

STEM-FOCUSED EXTRACURRICULAR ACTIVITIES

We have several STEM-focused extracurricular activities on campus. We participate in the NASA Inspires competition with the University of Alabama at Huntsville. We also participate in Vex Robotics and host a very large robotics competition each year on campus. We also participate in science-related FFA competitions like FFA Science Fair and Veterinarian Science competitions. Students participate in the campus, district, regional and state science fair competitions. We have a STEM student organization and students can run for office in that organization. Senior STEM students complete a Capstone project that requires assistance from an expert in the field of study.
