Internet Filtering

You must install a Securly SSL certificate on your MSCS iPad for it to work correctly with our new Internet Filter on our MSCS WiFi on the Internet. To complete this, follow the steps below. More detailed instructions along with screenshots and a video are available at this link.

1. Log into the iPad
2. Click on this link to download the file and press the **Install** button.
    a. You will be prompted with a warning message that says, "Installing this profile will change settings on your iPad." Press the **Install Now** button.
    b. Once installed you can exit the Profile Installed screen by pressing **Done** in the top right-hand corner
3. Next, you need to turn on SSL trust for that certificate, go to **Settings > General > About > Certificate Trust Settings.**
    a. Click on the toggle next to *.securly.com
    b. Click Continue
    c. (If you have an older iPad you may not see the “Certificate Trust Settings” option and that is fine, it is only required on version 10 and higher of iOS)
4. Now you are done.
