limited to:
   1. Ruptured, cracked, or stained finish coating.
   2. Discoloration, or lack of finish integrity.
   3. Cracking or peeling of finish.
   4. Failure of hardware.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Wood Laboratory Casework:
   1. CiF Lab Solutions LP: www.cifsolutions.com/#sle.
   2. Kewaunee Scientific Corp: www.kewaunee.com/#sle.
   3. Mott Manufacturing: www.mott.ca/#sle.

B. Countertops:
   1. Durcon (Epoxy resin, Solid phenolic): www.durcon.com/#sle.

2.2 WOOD LABORATORY CASEWORK

A. Wood Laboratory Casework: Solid wood and wood panel construction; each unit self-contained and not dependent on adjacent units or building structure for rigidity; in sizes necessary to avoid field cutting except for scribes and filler panels. Include adjustable levelers for base cabinets.
   1. Style: Flush overlay. Ease doors and drawer fronts slightly at edges.
   2. Cabinet Nominal Dimensions: Unless otherwise indicated, provide cabinets of widths and heights indicated on drawings, and with following front-to-back dimensions:
      a) Base Cabinets: 22 inches.
      b) Tall Cabinets: 22 inches.
      c) Upper Cabinets: 16 inches.
   3. Construction: Joints doweled, glued and screwed, except drawers may be lock-shoulder jointed; with interior of units smooth and flush; cabinet bottom flush with top of face frame; without gaps or inaccessible spaces or areas where dirt or moisture could accumulate.
   4. Structural Performance: In addition to the requirements of SEFA 3, SEFA 7, and SEFA 8W, components safely support the following minimum loads:
      a) Base Units: 500 pounds per linear foot across the cabinet ends.
      b) Suspended Units: 300 pounds static load.
      c) Tables: 300 pounds, minimum, on four legs.
      d) Drawers: 125 pounds, minimum.
      e) Hanging Wall Cases: 300 pounds.
   5. Fittings and Fixture Locations: Cut and drill counter tops, backs, and other components for service outlets and fixtures.
   6. Removable back panels on base cabinets. Provide partial height back panels at sink cabinets.
   7. Factory-finish all exposed and semi-exposed surfaces with the same finish.

a) Finish Performance: Provide finish on all surfaces having chemical resistance of Level 0 (no change) or Level 1 (slight change of gloss or slight discoloration) according to SEFA 8W and no visible effect when surface is exposed to:
   1) Hot water at temperature between 190 degrees F and 205 degrees F trickled down the test surface at 45 degree angle for 5 minutes.
   2) Constant moisture in the form of 2 by 3 by 1 inch thick cellulose sponge kept continually saturated with water and in contact with test surface for 100 hours.
b) Preparation: Wood sanded smooth, free from dust and mill marks.
c) Stain: Single application of clean, manufacturer-recommended stain of selected color; tinted coating not acceptable.
d) Coating: Clear, superior-quality, chemical-resistant acyclic urethane; applied in accordance with manufacturer instructions, force-dried, sanded and wiped clean.
e) Coats: Multiple coats as required to achieve minimum 1.5 mil dry film thickness.
f) Appearance: Clear satin gloss; not cloudy or muddy.

B. ~~Acid Storage Cabinets: Construction identical to other cabinets, with following exceptions:~~
   1. ~~Completely lined with corrosion-resistant liner material; stainless steel fasteners for all connections and hardware inside cabinets.~~
   2. ~~Shelves: Removable, same material as cabinet, covered with corrosion-resistant liner.~~
   3. ~~Bottom Pan: Liquid-tight liner covering entire bottom of acid storage cabinet.~~
   4. ~~Vents: Comply with SEFA 1.~~

C. ~~Solvent (Flammable and Combustible Liquids) Storage Cabinets: Construction identical to other cabinets, with following exceptions:~~
   1. ~~Construct to NFPA 30 and applicable OSHA requirements.~~
   2. ~~Comply with SEFA 11.~~
   3. ~~Fire Resistance: Maximum internal temperature of 325 degrees F at the center, and 1 inch from top of the cabinet when cabinet is subjected to a ten minute fire test that simulates fire exposure of a standard time-temperature curve specified in ASTM E119.~~
   4. ~~Shelves: Full depth, adjustable.~~
   5. ~~Bottom Pan: 2 inches deep, liquid-tight pan covering entire bottom of cabinet.~~
   6. ~~Cabinet Hardware: UL-listed.~~
      a) ~~Hinges: Full-length stainless steel continuous (piano) hinges.~~
      b) ~~Door Handles: Manufacturer's standard, with slip-resistant grip.~~
   7. ~~Vents: Provide venting capable of achieving ten air changes per hour.~~
      a) ~~Tie into building hazardous exhaust system.~~
      b) ~~Vent Connections: 1-1/2 inch minimum diameter, corrosion-resistant piping having flame spread index of 25 or less when tested in accordance with ASTM E84.~~
      c) ~~Vent each cabinet separately with sufficient mixing distance for incompatible chemicals.~~
      d) ~~Provide minimum of two vents with fire arrestor for each cabinet.~~
   8. ~~Signage: Provide manufacturer's standard signage reading "FLAMMABLE - KEEP FIRE AWAY" or similar message in bright red color.~~

D. ~~Mobile Tables: With standard aprons manufactured of not less than 3/4 by 3-1/2 inch solid lumber, machined to receive corner blocks, and bolted to 2-1/8 by 2-1/8 inch solid hardwood legs. 3/8 inch leveling devices, and slip-on type black PVC shoes.~~
   1. ~~Provide table legs designed to receive locking swivel casters.~~
      a) ~~Caster wheels of non-marring type urethane tires in gray or black color.~~

2. ~~Table Drawers: Where indicated, manufacturer's standard drawers. Single drawer for tables up to 48 inches wide, two drawers for wider tables.~~

2.3 CABINET HARDWARE

A. Manufacturer's standard types, styles, and finishes.

B. Comply with BHMA A156.9 requirements.

C. Finish of exposed stainless steel components: No.4 finish.

D. Locks: Provide locks on casework drawers and doors where indicated. Lock with 5 pin cylinder and 2 keys per lock.

E. Shelves in Cabinets:
   1. Shelf Standards and Rests: Vertical standards with rubber button fitted rests, satin chromium plated over nickel on base material.

F. Swinging Doors:
   1. Hinges: Offset pin, number as required by referenced standards for width, height, and weight of door.
   2. Catches: Magnetic.
   3. Pulls: Chrome wire pulls, 4 inches wide.
   4. Drawers:
      a) Pulls: Chrome wire pulls, 4 inches wide.
      b) Slides: Steel, full extension arms, ball bearings; self-closing; capacity as recommended by manufacturer for drawer height and width.

2.4 COUNTERTOPS

A. Countertops: Epoxy resin countertops - see Section 12 3600.

2.5 SINKS

A. Laboratory sinks.
   1. General: Manufacturer's adjustable support system for undermount sink installation.
   2. Sink : Single-bowl.
      a) Material: Stainless Steel

2.6 PEGBOARDS

A. Drying Rack **ES02**: Stainless steel pegboards with pre-drilled or punched holes in a staggered pattern, designed to accept removable white polypropylene pegs. With each pegboard include a stainless steel drip-trough with drain outlet and matching diameter 36 inches long PVC drain hose.
   1. Size: As indicated on drawings.
   2. Basis of Design Product: See Specialty Equipment Schedule on Drawing A912.

2.7 GOGGLE SANITIZING CABINETS

A. Goggle Cabinet Metal **ES01**: Lockable cabinet with UV lamp and power cord for sanitizing goggles and safety glasses.
   1. Capacity: (36) goggles minimum.
   2. Operation: Lamp automatically switches off if door is opened during sanitizing process.
   3. Basis of Design Product: See Specialty Equipment Schedule on Drawing A912.

2.8 MATERIALS

A. Wood-Based Materials:
   1. Solid Wood: Air-dried to 4.5 percent moisture content, then tempered to 6 percent moisture content before use.
   2. Composite Wood Panels: Containing no urea-formaldehyde resin binders.

B. Exposed Solid Wood: Clear, dry, sound, plain sawn, selected for compatible grain and color, no defects.

C. Exposed Hardwood Plywood: Veneer core; HPVA HP-1 Grade AA, Type I; same species as exposed solid wood, clear, compatible grain and color, no defects. Band exposed edges with solid wood of same species as veneer.

D. Stainless Steel Sheet: ASTM A666 Type 304.

E. ~~Solvent-Resistant Liner Material: High-density, asbestos-free, non-combustible, calcium-silicate-based panel consisting of autoclaved Portland cement, mineral fillers and synthetic fibers.~~

F. ~~Solvent-Resistant Liner Material: Polypropylene.~~

G. Sealant for Use in Casework Installation:
   1. One component, clear silicone base sealant, chemical curing complying with ASTM C920, Type S, Grade NS, Class 25, Use NT, when tested to glass and aluminum, anti-fungus composition.

2.9 ACCESSORIES

A. Toespace Grilles: Manufacturer's standard grille.

PART 3 EXECUTION

3.1 EXAMINATION

A. Site Verification of Environmental Conditions:
   1. Do not deliver casework until the following conditions have been met:
      a) Building has been enclosed (windows and doors sealed and weather-tight).
      b) An operational HVAC system that maintains temperature and humidity at occupancy levels has been put in place.
      c) Ceiling, overhead ductwork, piping, and lighting have been installed.

d) Installation areas do not require further "wet work" construction.

B. Verify adequacy of support framing and anchors.

C. Verify that service connections are correctly located and of proper characteristics.

3.2 INSTALLATION

A. Perform installation in accordance with manufacturer's instructions, approved shop drawings, and with SEFA 2.

B. Use anchoring devices to suit conditions and substrate materials encountered. Use concealed fasteners to the greatest degree possible. Use exposed fasteners only where allowed by approved shop drawings, or where concealed fasteners are impracticable.

C. Set casework items plumb and square, securely anchored to building structure.
1. Base Cabinets: Examine floor levelness and flatness of installation space. Do not proceed with installation if encountered floor conditions required more than 3/4 inch leveling adjustment. When installation conditions are acceptable, for each space, establish the high point of the floor. Set and make level and plumb first cabinet in relation to this high point.
2. Wall Cabinets: Examine wall surfaces in installation space. Do not proceed with installation if the following conditions are encountered:
   a) Maximum variation from plane of masonry wall exceeds 1/4 inch in 10 ft and 1/2 inch in 20 ft or more, and/or maximum variation from plumb exceeds 1/4 inch per story.
   b) Maximum Variation of finished gypsum board surface from true flatness exceeds 1/8 inch in 10 feet in any direction.

D. Align cabinets to adjoining components, install filler and/or scribe panels where necessary to close gaps.

E. Fasten together cabinets in continuous runs, with joints flush, uniform and tight. Misalignment of adjacent units not to exceed 1/16 inch. In addition, do not exceed the following tolerances:
1. Variation of Tops of Base Cabinets from Level: 1/16 inch in 10 feet.
2. Variation of Faces of Cabinets from a True Plane: 1/8 inch in 10 feet.
3. Variation of Adjacent Surfaces from a True Plane (Lippage): 1/32 inch.
4. Variation in Alignment of Adjacent Door and Drawer Edges: 1/16 inch.

F. Secure upper and floor cabinets to concealed blocking at gypsum board assemblies.

G. Separate dissimilar metals to prevent galvanic action.

H. Base Cabinets: Fasten cabinets to service space framing and/or wall substrates, with fasteners spaced not more than 16 inches on center. Bolt adjacent cabinets together with joints flush, tight, and uniform.
1. Where base cabinets are installed away from walls or service space framing, anchor to floor at toe space at not more than 24 inches on center, and at sides of cabinets with not less than two fasteners per side.

I. Wall Cabinets: Fasten to hanging strips, and/or wall substrates. Fasten each cabinet through back, near top, at not less than 16 inches on center.

J. Install hardware uniformly and precisely. Set hinges snug and flat in mortises.

K. ~~Vented Cabinets: Install in strict compliance with manufacturer's written installation instructions.~~
   1. ~~Use only rigid materials for venting. No flexible materials permitted.~~

L. Countertops:
   1. Coordinate installation of the work of this section with the installation of laboratory casework countertops specified in Section 12 3600.
   2. Install countertops in one true plane, with ends abutting at hairline joints, and no raised edges.

M. Replace units that are damaged, including those that have damaged finishes.

3.3 ADJUSTING

A. Adjust operating parts, including doors, drawers, hardware, and fixtures to function smoothly.

3.4 CLEANING

A. Clean casework and other installed surfaces thoroughly.

3.5 PROTECTION

A. Do not permit finished casework to be exposed to continued construction activity.

B. Protect casework and countertops from ongoing construction activities. Prevent installers from standing on or storing tools and materials on casework or countertops.

C. Repair damage that occurs prior to Date of Substantial Completion, including finishes, using methods prescribed by manufacturer; replace units that cannot be repaired to like-new condition.

END OF SECTION 12 3553.19

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 14 2100 - ELECTRIC TRACTION ELEVATORS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Complete electric traction elevator systems.
   1. Passenger type.
   2. The work required under this section consists of all labor, materials and services required for the complete installation (including operational verification) of all the equipment required for the elevator(s) as herein specified.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 03 3000 - Cast-in-Place Concrete.

C. Section 05 50 00 – Metal Fabrications: Delegated design requirements for pit ladder, ~~divider beams~~, supports for entrances and rails, and hoisting beam at top of elevator hoistway.

D. Section 07 1300 - Sheet Waterproofing: Waterproofing of elevator pit.

E. Section 21 1300 - Fire-Suppression Sprinkler Systems.

F. Section 26 0533.13 - Conduit for Electrical Systems: Electrical conduit requirements.

G. Section 26 0583 - Wiring Connections: Wiring connection requirements.

1.3 REFERENCE STANDARDS

A. AAMA 611 - Voluntary Specification for Anodized Architectural Aluminum; 2014 (2015 Errata).

B. ADA Standards - Americans with Disabilities Act (ADA) Standards for Accessible Design; 2010.

C. AISC 360 - Specification for Structural Steel Buildings; 2022.

D. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures; Most Recent Edition Cited by Referring Code or Reference Standard.

E. ASME A17.1 - Safety Code for Elevators and Escalators Includes Requirements for Elevators, Escalators, Dumbwaiters, Moving Walks, Material Lifts, and Dumbwaiters with Automatic Transfer Devices; 2022.

F. ASME A17.2 - Guide for Inspection of Elevators, Escalators, and Moving Walks Includes Inspection Procedures for Electric Traction and Winding Drum Elevators, Hydraulic Elevators, Inclined Elevators, Limited-Use/Limited-Application Elevators, Private Residence Elevators, Escalators, Moving Walks, and Dumbwaiters; 2020.

G. ASME QEI-1 - Standard for the Qualification of Elevator Inspectors; 2018.

H. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

I. ASTM A276/A276M - Standard Specification for Stainless Steel Bars and Shapes; 2023.

J. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.

K. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar; 2023.

L. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2021.

M. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric); 2021.

N. AWS B2.1/B2.1M - Specification for Welding Procedure and Performance Qualification; 2021.

O. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2020, with Errata (2023).

P. ITS (DIR) - Directory of Listed Products; Current Edition.

Q. NEMA MG 1 - Motors and Generators; 2018.

R. NFPA 13 - Standard for the Installation of Sprinkler Systems; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

S. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

T. NFPA 80 - Standard for Fire Doors and Other Opening Protectives; 2019.

U. SSPC-Paint 20 - Zinc-Rich Coating (Type I - Inorganic, and Type II - Organic); 2019.

V. UL (DIR) - Online Certifications Directory; Current Edition.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate work with other installers to provide necessary conduits for proper installation of wiring, including but not limited to the following:
      a) Elevator pit for lighting and sump pump.
      b) Automatic transfer switch from controller cabinet.
      c) Fire alarm panel from controller cabinet.
   2. Coordinate work with other installers for equipment provisions necessary for proper elevator operation, including but not limited to the following:
      a) Automatic transfer switches with auxiliary contacts for emergency power transfer status indication.

b) Shunt trip devices for automatic disconnection of elevator power prior to fire suppression system activation; include provisions for shunt trip power monitoring.

B. Preinstallation Meeting: Convene meeting at least one week prior to start of this work.
1. Review schedule of installation, proper procedures and conditions, and coordination with related work.
2. Review use of elevator for construction purposes, hours of use, scheduling of use, cleanliness of car, employment of operator, and maintenance of system.

C. Construction Use of Elevator: Not permitted.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Submit data on following items:
1. Car, guide rails, buffers, and other components in hoistway.
2. Maximum rail bracket spacing.
3. Maximum loads imposed on guide rails requiring load transfer to building structure.
4. Signal and operating fixtures, operating panels, and indicators.
5. Car design, dimensions, layout, and components.
6. Car and hoistway door and frame details.
7. Clearances and travel of car.
8. Clear inside hoistway and pit dimensions.
9. Electrical characteristics and connection requirements.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Shop Drawings: Include appropriate plans, elevations, sections, diagrams, and details on following items:
1. Elevator Equipment and Machines: Size and location of driving machines, power units, controllers, governors, and other components.
2. Hoistway Components: Size and location of car machine beams, guide rails, buffers, ropes, and other components.
3. Rail bracket spacing; maximum loads imposed on guide rails requiring load transfer to building structural framing.
4. Individual weight of principal components; load reaction at points of support.
5. Loads on hoisting beams.
6. Clearances and over-travel of car and counterweight.
7. Locations in hoistway and machine room of traveling cables and connections for car lighting and telephone.

8. Location and sizes of hoistway and car doors and frames.
9. Calculated heat dissipation of elevator equipment in machine room.
10. Interface with building security system.
11. Electrical characteristics and connection requirements.
12. Indicate arrangement of elevator equipment and allow for clear passage of equipment through access openings.

E. Delegated Design Submittal: Design data: Submit drawings and supporting calculations, signed and sealed by a qualified professional structural engineer, for the following:
   1. Hoisting beam or machine beam.
   2. Supports for entrances and rails:
      a) Structural steel shapes for subsills.
      b) Attachment plates and angles for subsills at entrances.
      c) Pit ladders.

F. Samples: Submit samples illustrating car floor material, car interior finishes, car and hoistway door and frame finishes, and handrail material and finish in the form of cut sheets, finish color selection brochures, or physical samples.

G. Designer's qualification statement.

H. Manufacturer's qualification statement.

I. Installer's qualification statement.

J. Welders' Qualification Statement: Welders' certificates in accordance with AWS B2.1/B2.1M and dated no more than 12 months before start of scheduled welding work.

K. Warranty Documentation: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

L. Operation and Maintenance Data:
   1. Parts catalog with complete list of equipment replacement parts; identify each entry with equipment description and identifying code.
   2. Operation and maintenance manual.
   3. Schematic drawings of equipment and wiring diagrams of installed electrical equipment with list of corresponding symbols to identify markings on machine room and hoistway apparatus.

1.6 QUALITY ASSURANCE

A. Designer Qualifications: Design guide rails under direct supervision of a licensed Professional Structural Engineer experienced in design of this type of work and licensed in the State in which the Project is located.

B. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with minimum ten years documented experience.

C. Installer Qualifications: Supervisor along with trained elevator installation personnel on staff of elevator equipment manufacturer.

D. Welder Qualifications: Welding processes and welding operators qualified in accordance with AWS D1.1/D1.1M and no more than 12 months before start of scheduled welding work.

E. Testing Agency Qualifications: Independent firm specializing in performing testing and inspections of type specified in this section.

F. Products Requiring Fire Resistance Rating: Listed and classified by ITS (DIR), UL (DIR), or testing agency acceptable to authorities having jurisdiction.

G. Products Requiring Electrical Connection: Listed and classified by UL (DIR) or testing agency acceptable to authorities having jurisdiction as suitable for the purpose indicated in construction documents.

1.7 WARRANTY

A. See Section 01 7800 - Closeout Submittals for additional warranty requirements.

B. Provide manufacturer's warranty for defective material and workmanship for one year from Date of Substantial Completion.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Electric Traction Elevators:
   1. Basis-of-Design: **Otis Elevator Company; Gen3 Edge:** www.otis.com/#sle.
   2. Other Acceptable Manufacturers:
      a) KONE: www.kone.us/#sle.
      b) ThyssenKrupp Elevator: www.thyssenkruppelevator.com/#sle.

B. Substitutions: See Section 01 6000 - Product Requirements.

C. Source Limitations: Provide elevator and associated equipment and components produced by a single manufacturer and obtained from a single supplier.

2.2 ELECTRIC TRACTION ELEVATORS

A. Electric Traction Passenger Elevator: Gearless machine-room-less elevator where all components fit inside the hoistway with the controller in the top landing entrance frame.
   1. Drive System: Regenerative.
   2. Operation Control Type:
      a) Selective Collective Automatic Operation Control.
   3. Service Control Type:
      a) Standard service control only.
   4. Interior Car Height: 93 inch.
   5. Rated Net Capacity: 3500 pounds.
   6. Rated Speed: 150 feet per minute.
   7. Hoistway Size: As indicated on drawings.
   8. Interior Car Platform Size: 77-9/16 inch wide by 77-9/16 inch deep.

9. Elevator Pit Depth: 48 inch.
10. Overhead Clearance at Top Floor to Hoist Beam: 127 inches.
11. Travel Distance: As indicated on drawings.
12. Number of Stops: As indicated on drawings.
13. Number of Openings: One Front; one Rear.

2.3 COMPONENTS

A. Elevator Equipment:
   1. Motors, Controllers, Controls, Buttons, Wiring, Devices, and Indicators: Comply with NFPA 70 requirements; see Section 26 0583 for additional information.
   2. Guide Rails, Cables, Counterweights, Sheaves, Buffers, Attachment Brackets, and Anchors: Design criteria for components includes safety factors in accordance with applicable requirements of Elevator Code, ASME A17.1.
   3. Buffers:
      a) Spring type for elevators with speed less than or equal to 200 feet per minute.
   4. Lubrication Equipment: Manufacturer's standard, as required.

B. Electrical Equipment:
   1. Motors: NEMA MG 1.
   2. Spare Conductors: Provide ten percent in extra conductors and two pairs of shielded audio cables in traveling cables.
   3. Include wiring and connections to elevator devices remote from hoistway and between elevator machine room. Provide additional components and wiring to suit machine room layout. See Section 26 0583.

2.4 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Comply with ASME A17.1, applicable local codes, and authorities having jurisdiction (AHJ).

B. Accessibility Requirements: Comply with ADA Standards.

C. Perform structural steel design, fabrication, and installation in accordance with AISC 360.

D. Comply with seismic design requirements in accordance with ASME A17.1, applicable local codes, and authorities having jurisdiction (AHJ).
   1. Comply with Elevator Safety Requirements for Seismic Risk Zone in accordance with ASME A17.1, ASCE 7, and other related requirements.

E. Perform welding of steel in accordance with AWS D1.1/D1.1M.

F. Fabricate and install door and frame assemblies in accordance with NFPA 80 and complying with requirements of authorities having jurisdiction (AHJ).

