

Family Math Engagement Grab & Go: Multiplication Practice

This activity would be
best used by:

Schools Families

Materials:

- multiplication flashcards
 - Use index cards to build a set of flash cards. Write the fact on one side with the product or answer on the back.
 - Use index cards to build a set of matching cards. Write the fact on one card and the product or answer on another card.

Steps:

1. Play games with the flashcards.
 - a. Use the flashcard set to practice precision and accuracy.
 - b. Use the matching set and have children match the card with the answer.
 - c. Play the memory game with the matching set by turning all of the cards upside down and choosing two to find matching pairs.
 - d. Arrange the fact family in order so students can see the patterns and count by a number. For example, find all facts that start with 2 and arrange them from least to greatest then count by 2.

Lagniappe:

- When students can multiply all numbers 0-9 quickly and accurately, expand your flashcard set to include facts of one-digit numbers multiplied by two-digit numbers.
