

If your student is seeking practice opportunities for the PSAT/NMSQT, please see the resources linked below:

- [Bluebook™ practice test](#): This is the best and most accurate way to ensure you're measuring your knowledge of the skills on the actual test. It's also a valuable introduction to the Bluebook testing app, which you'll use both for practice tests and on test day. Plus, when you practice in Bluebook, your practice scores will be available in My Practice, where you'll find helpful information about your performance on different content areas so you can target your practice more effectively.
- [Practice Quick Start Guide](#)
- [Build Your Study Plan](#) - This is step-by-step guide on study resources
- **Khan Academy® diagnostic**: For a skill check outside of Bluebook, take Khan Academy's SAT Course Challenge for both the [Reading and Writing Test](#) and the [Math Test](#). These challenges will give you a snapshot of your performance on different content areas, which you can use to decide what you want to study.
- **In-school test review**: You may know the areas where you need to study just from the tests you've already taken in school. Review your old tests from your math classes and your English or language arts classes and see if you notice any skill gaps you can boost. If you're feeling stuck, [check out our page with more information](#) about what different questions look like on the test to help you identify the skills you need to work on. This method will help you start studying right away so you can be more prepared when you take the diagnostic or practice test.