G. Perform electrical work in accordance with NFPA 70.

H. Comply with venting or pressurization of hoistway design in accordance with HVAC system requirements and authorities having jurisdiction (AHJ).

I. Comply with fire protection sprinkler system of hoistway design in accordance with NFPA 13 requirements and authorities having jurisdiction (AHJ). See Section 21 1300.

2.5 OPERATION CONTROLS

A. Elevator Controls: Provide landing operating panels and landing indicator panels.
   1. Landing Operating Panels: Metallic type, one for originating "Up" and one for originating "Down" calls, one button only at terminating landings; with illuminating indicators.
   2. Landing Indicator Panels: Illuminating.
   3. Comply with ADA Standards for elevator controls.

B. Interconnect elevator control system with building security, fire alarm, card access, smoke alarm, and building management control systems.

C. Door Operation Controls:
   1. Program door control to open doors automatically when car arrives at floor landing.
   2. Render "Door Close" button inoperative when car is standing at dispatch landing with doors open.
   3. Door Safety Devices: Moveable, retractable safety edges, quiet in operation; equipped with photo-electric light rays.

D. Provide "Firefighter's Emergency Operation" in accordance with ASME A17.1, applicable building codes, and authorities having jurisdiction (AHJ).
   1. Designated Landing: Main Lobby.

2.6 OPERATION CONTROL TYPE

A. Selective Collective Automatic Operation Control: Applies to car in single elevator shaft.
   1. Refer to description provided in ASME A17.1.
   2. Automatic operation by means of one button in the car for each landing served and by "UP" and "DOWN" buttons at the landings.
   3. Stops are registered by momentary actuation of landing car buttons without consideration of the number of buttons actuated or the sequence buttons actuated, but the stops are made in the order that landings are reached in each direction of travel.
   4. All "UP" landing calls are made when car is traveling in the up direction.
   5. All "DOWN" landing calls are made when car is traveling in the down direction.
   6. Uppermost and lowermost calls are answered as soon as they are reached without consideration of the car travel direction.

2.7 EMERGENCY POWER

A. Set-up elevator operation to run with elevator emergency power supply when the normal building power supply fails, and in compliance with ASME A17.1 requirements.

B. Elevator Emergency Power Supply: Supplied by battery backup; provide elevator system components as required for emergency power characteristics.

C. Emergency Lighting: Comply with ASME A17.1 elevator lighting requirements.

D. Provide operational control circuitry for adapting the change from normal to emergency power.

E. Upon transfer to emergency power, advance one elevator at a time to a preselected landing, stop car, open doors, disable operating circuits, and hold in standby condition.

2.8 MATERIALS

A. Rolled Steel Sections, Shapes, Rods: ASTM A36/A36M.

B. Sheet Steel: Hot-dipped galvanized steel sheet, ASTM A653/A653M, with G90/Z275 coating.

C. Stainless Steel Sheet: ASTM A666, Type 304; No. 4 Brushed finish unless otherwise indicated.

D. Stainless Steel Bars, Shapes and Moldings: ASTM A276/A276M, Type 304.

E. Extruded Aluminum: ASTM B221 (ASTM B221M), natural anodized finish unless otherwise indicated.

2.9 CAR AND HOISTWAY ENTRANCES

A. Elevator, Passenger:
   1. Car and Hoistway Entrances, Each Elevator Floor Lobby:
      a) Hoistway Fire Rating: As indicated on drawings.
      b) Elevator Door Fire Rating: 1 Hour.
      c) Framed Opening Finish and Material: Brushed stainless steel.
      d) Car Door Material: Stainless steel, with rigid sandwich panel construction.
      e) Hoistway Door Material: Stainless steel, with rigid sandwich panel construction.
      f) Door Type: Double leaf.
      g) Door Operation: Side opening, two speed.
      h) Door Width: 42 inch.
      i) Door Height: 84 inch.
      j) Sills: Extruded aluminum.

B. Sills/Thresholds: Configure to align with frame return and coordinate with floor finish.

2.10 CAR EQUIPMENT AND MATERIALS

A. Elevator Car, Passenger:
   1. Car Operating Panel: Provide main; flush-mounted applied face plate, with illuminated call buttons corresponding to floors served with "Door Open" button, "Door Close" button, and alarm button.
      a) Panel Material: Stainless steel; one per car.
      b) Car Floor Position Indicator: Above door with illuminating position indicators.
      c) Locate alarm button where it is unlikely to be accidentally actuated; not more than 54 inch above car finished floor.
      d) Provide matching service cabinet integral with front return panel, with hinged door and keyed lock in each car.
      e) Provide following within service cabinet as part of car operating panel:
         1) Switch for each auxiliary operational control, keyed.
         2) Switches for fan, light, and inspection control.
         3) Emergency light.
         4) Telephone cabinet and hard-wired connection with telephone.

5) Control for each other special feature specified.
6) Convenience outlet receptacle; 110 VAC, 15 amps.

2. Ventilation: Single-speed fan with grille in ceiling.
3. Flooring: Resilient tile, type as indicated on the Finish Product List on the drawings.
4. Wall Base: Recessed stainless steel, 4 inch high.
5. Front Return Panel: Stainless steel.
6. Door Wall: Stainless steel.
7. Side Walls: Plastic laminate, as selected by Architect..
8. Rear Wall: Plastic laminate, as selected by Architect.
9. Ceiling:
   a) Canopy Ceiling: Stainless steel.
   b) Lighting: Four LED fixtures, recessed.

B. Car Accessories:
   1. Certificate Frame: Stainless steel frame glazed with clear tempered glass, and attached with tamper-proof screws.
   2. Protective Pads: Canvas cover, padded with impact-resistant fill material, sewn with piping edges; fire resistant in compliance with ASME A17.1; brass grommets for supports, covering side and rear walls and front return, with cut-out for control panel; provide one set for each elevator.
      a) Color: Tan.
      b) Provide at least 4 inch clearance from bottom of pad to finished floor.
      c) Pad Supports: Stainless steel studs, and mounted from ceiling frame.

2.11 FINISHES

A. Powder Coat on Steel: Clean and degrease metal surface; apply one coat of primer; two coats of powder coat.

B. Baked Enamel on Steel: Clean and degrease metal surface; apply one coat of primer sprayed and baked; two coats of enamel sprayed and baked.

C. Touch-Up Primer for Galvanized Surfaces: SSPC-Paint 20 Type I - Inorganic, comply with VOC limitations of authorities having jurisdiction (AHJ).

D. Clear Anodized Finish: Class I, AAMA 611 AA-M12C22A41 clear anodic coating with electrolytically deposited organic seal; not less than 0.7 mils, 0.0007 inch thick.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify existing conditions before starting this work.

B. Verify that hoistway and pit are ready for work of this section.

C. Verify hoistway shaft and openings are of correct size and within tolerance.

D. Verify location and size of machine foundation and position of machine foundation bolts.

E. Verify that electrical power is available and of correct characteristics.

3.2 PREPARATION

A. Arrange for temporary electrical power for installation work and testing of elevator components. See Section 01 5000 - Temporary Facilities and Controls for additional requirements.

B. Maintain elevator pit excavation free of water.

3.3 INSTALLATION

A. Coordinate this work with installation of hoistway wall construction.

B. Install system components, and connect equipment to building utilities.

C. Provide conduit, electrical boxes, wiring, and accessories; see Sections 26 0533.13 and 26 0583.

D. Mount machines and motors on vibration and acoustic isolators.
   1. Place on structural supports and bearing plates.
   2. Securely fasten to building supports.
   3. Prevent lateral displacement.

E. Install hoistway, elevator equipment, and components in accordance with approved shop drawings.

F. Install guide rails to allow for expansion and contraction movement of guide rails.

G. Accurately machine and align guide rails, forming smooth joints with machined splice plates.

H. Bolt or weld brackets directly to structural steel hoistway framing.

I. Field Welds: Chip and clean away oxidation and residue with wire brush; spot prime with two coats.

J. Install hoistway door sills, frames, and headers in hoistway walls; grout sills in place, set hoistway floor entrances in alignment with car openings, and align plumb with hoistway.

K. Structural Metal Surfaces: Clean surfaces of rust, oil, or grease; wipe clean with solvent; prime with two coats.

L. Adjust equipment for smooth and quiet operation.

3.4 TOLERANCES

A. Guide Rail Alignment: Plumb and parallel to each other in accordance with ASME A17.1 and ASME A17.2.

B. Car Movement on Aligned Guide Rails: Smooth movement, without any objectionable lateral or oscillating movement or vibration.

3.5 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements for additional requirements.

B. Testing and inspection by regulatory agencies will be performed at their discretion.
   1. Schedule tests with agencies and notify Owner and Architect.
   2. Obtain permits as required to perform tests.
   3. Document regulatory agency tests and inspections in accordance with requirements.
   4. Perform tests required by regulatory agencies.
   5. Furnish test and approval certificates issued by authorities having jurisdiction (AHJ).

C. Perform testing and inspection in accordance with requirements.
   1. Inspectors shall be certified in accordance with ASME QEI-1.
   2. Perform tests in accordance with ASME A17.2.
   3. Provide at least two weeks written notice of date and time of tests and inspections.
   4. Supply instruments and execute specific tests.

D. Operational Tests:
   1. Perform operational tests in the presence of Owner and Architect.
   2. At an agreed time, and the building occupied with normal building traffic, conduct tests to verify performance.
      a) Furnish event recording of each landing call registrations, time initiated, and response time throughout entire working day.

3.6 ADJUSTING

A. Adjust for smooth acceleration and deceleration of car to minimize passenger discomfort.

B. Adjust with automatic floor leveling feature at each floor landing to reach 1/4 inch maximum from flush with sill.

3.7 CLEANING

A. See Section 01 7000 - Execution and Closeout Requirements for additional requirements.

B. Remove protective coverings from finished surfaces.

C. Clean surfaces and components in accordance with manufacturers written instructions.

3.8 CLOSEOUT ACTIVITIES

A. See Section 01 7800 - Closeout Submittals for closeout submittals.

B. Demonstrate proper operation of equipment to Owner's designated representative.

3.9 PROTECTION

A. Do not permit construction traffic within car after cleaning.

B. Protect installed products until Date of Substantial Completion.

C. Touch up, repair, or replace damaged products and materials before Date of Substantial Completion.

END OF SECTION 14 2100

SECTION 26 2726 - WIRING DEVICES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Wall switches.

B. Receptacles.

C. Wall plates.

1.2 RELATED REQUIREMENTS

A. Division 01 – General Requirements

B. Division 09 - Finishes

C. Section 260400 – General Conditions for Electrical Trades

D. Section 260519 - Electrical Power Conductors and Cables.

E. Section 260526 - Grounding and Bonding for Electrical Systems.

F. Section 260503 – Equipment Wiring Connections.

G. Section 260533 – Raceways and Boxes for Electrical Systems.

H. Section 260553 - Identification for Electrical Systems.

I. Section 260943 - Networked Lighting Controls.

J. Section 262913 - Enclosed Controllers.

1.3 REFERENCE STANDARDS

A. FS W-C-596 - Connector, Electrical, Power, General Specification for; Revision H.

B. FS W-S-896 - Switches, Toggle (Toggle and Lock), Flush-mounted (General Specification); Revision G.

C. NECA 1 - Standard for Good Workmanship in Electrical Construction.

D. NECA 130 - Standard for Installing and Maintaining Wiring Devices.

E. NEMA WD 1 - General Color Requirements for Wiring Devices.

F. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

G. UL 20 - General-Use Snap Switches; Current Edition, Including All Revisions.

H. UL 498 - Attachment Plugs and Receptacles; Current Edition, Including All Revisions.

I. UL 514D - Cover Plates for Flush-Mounted Wiring Devices; Current Edition, Including All Revisions.

J. UL 943 - Ground-Fault Circuit-Interrupters; Current Edition, Including All Revisions.

K. UL 1310 - Class 2 Power Units; Current Edition, Including All Revisions.

L. UL 1449 - Standard for Surge Protective Devices; Current Edition, Including All Revisions.

M. UL 1472 - Solid-State Dimming Controls; Current Edition, Including All Revisions.

N. UL 1917 - Solid-State Fan Speed Controls; Current Edition, Including All Revisions.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
1. Coordinate the placement of outlet boxes with millwork, furniture, equipment, etc. installed under other sections or by others.
2. Coordinate wiring device ratings and configurations with the electrical requirements of actual equipment to be installed.
3. Coordinate the placement of outlet boxes for wall switches with actual installed door swings.
4. Coordinate the installation and preparation of uneven surfaces, such as split face block, to provide suitable surface for installation of wiring devices.
5. Notify Architect of any conflicts or deviations from the contract documents to obtain direction prior to proceeding with work.

B. Sequencing:
1. Do not install wiring devices until final surface finishes and painting are complete.

1.5 SUBMITTALS

A. See Division 01 - General Requirements.

B. Product Data: Provide manufacturer's catalog information showing dimensions, colors, and configurations.
1. Wall Dimmers: Include derating information for ganged multiple devices.
2. Surge Protection Receptacles: Include surge current rating, voltage protection rating (VPR) for each protection mode, and diagnostics information.

C. Samples: One for each type and color of device and wall plate specified.

D. Certificates for Surge Protection Receptacles: Manufacturer's documentation of listing for compliance with UL 1449.

E. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

F. Operation and Maintenance Data:
1. Wall Dimmers: Include information on operation and setting of presets.
2. GFCI Receptacles: Include information on status indicators.
3. Surge Protection Receptacles: Include information on status indicators.

G. Project Record Documents: Record actual installed locations of wiring devices.

H. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
1. See Division 01 - General Requirements, for additional provisions.
2. Screwdrivers for Tamper-Resistant Screws: Two for each type of screw.
3. Extra Keys for Locking Switches: Two of each type.
4. Extra Surge Protection Receptacles: Two of each type.
5. Extra Wall Plates: One of each style, size, and finish.

1.6 QUALITY ASSURANCE

A. Conform to requirements of NFPA 70.

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

D. Products: Listed, classified, and labeled as suitable for the purpose intended.

E. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.7 DELIVERY, STORAGE, AND PROTECTION

A. Store in a clean, dry space in original manufacturer's packaging until ready for installation.

PART 2 PRODUCTS

2.1 WIRING DEVICE APPLICATIONS

A. Provide wiring devices suitable for intended use and with ratings adequate for load served.

B. For single receptacles installed on an individual branch circuit, provide receptacle with ampere rating not less than that of the branch circuit.

C. Provide weather resistant GFCI receptacles with specified weatherproof covers for receptacles installed outdoors or in damp or wet locations.

D. Provide tamper resistant receptacles for receptacles where indicated on the drawings.

E. Provide GFCI protection for receptacles installed within 6 feet of water source.

F. Provide GFCI protection for receptacles installed in dwelling unit kitchens.

G. Provide GFCI protection in other than dwelling units for all single-phase receptacles rated 150 volts to ground or less and all three-phase receptacles rated 150 volts to ground or less, 100 amperes of less in: Bathrooms, Kitchens and on Rooftops

H. Provide GFCI protection for receptacles serving electric drinking fountains.

I. Unless noted otherwise, do not use combination switch/receptacle devices.

2.2 WALL SWITCHES:

A. See Section 260943 – Networked Lighting Controls for specifications.

2.3 RECEPTACLES

A. Manufacturers:
   1. Hubbell Incorporated
   2. Leviton Manufacturing Company, Inc.
   3. Pass & Seymour, a brand of Legrand North America, Inc.
   4. Substitutions: See Division 01 - General Requirements.
   5. Source Limitations: Where wall controls are furnished as part of lighting control system, provide accessory matching receptacles and wallplates by the same manufacturer in locations indicated.

B. Receptacles - General Requirements: Self-grounding, complying with NEMA WD 1 and NEMA WD 6, and listed as complying with UL 498, and where applicable, FS W-C-596; types as indicated on the drawings.
   1. Wiring Provisions: Terminal screws for side wiring or screw actuated binding clamp for back wiring with separate ground terminal screw.
   2. NEMA configurations specified are according to NEMA WD 6.

3. Hospital Grade Receptacles: Listed as complying with UL 498 Supplement SD, with green dot hospital grade mark on device face.
4. Body color:
   a. General Purpose Receptacles: color by Architect.
   b. Emergency, [Critical Branch], [Equipment Branch] receptacles: Red.

C. Convenience Receptacles:
1. Standard Convenience Receptacles: Industrial specification grade, 20A, 125V, NEMA 5-20R; single or duplex as indicated on the drawings.
2. Automatically Controlled Convenience Receptacles: Industrial specification grade, 20A, 125V, NEMA 5-20R; controlled receptacle marking on device face per NFPA 70; single or duplex as indicated on the drawings.
3. Isolated Ground Convenience Receptacles: Industrial specification grade, 20A, 125V, NEMA 5-20R, with ground contacts isolated from mounting strap; isolated ground triangle mark on device face; single or duplex as indicated on the drawings.
4. Weather Resistant Convenience Receptacles: Industrial specification grade, 20A, 125V, NEMA 5-20R, listed and labeled as weather resistant type complying with UL 498 Supplement SE suitable for installation in damp or wet locations; single or duplex as indicated on the drawings.
5. Tamper Resistant Convenience Receptacles: Industrial specification grade, 20A, 125V, NEMA 5-20R, listed and labeled as tamper resistant type; single or duplex as indicated on the drawings.
6. Tamper Resistant and Weather Resistant Convenience Receptacles: Industrial specification grade, 20A, 125V, NEMA 5-20R, listed and labeled as tamper resistant type and as weather resistant type complying with UL 498 Supplement SE suitable for installation in damp or wet locations; single or duplex as indicated on the drawings.
7. Illuminated Convenience Receptacles: Hospital grade, 20A, 125V, NEMA 5-20R; illuminated face or indicator light to indicate power is being supplied to receptacle; single or duplex as indicated on the drawings.

D. GFCI Receptacles:
1. GFCI Receptacles - General Requirements: Self-testing, with feed-through protection and light to indicate ground fault tripped condition and loss of protection; listed as complying with UL 943, class A.
   a. Provide test and reset buttons of same color as device.
2. Standard GFCI Receptacles: Industrial specification grade, duplex, 20A, 125V, NEMA 5-20R, rectangular decorator style.
3. Weather Resistant GFCI Receptacles: Industrial specification grade, duplex, 20A, 125V, NEMA 5-20R, rectangular decorator style, listed and labeled as weather resistant type complying with UL 498 Supplement SE suitable for installation in damp or wet locations.
4. Tamper Resistant GFCI Receptacles: Industrial specification grade, duplex, 20A, 125V, NEMA 5-20R, rectangular decorator style, listed and labeled as tamper resistant type.
5. Tamper Resistant and Weather Resistant GFCI Receptacles: Industrial specification grade, duplex, 20A, 125V, NEMA 5-20R, rectangular decorator style, listed and labeled as tamper resistant type and as weather resistant type

complying with UL 498 Supplement SE suitable for installation in damp or wet locations.

E. USB Charging Devices:
1. USB Charging Devices - General Requirements: Listed as complying with UL 1310.
   a. Charging Capacity - Two-Port Devices: 2.1 A, minimum.
   b. Charging Capacity - Four-Port Devices: 4.2 A, minimum.
2. USB Charging/Tamper Resistant Receptacle Combination Devices: Two-port USB charging device and receptacle, commercial specification grade, duplex, 20A, 125V, NEMA 5-20R, listed and labeled as tamper resistant type; rectangular decorator style.
3. USB Charging Noncombination Devices: Four-port; rectangular decorator style.

F. Surge Protection Receptacles:
1. Surge Protection Receptacles - General Requirements: Listed and labeled as complying with UL 1449, Type 2 or 3.
   a. Energy Dissipation: Not less than 240 J per mode.
   b. Protected Modes: L-N, L-G, N-G.
   c. UL 1449 Voltage Protection Rating (VPR): Not more than 700 V for L-N, L-G modes and 1200 V for N-G mode.
   d. Diagnostics:
      1) Visual Notification: Provide indicator light to report functional status of surge protection.
      2) Audible Notification: Provide switchable audible alarm to report that surge protection is not functional.
2. Standard Surge Protection Receptacles: Industrial specification grade, duplex, 20A, 125V, NEMA 5-20R, rectangular decorator style.

G. Locking Receptacles: Industrial specification grade, configuration as indicated on the drawings.
1. Standard Locking Convenience Receptacles: Single, 20A, 125V, NEMA L5-20R.
2. Special Purpose Locking Receptacles: refer to drawings and schedules for NEMA locking configuration.

H. Special Purpose Receptacles: Industrial specification grade, straight blade grounding devices.
1. Refer to drawings and schedules for NEMA configuration.

I. Clock Hanger Receptacles: Single, 15A, 125V, NEMA 5-15R.

~~I.~~J. Overhead Cord Reel: Industrial cord reel, with Hubbell HBL4729C twist-lock input connector, 25' SJO Cable Jacket, 12/3, Nema 5-20R connector for use by owner. White housing. Shall be provided with the following: Pivot Base Hubbell #HBLI340PH; Mounting Bracket Hubbell #HBLIMB; Ball Stop Hubbell #HLI12BS

2.4 WALL PLATES

A. Manufacturers:
1. Hubbell Incorporated
2. Leviton Manufacturing Company, Inc.
3. Pass & Seymour, a brand of Legrand North America, Inc.
4. Substitutions: See Division 01 - General Requirements.
5. Source Limitations: Where wall controls are furnished as part of lighting control system, provide accessory matching receptacles and wallplates by the same manufacturer in locations indicated.

B. Wall Plates: Comply with UL 514D.
1. Configuration: One piece cover as required for quantity and types of corresponding wiring devices.
2. Screws: Metal with slotted heads finished to match wall plate finish.
3. Provide screwless wallplates with concealed mounting hardware where indicated.

C. Nylon Wall Plates: Smooth finish, high-impact thermoplastic.

D. Stainless Steel Wall Plates: Brushed satin finish, Type 302 stainless steel.

E. Brass Wall Plates: Brushed satin finish, factory-coated to inhibit oxidation.

F. Aluminum Wall Plates: Smooth satin finish, clear anodized, factory-coated to inhibit oxidation.

G. Chrome Wall Plates: Smooth finish, chrome plated steel.

H. Galvanized Steel Wall Plates: Rounded corners and edges, with corrosion resistant screws.

I. Premarked Wall Plates: Factory labeled as indicated; hot stamped for nylon wall plates and engraved for metal wall plates.

J. Weatherproof Covers for Damp Locations: Gasketed, cast aluminum, with self-closing hinged cover and corrosion-resistant screws; listed as suitable for use in wet locations with cover closed.

K. Weatherproof Covers for Wet Locations: Gasketed, cast aluminum, with hinged lockable cover and corrosion-resistant screws; listed as suitable for use in wet locations while in use with attachment plugs connected and identified as extra-duty type.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as shown on the drawings.

B. Verify that outlet boxes are installed in proper locations and at proper mounting heights and are properly sized to accommodate devices and conductors in accordance with NFPA 70.

