## The Circle of Life: Earth's Spheres

The 3rd graders banded together in a collaborative project to create a model of Earth's four spheres: the atmosphere, biosphere, geosphere and hydrosphere. The catch? They couldn't draw any of the components. They had to forage for natural and HUB-stocked materials to make their model. The whole class had to work together to create one, cohesive piece.

SUMNER ACADEMY

VISION | PASSION | DEDICATION

## Engineering Athletics

Mrs. Homra's 5th grade students continued their exploration of technology by innovating or improving adaptive devices used in various sports and activities. Students were allowed to use anything in the HUB, including the 3D printers, to fabricate their components and build a model of their device. From automatic fishing poles to new fencing rapiers, students creatively solved real-world problems experienced by many athletes.
