

“ We believe that every child  
with autism has untapped  
and limitless potential! ”

**JumpStart Interventions** specializes in family centered, early intervention services for children and their families affected by Autism Spectrum Disorders. Therapy methods are based on Applied Behavior Analysis (ABA) and are infused with many other research based interventions such as Social Stories, Self Management Training, Natural Environment Training, and Errorless Learning.

### **DIRECT THERAPY:**

One-on-one, individualized therapy targeting social, emotional, behavioral, and independent functioning in home and community environments. The goal is to teach new skills while reducing problem behavior.

### **UNIQUE SOCIAL SKILLS CLASSES:**

Community-based classes designed for developing independent, age appropriate social skills and meaningful friendships. Classes are geared toward children with developing pragmatic verbal skills.

### **PARENT TRAINING AND SUPPORT:**

Being family centered means that sessions are open; parent training happens during every session, everyday. Our goal is to teach you ABA! Many of our Board Certified Behavior Analysts are also certified teachers and know the school system. They are available to assist families in collaboration at IEP meetings.