C. Verify that wall openings are neatly cut and will be completely covered by wall plates.

D. Verify that final surface finishes are complete, including painting.

E. Verify that floor boxes are adjusted properly.

F. Verify that branch circuit wiring installation is completed, tested, and ready for connection to wiring devices.

G. Verify that conditions are satisfactory for installation prior to starting work.

3.2 PREPARATION

A. Provide extension rings to bring outlet boxes flush with finished surface.

B. Clean dirt, debris, plaster, and other foreign materials from outlet boxes.

3.3 INSTALLATION

A. Perform work in accordance with NECA 1 (general workmanship) and, where applicable, NECA 130, including mounting heights specified in those standards unless otherwise indicated.

B. Coordinate locations of outlet boxes provided under Section 260533 as required for installation of wiring devices provided under this section.
   1. Mounting Heights: Unless otherwise indicated, as follows:
      a. Wall Switches: 48 inches above finished floor.
      b. Wall Dimmers: 48 inches above finished floor.
      c. Fan Speed Controllers: 48 inches above finished floor.
      d. Receptacles: 18 inches above finished floor or 6 inches above counter.
         1) Install convenience GFCI type receptacles 36 to 48 inches above roof deck. Or at designated heights as indicated on drawings.
   2. Orient outlet boxes for vertical installation of wiring devices unless otherwise indicated.
   3. Where multiple receptacles, wall switches, or wall dimmers are installed at the same location and at the same mounting height, gang devices together under a common wall plate.
   4. Locate wall switches on strike side of door with edge of wall plate 3 inches from edge of door frame. Where locations are indicated otherwise, notify Architect to obtain direction prior to proceeding with work.
   5. Locate receptacles for electric drinking fountains concealed behind drinking fountain according to manufacturer's instructions.

C. Install wiring devices in special application enclosures per manufacturer’s instructions, provide stainless steel cover plates.

D. Install wiring devices in accordance with manufacturer's instructions.

E. Install permanent barrier between ganged wiring devices when voltage between adjacent devices exceeds 300 V.

F. Where required, connect wiring devices using pigtails not less than 6 inches long. Do not connect more than one conductor to wiring device terminals.

G. Connect wiring devices by wrapping conductor clockwise 3/4 turn around screw terminal and tightening to proper torque specified by the manufacturer. Where present, do not use push-in pressure terminals that do not rely on screw-actuated binding.

H. Unless otherwise indicated, connect wiring device grounding terminal to branch circuit equipment grounding conductor and to outlet box with bonding jumper. When stranded conductors are used in lieu of solid, use insulated crimp on fork terminals for device terminations. Do not place bare stranded conductors directly under screw terminals.

I. For isolated ground receptacles, connect wiring device grounding terminal only to identified branch circuit isolated equipment grounding conductor. Do not connect grounding terminal to outlet box or normal branch circuit equipment grounding conductor.

J. Provide GFCI receptacles with integral GFCI protection at each location indicated. Do not use feed-through wiring to protect downstream devices.

K. Where split-wired duplex receptacles are indicated, remove tabs connecting top and bottom receptacles.

L. Install wiring devices plumb and level with mounting yoke held rigidly in place.

M. Install wall switches with OFF position down.

N. Install wall dimmers to achieve full rating specified and indicated after derating for ganging as instructed by manufacturer.

O. Do not share neutral conductor on branch circuits utilizing wall dimmers.

P. Install vertically mounted receptacles with grounding pole on top and horizontally mounted receptacles with grounding pole on left.

Q. Install wall plates to fit completely flush to wall with no gaps and rough opening completely covered without strain on wall plate. Repair or reinstall improperly installed outlet boxes or improperly sized rough openings. Do not use oversized wall plates in lieu of meeting this requirement.

R. Install blank wall plates on junction boxes and on outlet boxes with no wiring devices installed or designated for future use.

S. Identify wiring devices in accordance with Section 260553.

3.4 FIELD QUALITY CONTROL

A. See Division 01 - General Requirements.

B. Inspect each wiring device for damage and defects.

C. Operate each wall switch, wall dimmer, and fan speed controller with circuit energized to verify proper operation.

D. Test each receptacle to verify operation and proper polarity.

E. Test each GFCI protected receptacle for proper tripping operation according to manufacturer's instructions.

F. Inspect each surge protection receptacle to verify surge protection is active.

G. Correct wiring deficiencies and replace damaged or defective wiring devices.

3.5 ADJUSTING

A. Adjust devices and wall plates to be flush and level.

B. Adjust presets for wall dimmers according to manufacturer's instructions as directed by Architect.

3.6 CLEANING

A. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

END OF SECTION

SECTION 32 0529 - GLACIAL BOULDERS FOR EXTERIOR IMPROVEMENTS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Glacial Boulders.

B. Related Requirements:

1. Section 017419 - Construction and Demolition Waste Management and Disposal.

2. Division 01 Section(s) "Construction Waste Management and Disposal" and "Sustainability Compliance Procedures" for sustainability requirements

3. Section 31 2200 - Grading: Preparation of site for boulder placement.

4. Section 31 2300 Excavation, Backfill, Compaction and Dewatering: Excavation for installing concrete footings.

1.3 SUBMITTALS

A. CTHPB Documentation Submittals: Comply with Section 01 3566.42 – Sustainability Compliance Procedures and provide the following in addition to other submittals:

1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

B. Photographs for Initial Selection: For each source of glacial boulders, provide at least ten photographs of all sizes of boulders. Provide at least three sources from which the Landscape Architect is to select.

C. Photographs for Verification:
1. For each boulder indicated, include at least four photographs of three potential boulders

considered for use. Photographs are to exhibiting extremes of the full range of color and other visual characteristics. If fewer than the required number of boulders are selected from the submitted photographs, additional photographs shall be submitted for selection.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain boulders through one source from a single supplier.

B. Boulder Review and Selection: Landscape Architect may observe review and select individual boulders either at the source or at site before placement for compliance with requirements and may reject unsatisfactory boulders at any time during progress of work. Remove rejected boulders immediately from Project site.

1. Notify Landscape Architect of sources of boulders seven days in advance of delivery to site.

C. Pre-installation conference: Conduct conference at project site to comply with requirements in Section 01 3000 - Administrative Requirements. The purpose of the conference is to meet with Landscape Architect on-site to select boulders to be used.

PART 2 PRODUCTS

2.1 LEED PERFORMANCE REQUIREMENTS

A. For all permanently installed products and materials related to the work of this Section, provide products and materials that meet the Project's LEED performance criteria as outlined in PART 2–PRODUCTS of Section 018113 – Sustainable Design Requirements.

2.2 STONE SOURCE

A. Varieties and Sources: Boulders to be sourced on site, as possible. If insufficient quality or quantity can be extracted from the site, obtain materials of each type from same source for the entire project. Approval of stone supplier is required prior to purchase.

2.3 GLACIAL BOULDERS

A. Boulders: ~~Off-site~~ Shall be selected from on-Site boulders and shall be randomly sized. Boulder size shall vary from the maximum size to the minimum size. No boulders shall be obtained from ~~on-~~off-site unless approved by the Landscape Architect.
   1. Boulders shall be naturally rounded glacial erratics as found in glacial till deposits on-site, and to be of solid basalt, sedimentary or granitic naturally occurring stone, free from flaking, decomposition or weathering.
   2. Boulders shall not be stone material from ledge excavations.
   3. Minimum Size: 4 feet by 3 feet by 3 feet.
   4. Maximum Size: No maximum however some of the largest should be at least be 8 feet by 6 feet by 6 feet.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for correct and level finished grade, mounting surfaces, installation tolerances, and other conditions affecting performance.
   1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 GLACIAL BOULDERS

A. Install boulders at locations, elevations and height as indicated on the Drawings and as directed by Landscape Architect.

B. Set firmly in place with approximately half the boulder exposed as indicated on the Drawings.

3.3 CLEANUP AND PROTECTION

A. After completing installation of boulders, remove spots, dirt, and debris.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 3113 - CHAIN LINK FENCES AND GATES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

1.2 SUMMARY

A. Section Includes:

1. Chain Link Fence.

a. Chicanes.

b. Baseball/Softball backstop with hood.

c. Baseball/Softball sideline and dugout fences.

d. Field Perimeter fence

e. Synthetic Turf fence (Alternate No. S1).

f. Tennis court fence.

2. Posts, rails, and frames - polymer coated.

3. Wire fabric - polymer coated.

4. Concrete for footings.

5. Manual swing and / or slide gates with related hardware.

a. Swing gates.

b. Slide gates.

B. Related Requirements:

a. Division 01 Section(s) "Construction Waste Management and Disposal" and "Sustainability Compliance Procedures" for sustainability requirements

b. Section 03 3000 - Cast-in-Place Concrete: Concrete anchorage for posts.

1.3 REFERENCE STANDARDS

A. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware 2016a.

B. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength 2018a.

C. ASTM F567 - Standard Practice for Installation of Chain-Link Fence 2014a.

D. ASTM F668 - Standard Specification for Polyvinyl Chloride (PVC) and Other Organic Polymer-Coated Steel Chain-Link Fence Fabric 2017.

E. ASTM F1043 - Standard Specification for Strength and Protective Coatings on Steel Industrial Fence Framework 2018.

F. ASTM F1083 - Standard Specification for Pipe, Steel, Hot-Dipped Zinc-Coated (Galvanized) Welded, for Fence Structures 2018.

G. CLFMI CLF-FIG0111 - Field Inspection Guide 2014.

H. CLFMI CLF-PM0610 - Product Manual 2017.

I. CLFMI WLG 2445 - Wind Load Guide for the Selection of Line Post and Line Post Spacing 2018.

J. FS RR-F-191/1D - Fencing, Wire and Post Metal (Chain-Link Fence Fabric) 1990.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on fabric, posts, accessories, fittings and hardware.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 – Sustainability Compliance Procedures and provide the following in addition to other submittals:

1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Design Calculations: For high wind load areas, provide calculations for fence fabric and accessory selection as well as line post spacing and foundation details. See CLFMI WLG 2445 for line post and spacing guidance.

E. Manufacturer's Installation Instructions: Indicate installation requirements and procedures.

F. Field Inspection Records: Provide installation inspection records that include post settings, framework, fabric, barbed wire, fittings and accessories, gates, and workmanship.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than three years of documented experience.

B. Fence Installer: Company with demonstrated successful experience installing similar projects and products, with not less than five years of documented experience.

1.6 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective Work within a one year period after Date of Substantial Completion.

C. Provide manufacturer’s standard warranty for vinyl-coated chain link fence system, minimum of one year.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design: Master Halco, www.masterhalco.com

1. Substitutions:
   a. Stevens Pipe and Steel, www.spsfence.com
   b. Merchants Metals, www.merchantsmetals.com

2.2 COMPONENTS

A. Line Posts: 1.9 inch (48 mm) diameter w/ cap.

B. Corner and Terminal Posts: 2.38 inch (60 mm) diameter w/ cap.

C. Gate Posts: 3-1/2 inch (89 mm) diameter w/ cap.

D. Top and Brace Rail: 1.66 inch (42 mm) diameter, plain end, sleeve coupled.

E. Bottom Rail: 1.66 inch (42 mm) diameter, plain end, sleeve coupled.

F. Gate Frame: 1.66 inch (42 mm) diameter for welded fabrication.

G. Fabric: diamond mesh interwoven wire, top selvage knuckle end closed, bottom selvage twisted tight.

a. Standard Fence Fabric:

1. Mesh Size: 2-inch (50mm).
2. Mesh Gauge: 9-gauge core wire with a dia. of 0.148 inch (3.76mm).

H. Tension Wire: 6 gauge, 0.1920 inch (4.9 mm) thick steel, single strand.

I. Tension and Brace Bands: Pressed steel.

J. Tension Bars: Steel, length not less than 2 inches (50 mm) shorter than full height of chain-link fabric.

K. Tie Wire: Hot-dip galvanized steel wire according to ASTM F626 for attaching chain-link fabric to posts, rails and frames.

2.3 MATERIALS

A. Posts, Rails, and Frames:

a. ASTM A1011/A1011M, Designation SS; hot-rolled steel strip, cold formed to pipe configuration, longitudinally welded construction, minimum yield strength of 50 ksi (345 MPa); zinc coating complying with ASTM F1043 and ASTM F1083.
b. Line Posts: Type I round in accordance with FS RR-F-191/1D.
c. Terminal, Corner, Rail, Brace, and Gate Posts: Type I round in accordance with FS RR-F-191/1D.
d. Comply with CLFMI CLF-PM0610.
e. ASTM F668 polymer-coated

B. Wire Fabric:

a. ASTM F668 polymer-coated steel chain link fabric.
b. Comply with CLFMI CLF-PM0610.
c. Standard Fence:

1. Mesh Size: 2-inch (50mm).
2. Mesh Gauge: 9-gauge core wire with a dia. of 0.148 inch (3.76mm).

C. Concrete for Bases:

a. Shall be as specified in Section 03 3005.

2.4 FENCE COMPONENTS

A. Line Posts: 1.9 inch (48 mm) diameter.

B. Corner and Terminal Posts: 2.38 inch (60 mm) diameter.

C. Fabric: 1-3/4 inch (44 mm) diamond mesh interwoven wire, 6 gage, 0.1920 inch (4.9 mm) thick, top selvage knuckle end closed, bottom selvage knuckle end closed.

2.5 MANUAL GATES AND RELATED HARDWARE

A. Hardware for Single Swinging Gates: 180 degree hinges, 2 for gates up to 60 inches (1,525 mm) high, 3 for taller gates; fork latch with gravity drop and padlock hasp; keeper to hold gate in fully open position.

B. Hardware for Double Swinging Gates: 180 degree hinges, 2 for gates up to 60 inches (1,525 mm) high, 3 for taller gates; drop bolt on inactive leaf engaging socket stop set in concrete, active leaf latched to inactive leaf preventing raising of drop bolt, padlock hasp; keepers to hold gate in fully open position.

C. Hardware for Cantilever Slide Gates, Class 1 with external roller assemblies:

   a. Hangers, Roller Assemblies, and Stops.
   b. Latch: Permitting operation from both sides of gate with provisions for padlocking accessible from both sides of gate.

D. Hinges: Finished to match fence components.

E. Latches: Finished to match fence components.

2.6 ACCESSORIES

A. Caps: Cast steel galvanized; sized to post diameter, set screw retainer and finished to match fence components.

B. Fittings: Sleeves, bands, clips, rail ends, tension bars, fasteners and fittings; steel.

2.7 CHAIN LINK FENCE FINISHES

A. Posts, Components, and Fabric: Vinyl coated over coating of 1.8 ounces per square foot galvanizing (over coating of 550 g/sq m galvanizing).

B. Hardware: Hot-dip galvanized to weight required by ASTM A153/A153M.

C. Accessories: Same finish as fabric.

D. Color(s): Black.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verification of Conditions: Verify that areas are clear of obstructions or debris.

B. Preinstallation Testing: Test areas for ledge.

3.2 PREPARATION

A. Removal: Obstructions or debris.

B. Ground Preparation:

a. Grading shall be completed prior to beginning of installation.

3.3 INSTALLATION

A. Install framework, fabric, accessories and gates to heights indicated on drawings and in accordance with ASTM F567.

B. Set intermediate, terminal, and gate posts plumb, in concrete footings with top of footing 6 inches below finish grade. Slope top of concrete for water runoff.

C. Provide top rail through line post tops and splice with 6 inch (150 mm) long rail sleeves.

D. Install center brace rail on corner gate leaves.

E. Do not stretch fabric until concrete foundation has cured 28 days.

F. Stretch fabric between terminal posts or at intervals of 100 feet (30 m) maximum, whichever is less.

G. Position bottom of fabric 2 inches (50 mm) above finished grade.

H. Fasten fabric to top rail, line posts, braces, and bottom tension wire with tie wire at maximum 15 inches (380 mm) on centers.

I. Attach fabric to end, corner, and gate posts with tension bars and tension bar clips.

J. Install bottom tension wire stretched taut between terminal posts.

K. Do not attach the hinged side of gate to building wall; provide gate posts.

L. Install hardware and gate with fabric to match fence.

M. Provide concrete center drop to footing depth and drop rod retainers at center of double gate openings.

N. Peen all bolts upon installation.

O. Perform three random field inspections confirming proper installation.

3.4 TOLERANCES

A. Maximum Variation From Plumb: 1/4 inch (6 mm).

B. Maximum Offset From True Position: 1 inch (25 mm).

C. Do not infringe on adjacent property lines.

3.5 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for additional requirements.

B. Layout: Verify that fence installation markings are accurate to design, paying attention to gate locations, underground utilities, and property lines.

C. Post Settings: Randomly inspect three locations against design for:

a. Hole diameter.
b. Hole depth.
c. Hole spacing.

D. Fence Height: Randomly measure fence height at three locations or at areas that appear out of compliance with design.

E. Gates: Inspect for level, plumb, and alignment.

F. Workmanship: Verify neat installation free of defects. See CLFMI CLF-FIG0111 for field inspection guidance.

3.6 CLEANING

A. Leave immediate work area neat at end of each work day.

B. Clean jobsite of excess materials; scatter excess material from post hole excavations uniformly away from posts. Remove excess material if required.

C. Clean fence with mild household detergent and clean water rinse well.

D. Remove mortar from exposed posts and other fencing material using a 10 percent solution of muriatic acid followed immediately by several rinses with clean water.

E. Touch up scratched surfaces using materials recommended by manufacturer. Match touched-up paint color to factory-applied finish.

F. See Section 01 7419 - Construction Waste Management and Disposal, for additional requirements.

3.7 CLOSEOUT ACTIVITIES

A. See Section 01 7800 - Closeout Submittals, for closeout submittals.

END OF SECTION 32 3113

SECTION 333115 – TELEVISION INSPECTION OF PIPELINES

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes

1. Closed-circuit television (CCTV) inspection of pipelines

1.2 SUBMITTALS

A. Manufacturer's product data for the television inspection equipment, including camera, television monitor, carriage, recording device, signal conductor cable, etc.

B. Information on database/software that will be used to store and review inspection data.

C. Sample of television inspection log that will be used. Provide a legend for all abbreviations, symbols, codes, etc. used on the logs.

D. Documentation submittals

1. Two printed copies of the television inspection reports, provided weekly during the course of the CCTV inspection work.

2. Two copies of the television inspection video and voice audio recordings saved onto DVD media, provided weekly during the course of the CCTV inspection work. The electronic file names must be labeled to identify the sewer segment televised by street and upstream and downstream manholes (for example "Washington Avenue SMH 1 – SMH 2").

1.3 QUALITY ASSURANCE

A. Personnel shall have confined space entry and other training as appropriate for the work to be performed.

PART 2 PRODUCTS

2.1 EQUIPMENT

A. Provide all equipment necessary to complete the video inspections with voice audio recordings, including, but not limited to, inspection studio, television camera, and video capture equipment.

B. The inspection equipment shall be capable of inspecting a minimum of 700 feet of pipe where entry into the pipe can only be made from one end. The equipment shall be capable of providing a picture of acceptable quality at these maximum lengths, regardless of the vibration caused by normal movement of the camera and the length of the signal conductor cable between the camera and the recording device.

C. The inspection equipment shall be capable of clearly televising the interior of a six inch diameter pipe and all larger sizes.

D. The television camera used for the inspection shall be one specifically designed and constructed for such inspection.

E. Lighting for the camera shall be suitable to allow a clear picture of the entire periphery of the pipe.

F. The camera shall be waterproof and operative in 100% humidity conditions.

G. The camera, television monitor, and other components of the video system shall be capable of producing a high quality color image with clear definition of pipe internal features.

H. A pan and tilt camera shall be used for the television inspection to provide the ability to view into the laterals to determine the accessibility of the lateral by the lateral inspection system (LIS) camera.

I. The pan and tilt camera shall be capable of 360 degree rotational scan. The tilt arc shall not be less than 225 degrees and the viewing angle shall be a minimum of 300 degrees. The lens position shall be operated remotely. Cameras incorporating mirrors for viewing sides or cameras using exposed rotating heads are not acceptable.

J. The camera shall be an auto-iris type with remote controlled manual override. The adjustment of focus and iris shall provide a minimum focal range of from 6 inches in front of the camera lens to infinity.

K. The distance along the pipe in focus from the initial point of observation shall be a minimum of twice the vertical height of the pipe.

L. The illumination must be such as to allow an even distribution of light, which will produce a clear picture around the pipe perimeter, regardless of diameter and without the loss of contrast, flare out of picture, or shadowing. The lighting system shall also minimize reflective glare and the intensity shall be fully adjustable. The camera lighthead shall include a high-intensity side viewing lighting system to allow illumination of internal sections of lateral pipe connections.

M. The television studio shall be insulated against noise and extremes in temperature and shall be large enough for two people for the purpose of viewing the television monitor while the inspection is in progress. The television studio shall be mounted on a mobile vehicle which allows safe and orderly movement of the inspection equipment.

N. The television monitor screen shall be not less than 17 inches, measured on the diagonal.

O. The television camera, monitor, and other components of the video system shall be capable of receiving and transmitting a picture having not less than 500 lines of resolution.

P. The camera shall be mounted on a self-propelled vehicle or skid assembly that is able to ride over obstructions and cushion the camera against shock. The skid shall also have guards to keep the camera in line in the event of a turnover due to an obstruction.

Q. The television inspection equipment shall meet the following criteria:

1. Color: The following colors shall be clearly differentiated: white, yellow, cyan, green, red, blue, and black.

2. Linearity: The background grid shall show squares of equal size, without convergence or divergence over the whole picture. The center circle shall appear round and have the correct height and width relationship.

3. Resolution: The live picture shall be displayed on a monitor capable of providing a clear, stable image free of electrical interference with a minimum horizontal resolution not less than 500 lines.

4. Color Consistency: To ensure that the camera shall provide similar results when used with its own illumination source, the lighting shall be fixed in intensity prior to commencing the survey. In order to ensure color consistency, generally no variation in illumination shall take place during the survey.

R. The monitor display shall incorporate an automatically updated record in feet and tenths of a foot of the distance along the pipe from the cable calibration point to the center point of the camera. Use a suitable metering device which enables the length of the pipe being inspected to be accurately measured to within ±0.2 feet.

PART 3 EXECUTION

3.1 PREPARATION

A. Reduce flow level in pipe being inspected by bypass pumping or by jetting to meet the requirements described below, unless otherwise agreed to:

Maximum Depth of Flow for Television Inspection	
6 inch to 10 inch pipe	20% of pipe diameter
12 inch to 24 inch pipe	25% of pipe diameter
Greater than 24 inch pipe	30% of pipe diameter

B. Alternatively, perform television inspection during off-peak hours when flow depths are lower.

3.2 INSPECTION

A. Television inspect pipes of main line sewers as shown on the Drawings.

B. Move the camera through the pipe at a moderate rate, stopping where necessary to permit proper documentation of all pertinent features/defects. In no case will the television camera be pulled at a speed greater than 30 feet per minute.

C. Use manual winches, power winches, TV cable, powered rewinds or other devices to move the camera through the pipe that do not obstruct the camera view or interfere with proper documentation of the pipe conditions. All winches shall be stable with either locking or ratcheting drums.

D. If, during the inspection operation, the television camera will not pass through the entire pipe section from one direction, set up equipment so that the inspection can be performed from the opposite direction, if possible.

