

Mobirise Blocks

Mobirise uses **BLOCKS** to help users design and edit web pages. There are many different block themes ready to use, which you can edit to fit your page. You also have the option to create your own block, then save it to reuse on other pages, some examples of this would be a footer block or navigation block. Here we will go over how to create and edit blocks.

Step 1: To create a new block click the red “+” icon

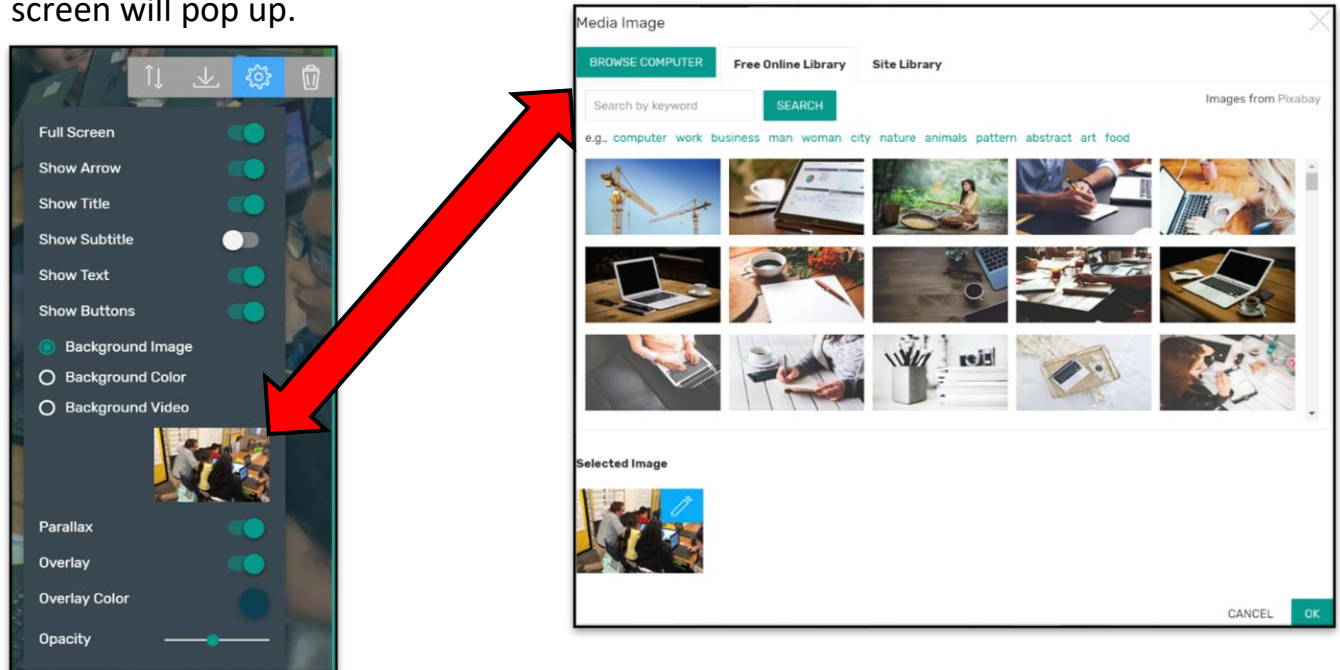

Step 2: The block menu will pop up on the right side of the screen. There are many different themes to choose from such as headers, slider & galleries, timelines, footers etc. Click and drag on the block you want to insert into your page.

Step 3: By clicking on the gear icon you can easily edit the block to your liking. You can add an overlay to make the text pop. You can add or change the image in the background of the block.

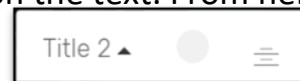

Step 4: To change the image click on the gear icon. Within the block menu you will see the current image towards the bottom. Click the image and a new menu screen will pop up.

Step 5: You can either use an image provided by Mobirise or you can select BROWSE COMPUTER to use an image from your computer.

Step 6: Step 4: To edit text within the block click once on the text. From here you'll be able to change the color, alignment and font.

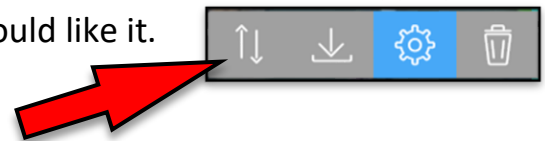

If you double click on the text you can make the text bold, italic, or attach a link to the text.

Step 5: To add a link to text click on the link icon. From here you can assign the link to a page within the website, direct the user to another website, attach an email address, phone number or file.

Step 6: Once you have a block created you are able to drag it up and down the page, if you decide it would look better further up or down the page. To do this click and hold the arrows icon. While still holding the mouse down start dragging up or down until the block is located where you would like it.

Step 7: If you want to undo the last edit that was made simply click on the undo arrow located at the top right corner of the editor.

an

Step 8: To preview your page in a browser click on the eye icon.

Step 9: To preview what your page would look like on a mobile device, click the mobile view button once. To switch back click the desktop view button once.
