

Using the PowerSchool App To Check Mastery Level

- Certain classes are learning within the mastery model here at Hayes. This means the grade is a year long grade. In this model, all grades get entered into the grading period of Y1 for the whole year, as opposed to being entered into individual quarters.

When you open your PowerSchool app, it will often default to Q1 (or the current quarter), in which case it will appear as it does in this screen to the left that there is no grades entered for mastery based courses, like Biology and Geometry.

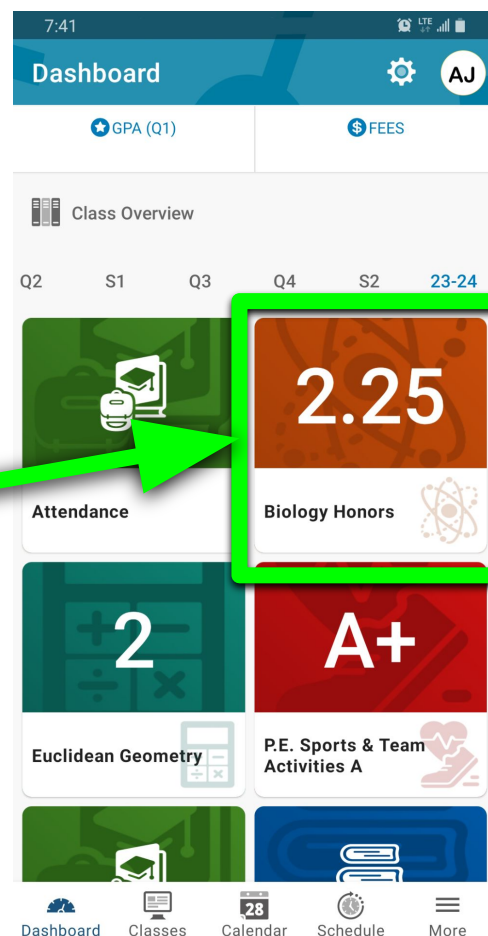

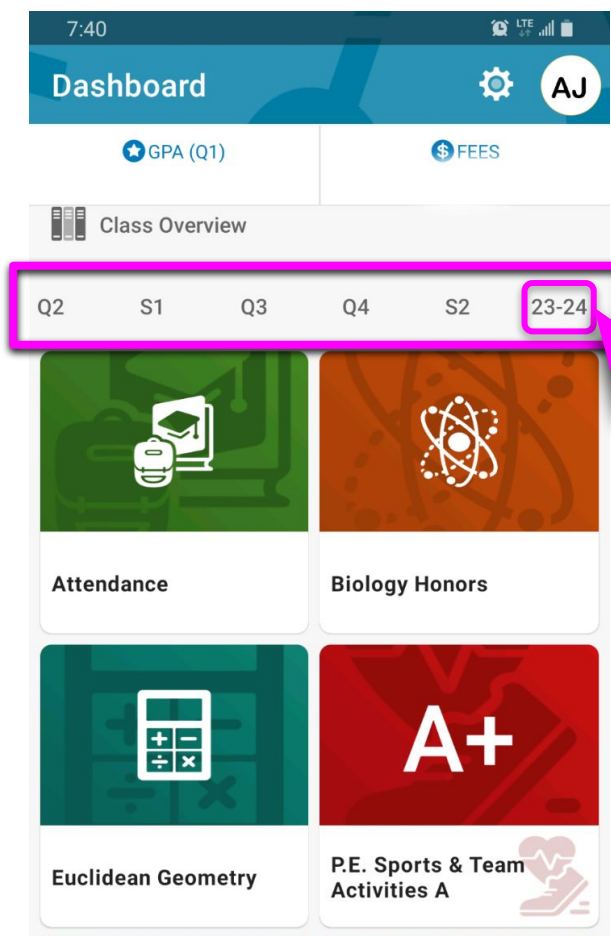

STEP ONE: Use your finger to scroll on this bar to where you see “23-24” this selection will be the furthest one to the right.

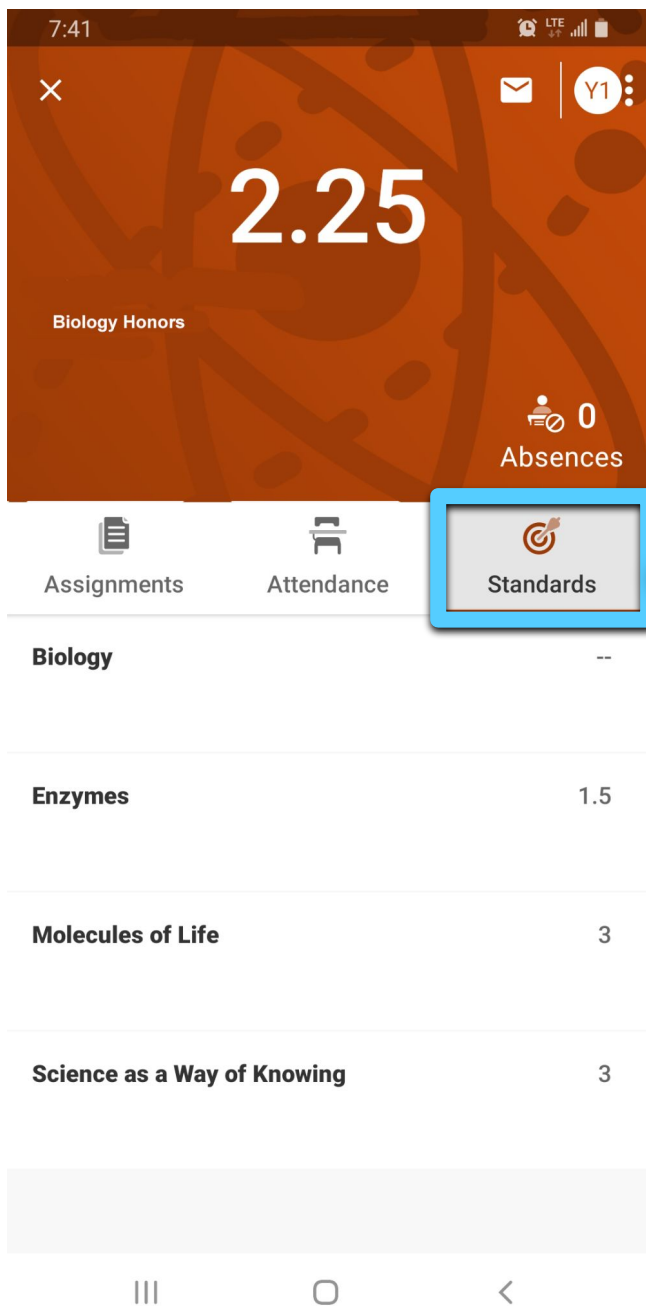

23-24 is the year long grade for this school year and serves as the Y1 spot. Tap on **23-24**.

STEP TWO:

You'll notice, now the year long mastery grades will now have scores that will show up. (As you can see in Biology and Geometry to the right) Tap on the class you want to check mastery progress for. In this example, we will be looking at Biology.

SEE REVERSE SIDE (next slide) FOR STEP 3

STEP 3: After clicking on the individual course, the large number in the colored part at the top of the screen is the running year long average for your student in that class.

Below this colored part of the screen there are 3 options:

1. Assignments
2. Attendance
3. Standards

In order to see the individual mastery scales and their levels, you will need to tap **"Standards"**

Once you tap standards, you will see the list of all of the mastery scales that have been entered thus far during the year and the current level that the student is at for each one.