E. When manually operated winches are used to pull the television camera through the pipe, use portable radios, telephones or other suitable means of communication between members of the crew located at each end of the pipe section being inspected to insure good communications.

F. The importance of accurate distance measurements is emphasized. Measurement for location of pipe features/defects shall be by means of a meter device. Marking on the

cable or a similar method will not be allowed. Accuracy of the distance meter shall be checked by use of a measuring wheel, tape, or other suitable distance measuring device.

G. Record the following pipe features/defects, at a minimum, and report them on the inspection logs in accordance with National Association of Sewer Service Companies (NASSCO) developed Pipeline Assessment Certification Program (PACP) methodology:

1. Pipe diameter and material of construction.

2. Joint spacing and the location of joints which appear to be damaged, incorrectly installed, shifted, open, or in any way deficient.

3. Location, size and orientation (clock position) of connecting pipes (such as building services in a sewer).

4. Description of severity and location of pipe structural deficiencies such as cracks, breaks, collapses, corrosion/erosion, etc.

5. Description of severity and location of pipe obstructions (such as sediment, roots or grease).

6. Description of severity and location of grade concerns, such as pipe sags, especially in gravity pipes.

7. The locations where infiltration is entering the pipe and/or connecting pipes and an estimated infiltration rate at each location.

H. Position the camera at the location of connecting pipes, and pan/tilt appropriately in order to obtain a clear view of the interior of the connecting pipe. Make note of any defects or infiltration visible within the connecting pipes.

I. Indicate direction of survey and distance to each feature/defect from the beginning of the inspection.

J. Provide an audio description of each feature/defect observed.

K. Report on the logs weather conditions, ground conditions, and surface cover.

L. Repair pipe damaged as a result of the inspections at no cost to the Owner.

M. Position camera head to reduce risk of picture distortion and along the longitudinal axis of the pipe. In circular pipes, position camera lens centrally, ±10% of the vertical sewer dimension. In non-circular pipes, position camera lens at mid-height and centered horizontally.

3.3 DOCUMENTATION

A. Television Inspection Logs

1. Prepare television inspection logs describing features/defects identified and their locations.

B. Video Recordings

1. Provide continuous digital video recordings of the inspection view as it appears on the television monitor. The image recorded shall be equal to or better than the quality of the original picture on the television monitor.

2. Provide a visual and voice audio description record of the pipe features/defects observed recorded simultaneously as original live recordings.

3. The audio portion of the recording shall be sufficiently free of electrical interference and background noise to produce an oral report that is clear, complete, and easily discernable. The audio portion of the video report shall include the location and identification of the pipe section inspected, the direction of travel, a description of the features/defects encountered, and the distance traveled.

4. Provide digitally formatted television inspection video/audio recordings saved onto DVD media with individual digital files for each recording completed. DVDs shall be properly identified by video numbers, locations, and project name.

5. Video recordings shall, by electronic means, display continuously and simultaneously generated transparent digital information as described below:

    a. At the start of each pipe section inspected:

        1) Size and length of pipe and pipe material

        2) Pipe section reference number

        3) Date of inspection

        4) Road name/location (city/town)

        5) Direction of inspection (upstream or downstream)

        6) Starting time of inspection

    b. Continuously during the inspection:

        1) Automatic update of the camera's position, in feet and tenths of feet from the beginning of the pipe section

        2) Upstream and downstream locations (manholes reference numbers for sewers and drains).

EXECUTIVE SUMMARY

Langan CT, Inc. (Langan) completed a Phase I Environmental Site Assessment (ESA) of the Central Middle School property at 9 Indian Rock Lane in Greenwich, Fairfield County, Connecticut (the "subject property") under the written authorization of Construction Solutions Group, LLC (the "Client" and "user").

The Phase I ESA was completed following the guidelines of ASTM International Standard Practice E1527-21 (ASTM E1527-21), the U.S. Environmental Protection Agency's (EPA) All Appropriate Inquiries (AAI) Rule, and industry standard practice. The user requested this ESA as part of their environmental due diligence related to a potential transaction involving the subject property.

Subject Property Layout

The subject property is improved with an approximately 77,500-square-foot school building. The northeastern portion of the building is two stories; the rest of the building is one story. The building is on slab with no basements. The building is in the southern portion of the subject property along Indian Rock Lane.

The school grounds are developed with parking lots along the western and southern building exteriors, tennis courts adjoining to the east of the building, and an approximately 5.4-acre field with two baseball diamonds adjoining to the north. The rest of the parcel is undeveloped.

Subject Property Current Use

Central Middle School operates as a middle school, with approximately 500 students and 90 staff members from 6th to 8th grade. The subject property is owned by the "Town of Greenwich c/o Finance Dept."

Subject Property History

Prior to the 1920s, the subject property was undeveloped. From the 1920s to the 1950s, the subject property was developed with a house and what appears to be barn or garage in the southwestern portion. The rest of the parcel was undeveloped, though portions appeared to be cleared, and what appeared to be a stream was depicted in the southern and central portions of the subject property in aerial photographs. The subject property was first developed with a portion of the current school building in the 1950s; the school was expanded in the early 2000s. No transfers of ownership are listed in town records.

Langan completed environmental due diligence of the subject property using the scope guidelines and inherent limitations of ASTM E1527-21. Table ES-1 presents the conclusions of the Phase I ESA.

Table ES-1 Conclusions, Findings and Opinions

ASTM E1527-21 Scope Items
Recognized Environmental Conditions (RECs)
Underground Storage Tank (UST): A 7,200-gallon heating oil UST (identification "T1", installation date July 1, 1958) is listed as "currently in use" at the subject property. According to the site contact, the UST was removed, and the building is heated with natural gas; however, they were not aware of when the tank removal had taken place and no closure documentation was available for review. Therefore, the UST is considered a recognized environmental condition (REC) based on a material threat of a release due its age, construction details, lack of tightness testing results, and lack of closure reporting.
Controlled Recognized Environmental Conditions (CRECs)
Langan did not identify controlled RECs (CRECs).
Historical Recognized Environmental Conditions (HRECs)
Langan did not identify historical RECs (HRECs).
De Minimis Conditions
Langan did not identify de minimis conditions.
Significant Data Gaps
As noted above, information regarding the location and removal of UST T1 previously located on the subject property was requested but not available for review.

1. INTRODUCTION

Langan CT, Inc. (Langan) completed a Phase I Environmental Site Assessment (ESA) of the Central Middle School property at 9 Indian Rock Lane in Greenwich, Fairfield County, Connecticut (the "subject property") under the written authorization of Construction Solutions Group, LLC (the "Client" and "user").

The Phase I ESA was completed following the guidelines of ASTM International Standard Practice E1527-21 (ASTM E1527-21), the U.S. Environmental Protection Agency's (EPA) All Appropriate Inquiries (AAI) Rule, and industry standard practice. The user requested this ESA as part of their environmental due diligence associated with a potential transaction involving the subject property.

1.1. Purpose

The purpose of this Phase I ESA is to identify recognized environmental conditions (RECs) associated with the subject property. This purpose also includes identifying controlled recognized environmental conditions (CRECs), historical recognized environmental conditions (HRECs), de minimis conditions, and significant data gaps. The definitions of REC, CREC, HREC, de minimis condition and other select ASTM terms used in this report are in Section 8.

1.2. Scope of Services

Langan's scope of services consisted of the completion of a Phase I ESA following the guidelines of ASTM E1527-21. Langan's scope of services as it pertains to the elements of a Phase I ESA as specified in ASTM E1527-21 is described below.

1.2.1 Records Review and Local Government Interviews

Langan contracted a third-party provider to search environmental regulatory databases and provide historical records. The database search included select federal, state, local and tribal standard source environmental databases within the approximate search radii specified by ASTM E1527-21.

Langan submitted Freedom of Information Act (FOIA) requests to supplement environmental database listing information. The FOIA requests were submitted to the town of Greenwich town clerk, fire marshal, and health department, as well as to the Connecticut Department of Energy and Environmental Protection (CTDEEP) file room. Langan also reviewed online records including the CTDEEP Document Online Search Portal (DOSP), Environmental Land Use Restriction (ELUR) Map, Spill Incidents database, CTDEEP Registered Underground Storage Tanks (USTs) and Hazardous Waste Manifest databases, U.S. Geological Survey (USGS) mapping, and EPA databases. Agency FOIA-requested information, where received, is discussed in relevant sections of this report and referenced in Section 7.

Langan supplemented the third-party-provided historical records with review of online historical record sources including Google Earth Pro and NETR Online.

1.2.2 Site Reconnaissance and Owner/Operator/Occupant Interviews

Langan completed the site reconnaissance on November 12, 2023. A member of the custodial staff accompanied Elyssa Schwendy of Langan during the site reconnaissance and answered interview questions. The site reconnaissance focused on the spatial extent of the subject property and associated structures and progressed to the adjoining and surrounding properties. The adjoining properties were observed from the subject property or from public right-of-ways. The weather at the time of the site reconnaissance was approximately 80 degrees Fahrenheit (°F) and sunny. Limiting conditions encountered during the site reconnaissance, if any, are discussed in Section 8.3.

1.2.3 Evaluation, Report and Parts Used in Concert

Langan evaluated the pieces of information obtained from the records reviews, site reconnaissance and interviews described above, and from the user as described in Section 1.3 in concert with each other. Langan's findings, opinions, and conclusions are discussed throughout this report. Significant assumptions, or deletions, deviations or exceptions to ASTM E1527-21 are noted in Section 5. and Section 8.3, respectively.

1.2.4 Non-ASTM Scope Services

The scope of services for the Phase I ESA did not include non-scope ASTM considerations, including per- and polyfluoroalkyl substances (PFAS).

1.3. User Responsibilities

Langan requested that the user provide the results of tasks the user is responsible for completing in order to satisfy the requirements of AAI. The tasks include: searching for known environmental liens and activity and use limitations (AULs) filed or recorded against the subject property, and provision of information related to specialized knowledge or experience of the user or the degree of obviousness relative to conditions indicative of releases or threatened releases; actual knowledge of the user regarding environmental liens or AULs related to the subject property; specialized knowledge or experience of the user; reasons for significantly lower purchase prices, and commonly known or reasonably ascertainable information within the local community about the subject property. Langan also requested that the user state the reason the Phase I ESA was requested. A summary of the user's responses is provided in Appendix B and relevant information provided by the user is discussed in applicable sections of this report.

Unless specifically included in the scope of services, Langan did not complete a title search or a search for environmental liens or AULs, as that is the responsibility of the user. If the user requested that Langan complete such searches on the user's behalf, the information was supplied to Langan by a vendor, and to the vendor by government sources; therefore, neither Langan nor the vendor can verify the completeness or accuracy of the title search, or AUL searches.

2. SUBJECT PROPERTY DESCRIPTION AND CURRENT USE

2.1. Location, Legal Description, and Ownership

The approximately 22.3-acre subject property is accessed from Indian Rock Lane, which adjoins to the south; the parcel is adjoined to the west by Stanwich Road and to the east by Orchard Street. The subject property is described by the town of Greenwich with Parcel ID 08-4598/S and is owned by the "Town of Greenwich c/o Finance Dept".

A Subject Property Location Map (Figure 1) is included in Appendix A of this report.

2.2. Physical Setting

The physical setting that includes the geologic, hydrogeologic, hydrologic, and topographic characteristics of the subject property and surrounding area are discussed below.

2.2.1. Topography

The 2018 USGS 7.5-minute quadrangle topographic map for Stamford depicts the developed area of the subject property at an elevation of approximately 50 feet above mean sea level (amsl). The undeveloped portions of the property slope down steeply to the developed portions from an elevation of approximately 90 feet amsl. The regional topography slopes downward to the east-southeast.

2.2.2. Geology

According to the U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) Soil Survey Geographic (SSURGO) data for Fairfield County, soils at the subject property are primarily comprised of Charlton-Chatfield complex, udorthents (smoothed), and udorthents-urban land complex.

According to a geotechnical investigation conducted by Atane Engineers, PC (Atane) in 2022, soils encountered at the subject property were largely consistent with the published geologic descriptions of thin till generally less than 10 to 15 feet thick and including areas of bedrock outcrop where till is absent. It consists predominantly of moderate compact mixture of gray and brown sand, silt, and gravel with inclusion of cobbles and boulders. Trace of organic matter and trace of clay were encountered as well.

According to review of the Bedrock Map of Connecticut, the subject property is within the Harrison Gneiss of the Hawley Formation, which consists of interlayered dark- and light-gray, medium-grained, well-foliated gneiss, composted of andesine, quartz, hornblende, and biotite.

Bedrock outcroppings were observed throughout the undeveloped portions of the subject property.

2.2.3. Hydrogeology

According to the CTDEEP Water Quality Map for Greenwich (dated October 2018), groundwater beneath the subject property is classified as "GA". Class GA designated uses

are "the existing private and potential public or private supplies of water suitable for drinking without treatment and baseflow for hydraulically-connected surface water bodies."

The closest surface water bodies to the subject property are an unnamed pond approximately 240 feet to the east and an unnamed pond associated with Greenwich Creek, approximately 250 feet southwest of the subject property. These ponds and Greenwich Creek are classified as "A". Class A designated uses are "habitat for fish and other aquatic life and wildlife; potential drinking water supplies; recreation; navigation; and water supply for industry and agriculture."

According to the CTDEEP Connecticut Aquifer Protection Areas (APAs) Interactive Map, the subject property is not in a mapped APA.

Information regarding subject property-specific groundwater flow direction is unavailable. Groundwater flow can be influenced by a number of factors such as surface water bodies, wetlands, hydrogeologic and anthropogenic variables. However, based on topographic gradient, it is expected that groundwater generally flows to the east-southeast.

According to a geotechnical investigation conducted by Atane in 2022, groundwater at the subject property was encountered between 6.2 to 10 feet below ground surface (bgs).

A review of the Geocheck section of the Environmental Data Resources (EDR) Regulatory Database Report (Appendix F) did not identify any groundwater monitoring wells on the subject property or within a 1-mile radius.

2.3. Subject Property Description

The subject property is improved with an approximately 77,500-square-foot school building. The northeastern portion of the building is two stories; the rest of the building is one story. The building is on slab with no basements. The building is in the southern portion of the subject property along Indian Rock Lane.

The school grounds are developed with parking lots along the western and southern building exteriors, tennis courts adjoining to the east of the building, and an approximately 5.4-acre field with two baseball diamonds adjoining to the north. The rest of the parcel is undeveloped.

A Subject Property Layout Map is provided in Figure 2 of Appendix A. Photographs of the subject property and a checklist documenting Langan's observations relative to the features, activities, uses and conditions outlined in Section 9.4 of ASTM E1527-21 are in Appendix C.

2.4. Current Subject Property Use

Central Middle School operates as a middle school, with approximately 500 students and 90 staff members from 6th to 8th grade.

The following table summarizes subject property utility providers.

Table 2-1 Utility Providers

Utility	Providers
Electricity	Eversource
Natural gas (used for heating)	Connecticut Natural Gas
Water	Aquarion
Sewer	Town of Greenwich

2.5. Hazardous Substances and Petroleum Products

Hazardous substance and petroleum product use was not identified at the subject property. Langan did not observe evidence of leaks, spills, pools of liquid or releases such as staining, or sheens. Additionally, key site managers were unaware of historical uses or releases of hazardous substances or petroleum products at the subject property, other than as described below.

2.5.1. Underground Storage Tanks (USTs)

Historical USTs are discussed in Section 3.2.

2.5.2. Aboveground Storage Tanks (ASTs)

Langan observed a septic holding tank in the boiler room of the school building. According to the site contact, the subject property has always been connected to the public sanitary system; the holding tank was installed when the addition to the school was constructed (see Section 3.1) as part of the expansion of the sanitary system. The tank connects to the rest of the building system and ultimately to the public sanitary system.

2.5.3. Drums, Totes, and Intermediate Bulk Containers

Langan did not observe any drums, totes, or intermediate bulk containers at the subject property.

2.5.4. Other Chemical Storage, Containers, or Equipment

Two locked flammable materials cabinets were observed in a storage area in the school building. The cabinets are used to store chemicals for science experiments. The cabinets were observed to be in good condition with no evidence of any releases, and no floor drains were present in the area.

Langan observed shelves and storage cabinets containing retail-size containers of maintenance-related products and janitorial products throughout the interior of the building. The containers appeared to be in good condition, and no evidence of release was noted. Minor staining was noted on the concrete floor of one of the storage areas; no floor drains were noted in this area and the concrete was observed to be in good condition.

The building contains an electric lift and a hydraulic elevator. The site contact was not sure if the hydraulic fluid was polychlorinated biphenyl (PCB)-containing. Both appeared to be in

good condition, and no evidence of staining or releases was noted within the elevator control room.

Langan observed a pad-mounted transformer along the northwestern exterior of the building. The transformer was not labeled to indicate whether it contained PCBs. Langan did not observe indications of leaks or releases from the transformer.

Minor staining was observed in asphalt-paved parking areas throughout the subject property. The staining appeared consistent with regular use, and the asphalt was observed to be in good condition.

2.6. Air Emissions

Air emission sources at the subject property include heating, ventilation, and air conditioning (HVAC) equipment and natural gas-fired boiler units. Langan did not identify obvious impacts, such as visible emissions or odors, from air emission sources at the subject property.

Langan does not consider the air emissions an environmental concern for the subject property.

2.7. Waste Management

2.7.1. Hazardous Waste

Langan did not observe any hazardous waste on the subject property.

2.7.2. Non-Hazardous Waste

Non-hazardous municipal waste generated at the subject property is collected in trash cans throughout the interior and exterior of the subject property and disposed of in dumpsters at the northwestern exterior of the school building. Some staining was observed on the outside of the dumpsters; however, Langan observed the non-hazardous waste containers to be intact without obvious indications of a release or material threat of a future release.

An aboveground grease trap was observed in the kitchen of the cafeteria. The grease trap appeared to be in good condition with no evidence of a release noted.

2.7.3. Fill Areas or Solid Waste

Langan did not observe areas that were apparently filled or graded by non-natural causes (or filled with material of unknown origin) that suggest the presence of garbage, construction debris, demolition debris, or other solid waste disposal, or mounds or depressions suggesting solid waste disposal.

Historical fill material is discussed in Section 3.3.

2.8. Wastewater

As noted above, sanitary wastewater is discharged to the public sewer system. Floor drains were noted within the boiler room and within the bathrooms throughout the building. No chemicals or petroleum products were noted in these areas, and no evidence of release was observed in the vicinity of the floor drains. A sump is present in the boiler room; it was covered by a metal sheet, which appeared to be in good condition. No evidence of release

was noted in the vicinity of the sump. According to the site contact, additional sumps are in tunnels underneath the school building. These sumps could not be accessed; however, it is considered unlikely that any releases have impacted these areas due to their location.

Langan did not identify evidence of septic systems or cesspools at the subject property.

2.9. Storm Water

Storm water at the subject property percolates through pervious areas or sheet flows to on-site storm drains or the adjoining roadways into the municipal storm sewer system.

Langan did not observe obvious evidence of impacts to storm water pathways such as sheens, residue, or stressed vegetation at the subject property.

3. SUBJECT PROPERTY HISTORY AND RECORDS REVIEW

3.1. Historical Summary

Langan compiled the following summary of the subject property history based on a review of readily available and reasonably ascertainable sources and interviews. Historical resources are provided in Appendix E.

Table 3-1 Subject Property History

Time Period	Historical Discussion
1892 – 1920	The subject property is depicted as undeveloped on topographic maps. A Sanborn map from 1920 suggests that the subject property was subdivided into at least two parcels at this time; however, no development is shown.
1930s – 1950	The earliest available aerial photograph depicts a house and what appears to be a barn or garage in the southwestern portion of the subject property. The rest of the parcel is undeveloped, though portions appear to be cleared. What appears to be a stream is depicted in the southern and central portions of the subject property.
1950 – 2000s	The current school building is first shown in the 1959 aerial photograph, the 1960 topographic map, and a Sanborn map from 1990. According to the Greenwich property card, the first building associated with the school was constructed in 1950, though this is not shown on the 1950 Sanborn map, and the 1990 Sanborn notes that that the building was constructed in 1957. The school building is shown in the southern portion of the subject property, with a circular parking area in the southwest. An approximately 5.4-acre field is depicted northeast of the school in the area where the stream was previously shown, and the northern portion of the subject property is undeveloped and forested. By 1960, the field is shown to include a baseball diamond and tennis courts are depicted to the west of the school building. The 1961 city directory lists Central Junior High School at Stanwich Road with no street address; the listing is between 59 and 99 Stanwich Road. In 1967, 1972, 1977, and 1980, Central Junior High School is listed at 77 Stanwich Road. No entity is listed at this address in 1988 or 1992, and there are no listings for 9 Indian Rock Lane in these years. Central Junior High School is listed as 9 Indian Rock Lane in 1995.
2000s – Present	The aerial photograph from 2006 shows an addition to the northwestern portion of the school. The field has gone through several iterations, and now includes two baseball diamonds. Central Middle School is listed as 9 Indian Rock Lane in 2005, 2010, and 2020. The subject property is listed as "Town of Greenwich" at 9 Indian Rock Lane in 2014 and 2017. The owner of the subject property is identified as "Town of Greenwich c/o Finance Dept." No transfers of ownership are indicated on the property card, and the subject property is zoned as "R-12 single family."

Environmental concerns related to historical operations are discussed further in Section 3.3.

3.2. Regulatory Database Review

The subject property is identified on the CT UST (under the address "Stanwich Road" with no street number) and CT Asbestos databases.

One 7,200-gallon heating oil UST (identification "T1", installation date July 1, 1958) and one 8,000-gallon heating oil UST ("T1R1", installation date October 1, 1990). Both USTs are listed as "currently in use."

According to a UST Removal Closure Report prepared by Big East Environmental and dated August 13, 2019, UST T1R1 was removed from the subject property in August 2019. A figure associated with the report indicates that the UST was located at the western exterior of the school building, in an area immediately west of the area indicated by the site contact as the previous UST location. Upon removal. the tank, which contained product, was observed to be in good condition with no evidence of release. Four sidewall samples and one bottom sample were collected from the UST grave and analyzed for extractable total petroleum hydrocarbons (ETPH), semi-volatile organic compounds (SVOCs), and volatile organic compounds (VOCs). No contamination was detected in the soil samples. Based on this information, UST T1R1 is not considered a REC.

According to the site contact, no USTs remain on the subject property, and the building is heated with natural gas; however, no closure documentation for UST T1 was available for review, and it is unknown if the two USTs were located in the same area. Therefore, UST T1 is considered a REC based on a material threat of a release due to its age, construction details, lack of tightness testing results, and lack of closure reporting.

The following CT Asbestos projects are associated with the subject property:

- ID 723: Start date July 17, end date August 18, 2006
- ID 5618: Start date August 14, end date August 18, 2007
- ID 8608: Start date June 19, end date August 29, 2008
- ID 10123: Start date September 26, end date September 28, 2008
- ID 12006: Start date June 20, end date August 29, 2009
- ID 12500: Start date June 25, end date July 3, 2009
- ID 15840: Start date July 6, end date August 3, 2010
- ID 16151: Start date July 22, end date July 23, 2010
- ID 19184: Start date June 27, end date July 27, 2011
- ID 43399: Start date June 30, end date September 5, 2012
- ID 47033: Start date July 6, end date August 6, 2013
- ID 59008: Start date June 24, end date July 1, 2016
- ID 79832: Start date April 9, end date April 17, 2021

In addition to the above-described review, Langan also queried or reviewed the following CTDEEP online resources – the DOSP, ELU) Map, Spill Incidents database, Registered USTs and Hazardous Waste Manifest databases on March 24, 2023. No ELURs, spills, USTS, or manifests were found to be associated with the subject property.

3.3. Prior Report Review

Langan was provided with a soil sampling report and a preliminary geotechnical investigation report. The reports are referenced in Section 7. and summarized below and in Section 2.2, as applicable.

A preliminary environmental investigation was conducted by Milone & MacBroom, Inc. (MMI) in 2019. The purpose of the investigation was to determine if any fill material was imported and/or placed in the playing field at the subject property. MMI installed 12 test pits across the field area between 4 to 6 feet bgs. MMI concluded that "other than the trace presence of construction-related materials, the fill material consisted entirely of earthen materials with no apparent environmental impact such as staining, discoloration, or odor." One soil sample was collected from 0 to 2 feet bgs in each test pit and analyzed for Resource Conservation and Recovery Act (RCRA) List Metals, PCBs, and polynuclear aromatic hydrocarbons (PAHs). No PCBs or PAHs were detected in any sample, and MMI concluded that levels of metals reflected background conditions.

4. ADJOINING PROPERTIES AND SURROUNDING AREA

4.1. Current Use of Adjoining Properties and Surrounding Area

The use of adjoining and surrounding properties is summarized as follows

Table 4-1 Current Use of Adjoining Properties and Surrounding Area

Direction	Adjoining Properties	Surrounding Area
North	Residential properties (95 Stanwich Road and, 300 and 302 Orchard Street)	Residential properties and Greenwich Country Club
East	Orchard Street followed by residential properties (1 and 6 Coachlamp Lane; 215, 219, and 221 Orchard Street; 115 Bible Street) and Montgomery Pinetum (Bible Street)	Residential properties and undeveloped land
South	Indian Rock Lane followed by a preschool (10 Indian Rock Lane), residential properties (12, 14, and 16 Indian Rock Lane), and an undeveloped parcel (4 Ponderosa Drive)	Residential properties and synagogue
West	Country club (19 Doubling Road) and residential properties (72 and 80 Stanwich Road)	Skating club and baseball field

Langan did not observe obvious conditions likely to represent environmental concerns for the subject property from current uses of adjoining or surrounding properties.

4.2. Adjoining Properties and Surrounding Area History

Langan compiled the following summaries of the adjoining properties and surrounding area history based on a review of historical resources and interviews. Historical resources are provided in Appendix E.

Table 4-2 Historical Use of Adjoining Properties

Direction	Adjoining Properties
North	Sanborn maps from 1920 and 1950 indicate that a structure identified as a sanitarium was previously adjoining to the north. Aerial photographs indicate that the northern adjoining properties were undeveloped or developed with residential properties from the 1930s and 1940s. Langan does not consider the historical use of the northern adjoining properties an environmental concern for the subject property.
East	Aerial photographs indicate that the eastern adjoining properties were undeveloped or developed with residential buildings from the 1930s, with increased residential development shown through the 1960s. Langan does not consider the historical use of the eastern adjoining properties an environmental concern for the subject property.

Direction	Adjoining Properties
South	Indian Rock Road is first shown on the 1959 aerial photograph. Prior to the road's construction, the southern adjoining area is shown to be largely undeveloped, with some structures that appear to be residential and a building that may be a church. Increased residential development is shown through the 1960s. Langan does not consider the historical use of the southern adjoining properties an environmental concern for the subject property.
West	The western adjoining properties are depicted as agricultural land in the 1930s through the late 1940s, after which residential development is shown. According to the country club website, the club was first founded in 1892 but moved locations to the present property at an unspecified date. What appears to be a golf course is shown on the earliest available aerial photograph. Langan does not consider the historical use of the western adjoining properties an environmental concern for the subject property.

The surrounding area was depicted as developed with mostly residential properties, with increased development through the 1970s. Surrounding business include a synagogue, a skating club, and athletic facilities.

4.3. Regulatory Database Review

Langan reviewed the environmental database report to evaluate if adjoining or surrounding area properties identified in the database report are suspected to represent an environmental concern for the subject property. If further information was deemed necessary to evaluate a potential REC for the subject property, Langan contacted an applicable regulatory agency to obtain additional records. Database and agency record information associated with adjoining properties are discussed in Section 4.3.1 and database and agency record information for surrounding properties of potential environmental concern for the subject property (see Section 8.2) are discussed in Section 4.3.2.

4.3.1. Adjoining Properties

None of the adjoining properties were listed in any regulatory database, as identified by the radius report

4.3.2. Surrounding Area

Langan evaluated each of the database listings for surrounding area properties. None of the properties were determined to warrant further discussion in the context of potential to represent an environmental concern for the subject property.

5. CONCLUSIONS, FINDINGS, AND OPINIONS

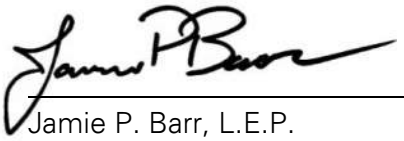
Langan completed a Phase I ESA in conformance with the scope and limitations of ASTM E1527-21 for the subject property at 9 Indian Rock Lane in Greenwich, Fairfield County, Connecticut. Exceptions to, or deletions from, ASTM E1527-21 are described in Section 8 of this report. This assessment has revealed the RECs, CRECs, HRECs, de minimis conditions, and significant data gaps presented in Table 5-1.

Table 5-1 Conclusions, Findings, and Opinions

ASTM E1527-21 Scope Items
Recognized Environmental Conditions (RECs)
Underground Storage Tank (UST): A 7,200-gallon heating oil UST (identification "T1", installation date July 1, 1958) is listed as "currently in use" at the subject property. According to the site contact, the UST was removed, and the building is heated with natural gas; however, they were not aware of when the tank removal had taken place and no closure documentation was available for review. Therefore, the UST is considered a recognized environmental condition (REC) based on a material threat of a release due its age, construction details, lack of tightness testing results, and lack of closure reporting.
Controlled Recognized Environmental Conditions (CRECs)
Langan did not identify CRECs.
Historical Recognized Environmental Conditions (HRECs)
Langan did not identify HRECs.
De Minimis Conditions
Langan did not identify de minimis conditions.
Significant Data Gaps
As noted above, information regarding the location and removal of UST T1 previously located on the subject property was requested but not available for review.

6. ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 Code of Federal Regulations (CFR) Part 312 and I have the specific qualifications based on my education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.



Jamie P. Barr, L.E.P.
Principal/Vice President (Environmental Professional)

20 April 2023

8. LIMITATIONS AND DEFINITIONS

This Phase I ESA report was prepared for the Client and is intended to be used in its entirety. Excerpts taken from this report are not necessarily representative of the assessment findings. The Client is the sole intended beneficiary of the report. The user requested no special terms or conditions regarding this Phase I ESA.

Langan's scope of services, which is described in Section 1.2 and in the contract executed between Langan and the Client, was limited to that agreed to with the Client/user and no other services beyond those explicitly stated are implied. To the extent possible, the services performed and agreed upon for this Phase I ESA are consistent with the guidelines of ASTM E1527-21.

This report is not intended to be an exhaustive assessment of the subject property. The purpose of the Phase I ESA is to reduce uncertainty about unknown conditions at the subject property. No environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs in connection with a subject property. Therefore, Langan cannot "verify", "insure", "certify", or "guarantee" that the subject property is free of environmental concerns.

No expressed or implied representation or warranty is included or intended in this report, except that our services were completed using the care and skill ordinarily followed by professionals providing similar services under similar circumstances in similar locations at the same point in time.

The conclusions provided in this report are based solely on information obtained through completing the standard activities required by ASTM E1527-21 and are intended exclusively for the purpose stated herein, at the specified subject property, as it existed at the point in time the assessment was completed. The conclusions provided in this report do not apply to conditions and features of which Langan was not made aware of through good faith efforts to complete the activities required by ASTM E1527-21 and did not have the opportunity to evaluate.

8.1. ASTM Definitions

The following definitions are provided in ASTM E1527-21 and presented below for reference. This section is not a comprehensive list of definitions provided in ASTM E1527-21 and is intended to summarize those pertinent to this Phase I ESA report.

Activity and use limitations (AULs): legal or physical restrictions or limitations on the use of, or access to, a site or facility: (1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil, soil vapor, groundwater, and/or surface water on the property, or (2) to prevent activities that could interfere with the effective-ness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls, are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil, soil vapor, groundwater, and/or surface water on a property.

Adjoining properties: any real property or properties the border of which is contiguous partially contiguous with that of the subject property, or that would be contiguous or partially contiguous with that of the subject property but for a street, road, or other public thoroughfare separating them.

All Appropriate Inquiries: that inquiry constituting all appropriate inquiries into the previous ownership and uses of the subject property consistent with good commercial and customary practice as defined in the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), 42 U.S. Code (USC) § 9601(35)(B) and 40 CFR. Part 312, that will qualify a party to a commercial real estate transaction for one of the threshold criteria for satisfying the Landowner Liability Protections (LLPs) to CERCLA liability (42 USC §§ 9601(35)(A) & (B), § 9607(b)(3), § 9607(q), and§ 9607(r)), assuming compliance with other elements of the defense.

Approximate minimum search distance: the area for which records must be obtained and reviewed pursuant to ASTM E1527-21 Section 8 subject to the limitations provided in that section. This may include areas outside the subject property and shall be measured from the nearest subject property boundary. This term is used in lieu of radius to include irregularly shaped properties.

Business environmental risk (BER): a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice. Consideration of BER issues may involve addressing one or more non-scope considerations.

Controlled recognized environmental condition (CREC): recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

Data gap: a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to, site reconnaissance (for example, an inability to conduct the site visit), and interviews (for example, an inability to interview the key site manager, regulatory officials, etc.).

De minimis condition: a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a de minimis condition is not a REC nor a CREC.

Engineering controls (ECs): physical modifications to a site or facility (for example, capping, slurry walls, or point of use water treatment) to reduce or eliminate the potential for

exposure to hazardous substances or petroleum products in the soil or groundwater on a property. ECs are a type of AUL.

Environment: environment shall have the same meaning as the definition of environment in CERCLA 42 USC § 9601(8).

Historical recognized environmental condition (HREC): previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). An HREC is not a REC.

Institutional controls (ICs): a legal or administrative mechanism (for example, "deed restrictions," restrictive covenants, easements, or zoning) on the use of, or access to, a site or facility to (1) reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the property, or (2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. An IC is a type of AUL.

Key site manager: the person identified by the owner or operator of a subject property as having good knowledge of the uses and physical characteristics of the subject property.

Material threat: obvious threat which is likely to lead to a release and that, in the opinion of the environmental professional, would likely result in impact to public health or the environment.

Obvious: that which is plain or evident; a condition or fact that could not be ignored or overlooked by a reasonable observer.

Property use limitation: limitation or restriction on current or future use of a property in connection with a response to a release, in accordance with the applicable regulatory authority or authorities that allows hazardous sub-stances or petroleum products to remain in place at concentrations exceeding unrestricted use criteria.

Reasonably ascertainable: information that is (1) publicly available, (2) obtainable from its source within reasonable time and cost constraints, and (3) practically reviewable.

Recognized environmental conditions (RECs): (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. For the purposes of this definition, "likely" is that which is neither certain nor proved, but can be expected or believed by a reasonable observer based on the logic and/or experience of the environmental professional, and/or available evidence, as stated in the report to support the opinions given therein.

Release: a release of any hazardous substance or petroleum product shall have the same meaning as the definition of "release" in CERCLA 42 USC § 9601(22). There are a number of statutory exclusions from the definition of release that may impact the environmental professional's opinions and conclusions, such as the normal application of fertilizer.

Significant data gap: a data gap that affects the ability of the environmental professional to identify a recognized environmental condition.

Site reconnaissance: that part that is contained in Section 9 of ASTM E1527-21 and addresses what should be done in connection with the site visit. The site reconnaissance includes, but is not limited to, the site visit done in connection with such a Phase I Environmental Site Assessment.

Site visit: the visit of the subject property during which observations are made constituting the site reconnaissance section of this practice.

Subject property: the property that is the subject of the environmental site assessment described in this practice.

User: the party seeking to use ASTM E1527-21 to complete an environmental site assessment of the subject property.

8.2. Standard Environmental Record Sources

Langan reviewed an environmental database search report prepared by an environmental database search provider for the subject property and surrounding area. The database search report includes a listing of properties identified on select federal, state, local and tribal standard source environmental databases within the approximate minimum search radii outlined in ASTM E1527-21. This information was supplied to Langan by the environmental database search provider, and to the environmental database search provider by government sources; therefore, neither Langan nor the environmental database search provider can verify the completeness and accuracy of the database information. Appendix F contains a copy of the report, with specific source and property descriptions, and the dates of the last update for each database searched. Langan reviewed the database search report on a record-by-record basis to evaluate if certain properties identified in the database report are likely to represent an environmental concern for the subject property. The evaluation criteria included factors such as distance, groundwater gradient, nature of the listing, and regulatory status. Unless specifically discussed in the body of this report, the facilities listed on the database do not appear to represent an environmental concern to the subject property.

8.3. Limiting Conditions/Deviations

Langan did not encounter any limiting conditions or delete or deviate from the ASTM E1527-21 guidelines during this Phase I ESA.

8.4. Data Gaps

Langan identified one significant data gap related to a historical UST, which is summarized in Section 5.

Appendix B User Provided Information

MILONE & MACBROOM

July 31, 2019

Mr. Daniel M. Watson, Director of School Facilities
Greenwich Public Schools
290 Greenwich Avenue
Greenwich, CT 06830

RE: Preliminary Environmental Investigation at Central Middle School
Greenwich, Connecticut
MMI #5062-10-02

Dear Mr. Watson:

Milone & MacBroom, Inc. (MMI) conducted a limited investigation of information and files pertaining to past construction activities associated with the playing field at Central Middle School located at 9 Indian Rock Lane in Greenwich, Connecticut. This work was performed in an effort to determine if, and potentially when, additional fill material was imported and/or placed at the field. Concurrently with this investigation, MMI also collected soil samples from 12 test pits located throughout the field area. This work was completed in an effort to inform the design process for the proposed field improvements.

Background Investigation Summary

The background research on the history of field construction included a review of historical aerial photography, a request to review pertinent town documentation, and in-person interviews of staff at the Town Hall of Greenwich. The following departments were contacted and interviewed: Department of Public Works (Building Inspection), the Board of Education Department, Planning & Zoning Department (includes Land Use and Environmental Affairs), Engineering Department, Assessor and Clerk Offices, and Parks & Recreation.

None of the town departments had any documentation pertaining to the construction of the playing field.

The in-person and phone interviews conducted with Town Hall staff resulted in no new or additional information.

Historical aerials from Connecticut Environmental Conditions Online (CT ECO) covering the following years were reviewed: 1934, 1951, 1970, 1985, 1990, 1996, 2004, 2008, 2012, and 2016. The aerial photography review indicated that the field may have been used for residential purposes with a few cleared areas in 1934. By 1951, the site appeared almost completely covered in woods and unused. In the 1970 aerial photo, the school building and playing field with one ballfield in the northern corner are apparent. The 1985, 1990, and 1996 aerial photographs show three ballfields on the athletic field, one each on the northern, western, and southeastern corners. By the 2004 aerial photo, only two ballfields remain, the ones in the northern and southeastern corners. In addition, the 2004 aerial photo also shows a structural addition to the northwestern side of the school building. The 2004 and forward photographs showed the field and the school building as it appears in the present.

The August 31, 2018, Topographic Survey completed by MMI indicated similar topographic conditions on the field as existing conditions.

Soil Sampling Activities

MMI observed and logged 12 test pits (TP-1 through TP-12) that were excavated by A. Vitti Excavators, LLC on July 15, 2019. The test pits were made to explore the subsurface conditions in the project area using a Caterpillar 420D backhoe to depths ranging between 4 and 6 feet below existing grades. Explorations were observed and logged by an MMI Environmental Scientist and an MMI Geotechnical Engineer. Refer to the attached exploration location plan for approximate locations of the test pits and attached logs of the test pits for the subsurface conditions encountered.

The generalized subsurface profile generally consists of fill or topsoil over fill over silt. Bedrock was not encountered in any of the test pits.

At Test Pits TP-5 and TP-11, fill was encountered at existing grade and extended to the depths explored. The fill consisted of reddish-brown, fine to medium sand, some silt, trace fine gravel over brown, fine to medium sand, some fine to coarse gravel, little to some silt, with cobbles and boulders.

Topsoil was encountered at each test pit location (excluding TP-5 and TP-11) and consisted of approximately 6 to 12 inches of dark brown, fine to medium sand, some silt, trace fine gravel, with trace roots. Fill was encountered below the topsoil that consisted of between 1.0 and at least 4.7 feet of brown/gray/gray-brown, fine to coarse sand, little to some fine to coarse gravel, little to some silt, with trace debris (e.g., rebar, asphalt, plastic), cobbles, and boulders. Where the fill is completely penetrated, silt was encountered below that consisted of gray, clayey silt, little fine to coarse gravel, trace to and fine to coarse sand, and trace roots to the depths explored.

Other than the trace presence of construction-related materials, the fill material consisted entirely of earthen materials with no apparent environmental impact such as staining, discoloration, or odor.

The current plans for the field reconstruction call for the installation of a synthetic turf playing surface. Construction of these types of surfaces typically involves the removal of existing soils to a depth of at least 2 feet so that drainage piping and base material can be installed. As such, soil samples were collected from the upper 2 feet and analyzed for selected parameters to help determine if special disposal measures will be necessary for the excess soil.

The samples were submitted to Complete Environmental Testing, Inc. (CET), a State of Connecticut certified laboratory for analysis of the following parameters:

- Resource Conservation and Recovery Act (RCRA) List of 8 Metals by the Environmental Protection Agency (EPA) 6010C Method (including total mercury by the EPA 7471B Method)
- Polychlorinated biphenyls (PCBs) by the EPA 8082A Method
- Polynuclear aromatic hydrocarbons (PAHs) by the EPA 8270D Method

Soil Sampling Results

The laboratory results indicated the following:

- No PCBs were detected in any of the samples.
- No PAH compounds were detected in any of the samples.
- Several metals were detected in all the soil samples at trace concentrations, which is likely indicative of naturally occurring levels.

Based upon the laboratory results and the observations made during the test pit advancements, the soil at the Central Middle School playing field does not contain contaminants and would be considered "clean fill" if excavated and removed from the site.

Very truly yours,

MILONE & MACBROOM, INC.

Scott G. Bristol, LEP, PG
Associate, Manager of Environmental Services

Reference: Preliminary Geotechnical Investigation for Central Middle School – Greenwich Public Schools, Connecticut

Object: Transmission of the Preliminary Geotechnical Investigation Report

Dear Mr. Watts:

Atane Engineers, P.C. is pleased to submit the report of finding, analysis, and recommendations related to the preliminary geotechnical investigation for the referenced project site. Our work was initiated and conducted in accordance with Contract Supplement 7061-3 CS Soil (22404) dated June 8th, 2022, and Contract Supplement 7201-01 CS CMS (22404) dated August 24th, 2022.

Should you have any questions or need any additional information, I can be reached at 617-655-4758, or psousa@ataneconsulting.com. We thank you for the opportunity to assist you on this project and look forward to continuing our successful working relationship with Greenwich Public Schools on future projects.

Sincerely,

Paul Sousa 10-10-22

Paul G. Sousa, Jr.
Assistant Vice President
Director of Materials – New England Region

1. INTRODUCTION

ATANE Engineers, P.C., was retained by the client to perform a preliminary geotechnical investigation to gather initial geotechnical data regarding the possible location for the construction of a new building to locate the Central Middle School of Greenwich Public Schools.

Currently, no specific building layout or location was provided from the client for the construction of the proposed building. The preliminary geotechnical investigation was conducted at the site identified by KGD, the Master Plan Architect, as a possible location to construct the proposed middle school building. Also, it is important to note that the architectural and structural drawings are not yet finalized and are not considered for this preliminary geotechnical investigation.

The main goal of this preliminary geotechnical investigation is to inform the design team and client of the basic geotechnical properties and parameters of the areas under consideration for the construction of the proposed building and to determine whether a specific location warrants the completion of all investigations required to be in accordance with Sections 1803.3 through 1803.5 of the International Building Code (IBC).

2. SITE LOCATION

The location under consideration for the construction of the proposed school building consists of the areas within the property lines that surround the existing Central Middle School building located at 9 Indian Rock Lane, Greenwich, CT 06830 (see Site Location Map in Appendix 1). The buildings main access is located on Indian Rock Lane. However, pedestrians can access the athletic field from the North using Orchard Street. The site is situated in the Residential Zone R-12 as per the "*Town of Greenwich, Connecticut, Building Zone Regulations Map, Rev. January 31, 2022*".

3. SCOPE OF SERVICES

This report presents the findings regarding the preliminary geotechnical investigation performed as required and in accordance with our scope of work, which consists of the following:

a) Geotechnical surface reconnaissance:
   - Identification of the type of soil
   - The strength and density of the soil
   - Identification of any organic material or contamination present
   - Recording of any shallow groundwater or perched water table encountered
b) Limited subsurface exploration using soil borings and test pits,
c) Representative soil samples collection,
d) Laboratory testing including chemical testing,
e) Analysis of the field and laboratory data, and
f) A review of available geologic literature.

Limited soil borings and test pits were to be performed at specific locations to evaluate the geotechnical conditions beneath the proposed site for implantation of eventual shallow foundations.

ATANE EXCEL.TOGETHER.
40 Wall Street, 11th Floor, New York, NY 10005
www.ATANEConsulting.com

Currently, a deep pile foundation system is not under consideration for support of the proposed structures.

3.1. Exclusions

The executed scope of work and the associated cost do not include services not specifically listed in the Contract including the following:

a) Preparation of drawings or specifications,
b) Design services,
c) Any additional borings or permeability tests, if and as warranted or required,
d) Any pavement cores, temporary or permanent wells, additional test pits, if and as warranted or required,
e) Site specific seismic evaluation,
f) Review of shop drawings or Request for Information (RFIs), and
g) Construction oversight or inspection services.

4. GEOTECHNICAL INVESTIGATION

As part of this preliminary geotechnical investigation, twelve (12) Test Pits were excavated to a maximum depth of twelve (12) feet below ground surface (BGS) and fifteen (15) Boreholes were drilled to a maximum depth of sixteen (16) BGS were performed in the Athletic Field on the North side of the existing school building, and five (5) more Boreholes were completed in the South and Southwest sides of the existing school building.

All borings were drilled using a 4-¼ inch hollow stem auger to advance and maintain the hole. Soil samples were collected using a 1-3/8 inch split-barrel sampler (SS) driven by a 140 pound hammer falling 30 inch for each hammer blow. The number of blows for each 6-inch increment was recorded, in accordance with procedures outlined in ASTM D1586, Standard Test Method for Standard Penetration Test (SPT) and Split-Barrel Sampling of Soils. An experienced geologist from SOILTESTING, INC. performed the classification of the soil samples. Most borings were sampled continuously from a depth of four (4) feet BGS to the depth of completion of the boring, except where large boulders or bedrock were encountered. The groundwater level BGS was recorded when encountered in each exploration.

Also, samples were collected at twelve (12) different locations for chemical testing (see Boring, Test Pit, and Sampling Location Plan in Appendix 2). Five of these twelve samples collected from Test Pit Locations were marked TP-SL-01 through TP-SL-05 and the remaining seven samples collected from Boreholes locations were marked B-SL-01 through B-SL-07. Additionally, other soil samples were collected for each type of soil encountered at potential shallow foundation depths (4 to 6 feet BGS) to identify geotechnical properties. The samples for identification of geotechnical properties were collected at the locations indicated below.

a. For moisture content, grain size analyses and specific gravity testing; samples were collected from the following locations: TP-1, TP-2, TP-3, TP-4, TP-5, TP-9, TP-12 and from B-17, B-18 and B-19 for a composite sample.

b. For Atterberg limits (plasticity indices) related to the clay materials encountered, samples were selected from the following locations: TP-8 and TP-9

Furthermore, all possible efforts were made to gather available pertinent data susceptible to help develop a broad understanding of the prevalent surface and subsurface materials in the vicinity of the existing school building. Among others, the following documents were reviewed:

- **Bedrock Geological Map of Connecticut** (1:125,000 scale), published in 1985 on behalf of the Connecticut Geological and Natural History Survey of the Connecticut Department of Environmental Protection, in Cooperation with the U.S. Geological Survey.
- **Generalized Bedrock Geologic Map of Connecticut**, published in 1990, reprinted 1996, revised 2013, Connecticut Geological Survey, Department of Energy and Environmental Protection.
- **Connecticut Quaternary Geology Long Island Sound End Moraine Deposits**, published in 2005, by Janet Radway Stone, John P. Schafer, Elizabeth Haley London, Mary L. DiGiacomo-Cohen, Ralph S. Lewis, and Woodrow B. Thompson on behalf of U.S. Geological Survey, State of Connecticut, Department of Environmental Protection, Geological and Natural History Survey
- **Superficial Materials Map of Connecticut,** published in 1992, by Janet Radway Stone, John P. Schafer, Elizabeth Haley London, and Woodrow B. Thompson, prepared in cooperation with the State of Connecticut, Department of Environmental Protection, Geological and Natural History Survey.
- **The Geology of Greenwich, Connecticut** (Reed A. Schwimmer), published in 1987 by The Greenwich Conservation Commission, Greenwich, Connecticut.

5. GEOTECHNICAL CONDITIONS

5.1. Geology

As identified in the Bedrock Geologic Map of Connecticut (1985) by John Rodgers, the Central Middle School site is situated in the Iapetos (Oceanic) Terrane – Connecticut Valley Synclinorium. The Harrison Gneiss (interlayered dark-and light-gray, medium grain, foliated gneiss) is the dominant rock in the areas surrounding the existing building. As per the Bedrock Geologic Map of Connecticut (1985), foliation of bedrock typically strikes N-NE and dips west at 34 to 82 degrees. Apart from the Cameron's fault line on the Northeast of Greenwich, a High-Angle Fault (mostly Jurassic) is located in the vicinity of the site on the West side.

Based on their geographic coordinates and available geologic information collected, the superficial soil in areas surrounding the Central Middle School building can be assessed as glacial ice-laid deposits (tills) which consist of non-sorted, generally non-stratified mixtures of grain-sizes ranging from clay to large boulders. The matrix is composed dominantly of sand and silt.

As described in the "*Superficial Materials Map of Connecticut (1992)*" by Janet Radway Stone, John P. Schafer, Elizabeth Haley London, and Woodrow B. Thompson, the thickness of superficial materials in Connecticut varies considerably because of such factors as the high relief of the bedrock surface, changing conditions of deposition during deglaciation, and various effects of postglacial erosion and removal of glacial sediments. Glacial ice-laid deposits (tills) in Connecticut are grouped into upper till and lower till. The matrix of most tills is composed dominantly of sand and silt. The most extensive till is commonly observed in surface exposures. It is described as thin till in areas where till is generally less than 10 to 15 feet thick and including areas of bedrock outcrop where till is absent. It consists predominantly of upper till which is loose to moderate compact, generally sandy, commonly stony. The lower till (thick till) is generally overlain by upper till. Lower till does constitute the bulk of material in the areas where till thickness is greater than 15 feet. It has a patchier distribution and is principally a subsurface deposit. Lower till is moderately to very compact and is commonly finer-grained and less stony than upper till.

The Water-Resources Investigations Report 03-4300 By John R. Mullaney records that two types of aquifers are present in the Greenwich area: (1) aquifers in surficial deposits; and (2) aquifers in the fractured crystalline bedrock. Report 03-4300 furthermore points out that "*The stream-drainage network apparently is strongly controlled by the underlying rock structure, and many streams are parallel to the strike of the foliation*".

No landslide, rockfall or debris flow were identified at the site during the preliminary investigation.

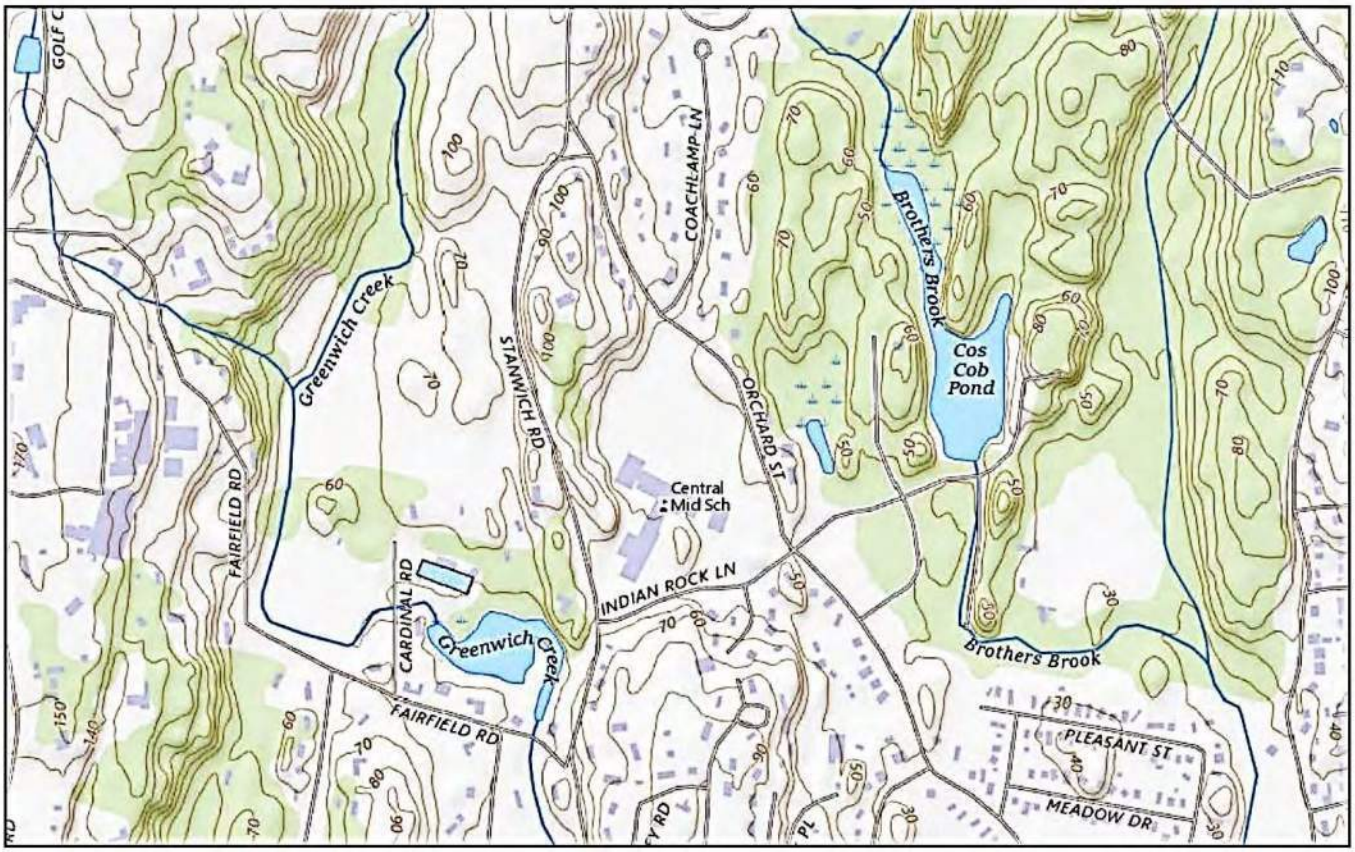
5.2. Surface Conditions

The areas surrounding the existing Central Middle School Building can be sorted in four main subareas consisting of: (1) the flat Athletic field, North of the existing Building; (2) the parking areas in the Southwest and the Southeast including an outcrop next to the building on the Southeast; (3) a hillock on the West side with some outcrops in the periphery of the property; and (4) a hillock located East including the existing tennis court and some outcrops in the periphery of the property as well. The subareas 3 and 4 are relatively wooded.

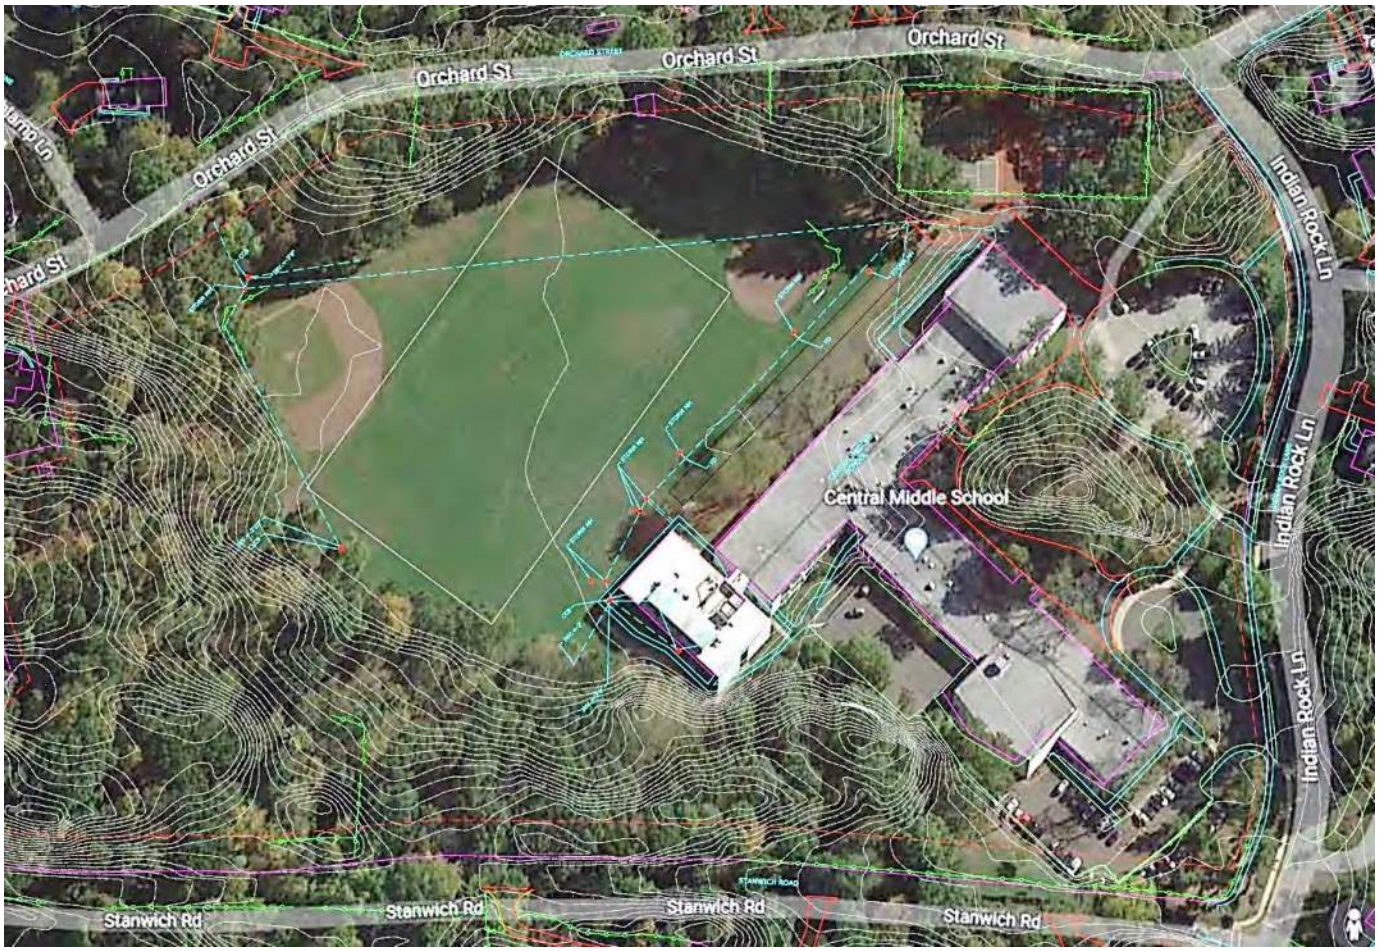


Central Middle School
9, Indian Rock Lane, Greenwich, CT 06830
Map Source: USGS The National Map

Based on data from "*USGS The National Map*", the athletic field on the North side of the existing school building has an average elevation of about 50 feet. The parking locations on the South of the building have an average elevation of about 60 feet with an outcrop on the Southeast of the existing school building. In general, the ground surface elevation increases when moving away from the existing building on the East and West sides of the property. Outcrops were noted as well on the East and West sides of the property.

	Outcrop on the Southeast of the existing school building
	Outcrop on the West side of the existing school building
	Outcrop on the East side of the existing school building

Some stormwater drains were identified in the Athletic Field as shown in the drawing provided by the client. These stormwater drains are shown in the figure below using a Google Map background.



Blue lines showing the locations of the stormwater drains by the Athletic Field

The Athletic Field is relatively depressed below the surrounding areas which makes it prone to flooding in the event of heavy and prolonged storms. The area is of minimal flood hazard as per the FEMA National Flood Hazard Layer FIRMette (see Appendix 3).

5.3. Subsurface Conditions

The soils encountered beneath this site are largely consistent with the published geologic descriptions of thin till generally less than 10 to 15 feet thick and including areas of bedrock outcrop where till is absent. It consists predominantly of moderate compact mixture of gray and brown sand, silt, and gravel with inclusion of cobbles and boulders. Trace of organic matter and trace of clay were encountered as well.

In subarea (1) around the middle of the flat Athletic field on the North side of the existing school building, mostly dense dry and dense wet granular soils were encountered in boreholes B-02, B-03, B-04, B-05, B-06, and B-08 below the topsoil layer of the athletic field. Trace of cobbles and trace boulders were noted. These boreholes generally ended at 14 feet to 16 feet BGS. Ground water table was measured at 9 feet BGS in B-02, 10 feet BGS in B-03, 7 feet BGS in B-04, 8 feet BGS in B-05 & B-06, 10 feet BGS in B-08. The soils above a depth of 4 feet to 6 feet could be described as possible fill. The information collected using Test Pits performed in the athletic field is consistent with these findings (see APPENDIX 4: Test Pit Logs and APPENDIX 5: Boring Logs). Standard penetration test N-values were typically around 30 blows per foot (bpf) on average. N-Values greater than 50 blows per foot generally indicated the presence of cobbles and boulders. However, Boreholes B-04 and B-08 in the middle of the athletic field exhibited some layers with N-Values between 6 and 15 blows per foot at depth greater than 9 feet BGS. This can be correlated with the presence clay of low to medium plasticity, debris, and organics identified in the Test Pits TP-05, TP-08, and TP-09 located in the vicinity of Boreholes B-04 and B-08.

In subarea (2) by the parking areas in the Southwest and the Southeast of the existing school building, mostly brown and gray mixtures of sand, silt, and gravel were encountered in boreholes B-15, B-16, B-17, and B-18. No Test Pits was performed in this subarea with auger refusal in large boulders of bedrock. Trace of asphalt was noted in the top layers. The boreholes in subarea (2) generally ended at 8 feet to 14 feet BGS. Auger refusal was noted at 9 feet BGS in B-15 with no ground water observation. Partly weathered bedrock was noted at 12 feet BGS for B-16 with no ground water observation. Auger refusal was noted at 8 feet BGS for B-17 with no ground water observation. However, B-18 ended at nearly 14 feet BGS with ground water table observed at 9 feet BGS. Trace of organics along with cobbles (possible fill materials) were noted in B-18. Standard penetration test N-values were typically above 30 blows per foot on average for B-15 and B-16. On the Southeast side, N-values were typically about 7 blows per foot for B-15 upper soil layers, and between 12 and 27 blows per foot for B-16 upper soil layers.

In subarea (3) by the hillock on the West side with some outcrops in the periphery of the property, mostly brown mixtures of sand, silt, and gravel were encountered with trace of cobbles and boulders in boreholes B-09, B-10, B-11, B-12, B-13, and B-14. No ground water was observed in these boreholes. The boreholes in subarea (3) generally ended with auger refusal at 7 feet to 12 feet BGS in large boulders of bedrock. Standard penetration test N-values

were typically around 50 blows per foot on average at 8 feet or more BGS. N-Values recorded for the upper soil layers were between 20 to 30 blows per foot.

In subarea (4) by the hillock on the East side and some outcrops in the periphery of the property, mostly brown mixtures of sand, silt, and gravel were encountered with trace of cobbles and boulders in boreholes B-01, B-07, B-19, and B-20. Ground water table was observed at 7 feet BGS in B-01 and at 8 feet BGS in B-07. No ground water table was observed in B-19 and B-20. Bedrock refusal was noted at about 10.5 feet BGS in B-01. Refusal was noted at about 11.5 feet in B-07. Spoon refusal was noted at about 7.5 feet BGS in B-19. Auger refusal in bedrock was noted at 3 feet BGS in B-20. Standard penetration test N-values were typically above 30 blows per foot on average for the upper soil layers.

The individual boring logs containing specific information at each boring location are included in APPENDIX 5: Boring Logs.

5.4. Groundwater

The following table summarize the observed groundwater conditions from information collected during the explorations of the boreholes and test pits. The depth below ground surface provided represents the value measured when the anticipated water table was first encountered. Given the distribution of the different sizes of individual particles within the in-situ soils, and considering the relative consistency in readings, we expect these ground water table surface readings to properly represent stable groundwater conditions, and not perched conditions.

The approximative ground surface elevation is based on the "*USGS The National Map*". If more accurate elevation data are needed, the service of a third-party surveyor should be engaged by the owner. Ground water monitoring wells and soil permeability evaluation are not included in the scope of this preliminary geotechnical investigation.

TP-11	±50	9	08/12/2022	
TP-12	±50	-	08/12/2022	No ground water observation

Preliminary interpreted groundwater table elevations for design would require additional investigation not part of this preliminary investigation to identify the following information:

- Direction and gradient of groundwater, artesian conditions, and confined aquifers
- Eventual perched water tables
- Potentially significant seasonal variations
- Observed influences on the groundwater table
- Other features related to groundwater, streams, springs, seeps.

5.5. Seismic Hazards

The determination of the Seismic Design Category (SDC) involves the following three parameters: geographic location, underlying soils, and building use or occupancy category. Seismic hazard assessment is not included in the contract scope for this preliminary geotechnical investigation.

5.6. Site Seismic Parameters

The evaluation of the following site seismic parameters may be needed in relation with the SDC.

- Geospatial information (latitude/longitude in decimal degrees) of representative location(s) where VS30 values are evaluated.
- The time-averaged shear-wave velocity (VS30) for the top 30 m of the earth materials, and how it was determined (e.g., CPT or SPT correlations, Seismic CPT, and geophysical methods).

However, evaluation of site seismic parameters is not included in the contract scope for this preliminary geotechnical investigation.

5.7. Ground Motion Parameters

The evaluation of the following ground motion parameters may be needed in relation with the SDC.

- Design Horizontal Peak Ground Acceleration (HPGA),
- Mean earthquake moment magnitude (M), and
- Mean site to fault source distance (R) based on procedures described in Design Acceleration Response Spectrum

However, evaluation of ground motion parameters is not included in the contract scope for this preliminary geotechnical investigation.

5.8. Identification of contamination present

The chemical testing data are summarized in the following table. See APPENDIX 6 for Laboratory Test Results – Chemical Test Results

Table 2 – Chemical testing data summary

Parameter	Comments
Dibromotoluene-FID for samples B-SL-01 through B-SL -06 and samples TP-SL-01 through TP-SL-05	Potential high bias
CT RCP Volatile Organics for samples B-SL-01 through B-SL -06 and samples TP-SL-01 through TP-SL-05	Not detected (ND) at the reporting limit (RL) for the sample
CT RCP PAHs for samples B-SL-01 through B-SL -06 and samples TP-SL-01 through TP-SL-05	Not detected (ND) at the reporting limit (RL) for the sample
CT RCP Semivolatile Organics for samples B-SL-01 through B-SL -06 and samples TP-SL-01 through TP-SL-05	Within the percentage recovery limits
Gasoline Range Organics for samples B-SL-01 through B-SL -06 and samples TP-SL-01 through TP-SL-05	Not detected (ND) at the reporting limit (RL) for the sample
Diesel Range Organics for samples B-SL-01 through B-SL -06 and samples TP-SL-01 through TP-SL-05	Not detected (ND) at the reporting limit (RL) for the sample
Volatile Petroleum Hydrocarbons for samples B-SL-01 through B-SL -06 and samples TP-SL-01 through TP-SL-05	Not detected (ND) at the reporting limit (RL) for the sample
Extractable Petroleum Hydrocarbons for samples B-SL-01 through B-SL -06 and samples TP-SL-01 through TP-SL-05 except for samples B-SL-04, B-SL-06, TP-SL-03	Not detected (ND) at the reporting limit (RL) for the sample
CT RCP Total Metals - Associated samples B-SL-01 through B-SL -06 and samples TP-SL-01 through TP-SL-05	Within the percentage recovery limits
Ignitability of Solids for samples B-SL-01 through B-SL -06 and samples TP-SL-01 through TP-SL-05	Not ignitable (NI)
pH for samples B-SL-01 through B-SL -06 and samples TP-SL-01 through TP-SL-05	Between 5.9 and 8.4

40 Wall Street, 11th Floor, New York, NY 10005
www.ATANEConsulting.com

5.9. Strength and density of the soil

Initial value of the compressive strength of the cohesive soil and modulus of elasticity of granular soil (Es) can be approximated based on the Standard Penetration Test N-Values data collected during Boreholes explorations. However, a given soil does not have a unique bearing capacity; the bearing capacity is a function of the footing shape, depth, and width as well as load eccentricity.

As described in Table 4-1 of the Manual on Subsurface Investigations (Publication No. FHWA NHI-01-031, July 2001), for the coarse-grained soils with a standard penetration test N-values around 30 blows per foot, the coarse-grain soils can be described as firm to dense with a relative density of about 70%. Based on the boring logs, this is representative of most of the soil layers located at 6 to 7 feet BGS, with exception in boreholes B-14 and B-18. Using the Peck, Hanson, and Thornburn (1974) correlation, the average pick friction angle, ϕ'(deg), can be approximated to roughly 36 degrees. Based on a first order estimation given by Kulhawy and Mayne (1990), the modulus of elasticity of the granular soils (E_s) is found to be approximately between 10,000 and 18,000 kPa for depth around 6 feet BGS. Also, based on the 2021 IBC Table 1806.2, the presumptive load-bearing values can be approximated between 95 and 140 kPa.

Similarly, as described in Table 4-2 of the Manual on Subsurface Investigations (Publication No. FHWA NHI-01-031, July 2001), for the fine-grained soils with a standard penetration test N-values around 6 and 10 blows per foot, the fine-grained soils can be described as firm to stiff with an unconfined compressive strength between 50 and 125 kPa. Based on the boring logs, this is representative of soil layers located at 10 to 12 feet BGS in borehole B-04 and at 9 to 11 feet BGS in borehole B-08.

Coarse-grained soils have high permeability which typically leads to immediate settlements. However, long term settlements can occur due to submergence, change in water level, blasting, machine vibration or earthquake loading. For the samples collected at depth ranging from 4 feet to 6 feet BGS, the average specific gravity was 2.674 and the natural moisture content was found to be between 4% and 6%. Since the sieve analysis revealed that more than 10 percent of the soil particles pass a No.200 sieve (75 µm) for samples collected in boreholes B-17, B-18 and B-19 and in Test Pits TP-01, TP-08, TP-09 and TP-12, it is likely to have expansive soil on the North and East side portions of the athletic field in subarea (1) and on the Southeast side of the existing school building in subarea (2). However, the values of 2.8 and 3.4 obtained for the plasticity index (PI) of the soil samples tested for TP-08 and TP-09 are indicative of low expansion potential. Hence, additional geotechnical investigations will be required in accordance with the 2021 IBC Section 1803.5.3 in case portion of the footprint of the proposed new building would have to be situated in said areas.

Also, fine-grained soils have very low permeability. The underlying silty clay soils layers in the vicinity of boreholes B-04 and B-08 on the North and East side portions of the athletic field in subarea (1) will require additional investigations to determine the magnitude and duration of settlement to be expected in said area.

ATANE EXCEL.TOGETHER.
40 Wall Street, 11th Floor, New York, NY 10005
www.ATANEConsulting.com

As the range of applied loads for consolidation testing should cover the smallest and largest effective stresses anticipated in the field and will depend on depth, foundation loads, and excavations, additional investigations based on design information are needed to perform consolidation testing. Indeed, performance of consolidation tests can provide additional data that will be needed by the design engineer to estimate the magnitude and rate of both differential and total settlement if the decision was to be made to locate portion of the footprint of the proposed new school building structure or earthfill by the location of Test Pits TP-05, TP-08, and TP-09 and Boreholes B-04 and B-08 in the North and East side portions of the athletic field in subarea (1).

6. RECOMMENDATIONS

All soils and foundation work shall comply with the Chapter 18 of the 2022 Connecticut State Building Code and of the 2021 International Building Code (IBC). Additional studies shall be made as recommended to evaluate slope stability, soil strength, position and adequacy of load-bearing soils, the effect of moisture variation on soil-bearing capacity, compressibility, liquefaction, and expansiveness in accordance with the requirements of the 2021 IBC.

6.1. Recommendations for frost protection

As per the 2022 Connecticut State Building Code Section (Amd) 1809.5, except where otherwise protected from frost, foundations and other permanent supports of buildings and structures shall be protected from frost by one or more of the following methods:

1) Extending a minimum of 42 inches (1067 mm) below finished grade;
2) Constructing in accordance with ASCE 32; or
3) Erecting on solid rock.

Shallow foundations shall not bear or be installed on frozen soil.

6.2. Recommendations for excavation and controlled fill

The depth and slope of excavation and ground water conditions control the overall stability of open excavations. One of the main concerns would be the fluctuation of the ground water level, specifically ground water lowering. It is not yet known how the ground water table will fluctuate over time. Dewatering may be required during excavations if portions of the existing athletic field will be included in the footprint of the proposed new building. Additional investigation including permeability testing and ground water monitoring wells would be warranted.

In general, we recommend installing drainage to keep the depth of the water table dw > D (depth of footing). Shoring should be provided for excavation depth of 5 feet or greater unless the excavation is made entirely in stable rock.

The effects of excavation on adjacent structures should be evaluated by the design engineer to determine whether existing buildings in the vicinity are protected.

6.2.1. Excavation Difficulties

Cobbles and boulders encountered in subarea (1) – the flat Athletic field on the North side of the existing Building – will likely present excavation difficulties. Excavation difficulties will be particularly affected by the anticipated excavation size and depth. The speed and ease of excavation will depend on the type of equipment used and the skill of the operator.

The same level of difficulties is to be expected for the upper layers of soil in the remaining subareas (2), (3), and (4). In addition, the presence of the bedrock at shallow depth (3 to 7 feet BGS) may require additional heavier equipment.

6.2.2. Excavation near foundations

In accordance with 2021 IBC Section 1803.5.7, where excavations will reduce support from any foundation, a registered design professional shall prepare an assessment of the structure and shall determine the requirements for support and protection of any existing foundation and prepare site-specific plans, details and sequence of work for submission. Such support shall be provided by underpinning, bracing, excavation retention systems, or by other means acceptable to the local building official.

6.2.3. Surface Preparation/Proofrolling

In general, large size particles interfere with compaction of the finer soil fraction. It is recommended that the maximum cobble size should not exceed 3 inches or 50 percent of the compacted layer thickness.

All organics and any other deleterious material should be stripped and removed from the surface. All subsurface structures or debris which will interfere with the compaction of the area to be prepared should be removed. The soil should be scarified as needed and brought to optimum moisture content. Before performing fill placement, the newly exposed soil surface should be compacted to a firm and unyielding surface with several passes in two perpendicular directions. Additional investigations based on design information is needed to determine the minimum vibratory compactor needed to meet the requirements of the specifications.

6.2.4. Compacted fill material

As per 2021 IBC Section 1803.5.8, where shallow foundations will bear on compacted fill material more than 12 inches (305 mm) in depth, a geotechnical investigation shall be conducted and shall include Specifications for the preparation of the site prior to placement of compacted fill material, specifications for said fill material, the various test methods to be used and their frequency, maximum allowable thickness of each lift of compacted fill material, and the minimum acceptable in-place dry density. Additional investigations based on design information is needed regarding the proposed new building (such as loads, type and shape of proposed foundation system, etc.) to meet the requirements of the specifications.

ATANE EXCEL.TOGETHER.
40 Wall Street, 11th Floor, New York, NY 10005
www.ATANEConsulting.com

6.3. Recommendations for further investigations to be performed

As per 2021 IBC Section 1803.6, where geotechnical investigations are required, a written report of the investigations shall be submitted to the building official by the permit applicant at the time of permit application. Among other requirements, the geotechnical report shall include bearing capacity of natural or compacted soil, expected total and differential settlement, effects of any adjacent loads, provisions to mitigate the effects of expansive soils, mitigation of the effects of liquefaction, differential settlement, and varying soil strength.

6.3.1. Ground-water table

According to 2021 IBC Section 1803.5.4 Ground-water table, "*A subsurface soil investigation shall be performed to determine whether the existing ground-water table is above or within 5 feet (1524 mm) below the elevation of the lowest floor level where such floor is located below the finished ground level adjacent to the foundation*." However, such subsurface soil investigation shall not be required where waterproofing is provided in accordance with Section 1805. Hence, unless the decision is made to provide waterproofing, ground water monitoring wells are recommended for estimation of the degree of fluctuation of the groundwater table elevations for design that would require the identification of the following information:

- Direction and gradient of groundwater, artesian conditions, and confined aquifers
- Eventual perched water tables
- Potentially significant seasonal variations
- Observed influences on the groundwater table
- Other features related to groundwater such as streams, springs, seeps.

6.3.2. Seismic hazard assessment and design wind speed

Preliminary seismic hazard assessment is not included in the contract scope for this preliminary geotechnical investigation. The evaluation of the site seismic parameters and the evaluation of the ground motion parameters would require additional geotechnical investigation.

Determination of wind characteristics is not part of this preliminary geotechnical investigation. However, it is worth noting that some basic design wind speed, V, for use in the design of Risk Category III buildings and structures can be obtained from Figures 1609.3(2), 1609.3(7) and 1609.3(8) of the 2021 International Building Code. (Ref.: 2021 International Building Code®)

6.3.3. Allowable bearing pressures

Allowable bearing pressures for shallow foundations are limited by two considerations. The safety factor against ultimate shear failure must be adequate, and settlements under allowable bearing pressure should not exceed tolerable values. In most cases, settlement governs the foundation pressures. (Ref.: *pp151, Naval Facilities Engineering Command, Foundations & Earth Structures, Design Manual 7.02, September 1986*)

In dense coarse-grained soils failure typically occurs along a well-defined failure surface. In loose coarse-grained soils, volumetric compression dominates and punching failures are common. Increased depth of overburden can change a dense sand to behave more like loose sand. In (homogeneous) fine-grained cohesive soils, failure occurs along an approximately circular surface.

However, as previously stated, a given soil does not have a unique bearing capacity; the bearing capacity is a function of the footing shape, depth, and width as well as load eccentricity. Since the bearing capacity is based on effective stress analysis, fluctuation of the groundwater table is expected to affect the value of the soil unit weight. Hence, additional design information regarding the proposed new building (such as loads, type and shape of proposed foundation system, etc.) will be needed to determine the expected settlement and the bearing capacity of the proposed footprint of the eventual new school building.

7. CONCLUSION

A preliminary geotechnical investigation was performed to inform the design process by identifying some basic geotechnical properties of the areas under consideration for the construction of the proposed building to allow the design engineer to determine whether a specific location warrants the completion of all investigations required in accordance with Sections 1803.3 through 1803.5 of the IBC.

The data collected suggests that the North and East side portions of the athletic field in subarea (1) and Southeast of the existing school building in subarea (2) may contain layers of expansive soil. Additional geotechnical investigations will be required in accordance with the 2021 IBC Section 1803.5.3 if the proposed new building would be located in said portions of the athletic field or by the Southeast of the existing school building.

The boreholes performed in subareas (2), (3), and (4) generally terminated with auger refusal at 7 to 12 feet BGS in large boulders of weathered bedrock. However, it is worth noting that in subarea (2), standard penetration test N-values were typically above 30 blows per foot on average for B-15 and B-16. On the Southeast side, N-values were typically about 7 blows per foot for B-15 upper soil layers, and between 12 and 27 blows per foot for B-16 upper soil layers. In subareas (3) and (4), N-Values recorded for the upper soil layers were between 20 to 30 blows per foot. Additional information regarding the proposed new building (such as loads, type and shape of proposed foundation system, etc.) will be needed to assess the allowable bearing capacity.

Also, it was determined that additional geotechnical investigation may be required to assess the seasonal degree of fluctuation of the underground water table level. Furthermore, additional investigation may be needed to assess seismic hazard and design wind speed along with specific recommendations for compacted fill and excavations. In addition, more investigations will be necessary to finalize specific recommendations to meet all requirements stipulated in the 2021 IBC Section 1803.6.

8. PERMITS

Any permit application shall be the responsibility of the owner. However, ATANE may provide some assistance regarding permit application, if warranted.

- Unmapped

N

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 6/22/2022 at 3:50 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

CT DEP Reasonable Confidence Protocols
Laboratory Analysis
QA/QC Certification Form

1	For each analytical method referenced in this laboratory report package, were all specified QA/QC performance criteria followed (including the requirement to explain any criteria falling outside of acceptable guidelines, as specified in the CT DEP method-specific Reasonable Confidence Protocol documents)?	YES
1a	Were the method specified preservation and holding time requirements met?	YES
1b	VPH & EPH Methods Only: Was the VPH or EPH Method conducted without significant modifications (see Section 11.3 of respective Methods)?	YES
2	Were all samples received by the laboratory in a condition consistent with that described on the associated chain-of-custody document(s)?	YES
3	Were all samples received at an appropriate temperature (<6°C)?	NO
4	Were all QA/QC performance criteria specified in the CT DEP Reasonable Confidence Protocol documents achieved?	NO
5a	Were reporting limits specified or referenced on the chain-of-custody?	NO
5b	Were these reporting limits met?	N/A
6	For each analytical method referenced in this laboratory report package, were results reported for all constituents identified in the method-specific analyte lists presented in the Reasonable Confidence Protocol documents?	NO
7	Are project-specific matrix spikes and laboratory duplicates included in this data set?	NO

Note: For all questions to which the response was "No" (with the exception of question #7), additional information must be provided in an attached narrative. If the answer to question #1, #1A or question B is "No", the data package does not meet the requirements for "Reasonable Confidence".

Project Name:	CENTRAL MIDDLE SCHOOL	**Lab Number:**	L2243810
Project Number:	Not Specified	**Report Date:**	09/07/22

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

RCP Related Narratives

Report Submission

In reference to question 5a:

Reporting limits were not specified.

Sample Receipt

In reference to question 3:

The samples were received at the laboratory above the required temperature range and were not on ice.

Volatile Organics

In reference to question 4:

L2243810-01 through -05: Initial Calibration Verification outside criteria: dichlorodifluoromethane (124%)

PAHs

In reference to question 6:

At the client's request, all submitted samples were not analyzed for the full RCP list of constituents identified in the method specific analyte list presented in the RCP documents.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: Data Usability Report

Project Name:	CENTRAL MIDDLE SCHOOL	**Lab Number:**	L2243810
Project Number:	Not Specified	**Report Date:**	09/07/22

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

Report Format: Data Usability Report

Project Name:	CENTRAL MIDDLE SCHOOL	**Lab Number:**	L2243810
Project Number:	Not Specified	**Report Date:**	09/07/22

Data Qualifiers

ND - Not detected at the reporting limit (RL) for the sample.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Report Format: Data Usability Report

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625/625.1: alpha-Terpineol
EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

CT DEP Reasonable Confidence Protocols
Laboratory Analysis
QA/QC Certification Form

1	For each analytical method referenced in this laboratory report package, were all specified QA/QC performance criteria followed (including the requirement to explain any criteria falling outside of acceptable guidelines, as specified in the CT DEP method-specific Reasonable Confidence Protocol documents)?	YES
1a	Were the method specified preservation and holding time requirements met?	YES
1b	VPH & EPH Methods Only: Was the VPH or EPH Method conducted without significant modifications (see Section 11.3 of respective Methods)?	YES
2	Were all samples received by the laboratory in a condition consistent with that described on the associated chain-of-custody document(s)?	YES
3	Were all samples received at an appropriate temperature (<6°C)?	YES
4	Were all QA/QC performance criteria specified in the CT DEP Reasonable Confidence Protocol documents achieved?	NO
5a	Were reporting limits specified or referenced on the chain-of-custody?	NO
5b	Were these reporting limits met?	N/A
6	For each analytical method referenced in this laboratory report package, were results reported for all constituents identified in the method-specific analyte lists presented in the Reasonable Confidence Protocol documents?	NO
7	Are project-specific matrix spikes and laboratory duplicates included in this data set?	NO

Note: For all questions to which the response was "No" (with the exception of question #7), additional information must be provided in an attached narrative. If the answer to question #1, #1A or question B is "No", the data package does not meet the requirements for "Reasonable Confidence".

Project Name:	CENTRAL MIDDLE SCHOOL	**Lab Number:**	L2246257
Project Number:	Not Specified	**Report Date:**	09/12/22

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

RCP Related Narratives

Report Submission

In reference to question 5a:

Reporting limits were not specified.

Volatile Organics

In reference to question 4:

L2246257-01 through -07: Initial Calibration Verification outside criteria: dichlorodifluoromethane (124%)

Semivolatile Organics

In reference to question 6:

At the client's request, all submitted samples were not analyzed for the full RCP list of constituents identified in the method specific analyte list presented in the RCP documents.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: Data Usability Report

Project Name:	CENTRAL MIDDLE SCHOOL	**Lab Number:**	L2246257
Project Number:	Not Specified	**Report Date:**	09/12/22

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

Report Format: Data Usability Report

Project Name:	CENTRAL MIDDLE SCHOOL	**Lab Number:**	L2246257
Project Number:	Not Specified	**Report Date:**	09/12/22

Data Qualifiers

ND - Not detected at the reporting limit (RL) for the sample.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625/625.1: alpha-Terpineol
EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

Greenwich Public Schools

UST Removal Closure Report

Central Middle School

Big East Environmental
Project 19433.002

SUBJECT SITE:	Central Middle School 9 Indian Rock Road Greenwich, CT
CLIENT:	Greenwich Public Schools 290 Greenwich Avenue Greenwich, CT 06830 203.625.7412 Eric_haaga@greenwich.k12.ct.us
INSPECTION DATE:	August 13, 2019
BIG EAST PROJECT #:	19433.002

UST REMOVAL CLOSURE REPORT

Central Middle School State ID: 57-4741
CT DEEP Tank ID: T1R1

INTRODUCTION

Big East Environmental, LLC was retained by *the client* to oversee the removal of one 8,000-gallon underground storage tank (UST) and collect soil samples at the above referenced subject site. The subject site is a public-school facility known as Central Middle School that lies in an area with GA classified groundwater. The area of the underground storage tank (UST) is located north west portion of the subject site property north of the back-parking lot. The UST was utilized for the storage of #2 fuel oil.

METHODS

Soil samples were collected by hand with the aid of the onsite excavator. Soil samples were collected from each side wall and the tank grave/ bottom and field screened on site with a photovoltaic ionization device (PID meter). Samples were analyzed at Phoenix Environmental Laboratories for extractable total petroleum hydrocarbons (ETPH), semi-volatile organic compounds (PAH 8270) and volatile organic compounds (EPA 8260). All lab reports can be found in appendices.

FINDINGS

Steve DiNapoli of Big East Environmental was present upon the excavation of the UST on August 13, 2019. Prior to excavation, the UST was cut open for sludge and product removal. The UST was composed of double wall steel and was buried beneath soil and grass. The tank did contain fuel oil which was removed by the excavation contractor. Upon excavation, the tanks were thoroughly inspected for any signs of holes, cracks, or other indications of tank failure. No signs of tank failure were found. Ground and rain water was encountered during the excavation, this water was removed for disposal by the excavation contractor.

CONCLUSION

- No soil contamination has been detected.

If you have any questions regarding this report please feel free to contact me directly at any time.

Sincerely,

Stephen DiNapoli

Stephen E. DiNapoli, LEED AP, CMC
Environmental Professional
Big East Environmental, LLC

EXCLUSIONS and LIMITATIONS

While Big East Environmental strives to conduct a thorough, comprehensive inspection, some exclusion is warranted. For 100% accuracy in the determination of soil contamination or the presence of any buried object full excavation would be necessary. There is always a possibility that contamination is present within areas that we could not access. Client acknowledges that this report is limited and all hazardous materials may only become apparent during the course of future demolition/ renovation/ excavation. Big East shall not be held liable for abatement/ remediation costs related to additional contaminants not identified in this report.

If a leak has been detected the responsible party(ies) must notify the Connecticut DEP of any contamination over the DEC as described in Public Act 95-190. ***(Chemical Spills -24hr- 860-424-3338).***

Connecticut Department of
Energy & Environmental Protection
Bureau of Materials Management & Compliance Assurance
Emergency Response & Spill Prevention Division

Notification of Scheduled Permanent Closure of Underground Storage Tanks

Submit one notification form per site. This notification must be submitted at least 30 days before beginning permanent closure of a commercial underground storage tank (UST) pursuant to the UST Regulations; section 22a-449(d)-107 of the Regulations of State Agencies.

Important Information:

1) ***At least 30 days before beginning permanent closure, please submit this completed form to: DEEP.30DayUST@ct.gov. A separate notification is required and submitted through ezFile when the tank is completely closed.***
2) ***Please review DEEP Guidance on Sampling and Analytical Methods for UST Closure: www.ct.gov/deep/cwp/view.asp?a=2692&q=322592&deepNav_GID=1652.***
3) ***If a release is discovered during a pre-tank removal assessment or during the tank removal the release must be reported to DEEP pursuant to Connecticut General Statutes section 22a-450 (please call 860-424-3338 or toll free at 1-866-337-7745).***
4) ***DEEP may be onsite to inspect the removal activities, but whether an inspection is performed or not, please proceed on your submitted schedule.***
5) ***If the submitted schedule changes please e-mail details of the schedule change to: DEEP.30DayUST@ct.gov. Enter "Schedule Change" on the email subject line.***

Street Address or Location Description: **9 Indian Rock Lane**

City/Town: **Greenwich** State: **CT** Zip Code: **06830**

2. Site ID Number: 57-4741

Part II: Owner/Operator Information

1. UST Owner Name: Greenwich Public Schools

Mailing Address: 290 Greenwich Avenue

City/Town: Greenwich State: CT Zip Code: 06830

Business Phone: 203-625-7412 ext.:

Contact Person: Eric Haaga Phone: 203-724-7953 ext.

*E-mail: eric_haaga@greenwich.ct.us

*By providing this e-mail address you are agreeing to receive official correspondence from the department, at this electronic address, concerning the subject application. Please remember to check your security settings to be sure you can receive e-mails from "ct.gov" addresses. Also, please notify the department if your e-mail address changes.

Part II: Owner/Operator Information (continued)

2. UST Operator, if different than UST owner

Name:

Mailing Address:

City/Town: State: Zip Code:

Business Phone: ext.:

Contact Person: Phone: ext.

*E-mail:

*By providing this e-mail address you are agreeing to receive official correspondence from the department, at this electronic address, concerning the subject application. Please remember to check your security settings to be sure you can receive e-mails from "ct.gov" addresses. Also, please notify the department if your e-mail address changes.

3. Contractor or person responsible for removing the UST System:

Name: ACV Enviro

Mailing Address: 118 Burr Street

City/Town: Bridgeport State: CT Zip Code: 06605

Business Phone: 203-384-6020 ext.:

Contact Person: Tim Firla Phone: 203-496-8853 ext.

E-mail: tfirla@acvenviro.com

4. Contractor or environmental consultant responsible for conducting sampling:

Name: Big East Environmental

Mailing Address: 57 Chestnut Street, Unit 10

City/Town: Norwalk State: CT Zip Code: 06854

Business Phone: 203-354-4955 ext.:

Contact Person: Steve DiNapoli Phone: 203.354.4955 ext.

E-mail: steve@bigeastlabs.com

Part III: Underground Storage Tank Information

Complete for all tanks being permanently closed at the subject location.

Tank Identification Number	Tank No.: T1-R1	Tank No.:	Tank No.:	Tank No.:	Tank No.:
1. Estimated Date Tank will be Closed (month/day/year)	August 24, 2019				
2. Estimated Total Capacity (gallons)	8,000				
3a. Will a pre- tank removal assessment be undertaken (or was it already undertaken)?	☐ yes ☒ no	☐ yes ☐ no	☐ yes ☐ no	☐ yes ☐ no	☐ yes ☐ no
3b. If yes, was a release discovered and reported?	☐ yes ☒ no	☐ yes ☐ no	☐ yes ☐ no	☐ yes ☐ no	☐ yes ☐ no
4. Is this a piping only removal?	☐ yes ☒ no	☐ yes ☐ no	☐ yes ☐ no	☐ yes ☐ no	☐ yes ☐ no
5. Substance Currently Stored (or last stored) *check one per compartment/tank*

LABORATORY ANALYSIS REPORT

203.354.4955 | contact@bigeastlabs.com | www.bigeastlabs.com
Big East Environmental, 57 Chestnut Street, Unit 10, Norwalk, CT 06854

Thursday, August 22, 2019

Attn: Mr. Steve Dinapoli
Big East Environmental LLC
57 Chestnut Street Unit 10
Norwalk, CT 06854

Project ID: CENTRAL MS
SDG ID: GCD85047
Sample ID#s: CD85047 - CD85051

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

Phyllis Shiller
Laboratory Director

Comment:

Additional 8260 criteria: 10% of LCS/LCSD compounds can be outside of acceptance criteria as long as recovery is 40-160%, 25-160% for Chloroethane-HL and Trichlorofluoromethane-HL.

m = This parameter is outside laboratory MS/MSD specified recovery limits.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

RPD - Relative Percent Difference
LCS - Laboratory Control Sample
LCSD - Laboratory Control Sample Duplicate
MS - Matrix Spike
MS Dup - Matrix Spike Duplicate
NC - No Criteria
Intf - Interference

Sample Criteria Exceedances Report

GCD85047 - BIG-EAST

SampNo	Acode	Phoenix Analyte	Criteria	Result	RL	Criteria	RL Criteria	Analysis Units

*** No Data to Display ***

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

REASONABLE CONFIDENCE PROTOCOL
LABORATORY ANALYSIS QA/QC CERTIFICATION FORM

Laboratory Name: Phoenix Environmental Labs, Inc. ***Client:*** Big East Environmental LLC

Project Location: CENTRAL MS ***Project Number:***

Laboratory Sample ID(s): CD85047-CD85051 ***Sampling Date(s):*** 8/13/2019

List RCP Methods Used (e.g., 8260, 8270, et cetera) 8260, 8270, ETPH

1	**For each analytical method referenced in this laboratory report package, were all specified QA/QC performance criteria followed, including the requirement to explain any criteria falling outside of acceptable guidelines, as specified in the CT DEP method-specific Reasonable Confidence Protocol documents?**	☑ Yes ☐ No
1A	**Were the method specified preservation and holding time requirements met?**	☑ Yes ☐ No
1B	***VPH and EPH methods only:*** **Was the VPH or EPH method conducted without significant modifications (see section 11.3 of respective RCP methods)**	☐ Yes ☐ No ☑ NA
2	**Were all samples received by the laboratory in a condition consistent with that described on the associated Chain-of-Custody document(s)?**	☑ Yes ☐ No
3	**Were samples received at an appropriate temperature (< 6 Degrees C)?**	☑ Yes ☐ No ☐ NA
4	**Were all QA/QC performance criteria specified in the CTDEP Reasonable Confidence Protocol documents achieved?**	☑ Yes ☐ No
5	**a) Were reporting limits specified or referenced on the chain-of-custody?** **b) Were these reporting limits met?**	☐ Yes ☑ No ☑ Yes ☐ No
6	**For each analytical method referenced in this laboratory report package, were results reported for all constituents identified in the method-specific analyte lists presented in the Reasonable Confidence Protocol documents?**	☐ Yes ☑ No
7	**Are project-specific matrix spikes and laboratory duplicates included in the data set?**	☐ Yes ☑ No

Notes: For all questions to which the response was "No" (with the exception of question #7), additional information must be provided in an attached narrative. If the answer to question #1, #1A or 1B is "No", the data package does not meet the requirements for "Reasonable Confidence". This form may not be altered and all questions must be answered.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete.

RCP Certification Report

August 22, 2019

SDG I.D.: GCD85047

SDG Comments

8270 Semi-volatile Organics:
The client requested a short list for 8270 RCP Semivolatile. Only the PAH constituents are reported as requested on the chain-of-custody.

ETPH Narration

Were all QA/QC performance criteria specified in the Reasonable Confidence Protocol documents achieved? Yes.

Instrument:

AU-FID1 08/16/19-1 Jeff Bucko, Chemist 08/16/19

CD85047, CD85051

The initial calibration (ETPH808I) RSD for the compound list was less than 30% except for the following compounds: None.
As per section 7.2.3, a discrimination check standard was run (816A003A) and contained the following outliers: None.
The continuing calibration %D for the compound list was less than 30% except for the following compounds:None.

AU-FID21 08/15/19-1 Jeff Bucko, Chemist 08/15/19

CD85048, CD85049, CD85050

The initial calibration (ETPH709I) RSD for the compound list was less than 30% except for the following compounds: None.
As per section 7.2.3, a discrimination check standard was run (815A003_1) and contained the following outliers: None.
The continuing calibration %D for the compound list was less than 30% except for the following compounds:None.

QC (Batch Specific):

Batch 492581 (CD84840)

CD85047, CD85048, CD85049, CD85050, CD85051

All LCS recoveries were within 60 - 120 with the following exceptions: None.
All LCSD recoveries were within 60 - 120 with the following exceptions: None.
All LCS/LCSD RPDs were less than 30% with the following exceptions: None.
Additional surrogate criteria: LCS acceptance range is 60-120% MS acceptance range 50-150%. The ETPH/DRO LCS has been normalized based on the alkane calibration.

SVOA Narration

Were all QA/QC performance criteria specified in the Reasonable Confidence Protocol documents achieved? Yes.

Instrument:

CHEM04 08/15/19-2 Matt Richard, Chemist 08/15/19

CD85049, CD85050, CD85051

For 8270 full list, the DDT breakdown and pentachlorophenol & benzidine peak tailing were evaluated in the DFTPP tune and were found to be in control.
For 8270 BN list, benzidine peak tailing was evaluated in the DFTPP tune and was found to be in control.

Initial Calibration Evaluation (CHEM04/4_BN_0814):
100% of target compounds met criteria.
The following compounds had %RSDs >20%: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet a minimum response factors: None.

Continuing Calibration Verification (CHEM04/0815_23-4_BN_0814):

Environmental Laboratories, Inc.
587 East Middle Turnpike, P.O.Box 370, Manchester, CT 06045
Tel. (860) 645-1102 Fax (860) 645-0823

ACCREDITED IN ACCORDANCE WITH nelac NY # 11301

RCP Certification Report

August 22, 2019

SDG I.D.: GCD85047

SVOA Narration

Internal standard areas were within 50 to 200% of the initial calibration with the following exceptions: None.
100% of target compounds met criteria.
The following compounds did not meet % deviation criteria: None.
The following compounds did not meet maximum % deviations: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet minimum response factors: None.

CHEM28 08/15/19-1 Matt Richard, Chemist 08/15/19

CD85047, CD85048

For 8270 full list, the DDT breakdown and pentachlorophenol & benzidine peak tailing were evaluated in the DFTPP tune and were found to be in control.
For 8270 BN list, benzidine peak tailing was evaluated in the DFTPP tune and was found to be in control.

Initial Calibration Evaluation (CHEM28/28_BN_0807):
100% of target compounds met criteria.
The following compounds had %RSDs >20%: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet a minimum response factors: None.

Continuing Calibration Verification (CHEM28/0815_04-28_BN_0807):
Internal standard areas were within 50 to 200% of the initial calibration with the following exceptions: None.
100% of target compounds met criteria.
The following compounds did not meet % deviation criteria: None.
The following compounds did not meet maximum % deviations: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet minimum response factors: None.

QC (Batch Specific):

Batch 492374 (CD84115)

CD85047, CD85048

All LCS recoveries were within 30 - 130 with the following exceptions: None.
All LCSD recoveries were within 30 - 130 with the following exceptions: None.
All LCS/LCSD RPDs were less than 30% with the following exceptions: None.
Additional 8270 criteria: 20% of compounds can be outside of acceptance criteria as long as recovery is at least 10%. (Acid surrogates acceptance range for aqueous samples: 15-110%, for soils 30-130%)

Batch 492575 (CD85325)

CD85049, CD85050, CD85051

All LCS recoveries were within 30 - 130 with the following exceptions: None.
All LCSD recoveries were within 30 - 130 with the following exceptions: None.
All LCS/LCSD RPDs were less than 30% with the following exceptions: None.
Additional 8270 criteria: 20% of compounds can be outside of acceptance criteria as long as recovery is at least 10%. (Acid surrogates acceptance range for aqueous samples: 15-110%, for soils 30-130%)

VOA Narration

Were all QA/QC performance criteria specified in the Reasonable Confidence Protocol documents achieved? Yes.

VOA Narration

CHEM18 08/19/19-2 Jane Li, Chemist 08/19/19

CD85047, CD85048, CD85049, CD85050, CD85051

Initial Calibration Evaluation (CHEM18/VT-M081319):
98% of target compounds met criteria.
The following compounds had %RSDs >20%: Bromoform 25% (20%), trans-1,4-dichloro-2-butene 21% (20%)
The following compounds did not meet recommended response factors: Bromoform 0.097 (0.1)
The following compounds did not meet a minimum response factors: None.

Continuing Calibration Verification (CHEM18/0819M36-VT-M081319):
Internal standard areas were within 50 to 200% of the initial calibration with the following exceptions: None.
100% of target compounds met criteria.
The following compounds did not meet % deviation criteria: None.
The following compounds did not meet maximum % deviations: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet minimum response factors: None.

QC (Batch Specific):

Batch 493191 (CD85316)

CD85047, CD85048, CD85049, CD85050, CD85051

All LCS recoveries were within 70 - 130 with the following exceptions: None.
All LCSD recoveries were within 70 - 130 with the following exceptions: None.
All LCS/LCSD RPDs were less than 30% with the following exceptions: None.
Additional 8260 criteria: 10% of LCS/LCSD compounds can be outside of acceptance criteria as long as recovery is 40-160%, 25-160% for Chloroethane-HL and Trichlorofluoromethane-HL.

Temperature Narration

The samples were received at 2.2C with cooling initiated.
(Note acceptance criteria for relevant matrices is above freezing up to 6°C)

To whom it may concern:

On August 14, 2019, ACV Enviro (ACV) removed a 8,000-gallon underground storage tank from Central Middle School, located at 9 Indian Rock Lane in Greenwich, CT. The tank was transported to LaJoie's Auto Wrecking, located at 40 Meadow Street in Norwalk, CT for recycling. ACV will provide a receipt the disposal as needed.

Thank You,

Timothy Firla

To: Elyssa Schwendy
Subject: [External] Central Middle School - 9 Indian Rock Lane, Greenwich, CT

Elyssa,

In regards to your F.O.I.A. request for Central Middle School, 9 Indian Rock Lane, a search of our system did not yield any records of underground storage tanks. We do not have records of any hazardous materials spills or discharges for this location.

ASBESTOS ABATEMENT NOTIFICATION FORM

This form is to be completed and filed with the Connecticut State Department of Health ten (10) days prior to the start of asbestos abatement, as required by the Regulations of Connecticut State Agencies, Section 19a-332a-3. In case of emergency notifications, this form is to be completed and postmarked within one (1) working day following the start of asbestos abatement. The U.S. EPA may require notification of abatement or demolition, as per 40 CFR, Part 61, the asbestos NESHAP regulation. Faxed originals are not acceptable. Revisions may be faxed unless a fee is required.

INSTRUCTIONS FOR FILLING IN FORM USING WORD:
This is a form that only accept information in the 'form fields'. Do not use the ENTER button or a mouse. Use TAB to advance to the next field.

May 19, 2006

Re: Garage - Pre- Demolition Asbestos Survey
14 Irvine Road
Old Greenwich, CT

To Whom It May Concern:

HYGENIX was contacted by Shorelines Builders, to perform an asbestos survey at the above mentioned location. I inspected the building on May 15, 2006.

I collected six bulk samples during the inspection. All samples were sent overnight to AmeriSci New York Laboratories at 117 East 30th Street in New York City, where they were analyzed for asbestos content by polarized light microscopy (PLM) in accordance with EPA procedure #600/M4-82-020. AmeriSci New York Laboratories is accredited to perform bulk asbestos analysis by the National Voluntary Laboratory Approval Program (NVLAP).

The Connecticut Department of Public Health and U.S. E.P.A. define an asbestos containing material as any material that is greater than 1% asbestos by weight. The laboratory analysis found no samples to exceed the 1% asbestos standard. **Therefore all building materials associated with the garage can be removed and disposed of as regular demolition waste.** A detailed laboratory report is attached.

Please feel free to reach me at the office, 203-324-3635, if there any questions regarding this inspection. Thank you for using HYGENIX Inc. for your environmental concerns.

Sincerely,

Ryan Ebenhack

RECORDS REQUEST FORM

You may use this form to request copies of public records from Town agencies, boards, departments, and divisions. Although any written request for records may be submitted, , use of this form is encouraged to ensure that you can be provided with the correct records as quickly as possible. Please write legibly. Separate forms should be used to request Geographic Information Systems (GIS) maps, data, abutters, and data layers.

1. **Name:** Elyssa Schwendy **Phone:** (860) 930-3689
   Mailing address: Langan CT, 555 Long Wharf Drive, New Haven CT 06511
2. **Office/Department from which records are sought:** Town clerk, fire department, health department, planning & zoning
3. **Please provide me with copies of the following records (continue on back if necessary):**

   Langan CT, Inc. (Langan) requests information on or copies of environmental permits, spills/discharge incidents, storage or disposal of hazardous substances, underground storage tanks, leaking underground storage tanks, asbestos abatement, and any other environmental reports for the Central Middle School property at 9 Indian Rock Lane (parcel 08-4598/S; previously known as 77 Stanwich Road). A copy of the property card has already been obtained.

   ☐ **check here for certified copies**

4. **Please provide me with any such electronically-stored records in the following format:**
   ☐ **printout** ☐ **computer diskette** ☒ **other:** Email preferred if practical; otherwise a diskette would be fine
5. **When the records are ready, please:** ☐ **mail them to me OR** ☒ **call me for pickup**
   If the timing works out I may be able to pick them up; otherwise I may need them mailed

OFFICIAL USE ONLY * = prior authorization of Town Law Department is required

WATER QUALITY CLASSIFICATIONS
GREENWICH, CT

SURFACE WATER QUALITY CLASSES

A	A
AA	AA
B, B*	B, B*
SA	SA
SB	SB

NOTES:
Surface Water Classifications beginning with S refer to Coastal and Marine Surface Water.
B* is a subset of Class B where no direct wastewater discharges are allowed other than those consistent with Class AA, A and SA surface waters.

GROUND WATER QUALITY CLASSES

GA (white background)
GAA, GAAs
GA, GAA may not meet current standards
GB
GC

Area of Contribution to Public Supply Well

Final Aquifer Protection Area (Level A)
Major Basin Boundary

EXPLANATION

WATER QUALITY CLASSIFICATIONS (WQC) MAPS are one of the elements of the Water Quality Standards (WQS) for the State of Connecticut. The WQS are a part of Connecticut's clean water program and are essential for protecting and improving water quality. The WQS follow the principles of Connecticut's Clean Water Act which is in Chapter 446K of the Connecticut General Statutes. The WQS provide policy guidance in many areas, for example decisions on acceptable discharges to water resources, siting of landfills, remediation or prioritization of municipal sewerage system projects. The first two elements of the WQS are the Standards, which set an overall policy for management of water quality, and the Criteria, which are descriptive and numerical standards that describe the allowable parameters and goals for various water quality classifications. A discussion of these two elements is found in the Water Quality Standards document available on the CT DEEP website. The third element is the Classifications and the Water Quality Classification Maps which show the Classification assigned to each surface and groundwater resource throughout the State. The WQS are adopted using a public participation process. The WQC maps are also adopted using a public participation process but go through hearings separately from the Standards and Criteria hearings. Revision and adoption of the WQC data occurs in accordance with the public participation procedures contained in Section 22a-426 of the Connecticut General Statutes. Ground WQC is subject to Connecticut regulation and changes must be reviewed and adopted. All changes to the Surface WQC require an adoption process which is subject to federal review and approval in addition to CT regulation. The adoption dates for the WQC by major drainage basin are: Housatonic River, Hudson River and Southwest Coastal Basins - March 1999; Connecticut River and South Central Coastal Basins - February 1993; Thames River, Pawcatuck River and Southeast Coastal Basins - December 1986. Surface Water Classifications do not change after the adoption date until the next major revision. Ground Water Classifications may change after the adoption date under specific circumstances. The map may have more than one WQC adoption date because a town may be in more than one major drainage basin.

SURFACE WATERS in Connecticut are divided into freshwater classified as AA, A, B or B* and saline waters classified as SA or SB. Class AA designated uses are existing or proposed drinking water supplies; habitat for fish and other aquatic life and wildlife; recreation; and water supply for industry and agriculture. Class A designated uses are habitat for fish and other aquatic life and wildlife; potential drinking water supplies; recreation; navigation; and water supply for industry and agriculture. Class SA designated uses are habitat for marine fish, other aquatic life and wildlife; shellfish harvesting for direct human consumption; recreation; industrial water supply; and navigation. Class B designated uses are habitat for fish and aquatic life and wildlife; recreation; navigation; and industrial and agricultural water supply. Class B*, applicable to Candlewood Lake, is a subset of Class B and is identical in all ways to the designated uses, criteria and standards for Class B waters except for the restriction on direct discharges. Class SB designated uses are habitat for marine fish and aquatic life and wildlife; commercial shellfish harvesting; recreation; industrial water supply; and navigation.

Surface waters which are not specifically classified shall be considered as Class A or Class AA. Surface waters in GA ground water areas are assumed Class A or Class SA unless otherwise indicated. Surface waters in GAA ground water areas are assumed Class AA unless otherwise indicated.

On the WQC map a surface water quality goal of A is represented by blue colored water bodies. Surface water quality goal of AA is represented by purple colored water bodies. Surface water quality goal of B is represented by gold colored water bodies.

GROUND WATERS in Connecticut are classified as GAA, GA, GB and GC. Class GAA designated uses are existing or potential public supply of water suitable for drinking without treatment and baseflow for hydraulically-connected surface water bodies. The Class GAAs is a subclass of GAA for ground water that is tributary to a public water supply reservoir. The area of contribution to a public water supply well is represented by a 500-foot radius around the well and is assumed to be Class GAA unless otherwise classified. Class GA designated uses are existing private and potential public or private supplies of water suitable for drinking without treatment and baseflow for hydraulically-connected surface water bodies. All ground waters not specifically classified are considered as Class GA. Class GB designated uses are industrial process water and cooling waters and baseflow for hydraulically-connected water bodies and is presumed not suitable for human consumption without treatment. Class GC designated uses are assimilation of discharges authorized by the Commissioner pursuant to Section 22a-430 of the General Statutes.

On the WQC map GA is represented by white colored land areas. Class GAA and class GAAs are represented by blue colored land areas. The area of contribution to a public water supply well is shown by a blue cross-hatch overprint. A notation of GAA followed by a state abbreviation indicates a watershed that contributes to the public water supply for a state other than Connecticut. Class GA or Class GAA areas that currently may not be meeting the GA or GAA standards are represented on the WQC maps by tan colored land areas. Class GB is represented by green colored land areas. Class GC is represented by magenta colored land areas.

FINAL AQUIFER PROTECTION AREAS (Level A) are included on the WQC maps for informational purposes. These areas are anticipated to be reclassified GAA during the next major basin updates, subject to public participation. The Aquifer Protection Program helps protect Connecticut's public drinking water resources by delineating aquifer protection areas (also called wellhead protection areas) for public supply wells and establishing land use regulations within these areas. These areas represent the land area contributing ground water to active public water supply wells or well fields that serve more than 1000 people and are set in sand and gravel aquifers (stratified drift deposits).

DATA SOURCES

WATER QUALITY CLASSIFICATIONS DATA – Water quality classifications shown on this map are based on information from the following digital spatial datasets that are typically shown together – Ground Water Quality Classifications Poly, Surface Water Quality Classifications Line, and Surface Water Quality Classifications Poly. The map legend above reflects the content of these three data sources. These WQC data were initially compiled on 1:24,000-scale 7.5 minute USGS topographic quadrangle maps and later digitized at 1:24,000 scale. For example, the Surface Water Quality Classifications Line and Surface Water Quality Classifications Poly digital data assigns surface water quality classifications to water bodies such as rivers, streams, reservoirs, lakes, ponds and coves found in 1:24,000-scale hydrography data available from CT DEEP. The hydrography may not include all the waterbodies in Connecticut. The Ground Water Quality Classifications Poly data assigns ground water quality classifications, at 1:24,000 scale, to the remaining land areas in Connecticut.

AQUIFER PROTECTION AREA DATA – Aquifer Protection Areas shown on this map are from the Aquifer Protection Area digital dataset which contains polygon data intended to be used at 1:24,000 scale. The dataset contains regulated areas classified as Level A Aquifer Protection Area (Final) and Level B Aquifer Protection Area (Preliminary). The Level B areas are not shown on the WQC maps. The data was collected from 1991 to the present and is actively updated as Final area mapping replaces earlier Preliminary areas. The Aquifer Protection Areas are delineated by the individual water companies owning the well fields and submitted to the CT DEEP for approval. Preliminary mapping provides a general estimate of the area contributing ground water to the well field. Final mapping is based on extensive, site-specific, detailed modeling of the ground water flow system. CT DEEP may adjust Final area boundaries to be consistent with 1:24,000 scale topography and base map data where appropriate during the approval process.

MAJOR DRAINAGE BASIN DATA – Major drainage basins shown on this map are from Major Basin Line data developed by CT DEEP and intended to be used at 1:24,000 scale.

BASE MAP DATA - Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangle maps published between 1969 and 1992. It includes political boundaries, railroads, airports, hydrography, geographic names and geographic places. Streets and street names are from Tele Atlas® copyrighted data. Base map information is neither current nor complete.

RELATED INFORMATION
This map is intended to be printed at its original dimensions in order to maintain the 1:24,000 scale (1 inch = 2000 feet).
WATER QUALITY STANDARDS - Go to the CT DEEP website for a summary and the full text of the "Water Quality Standards" and for other information on water quality.
AQUIFER PROTECTION AREAS - Go to the CT DEEP website for more information.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Langan Environmental Services were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Langan Environmental Services were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Langan Environmental Services were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA), ARISING OUT OF OR IN ANY WAY CONNECTED WITH THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT.** Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.
